[99] On page 62 of the permit, U.S. EPA Phase I Facilities are defined as "facilities in specified industrial categories that are required to obtain an NPDES permit for storm water discharges, as required by 40 CFR 122.26(c). These categories include: (i) facilities subject to storm water effluent limitation guidelines, new source performance standards, or toxic pollutant effluent standards (40 CFR N); (ii) manufacturing facilities; (iii) oil and gas/mining facilities; (iv) hazardous waste treatment, storage, or disposal facilities; (v) landfills, land application sites, and open dumps; (vi) recycling facilities; (vii) steam electric power generating facilities; (viii) transportation facilities; (ix) sewage or wastewater treatment works; (x) light manufacturing facilities.

Regional Board has not inspected, each Permittee shall conduct compliance inspections as specified below. [Emphasis added.]

Frequency of Inspection

Facilities in Tier 1 Categories:[100] Twice during the 5-year term of the Order, provided that the first inspection occurs no later than August 1, 2004, and that there is a minimum interval of one year in between the first compliance inspection and the second compliance inspection.

Facilities in Tier 2 Categories:[101] Twice during the 5-year term of the permit, provided that the first inspection occurs no later than August 1, 2004, Permittees need not perform additional inspections at those facilities determined to have no risk of exposure of industrial activity[102] to stormwater. For those facilities that do have exposure of industrial activities to stormwater, a Permittee may reduce that frequency of additional compliance inspections to once every 5 years, provided that the Permittee inspects at least 20% of the facilities in Tier 2 each year.

Level of Inspection: Each Permittee shall confirm that each operator:

- has a current Waste Discharge Identification (WDID) number for facilities discharging stormwater associated with industrial activity, and that a Storm Water Pollution Prevention Plan is available on-site, and is effectively

---

[100] Attachment B of the permit (pp. B-1 to B-2) lists the Tier 1 categories as follows (with Phase I facilities listed in italics): "*Municipal landfills ...; Hazardous Waste Treatment, Disposal and Recovery Facilities; Facilities Subject to SARA Title III ...;* Restaurants; *Wholesale trade (scrap, auto dismantling)...;* Automotive service facilities; *Fabricated metal products ...; Motor freight ...; Chemical/allied products ...;* Automotive Dealers/Gas Stations ...; *Primary Metals.*"

[101] Attachment B of the permit (pp. B-1 to B-2) lists the Tier 2 categories as follows (with Phase I facilities listed in italics): "*Electric/Gas/Sanitary...; Air Transportation ...; Rubbers/Miscellaneous Plastics ...; Local/Suburban Transit ...; Railroad Transportation ...; Oil & Gas Extraction ...; Lumber/Wood Products...; Machinery Manufacturing ...; Transportation Equipment ...; Stone, Clay, Glass, Concrete ...; Leather/Leather Products...; Miscellaneous Manufacturing ...; Food and kindred Products...; Mining of Nonmetallic Minerals ...; Printing and Publishing ...; Electric/Electronics ...; Paper and Allied Products ...; Furniture and Fixtures ...;* Laundries ...; *Instruments...; Textile Mills Products ...; Apparel ...*"

[102] "Storm water discharge associated with industrial activity means the discharge from any conveyance that is used for collecting and conveying storm water and that is directly related to manufacturing, processing or raw materials storage areas at an industrial plant. ... The following categories of facilities are considered to be engaging in "industrial activity" for purposes of paragraph (b)(14): [¶]...[¶] (x) Construction activity including clearing, grading and excavation, except operations that result in the disturbance of less than five acres of total land area. Construction activity also includes the disturbance of less than five acres of total land area that is a part of a larger common plan of development or sale if the larger common plan will ultimately disturb five acres or more;" [40 CFR §122.26 (b)(14), Emphasis added.]

implementing BMPs in compliance with County and municipal ordinances, Regional Board Resolution 98-08, and the SQMP.

Based on this mandatory language to perform the inspections of phase I facilities as specified, staff finds that part 4C2b of the permit is a state-mandate.

Inspecting construction sites (part 4E): Part 4E of the permit contains the following requirements:

- Implement a program to control runoff from construction activity at all construction sites within each permittees jurisdiction, and ensure the specified minimum requirements are effectively implemented at all construction sites. (Permit, 4E1.)

  For construction sites one acre or greater, each permittee shall:

- Require the preparation and submittal of a Local SWPPP [Storm Water Pollution Prevention Plan], with specified contents, for approval prior to issuing a grading permit for construction projects. (Permit, 4E2a).
- Inspect all construction sites for stormwater quality requirements during routine inspections a minimum of once during the wet seasons (Permit, 4E2b).
- Review the Local SWPPP for compliance with local codes, ordinances, and permits (Permit, 4E2b).
- For inspected sites that have not adequately implemented their Local SWPPP, conduct a follow-up inspection to ensure compliance will take place within 2 weeks.
  - If compliance has not been attained, take additional actions to achieve compliance (as specified in municipal codes).
  - If compliance has not been achieved, and the site is also covered under a statewide general construction stormwater permit, enforce the local ordinance requirements, and
  - If non-compliance continues the Regional Board shall be notified for further joint enforcement actions (Permit, 4E2b).
- Require by March 10, 2003, before issuing a grading permit for all projects less than five acres requiring coverage under a statewide general construction stormwater permit, proof of a Waste Discharger Identification Number for filing a Notice of Intent for permit coverage and a certification that a SWPPP has been prepared by the project developer. A Local SWPPP may substitute for the State SWPPP if the Local SWPPP is at least as inclusive in controls and BMPs [Best Management Practices] as the State SWPPP (Permit, 4E2c).
- For sites five acres and greater:
  - Require, prior to issuing a grading permit for all projects requiring coverage under the state general permit, proof of a Waste Discharger Identification (WDID) number for filing a Notice of Intent (NOI) for coverage under the GCASP [General Construction Activity Storm Water Permit] and a

certification that a SWPPP has been prepared by the project developer. A Local SWPPP may substitute for the State SWPPP if the Local SWPPP is at least as inclusive in controls and BMPs as the State SWPPP.

- Require proof of an Notice of Intent (NOI) and a copy of the SWPPP at any time a transfer of ownership takes place for the entire development or portions of the common plan of development where construction activities are still on-going.
- Use an effective system to track grading permits issued by each permittee (Permit, 4E3).

- For projects subject to the GCASP [General Construction Activity Storm Water Permit], permittees shall refer non-filers (i.e., those projects which cannot demonstrate that they have a WDID number) to the Regional Board, within 15 days of making a determination. In making such referrals, permittees shall include, at a minimum, the following documentation: Project location; Developer; Estimated project size; and Records of communication with the developer regarding filing requirements (Permit, 4E4b).
- Train employees in targeted positions (whose jobs or activities are engaged in construction activities including construction inspection staff) regarding the requirements of the stormwater management program no later than August 1, 2002, and annually thereafter. For permittees with a population of 250,000 or more (2000 US Census), initial training shall be completed no later than February 3, 2003. Each permittee shall maintain a list of trained employees (Permit, 4E5).

The applicable federal regulation (40 CFR § 122.26 (d)(2)(iv)(D)) on the issue of whether the inspection of construction sites is a federal mandate is as follows:

(d) Application requirements for large[103] and medium[104] municipal separate storm sewer discharges. The operator[105] of a discharge from a large or medium municipal separate storm

---

[103] "(4) Large municipal separate storm sewer system means all municipal separate storm sewers that are either: (i) Located in an incorporated place with a population of 250,000 or more as determined by the 1990 Decennial Census by the Bureau of the Census (Appendix F of this part); or (ii) Located in the counties listed in appendix H, except municipal separate storm sewers that are located in the incorporated places, townships or towns within such counties; or (iii) Owned or operated by a municipality other than those described in paragraph (b)(4)(i) or (ii) of this section and that are designated by the Director as part of the large or medium municipal separate storm sewer system due to the interrelationship between the discharges of the designated storm sewer and the discharges from municipal separate storm sewers described under paragraph (b)(4)(i) or (ii) of this section. ..." [40 CFR § 122.26 (b)(4).]

[104] "(7) Medium municipal separate storm sewer system means all municipal separate storm sewers that are either: (i) Located in an incorporated place with a population of 100,000 or more but less than 250,000, as determined by the 1990 Decennial Census by the Bureau of the Census (Appendix G of this part); or (ii) Located in the counties listed in appendix I, except municipal

sewer or a municipal separate storm sewer that is designated by the Director under paragraph (a)(1)(v) of this section, may submit a jurisdiction-wide or system-wide permit application. ... Permit applications for discharges from large and medium municipal storm sewers or municipal storm sewers designated under paragraph (a)(1)(v) of this section shall include; [¶]...[¶]

(2) Part 2 of the application shall consist of: [¶]...[¶]

(iv) Proposed management program. A proposed management program covers the duration of the permit. It shall include a comprehensive planning process which involves public participation and where necessary intergovernmental coordination, to reduce the discharge of pollutants to the maximum extent practicable using management practices, control techniques and system, design and engineering methods, and such other provisions which are appropriate. The program shall also include a description of staff and equipment available to implement the program. Separate proposed programs may be submitted by each coapplicant. Proposed programs may impose controls on a systemwide basis, a watershed basis, a jurisdiction basis, or on individual outfalls. Proposed programs will be considered by the Director when developing permit conditions to reduce pollutants in discharges to the maximum extent practicable. Proposed management programs shall describe priorities for implementing controls. Such programs shall be based on: [¶]...[¶]

(D) A description of a program to implement and maintain structural and non-structural best management practices to reduce pollutants in stormwater runoff from construction sites to the municipal storm sewer system, which shall include: [¶]...[¶]

(3) A description of procedures for identifying priorities for inspecting sites and enforcing control measures which consider the nature of the construction activity, topography, and the characteristics of soils and receiving water quality; and ... [Emphasis added.]

The language of the federal regulation indicates a duty to inspect construction sites and enforce control measures as specified in part 4E of the permit. The *Rancho Cucamonga* case cited by the State Board also states that federal law requires NPDES permittees to inspect construction sites.[106]

---

separate storm sewers that are located in the incorporated places, townships or towns within such counties; or (iii) Owned or operated by a municipality other than those described in paragraph (b)(7)(i) or (ii) of this section and that are designated by the Director as part of the large or medium municipal separate storm sewer system due to the interrelationship between the discharges of the designated storm sewer and the discharges from municipal separate storm sewers described under paragraph (b)(7)(i) or (ii) of this section. ..." [40 CFR § 122.26 (b)(7).]

[105] "*Owner or operator* means the owner or operator of any 'facility or activity' subject to regulation under the NPDES program" (40 CFR § 122.2).

[106] *City of Rancho Cucamonga v. Regional Water Quality Control Bd.-Santa Ana Region, supra,* 135 Cal.App.4th 1377, 1390.

The issue, however, is whether the federal requirements to inspect construction sites and enforce control measures amounts to a federal mandate. Staff finds that it does not. First, the federal regulations quoted above do not specify the frequency or other specifics of the inspection program as the permit does. These are activities, as in the *Long Beach Unified School Dist.* case discussed above,[107] that are specified actions going beyond the federal requirement for inspections "to prevent illicit discharges to the municipal separate storm sewer system." (40 C.F.R. § 122.26, subd. (d)(2)(iv)(B)(1).) As such, the inspections of construction sites are not federally mandated.

Moreover, it is the state that mandates the inspections of construction sites and related activities in that the state freely chooses to impose the inspection and enforcement requirements on the local agency permittees.[108] The federal regulations do not require: (1) a municipality to have a separate permit for construction activity or enforcement; or (2) that the inspections and related activities in part 4E of the permit be conducted by the owner or operator of the discharge. Rather, these activities may be conducted by the state under a state-wide, state-enforced, general permit, as stated in the federal stormwater regulation (40 CFR § 122.26 (c)), which states in part:

> (c) Application requirements for stormwater discharges associated with industrial activity [includes construction activity of five or more acres] and stormwater discharges associated with small construction activity[109] [construction activity from one to less than five acres]--
>
> (1) Individual application. Dischargers of stormwater associated with industrial activity and with small construction activity are required to apply for an individual permit or seek coverage under a promulgated stormwater general permit. [Emphasis added.]

The state has issued a statewide general industrial permit and a statewide general construction permit, both of which are enforced through the regional boards.[110] These are described on page 11 of the permit as quoted above.

---

[107] *Long Beach Unified School Dist. v. State of California, supra,* 225 Cal.App.3d 155.

[108] *Hayes v. Commission on State Mandates, supra,* 11 Cal. App. 4th 1564, 1593-1594.

[109] According to 40 CFR § 122.26, (b)(15): "Storm water discharge associated with small construction activity means the discharge of storm water from: (i) Construction activities including clearing, grading, and excavating that result in land disturbance of equal to or greater than one acre and less than five acres. Small construction activity also includes the disturbance of less than one acre of total land area that is part of a larger common plan of development or sale if the larger common plan will ultimately disturb equal to or greater than one and less than five acres. Small construction activity does not include routine maintenance that is performed to maintain the original line and grade, hydraulic capacity, or original purpose of the facility. The Director may waive the otherwise applicable requirements in a general permit for a storm water discharge from construction activities that disturb less than five acres where: ..."

[110] For example, page 2 of the Fact Sheet for the General Construction Activity Storm Water Permit states: "This General Permit shall be implemented and enforced by the nine California

There is nothing in the federal statutes or regulations that would prevent the state (rather than local agencies) from performing the inspection of construction sites and related activities (in part 4E of the permit) under the state-enforced general permit. Nor does federal law require the owner or operator of the discharge to perform these activities in part 4E of the permit. Therefore, staff finds that the requirement to inspect construction sites in section 4E of the permit is not a federal mandate.

Staff finds that, based on the permit's mandatory language, the following activities in part 4E are state mandates on the permittees within the meaning of article XIII B, section 6:

- Implement a program to control runoff from construction activity at all construction sites within each permittees jurisdiction, and ensure the specified minimum requirements are effectively implemented at all construction sites. (Permit, 4E1.)

  For construction sites one acre or greater:

- Require the preparation of a Local SWPPP [Storm Water Pollution Prevention Plan], with specified contents, for approval prior to issuing a grading permit for construction projects. (Permit, 4E2a).
- Inspect all construction sites for stormwater quality requirements during routine inspections a minimum of once during the wet seasons (Permit, 4E2b).
- Review the Local SWPPP for compliance with local codes, ordinances, and permits (Permit, 4E2b).
- For inspected sites that have not adequately implemented their Local SWPPP, conduct a follow-up inspection to ensure compliance will take place within 2 weeks.
  - If compliance has not been attained, take additional actions to achieve compliance (as specified in municipal codes).
  - If compliance has not been achieved, and the site is also covered under a statewide general construction stormwater permit, enforce the local ordinance requirements, and
  - If non-compliance continues the Regional Board shall be notified for further joint enforcement actions (Permit, 4E2b).
- Require by March 10, 2003, before issuing a grading permit for all projects less than five acres requiring coverage under a statewide general construction stormwater permit, proof of a Waste Discharger Identification Number for filing a Notice of Intent for permit coverage and a certification that a SWPPP has been prepared by the project developer. A Local SWPPP may substitute for the State SWPPP if the Local SWPPP is at least as inclusive in controls and BMPs [Best Management Practices] as the State SWPPP (Permit, 4E2c).

Regional Water Quality Control Boards (RWQCBs)." See <http://www.swrcb.ca.gov/water_issues/programs/stormwater/docs/finalconstpermit.pdf> as of October 23, 2008.

- For sites five acres and greater:
  - Require, prior to issuing a grading permit for all projects requiring coverage under the state general permit, proof of a Waste Discharger Identification (WDID) number for filing a Notice of Intent (NOI) for coverage under the GCASP [General Construction Activity Storm Water Permit] and a certification that a SWPPP has been prepared by the project developer. A Local SWPPP may substitute for the State SWPPP if the Local SWPPP is at least as inclusive in controls and BMPs as the State SWPPP.
  - Require proof of an Notice of Intent (NOI) and a copy of the SWPPP at any time a transfer of ownership takes place for the entire development or portions of the common plan of development where construction activities are still on-going.
  - Use an effective system to track grading permits issued by each permittee (Permit, 4E3).
- For projects subject to the GCASP [General Construction Activity Storm Water Permit], permittees shall refer non-filers (i.e., those projects which cannot demonstrate that they have a WDID number) to the Regional Board, within 15 days of making a determination. In making such referrals, permittees shall include, at a minimum, the following documentation: Project location; Developer; Estimated project size; and Records of communication with the developer regarding filing requirements (Permit, 4E4b).
- Train employees in targeted positions (whose jobs or activities are engaged in construction activities including construction inspection staff) regarding the requirements of the stormwater management program no later than August 1, 2002, and annually thereafter. For permittees with a population of 250,000 or more (2000 US Census), initial training shall be completed no later than February 3, 2003. Each permittee shall maintain a list of trained employees (Permit, 4E5).

One of the requirements in part 4E3c of the permit is to: "Use an effective system to track grading permits issued by each permittee. To satisfy this requirement, the use of a database or GIS system is encouraged, but not required." Staff finds that, based on the plain language of this provision, using an effective system to track grading permits is a state mandate, although use of a database or GIS system is not.

Issue 2: Do the transit trash receptacle and inspection permit provisions (Parts 4C2a, 4C2b, 4E, and 4F5c3) impose a new program or higher level of service?

The next issue is whether the permit provisions at issue, i.e., found above to be state-mandated, are a program, and whether they are a new program or higher level of service.

First, courts have defined a "program" for purposes of article XIII B, section 6, of the California Constitution, as one that carries out the governmental function of providing public services, or a

law that imposes unique requirements on local agencies or school districts to implement a state policy, but does not apply generally to all residents and entities in the state.[111]

The State Water Board, in its April 2008 comments, argues that the NPDES program is not a program because "the NPDES permit program, and the stormwater requirements specifically, are not peculiar to local government. Industrial and construction facilities must also obtain NPDES stormwater permits."

In comments submitted June 25, 2008, the cities call the State Board's argument inapposite, and cite the *Carmel Valley Fire Protection District* case[112] regarding whether the permit constitutes a "program." According to claimant, "[t]he test is not whether the general program applies to both governmental and non-governmental entities. The test is whether the specific executive orders at issue apply to both government and non-governmental entities."

Staff finds that the permit activities constitute a program within the meaning of article XIII B, section 6. The permit activities are limited to local governmental entities. The permit defines the "permittees" as the County of Los Angeles and 84 incorporated cities within the Los Angeles County Flood Control District (Permit, p. 1 & attachment A). The permit lists no private entities as "permittees." Moreover, the permit provides a service to the public by preventing or abating pollution in waterways and beaches in Los Angeles County. (Or as stated on page 13 of the permit: "The objective of this Order is to protect the beneficial uses of receiving waters in Los Angeles County.") Therefore, staff finds that the permit is a program within the meaning of article XIII B, section 6.

Second, to determine whether the permit is a new program or higher level of service, the permit is compared to the legal requirements in effect immediately before its adoption.[113]

Staff finds that local agencies were not required by state or federal law to place and maintain trash receptacles at transit stops before the permit was adopted. Whether or not most cities or counties do so, as argued by the State Water Board in its April 2008 comments, is not relevant to finding a state-mandated new program or higher level of service because even if they do, Government Code section 17565 states: "If a local agency ... at its option, has been incurring costs which are subsequently mandated by the state, the state shall reimburse the local agency ... for those costs incurred after the operative date of the mandate."

Because the transit trash requirement is newly mandated by the permit, and based on the plain language of part 4F5c3 of the permit, staff finds that it is a new program or higher level of service to place trash receptacles at transit stops and maintain them as specified in the permit.

For the same reason, staff finds that the inspections and enforcement activities at industrial and commercial facilities, including restaurants, automotive service facilities, retail gasoline outlets,

---

[111] *San Diego Unified School Dist., supra,* 33 Cal.4th 859, 874, (reaffirming the test set out in *County of Los Angeles v. State of California, supra,* 43 Cal.3d 46, 56; *Lucia Mar, supra,* 44 Cal.3d 830, 835.)

[112] *Carmel Valley Fire Protection District v. State of California* (1987) 190 Cal.App.3d 521, 537.

[113] *San Diego Unified School Dist., supra,* 33 Cal.4th 859, 878; *Lucia Mar, supra,* 44 Cal.3d 830, 835.

automotive dealerships, and phase I facilities (in parts 4C2a & 4C2b of the permit) as well as inspection and enforcement at construction sites (in part 4E of the permit) are a new program or higher level of service. These were not required activities of the permittees prior to the permit's adoption.

In sum, staff finds that all the permit provisions at issue in this test claim impose a new program or higher level of service within the meaning of article XIII B, section 6 of the California Constitution.

Issue 3: Do the transit trash receptacle and inspection permit provisions (Parts 4C2a, 4C2b, 4E, and 4F5c3) impose costs mandated by the state within the meaning of Government Code sections 17514 and 17556?

The final issue is whether the permit provisions impose costs mandated by the state,[114] and whether any statutory exceptions listed in Government Code section 17556 apply to the test claims. Government Code section 17514 defines "cost mandated by the state" as follows:

> [A]ny increased costs which a local agency or school district is required to incur after July 1, 1980, as a result of any statute enacted on or after January 1, 1975, or any executive order implementing any statute enacted on or after January 1, 1975, which mandates a new program or higher level of service of an existing program within the meaning of Section 6 of Article XIII B of the California Constitution.

Government Code section 17564 requires reimbursement claims to exceed $1000 to be eligible for reimbursement.

In test claims 03-TC-20 and 03-TC-21, the cities' claimant representative declares (p. 24) that the cities will incur costs estimated to exceed $1000 to implement the permit conditions.

In test claim 03-TC-04, the County of Los Angeles states (p. 18) that the costs in providing the services claimed "far exceed the minimum reimbursement amount of $1000 per annum." In the attached declaration for *Transit Trash Receptacles*, the County declares (pp. 22-23) the following itemization of costs from December 13, 2001 to October 31, 2002:

> (1) Identify all transit stops in the jurisdiction: $19,989.17;
>
> (2) Select proper trash receptacle design, evaluate proper placement, specification and drawing preparation: $38,461.87;
>
> (3) Preliminary engineering works (construction contract preparation, specification reviewing process, bid advertising and awarding): $19,662.02;
>
> (4) Construct and install trash receptacle units: $230,755.58, construction management $34,628.31;
>
> (5) Trash collection and receptacle maintenance in FY 2002-03, $3,513.94, maintenance contractor costs for maintaining and collecting trash in FY 2002-03, $93,982.50;
>
> (6) Projected costs for on-going maintenance in FY 2003-04, $375,570.00.

---

[114] *Lucia Mar, supra*, 44 Cal.3d 830, 835; Government Code section 17514.

Similarly, attached to claim 03-TC-19 (pp. 20-21) are declarations that itemize the County of Los Angeles' costs for *Inspection of Industrial/Commercial Facilities* program, from December 13, 2001 to September 15, 2003, as follows:

(1) inspect 1744 restaurants: $234,931.83;

(2) inspect 1110 automotive service facilities: $149,526.36;

(3) inspect 249 retail gasoline outlets and automotive dealerships: $33,542.45;

(4) Identify and inspect all Phase I (387 Tier 1 and 543 Tier 2) facilities within the jurisdiction: $125,155.31;

(5) Total $543,155.95.

These declarations illustrate that the costs associated with the permit activities exceed $1,000. The Commission, however, cannot find "costs mandated by the state" within the meaning of Government Code section 17514 if any exceptions in Government Code section 17556 apply, which is discussed below.

A. Did the claimants request the activities in the permit within the meaning of Government Code section 17556, subdivision (a)?

The first issue is whether the claimants requested the activities in the permit. The Department of Finance and the State Water Board both asserted that they did. As discussed above, the claimants were required to submit a Report of Waste Discharge and Stormwater Quality Management Plan before the permit was issued.

Government Code section 17556, subdivision (a), provides that the Commission shall not find costs mandated by the state if:

> (a) The claim is submitted by a local agency ... that requested legislative authority for that local agency ... to implement the program specified in the statute, and that statute imposes costs upon that local agency or school district requesting the legislative authority. A resolution from the governing body or a letter from a delegated representative of the governing body of a local agency ... that requests authorization for that local agency ... to implement a given program shall constitute a request within the meaning of this subdivision.

Based on the language of the statute, section 17556, subdivision (a), does not apply because the permit is not a statute, the claimants did not request "legislative authority" to implement the permit, and the record lacks any resolutions adopted by the claimants. Therefore, staff finds that the claimants did not request the activities in the permit within the meaning of Government Code section 17556, subdivision (a).

B. Do the claimants have fee authority for the permit activities within the meaning of Government Code section 17556, subdivision (d)?

Government Code section 17556, subdivision (d), states:

> The commission shall not find costs mandated by the state, as defined in Section 17514, in any claim submitted by a local agency ... if, after a hearing, the commission finds any one of the following: [¶]...[¶] (d) The local agency ... has

the authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service.

The constitutionality of Government Code section 17556, subdivision (d), was upheld by the California Supreme Court in *County of Fresno v. State of California*,[115] in which the court held that the term "costs" in article XIII B, section 6, excludes expenses recoverable from sources other than taxes. The court stated:

> Section 6 was included in article XIII B in recognition that article XIII A of the Constitution severely restricted the taxing powers of local governments. (See *County of Los Angeles, supra,* 43 Cal.3d at p. 61.) The provision was intended to preclude the state from shifting financial responsibility for carrying out governmental functions onto local entities that were ill equipped to handle the task. (*Ibid.*; see *Lucia Mar Unified School Dist. v. Honig* (1988) 44 Cal.3d 830, 836, fn. 6 [244 Cal.Rptr. 677, 750 P.2d 318].) Specifically, it was designed to protect the tax revenues of local governments from state mandates that would require expenditure of such revenues. Thus, although its language broadly declares that the "state shall provide a subvention of funds to reimburse ... local government for the costs [of a state-mandated new] program or higher level of service," read in its textual and historical context section 6 of article XIII B requires subvention only when the costs in question can be recovered *solely from tax revenues.*
>
> In view of the foregoing analysis, the question of the facial constitutionality of section 17556(d) under article XIII B, section 6, can be readily resolved. As noted, the statute provides that "The commission shall not find costs mandated by the state ... if, after a hearing, the commission finds that" the local government "has the authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service." Considered within its context, the section effectively construes the term "costs" in the constitutional provision as excluding expenses that are recoverable from sources other than taxes. Such a construction is altogether sound. As the discussion makes clear, the Constitution requires reimbursement only for those expenses that are recoverable solely from taxes. It follows that section 17556(d) is facially constitutional under article XIII B, section 6.[116]

In *Connell v. Superior Court,*[117] the dispute was whether local agencies had sufficient fee authority for a mandate involving increased purity of reclaimed wastewater used for certain types of irrigation. The court cited statutory fee authority for the reclaimed wastewater, and noted that the water districts did not dispute their fee authority. Rather, the water districts argued that they lacked "sufficient" fee authority in that it was not economically feasible to levy fees sufficient to pay the mandated costs. In finding the fee authority issue is a question of law, the court stated

---

[115] *County of Fresno v. State of California , supra,* 53 Cal.3d 482.

[116] *County of Fresno v. State of California, supra,* 53 Cal.3d 482, 487.

[117] *Connell v. Superior Court* (1997) 59 Cal.App.4th 382.

that Government Code section 17556, subdivision (d), is clear and unambiguous, in that its plain language precludes reimbursement where the local agency has the authority, i.e., the right or the power, to levy fees sufficient to cover the costs of the state-mandated program." The court rejected the districts' argument that "authority" as used in the statute should be construed as a "practical ability in light of surrounding economic circumstances" because that construction cannot be reconciled with the plain language of section 17556, and would create a vague standard not capable of reasonable adjudication. The court also said that nothing in the fee authority statute (Wat. Code, § 35470) limited the authority of the Districts to levy fees "sufficient" to cover their costs. Thus, the court concluded that the plain language of section 17556 made the fee authority issue solely a question of law, and that the water districts could not be reimbursed due to that fee authority.[118]

In its April 18, 2008 comments (p. 19), the State Board asserted that the claimants have fee authority to pay for the trash receptacle and inspection programs in the permit. Likewise, the Department of Finance, in its March 2008 comments, states that "some local agencies have set fees to be used toward funding the claimed permit activities" that should be considered offsetting revenues.

Los Angeles County, in its comments submitted in June 2008, states (p. 2) that it is "without sufficient fee authority to recover its costs." The County points out that the state or regional water board has fee authority in Water Code section 13260, subdivision (d)(2)(B)(iii) for inspections of industrial and commercial facilities, but those fees are not shared with the County or the cities.[119] The County also states that the inspections are to determine compliance with the general industrial permit that is enforced by the Regional Boards.[120]

In their comments received June 25, 2008, the city claimants assert that they do not have fee authority. The cities first note that, for facilities that hold state-issued general industrial or

---

[118] *Connell v. Superior Court, supra,* 59 Cal.App.4th 382, 398-402.

[119] Water Code section 13260, subdivision (d)(2)(B)(i) - (iii) states:

> (i) Notwithstanding subparagraph (A), the fees collected pursuant to this section from stormwater dischargers that are subject to a general industrial or construction stormwater permit under the national pollutant discharge elimination system (NPDES) shall be separately accounted for in the Waste Discharge Permit Fund. (ii) Not less than 50 percent of the money in the Waste Discharge Permit Fund that is separately accounted for pursuant to clause (i) is available, upon appropriation by the Legislature, for expenditure by the regional board with jurisdiction over the permitted industry or construction site that generated the fee to carry out stormwater programs in the region. (iii) Each regional board that receives money pursuant to clause (ii) shall spend not less than 50 percent of that money solely on stormwater inspection and regulatory compliance issues associated with industrial and construction stormwater programs.

[120] Page 3 of the General Industrial Permit states in part: "Following adoption of this General Permit, the Regional Water Boards shall enforce its provisions." See <http://www.swrcb.ca.gov/water_issues/programs/stormwater/docs/induspmt.pdf> as of October 23, 2008.

general construction stormwater permits, the state already imposes an annual fee and therefore has occupied the field (Wat. Code, § 13260, subd. (d)(2)(B)(iii)). The cities also relate the difficulty of imposing a fee for inspecting restaurants, automotive service facilities, retail gasoline outlets and automotive dealerships because, although the cities could enact a general businesses license on all businesses, "the cities could not charge other businesses for the cost of inspecting this subgroup without again running the risk of charging fees on the other businesses for services not related to regulation of them." The cities also dispute the State Water Board's assertion that transit users could be charged a fee for the transit trash receptacles because the County and cities do not operate the transit system.

The issue of local fee authority for the municipal stormwater permit activities is one of first impression for the Commission. Although there are no authorities directly on point (except Pub. Res. Code, § 40059, discussed below) some legal principles emerge that guide the analysis, as discussed below.

1. Fee authority under the police power

The law on local government fee authority begins with article XI, section 7, of the California Constitution, which states: "A county or city may make and enforce within its limits all local, police, sanitary, and other ordinances and regulations not in conflict with general laws."

The Third District Court of Appeal has stated that article XI, section 7, includes the authority to impose fees. In *Mills v. Trinity County*,[121] a taxpayer challenged a county ordinance that imposed new and increased fees for county services in processing subdivision, zoning, and other land-use applications that had been adopted without the two-thirds affirmative vote of the county electors. In upholding the fees, the court stated:

> [S]o long as the local enactments are not in conflict with general laws, the power to impose valid regulatory fees does not depend on legislatively authorized taxing power but exists pursuant to the direct grant of police power under article XI, section 7, of the California Constitution.[122]

In addition to the *Mills* case, courts have held that water pollution prevention is a valid exercise of government police power.[123] And municipal inspections in furtherance of sanitary regulations have been upheld as "an exercise of that branch of the police power which pertains to the public health."[124]

In *Sinclair Paint v. State Board of Equalization*, [125] the California Supreme Court upheld a fee imposed on manufacturers of paint that funded a child lead-poisoning program, ruling it was a regulatory fee and not a special tax. The court recognized that determining under Proposition 13

---

[124] *Sullivan v. City of Los Angeles Dept. of Bldg. & Safety* (1953) 116 Cal.App.2d 807, 811.

[125] *Sinclair Paint v. State Board of Equalization* (1997) 15 Cal.4th 866.

whether impositions were fees or taxes is a question of law. In holding that the fee on paint manufacturers was "regulatory" and not a special tax, the court stated:

> From the viewpoint of general police power authority, we see no reason why statutes or ordinances calling on polluters or producers of contaminating products to help in mitigation or cleanup efforts should be deemed less "regulatory" in nature than the initial permit or licensing programs that allowed them to operate.
>
> Viewed as a mitigating effects measure, [the fee] is comparable in character to several police power measures imposing fees to defray the actual or anticipated adverse effects of various business operations.[126] [Emphasis added.]

The *Sinclair Paint* court also recognized that regulatory fees help to prevent pollution when it stated: "imposition of 'mitigating effects' fees in a substantial amount ... also 'regulates' future conduct by deterring further manufacture, distribution, or sale of dangerous products, and by stimulating research and development efforts to produce safer or alternative products."[127]

Although the court's holding in *Sinclair Paint* applied to a state-wide fee, the language it used (putting "ordinances" in the same category as "statutes") recognizes that local agencies also have the police power to impose regulatory fees. Moreover, the court relied on local government police power cases in its analysis.[128]

A regulatory fee is an imposition that funds a regulatory program[129] and is "enacted for purposes broader than the privilege to use a service or to obtain a permit. Rather, the regulatory program is for the protection of the health and safety of the public."[130] Courts will uphold regulatory fees if they comply with the following principles:

> Fees charged for the associated costs of regulatory activities are not special taxes under an article XIII A section 4 analysis if the "fees do not exceed the reasonable cost of providing services necessary to the activity for which the fee is charged and [they] are not levied for unrelated revenue purposes." [Citations omitted] "A regulatory fee may be imposed under the police power when the fee constitutes an amount necessary to carry out the purposes and provisions of the regulation." [Citations omitted] "Such costs ... include all those incident to the issuance of the license or permit, investigation, inspection, administration, maintenance of a

---

[127] *Sinclair Paint v. State Board of Equalization, supra,* 15 Cal.4th 866, 877.

[128] *Sinclair Paint v. State Board of Equalization, supra,* 15 Cal.4th 866, 873. The Court stated: "Because of the close, 'interlocking' relationship between the various sections of article XIII A (Citation omitted) we believe these "special tax" cases [under article XIII A, § 3, state taxes] may be helpful, though not conclusive, in deciding the case before us. The reasons why particular fees are, or are not, "special taxes" under article XIII A, section 4, [local government taxes] may apply equally to section 3 cases."

[129] *California Assn. of Prof. Scientists v. Dept. of Fish and Game* (2000) 79 Cal.App.4th 935, 950.

[130] *Ibid.*

> system of supervision and enforcement." [Citations omitted] Regulatory fees are valid despite the absence of any perceived "benefit" accruing to the fee payers. [Citations omitted] Legislators "need only apply sound judgment and consider 'probabilities according to the best honest viewpoint of informed officials' in determining the amount of the regulatory fee."[131] [Emphasis added.]

Local fees for stormwater inspections would be preventative and could be imposed to comply with the criteria the courts have used to uphold regulatory fees, articulated above. And the regulatory fees fall within the local police power to prevent, clean up, or mitigate pollution.

Therefore, pursuant to article XI, section 7, staff finds that the claimants have fee authority within the meaning of Government Code section 17556, subdivision (d), sufficient to carry out the mandated activities in parts 4C2a, 4C2b, 4E, and 4F5c3 of the permit. Therefore, staff does not find "costs mandated by the state" within the meaning of Government Code section 17514 and 17556 to perform the activities in those parts of the permit (business and construction site inspections and related activities, and placing and maintaining trash receptacles at transit stops).

In fact, in June 2005, claimant Covina adopted stormwater inspection fees on restaurants, retail gasoline outlets, automotive service facilities, etc., as part of its business license fee, expressly for the purpose of complying with the permit at issue in this claim.[132]

2. Statutory fee authority to place and maintain transit trash receptacles

In addition to the police power, local agencies have statutory authority to place and maintain trash receptacles, and to charge fees for doing so. Public Resources Code section 40059, subdivision (a), states:

> (a) Notwithstanding any other provision of law, each county, city, district, or other local governmental agency may determine all of the following: (1) Aspects of solid waste handling which are of local concern, including, but not limited to, frequency of collection, means of collection and transportation, level of services, charges and fees, and nature, location, and extent of providing solid waste handling services.

The statute gives local governments the authority over the "nature, location and extent of providing solid waste handling services" so it is broad enough to encompass "placing and maintaining" receptacles at transit stops, as specified in the permit. The statute also provides local governments with broad authority over the "level of services, charges and fees."

Both the State Board and county argue the ability or merits of imposing a trash fee on transit users. Regardless of whom the fees would be imposed on, the authority to impose them exists in section 40059 of the Public Resources Code.

---

[131] *California Assn. of Prof. Scientists v. Dept. of Fish and Game, supra,* 79 Cal.App.4th 935, 945.

[132] Resolution No. 05-6455. See the resolution and agenda item at:<http://www.ci.covina.ca.us/clerk/agendas/2005/050621CCAgendaPacket.pdf > as of March 18, 2009.

As discussed in the *Connell v. Superior Court*[133] case cited above, whether the fee for transit stops is economically feasible is not relevant in finding a reimbursable state mandate. Thus, staff finds that the claimants possess statutory fee authority sufficient to pay for the activity of placing and maintaining trash receptacles at transit stops (in part 4F5c3) pursuant to Public Resources Code section 40059, and within the meaning of Government Code section 17556, subdivision (d). Therefore, staff does not find "costs mandated by the state" within the meaning of Government Code section 17514 and 17556 to install or maintain trash receptacles at transit stops.

3. Statutory fee authority to inspect commercial and industrial facilities and construction sites

Health and Safety Code section 5471 expressly authorizes cities and counties to charge fees for storm drainage maintenance and operation services:

> [A]any entity[134] shall have power, by an ordinance approved by a two-thirds vote of the members of the legislative body thereof, to prescribe, revise and collect, fees, tolls, rates, rentals, or other charges for services and facilities furnished by it, either within or without its territorial limits, in connection with its water, sanitation, storm drainage, or sewerage system. ... Revenues derived under the provisions in this section, shall be used only for the acquisition, construction, reconstruction, maintenance, and operation of water systems and sanitation, storm drainage, or sewerage facilities ....

The statute makes no mention of "inspecting" commercial or industrial facilities. Rather, the fee revenues are used for "maintenance and operation" of storm drainage facilities. Thus, for the types of businesses regulated by the permit (restaurants, automotive service facilities, retail gasoline outlets, automotive dealerships, phase I facilities, as defined, and construction sites) staff cannot find that the claimants have statutory fee authority sufficient to pay for the mandated program because "operation and maintenance" of storm drainage facilities does not encompass the state-mandated inspections of the facilities or construction sites specified in the permit.

The remainder of this analysis addresses the arguments raised by the claimants that their local fee authority would be preempted by a statute granting the state fee authority, and that a local fee would be a special tax.

4. Local fee authority for stormwater would not be preempted by state fee authority

Claimant cities argue that the permittees cannot impose fees as follows:

> [W]ith respect to facilities that hold state-issued general industrial or general construction stormwater permits, the state had occupied the field. ...[T]he state already imposes an annual fee on general industrial and general construction

---

[133] *Connell v. Superior Court, supra,* 59 Cal.App.4th 382, 398-402.

[134] Entity is defined to include "counties, cities and counties, cities, sanitary districts, county sanitation districts, sewer maintenance districts, and other public corporations and districts authorized to acquire, construct, maintain and operate sanitary sewers and sewerage systems." Health and Safety Code section 5470, subdivision (e).

stormwater permittees. That fee is explicitly designated, in part, to cover inspections of these facilities and regulatory compliance. Water Code § 13260(d)(2)(B).

This state fee thus preempts any fee that the Cities or County could charge for inspection of these facilities.

The statute that gives stormwater fee authority to the State Water Board, subdivision (d) of section 13260 of the Water Code, reads in pertinent part:

> (d)(1)(A) Each person who is subject to subdivision (a) [who discharges waste that affects the quality of waters of the state] or (c) shall submit an annual fee according to a fee schedule established by the state board.
>
> (B) The total amount of annual fees collected pursuant to this section shall equal that amount necessary to recover costs incurred in connection with the issuance, administration, reviewing, monitoring, and enforcement of waste discharge requirements and waivers of waste discharge requirements.
>
> (C) Recoverable costs include, but are not limited to, costs incurred in reviewing waste discharge reports, prescribing terms of waste discharge requirements and monitoring requirements, enforcing and evaluating compliance with waste discharge requirements and waiver requirements, conducting surface water and groundwater monitoring and modeling, analyzing laboratory samples, and reviewing documents prepared for the purpose of regulating the discharge of waste, and administrative costs incurred in connection with carrying out those actions. [¶]...[¶]
>
> (2) Subject to subparagraph (B), any fees collected pursuant to this section shall be deposited in the Waste Discharge Permit Fund which is hereby created. The money in the fund is available for expenditure by the state board, upon appropriation by the Legislature, for the purposes of carrying out this division. (B)
>
> (i) Notwithstanding subparagraph (A), the fees collected pursuant to this section from stormwater dischargers that are subject to a general industrial or construction stormwater permit under the national pollutant discharge elimination system (NPDES) shall be separately accounted for in the Waste Discharge Permit Fund.
>
> (ii) Not less than 50 percent of the money in the Waste Discharge Permit Fund that is separately accounted for pursuant to clause (i) is available, upon appropriation by the Legislature, for expenditure by the regional board with jurisdiction over the permitted industry or construction site that generated the fee to carry out stormwater programs in that region. (iii) Each regional board that receives money pursuant to clause (ii) shall spend not less than 50 percent of that money solely on stormwater inspection and regulatory compliance issues associated with industrial and construction stormwater programs. (Wat. Code, § 13260, subds. (d)(1) & (d)(2).) [Emphasis added.]

The State Water Board has adopted regulations to implement the stormwater fee.[135] Staff finds that the state's fees in Water Code section 13260, subdivision (d)(2), and in the State Water Board's regulations does not preempt or "occupy the field" of stormwater regulation. The California Supreme Court has ruled that state law preemption of a local ordinance requires the following:

> Under article XI, section 7 of the California Constitution, '[a] county or city may make and enforce within its limits all local, police, sanitary, and other ordinances and regulations not in conflict with general [state] laws.' [¶] 'If otherwise valid local legislation conflicts with state law, it is preempted by such law and is void.' [Citations.] [¶] 'A conflict exists if the local legislation " ' *duplicates, contradicts,* or *enters an area fully occupied* by general law, either expressly or by legislative implication. [Citations.]' " ' " [Citations] ... A local ordinance *duplicates* state law when it is "coextensive" with state law. [Citations][136]

There is nothing in Water Code section 13260 or in the State Board's title 23 regulations that expressly preempts, or indicates that the state fee authority would preempt, a local regulatory fee for stormwater inspections. Nor would a local regulatory fee contradict these state laws. Staff also finds that a local fee ordinance for inspections would not "duplicate" state law because the local fee would not be coextensive with state law. Although the General Industrial Activities Storm Water Permit (GIASP, Water Quality Order No. 97-03-DWQ) issued by the State Water Board covers a variety of facilities and may overlap in inspection of phase I facilities, it does not cover restaurants, automotive service facilities, retail gasoline outlets or automotive dealerships.[137]

---

[135] Fees for NPDES permits for municipal separate stormwater sewer systems are in subdivision (b) of section 2200 of title 23 of the California Code of Regulations.

[136] *O'Connell v. City of Stockton* (2007) 41 Cal.4th 1061, 1067. Emphasis in original.

[137] The facilities covered under the GIASP are as listed at <www. waterboards.ca.gov/ water_issues/programs/stormwater/docs/induspmt.pdf> as of October 16, 2008. "Currently, categories of facilities subject to storm water effluent limitations guidelines are Cement Manufacturing (40 CFR Part 411), Feedlots (40 CFR Part 412), Fertilizer Manufacturing (40 CFR Part 418), Petroleum Refining (40 CFR Part 419), Phosphate Manufacturing (40 CFR Part 422), Steam Electric (40 CFR Part 423), Coal Mining (40 CFR Part 434), Mineral Mining and Processing (40 CFR Part 436), Ore Mining and Dressing (40 CFR Part 440), and Asphalt Emulsion (40 CFR Part 443). 2. MANUFACTURING FACILITIES: ... 3. OIL AND GAS/MINING FACILITIES: ... 4. HAZARDOUS WASTE TREATMENT, STORAGE, OR DISPOSAL FACILITIES: ... 5. LANDFILLS, LAND APPLICATION SITES, AND OPEN DUMPS: ... 6. RECYCLING FACILITIES: ... 7. STEAM ELECTRIC POWER GENERATING FACILITIES: ... 8. TRANSPORTATION FACILITIES: ... 9. SEWAGE OR WASTEWATER TREATMENT WORKS: ... 10. MANUFACTURING FACILITIES WHERE INDUSTRIAL MATERIALS, EQUIPMENT, OR ACTIVITIES ARE EXPOSED TO STORM WATER: ...."

As for the phase I facilities[138] subject to inspection, the permit specifies that these need not be inspected if the Regional Board has inspected them within the past 24 months.

In a 1996 case, a California appellate court upheld an alcohol regulation ordinance and fee even though the state Department of Alcoholic Beverage Control has the exclusive power to collect license fees or occupation taxes related to alcoholic beverage sales under the California Constitution. The court explained that the local fee was not preempted by state law as follows:

> Courts distinguish between municipal revenue taxes that may be preempted by state law and fees properly imposed by a city pursuant to its regulatory authority to control and supervise a business that imposes an unusual burden on the local entity for services. For example, in one case, a city imposed a permit fee on house movers. State law specifically prohibits any municipal *license fee* to be imposed on intercity transportation. Despite this statute, the appellate court upheld the ordinance requiring the fee. The court found the purpose of the fee was to pay city inspection and administrative costs associated with house moving. The amount of the fee was based on reasonably anticipated costs of inspection and administration of the permitted house moving activities. Thus, the court concluded that the ordinance was a regulatory one and that the fee imposed was not preempted by the prohibition on license fees.[139] [Emphasis added.]

Thus, so long as the purpose of the regulatory fee would be stormwater regulation via inspections and not solely for revenue, the regulatory fee would not be classified as a special tax.[140] The special tax issue is discussed further below.

In short, a regulatory fee ordinance that provided for inspections of the facilities and construction sites specified in the permit (Parts 4C2a, 4C2b, & 4E) would not be preempted by the state fee authority in Water Code section 13260 or in title 23 of the California Code of Regulations.

5. A local regulatory fee for stormwater would not be a "special tax" under article XIII A, section 4, of the California Constitution

In their comments received June 25, 2008, the city claimants assert that they do not have sufficient fee authority under Government Code section 17556, subdivision (d). They focus on facilities that hold state-issued general industrial or construction stormwater permits and pay the

---

[138] On page 62 of the permit, U.S. EPA Phase I Facilities are defined as "facilities in specified industrial categories that are required to obtain an NPDES permit for storm water discharges, as required by 40 CFR 122.26(c). These categories include: (i) facilities subject to storm water effluent limitation guidelines, new source performance standards, or toxic pollutant effluent standards (40 CFR N); (ii) manufacturing facilities; (iii) oil and gas/mining facilities; (iv) hazardous waste treatment, storage, or disposal facilities; (v) landfills, land application sites, and open dumps; (vi) recycling facilities; (vii) steam electric power generating facilities; (viii) transportation facilities; (ix) sewage or wastewater treatment works; (x) light manufacturing facilities.

[139] *City of Oakland v. Superior Court* (1996) 45 Cal.App.4th 740, 759-760.

[140] *Id.* at 761.

state-imposed fees pursuant to Water Code section 13260, arguing that an additional local fee for inspecting these facilities would be considered a special tax. According to the city claimants:

> In order for a fee to be considered a "fee" as opposed to a "special tax," the fee cannot exceed the reasonable cost of providing the services necessary for which the fee is charged. See *Mills v. County of Trinity* (1980) 108 Cal.App.3d 656, 659-660. Any fee assessed by the Cities or the County for inspection of these facilities would be a double assessment, and thus run afoul of this rule.

Although the State Water Board's April 18, 2008 comments do not address the issue of a special tax or double fees, the comments do address double inspections under the two permit systems. Thus, the comments indirectly address state and local costs under the program:

> In addition to the requirements for permits issued to municipalities, the Water Boards are also mandated to issue permits to entities that discharge stormwater "associated with industrial activity." (fn. CWA § 402(p)(2)(B)). As part of its responsibilities for its in lieu program, the State Boards must administer and enforce all of its permits. (fn. CWA § 402(p).) The State Water Board has issued permits for industrial and construction discharges of stormwater, and the Los Angeles Water Board administers those permits within its jurisdiction. Therefore, the Los Angeles Water Board does conduct inspections at businesses in Los Angeles County to ensure compliance with the state permits. In addition, the MS4 Permit requires the permittees also to conduct inspections. This approach, which may result in two different entities inspecting the same businesses to review stormwater practices, was specifically envisioned and required by U.S. EPA in adopting its stormwater regulations.

The State Water Board includes the following in a footnote to its comments: "In fact, the Los Angeles Water Board acted to lessen any duplication of effort and costs to the municipal permittees by exempting them from inspection requirements if the same facility has been inspected by the Board." A review of the permit, however, shows this lessened duplication only for the inspections of phase I facilities.[141] Part 4C2b of the permit states: "Permittees need not inspect facilities that have been inspected by the Regional Board within the past 24 months." This limitation does not apply to inspecting the construction sites or the specified industrial or commercial facilities (restaurants, retail gasoline outlets, automotive service facilities and automotive dealerships).

---

[141] On page 62 of the permit, U.S. EPA phase I facilities are defined as "facilities in specified industrial categories that are required to obtain an NPDES permit for storm water discharges, as required by 40 CFR 122.26(c). These categories include: (i) facilities subject to storm water effluent limitation guidelines, new source performance standards, or toxic pollutant effluent standards (40 CFR N); (ii) manufacturing facilities; (iii) oil and gas/mining facilities; (iv) hazardous waste treatment, storage, or disposal facilities; (v) landfills, land application sites, and open dumps; (vi) recycling facilities; (vii) steam electric power generating facilities; (viii) transportation facilities; (ix) sewage or wastewater treatment works; (x) light manufacturing facilities.

Special taxes are governed by article XIII A, section 4, of the California Constitution:

> Cities, Counties and special districts, by a two-thirds vote of the qualified electors of such district, may impose special taxes on such district, except ad valorem taxes on real property or a transaction tax or sales tax on the sale of real property within such City, County or special district.

Government Code section 50076 states that a fee is not a special tax under article XIII A, section 4, if the fees are: (1) "charged in connection with regulatory activities which fees do not exceed the reasonable cost of providing services necessary to the activity for which the fee is charged," and (2) "are not levied for unrelated revenue purposes." The California Supreme Court has reaffirmed this rule.[142]

Staff finds that a local regulatory stormwater fee, if appropriately calculated and charged, would not be a special tax within the meaning of article XIII A, section 4. There is no indication that a local regulatory fee charged for the stormwater permit activities, and that does not exceed the reasonable cost of providing the inspections and related services, would violate the criteria in section 50076.

In fact, as to inspection duties and costs under two permit systems, one court has stated regarding a permit similar to the one in this claim:

> Rancho Cucamonga and the other permittees are responsible for inspection construction and industrial sites and commercial facilities within their jurisdiction for compliance with the enforcement of local municipal ordinance and permits. But the Regional Board continues to be responsible under the 2002 NPDES permit for inspections under the general permits.[143]

The reasoning of the *City of Rancho Cucamonga* case is instructive because a local regulatory fee could be used for local-government inspections, and the state fee is for state or regional inspections under the general statewide permits. As the court stated in the *Connell v. Superior Court* case discussed above:

> The [Water] Districts argue any fees levied by the districts "cannot exceed the cost to the local agency to provide such service," because such excessive fees

---

[142] *Sinclair Paint v. State Board of Equalization, supra,* 15 Cal.4th at p. 876: "[T]he term "special taxes" in article XIII A, section 4, does not embrace fees charged in connection with regulatory activities which fees do not exceed the reasonable cost of providing services necessary to the activity for which the fee is charged and which are not levied for unrelated revenue purposes."

[143] *City of Rancho Cucamonga v. Regional Water Quality Control Board, supra,* 135 Cal.App.4th 1377. The test claim record is silent as to the number of facilities within the permit area that are subject to the General Industrial Activity Storm Water Permit, or how many construction sites within the permit area are subject to the General Construction Activity Storm Water Permit.

would constitute a special tax. However, the districts fail to explain how this is an issue. No one is suggesting the districts levy fees that exceed their costs.[144]

Similarly, in this claim no one is suggesting that the local agencies levy regulatory fees that exceed their costs. Therefore, staff finds that a local regulatory fee for stormwater would not be a "special tax" under article XIII A, section 4, of the California Constitution for the activities at issue in the permit.

6. The local fee for stormwater would not be subject to voter approval under article XIII D (Proposition 218) of the California Constitution

Some local government fees are subject to voter approval under article XIII D of the California Constitution, as added by Proposition 218 (1996). Article XIII D defines a property-related fee or charge as any levy other than an ad valorem tax, a special tax, or an assessment, imposed by an agency on a parcel or a person as an incident of property ownership, including a user fee or charge for a property-related service. Among other things, new or increased property-related fees require a majority-vote of the affected property owners, or two-thirds registered voter approval, or weighted ballot approval by the affected property owners (article XIII D, § 6, subd. (c)). Exempt from voter approval, however, are property-related fees for sewer, water, or refuse collection services (*Ibid*).

In 2002, an appellate court decision in *Howard Jarvis Taxpayers Association v. City of Salinas* (2002) 98 Cal.App.4th 1351, found that a city's charges on developed parcels to fund stormwater management were property-related fees, and were not covered by Proposition 218's exemption for "sewer" or "water" services. This means that an election would be required to impose storm water fees if they are imposed "as an incident of property ownership."

Staff finds that the voter requirement does not apply to the activities at issue in the permit for the following reasons. First, as to the trash receptacles, refuse collection is expressly exempted from Proposition's 218 majority-vote requirement (article XIII D, § 6, subd. (c).). This exemption would encompass the state-mandated activity of placing and maintaining trash receptacles at transit stops.

Second, staff finds that local fees for inspections of restaurants, retail gasoline outlets, automotive dealerships, etc., would not be subject to the vote requirement of Proposition 218. In a case involving inspections of apartments in the City of Los Angeles in which a fee was charged to landlords, the California Supreme Court ruled that the regulatory fee for inspecting apartments was not a "levy ... upon a parcel or upon a person as an incident of property ownership, including a user fee or charge for a property-related service" [145] within the meaning of Proposition 218. The court interpreted the phrase "incident of property ownership" as follows:

> The foregoing language means that a levy may not be imposed on a property owner as such-i.e., in its capacity as property owner-unless it meets constitutional prerequisites. In this case, however, the fee is imposed on landlords not in their capacity as landowners, but in their capacity as business owners. The exaction at issue here is more in the nature of a fee for a business license than a charge

---

[144] *Connell v. Superior Court, supra,* 59 Cal.App.4th 382, 402.

[145] That is the definition of "fee" or "charge" in article XIII D, section 2, subdivision (e).

> against property. It is imposed only on those landowners who choose to engage in the residential rental business, and only while they are operating the business.[146]
>
> [¶]...[¶] In other words, taxes, assessments, fees, and charges are subject to the constitutional strictures when they burden landowners *as landowners.* The [City of Los Angeles'] ordinance does not do so: it imposes a fee on its subjects by virtue of their ownership of a business-i.e., because they are landlords.[147]

Following the reasoning of the *Apartment Assoc.* case, the inspection fees on restaurants, retail gasoline outlets, automotive dealerships, phase I facilities, etc., like the fee in *Apartment Assoc.*, would not be imposed on landowners as landowners, nor as an incident of property ownership, but by virtue of business ownership. Thus, the inspection fee would fall outside the voter requirement of Proposition 218.

As to the fees for inspecting construction sites, staff finds that they too would not be subject to Proposition 218's voter requirement. Article XIII D of the California Constitution states that it shall not be construed to "affect existing laws relating to the imposition of fees or charges as a condition of property development."[148]

Moreover, the California Supreme Court, in determining whether water connection fees are within the purview of Proposition 218, reasoned that "water service" fees were within the meaning of "property-related services" but "water connection" fees were not.

> Rather, we conclude that a water service fee is a fee or charge under article XIII D if, but only if, it is imposed "upon a person as an incident of property ownership." (Art. XIII D, § 2, subd. (e).) A fee for ongoing water service through an existing connection is imposed "as an incident of property ownership" because it requires nothing other than normal ownership and use of property. But a fee for making a new connection to the system is not imposed "as an incident of property ownership" because it results from the owner's voluntary decision to apply for the connection.[149]

The Supreme Court's reasoning applies to local stormwater fees for inspecting construction sites. That is, the fee would not be an incident of property ownership because it results from the owner's voluntary decision to build on or develop the property. Therefore, staff finds that local inspection fees for stormwater compliance at construction sites would not be within the purview of the election requirement of Proposition 218. A recent report by the Office of the Legislative Analyst concurs with this conclusion.[150]

[146] *Apartment Assoc. of Los Angeles County v. City of Los Angeles* (2001) 24 Cal.4th 830, 839-840.

[147] *Id.* at 842 [Emphasis in original.]

[148] Article XIII D, section 1, subdivision (b).

[149] *Richmond v. Shasta Community Services Dist.* (2004) 32 Cal.4th 409, 427.

[150] "Local governments finance stormwater clean–up services from revenues raised from a variety of fees and, less frequently, through taxes. Property owner fees for stormwater services typically require approval by two–thirds of the voters, or a majority of property owners.

In sum, staff finds that the permit activities at issue are not subject to voter approval in article XIII D of the California Constitution (Proposition 218), so a regulatory stormwater fee ordinance enacted by the claimants would not be subject to voter approval.

Given the existence of local regulatory fee authority under the police power (Cal. Const, art. XI, § 7), and the statutory fee authority in Public Resources Code section 40059, and lacking any evidence or information to the contrary, staff finds that the claimants' authority to adopt a regulatory fee is sufficient (pursuant to Gov. Code, § 17556, subd. (d)) to pay for placement and maintenance of transit trash receptacles, and the inspections of restaurants, automotive service facilities, retail gasoline outlets, automotive dealerships, phase I facilities, as defined, and construction sites, and related activities specified in the permit. Therefore, the staff finds that there are no "costs mandated by the state" within the meaning of Government Code sections 17514 and 17556.

CONCLUSION AND STAFF RECOMMENDATION

For the reasons discussed above, staff recommends that the Commission adopt this analysis to deny the test claims because the claimants have fee authority (under Cal. Const. article XI, § 7, & Pub. Res. Code, § 40059) within the meaning of Government Code section 17556, subdivision (d), sufficient to pay for the activities in the permit (in parts 4C2a, 4C2b, 4E & 4Fc3).

Developer fees and fees imposed on businesses that contribute to urban runoff, in contrast, are not restricted by Proposition 218 and may be approved by a vote of the governing body. Taxes for stormwater services require approval by two–thirds of the electorate." Office of the Legislative Analyst. *California's Water: An LAO Primer* (October 22, 2008) page 56. APARTMENT ASSOCIATION OF LOS ANGELES COUNTY, INC., et al., Plaintiffs and Appellants,
v.
CITY OF LOS ANGELES, Defendant and Respondent.
No. S082645.

Supreme Court of California
Jan. 8, 2001.

SUMMARY

A city council, seeking to establish and fund a program to remedy substandard housing conditions, adopted an ordinance that required the owners of all residential rental properties subject to inspection under the program to pay a fee. An apartment association and other groups with similar interests brought an action for declaratory and injunctive relief against the city, alleging that the fee ordinance was unconstitutional and therefore void as a charge upon real property under Prop. 218 (Cal. Const., art. XIII D). The trial court sustained the city's demurrer without leave to amend, finding that the fee was not subject to the constitutional requirements, and entered judgment for the city. (Superior Court of Los Angeles County, No. BC195216, Charles W. McCoy, Jr., Judge.) The Court of Appeal, Second Dist., Div. One, No. B130243, reversed.

The Supreme Court reversed the judgment of the Court of Appeal. The court held that this ordinance did not fall within the scope of Cal. Const., art. XIII D, which only restricts fees imposed directly on property owners in their capacity as such. The inspection fee was not imposed on landlords in their capacity as property owners, but rather in their capacity as business owners. This constitutional provision does not refer to fees imposed on an incident of property ownership, but rather to fees imposed on a parcel or a person as an incident of property ownership; this distinction was crucial to this case. According to its plain meaning, Cal. Const., art. XIII D applies only to exactions levied solely by virtue of property ownership. This inspection fee was imposed because the property was being rented; it ceased along with the business operation, whether or not ownership remained in the same hands. (Opinion by Mosk, J., with George, C. J., Kennard, Werdegar, and Chin, JJ., concurring. Dissenting opinion by Brown, J., with Baxter, J., concurring (see p. 845).)

HEADNOTES

Classified to California Digest of Official Reports

(1) Appellate Review § 145--Scope of Review--Questions of Law and Fact-- Interpretation of Constitutional Provision.
The interpretation of a constitutional provision, passed by voter initiative, is a question of law for the appellate courts to decide on independent review of the facts.

(2a, 2b, 2c) Property Taxes § 7.6--Real Property Tax Limitation-- Proposition 218--Construction--In Context of Proposition 13.
Prop. 218, which added Cal. Const., art. XIII C and art. XIII D, can best be understood against its historical background, which began in 1978 with the adoption of Prop. 13, the purpose of which was to cut local property taxes. Prop. 218 buttressed the limitations in Prop. 13 on ad valorem property taxes and special taxes by placing analogous restrictions on assessments, fees, and charges. Prop. 218 must be construed in the context of Prop. 13. Prop. 218 focuses on exactions, whether they be called taxes, fees, or charges, that are directly associated with property ownership.

(3a, 3b, 3c, 3d, 3e) Property Taxes § 7.6--Real Property Tax Limitation--Proposition 218:Municipalities § 54--Ordinances--Fee Imposed on Owners of Residential Rental Properties--Validity.
A city ordinance that required payment of a fee by the owners of all residential rental properties subject to inspection under a program designed to remedy substandard housing conditions did not fall within the scope of Prop. 218 (Cal. Const., art. XIII D), which only restricts fees imposed directly on property owners in their capacity as such. The inspection fee was not imposed on landlords in their capacity as property owners, but rather in their capacity as business owners. This constitutional provision does not refer to

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

fees imposed on an incident of property ownership, but rather to fees imposed on a parcel or a person as an incident of property ownership. That distinction was crucial to this case. According to its plain meaning, Cal. Const., art. XIII D applies only to exactions levied solely by virtue of property ownership. This inspection fee was imposed because the property was being rented; it ceased along with the business operation, whether or not ownership remained in the same hands.
[See 9 Witkin, Summary of Cal. Law (9th ed. 1989) Taxation, §§ 110A, 110B.]
(4) Real Property § 4--Incidents of Ownership--Right of Alienation.
Ownership of property in fee simple absolute is the greatest possible estate. Among the panoply of lesser estates are such nonfreehold chattels real as leases for a specific term and periodic tenancies-in common parlance, rentals or leases of limited duration. Among the incidents of estates in land are the so-called bundle of rights that flow from such tenure. Among them is the fundamental right to alienate one's property held in fee simple. That incident, or right, has been called inseparable, indispensable, and necessary. The power to alienate property or a property right is not limited to the right to sell or assign it. It means generally the power to transfer or convey it to another. The conveyance need not be of the whole fee. The right of alienation applies when fee holders seek to convey lesser estates. The power or right of alienation incident to the ownership of an estate in fee simple includes the power or right to dispose of property held in fee by lease, mortgage, or other mode of conveyance.

(5) Taxation § 3--Construction--Distinguished from Regulatory Fees.
Regulatory fees are those charged in connection with regulatory activities, which do not exceed the reasonable cost of providing services necessary to the activity for which the fee is charged, and which are not levied for unrelated revenue purposes.

(6) Statutes § 27--Construction--Liberality:Constitutional Law § 11-- Construction--Liberality.
As a rule, a command that a constitutional provision or a statute be liberally construed does not license either enlargement or restriction of the evident meaning of the provision.

MOSK, J.

We granted review to decide whether a city ordi-

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

nance imposing an inspection fee on private landlords violates article XIII D of the California Constitution (article XIII D), added by initiative measure, Proposition 218, in 1996. We conclude that it does not.

In July 1998, the City of Los Angeles put into effect the Los Angeles Housing Code. It is codified as article 1 of chapter XVI of the Los Angeles Municipal Code (§ 161.101 et seq.). Later that month, plaintiffs sued the city for declaratory and injunctive relief, alleging that Los Angeles Municipal Code section 161.352, imposing an inspection fee on private landlords, is unenforceable because it was enacted without complying with section 6 of article XIII D. The city demurred. The trial court sustained the demurrer without leave to amend, finding that the fee was not subject to the constitutional requirements. It entered judgment for the city.

In its statement of decision, the trial court recognized that the inspection fee "appears arguably to fall within the wide range of assessments which Proposition 218 was apparently written to encompass." But it added, "In *Pennell v. City of San Jose* (1986) 42 Cal.3d 365, 375 [228 Cal.Rptr. 726, ***834** 721 P.2d 1111], the California Supreme Court held that a fee charged to cover the costs of operating San Jose's rent control ordinances, and not used to raise general revenue, is not subject to Article XIII A of the California Constitution. The City's ordinance here fits squarely within both the reason and rule of *Pennell*.The ordinance levies only property used for residential apartment rentals, and the money is used only to pay for regulat[ing such] rentals to insure, among other things, that they do not degenerate into what is commonly called 'slum conditions.' The assessment is not imposed on all property owners-only a subset of owners who rent apartments."

The Court of Appeal reversed, holding that the state constitutional provision invalidated the city ordinance. The court wrote: "There is nothing in Proposition 218 that exempts regulatory fees imposed on residential rental properties. It thus adds nothing to say, as does the City, that the fees are not 'imposed upon property owners in general, but only those who voluntarily engage in the business of renting, generate the risks of slum housing, and specially benefit from regular inspections as they contribute to the overall reputability and safety of the housing provided.' Quite plainly, Proposition 218 applies to any 'fee' or 'charge,' both of which are defined to mean 'any levy other than an ad valorem tax, a special tax, or an assessment, imposed by an agency upon a parcel or upon a person as an incident of property ownership, including a user fee or charge for a property-related service.' (Art. XIII D, § 2, subd. (e) ....) However well intentioned the City's program to abolish slum housing may be, we find it impossible to say that a fee imposed upon the owners of rental units so the City can locate and eradicate substandard housing is anything other than a user fee or charge for a property-related service." (Italics and fn. omitted.)

I.

A.

Section 161.102 of the Los Angeles Municipal Code states the reason for enacting the Los Angeles Housing Code: "It is found and declared that there exist in the City of Los Angeles substandard and unsanitary residential buildings and dwelling units the physical conditions and characteristics of which render them unfit or unsafe for human occupancy and habitation, and which conditions and characteristics are such as to be detrimental to or jeopardize the health, safety and welfare of their occupants and of the public.

"It is further found and declared that the existence of such substandard buildings as dwelling units threatens the physical, social and economic stability of sound residential buildings and areas, and of their supporting ***835** neighborhood facilities and institutions; necessitates disproportionate expenditures of public funds for remedial action; impairs the efficient and economical exercise of governmental powers and functions; and destroys the amenity of residential areas and neighborhoods and of the community as a whole."

Los Angeles Municipal Code section 161.301, entitled Scope, declares that the Los Angeles Housing Code applies to "all residential rental properties with two or more dwelling units on the same lot, the land, buildings and structures appurtenant thereto," but not to owner-occupied units, on-campus dormitory housing, hotels, motels, or certain other types of housing also specifically exempted.

Division 3.5 of the Los Angeles Housing Code (§ 161.351 et seq.) is entitled Housing Inspection Fees.

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

Section 161.351 limits the scope of division 3.5 to "residential rental properties with two or more dwellings subject to the provisions of this Code." Those properties "will be subject to regular inspection by the General Manager or an authorized representative. Inspections may also be complaint-based." (*Ibid.*)

Section 161.352 of the Los Angeles Municipal Code, at issue here, sets forth the inspection fee schedule. It provides, in its entirety: "Owners of all buildings subject to inspection shall pay a service fee of $12.00 per unit per year. The fee will be used to finance the cost of inspection and enforcement by the Housing Department. Should the owner fail to pay the required fee, the City of Los Angeles will recover it, plus accrued interest, utilizing any remedies provided by law including nuisance abatement or municipal tax lien procedures established by ordinance or state law. This fee shall be known as the 'Systematic Code Enforcement Program Fee.' " (*Ibid.*, boldface omitted.)

B.

In November 1996 the voters approved Proposition 218, the Right to Vote on Taxes Act. (Ballot Pamp., Gen. Elec. (Nov. 5, 1996) text of Prop. 218, § 1, p. 108; reprinted as Historical Notes, 2A West's Ann. Cal. Const. (2001 supp.) foll. art. XIII C, § 1, p. 33.) The proposition amended the California Constitution, adding article XIII D. Section 3, subdivision (a)(3) of article XIII D provides that, with certain exceptions not relevant here, "No tax, assessment, fee, or charge shall be assessed by any agency upon any parcel of property or upon any person as an incident of property ownership except: [¶] ... [¶] ... as provided by this article." An agency is a local or regional governmental entity. (*Id.*, § 2, subd. (a); Cal. Const., art. XIII C, § 1, subd. (b).) ***836**

Section 1 of article XIII D provides that it applies to "all assessments, fees and charges, whether imposed pursuant to state statute or local government charter authority." Fees and charges are defined in subdivision (e) of section 2 thereof. " 'Fee' or 'charge' means any levy other than an ad valorem tax, a special tax, or an assessment, imposed by an agency upon a parcel or upon a person as an incident of property ownership, including a user fee or charge for a property-related service." (*Ibid.*)

"Property-related service" is further defined. It "means a public service having a direct relationship to property ownership." (Art. XIII D, § 2, subd. (h).)

Thus, and in summary, article XIII D applies, with certain exceptions not relevant here, to "any levy ... upon a parcel or upon a person as an incident of property ownership, including a user fee or charge for a property-related service." (Art. XIII D, § 2, subd. (e).) As will appear, the outcome of this case turns on the meaning of this language.

C.

(1) Before us is "a question of law for the appellate courts to decide on independent review of the facts." (*Sinclair Paint Co. v. State Bd. of Equalization* (1997) 15 Cal.4th 866, 874 [64 Cal.Rptr.2d 447, 937 P.2d 1350].) Though our reasoning turns on the language of the constitutional stricture, it may be helpful to explain, as did the Court of Appeal in *Howard Jarvis Taxpayers Assn. v. City of Riverside* (1999) 73 Cal.App.4th 679 [86 Cal.Rptr.2d 592](*Howard Jarvis*), the reasons that led to placing Proposition 218 on the ballot.

(2a) "Proposition 218 can best be understood against its historical background, which begins in 1978 with the adoption of Proposition 13. 'The purpose of Proposition 13 was to cut local property taxes. [Citation.]' [Citation.] Its principal provisions limited ad valorem property taxes to 1 percent of a property's assessed valuation and limited increases in the assessed valuation to 2 percent per year unless and until the property changed hands. (Cal. Const., art. XIII A, §§ 1, 2.)

"To prevent local governments from subverting its limitations, Proposition 13 also prohibited counties, cities, and special districts from enacting any special tax without a two-thirds vote of the electorate. (Cal. Const., art. XIII A, § 4; *Rider v. County of San Diego* (1991) 1 Cal.4th 1, 6-7 [2 Cal.Rptr.2d 490, 820 P.2d 1000].) It has been held, however, that a special assessment is not a special tax within the meaning of Proposition 13. (*Knox v. City of *837 Orland* (1992) 4 Cal.4th 132, 141 [14 Cal.Rptr.2d 159, 841 P.2d 144], and cases cited.) Accordingly, a special assessment could be imposed without a two-thirds vote.

"In November 1996, in part to change this rule, the

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

electorate adopted Proposition 218, which added articles XIII C and XIII D to the California Constitution. Proposition 218 allows only four types of local property taxes: (1) an ad valorem property tax; (2) a special tax; (3) an assessment; and (4) a fee or charge. (Cal. Const., art. XIII D, § 3, subd. (a)(1)-(4); see also [*id.*],§ 2, subd. (a).) It buttresses Proposition 13's limitations on ad valorem property taxes and special taxes by placing analogous restrictions on assessments, fees, and charges." (*Howard Jarvis*, *supra*,73 Cal.App.4th 679, 681-682.)

D.

(3a) The Court of Appeal explained the parties' differing views of the effect of article XIII D on the city ordinance. "As viewed by [plaintiffs], the fee is imposed 'upon a parcel or upon a person as an incident of property ownership' and is, therefore, subject to the procedural requirements of Proposition 218. As viewed by the City, the fee is imposed upon a business activity (the rental of residential dwellings), separate and apart from property ownership, and purely for regulatory purposes, and it is therefore not subject to Proposition 218." (Italics omitted.)

Adhering before us to their point of view, plaintiffs contend that "nothing in Proposition 218 ... support[s] the contention that [it] was not meant to affect the ability of local governments to impose and collect business 'regulatory fees.' " The city also adheres to its position, devoting much of its briefing to an argument that because its inspection fee is a regulatory fee on business operations, it falls outside the purview of article XIII D. Examining the ballot arguments for and against Proposition 218 and the Legislative Analyst's analysis of the measure, the city also contends that article XIII D was intended only to restrict fees imposed directly on property owners in their capacity as such. A regulatory fee imposed on residential rental businesses, the city argues, necessarily falls outside article XIII D's ambit, even if the fee bears some relation to ownership of real property. FN1

FN1 We have also received several amicus curiae briefs. Along with one of them is a request to judicially notice three purported local mobilehome park rent control ordinances and two other documents regarding that topic. The request is denied. The five documents have no bearing on the question before us.

Amici curiae also include a printed discussion issued by the Legislative Analyst in December 1996 and entitled Understanding Proposition 218. This document contains material relevant to the question at bench, and we grant the request for judicial notice regarding it. (Evid. Code, §§ 452, subd. (c), 459, subd. (a).)

As will appear, neither party is entirely correct. The relevant language of article XIII D does not compel a conclusion in plaintiffs' favor; rather, it ***838** compels the opposite. The city also misses the mark when it contends (or at least implies) that a regulatory fee or a levy on the operation of a business necessarily falls outside the scope of article XIII D.

But both parties are partly correct. Plaintiffs accurately state that the constitutional provision does not speak of regulatory fees or levies on business operations. Hence, the mere fact that a levy is regulatory (as this inspection fee clearly is) or touches on business activities (as it clearly does) is not enough, by itself, to remove it from article XIII D's scope. But the city is correct that article XIII D only restricts fees imposed directly on property owners in their capacity as such. The inspection fee is not imposed solely because a person owns property. Rather, it is imposed because the property is being rented. It ceases along with the business operation, whether or not ownership remains in the same hands. For that reason, the city must prevail.

II.

Section 2 of Proposition 218 stated the measure's purpose. "The people of the State of California hereby find and declare that Proposition 13 was intended to provide effective tax relief and to require voter approval of tax increases. However, local governments have subjected taxpayers to excessive tax, assessment, fee and charge increases that not only frustrate the purposes of voter approval for tax increases, but also threaten the economic security of all Californians and the California economy itself. This measure protects taxpayers by limiting the methods by which local governments exact revenue from taxpayers without their consent." (Ballot Pamp., Gen.

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

Elec., *supra*, text of Prop. 218, § 2, p. 108; reprinted as Historical Notes, 2A West's Ann. Cal. Const., *supra*, foll. art. XIII C, § 1, p. 33.)

The repeated references to taxes and taxpayers suggest an intent to prohibit unratified exactions imposed on property owners as such, rather than on the business of renting or leasing apartments-i.e., "residential rental properties with two or more dwellings" (L.A. Mun. Code, § 161.351).

(2b) As explained in *Howard Jarvis*, *supra*,73 Cal.App.4th 679, Proposition 218 is Proposition 13's progeny. Accordingly, it must be construed in that context. (*People ex rel. Lungren v. Superior Court* (1996) 14 Cal.4th ***839** 294, 301 [58 Cal.Rptr.2d 855, 926 P.2d 1042].) Specifically, because Proposition 218 was designed to close government-devised loopholes in Proposition 13, the intent and purpose of the latter informs our interpretation of the former. Proposition 13 was directed at taxes imposed on property owners, in particular homeowners. The text of Proposition 218, the ballot arguments (both in favor and against), the Legislative Analyst's analysis, and the annotations of the Howard Jarvis Taxpayers Association, which drafted Proposition 218, all focus on exactions, whether they are called taxes, fees, or charges, that are directly associated with property ownership.

(3b) The Legislative Analyst's analysis, printed in the November 1996 ballot pamphlet, is illustrative. It explained that Proposition 218 "would constrain local governments' ability to impose fees, assessments, and taxes," meaning "property-related" fees, including fees for water, sewer and refuse collection, but excluding gas and electricity charges (see Cal. Const., art. XIII D, § 3, subd. (b)) and development fees (see *id.*,§ 1, subd. (b)). (Ballot Pamp., Gen. Elec., *supra*, Legis. Analyst's analysis, p. 73.) It did not refer to levies linked more indirectly to property ownership.

(2c) The ballot arguments for Proposition 218 are also illustrative. "Proposition 218 guarantees your right to vote on local tax increases-even when they are called something else, like 'assessments' or 'fees' and imposed on homeowners." (Ballot Pamp., Gen. Elec., *supra*, argument in favor of Prop. 218, p. 76.) "After voters passed Proposition 13, politicians created a loophole in the law that allows them to raise taxes without voter approval by calling taxes 'assessments' and 'fees.' " (*Ibid.*) "There are now over 5,000 local districts which can impose fees and assessments without the consent of local voters. Special districts have increased assessments by over 2400% over 15 years. Likewise, cities have increased utility taxes 415% and raised benefit assessments 976%, a tenfold increase." (*Ibid.*) "To confirm the impact of fees and assessments on you, look at your property tax bill. You will see a growing list of assessments imposed without voter approval. The list will grow even longer unless Proposition 218 passes." (*Ibid.*)

(3c) The ballot arguments identify what was perhaps the drafter's main concern: tax increases disguised via euphemistic relabeling as "fees," "charges," or "assessments." But in fairness to plaintiffs, it cannot be denied that the text of article XIII D does not limit its scope to taxes and taxpayers. We turn to the definitive language: restrictions on *any* levy imposed "upon a parcel or upon a person as an incident of property ownership." (Art. XIII D, § 2, subd. (e).)

The foregoing language means that a levy may not be imposed on a property owner as such-i.e., in its capacity as property owner-unless it ***840** meets constitutional prerequisites. In this case, however, the fee is imposed on landlords not in their capacity as landowners, but in their capacity as business owners. The exaction at issue here is more in the nature of a fee for a business license than a charge against property. It is imposed only on those landowners who choose to engage in the residential rental business, and only while they are operating the business.

The contrary reasoning of the Court of Appeal, and of plaintiffs, stems from a reliance on the word "incident," leaving aside that the constitutional provision does not refer to fees imposed *on* an incident of property ownership, but on a parcel or a person *as* an incident of property ownership. As amicus curiae for the city persuasively argue, the distinction is crucial.

Were the principal words *parcel* and *person* missing, and were *as* replaced with *on*, so that article XIII D restricted the city's ability to impose fees "on an incident of property ownership," plaintiffs' argument might have merit. (4) For among the incidents [FN2] of estates in land are the so-called bundle of rights that flow from such tenure. (31 C.J.S. (1996) Estates § 12, pp. 28-30; *id.*, § 14, pp. 32, 34; *id.*, § 31, p. 58.) Among them is the fundamental right to alienate

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

one's property held in fee simple. (E.g., *id.*, § 12, p. 30; *Holien v. Trydahl* (N.D. 1965) 134 N.W.2d 851, 856; *Davis v. Geyer* (1942) 151 Fla. 362, 369 [9 So.2d 727, 728]; *Hardy v. Galloway**841 (1892) 111 N.C. 519, 523 [15 S.E. 890]; see also *Yee v. City of Escondido* (1992) 503 U.S. 519, 528 [112 S.Ct. 1522, 1528-1529, 118 L.Ed.2d 153].) That incident, or right, has been called "inseparable" (*Holien, supra*, 134 N.W.2d at p. 856; *Hardy, supra*, 15 S.E. at p. 890), "indispensable" (*Dukes v. Crumpton* (1958) 233 Miss. 611, 620 [103 So.2d 385, 388]), and "necessary" (*Re Collier* (Nfld. 1966) 60 D.L.R.2d 70, 75 [52 M.P.R. 211, 216] (per Puddester, J.)).

FN2 Over time, "incident" has meant many things. As a noun, the meanings include the burden of the risk of a diminution of the value of real property during condemnation proceedings (*Agins v. City of Tiburon* (1980) 447 U.S. 255, 263, fn. 9 [100 S.Ct. 2138, 2143, 65 L.Ed.2d 106]), the " 'burdens and disabilities' " of slavery prohibited by the Thirteenth Amendment to the United States Constitution (*Jones v. Mayer Co.* (1968) 392 U.S. 409, 441 [88 S.Ct. 2186, 2204, 20 L.Ed.2d 1189]), or, in earlier times, the monetary obligations imposed by the king or a mesne lord (McPherson, *Revisiting the Manor of East Greenwich* (1998) 42 Am. J. Legal Hist. 35, 39; see also 2 Coke (1641) Institutes of the Lawes of England (Butler & Hargrave's Notes ed.) 69a, § 95, fn. 7). And, in a more general sense, the meanings of "incident" include benefits or duties that appertain to some greater right or interest, i.e., the principal. (Civ. Code, §§ 662, 1084, 3540; *Owsley v. Hamner* (1951) 36 Cal.2d 710, 716-717 [227 P.2d 263, 24 A.L.R.2d 112]; *Fender v. Waller* (1941) 139 Neb. 612, 616 [298 N.W. 349, 351]; *Harris v. Elliott* (1836) 35 U.S. (10 Pet.) 25, 54 [9 L.Ed. 333].) In its fourth edition (1897), Bouvier's Law Dictionary defined "incident" as a term "used both substantively and adjectively of a thing which, either usually or naturally and inseparably depends upon, appertains to, or follows another that is more worthy. For example, ... the right of alienation is necessarily incident to a fee-simple at common law ...." (*Id.* at p. 1006, col. 1.) Many cases have followed the Bouvier's Law Dictionary definition, or ones similar to it. (E.g., *Watts v. Copeland* (1933) 170 S.C. 449, 452 [170 S.E. 780]; *Moccasin State Bank v. Waldron* (1928) 81 Mont. 579, 586 [264 P. 940].) "Thus, timber trees are incident to the freehold, and so is a right of way." (*In re Estate of Bellesheim* (N.Y. Surr. 1888) 1 N.Y.S. 276, 278 [dictum]; accord, *Harris v. Elliott, supra*, 35 U.S. (10 Pet.) at p. 54 [9 L.Ed. at p. 344] [easements]; Black's Law Dict. (7th ed. 1999) p. 765, col. 1 ["the utility easement is incident to the ownership of the tract"].)

The power to alienate property or a property right is not limited to the right to sell or assign it. It means generally the power "to transfer or convey [it] to another." (Black's Law Dict., *supra*, p. 73, col. 1.) The conveyance need not be the whole fee. The right of alienation applies when fee holders seek to convey lesser estates. [FN3] " '[T]he power or right of alienation' " " 'incident to the ownership of an estate in fee-simple' " " 'include[s] the power or right to dispose of property held in fee ... by *lease*, mortgage, or other mode of conveyance ....' " (*Porter v. Barrett* (1925) 233 Mich. 373, 379-380 [206 N.W. 532, 535], quoting *Manierre v. Welling* (1911) 32 R.I. 104, 140 [78 A. 507, 522], italics added here.)

FN3 It is, of course, axiomatic in Anglo-American law that ownership of real property in fee simple absolute is the greatest possible estate (1 Coke (1628) Institutes of the Lawes of England (Butler & Hargrave's Notes ed.) 18a, § 11), and among the panoply of lesser estates are such nonfreehold chattels real as leases for a specific term and periodic tenancies (*Pacific Southwest Realty Co. v. County of Los Angeles* (1991) 1 Cal.4th 155, 162 [2 Cal.Rptr.2d 536, 820 P.2d 1046])-in common parlance, rentals or leases of limited duration. (1 Tiffany, The Law of Real Property (3d ed. 1939) § 76, pp. 112-113; *Wilgus v. Commonwealth* (1873) 72 Ky. (9 Bush.) 556, 557 [1873 WL 6660], citing 2 Blackstone, Commentaries 143 [" 'An estate for years in land is regarded in law as inferior to an estate for life or an inheritance' "]; *Brydges v. Millionair Club* (1942) 15 Wash.2d 714, 719 [132 P.2d 188, 190]; see also *Williams v. R. R.* (1921) 182 N.C. 267, 272 [108 S.E. 915, 918].)

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

(3d) Accordingly, *if*article XIII D restricted the city's ability to impose a "tax, assessment, fee, or charge on an incident of property ownership" (cf. *id.*,§§ 2, subd. (e), 3), plaintiffs' argument might be persuasive. The business of renting apartments is an incident of owning them, an activity necessarily dependent on that ownership but not vice versa. One can own apartments without renting them, but no one can rent them without owning them. (See fn. 2, *ante*, at p. 840.) [FN4]

> FN4 In *Acme Freight Lines v. City of Vidalia* (1942) 193 Ga. 334 [18 S.E.2d 540](*Acme Freight*), similar statutory language favored an analogous argument-that a tax on an incident of the trucking business was a tax on a trucking company's ancillary delivery business.
>
> In *Acme Freight*, a trucking company sought an injunction against a city's practice of imposing a business tax on those ancillary operations. The firm relied on this law: " 'No subdivision of this State ... shall levy any excise, license, or occupation tax of any nature *on* ... *any incidents* of said motor carrier business, or on a motor common carrier.' " (*Acme Freight, supra*, 193 Ga. 334, 335 [18 S.E.2d 540, 541], italics added.)
>
> The city, Vidalia, acknowledged "its lack of authority to levy any tax against the plaintiff in reference to its transportation of freight as a motor common carrier .... Justification for the tax is founded upon the fact that, in addition to the operation of trucks for the transportation of freight ..., the plaintiff carries on ... a 'pick-up and delivery service' in and around the city. The trial judge ruled that this 'is not a *necessary* incident to the operation of a common carrier,' and that as to it 'the plaintiff is not a motor common carrier, but is engaged in a special and distinct business in the City of Vidalia, and is taxable as such.' This formula interpolates before the word 'incidents,' used in the statute, the word 'necessary' so as to require, as a condition of tax immunity, that the operation be a necessary incident of the business of a motor common carrier. This appears to us to be erroneous. [Rather,] ... an incident of the business of a motor common carrier of freight would be something naturally associated as pertinent to such transportation and necessarily dependent upon it, but without which the business of transportation might nevertheless be carried on. In other words, the incidental operation would be necessarily dependent upon the transportation, but the business of transportation would not be necessarily dependent upon the incidental operation.... As we understand the evidence adduced in this case, the plaintiff's operations against which the tax is said to be levied is of the above-described character; and accordingly we conclude that the tax is illegal, and should have been enjoined." (*Acme Freight, supra*, 193 Ga. 334, 335-336 [18 S.E.2d 540, 541].)

But the language of article XIII D is materially dissimilar. As stated, article XIII D, section 3 provides that "[n]o tax, assessment, fee, or charge ***842** shall be assessed by any agency upon any parcel of property or upon any person as an incident of property ownership except ... [¶] ... [¶] ... as provided by this article." (See also *id.*,§ 2, subd. (e).) In other words, taxes, assessments, fees, and charges are subject to the constitutional strictures when they burden landowners *as landowners*. The ordinance does not do so: it imposes a fee on its subjects by virtue of their ownership of a business-i.e., because they are landlords. [FN5] What plaintiffs ask us to do is to alter the foregoing language-changing "as an incident of property ownership" to "on an incident of property ownership." But to do so would be to ignore its plain meaning-namely, that it applies only to exactions levied solely by virtue of property ownership. We may not interpret article XIII D as if it had been rewritten. (Accord, *People ex rel. Lungren v. Superior Court, supra*,14 Cal.4th 294, 301.)

> FN5 We acknowledge that landlords may rent because they wish to keep the property occupied in their absence, for philanthropic reasons, or to a family member for a nominal charge. Such arrangements are not rare, and may lie within the province of the ordinance, which refers to "residential rental properties." But even nonprofit or charitable purposes are business purposes under broad constructions of the term, and we believe

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

> that as long as the property is being rented for consideration, it is being conveyed for a business purpose. (Cf. *Marin Municipal Water Dist. v. Chenu* (1922) 188 Cal. 734, 738 [207 P. 251] [" 'business' " has "a narrower meaning applicable to occupation or employment for livelihood or gain, and to mercantile or commercial enterprises or transactions"].)

The language of article XIII D, sections 2, subdivision (e), and 3, shows that it applies to levies imposed on a person or on property strictly as an incident of property ownership. Had the law included levies imposed on incidents of the ownership or use of residential real property (as relevant ***843** here, the exercise of the right to rent one's property), its text would have said so. But it did not. And although the plain language of the relevant constitutional provisions requires us not to consider extrinsic evidence of the voters' intent, we reiterate, purely as an aside, that neither the ballot arguments nor the Legislative Analyst's analysis suggested that article XIII D was intended to encompass fees of the type at issue here.

The subordinate clause in section 2, subdivision (e), of article XIII D, as clarified in section 2, subdivision (h), supports our conclusion. It may be recalled that among the fees or charges covered by article XIII D, section 2, subdivision (e), is "a user fee or charge for a property-related service." Such a service "means a public service having a direct relationship to property ownership." (*Id.*,§ 2, subd. (h).) In this case, the relationship between the city's inspection fee and property ownership is indirect-it is overlain by the requirement that the landowner be a landlord.

As stated, the foregoing clause is subordinate. It does not include all possible fees and charges that fall within the ambit of article XIII D. (5)**(See fn. 6.)** But it does provide additional evidence of the scope of the constitutional provision. [FN6]

> FN6 We turn to discuss briefly the authorities on which the city chiefly relies. They consist of two cases: *Sinclair Paint Co. v. State Bd. of Equalization*, *supra*,15 Cal.4th 866; and *Pennell v. City of San Jose* (1986) 42 Cal.3d 365 [228 Cal.Rptr. 726, 721 P.2d 1111] (affd. *sub nom.Pennell v. San Jose* (1988) 485 U.S. 1 [108 S.Ct. 849, 99 L.Ed.2d 1]). They are inapposite.
>
> In *Sinclair* we held that an exaction on sources of lead contamination to remediate the effects of lead poisoning was a fee, not a tax. In *Pennell*, we held that a $3.75 charge on each residential rental unit, imposed by a rent control ordinance to fund its hearing process, also was a fee, not a tax. In *Sinclair* and *Pennell*, we defined such fees, which are similar to the city's inspection charge, as regulatory in nature. Regulatory fees are those " ' "charged in connection with regulatory activities[,] which fees do not exceed the reasonable cost of providing services necessary to the activity for which the fee is charged and which are not levied for unrelated revenue purposes." ' " (*Sinclair Paint Co. v. State Bd. of Equalization*, *supra*,15 Cal.4th 866, 876, quoting *Pennell v. City of San Jose*, *supra*,42 Cal.3d 365, 375, in turn quoting *Mills v. County of Trinity* (1980) 108 Cal.App.3d 656, 659-660 [166 Cal.Rptr. 674], bracketed material added here.)
>
> We have stated that the city's inspection fee is a regulatory fee. And we have concluded that it does not fall within article XIII D's ambit. But *Sinclair* and *Pennell* do not concern themselves with the issue we confront here. Indeed, in *Sinclair* we cautioned that "We are not here concerned with issues arising under constitutional amendments effected by a recent initiative measure (Proposition 218) adopted at the November 5, 1996, General Election. That measure contains new restrictions on local agencies' power to impose fees and assessments." (*Sinclair Paint Co. v. State Bd. of Equalization*, *supra*,15 Cal.4th 866, 873, fn. 2.) In *Pennell v. City of San Jose*, *supra*,42 Cal.3d 365, we could not have written a similar caveat, for article XIII D did not exist at the time. But it applies just as well.

(3e) At oral argument, plaintiffs emphasized article XIII D's exemptions for existing development fees and all charges to provide gas and electrical ***844** service. (Art. XIII D, §§ 1, subd. (b), 3, subd. (b).) They assert that a developer fee is a fee on an incident of property-the right to improve it-and that there

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

would have been no need to exempt such fees if other fees imposed on incidents of property did not fall within article XIII D's scope. Similarly, they argue that one can own property without having utility service, and that if article XIII D applied strictly to levies that are imposed solely on the basis of property ownership, there would have been no need to exempt such utility charges in the constitutional provision.

We note, however, that the provision regarding development fees refers only to those existing at the time of article XIII D's enactment. Moreover, it is unclear to us whether a fee to provide gas or electricity service is the same as a fee imposed on the consumption of electricity or gas. In any event, we believe that the aforementioned exemptions may have been included in an abundance of caution in case court interpretations of article XIII D similar to the Court of Appeal's should prevail. Finally, we do not believe that any incongruity can trump the plain language we have discussed herein. In short, we are unpersuaded.

Similarly unpersuasive is plaintiffs' contention, also emphasized at oral argument, that the city's ability to enforce payment of the inspection fee by imposing a lien on the property shows that the fee is property-related, not business-related. The fact is that the city is simply availing itself of all possible means to collect the fee. Property liens may be precipitated by at least one cause unconnected to land ownership (except ownership of the land on which the lien is imposed): the cost of removing graffiti. (Gov. Code, § 38772.)A lien may be imposed on parents' land to defray the cost of removing graffiti their child has scrawled on that belonging to another. (*Id.*, subd. (b).)

Plaintiffs also advert to section 5 of Proposition 218, which requires that "[t]he provisions of this act shall be liberally construed to effectuate its purposes of limiting local government revenue and enhancing taxpayer consent." (Ballot Pamp., Gen. Elec., *supra*, text of Prop. 218, § 5, p. 109; reprinted as Historical Notes, 2A West's Ann. Cal. Const., *supra*, foll. art. XIII C, p. 33.) But "[l]iberal construction cannot overcome the plain language of Proposition 218 limiting [its] scope ... to [levies] based on real property." (*Howard Jarvis Taxpayers Assn. v. City of San Diego* (1999) 72 Cal.App.4th 230, 237-238 [84 Cal.Rptr.2d 804].) (6) As a rule, a command that a constitutional provision or a statute be liberally construed "does not license either enlargement or restriction of its evident meaning" (*People v. Cruz* (1974) 12 Cal.3d 562, 566 [116 Cal.Rptr. 242, 526 P.2d 250]). Thus, ***845** given that article XIII D's scope is, as we have explained, unambiguously limited to burdens on landowners as such, " 'no resort to this command [of liberal construction] is required' " (*Howard Jarvis*, *supra*,73 Cal.App.4th 679, 687, quoting *Buhlert Trucking v. Workers' Comp. Appeals Bd.* (1988) 199 Cal.App.3d 1530, 1533, fn. 4 [247 Cal.Rptr. 190]) or even permitted.

III.

The Court of Appeal's judgment is reversed.

George, C. J., Kennard, J., Werdegar, J., and Chin, J., concurred.

BROWN, J.

I respectfully dissent.

Under the provisions of Proposition 218, affected property owners must approve the imposition of any new or increased fee, which is "any levy other than an ad valorem tax, a special tax, or an assessment, imposed by an agency upon a parcel or upon a person as an incident of property ownership, including a user fee or charge for a property-related service." (Cal. Const., art. XIII D, § 2, subd. (e) (article XIII D).) The dispositive determination in this case is whether a rental inspection fee is imposed "upon a person as an incident of property ownership." (*Ibid.*) To find that it is not, the majority concludes the Court of Appeal erroneously substituted "on" for "as." It is the majority that errs, however, in assuming "incident" denotes "the so-called bundle of rights that flow from [estates in land]." (Maj. opn., *ante*, at p. 840; see maj. opn., *ante*, at pp. 840-841.) In my view, the voters did not intend the courts to look any further than a standard dictionary in applying the terms of article XIII D.

"A constitutional amendment should be construed in accordance with the natural and ordinary meaning of its words. [Citation.]" (*Amador Valley Joint Union High Sch. Dist. v. State Bd. of Equalization* (1978) 22 Cal.3d 208, 245 [149 Cal.Rptr. 239, 583 P.2d 1281]; *People ex rel. Lungren v. Superior Court* (1996) 14 Cal.4th 294, 302 [58 Cal.Rptr.2d 855, 926 P.2d 1042].) Nothing in the ballot arguments in favor of or

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

against Proposition 218 or in the Legislative Analyst's analysis implies that a different rule should obtain with respect to "incident," or that the voters intended it to have other than a plain meaning. The dictionary defines an "incident" as "something incident to something else," that is, "dependent upon or involved in something else." (Webster's New World Dict. (3d college ed. 1988) p. 682; see also Black's Law Dict. (4th ed. 1968) p. 904, col. 2 ["Used as a noun, [incident] denotes anything which inseparably belongs to, or is connected with, or inherent in, another thing .... Also, less strictly, it denotes anything which is usually ***846** connected with another, or connected for some purposes, though not inseparably"].) In other words, if the imposition of a fee depends upon one's ownership of property, it comes within the purview of article XIII D unless otherwise excepted.

The fee at issue here plainly meets this definition. Pursuant to its police powers, the City of Los Angeles (City) enacted a Housing Code (L.A. Mun. Code, § 161.101 et seq.), which provides that residential rental properties are subject to regular inspection for substandard and unsanitary conditions. Under the Housing Code, funding for these inspections devolves to a particular class of property owners, the landlords of the rental units, who must pay a $12 fee for every unit owned. (*Id.*, § 161.352.) [FN1] As the majority acknowledges, "no one can rent [apartments] without owning them." (Maj. opn., *ante*, at p. 841; see also *Nash v. City of Santa Monica* (1984) 37 Cal.3d 97, 105 [207 Cal.Rptr. 285, 688 P.2d 894].) And no one is subject to the rental inspection fee without owning them. This exaction is thus imposed "as an incident of property ownership" (art. XIII D, § 2, subd. (e)); that is, it is dependent upon such ownership. (Cf. Off. of Legis. Analyst, Understanding Proposition 218 (Dec. 1996) p. 30 ["Generally, we think these fees would be considered property-related if there were no practical way that the owner could avoid the fee, short of selling the property or fundamentally changing its use"].) Moreover, "[s]hould the owner fail to pay the required fee, the City of Los Angeles will recover it, plus accrued interest, utilizing any remedies provided by law including nuisance abatement or municipal tax lien procedures established by ordinance or state law." (L.A. Mun. Code, § 161.352.) The use of tax lien procedures is a typical enforcement mechanism for delinquent levies imposed against property.

FN1 Los Angeles Municipal Code section 161.352 provides: "*Owners* of all buildings subject to inspection shall pay a service fee of $12.00 per unit per year. The fee will be used to finance the cost of inspection and enforcement by the Housing Department. Should the *owner* fail to pay the required fee, the City of Los Angeles will recover it, plus accrued interest, utilizing any remedies provided by law including nuisance abatement or municipal tax lien procedures established by ordinance or state law. This fee shall be known as the 'Systematic Code Enforcement Program Fee.' " (Italics added.)

The majority avoids this result in part by finding the City "imposes a fee on its subjects by virtue of their ownership of a business-i.e., because they are landlords." (Maj. opn., *ante*, at p. 842.) The last portion of this statement proves too much: Landlords are property owners. Imposition of the fee is an incident of, i.e., depends upon, that status and thereby runs afoul of article XIII D. As for the first portion of the statement, it ignores or disregards what the majority elsewhere concedes, that the business at issue is inseparable from property ownership. No amount of parsing can change that ineluctable fact. ***847**

The majority also concludes "neither the ballot arguments nor the Legislative Analyst's analysis suggested that article XIII D was intended to encompass fees of the type at issue here." (Maj. opn., *ante*, at p. 843.) Ultimately, the terms of the measure as enacted control our interpretation (see *Kopp v. Fair Pol. Practices Com.* (1995) 11 Cal.4th 607, 673 [47 Cal.Rptr.2d 108, 905 P.2d 1248] (conc. opn. of Mosk, J.)); and their plain meaning does not support the majority's reasoning. But the ballot materials also belie the majority's conclusion. While those materials do not specifically mention rental inspection fees, such an intention is readily discernable from any fair reading. The Legislative Analyst warned generally that "[t]his measure would constrain local governments' ability to impose fees" and "[r]educe the amount of fees ... businesses pay." (Ballot Pamp., Gen. Elec. (Nov. 5, 1996), analysis of Prop. 218 by the Legis. Analyst, p. 73 (Ballot Pamphlet).) More particularly, the Legislative Analyst's list of "most likely fees and assessments affected by these provisions" (*id.* at p. 74) easily encompasses this type of

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

exaction: "park and recreation programs, fire protection, lighting, ambulance, business improvement programs, library, and water service." (*Ibid.*) The argument in favor of Proposition 218 reminded the electorate that "[a]fter voters passed Proposition 13, politicians created a loophole in the law that allows them to raise taxes without voter approval by calling taxes 'assessments' and 'fees.' " (Ballot Pamp., *supra*, argument in favor of Prop. 218, p. 76.) "Proposition 218 guarantees your right to vote on local tax increases-even when they are called something else, like 'assessments' or 'fees' ...." (*Ibid.*) The argument did not limit the type of "fee" that would be subject to a vote under article XIII D but instead promised, "Proposition 218 ... stops politicians' end-runs around Proposition 13." (Ballot Pamp., *supra*, rebuttal to argument against Prop. 218, p. 77.) Particularly in light of its timing, the City's rental inspection fee appears to be just the kind of evasive maneuver at which proponents aimed Proposition 218. (See generally *Huntington Park Redevelopment Agency v. Martin* (1985) 38 Cal.3d 100, 105 [211 Cal.Rptr. 133, 695 P.2d 220] [purpose, in part, of Prop. 13 was "to prevent the government from recouping its losses from decreased property taxes by imposing or increasing other taxes"].)

In this regard, the majority also fails to accord any significance to two important provisions of Proposition 218. In any action challenging imposition of a new or increased fee or charge, the initiative assigns to the agency "the burden ... to demonstrate compliance with this article" (art. XIII D, § 6, subd. (b)(5)), thereby reversing the usual deference accorded governmental action in such matters and making it more difficult to defend its legitimacy. (See Ballot Pamp., *supra*, analysis of Prop. 218 by the Legis. ***848** Analyst, p. 74; see also art. XIII D, § 4, subd. (f) [imposing same burden for assessments].) The voters also expressly provided that Proposition 218 "shall be liberally construed to effectuate its purposes of limiting local government revenue and enhancing taxpayer consent." (Ballot Pamp., *supra*, text of Prop. 218, § 5, p. 109, also reprinted as Historical Notes, 2A West's Ann. Cal. Const. (2000 supp.) foll. art. XIII C, § 1, p. 25.) The majority's construction frustrates both these goals.

The City argues that conditioning imposition of its rental inspection fee on compliance with the procedures set forth in article XIII D would allow landlords to defeat regulation of their businesses. This argument misses two critical points: First and generally, since the City has decided its rental inspections are necessary to eradicate "substandard and unsanitary residential buildings and dwelling units the physical conditions and characteristics of which ... are such as to be detrimental to or jeopardize the health, safety and welfare of their occupants and of the public" (L.A. Mun. Code, § 161.102), it can reasonably expect the public to pay for the program.

Second and specifically, the Los Angeles Municipal Code already provides substantial enforcement authority to prosecute landlords who violate the City's Housing Code. If a property owner fails to correct violations, the City may recover its administrative as well as abatement costs (L.A. Mun. Code, § 161.206.2), may seek criminal penalties including fines and imprisonment (*id.*, § 161.206.3), and may pursue civil remedies as provided in the Health and Safety Code (L.A. Mun. Code, § 161.206.4).

When the voters passed Proposition 13 in 1978, they sought to restrict the ability of government to impose taxes and other charges on property owners without their approval. For almost two decades, however, they witnessed politicians evade this constitutional limitation. The message of Proposition 218 is that they meant what they said. With the majority turning a deaf ear to that message, we may well expect a future effort to "stop[] politicians' end-runs around Proposition 13." (Ballot Pamp., *supra*, rebuttal to argument against Prop. 218, p. 77.)

[Opinion certified for partial publication. [FN*]]

FN* Pursuant to California Rules of Court, rule 976.1, this opinion is certified for publication with the exception of part I.

SUMMARY

An individual filed a declaratory relief action challenging the constitutionality of a flat fee imposed by the Legislature pursuant to Fish & G. Code, § 711.4, on those submitting project proposals to the Department of Fish and Game for environmental review. Plaintiff alleged the fee constituted a tax that was not passed by a two-thirds majority as required under Cal. Const., art. XIII A (Prop. 13). The trial court found that although the statute was not unconstitutional on its face, it was unconstitutional as applied to plaintiff. Before entry of judgment, however, the parties settled the matter, with the department agreeing to refund plaintiff's fees and to stop collecting the fees statewide. Employees of the department then filed a petition for a writ of mandate to compel the department to resume collection of the fees and to pursue retroactive collection. The writ proceeding and the declaratory relief action were consolidated. The trial court again ruled that the statute was unconstitutional as applied, but that, in the absence of an appellate finding that the statute was unconstitutional, the ruling could only be applied to the individual plaintiff. The trial court ordered the department to reinstate enforcement and to retroactively collect the fees, and the settlement order in the declaratory relief action was modified to conform to the judgment in the writ proceedings. (Superior Court of Sacramento County, Nos. 95CS02523 and CV529928, Jeffrey L. Gunther, Judge.)

The Court of Appeal affirmed in part and reversed in part the judgment entered in the declaratory relief action, and, since the court concluded that the statute was a valid regulatory fee, and was therefore constitutionally enacted, plaintiff's appeal from the judgment entered in the writ proceedings was dismissed as moot. The court held that the Legislature did not violate the supermajority requirement of Cal. Const., art. XIII A, by imposing the flat fee pursuant to Fish & G. Code, § 711.4, with less than a two-thirds vote, since the exaction was a regulatory fee rather than a tax. The department met its burden of showing that the amount of fees generated by Fish & G. Code, § 711.4, was far less than the cost of the environmental reviews provided. Thus, the fees were not revenue raising. Although a flat fee will seldom represent the exact cost of providing a service, the evidence was sufficient to sustain the legislative determination that a flat fee system was a reasonable means to allocate the costs of environmental review. It was reasonable to assess a flat fee and thereby reduce the cost and administrative difficulty of accounting for the services provided for each individual project. Moreover, collection of a flat fee at a uniform time eased the administrative burden of collection and provided certainty to those submitting project proposals. The court further held that there was sufficient evidence to show that there was a reasonable basis for the legislative decision to charge more for the review of a negative declaration than for the review of an environmental impact report. (Opinion by Raye, J., with Sims, Acting P. J., and Nicholson, J., concurring.)

Construction of Legislation.
The Legislature did not violate the super-majority requirement of Cal. Const., art. XIII A (Prop. 13) by imposing a flat fee pursuant to Fish & G. Code, § 711.4, with less than a two-thirds vote, on those who submit project proposals to the Department of Fish and Game for the environmental review necessary to protect fish and wildlife, since the exaction was a regulatory fee rather than a tax. The department met its burden of showing that the amount of fees generated by Fish & G. Code, § 711.4, was far less than the cost of the environmental reviews provided. Thus, the fees were not revenue raising. Although a flat fee will seldom represent the exact cost of providing a service, the evidence was sufficient to sustain the legislative determination that a flat fee system was a reasonable means to allocate the costs of environmental review. It was reasonable to assess a flat fee and thereby reduce the cost and administrative difficulty of accounting for the services provided for each individual project. Moreover, collection of a flat fee at a uniform time eased the administrative burden of collection and provided certainty to those submitting project proposals.
[See 9 Witkin, Summary of Cal. Law (9th ed. 1989) Taxation, § 107 et seq.]
(2) Property Taxes § 7.6--Constitutional Provisions--Proposition 13-- Assessments as Fees or Taxes:Taxation § 3--Construction of Legislation.
The determination under Prop. 13 (Cal. Const., art. XIII A, §§ 3, 4) whether impositions are taxes or fees is a question of law for the appellate courts to decide on independent review of the facts. Ordinarily, taxes are imposed for revenue purposes, rather than in return for a specific benefit conferred or privilege granted, and most taxes are compulsory rather than imposed in response to a voluntary decision to develop or to seek other government benefits or privileges.

(3a, 3b) Property Taxes § 7.8--Constitutional Provisions--Proposition 13--Regulatory Fees--Special Taxes.
Fees charged for the costs of regulatory activities are not special taxes under a Cal. Const., art. XIII A, § 4 (Prop. 13) analysis if the fees do not exceed the reasonable cost of providing services necessary to the activity for which the fee is charged and they are not levied for unrelated revenue purposes. A regulatory fee may be imposed under the police power when the fee constitutes an amount necessary to carry out the purposes and provisions of the regulation. The regulatory fee, to survive as a fee, does not require a precise cost-fee ratio. Legislators need only apply sound judgment and consider probabilities according to the best honest viewpoint of informed officials in determining the amount of the fee. The government bears the burden of proof. It must establish (1) the estimated costs of the service or regulatory activity, and (2) the basis for determining the manner in which the costs are apportioned, so that charges allocated to a payor bear a fair or reasonable relationship to the payor's burdens on or benefits from the regulatory activity. The record need only demonstrate a reasonable relationship between the fees to be charged and the estimated cost of the service or program to be provided; that requirement may be satisfied by evidence showing only that the fees will generate substantially less than the anticipated costs.

(4) Fish and Game § 3--Regulation--Fee for Environmental Review with Department of Fish and Game--Validity of Higher Fee for Review of Negative Declaration.
In proceedings to challenge the validity of a flat fee (Fish & G. Code, § 711.4) on those submitting project proposals to the Department of Fish and Game for environmental review, there was sufficient evidence to show that there was a reasonable basis for the legislative decision to charge more for the review of a negative declaration than for the review of an environmental impact report. A senior environmental specialist supervisor for the department testified at trial that the standard for a negative declaration is that a project must have no adverse impact on the environment. Thus, the department must ensure that the disclosure of the possible impacts is complete and to assure any mitigation measures are adequate. Often, the proposed mitigation measures are inadequate, and the department staff must work with the lead agency and with the project proponent to develop an acceptable negative declaration document. The supervisor testified that his staff probably spent more time on the review of a negative declaration than the review of an equivalent size project with environmental impact report documentation. Hence, due to project information collection costs and the time spent negotiating mitigation measures, the department's costs were generally higher for negative declarations.

RAYE, J.

In this appeal we consider whether the Legislature ran afoul of the supermajority requirement of article XIII A of the California Constitution when it imposed a flat fee per environmental review by the Department ***939** of Fish and Game (Fish and Game). More precisely, we must determine whether the exactions imposed by section 711.4 of the Fish and Game Code [FN1] constitute a regulatory fee or a tax.

FN1 Further statutory references to sections of an undesignated code are to this code.

Determining whether an exaction is a fee or a tax has been a recurring chore since 1978 when the voters in California enacted comprehensive and constitutional tax reform. (Cal. Const., art. XIII A (the Jarvis-Gann Property Tax Initiative or Proposition 13).) An act to increase state taxes must be passed by two-thirds of the members of the Legislature and an increase in local taxes must be passed by a two-thirds vote of the qualified electors. (Cal. Const., art. XIII A, §§ 3 & 4.) Fees, by contrast, are not subject to the supermajority limitation of article XIII A. Albert Mills, an appellant in both cases, insists the environmental review fees charged by Fish and Game pursuant to section 711.4 constitute a tax and, therefore, are unconstitutional because the statute was passed by slightly less than a two-thirds majority.

It is well established that the amount of fees collected must not surpass the cost of the regulatory services or programs they are designed to support. We must decide whether there must be a direct correlation between the amount of a fee imposed on a specific payor and the benefits received or burdens imposed by the payor's activity. More to the point, is a flat regulatory fee in legal effect a tax subject to the supermajority requirement of California Constitution, article XIII A?

We conclude that as long as the cumulative amount of the fees does not surpass the cost of the regulatory program or service and the record discloses a reasonable basis to justify distributing the cost among payors, a fee does not become a tax simply because each payor is required to pay a predetermined fixed amount. Flat fees are not in legal effect taxes. Based on the evidentiary record before us, we find that the Legislature did not violate California Constitution, article XIII A by imposing a flat regulatory fee on those who submit project proposals to Fish and Game for the environmental review necessary to protect fish and wildlife. The consequences of our ruling to the multiple parties in these consolidated cases are explained below.

Procedural Background

Section 711.4, enacted by the Legislature in 1990, set a fee schedule to defray a portion of the costs incurred by Fish and Game in meeting its environmental review obligations under the California Environmental Quality Act and the Z'Berg-Nejedly Forest Practice Act of 1973. (§ 711.4, ***940** subds. (a), (b), (c) & (d); Pub. Resources Code, §§ 4511, 21000 et seq.) Section 711.4 states in relevant part: "(a) The department shall impose and collect a filing fee in the amount prescribed in subdivision (d) to defray the costs of managing and protecting fish and wildlife trust resources, including, but not limited to, consulting with other public agencies, reviewing environmental documents, recommending mitigation measures, developing monitoring requirements for purposes of the California Environmental Quality Act ..., consulting pursuant to Section 21104.2 of the Public Resources Code, and other activities protecting those trust resources identified in the review pursuant to the California Environmental Quality Act. [ ] (b) The filing fees shall be proportional to the cost incurred by the department and shall be annually reviewed and adjustments recommended to the Legislature in an amount necessary to pay the full costs of department programs as specified." For projects for which a negative declaration has been prepared, the filing fee set by the Legislature is $1,250 and for projects for

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

which an environmental impact report has been prepared, the filing fee is $850. (§ 711.4, subd. (d)(3) & (4).) "The county clerk may charge a documentary handling fee of twenty-five dollars ($25) per filing in addition to the filing fee specified in subdivision (d)." (§ 711.4, subd. (e).)

Albert W. Mills challenged the constitutionality of section 711.4 in a declaratory relief action he filed in July 1991. He sought declaratory and injunctive relief in a first cause of action and a refund of his fees in a second cause of action. A demurrer was sustained without leave to amend to the second cause of action. Fish and Game sought a writ of mandate to compel the trial court to dismiss the entire complaint because Mills had not filed a claim for a tax refund. We summarily denied the petition for the writ. The trial court denied a subsequent motion for judgment on the pleadings on the same ground asserted in the writ petition.

In 1992 the Legislature amended the statute to expand the exemptions for projects for which no fees were required. The amendment passed by a two-thirds majority vote.

The case was tried in the summer of 1994 and the following spring the trial court issued a statement of decision. The court found that although the statute was not unconstitutional on its face, on the evidence received by the court, it was unconstitutionally applied. Before the statement of decision was filed and a judgment was entered, the parties settled the lawsuit. Fish and Game agreed to refund Mills's fees, to pay his attorney fees, and to cease collection of the fees statewide.

Employees of Fish and Game, however, filed a petition for a writ of mandate to compel Fish and Game to resume collection of the fees and to ***941** pursue retroactive collection. Mills intervened in the writ proceedings, which were then consolidated with the declaratory relief action.

The trial court again ruled that section 711.4 was unconstitutional as applied but that, in the absence of an appellate finding that the statute was unconstitutional, the ruling could only be applied to Mills. (Cal. Const., art. III, § 3.5.)The court ordered Fish and Game to reinstate enforcement and to retroactively collect the fees. The settlement order in the declaratory relief action was modified to conform to the judgment in the writ proceedings. The settlement order provides in pertinent part that section 711.4 is not unconstitutional on its face but is unconstitutional as applied to Mills; Fish and Game is enjoined from collecting fees from Mills but is not otherwise prohibited from collecting fees.

Mills appeals both judgments. On appeal from the judgment in the declaratory relief action, he maintains section 711.4 is unconstitutional on its face and, consequently, Fish and Game must be enjoined from collecting all fees. Fish and Game urges us to dismiss the appeal on multiple grounds: Mills lacks standing because, under the terms of the settlement, he is not aggrieved; the constitutionality of section 711.4 is moot because it was amended by a two-thirds majority; and the trial court lacked jurisdiction because Mills failed to exhaust his administrative remedies by filing a claim for a tax refund. Fish and Game also appeals. We granted the Pacific Legal Foundation's request to file an amicus curiae brief echoing Mills's constitutional attack on the statute.

For the reasons discussed herein, we affirm in part and reverse in part the judgment entered in the declaratory relief action. Because we have concluded that section 711.4 is a valid regulatory fee, and was therefore constitutionally enacted, Mills's appeal from the judgment entered in the writ proceedings is moot. That appeal is dismissed.

Discussion

I [FN*]

FN* See footnote, *ante*, page 935.

. . . . . .

II

Before we apply the ever-growing body of case law involving post-Proposition 13 fees and taxes, it is essential to understand the statutory world ***942** in which Fish and Game lives and section 711.4 was born. The language of these statutes resolves some of the issues raised by Mills and provides the necessary background to analyze others.

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

(1a) Mills argues that Fish and Game does not operate a regulatory program and, therefore, the fee is not regulatory in nature. We disagree. Fish and Game is only one small part of a huge regulatory system in place in this state to protect and sustain the environment, but it plays a vital regulatory role under the California Environmental Quality Act (CEQA). (Pub. Resources Code, § 21000 et seq.) CEQA guidelines specifically list Fish and Game as a trustee agency, a status which imposes certain obligations. Fish and Game must be consulted before a determination is made as to whether a negative declaration or an environmental impact report is required for a particular project. (Pub. Resources Code, § 21080.3, subd. (a).) If an environmental impact report is required, Fish and Game must comment as to the scope and contents of this document. (Pub. Resources Code, § 21080.4, subd. (a).) Later in the process, Fish and Game may be required to submit a proposed program to monitor the mitigation measures. (Pub. Resources Code, § 21081.6.)The same obligations are imposed by documents which function as environmental assessment documents such as timber harvest plans. (*Environmental Protection Information Center, Inc. v. Johnson (1985) 170 Cal.App.3d 604, 626[216 Cal.Rptr. 5022].)Fish and Game Code section 1802 also requires Fish and Game to consult with lead and responsible agencies.*

Fish and Game also has comparable obligations under the Forest Practice Act. (Pub. Resources Code, § 4511 et seq.) Like the responsibility conferred on it under CEQA, Fish and Game must review the impact of a timber harvest plan on fish and wildlife. The Department of Forestry and Fire Protection cannot approve a timber harvest plan until it has consulted with Fish and Game. (Pub. Resources Code, § 4582.6.)

Under both CEQA and the Forest Practice Act, Fish and Game is an essential link in a comprehensive attempt to safeguard the environment. The fact that Fish and Game does not operate an independent regulatory program with a correlative accounting system does not detract from its regulatory role. The law is not so narrowly drawn. In a similar vein, the court in *Sinclair Paint Co. v. State Bd. of Equalization* (1997) 15 Cal.4th 866 [64 Cal.Rptr.2d 447, 937 P.2d 1350] observed: "From the viewpoint of general police power authority, we see no reason why statutes or ordinances calling on polluters or producers of contaminating products to help in mitigation or cleanup efforts should be deemed less 'regulatory' in nature than the initial ***943** permit or licensing programs that allowed them to operate. Moreover, imposition of 'mitigating effects' fees in a substantial amount ... also 'regulates' future conduct by deterring further manufacture, distribution, or sale of dangerous products, and by stimulating research and development efforts to produce safer or alternative products." (*Id.* at p. 877.)

Having charged Fish and Game with the responsibility to manage and protect fish and wildlife through the environmental review process, the Legislature enacted a fee statute to fund Fish and Game's review functions. There are two parts of section 711.4 which are germane to the constitutional question before us.

The Legislature expressly addressed proportionality. Section 711.4, subdivision (b) states: "The filing fees shall be proportional to the cost incurred by the department and shall be annually reviewed and adjustments recommended to the Legislature in an amount necessary to pay the full costs of department programs as specified."

Although the Legislature mandated a flat fee financing mechanism, it also provided an exemption for those projects with a de minimis impact on fish and wildlife. Section 711.4, subdivision (d)(1) provides: "For a project which is found by the lead or certified regulatory agency to be de minimis in its effect on fish and wildlife, no filing fee shall be paid, whether or not a negative declaration or an environmental impact report is prepared pursuant to the California Environmental Quality Act." In fact, 68 percent of the projects are found to be de minimis and a fee is not required.

In sum, the Legislature has given Fish and Game a critical regulatory role in the complex regulatory structure created to safeguard precious environmental resources. At the same time, the Legislature created a flat fee system to finance Fish and Game's environmental review. That system, by statute, must be proportional to the overall cost of environmental review, but only those who propose development projects which have more than a de minimis impact upon fish and wildlife are required to bear the cost of review. We must determine whether the Legislature violated the Constitution by establishing such a fee system

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

with less than a two-thirds vote.

III

In 1991 the Legislature enacted the Childhood Lead Poisoning Prevention Act to provide evaluation, screening, and follow-up services for children who were at risk of suffering lead poisoning. The program of screening and treatment under the act was to be paid entirely by fees paid by those who ***944** contributed to lead contamination. In *Sinclair Paint Co.v.State Bd. ofEqualization, supra,* 15 Cal.4th 866, the Supreme Court concluded the act imposed bona fide regulatory fees, not taxes.

Sinclair is the first published case in the post-Proposition 13 era to consider whether a state, rather than a local, fee is in legal effect a tax. "Section 3 of article XIII A restricts the enactment of changes in state taxes, as follows: 'From and after the effective date of this article, any changes in State taxes enacted for the purpose of increasing revenues collected pursuant thereto whether by increased rates or changes in methods of computation must be imposed by an Act passed by not less than two-thirds of all members ... of the Legislature, except that no new ad valorem taxes on real property, or sales or transaction taxes on the sales of real property may be imposed.' " (*Sinclair Paint Co. v. State Bd. of Equalization, supra,* 15 Cal.4th at pp. 872-873.)By contrast, there have been an abundance of cases in which courts have struggled to characterize a local exaction as a fee or a "special tax" under California Constitution, article XIII A, section 4. In *Sinclair*, the Supreme Court announced that "[b]ecause of the close, 'interlocking' relationship between the various sections of article XIII A" the section 4 cases "may be helpful, though not conclusive" in deciding cases under section 3. (15 Cal.4th at p. 873.)

(2) The court also reiterated the fundamental principle that "whether impositions are 'taxes' or 'fees' is a question of law for the appellate courts to decide on independent review of the facts." (*Sinclair Paint Co. v. State Bd. of Equalization, supra,* 15 Cal.4th at p. 874.)Ordinarily, "taxes are imposed for revenue purposes, rather than in return for a specific benefit conferred or privilege granted" and "[m]ost taxes are compulsory rather than imposed in response to a voluntary decision to develop or to seek other government benefits or privileges." (*Id.* at pp. 873-874.)

Sinclair was particularly helpful in identifying three very different kinds of fees or assessments, viz. special assessments, development fees and regulatory fees. (See also *Isaac v. City of Los Angeles* (1998) 66 Cal.App.4th 586, 596 [77 Cal.Rptr.2d 752].) As the court pointed out, special assessments are based on the value of benefits conferred on property, and development fees are exacted in return for permits or other government privileges. Regulatory fees, enacted under the police power, are an entirely different animal. The parties have failed to distinguish between these types of fees and, consequently, have extracted general principles from cases involving one type of fee and applied them to cases involving a completely different type of fee. We have focused our research on those cases, like *Sinclair*, involving regulatory fees. ***945**

(3a) General principles have emerged. Fees charged for the associated costs of regulatory activities are not special taxes under an article XIII A, section 4 analysis if the " ' "fees do not exceed the reasonable cost of providing services necessary to the activity for which the fee is charged and [they] are not levied for unrelated revenue purposes." ' " (*Sinclair Paint Co. v. State Bd. of Equalization, supra,* 15 Cal.4th at p. 876; *Townzen v. County of El Dorado* (1998) 64 Cal.App.4th 1350, 1359 [76 Cal.Rptr.2d 281].) "A regulatory fee may be imposed under the police power when the fee constitutes an amount necessary to carry out the purposes and provisions of the regulation." (*San Diego Gas &Electric Co.v.San Diego County Air Pollution Control Dist.* (1988) 203 Cal.App.3d 1132, 1146, fn. 18 [250 Cal.Rptr. 420].) "Such costs ... include all those incident to the issuance of the license or permit, investigation, inspection, administration, maintenance of a system of supervision and enforcement." (*United Business-Com.v.City of San Diego* (1979) 91 Cal.App.3d 156, 165 [154 Cal.Rptr. 263].) Regulatory fees are valid despite the absence of any perceived "benefit" accruing to the fee payers. (*Pennellv.City of SanJose* (1986) 42 Cal.3d 365, 375 [228 Cal.Rptr. 726, 721 P.2d 1111], affd. on other grounds *sub nom. Pennell v. City of San Jose* (1988) 485 U.S. 1 [108 S.Ct. 849, 99 L.Ed.2d 1].) Legislators "need only apply sound judgment and consider 'probabilities according to the best honest viewpoint of informed officials' in determining the amount of the regulatory fee." (*United Business Com.v.City ofSan Diego, supra,* 91

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

Cal.App.3d at p. 166.)

The government bears the burden of proof. (*Beaumont Investorsv.Beaumont-CherryValley Water Dist.* (1985) 165 Cal.App.3d 227, 235 [211 Cal.Rptr. 567].) It must establish (1) the estimated costs of the service or regulatory activity, and (2) the basis for determining the manner in which the costs are apportioned, so that charges allocated to a payor bear a fair or reasonable relationship to the payor's burdens on or benefits from the regulatory activity. (*Id.* at pp. 234-235.)"Courts [look] to a variety of evidence in determining whether the agency has satisfied that burden, not all of it prepared before the adoption of the ordinance." (*City of Dublinv.County of Alameda* (1993) 14 Cal.App.4th 264, 282 [17 Cal.Rptr.2d 845].)

*City of Dublinv.County of Alameda, supra,*14 Cal.App.4th 264, provides guidance on the quantum of proof necessary to establish the requisite fee-cost ratio. By initiative, the voters in Alameda County enacted a comprehensive recycling plan. Under the law, the plan was to be funded from a recycling fund created by a $6 per ton surcharge on materials dumped in the county landfills. The issue presented was whether the evidence before the trial court established that the surcharge would not exceed the reasonably ***946** necessary costs of the programs it would fund. The Court of Appeal considered both the estimated costs of the programs and the basis for determining the apportionment of those costs.

The court wrote: "The trial court concluded that the requisite fee-cost relationship was not established because Measure D's programs are not yet developed and their costs cannot presently be calculated with certainty, but such specificity is not required. Instead, the record need only demonstrate a reasonable relationship between the fees to be charged and the *estimated* cost of the service or program to be provided; that requirement may be satisfied by evidence showing only that the fees will generate substantially less than the anticipated costs." (*City of Dublin v. County of Alameda, supra,*14 Cal.App.4th at p. 283, original italics.)

In a similar case, the Court of Appeal addressed the quantum of proof and proportionality. "Plaintiffs fault the report for failing to include 'site-specific' data showing a 'close connection' between new development and the fees to be imposed. However, their citation to 'taking' cases shows that they are blurring legal principles. [Citation.] The fee at issue here is a general one applied to all new residential development and valid if supported by a reasonable relationship between the amount of the fee and estimated cost of services. Site-specific review is neither available nor needed." (*Garrick Development Co.v.Hayward Unified School Dist.* (1992) 3 Cal.App.4th 320, 333-334 [4 Cal.Rptr.2d 897].)

(1b) Fish and Game met its burden of showing that the amount of fees generated by section 711.4 was far less than the cost of the environmental reviews provided. There was evidence that $11 million had been collected in fees, but the cost of the reviews was in excess of $20 million. Thus, the fees were not revenue raising in that they did not generate income which surpassed the cost of the services provided.

The more difficult issue is determining what latitude the Legislature has in establishing the amount of a fee imposed on an individual payor. Fish and Game argues the fees have no indicia of a tax. Since there is sufficient evidence to demonstrate that collectively the amount of the fees do not exceed the cost of the regulatory program they are collected to support, they urge us to uphold the constitutionality of section 711.4. Mills, on the other hand, insists Fish and Game failed to prove the more specific requirement that the fees are proportionate to the service provided or the burden imposed. He insists the flat fee is a tax because there is no individual correlation between the amount of the fee and the cost of the benefit or burden. Whether the Legislature retains the flexibility to mandate a flat fee by a simple majority vote is the crux of this case. ***947**

Sinclair is noteworthy for its expansive legitimation of regulatory fees. Under the formula approved by the Supreme Court, paint manufacturers are assessed fees based on their market share or their past and present responsibility for environmental lead contamination. (*Sinclair Paint Co. v. State Bd. of Equalization, supra,*15 Cal.4th at p. 872.)Market share is a novel methodology for assessing fees. Nevertheless, the court permitted present fees to be determined on the basis of past conduct when not only were fees nonexistent, but the dangers of lead-based paint were unknown.

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

As broad as the implications of *Sinclair* are, the Supreme Court did not have to reach the troublesome issue of proportionality, because paint manufacturers were assessed fees in proportion to their share of the market. Moreover, Sinclair, in moving for summary judgment, did not seek to establish that the amount of the fees bore no reasonable relationship to the social or economic burdens its operations generated. The court noted that Sinclair would have the opportunity at trial "to try to show that no clear nexus exists between its products and childhood lead poisoning, or that the amount of the fees bore no reasonable relationship to the social or economic 'burdens' its operations generated." (*Sinclair Paint Co. v. State Bd. of Equalization, supra*,15 Cal. 4th at p. 881.)

Close to 20 years ago, we articulated the same rule to Mills in his earlier constitutional challenge to fees charged for processing land use applications. In *Millsv.County of Trinity* (1980) 108 Cal.App.3d 656 [166 Cal.Rptr. 674], we stated: " '[T]he special tax' referred to in section 4 of article XIII A does not embrace fees charged in connection with regulatory activities which fees do not exceed the reasonable cost of providing services necessary to the activity for which the fee is charged and which are not levied for unrelated revenue purposes." (*Id.* at pp. 659-660.)In *Mills* as in *Sinclair*, however, the case was remanded "for a factual determination of whether the fees in question are reasonably compensatory for the costs occasioned by the regulated activities." (*Mills*, at p. 660.)

Flat regulatory fees were upheld in *Pennellv.City of SanJose, supra,*42 Cal.3d 365.In *Pennell*, a rent control ordinance imposed a flat annual fee on each rental unit. It was "designed to defray the costs of providing and administering the hearing process prescribed in the ordinance, not to pay general revenue to the local government." (*Id.* at p. 375.)The court concluded: "It is well settled that a municipality under the police power may impose a regulatory fee when, as here, the fee constitutes an amount necessary to carry out the purpose and provisions of the regulation." (*Id.* at p. 375, fn. 11.)***948**

The court in *Pennell* appeared satisfied that the cumulative amount of the fee would support the administration and implementation of the hearing process without an examination of the benefits to be derived by individual lessees. Many lessors would never avail themselves of the hearing process at all and yet under the rent control ordinance, they, like the lessees who would petition for hearing, were required to pay the fee. *Pennell* does not require the government to prove proportionality on an individual basis. Under *Pennell,* the significant inquiry is whether the amount of the fees collected under the ordinance exceed the cost of the regulatory program they are collected to support. Proportionality is measured collectively to assure that the fee is indeed regulatory and not revenue raising.

While Mills cites many cases for the general proposition that fees must be apportioned according to some formula for ascertaining the benefits received or the burdens imposed by the payor's activity, he fails to cite a single regulatory fee case in which a fee was found to be a tax because the government failed to sustain its burden of proving a reasonable apportionment. On this pivotal point, the cases require close examination for what they require and for what they do not.

Two cases involve regulatory fees, like those before us, enacted to defray the costs of programs to mitigate damage to the environment. In *San Diego Gas & Electric Co.v.San Diego CountyAir Pollution Control Dist., supra,*203 Cal.App.3d 1132(*San Diego Gas & Electric Co.*), and *Brydonv.East Bay Mun. Utility Dist.* (1994) 24 Cal.App.4th 178 [29 Cal.Rptr.2d 128], the Courts of Appeal upheld fee structures against challenges they constituted special taxes. Both cases discuss the apportionment issue at some length.

In *San Diego Gas & Electric Co., supra*, a utility company challenged an air pollution district's method of apportioning the costs of its permit programs by apportioning them among all monitored polluters according to a formula based on the amount of emissions discharged by a stationary pollution source. The emissions-based formula allowed the district to charge additional renewal permit fees based on the average pollution generated by a facility within a specific industry. The court wrote: "SDG&E argues the district has not specifically shown how the amount of emissions generated by a pollution source increase the district's indirect costs .... There is no reason to require the district to show precisely how more emissions generate more costs to justify the emission-based apportionment formula. The purpose

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

for the district's existence is to achieve and maintain air quality standards (§ 40001), thus from an overall perspective it is reasonable to allocate costs based on a premise that the more emissions generated by a ***949** pollution source, the greater the regulatory job of the district." (203 Cal.App.3d at pp. 1147-1148, fn. omitted.)

In rejecting *San Diego Gas & Electric Co.*'s argument that the emissions-based formula eroded the intent of the voters in enacting California Constitution, article XIII A, the court explained that "Proposition 13's goal of providing effective property tax relief is not subverted by the increase in fees or the emissions-based apportionment formula. A reasonable way to achieve Proposition 13's goal of tax relief is to shift the costs of controlling stationary sources of pollution from the tax-paying public to the pollution-causing industries themselves, an accomplishment of the 1982 amendments to [Health and Safety Code] section 42311 and the emissions-based fee schedule." (*San Diego Gas & Electric Co., supra*,203 Cal.App.3d at pp. 1148-1149.)

In *Brydon,* water customers challenged a new rate structure as a special tax. The inclined rate structure increased price per cubic foot for increased usage. The Court of Appeal found *San Diego Gas & Electric Co.* "a sustainable analogy." "Just as the regulatory scheme set forth by the [air pollution control district] was designed to achieve a legislatively mandated ecological objective, so is the inclined block rate structure of the District a response to state-mandated water-resource conservation requirements." (*Brydonv.East BayMun. Utility Dist., supra*,24 Cal.App.4th at p. 192.)The court emphasized the latitude necessary to set the amount of fees to meet the regulatory objectives. "In pursuing a constitutionally and statutorily mandated conservation program, cost allocations for services provided are to be judged by a standard of reasonableness with some flexibility permitted to account for system-wide complexity. [Citation.] [ ] ... [ ] ... In short, California Constitution, article XIII A does not apply to every regulatory fee simply because, as applied to one or another of the payor class, the fee is disproportionate to the service rendered." (*Id.* at pp. 193-194.)

Hence, both cases narrow the breadth of California Constitution, article XIII A as applied to regulatory fees. Both suggest a flexible assessment of proportionality within a broad range of reasonableness in setting fees. In *San Diego Gas & Electric Co.,* the use of a formula to distribute indirect costs was sustained, while in *Brydon* an inclined block rate schedule allowed the water district to discourage water consumption. Neither relied on the kind of exact apportionment calculation urged by Mills.

Still, *San Diego Gas & Electric Co.* and *Brydon*, unlike *Pennell*, did not involve flat fees. While the formula or rate structure may not have been exact, each bore some relationship to the benefit reaped or the burden ***950** imposed by the payor. Put another way, the payors had some control over the amount of the regulatory fee they were compelled to pay by the degree to which their respective activities impacted the environment. The more they polluted the air and consumed the water, the more they paid.

We acknowledge that in this case Mills had no comparable control over the amount of the fees he was charged to review his timber harvest plan. The amount of the fees is expressly set forth in section 711.4. (3b) Nevertheless, we hold that a regulatory fee, to survive as a fee, does not require a precise cost-fee ratio. A regulatory fee is enacted for purposes broader than the privilege to use a service or to obtain a permit. Rather, the regulatory program is for the protection of the health and safety of the public. The legislative body charged with enacting laws pursuant to the police power retains the discretion to apportion the costs of regulatory programs in a variety of reasonable financing schemes. An inherent component of reasonableness in this context is flexibility. We agree with the notion that shifting the costs of environmental protection to those who seek to impact our natural resources does not subvert the objectives embodied in Proposition 13. Hence, a regulatory fee does not violate California Constitution, article XIII A when the fees collected do not surpass the costs of the regulatory programs they support and the cost allocations to individual payors have a reasonable basis in the record.

IV

(1c) The record before us is a vivid illustration of the need for flexibility in establishing the amount of regulatory fees. Regulatory fees, unlike other types of user fees, often are not easily correlated to a specific, ascertainable cost. This may be due to the complexity

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

of the regulatory scheme and the multifaceted responsibilities of the department or agency charged with implementing or enforcing the applicable regulations; the multifaceted responsibilities of each of the employees who are charged with implementing or enforcing the regulations; the intermingled functions of various departments as well as intermingled funding sources; and expansive accounting systems which are not designed to track specific tasks.

Mills asserts that these problems preclude a finding of a fee. He points out that Fish and Game did not conduct the kind of study now accepted within the expert field of user fee analysis to ascertain with precision the justifiable amount of a proposed fee based on the costs involved in providing the service. He criticizes the change in accounting systems in July 1991 which obfuscates the data necessary to make credible calculations, and he bemoans ***951** the incomprehensibility of the new CALSTARS accounting system as it relates to a user fee analysis. He insists that depositing the fees into Fish and Game's preservation fund is tantamount to a tax since the preservation fund operates as a general fund for Fish and Game. And he provides many examples of how disproportionate the fees are as to certain payors. Although most projects only receive a cursory review, there is a substantial variance in the amount of time spent on more in-depth reviews, varying from a few minutes to a few weeks, with the burden falling most heavily on small timberland owners.

This evidence is undisputed. There is no question that a flat fee will seldom represent the exact cost of providing a service. Fish and Game does not pretend such a correlation exists. Since we have determined that state regulatory fees are different from other user fees, the question presented is whether the evidence in this record is sufficient to sustain the legislative determination that a flat fee system is a reasonable means to allocate the costs of environmental review. FN3

> FN3 Evidence of the legislative history of section 711.4 was admitted at trial. Legislative history can be relevant to a determination whether an exaction is a fee or a tax. (*CentexReal Estate Corp.v.City of Vallejo* (1993) 19 Cal.App.4th 1358, 1362 [24 Cal.Rptr.2d 48].) Here, the trial court found the costs of environmental review exceeded the amount of the fees, but it found imposition of a flat fee arbitrary. Without the benefit of the Supreme Court's holding in *Sinclair* and the broad analysis of regulatory fees, the trial court narrowly construed section 711.4 as a user fee requiring the amount of the fees to reflect the cost of the service provided the payor. Because we have decided that a flat fee may be a reasonable allocation of the costs of a regulatory fee and the trial court found Fish and Game had met its burden of proof on this issue, the legislative history cited by the trial court is unnecessary.

Mills fails to appreciate the difference between regulatory fees and more typical user fees. At trial, he offered an expert from the new cottage industry of analysts and advisers to local governments on how to legitimize their fees in the litigious climate spawned by Proposition 13. That expert's testimony reflects his misguided assumption that all fees are created equal and that, to survive constitutional attack, they must be supported by exhaustive studies, unassailable time keeping, and a precise cost-fee analysis.

He insisted that a cost analysis study was not only advisable, but necessary. "So that is why I am saying it is possible for Fish and Game to do a kind of cost analysis study. My question then would be, secondly, do they now have that in place? Have they kept track? Have they required their staff to fill in reports? I mean, they might be able to do it starting now. But have they done it? Nothing has been submitted to me showing a tracking process of the steps taken and breaking down the specific tasks and functions.

"I recall this being referenced to the fact the administrative or bookkeeping costs were too high to do that. Frankly, my judgment is that becomes a ***952** copout. It is not too difficult. You can organize and set up, especially in today's computerized world with P.C.'s on half the staff desks.

"Attorneys have to bill by the minutes. They have to keep track of their time.

"It is perfectly possible to keep track of time. And I think, frankly, my judgment might be that if it is difficult, if your staff are not now doing those things systematically, it needs a whole retraining and re-

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

gearing."

He opined that absent retraining, regearing, studies, and analysis, a fee could not survive a constitutional challenge. He went on to suggest a rather unique correlation between the time spent and the benefits achieved. Having testified he could not find a direct relationship between payment of a fee and providing any service, he stated: "There is no discussion of what happens as a result of the reviews. You know, do more spotted owls get saved? More fish saved? Or what. There is no functional relationship." Again he opined that in order to sustain the constitutionality of the fee, Fish and Game must document how a forest was saved or how many spotted owls were saved by the staff.

Fish and Game urges us to dismiss his opinion for several reasons: He had never reviewed the data supporting imposition of a state fee, he did not conduct any study to determine whether the section 711.4 flat fees were reasonable or proportional, and he had no familiarity with CEQA or the regulatory landscape in which Fish and Game must operate, not to mention that his proffered opinion constituted an inadmissible conclusion of law.

We need not address these specific deficiencies because we believe his testimony serves to highlight the fundamental distinction between a user fee and a regulatory fee. His testimony is predicated on many faulty assumptions based on user fees when there is an obvious correlation between cost and benefit. Moreover, in many cases, a statute demands that the amount of a fee be commensurate with the value of a service provided or the cost of a burden imposed. (See, e.g., Gov. Code, §§ 50076, 66001.) No comparable statutes apply to this state-imposed regulatory fee.

From the vantage point of one who earns a living studying user fees and counseling local governments on how to insulate their fees from constitutional attack, it is not surprising he would overlook the vast discrepancy between a fee imposed or a privilege accorded an individual and a fee that apportions and distributes the collective costs of a regulation. In the latter case, the many factors this expert described as deficiencies become the ***953** reasonable justification for imposing a flat fee. That is, the Legislature may have determined that the administrative cost and burden of a statewide fee, including expensive studies and accounting, was too high when a simpler, flat fee could be imposed. Moreover, often, as here, measuring the benefits is amorphous. The Legislature could reasonably eschew a graduated fee structure based on an accounting of owls that were spared and forests that survived. He failed to understand that a legislative body in determining the amount of a regulatory fee is legitimately hampered by the many factors he describes as necessary to support a user fee.

The Legislature determined that the fee must be paid when a notice of determination is entered. Mills argues the timing of the exaction is unfair and unreasonable because many payors pay for reviews they never receive and others receive a bargain price for an extensive and time-consuming study. It is not our role to assess the wisdom of legislation from either a public policy or public relations perspective. We are asked only to determine whether section 711.4 imposes a fee or a tax. The record discloses several reasonable justifications for imposing a flat fee.

Fish and Game offered testimony that the imposition of an hourly fee for any environmental review would discourage early consultation. Often developers contact Fish and Game to discuss potential adverse impacts of a proposed project before any plans are submitted. Fish and Game then has the opportunity to engage in a collaborative process to eliminate or mitigate impacts on fish and wildlife before resources have been committed to a particular development plan.

The record also discloses that the environmental review process for a CEQA project or a timber harvest plan can involve various biologists at the regional level, consultation with biologists at headquarters and review of various data bases. Moreover, the biologists often work on several projects simultaneously and perform work which benefits all the projects. Consequently, the evidence suggests it would be cumbersome and expensive to account for multiple biologists' time, from multiple regions, working multiple projects.

The evidentiary thrust to Fish and Game's argument is that the cost of performing its duties under CEQA and the Forest Practice Act far exceeds the revenue generated under section 711.4. (*City ofDublinv.County of Alameda, supra,* 14 Cal.App.4th at p.

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

282.)Under the accounting system dismantled in 1991, Fish and Game employees recorded their time and charged the time to various codes. Before changing to a new system, the ***954** employees' time sheets were surveyed and analyzed. A new coding system was predicated on these surveys and analyses. Mills complains that the new system camouflages and inflates the true costs of environmental review.

The trial court found Fish and Game met its burden of proving the cost of its environmental review programs. The court wrote, "While Plaintiff attacks the Department's method of converting its costs under its old accounting system to the new accounting program, the authorities do not require absolute precision. Rather, as long as the estimate of costs is a reasonable one, it will be upheld."

We need not perform an appellate audit of Fish and Game's accounting systems. Having reviewed the entire record, we are satisfied there is sufficient evidence to support the trial court's finding that the cost of comprehensive environmental review far surpasses the amount of fees generated under section 711.4. " '[W]e would be demanding the impossible by insisting on rigorously supported findings.' [Citation.] All that our review requires is that we are able to determine that the [Legislature] acted after finding a reasonable relationship between the fee and the need to which the development contributes." (*Shapell Industries, Inc.v.Governing Board* (1991) 1 Cal.App.4th 218, 247 [1 Cal.Rptr.2d 818].) Mills squabbles about the costs associated with the review of Fish and Game's own projects, the preparation of resource databases, and a few other relatively small items. His argument, like his expert's testimony, proves the point. Complex regulatory programs involve complex accounting methodologies which render a more conventional "user fee" assessment impractical or expensive.

There is also evidence that the administrative costs to implement an extensive and comprehensive time-reporting system would be high. The evidence shows that biologists often simultaneously perform the preliminary work establishing resource data for several projects and consult and research issues relating to many different projects. It is reasonable to assess a flat fee and thereby reduce the cost and administrative difficulty of accounting for the services provided for each individual project. Moreover, collection of a flat fee at a uniform time eases the administrative burden of collection and provides certainty to those who submit project proposals.

Fish and Game provides an apt analogy to demonstrate the reasonableness of flat fees. The Legislature has adopted a flat filing fee for filing an action in superior court whether the matter is a simple case requiring little time and attention or a complex case requiring intensive judicial resources from pretrial motions through a lengthy trial. By statute, statewide judicial fees ***955** cannot be increased or decreased by counties to provide any kind of graduated structure. (Gov. Code, § 54985, subd. (c)(1).) The fees imposed by section 711.4 are quite similar. Like a civil action, the environmental review may be time and staff intensive or it may be summarily handled. In neither case does the fee operate as a tax just because a prescribed amount is charged to all who avail themselves of the opportunity to obtain discretionary government services.

(4) Finally, plaintiff also challenges the Legislature's decision to charge a higher fee for the filing of a negative declaration than for other environmental documents. As explained by a Fish and Game senior environmental specialist supervisor at trial, the standard for a negative declaration is that a project have no adverse impact on the environment. Thus, Fish and Game has the responsibility to make sure the disclosure of the possible impacts is complete and to assure any mitigation measures are adequate. Often, the proposed mitigation measures are inadequate, and Fish and Game staff must work with the lead agency and with the project proponent to develop an acceptable negative declaration document. The supervisor testified that his staff probably spends more time on the review of a negative declaration than for the review of an equivalent size project with EIR (environmental impact report) documentation. Hence, because of project information collection cost and the time spent negotiating mitigation measures, Fish and Game's costs are generally higher for negative declarations. There is a sufficient reasonable basis for the legislative decision to charge more for the review of a negative declaration than for the review of an environmental impact report.

V

We need not address the many other issues raised by

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

the parties in these consolidated cases rendered moot by our finding that section 711.4 does constitute a regulatory fee. Moreover, we dismiss Mills's second appeal because it too is rendered moot by our finding. In the underlying case, the California Association of Professional Scientists sought to enjoin the settlement entered into by Mills and Fish and Game in the original action. The crux of the appeal is whether the trial court properly restricted its constitutional ruling to Mills alone. Since we have upheld the constitutionality of section 711.4, we need not decide whether the trial court erred by invoking article III, section 3.5 of the California Constitution to limit the scope of its constitutional ruling.

Many of the arguments raised by Mills, and echoed by his expert at trial, are rooted in the perception that a flat fee is unfair. They object vociferously ***956** to the disparity between the amount of the fee and the services provided for different projects. This may be so. The scope of our inquiry, however, is not whether the fee is fair but whether the fee is, in legal effect, a tax. This case is not a challenge to the legislative power to enact a fee, nor is it a substantive constitutional challenge to the fee. We were asked to make the legal determination as to whether it is a fee exclusively for the purpose of determining whether it was properly enacted by a majority vote. Constrained by the limited scope of appellate review, we have concluded the Legislature did not violate California Constitution, article XIII A by enacting the section 711.4 fees by a simple majority vote. Any further challenge to the equity of a flat fee structure must be presented to the Legislature for the issue is political, not constitutional.

Disposition

The appeal in case No. C023075 is dismissed. The judgment in case No. C023184 is affirmed in part and reversed in part as explained above. In both cases, Mills shall pay the costs on appeal.

Sims, Acting P. J., and Nicholson, J., concurred.
The petition of appellant Albert W. Mills for review by the Supreme Court was denied July 12, 2000. ***957**

Supreme Court of California
CITY OF BURBANK, Plaintiff and Appellant,
v.
STATE WATER RESOURCES CONTROL BOARD et al., Defendants and Appellants.
City of Los Angeles, Plaintiff and Respondent,
v.
State Water Resources Control Board et al., Defendants and Appellants.
Nos. S119248, B151175, B152562.

April 4, 2005.
Rehearing Denied June 29, 2005.[FN*]

FN* Brown, J., did not participate therein.

Background: Cities filed petitions for writs of mandate challenging pollutant limitations in wastewater discharge permits issued by regional water quality control boards. The Superior Court, Los Angeles County, Nos. BS060957 and BS060960,Dzintra I. Janavs, J., set aside permits. Regional board and state water resources control board appealed. The Court of Appeal consolidated the cases and reversed. The Supreme Court granted review, superseding the opinion of the Court of Appeal.

Holdings: The Supreme Court, Kennard, J., held that:
(1) regional board may not consider economic factors as justification for imposing pollutant restrictions in wastewater discharge permit which are less stringent than applicable federal standards, and
(2) when imposing more stringent pollutant restrictions that those required by federal law, regional board may take economic factors into account.

Judgment of Court of Appeal affirmed, and matter remanded.

Brown, J., filed concurring opinion.

Opinion, 4 Cal.Rptr.3d 27, superseded.

KENNARD, J.

***618** **864** Federal law establishes national water quality standards but allows the states to enforce their own water quality laws so long as they comply with federal standards. Operating within this federal-state framework, California's nine Regional Water Quality Control Boards establish water quality policy. They also issue permits for the discharge of treated wastewater; these permits specify the maximum allowable concentration of chemical pollutants in the discharged wastewater.

The question here is this: When a regional board issues a permit to a wastewater treatment facility, must the board take into account the facility's costs of complying with the board's restrictions on pollutants in the wastewater to be discharged? The trial court ruled that California law required a regional board to weigh the economic burden on the facility against the expected environmental benefits of reducing pollutants in the wastewater discharge. The Court of Appeal disagreed. On petitions by the municipal operators of three wastewater treatment facilities, we granted review.

We reach the following conclusions: Because both California law and federal law require regional boards to comply with federal clean water standards, and because the supremacy clause of the United States Constitution requires state law to yield to federal law, a regional board, when issuing a wastewater discharge permit, may not consider economic factors to justify imposing pollutant restrictions that are *less stringent* than the applicable federal standards require. When, however, a regional board is considering whether to make the pollutant restrictions in a wastewater discharge permit *more stringent* than federal law requires, California law allows the board to take into account economic **865 factors, including the wastewater discharger's cost of compliance. We remand this case for further proceedings to determine whether the pollutant limitations in the permits challenged here meet or exceed federal standards.

*619 I. STATUTORY BACKGROUND

The quality of our nation's waters is governed by a "complex statutory and regulatory scheme ... that implicates both federal and state administrative responsibilities." (*PUD No. 1 of Jefferson County v. Washington Department of Ecology* (1994) 511 U.S. 700, 704, 114 S.Ct. 1900, 128 L.Ed.2d 716.) We first discuss California law, then federal law.

A. California Law

In California, the controlling law is the Porter-Cologne Water Quality Control Act (Porter-Cologne Act), which was enacted in 1969. (Wat.Code, § 13000 et seq., added by Stats.1969, ch. 482, § 18, p. 1051.) [FN1] Its goal is "to attain the highest water ***307** quality which is reasonable, considering all demands being made and to be made on those waters and the total values involved, beneficial and detrimental, economic and social, tangible and intangible."(§ 13000.) The task of accomplishing this belongs to the State Water Resources Control Board (State Board) and the nine Regional Water Quality Control Boards; together the State Board and the regional boards comprise "the principal state agencies with primary responsibility for the coordination and control of water quality."(§ 13001.) As relevant here, one of those regional boards oversees the Los Angeles region (the Los Angeles Regional Board).[FN2]

FN1. Further undesignated statutory references are to the Water Code.

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

> FN2. The Los Angeles water region "comprises all basins draining into the Pacific Ocean between the southeasterly boundary, located in the westerly part of Ventura County, of the watershed of Rincon Creek and a line which coincides with the southeasterly boundary of Los Angeles County from the ocean to San Antonio Peak and follows thence the divide between San Gabriel River and Lytle Creek drainages to the divide between Sheep Creek and San Gabriel River drainages."(§ 13200, subd. (d).)

Whereas the State Board establishes statewide policy for water quality control (§ 13140), the regional boards "formulate and adopt water quality control plans for all areas within [a] region" (§ 13240). The regional boards' water quality plans, called "basin plans," must address the beneficial uses to be protected as well as water quality objectives, and they must establish a program of implementation. (§ 13050, subd. (j).) Basin plans must be consistent with "state policy for water quality control."(§ 13240.)

B. Federal Law

[1] In 1972, Congress enacted amendments (Pub.L. No. 92-500 (Oct. 18, 1972) 86 Stat. 816) to the Federal Water Pollution Control Act (33 U.S.C. § 1251 et seq.), which, as amended in 1977, is commonly known as the Clean ***620** Water Act. The Clean Water Act is a "comprehensive water quality statute designed 'to restore and maintain the chemical, physical, and biological integrity of the Nation's waters.' "(*PUD No. 1 of Jefferson County v. Washington Dept. of Ecology, supra,* 511 U.S. at p. 704, 114 S.Ct. 1900, quoting 33 U.S.C. § 1251(a).) The Act's national goal was to eliminate by the year 1985 "the discharge of pollutants into the navigable waters" of the United States. (33 U.S.C. § 1251(a)(1).) To accomplish this goal, the Act established "effluent limitations," which are restrictions on the "quantities, rates, and concentrations of chemical, physical, biological, and other constituents"; these effluent limitations allow the discharge of pollutants only when the water has been satisfactorily treated to conform with federal water quality standards. (33 U.S.C. §§ 1311, 1362(11).)

Under the federal Clean Water Act, each state is free to enforce its own water quality laws so long as its effluent limitations are not "less stringent" than those set out in the Clean Water Act. (33 U.S.C. § 1370.) This led the California Legislature in 1972 to amend the state's Porter-Cologne Act "to ensure consistency with the requirements for state programs implementing the Federal Water Pollution Control Act."(§ 13372.)

****866** Roughly a dozen years ago, the United States Supreme Court, in *Arkansas v. Oklahoma* (1992) 503 U.S. 91, 112 S.Ct. 1046, 117 L.Ed.2d 239, described the distinct roles of the state and federal agencies in enforcing water quality: "The Clean Water Act anticipates a partnership between the States and the Federal Government, animated by a shared objective: 'to restore and maintain the chemical, physical, and biological integrity of the Nation's waters.' 33 U.S.C. § 1251(a). Toward *****308** this end, [the Clean Water Act] provides for two sets of water quality measures. 'Effluent limitations' are promulgated by the [Environmental Protection Agency (EPA)] and restrict the quantities, rates, and concentrations of specified substances which are discharged from point sources.[FN3] See §§ 1311, 1314. '[W]ater quality standards' are, in general, promulgated by the States and establish the desired condition of a waterway. See § 1313. These standards supplement effluent limitations 'so that numerous point sources, despite individual compliance with effluent limitations, may be further regulated to prevent water quality from falling below acceptable levels.' *EPA v. California ex rel. State Water Resources Control Bd.,* 426 U.S. 200, 205, n. 12, 96 S.Ct. 2022, 2025, n. 12, 48 L.Ed.2d 578 (1976).

> FN3. A "point source" is "any discernable, confined and discrete conveyance" and includes "any pipe, ditch, channel ... from which pollutants ... may be discharged." (33 U.S.C. § 1362(14).)

***621** "The EPA provides States with substantial guidance in the drafting of water quality standards. See generally 40 CFR pt. 131 (1991) (setting forth model water quality standards). Moreover, [the Clean Water Act] requires, *inter alia,* that state authorities periodically review water quality standards and secure the EPA's approval of any revisions in the standards. If the EPA recommends changes to the standards and the State fails to comply with that recommendation, the Act authorizes the EPA to promulgate

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

water quality standards for the State. 33 U.S.C. § 1313(c)." (*Arkansas v. Oklahoma, supra,* 503 U.S. at p. 101, 112 S.Ct. 1046.)

Part of the federal Clean Water Act is the National Pollutant Discharge Elimination System (NPDES), "[t]he primary means" for enforcing effluent limitations and standards under the Clean Water Act. (*Arkansas v. Oklahoma, supra,* 503 U.S. at p. 101, 112 S.Ct. 1046.) The NPDES sets out the conditions under which the federal EPA or a state with an approved water quality control program can issue permits for the discharge of pollutants in wastewater. (33 U.S.C. § 1342(a) & (b).) In California, wastewater discharge requirements established by the regional boards are the equivalent of the NPDES permits required by federal law. (§ 13374.)

With this federal and state statutory framework in mind, we now turn to the facts of this case.

II. FACTUAL BACKGROUND

This case involves three publicly owned treatment plants that discharge wastewater under NPDES permits issued by the Los Angeles Regional Board.

The City of Los Angeles owns and operates the Donald C. Tillman Water Reclamation Plant (Tillman Plant), which serves the San Fernando Valley. The City of Los Angeles also owns and operates the Los Angeles-Glendale Water Reclamation Plant (Los Angeles-Glendale Plant), which processes wastewater from areas within the City of Los Angeles and the independent cities of Glendale and Burbank. Both the Tillman Plant and the Los Angeles-Glendale Plant discharge wastewater directly into the Los Angeles River, now a concrete-lined flood control channel that runs through the City of Los Angeles, ending at the Pacific Ocean. The State Board and the Los Angeles Regional Board consider the Los Angeles River to be a navigable water of the United States for purposes of the federal Clean Water Act.

The third plant, the Burbank Water Reclamation Plant (Burbank Plant), is owned and operated by the City of Burbank,***309** serving residents and businesses within that city. The Burbank Plant discharges wastewater into the Burbank Western Wash, which drains into the Los Angeles River.

*622 All three plants, which together process hundreds of millions of gallons of sewage **867 each day, are tertiary treatment facilities; that is, the treated wastewater they release is processed sufficiently to be safe not only for use in watering food crops, parks, and playgrounds, but also for human body contact during recreational water activities such as swimming.

In 1998, the Los Angeles Regional Board issued renewed NPDES permits to the three wastewater treatment facilities under a basin plan it had adopted four years earlier for the Los Angeles River and its estuary. That 1994 basin plan contained general narrative criteria pertaining to the existing and potential future beneficial uses and water quality objectives for the river and estuary.[FN4] The narrative criteria included municipal and domestic water supply, swimming and other recreational water uses, and fresh water habitat. The plan further provided: "All waters shall be maintained free of toxic substances in concentrations that are toxic to, or that produce detrimental physiological responses in human, plant, animal, or aquatic life." The 1998 permits sought to reduce these narrative criteria to specific numeric requirements setting daily maximum limitations for more than 30 pollutants present in the treated wastewater, measured in milligrams or micrograms per liter of effluent.[FN5]

> FN4. This opinion uses the terms "narrative criteria" or descriptions, and "numeric criteria" or effluent limitations. Narrative criteria are broad statements of desirable water quality goals in a water quality plan. For example, "no toxic pollutants in toxic amounts" would be a narrative description. This contrasts with numeric criteria, which detail specific pollutant concentrations, such as parts per million of a particular substance.
>
> FN5. For example, the permits for the Tillman and Los Angeles-Glendale Plants limited the amount of fluoride in the discharged wastewater to 2 milligrams per liter and the amount of mercury to 2.1 micrograms per liter.

The Cities of Los Angeles and Burbank (Cities) filed appeals with the State Board, contending that achievement of the numeric requirements would be

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

too costly when considered in light of the potential benefit to water quality, and that the pollutant restrictions in the NPDES permits were unnecessary to meet the narrative criteria described in the basin plan. The State Board summarily denied the Cities' appeals.

Thereafter, the Cities filed petitions for writs of administrative mandate in the superior court. They alleged, among other things, that the Los Angeles Regional Board failed to comply with sections 13241 and 13263, part of California's Porter-Cologne Act, because it did not consider the economic burden on the Cities in having to reduce substantially the pollutant content of their discharged wastewater. They also alleged that compliance with the pollutant restrictions set out in the NPDES permits issued by the regional *623 board would greatly increase their costs of treating the wastewater to be discharged into the Los Angeles River. According to the City of Los Angeles, its compliance costs would exceed $50 million annually, representing more than 40 percent of its entire budget for operating its four wastewater treatment plants and its sewer system; the City of Burbank estimated its added costs at over $9 million annually, a nearly 100 percent increase above its $9.7 million annual budget for wastewater treatment.

***310 The State Board and the Los Angeles Regional Board responded that sections 13241 and 13263 do not require consideration of costs of compliance when a regional board issues a NPDES permit that restricts the pollutant content of discharged wastewater.

The trial court stayed the contested pollutant restrictions for each of the three wastewater treatment plants. It then ruled that sections 13241 and 13263 of California's Porter-Cologne Act required a regional board to consider costs of compliance not only when it adopts a basin or water quality plan but also when, as here, it issues an NPDES permit setting the allowable pollutant content of a treatment plant's discharged wastewater. The court found no evidence that the Los Angeles Regional Board had considered economic factors at either stage. Accordingly, the trial court granted the Cities' petitions for writs of mandate, and it ordered the Los Angeles Regional Board to vacate the contested restrictions on pollutants in the wastewater discharge permits issued to the three municipal plants here and to conduct hearings **868 to consider the Cities' costs of compliance before the board's issuance of new permits. The Los Angeles Regional Board and the State Board filed appeals in both the Los Angeles and Burbank cases.[FN6]

FN6. Unchallenged on appeal and thus not affected by our decision are the trial court's rulings that (1) the Los Angeles Regional Board failed to show how it derived from the narrative criteria in the governing basin plan the specific numeric pollutant limitations included in the permits; (2) the administrative record failed to support the specific effluent limitations; (3) the permits improperly imposed daily maximum limits rather than weekly or monthly averages; and (4) the permits improperly specified the manner of compliance.

The Court of Appeal, after consolidating the cases, reversed the trial court. It concluded that sections 13241 and 13263 require a regional board to take into account "economic considerations" when it adopts water quality standards in a basin plan but not when, as here, the regional board sets specific pollutant restrictions in wastewater discharge permits intended to satisfy those standards. We granted the Cities' petition for review.

*624 III. DISCUSSION

A. Relevant State Statutes

The California statute governing the issuance of *wastewater permits* by a regional board is section 13263, which was enacted in 1969 as part of the Porter-Cologne Act. (See 26 Cal.Rptr.3d pp. 306-307, 108 P.3d p. 865,*ante*.) Section 13263 provides in relevant part: "*The regional board*, after any necessary hearing, *shall prescribe requirements as to the nature of any proposed discharge* [of wastewater]. *The requirements* shall implement any relevant water quality control plans that have been adopted, and *shall take into consideration* the beneficial uses to be protected, the water quality objectives reasonably required for that purpose, other waste discharges, the need to prevent nuisance, and *the provisions of Section 13241*."(§ 13263, subd. (a), italics added.)

Section 13241 states: "Each regional board shall es-

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

tablish such water quality objectives in water quality control plans as in its judgment will ensure the reasonable protection of beneficial uses and the prevention of nuisance; however, it is recognized that it may be possible for the quality of water to be changed to some degree without unreasonably affecting beneficial uses. Factors to be considered by a regional board in establishing water quality objectives shall include, but not necessarily be limited to, all of the following:

***311** "(a) Past, present, and probable future beneficial uses of water.

"(b) Environmental characteristics of the hydrographic unit under consideration, including the quality of water available thereto.

"(c) Water quality conditions that could reasonably be achieved through the coordinated control of all factors which affect water quality in the area.

"(d) *Economic considerations.*

"(e) The need for developing housing within the region.

"(f) The need to develop and use recycled water." (Italics added.)

The Cities here argue that section 13263's express reference to section 13241 requires the Los Angeles Regional Board to consider section 13241's listed factors, notably "[e]conomic considerations," before issuing NPDES permits requiring specific pollutant reductions in discharged effluent or treated wastewater.

[2] ***625** Thus, at issue is language in section 13263 stating that when a regional board "prescribe[s] requirements as to the nature of any proposed discharge" of treated wastewater it must "take into consideration" certain factors including "the provisions of Section 13241." According to the Cities, this statutory language requires that a regional board make an independent evaluation of the section 13241 factors, including "economic considerations," before restricting the pollutant content in an NPDES permit. This was the view expressed in the trial court's ruling. The Court of Appeal rejected that view. It held that a regional board need consider the section 13241 factors only when it adopts a basin or water quality plan, but not when, as in this case, it issues a wastewater discharge ****869** permit that sets specific numeric limitations on the various chemical pollutants in the wastewater to be discharged. As explained below, the Court of Appeal was partly correct.

B. Statutory Construction

[3] When construing any statute, our task is to determine the Legislature's intent when it enacted the statute "so that we may adopt the construction that best effectuates the purpose of the law." (*Hassan v. Mercy American River Hospital* (2003) 31 Cal.4th 709, 715, 3 Cal.Rptr.3d 623, 74 P.3d 726; *Esberg v. Union Oil Co.* (2002) 28 Cal.4th 262, 268, 121 Cal.Rptr.2d 203, 47 P.3d 1069.) In doing this, we look to the statutory language, which ordinarily is "the most reliable indicator of legislative intent." (*Hassan, supra,* at p. 715, 3 Cal.Rptr.3d 623, 74 P.3d 726.)

As mentioned earlier, our Legislature's 1969 enactment of the Porter-Cologne Act, which sought to ensure the high quality of water in this state, predated the 1972 enactment by Congress of the precursor to the federal Clean Water Act. Included in California's original Porter-Cologne Act were sections 13263 and 13241. Section 13263 directs regional boards, when issuing wastewater discharge permits, to take into account various factors, including those set out in section 13241. Listed among the section 13241 factors is "[e]conomic considerations." (§ 13241, subd. (d).) The plain language of sections 13263 and 13241 indicates the Legislature's intent in 1969, when these statutes were enacted, that a regional board consider the cost of compliance when setting effluent limitations in a wastewater discharge permit.

Our construction of sections 13263 and 13241 does not end with their plain statutory language, however. We must also analyze them in the context of the statutory scheme of which they are a part. (*State Farm Mutual Automobile Ins. Co. v. Garamendi* (2004) 32 Cal.4th 1029, 1043, 12 ***312** Cal.Rptr.3d 343, 88 P.3d 71.) Like sections 13263 and 13241, section 13377 is part of the Porter-Cologne Act. But unlike the former two statutes, section 13377 was *626 not enacted until 1972, shortly after Congress, through adoption of the Federal Water Pollution Control Act Amendments, established a comprehensive

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

water quality policy for the nation.

[4] Section 13377 specifies that wastewater discharge permits issued by California's regional boards must meet the federal standards set by federal law. In effect, section 13377 forbids a regional board's consideration of any economic hardship on the part of the permit holder if doing so would result in the dilution of the requirements set by Congress in the Clean Water Act. That act prohibits the discharge of pollutants into the navigable waters of the United States unless there is compliance with federal law (33 U.S.C. § 1311(a)), and publicly operated wastewater treatment plants such as those before us here must comply with the act's clean water standards, regardless of cost (see *id.*, §§ 1311(a), (b)(1)(B) & (C), 1342(a)(1) & (3)). Because section 13263 cannot authorize what federal law forbids, it cannot authorize a regional board, when issuing a wastewater discharge permit, to use compliance costs to justify pollutant restrictions that do not comply with federal clean water standards.[FN7] Such a construction of section 13263 would not only be inconsistent with federal law, it would also be inconsistent with the Legislature's **870 declaration in section 13377 that all discharged wastewater must satisfy federal standards.[FN8] This was also the conclusion of the Court of Appeal. Moreover, under the federal Constitution's supremacy clause (art. VI), a state law that conflicts with federal law is " 'without effect.' " (*Cipollone v. Liggett Group, Inc.* (1992) 505 U.S. 504, 516, 112 S.Ct. 2608, 120 L.Ed.2d 407; *Dowhal v. SmithKline Beecham Consumer Healthcare* (2004) 32 Cal.4th 910, 923, 12 Cal.Rptr.3d 262, 88 P.3d 1.) To comport with the principles of federal supremacy, California law cannot authorize this *627 state's regional boards to allow the discharge of pollutants into the navigable waters of the United States in concentrations ***313 that would exceed the mandates of federal law.

> FN7. The concurring opinion misconstrues both state and federal clean water law when it describes the issue here as "whether the Clean Water Act prevents or prohibits the regional water board from considering economic factors to justify pollutant restrictions *that meet the clean water standards in more cost-effective and economically efficient ways.*" (Conc. Opn. of Brown, J., *post,* 26 Cal.Rptr.3d p. 314, 108 P.3d at p. 871, some italics added.) This case has nothing to do with meeting federal standards in more cost effective and economically efficient ways. State law, as we have said, allows a regional board to consider a permit holder's compliance cost to *relax* pollutant concentrations, as measured by numeric standards, for pollutants in a wastewater discharge permit. (§§ 13241 & 13263.) Federal law, by contrast, as stated above in the text, "prohibits the discharge of pollutants into the navigable waters of the United States unless there is compliance with federal law (33 U.S.C. § 1311(a)), and publicly operated wastewater treatment plants such as those before us here must comply with the [federal] act's *clean water standards, regardless of cost* (see *id.*, §§ 1311(a), (b)(1)(B) & (C), 1342(a)(1) & (3))." (Italics added.)
>
> FN8. As amended in 1978, section 13377 provides for the issuance of waste discharge permits that comply with federal clean water law "together with any more stringent effluent standards or limitations necessary to implement water quality control plans, or for the protection of beneficial uses, or to prevent nuisance." We do not here decide how this provision would affect the cost-consideration requirements of sections 13241 and 13263 when more stringent effluent standards or limitations in a permit are justified for some reason independent of compliance with federal law.

Thus, in this case, whether the Los Angeles Regional Board should have complied with sections 13263 and 13241 of California's Porter-Cologne Act by taking into account "economic considerations," such as the costs the permit holder will incur to comply with the numeric pollutant restrictions set out in the permits, depends on whether those restrictions meet or exceed the requirements of the federal Clean Water Act. We therefore remand this matter for the trial court to resolve that issue.

C. Other Contentions

The Cities argue that requiring a regional board at the wastewater discharge permit stage to consider the permit holder's cost of complying with the board's restrictions on pollutant content in the water is con-

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

sistent with federal law. In support, the Cities point to certain provisions of the federal Clean Water Act. They cite section 1251(a)(2) of title 33 United States Code, which sets, as a national goal "*wherever attainable*," an interim goal for water quality that protects fish and wildlife, and section 1313(c)(2)(A) of the same title, which requires consideration, among other things, of waters' "*use and value* for navigation" when revising or adopting a "water quality standard." (Italics added.) These two federal statutes, however, pertain not to permits for wastewater discharge, at issue here, but to establishing water quality standards, not at issue here. Nothing in the federal Clean Water Act suggests that a state is free to disregard or to weaken the federal requirements for clean water when an NPDES permit holder alleges that compliance with those requirements will be too costly.

[5] At oral argument, counsel for amicus curiae National Resources Defense Council, which argued on behalf of California's State Board and regional water boards, asserted that the federal Clean Water Act incorporates state water policy into federal law, and that therefore a regional board's consideration of economic factors to justify greater pollutant concentration in discharged wastewater would conflict with the federal act even if the specified pollutant restrictions were not less stringent than those required under federal law. We are not persuaded. The federal Clean Water Act reserves to the states significant aspects of water quality policy (33 U.S.C. § 1251(b)), and it specifically grants the states authority to "enforce any effluent limitation" that is not "*less stringent* " than the federal standard (*id.* § 1370, italics added). It does not prescribe or restrict the factors that a state may consider when exercising this reserved authority, and thus it does not prohibit ***628** a state-when imposing effluent limitations that are *more stringent* than required by federal law-from taking into account the economic effects of doing so.

Also at oral argument, counsel for the Cities asserted that if the three municipal wastewater treatment facilities ceased releasing their treated wastewater into the concrete channel that makes up the Los Angeles River, it would (other than during the rainy season) contain no water at all, and thus would not be a "navigable water" of the ****871** United States subject to the Clean Water Act. (See *Solid Waste Agency v. United States Army Corps of Engineers* (2001) 531 U.S. 159, 172, 121 S.Ct. 675, 148 L.Ed.2d 576 ["The term 'navigable' has at least the import of showing us what Congress had in mind as its authority for enacting the CWA: its traditional jurisdiction over waters that were or had been navigable in fact or which could reasonably be so made."].) It is unclear when the Cities first raised this issue. The Court of Appeal did not discuss it in its opinion, and the Cities did not seek rehearing on this ground. (See Cal. Rules of Court, rule *****314** 28(c)(2).) Concluding that the issue is outside our grant of review, we do not address it.

CONCLUSION

Through the federal Clean Water Act, Congress has regulated the release of pollutants into our national waterways. The states are free to manage their own water quality programs so long as they do not compromise the federal clean water standards. When enacted in 1972, the goal of the Federal Water Pollution Control Act Amendments was to *eliminate* by the year 1985 the discharge of pollutants into the nation's navigable waters. In furtherance of that goal, the Los Angeles Regional Board indicated in its 1994 basin plan on water quality the intent, insofar as possible, to remove from the water in the Los Angeles River toxic substances in amounts harmful to humans, plants, and aquatic life. What is not clear from the record before us is whether, in limiting the chemical pollutant content of wastewater to be discharged by the Tillman, Los Angeles-Glendale, and Burbank wastewater treatment facilities, the Los Angeles Regional Board acted only to implement requirements of the federal Clean Water Act or instead imposed pollutant limitations that exceeded the federal requirements. This is an issue of fact to be resolved by the trial court.

DISPOSITION

We affirm the judgment of the Court of Appeal reinstating the wastewater discharge permits to the extent that the specified numeric limitations on chemical pollutants are necessary to satisfy federal Clean Water Act requirements for treated wastewater. The Court of Appeal is directed to remand this ***629** matter to the trial court to decide whether any numeric limitations, as described in the permits, are "more stringent" than required under federal law and thus should have been subject to "economic considera-

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

tions" by the Los Angeles Regional Board before inclusion in the permits.

WE CONCUR: GEORGE, C.J., BAXTER, WERDEGAR, CHIN, and MORENO, JJ.Concurring Opinion by BROWN, J.

I write separately to express my frustration with the apparent inability of the government officials involved here to answer a simple question: How do the federal clean water standards (which, as near as I can determine, are the state standards) prevent the state from considering economic factors? The majority concludes that because "the supremacy clause of the United States Constitution requires state law to yield to federal law, a regional board, when issuing a wastewater discharge permit, may not consider economic factors to justify imposing pollutant restrictions that are *less stringent* than applicable federal standards require." (Maj. opn., *ante,* 26 Cal.Rptr.3d at p. 306, 108 P.3d at p. 864.) That seems a pretty self-evident proposition, but not a useful one. The real question, in my view, is whether the Clean Water Act prevents or prohibits the regional water board from considering economic factors to justify pollutant restrictions that *meet* the clean water standards in more cost-effective and economically efficient ways. I can see no reason why a federal law-which purports to be an example of cooperative federalism-would decree such a result. I do not think the majority's reasoning is at fault here. Rather, the agencies involved seemed to have worked hard to make this simple question impenetrably obscure.

A brief review of the statutory framework at issue is necessary to understand my concerns.

*****315 **872 I. Federal Law**

"In 1972, Congress enacted the Federal Water Pollution Control Act (33 U.S.C. § 1251 et seq.), commonly known as the Clean Water Act (CWA) [Citation.] ... [¶] Generally, the CWA 'prohibits the discharge of any pollutant except in compliance with one of several statutory exceptions. [Citation.]' ... The most important of those exceptions is pollution discharge under a valid NPDES [National Pollution Discharge Elimination System] permit, which can be issued either by the Environmental Protection Agency (EPA), or by an EPA-approved state permit program such as California's. [Citation.] [¶] Under the CWA's NPDES permit program, the states are required to develop *water quality standards.* [Citations.] A water quality standard 'establish[es] the desired condition of a waterway.' [Citation.] A water quality standard for any ***630** given waterway, or 'water body,' has two components: (1) the designated beneficial uses of the water body and (2) the *water quality criteria* sufficient to protect those uses. [Citations.] [¶] Water quality criteria can be either *narrative* or *numeric.* [Citation.]" (*Communities for a Better Environment v. State Water Resources Control Bd.* (2003) 109 Cal.App.4th 1089, 1092-1093, 1 Cal.Rptr.3d 76.)

With respect to satisfying water quality standards, "a polluter must comply with *effluent limitations.* The CWA defines an effluent limitation as 'any restriction established by a State or the [EPA] Administrator on quantities, rates, and concentrations of chemical, physical, biological, and other constituents which are discharged from point sources into navigable waters, the waters of the contiguous zone, or the ocean, including schedules of compliance.' [Citation.] 'Effluent limitations are a means of *achieving* water quality standards.' [Citation.] [¶] NPDES permits establish effluent limitations for the polluter. [Citations.] CWA's NPDES permit system provides for a two-step process for the establishing of effluent limitations. First, the polluter must comply with *technology-based effluent limitations,* which are limitations based on the best available or practical technology for the reduction of water pollution. [Citations.] [¶] Second, the polluter must also comply with more stringent *water quality-based effluent limitations* (WQBEL's) where applicable. In the CWA, Congress 'supplemented the "technology-based" effluent limitations with "water quality-based" limitations "so that numerous point sources, despite individual compliance with effluent limitations, may be further regulated to prevent water quality from falling below acceptable levels.' " [Citation.] [¶] The CWA makes WQBEL's applicable to a given polluter whenever WQBEL's are 'necessary to meet water quality standards, treatment standards, or schedules of compliance, established pursuant to any State law or regulations....' [Citations.] Generally, NPDES permits must conform to state water quality laws insofar as the state laws impose more stringent pollution controls than the CWA. [Citations.] Simply put, WQBEL's implement water quality standards." (*Communities for a Better Environment v. State Water Resources Control Bd., supra,* 109 Cal.App.4th at pp. 1093-

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

1094, 1 Cal.Rptr.3d 76, fns. omitted.)

This case involves water quality-based effluent limitations. As set forth above, "[u]nder the CWA, states have the primary role in promulgating water quality standards." (*Piney Run Preservation Ass'n v. Commrs. of Carroll Co.* (4th Cir.2001) 268 F.3d 255, 265, fn. 9.)"Under the CWA, the water quality standards referred to in section 301 [see 33 U.S.C. § 1311] are primarily the states' handiwork."***316** (*American Paper Institute, Inc. v. U.S. Envtl. Protection Agency* (D.C.Cir.1993) 996 F.2d 346, 349(*American Paper*).) In fact, upon the 1972 passage of the CWA, "[s]tate water quality standards in effect at the time ... were deemed to be the initial water quality benchmarks for CWA purposes.... The states were to revisit and, if *631 necessary, revise those initial standards at least once every three years." (*American Paper,* at p. 349.) Therefore, "once a water quality standard has been promulgated, section 301 of the CWA requires all NPDES permits for point sources to incorporate discharge limitations necessary to satisfy that standard." (*American Paper,* at p. 350.) Accordingly, it appears that in most instances, **873 state water quality standards are identical to the federal requirements for NPDES permits.

II. State Law

In California, pursuant to the Porter-Cologne Water Quality Control Act (Wat.Code, § 13000 et seq.; Stats.1969, ch. 482, § 18, p. 1051; hereafter Porter-Cologne Act), the regional water quality control boards establish water quality standards-and therefore federal requirements for NPDES permits-through the adoption of water quality control plans (basin plans). The basin plans establish water quality objectives using enumerated factors-including economic factors-set forth in Water Code section 13241.

In addition, as one court observed: "The Porter-Cologne Act ... established nine regional boards to prepare water quality plans (known as basin plans) and issue permits governing the discharge of waste. (Wat.Code, §§ 13100, 13140, 13200, 13201, 13240, 13241, 13243.) The Porter-Cologne Act identified these permits as 'waste discharge requirements,' and provided that the waste discharge requirements must mandate compliance with the applicable regional water quality control plan. (Wat.Code, §§ 13263, subd. (a), 13377, 13374.)[¶] Shortly after Congress enacted the Clean Water Act in 1972, the California Legislature added Chapter 5.5 to the Porter-Cologne Act, for the purpose of adopting the necessary federal requirements to ensure it would obtain EPA approval to issue NPDES permits. (Wat.Code, § 13370, subd. (c).) As part of these amendments, the Legislature provided that the state and regional water boards 'shall, as required or authorized by the [Clean Water Act], issue waste discharge requirements ... which apply and ensure compliance with all applicable provisions [of the Clean Water Act], together with any more stringent effluent standards or limitations necessary to implement water quality control plans, or for the protection of beneficial uses, or to prevent nuisance.' (Wat.Code, § 13377.) Water Code section 13374 provides that '[t]he term "waste discharge requirements" as referred to in this division is the equivalent of the term "permits" as used in the [Clean Water Act].' [¶] California subsequently obtained the required approval to issue NPDES permits. [Citation.] Thus, the waste discharge requirements issued by the regional water boards ordinarily also serve as NPDES permits under federal law. (Wat.Code, § 13374.)" (*Building Industry Assn. of San Diego County v. State Water Resources Control Bd.* (2004) 124 Cal.App.4th 866, 875, 22 Cal.Rptr.3d 128.)

*632 Applying this federal-state statutory scheme, it appears that throughout this entire process, the Cities of Burbank and Los Angeles (Cities) were unable to have economic factors considered because the Los Angeles Regional Water Quality Control Board (Board)-the body responsible to enforce the statutory framework-failed to comply with its statutory mandate.

***317** For example, as the trial court found, the Board did not consider costs of compliance when it initially established its basin plan, and hence the water quality standards. The Board thus failed to abide by the statutory requirement set forth in Water Code section 13241 in establishing its basin plan. Moreover, the Cities claim that the initial narrative standards were so vague as to make a serious economic analysis impracticable. Because the Board does not allow the Cities to raise their economic factors in the permit approval stage, they are effectively precluded from doing so. As a result, the Board appears to be playing a game of "gotcha" by allowing the Cities to raise economic considerations when it is not practical, but precluding them when they have the ability to

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

do so.

Moreover, the Board acknowledges that it has neglected other statutory provisions that might have provided an additional opportunity to air these concerns. As set forth above, pursuant to the CWA, "[t]he states were to revisit and, if necessary, revise those initial standards at least once every three years-a process commonly known as triennial review. [Citation.] Triennial reviews consist of public hearings in which current water quality standards are examined to assure that they 'protect the public health or welfare, enhance the quality of water and serve the purposes' of the Act. [Citation.] Additionally, the CWA ****874** directs states to consider a variety of competing policy concerns during these reviews, including a waterway's 'use and value for public water supplies, propagation of fish and wildlife, recreational purposes, and agricultural, industrial, and other purposes.'"(*American Paper, supra,* 996 F.2d at p. 349.)

According to the Cities, "[t]he last time that the narrative water quality objective for toxicity contained in the Basin Plan was reviewed and modified was 1994." The Board does not deny this claim. Accordingly, the Board has failed its duty to allow public discussion-including economic considerations-at the required intervals when making its determination of proper water quality standards.

What is unclear is why this process should be viewed as a contest. State and local agencies are presumably on the same side. The costs will be paid by taxpayers and the Board should have as much interest as any other agency in fiscally responsible environmental solutions.

***633** Our decision today arguably allows the Board to continue to shirk its statutory duties. The majority holds that when read together, Water Code sections 13241, 13263, and 13377 do not allow the Board to consider economic factors when issuing NPDES permits to satisfy federal CWA requirements. (Maj. opn., *ante,* 26 Cal.Rptr.3d at pp. 311-312, 108 P.3d at pp. 869-870.) The majority then bifurcates the issue when it orders the Court of Appeal "to remand this matter to the trial court to decide whether any numeric limitations, as described in the permits, are 'more stringent' than required under federal law and thus should have been subject to 'economic considerations' by the Los Angeles Regional Board before inclusion in the permits." (*Id.* at p. 314, 108 P.3d at p. 871.)

The majority overlooks the feedback loop established by the CWA, under which federal standards are linked to state-established water quality standards, including narrative water quality criteria. (See 33 U.S.C. § 1311(b)(1)(C); 40 C.F.R. § 122.44(d)(1) (2004).) Under the CWA, NPDES permit requirements include the state narrative criteria, which are incorporated into the Board's basin plan under the description "no toxins in toxic amounts." As far as I can determine, NPDES permits*****318** designed to achieve this narrative criteria (as well as designated beneficial uses) will usually implement the state's basin plan, while satisfying federal requirements as well.

If federal water quality standards are typically identical to state standards, it will be a rare instance that a state exceeds its own requirements and economic factors are taken into consideration.[FN1] In light of the Board's initial failure to consider costs of compliance and its repeated failure to conduct required triennial reviews, the result here is an unseemly bureaucratic bait-and-switch that we should not endorse. The likely outcome of the majority's decision is that the Cities will be economically burdened to meet standards imposed on them in a highly questionable manner.[FN2] In these times of tight fiscal budgets, it is difficult to imagine imposing additional financial burdens on municipalities without at least allowing them to present alternative views.

> FN1. (But see *In the Matter of the Petition of City and County of San Francisco, San Francisco Baykeeper et al.* (Order No. WQ 95-4, Sept. 21, 1995) 1995 WL 576920.)
>
> FN2. Indeed, given the fact that "water quality standards" in this case are composed of broadly worded components (i.e., a narrative criteria and "designated beneficial uses of the water body"), the Board possessed a high degree of discretion in setting NPDES permit requirements. Based on the Board's past performance, a proper exercise of this discretion is uncertain.

Based on the facts of this case, our opinion today

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

appears to largely retain the status quo for the Board. If the Board can actually demonstrate that only the precise limitations at issue here, implemented in only one way, will achieve the desired water standards, perhaps its obduracy is justified. That case has yet to be made.

***634** Accordingly, I cannot conclude that the majority's decision is wrong. The analysis ****875** may provide a reasonable accommodation of conflicting provisions. However, since the Board's actions "make me wanna holler and throw up both my hands," [FN3] I write separately to set forth my concerns and concur in the judgment-*dubitante*.[FN4]

HCITY OF OAKLAND et al., Petitioners,
v.
THE SUPERIOR COURT OF ALAMEDA COUNTY, Respondent; CALIFORNIA BEVERAGE RETAILER COALITION et al., Real Parties in Interest.
No. A068638.

Court of Appeal, First District, Division 4, California.
May 20, 1996.

SUMMARY

Following a city's enactment of an ordinance regulating nuisances associated with alcoholic beverage establishments, an organization of liquor retailers filed an action against the city, seeking a declaratory judgment that the ordinance was invalid, an injunction precluding its enforcement, and monetary damages. The trial court granted summary adjudication on two of six causes of action, concluding that the city ordinance illegally regulated holders of earlier-granted alcoholic beverages licenses (Bus. & Prof. Code, § 23790) and taxed these licensees in violation of state law (Cal. Const., art. XX, § 22). (Superior Court of Alameda County, No. 726329-3, James R. Lambden, Judge.)

The Court of Appeal ordered issuance of a writ of mandate directing the trial court to vacate its order and to enter a new order denying the summary adjudication motion and granting summary adjudication on the two causes of action in favor of the city. The court held that Bus. & Prof. Code, § 23790, which permits alcoholic beverage licensees operating in an area before the enactment of restrictive zoning ordinances to remain in business, did not preempt or otherwise preclude enforcement of the city's ordinance addressing nuisance problems associated with alcoholic beverage sale establishments. A city may properly enact a local ordinance to control and abate nuisance activities, despite the fact that the business that would be regulated by the ordinance possessed grandfather rights that might ordinarily render it immune from compliance with local ordinances. The court also held that the ordinance was not precluded by Cal. Const., art. XX, § 22, which grants the State Department of Alcoholic Beverage Control the exclusive power to collect license fees or occupation taxes related to alcoholic beverage sales. It further held that the fee was not a tax imposed to pay general revenue to the local governmental entity, but was a valid regulatory fee intended to defray the cost of providing and administering the hearing process set out in the ordinance. The court held that the Legislature did not intend that a person licensed to sell alcoholic beverages be immune from local supervision of any activity that the licensee may pursue in conjunction with the sale of alcoholic beverages. An ordinance prohibiting nuisance and criminal activities from being conducted on or near the premises of liquor licensees falls within the legitimate scope of a city's police power. Thus, since the ordinance was not intended to control the sale of alcoholic beverages, but to eliminate nuisances and criminal activities, it did not conflict with the state's authority to regulate alcoholic beverage sales. (Opinion by Reardon, J., with Anderson, P. J., and Poché, J., concurring.)

HEADNOTES

Classified to California Digest of Official Reports

(1a, 1b) Mandamus and Prohibition § 40--Mandamus--To Courts--Summary Judgment.
A summary adjudication ruling that a city ordinance addressing nuisance problems associated with alcoholic beverage sale establishments illegally regulated holders of earlier-granted alcoholic beverages licenses and taxed these licensees in violation of state law (Cal. Const., art. XX, § 22; Bus. & Prof. Code, § 23790), was an appropriate matter to be considered on a petition for a writ of mandate. An order granting partial summary judgment or summary adjudication is not an appealable order, and mandate may be granted to review an order granting summary adjudication. Although there was not a final judgment in the case, as the trial court ruled on only two of six causes of action, the issues in the case presented significant legal questions of constitutional and statutory interpretation. The public interest supported an immediate review of the trial court's ruling, since, when the validity of a public agency's action was at issue, the public interest in a speedy determination of the matter may have made an appeal inadequate. Also, the issues presented were questions of law, making

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

their immediate resolution on a petition for a writ of mandate appropriate. Mandate will lie if the trial court has a clear, present, and usually ministerial duty and the petitioner has a clear, present and beneficial right of performance of that duty. If the trial court erred, the appellate court could exercise its discretion to entertain the writ in order to avoid unnecessary trial court proceedings.
[See 8 **Witkin,** Cal. Procedure (3d ed. 1985) Extraordinary Writs, § 98.]
(2) Mandamus and Prohibition § 37--Mandamus--To Courts--Interim Order.
In most cases, a trial court's interim order must await review on appeal from the final judgment. However, in cases of significant legal impact, appellate courts may consider a petition for an extraordinary writ. The adequacy of an appellate remedy depends on the circumstances of the case, vesting a large measure of discretion in the appellate court to grant or deny a writ petition.

(3a, 3b, 3c) Alcoholic Beverages § 31--Regulation by Municipalities-- Control of Nuisances and Criminal Activities--State Preemption.
Bus. & Prof. Code, § 23790, which permits alcoholic beverage licensees operating in an area before the enactment of restrictive zoning ordinances to remain in business, did not preempt or otherwise preclude enforcement of a city's ordinance addressing nuisance problems associated with alcoholic beverage sale establishments. A city may properly enact a local ordinance to control and abate nuisance activities, despite the fact that the business that would be regulated by the ordinance possessed grandfather rights that might ordinarily render it immune from compliance with local ordinances. The ordinance did not create any new authority empowering the city to halt operation of an alcoholic beverage sales establishment. It merely created an administrative mechanism that might have resulted in a third party taking action against the alcoholic beverage seller-abatement by a court or license revocation by the State Department of Alcoholic Beverage Control. The conduct that is regulated by the ordinance, the control and abatement of nuisances and criminal activities, did not fall within the ambit of § 23790.

(4) Summary Judgment § 26--Appellate Review--Scope--Statutory Construction.
On review of a summary adjudication ruling that a city ordinance addressing nuisance problems associated with alcoholic beverage sale establishments illegally regulated holders of earlier-granted alcoholic beverages licenses and taxed these licensees in violation of state law, the standard of review was one of de novo review. The construction of statutes and the ascertainment of legislative intent are questions of law. The reviewing court is not limited by the trial court's interpretation, nor by the evidence presented on the issue in the trial court.

(5) Evidence § 42--Hearsay--Exceptions--Admissions--By Conduct--Arguments in Favor of Amendment of Statute.
A city's role in the legislative history of Bus. & Prof. Code, § 23790, did not constitute an admission in a subsequent action that a city ordinance addressing nuisance problems associated with alcoholic beverage sale establishments impermissibly regulated grandfathered alcoholic beverage sales establishments. The city's proposed amendment to § 23790 would have provided for the expiration of grandfather rights when continuous use ended, which did not shed any light on the issue presented in the subsequent case, whether the new administrative mechanism in the ordinance may properly be applied to alcoholic beverage sales establishments that have been in continuous operation since before the ordinance was enacted.

(6) Statutes § 22--Construction--Reasonableness.
A statute must be construed in a reasonable, commonsense manner consistent with the Legislature's apparent purpose and intent, the application of which will promote wise policy, not absurdity.

(7) Alcoholic Beverages § 34--Regulation by Municipalities--Licensing and Permits--Fees to Implement Nuisance Control Ordinance.
Fees imposed by a city ordinance on liquor retailers to pay for the costs of regulating nuisance and criminal activities associated with alcoholic beverage sales establishments, were not precluded by Cal. Const., art. XX, § 22, which grants the State Department of Alcoholic Beverage Control the exclusive power to collect license fees or occupation taxes related to alcoholic beverage sales. That the ultimate result of a failure to pay the city's required fee might be abatement or revocation of the state liquor license did not transform the regulatory fee into a prohibited license tax.

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

(8a, 8b) Municipalities § 30--Police Power--Regulation of Business-- Liquor Retailers--Fees For Enforcement of Nuisance Ordinance.
Fees imposed by a city ordinance on liquor retailers to pay for the costs of regulating nuisance and criminal activities associated with alcoholic beverage sales establishments, was not precluded by Cal. Const., art. XX, § 22, which grants the State Department of Alcoholic Beverage Control the exclusive power to collect license fees or occupation taxes related to alcoholic beverage sales. City documents showed that the annual operating budget for the program would be recovered in fees charged to alcoholic beverage retail establishments pursuant to the ordinance. Reinspection fees would be charged only to establishments that were found not to be in compliance with the terms of the ordinance. The estimated revenues derived from the fees matched the program's proposed budget, and the ordinance's revenue was intended to pay the administrative costs of its programs. The ordinance's primary purpose was regulatory, to create an environment in which nuisance and criminal activities associated with alcoholic beverage retail establishments may be reduced or eliminated. Thus, the fee imposed pursuant to the ordinance was not a tax imposed to pay general revenue to the local governmental entity, but a regulatory fee intended to defray the cost of providing and administering the hearing process set out in the ordinance.

(9) Municipalities § 30--Police Power--Regulation of Business--Liquor Retailers.
Cal. Const., art. XX, § 22, grants the State Department of Alcoholic Beverage Control the exclusive power to tax alcoholic beverage sales, and a local tax on alcoholic beverage sales is preempted by state law. However, alcoholic beverages retailers may properly be required to pay their fair share of the cost of government. If a business imposes an unusual burden on city services, a municipality may properly impose fees pursuant to its police powers, but may not impose a tax on alcoholic beverage retailers under the guise of a fee.

(10) Municipalities § 30--Police Power--Regulation of Business--Fee or Tax.
To determine whether the purpose of a local ordinance imposing a fee on a business is regulatory or revenue-generating, the court looks to the substantive provisions of the ordinance, not merely its title and form. If revenue is the primary purpose of the ordinance and regulation is merely incidental, then the imposition is a tax. If regulation is the primary purpose, the mere fact that incidental revenue is also obtained does not make the imposition a tax. Generally, when a fee is imposed for a regulatory purpose and the ordinance requires compliance with conditions in addition to the payment of the prescribed sum, the imposed sum is a not a tax, but is a fee properly imposed pursuant to the local entity's police power. When the sum is exacted solely for a revenue purpose and its payment gives the right to carry on the business without any further condition, it is a tax. Fees charged in connection with regulatory activities that do not exceed the reasonable costs of providing services necessary to the activity for which the fee is charged and which are not levied for unrelated revenue purposes do not constitute a tax. Generally, a regulatory fee cannot exceed the sum reasonably necessary to cover the costs of the regulatory purpose sought. These costs include all those incident to the issuance of the permit, investigation, inspection, and administration. The municipality need only apply sound judgment and consider probabilities according to the best honest view of informed officials in setting the amount of the regulatory fee.

(11) Municipalities § 30--Police Power--Regulation of Business--Fee or Tax.
To establish that a fee is a regulatory fee and not a tax, the local entity should show the estimated costs of the regulatory activity and the basis for determining the manner in which the costs are apportioned, so that the charges allocated to a payor bear a fair or reasonable relationship to the payor's burdens on or benefits from the regulatory activity. It is not necessary that the payor perceive the regulation to be a benefit. A regulatory fee may be imposed pursuant to the local governmental entity's police power when the fee constitutes an amount necessary to carry out the purposes and provisions of the regulation.

(12a, 12b) Municipalities § 30--Police Power--Regulation of Business-- Liquor Retailers--Regulatory Fees--Validity.
Fees imposed by a city ordinance on liquor retailers to pay for the costs of regulating nuisance and criminal activities associated with alcoholic beverage sales establishments, derived solely from the city's police power under Cal. Const., art. XI, § 7, and the fees were therefore valid. A city's police powers are as broad as the police power that may be exercised by

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

the Legislature itself. However, in its proper exercise of its police powers, the city could not also violate Cal. Const., art. XX, § 22, which grants the State Department of Alcoholic Beverage Control the exclusive power to tax alcoholic beverage sales. Generally, the constitutional provision will not preempt a local ordinance when the ordinance does not directly affect the licensee's ability to sell alcoholic beverage to a willing purchaser. The Legislature did not intend that a person licensed to sell alcoholic beverages be immune from local supervision of any activity that the licensee may pursue in conjunction with the sale of alcoholic beverages. An ordinance prohibiting nuisance and criminal activities from being conducted on or near the premises of liquor licensees falls within the legitimate scope of a city's police power. Thus, since the ordinance was not intended to control the sale of alcoholic beverages, but to eliminate nuisances and criminal activities, it did not conflict with the state's authority to regulate alcoholic beverage sales.
[See 8 **Witkin,** Summary of Cal. Law (9th ed. 1988) Constitutional Law, § 795.]
(13) Municipalities § 28--Police Power--Public Safety, Health, and Morals-- State Law.
Local governments have a legitimate need to address problems generated by business involvement in activities that may be inimical to the health, welfare, and safety of the community. State requirements may be inadequate to meet the demands of densely populated cities. Thus, it becomes proper and necessary to add tostate regulations those provisions adapted to a city's special requirements. For this reason, a local entity may properly determine that a particular business fosters, profits from, and provides an environment for activities proscribed by state law. Thus, an ordinance is not transformed into a statute prohibiting crime simply because the city uses its police powers to discourage illegal activities associated with certain businesses.

(14) Alcoholic Beverages § 3--Police Power--Local Ordinance--Federal Regulation.
A city ordinance imposing a fee on liquor retailers to pay for the costs of regulating nuisance and criminal activities associated with alcoholic beverage sales establishments, did not violate U.S. Const., Amend. XXI, which grants the state authority to tax and regulate liquor licensing. The ordinance imposed a regulatory fee, not a tax, and as the state Constitution did not prohibit the ordinance's regulatory fees, the state having impliedly delegated to municipalities the power to impose such fees.

Pillsbury, Madison & Sutro, James M. Seff, Kevin M. Fong and J. Daniel Davis as Amici Curiae on behalf of Real Parties in Interest.

REARDON, J.

Many California cities must grapple with nuisances associated with alcoholic beverage sale establishments. Some local entities have *747 adopted ordinances to identify those activities associated with alcoholic beverage sales that constitute nuisances and to eliminate their attendant threat to the public health and welfare by means of an administrative process. The proprietors of alcoholic beverage sale establishments challenge these ordinances, arguing that they trod on the state's exclusive right to regulate and tax alcoholic beverage sales. We hold that a city ordinance addressing nuisance problems associated with alcoholic beverage sale establishments does not improperly regulate preexisting grandfathered [FN1] licensees or tax licensees for regulatory purposes.

> FN1 "Grandfathered" businesses are nonconforming uses that are not required to seek permits under local zoning ordinances enacted after they were in business. (See *Korean American Legal Advocacy Foundation v. City of Los Angeles* (1994) 23 Cal.App.4th 376, 397 [28 Cal.Rptr.2d 530].)

In this case, petitioner City of Oakland (city) enacted

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

an ordinance regulating nuisances associated with alcoholic beverage establishments. Real parties in interest California Beverage Retailer Coalition and Village Market filed an action against the city, seeking a declaratory judgment that the ordinance was invalid, an injunction precluding its enforcement, and monetary damages. The trial court granted summary adjudication on two of six causes of action, concluding that the city ordinance illegally regulated holders of earlier-granted alcoholic beverages licenses and taxed these licensees in violation of state law. (See Cal. Const., art. XX, § 22; Bus. & Prof. Code, § 23790.) [FN2]The city and others petitioned for a writ of mandate and prohibition, seeking to compel the trial court to vacate its summary adjudication order and enter an order denying the motion for summary adjudication. We issued an alternative writ and now grant the city's petition.

FN2 All statutory references are to the Business and Professions Code unless otherwise indicated.

I. Facts

In July 1993, petitioner city enacted an ordinance as a one-year pilot program to address public nuisance problems associated with certain alcoholic beverage sale establishments in specified areas of the city. (See Oakland Planning Code, §§ 15000-15530 [Ord. No. 11624].) Under the ordinance, the sale of alcoholic beverages in the city is deemed to be an approved commercial activity as long as the merchant complies with the city's "Deemed Approved Performance Standards." [FN3]Each merchant must post a notice of these standards. (*Id.*, § 15320.) If the city receives a ***748** complaint that these standards have been violated, an administrative hearing must be conducted to review the complaint. (*Id.* § 15340.) The hearing officer must determine if the merchant has conformed to the performance standards and, if the merchant has not, may impose conditions on the use of the property to ensure compliance. (*Ibid.*) If the merchant fails to comply with these conditions, the deemed approved status may be revoked. (*Id.* § 15350.) Once administrative appeals to the planning commission and city council are exhausted, the city may seek to have the activity abated as a nuisance. (*Id.* §§ 15360-15370, 15510(c).) The city may also refer the matter to the Department of Alcoholic Beverage Control for revocation of the merchant's liquor license. (See Bus. & Prof. Code, §§ 24200-24211.) To support the pilot project, most alcoholic beverage sale licensees within the city will be assessed a $600 fee. An additional $200 reinspection fee may be imposed on an estimated 10 percent of the alcoholic beverage establishments covered by the ordinance. [FN4] (Oakland Planning Code, §§ 15400, 15510(f).)

FN3 "An Activity shall retain its Deemed Approved Status only if it conforms with all of the following Deemed Approved Performance Standards: [¶] (a) That it does not result in adverse effects to the health, peace or safety of persons residing or working in the surrounding area. [¶] (b) That it does not result in jeopardizing or endangering the public health or safety of persons residing or working in the surrounding area. [¶] (c) That it does not result in repeated nuisance activities within the premises or in close proximity of the premises, including but not limited to disturbance of the peace, illegal drug activity, public drunkenness, drinking in public, harassment of passersby, gambling, prostitution, sale of stolen goods, public urination, theft, assaults, batteries, acts of vandalism, excessive littering, loitering, graffiti, illegal parking, excessive loud noises, especially in the late night or early morning hours, traffic violations, curfew violations, lewd conduct, or police detentions and arrests. [¶] (d) That it does not result in violations to any applicable provision of any other city, state, or federal regulation, ordinance or statute. [¶] (e) That its upkeep and operating characteristics are compatible with and will not adversely affect the livability or appropriate development of abutting properties and the surrounding neighborhood." (Oakland Planning Code, § 15210.)

FN4 Full service restaurants, except those located on East 14th Street, Foothill Boulevard, MacArthur Boulevard, West MacArthur Boulevard, San Pablo Avenue north of 16th Street, and Edes Avenue between Clara Street and Bergedo Avenue, are exempt from the ordinance and are not required to pay the fee.

In November 1993, real parties in interest California

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

Beverage Retailer Coalition and Village Market and others [FN5] filed a complaint against the city, seeking declaratory and injunctive relief and damages. The complaint alleged that the ordinance was preempted by state law, violated due process and equal protection, and infringed civil rights. It also sought a preliminary injunction to preclude enforcement of the ordinance pending trial on the merits of the complaint. In December 1993, petitioner Coalition on Alcohol ***749** Outlet Issues [FN6] was granted leave to intervene and filed a complaint in intervention in this matter. At the hearing on the motion for preliminary injunction, the trial court found that the ordinance was preempted by state law and that the restrictions and conditions imposed by the ordinance were impermissibly retroactive. The trial court granted the preliminary injunction later that month, barring enforcement of the ordinance. The city and CAOI appealed. In September 1994, we reversed the order granting the preliminary injunction, finding that there was no clear and imminent danger of irreparable harm. (See *California Beverage Retailer Coalition v. City of Oakland* (Sept. 20, 1994) A064898 [nonpub. opn.].) [FN7]

FN5 The California Beverage Retailer Coalition is a nonprofit organization of alcoholic beverage retailers. Village Market is a retail grocery doing business in Oakland and operates under a valid off-sale liquor license issued by the State of California before the September 1, 1993, operative date of the Oakland ordinance. The third plaintiff in the original complaint-Clem Daniels, Inc.-is not a plaintiff in the second amended complaint and is not a real party in interest on appeal. For convenience, this opinion refers to the California Beverage Retailer Coalition and Village Market as "CBRC."

FN6 The Coalition on Alcohol Outlet Issues consists of the California chapter of the National Black Alcoholism Council, the California Latino Alcohol and Other Drug Coalition, the Narcotics Education League, Jubilee West Inc., Interfaith Prevention Program, Inc., and Alcohol Policy Network. This group supports the city's ordinance. For convenience, all these groups will be referred to as "CAOI."

FN7 The city asks us to take judicial notice of the record in *California Beverage Retailer Coalition v. City of Oakland, supra,* A064898.We have done so. (See Evid. Code, §§ 452, subd. (d)(1), 459, subd. (a).)

In November 1994, CBRC filed its second amended complaint. It alleged six causes of action-preemption by article XX of the California Constitution, violation of section 23790, unlawful taxation in violation of article XX of the California Constitution, and violations of due process, equal protection and civil rights. CBRC also moved for summary adjudication on the second and third causes of action alleging improper regulation in violation of section 23790 and unlawful taxation in violation of the state Constitution. The city and CAOI opposed the motion, but it was granted by the trial court.

In January 1995, the trial court filed its order granting summary adjudication on these two causes of action. It found no triable issue of fact existed on these causes of action and ruled in CBRC's favor on the law. It concluded that the ordinance was preempted by section 23790 because it regulates previously existing licensees. It also found that the fees required by the ordinance were illegal because the power to regulate and tax alcoholic beverages belongs exclusively to the state. Its order anticipated trial on the unresolved matters in this case.

The city petitioned this court for a writ of mandate or prohibition. The city argues that the trial court erred as a matter of law in concluding that the ordinance was preempted by state law. It seeks either a peremptory writ of mandate directing the trial court to vacate and set aside its order granting summary adjudication and entering a denial order instead, or an alternative writ directing the trial court to show cause why it should not be so directed. In January 1996, we issued an alternative writ. ***750**

II. Mandate [FN8]

(1a) First, we must determine whether we may review the order granting summary adjudication on a petition for writ of mandate. A writ of mandate may be issued by any court to an inferior tribunal to compel the admission of a party to the use or enjoyment of a right to which it is entitled and from which it is unlawfully precluded by the inferior tribunal. (Code

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

Civ. Proc., § 1085.)Typically, the writ will not issue if there is a plain, speedy and adequate remedy in the ordinary course of law. (*Id.* § 1086.)

> FN8 The issue of the absence of an adequate remedy in the ordinary course of law has already been determined by the granting of an alternative writ. (*Brown v. Superior Court* (1971) 5 Cal.3d 509, 515 [96 Cal.Rptr. 584, 487 P.2d 1224].) We include this part to explain our reason for granting the alternative writ.

An order granting partial summary judgment-or summary adjudication-is not an appealable order. Mandate may be granted to review an order granting summary adjudication. (See *Field Research Corp. v. Superior Court* (1969) 71 Cal.2d 110, 111 [77 Cal.Rptr. 243, 453 P.2d 747]; *Mason v. Superior Court* (1985) 163 Cal.App.3d 989, 994 [210 Cal.Rptr. 63]; see 8 Witkin, Cal. Procedure (3d ed. 1985) Extraordinary Writs, § 98, pp. 737-738.)

There is not yet a final judgment in this case, as the trial court has ruled on only two of six causes of action. (2) In most cases, an interim order must await review on appeal from the final judgment. However, in cases of significant legal impact, appellate courts may consider a petition for an extraordinary writ. The adequacy of an appellate remedy depends on the circumstances of the case, vesting a large measure of discretion in the appellate court to grant or deny a writ. (*San Gabriel Tribune v. Superior Court* (1983) 143 Cal.App.3d 762, 770 [192 Cal.Rptr. 415].)

(1b) Several factors cause us to exercise our discretion and consider the merits of the petition at this time. First, the issues in this case present significant legal questions of constitutional and statutory interpretation. If the court permits CBRC to go to trial based on erroneous rulings of law, substantial trial expenses will be needlessly imposed on the city and the public. (See, e.g., *San Diego Unified Port Dist. v. Superior Court* (1977) 67 Cal.App.3d 361, 364-365 [136 Cal.Rptr. 557].) This factor tends to make later review on appeal an inadequate remedy. (*City of Glendale v. Superior Court* (1993) 18 Cal.App.4th 1768, 1776-1777 [23 Cal.Rptr.2d 305]; see *Hampton v. Superior Court* (1952) 38 Cal.2d 652, 657 [242 P.2d 1] [prohibition]; *Bricklayers & Masons Union No. 1 v. Superior Court* (1963) 216 Cal.App.2d 578, 582 [31 Cal.Rptr. 115] [prohibition]; see also 8 Witkin, ***751** Cal. Procedure, *supra*, Extraordinary Writs, §§ 101, 116, at pp. 739-740, 751-753.)

Second, the public interest supports an immediate review of the trial court's ruling. When the validity of a public agency's action is at issue, the public interest in a speedy determination of the matter may also make an appeal inadequate. (See *Millbrae School Dist. v. Superior Court* (1989) 209 Cal.App.3d 1494, 1496-1497 [261 Cal.Rptr. 409].) A number of municipalities have ordinances similar to the one challenged by CBRC or are interested in adopting one. The issues presented in this action are of significance to other California communities struggling with similar nuisances and criminal activity centering on establishments that sell alcoholic beverages. [FN9] (See, e.g., *City of Glendale v. Superior Court*, *supra*, 18 Cal.App.4th at p. 1777.) The fact that it is in the public interest to resolve this controversy as expeditiously as possible tends to weigh in favor of the exercise of our discretion to consider the petition for writ of mandate, rather than requiring the city to await a later appeal. (See *City of Huntington Beach v. Superior Court* (1978) 78 Cal.App.3d 333, 339-340 [144 Cal.Rptr. 236] [error in liability portion affects scheduled damage trial].)

> FN9 The cities and towns joining as amici curiae in support of the city are the Cities of Alameda, Anaheim, Bakersfield, Carlsbad, Chico, Cypress, Fresno, Glendale, Lemon Grove, Lodi, Los Altos, Monterey, Redlands, Sacramento, San Jose, Santa Cruz, Santee, Torrance and Walnut Creek and the Town of Los Gatos.

Third, the issues presented are questions of law, making their immediate resolution on a petition for writ of mandate appropriate. Mandate will lie if the trial court has a clear, present and usually ministerial duty and the city has a clear, present and beneficial right of performance of that duty. However, the city may not invoke mandamus to control a trial court's exercise of discretion. (See *Residents for Adequate Water v. Redwood Valley County Water Dist.* (1995) 34 Cal.App.4th 1801, 1806 [41 Cal.Rptr.2d 123]; see *San Gabriel Tribune v. Superior Court*, *supra*, 143 Cal.App.3d at p. 771.) On a motion for summary adjudication, the trial court has no discretion to exercise. If a triable issue of material fact exists as to the

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

challenged causes of action, the motion must be denied. If there is no triable issue of fact, the motion must be granted. (Code Civ. Proc., § 437c, subd. (f).) If the trial court errs, it has made an error of law, which automatically constitutes an abuse of discretion. Under these circumstances, obtaining relief by means of mandate may be proper. If it appears that the trial court erred, the appellate court may exercise its discretion to entertain the writ in order to avoid unnecessary trial court proceedings. (*Whitney's at the Beach v. Superior Court* (1970) 3 Cal.App.3d 258, 266 [83 Cal.Rptr. 237].)*752

If the significant legal issues of statewide interest are resolved in favor of the validity of the city's ordinance, to await a later appeal in order to make this determination would cause needless expense to the city, the CBRC and the public. Thus, we conclude that this is an appropriate matter to be considered on a petition for writ of mandate.

III. Statutory Claim

A. *Section 23790*

(3a) The trial court concluded that the Oakland ordinance was preempted by section 23790 because it regulates previously existing licensees. Thus, it granted CBRC summary adjudication on its second cause of action for declaratory and injunctive relief based on its allegation that the Oakland ordinance violated section 23790. In its petition for writ of mandate, the city contends that the trial court erred in granting summary adjudication on this cause of action because it wrongly concluded that the ordinance was preempted. It argues that the trial court based its decision on cases that did not address the specific issue presented in this case. (See *Korean American Legal Advocacy Foundation v. City of Los Angeles*, *supra*, 23 Cal.App.4th 376; see also *Boccato v. City of Hermosa Beach* (1994) 29 Cal.App.4th 1797 [35 Cal.Rptr.2d 282].)

The city frames the issue in this manner-does section 23790 preclude it from enforcing an ordinance setting up a new mechanism to control nuisance and criminal activities that were regulated *before* enactment of this ordinance, if the new mechanism applies to an alcoholic beverage sales establishment in operation before the ordinance was enacted? [FN10] The ordinance imposes no new regulation on alcoholic beverage sales establishments, it reasons-it simply collects various, scattered nuisance and criminal regulations that exist in other laws and creates a new means of enforcing them. Thus, the city reasons, its ordinance is not preempted by section 23790. Amici curiae California cities and towns have filed an amicus curiae brief in support of the city's position. (See fn. 9, *ante*.)For its part, CBRC contends that the issue is not whether the ordinance is preempted by section 23790, but simply whether this statute precludes a retroactive land use ordinance which interferes with the sale of alcoholic beverages by a licensee. Amici curiae Beer Institute of California, California Beer and Wine Wholesalers *753 Association, Inc., and Wine Institute have filed an amicus curiae brief in support of CBRC's opposition to the petition for writ of mandate. [FN11]

FN10 Although neither party addresses this specific point, CBRC does not contend that the alcoholic beverage sales establishments were in operation before the city began regulating nuisances and criminal activities.

FN11 The Legislative Counsel of California rendered an opinion in 1993 concluding that a court reviewing the Oakland ordinance would find that it was preempted by article XX, section 22 of the California Constitution and section 23790. However, the same report also noted that a contrary argument could be made that the ordinance "regulates a nuisance aspect of the liquor business, effects of consumption, that is not covered by state law either expressly or by implication."

The pertinent part of section 23790 provides that "[n]o retail license shall be issued for any premises which are located in any territory where the exercise of the rights and privileges conferred by the license is contrary to a valid zoning ordinance of any county or city. *Premises which had been used in the exercise of those rights and privileges at a time prior to the effective date of the zoning ordinance may continue operation under the following conditions*: [¶] (a) The premises retain the same type of retail liquor license within a license classification. [¶] (b) The licensed premises are operated continuously without substantial change in mode or character of operation...." (Italics added.) This statute was originally enacted in 1935. (*Town of Los Gatos v. State Bd. of*

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

Equal.(1956) 141 Cal.App.2d 344, 346-347 [296 P.2d 909]; see Stats. 1935, ch. 330, § 15, p. 1130.) It prohibits the issuance of alcoholic beverage retail licenses for any premises located in a zone where the exercise of the rights conferred by that license would violate a valid local zoning ordinance, unless the premises had been used in the exercise of such rights before the effective date of the ordinance. (*Board of Trustees v. Munro* (1958) 163 Cal.App.2d 440, 447 [329 P.2d 765].)

(4) When reviewing the Oakland ordinance and section 23790, we must interpret both. Thus, the standard of review is one of de novo review. The construction of statutes and the ascertainment of legislative intent are questions of law. We are not limited by the trial court's interpretation, nor by the evidence presented on the issue in the trial court. (See *Bravo Vending v. City of Rancho Mirage* (1993) 16 Cal.App.4th 383, 391-392 [20 Cal.Rptr.2d 164].)

B. *Grandfathered Rights*

1. *Legislative Argument*

(5) Preliminarily, CBRC contends that Oakland's role in the legislative history of section 23790 constitutes an admission that the city ordinance ***754** impermissibly regulates grandfathered alcoholic beverage sales establishments. [FN12] In 1982, the city proposed an amendment to section 23790 providing for the expiration of grandfather rights under certain circumstances. The proposed amendment would have provided for the expiration of grandfather rights when continuous use ended. It would also have distinguished between types of alcoholic beverage licenses when applications were submitted to the Department of Alcoholic Beverage Control to reopen discontinued alcoholic beverage sales establishments. The city's intent was to prevent beer-and-wine-only establishments from being upgraded to full scale liquor stores and retaining the prior owner's grandfather rights. Under the proposed amendment, the premises used in the exercise of an alcoholic beverage license before the enactment of a local zoning ordinance would continue in that operation only if the same type of retail license were used continuously at the same location. In that legislative session, the Legislature enacted a provision defining what constituted a break in the continuous operation of an alcoholic beverage sales establishment. (See § 23790, subd. (b) [now subd. (b)(1)], as amended by Stats. 1982, ch. 474, § 1, p. 2076.)

> FN12 Although, for convenience, we state this issue in terms of CBRC's objections to the ordinance, we do not mean to suggest that we believe that CBRC has the burden of proof on this or any other issue presented in the petition. As the moving party, the city has the obligation to prove that the ordinance passes muster.

Oakland officials explained that the purpose of the city's proposed amendment was "an attempt to adjust existing state law to allow the city to control the location of alcoholic beverage sales activities in a more logical and successful manner." In its letter urging the Legislature to amend section 23790, the city's legislative advocate stated that this statute provided that an establishment licensed before the effective date of a zoning ordinance would be unaffected by that zoning ordinance because of the establishment's grandfather rights. The letter added that "the state preempts local jurisdictions in the field of licensing alcoholic beverage establishments." CBRC contends that these 1982 arguments urging amendment of section 23790 contradict the city's claim that this statute does not preclude the application of the Oakland ordinance to grandfathered alcoholic beverage licensees. (See, e.g., *California Court Reporters Assn. v. Judicial Council of California* (1995) 39 Cal.App.4th 15, 30-31 [46 Cal.Rptr.2d 44] [Judicial Council's earlier requests for legislative authority to enact rules counters present argument that no legislative authority is now needed].)

Having reviewed this matter carefully, we are satisfied that the issues are sufficiently distinct such that the city's previous position does not contradict its contentions in the present case. In 1982, the city advocated a ***755** general change in the language of section 23790 defining more clearly what constituted "continuous use" for purposes of determining whether the city had authority to regulate more alcoholic beverage sales establishments. Much of the "argument" that CBRC cites is the city's summary of the then existing law-little more than a paraphrase of the text of section 23790. The city and CBRC do not dispute what section 23790*says*, but what its language *means*-whether it applies at all in the context presented by this case.

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

More importantly, the issues presented by the proposed legislation and the case at bar are significantly different. In 1982, the city sought a legislative amendment that would have allowed it more authority to limit the number and location of alcoholic beverage *licenses* issued within certain zones in the city. In the ordinance now before us, the city attempts to create an *administrative mechanism* to regulate nuisance and criminal activities that occur near alcoholic beverage sales establishments. This ordinance does not affect alcoholic beverage licenses or attempt to limit or restrict them. (See pt. IV. B.-D., *post.*) The city's recitation of the text of a statute in the context of a request for legislative clarification that some alcoholic beverage establishments should no longer be entitled to the protection of grandfather status does not shed any light on the issue presented in our case-whether the new administrative mechanism may properly be applied to alcoholic beverage sales establishments that have been in continuous operation since before the ordinance was enacted. Thus, we conclude that the city's earlier statements on an unrelated issue do not preclude it from making the arguments that it now does in favor of its interpretation of section 23790.

2. *Nuisance and Criminal Activities Control*

(3b) The city contends that the ordinance merely creates an administrative mechanism for enforcing nuisance and criminal laws that are applicable to all alcoholic beverage establishments, even those in operation before the ordinance's effective date. CBRC couches the issue somewhat differently-it argues that the Oakland ordinance creates a mechanism in the form of a retroactive land use ordinance that may result in the denial of the right to sell alcoholic beverages. As we have already concluded, the purpose of this ordinance is to control and abate nuisances and criminal activities occurring near alcoholic beverage sales establishments. (See *Korean AmericanLegal Advocacy Foundation v. City of Los Angeles*, *supra*, 23 Cal.App.4th at p. 389 [no invasion of state power to regulate alcohol sales]; see pt. IV. D., *post.*) Thus, we begin our legal analysis of the applicability of section 23790 by considering this purpose.

By ordinance, a city council may declare what constitutes a nuisance. (Gov. Code, § 38771.)A city may bring an action to abate a public nuisance.*756 (Code Civ. Proc., § 731.)The California Supreme Court permits the abatement of even a grandfathered business if it constitutes a nuisance. In one case, the high court reasoned that zoning laws do not customarily interfere with existing conditions, but regulate future use of land. However, if a business constitutes a nuisance, it can still be abated in a proper exercise of the police power. (*Jones v. City of Los Angeles* (1930) 211 Cal. 304, 311 [295 P. 14].) In another, it reaffirmed that the right to continue a previously existing lawful business may be revoked if the business is found to be a nuisance. The abatement of such an existing business would be a lawful exercise of the police power, the court ruled. (*Livingston Rock etc. Co. v. County of L. A.* (1954) 43 Cal.2d 121, 128 [272 P.2d 4].) In a third case, the Supreme Court ruled that a city may determine what constitutes a nuisance and may take action to abate such a nuisance, despite the fact that the safety standards that had been incorporated in a building code sought to be enforced was enacted after construction of the building. (See *City of Bakersfield v. Miller* (1966) 64 Cal.2d 93, 96, 100 [48 Cal.Rptr. 889, 410 P.2d 393],cert. den.384 U.S. 988 [16 L.Ed.2d 1005, 86 S.Ct. 1890].)

These cases support the conclusion that a city may properly enact a local ordinance to control and abate nuisance activities, despite the fact that the business that would be regulated by the ordinance possessed grandfather rights that might ordinarily render it immune from compliance with local ordinances. (See *Livingston Rock etc. Co. v. County of L. A.*, *supra*, 43 Cal.2d at p. 128;*Jones v. City of Los Angeles*, *supra*, 211 Cal. at p. 311; see also *City of Bakersfield v. Miller*, *supra*, 64 Cal.2d at pp. 96, 100;*Suzuki v. City of Los Angeles* (1996) 44 Cal.App.4th 263, 277-281 [51 Cal.Rptr.2d 880].) If a city may abate a public nuisance despite grandfather rights, then a fortiori a municipality may enforce criminal laws in the face of such a claim of prior existing lawful operation.

CBRC counters that while these cases may support the city's authority to abate a public nuisance or control criminal activities, they did not arise in a context of a zoning ordinance enacted in violation of section 23790. It contends that section 23790 overrides the city's police powers. We disagree. Construing section 23790, it appears to us that the Legislature intended that this provision protect the vested rights of the proprietors of premises engaged in the lawful, licensed sale of alcoholic beverages. Such a business

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

has acquired by the passage of time a vested right to continue in operation to lawfully dispense alcoholic beverages. However, for CBRC's challenge to the ordinance to succeed, we must also read this provision to mean that the Legislature intended that a licensed alcoholic beverage establishment retains a vested right to conduct its operation in a manner that encourages nuisance or criminal activities to occur on or near its premises. *757

Such a conclusion defies logic. (6) We must construe the statute in a reasonable, commonsense manner consistent with the Legislature's apparent purpose and intent, the application of which will promote wise policy, not absurdity. (See *DeYoung v. City of San Diego* (1983) 147 Cal.App.3d 11, 18 [194 Cal.Rptr. 722]; see also 7 Witkin, Summary of Cal. Law (9th ed. 1988) Constitutional Law, § 94, pp. 146-148.) (3c) To interpret the concept of grandfather rights so far as to allow long-time businesses the freedom to conduct their operations in a manner that promotes nuisances and criminal activities would be absurd. A limited view of grandfather rights is also consistent with wise policy. As another court held when reviewing the applicability of grandfather rights under section 23790 in a different context, it makes sense for the number and type of events allowing nonconforming uses to avoid compliance with updated codes to be narrow and limited. (See *Korean American Legal Advocacy Foundation v. City of Los Angeles*, *supra*, 23 Cal.App.4th at p. 397.)

Nevertheless, CBRC urges us to find that section 23790 invalidates the ordinance because its enforcement may ultimately lead to a loss of a state-issued license to sell alcoholic beverages. However, the city ordinance does not halt operation of a licensed alcoholic beverage establishment. If an alcoholic beverage sales establishment fails to comply with the requirements of the ordinance after numerous administrative attempts to obtain compliance, the ordinance authorizes the city to seek a court order to abate a nuisance or to ask the Department of Alcohol Beverage Control to revoke the license. The city already has *this* authority-independent of this ordinance-which it may use in appropriate cases in the proper exercise of its police power. The ordinance does not create any *new* authority empowering the city to halt operation of an alcoholic beverage sales establishment premises. It merely creates an administrative mechanism that may result in a third party taking action against the alcoholic beverage seller-abatement by a court or license revocation by the Department of Alcoholic Beverage Control.

In sum, we find that the conduct that is regulated by the ordinance-the control and abatement of nuisances and criminal activities-does not fall within the ambit of section 23790. A municipality retains the right to abate nuisances and enforce its criminal laws even in the face of grandfather rights. No business-not even an alcoholic beverage sales establishment regulated by state law-has a vested right to conduct its business in a ***758** manner that attracts public nuisances and encourages criminal activities near its premises. [FN13]

FN13 We are aware that other courts have analyzed the question of violation of section 23790 as a preemption question. (See *Suzuki v. City of Los Angeles*, *supra*, 44 Cal.App.4th at pp. 266, 281;*Boccato v. City of Hermosa Beach*, *supra*, 29 Cal.App.4th at p. 1807;*Korean American Legal Advocacy Foundation v. City of Los Angeles*, *supra*, 23 Cal.App.4th at p. 394.) However, our conclusion that the city's authority to control and abate nuisances and criminal activities exists despite any grandfather rights makes it unnecessary for us to also consider whether the ordinance is preempted by section 23790. Clearly, if the statute does not preclude the city's use of its authority to control and abate nuisances and criminal activities, the state statute would not preempt this ordinance.

C. *Conclusion*

The trial court erred in concluding that CBRC was entitled to a summary adjudication on the second cause of action for declaratory and injunctive relief based on its claim of illegal regulation in violation of section 23790. As the ordinance does not violate this statute, the city is entitled to summary adjudication on the second cause of action.

IV. Constitutional Claim

A. *Article XX, Section 22*

The city also contends that the trial court erred in

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

granting CBRC summary adjudication on its third cause of action because it wrongly concluded that the ordinance's fees constitute an unlawful taxation. The third cause of action sought declaratory and injunctive relief, alleging unlawful taxation in violation of section 22 of article XX of the California Constitution. The trial court held that the fees imposed pursuant to the ordinance violated article XX, section 22 of the California Constitution. In its response to the city's petition for writ of mandate, CBRC contends that the $600 annual fee and the subsequent fees constitute unlawful license fees. Amici curiae Beer Institute of California, California Beer and Wine Wholesalers Association, Inc., and Wine Institute filed an amicus curiae brief in support of CBRC.

The Constitution provides that "[t]he State of California, subject to the internal revenue laws of the United States, shall have the exclusive right and power to license and regulate the ... sale ... of alcoholic beverages within the State .... [¶] ... [¶] The Department of Alcoholic Beverage Control shall have the exclusive power ... to license the ... sale of alcoholic beverages in this State, and to collect license fees or occupation taxes on account thereof...." (Cal. Const., art. XX, § 22; see *Board of Trustees v. Munro*, *supra*, 163 Cal.App.2d at p. 445.) This provision of the ***759** state Constitution took effect in 1933 when the Twenty-first Amendment to the United States Constitution took effect. (*City of Rancho Cucamonga v. Warner Consulting Services, Ltd.* (1989) 213 Cal.App.3d 1338, 1343 [262 Cal.Rptr. 349].) While it originally granted municipalities the right to license the manufacture, disposition or sale of alcoholic beverages, article XX, section 22 was amended in 1934 to delete this authority. (*L. A. Brewing Co. v. Los Angeles* (1935) 8 Cal.App.2d 391, 394 [48 P.2d 71].)

B. *License Tax*

The trial court concluded that the state Constitution precluded all city taxation applying solely to alcoholic beverage licensees. Specifically, it found that "there is no precedent in the area of alcoholic beverage law to allow for a municipality to impose a fee solely on sellers of alcoholic beverages because of the nature of their business." (7) On the petition for mandamus relief, the city first contends that the fees imposed by its ordinance do not constitute a license tax. It argues that the ordinance's fees are not imposed as a condition to the issuance of a license, but are required to pay for the costs of regulating nuisance and criminal activities associated with alcoholic beverage sales establishments.

The California Constitution grants the state Department of Alcoholic Beverage Control the exclusive power to collect license fees or occupation taxes related to alcoholic beverage sales. (Cal. Const., art. XX, § 22.)Liquor licenses are not subject to local license or occupation taxes. (*Roehm v. County of Orange* (1948) 32 Cal.2d 280, 290-291 [196 P.2d 550].) The Oakland ordinance does not require the payment of a fee on the issuance of a license. It grants deemed approved status to existing alcoholic beverage retailers and requires them to pay a fee to administer the enforcement of the ordinance's requirements. (Oakland Planning Code, §§ 15400, 15510(f).)

Courts distinguish between municipal revenue taxes that may be preempted by state law and fees properly imposed by a city pursuant to its regulatory authority to control and supervise a business that imposes an unusual burden on the local entity for services. For example, in one case, a city imposed a permit fee on house movers. State law specifically prohibits any municipal *license fee* to be imposed on intercity transportation. Despite this statute, the appellate court upheld the ordinance requiring the fee. The court found that purpose of the fee was to pay city inspection and administrative costs associated with house moving. The amount of the fee was based on reasonably anticipated costs of inspection and administration of the permitted house moving activities. Thus, the court concluded that the ordinance was a regulatory one and that the fee imposed was not preempted by ***760** the prohibition on license fees. (*Housemoving Contractors Assn. v. City of Glendale* (1981) 123 Cal.App.3d 673, 675 [176 Cal.Rptr. 751]; see Pub. Util. Code, §§ 4303, 4304.)

We find this precedent persuasive in our own case. CBRC's criticism of this case on the ground that the license tax prohibition in *Housemoving Contractors Assn. v. City of Glendale*, *supra*, 123 Cal.App.3d 673 was statutory rather than constitutional strikes us as a distinction without a difference. A state statute, like a state constitutional provision, would prevail over a local ordinance if a conflict occurred. (See *Cohen v. Board of Supervisors* (1985) 40 Cal.3d 277, 290 [219 Cal.Rptr. 467, 707 P.2d 840] [local legislation in con-

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

flict with general law is void]; *Korean AmericanLegal Advocacy Foundation v. City of Los Angeles*, *supra*, 23 Cal.App.4th at p. 384.) Both state laws specifically prohibit municipal license taxes. If the house moving fee does not constitute a license tax, neither does the fee imposed pursuant to Oakland's ordinance.

Nevertheless, CBRC and its amici curiae urge us to conclude that because the failure to pay the required fee may result in summary abatement and loss of the privilege of engaging in business, the fee constitutes a license tax. Neither abatement nor loss of the privilege of doing business will occur unless a court orders abatement or the Department of Alcoholic Beverage Control revokes the business's state-issued liquor license. (See §§ 24200-24211; Civ. Code, §§ 3490-3496; Oakland Planning Code, § 15510(c).) That the ultimate result of a failure to pay the city's required fee might be abatement or revocation of the state liquor license does not transform a regulatory fee to a license tax. Thus, we find that the ordinance's fees do not constitute an impermissible license tax.

C. *Tax or Fee*

(8a) The trial court impliedly concluded that the ordinance's fees constituted a tax on alcoholic beverage retailers. In its next claim in support of its petition for mandate, the city contends that the fees imposed pursuant to the ordinance are not taxes at all, but proper regulatory fees imposed without violating article XX, section 22 of the California Constitution. CBRC counters by arguing that the fee is a impermissible revenue-generating measure-that is, a tax disguised as a fee.

(9) The state Constitution grants the state Department of Alcoholic Beverage Control the exclusive power to tax alcoholic beverage sales. (Cal. Const., art. XX, § 22; see *Board of Trustees v. Munro*, *supra*, 163 Cal.App.2d at p. 445.) A local tax on alcoholic beverage sales is preempted by state law. ***761** (*A.B.C. Distributing Co. v. City and County of San Francisco* (1975) 15 Cal.3d 566, 575 [125 Cal.Rptr. 465, 542 P.2d 625]; see *Century Plaza Hotel Co. v. City of Los Angeles* (1970) 7 Cal.App.3d 616, 626 [87 Cal.Rptr. 166] [5 percent local excise tax on alcoholic beverage sales held illegal].) However, alcoholic beverages retailers may properly be required to pay their fair share of the cost of government. (*Id.* at p. 626.)If a business imposes an unusual burden on city services, a municipality may properly impose fees pursuant to its police powers. (See, e.g., *Housemoving Contractors Assn. v. City of Glendale*, *supra*, 123 Cal.App.3d at p. 675;*United Business Com. v. City of San Diego* (1979) 91 Cal.App.3d 156, 165-166 [154 Cal.Rptr. 263].) A local entity may not impose a tax on alcoholic beverage retailers under the guise of a fee. (See Cal. Const., art. XX, § 22.) Thus, we must determine whether the Oakland ordinance's fees are regulatory or are hidden taxes intended to generate unrelated revenue for the city.

The determination of whether the actual purpose of an ordinance is regulatory or revenue raising is a question of fact. (*United Business Com. v. City of San Diego*, *supra*, 91 Cal.App.3d at p. 165.) In the trial court, the parties posed no factual issues to be resolved, only legal questions. In its order granting summary adjudication, the trial court recited that the parties did not dispute that the fees generated revenue to fund the ordinance's programs. As the meaning of this recitation is somewhat ambiguous on this issue, we will consider how courts factually distinguish a fee from a tax.

(10) To determine whether the purpose of the ordinance is regulatory or revenue generating, the court looks to the substantive provisions of the ordinance, not merely its title and form. If revenue is the primary purpose of the ordinance and regulation is merely incidental, then the imposition is a tax. If regulation is the primary purpose, the mere fact that incidental revenue is also obtained does not make the imposition a tax. Generally, when a fee is imposed for a regulatory purpose and the ordinance requires compliance with conditions in addition to the payment of the prescribed sum, the imposed sum is a not a tax, but is a fee properly imposed pursuant to the local entity's police power. When the sum is exacted solely for a revenue purpose and its payment gives the right to carry on the business without any further condition, it is a tax. (See *United Business Com. v. City of San Diego*, *supra*, 91 Cal.App.3d at p. 165; see also *Ainsworth v. Bryant* (1949) 34 Cal.2d 465, 473 [211 P.2d 564] [regardless of formal title, character of tax determined by its incidents and from natural and legal effect of zoning ordinance language].)

Fees charged in connection with regulatory activities that do not exceed the reasonable costs of providing

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

services necessary to the activity for which *762 the fee is charged and which are not levied for unrelated revenue purposes do not constitute a tax. (*Pennell v. City of San Jose* (1986) 42 Cal.3d 365, 375 [228 Cal.Rptr. 726, 721 P.2d 1111]; *San Diego Gas & Electric Co. v. San Diego County Air Pollution Control Dist.* (1988) 203 Cal.App.3d 1132, 1145-1146 [250 Cal.Rptr. 420].) Generally, a regulatory fee cannot exceed the sum reasonably necessary to cover the costs of the regulatory purpose sought. These costs include all those incident to the issuance of the permit, investigation, inspection, administration, maintenance of a system of supervision and enforcement. (*United Business Com. v. City of San Diego*, *supra*, 91 Cal.App.3d at p. 165.) The municipality need only apply sound judgment and consider probabilities according to the best honest view of informed officials in setting the amount of the regulatory fee. (*Id.* at p. 166.)

(11) To establish that a fee is a regulatory fee and not a tax, the local entity should prove the estimated costs of the regulatory activity and the basis for determining the manner in which the costs are apportioned, so that the charges allocated to a payor bear a fair or reasonable relationship to the payor's burdens on or benefits from the regulatory activity. (*San Diego Gas & Electric Co. v. San Diego County Air Pollution Control Dist.*, *supra*, 203 Cal.App.3d at p. 1146.) It is not necessary that the payor perceive the regulation to be a benefit. A regulatory fee may be imposed pursuant to the local governmental entity's police power when the fee constitutes an amount necessary to carry out the purposes and provisions of the regulation. (*Id.* at p. 1146 fn. 18.)

(8b) In our case, city documents show that the annual operating budget for the program would be recovered in fees charged to alcoholic beverage retail establishments pursuant to the ordinance. Reinspection fees would be charged only to establishments that were found not to be in compliance with the terms of the ordinance. The estimated revenues derived from the fees match the program's proposed budget. The Oakland ordinance's revenue is intended to pay the administrative costs of its programs. [FN14] The ordinance's primary purpose is regulatory-to create an environment in which nuisance and criminal activities associated with alcoholic beverage retail establishments may be reduced or eliminated. Thus, the fee imposed pursuant to the ordinance is not a tax imposed to pay general revenue to the local governmental entity, but is a regulatory fee intended to defray the cost of providing and administering the hearing process set out in the ordinance. (See, e.g., *Pennell v. City of San Jose*, *supra*, 42 Cal.3d at p. 375.) *763

FN14 At trial, the parties agreed that the fees generated revenue to fund the ordinance's programs.

D. *Regulatory Fee Applied Solely to Alcoholic Beverage Retailers*

(12a) The trial court concluded that there was no precedent to allow a city to impose a fee on alcoholic beverage retailers because of the nature of their business. It impliedly agreed with CBRC's argument that the ordinance improperly singled out alcoholic beverage retailers. It its petition for writ of mandate, the city argues that the trial court erroneously concluded that the state Constitution prohibits a municipality from imposing a fee on alcoholic beverage establishments. CBRC counters that the trial court's ruling was correct because the fee was levied only against alcoholic beverage licensees. The city argues that a regulatory fee may be lawfully imposed on alcoholic beverage sales establishments.

As CBRC contends in its opposition to the petition for writ of mandate, a tax that singles out alcoholic beverage retailers is suspect. (*A.B.C. Distributing Co. v. City and County of San Francisco*, *supra*, 15 Cal.3d at p. 575.) However, we have already concluded that the ordinance requires the payment of a regulatory fee, not a tax of any kind. (See pt. III. B., C., *ante*.)To the extent that this suspect character also applies to regulatory fees, we note that to label a fee as "suspect" does not compel the finding that the fee is prohibited. As with other businesses, alcoholic beverage establishments may properly be required to pay their fair share of the cost of government. (See *Century Plaza Hotel Co. v. City of Los Angeles*, *supra*, 7 Cal.App.3d at p. 626.) That the fee will probably be paid from revenue derived at least in part from the sale of alcoholic beverages creates only an indirect burden on an alcoholic beverage retailer-one that is insufficient to nullify the otherwise proper imposition of a regulatory fee. (See *A.B.C. Distributing Co. v. City and County of San Francisco*,*supra*, at p. 575 [tax case].)

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

CBRC does not dispute that the city may properly regulate nuisance and criminal activities through its exercise of its police power, but it argues that these police powers are overridden by article XX, section 22 of the California Constitution, when the regulation involves alcoholic beverages. Thus, the issue is whether a local entity's authority to regulate alcoholic beverage sellers properly derives from the city's police power under article XI, section 7 of the California Constitution. (See *City of Rancho Cucamonga v. Warner Consulting Services, Ltd.*, *supra*, 213 Cal.App.3d 1338, 1345.) A local entity's authority to regulate state-licensed alcoholic beverage retailers derives solely from its general police powers. (*Id.* at pp. 1343, 1345.)A city's police powers are as broad as the police power that may be exercised by the Legislature itself. However, in its proper exercise of its police powers, the city may not also violate article XX, section 22. (213 Cal.App.3d at pp. 1344-1345.) ***764**

Article XX, section 22 of the California Constitution gives the state Department of Alcohol Beverage Control exclusive jurisdiction to regulate alcohol. (*Korean AmericanLegal Advocacy Foundation v. City of Los Angeles*, *supra*, 23 Cal.App.4th at p. 385.) If the purpose and effect of the city ordinance is to regulate the manufacture, sale, purchase, possession or transportation of alcoholic beverages, the legislation is expressly preempted by the state Constitution. (*Ibid.*;*Floresta, Inc. v. City Council* (1961) 190 Cal.App.2d 599, 606-607 [12 Cal.Rptr. 182].) For example, an express prohibition of the sale of alcoholic beverages at automobile service stations conflicts with article XX, section 22. (*Mussalli v. City of Glendale* (1988) 205 Cal.App.3d 524, 528 [252 Cal.Rptr. 299]; see § 23790.5 [by legislative enactment, local entities may now regulate alcoholic beverage sales at service stations].) Despite this constitutional prohibition, the state Legislature has expressed its intent that local entities-not the state-control local matters. (*Jon-Mar Co. v. City of Anaheim* (1962) 201 Cal.App.2d 832, 837 [20 Cal.Rptr. 350].) The resolution of the issue before us turns on whether the Oakland ordinance trods on the state's regulatory power or falls within local authority.

Courts have recognized that local regulation of alcoholic beverage retailers may be properly within the local entity's police powers without violating section 22 of article XX of the California Constitution. Generally, this constitutional provision will not preempt a local ordinance when the ordinance does not directly affect the licensee's ability to sell alcoholic beverage to a willing purchaser. (*California Restaurant Assn. v. City of Los Angeles* (1987) 192 Cal.App.3d 405, 411 [237 Cal.Rptr. 415] [local ordinance requiring posting of notice warning of alcohol effects on pregnant women was not preempted by Constitution]; see *Daniel v. Board of Police Commissioners* (1961) 190 Cal.App.2d 566, 570-571 [12 Cal.Rptr. 226],overruled on other grounds in *Burton v. MunicipalCourt* (1968) 68 Cal.2d 684, 693 [68 Cal.Rptr. 721, 441 P.2d 281] [prohibition of live entertainment at alcoholic beverage establishment does not interfere with licensee's right to sell alcoholic beverages].) The Legislature did not intend that a person licensed to sell alcoholic beverages should be immune from local supervision of any activity that the licensee may pursue in conjunction with the sale of alcoholic beverages. (*Id.* at p. 570.)

For example, the California Supreme Court has held that local ordinances may properly regulate live entertainment in taverns while leaving intact the state's jurisdiction to license the sale of alcoholic beverages. The two types of regulations were held to be independent and distinct. Thus, ordinances relating to live entertainment do not conflict with the state's powers over the ***765** sale of alcoholic beverages. (*Crownover v. Musick* (1973) 9 Cal.3d 405, 417-418 [107 Cal.Rptr. 681, 509 P.2d 497], cert. den. *subnom.Reynolds v. City of Sacramento,* 415 U.S. 931 [39 L.Ed.2d 489, 94 S.Ct. 1443]; *Owen v. Musick,* 415 U.S. 931 [39 L.Ed.2d 489, 94 S.Ct. 1443],disapproved on another point in *Morris v. Municipal Court* (1982) 32 Cal.3d 553, 564-565 [186 Cal.Rptr. 494, 652 P.2d 51].) In another case, an appellate court concluded that a municipality retains the constitutional right to enforce a zoning ordinance that does not permit a cocktail lounge in a shopping center without a use permit. This prerogative was held not to have been preempted by the state's generalized regulation of alcohol sales. (See *Floresta, Inc. v. City Council*, *supra*, 190 Cal.App.2d at pp. 612-613.) In a third case, another appellate court upheld a local ordinance prohibiting persons possessing, using, consuming or under the influence of alcohol from entering or remaining in a modeling studio adjacent to an alcoholic beverage retail establishment. The court found that the ordinance did not attempt to invade the exclusive power given to the state pursuant to article

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

XX, section 22 of the state Constitution to license, regulate or prohibit the sale of alcoholic beverages. (See *Cristmat, Inc. v. County of Los Angeles* (1971) 15 Cal.App.3d 590, 594-598 [93 Cal.Rptr. 325]; see also *Mussalli v. City of Glendale*, *supra*, 205 Cal.App.3d at p. 528.) Courts upheld these ordinances because their purpose was properly related to the police powers, distinct from the direct regulation of alcoholic beverage licensees.

CBRC characterizes the Oakland ordinance as a regulation of alcoholic beverage retailer sellers. However, the purpose of the ordinance determines the issue before us. (See *Daniel v. Board of Police Commissioners*, *supra*, 190 Cal.App.2d at p. 571 [purpose of ordinance was to regulate live entertainment furnished in restaurants and cocktail lounges; local ordinance did not violate Cal. Const., art. XX, § 22].) To paraphrase one of these cases, the city may regulate nuisances and criminal activity pursuant to its police power. An ordinance prohibiting nuisance and criminal activities from being conducted on or near the premises of liquor licensees falls within the legitimate scope of the city's police power. The regulation is not intended to control the sale of alcoholic beverages, but to eliminate nuisances and criminal activities. (See *Cristmat, Inc. v. County of Los Angeles*, *supra*, 15 Cal.App.3d at pp. 595-596 [under art. XX, § 22, ordinance may regulate floor shows in places of public entertainment where alcoholic beverages are served]; see also *Mussalli v. City of Glendale*, *supra*, 205 Cal.App.3d at p. 528.) We are satisfied that the ordinance's purpose is the regulation of nuisance and criminal activity-a subject independent and distinct from the regulation of alcoholic beverage sales. Thus, the ordinance does not conflict with the state's authority to regulate alcoholic beverage sales. (See ***766** *Crownover v. Musick*, *supra*, 9 Cal.3d at pp. 417-418; see also *City of Rancho Cucamonga v. Warner Consulting Services, Ltd.*, *supra*, 213 Cal.App.3d at pp. 1343-1344;*Mussalli v. City of Glendale*, *supra*, 205 Cal.App.3d at p. 528.)

Our conclusion is consistent with a recent decision of the Second Appellate District holding that the revocation requirements of a similar ordinance did not invade the state's exclusive power to regulate alcohol sales pursuant to article XX, section 22 of the California Constitution. In *Korean AmericanLegal Advocacy Foundation v. City of Los Angeles*, *supra*, 23 Cal.App.4th 376, the city required a conditional use permit for all establishments selling alcoholic beverages. Uses in existence before the operative date of the specific plan requiring a conditional use permit were deemed to be approved conditional use permits. (*Id.* at p. 382.)After fire destroyed businesses in South Central Los Angeles, alcoholic beverage establishments seeking to rebuild were required to comply with the specific plan. Typically, the conditions imposed before rebuilding would be permitted were for the owner to agree to remove graffiti promptly, provide adequate lighting, remove trash, provide a security guard and limit hours of operation. (*Id.* at pp. 382-383.)In addition, the city instituted revocation hearings to revoke or condition an owner's deemed approved status or use permit if the business threatened to become, or became, a nuisance or a law enforcement problem. (*Id.* at p. 383.)

The appellate court found that the Los Angeles ordinance at issue in that case constituted a valid exercise of the city's police powers to control and abate nuisances under article XI, section 7 of the state Constitution. (*Korean American Legal Advocacy Foundation v. City of Los Angeles*, *supra*, 23 Cal.App.4th at p. 389.) It ruled that the city was not preempted by article XX, section 22 from exercising land use control over businesses licensed to sell alcoholic beverages. (23 Cal.App.4th at pp. 384, 389-390.) Although it acknowledged the state's exclusive jurisdiction to regulate alcoholic beverage sales, the court concluded that the ordinance did not directly regulate alcoholic beverage licensees. (*Id.* at p. 388.)It found that the ordinance was not expressly preempted by the state Constitution, that it did not duplicate or contradict state law, and that the statutory scheme codified in the Alcoholic Beverage Control Act did not evidence an intent to occupy the field by implication. (*Id.* at pp. 390-394; see §§ 23000-25762.) *Korean American*'s preemption analysis differs somewhat from ours, but our conclusion is the same-that a city in the exercise of its police powers may undertake to control nuisances occurring near alcoholic beverage sales establishments, without violating the state's exclusive power to regulate the sale of alcoholic beverages. (See 23 Cal.App.4th at pp. 384-394.) ***767**

The policy reason for the distinction between a city's improper direct regulation of alcoholic beverage sales and its appropriate use of its police powers applying to alcoholic beverage sales establishments is well established. (13) As the California Supreme Court

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

has ruled, local governments have a legitimate need to address problems generated by business involvement in activities that may be inimical to the health, welfare and safety of the community. (*Cohen v. Board of Supervisors*, *supra*, 40 Cal.3d at p. 298.) State requirements may be inadequate to meet the demands of densely populated cities. Thus, it becomes proper and necessary to add to state regulations those provisions adapted to the city's special requirements.(*Ibid.*;*Daniel v. Board of Police Commissioners*, *supra*, 190 Cal.App.2d at p. 571; see *Bravo Vending v. City of Rancho Mirage*, *supra*, 16 Cal.App.4th at p. 411.) For this reason, a local entity may properly determine that a particular business fosters, profits from and provides an environment for activities proscribed by state law. For example, an ordinance is not transformed into a statute prohibiting crime simply because the city uses its police powers to discourage illegal activities associated with certain businesses. Many regulatory ordinances have a direct impact on the enforcement of state laws that have been enacted to preserve the health, safety and welfare of state and local citizens. This fact does not deprive a local entity of the power to enact them. (See *Cohen v. Board of Supervisors*,*supra*, at pp. 298-299 [licensing ordinance case].) (12b) The legislative history of the ordinance shows that there are substantial geographic, economic or other distinctions that persuade us of the need for local control. (See *id.* at p. 300.) [FN15]

FN15 The record reveals that the application of this ordinance to alcoholic beverage retailers alone was not unreasonable, given the high level of nuisance and criminal activity occurring near these establishments. Oakland's deputy chief of police testified about the proliferation of complaints about nuisance and criminal activities occurring around alcoholic beverage retail sales establishments. He opined that these activities constituted a blight on the neighborhoods where these alcoholic beverage establishments were located and served as a magnet for crime and neighborhood decay. He also stated that the number of police responses around alcoholic beverage establishments was disproportionately high when compared to police activity around adult entertainment facilities, gun dealer outlets, fast food restaurants or gas stations. Nuisance problems associated with alcoholic beverage retailers had risen over several years before the ordinance's enactment and the deputy chief opined that the program established by the ordinance would "... 'significantly mitigate the negative impacts that many of these establishments have on the community.' "

E. *Federal Bar*

(14) For its part, CBRC challenges the city's authority under the Twenty-first Amendment to the United States Constitution to tax sellers of alcoholic beverages. (U.S. Const., Amend. XXI.)The trial court found only ***768** that the ordinance violated the state Constitution; it did not rule on whether the ordinance also violated the federal Constitution. The Twenty-first Amendment grants the state authority to tax and regulate liquor licensing, although the state may delegate that authority to local entities. (*City of Rancho Cucamonga v. Warner Consulting Services, Ltd.*, *supra*, 213 Cal.App.3d at pp. 1342-1343). We have concluded that the ordinance imposes a regulatory fee, not a tax. (See pt. IV., B.-D., *ante.*)As the state Constitution does not prohibit the ordinance's regulatory fees, the state has impliedly delegated to municipalities the power to impose such fees. Thus, we are satisfied that the ordinance does not violate the Twenty-first Amendment.

F. *Conclusion*

The trial court erred in concluding that CBRC was entitled to a summary adjudication on the third cause of action for declaratory and injunctive relief, based on its claim of unlawful taxation in violation of section 22 of article XX of the California Constitution. As the ordinance does not violate this provision of the state Constitution, the city is entitled to summary adjudication on the third cause of action.

V. Remittitur

Let a peremptory writ of mandate issue directing the Superior Court of Alameda County to vacate its order of January 5, 1995, granting CBRC summary adjudication on the second and third causes of action, and to enter a new order denying CBRC's motion and granting summary adjudication on these two causes of action in favor of the city.

H

Court of Appeal, Fourth District, Division 2, California.
CITY OF RANCHO CUCAMONGA, Plaintiff and Appellant,
v.
REGIONAL WATER QUALITY CONTROL BOARD-SANTA ANA REGION et al., Defendants and Respondents;
County of San Bernardino et al., Real Parties in Interest and Respondents.
No. E037079.

Jan. 26, 2006.
As Modified Feb. 27, 2006.

Background: Cities filed petitions for writs of mandate to challenge the procedure by which municipal storm sewer permit was issued by regional water quality control board, the conditions imposed by permit, and the expense of permit requirements. The Superior Court, San Bernardino County, No. RCV 071613, Shahla Sabet, J., sustained without leave to amend the demurrer of State Water Resources Control Board to entire action, sustained demurrer as to four causes of action and granted motion to strike of the regional board, and denied petition for writ of mandate. City appealed.

Holdings: The Court of Appeal, Gaut, J., held that:
(1) State Water Resources Control Board was not a proper party in lawsuit;
(2) regional water quality control board could move to strike less than all causes of action;
(3) substantial evidence supported regional water quality control board's findings in issuing permit; and
(4) permit requirements were not overly prescriptive.

Affirmed.

Municipal storm sewer permit issued by regional water quality control board did not violate Clean Water Act by failing to include "safe harbor" provisions providing that, if permittee was in full compliance with permit conditions, it could not be found in violation of Clean Water Act; there was no statutory right to a "safe harbor" provision to be included as a term of the permit, and, in any event, such protection was already included in the Act. Clean Water Act, § 402(k), 33 U.S.C.A. § 1342(k).

Requirements contained in municipal storm sewer permit issued by regional water quality control board were not overly prescriptive and did not illegally dictate the manner of compliance; the federal Clean Water Act authorized imposition of permit conditions, and the permitting agency had discretion to decide what practices, techniques, methods, and other provisions were appropriate and necessary to control the discharge of pollutants. Clean Water Act, § 402(p)(3)(B)(iii), 33 U.S.C.A. § 1342(p)(3)(B)(iii).

***1379** OPINION

GAUT, J.

1. *Introduction*

This case involves environmental regulation of municipal storm sewers that carry excess water runoff to the Santa Ana River as it passes through San Bernardino County on its way to the Pacific Ocean. Federal and state laws impose regulatory controls on storm sewer discharges. Municipalities are required to obtain and comply with a federal regulatory permit limiting the quantity and quality of water runoff that can be discharged from these storm sewer systems.

In this instance, the Regional Water Quality Control Board for the Santa Ana Region (the Regional Board) conducted public hearings and then issued a comprehensive 66-page municipal storm sewer permit governing 18 local ***1380** public entities. Two permittees, the City of Rancho Cucamonga and the City of Upland, among others, filed an administrative appeal with the State Water Resources Control Board (the State Board.) The State Board summarily dismissed the appeal. The Cities of Rancho Cucamonga and Upland [FN1] then filed a petition for writ of mandate and complaint against the State Board and the Regional Board.

FN1. Upland is not a party to this appeal.

The trial court sustained without leave to amend the demurrer of the State Board to the entire action. It sustained the demurrer as to four causes of action and granted the motion to strike of the Regional Board. After a hearing, the trial court denied the petition for writ of mandate.

Both procedurally and substantively, the City of Rancho Cucamonga challenges the conditions imposed by the NPDES [FN2] Permit and Waste Discharge Requirements (the 2002 permit). It contends the procedure by which the 2002 permit was adopted was not legal, that the 2002 permit's conditions are not appropriate for the area, and that the permit's requirements are too expensive. Because we conclude the permit was properly adopted and its conditions and requirements are appropriate, we reject these contentions.

FN2. The National Pollutant Discharge Elimination System.

discharge into the public waterways. (*City of Burbank v. State Water Resources Control Bd.* (2005) 35 Cal.4th 613, 619-621, 26 Cal.Rptr.3d 304, 108 P.3d 862(*Burbank*); *Building Industry Assn. of San Diego County v. State Water Resources Control Board* (2004) 124 Cal.App.4th 866, 872-875, 22 Cal.Rptr.3d 128(*Building Industry*); *Communities for a Better Environment v. State Water Resources Control Board* (2003) 109 Cal.App.4th 1089, 1092-1094, 1 Cal.Rptr.3d 76(*Communities*); *WaterKeepers Northern California v. State Water Resources Control Board* (2002) 102 ****453** Cal.App.4th 1448, 1451-1453, 126 Cal.Rptr.2d 389(*WaterKeepers*)).

For purposes of this case, the important point is described by the California Supreme Court in *Burbank:* "Part of the federal Clean Water Act [33 U.S.C. § 1251 et seq.] is the National Pollutant Discharge Elimination System (NPDES), '[t]he primary means' for enforcing effluent limitations and standards under the Clean Water Act. (*Arkansas v. Oklahoma* [(1992) 503 U.S. ***1381** 91, 101, 112 S.Ct. 1046, 117 L.Ed.2d 239.]) The NPDES sets out the conditions under which the federal EPA or a state with an approved water quality control program can issue permits for the discharge of pollutants in wastewater. (33 U.S.C. § 1342(a) & (b).) In California, wastewater discharge requirements established by the regional boards are the equivalent of the NPDES permits required by federal law. (§ 13374.)" (*Burbank, supra,* 35 Cal.4th at p. 621, 26 Cal.Rptr.3d 304, 108 P.3d 862.)

California's Porter-Cologne Act (Wat.Code, § 13000 et seq.) establishes a statewide program for water quality control. Nine regional boards, overseen by the State Board, administer the program in their respective regions. (Wat.Code, §§ 13140, 13200 et seq., 13240, and 13301.) Water Code sections 13374 and 13377 authorize the Regional Board to issue federal NPDES permits for five-year periods. (33 U.S.C. § 1342, subd. (b)(1)(B).)

As discussed more fully in part 6 below, the state-issued NPDES permits are subject to the informal hearing procedures set forth for administrative adjudications. (Gov.Code, § 11445.10 et seq.; Cal.Code Regs., tit. 23, § 647 et seq.) The issuance of permits is specifically excluded from the procedures for administrative regulations and rulemaking. (Gov.Code, §§ 11340 et seq., 11352.)

3. *Factual and Procedural Background*

The Regional Board issued the first NPDES permit for San Bernardino County in 1990. The principal permittee was the San Bernardino Flood Control District (the District). The 1990 permit required the permittees to develop and implement pollution control measures, using "best management practices" and monitoring programs, to eliminate illegal discharges and connections, and to obtain any necessary legal authority to do so. The management programs could be existing or new.

In 1993, the District developed the NPDES Drain Area Management Program (DAMP).

The second NPDES permit was issued in 1996 and was based on the Report of Waste Discharge (ROWD) prepared by the principal permittee and co-permittees, including Rancho Cucamonga. The 1996 permit proposed extending the existing program, which included inspections of industrial and commercial sources; policies for development and redevelopment; better public education; and implementation of a monitoring program. It offered a commitment to reduce pollutants to the "maximum extent practicable."

In 2000, the permittees submitted another ROWD to renew their NPDES permit. The 2000 ROWD proposed continuing to implement and develop water quality management and monitoring programs.

***1382** Based on the 2000 ROWD, the Regional Board staff created five successive drafts of the 2002 permit, incorporating written comments by Rancho Cucamonga and others and comments made during two public workshops. Some of the comments addressed the economic considerations of anticipated prohibitive compliance costs.

The notice of the public hearing to consider adoption of the 2002 permit hearing ****454** announced: "relevant Regional Board files are incorporated into the record;" the governing procedures were those for an informal hearing procedure as set forth in "Title 23, California Code of Regulations, Section 647 et seq.;" and "Hearings before the Regional Water Board are not conducted pursuant to Government Code section 11500 et seq.," the alternative formal hearing procedure for administrative adjudication. The notice was

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

mailed to all permittees. The accompanying "fact sheet," which was publicly circulated, offered further information about the conduct and nature of the hearing and the legal and factual grounds for the Regional Board's recommendation to adopt the 2002 permit.

The informal public hearing was conducted on April 26, 2002. Neither Rancho Cucamonga nor any of the permittees objected to the form or substance of the hearing. Ultimately, after a staff presentation and testimony, including a statement from Rancho Cucamonga's counsel, the Regional Board adopted the 2002 permit. After the State Board dismissed their administrative appeal, Rancho Cucamonga and Upland filed the instant action.

The operative pleading is the second amended petition for writ of mandate and complaint. The petition alleges that the State Board and the Regional Board acted illegally and in excess of their jurisdiction in developing, adopting and implementing the 2002 permit. Based on 26 pages of general allegations, the petition asserts eight causes of action, alleging the State Board and the Regional Board violated sections 13241, 13263, and 13360 of the Water Code (the Porter-Cologne Act); the California Environmental Quality Act (Pub. Resources Code, § 21000 et seq.); the California Administrative Procedure Act (Gov.Code, §§ 11340-11529); the California Constitution; and the Federal Clean Water Act; and seeking declaratory and injunctive relief.

The State Board successfully opposed the action on demurrer. The Regional Board eliminated four causes of action, the fourth, fifth, seventh, and eighth by demurrer and motion to strike. On the remaining four causes of action, the trial court found in favor of the Regional Board.

***1383** 4. *State Board's Demurrer*

[1] Rancho Cucamonga maintains the trial court should not have sustained the demurrer of the State Board without leave to amend because the State Board is the ultimate authority on state-issued NPDES permits, and, therefore, was properly joined as a party: "Because the State Board has for all intents and purposes adopted the rules and policies of general application upon which the Permit is based, it is clearly a proper party to this action."

The difficulty with Rancho Cucamonga's theory of liability against the State Board is, to quote Gertrude Stein about the City of Oakland, "There is no there there." (Gertrude Stein, *Everybody's Autobiography.*) In other words, Rancho Cucamonga's allegations against the State Board lack any substance. Instead, Rancho Cucamonga launches an unspecific attack on the State Board without identifying any particular problems. The petition makes the unexceptional allegation that the State Board formulates general water control policy which it implements and enforces through regional boards. It also alleges the State Board has not complied with the Administrative Procedure Act but it does not identify any objectionable policies or how there is no compliance. Instead the petition complains about a State Board letter directing that all NPDES permits follow consistent principles regarding Standard Urban Storm Water Mitigation ****455** Plans. Additionally, the petition maintains the 2002 permit included new reporting requirements and increased costs of compliance.

But the foregoing allegations did not articulate any improper State Board conduct. The 2002 permit, issued by the Regional Board and not by the State Board, is not subject to formal rule-making procedures. (Gov.Code, § 11352, subd. (b).) The State Board's letter, explaining a precedential decision concerning mitigation plans, is not an example of formal rule-making. (Gov.Code, § 11425.60, subd. (b).) By dismissing Rancho Cucamonga's administrative appeal concerning the 2002 permit, the State Board declined to become involved and the Regional Board's decision to issue the permit became final and subject to judicial review. (*People ex rel Cal. Regional Wat. Quality Control Bd. v. Barry* (1987) 194 Cal.App.3d 158, 177, 239 Cal.Rptr. 349.) But the State Board was not made a proper party by reason of its dismissal of the administrative appeal.

Furthermore, even if Rancho Cucamonga had identified any cognizable claim against the State Board, it would have been barred by the 30-day statute of limitations for challenging an improperly adopted State Board regulation or order. (Wat.Code, § 13330; Gov.Code, § 11350.)

***1384** We hold the trial court properly sustained without leave to amend the State Board's demurrer to the second amended petition for writ of mandate and complaint.

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

5. Standard of Review for Petition for Writ of Mandate

[2] In deciding a petition for writ of mandate, the trial court exercises its independent judgment. (Code Civ. Proc., § 1094.5, subd. (c); Wat.Code, § 13330, subd. (d); *Building Industry, supra,* 124 Cal.App.4th at p. 879, 22 Cal.Rptr.3d 128.) But, "[i]n exercising its independent judgment, a trial court must afford a strong presumption of correctness concerning the administrative findings, ... Because the trial court ultimately must exercise its own independent judgment, that court is free to substitute its own findings after first giving due respect to the agency's findings." (*Fukuda v. City of Angels* (1999) 20 Cal.4th 805, 817-818, 85 Cal.Rptr.2d 696, 977 P.2d 693(*Fukuda*).)

[3][4] On appeal, the reviewing court determines whether substantial evidence supports the trial court's factual determinations. (*Fukuda, supra,* 20 Cal.4th at p. 824, 85 Cal.Rptr.2d 696, 977 P.2d 693; *Building Industry, supra,* 124 Cal.App.4th at p. 879, 22 Cal.Rptr.3d 128.) The trial court's legal determinations receive a de novo review with consideration being given to the agency's interpretations of its own statutes and regulations. (*Building Industry, supra,* at p. 879, 22 Cal.Rptr.3d 128; *Nasha L.L.C. v. City of Los Angeles* (2004) 125 Cal.App.4th 470, 482, 22 Cal.Rptr.3d 772.)

6. Rancho Cucamonga's Objections to the Administrative Record and Lack of Notice

[5] The notice of the administrative hearing for adoption of the 2002 permit included the statement that the Regional Board's files would be incorporated as part of the record. Before trial on the writ petition, Rancho Cucamonga attempted to raise an omnibus objection to the entire administrative record and a specific objection to four documents, three studies about marine pollution and one economic study. The trial court ruled the objections had been waived by not making them before or at the time of the hearing. Applying the presumption of administrative regularity, we affirm the trial court's evidentiary ruling. (*Mason v. Office of Administrative* ***456** *Hearings* (2001) 89 Cal.App.4th 1119, 1131, 108 Cal.Rptr.2d 102.)

The reasons given by Rancho Cucamonga as to why the trial court should have sustained its objections to all or part of the administrative record are that it did not waive its objections to the record because Rancho Cucamonga did not know the hearing was adjudicative; the Regional Board did not provide ***1385** notice of an informal hearing (Gov.Code, § 11445.30); and Rancho Cucamonga never had an opportunity to object to the administrative record.

[6] As noted previously, Government Code section 11352, subdivision (b), makes the issuance of an NPDES permit exempt from the rulemaking procedures of the Administrative Procedure Act. Permit issuance is a quasi-judicial, not a quasi-legislative, rule-making proceeding: "The exercise of discretion to grant or deny a license, permit or other type of application is a quasi-judicial function." (*Sommerfield v. Helmick* (1997) 57 Cal.App.4th 315, 320, 67 Cal.Rptr.2d 51; *City of Santee v. Superior Court* (1991) 228 Cal.App.3d 713, 718, 279 Cal.Rptr. 22.)

Instead, the Regional Board correctly followed the administrative adjudication procedures (Gov.Code, § 11445.10 et seq.) and the companion regulations at California Code of Regulations, Title 23, sections 647-648.8 for informal adjudicative public hearings. These procedures were announced in the notice of hearing which also stated that Government Code section 11500 et seq., governing formal administrative adjudication hearings, would not apply, thus satisfying Government Code section 11445.30 requiring notice of an informal hearing procedure. At the time of the hearing, Rancho Cucamonga did not object to the informal procedure. Rancho Cucamonga's effort to argue that federal notice requirements (40 C.F.R. § 124.8, subd. (b)(6)(ii) (2005)) should also have been followed fails because this involved a state-issued NPDES permit adopted according to California procedures.

Because Rancho Cucamonga was given notice that the hearing on the permit would proceed as an informal administrative adjudication, it cannot successfully argue it was relieved of the obligation to object to the administrative record at the time of the hearing. An informal administrative adjudication contemplates liberality in the introduction of evidence. (Cal. Code Regs., tit. 23, §§ 648, subd. (d) and 648.5.1.) If Rancho Cucamonga wished to object to the informal hearing procedures, including the liberal introduction

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

of evidence, it should have raised its objections as provided by statute and regulation before or at the time of the hearing (Gov.Code, §§ 11445.30, 11445.40, and 11445.50; Cal. Code Regs., tit. 23, § 648.7), not a year later in the subsequent civil proceeding.

7. *Economic Considerations for Issuance of NPDES Permit*

Rancho Cucamonga's next assignment of error is that the Regional Board failed to consider the economic impact of the requirements of the 2002 permit by not conducting a cost-benefit analysis. Rancho Cucamonga relies on the California Supreme Court's *Burbank* opinion, in which the court held: "When ... a regional board is considering whether to make the pollutant restrictions in a wastewater discharge permit *more stringent* than federal law ***1386** requires, California law allows the board to take into account economic factors, including the wastewater discharger's cost of compliance." (*Burbank, supra,* 35 Cal.4th at p. 618, 26 Cal.Rptr.3d 304, 108 P.3d 862.) Rancho Cucamonga contends that the 2002 permit exceeds federal requirements and that, therefore, this case should be remanded for a consideration of ****457** economic factors. (See *ibid.;* Wat.Code, § 13241, subd. (d).)

The two problems with this argument are the trial court found there was no evidence that the 2002 permit exceeded federal requirements and Rancho Cucamonga does not explain now how it does so. There was also evidence that the 2002 permit was based on a fiscal analysis and a cost-benefit analysis. In the absence of the foundational predicate and in view of evidence that cost was considered, Rancho Cucamonga's contention on this point fails.

[7] We also reject Rancho Cucamonga's related procedural argument that the Regional Board's motion to strike was impermissible as piecemeal adjudication. (*Regan Roofing v. Superior Court* (1994) 24 Cal.App.4th 425, 432-436, 29 Cal.Rptr.2d 413,*Lilienthal & Fowler v. Superior Court* (1993) 12 Cal.App.4th 1848, 1851-1855, 16 Cal.Rptr.2d 458.) It is well recognized a court may strike all or part of a pleading as it did in this instance. (Code Civ. Proc., §§ 431.10 and 436; *PH II, Inc. v. Superior Court* (1995) 33 Cal.App.4th 1680, 1682-1683, 40 Cal.Rptr.2d 169.)

8. *Substantial Evidence*

[8] Rancho Cucamonga also challenges the trial court's independent factual determination that sufficient evidence supports the findings of the Regional Board. Rancho Cucamonga's main contention is that the 2002 permit was not distinctively crafted for San Bernardino County but, instead, copied a similar permit for other counties without identifying any particular water quality impairment in San Bernardino County caused by the permittees. In other words, no evidence in the record supports issuance of the 2002 permit and the trial court did not identify any such evidence in its statement of decision.

One problem with Rancho Cucamonga's foregoing argument is that the Clean Water Act requires an NPDES permit to be issued for *any* storm sewer discharge, whether there is any actual impairment in a particular region. (33 U.S.C. § 1342; *Communities, supra,* 109 Cal.App.4th at pp. 1092-1093, 1 Cal.Rptr.3d 76.) Therefore, Rancho Cucamonga's contention that the permit fails to identify impaired water bodies in the region is beside the point.

In its statement of decision, the trial court discussed the inadequacy of the arguments and evidence cited by Rancho Cucamonga and concluded: "The San Bernardino Permit is based in part on the Basin Plan for this region. It is ***1387** also based on the permittees' own reports and monitoring within this region.... It incorporates the permittees' management program, which is unique to these cities and county." The trial court included a citation to the 1993 DAMP report's "Geographic Description of the Drainage Area," which discusses the specific conditions present in San Bernardino County.

On appeal, Rancho Cucamonga faults the trial court for not presenting a more detailed description of the evidence supporting the issuance of the permit. We do not think the trial court, or this court, must bear that burden.

[9] First, "[a]n agency may ... rely upon the opinion of its staff in reaching decisions, and the opinion of staff has been recognized as constituting substantial evidence. (*Coastal Southwest Dev. Corp. v. California Coastal Zone Conservation Com.* (1976) 55 Cal.App.3d 525, 535-536, 127 Cal.Rptr. 775.)"

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

(*Browning-Ferris Industries v. City Council* (1986) 181 Cal.App.3d 852, 866, 226 Cal.Rptr. 575.) Here the Regional Board adopted the recommendation of its staff in issuing the permit. And, as the record shows, the staff's recommendation was based on the previous 1990 and 1996 permits, the 1993 DAMP ****458** report and the 2000 ROWD, the permittees' application for renewal of the 1996 permit, as well as more general water quality factors. The evidence contradicts Rancho Cucamonga's assertion, that "the Regional Board simply copied verbatim the NPDES Permit for North Orange County, a coastal region with markedly different water quality conditions and problems."

As part of the trial court's consideration of the petition for writ of mandate, Rancho Cucamonga and the Regional Board directed the court to review specific items of evidence contained in the administrative record. In its opposing brief, the Regional Board offered a detailed account of the evidence supporting the issuance of the permit. The trial court indicated it had reviewed the parties' submissions before ruling. It discussed the evidence at the hearing on the petition and referred to it in its statement of decision. (*Lala v. Maiorana* (1959) 166 Cal.App.2d 724, 731, 333 P.2d 862.) Rancho Cucamonga had the burden of showing the Board abused its discretion or its findings were not supported by the facts. (*Building Industry, supra,* 124 Cal.App.4th at pp. 887-888, 22 Cal.Rptr.3d 128.) To the extent it attempted to do so at the trial court level, it was not successful.

This court has independently reviewed the record with particular attention to the evidence as emphasized by the parties. We do not, however, find it incumbent upon us or the trial court to review the many thousands of pages submitted on appeal and identify the particular evidence that constitutes substantial evidence. Instead, we deem the trial court's findings sufficient and not affording any grounds for reversal. (*Building Industry, supra,* 124 Cal.App.4th at p. 888, 22 Cal.Rptr.3d 128; see *Weisz Trucking Co., Inc. v. Emil R. Wohl* ***1388** *Construction* (1970) 13 Cal.App.3d 256, 264, 91 Cal.Rptr. 489, citing *Perry v. Jacobsen* (1960) 184 Cal.App.2d 43, 50, 7 Cal.Rptr. 177.)

9. *Safe Harbor Provision*

[10] As it did repeatedly below, Rancho Cucamonga maintains the 2002 permit violates section 402(k) of the Clean Water Act (33 U.S.C. § 1342, subd. (k)), because the permit does not include "safe harbor" language, providing that, if a permittee is in full compliance with the terms and conditions of its permit, it cannot be found in violation of the Clean Water Act. (*United States Public Interest Research Group v. Atlantic Salmon of Maine, LLC* (1st Cir.2003) 339 F.3d 23, 26; *EPA v. State Water Resources Control Bd.* (1976) 426 U.S. 200, 205, 96 S.Ct. 2022, 48 L.Ed.2d 578.) The trial court found there was no statutory right to a "safe harbor" provision to be included as the term of the permit. We agree.

This seems like much ado about nothing because 33 U.S.C. § 1342, subdivision (k), already affords Rancho Cucamonga the protection it seeks: "Compliance with a permit issued pursuant to this section shall be deemed compliance, for purposes of sections 1319 and 1365 of this title, with sections 1311, 1312, 1316, 1317, and 1343 of this title, except any standard imposed under section 1317 of this title for a toxic pollutant injurious to human health." Rancho Cucamonga does not cite any persuasive authority as to why this statutory protection had to be duplicated as a provision in the 2002 permit.

Furthermore, the 2002 permit complied with the State Board's Water Quality Order No. 99-05, a precedential decision requiring NPDES permits to omit "safe harbor" language used in earlier permits. A permit without "safe harbor" language was upheld in *Building Industry, supra,* 124 ****459** Cal.App.4th at p. 877, 22 Cal.Rptr.3d 128. The trial court did not err.

10. *Maximum Extent Practicable*

Rancho Cucamonga protests that the 2002 permit's discharge limitations/prohibitions exceed the federal requirement that storm water dischargers should "reduce the discharge of pollutants to the maximum extent practicable." (33 U.S.C. § 1342, subd. (p)(3)(B)(iii).) The trial court, however, found there was no evidence presented that the 2002 permit exceeded federal requirements. Because there is no evidence, the issue presented is hypothetical and, therefore, premature. (*Building Industry, supra,* 124 Cal.App.4th at p. 890, 22 Cal.Rptr.3d 128.)

Additionally, as Rancho Cucamonga recognizes,

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

Building Industry rejected the contention that a "regulatory permit violates federal law because it allows the Water Boards to impose municipal storm sewer control measures more ***1389** stringent than a federal standard known as 'maximum extent practicable.' [Citation.] [Fn. omitted.] [W]e ... conclude the Water Boards had the authority to include a permit provision requiring compliance with state water quality standards." (*Building Industry, supra,* 124 Cal.App.4th at p. 871, 22 Cal.Rptr.3d 128.) The *Burbank* case, allowing for consideration of economic factors when federal standards are exceeded, does not alter the analysis in this case where there was no showing that federal standards were exceeded and where there was evidence that economic factors were considered. Furthermore, like the permit in *Building Industry*, the 2002 permit contemplates controlling discharge of pollutants to the maximum extent practicable through a "cooperative iterative process where the Regional Water Board and Municipality work together to identify violations of water quality standards." (*Building, supra,* at p. 889, 22 Cal.Rptr.3d 128.) The 2002 permit does not exceed the maximum extent practicable standard.

11. *The Requirements of the 2002 Permit*

[11] Rancho Cucamonga lastly complains the requirements of the 2002 permit are "overly prescriptive," illegally dictating the manner of compliance and improperly delegating to the permittees the inspection duties of the State Board and the Regional Board. Rancho Cucamonga's arguments contradict the meaning and spirit of the Clean Water Act.

In creating a permit system for dischargers from municipal storm sewers, Congress intended to implement actual programs. (*Natural Resources Defense Council, Inc. v. Costle* (D.C.Cir.1977) 568 F.2d 1369, 1375.) The Clean Water Act authorizes the imposition of permit conditions, including: "management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator of the State determines appropriate for the control of such pollutants." (33 U.S.C. § 1342, subd. (p)(3)(B)(iii).) The Act authorizes states to issue permits with conditions necessary to carry out its provisions. (33 U.S.C. § 1342, subd. (a)(1).) The permitting agency has discretion to decide what practices, techniques, methods and other provisions are appropriate and necessary to control the discharge of pollutants. (*NRDC v. EPA* (9th Cir.1992) 966 F.2d 1292, 1308.) That is what the Regional Board has created in the 2002 permit.

Rancho Cucamonga's reliance on Water Code section 13360 is misplaced because that code section involves enforcement and implementation of state water quality law, (Wat.Code, § 13300 et seq.) not compliance with the Clean Water Act (Wat.Code, § 13370 et seq.) The federal law ****460** preempts the state law. (*Burbank, supra,* 35 Cal.4th at p. 626, 26 Cal.Rptr.3d 304, 108 P.3d 862.) The Regional Board must comply with federal law requiring detailed conditions for NPDES permits.

***1390** Furthermore, the 2002 permit does afford the permittees discretion in the manner of compliance. It is the permittees who design programs for compliance, implementing best management practices selected by the permittees in the DAMP report and approved by the Regional Board. Throughout the permit, the permittees are granted considerable autonomy and responsibility in maintaining and enforcing the appropriate legal authority; inspecting and maintaining their storm drain systems according to criteria they develop; establishing the priorities for their own inspection requirements; and establishing programs for new development. The development and implementation of programs to control the discharge of pollutants is left largely to the permittees.

More particularly, we agree with the Regional Board that the permit properly allocated some inspection duties to the permittees. As part of their ROWD application for a permit, the permittees proposed to "Conduct Inspection, Surveillance, and Monitoring. Carry out all inspections, surveillance, and monitoring procedures necessary to determine compliance and noncompliance with permit conditions including the prohibition on illicit discharges to the municipal storm drain system." The ROWD also discussed continuing existing inspection programs.

Water Code section 13383 provides that as part of compliance with the Clean Water Act, the Regional Board may establish inspection requirements for any pollutant discharger. Federal law, either expressly or by implication, requires NPDES permittees to perform inspections for illicit discharge prevention and detection; landfills and other waste facilities; industrial facilities; construction sites; certifications of no

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

discharge; non-stormwater discharges; permit compliance; and local ordinance compliance. (40 C.F.R. 122.26, subds. (d), (g); 33 U.S.C. § 1342, subd. (p)(3)(B)(ii).) Permittees must report annually on their inspection activities. (40 C.F.R. § 122.42, subd. (c)(6) (2005).)

Rancho Cucamonga claims it is being required to conduct inspections for facilities covered by other state-issued general permits. Rancho Cucamonga and the other permittees are responsible for inspecting construction and industrial sites and commercial facilities within their jurisdiction for compliance with and enforcement of local municipal ordinances and permits. But the Regional Board continues to be responsible under the 2002 NPDES permit for inspections under the general permits. The Regional Board may conduct its own inspections but permittees must still enforce their own laws at these sites. (40 C.F.R. § 122.26, subd. (d)(2) (2005).)

***1391** 12. *Disposition*

Rancho Cucamonga is the only of the original 18 permittees still objecting to the 2002 NPDES permit. It has not successfully demonstrated that substantial evidence does not support the trial court's factual determinations or the trial court erred in its interpretation and application of state and federal law.

We affirm the judgment and order the prevailing parties to recover their costs on appeal.

H

Court of Appeal, Second District, Division 5, California.
COUNTY OF LOS ANGELES et al., Plaintiffs and Appellants,
v.
CALIFORNIA STATE WATER RESOURCES CONTROL BOARD et al., Defendants and Respondents.
No. B184034.

Oct. 5, 2006.
Certified for Partial Publication.[FN*]

FN* Pursuant to California Rules of Court, rules 976(b) and 976.1, this opinion is certified for publication with the exception of Part IV(G)-(L).

As Modified on Denial of Rehearing Nov. 6, 2006.
Rehearing Denied Dec. 6, 2006.
Review Denied Feb. 14, 2007.

Background: Multiple cities, county, county flood control district, and other interested parties challenged order of the California Regional Water Quality Control Board adopting National Pollutant Discharge Elimination System permit. The Superior Court, Los Angeles County, No. BS080792,Victoria G. Chaney, J., entered judgment for regional board. Plaintiffs appealed.

Holdings: The Court of Appeal, Turner, P.J., held that:
(1) regional board had jurisdiction to issue permit;
(2) declaratory relief was not available to plaintiffs;
(3) regional board did not unlawfully interfere in local general plans and California Environmental Quality Act (CEQA) review; and
(4) CEQA review was not required.

Affirmed.

TURNER, P.J.

*989 I. INTRODUCTION

Plaintiffs, 33 cities,[FN1] the County of Los Angeles (the county), the Los Angeles County Flood Control District (the flood control district), the Building Industry Legal Defense Fund, and the Construction Industry Coalition on Water Quality, appeal from a March 24, 2005 judgment in **622 favor of defendants, California Regional Water Quality Control Board, Los Angeles Region (the regional board) and the State Water Resources Control Board (the state board) and intervenors, Natural Resources Defense Council, Inc., Santa Monica Baykeeper, and Heal the Bay. Plaintiffs challenge the legality of the regional board's issuance of Order No. 01-182 adopting the National Pollutant Discharge Elimination System Permit No. CAS004001 (the permit) which is *990 entitled, "Municipal Storm Water And Urban Runoff Discharges Within The County Of Los Angeles, And The Incorporated Cities Therein, Except The City Of Long Beach." The December 13, 2001 permit was issued to the county, the flood control district, and 84 incorporated cities in Los Angeles County. We affirm the judgment in its entirety.

FN1. The following cities have appealed Arcadia, Artesia, Bellflower, Beverly Hills, Carson, Cerritos, Claremont, Commerce, Covina, Diamond Bar, Downey, Gardena, Hawaiian Gardens, Industry, Irwindale, La Mirada, Lawndale, Monrovia, Norwalk, Paramount, Pico Rivera, Rancho Palos Verdes, Rosemead, Santa Clarita, Santa Fe Springs, Signal Hill, South Pasadena, Torrance, Vernon, Walnut, West Covina, Westlake Village, and Whittier.

II. THE PERMIT

A. Overview

The permit was issued pursuant to the obligations imposed by the Clean Water Act which will be discussed in greater detail later in this opinion. The Clean Water Act was originally entitled the Federal Water Pollution Control Act. (62 Stat. 1115; 1948 U.S.Code Cong. & Admin. News at pp. 2215-2220.) For purposes of clarity and consistency, the federal applicable water pollution statutes will collectively be referred to as the Clean Water Act. The 72-page permit is divided into 6 parts. There is an overview and findings followed by a statement of discharge prohibitions; a listing of receiving water limitations; the Storm Water Quality Management Program; an explanation of special provisions; a set of definitions; and a list of what are characterized as standard provisions. The county, the flood control district, and the 84 cities are designated in the permit as the permittees. The findings and permit are as follows.

B. Findings

The permit found that the county, the flood control district, and the 84 cities discharge and contribute to the release of pollutants from "municipal separate storm sewer systems" (storm drain systems). These discharges were the subject of permits issued by the regional board in 1990 and 1996. The 1996 order served as the National Pollutant Discharge Elimination System permit for the discharge of municipal storm water.

The regional board found that storm drain systems in the county discharged cyanide, indicator bacteria, total dissolved solids, total suspended solids, turbidity, nutrients, total aluminum, dissolved cadmium, copper, lead, total mercury, nickel, zinc, bis(2-ethylhexyl)phthalate, polycyclic aromatic hydrocarbons, diazinon, and chlorpyrifos. According to the regional board, there were certain pollutants present in urban runoff which resulted from sources over which the permittees had no control. Among the runoff sources over which the permittees have no control are polycyclic aromatic hydrocarbons *991 which are the products of internal combustion engines or copper from brake pad wear. Various reports prepared by the regional board, the Los Angeles County Grand Jury, and academic institutions indicated pollutants are threatening to or actually impairing the beneficial uses of water bodies in the Los Angeles region.

The regional board concluded that urbanization increased the velocity, volume, and duration of water runoff; increased erosion; and adversely affected natural drainages. The regional board found: "The [county] has identified as the seven highest priority

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

industrial and commercial critical source types, (i) wholesale trade (scrap recycling, auto dismantling); (ii) automotive**623 repair/parking; (iii) fabricated metal products; (iv) motor freight; (v) chemical and allied products; (vi) automotive dealers/gas stations; [and] (vii) primary metal products." Also, the regional board concluded, "auto repair facilities" contribute "significant concentrations of heavy metals" to storm waters. Moreover, paved surfaces such as those outside fast food establishments or parking lots "are potential sources of pollutants" in storm water runoff. Further, storm water runoff from retail gas establishments "have concentrations" of heavy metals and hydrocarbons.

The regional board further made findings concerning the background of the permit and its coverage area. The essential components of a Storm Water Management Program are: adequate legal authority; fiscal resources; the actual Storm Water Quality Management Program itself; and a monitoring program. A Storm Water Quality Management Program consists of: a Public Information and Participation Program; an Industrial/Commercial Facilities Program: a Development Planning Program; a Development Construction Program; a Public Agency Activities Program; and an Illicit Connection and Illicit Discharges Elimination Program. The permittees filed a Report of Waste Discharge dated January 31, 2001, which contained a proposed Storm Water Quality Management Program.

C. Prohibited and Allowable Discharges

In the prohibited discharges portion of the permit, the county and the cities were required to "effectively prohibit non-storm water discharges" into their storm sewer systems. This prohibition contains the following exceptions: where the discharge is covered by a National Pollutant Discharge Elimination permit for non-storm water emission; natural springs and rising ground water; *992 flows from riparian habitats or wetlands; stream diversions pursuant to a permit issued by the regional board; "uncontaminated ground water infiltrations" as defined by 40 Code of Federal Regulations, part 35.2005(b)(20) (1990); and waters from emergency fire-fighting flows. Another category of permissible discharges were flows incidental to urban activities consisting of: reclaimed and potable landscape irrigation runoff; potable drinking water discharges which comply with the American Water Works Association guidelines for dechlorination and "suspended solids reduction practices"; drains for foundations, footings, and crawl spaces; air conditioning condensate; "dechlorinated/debrominated" swimming pool discharges; dewatering of lakes and decorative fountains; non-commercial car washing by residents or nonprofit organizations; and sidewalk rinsing.

The regional board's executive officer was granted authority to add or remove categories of non-storm water discharges. If one of the foregoing categories was determined to be "a source of pollutants" by the regional board's executive officer, the discharge was to be no longer exempt. The executive officer retained the authority to impose conditions on the city or county to ensure that the discharge was "not a source of pollutants." Also, the executive director was given the authority to impose additional "prohibitions on non-storm water discharges" after considering either of two factors. The first factor the regional board's executive officer could consider is anti-degradation policies. The second factor the regional board's executive officer could consider is the total maximum load an impaired water body can receive and still meet applicable water quality standards and protect beneficial uses. (33 U.S.C. § 1313(d)(1).)

**624 D. Receiving Water Limitations

Receiving waters are defined thusly, " 'Receiving waters' means all surface water bodies...." Discharges from storm sewer systems that "cause or contribute" to violations of "Water Quality Standards" objectives in receiving waters as specified in state and federal water quality plans were prohibited. Storm or non-storm water discharges from storm sewer systems which constitute a nuisance were also prohibited. The term nuisance is defined, " 'Nuisance' means anything that meets all of the following requirements: (1) is injurious to health, or is indecent or offensive to the senses, or an obstruction to the free use of property, so as to interfere with the comfortable enjoyment of life or property; (2) affects at the same time an entire community or neighborhood, or any considerable number of persons, although the extent of the annoyance or damage inflicted upon individuals may be unequal; (3) occurs during, or as a result of, the treatment or disposal of wastes." In *993 order to comply with the receiving water limitations, the per-

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

mittees were required to implement control measures in accordance with the permit. If the Storm Water Quality Management Program did not assure compliance with the receiving water requirements, the permittee was required to immediately notify the regional board; submit a Receiving Water Limitations Compliance Report that described the best management practices that were currently being used and proposed changes to them; submit an implementation schedule as part of the Receiving Water Limitations Compliance Report; and, after approval by the regional board, promptly implement the new best management practices. If the permittee makes the foregoing changes, even if there were further receiving water discharges beyond those addressed in the Water Limitations Compliance Report, additional changes to the best management practices need not be made unless directed to do so by the regional board.

E. Storm Water Quality Management Program

The permittees were to implement the Storm Water Quality Management Program which meet the standards of 40 Code of Federal Regulations, part 122.26(d)(2) (2000) and reduce the pollutants in storm waters to the maximum extent possible with the use of best management practices. Further, the permittees were required to revise the Storm Water Quality Management Program to comply with specified total daily maximum load allocations. If a permittee modified the countywide Storm Water Quality Management Program, it was required to implement a local management program. Each permittee was required by November 1, 2002, to adopt a storm water and urban runoff ordinance. By December 2, 2002, each permittee was required to certify that it had the requisite legal authority to comply with the permit through adoption of ordinances or municipal code modifications.

The county was designated as the "Principal Permittee" and was given coordination responsibilities for the Storm Water Quality Management Program. Among other things, the county was to convene watershed management committees which were to meet at least four times per year. Each permittee was entitled to have a voting representative on the committees. The committees were to coordinate and monitor implementation of the Storm Water Quality Management Program. Each permittee was required to designate a technically knowledgeable representative to the appropriate watershed management committees. Each permittee was required to prepare a budget summary of moneys spent on the Storm Water Quality Management Program.

****625 *994** The permit granted each permittee the "necessary legal authority" to prohibit non-storm water discharges into the storm drain system. That authority extended to prohibiting discharges from: illicit connections of all kinds; wash waters from gas stations and automotive service facilities; runoff from mobile cleaning businesses; areas where oil, fluid, or antifreeze was dripping from machinery; storage areas containing hazardous substances; swimming pool waters; washing of toxic materials; and washing impervious surfaces in industrial and commercial areas. The authority also extended to the discharge of concrete and cement-laden wash waters and prohibition of dumping of materials into storm drain systems. The legal authority extended to: requiring persons to comply with permittees' ordinances; holding dischargers to storm drain systems accountable; controlling pollutants and their potential contributors; inspecting, watching, and monitoring procedures to ensure compliance with the permit including prohibition of illicit discharges into storm drain systems; and requiring the use of best management practices to reduce pollutant discharge into the storm drain systems to the maximum extent possible.

F. Special Provisions

The regional board's executive officer had the power to alter a best management practice under specified circumstances. The county, as the principal permittee, was required to implement a public information and participation program. The program included: marking all storm drains with " 'no dumping' " signs; instituting a county-wide hotline to report illicit discharges and other environmental hazards; public education; every year, requiring 50 percent of all school children to be educated on storm water pollution; assessments of education; and other outreach programs.

***995** Each permittee was required to maintain a database of entities that are "critical sources" of storm water pollution. Each permittee was required to inspect under specified circumstances critical facilities including: restaurants; automotive service businesses; retail gasoline outlets; and automotive dealerships.

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

Further, each permittee was to evaluate best management practices and increase their severity if appropriate. Violations of the Storm Water Quality Management Program were to be investigated within specified time periods. By August 1, 2002, the permittees were to amend their ordinances or municipal codes to implement the standard urban storm water mitigation plans contained in the permit. Special requirements were imposed when discharges occur in environmentally sensitive areas.

Each permittee was required to consider storm water quality impacts as part of their California Environmental Quality Act assessments. Each permittee was required to update its general plan to include "considerations and policies" of watershed and storm water quality and quantity management. The permittees were required to educate employees involved in development planning regarding the permit's requirements.

G. Development Construction Program

The permittees were required to implement programs to "control" runoff from construction sites. Runoff from construction sites was prohibited. Non-storm water runoff from equipment washing on construction sites was to be contained on-site. Special requirements were imposed on construction sites of one acre or greater in area. Additional requirements were imposed on developments which were five acres or larger including securing a general construction activity storm water permit.**626 The permit imposed "Numerical Design Criteria" which required that post-construction best-management practices incorporate "either a volumetric or flow based treatment control design standard, or both" under specified circumstances. If there is a violation of a general construction activity storm water permit, the permittee may refer the violator to the state board.

H. Public Agency Activities Program

The permittees were required to minimize storm water pollution impacts. The requirements extended to: sewer systems; public construction; vehicle related facilities; landscape and recreational facilities; storm drain management; and street maintenance. The permittees were also required to participate in a study concerning possible dry weather discharges and the use of alternative treatment control best management practices.

I. Illicit Discharges And Connections

The permit states, "Permittees shall eliminate all illicit connections and ... discharges to the storm drain system, and shall document, track, report all such cases...." The elimination and reporting of such discharges required: development of an implementation program; by February 3, 2003, the municipalities provide the county with a list of all approved connections in the storm drain system; the county to conduct an annual evaluation of illicit ***996** discharges; and training of personnel in the identification and investigation of such discharges. The permittees were to complete the screening of illicit connections as follows: open channels, no later than February 3, 2003; underground pipes by February 1, 2005; and underground pipes with a diameter of 36 inches or greater by December 12, 2006. By December 12, 2006, the permittees were to complete a review of all "permitted connections" to the storm drain system to ensure eliminating illicit discharges. Upon receipt of a report an illicit connection, an investigation was to be initiated within 21 days to determine the source and the responsible party. Within 180 days, the permittees were required to "ensure termination of the connection" using appropriate enforcement authority. As to illicit discharges, a permittee was required within one business day to respond to a report and clean up a discharge. Illicit discharges were to be investigated as soon as possible and appropriate enforcement action was to be pursued.

III. NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM PERMITS, PROCEDURAL HISTORY, AND STANDARDS OF REVIEW

The present appeal arises from the issuance of the permit. The legal genesis of the National Pollutant Discharge Elimination System permits for the discharge of municipal storm water has previously been described in some detail in other decisions. (*City of Burbank v. State Water Resources Control Bd.* (2005) 35 Cal.4th 613, 619-621, 26 Cal.Rptr.3d 304, 108 P.3d 862; *City of Rancho Cucamonga v. Regional Water Quality Control Board* (2006) 135 Cal.App.4th 1377, 1380-1381, 38 Cal.Rptr.3d 450.) In *City of Rancho Cucamonga,* our colleagues in the Division Two of the Fourth Appellate District sum-

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

marized the complex federal and state relationship: " 'Part of the Federal Clean Water Act [33 U.S.C. § 1251 et seq.] is the National Pollutant Discharge Elimination System (NPDES), "[t]he primary means" for enforcing effluent limitations and standards under the Clean Water Act. (*Arkansas v. Oklahoma* (1992) 503 U.S. 91, 101, 112 S.Ct. 1046, 117 L.Ed.2d 239.) The NPDES sets out the conditions under ****627** which the federal [Environmental Protection Agency] or a state with an approved water quality control program can issue permits for the discharge of pollutants in wastewater. (33 U.S.C. § 1342(a) & (b).) In California, wastewater discharge requirements established by the regional boards are the equivalent of the NPDES permits required by federal law. (§ 13374.)' (*Burbank, supra,* 35 Cal.4th at p. 621, 26 Cal.Rptr.3d 304, 108 P.3d 862.)[¶] California's Porter-Cologne Act (Wat.Code, § 13000 et seq.) establishes a statewide program for water quality control. Nine regional boards, overseen by the State Board, administer the program in their respective regions. (Wat. ***997** Code, §§ 13140, 13200 et seq., 13240, and 13301.) Water Code sections 13374 and 13377 authorize the Regional Board to issue federal NPDES permits for five-year periods. (33 U.S.C. § 1342[ ](b)(1)(B).)" (*City of Rancho Cucamonga v. Regional Water Quality Control Board, supra,* 135 Cal.App.4th at pp. 1380-1381, 38 Cal.Rptr.3d 450.)

After the board issued the aforementioned December 13, 2001 permit, on January 17, 2003, a series of legal challenges, consisting of the filing administrative mandate and mandate petitions and complaints, were instituted by plaintiffs. Judgments in favor of the regional and state boards were entered on March 24, 2005. After the judgments were entered, notices of appeal were filed on June 21 and 22, 2005. The parties stipulated to the maximum extensions of time to brief the matter as allowed by California Rules of Court, rule 15(b)(1). This court had no authority to deny the stipulated to extensions of time to file briefs. (Cal. Rules of Court, rule 15(b) ["The reviewing court may not shorten a stipulated extension"].) No extension of time request was ever granted by any member of this court. The final reply brief was filed on August 1, 2006. Oral argument was held on September 6, 2006.

[1][2][3] There are varying standards of review. Many of the challenges to the content of the permit involve review of the denial of Code of Civil Procedure section 1094.5 administrative mandate petitions filed pursuant to Water Code section 13330, subdivision (b). We review the trial court's factual findings for substantial evidence. (*Fukuda v. City of Angels* (1999) 20 Cal.4th 805, 824, 85 Cal.Rptr.2d 696, 977 P.2d 693; *Drummey v. State Bd. of Funeral Directors* (1939) 13 Cal.2d 75, 86, 87 P.2d 848.) Further, it is presumed the regional board considered the documents before it. (*City of Santa Cruz v. Local Agency Formation Com.* (1978) 76 Cal.App.3d 381, 393-394, 142 Cal.Rptr. 873.) All reasonable doubts are resolved in favor of upholding the regional board's decision. (*Laurel Heights Improvement Assn. v. Regents of the University of California* (1988) 47 Cal.3d 376, 393, 253 Cal.Rptr. 426, 764 P.2d 278; *San Franciscans Upholding the Downtown Plan v. City and County of San Francisco* (2002) 102 Cal.App.4th 656, 674, 125 Cal.Rptr.2d 745.) We (and trial courts) examine the regional board's interpretation of legal matters utilizing a de novo standard of review. But we defer to the regional board's expertise in construing language which is not clearly defined in statutes involving pollutant discharge into storm drain sewer systems. (*Yamaha Corp. of America v. State Board of Equalization* (1998) 19 Cal.4th 1, 7-8, 78 Cal.Rptr.2d 1, 960 P.2d 1031; *City of Rancho Cucamonga v. Regional Water Quality Control Board, supra,* 135 Cal.App.4th at p. 1384, 38 Cal.Rptr.3d 450.) Finally, the trial court's denials of plaintiffs' new trial and to enter a new judgment motions ***998** and declaratory relief requests are reviewed for an abuse of discretion. (*Ashcraft v. King* (1991) 228 Cal.App.3d 604, ****628** 616, 278 Cal.Rptr. 900 [new trial motion]; *Bess v. Park* (1955) 132 Cal.App.2d 49, 52, 281 P.2d 556 [declaratory relief].)

IV. DISCUSSION

A. The Jurisdiction of the Regional Board To Issue The Permit

[4] Plaintiffs contend the regional board did not have jurisdiction to issue the permit. Plaintiffs rely on language appearing in the Code of Federal Regulations. For example, the permittees cite to 40 Code of Federal Regulations part 123.1(g)(1) (1998) which states, "NPDES authority may be shared by two or more State agencies but each agency must have Statewide jurisdiction over a class of activities or discharges." [FN2] Further the permittees refer to the following language in 40 Code of Federal Regulations part

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

123.22(b) (1998), "If more than one agency is responsible for administration of a program, each agency must have statewide jurisdiction over a class of activities." [FN3] Moreover, 40 Code of Federal Regulations part 123.1(f) (1998) states, "Any State ***999** program approved by the Administrator shall at all times be conducted in accordance with the requirements of this part."

> FN2. 40 Code of Federal Regulations part 123.1(g)(1) (1998) states in its entirety: "(g)(1) Except as may be authorized pursuant to paragraph (g)(2) of this section or excluded by § 122.3, the State program must prohibit all point source discharges of pollutants, all discharges into aquaculture projects, and all disposal of sewage sludge which results in any pollutant from such sludge entering into any waters of the United States within the State's jurisdiction except as authorized by a permit in effect under the State program or under section 402 of [Clean Water Act]. [National Pollutant Discharge Elimination System] authority may be shared by two or more State agencies but each agency must have Statewide jurisdiction over a class of activities or discharges. When more than one agency is responsible for issuing permits, each agency must make a submission meeting the requirements of § 123.21 before [the Environmental Protection Agency] will begin formal review. [¶] (2) A State may seek approval of a partial or phased program in accordance with section 402(n) of the [Clean Water Act]."
>
> FN3. 40 Code of Federal Regulations part 123.22(b) (1998) states in its entirety: "A description (including organization charts) of the organization and structure of the State agency or agencies which will have responsibility for administering the program, including the information listed below. If more than one agency is responsible for administration of a program, each agency must have statewide jurisdiction over a class of activities. The responsibilities of each agency must be delineated, their procedures for coordination set forth, and an agency may be designated as a 'lead agency' to facilitate communications between [the Environmental Protection Agency] and the State agencies having program responsibility. If the State proposes to administer a program of greater scope of coverage than is required by Federal law, the information provided under this paragraph shall indicate the resources dedicated to administering the Federally required portion of the program. [¶] (1) A description of the State agency staff who will carry out the State program, including the number, occupations, and general duties of the employees. The State need not submit complete job descriptions for every employee carrying out the State program. [¶] (2) An itemization of the estimated costs of establishing and administering the program for the first two years after approval, including cost of the personnel listed in paragraph (b)(1) of this section, cost of administrative support, and cost of technical support. [¶] (3) An itemization of the sources and amounts of funding, including an estimate of Federal grant money, available to the State Director for the first two years after approval to meet the costs listed in paragraph (b)(2) of this section, identifying any restrictions or limitations upon this funding."

Plaintiffs reason that under state law, the regional board does not have statewide jurisdiction. Water Code section 13100 states that the state and regional boards are part of the California Environmental Protection Agency. Water Code section 13200 identifies the scope of jurisdiction of ****629** the nine regional boards. The regional board's limited jurisdiction is defined in Water Code section 13200, subdivision (d).[FN4] The powers of the regional boards are set forth in Water Code section 13225 with the caveat that the powers exist "with respect to its region." [FN5] Because the regional board is not a statewide agency, plaintiffs argue the permit is void.

> FN4. Water Code section 13200, subdivision (d) states: "The state is divided, for the purpose of this division, into nine regions: [¶] Los Angeles region, which comprises all basins draining into the Pacific Ocean between the southeasterly boundary, located in the westerly part of Ventura County, of the

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

watershed of Rincon Creek and a line which coincides with the southeasterly boundary of Los Angeles County from the ocean to San Antonio Peak and follows thence the divide between San Gabriel River and Lytle Creek drainages to the divide between Sheep Creek and San Gabriel River drainages."

FN5. Water Code section 13225 states in its entirety: "Each regional board, with respect to its region, shall: [¶] (a) Obtain coordinated action in water quality control, including the prevention and abatement of water pollution and nuisance. [¶] (b) Encourage and assist in self-policing waste disposal programs, and upon application of any person, advise the applicant of the condition to be maintained in any disposal area or receiving waters into which the waste is being discharged. [¶] (c) Require as necessary any state or local agency to investigate and report on any technical factors involved in water quality control or to obtain and submit analyses of water; provided that the burden, including costs, of such reports shall bear a reasonable relationship to the need for the report and the benefits to be obtained therefrom. [¶] (d) Request enforcement by appropriate federal, state and local agencies of their respective water quality control laws. [¶] (e) Recommend to the state board projects which the regional board considers eligible for any financial assistance which may be available through the state board. [¶] (f) Report to the state board and appropriate local health officer any case of suspected contamination in its region. [¶] (g) File with the state board, at its request, copies of the record of any official action. [¶] (h) Take into consideration the effect of its actions pursuant to this chapter on the California Water Plan adopted or revised pursuant to Division 6 (commencing with Section 10000) of this code and on any other general or coordinated governmental plan looking toward the development, utilization or conservation of the water resources of the state. [¶] (i) Encourage regional planning and action for water quality control."

This argument has no merit. Effective September 22, 1989, the authority to issue National Pollutant Discharge Elimination System permits was vested by the federal Environmental Protection Agency in the state board. (54 Fed.Reg. 40664, 40665 (Oct. 3, 1989); see *Building Industry Assn. of San Diego County v. State Water Resources Control Bd.* (2004) 124 ***1000** Cal.App.4th 866, 875, 22 Cal.Rptr.3d 128.) The state board is organized into nine regional boards which are part of the California Environmental Protection Agency. (Wat.Code, §§ 174 et seq.13100; see *City of Arcadia v. State Water Resources Control Bd.* (2006) 135 Cal.App.4th 1392, 1405, 38 Cal.Rptr.3d 373.) The nine regional boards are authorized under this state's laws to issue National Pollutant Discharge Elimination System permits. (*Building Industry Assn. of San Diego County v. State Water Resources Control Bd., supra,* 124 Cal.App.4th at p. 875, 22 Cal.Rptr.3d 128; Wat.Code, § 13374.) The federal Environmental Protection Agency memorandum of agreement with the state board complies with the statewide jurisdiction requirements imposed by the federal regulations. The fact the state board is organized into nine regional boards is legally irrelevant. The state board has statewide jurisdiction.

[5] Further, we agree with the Attorney General that plaintiffs may not challenge the regional board's authority to issue a National Pollutant Elimination System permit in this proceeding. Such ****630** an indirect challenge to the board's authority is barred by the de facto officer doctrine. The Supreme Court has described the de facto officer doctrine, which bars a challenge to an agency's action based on a purported lack of legal authority to act, thusly: "[W]e conclude that under the 'de facto officer' doctrine prior actions of the Commission cannot be set aside on the ground that the appointment of the commissioners who participated in the decision may be vulnerable to constitutional challenge. As this court explained in *In re Redevelopment Plan for Bunker Hill* (1964) 61 Cal.2d 21, 41-42 [37 Cal.Rptr. 74, 389 P.2d 538]: 'The de facto doctrine in sustaining official acts is well established. [Given the existence of] a de jure office, "[p]ersons claiming to be public officers while in possession of an office, ostensibly exercising their function lawfully and with the acquiescence of the public, are *de facto* officers.... The lawful acts of an officer *de facto,* so far as the rights of third persons are concerned, are, if done within the scope and by the apparent authority of office, as valid and binding as if he were the officer legally elected and qualified for the office and in full possession of it." [Cita-

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

tions.]' (See also *Pickens v. Johnson* (1954) 42 Cal.2d 399, 410 [267 P.2d 801] ['There is no question but that ... the status of a judge de facto attached to his action. The office to which he was assigned was a de jure office. By acting under regular assignment under a statute authorizing it he was acting under color of authority as provided by law. His conduct in trying the cases and rendering judgment therein cannot here be questioned.'].)"(*Marine Forests Soc. v. California Coastal Com.* (2005) 36 Cal.4th 1, 54, 30 Cal.Rptr.3d 30, 113 P.3d 1062; original italics.) Here, plaintiffs are challenging the permit by attacking the regional board's authority. Under these circumstances, this they may not do in what amounts to a licensing proceeding. (*Ibid.; In re Redevelopment Plan for Bunker Hill, supra,* 61 Cal.2d at pp. 41-42, 37 Cal.Rptr. 74, 389 P.2d 538.)

[6] ***1001** Finally there is no merit to the contention that because the regional board is not an elected body, it cannot make the financial decisions of the scope entailed by the permit. The board's powers exist because of: the Clean Water Act which was adopted and amended by elected members of Congress and signed into law by elected presidents; provisions of the Water Code which were enacted by elected legislators and approved by elected governors; and the members, who must have special competence, are appointed by an elected governor and confirmed by the elected State Senate. (Wat.Code, § 13201, subds.(a)-(b).) The democratic processes of government control every aspect of the creation of the board, its legal authority, and the selection of its members. Further, the decisions of regulatory institutions such as the regional board, are entitled by law to a presumption of competence and propriety. (*City of Rancho Cucamonga v. Regional Water Quality Control Bd., supra,* 135 Cal.App.4th at p. 1384, 38 Cal.Rptr.3d 450; *Communities for a Better Environment v. State Water Resources Control Bd.* (2003) 109 Cal.App.4th 1089, 1104, 1 Cal.Rptr.3d 76.)

B. The Motions To Strike

Plaintiffs argue that the trial court erroneously granted the regional board's motions to strike portions of the petition. Plaintiffs contend: the motions to strike were in fact disguised summary adjudication motions; the orders granting the motions to strike did not resolve entire causes of action; and hence, the orders violated Code of Civil Procedure section 437c, subdivision****631** (f)(1). This contention has no merit. Code of Civil Procedure section 436 allows a court to strike portions of a cause of action. (*City of Rancho Cucamonga v. Regional Water Quality Control Bd., supra,* 135 Cal.App.4th at p. 1386, 38 Cal.Rptr.3d 450; *PH II, Inc. v. Superior Court* (1995) 33 Cal.App.4th 1680, 1682-1683, 40 Cal.Rptr.2d 169.)

C. The State Board's Demurrer

[7] Plaintiffs argue that the trial court erroneously sustained the state board's demurrer to the petitions. The state board contended it was not properly joined as a party to the litigation. A group of plaintiffs alleged the state board required the regional boards to adopt terms and conditions on National Pollutant Discharge Elimination System permits without complying with Government Code sections 11340.5, subdivision (a) [FN6] and 11352, ***1002** subdivision (b) which are part of the Administrative Procedure Act. Plaintiffs had a duty to specifically allege every fact that would give rise to liability by the state board. (*Covenant Care, Inc. v. Superior Court* (2004) 32 Cal.4th 771, 790, 11 Cal.Rptr.3d 222, 86 P.3d 290; *Lopez v. Southern Cal. Rapid Transit Dist.* (1985) 40 Cal.3d 780, 795, 221 Cal.Rptr. 840, 710 P.2d 907.) The state board refused to assume jurisdiction over this case. There were thus no specific allegations as to the state board to hold it liable as it engaged in no independent activity. Hence, this contention has no merit and the demurrer was properly sustained. (*City of Rancho Cucamonga v. Regional Water Quality Control Bd., supra,* 135 Cal.App.4th at p. 1383, 38 Cal.Rptr.3d 450; *People ex rel Cal. Regional Wat. Quality Control Bd. v. Barry* (1987) 194 Cal.App.3d 158, 177, 239 Cal.Rptr. 349.)

FN6. Government Code sections 11340.5, subdivision (a) states, "No state agency shall issue, utilize, enforce, or attempt to enforce any guideline, criterion, bulletin, manual, instruction, order, standard of general application, or other rule, which is a regulation as defined in Section 11342.600, unless the guideline, criterion, bulletin, manual, instruction, order, standard of general application, or other rule has been adopted as a regulation and filed with the Secretary of State pursuant to this chapter."

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

D. The Declaratory Relief Claims

[8] The trial court sustained the regional board's demurrers to the declaratory relief claims. Plaintiffs argue they were entitled to declaratory relief as to whether the permittees were required to "go beyond the [maximum extent practicable]" standard to comply with part 2 of the permit which relates to receiving water limitations; part 2 contained a "safe harbor" if the permittees were acting in good faith in implementing best management practices to control excessive discharge of pollutants and nuisance conditions; the requirement in part 4 of the permit that each permittee's general plan and California Environmental Quality Act review take into account storm water runoff is lawful; the regional board was required to consider the economic impact of the proposed permit and its effect on housing; and the regional board was required to perform a "cost/benefit analysis" of the monitoring and reporting program.

[9] When a remedy has been designated by the Legislature to review an administrative action, declaratory relief is unavailable. (*State of California v. Superior Court* (1974) 12 Cal.3d 237, 249, 115 Cal.Rptr. 497, 524 P.2d 1281; *Scott v. City of Indian Wells* (1972) 6 Cal.3d 541, 546, 99 Cal.Rptr. 745, 492 P.2d 1137.) Water Code section 13330, subdivision (b) provides that a regional board order may be reviewed by a Code of Civil Procedure section 1094.5 administrative mandate petition****632** filed within 30 days after the state board denies review. Therefore, the demurrer was correctly sustained to the declaratory relief claims. (*Hill v. City of Manhattan Beach* (1971) 6 Cal.3d 279, 287, 98 Cal.Rptr. 785, 491 P.2d 369; *Hostetter v. Alderson* (1952) 38 Cal.2d 499, 500, 241 P.2d 230.)

***1003** E. The Regional Board Has Not Unlawfully Interfered In Local General Plans And California Environmental Quality Act Review

[10] The permit requires the permittees to update their general plans to include watershed and storm water runoff as considerations in land use, housing, conservation, and open space planning. Further, the permittees were required to amend their California Environmental Quality Act process to ensure review of the effect of commercial and residential development on storm water runoff. Plaintiffs argue these aspects of the permit violate the separation of powers doctrine. This contention has no merit. As noted, the regional boards are part of a joint state and federal process to enforce the Clean Water Act.(*City of Burbank v. State Water Resources Control Bd., supra,* 35 Cal.4th at pp. 619-620, 26 Cal.Rptr.3d 304, 108 P.3d 862; *City of Rancho Cucamonga v. Regional Water Quality Control Bd., supra,* 135 Cal.App.4th at pp. 1380-1381, 38 Cal.Rptr.3d 450.) The general plan powers and duties of cities and counties are limited by statewide law. (Cal. Const., art. XI, § 7; Gov.Code, § 65030.1; *Jackson v. City of Los Angeles* (2003) 111 Cal.App.4th 899, 907-908, 4 Cal.Rptr.3d 325; *Suter v. City of Lafayette* (1997) 57 Cal.App.4th 1109, 1118, 67 Cal.Rptr.2d 420.) Further, the Clean Water Act supersedes all conflicting state and local pollution laws. (*Arkansas v. Oklahoma* (1992) 503 U.S. 91, 101, 112 S.Ct. 1046, 117 L.Ed.2d 239; *City of Burbank v. State Water Resources Control Bd., supra,* 35 Cal.4th at p. 621, 26 Cal.Rptr.3d 304, 108 P.3d 862.) The state and regional boards are vested with the primary responsibility of controlling water quality. (Wat.Code, § 13001; see *Arkansas v. Oklahoma, supra,* 503 U.S. at p. 101, 112 S.Ct. 1046; *Hampson v. Superior Court* (1977) 67 Cal.App.3d 472, 484, 136 Cal.Rptr. 722.) Regional boards are explicitly granted the authority to issue orders for purposes of enforcing the federal Clean Water Act. (Wat.Code, § 13377.) Federal law requires that permits include controls to reduce pollutant discharge in areas of new development and significant redevelopment-the very area where regional board review occurs. (40 C.F.R. § 122.26(d)(2)(iv)(A)(2) (2006).) So long as the regional boards' decisions carry out federal and state water quality mandates resulting from express legislative action as the challenged orders in this case in fact do, no separation of powers issue is present. (*Kugler v. Yocum* (1968) 69 Cal.2d 371, 375-377, 71 Cal.Rptr. 687, 445 P.2d 303; *Salmon Trollers Marketing Assn. v. Fullerton* (1981) 124 Cal.App.3d 291, 300, 177 Cal.Rptr. 362.) Given the foregoing, we need not address the waiver, laches, and estoppel contentions of the regional and state boards and the intervenors.

F. Failure To Comply With the California Environmental Quality Act

[11] Plaintiffs argue that the permit issuance process violates provisions of the California Environmental Quality Act. Plaintiffs rely on Water Code section ***1004** 13389 which provides that chapter 3 of the

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

California Environmental Quality Act does not apply to National Pollutant Discharge Elimination Systems permits proceedings: "Neither the state board nor the regional boards shall be required to comply**633 with the provisions of Chapter 3 (commencing with Section 21100) of Division 13 of the Public Resources Code prior to the adoption of any waste discharge requirement, except requirements for new sources as defined in the Federal Water Pollution Control Act or acts amendatory thereof or supplementary thereto." California Code of Regulations, title 23, section 3733 also states, "Environmental documents are not required for adoption of waste discharge requirements under Chapter 5.5, Division 7 of the Water Code, except requirements for new sources as defined in the Federal Water Pollution Control Act. This exemption is in accordance with Water Code Section 13389 which does not apply to the policy provisions of Chapter 1 of CEQA."Plaintiffs argue that the California Environmental Quality Act applies to: the receiving water limitations; the revision of the Storm Water Quality Management Program; and the development planning program. (See *City of Arcadia v. State Water Resources Control Bd., supra,* 135 Cal.App.4th at pp. 1420-1426, 38 Cal.Rptr.3d 373; *Committee for Progressive Gilroy v. State Water Resources Control Bd.* (1987) 192 Cal.App.3d 847, 862, 237 Cal.Rptr. 723.)

Chapter 3 of the California Environmental Quality Act was originally adopted in 1970. (Stats.1970, ch. 1433, § 1, pp. 2781-2782.) The original chapter 3 of the California Environmental Quality Act required all state agencies, boards, and commissions that proposed a project which would have a significant effect on the environment to prepare a "detailed statement" setting forth the environmental effect of the contemplated undertaking.[FN7] (See *Russian Hill Improvement Assn. v. Board of Permit Appeals* (1974) 44 Cal.App.3d 158, 166, 118 Cal.Rptr. 490; *City of Orange v. Valenti* (1974) 37 Cal.App.3d 240, 246, 112 Cal.Rptr. 379.) Water Code section 13389 was adopted as urgency legislation to comply with certain provisions of the Clean Water Act provisions establishing the National Pollution Discharge Elimination System. (Stats.1972, ch. 1256, § 3, p. 2490.) Expressly for that purpose, the California Legislature enacted chapter 5.5, the "Water Quality" division, ***1005** which includes Water Code section 13389. (Wat.Code, § 13370 [FN8]; *City of Brentwood v.* ***634** *Central Valley Regional Water Quality Control Bd.* (2004) 123 Cal.App.4th 714, 723, 20 Cal.Rptr.3d 322; *Sierra Club v. Union Oil Co. of California* (9th Cir.1987) 813 F.2d 1480, 1483.) When Water Code section 13389 became effective on December 19, 1972, chapter 2.6 of the California Environmental Quality Act had just been enacted, also as urgency legislation, and it consisted of Public Resources Code sections 21080 through 21090. The new chapter 2.6 of the California Environmental Quality Act became effective on December 5, 1972. (Stats.1972, ch. 1154, § 19, p. 2280.) Chapter 3 of the California Environmental Quality Act was also amended effective December 5, 1972, and it which applied to all environmental assessments by state agencies, boards, and commissions. Former Public Resources Code section 21100, the core provision of the 1972 version of the California Environmental Quality Act as it related to state agencies, boards, and commissions, stated: "All state agencies, boards, and commissions shall prepare, or cause to be prepared ... and certify the completion of an environmental impact report on any project they propose to carry out or approve which may have a significant effect on the environment." (Stats.1972, ch. 1154, § 2.5, p. 2274; see *Desert Environment Conservation Assn. v. Public Utilities Com.* (1973) 8 Cal.3d 739, 742, 106 Cal.Rptr. 31, 505 P.2d 223; *San Francisco Ecology Center v. City and County of San Francisco* (1975) 48 Cal.App.3d 584, 594, fn. 8, 122 Cal.Rptr. 100.)Beyond question, the Legislature intended that chapter 3 of the California Environmental Quality Act not apply to National Pollution Discharge Elimination System permits-in that respect Water Code section 13389 is entirely clear.

FN7. Public Resources Code section 21100 as enacted in 1970 stated: "All state agencies, boards, and commissions shall include in any report on any project they propose to carry out which could have a significant effect on the environment of the state, a detailed statement by the responsible state official setting forth the following: [¶] (a) The environmental impact of the proposed action.[¶] (b) Any adverse environmental effects which cannot be avoided if the proposal is implemented. [¶] (c) Mitigation measures proposed to minimize the impact. [¶] (d) Alternatives to the proposed action. [¶] (e) The relationship between local short-term uses of man's environment and the maintenance and enhancement of long-term productivity. [¶] (f) Any irreversible envi-

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

ronmental changes which would be involved in the proposed action should it be implemented." (Stats.1970, ch. 1433, § 1, pp. 2781-2782.)

FN8. Water Code section 13370 states: "The Federal Water Pollution Control Act (33 U.S.C. Sec. 1251 et seq.), as amended, provides for permit systems to regulate the discharge of pollutants and dredged or fill material to the navigable waters of the United States and to regulate the use and disposal of sewage sludge. [¶] (b) The Federal Water Pollution Control Act, as amended, provides that permits may be issued by states which are authorized to implement the provisions of that act. [¶] (c) It is in the interest of the people of the state, in order to avoid direct regulation by the federal government of persons already subject to regulation under state law pursuant to this division, to enact this chapter in order to authorize the state to implement the provisions of the Federal Water Pollution Control Act and acts amendatory thereof or supplementary thereto, and federal regulations and guidelines issued pursuant thereto, provided, that the state board shall request federal funding under the Federal Water Pollution Control Act for the purpose of carrying out its responsibilities under this program."

But on December 19, 1972, when Water Code section 13389 was enacted, chapter 2.6 of the California Environmental Quality Act, which contains generalized requirements for the preparation of environmental impact reports for discretionary projects, had just been adopted effective December 5, 1972. Chapter 2.6 of the California ***1006** Environmental Quality Act applies to discretionary projects proposed by public agencies. (Former Pub. Resources Code, § 21080.) Pursuant to new chapter 2.6 of the California Environmental Quality Act, all public agencies were required to adopt by ordinance, resolution, or the like procedures for preparation of environmental impact reports. (Former Pub. Resources Code, § 21082.) The Office of Planning and Research was directed to adopt proposed guidelines for the preparation of environmental impact reports including a listing of projects determined not to have a significant impact on the environment. (Former Pub. Resources Code, §§ 21083-21088.) Finally, chapter 2.6, as adopted in 1972, allowed a public agency to charge fees for the preparation of environmental impact report and defined public and private developments pursuant to a redevelopment plan as a single project. (Former Pub. Resources Code, §§ 21089-21090.)

It can be argued that even though chapter 3 with its environmental impact preparation requirement for state agencies, boards, and commissions was not to apply to National Pollution Discharge Elimination System permits, the discretionary projects requirements in chapter 2.6 of the California Environmental Quality Act mandated environmental review. Hence, the argument would be that the Legislature in enacting Water Code section 13389 did not intend to obviate the duty pursuant to ****635** chapter 2.6 of the California Environmental Quality Act to prepare an environmental impact report. We are unpersuaded by this analysis. Former Public Resources Code section 20180, subdivision (a), the core provision relating to discretionary projects, stated: "(a) Except as otherwise provided in this division, this division shall apply to discretionary projects proposed to be carried out or approved by public agencies including, but not limited to, the enactment and amendment of zoning ordinances, the issuance of zoning variances, the issuance of conditional use permits and the approval of tentative subdivision maps (except where such a project is exempt from the preparation of an environmental impact report pursuant to Section 21166)." (Stats.1972, ch. 1154, § 2.3, p. 2272; see *People v. County of Kern* (1974) 39 Cal.App.3d 830, 839, 115 Cal.Rptr. 67; *Friends of Lake Arrowhead v. Board of Supervisors* (1974) 38 Cal.App.3d 497, 510, 113 Cal.Rptr. 539.) As can be noted, Public Resources Code section 21080, subdivision (a) established that a discretionary project was subject to the environmental impact requirement. But the requirement that a state agency, board, and commission prepare an environmental report was found in Public Resources Code section 21110 which was, and is now, located in chapter 3 of the California Environmental Quality Act. The obligation imposed on a state agency, board, and commission to prepare an environmental impact report existed in chapter 3 before the adoption of Water Code section 13389 and it remained there after the 1972 amendments to the California Environmental Quality Act. No doubt, since 1972 when the Legislature adopted Water Code section 13389 and the then new chapter 2.6, ***1007** the California Environmental Quality Act has been repeatedly amended. But de-

fendants cite no evidence the Legislature ever intended to: impose a duty on regional boards to prepare environmental impact reports; require regional boards to engage in any other form of environmental review specified in the California Environmental Quality Act; or to otherwise modify Water Code section 13389.

Defendants rely on the analysis of our colleague Presiding Justice Judith D. McConnell of Division One of the Fourth Appellate District in *City of Arcadia v. State Water Resources Control Bd., supra,* 135 Cal.App.4th at pages 1420-1430, 38 Cal.Rptr.3d 373 that regional board basin plans are subject to limited California Environmental Quality Act review. The *City of Arcadia* decision does not involve the issuance of a National Pollution Discharge Elimination System permit. Rather, it involves the development of a basin plan. (*Ibid.*). We agree with the Attorney General that a basin plan is subject to limited environmental review pursuant to Public Resources Code section 21080.5. Public Resources Code section 21080.5, subdivision (a) vests the Secretary of the Resources Agency with the authority to require limited environmental review: "(a) Except as provided in Section 21158.1, when the regulatory program of a state agency requires a plan or other written documentation containing environmental information and complying with paragraph (3) of subdivision (d) to be submitted in support of an activity listed in subdivision (b), the plan or other written documentation may be submitted in lieu of the environmental impact report required by this division if the Secretary of the Resources Agency has certified the regulatory program pursuant to this section." The secretary's authority extends to requiring limited environmental review when an agency adopts "standards, rules, regulations, or plans for use" in a regulatory program. (Pub. Resources Code, § 21080.5, subd. (b)(2).) The secretary has certified the regional boards' basin plan program as requiring limited environmental review. (*City of Arcadia v. State Water Resources* ***636** *Control Bd., supra,* 135 Cal.App.4th at p. 1422, 38 Cal.Rptr.3d 373; Cal.Code Regs., tit. 14, § 15251, subd. (g).[FN9]) The resources secretary has never identified the National Pollution Discharge Elimination System permit system as a Public Resources Code section 21080.5 certified program. Thus, *City of Arcadia* does not require California Environmental Quality Act review prior to the issuance of a National Pollution Discharge Elimination System permit.

FN9. California Code of Regulations, title 14, section 15251, subdivision (g) states: "The following programs of state regulatory agencies have been certified by the Secretary for Resources as meeting the requirements of Section 21080.5: [¶] ... (g) The Water Quality Control (Basin)/208 Planning Program of the State Water Resources Control Board and the Regional Water Quality Control Boards."

V. DISPOSITION

The judgment is affirmed. Defendants, California Regional Water Quality Control Board, Los Angeles Region and the State Water Resources Board, are to recover their costs incurred on appeal jointly and severally from plaintiffs, the Cities of Arcadia, Artesia, Bellflower, Beverly Hills, Carson, Cerritos, Claremont, Commerce, Covina, Diamond Bar, Downey, Gardena, Hawaiian Gardens, Industry, Irwindale, La Mirada, Lawndale, Monrovia, Norwalk, Paramount, Pico Rivera, Rancho Palos Verdes, Rosemead, Santa Clarita, Santa Fe Springs, Signal Hill, South Pasadena, Torrance, Vernon, Walnut, West Covina, Westlake Village, and Whittier, and the County of Los Angeles, Los Angeles County Flood Control District, Building Industry Legal Defense Fund, and the Construction Industry Coalition on Water Quality.

We concur: ARMSTRONG and KRIEGLER, JJ.

Court of Appeal, First District, Division 3, California.
DIABLO VALLEY COLLEGE FACULTY SENATE, Plaintiff and Appellant,
v.
CONTRA COSTA COMMUNITY COLLEGE DISTRICT et al., Defendants and Respondents.
No. A108713.

March 21, 2007.
Rehearing Denied April 6, 2007.
Review Denied June 27, 2007.

Background: Faculty senate of community college filed petition for a writ of mandate against community college district, and a complaint for declaratory relief against Chancellor. Faculty senate alleged that district was required to engage in collegial consultation with senate before effecting an administrative reorganization. The Superior Court, Contra Costa County, No. N03-0005,Steven K. Austin, J., denied relief, and faculty senate appealed.

Holding: The Court of Appeal, McGuiness, P.J., held that community college district was not required to engage in collegial consultation with faculty senate before effecting an administrative reorganization.

Affirmed.

Although the final responsibility for interpreting a statute or regulation rests with the court, judicial deference must often be accorded to the construction applied by an agency charged with the law's administration and enforcement.

McGUINESS, P.J.

***1027** This case concerns whether the Education Code or applicable regulations required a community college district to engage in collegial consultation with a college's academic senate before effecting an administrative reorganization. In September 2001, the President of Diablo Valley College (DVC) announced that, as part of a district-wide reorganization, professional deans would be hired for managerial positions previously filled on a part-time basis by faculty members. The Diablo Valley College ***1028** Faculty Senate (Faculty Senate) complained this change could not be undertaken without its consent, based on regulations requiring collegial consultation for policies relating to "academic and professional matters." (Cal.Code Regs., tit. 5, §§ 53200, 53203, subd. (a).) [FN1] After several unsuccessful complaints to the Chancellor of the California Community Colleges (Chancellor), which resulted in a series of legal opinions from the Chancellor concluding the reor-

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

ganization did not impose a duty of collegial consultation, the Faculty Senate filed a petition for writ of mandate against the Contra Costa Community College District (District) and its governing board (Board) and a complaint for declaratory relief against the Chancellor. The trial court agreed that the regulations did not require collegial consultation and denied relief. As the third neutral entity to evaluate the question, we reach the same conclusion and affirm the judgment.

FN1. All unspecified section references are to Title 5 of the California Code of Regulations.

BACKGROUND

I. History of DVC Division Chairs and the Change to Professional Deans

With an annual enrollment of approximately 35,000 students, DVC is one of the largest community colleges in northern California, and it is one of three colleges managed by the District. Beginning in approximately 1968, DVC employed faculty "division chairs" to manage the various academic divisions within the college.[FN2] Division chairs were nominated by a majority vote of full-time faculty members within each division and then appointed to the position by the university president. Selected faculty members served up to two consecutive three-year terms as division chair and continued to teach part-time during this period. At the end of his or her service, a division chair generally resumed full-time teaching responsibilities. Division chairs acted as first-line managers for their divisions. They facilitated communications between faculty and administrators and managed most aspects of the faculty's involvement in college administration.

FN2. "Division" refers to an aggregate of related academic disciplines.

The division chair management system at DVC was first memorialized in writing in June 1977, when it was added to the District's Administrative Procedures Manual as AP 4111.07. The District moved this provision into different manuals over **297 the years, but the description of division chair selection procedures and responsibilities remained substantively unchanged. The parties dispute whether any of these acts were accompanied by collegial consultation and whether the Board ever formally adopted AP 4111.07 or its successors.

In addition, in 1982 or 1983, a description of the procedure for selecting division chairs was added to the collective bargaining agreement (CBA) between the District and United Faculty, the union representing faculty *1029 members in District colleges. The CBA identifies division chairs as "management positions." The significance of this description's appearance in the CBA is another subject of dispute between the parties.

In the spring of 2001, the chancellor of the District (Charles Spence) determined it would be advantageous for colleges in the District to switch from the division chair system, which all three were using, to full-time management by professional administrators. In accordance with this decision, on September 14, 2001, DVC president Mark Edelstein sent a memorandum to all faculty and staff advising them of the upcoming change. Because of the school's high enrollment and almost year-round instructional calendar, Edelstein explained it had become increasingly difficult for the college to manage its affairs effectively using part-time faculty division chairs, who worked for only nine months of the year and served relatively brief terms.

II. Opinions of the State Chancellor and Legal Proceedings

Although the change from division chairs to professional deans was accepted at other colleges in the District, it was controversial at DVC. On September 28, 2001, the Faculty Senate filed a formal complaint with statewide Chancellor Thomas J. Nussbaum arguing state regulations required the District to consult collegially with DVC faculty before implementing the proposed reorganization.[FN3] Specifically, the Faculty Senate maintained that the reorganization was an "academic or professional matter[ ]" requiring consultation (§ 53203, subd. (a)) because it would alter faculty roles in governance (§ 53200, subd. (c)(6)). For such matters, Board policy required the District to reach "mutual agreement" with faculty before they could legally make the change.

FN3. Mr. Nussbaum served as Chancellor of the California Community Colleges from

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

May 1996 to January 17, 2004. The current statewide Chancellor is Marshall Drummond.

The Chancellor has statutory responsibility for establishing "minimum conditions" and ensuring these conditions are met at state community colleges as a prerequisite of their receipt of state funding. (Ed.Code, § 70901, subd. (b)(6).) One "minimum condition" is the requirement of collegial consultation with academic senates under certain defined circumstances. (§§ 51023, 53200, 53203.) The Chancellor treated the Faculty Senate's September 2001 letter (and subsequent letters) as a minimum conditions complaint triggering the office's duty to investigate, and on October 23, 2001, he issued the first of several legal opinions addressing the proposal to replace division chairs with full-time deans.

Legal opinion L 01-26 reported that the Board had tabled the proposed change for 90 days to allow for continuing informal discussions between the ***1030** DVC faculty and administration. Because the Board had taken no action to implement the reorganization, the Chancellor observed a formal complaint about the lack of collegial consultation was "technically premature." Nevertheless, in order to provide guidance, the Chancellor identified specific changes ****298** that might require collegial consultation if they were implicated by the District's actions, but he also repeated the general rule-set forth in his September 1997 advisory opinion on shared governance (legal opinion M 97-20)-that mere changes to a District's administrative organization do not require collegial consultation. The Chancellor issued a second opinion almost a month later. Legal opinion L 01-31 (November 15, 2001) repeated the prior opinion's conclusion that changes in the District's management structure "might" require collegial consultation if they could be construed as affecting faculty roles in governance. However, consultation would not be required if the change was merely to a past practice rather than to a policy. In addition, because the division chair practice was outlined in the CBA with United Faculty, the Chancellor believed collegial consultation would be inconsistent with a regulation exempting the provisions of collective bargaining agreements from such consultation obligations (§ 53204).

The Board formally approved the replacement of DVC's division chairs with full-time deans in December 2001, and the Faculty Senate renewed its complaint with Chancellor Nussbaum. On July 22, 2002, the Chancellor issued an exhaustive opinion (legal opinion O 02-19) reviewing all aspects of the District's reorganization, including the change from division chairs to deans. He concluded the regulations require collegial consultation only for "matters that go to the heart of faculty expertise," based on "their expertise as teachers and subject matter specialists and their professional status." Consistent with this understanding, the Chancellor's office had developed a general rule that management reorganizations do not require collegial consultation, and the Chancellor discerned no reason to depart from this rule with regard to the District's reorganization. Specifically, because the reorganization concerned only management of the colleges, it did not affect "governance structures ... related to faculty roles" (§ 53200, subd. (c)(6)). The Chancellor also found that the faculty's role in selecting division chairs was established through the collective bargaining process, and collegial consultation on the matter was therefore precluded.

On January 8, 2003, the Faculty Senate filed a petition for writ of mandate (Code Civ. Proc., § 1085) against the District and the Board and a complaint for declaratory relief against the Chancellor. Later in January 2003, counsel for the Faculty Senate sent a letter to Chancellor Nussbaum advising him that the Senate had just discovered the existence of a District policy for the selection of division chairs. This policy, which counsel represented had been in effect for many years, was contained in the District's Curriculum and Instruction Procedure Manual. The Chancellor responded with a fourth ***1031** opinion. In legal opinion O 03-13 (May 2, 2003), the Chancellor observed that, just like AP 4111.07, there was no evidence the provision in question was ever adopted by the Board.[FN4] The Chancellor therefore continued to maintain collegial consultation was not required, and he reiterated his additional conclusions that the division chair procedure was not an "academic or professional matter" requiring consultation (§ 53200, subd. (c)) and that the parties' CBA precluded such consultation.

FN4. Indeed, the Curriculum and Instruction provision was simply one of several successive versions of the procedure originally described in AP 4111.07.

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

After a hearing, on October 13, 2004, the trial court entered an order denying the petition for writ of mandate and denying "all relief requested in the complaint for declaratory relief." The court rejected the ****299** respondents' arguments about the absence of a Board policy, interpreting the collegial consultation regulations as "applying to established practices, as well as to formally approved policies." Further, the court found the District and Board were estopped from denying that the division chair structure was an approved policy by their knowledge and approval of this job description over the years, through various policy and procedure manuals. The court also rejected the respondents' assertion that the CBA precluded collegial consultation, based on a finding that neither side intended the CBA to be binding on the subject of the division chair management structure.[FN5] However, the trial court agreed with the respondents that the regulations did not require collegial consultation because the switch from division chairs to deans did not implicate "district and college governance structures, as related to faculty roles" (§ 53200, subd. (c)(6).) The court interpreted the regulations as requiring collegial consultation only when a change in a college's governing structure diminishes the faculty's ability to perform their unique "faculty roles," as opposed to roles they might serve in management.

> FN5. The court also observed this provision could not have been a negotiable term in the CBA because modification of a management structure was exclusively a management prerogative.

DISCUSSION

[1][2] In mandate and declaratory relief proceedings, we defer to the trial court's findings of fact if they are supported by substantial evidence. (*Franzosi v. Santa Monica Community College Dist.* (2004) 118 Cal.App.4th 442, 447, 13 Cal.Rptr.3d 25; *Dolan-King v. Rancho Santa Fe Assn.* (2000) 81 Cal.App.4th 965, 974, 97 Cal.Rptr.2d 280.) Where, as here, the material facts are undisputed, the trial court's interpretation of the Education Code is subject to de novo review. (*Franzosi v. Santa Monica Community College Dist., supra,* 118 Cal.App.4th at p. 447, 13 Cal.Rptr.3d 25.)

[3] The District and the Chancellor, respondents herein, both adopt the trial court's interpretation of the applicable regulations. In addition, both liken ***1032** the Chancellor's office to a state agency and argue the Chancellor's interpretation of the regulations must be accorded deference unless it is clearly erroneous. The District repeats several alternative arguments that the trial court rejected (concerning the Faculty Senate's standing, lack of a Board-approved policy, and the provision regarding division chairs in the CBA) and adds a new claim that the collegial consultation regulations are invalid because they exceed the shared governance authority granted to academic senates by the Legislature. We do not address these alternative arguments because we agree with the trial court's conclusion that the regulations did not require collegial consultation for the specific management reorganization implemented at DVC.

I. Legislative and Regulatory Framework

In 1988, the Legislature enacted Assembly Bill No. 1725 (AB 1725), which provided for substantial changes in the administration and governance of the state's community colleges.[FN6] (Stats.1988, ch. 973, §§ 1-72, pp. 3087-3144.) AB ****300** 1725 established a statewide board of governors and charged this body with establishing minimum standards to govern academic matters, hiring, administration and governance. (Stats.1988, ch. 973, § 8, pp. 3102-3105.) Among several other additions and amendments to the Education Code, newly added Education Code section 70901, subdivision (b)(1)(E) required the statewide board of governors to establish: "Minimum standards governing procedures established by governing boards of community college districts to ensure faculty, staff, and students the right to participate effectively in district and college governance, and the opportunity to express their opinions at the campus level and to ensure that these opinions are given every reasonable consideration, and the right of academic senates to assume primary responsibility for making recommendations in the areas of curriculum and academic standards." (Stats.1988, ch. 973, § 8, p. 3103.)

> FN6. We grant the Chancellor's request for judicial notice of legislative history concerning AB 1725. Other requests for judicial notice, filed by the Faculty Senate and amicus curiae Academic Senate for California

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

> Community Colleges, are denied because they concern arguments not addressed in this opinion.

With input from the statewide academic senate, the state Chancellor's office and others, the statewide board of governors promulgated regulations to implement this "minimum standards" directive for shared governance. The regulations direct the governing boards of local community college districts to adopt policies for delegating authority to academic senates. Such a policy must provide, at a minimum, "that the governing board or its designees will consult collegially with the academic senate when adopting policies and procedures on academic and professional matters."(§ 53203, subd. (a).) ***1033** "Academic and professional matters" are defined exclusively as: "(1) curriculum, including establishing prerequisites and placing courses within disciplines; [¶] (2) degree and certificate requirements; [¶] (3) grading policies; [¶] (4) educational program development; [¶] (5) standards or policies regarding student preparation and success; [¶] (6) district and college governance structures, as related to faculty roles; [¶] (7) faculty roles and involvement in accreditation processes, including self-study and annual reports; [¶] (8) policies for faculty professional development activities; [¶] (9) processes for program review; [¶] [and] (10) processes for institutional planning and budget development ...." (§ 53200, subd. (c).) Beyond these 10 subjects, collegial consultation may also be required for "other academic and professional matters ... mutually agreed upon between the governing board and the academic senate."(§ 53200, subd. (c)(11).)

Collegial consultation may take either of two forms, as decided by each local district. With respect to a particular subject, the district may decide to "rely primarily upon the advice and judgment of the academic senate," in which case, absent exceptional circumstances, "the recommendations of the senate will normally be accepted."(§ 53203, subd. (d)(1).) Or, the district may elect to require "mutual agreement" with the academic senate for certain subjects. In such cases, when an agreement is not reached, "existing policy shall remain in effect unless continuing with such policy exposes the district to legal liability or causes substantial fiscal hardship."(§ 53203, subd. (d)(2).)

In accordance with these regulations, the District's Governing Board adopted Board Policy 1009, which stated that the Governing Board would consult collegially with the District's academic senate "when adopting policies and procedures on academic and professional matters as defined in Title 5, Section 53200(c)." Board Policy 1009 sets forth the same categories of "academic and professional matters" defined in section 53200, subdivision (c), and it provides that the Board will "rely primarily upon the advice and judgment" of ****301** the academic senate with respect to curriculum, degree requirements and grading, and will "reach mutual agreement" with the academic senate with respect to all other categories.

II. Collegial Consultation Not Required for Administrative Reorganization

As discussed, local community college districts must consult collegially with faculty senates only with regard to specific "academic and professional matters." (§ 53203.) No one has suggested the parties here had a preexisting agreement to consult collegially about the administrative reorganization that occurred at DVC; thus, the question comes down to whether the reorganization comes within one of the categories enumerated in section 53200, subdivision (c). The only potentially relevant category in section 53200, as all ***1034** parties recognize, is subdivision (c)(6), which identifies "district and college governance structures, as related to faculty roles," as an academic and professional matter requiring collegial consultation.

A. Weight to be Accorded the Chancellor's Opinions

[4][5] Although the final responsibility for interpreting a statute or regulation rests with the court, judicial deference must often be accorded to the construction applied by an agency charged with the law's administration and enforcement. (*Whitcomb Hotel, Inc. v. Cal. Emp. Com.* (1944) 24 Cal.2d 753, 756-757, 151 P.2d 233; *Spanish Speaking Citizens' Foundation, Inc. v. Low* (2000) 85 Cal.App.4th 1179, 1214, 103 Cal.Rptr.2d 75 (*Spanish Speaking Citizens*).) " 'The appropriate degree of judicial scrutiny in any particular case is perhaps not susceptible of precise formulation, but lies somewhere along a continuum with nonreviewability at one end and independent judgment at the other.' [Citation.] Quasi-

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

legislative administrative decisions are properly placed at that point of the continuum at which judicial review is more deferential; ministerial and informal actions do not merit such deference, and therefore lie toward the opposite end of the continuum." (*Western States Petroleum Assn. v. Superior Court* (1995) 9 Cal.4th 559, 575-576, 38 Cal.Rptr.2d 139, 888 P.2d 1268.)

[6] The parties dispute how much weight, if any, we should accord the Chancellor's interpretation of section 53200, subdivision (c)(6). When he was general counsel for the statewide board of governors, Chancellor Nussbaum personally participated in drafting the regulations at issue in this case. Then, as Chancellor of the California Community Colleges, he assumed responsibility for enforcing these regulations, including the statutory requirement that colleges satisfy certain "minimum conditions" as a condition of receiving state aid.[FN7] Respondents analogize the Chancellor's office to an administrative agency and cite case law holding an agency's interpretation of its own regulations is controlling unless it is plainly erroneous or unauthorized. (*Calderon v. Anderson* (1996) 45 Cal.App.4th 607, 613, 52 Cal.Rptr.2d 846; *Lusardi Construction Co. v. California Occupational Safety & Health Appeals Bd.* (1991) 1 Cal.App.4th 639, 645, 2 Cal.Rptr.2d 297.) While no precedent directly addresses this situation, a rule affording such great deference to legal opinions issued by the Chancellor's office appears to be precluded by *Yamaha Corp. of America v. State Bd. of Equalization***302** (1998) 19 Cal.4th 1, 78 Cal.Rptr.2d 1, 960 P.2d 1031(*Yamaha*).

> FN7. This authority was delegated to the Chancellor by the statewide board of governors pursuant to Education Code section 70901, subdivision (d).

[7] In *Yamaha,* the Supreme Court distinguished between the level of judicial deference to be accorded to quasi-legislative acts, in which an agency ***1035** exercises its delegated lawmaking power, as compared with interpretive acts, in which an agency interprets the meaning or legal effect of a statute or regulation. (*Yamaha, supra,* 19 Cal.4th at pp. 7, 10-11, 78 Cal.Rptr.2d 1, 960 P.2d 1031.) Whereas courts are bound by an agency's rulemaking, so long as it is authorized by the enabling legislation, "the binding power of an agency's *interpretation* of a statute or regulation is contextual: Its power to persuade is both circumstantial and dependent on the presence or absence of factors that support the merit of the interpretation." (*Id.* at p. 7, 78 Cal.Rptr.2d 1, 960 P.2d 1031.)Here, we are considering the Chancellor's interpretation of a regulation, as opposed to his quasi-legislative act in drafting the regulation itself. "The level of deference due to an agency's regulatory interpretation turns on a legally informed, commonsense assessment of its merit in the context presented. [Citation.]" (*State Farm Mutual Automobile Ins. Co. v. Quackenbush* (1999) 77 Cal.App.4th 65, 71, 91 Cal.Rptr.2d 381.) More specifically, the Supreme Court has proffered "two broad categories of factors relevant to a court's assessment of the weight due an agency's interpretation: Those 'indicating that the agency has a comparative interpretive advantage over the courts,' and those 'indicating that the interpretation in question is probably correct.' [Citations.]" (*Yamaha, supra,* 19 Cal.4th at p. 12, 78 Cal.Rptr.2d 1, 960 P.2d 1031.) Both of these factors weigh in favor of according the Chancellor's decision some deference.

[8][9] An agency has a potential interpretive advantage over the courts if it has developed a specialized expertise, " 'especially where the legal text to be interpreted is technical, obscure, complex, open-ended, or entwined with issues of fact, policy, and discretion.'" (*Yamaha, supra,* 19 Cal.4th at p. 12, 78 Cal.Rptr.2d 1, 960 P.2d 1031.) Although the specific regulations at issue are not highly technical, they are part of a complex regulatory system of shared governance that is very familiar to the Chancellor's office but essentially foreign to the courts. " 'A court is more likely to defer to an agency's interpretation of its own regulation than to its interpretation of a statute, since the agency is likely to be intimately familiar with regulations it authored and sensitive to the practical implications of one interpretation over another.' [Citation.]" (*Ibid.*)As is apparent from declarations and other opinions in the record, the Chancellor's office routinely issues opinions advising colleges and academic senates about whether collegial consultation is required for specific changes in policy or procedure. Because the Chancellor is thus " 'immersed in administering' " the collegial consultation regulations, he can be expected to have " 'an intimate knowledge of the problems dealt with in the [regulations] and the various administrative consequences arising from particular interpretations. In contrast, a generalist court that visits a particular regulatory stat-

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

ute only infrequently lacks the advantage arising out of specialization.'" (*Spanish Speaking Citizens, supra,* 85 Cal.App.4th at p. 1215, 103 Cal.Rptr.2d 75, quoting Asimow, *The Scope of Judicial Review of Decisions of Administrative Agencies* (1995) 42 UCLA L.Rev. 1157, 1195-1196.)

[10] ***1036** With respect to whether an agency's decision is "probably correct" (*Yamaha, supra,* 19 Cal.4th at p. 12, 78 Cal.Rptr.2d 1, 960 P.2d 1031), factors suggesting such correctness include: (1) indications****303** that the interpretation was carefully considered by senior agency officials; and (2) evidence that the agency has consistently maintained its interpretation, especially over a long period of time. (*Id.* at pp. 12-13, 78 Cal.Rptr.2d 1, 960 P.2d 1031; *Spanish Speaking Citizens, supra,* 85 Cal.App.4th at p. 1215, 103 Cal.Rptr.2d 75.) The Chancellor issued four legal opinions addressing the issues in this case. These opinions, especially the final two, contain exhaustive analyses of the Faculty Senate's complaints, and they were drafted by the Chancellor's chief legal counsel. It is hard to envision evidence of a more careful consideration than occurred here.

The record also demonstrates that the Chancellor has maintained a consistent interpretation of the phrase "district and college governance structures, as related to faculty roles" (§ 53200, subd. (c)(6)). In 1997, the Chancellor issued an advisory opinion addressing several questions about the shared governance regulations. One question asked, "Must the district consult collegially on the administrative organization chart of the college?" The Chancellor answered, "No. Neither the governing board nor its designee(s) are required to 'consult collegially' with the academic senate regarding organization of the district administration, but the board would certainly have the discretion to do so if it wished." [FN8] The following year, the Chancellor applied this interpretation to a specific set of facts when he addressed a reorganization proposed by the Los Angeles Community College District. In response to the Los Angeles district's claim that collegial consultation was not required, the Chancellor's July 2, 1998 opinion explained: "A particular change in the administrative organization of a district may or may not affect academic and professional matters; but if it does, the governing board would have an obligation to consult with the academic senate before approving the change in administrative structure. In other words, a district is free to revise its administrative organization chart without consulting the academic senate, but if the changes in administrative structure also implicate academic and professional matters then there is an obligation to consult collegially before the policy is adopted." The Chancellor concluded the Los Angeles reorganization went "well beyond merely changing the administrative organization" of the district. In addition to changing fiscal planning and budgeting processes, the reorganization affected "faculty roles in governance" because it altered the local district's procedures for determining curriculum. Here, because the ***1037** District's switch from division chairs to deans is a much narrower reorganization and does not affect curriculum or other academic matters, the Chancellor's current interpretation of section 53200, subdivision (c)(6) is consistent with his opinion in the Los Angeles case that collegial consultation is required only when an administrative reorganization affects academic and professional matters.

> FN8. The Chancellor added that, although collegial consultation was not required, it would "probably be a good practice" for the district to inform faculty, staff and students and solicit their views before finalizing a reorganization. The record indicates the District took part in extended informal discussions with DVC faculty before it implemented the reorganization.

[11] Accordingly, we conclude some weight should be afforded to the Chancellor's consistent interpretation that section 53200, subdivision (c)(6) does not require collegial consultation for management reorganizations, and to his carefully considered opinion that the District was not required to consult collegially before implementing the reorganization ****304** at issue in this case. However, this conclusion does not relieve us of the obligation to interpret the meaning of the regulation ourselves. "Whatever the force of administrative construction, however, final responsibility for the interpretation of the law rests with the courts. 'At most administrative practice is a weight in the scale, to be considered but not to be inevitably followed.... While we are of course bound to weigh seriously such rulings, they are never conclusive.' [Citation.]" (*Whitcomb Hotel, Inc. v. Cal. Emp. Com., supra,* 24 Cal.2d at p. 757, 151 P.2d 233.)

B. De Novo Review Supports Chancellor's Inter-

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

pretation

[12][13] Rules governing the interpretation of statutes also apply to interpretation of regulations. (*Spanish Speaking Citizens, supra,* 85 Cal.App.4th at p. 1214, 103 Cal.Rptr.2d 75.) "In interpreting regulations, the court seeks to ascertain the intent of the agency issuing the regulation by giving effect to the usual meaning of the language used so as to effectuate the purpose of the law, and by avoiding an interpretation which renders any language mere surplusage. [Citation.]" (*Modern Paint & Body Supply, Inc. v. State Bd. of Equalization* (2001) 87 Cal.App.4th 703, 708, 104 Cal.Rptr.2d 784.)

The Chancellor determined the reorganization at issue in this case did not require collegial consultation because the District's administrative organization could not be construed as a "district or college governance structure" (§ 53200, subd. (c)(6)). Unlike curriculum committees or budget committees, which clearly function in college governance, the Chancellor concluded the process of choosing managers of various college divisions is administrative in nature. This conclusion is reasonable, and it is consistent with the preexisting rule that collegial consultation is not required for administrative reorganizations that do not impact academic matters, such as curriculum.

Moreover, without regard to whether management by division chairs or deans constitutes a "district or college governance structure," it seems ***1038** clear that this management system is not "related to faculty roles." As the trial court observed, the phrase "as related to faculty roles" in section 53200, subdivision (c)(6) acts as a limitation imposed on the general subject of "district and college governance structures." Thus, only when a district seeks to change aspects of such governance structures that are related to "faculty roles"-such as, for example, curriculum or faculty hiring committees-must it consult collegially with the faculty. The regulations do not define "faculty roles." However, all other "academic and professional matters" defined in section 53200, subdivision (c) concern subjects that are within the unique expertise of faculty members, as opposed to administrators or any other specialists. These matters concern the development of academic programs and curriculum (§ 53200, subds. (c)(1), (2), (4), (9)), assessment of students and their progress toward degrees (§ 53200, subds. (c)(2), (3), (5)), professional development for faculty (§ 53200, subd. (c)(8)), and institutional development with respect to accreditation, review of existing academic programs, future planning and budgeting (§ 53200, subds. (c)(7), (9), (10)). Consistent with these other defined "academic and professional matters," we construe the term "faculty roles" in subdivision (c)(6) as referring to the traditionally understood roles faculty members play in a college. Faculty members are uniquely qualified to instruct students and assess their work, to design and implement curriculum, to develop the college's educational offerings, and to address broader institutional issues such as ****305** accreditation and budgeting to the extent these issues depend upon or impact student instruction. No evidence in the record, however, suggests faculty members at DVC are uniquely qualified to manage their peers or to decide which management structure the college should use.

The Faculty Senate advances two arguments against this construction. First, the Senate argues the District's management structure is related to faculty roles because DVC faculty members previously had a "role"-i.e., a function they performed-in selecting their managers and occasionally serving as managers themselves. In other words, because, through long-standing practice, the DVC faculty once played a role in college management, no change in management affecting this role could be accomplished without collegial consultation. This interpretation renders the definition of "faculty roles" in section 53200, subdivision (c)(6) entirely contextual, dependent in any given case on the faculty's history of involvement in a particular area. Such a broad construction would undermine the independent statutory authority of local governing boards to manage the colleges in their districts. (Ed.Code, § 70902.) In addition, it could prove unworkable in practice if districts were required to engage in the formal process of collegial consultation for every administrative practice that marginally involved faculty. (See *Spanish Speaking Citizens, supra,* 85 Cal.App.4th at p. 1214, 103 Cal.Rptr.2d 75 [court should consider consequences that might flow from a particular construction ***1039** in interpreting a statute or regulation].) In short, the faculty's past participation does not convert the District's reorganization of purely managerial positions into an "academic or professional matter" requiring collegial consultation.

Second, reaching back to legislative history, the Fac-

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

ulty Senate argues section 53200 must be interpreted broadly consistent with the purpose of AB 1725, which was to expand the role of faculty in shared governance. However, the Senate's characterization of AB 1725 is far too narrow. This bill enacted comprehensive reforms of all aspects of the state's community college system, and we find no indication in the legislative history to support the Senate's view that a primary purpose of the statute was to increase faculty's ability to participate in purely administrative decisions concerning their colleges. On the contrary, among numerous other declarations, AB 1725 stated: "It is the intent of the Legislature that the California Community Colleges be governed under an efficient and flexible system.... The Legislature recognizes that the California Community Colleges is a statewide system with common standards and practices governing local initiative and control. The Legislature therefore finds and declares that clarifying and strengthening the respective roles of the Board of Governors and the Chancellor of the California Community Colleges will enhance the efficiency and flexibility of the system." (Stats.1988, ch. 973, § 3, p. 3093.) Thus, the Legislature envisioned clearly defined and enhanced powers for these administrators. With respect to shared governance, AB 1725 stated: "It is a general purpose of this act to improve *academic quality,* and to that end the Legislature specifically intends to authorize more responsibility for faculty members in duties that are *incidental to their primary professional duties.*" (Stats.1988, ch. 973, § 4(n), p. 3096, italics added.) This purpose of enhancing faculty responsibility "incidental to their primary professional duties" is consistent with the interpretation of section 53200, subdivision (c)(6) we reach here-i.e., districts must consult collegially with faculty for changes in college governance when such changes ****306** are related to the faculty's acknowledged areas of expertise. Although the Legislature clearly intended to expand the participation of faculty (and students) in college governance, the language of AB 1725 does not indicate a legislative intent to encourage faculty involvement in purely administrative matters.[FN9]

FN9. In its reply brief and at oral argument, the Faculty Senate urged us to rely on *Irvine Valley College Academic Senate v. South Orange County Community College Dist.* (2005) 129 Cal.App.4th 1482, 29 Cal.Rptr.3d 336(*Irvine Valley*) as a "mirror image" of this case. The *Irvine Valley* decision construed a specific statute, Education Code section 87360, which expressly requires a governing board to reach joint agreement with the academic senate in developing faculty hiring procedures. Based on this statute's language and legislative history, *Irvine Valley* concluded the Legislature intended academic senates to have a role in developing hiring procedures. (*Irvine Valley, supra,* 129 Cal.App.4th at pp. 1491-1492, 29 Cal.Rptr.3d 336.) The court never considered the regulation before us, or whether, for purposes of this regulation, faculty have an acknowledged "role" in choosing their managers. *Irvine Valley* is also notable for its rejection of the community college district's argument that requiring a joint agreement with faculty would give academic senates an unfair "veto" in the process of creating hiring policies. (*Id.* at p. 1492, 29 Cal.Rptr.3d 336.) Because we do not reach the District's argument that the collegial consultation regulations here give greater power to academic senates than is statutorily permitted, we have no occasion to consider the validity of *Irvine Valley's* observations on this point.

***1040 DISPOSITION**

The judgment is affirmed. Appellant shall bear costs on appeal.

DOUGLAS H. FREEMAN et al., Plaintiffs and Appellants,
v.
CONTRA COSTA COUNTY WATER DISTRICT, Defendant and Respondent
Civ. No. 28717.

Court of Appeal, First District, Division 4, California.
June 24, 1971.

SUMMARY

Homeowners with wells on their property challenged the validity of a regulation of their county water district requiring that unless they installed on their water meter boxes, at their own expense ($35, plus 25 cents per month maintenance) a double check valve assembly to prevent water from their auxiliary supply from backing up into, and contaminating, the public water system, their public water service would be terminated. Judgment was entered for the district. (Superior Court of Contra Costa County, No. 113193, S. C. Masterson, Judge.)

The Court of Appeal affirmed. Pointing out that the prevention of water pollution is a proper exercise of the police power to which the eminent domain guaranty of compensation is inapplicable, the court held that the district regulation was justified by the potential hazard of cross- connections, accidental or otherwise, between the homeowners' well systems and the public water supply, and that there was no necessity to wait until contamination had actually occurred. Furthermore, the regulation was statutorily authorized and was not void for vagueness. Other contentions by plaintiffs were held to be without merit. (Opinion by Christian, J., with Devine, P.J., and Rattigan, J., concurring.)

HEADNOTES

Classified to California Digest of Official Reports

(1a, 1b) Constitutional Law § 97--Police Power--Right to Damages.
The constitutional guaranty of just compensation that attaches to an exercise of the power of eminent domain does not extend to the state's exercise of its police power, and injury resulting from a proper exercise of the police power is *damnum absque injuria.* Thus, the eminent domain guaranty was inapplicable to the requirement by a water district that homeowners with wells on their property should install at their own expense, if they chose to make use of the public water supply, a $35 double check valve assembly on their public water meter box to prevent auxiliary water from backing up into, and contaminating, the public system, and it was immaterial that the general public, and not the homeowners, would receive the benefit of the protective device.
[See **Cal.Jur.2d, Rev.,** Eminent Domain, § 3; **Am.Jur.2d,** Constitutional Law, §§ 264, 301.]
(2) Constitutional Law § 107--Police Power--Legislative Discretion and Court Review.
A governmental regulation will be upheld as a valid exercise of the police power if it is reasonably necessary to protect the order, safety, health, morals, and general welfare of society.

(3) Administrative Law § 144--Judicial Review and Control--Burden of Proof.
A governmental regulation is presumed to be valid; therefore, one who challenges its validity has the burden of proving unreasonableness.

(4) Waters § 278--Interference of Third Parties--Pollution--Police Power.
Prevention of water pollution is a legitimate governmental objective in furtherance of which the police power may be exercised.

(5) Waters § 285(1)--Pollution--Remedies:Constitutional Law § 104--Police Power--Preventing Contamination to Water Supply.
The state need not wait until the public safety has actually suffered injury, and may take reasonable steps to protect a public water supply from potential cross-connections that may create a substantial hazard of contamination. Thus, in the case of homeowners with wells on their property, the potential hazard from cross-connections, accidental or otherwise, between their well-water and their public water supply justified the water district's requirement that the homeowners install, at their own expense, a device on their water meter box to eliminate the hazard, de-

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

spite their claims that no such cross-connections presently existed.

(6) Waters § 483--Districts--Validity of Acts--Anti-contamination Regulation.
A regulation requiring that a protective device be installed on any premises receiving water from the public water system and containing an auxiliary water supply regardless of whether the auxiliary water supply were connected to the public water system was not unconstitutionally vague as leaving the determination of what constitutes an "auxiliary water supply" to the water district's unfettered discretion, where a state regulation defined "auxiliary water supply" as "any water supply on or available to the premises other than the public water supply."

(7) Waters § 483--Districts--Validity of Acts--Anti-contamination Regulation.
The requirement by a water district that homeowners with wells on their property should install, at their own expense, a protective device on their public water meter box to prevent auxiliary water from backing up into, and contaminating, the public water supply, was statutorily authorized, not only under Wat. Code, § 31024, authorizing a water district to establish regulations for the distribution and use of water, but also under a combination of Wat. Code, § 30060, providing that County Water District Law does not modify any other law relating to water, and Health & Saf. Code, §§ 203, 208, authorizing regulations that included the requirement that the responsibility for installing the protective device be placed on the water user.

(8) Administrative Law § 43--Validity of Administrative Action:Waters § 480--Districts--Due Process.
Due process does not require that new notice and hearing be given in each individual case before an agency can enforce a valid statute or regulation. Thus, homeowners with wells on their property were not required to be given notice and a hearing before their water district could demand either that their water service be discontinued or that they install, at their own expense, a device on their water meter boxes to prevent water from their well systems from backing up into, and contaminating, the public water supply, where, in making the demand, the district was merely enforcing a lawful state regulation.

COUNSEL

James H. Disney for Plaintiffs and Appellants.

Bold & Polisner and Jeffrey D. Polisner for Defendant and Respondent.

CHRISTIAN, J.

Appellants are the owners of residences in the City of Concord served by the water system of respondent Contra Costa County Water District. Each of the appellants maintains on his property a well from which water is drawn for such purposes as gardening and car-washing. Although appellants had not connected their well water systems to the pipes of the district's public system, the district threatens to terminate service until the affected householders agree to have installed, at their own expense, a "double check valve assembly," designed to prevent water from the auxiliary supply from "backing up" into and contaminating the public water supply. Appellants sought from the court protection against the district's threat; judgment was for the district, and the present appeal followed. We affirm the judgment.

The record shows without contradiction that contamination of a water system can occur if there is a physical connection between the public system and auxiliary water supply, such as where the two systems are connected by pipes, or where the auxiliary water is "impounded" (e.g., in a swimming pool or fish pond) and an ordinary garden hose from the public water supply is allowed to lie in water from the auxiliary system. In the latter situation a temporary loss of pressure can result in contaminated water being drawn into the public system.

Protection against this risk can be provided by installing in the consumer's water meter box a device which prevents a backward flow of water. The directors of respondent district have established an installation charge of $35, and a $.25 per month maintenance charge, for such devices, based on the cost thereof to the district. Appellants receive no special benefit

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

from the device other than that which they receive as members of the general public.

It will be useful to outline the statutory framework under which respondent is requiring the installation of the back flow prevention device. Health and Safety Code section 203 provides that the State Department of Public Health "shall examine and may prevent the pollution of sources of public domestic water ... supply." The department may "adopt and enforce rules and regulations" for this purpose. (Health & Saf. Code, § 208.)Pursuant to these statutes, the department adopted administrative regulations designed to prevent contamination or pollution of any public water supply as a result of "actual *or* potential cross-connections" with auxiliary water supplies. (Cal.Admin.Code, tit. 17, § 7583, italics added.) An auxiliary water supply is defined as "any water supply on or available to the premises other than the public water supply." (Cal.Admin.Code, tit.***408** 17, § 7590.)A protective device is required to be installed on any premises receiving water from the public water system and containing an auxiliary water supply, regardless of whether the auxiliary water supply is connected to the public water system. (Cal.Admin.Code, tit. 17, § 7603.)The regulations specify various types of protective devices, depending on the "degree of hazard" involved; where the auxiliary and public water supplies are not connected, the protective device required is a "double check valve assembly," which is what respondent desires appellants to install. (Cal.Admin.Code, tit. 17, § 7604, subd. 1.) Responsibility for installing the protective device is placed on the water user. (Cal.Admin.Code, tit. 17, § 7603.)Pursuant to the foregoing state regulations, respondent adopted its own regulations providing for discontinuance of water service to any consumer who failed to install the required device.

(1a) Appellants contend that the requirement that they install a protective device constitutes a taking of property which must be compensated. They argue that they have the right to take water from their wells and that respondent's demand infringes on their right to use their property as they wish. This contention confuses an exercise of the police power with an exercise of the power of eminent domain; "the constitutional guarantee of just compensation attached to an exercise of the power of eminent domain does not extend to the state's exercise of its police power, and damage resulting from a proper exercise of the police power is simply *damnum absque injuria*" (*Lees v. Bay Area Air, etc. Control Dist.* (1965) 238 Cal.App.2d 850, 856 [48 Cal.Rptr. 295]; see also *Goldblatt* v. *Town of Hempstead* (1962) 369 U.S. 590, 593 [8 L.Ed.2d 130, 133, 82 S.Ct. 987]; *Beverly Oil Co.* v. *City of Los Angeles* (1953) 40 Cal.2d 552, 557 [254 P.2d 865]). (2) A governmental regulation will be upheld as a valid exercise of the police power if it is reasonably necessary to "protect the order, safety, health, morals and general welfare of society." (*Lees v. Bay Area Air, etc. Control Dist., supra*, at p. 857, citing *In re Rameriz* (1924) 193 Cal. 633, 649, 650 [226 P. 914, 34 A.L.R. 51].) (3) A regulation is presumed to be valid; therefore, appellants have the burden of proving unreasonableness. (*Goldblatt v. Town of Hempstead, supra*, at p. 596 [8 L.Ed.2d at p. 135].) (4) It cannot be denied that prevention of water pollution is a legitimate governmental objective, in furtherance of which the police power may be exercised. (5) Appellants argue, however, that it is unreasonable to require them to install a protective device when their water well is not connected to the domestic water supply. Therefore, it is argued, there is no possibility of contamination and the danger that respondent seeks to protect is "imagined and speculative." But the state need not wait until the public safety has actually suffered injury; it may take reasonable steps to protect a public water supply from potential cross-connections ***409** that may create a substantial hazard of contamination. Otherwise respondent, or the Department of Public Health, would have the burdensome job of continuous inspection of all premises which possessed auxiliary water supplies to insure that no cross-connections had been made, accidently or otherwise. It is not unreasonable or oppressive to require appellants to install a $35 device to protect against a potential danger of water contamination.

(1b) Appellants also argue that it is unreasonable to require them to pay for the cost of installation and maintenance as their property receives no special benefit from the prevention device. It is argued that, since the device is for the benefit of the public, the public should pay for it. A similar contention was made in *Atchison, Topeka & S. F. R. Co. v. Public Util. Com.* (1953) 346 U.S. 346 [98 L.Ed. 51, 74 S.Ct. 92]. In that case the California Public Utilities Commission had ordered improvement of railroad underpasses to promote public safety and had assessed half the cost of the improvements to the rail-

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

roads. The railroads argued that, since they would receive little or no benefit from the construction, the allocation of costs constituted a taking of their property without due process of law. In rejecting this contention, the United States Supreme Court stated, "The railroad tracks are in the streets not as a matter of right but by permission from the State or its subdivisions. The presence of these tracks in the streets creates the burden of constructing grade separations in the interest of public safety and convenience. Having brought about the problem, the railroads are in no position to complain because their share in the cost of alleviating it is not based solely on the special benefits accruing to them from the improvements." (346 U.S. at p. 353 [98 L.Ed. at p. 60].) Similarly appellants, by maintaining water wells on their premises, have created the potential hazard which requires special measures of protection; they have no reasonable grounds for complaint at being required to pay the cost of such protection. Appellants are not being forced to subscribe to respondent's water service; they have the option of relying solely on their water well for their water needs. While they are entitled to use both the public water supply and their own water well, they have no right to do so in a manner which may endanger the public water supply.

(6) Appellants next contend that the term "auxiliary water supply" used in the regulation is unconstitutionally vague, as it leaves the determination of what constitutes an auxiliary water supply to respondent's unfettered discretion. Title 17, section 7590, of the California Administrative Code defines "auxiliary water supply" as "any water supply on or available to the premises other than the public water supply." This definition is not so vague and ambiguous as to be unenforceable. ***410**

(7) Appellants argue that the district is without statutory authority to charge them for installation and maintenance of the protective device, as the County Water District Law (Wat. Code, § 30000 et seq.) provides the sole means by which respondent may finance public improvements. Respondent has not attempted to raise funds for installation of protective devices by any of the methods specified in the County Water District Act. (See Wat. Code, §§ 31501, 31502, 31503.) But section 31024 authorizes a water district to "establish rules and regulations for the sale, distribution, and use of water ..." The protective device is not a public improvement but a condition for appellants' use of the public water supply, a condition which respondent is authorized to impose under section 31024. Moreover, Water Code section 30060 provides that the County Water District Law shall not "be so construed as repealing or in anywise modifying any other law relating to water or the supply of water ...." The Department of Public Health regulations, authorized under Health and Safety Code sections 203 and 208, require that responsibility for installing the protective device be placed on the water user. Therefore the statutes do authorize respondent to require appellants to pay for the cost of installing and inspecting the protective device.

(8) Appellants contend that due process entitled them to notice and a hearing before respondent could demand that they either install the device or have their water service discontinued. But respondent was merely enforcing a lawful state regulation in making the demand. State law requires that before the regulations could be adopted there must be notice and a hearing at which any interested person could appear to oppose the proposed regulations. (Gov. Code, § 11420 et seq.) There is no requirement that a new notice and hearing be given in each individual case before an agency can enforce a valid statute or regulation.

The judgment is affirmed.

Devine, P. J., and Rattigan, J., concurred. ***411**

Texas Cities Coalition on Stormwater; Texas Counties Storm Water Coalition, Petitioners,
v.
United States Environmental Protection Agency, Respondent,
Natural Resources Defense Council, Inc., Respondent-Intervenor.
Nos. 00-70014, 00-70734, 00-70822.

Argued and Submitted Dec. 3, 2001.
Filed Sept. 15, 2003.

Environmental, municipal, and industry groups brought petitions for review of Environmental Protection Agency (EPA) rule mandating that discharges from small municipal storm sewers and construction sites be subject to National Pollutant Discharge Elimination System (NPDES) permitting requirements. On denial of rehearing, the Court of Appeals, James R. Browning, Circuit Judge, held that: (1) EPA had authority to impose rule; (2) rule did not violate the Tenth Amendment; (3) rule improperly failed to provide for review of notices of intent and public participation in NPDES permitting process; (4) EPA's failure to designate industrial sources of storm water pollution for permitting requirements was not arbitrary and capricious; (5) challenge to rule's exclusion of forest roads was not time-barred; (6) forestry trade association lacked standing to challenge rule; (7) EPA properly consulted with state and local officials; (8) sites subject to rule were properly designated; and (9) EPA properly retained authority to designate future sources of storm water pollution for regulation.

Petitions for review granted in part and denied in part.

Tallman, Circuit Judge, filed opinion concurring in part and dissenting in part, and would have granted petition for rehearing.

Opinion, 319 F.3d 398, vacated.

Environmental Protection Agency (EPA) interpretation of rule promulgated under Clean Water Act (CWA), whereby EPA would require that discharges from small municipal storm sewers and construction sites be subject to National Pollutant Discharge Elimination System (NPDES) permitting requirements, was reasonable, and thus EPA acted within its statutory mandate in formulating permit program under rule; even though permitting was not included on statutory list of elements for EPA's comprehensive program to regulate small sewer systems, list was non-exclusive, and statutory language requiring imposition of permits for "municipal storm sewers" was reasonably interpreted to extend to small systems. Federal Water Pollution Control Act Amendments of 1972, § 402(p)(6), 33 U.S.C.A. § 1342(p)(6).

360k4.16(3) k. Surrender of State Sovereignty and Coercion of State. Most Cited Cases
The crucial proscribed element under the Tenth Amendment, as to federal government's ability to have states implement federal programs, is coercion; the residents of the State or municipality must retain the ultimate decision as to whether or not the State or municipality will comply with the federal regulatory program, but as long as the alternative to implementing a federal regulatory program does not offend the Constitution's guarantees of federalism, the fact that the alternative is difficult, expensive, or otherwise unappealing is insufficient to establish a Tenth Amendment violation. U.S.C.A. Const.Amend. 10.

On Petition for Review of an Order of the Environmental Protection Agency. EPA No. Clean Water 40 CFR.

Before BROWNING, REINHARDT, and TALLMAN, Circuit Judges.

Opinion by Judge JAMES R. BROWNING; Partial Concurrence and Partial Dissent by Judge TALLMAN.

ORDER AND OPINION

ORDER

The opinion and dissent filed in this case on January 14, 2003, and published at 319 F.3d 398 are vacated. They are replaced by the Opinion and Dissent filed today.

With the filing of the new Opinion and Dissent, the panel has voted to deny the petitions for rehearing and the petition for rehearing en banc. (Judge Tallman would grant the petition for rehearing filed by ***840** the Environmental Protection Agency.) The full court has been advised of the new Opinion, new Dissent, and petition for rehearing en banc. No judge has requested a vote on the petition for rehearing en banc. Fed. R.App. P. 35.

The petitions for rehearing and the petition for rehearing en banc are DENIED. The clerk is instructed not to accept for filing any new petitions for rehearing or petitions for rehearing en banc in this case.

Each party shall bear its own costs in this appeal.

OPINION

JAMES R. BROWNING, Circuit Judge.

Petitioners challenge a rule issued by the United States Environmental Protection Agency pursuant to the Clean Water Act, 33 U.S.C. §§ 1251-1387, to control pollutants introduced into the nation's waters by storm sewers.

Storm sewers drain rainwater and melted snow from developed areas into water bodies that can handle the excess flow. Draining stormwater picks up a variety of contaminants as it filters through soil and over pavement on its way to sewers. Sewers are also used on occasion as an easy (if illicit) means for the direct discharge of unwanted contaminants. Since storm sewer systems generally channel collected runoff into federally protected water bodies, they are subject to the controls of the Clean Water Act.

In October of 1999, after thirteen years in process, the Environmental Protection Agency ("EPA") promulgated a final administrative rule (the "Phase II Rule"[FN1] or "the Rule") under § 402(p) of the Clean Water Act, 33 U.S.C. § 1342(p), mandating that discharges from small municipal separate storm sewer systems and from construction sites between one and five acres in size be subject to the permitting requirements of the National Pollutant Discharge Elimination System ("NPDES"), 33 U.S.C. §§ 1311(a), 1342. EPA preserved authority to regulate other harmful stormwater discharges in the future.

> FN1. The "Phase II Rule" reviewed here is the product of the second stage of EPA's two-phase stormwater rulemaking effort. The "Phase I Rule," governing larger-scale stormwater discharges, was issued in 1990 and reviewed by this court in *Natural Res. Def. Council v. EPA*, 966 F.2d 1292 (9th Cir.1992).

In the three cases consolidated here, petitioners and intervenors challenge the Phase II Rule on twenty-two constitutional, statutory, and procedural grounds.

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

We remand three aspects of the Rule concerning the issuance of notices of intent under the Rule's general permitting scheme, and a fourth aspect concerning the regulation of forest roads. We affirm the Rule against all other challenges.

I.

BACKGROUND

A. The Problem of Stormwater Runoff

Stormwater runoff is one of the most significant sources of water pollution in the nation, at times "comparable to, if not greater than, contamination from industrial and sewage sources."[FN2] Storm sewer waters carry suspended metals, sediments, algae-promoting nutrients (nitrogen and phosphorus), floatable trash, used motor oil, raw sewage, pesticides, and other toxic contaminants into streams, rivers, lakes, ***841** and estuaries across the United States.[FN3] In 1985, three-quarters of the States cited urban stormwater runoff as a major cause of waterbody impairment, and forty percent reported construction site runoff as a major cause of impairment.[FN4] Urban runoff has been named as the foremost cause of impairment of surveyed ocean waters.[FN5] Among the sources of stormwater contamination are urban development, industrial facilities, construction sites, and illicit discharges and connections to storm sewer systems.[FN6]

FN2. Richard G. Cohn-Lee and Diane M. Cameron, *Urban Stormwater Runoff Contamination of the Chesapeake Bay: Sources and Mitigation,*THE ENVIRONMENTAL PROFESSIONAL, Vol. 14, p. 10, at 10 (1992); *see also Natural Res. Def. Council,* 966 F.2d at 1295 (citing a study by the Nationwide Urban Runoff Program).

FN3. Regulation for Revision of the Water Pollution Control Program Addressing Storm Water, 64 Fed. Reg. 68,722, 68,724, 68,727 (Dec. 8, 1999) (codified at 40 C.F.R. pts. 9, 122, 123, and 124).

FN4. *Id.* at 68,726.

FN5. *Id.*

FN6. *Id.* at 68,725-31.

B. Stormwater and the Clean Water Act

Congress enacted the Clean Water Act in 1948 to "restore and maintain the chemical, physical, and biological integrity of the Nation's waters." 33 U.S.C. § 1251(a) (originally codified as the Federal Water Pollution Control Act, 62 Stat. 1155). The Clean Water Act prohibits the discharge of pollutants from a "point source"[FN7] into the waters of the United States without a permit issued under the terms of the National Pollutant Discharge Elimination System, 33 U.S.C. §§ 1311(a), 1342, which requires dischargers to comply with technology-based pollution limitations (generally according to the "best available technology economically achievable," or "BAT" standard). 33 U.S.C. § 1311(b)(2)(A). NPDES permits are issued by EPA or by States that have been authorized by EPA to act as NPDES permitting authorities. 33 U.S.C. § 1342(a)-(b). The permitting authority must make copies of all NPDES permits and permit applications available to the public, 33 U.S.C. §§ 1342(j), 1342(b)(3); state permitting authorities must provide EPA notice of each permit application, 33 U.S.C. § 1342(b)(4); and a permitting authority must provide an opportunity for a public hearing before issuing any permit, 33 U.S.C. §§ 1342(a)(1), 1342(b)(3); *cf.*33 U.S.C. § 1251(e) (requiring public participation).

FN7. A point source is "any discernible, confined and discrete conveyance, including but not limited to any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, or vessel or other floating craft, from which pollutants are or may be discharged." 33 U.S.C. § 1362(14).

[1][2] Storm sewers are established point sources subject to NPDES permitting requirements. *Natural Res. Def. Council v. Costle,* 568 F.2d 1369, 1379 (D.C.Cir.1977) (holding unlawful EPA's exemption of stormwater discharges from NPDES permitting requirements); *Natural Res. Def. Council v. EPA,* 966 F.2d 1292, 1295 (9th Cir.1992).[FN8] In 1987, to better regulate pollution conveyed by stormwater runoff, Congress enacted Clean Water Act § 402(p), 33 U.S.C. § 1342(p), "Municipal and Industrial Storm-

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

water Discharges." Sections 402(p)(2) and 402(p)(3) mandate NPDES permits for stormwater discharges "associated with industrial activity," discharges from large and medium-sized municipal storm sewer systems, and certain other discharges. Section 402(p)(4) sets out a timetable for promulgation of the first of a ***842** two-phase overall program of stormwater regulation. *Id.* at § 1342(p)(2)-(4); *Natural Res. Def. Council,* 966 F.2d at 1296. In 1990, pursuant to § 402(p)(4), EPA issued the Phase I Rule regulating large discharge sources.[FN9]

FN8. Diffuse runoff, such as rainwater that is not channeled through a point source, is considered nonpoint source pollution and is not subject to federal regulation. *Oregon Natural Desert Ass'n v. Dombeck,* 172 F.3d 1092, 1095 (9th Cir.1998).

FN9. National Pollutant Discharge Elimination System Permit Application Regulations for Stormwater Discharges, 55 Fed. Reg. 47,990 (Nov. 16, 1990) (codified at 40 C.F.R. pt. 122-124). The Phase I rule was challenged in this court in *Natural Res. Def. Council,* 966 F.2d at 1292. We held, *inter alia,* that EPA must impose deadlines for permit approvals, *id.* at 1300, that EPA's decision to regulate construction sites only over five acres in size was arbitrary and capricious, *id.* at 1306, and that EPA did not act capriciously in defining "municipal," *id.* at 1304, or in placing differently-sized municipalities on different permitting schedules, *id.* at 1301.

C. The Phase II Stormwater Rule

In Clean Water Act § 402(p), Congress also directed a second stage of stormwater regulation by ordering EPA to identify and address sources of pollution not covered by the Phase I Rule. Section 402(p)(1) placed a temporary moratorium (expiring in 1994) on the permitting of other stormwater discharges pending the results of studies mandated in § 402(p)(5) to identify the sources and pollutant content of such discharges and to establish procedures and methods to control them as "necessary to mitigate impacts on water quality." 33 U.S.C. § 1342(p)(5). Section 402(p)(6) required that EPA establish "a comprehensive program to regulate" these stormwater discharges "to protect water quality," following the studies mandated in § 402(p)(5) and consultation with state and local officials. *Id.* at § 1342(p)(6).

EPA proposed the Phase II Rule in January of 1998.[FN10] In October, 1999, Congress passed legislation precluding EPA from promulgating the new Rule until EPA submitted an additional report to Congress supporting certain anticipated aspects of the Rule.[FN11] EPA was also required to publish its report in the Federal Register for public comment. Pub. L. No. 106-74, § 431(c), 113 Stat. at 1097. Later that month, EPA submitted the required ("Appropriations Act") study and promulgated the Rule.[FN12]

FN10. Proposed Regulations for Revision of the Water Pollution Control Program Addressing Storm Water Discharges, 63 Fed. Reg. 1536 (proposed Jan. 9, 1998).

FN11. Pub. L. No. 106-74, § 431(a), 113 Stat. 1047, 1096 (1999) ("Appropriations, 2000-Department of Veterans Affairs and Housing and Urban Development, and Independent Agencies").

FN12. Regulations for Revision of the Water Pollution Control Program Addressing Storm Water Discharges, 64 Fed. Reg. 68,722 (Dec. 8, 1999) (codified at 40 C.F.R. pts. 9, 122, 123, and 124).

Under the Phase II Rule, NPDES permits are required for discharges from small municipal separate storm sewer systems ("small MS4s") and stormwater discharges from construction activity disturbing between one and five acres ("small construction sites"). 40 C.F.R. §§ 122.26(a)(9)(i)(A)-(B). Small MS4s may seek permission to discharge by submitting an individualized set of best-management plans in six specified categories, *id.* at § 122.34, either in the form of an individual permit application, or in the form of a notice of intent to comply with a general permit. *Id.* at § 122.33(b). Small MS4s may also seek permission to discharge through an alternative process, under which a permit may be sought without requiring the operator to regulate third parties, *id.* at §§ 122.33(b)(2)(ii), 122.26(d).[FN13] Small construction sites may ***843** apply for individual NPDES permits or seek coverage under a promulgated general permit. *Id.* at § 122.26(c). EPA also preserved authority to

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

regulate other categories of harmful stormwater discharges on a regional, as-needed basis. *Id.* at § 122.26(a)(9)(i)(C)-(D).

FN13. The Rule also allows a small MS4 to be regulated under an individual NPDES permit covering a nearby large or medium MS4, with provisions adapted to address the small MS4. 40 C.F.R. § 122.33(b)(3).

D. Facial Challenges to the Phase II Rule

The Rule was challenged in the Fifth, Ninth, and D.C. Circuits in three separate actions ultimately consolidated before the Ninth Circuit.

The Texas Cities Coalition on Stormwater and the Texas Counties Stormwater Coalition (collectively, "the Municipal Petitioners") assert that EPA lacked authority to require permitting, that its promulgation of the Rule was procedurally defective, that the Rule establishes categories that are arbitrary and capricious, and that the Rule impermissibly requires municipalities to regulate their own citizens in contravention of the Tenth Amendment and to communicate a federally mandated message in contravention of the First Amendment. The Natural Resources Defense Council ("NRDC") intervened on behalf of EPA.

Environmental Defense Center, joined by petitioner-intervenor NRDC ("the Environmental Petitioners"), asserts that the regulations fail to meet minimum Clean Water Act statutory requirements because they constitute a program of impermissible self-regulation, fail to provide required avenues of public participation, and neglect to address stormwater runoff associated with forest roads and other significant sources of runoff pollution.

The American Forest & Paper Association ("AF&PA") and the National Association of Home Builders ("the Industrial Petitioners") assert that promulgation of the Rule was procedurally defective and violated the Regulatory Flexibility Act, that EPA's retention of authority to regulate future sources of runoff pollution is *ultra vires,* and that the decision to regulate discharge from construction sites one to five acres in size is arbitrary and capricious. NRDC again intervened on behalf of EPA.

We have jurisdiction pursuant to section 509(b)(1) of the Clean Water Act, 33 U.S.C. § 1369(b)(1) (assigning review of EPA effluent and permitting regulations to the Federal Courts of Appeals).

II.

DISCUSSION

A. The Permit Requirements

[3] The Municipal Petitioners' primary contention is that the Phase II Rule compels small MS4s to regulate citizens as a condition of receiving a permit to operate, and that EPA lacks both statutory and constitutional authority to impose such a requirement. Because we avoid considering constitutionality if an issue may be resolved on narrower grounds, *Greater New Orleans Broadcasting Ass'n v. United States,* 527 U.S. 173, 184, 119 S.Ct. 1923, 144 L.Ed.2d 161 (1999), we first ask whether the Phase II Rule is supported by statutory authority.

1. Statutory Authority

[4] The Municipal Petitioners assert that the statutory command in Clean Water Act § 402(p)(6) that EPA develop a "comprehensive program to regulate" small MS4s did not authorize a program based on NPDES permits. Petitioners argue that because § 402(p)(6) explicitly indicates elements that the program may ***844** contain (performance standards, guidelines, etc.) without mentioning "permits," Congress must have intended that the program exclude permitting.[FN14]

FN14. The text of that section reads: "Not later than October 1, 1993, [EPA], in consultation with state and local officials, shall issue regulations (based on the results of the studies conducted under paragraph (5)) which designate stormwater discharges, other than those discharges described in paragraph (2), to be regulated to protect water quality and shall establish a comprehensive program to regulate such designated sources. The program shall, at a minimum, (A) establish priorities, (B) establish requirements for State stormwater manage-

GILLETT-HARRIS-DURANCEAU & ASSOCIATES, INC., Plaintiff and Appellant,
v.
ROBERT C. KEMPLE et al., Defendants and Respondents.
Civ. No. 40857.

Court of Appeal, First District, Division 2, California.
July 27, 1978.

SUMMARY

An engineering, land surveying, and architectural services firm brought an action for defamation against individual members of a grand jury. In its report on its investigations of local government affairs (Pen. Code, §§ 925-931), the jury had charged that the firm had been negligent, incompetent, and wrong in the performance of its duties. The firm alleged that the statement in the report was untrue. No indictment was returned against the firm, any of its employees, or against any elected or appointed officials mentioned in the report. The trial court ruled that, though Pen. Code, § 930, attempted to remove civil immunity from grand jury functions, the statute was unconstitutional because the grand jury was a judicial body entitled to be protected in its functions in the same way as courts and the statute constituted an impermissible invasion of the jury's judicial prerogatives. (Superior Court of Lake County, No. 13430, Frank S. Petersen, Judge. [FN*])

The Court of Appeal reversed, holding that, while the grand jury's criminal indictment function was clearly judicial in nature and provided for in the state Constitution, its function in investigating and reporting on local government was a task imposed solely by statute. The court noted that the procedural safeguards available to a defendant in a criminal proceeding were not available to individuals mentioned in the jury's reports on civil matters and held that, under those circumstances, the removal of civil immunity of jury members was justified and not in conflict with the state Constitution.

FN* Assigned by the Chairperson of the Judicial Council.(Opinion by Rouse, J., with Taylor, P. J., and Kane, J., concurring.) *215

HEADNOTES

Classified to California Digest of Official Reports

(1) Statutes § 29--Language--Legislative Intent--Literal Meaning.
Though courts cannot add to, alter, or insert qualifying provisions to a statute when its language is clear, the intent of the law will prevail over the literal meaning when a strict interpretation of statutory language is contrary to the legislative objective.

(2a, 2b) Grand Jury § 3--Powers and Jurisdiction--Distinctions-- Authority to Investigate Local Government--Civil Immunity of Jury Members.
A grand jury's authority to indict (Cal. Const., art. I, § 14) is separate from its authority to investigate and report on matters pertaining to local government (Pen. Code, §§ 925-931). The latter function is a unique creature of the Legislature and is subject to its limitations. Thus, the statutory removal of civil immunity from members of the jury for comments upon any person or official not indicted contained within a report on local government (Pen. Code, § 930) is not conflict with the state Constitution.
[See **Cal.Jur.3d**, Criminal Law, § 406; **Am.Jur.2d**, Grand Jury, § 29.]

(3) Statutes § 51--Construction--Codes--Conflicting Provisions--Reconciling Specific and General Statutes.
A special statute dealing expressly with a particular subject controls and takes precedence over a general statute covering the same subject.

(4) Grand Jury § 3--Powers and Jurisdiction--Distinctions Between Criminal and Investigative Powers--Procedural Safeguards.
A grand jury's function of investigating and reporting on local government is not inherently a part of the judicial system. Criminal indictments are subject to public trial and judicial review, but the power of a court to review a grand jury's investigation and report on local government is limited because procedural safeguards such as a means for challenging the sufficiency of evidence and rules of evidence controlling

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

the type of information that can be presented to a grand jury in its investigative function are not available.

COUNSEL

Littlejohn & Westfall, Donald W. Littlejohn, Gerald W. Nash and Crump, Bruchler & Crump for Plaintiff and Appellant.

Spridgen, Barrett, Achor, Luckhardt, Anderson & James, William G. Luckhardt and Harry A. Allen for Defendants and Respondents.

ROUSE, J.

Plaintiff, Gillett-Harris-Duranceau & Associates, Inc., appeals from a judgment of dismissal entered after a demurrer to its second amended complaint was sustained without leave to amend.

Plaintiff's second amended complaint named, as defendants, 19 individuals who served on the Lake County Grand Jury during the fiscal year 1974-1975. It was alleged therein that plaintiff was a firm which provided engineering, land surveying and architectural services, and that in 1970, it began contracting to furnish such services to the County of Lake and to certain special districts within said county. Plaintiff alleged that on August 8, 1975, defendants had filed a public report entitled 'Final Report of the Grand Jury-1975,' with the Lake County Clerk, and that said report contained the statement that plaintiff had been negligent, incompetent and wrong in the performance of its duties. Allegedly, such statement was untrue, was known by defendants to be untrue, was made with the intent to convey defamatory meaning, and did, in fact, bring plaintiff into public disgrace and disrepute and injure plaintiff in its profession. Plaintiff's complaint alleged that the grand jury had returned no indictment against plaintiff or any of its employees or agents or against any elected or appointed officers of the County of Lake. Plaintiff sought to recover compensatory damages for defamation and interference with prospective business advantage. Exemplary damages were also sought on the theory that defendants had acted maliciously in making the defamatory statement concerning plaintiff.

In sustaining the demurrer without leave to amend, the trial court concluded that a grand jury was a judicial body which was entitled to be as fully protected in the exercise of its powers and functions as the courts themselves and that, like the courts, the grand jury was therefore entitled ***217** to full immunity from liability based upon statements made in the performance of its duties. The court further concluded that to the extent that section 930 of the Penal Code constituted an attempt to remove civil immunity from the grand jury's functions, such statute was an unconstitutional invasion of judicial prerogatives.

Plaintiff's appeal presents two issues: (1) whether section 930 of the Penal Code is applicable in this instance, and (2) whether said statute, if applicable, is constitutional.

Section 930 of the Penal Code [FN1] is based upon former section 928, as amended in 1897. That statute specified the affairs of county government upon which the grand jury was required to make its annual report, and included the following caveat: '*provided*, that if any grand jury shall, in the report above mentioned, comment upon any person or official who has not been indicted by the said grand jury, the said comments shall not be deemed to be privileged.' (Stats. 1897, ch. 142, § 2, p. 205.)

> FN1 Unless otherwise specified, all subsequent statutory references are to the Penal Code.

Former section 928 was later amended, on various occasions, [FN2] until 1959, when it was repealed and its provisions were reenacted as seven separate statutes, namely, sections 925 through 931. (Stats. 1959, ch. 501, art. 2, pp. 2449-2450.) Sections 925 and 926 were based upon the first paragraph of former section 928, sections 927 and 928 upon the second paragraph of said statute, section 929 upon the third paragraph, section 930 upon the fourth paragraph, and section 931 upon the fifth paragraph. ***218**

> FN2 In 1957, that section read as follows: 'It shall be the duty of the grand jury annually to make a careful and complete examination of the books, records and accounts of all the officers of the county, of all hospital districts which were organized in the county, and especially those pertaining to the revenue, and report as to the facts they have found, with

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

such recommendations as they may deem proper and fit; and if, in their judgment, the services of an expert are necessary, they shall have power to employ one, at an agreed compensation, to be first approved by the court; and if, in their judgment, the services of assistants to such expert are required, they shall have power to employ such, at a compensation to be agreed upon and approved by the court.

'It shall be the duty of every grand jury first impaneled in even-numbered years to investigate, upon request to grant personal interviews to the officials concerned, and to report upon the needs for increase or decrease in salaries of the county supervisors, the district attorney and the auditor, and it shall cause a copy of such report to be transmitted to each Member of the Legislature representing the county in which it has been impaneled before the commencement of the regular session of the Legislature in odd-numbered years. It shall also be the duty of every grand jury to investigate and report upon the needs of all county officers in its county, including the abolition or creation of offices and the equipment for, or the method or system of performing the duties of, the several offices, and it shall cause a copy of such report to be transmitted to each member of the board of supervisors in its county.

'It shall be the duty of the grand jury, when making an examination of the books, records, and accounts of all the officers of the county and when investigating and reporting upon the needs of all county officers in its county, to include an examination and report upon all the books, records, and accounts of all the officers of such county which are kept in their ex officio capacity, as incumbents or officers of any special legislative district or other district created by or under the laws of the State of California, in their respective counties.

'The judge, on impanelment of the grand jury, shall charge them especially as to their duties under this section; provided, that if any grand jury shall, in the report above mentioned, comment upon any person or official who has not been indicted by the said grand jury the said comments shall not be deemed to be privileged.

'Any and all expenses incurred under this section, and also the per diem and mileage where allowed by law, of the grand jurors, shall be paid by the treasurer of the county out of the general fund of said county upon warrants drawn by the county auditor upon the written order of the judge of the superior court in said county.' (Stats. 1957, ch. 1364, § 1, p. 2699.)

In 1961, the Legislature enacted a new statute, section 933.5, which authorized the grand jury to examine the books and records of any special-purpose assessing or taxing district located wholly or partly in the county. (Stats. 1961, ch. 1461, § 2, p. 3313.) The statute was amended in 1969 to add language to the effect that the grand jury could investigate and report upon the method or system of performing the duties of such districts. (Stats. 1969, ch. 931, § 1, p. 1870.)

At the time of the grand jury report here in issue, section 930 read as follows: 'If any grand jury shall, *in the report above mentioned*, comment upon any person or official who has not been indicted by such grand jury such comments shall not be deemed to be privileged.' (Italics added.)

Section 930 was immediately preceded by section 929, [FN3] which provided that 'When making an examination of the books, records, and accounts of all the officers of the county and when investigating and reporting upon the needs of all county officers in its county, the grand jury shall include an examination and report upon all the books, records, and accounts of all the officers of such county which are kept in their ex officio capacity, as incumbents or officers of any special legislative district or other district in the county, created pursuant to state law.'

FN3 Section 929.1, which dealt with the employment by the grand jury of expert auditors or appraisers to assist in the examination of the county assessor's records, was repealed in 1974. (Stats. 1974, ch. 1396, § 2, p. 3054.)

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

The alleged defamatory statement upon which the action is based was contained in a report rendered by the 'Special Districts Committee' of ***219** the grand jury. Defendants point out that, when the provision eliminating the grand jury's privilege was originally added to former section 928 in 1897, that statute dealt solely with the examination of the books, records and accounts of county officers and made no mention of special-purpose assessing or taxing districts. They assert that the Legislature could not have had special districts in mind when it originally added the provision eliminating the grand jury's privilege, since it was not until the 1961 enactment of section 933.5 that the grand jury was authorized to examine the books and records of such special districts. In 1975, when the grand jury rendered the report here in issue, section 930 provided that there should be no privilege in connection with 'the report above mentioned.' Reports on special districts are not mentioned in any of the statutes preceding section 930, but only in the subsequent statute, section 933.5. According to defendants, it follows that a special district report cannot be deemed 'the report above mentioned,' within the meaning of section 930. They contend that the statute was intended to eliminate immunity on the part of the grand jury only in connection with the previously mentioned reports on county officers.

Plaintiff asserts that there is no logical reason why the Legislature would have intended that a grand jury report on county officers not be privileged, while a report on special districts would be privileged. They point out that, as a matter of practice, grand juries do not separate special districts reports from reports on county officials; rather, that the normal practice, which was followed in this case, is to render a single report dealing with both subjects. Plaintiff argues that since the Legislature has imposed no requirement that grand juries separate special district reports from reports on county officers, it may be presumed that the Legislature approved of the preparation of a single report and that the reference to 'the report above mentioned' in section 930 should be interpreted as referring to a report by the grand jury on the subject of special districts as well as county officers.

(1)Juridical construction of a statute is possible only when uncertainty is found. 'Clear statutory language no more needs to be interpreted than pure water needs to be strained.' (*Holder v. Superior Court* (1969) 269 Cal.App.2d 314, 317 [74 Cal.Rptr. 853].) A court may not rewrite a statute by inserting thoughts that have been omitted or by omitting thoughts that have been inserted. (*Richardson v. City of San Diego* (1961) 193 Cal.App.2d 648, 650 [14 Cal.Rptr. 494].) Where the words of a statute are clear, the courts cannot add to them or alter them or insert qualifying ***220** provisions to conform to an assumed intent or accomplish a purpose that does not appear on the face of the statute or from its legislative history. (*Rowan v. City etc. of San Francisco* (1966) 244 Cal.App.2d 308, 314 [53 Cal.Rptr. 88].)

On the other hand, there is abundant authority for the proposition that the literal construction of a statute will not prevail if it is opposed to legislative objective. (*Pacific Gas & Elec. Co. v. Morse* (1970) 6 Cal.App.3d 707, 712 [86 Cal.Rptr. 7].) The fundamental rule of statutory construction is that the court should ascertain the intent of the Legislature so as to effectuate the purpose of the law, and every statute should be construed with reference to the whole system of law of which it is a part so that all may be harmonized and have effect. (*Cannon v. American Hydrocarbon Corp.* (1970) 4 Cal.App.3d 639, 648 [84 Cal.Rptr. 575].) Words will not be given their literal meaning when to do so would make the provisions of a statute apply to transactions never contemplated by the Legislature, and to this end, the intent of a law must be held to prevail over the letter. (*La-Borde v. McKesson & Robbins, Inc.* (1968) 264 Cal.App.2d 363, 370 [70 Cal.Rptr. 726].)

Here, the language of section 930 renders it applicable only to 'the report above mentioned.' The statutes preceding section 930 make no mention of reports concerning special districts; they refer only to reports on county officers. We agree, however, with plaintiff's assertion that it is difficult to conceive of any valid legislative objective which would be furthered by eliminating the grand jury's privilege in connection with reports concerning county officers while preserving such privilege as to reports which concern special districts within the county. We conclude that the provisions of section 930 apply both to grand jury reports on county officers and reports on special districts.

The question remaining is whether the provisions of section 930 constitute an unconstitutional impairment of the judicial privilege. Defendants remind us that article III, section 3, of the California Constitution

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

divides the state government into legislative, executive and judicial departments, and that it has long been settled that the Legislature cannot exercise or place limitations upon judicial powers. Thus, in *Oppenheimer v. Ashburn* (1959) 173 Cal.App.2d 624 [343 P.2d 931], the appellate court held invalid a section of the Penal Code which provided for the imposition of a fine upon a judge who refused to grant a writ of habeas corpus after a proper application therefor had been made. In so holding, the court observed that the decisions of this state uniformly and ***221** consistently grant immunity to judges in the exercise of their judicial functions. The court then referred to an early California case which applied such rule to grand jurors, pointing out that 'The clear line of California decisions begins with the early case of *Turpen v. Booth* (1880), 56 Cal. 65[38 Am.Rep. 48], which held that since a grand juror served in a quasi-judicial status he was not civilly responsible, no matter how erroneous his findings or how malicious his motive, for his action on the grand jury.' (P. 629.)

Defendants also rely upon section 47, subdivision 2, of the Civil Code, which provides that a privileged publication or broadcast is one made in any judicial proceeding. They note that in *Irwin v. Murphy* (1933) 129 Cal.App. 713 [19 P.2d 292], it was held that a grand jury is a judicial body and grand jurors are officers of the court (p. 716), and that statements impugning the integrity of the plaintiff as a boxing referee were privileged where pertinent to the matters or persons under investigation (p. 718).

Plaintiff points out that the only reference to the grand jury in the California Constitution concerns the indicting function of that body and provides for the annual summoning of grand jurors. (Cal. Const., art. I, §§ 14, 23.)

In *Fitts v. Superior Court* (1936) 6 Cal.2d 230, 241 [57 P.2d 510], the California Supreme Court held that, by failing to make any further provision regarding the grand jury, the constitutional convention of 1879 left to the Legislature all questions affecting the grand jury not expressly covered by the Constitution.

(2a)Thus, as plaintiff suggests, an important distinction must be made between a grand jury's authority to indict and its authority to exercise a 'watchdog' function in matters of local government. The latter activity is a unique creature of the California Legislature, which has a long and well respected heritage. (*People v. Superior Court (1973 Grand Jury)* (1975) 13 Cal.3d 430, 436 [119 Cal.Rptr. 193, 531 P.2d 761].) Since the grand jury's power to investigate and report on matters pertaining to local government is a creature of statute, the Legislature is at liberty to impose reasonable limitations upon the exercise of this watchdog function. Section 930 imposes such a limitation.

The cases relied upon by defendants, namely, *Turpen v. Booth*, *supra.*, 56 Cal. 65, and *Irwin v. Murphy*, *supra.*, 129 Cal.App. 713, are readily ***222** distinguishable from the situation before us. Each of those cases upheld a claim of privilege in connection with statements made by grand juries as a part of investigations which were conducted in order to determine whether their constitutional authority to indict should be exercised. Also, we believe that defendants' reliance upon section 47, subdivision 2, of the Civil Code, is misplaced. (3)It is well settled that a special statute dealing expressly with a particular subject controls and takes precedence over a general statute covering the same subject. (*In re Williamson* (1954) 43 Cal.2d 651, 654 [276 P.2d 593]*Burum v. State Compensation Ins. Fund* (1947) 30 Cal.2d 575, 586 [184 P.2d 505].) Therefore, where the Legislature has enacted a statute which exempts statements made in certain reports rendered by the grand jury from the status of privileged communications, that statute takes precedence over another statute which deals generally with the subject of privilege in judicial proceedings.

(2b)Defendants have not established, nor have we been able to discern, any conflict between the provisions of section 930 and those of our state Constitution which deal with grand juries. The simple truth is that the latter document does not deal with the grand jury's authority to act as a watchdog and prepare reports on local government. Since the watchdog function of the grand jury was created by statute, there is no reason why its exercise cannot be limited by statute.

(4)We agree with plaintiff that the grand jury's function of investigating and reporting on local government is not inherently a part of the judicial system. Further, we find merit in plaintiff's contention that there is sufficient basis for distinguishing the grand

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

jury's watchdog role from its role as an indicting body: indictment proceedings are secret and their disclosure is a misdemeanor (§ 924.1); the sufficiency of the evidence presented to the grand jury may be challenged pursuant to section 995; the accused, if indicted, is afforded a public trial and the opportunity to defend against the charges. By contrast, when the grand jury renders its watchdog report, the trial court's power to review such report is limited: it may refuse to file an illegal report which is beyond the grand jury's jurisdiction to render. (*People v. Superior Court (1973 Grand Jury)*, *supra.*, 13 Cal.3d at p. 440.) There is no statutory provision similar to section 995 for challenging the sufficiency of the evidence; there are no rules of evidence controlling the type of information which can be presented to the grand jury for its report; and there is no forum in which an individual who has been unfavorably mentioned by the grand jury may present his version of the facts. In our opinion, these considerations furnish ample justification for the Legislature's decision to enact section 930 and thereby ***223** eliminate the claim of privilege in connection with the grand jury's report on local government. [FN4]We conclude that, in so doing, the Legislature acted well within its power and that the restrictions thus imposed do not violate the California Constitution.

> FN4 It is of interest to note that when the grand jurors in this case were impaneled and sworn, the court advised them of their lack of immunity in certain instances, stating, 'as to any comments in your reports upon a person or public official not indicted, such comments are not privileged and could, if libelous, be the basis for a charge of civil or criminal libel.'

The judgment of dismissal is reversed.

Taylor, P. J., and Kane, J., concurred.

CALBERT MILLS, Plaintiff and Respondent,
v.
COUNTY OF TRINITY et al., Defendants and Appellants.
Civ. No. 18866.

Court of Appeal, Third District, California.
Jul 28, 1980.

SUMMARY

In an action against Trinity County and its board of supervisors brought by a taxpayer in that county challenging a resolution by the county's board of supervisors providing for both increased and new fees for county services in processing subdivision, zoning, and other land-use applications that had been adopted without the two-thirds affirmative vote of the county electors required for a "special tax" within the meaning of Cal. Const., art. XIIIA, § 4, the court granted summary judgment for plaintiff and issued a writ of mandamus barring enforcement of the resolution's provisions. (Superior Court of Trinity County, No. 7030, Clyde H. Small, Judge. [FN*])

The Court of Appeal reversed and remanded with directions for further proceedings consistent with its holdings. The court held that special initiatives should be liberally interpreted to give full effect to the framers' objectives, but that the trial court erred in construing "tax" to include, within the contemplation of the "special tax" referred to in Cal. Const., art. XIIIA, § 4, all charges however labeled, to exact money for the support of government or for public purposes. The court further held that the "special tax" does not embrace fees charged in connection with regulatory activities that do not exceed the reasonable cost of providing services necessary to the activity for which the fees are charged, that the new and increased fees in Trinity County were not, therefore, unconstitutional as a matter of law, and that whether or not those fees were invalid would depend on a factual determination on remand as to whether or not such fees were greater than the reasonable cost of the regulatory activities for which they were imposed,

FN* Deleted on direction of Supreme Court by order dated October 1, 1980. (Opinion by Puglia, P. J., with Reynoso, J., and De-Cristoforo, J., [FN†]]] concurring.) ***657**

HEADNOTES

Classified to California Digest of Official Reports

(1) Constitutional Law § 10--Construction of Constitutions--Constitutional Amendment Limiting State and Local Taxing Powers.
The "special tax" referred to in Cal. Const., art. XIIIA, § 4, as being incapable of being legally imposed in a taxing district without a two-thirds vote of the qualified electors of the taxing district, does not embrace, under the established rules of construction applicable to the interpretation of constitutional provisions, fees charged in connection with regulatory activities, where the fees do not exceed the reasonable cost of providing services necessary to the activity for which the fee is charged, and that are not levied for unrelated revenue purposes.
[See **Cal.Jur.3d,** Constitutional Law, § 167; **Am.Jur.2d,** State and Local Taxation, § 93.]
(2) Words, Phrases and Maxims--Tax--Definition--Construction Within Context and Purpose in Which Used.
"Tax" is a term without fixed definition. The word may be construed narrowly or broadly depending on its particular context and the purpose for which the definition is created. In its broadest sense, a tax includes all charges on persons or property for the support of government or for public purposes. In narrower contexts, the word may be construed to exclude charges to particular individuals that do not exceed the value of the governmental benefit conferred on or the service rendered to the individuals, and to exclude charges against particular individuals for governmental regulatory activities where the fees involved do not exceed the reasonable expense of the regulatory activities.

(3) Initiative and Referendum § 6--State Elections--Initiative Measures-- Construction.

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

Initiative measures should, like other constitutional provisions, be interpreted liberally to give full effect to the framers' objective and the growing needs of the people.

(4) Constitutional Law § 10--Construction of Constitutions--Constitutional Amendment Limiting State and Local Taxing Powers--Regulatory Fees Within Ambit of Special Tax Proscription.
In an action challenging the constitutionality of a resolution by a county board of supervisors providing for both increased and new fees for county services in processing subdivision, zoning, and other land-use applications, the trial court erred in determining that the resolution violated prohibitions of Cal. Const., art. XIIIA, § 4, against a "special tax." In reaching its decision the trial court erred in construing the term, "tax", as used in Cal. Const., art. XIIIA, § 4, to include all charges, however labeled, to exact money for the support of government or for public purposes, and in ruling that the special fees imposed by the county resolution thus constituted, a "special tax" within the prohibitions of Cal. Const., art. XIIIA, § 4. The "special tax" referred to in Cal. Const., art. XIIIA, does not embrace fees for land-use regulatory activities where the fees charged to particular applicants do not exceed the reasonable cost of the regulatory activities and are not levied for unrelated revenue purposes. Whether or not the fees imposed under the resolution were invalid would depend on a factual determination on remand to the trial court as to whether or not such fees were greater than the reasonable cost of the regulatory activities for which they were imposed.

COUNSEL

Ronald Barbatoe, District Attorney, for Defendants and Appellants.

Wells, Wingate & Small, W. Leonard Wingate and Edward A. Shuttle as Amici Curiae on behalf of Defendants and Appellants.

David R. Hammer for Plaintiff and Respondent.

Ronald A. Zumbrun, John H. Findley, Thomas E. Hookano and James L. Meyer as Amici Curiae on behalf of Plaintiff and Respondent.

PUGLIA, P. J.

Following enactment of article XIII A of the California Constitution (Prop. 13 on the June 6, 1978, ballot, commonly known as the Jarvis-Gann initiative), the Trinity County Board of Supervisors adopted resolution No. 73-78 providing both increased and new fees for county services in processing subdivision, zoning, and other ***659** land-use applications. Plaintiff Mills then brought this action in the superior court against the county and its board challenging the constitutionality of the resolution and seeking to bar its enforcement through mandate and declaratory and injunctive relief. The trial court sustained plaintiff's claim that as a matter of law the new and increased fees under resolution No. 73-78 constitute a "special tax" within the meaning of article XIII A and thus cannot be imposed without a two-thirds affirmative vote of the electors of Trinity County. Since the board of supervisors had adopted the resolution without submitting it to the county electorate for approval, the court ordered summary judgment in plaintiff's favor and issued a peremptory writ of mandate. The writ ordered defendants to "desist and refrain from enforcing the provisions of Resolution Number 73-78" and further directed defendants to refund any and all monies received pursuant to the provisions of the resolution which exceeded amounts in effect under prior fee schedules.

Defendants appealed and filed an accompanying petition for a writ of supersedeas. We issued the writ, restraining enforcement of the judgment pending disposition of this appeal. (*Mills v. County of Trinity* (1979) 98 Cal.App.3d 859 [159 Cal.Rptr. 679].)

Although in its generality, article XIII A is not fatally vague, "in a number of particulars [it] is imprecise and ambiguous" (*Amador Valley Joint Union High Sch. Dist. v. State Bd. of Equalization* (1978) 22 Cal.3d 208, 245 [149 Cal.Rptr. 239, 583 P.2d 1281]) "and over a period of time will require judicial, legislative and administrative construction" (*id.*, at p. 244). We are now called upon in this appeal to determine whether the new and increased fees exacted by resolution No. 73-78 constitute a "special tax" within the meaning of section 4 of article XIII A. That provision states: "Cities, Counties and special districts, by a two-thirds vote of the qualified electors of such district, may impose special taxes on such district, except ad valorem taxes on real property or a

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

transaction tax or sales tax on the sale of real property within such City, County or special district."

(1)Utilizing the established rules of construction applicable to the interpretation of constitutional provisions (see *Amador Valley, supra.*, 22 Cal.3d at pp. 245-246), we conclude that the "special tax" referred to in section 4 of article XIII A does not embrace fees charged in connection with regulatory activities which fees do not exceed the reasonable cost of providing services necessary to the activity for which the fee is charged and which are not levied for unrelated revenue purposes.***660** Accordingly, we shall reverse and remand for a factual determination of whether the fees in question are reasonably compensatory for the costs occasioned by the regulated activities.

(2)"Tax" is a term without fixed definition. The word may be construed narrowly or broadly depending on its particular context and the purpose for which the definition is to be used. (See *Crawford v. Herringer* (1978) 85 Cal.App.3d 544, 548-551 [149 Cal.Rptr. 578]; *City of Glendale v. Trondsen* (1957) 48 Cal.2d 93, 99-100 [308 P.2d 1].) In its broadest sense, a tax includes all charges upon persons or property for the support of government or for public purposes. (*City of Madera v. Black* (1919) 181 Cal. 306, 310-311 [184 P. 397]; Webster's New Internat. Dict. (3d ed. 1971) p. 2345.) In narrower contexts, the word has been construed to exclude charges to particular individuals which do not exceed the value of the governmental benefit conferred upon or the service rendered to the individuals (*County of Fresno v. Malmstrom* (1979) 94 Cal.App.3d 974, 984 [156 Cal.Rptr. 777]; *Crawford v. Herringer, supra.*, 85 Cal.App.3d at p. 550), and to exclude charges against particular individuals for governmental regulatory activities where the fees involved do not exceed the reasonable expense of the regulatory activities (*United Business Com. v. City of San Diego* (1979) 91 Cal.App.3d 156, 165 [154 Cal.Rptr. 263]).

(3)Initiative measures as well as other general constitutional provisions should be interpreted liberally to give full effect to the framers' objective and the growing needs of the people. (*Amador Valley, supra.*, 22 Cal.3d at pp. 244-245.) Animated by the foregoing principle, the trial court construed "tax" in its broadest meaning holding that, as used in section 4 of article XIII A, it "includes all charges, however labeled, which are to exact money for the support of government or for public purposes." (4) However, were we to accept the trial court's broad definition, the initiative measure as so construed would prohibit any increase in fees for governmental activities conferring a direct benefit on the specific individual who is charged for such benefit without the prior approval of two-thirds of the electors. In other words, a county would be powerless to raise charges for proprietary functions such as hospital services, public transportation, and garbage collection without the two-thirds stamp of approval. We do not believe the state electors intended to put local government in such a fiscal straightjacket.

Conceding that such a draconian result was probably never intended by the electorate, plaintiff asserts the interpretation adopted by the trial ***661** court would exclude from the meaning of "special tax" fees charged for governmental activities *primarily* for the benefit of individuals and only incidentally for the benefit of the public. The minor premise of plaintiff's argument is that land-use charges imposed on the developer pursuant to the government's police power are primarily for the benefit of the public at large. Plaintiff thus concludes that such charges constitute taxes within the meaning of section 4 of article XIII A. Defendants, while not disputing the applicability of the "primary purpose" test, contend that it is the developer who is the primary beneficiary of an approval for land subdivision since the value of the land increases; the public, defendants assert, is merely the indirect beneficiary.

We eschew the public versus individual primary purpose test as a solvent of the instant litigation. The trial court also recognized the difficulty of embarking on such "spongy terrain" since all governmental activities by definition serve a public purpose. Under such a test, every charge imposed in connection with land-use activities as well as all other regulatory activities undertaken pursuant to the police power might well be categorized as a "special tax" since the police power is constitutional only if adopted to promote the health, safety, and welfare of the public as a whole. (*Euclid v. Ambler Realty Co.* (1926) 272 U.S. 365, 387 [71 L.Ed. 303, 310, 47 S.Ct. 114, 54 A.L.R. 1016]; *Associated Homebuilders etc. Inc. v. City of Livermore* (1976) 18 Cal.3d 582, 604 [135 Cal.Rptr. 41, 557 P.2d 473, 92 A.L.R.3d 1038].)

We rely instead on statutory and judicial precedent

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

(see *County of Sacramento v. Hickman* (1967) 66 Cal.2d 841, 850 [59 Cal.Rptr. 609, 428 P.2d 593]) and contemporaneous legislative construction (*Amador Valley, supra.*, 22 Cal.3d at p. 245) in determining that the state electorate did not intend to include within the meaning of "special tax" reasonable costs for processing land-use permits and applications.

Traditionally, courts have determined whether a local governmental charge denominated a regulatory fee is an exercise of the police power or the power to raise revenue by analyzing the use of the fee involved rather than relying on its label. (*United States Com. v. City of San Diego, supra.*, 91 Cal.App.3d at p. 165.) The general rule is that a regulatory fee must not "exceed the sum reasonably necessary to cover the costs of the regulatory purpose sought" in order to be considered as a fee rather than a guise for a tax. (*Ibid.*; see also *County of Plumas v. Wheeler* (1906) 149 Cal. 758, 763 [87 P. 909]; 5 Witkin, Summary of Cal. Law (8th ed. 1974) Taxation, § 5, pp. 3991-3992; 9 McQuillin, ***662** Municipal Corporations (3d ed. 1978) § 26.15, p. 29.) As long as the local enactments are not in conflict with general laws, the power to impose valid regulatory fees is not dependent on any legislatively authorized taxing power but exists pursuant to the direct grant of police power under article XI, section 7, of the California Constitution. (*County of Plumas v. Wheeler, supra.*, 149 Cal. at pp. 761, 763.) Land-use regulations fulfill a legitimate public welfare purpose under the police power. (*Associated Homebuilders etc. Inc. v. City of Livermore, supra.*, 18 Cal.3d at p. 604;*Associated Homebuilders etc. Inc. v. City of Walnut Creek* (1971) 4 Cal.3d 633, 651 [94 Cal.Rptr. 630, 484 P.2d 606, 43 A.L.R.3d 847].) Moreover, with respect to subdivision map activities in particular, Government Code section 66451.2 provides that "... local agenc [ies] may establish *reasonable* fees for the processing of tentative, final and parcel maps and for other procedures required or authorized by [the Subdivision Map Act] or local ordinance." (Italics added.)

Senate Bill No. 785, enacted in September 1979 after the enactment of article XIII A and the county's adoption of resolution No. 73-78, is sufficiently contemporaneous to serve as an interpretive guide. Its purpose is to furnish legislative authorization for counties and general law cities to impose special taxes subject to the two-thirds requirement of article XIII A. Section 50076, added to the Government Code by Senate Bill No. 785, clarifies the meaning of "special tax" as follows: "As used in this article, *'special tax' shall not include any fee which does not exceed the reasonable cost of providing the service or regulatory activity for which the fee is charged and which is not levied for general revenue purposes.*" (Italics added.) Where the Legislature has enacted a law in light of a particular constitutional provision, a settled rule of construction is that the Legislature's interpretation of uncertain constitutional terms is entitled to great deference by the courts. (*San Francisco v. Industrial Acc. Com.* (1920) 183 Cal. 273, 279 [191 P. 26]; *Methodist Hosp. of Sacramento v. Saylor* (1971) 5 Cal.3d 685, 692-693 [97 Cal.Rptr. 1, 488 P.2d 161].)

In addition, the "special tax" referred to in section 4 of article XIII A has been judicially construed to exclude special assessments charged for improvements to individual properties which do not exceed the benefits the assessed properties receive from the improvement. (*County of Fresno v. Malmstrom, supra.*, 94 Cal.App.3d at p. 984.) The *Malmstrom* interpretation is consistent with that expressed by the Legislature in Senate Bill No. 785 (Gov. Code, § 50076).***663**

Ballot arguments and analyses presented to the electorate may be helpful in determining the probable meaning of an initiative's uncertain language. (*Amador Valley, supra.*, 22 Cal.3d at pp. 245-246.) Here, the arguments in favor of the constitutional initiative "support a conclusion that the article is aimed at *general* taxes and governmental spending." (Original italics; *County of Fresno v. Malmstrom, supra.*, 94 Cal.App.3d at p. 981.) There is nothing in the ballot arguments supporting article XIII A suggesting an intent to prevent local government from exacting fees reasonably commensurate with the cost of regulatory activity from those at whose instance the activity is conducted.

Finally, support for the Legislature's interpretation of "special taxes" is found in an initiative measure subsequently adopted by the California electorate in 1979; the measure placed limitations on governmental spending. (Cal. Const., art. XIII B.) Although applicable only to article XIII B, the phrase, "proceeds of taxes," is defined there as including, but not restricted to "all tax revenues and the proceeds to an

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

entity of government, from (i) regulatory licenses, user charges, and user fees to the extent that such proceeds *exceed* the costs reasonably borne by such entity in providing the regulation, product, or service, ..." (Italics added; Cal. Const., art. XIII B, § 8, subd. (c).)

Informed by those sources recognized as germane to the task of statutory interpretation, we conclude that "special taxes" under article XIII A, section 4 of the California Constitution do not embrace fees for land-use regulatory activities where the fees charged to particular applicants do not exceed the reasonable cost of the regulatory activities and are not levied for unrelated revenue purposes. Since the trial court held the fees imposed by resolution No. 73-78 constitute a "special tax" as a matter of law, the factual question whether or not such fees exceed the reasonable cost of the related regulatory activity has never been litigated. On remand that issue must be tried.

The judgment is reversed and the cause remanded for further proceedings consistent with this opinion.

v.
Douglas M. COSTLE, Administrator, and Environmental Protection Agency, et al., Appellants.
NATURAL RESOURCES DEFENSE COUNCIL, INC.
v.
Douglas M. COSTLE, Administrator, Environmental Protection Agency, Colorado River Water Conservation District, Appellant.
Nos. 75-2056, 75-2066, 75-2067 and 75-2235.

Argued Dec. 3, 1976.
Decided Nov. 16, 1977.

The National Resources Defense Council, Inc. challenged authority of the Environmental Protection Agency Administrator to exempt categories of point sources from permit requirements of the Federal Water Pollution Control Act Amendments of 1972. The United States District Court for the District of Columbia, Thomas A. Flannery, J., 396 F.Supp. 1393, granted summary judgment to the NRDC and the Administrator and others appealed. The Court of Appeals, Leventhal, Circuit Judge, held that: (1) legislative history shows that National Pollution Discharge Elimination System permit is the only means by which discharger may escape total prohibition of discharges from point sources found in FWPCA; (2) national effluent limitations need not be uniform as precondition for NPDES program to include pollution from agricultural, silvicultural, and storm runoff point sources, and while technological or administrative infeasibility of such limitations may warrant adjustments in permit program it does not authorize Administrator to exclude relevant point sources; (3) where numeric effluent limitations are infeasible, permit conditions may proscribe industry practices that aggravate problems of point source pollution as well as require monitoring and reporting of effluent level; and (4) a number of administrative devices, including general or area permits are available to aid EPA in practical administration of NPDES program, and FWPCA, however tight in some respects, leaves some leeway to EPA in interpretation of that statute and affords agency some means to consider matters of feasibility.

Affirmed in accordance with opinion.

MacKinnon, Circuit Judge, filed a concurring opinion.

It is not what court thinks that is generally appropriate to regulatory process, but what Congress intended.

**1370 **148 Syllabus by the Court*

The National Resources Defense Council, Inc. (NRDC) challenged the authority of the EPA Administrator to exempt categories of point sources from the permit requirements of s 402 of the Federal Water Pollution Control Act Amendments of 1972, 33 U.S.C. s 1342 (Supp. V 1975). On appeal from a grant of summary judgment to NRDC, held:

1. The legislative history makes clear that Congress intended the National Pollution Discharge Elimination System (NPDES) permit to be the only means by which a discharger may escape the total prohibition of discharges from point sources found in FWPCA s 301(a), 33 U.S.C. s 1311(a) (Supp. V 1975).

2. It is not necessary that national effluent limitations be uniform as a precondition for the NPDES program to include pollution from agricultural, silvicultural, and storm water runoff point sources. The technological or administrative infeasibility ***1371 **149** of such limitations may warrant adjustments in the permit program, but it does not authorize the Administrator to exclude the relevant point source from the NPDES program.

3. Where numeric effluent limitations are infeasible, permit conditions may proscribe industry practices that aggravate the problems of point source pollution as well as require monitoring and reporting of effluent levels.

4. A number of administrative devices, including general or area permits, are available to aid EPA in the practical administration of the NPDES program. The FWPCA, however tight in some respects, leaves some leeway to EPA in the interpretation of that statute and, in that regard, affords the agency some means to consider matters of feasibility.

Before BAZELON, Chief Judge, and LEVENTHAL and MacKINNON, Circuit Judges.

Opinion for the Court filed by LEVENTHAL, Circuit Judge.
Concurring Opinion filed by MacKINNON, Circuit Judge.
LEVENTHAL, Circuit Judge:

In 1972 Congress passed the Federal Water Pollution Control Act Amendments (hereafter referred to as the "FWPCA" or the "Act" [FN1]). It was a dramatic response to accelerating environmental degradation of rivers, lakes and streams in this country. The Act's stated goal is to eliminate the discharge of pollutants into the Nation's waters by 1985. This goal is to be achieved through the enforcement of the strict timetables and technology-based effluent limitations established by the Act.

> FN1.33 U.S.C. ss 1251-1376 (Supp. V 1975). Although characterized in the official title as "amendments", the 1972 FWPCA actually substitutes its provisions for those of the pre-1972 Federal Water Pollution Control Act as amended, id. ss 1151-1175 (1970).

The FWPCA sets up a permit program, the National Pollutant Discharge Elimination System (NPDES), as the primary means of enforcing the Act's effluent limitations.[FN2] At issue in this case is the authority*1372 **150 of the Administrator of the Environmental Protection Agency to make exemptions from this permit component of the FWPCA.

> FN2. This case deals with s 402 of the FWPCA, 33 U.S.C. s 1342 (Supp. V 1975), which sets out the permitting authority of the EPA Administrator as well as that of the states under EPA-approved state permit programs. The Secretary of the Army also has a permitting authority in certain circumstances. Under s 404 of the FWPCA, 33 U.S.C. s 1344 (Supp. V 1975), he may issue permits for the discharge of dredged or fill material into navigable waters.

Section 402 of the FWPCA, 33 U.S.C. s 1342 (Supp. V 1975), provides that under certain circumstances the EPA Administrator "may . . . issue a permit for the discharge of any pollutant" notwithstanding the general proscription of pollutant discharges found in s 301 of the Act.33 U.S.C. s 1311 (Supp. V 1975). The discharge of a pollutant is defined in the FWPCA as "any addition of any pollutant to navigable waters from any point source" or "any addition of any pollutant to the waters of the contiguous zone or the ocean from any point source other than a vessel or floating craft."33 U.S.C. s 1362(12) (Supp. V 1975). In 1973 the EPA Administrator issued regulations that exempted certain categories of "point sources" of pollution from the permit requirements of s 402.[FN3] The Administrator's purported authority to make such exemptions turns on the proper interpretation of s 402.

> FN3.40 C.F.R. s 125.4 (1975). See 38 Fed.Reg. 18000-04 (1973).

A "point source" is defined in s 502(14) as "any discernible, confined and discrete conveyance, including but not limited to any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, or vessel or other floating craft, from which pollutants are or may be discharged."[FN4]

> FN4.33 U.S.C. s 1362(14) (Supp. V 1975).

The 1973 regulations exempted discharges from a number of classes of point sources from the permit requirements of s 402, including all silvicultural point sources; all confined animal feeding operations be-

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

low a certain size; all irrigation return flows from areas of less than 3,000 contiguous acres or 3,000 noncontiguous acres that use the same drainage system; all nonfeedlot, nonirrigation agricultural point sources; and separate storm sewers containing only storm runoff uncontaminated by any industrial or commercial activity.[FN5] The EPA's ***1373 **151** rationale for these exemptions is that in order to conserve the Agency's enforcement resources for more significant point sources of pollution, it is necessary to exclude these smaller sources of pollutant discharges from the permit program.

FN5.40 C.F.R. s 125.4 (1975):

The following do not require an NPDES permit:

(f) Uncontrolled discharges composed entirely of storm runoff when these discharges are uncontaminated by any industrial or commercial activity, unless the particular storm runoff discharge has been identified by the Regional Administrator, the State water pollution control agency or an interstate agency as a significant contributor of pollution. (It is anticipated that significant contributors of pollution will be identified in connection with the development of plans pursuant to section 303(e) of the Act. This exclusion applies only to separate storm sewers. Discharges from combined sewers and bypass sewers are not excluded.)

(j) Discharges of pollutants from agricultural and silvicultural activities, including irrigation return flow and runoff from orchards, cultivated crops, pastures, rangelands, and forest lands, except that this exclusion shall not apply to the following:

(1) Discharges from animal confinement facilities, if such facility or facilities contain, or at any time during the previous 12 months contained, for a total of 30 days or more, any of the following types of animals at or in excess of the number listed for each type of animal:

(i) 1,000 slaughter and feeder cattle;

(ii) 700 mature dairy cattle (whether milkers or dry cows);

(iii) 2,500 swine weighing over 55 pounds;

(iv) 10,000 sheep;

(v) 55,000 turkeys;

(vi) If the animal confinement facility has continuous overflow watering, 100,000 laying hens and broilers;

(vii) If the animal confinement facility has liquid manure handling systems, 30,000 laying hens and broilers;

(viii) 5,000 ducks;

(2) Discharges from animal confinement facilities, if such facility or facilities contain, or any time during the previous 12 months contained for a total of 30 days or more, a combination of animals such that the sum of the following numbers is 1,000 or greater: the number of slaughter and feeder cattle multiplied by 1.0, plus the number of mature dairy cattle multiplied by 1.4, plus the number of swine weighing over 55 pounds multiplied by 0.4, plus the number of sheep multiplied by 0.1;

(3) Discharges from aquatic animal production facilities;

(4) Discharges of irrigation return flow (such as tailwater, tile drainage, surfaced ground water flow or bypass water), operated by public or private organizations or individuals, if: (1) There is a point source of discharge (e. g., a pipe, ditch, or other defined or discrete conveyance, whether natural or artificial) and; (2) the return flow is from land areas of more than 3,000 contiguous acres, or 3,000 non-contiguous acres which use the same drainage system; and

(5) Discharges from any agricultural or silvicultural activity which have been identi-

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

fied by the Regional Administrator or the Director of the State water pollution control agency or interstate agency as a significant contributor of pollution.

The National Resources Defense Council, Inc. (NRDC) sought a declaratory judgment that the regulations are unlawful under the FWPCA. Specifically, NRDC contended that the Administrator does not have authority to exempt any class of point source from the permit requirements of s 402. It argued that Congress in enacting ss 301, 402 of the FWPCA intended to prohibit the discharge of pollutants from all point sources unless a permit had been issued to the discharger under s 402 or unless the point source was explicitly exempted from the permit requirements by statute. The District Court granted NRDC's motion for summary judgment. It held that the FWPCA does not authorize the Administrator to exclude any class of point sources from the permit program.NRDC v. Train, 396 F.Supp. 1393 (D.D.C.1975). The EPA has appealed to this court. It is joined on appeal by a number of defendant-intervenors, National Forest Products Association (NFPA), National Milk Producers Federation (NMPF), and the Colorado River Conservation District.[FN6]

FN6. Briefs as amicus curiae were filed by the American Iron and Steel Institute, the State of Texas, and the State of Washington, Department of Natural Resources.

This case thus presents principally a question of statutory interpretation. EPA also argues that even if Congress intended to include the pertinent categories in the permit program, the regulations exempting them should be upheld on a doctrine of administrative infeasibility, i. e., the regulations should be upheld as a deviation from the literal terms of the FWPCA that is necessary to permit the Agency to realize the principal objectives of the Act.

I. LEGISLATIVE HISTORY

The principal purpose of the FWPCA is "to restore and maintain the chemical, physical, and biological integrity of the Nation's waters."[FN7]The Act's ultimate objective, to eliminate the discharge of pollutants into navigable waters by 1985, is to be achieved by means of two intermediate steps. As of July 1, 1977, all point sources other than publicly owned treatment works were to have achieved effluent limitations that require application of the "best practicable control technology." [FN8]These same point sources must reduce their effluent discharges by July 1, 1983, to meet limitations determined by application of the "best available technology economically achievable" for each category of point source.[FN9]

FN7.33 U.S.C. s 1251(a) (Supp. V 1975).

FN8.33 U.S.C. s 1311(b)(1)(A) (Supp. V 1975).

FN9.Id.s 1311(b)(2)(A).

The technique for enforcing these effluent limitations is straightforward. Section 301(a) of the FWPCA provides:

Except as in compliance with this section and sections 302, 306, 307, 318, 402, and 404 of this Act, the discharge of any pollutant by any person shall be unlawful.[FN10]

FN10.Id.s 1311(a).

Appellants concede that if the regulations are valid, it must be because they are authorized***1374 **152** by s 402; none of the other sections listed in s 301(a) afford grounds for relieving the exempted point sources from the prohibition of s 301. [FN11]

FN11. Section 302, 33 U.S.C. s 1312 (Supp. V 1975), permits the Administrator to set water quality related effluent limitations or control strategies where technology-based limitations are inadequate. Section 306, 33 U.S.C. s 1316 (Supp. V 1975), instructs the EPA Administrator to promulgate standards of performance for new sources of pollution constructed after those standards are proposed. Section 307, 33 U.S.C. s 1317 (Supp. V 1975), gives the EPA Administrator the authority to issue generally applicable effluent standards with respect to toxic substances and to require pretreatment of some pollutants before their introduction into treatment works. By virtue of s 318, 33 U.S.C. s 1328 (Supp. V 1975), the Administrator may "permit the discharge of a spe-

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

> cific pollutant or pollutants under controlled conditions associated with an approved aquaculture project under Federal or State supervision."Section 404, 33 U.S.C. s 1344 (Supp. V 1975), gives the Secretary of the Army authority to issue permits for the discharge of dredged or fill material into the navigable waters at specified disposal sites.

Section 402 provides in relevant part that the Administrator may, after opportunity for public hearing, issue a permit for the discharge of any pollutant, or combination of pollutants, notwithstanding section 301(a), upon condition that such discharge will meet either all applicable requirements under sections 301, 302, 306, 307, 308, and 403 of this Act, or prior to the taking of the necessary implementing actions relating to all such requirements, such conditions as the Administrator determines are necessary to carry out the provisions of this Act.

The NPDES permit program established by s 402 is central to the enforcement of the FWPCA. It translates general effluent limitations into the specific obligations of a discharger. As this court noted in NRDC v. Train, 166 U.S.App.D.C. 312, 315, 510 F.2d 692, 695 (1975), the Act "relies primarily on a permit program for the achievement of effluent limitations . . . to attain its goals."The comments in floor debates of Senator Muskie, the leading Congressional sponsor of the Act, makes this clear.[FN12]

> FN12."The Administrator of the Environmental Protection Agency is authorized to regulate discharge of pollutants through the use of an expanded permit program."117 Cong.Rec. 38800 (1971) (Senator Muskie) (emphasis added), reprinted in 2 Environmental Policy Div., Congressional Reference Serv., A Legislative History of the Water Pollution Control Act Amendments of 1972, at 1259 (Senate Public Works Comm. Print 1973) (hereinafter cited as Legislative History).

The appellants argue that s 402 not only gives the Administrator the discretion to grant or refuse a permit, but also gives him the authority to exempt classes of point sources from the permit requirements entirely. They argue that this interpretation is supported by the legislative history of s 402 and the fact that unavailability of this exemption power would place unmanageable administrative burdens on the EPA.

[1] Putting aside for the moment the appellants' administrative infeasibility argument, we agree with the District Court that the legislative history makes clear that Congress intended the NPDES permit to be the only means by which a discharger from a point source may escape the total prohibition of s 301(a). This intention is evident in both Committee Reports. In discussing s 301 the House Report stressed:

Any discharge of a pollutant without a permit issued by the Administrator under section 318, or by the Administrator or the State under section 402 or by the Secretary of the Army under section 404 is unlawful. Any discharge of a pollutant not in compliance with the conditions or limitations of such a permit is also unlawful.[FN13]

> FN13. H.Rep.No.92-911, 92d Cong., 2d Sess. 100 (1972), reprinted in Legislative History at 787.

The Senate Report echoed this interpretation:

(Section 301) clearly establishes that the discharge of pollutants is unlawful. Unlike its predecessor program which permitted the discharge of certain amounts of pollutants under the conditions described above, this legislation would clearly establish that no one has the right ***1375 **153** to pollute that pollution continues because of technological limits, not because of any inherent rights to use the nation's waterways for the purpose of disposing of wastes.

The program proposed by this Section will be implemented through permits issued in Section 402. The Administrator will have the capability and the mandate to press technology and economics to achieve those levels of effluent reduction which he believes to be practicable in the first instance and attainable in the second.[FN14]

> FN14. S.Rep.No.92-414, 92d Cong., 1st Sess. 42 (1971), reprinted in Legislative History at 1460; U.S.Code Cong. & Admin.News 1972, pp. 3668, 3709.

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

[2] The EPA argues that since s 402 provides that "the Administrator may . . . issue a permit for the discharge of any pollutant" (emphasis added), he is given the discretion to exempt point sources from the permit requirements altogether. This argument, as to what Congress meant by the word "may" in s 402, is insufficient to rebut the plain language of the statute and the committee reports. We say this with due awareness of the deference normally due "the construction of a new statute by its implementing agency."NRDC v. Train, 166 U.S.App.D.C. at 326, 510 F.2d at 706; see Zuber v. Allen, 396 U.S. 168, 192, 90 S.Ct. 314, 24 L.Ed.2d 345 (1969); Udall v. Tallman, 380 U.S. 1, 16, 85 S.Ct. 792, 13 L.Ed.2d 616 (1965). The use of the word "may" in s 402 means only that the Administrator has discretion either to issue a permit or to leave the discharger subject to the total proscription of s 301. This is the natural reading, and the one that retains the fundamental logic of the statute.

Under the EPA's interpretation the Administrator would have broad discretion to exempt large classes of point sources from any or all requirements of the FWPCA. This is a result that the legislators did not intend. Rather they stressed that the FWPCA was a tough law that relied on explicit mandates to a degree uncommon in legislation of this type. A statement of Senator Jennings Randolph of West Virginia, Chairman of the Senate Committee responsible for the Act, is illustrative.

> I stress very strongly that Congress has become very specific on the steps it wants taken with regard to environmental protection. We have written into law precise standards and definite guidelines on how the environment should be protected. We have done more than just provide broad directives for administrators to follow. . . .
>
> In the past, too many of our environmental laws have contained vague generalities. What we are attempting to do now is provide laws that can be administered with certainty and precision. I think that is what the American people expect that we do.[FN15]
>
> FN15.117 Cong.Rec. 38805 (1971), reprinted in Legislative History at 1272. See also the comments of Senator Montoya on the original Senate bill.
>
> Your committee has placed before you a tough bill. This body and this Nation would not have it be otherwise. Our legislation contains an important principle of psychology: Men seldom draw the best from themselves unless pressed by circumstances and deadlines. This bill contains deadlines and it imposes rather tough standards on industry, municipalities, and all other sources of pollution. Only under such conditions are we likely to press the technological threshold of invention into new and imaginative developments that will allow us to meet the objectives stated in our bill.
>
> 117 Cong.Rec. 38808 (1971), reprinted in Legislative History at 1278.

There are innumerable references in the legislative history to the effect that the Act is founded on the "basic premise that a discharge of pollutants without a permit is unlawful and that discharges not in compliance with the limitations and conditions for a permit are unlawful."[FN16]Even when infeasibility arguments were squarely raised, ***1376** ****154** the legislature declined to abandon the permit requirement.[FN17] We stand by our previous interpretation of the Act's scheme for the enforcement of effluent limitations:

> FN16.118 Cong.Rec. 10215 (1972) (Rep. Clausen), reprinted in Legislative History at 378. See, e. g., H.R.Rep.No.92-911 92d Cong., 2d Sess. 100 (1972), reprinted in Legislative History at 787; S.Rep.No.92-414; 92d Cong., 1st Sess. 42-43 (1971), reprinted in Legislative History at 1460-61; 118 Cong.Rec. 10661 (1972) (Rep. Podell), reprinted in Legislative History at 574.
>
> FN17. The House rejected an amendment designed to avoid the problems of including irrigation return flows in the permit program. Congressman Teno Roncalio of Wyoming offered an amendment on the floor of the House that would have explicitly exempted irrigated agriculture from the NPDES permit program.
>
> Mr. RONCALIO. . . .

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

> I offer my amendment so that a serious omission to H.R. 11896 can be corrected before we end up with a law that would be virtually impossible to enforce. My amendment would specifically exempt irrigated agriculture from sections 301(a), 302 and 304 of the Federal Water Pollution Control Act.
>
> I think my colleagues will agree that the type of salinity problems created by irrigation runoff are simply not as alarming as the more common pollutants discharged by industrial and municipal facilities. Substantial salinity concentrations have little effect on recreational use of water or its suitability for the propagation of fish.
>
> My amendment is necessary, Mr. Chairman, because at the present time we could not enforce pollution control on irrigation systems. It is virtually impossible to trace pollutants to specific irrigation lands, making these pollutants a nonpoint source in most cases. Second, we do not have the technology to deal with irrigation runoff (as contrasted to industrial pollution) and if we begin making laws to control something that cannot be handled with our given technological knowledge, we will be doing many thousand farmers and ranchers a great disservice. In fact, we will be doing the Federal Government a great disservice if we actually pass a Federal water pollution control bill that cannot be fully enforced.
>
> 118 Cong.Rec. 10764-65 (1972), reprinted in Legislative History at 651. The amendment was rejected.

After dates set forth in (s 301(b)), a person must obtain a permit and comply with its terms in order to discharge any pollutant. The conditions of the permit must assure that any discharge complies with the applicable requirements of numerous sections including the effluent limitations of section 301(b).
NRDC v. Train, 166 U.S.App.D.C. at 316, 510 F.2d at 696 (emphasis added; footnotes omitted).

We also note that all the Supreme Court decisions referring to s 402 view the permit as the only means by which a point source polluter can avoid the ban on discharges found in s 301. Strictly speaking these expressions may be dicta, for they do not touch directly on the interpretation of s 402. But they are at least a considered reading of what the Act appears to mean.

In Train v. Colorado Public Interest Research Group, Inc., 426 U.S. 1, 96 S.Ct. 1938, 48 L.Ed.2d 434 (1976), Justice Marshall characterized the enforcement scheme of the FWPCA as follows:

(E)ffluent limitations are enforced through a permit program. The discharge of "pollutants" into water is unlawful without a permit issued by the Administrator of the EPA or, if a State has developed a program that complies with the FWPCA, by the State. . . .

Id. at 7, 96 S.Ct. at 1941 (footnote omitted).

In EPA v. State Water Resources Control Board, 426 U.S. 200, 96 S.Ct. 2022, 48 L.Ed.2d 578 (1976), the issue was whether federal installations were subject to state NPDES programs. Justice White's majority opinion describes NPDES at 205, 96 S.Ct. at 2025 (footnote omitted):

Under NPDES, it is unlawful for any person to discharge a pollutant without obtaining a permit and complying with its terms. An NPDES permit serves to transform generally applicable effluent limitations and other standards including those based on water quality into the obligations (including a timetable for compliance) of the individual discharger, and the Amendments provide for direct administrative and judicial enforcement of permits.

In E. I. du Pont de Nemours v. Train, 430 U.S. 112, 97 S.Ct. 965, 51 L.Ed.2d 204 (1977), the Court held that under FWPCA the EPA can set uniform effluent limitations through industry-wide regulations rather than develop them on an individual basis during the permit issuance process. But the Court, per Justice Stevens, clearly indicated*1377 **155 that those limitations were translated into obligations of the discharger through their inclusion in an NPDES permit.Id. at 119-20, 97 S.Ct. 965.

The wording of the statute, legislative history, and precedents are clear: the EPA Administrator does not have authority to exempt categories of point sources

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

from the permit requirements of s 402. Courts may not manufacture for an agency a revisory power inconsistent with the clear intent of the relevant statute. In holding that the FPC does not have authority to exempt the rates of small producers from regulation under the Natural Gas Act, the Supreme Court observed:

It is not the Court's role . . . to overturn congressional assumptions embedded into the framework of regulation established by the Act. This is a proper task for the Legislature where the public interest may be considered from the multifaceted points of view of the representational process.

FPC v. Texaco, Inc., 417 U.S. 380, 400, 94 S.Ct. 2315, 2327, 41 L.Ed.2d 141 (1974).

II. ADMINISTRATIVE INFEASIBILITY

The appellants have stressed in briefs and at oral argument the extraordinary burden on the EPA that will be imposed by the above interpretation of the scope of the NPDES program. The spectre of millions of applications for permits is evoked both as part of appellants' legislative history argument that Congress could not have intended to impose such burdens on the EPA and as an invitation to this court to uphold the regulations as deviations from the literal terms of the FWPCA necessary to permit the agency to realize the general objectives of that act. During oral argument we asked for supplemental briefs so that the appellants could expand on their infeasibility arguments. We consider EPA's infeasibility contentions in turn.

A. Uniform National Effluent Limitations

EPA argues that the regulatory scheme intended under Titles III and IV of the FWPCA requires, first, that the Administrator establish national effluent limitations [FN18] and, second, that these limitations be incorporated in the individual permits of dischargers. EPA argues that the establishment of such limitations is simply not possible with the type of point sources involved in the 1973 regulations, which essentially involve the discharge of runoff i. e., wastewaters generated by rainfall that drain over terrain into navigable waters, picking up pollutants along the way.

FN18. See FWPCA s 502(11), 33 U.S.C. s 1362(11) (Supp. V 1975):

> The term "effluent limitation" means any restriction established by a State or the Administrator on quantities, rates, and concentrations of chemical, physical, biological, and other constituents which are discharged from point sources into navigable waters, the waters of the contiguous zone, or the ocean, including schedules of compliance.

There is an initial question, to what extent point sources are involved in agricultural, silvicultural, and storm sewer runoff. The definition of point source in s 502(14), including the concept of a "discrete conveyance", suggests that there is room here for some exclusion by interpretation. We discuss this issue subsequently. Meanwhile, we assume that even taking into account what are clearly point sources, there is a problem of infeasibility which the EPA properly opens for discussion.

EPA contends that certain characteristics of runoff pollution make it difficult to promulgate effluent limitations for most of the point sources exempted by the 1973 regulations:

The major characteristic of the pollution problem which is generated by runoff . . . is that the owner of the discharge point . . . has no control over the quantity of the flow or the nature and amounts of the pollutants picked up by the runoff. The amount of flow obviously is unpredictable because it results from the duration and intensity of the rainfall event, the topography, the type of ground cover and the saturation point of the land due to any previous ***1378 ****156** rainfall. Similar factors affect the types of pollutants which will be picked up by that runoff, including the type of farming practices employed, the rate and type of pesticide and fertilizer application, and the conservation practices employed . . .

An effluent limitation must be a precise number in order for it to be an effective regulatory tool; both the discharger and the regulatory agency need to have an identifiable standard upon which to determine whether the facility is in compliance. That was the principal of the passage of the 1972 Amendments.

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

Federal Appellants' Memorandum on "Impossibility" at 7-8 (footnote omitted). Implicit in EPA's contentions is the premise that there must be a uniform effluent limitation prior to issuing a permit. That is not our understanding of the law.

In NRDC v. Train, we described the interrelationship of the effluent limitations and the NPDES permit program, 166 U.S.App.D.C. at 327, 510 F.2d at 707 (footnotes omitted):

The Act relies on effluent limitations on individual point sources as the "basis of pollution prevention and elimination." . . . Section 301(b) contains a broad description of phase one and phase two effluent limitations, to be achieved by July 1, 1977 and July 1, 1983, respectively. The limitations established under section 301(b) are to be imposed upon individual point sources through permits issued under the National Pollutant Discharge Elimination System (NPDES) established by section 402. Those permits are to contain schedules which will assure phased compliance with the effluent limitations no later than the final dates set forth in section 301(b). Section 304(b) calls for the publication of regulations containing guidelines for effluent limitations for classes and categories of point sources. These guidelines are intended to assist in the establishment of section 301(b) limitations that will provide uniformity in the permit conditions imposed on similar sources within the same category by diverse state and federal permit authorities.

As noted in NRDC v. Train, the primary purpose of the effluent limitations and guidelines was to provide uniformity among the federal and state jurisdictions enforcing the NPDES program and prevent the "Tragedy of the Commons" [FN19] that might result if jurisdictions can compete for industry and development by providing more liberal limitations than their neighboring states.166 U.S.App.D.C. at 329, 510 F.2d at 709. The effluent limitations were intended to create floors that had to be respected by state permit programs.

> FN19. As one commentator has recently written:
>
> The Tragedy of the Commons arises in non-centralized decisionmaking under conditions in which the rational but independent pursuit by each decisionmaker of its own self-interest leads to results that leave all decisionmakers worse off than they would have been had they been able to agree collectively on a different set of policies.
>
> Stewart, Pyramids of Sacrifice? Problems of Federalism in Mandating State Implementation of National Environmental Policy, 86 Yale L.J. 1196, 1211 (1977). The classic account of the Tragedy of the Commons can be found in Hardin, The Tragedy of the Commons, 162 Science 1243 (1968). Hardin makes the point in the context of sheep-grazing. Put simply, even over-simply, Hardin shows that if no one is authorized to set limits to preserve open pasture land as a whole, allowing sheep to graze on that land may lead to serious overgrazing, as each herdsman thinks only of his own advantage. The solution lies in some mandate, from above or by agreement, with sanctions to compel conformance.

But in NRDC v. Train it was also recognized that permits could be issued before national effluent limitations were promulgated and that permits issued subsequent to promulgation of uniform effluent limitations could be modified to take account of special characteristics of subcategories of point sources.

Prior to the promulgation of effluent limitations under section 301, the director of a state program is instructed merely to impose such terms and conditions in each permit as he determines are necessary to carry out the provisions of the Act. Once ***1379 **157** an effluent limitation is established, however, the state director and the regional EPA Administrator are required to apply the specified, uniform effluent limitations, modified only as necessary to take account of fundamentally different factors pertaining to particular point sources within a given class or category. Any variation in the uniform limitations adopted for specific dischargers must be approved by the Administrator.

166 U.S.App.D.C. at 330, 510 F.2d at 710 (footnotes omitted).

Another passage in NRDC v. Train touches on the

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

infeasibility problem. We noted that "(t)he statutory framework is not so tightly drawn as to require guidelines for each and every class and category of point source regardless of the need for uniform guidelines or to mandate that all guidelines be published prior to December 31 (1974) regardless of their quality or the burden that task would place upon the agency."Id. at 320-21, 510 F.2d at 710-11. In that case this court fully appreciated that technological and administrative constraints might prevent the Administrator from developing guidelines and corresponding uniform numeric effluent limitations for certain point sources anytime in the near future. The Administrator was deemed to have the burden of demonstrating that the failure to develop the guidelines on schedule was due to administrative or technological infeasibility.166 U.S.App.D.C. at 333, 510 F.2d at 713.Yet the underlying teaching was that technological or administrative infeasibility was a reason for adjusting court mandates to the minimum extent necessary to realize the general objectives of the Act.[FN20] It is a number of steps again to suggest that these problems afford the Administrator the authority to exempt categories of point sources from the NPDES program entirely.

FN20. In NRDC v. Train, this court stated:

> A federal equity court may exercise its discretion to give or withhold its mandate in furtherance of the public interest, including specifically the interest in effectuating the congressional objective incorporated in regulatory legislation. We think the court may forebear the issuance of an order in those cases where it is convinced by the official involved that he has in good faith employed the utmost diligence in discharging his statutory responsibilities. The sound discretion of an equity court does not embrace enforcement through contempt of a party's duty to comply with an order that calls him "to do an impossibility."
>
> 166 U.S.App.D.C. at 333, 510 F.2d at 713 (footnotes omitted). For reasons stated in this opinion, we conclude that to require the EPA Administrator to include silvicultural, agricultural, and storm sewer point sources in the NPDES program is not to require him "to do an impossibility."

With time, experience, and technological development, more point sources in the categories that EPA has now classed as exempt may be amenable to national effluent limitations achieved through end-of-pipe technology or other means of pollution control. EPA has noted its own success with runoff from mining operations:

> EPA has found that in the area of runoff from mining operations, there is sufficient predictability because of a longer history of regulation and the relatively confined nature of the operations that numerical limitations can be established. Thus, consistent with EPA's position stated earlier that it will expand the permit program where its capability of establishing effluent limitations allows, appropriate limitations have been created and the permit program expanded.
>
> Federal Appellants' Memorandum on "Impossibility" at 8.

[3] In sum, we conclude that the existence of uniform national effluent limitations is not a necessary precondition for incorporating into the NPDES program pollution from agricultural, silvicultural, and storm water runoff point sources. The technological or administrative infeasibility of such limitations may result in adjustments in the permit programs, as will be seen, but it does not authorize the Administrator to exclude the relevant point source from the NPDES program.

B. Alternative Permit Conditions under s 402(a)

EPA contends that even if it is possible to issue permits without national effluent limitations,***1380 **158** the special characteristics of point sources of runoff pollution make it infeasible to develop restrictions on a case-by-case basis. EPA's implicit premise is that whether limitations are promulgated on a class or individual source basis, it is still necessary to articulate any limitation in terms of a numerical effluent standard. That is not our understanding.

[4] Section 402 provides that a permit may be issued upon condition "that such discharge will meet either all applicable requirements under sections 301, 302, 306, 307, 308 and 403 of this Act, or prior to taking of necessary implementing actions relating to all such

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

requirements, such conditions as the Administrator determines are necessary to carry out the provisions of this Act."33 U.S.C. s 1342(a) (Supp. V 1975) (emphasis added). This provision gives EPA considerable flexibility in framing the permit to achieve a desired reduction in pollutant discharges. The permit may proscribe industry practices that aggravate the problem of point source pollution.[FN21]

> FN21. That Congress did not regard numeric effluent limitations as the only permissible limitation on a discharger is supported by s 302(a) of the Act, 33 U.S.C. s 1312(a) (Supp. V 1975):
>
> Whenever, in the judgment of the Administrator, discharges of pollutants from a point source or group of point sources, with the application of effluent limitations required under (s 301(b) of the Act), would interfere with the attainment or maintenance of that water quality in a specific portion of the navigable waters which shall assure protection of public water supplies, agricultural and industrial uses, and the protection and propagation of a balanced population of shellfish, fish and wildlife, and allow recreational activities in and on the water, effluent limitations (including alternative effluent control strategies) for such point source or sources shall be established which can reasonably be expected to contribute to the attainment or maintenance of such water quality.
>
> The emphasis has been added.

EPA's counsel caricatures the matter by stating that recognition of any such authority would give EPA the power "to instruct each individual farmer on his farming practices."Federal Appellants Memorandum on "Impossibility" at 12. Any limitation on a polluter forces him to modify his conduct and operations. For example, an air polluter may have a choice of installing scrubbers, burning different fuels or reducing output. Indeed, the authority to prescribe limits consistent with the best practicable technology may be tantamount to prescribing that technology. Of course, when alternative techniques are available, Congress intended to give the discharger as much flexibility as possible in choosing his mode of compliance. See, e. g., H.Rep.No.92-911, 92d Cong., 2d Sess. 107, reprinted in Legislative History at 794. We only indicate here that when numerical effluent limitations are infeasible, EPA may issue permits with conditions designed to reduce the level of effluent discharges to acceptable levels. This may well mean opting for a gross reduction in pollutant discharge rather than the fine-tuning suggested by numerical limitations. But this ambitious statute is not hospitable to the concept that the appropriate response to a difficult pollution problem is not to try at all.

It may be appropriate in certain circumstances for the EPA to require a permittee simply to monitor and report effluent levels; EPA manifestly has this authority.[FN22] Such permit conditions might be desirable where the full extent of the pollution problem is not known.

> FN22. FWPCA s 402(a)(3), (b)(2)(B), 33 U.S.C. s 1342(a)(3), (b)(2)(B) (Supp. V 1975). EPA concedes that it has this authority. Federal Appellants' Memorandum on "Impossibility" at 14.

C. General Permits

Finally, EPA argues that the number of permits involved in the absence of an exemption authority will simply overwhelm the Agency. Affidavits filed with the District Court indicate, for example, that the number of silviculture point sources may be over 300,000 and that there are approximately 100,000 separate storm sewer point sources.[FN23] We are and must be sensitive to ***1381 **159** EPA's concerns of an intolerable permit load. But the District Court and the various parties have suggested devices to mitigate the burden to accommodate within a practical regulatory scheme Congress's clear mandate that all point sources have permits. All that is required is that EPA makes full use of its interpretational authority. The existence of a variety of options belies EPA's infeasibility arguments.

> FN23. Affidavit of William H. McCredie, Director, Industrial Forestry, of the NFPA; Affidavit of Walter G. Gilbert, Chief of the Municipal Operations Branch, Municipal Waste Water Systems Div., EPA Office of Air and Water Programs.

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

[5] Section 402 does not explicitly describe the necessary scope of a NPDES permit. The most significant requirement is that the permit be in compliance with limitation sections of the Act described above. As a result NRDC and the District Court have suggested the use of area or general permits. The Act allows such techniques. Area-wide regulation is one well-established means of coping with administrative exigency. An instance is area pricing for natural gas producers, which the Supreme Court upheld in Permian Basin Area Rate Cases, 390 U.S. 747, 88 S.Ct. 1344, 20 L.Ed.2d 312 (1968).[FN24] A more dramatic example is the administrative search warrant, which may be issued on an area basis despite the normal Fourth Amendment requirement of probable cause for searching specific premises. Camara v. Municipal Court, 387 U.S. 523, 87 S.Ct. 1727, 18 L.Ed.2d 930 (1967).

> FN24. In Permian Basin the Supreme Court observed:
>
> The Commission has asserted, and the history of producer regulation has confirmed, that the ultimate achievement of the Commission's regulatory purposes may easily depend upon the contrivance of more expeditious administrative methods. The Commission believes that the elements of such methods may be found in area proceedings."(C)onsiderations of feasibility and practicality are certainly germane" to the issues before us. . . . We cannot, in these circumstances, conclude that Congress has given authority inadequate to achieve with reasonable effectiveness the purposes for which it has acted.
>
> 390 U.S. at 777, 88 S.Ct. at 1365.

In response to the District Court's order, EPA promulgated regulations that make use of the general permit device.42 Fed.Reg. 6846-53 (Feb. 4, 1977). The general permit is addressed to a class of point source dischargers, subject to notice and opportunity for public hearing in the geographical area covered by the permit. Although we do not pass on the validity of the February, 1977, regulations, they serve to dilute an objection of wholesale infeasibility.[FN25]

> FN25. It is also of some, albeit limited, significance that the House Committee on Government Operations found EPA's administrative problems with applying the permit program to animal feedlots "grossly exaggerated." It was of the opinion that the Administrator did not have authority to exempt point sources from the NPDES program. H.Rep.No.93-1012, 93d Cong., 2d Sess. 15-30 (1974).

Our approach is not fairly subject to the criticism that it elevates form over substance that the end result will look very much like EPA's categorical exemption. It is the function of the courts to require agencies to comply with legislative intent when that intent is clear, and to leave it to the legislature to make adjustments when the result is counterproductive.[FN26] At the same time, where intent on an issue is unclear,***1382 **160** we are instructed to afford the administering agency the flexibility necessary to achieve the general objectives of the Act.Weinberger v. Bentex Pharmaceuticals, Inc., 412 U.S. 645, 653,93 S.Ct. 2448,37 L.Ed.2d 235 (1973); United States v. Southwestern Cable Co., 392 U.S. 157, 177-78, 88 S.Ct. 1994, 20 L.Ed.2d 1001 (1968); Permian Basin Area Rate Cases, 390 U.S. 747, 780, 88 S.Ct. 1344, 20 L.Ed.2d 312 (1968). These lines of authority conjoin in our approach. We insist, as the Act insists, that a permit is necessary; the Administrator has no authority to exempt point sources from the NPDES program. But we concede necessary flexibility in the shaping of the permits that is not inconsistent with the clear terms of the Act.

> FN26. The Supreme Court recently reiterated this instruction in Union Electric Co. v. EPA, 427 U.S. 246, 96 S.Ct. 2518, 49 L.Ed.2d 474 (1976). There the Court held that the EPA Administrator could not consider claims of technological or economic infeasibility when approving state implementation plans under the Clean Air Act Amendments of 1970, 42 U.S.C. ss 1857a-1857l (1970). Such claims were held only to be cognizable by the states in the plan design stage or by the Administrator when drawing up compliance orders. Justice Marshall, writing for the Court, emphasized that federal courts are not to ignore clear expressions of Congressional intent in order to accommodate claims of technological or eco-

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

nomic infeasibility.

> Allowing such claims to be raised by appealing the Administrator's approval of an implementation plan . . . would frustrate congressional intent. It would permit a proposed plan to be struck down as infeasible before it is given a chance to work, even though Congress clearly contemplated that some plans would be infeasible when proposed. And it would permit the Administrator or a federal court to reject a State's legislative choices in regulating air pollution, even though Congress plainly left with the States, so long as the national standards were met, the power to determine which sources would be burdened by regulation and to what extent. Technology forcing is a concept somewhat new to our national experience and it necessarily entails certain risks. But Congress considered those risks in passing the 1970 Amendments and decided that the dangers posed by uncontrolled air pollution made them worth taking. Petitioner's theory would render that considered legislative judgment a nullity, and that is a result we refuse to reach.
>
> 427 U.S. at 268-69, 96 S.Ct. at 2531 (footnote omitted). See also Wilderness Society v. Morton, 156 U.S.App.D.C. 121, 171, 479 F.2d 842, 892 (1973), cert. denied, 411 U.S. 917, 93 S.Ct. 1550, 36 L.Ed.2d 309 (quoting United States v. City and County of San Francisco, 310 U.S. 16, 31-32, 60 S.Ct. 749, 84 L.Ed. 1050 (1940): " 'We cannot accept the contention that administrative rulings such as those relied on can thwart the plain purpose of a valid law.' ")

There is also a very practical difference between a general permit and an exemption. An exemption tends to become indefinite: the problem drops out of sight, into a pool of inertia, unlikely to be recalled in the absence of crisis or a strong political protagonist. In contrast, the general or area permit approach forces the Agency to focus on the problems of specific regions and requires that the problems of the region be reconsidered at least every five years, the maximum duration of a permit.[FN27]

> FN27.33 U.S.C. s 1342(a)(3), (b)(1)(B) (Supp. V 1975).

D. Other Interpretational Powers

[6] Many of the intervenor-appellants appear to argue that the District Court should be reversed because the categories exempted by EPA are nonpoint sources and are not, in fact, point sources.[FN28]We agree with the District Court "that the power to define point and nonpoint sources is vested in EPA and should be reviewed by the court only after opportunity for full agency review and examination."396 F.Supp. at 1396. The only issue precisely confronted by all the parties and properly framed for our consideration is whether the Administrator has authority to exempt point sources from the NPDES program. We also think that we should, for similar reasons, not consider at this time the appropriate definition of "discharge of any pollutant" as used in s 402. The American Iron and Steel Institute as amicus curiae has pressed upon us the argument that the term "discharge" as used in s 402 was intended to encompass only "volitional flows" that add pollutants to navigable waters. Most forms of runoff, it is argued, do not involve volitional flows.

> FN28. This appears to be the position of the Colorado River Water Conservation District and the NFPA with respect to silvicultural activities, and NMPF, less obviously, with respect to small dairy farms.
>
> We would put in the same category EPA's contention that the exempt categories are best handled under the areawide waste treatment management planning process of s 208 of the FWPCA, 33 U.S.C. s 1288 (Supp. V 1975). By its terms that section is concerned with areawide waste treatment plans that identify and control "agriculturally and silviculturally related non-point sources of pollution."Id.s 1288(b)(2)(F).

[7] We assume that FWPCA, however tight in some respects, leaves some leeway to EPA in the interpretation of that statute, and in that regard affords the Agency some means to consider matters of feasibility. However, for reasons already noted, we do not consider these particular contentions as to interpretation on the merits.

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

III. CONCLUSION

[8] As the Supreme Court recently stated in a FWPCA case, "(t)he question . . .is**161 *1383 not what a court thinks is generally appropriate to the regulatory process, it is what Congress intended . . .."E. I. du Pont de Nemours & Co. v. Train, 430 U.S. 112, 138, 97 S.Ct. 965, 980, 51 L.Ed.2d 204 (1977). We find a plain Congressional intent to require permits in any situation of pollution from point sources. We also discern an intent to give EPA flexibility in the structure of the permits, in the form of general or area permits. We are aware that Congress hoped that more of the NPDES permit program would be administered by the states at this point.[FN29] But it also made provision for continuing EPA administration. Imagination conjoined with determination will likely give EPA a capability for practicable administration. If not, the remedy lies with Congress.

FN29. See, e. g., 118 Cong.Rec. 10235 (1972) (Rep. Ichord) reprinted in Legislative History at 428.

So ordered.

MacKINNON, Circuit Judge, concurring:

I concur in the very sound and practical construction set forth in the foregoing opinion. Any person concerned with the actual application and enforcement of laws would necessarily be concerned by the application of the relevant legislation to all point sources in agriculture and particularly to irrigated agriculture. Concern would also lie in the congressional admission that present technology is inadequate to enable our citizens to meet the standards and deadlines the Act imposes; in passing the law, Congress was relying on the future "invention (of) new and imaginative developments that will allow us to meet the objectives of our bill."[FN1]In gambling parlance, Congress in enacting the law was "betting on the come." It is relying on our citizens in the near future to develop the complex technology to meet all the law's standards and objectives on time. The difficulty with that approach is that the hopes of Congress in this respect, like that of any gambler, might not be realized. The agency in this case, however, has shown that it takes a realistic view of both the situation and the task of meeting the difficult requirements and objectives of the Act. I sincerely hope that the ability of the agency to issue section 402 permits including general area permits [FN2] will permit it to meet the present and future compliance problems posed by the Act in a practical way.

FN1. Comments of Senator Montoya, 117 Cong.Rec. 38808 (1971), quoted in court's opinion at 12, reprinted in Legislative History at 1278.

FN2. As an example, an area permit with appropriate conditions and modifications could issue for the agricultural point sources within the Grand River Irrigation District, or the watershed of the Roaring Fork River and tributaries, etc.

Supreme Court of California
Kendra O'CONNELL, Plaintiff and Appellant,
v.
CITY OF STOCKTON et al., Defendants and Respondents.
No. S135160.

July 26, 2007.
Rehearing Denied Oct. 10, 2007.[FN*]

FN* Baxter, Chin, and Corrigan, JJ., are of the opinion the petition should be granted.

Background: City taxpayer filed action against city for declaratory and injunctive relief, challenging municipal ordinance permitting city to seize and hold for forfeiture any motor vehicle used to solicit act of prostitution or to attempt to consummate drug transaction. The Superior Court, San Joaquin County, No. CV019275,Elizabeth Humphreys, J., entered judgment for city after it sustained city's demurrer and taxpayer did not amend complaint. Taxpayer appealed. The Court of Appeal reversed, ruling that state law preempted ordinance, and the Supreme Court granted review.

Holdings: The Supreme Court, Kennard, J., held that:
(1) ordinance was preempted by California Uniform Controlled Substances Act (UCSA), and
(2) ordinance was preempted by statute addressing subject of seizures of vehicles by local entities as nuisances when used in connection with prostitution;
disapproving *Horton v. City of Oakland*, 82 Cal.App.4th 580, 98 Cal.Rptr.2d 371.

Judgment of Court of Appeal affirmed.

Corrigan, J., filed a dissenting opinion in which Baxter and Chin, JJ., joined.

Opinion, 27 Cal.Rptr.3d 696, superseded.

268k592 Concurrent and Conflicting Exercise of Power by State and Municipality
268k592(1) k. In General. Most Cited Cases
When the Legislature has not expressly stated its intent to occupy an area of law, courts look to whether it has impliedly done so for purposes of preemption analysis, which occurs in three situations: when (1) the subject matter has been so fully and completely covered by general law as to clearly indicate that it has become exclusively a matter of state concern; (2) the subject matter has been partially covered by general law couched in such terms as to indicate clearly that a paramount state concern will not tolerate further or additional local action; or (3) the subject matter has been partially covered by general law, and the subject is of such a nature that the adverse effect of a local ordinance on the transient citizens of the state outweighs the possible benefit to the locality.

Vehicle Code provision that set up a pilot program for local entities to declare vehicles used in specified prostitution-related offenses public nuisances was not a "special statute" for purposes of preemption analysis of city ordinance permitting the forfeiture of any vehicle used to solicit an act of prostitution or to acquire or attempt to acquire any controlled substance; statute was a general rather than a special law because it applied generally throughout the state, and was not limited to certain listed cities and counties. West's Ann.Cal.Vehicle Code §§ 21, 22659.5.

KENNARD, J.

***1065** ****585** Our state Constitution allows cities and counties to enact and enforce local ordinances so long as they are "not in conflict" with the state's "general laws." (Cal. Const., art. XI, § 7.) Any conflicting ordinance is preempted by state law and thus void.

At issue here is a city ordinance allowing forfeiture to the city of any vehicle used to commit certain acts made criminal by state law. The Court of Appeal held that state law preempts the city ordinance. We agree.

I.

Plaintiff Kendra O'Connell filed this taxpayer action (Code Civ. Proc., § 526a) against the City of Stockton and its city ***70** attorney (City) challenging ***1066** the constitutionality of a City ordinance labeled "Seizure and Forfeiture of Nuisance Vehicles." Plaintiff sought to enjoin the City's enforcement of the ordinance. The trial court sustained the City's demurrer to plaintiff's complaint, allowing plaintiff leave to amend her complaint. When plaintiff did not do so, the trial court dismissed the lawsuit.

On plaintiff's appeal, the Court of Appeal reversed. It held that the forfeiture ordinance****586** violated procedural due process because it failed to provide for a reasonably prompt postseizure probable cause hearing on the City's right to hold a vehicle pending its forfeiture. The Court of Appeal also held that the forfeiture ordinance was preempted by specific state law provisions governing vehicle forfeiture. This conclusion conflicted with *Horton v. City of Oakland* (2000) 82 Cal.App.4th 580, 98 Cal.Rptr.2d 371, in which a different Court of Appeal held that a vehicle forfeiture ordinance enacted by the City of Oakland, and similar to the one at issue here, was not preempted by state law. We granted review to resolve the conflict.[FN1]

FN1. In granting review in this case, we asked the parties to brief these three issues: "(1) Does California state law preempt provisions of the City of Stockton Municipal Code pertaining to 'Seizure and Forfeiture of Nuisance Vehicles'? (2) Do the Stockton municipal code provisions allowing the commencement of vehicle forfeiture proceedings 'as soon as practicable but in any case within one year' satisfy the state and federal constitutional requirements of proce-

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

dural due process? (3) Do the municipal code provisions allocating proceeds of vehicle forfeitures to the offices of the San Joaquin County District Attorney and the Stockton City Attorney violate state or federal constitutional guarantees of substantive or procedural due process?" Because we conclude here that state law preempts the provisions of the Stockton Municipal Code pertaining to seizure and forfeiture of nuisance vehicles, thus invalidating those provisions and rendering them unenforceable, we need not address the remaining two issues.

II.

Part XXV of Chapter 5 of the Stockton Municipal Code is entitled "Seizure and Forfeiture of Nuisance Vehicles." The term "forfeiture," as used here, means that the government assumes title to property used to further some illegal purpose. (See *United States v. Bajakajian* (1998) 524 U.S. 321, 118 S.Ct. 2028, 141 L.Ed.2d 314; *Bennis v. Michigan* (1996) 516 U.S. 442, 116 S.Ct. 994, 134 L.Ed.2d 68; *Calero-Toledo v. Pearson Yacht Leasing Co.* (1974) 416 U.S. 663, 682, 94 S.Ct. 2080, 40 L.Ed.2d 452.)

The ordinance at issue provides for the forfeiture of "[a]ny vehicle used *to solicit an act of prostitution, or to acquire or attempt to acquire any controlled substance,*" with "[a]ll right, title, and interest" thereafter vesting in the City. (Stockton Mun.Code, §§ 5-1000 & 5-1002, italics added.) A vehicle so used may be seized by a peace officer (1) with a court order; (2) incident to an arrest or a search conducted with a search warrant; or (3) with probable cause to believe the vehicle was used in the specified ***1067** crimes. (*Id.,* § 5-1003.) Within one year of police seizure of a vehicle, either the Stockton City Attorney or the San Joaquin County District Attorney "shall file a petition for forfeiture with the Superior Court of San Joaquin County." (*Id.,* § 5-1006, subds. (a) & (b).) The prosecuting agency must then give notice of the intended forfeiture proceedings to interested parties, advising them of their rights to file claims with the San Joaquin County Superior Court challenging the forfeiture. (*Id.,* § 5-1006, subd. (c).)

A trial of the vehicle forfeiture can be before either a court or a jury. The City *****71** has "the burden of proving by a preponderance of the evidence" that the vehicle was used for one of the prohibited purposes set out in the ordinance. (Stockton Mun.Code, § 5-1006, subd. (f).) Forfeited vehicles are to be sold; the proceeds are used first to pay any "bona fide or innocent purchaser, conditional sales vendor, mortgagee or lien holder" of the vehicle, when such payment is ordered by the prosecuting agency. (*Id.,* § 5-1008, subd. (a).) After paying the costs of publishing the notice of the forfeiture action and of storing, repairing and selling the vehicle (*id.,* § 5-1008, subd. (b)), remaining funds are distributed in proportionate shares to the involved prosecuting and law enforcement agencies. (*Id.,* § 5-1008, subd. (c).)

We now turn to the principles governing state law preemption of local ordinances.

III.

[1][2] We have in the past articulated the following principles on state law preemption of local ordinances. "Under article XI, section 7 of the California Constitution, '[a] county or city may make and enforce within its limits all local, police, sanitary, and other ordinances and regulations not in conflict with general [state] laws.'[¶] 'If otherwise valid local legislation conflicts with state law, ****587** it is preempted by such law and is void.' [Citations.] [¶] 'A conflict exists if the local legislation " '*duplicates, contradicts,* or *enters an area fully occupied* by general law, either expressly or by legislative implication. [Citations.]' " ' " (*Sherwin-Williams Co. v. City of Los Angeles* (1993) 4 Cal.4th 893, 897, 16 Cal.Rptr.2d 215, 844 P.2d 534(*Sherwin-Williams*), italics added; see also *American Financial Services Assn. v. City of Oakland* (2005) 34 Cal.4th 1239, 1251, 23 Cal.Rptr.3d 453, 104 P.3d 813(*American Financial*).) We explain the italicized terms below.

[3] A local ordinance *duplicates* state law when it is "coextensive" with state law. (*Sherwin-Williams, supra,* 4 Cal.4th at pp. 897-898, 16 Cal.Rptr.2d 215, 844 P.2d 534, citing *In re Portnoy* (1942) 21 Cal.2d 237, 240, 131 P.2d 1 [as "finding 'duplication' where local legislation purported to impose the same criminal prohibition that general law imposed"].)

[4] ***1068** A local ordinance *contradicts* state law when it is inimical to or cannot be reconciled with state law. (*Sherwin-Williams, supra,* 4 Cal.4th at p.

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

898, 16 Cal.Rptr.2d 215, 844 P.2d 534, citing *Ex Parte Daniels* (1920) 183 Cal. 636, 641-648, 192 P. 442 [as finding " 'contradiction' " in a local ordinance that set the maximum speed limit for vehicles below that set by state law].)

[5] A local ordinance *enters a field fully occupied* by state law in either of two situations-when the Legislature "expressly manifest[s]" its intent to occupy the legal area or when the Legislature "impliedly" occupies the field. (*Sherwin-Williams, supra,* 4 Cal.4th at p. 898, 16 Cal.Rptr.2d 215, 844 P.2d 534; see also 8 Witkin, Summary of Cal. Law (10th ed. 2005) Constitutional Law, § 986, p. 551["[W]here the Legislature has manifested an intention, expressly or by implication, wholly to occupy the field ... municipal power [to regulate in that area] is lost."].)

[6] When the Legislature has not expressly stated its intent to occupy an area of law, we look to whether it has *impliedly* done so. This occurs in three situations: when " '(1) the subject matter has been so fully and completely covered by general law as to clearly indicate that it has become exclusively a matter of state concern; (2) the subject matter has been partially covered by general law couched in such terms as to indicate clearly that a paramount***72** state concern will not tolerate further or additional local action; or (3) the subject matter has been partially covered by general law, and the subject is of such a nature that the adverse effect of a local ordinance on the transient citizens of the state outweighs the possible benefit to the' locality." (*Sherwin-Williams, supra,* 4 Cal.4th at p. 898, 16 Cal.Rptr.2d 215, 844 P.2d 534.)

[7][8][9] With respect to the *implied* occupation of an area of law by the Legislature's full and complete coverage of it, this court recently had this to say: " 'Where the Legislature has adopted statutes governing a particular subject matter, its intent with regard to occupying the field to the exclusion of all local regulation is not to be measured alone by the language used but by the whole purpose and scope of the legislative scheme.' " (*American Financial, supra,* 34 Cal.4th at p. 1252, 23 Cal.Rptr.3d 453, 104 P.3d 813, quoting *Tolman v. Underhill* (1952) 39 Cal.2d 708, 712, 249 P.2d 280.) We went on to say: " 'State regulation of a subject may be so complete and detailed as to indicate an intent to preclude local regulation.' " (*American Financial, supra,* at p. 1252, 23 Cal.Rptr.3d 453, 104 P.3d 813.) We thereafter observed: " 'Whenever the Legislature has seen fit to adopt a general scheme for the regulation of a particular subject, the entire control over whatever phases of the subject are covered by state legislation ceases as far as local legislation is concerned.' " (*Id.* at p. 1253, 23 Cal.Rptr.3d 453, 104 P.3d 813, quoting *In re Lane* (1962) 58 Cal.2d 99, 102, 22 Cal.Rptr. 857, 372 P.2d 897.) When a local ordinance is identical to a state statute, it is clear that " 'the field sought to be covered by the ordinance has already been occupied' " by state law. (*American Financial, supra,* at p. 1253, 23 Cal.Rptr.3d 453, 104 P.3d 813.)

***1069** [10] "[W]hen local government regulates in an area over which it traditionally has exercised control, such as the location of particular land uses, California courts will ****588** presume, absent a clear indication of preemptive intent from the Legislature, that such regulation is *not* preempted by state statute." (*Big Creek Lumber Co. v. County of Santa Cruz* (2006) 38 Cal.4th 1139, 1149, 45 Cal.Rptr.3d 21, 136 P.3d 821.)

With these principles in mind, we consider below whether state law preempts the City's vehicle forfeiture ordinance.

IV.

[11] As we noted earlier, the City's ordinance permits the forfeiture of any vehicle used to "to solicit an act of prostitution, *or* to acquire or attempt to acquire any controlled substance." (Stockton Mun.Code, § 5-1000, italics added.) We turn first to the latter aspect. The Court of Appeal concluded that this part of the ordinance was preempted by certain provisions of the California Uniform Controlled Substances Act (UCSA) (Health & Saf. Code, § 11000 et seq.) authorizing forfeiture of vehicles used in specified serious drug crimes. We too look to the UCSA as the source of state law preemption of this part of the City's forfeiture ordinance. But unlike the Court of Appeal, we do not rely solely on the UCSA's vehicle forfeiture provisions; instead, we consider the UCSA *as a whole,* a comprehensive scheme defining and setting the penalties for crimes involving controlled substances. This requires an analysis of various UCSA provisions pertinent here. It makes for tedious reading, but it is central to a resolution of the preemption issue presented.

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

As defined in the UCSA, controlled substances include every "drug, substance, or immediate precursor" listed in one of five schedules set out in Health and Safety ***73** Code sections 11054 through 11058. The schedules include all commonly known controlled substances, such as marijuana, cocaine, heroin, and methamphetamine, as well as many others less familiar. The UCSA not only regulates the lawful use and distribution of controlled substances (see Health & Saf. Code, §§ 11100, 11210-11211), but it also defines as criminal offenses the unlawful possession and distribution of specified controlled substances (see Health & Saf. Code, § 11350-11361).

In addition, the UCSA sets forth the penalties for criminal violations of its provisions. For example, unlawful possession of "not more than 28.5 grams of marijuana" is a misdemeanor offense carrying a maximum fine of $100 and no jail time. (Health & Saf. Code, § 11357, subd. (b).) For more serious possessory drug crimes and those involving manufacture, sale, or possession for sale, the UCSA prescribes felony penalties. (See Health & Saf. Code, ***1070** §§ 11350, subd. (a) [providing that certain specified possessory drug crimes "shall be punished by imprisonment in the state prison"], 11351. 5 [punishment for the sale of cocaine base is "imprisonment ... for ... three, four, or five years"], 11352, subd. (a) [providing state prison terms of three, four, or five years for transporting, importing into California, selling, furnishing, administering, or giving away certain controlled substances.].)

In Health and Safety Code section 11470, the Legislature specifies the following as subject to forfeiture: Controlled substances "manufactured, distributed, dispensed, or acquired in violation of this division"(*id.,* subd. (a)); the raw materials, products and equipment used, or intended to be used, to manufacture, compound, process, deliver, import or export controlled substances in violation of the UCSA (*id.,* subd. (b)); items used as containers for the property described in subdivisions (a) and (b) (*id.,* subd. (c)); "[a]ll books, records, and research products and materials, including formulas, microfilm, tapes, and data which are used, or intended for use, in violation of this division"(*id.,* subd. (d)); moneys, negotiable instruments, securities and other valuable items furnished or intended to be furnished in illicit exchanges of specified controlled substances as well as all proceeds traceable to such exchanges (*id.,* subd. (f)); and the real property of persons convicted of specified drug crimes involving such property, except for real property "used as a family residence or for other lawful purposes, or which is owned by two or more persons, one of whom had no knowledge of its unlawful use"(*id.,* subd. (g)).

Subdivision (e) of Health and Safety Code section 11470 governs forfeitures involving boats, airplanes, and *vehicles.* It makes the ****589** following subject to forfeiture: "The interest of any registered owner of a boat, airplane, or *any vehicle* [other than certain vehicles used for agricultural purposes] which has been *used as an instrument to facilitate the manufacture of, or possession for sale or sale of* " specified amounts of certain controlled substances including 14.25 grams or more of heroin or cocaine base, or a substance containing 14.25 grams or more of heroin or cocaine base, or 28.5 grams or more of all Schedule I controlled substances except marijuana, peyote, or psilocybin, or 10 pounds or more of marijuana, peyote, or psilocybin, or methamphetamine in any amount. (Health & Saf. Code, § 11470, subd. (e), italics added.) Health and Safety Code section 11488.4, subdivision (i)(1), states that forfeiture of airplanes, boats, and vehicles requires *proof beyond a reasonable doubt* that the property to be forfeited was used for one of the specified drug offenses. Thus, as relevant here, under the UCSA a vehicle can be forfeited to a government entity only upon proof beyond a reasonable ***74** doubt that the vehicle was "used as an instrument to facilitate the manufacture of, or possession for sale or sale" of specified amounts of certain controlled substances. (Health & Saf. Code, § 11470, subd. (e).)

***1071** In Health and Safety Code section 11469, the Legislature has established "guidelines" that local law enforcement and prosecutorial agencies should follow in enforcing the state law provisions regarding the seizure and forfeiture of property used to commit drug crimes in California. It points out, among other things, that "[l]aw enforcement is the principal objective of forfeiture," and that "[p]otential revenue [to be derived from property forfeiture] must not be allowed to jeopardize the effective investigation and prosecution of criminal offenses." (Health & Saf. Code, § 11469, subd. (a).) And it reminds prosecutors that they should "[w]henever appropriate ... seek criminal sanctions as to the underlying criminal acts which give rise to the forfeiture action." (*Id.,* subd. (c).)

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

Recognizing that forfeiture can sometimes lead to harsh results, the Legislature included this cautionary language in subdivision (j) of Health and Safety Code section 11469: "Although civil forfeiture is intended to be remedial by removing the tools and profits from those engaged in the illicit drug trade, it can have harsh effects on property owners in some circumstances. Therefore, law enforcement shall seek to protect the interests of innocent property owners, guarantee adequate notice and due process to property owners, and ensure that forfeiture serves the remedial purpose of the law."

We summarize: State law, through the UCSA (Health & Saf. Code, § 11000 et seq.), defines controlled substances, regulates their use, and sets penalties for their unlawful possession and distribution. Among the available penalties is vehicle forfeiture but, as pointed out earlier, only upon *proof beyond a reasonable doubt* of the vehicle's use to facilitate certain serious drug crimes (manufacture, sale, or possession for sale of methamphetamine, or of heroin or cocaine base, marijuana, peyote, or psilocybin and other Schedule I controlled substances in specified amounts). By way of contrast, the City's ordinance allows the harsh penalty of vehicle forfeiture upon proof merely by a *preponderance of evidence* of a vehicle's use simply "to attempt to acquire" any amount of any controlled substance (for instance, less than 28.5 grams of marijuana, a low-grade misdemeanor warranting only a $100 fine and no jail time and not subject to vehicle forfeiture under the UCSA).

The comprehensive nature of the UCSA in defining drug crimes and specifying penalties (including forfeiture) is so thorough and detailed as to manifest the Legislature's intent to preclude local regulation. The UCSA accordingly occupies the field of penalizing crimes involving controlled substances, thus impliedly preempting the City's forfeiture ordinance to the extent it calls for the forfeiture of vehicles used "to acquire or attempt to acquire" (Stockton Mun.Code, § 5-1000) controlled substances regulated under the UCSA. (See *American Financial, supra,* 34 Cal.4th at p. 1252, 23 Cal.Rptr.3d 453, 104 P.3d 813; *Tolman v. Underhill, supra,* 39 Cal.2d at p. 712, 249 P.2d 280.)

*1072 Relevant to this conclusion is our decision in *In re Lane, supra,* 58 Cal.2d 99, 22 Cal.Rptr. 857, 372 P.2d 897. That case involved **590 a statewide statutory scheme that, we held, fully occupied an area of regulation, thereby preempting a municipal ordinance covering the same legal area. The statewide statutory scheme consisted of comprehensive criminal proscriptions against specified sexual conduct, and the local law was a Los Angeles City ordinance criminalizing sexual intercourse between ***75 persons not married to each other. Although the state statutory scheme included laws prohibiting prostitution, pimping and pandering, bigamy, acts against public decency, rape, and various sex crimes against children, it did not include any offense for "simple fornication or adultery." (*In re Lane, supra,* 58 Cal.2d at p. 104, 22 Cal.Rptr. 857, 372 P.2d 897.) This court reasoned that the exclusion of fornication or adultery from the comprehensive state law scheme showed the Legislature's intent that "such conduct sh[ould] not be criminal." (*Ibid.*)

Here too the Legislature's comprehensive enactment of penalties for crimes involving controlled substances, but exclusion from that scheme of any provision for vehicle forfeiture for simple possessory drug offenses, manifests a clear intent to reserve that severe penalty for very serious drug crimes involving the manufacture, sale, or possession for sale of specified amounts of certain controlled substances.

We now consider the Court of Appeal's decision in *Horton v. City of Oakland, supra,* 82 Cal.App.4th 580, 98 Cal.Rptr.2d 371, which involved an ordinance similar to the one at issue here, but which reached a conclusion contrary to that of the Court of Appeal in this case. *Horton* held that the UCSA's forfeiture provisions did not preempt Oakland's ordinance allowing forfeiture of vehicles used to acquire or attempt to acquire controlled substances. It reasoned that the ordinance covered an area of law "untouched by statewide legislation" because the UCSA's forfeiture provisions, which apply only to persons possessing for sale or selling illicit drugs, were "silent with regard to vehicles used by *drug buyers.*" (*Horton v. City of Oakland, supra,* 82 Cal.App.4th at p. 586, 98 Cal.Rptr.2d 371, italics added.) In focusing solely on the UCSA's forfeiture provisions, *Horton* failed to consider the UCSA's comprehensive scheme of drug crime penalties, which include forfeiture of various items of property, including vehicles, when used in specified serious

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

drug offenses. Thus, *Horton* never addressed whether the UCSA as a whole constitutes a comprehensive scheme that fully occupies the field of penalizing crimes involving controlled substances. Because of our conclusion in this case that the UCSA's *comprehensive regulation of drug offenses as a whole* impliedly preempts the City's ordinance allowing forfeiture of vehicles used in acquiring controlled substances, we need not resolve whether the UCSA's *forfeiture provisions alone**1073 establish implied state preemption, the question entertained by the Courts of Appeal in this case and in *Horton.*[FN2]

> FN2. The dissent, relying on the Court of Appeal decision in *Horton,* asserts there is no conflict between the City's ordinance and the UCSA because the former covers drug buyers while the latter is silent on that topic. Not so. As comprehensive statewide legislation that broadly addresses the problems arising from illicit drugs, the UCSA, through its generally applicable laws against possession or attempted possession of all controlled substances, imposes criminal penalties on those who, in the words of the City's forfeiture ordinance, "acquire or attempt to acquire any controlled substance."

[12] We now turn to the other aspect of the City's forfeiture ordinance, allowing for the forfeiture of any vehicle used to solicit prostitution. The Court of Appeal below held that the Legislature had *expressly preempted* that field through the interplay of two Vehicle Code provisions: Vehicle Code section 21 (precluding local regulation in areas covered by the Vehicle Code absent express legislative authorization) and Vehicle Code section 22659.5, subdivision (a) (setting up a five-year pilot program for local entities to declare vehicles***76 used in specified prostitution-related offenses public nuisances). The Court of Appeal was correct, as we explain below.

Vehicle Code section 21 states: "Except as otherwise expressly provided, the provisions of this code are applicable and uniform throughout the State and in all counties and municipalities therein, and *no local authority **591 shall enact or enforce any ordinance on the matters covered by this code unless expressly authorized herein.*" (Italics added.) Thus, under section 21, local regulation of any "matter[ ]" covered by this state's Vehicle Code is prohibited unless the Legislature has expressly allowed local regulation in that field. (See *Rumford v. City of Berkeley* (1982) 31 Cal.3d 545, 550, 183 Cal.Rptr. 73, 645 P.2d 124; *Save the Sunset Strip Coalition v. City of West Hollywood* (2001) 87 Cal.App.4th 1172, 1177-1178, 105 Cal.Rptr.2d 172.)

The matter that is covered by the Vehicle Code and that is pertinent here is the authority of local government entities to declare a vehicle used in soliciting prostitution to be a public nuisance. That topic is addressed in the Vehicle Code by subdivision (a) of section 22659.5. That provision allows a city or a county to "adopt an ordinance establishing a five-year pilot program that implements procedures for declaring *any motor vehicle a public nuisance* " when used in the commission of specified criminal conduct, including acts covered in Penal Code section 647, subdivision (b), which prohibits engaging in acts of prostitution as well as soliciting or agreeing to engage in such acts. (Veh.Code, § 22659.5, subd. (a), italics added.)

Subdivision (b) of Vehicle Code section 22659.5 permits local ordinances adopted under the statutory scheme to "include procedures to *1074 enjoin and abate the declared [vehicular] nuisance by ordering the defendant not to use the vehicle again," and it allows for the forcible removal of vehicles. Under subdivision (c) of section 22659.5, any action taken to abate a public nuisance is limited to those "specified in subdivision (b)," that is, an injunction against or abatement of a declared nuisance or the removal of a nuisance vehicle. Section 22659.5 contains no language, however, that would allow a local entity such as the City here to seize and forfeit a vehicle that, through its use in soliciting prostitution, has created a public nuisance.

We summarize: Vehicle Code section 21 precludes local regulation of "matters covered" by the Vehicle Code, absent express legislative authorization. The use of vehicles in soliciting prostitution is a matter that the Vehicle Code covers in section 22659.5, which establishes a five-year pilot program under which cities and counties may treat as a public nuisance any vehicle used in soliciting prostitution, but that pilot program does not allow for forfeiture of the vehicle. There being no express legislative authorization for any other form of local regulation of the matter covered by Vehicle Code section 22659.5, Vehi-

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

cle Code section 21 precludes an ordinance like the City's, which seeks to regulate vehicle use in soliciting prostitution by requiring forfeiture of the vehicle. Under Vehicle Code section 21, therefore, the City's ordinance is *expressly preempted* by state law.

In addressing a similar ordinance adopted by the City of Oakland, the Court of Appeal in *Horton v. City of Oakland, supra,* 82 Cal.App.4th 580, 98 Cal.Rptr.2d 371, reached a contrary conclusion. First, asking whether Vehicle Code section 22659.5 had *impliedly* preempted the Oakland ordinance allowing forfeiture of any vehicle used to solicit prostitution, *Horton* concluded it had not, because Oakland had not adopted the five-year pilot program authorized by that statute. (*Horton, supra,* 82 Cal.App.4th at p. 589, 98 Cal.Rptr.2d***77 371.) *Horton* then considered whether there was *express* preemption under Vehicle Code section 21. As we have seen, absent express legislative authorization of local regulation in a legal area, Vehicle Code section 21 prohibits such regulation pertaining to any "matters" covered by the Vehicle Code. And section 22659.5 of the Vehicle Code specifically covers abatement of public nuisance vehicles used to solicit prostitution, the same subject of the Oakland ordinance at issue in *Horton.* But *Horton* reasoned that because Vehicle Code section 22659.5 allowed local entities to abate as a public nuisance any vehicle used to solicit prostitution only if the local entity participated in "an optional and limited pilot program" authorized by section 22659.5, that state statute, according to *Horton,* did not cover the same subject as the Oakland ordinance, which was not based on the pilot program. (*Horton, supra,* 82 Cal.App.4th at p. 591, 98 Cal.Rptr.2d 371.) We disagree.

**592 Vehicle Code section 22659.5, and the vehicle forfeiture ordinances in this case and in *Horton v. City of Oakland, supra,* 82 Cal.App.4th 580, 98 Cal.Rptr.2d 371,*1075 both address the same subject: abatement of a public nuisance created by vehicles used in soliciting prostitution. As the Court of Appeal here noted, the purpose of the state Legislature's enactment of section 22659.5 was to ascertain through a five-year pilot program " 'whether declaring motor vehicles a public nuisance when used in the commission of acts of prostitution would have a substantial effect upon the reduction of prostitution in neighborhoods, thereby serving the local business owners and citizens of our urban communities.' " (Quoting Stats.1993, ch. 485, § 1, pp. 2595-2596.) Because the Vehicle Code addresses the same subject-nuisance abatement of vehicles used to solicit prostitution-as the City's ordinance at issue, and the state Legislature has in no other statute provided for local regulation in this area, the City's ordinance is preempted by state law.[FN3]

> FN3. To the extent it is contrary to our conclusions here, we disapprove *Horton v. City of Oakland, supra,* 82 Cal.App.4th 580, 98 Cal.Rptr.2d 371.

[13] We also reject the City's characterization of Vehicle Code section 22659.5 as a "special statute" that cannot support a claim of preemption, because such claims must be "founded upon a 'conflict with *general laws* ' "(*Baldwin v. County of Tehama* (1994) 31 Cal.App.4th 166, 177, 36 Cal.Rptr.2d 886, italics added). Vehicle Code section 22659.5 allows, but does not require, a city or a county to adopt an ordinance declaring vehicles used in specified sex offenses to be a public nuisance in accord with the terms of the statute. But this statute is, contrary to the City's contention, a general rather than a special law because it applies generally throughout the state; it is not limited to certain listed cities and counties. Thus, Vehicle Code section 22659 cannot be characterized as special legislation. (See Cal. Const., art. IV, § 16 [authorizing the enactment of statutes applicable to particular cities or counties]; *White v. State of California* (2001) 88 Cal.App.4th 298, 305, 105 Cal.Rptr.2d 714 [Legislature must have rational basis for singling out a city or county to be " 'affected by [a special] statute' "]; *Baldwin, supra,* at p. 177, 36 Cal.Rptr.2d 886 [uncodified enactments granting limited powers over groundwaters to "specifically identified special districts" described as "special acts"].)

We now turn to the City's arguments made in overall support of its vehicle forfeiture ordinance. According to the City, the ordinance does not conflict with any state law, and therefore a necessary precondition***78 to state preemption is lacking. We disagree. As discussed earlier, the ordinance conflicts with state law because anyone using a vehicle "to solicit an act of prostitution, or to acquire or attempt to acquire any controlled substance"-conduct exclusively within the purview of state law-is subject to penalties in excess of those prescribed by the Legisla-

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

ture.

The City also argues that because it operates under a charter rather than under the general laws governing California cities and therefore meets the ***1076** requirement of Government Code section 34101 for a "chartered city," our state Constitution allows it to adopt and enforce ordinances in conflict with state law so long as the subject matter constitutes a "municipal affair [ ]" rather than a "statewide concern." (See Cal. Const., art. XI, § 5; *Johnson v. Bradley* (1992) 4 Cal.4th 389, 399, 14 Cal.Rptr.2d 470, 841 P.2d 990.) The City asserts that its vehicle forfeiture ordinance deals with a municipal affair, namely, abating the nuisance caused by vehicular traffic associated with the "illicit commercial activity" of obtaining drugs or soliciting prostitution within the City's boundaries. We are not persuaded, as explained below.

The illicit commercial activities-prostitution and trafficking in controlled substances-that are the focus of the City's vehicle forfeiture ordinance are matters of statewide concern that our Legislature has comprehensively addressed through various provisions of this state's Penal and Vehicle Codes, leaving no room for further regulation at the local level. One of the lesser harms associated with these crimes is the traffic congestion that may result when vehicles****593** are used to solicit acts of prostitution or to buy or sell drugs illegally on city streets. Although traffic congestion is a local problem that cities ordinarily are authorized to address, they may not do so by means of an ordinance that, by allowing forfeiture of a vehicle used to commit a specific state law violation, impinges on an area fully occupied or exclusively covered by state law.[FN4]

> FN4. Because the determination to preclude or to allow local regulation in a field addressed by state law resides exclusively with the state Legislature, that body can, of course, expressly authorize local entities to enact ordinances such as the one in this case that we conclude is preempted under existing law.

DISPOSITION

The judgment of the Court of Appeal is affirmed.

WE CONCUR: GEORGE, C.J., WERDEGAR, and MORENO, JJ.

Dissenting Opinion by CORRIGAN, J.

I respectfully dissent from the opinion of my colleagues.

The ordinance at issue is a practical and responsible attempt by the City of Stockton (Stockton) to address problems it, and many other cities face on a daily basis. The ordinance speaks to a narrow, pressing and quite real local concern. Street commerce in drugs and sex forces innocent people to share their neighborhoods with pimps, prostitutes, and drug dealers who use their streets as a bazaar for illegal transactions.

Article XI, section 7 of the California Constitution provides, "[a] county or city may make and enforce within it limits all local, police, sanitary, and ***1077** other ordinances and regulations not in conflict with general laws." Article XI, section 5 of the California Constitution, commonly referred to as the "home rule" doctrine, "reserves to charter cities the right to adopt and enforce ordinances that conflict with general state laws, provided the subject of the regulation is a 'municipal affair' rather *****79** than one of 'statewide concern.' [Citation.]" (*Horton v. City of Oakland* (2000) 82 Cal.App.4th 580, 584-585, 98 Cal.Rptr.2d 371(*Horton*).) "[W]hen local government regulates in an area over which it traditionally has exercised control, ... California courts will presume, absent a clear indication of preemptive intent from the Legislature, that such regulation is *not* preempted by state statute." (*Big Creek Lumber Co. v. County of Santa Cruz* (2006) 38 Cal.4th 1139, 1149, 45 Cal.Rptr.3d 21, 136 P.3d 821.)

In deciding whether a local ordinance enacted by a charter city, like Stockton, is valid, we apply the following analysis: " 'First, a court must determine whether there is a genuine conflict between a state statute and a municipal ordinance. [Citations.] Only after concluding there is an actual conflict should a court proceed with the second question; i.e., does the local legislation impact a municipal or statewide concern?' [Citation.] Courts should avoid making unnecessary choices between competing claims of municipal and state governments 'by carefully insuring that the purported conflict is in fact a genuine one, unresolvable short of choosing between one enactment and the other.' [Citation.] In other words, the preemp-

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

tion question begins with an inquiry into the existence of a conflict. If there is no conflict, the home rule doctrine is not brought into play." (*Horton, supra,* 82 Cal.App.4th at p. 585, 98 Cal.Rptr.2d 371.)

The majority relies on the California Uniform Controlled Substances Act (UCSA) (Health & Saf. Code, § 11000 et seq.) in reaching its conclusion that Stockton's ordinance is preempted because of a conflict. It views the UCSA as so comprehensive in nature "as to manifest the Legislature's intent to preclude local regulation." (Maj. opn., *ante,* 63 Cal.Rptr.3d at p. 74, 162 P.3d at p. 589.) The majority's reasoning, if accepted, requires preemption on an all-encompassing basis.

Unlike the majority, I cannot conclude that the overall structure of the UCSA "manifests a clear intent" to limit the penalty of vehicle forfeiture to "very serious drug crimes involving the manufacture, sale, or possession for sale of" drugs. (Maj. opn., *ante,* 63 Cal.Rptr.3d at p. 75, 162 P.3d at p. 590.) The Legislature has authorized a state prison sentence of up to three years for the simple ****594** possession of even a small amount of certain drugs. (health & saf. code, § 11350; pen.code, § 18.) it is difficult to conclude that the Legislature intended to deprive a person of freedom for simple possession, but intended to protect an automobile from forfeiture in only very serious cases of drug manufacture and sale.

1078** Certainly the Legislature has not said that was its intent and no legislative history [FN1] has been cited to support that conclusion.**80** Unlike the majority, I do not discern a conflict between the UCSA and Stockton's ordinance.

> FN1. In *Horton, supra,* 82 Cal.App.4th at page 588, 98 Cal.Rptr.2d 371, the court rejected an argument that it should "retroactively infer ... preemptive intent from recent legislative activity" based on the Legislature's passage of Assembly Bill No. 662 (1999-2000 Reg. Sess.) That bill amended Health and Saf. Code section 11469 et seq."to include forfeitures under the criminal profiteering statute. The bill also declared the Legislature's intent that forfeiture law be exclusive of any local ordinance or regulation, declaring the subject a matter of statewide concern." (*Horton,* at p. 588, 98 Cal.Rptr.2d 371.) The Governor vetoed Assembly Bill No. 662 explaining, " '[i]t is not appropriate for the State to take away the tools from Oakland, Sacramento, and other cities considering the adoption of similar ordinances without a more careful analysis of the amount of discretion which should be left to cities to craft their own remedies in response to local conditions.' " (*Horton,* at p. 588, 98 Cal.Rptr.2d 371.)The court concluded, "Thus the bill's statement that '[t]he provisions of this section are a clarification and declaration of existing law' is far from definitive. A 'clear indication' is one which needs no further elucidation. The Legislature's perceived need to 'clarify' demonstrates that the statute as drafted fails to provide the clear indication required to preempt by implication." *(Ibid.)*

In fact, "the [UCSA] is silent with regard to vehicles used by drug *buyers.*" (*Horton, supra,* 82 Cal.App.4th at p. 586, 98 Cal.Rptr.2d 371, fn. omitted.) Stockton has included these vehicles in its nuisance abatement program in an attempt to alleviate the concerns of its residents. Thus, rather than creating a conflict, Stockton's ordinance covers an area undisturbed by the UCSA.

Also, Stockton's ordinance does not conflict with provisions of the Vehicle Code. The majority relies on Vehicle Code section 21, which states, "Except as otherwise expressly provided, the provisions of this code are applicable and uniform throughout the State and in all counties and municipalities therein, and no local authority shall enact or enforce any ordinance on the matters covered by this code unless expressly authorized herein." The majority next refers to Vehicle Code section 22659.5, which authorizes a city to "adopt an ordinance establishing a five-year pilot program that implements procedures for declaring any motor vehicle a public nuisance" used in soliciting prostitution. (See maj. opn., *ante,* 63 Cal.Rptr.3d at p. 76, 162 P.3d at p. 591, italics omitted.) The majority concludes that because Vehicle Code section 22659.5 covers nuisance abatement of vehicles used in soliciting prostitution and "does not allow for forfeiture of the vehicle," Stockton's ordinance is preempted under the provisions of Vehicle Code section 21. (Maj. opn., *ante,* 63 Cal.Rptr.3d at p. 76, 162 P.3d at p. 591.)

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

I disagree. The provisions of Vehicle Code section 22659.5 merely authorize "an optional and limited pilot program." (*Horton, supra,* 82 Cal.App.4th at p. 591, 98 Cal.Rptr.2d 371.) Vehicle Code section 22659.5"does not preclude local governments from enacting other provisions if they decide not to adopt the proffered pilot program." (*Horton,* at p. 589, 98 Cal.Rptr.2d 371.) Like the Oakland ordinance in *Horton,* ***1079** Stockton's ordinance "was not enacted pursuant to section 22659. 5, [therefore] it is not constrained by the procedural requirements of that statute." (*Ibid.,* fn. omitted.) Thus, Stockton's ordinance does not conflict with state law. The ordinance does not interfere with the operation of state law as it is not "inimical" to its provisions in the relevant sense, and it "does not prohibit what the statute commands or command what it prohibits." (*Sherwin-Williams Co. v. City of Los Angeles* (1993) 4 Cal.4th 893, 902, 16 Cal.Rptr.2d 215, 844 P.2d 534.)

This court has counseled that we should carefully ensure "that the purported conflict is in fact a genuine one, unresolvable short of choosing between one enactment and the other." (*California Fed. Savings and Loan Assn. v. City of Los Angeles* (1991) 54 Cal.3d 1, 17, 283 Cal.Rptr. 569, 812 P.2d 916.) Contrary to the majority, I would hold that there ****595** is no conflict between state law and Stockton's ordinance.

In addition, assuming there is a conflict with state law, because Stockton is a charter city, it argues that its ordinance addresses a municipal affair: nuisance abatement. Stockton urges that the ordinance's forfeiture provisions are necessary to reduce the urban blight and traffic caused by prostitution and drug dealing. The majority summarily rejects this argument holding that although traffic congestion is a *****81** harm associated with these crimes, illicit commercial activities such as prostitution and drug trafficking are matters of statewide concern. (Maj. opn., *ante,* 63 Cal.Rptr.3d at p. 78, 162 P.3d at p. 592.)

The majority quotes our opinion in *Big Creek Lumber Co. v. County of Santa Cruz, supra,* 38 Cal.4th 1139, 45 Cal.Rptr.3d 21, 136 P.3d 821, for the rule that when a local government regulates an area which it traditionally exercised control, courts will presume that the regulation is not preempted by state statute, absent the Legislature's clear intention to preempt. (*Id.* at p. 1149, 45 Cal.Rptr.3d 21, 136 P.3d 821; see maj. opn., *ante,* 63 Cal.Rptr.3d at p. 72, 162 P.3d at p. 592.) The majority fails to follow this rule. It cannot be said that when the Legislature enacted the UCSA and Vehicle Code, it intended to invalidate local nuisance ordinances targeting the urban blight created by drug trafficking and prostitution.

The majority also relies on *American Financial Services Assn. v. City of Oakland* (2005) 34 Cal.4th 1239, 23 Cal.Rptr.3d 453, 104 P.3d 813(*American Financial*), where we concluded that a statutory scheme that regulated predatory lending practices preempted an Oakland ordinance that purported to regulate predatory lending practices in the Oakland home mortgage market. In that case, we found it significant that "the Legislature was not suddenly entering an area previously governed by municipalities," but instead was addressing a subject matter that historically has been regulated "at the state, not the municipal, level." (*Id.* at p. 1255, 23 Cal.Rptr.3d 453, 104 P.3d 813.)

***1080** Here, by contrast, Stockton passed an ordinance aimed at nuisance abatement, a traditionally local police power.[FN2] (*People v. Johnson* (1954) 129 Cal.App.2d 1, 6, 277 P.2d 45 ["[a] city has the power to pass general police regulations to prevent nuisances"]; see also *The City of Oakland v. Williams* (1940) 15 Cal.2d 542, 549, 103 P.2d 168 [cities " possess the necessary police power, both under constitutional grant and under their respective charters, to abate nuisances"].) In acknowledging what constitutes a "nuisance," the Civil Code defines the term broadly as including "[a]nything which is injurious to health, including, *but not limited to,* the illegal sale of controlled substances," or anything that is " indecent or offensive ... so as to interfere with the comfortable enjoyment of life or property," or anything that "unlawfully obstructs the free passage or use, in the customary manner, of any ... public park, square, street, or highway...." (Civ.Code, § 3479, italics added; see also Civ.Code, § 3480["[a] public nuisance is one which affects at the same time an entire community or neighborhood, or any considerable number of persons, although the extent of the annoyance or damage inflicted upon individuals may be unequal"].) Therefore, the traditionally local nature of nuisance regulation distinguishes this case from the situation presented in *American* *****82** *Financial, supra,* 34 Cal.4th 1239, 23 Cal.Rptr.3d 453, 104 P.3d

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

813.

> FN2. The majority relies on *In re Lane* (1962) 58 Cal.2d 99, 22 Cal.Rptr. 857, 372 P.2d 897, in support of its conclusion that the UCSA thoroughly "occupies the field of penalizing crimes involving controlled substances." (Maj. opn., *ante,* 63 Cal.Rptr.3d at p. 74, 162 P.3d at p. 589.) *Lane* is distinguishable. It involved a statewide statutory scheme providing comprehensive criminal proscriptions against specified sexual conduct. *Lane* held void, a local ordinance that appears quaint nearly 50 years later, which purported to criminalize sexual intercourse between unmarried persons.
>
> This case involves a completely different situation. Here, Stockton's ordinance attempts to address the problems caused by drug dealing and prostitution, activities the city understandably views as public nuisances. (Civ.Code, §§ 3479, 3480, 3491.)

The majority does not address the compelling problem of urban blight for the poor and elderly, which is immediate, significant, and certainly a local concern. The aged homeowner****596** who must shut herself inside while drug transactions are conducted in her front yard, and the parents who must walk their children to school while commercial sex acts are performed in cars parked at the curb pay a heavy and very local price. Not all Californians confront these problems, but those who do have a pressing and localized need for protection.

It should not be the case that local governments require the permission of the state to protect their own citizens from nuisances that profoundly affect their quality of life and the quiet enjoyment of their own property.

***1081** Accordingly, I would reverse the judgment of the Court of Appeal.[FN3]

> FN3. I believe the distinctions drawn in *Horton, supra,* 82 Cal.App.4th 580, 98 Cal.Rptr.2d 371, are sound and should be adopted. *Horton* specifically left open the due process question raised by ordinances that impose a reduced burden of proof and the authorization of a one-year time frame before requiring notice and providing an opportunity for challenging the forfeiture. These procedural provisions are worthy of careful scrutiny.

Supreme Court of California
Jerry RICHMOND et al., Plaintiffs and Appellants,
v.
SHASTA COMMUNITY SERVICES DISTRICT, Defendant and Respondent.
No. S105078.

Feb. 9, 2004.

Background: Property owners brought action challenging constitutionality of resolution adopted by water district that increased connection fee charged to new users and continued unchanged, as part of connection fee, a fee for fire suppression. The Superior Court, Shasta County, No. 0134636,Richard A. McEachen, J., upheld enactment. Property owners appealed. The Court of Appeal affirmed in part and reversed in part. The Supreme Court granted review, superseding the opinion of the Court of Appeal.

Holdings: The Supreme Court, Kennard, J., held that:
(1) district's capacity charge, imposed on applicants for new service connections, was not an "assessment" subject to state constitutional restrictions;
(2) district's fee for fire suppression as part of new connection fee was not subject to constitutional restrictions on fees; and
(3) district could amend ordinance establishing new connection fees by resolution.

Judgment of the Court of Appeal reversed and matter remanded to that court with directions.

Opinion, 116 Cal.Rptr.2d 343, superseded.

Water district's capacity charge, imposed on applicants for new service connections, was not an "assessment" subject to state constitutional restrictions on assessments, since district could only estimate number of connections and could not identify specific parcels for which new applications would be made, as required by constitutional provision. KENNARD, J.

In November 1996, California voters adopted Proposition 218, the Right to Vote on Taxes Act, which added articles XIII C and XIII D to the California Constitution. (See *Apartment Assn. of Los Angeles County, **415 Inc. v. City of Los Angeles* (2001) 24 Cal.4th 830, 835, 102 Cal.Rptr.2d 719, 14 P.3d 930.) Article XIII D of the state Constitution (hereafter article XIII D) specifies various restrictions and requirements for assessments, fees, and charges that local governments impose on real property or on persons as an incident of property ownership. Here, the main issue is whether a charge that a local water district imposed as a condition of making a new connection to the water system, and that the district used to finance capital improvements to the water system, is subject to the restrictions of article XIII D. Other questions presented are whether article XIII D prohibits a local water district from continuing to include in the new connection fees a fire suppression charge, the proceeds of which are used to purchase firefighting and emergency medical equipment for the district's volunteer fire department, and whether an ordinance imposing a water connection fee may be amended by a resolution.

On these questions, we conclude: (1) a capacity charge imposed as a condition for making a new connection to a water system, the proceeds of which are used to finance capital improvements, is not an assessment within the meaning of article XIII D, and thus it is not subject to article XIII D's restrictions on assessments; (2) a fire suppression fee imposed as a condition for making a new connection to a water system, the proceeds of which are used to purchase

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

firefighting and emergency medical***124 equipment, is not a property-related fee or charge under article XIII D, and thus it is not subject to article XIII D's prohibition against property-related fees and charges for general governmental services; and (3) an ordinance enacted by a community services district to impose a water connection fee may be amended by a resolution. Because these conclusions are consistent with the trial court's judgment but inconsistent with part of the Court of Appeal's opinion, we will reverse that court's judgment with directions to affirm the trial court's judgment.

I. FACTS AND PROCEDURAL HISTORY

Because neither party petitioned the Court of Appeal for a rehearing, we take the facts largely from that court's opinion. (See Cal. Rules of Court, rule 28(c)(2).)

Defendant Shasta Community Services District (the District) is a local public entity organized under the community services district law (Gov.Code, § 61000 et seq.). It operates a water system for residential and commercial users and a volunteer fire department that provides both fire suppression and emergency medical services. In February 1994, the District adopted an ordinance (No. 1-94) establishing a "standard connection fee" of $2,000, plus the cost of a water meter, for new water service connections. *416 According to the ordinance, this fee included a capacity charge [FN1] of $600 for future improvements to the water system and a fire suppression charge of $400. The ordinance did not expressly allocate the remaining $1,000, but one may infer that it covered the cost of installing the water service connection because the ordinance also provided that if the water main was not on the same side of the street or highway as the property to be served, "the District will charge the actual **521 cost of the connection to the extent such cost exceed[s] the sum of $1,000."

> FN1. The Government Code defines a "capacity charge" as "a charge for facilities in existence at the time a charge is imposed or charges for new facilities to be constructed in the future that are of benefit to the person or property being charged." (Gov.Code, § 66013, subd. (b)(3).)

In November 1997, the District adopted a resolution (No. 10-97) to amend this ordinance. According to the resolution, applicants for new water service connections would be required to pay: (1) a "standard connection fee"; (2) the actual cost of a water meter; and (3) if the property owner chose to have the District install the service connection, the "actual cost of the materials, labor, and overhead" for installing the "entire service connection including the meter, line setter, meter box, appurtenant equipment, and mainline extension, if any." The "standard connection fee" consisted of a $3,176 capacity charge for capital improvements to the water system and a $400 fire suppression charge. The resolution stated that the $3,176 capacity charge was "based upon estimated project costs of $762,300 for future improvements assigned to the new development of 240 future connections which equals $3,176 per connection."

In March 1998, plaintiffs Jerry Richmond, Linda Panich, Hank Edelstein, and Victoria Edelstein, both individually and doing business as a joint venture, brought this action to test the validity of the resolution increasing the fees for new connections. (Code Civ. Proc., § 860; Gov.Code, §§ 66013, 66022.) They alleged that they owned real property within the District and also within an area proposed for annexation into the District. They challenged the resolution on many grounds, only three of which are relevant here: (1) The resolution imposed an assessment within the meaning of article XIII D, but ***125 the District had not satisfied the constitutional requirements for imposing an assessment; (2) the $400 fire suppression charge was a "fee" or "charge" within the meaning of article XIII D, and it violated article XIII D's prohibition against fees or charges for general governmental services; and (3) the 1994 ordinance could be amended only by another ordinance, not by a mere resolution. Plaintiffs requested a declaratory judgment that the resolution was void and a permanent injunction restraining the District from enforcing it.

*417 The action was tried to the court without a jury. At the trial, the District presented evidence showing, among other things, that the capital improvements to be funded by the $3,176 capacity charge, including a new 500,000-gallon storage tank, would both remedy existing deficiencies in the water system and expand the system's ability to provide service to new customers through new connections. The $3,176 charge was calculated by allocating 50 percent of the cost of the improvements to new connections and 50 percent to

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

existing connections. Water customers throughout the district would benefit from the improvements, but customers in certain higher-elevation areas would receive somewhat less benefit than other customers. After considering the evidence, the superior court granted judgment for the District. The court concluded: (1) The connection fee imposed by resolution No. 10-97 is not a special assessment but a development fee exempt from article XIII D; (2) the fire suppression charge is merely the continuation of a fee imposed before article XIII D was enacted; and (3) the connection fee could legally be adopted by a resolution (enactment of an ordinance was not required).

On plaintiffs' appeal, the Court of Appeal affirmed the judgment, except as to the fire suppression charge. The court reasoned that the District's connection fee was not an assessment within the meaning of article XIII D because that constitutional provision by implication defines an assessment as a charge imposed on specific identified parcels, whereas the connection fee was not imposed on identified parcels. Because the connection fee was imposed only when a property owner requested a new service connection, the specific properties for which connections would be sought could not be identified (although the number of such requests could be estimated), and thus the connection charge could not be characterized as an assessment. The Court of Appeal also concluded that the connection fee, because it was incurred only when the owner voluntarily requested a new service connection, was properly characterized as a development fee, and as such it was exempt from the requirements of article XIII D.

****522** With respect to the fire suppression charge, however, the Court of Appeal accepted plaintiff's argument that it was a fee for general governmental services prohibited by section 6, subdivision (b)(5), of article XIII D. The Court of Appeal rejected the District's argument that this provision did not apply to fees authorized by laws enacted before article XIII D became effective, but only to fees that were newly enacted or increased thereafter.

Finally, the Court of Appeal concluded that the District could validly use a resolution to amend an ordinance.

*418 II. THE CAPACITY CHARGE

[1][2][3][4] To determine whether the District's $3,176 capacity charge, imposed only on applicants for new service connections, violates article XIII D's restrictions on assessments, we must interpret our state Constitution. "The principles of constitutional interpretation are similar to those governing statutory construction." *****126** (*Thompson v. Department of Corrections* (2001) 25 Cal.4th 117, 122, 105 Cal.Rptr.2d 46, 18 P.3d 1198.) The aim of constitutional interpretation is to determine and effectuate the intent of those who enacted the constitutional provision at issue. (*Ibid.*) To determine that intent, we begin by examining the constitutional text, giving the words their ordinary meanings. (*Ibid.;* accord, *Leone v. Medical Board* (2000) 22 Cal.4th 660, 665, 94 Cal.Rptr.2d 61, 995 P.2d 191.)

Section 2 of article XIII D defines an "assessment" as "any levy or charge upon real property ... for a special benefit conferred upon the real property...." (Art. XIII D, § 2, subd. (b).) It defines "special benefit" as "a particular and distinct benefit over and above general benefits conferred on real property located in the district or to the public at large...." (*Id.*, § 2, subd. (i).)

Section 4 of article XIII D establishes procedures and requirements for assessments. A local public agency may not impose an assessment, as defined in article XIII D, unless: (1) the agency identifies "all parcels which will have a special benefit conferred upon them and upon which an assessment will be imposed" (art. XIII D, § 4, subd. (a)); (2) the agency obtains an engineer's report that supports the assessment (*id.*, § 4, subd. (b)); (3) the assessment does not exceed the reasonable cost of the proportional special benefit conferred on the affected parcel (*id.*, § 4, subds. (a) & (f)); and (4) after giving notice to affected property owners and holding a public hearing, the agency does not receive a majority protest based on ballots "weighted according to the proportional financial obligation of the affected property"(*id.*, § 4, subds. (c)-(e)).

To determine what constitutes an assessment under article XIII D, it is necessary to consider not only article XIII D's definition of an assessment, but also the requirements and procedures that article XIII D imposes on assessments. Article XIII D requires that an agency imposing an assessment identify "all parcels which *will* have a special benefit conferred upon them and upon which an assessment *will* be im-

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

posed." (Art. XIII D, § 4, subd. (a), italics added.) The agency then must give written notice of the proposed assessment to the owners of these identified parcels (*id.*, § 4, subd. (c)) and provide an opportunity for a protest using ballots "weighted according to the proportional financial obligation of the affected property"(*id.*, § 4, subd. (e)).

419** Because the capacity charge is imposed only on property owners who apply for a new service connection, the District cannot identify the parcels upon which the capacity charge will be imposed. Here, the District *estimated* that there would be 240 new connection applications, but the District did not and could not *identify* the specific parcels for which new connection applications would be made. At most, the District can identify the parcels within its boundaries on which the capacity charge *would* be imposed *if* the owners applied for a service connection. But the matter is more complex, because many existing undeveloped parcels would likely be subdivided into an indeterminable number of smaller parcels, for each of which a connection might be requested, thus making it impossible to now determine "the proportional financial obligation of the affected property." And even this understates the problem, because owners of property outside the District's*523** boundaries may seek service connections by applying for annexation of their property into the District. Therefore, it is impossible for the District to comply with article XIII D's requirement that the agency identify the parcels on which the assessment will be imposed *****127** and provide an opportunity for a majority protest weighted according to the proportional financial obligation of the affected property.

We agree with the Court of Appeal that the proper conclusion to be drawn from this impossibility of compliance is that an assessment within the meaning of article XIII D must not only confer a special benefit on real property, but also be imposed on identifiable parcels of real property. Because the District does not impose the capacity charge on identifiable parcels, but only on individuals who request a new service connection, the capacity charge is not an assessment within the meaning of article XIII D.

[5] This construction is consistent with settled rules of constitutional interpretation. "Courts construe constitutional phrases liberally and practically; where possible they avoid a literalism that effects absurd, arbitrary, or unintended results." (*Carman v. Alvord* (1982) 31 Cal.3d 318, 327, 182 Cal.Rptr. 506, 644 P.2d 192; see also *California Correctional Peace Officers Assn. v. State Personnel Bd.* (1995) 10 Cal.4th 1133, 1147, 43 Cal.Rptr.2d 693, 899 P.2d 79 ["a practical construction is preferred"].) Construing article XIII D's definition of assessment as applying only to charges imposed on identifiable parcels avoids the probably unintended result of prohibiting local water districts from imposing capacity charges, no matter how modest or reasonable, for new connections because of the inherent impossibility of identifying in advance the parcels for which new connections would later be requested.

This construction is also consistent with article XIII D's definition of an assessment as a "levy or charge *upon real property*...." (Art. XIII D, § 2, ***420** subd. (b), italics added.) [FN2] The District does not impose the capacity charge on real property as such, but on individuals who apply for new service connections. It is the applicant who must pay, and the District may not impose a lien or otherwise have recourse to the property to compel payment. Rather, the District simply does not initiate water service until the charge is paid. A charge that operates in this way cannot be described as a charge upon real property, within the meaning of article XIII D.

> FN2. In this regard, it may be instructive to compare article XIII D's definition of an assessment as a "levy or charge upon real property" (*id.*, § 2, subd. (b)) with its definition of a fee or charge as a "levy ... upon a parcel or upon a person as an incident of property ownership ..." (*id.*, § 2, subd. (e)). Although a property-related fee or charge may be imposed either on the property itself or upon the owner as an incident of ownership, a levy must be imposed on the property itself to qualify as an assessment under article XIII D.

Finally, this construction is consistent with the aim of Proposition 218 to enhance taxpayer consent. Here, the District proposed to divide the costs of new capital improvements between users receiving service through existing connections and users applying for new connections. This case concerns only imposition of costs on new connections. Presumably, any costs imposed on customers receiving service through ex-

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

isting connections would be subject to article XIII D's voter approval requirements, and thus their consent. Customers who apply for new connections give consent by the act of applying. Moreover, water connection fees are already subject to significant constraints under Government Code section 66013.[FN3]

FN3. Government Code section 66013 provides:

"(a) Notwithstanding any other provision of law, when a local agency imposes fees for water connections or sewer connections, or imposes capacity charges, those fees or charges shall not exceed the estimated reasonable cost of providing the service for which the fee or charge is imposed, unless a question regarding the amount of the fee or charge imposed in excess of the estimated reasonable cost of providing the services or materials is submitted to, and approved by, a popular vote of two-thirds of those electors voting on the issue.

"(b) As used in this section:

"(1) 'Sewer connection' means the connection of a structure or project to a public sewer system.

"(2) 'Water connection' means the connection of a structure or project to a public water system, as defined in subdivision (f) of Section 116275 of the Health and Safety Code.

"(3) 'Capacity charge' means a charge for facilities in existence at the time a charge is imposed or charges for new facilities to be constructed in the future that are of benefit to the person or property being charged.

"(4) 'Local agency' means a local agency as defined in Section 66000.

"(5) 'Fee' means a fee for the physical facilities necessary to make a water connection or sewer connection, including, but not limited to, meters, meter boxes, and pipelines from the structure or project to a water distribution line or sewer main, and that does not exceed the estimated reasonable cost of labor and materials for installation of those facilities.

"(c) A local agency receiving payment of a charge as specified in paragraph (3) of subdivision (b) shall deposit it in a separate capital facilities fund with other charges received, and account for the charges in a manner to avoid any commingling with other moneys of the local agency, except for investments, and shall expend those charges solely for the purposes for which the charges were collected. Any interest income earned from the investment of moneys in the capital facilities fund shall be deposited in that fund.

"(d) For a fund established pursuant to subdivision (c), a local agency shall make available to the public, within 180 days after the last day of each fiscal year, the following information for that fiscal year:

"(1) A description of the charges deposited in the fund.

"(2) The beginning and ending balance of the fund and the interest earned from investment of moneys in the fund.

"(3) The amount of charges collected in that fiscal year.

"(4) An identification of all of the following:

"(A) Each public improvement on which charges were expended and the amount of the expenditure for each improvement, including the percentage of the total cost of the public improvement that was funded with those charges if more than one source of funding was used.

"(B) Each public improvement on which

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

charges were expended that was completed during that fiscal year.

"(C) Each public improvement that is anticipated to be undertaken in the following fiscal year.

"(5) A description of each interfund transfer or loan made from the capital facilities fund. The information provided, in the case of an interfund transfer, shall identify the public improvements on which the transferred moneys are, or will be, expended. The information, in the case of an interfund loan, shall include the date on which the loan will be repaid, and the rate of interest that the fund will receive on the loan.

"(e) The information required pursuant to subdivision (d) may be included in the local agency's annual financial report.

"(f) The provisions of subdivisions (c) and (d) shall not apply to any of the following:

"(1) Moneys received to construct public facilities pursuant to a contract between a local agency and a person or entity, including, but not limited to, a reimbursement agreement pursuant to Section 66003.

"(2) Charges that are used to pay existing debt service or which are subject to a contract with a trustee for bondholders that requires a different accounting of the charges, or charges that are used to reimburse the local agency or to reimburse a person or entity who advanced funds under a reimbursement agreement or contract for facilities in existence at the time the charges are collected.

"(3) Charges collected on or before December 31, 1998.

"(g) Any judicial action or proceeding to attack, review, set aside, void, or annul the ordinance, resolution, or motion imposing a fee or capacity charge subject to this section shall be brought pursuant to Section 66022.

"(h) Fees and charges subject to this section are not subject to the provisions of Chapter 5 (commencing with Section 66000), but are subject to the provisions of Sections 66016, 66022, and 66023.

"(i) The provisions of subdivisions (c) and (d) shall only apply to capacity charges levied pursuant to this section."

*****128 *421 **524** Plaintiffs rely on this court's decision in *****129** *San Marcos Water Dist. v. San Marcos Unified School Dist.* (1986) 42 Cal.3d 154, 228 Cal.Rptr. 47, 720 P.2d 935(*San Marcos*). The issue there was whether a provision of the state Constitution exempting public entities from payment of property taxes (Cal. Const., art. XIII, § 3, subd. (b)) applied to a local water district's capacity fee, used to fund capital improvements to the water system. The constitutional property tax exemption for public entities had been construed to include ***422** special assessments, but not user fees, and thus the issue presented to this court was whether the capacity charge was more properly characterized as a special assessment or as a user fee for purposes of this constitutional provision. We concluded that a capacity charge was a hybrid, in the sense that it had some characteristics of a user fee and some characteristics of an assessment. (*San Marcos, supra,* at p. 163, 228 Cal.Rptr. 47, 720 P.2d 935.) We concluded also, however, that the fee should be considered an assessment for purposes of the public entity property tax exemption. We established a bright-line rule that "a fee aimed at assisting a utility district to defray costs of capital ****525** improvements will be deemed a special assessment from which other public entities are exempt." (*Id.* at pp. 164-165, 228 Cal.Rptr. 47, 720 P.2d 935.) [FN4]

FN4. In response to our *San Marcos* decision, the Legislature granted local water districts authority to impose capacity charges on other public entities, thereby removing the public entity exemption. (See Gov.Code, §§ 54999-54999.6; *Utility Cost Management v. Indian Wells Valley Water Dist.* (2001) 26 Cal.4th 1185, 1189, 114 Cal.Rptr.2d 459, 36

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

P.3d 2; *City of Marina v. Board of Trustees* (2003) 109 Cal.App.4th 1179, 1182-1183, 135 Cal.Rptr.2d 815; *Utility Cost Management v. East Bay Mun. Utility Dist.* (2000) 79 Cal.App.4th 1242, 1246-1247, 94 Cal.Rptr.2d 777.)

San Marcos, supra, 42 Cal.3d 154, 228 Cal.Rptr. 47, 720 P.2d 935, is not on point here. We were not there construing the term "assessment" as used in article XIII D; instead, we were construing the constitutional provision exempting public entities from property taxes (Cal. Const., art. XIII, § 3, subd. (b)), a provision in which the term "assessment" does not appear. In deciding what constituted an assessment in *San Marcos,* we sought to determine and effectuate the constitutional purpose for exempting public entities from property taxes, a purpose that plays no role in interpreting the provisions of article XIII D that are at issue here. The characteristic that we found determinative for identifying assessments in *San Marcos*-that the proceeds of the fee were used for capital improvements-forms no part of article XIII D's definition of assessments. For each of these reasons, we agree with the Court of Appeal that *San Marcos* is not helpful, much less controlling, in this strikingly different context. (See *Ginns v. Savage* (1964) 61 Cal.2d 520, 524, fn. 2, 39 Cal.Rptr. 377, 393 P.2d 689 ["Language used in any opinion is of course to be understood in the light of the facts and the issue then before the court, and an opinion is not authority for a proposition not therein considered."]; *People v. Woodhead* (1987) 43 Cal.3d 1002, 1008, 239 Cal.Rptr. 656, 741 P.2d 154 [a word may have different legal meanings in different contexts]; *In re Marriage of Buol* (1985) 39 Cal.3d 751, 757, fn. 6, 218 Cal.Rptr. 31, 705 P.2d 354 [same].)

[6] Plaintiffs invoke the rule that when a term has been given a particular meaning by a judicial decision, it should be presumed to have the same meaning in later-enacted statutes or constitutional provisions. (See *People v. Hurtado* (2002) 28 Cal.4th 1179, 1188-1189, 124 Cal.Rptr.2d 186, 52 P.3d 116; *Arnett v. Dal* ***130** *Cielo* (1996) 14 Cal.4th 4, 19, 56 Cal.Rptr.2d 706, 923 **423** P.2d 1.) Plaintiffs argue that *San Marcos, supra,* 42 Cal.3d 154, 228 Cal.Rptr. 47, 720 P.2d 935, gave the term "assessment" a precise legal meaning as applying to capacity charges used to fund capital improvements, and therefore the term "assessment" in article XIII D, enacted after *San Marcos,* must be construed to have the same meaning. But the rule that plaintiffs invoke does not apply when, as here, the statute or constitutional provision contains its own definition of the term at issue: "If the Legislature has provided an express definition of a term, that definition ordinarily is binding on the courts." (*Curle v. Superior Court* (2001) 24 Cal.4th 1057, 1063, 103 Cal.Rptr.2d 751, 16 P.3d 166.) Here, article XIII D provides both an express definition of assessment and an implied qualification of that definition through the requirement that the agency identify the specific parcels on which the assessment will be imposed.

Plaintiffs next rely on the definition of assessment in Government Code section 53750, part of the Proposition 218 Omnibus Implementation Act (Gov.Code, §§ 53750-53753) that the Legislature enacted in 1997. (Stats.1997, ch. 38, § 5.) Government Code section 53750 states that "[f]or purposes of Article XIII C and Article XIII D of the California Constitution" an "assessment" means "any levy or charge by an agency upon real property that is based upon the special benefit conferred upon the real property by a public improvement or service, that is imposed to pay the capital cost of the public improvement, the maintenance and operation expenses of the public improvement, or the cost of the service being provided." (Gov.Code, § 53750, subd. (b).) As plaintiffs point out, this definition does not distinguish between charges imposed only in response to a request for service and charges imposed on previously identified parcels. In this respect, **526 the statutory definition is no different from the constitutional definition in section 2, subdivision (b), of article XIII D. But the statutory provisions implementing article XIII D, like article XIII D itself, assume that assessments are imposed only on identified parcels. Under Government Code section 53753, subdivision (b), before levying a new or increased assessment, an agency must give notice " to the record owner of each identified parcel." Government Code section 53750, subdivision (g), defines an "identified parcel" as "a parcel of real property that an agency has identified as having a special benefit conferred upon it and upon which a proposed assessment is to be imposed...." Because the statutory provisions merely reflect the constitutional provisions, they do not alter our conclusion that under article XIII D an assessment is a charge imposed on previously identified parcels, and not a charge imposed only as a condition of extending service through a new service connection.

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

Arguing that a charge imposed only on property owners who voluntarily seek a governmental service or approval may properly be characterized as an assessment, plaintiffs call our attention to the Integrated Financing District ***424** Act (Gov.Code, § 53175 et seq.), under which local agencies may establish "contingent assessments" payable only when a landowner applies for development approval. (See *id.*, § 53187.) As plaintiffs point out, the Integrated Financing District Act includes notice and majority protest provisions for owners of property subject to the contingent assessment (*id.*, § 53183). (See *Southern Pacific Pipe Lines, Inc. v. Board of Supervisors* (1992) 9 Cal.App.4th 451, 461-462, 11 Cal.Rptr.2d 745.) We agree that the District's capacity charge is similar to a contingent assessment under the Integrated Financing District Act, but this *****131** observation does not assist plaintiffs. Unlike article XIII D, the Integrated Financing District Act does not require a local agency to identify in advance the particular parcels that *will be* subject to the assessment. Instead, the notice of intention to impose a contingent assessment goes to all owners of property within the proposed assessment zone, and the assessment cannot be imposed if protested by "the owners of more than one-half of the area of the property within the proposed ... district which is proposed to be subject to the contingent assessment immediately or in the future...." (Gov.Code, § 53183, subd. (d).) Thus, under the Integrated Financing District Act, in contrast to article XIII D, all owners of property *potentially* subject to a charge are entitled to notice and a weighted vote.

Article XIII D could have been written, like the Integrated Financing District Act, to cover contingent assessments as well as assessments imposed only on previously identified parcels. But it was not written in that manner, and we remain persuaded that a capacity charge contingent on some voluntary action by the property owner is not an assessment within the meaning of article XIII D.

[7] Plaintiffs argue that the Court of Appeal erred in characterizing the District's capacity charge as a development fee. Observing that development fees "are imposed only if a property owner elects to develop"(*Loyola Marymount University v. Los Angeles Unified School Dist.* (1996) 45 Cal.App.4th 1256, 1267, 53 Cal.Rptr.2d 424), the Court of Appeal reasoned that the District's capacity charge, because it was imposed only in response to a property owner's voluntary decision to request a service connection, should be considered a development fee and thus exempt from the requirements of article XIII D under its section 1, subdivision (b), stating that "[n]othing in this article ... shall be construed to ... [a]ffect existing laws relating to the imposition of fees or charges as a condition of property development."

Plaintiffs insist that the District's capacity charge cannot be a development fee because the District has no authority to approve or disapprove property development, and because a property owner may request a new service connection without proposing any new development, such as when the owner ***425** of a previously developed residential parcel decides to use the District's water instead of water from an existing well on the property.

We agree with plaintiffs that the District's capacity charge is not a development fee. It is similar to a development fee in being imposed****527** only in response to a property owner's voluntary application to a public entity, but it is different in that the application may be only for a water service connection without necessarily involving any development of the property. (See *Utility Cost Management v. Indian Wells Valley Water Dist., supra,* 26 Cal.4th at p. 1191, 114 Cal.Rptr.2d 459, 36 P.3d 2 [noting that a capacity charge "might apply regardless of whether a development project is at issue"]; *Capistrano Beach Water Dist. v. Taj Development Corp.* (1999) 72 Cal.App.4th 524, 530, 85 Cal.Rptr.2d 382 [concluding that a capacity charge is not a development fee under the Mitigation Fee Act (Gov.Code, § 66000 et seq.)].) Our agreement that the capacity charge is not a development fee does not assist plaintiffs, however, because it does not mean that the capacity charge is an assessment within the meaning of article XIII D. The capacity charge is neither an assessment nor a development fee under article XIII D.

We conclude, as did the trial court and the Court of Appeal, that the District's *****132** capacity charge is not an assessment under article XIII D.

III. THE FIRE SUPPRESSION CHARGE

Article XIII D provides: "No fee or charge may be imposed for general governmental services including, but not limited to, police, *fire,* ambulance or library

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

services, where the service is available to the public at large in substantially the same manner as it is to property owners." (Art. XIII D, § 6, subd. (b)(5), italics added.) At the trial below, the evidence showed that the District uses the proceeds of the fire suppression component of the connection fee to purchase equipment for its volunteer fire department, including both firefighting equipment and emergency medical equipment.[FN5] The fire department provides firefighting and emergency medical services to the public at large. Accordingly, the District's fire suppression charge is "imposed for general governmental services" within the meaning of section 6, subdivision (b)(5), of article XIII D, and it is prohibited by that provision if it satisfies article XIII D's definition of a "fee or charge."

> FN5. Government Code section 50078 authorizes "[a]ny local agency which provides fire suppression services" to "determine and levy an assessment for fire suppression services." Plaintiffs have argued that the District may not rely on this provision as authority for its fire suppression fee because Government Code section 50001 defines "local agency" to include only cities and counties. Plaintiffs have overlooked Government Code section 50078.1, subdivision (b), which defines "local agency," as used in Government Code section 50078, to include any city, county, "or special district."

*426 Article XIII D defines a "fee" or "charge" as "any levy other than an ad valorem tax, a special tax, or an assessment, imposed by an agency upon a parcel or upon a person as an incident of property ownership, including a user fee or charge for a property-related service." (*Id.*, § 2, subd. (e).) It defines "property-related service" as "a public service having a direct relationship to property ownership." (*Id.*, § 2, subd. (h).)

[8] The District argues that the connection fee, including its fire suppression component, does not fall within article XIII D's definition of a fee or charge because it is not imposed "upon a parcel or upon a person as an incident of property ownership." (Art. XIII D, § 2, subd. (e).) The District does not impose the fee on parcels of real property but on persons who apply for a water service connection. The District does not impose the fee on such persons "as an incident of property ownership" but instead as an incident of their voluntary decisions to request water service. If a person fails to pay the connection fee, the District does not collect it by levying upon the person's property. Rather, because the person applying for service has not satisfied a condition for extending service, the District does not make the water connection and does not provide water service.

We agree that a connection charge, because it is not imposed "as an incident of property ownership" (art. XIII D, § 2, subd. (e)), is not a fee or charge under article XIII D. A connection fee is not imposed simply by virtue of property ownership, but instead it is imposed as an incident of the voluntary act of **528 the property owner in applying for a service connection.

Urging a different construction, plaintiffs rely on article XIII D's definition of a fee or charge as "including a user fee or charge for a property-related service." (*Id.*, § 2, subd. (e).) They argue that supplying water is a "property-related service," and, therefore, all charges for water service must be deemed to be imposed ***133 "upon a person as an incident of property ownership."

We agree that supplying water is a "property-related service" within the meaning of article XIII D's definition of a fee or charge. In the ballot pamphlet for the election at which article XIII D was adopted, the Legislative Analyst stated that "[f]ees for water, sewer, and refuse collection service probably meet the measure's definition of property-related fee." (Ballot Pamp., Gen. Elec. (Nov. 5, 1996), analysis of Prop. 218 by Legis. Analyst, p. 73.) The Legislative Analyst apparently concluded that water service has a direct relationship to property ownership, and thus is a property-related service within the meaning of article XIII D because water is indispensable to most uses of real property; because water is provided through pipes that are physically connected to the property; and because a water provider may, by recording a certificate, obtain a lien on the property for the amount of any *427 delinquent service charges (see Gov.Code, §§ 61621, 61621.3). But the Legislative Analyst was apparently referring to fees imposed on existing water service customers, not fees imposed as a condition of initiating water service in the first instance.

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

Several provisions of article XIII D tend to confirm the Legislative Analyst's conclusion that charges for utility services such as electricity and water should be understood as charges imposed "as an incident of property ownership." For example, subdivision (b) of section 3 provides that "fees for the provision of electrical or gas service shall not be deemed charges or fees imposed as an incident of property ownership" under article XIII D. Under the rule of construction that the expression of some things in a statute implies the exclusion of other things not expressed (*In re Bryce C.* (1995) 12 Cal.4th 226, 231, 48 Cal.Rptr.2d 120, 906 P.2d 1275), the expression that electrical and gas service charges are not within the category of property-related fees implies that similar charges for other utility services, such as water and sewer, are property-related fees subject to the restrictions of article XIII D.

This implication is reinforced by subdivision (c) of article XIII D, section 6, which expressly excludes "fees or charges for sewer, water, and refuse collection services" from the voter approval requirements that article XIII D imposes on property-related fees and charges. Because article XIII D does not include similar express exemptions from the other requirements that it imposes on property-related fee and charges, the implication is strong that fees for water, sewer, and refuse collection services are subject to those other requirements. (See *Howard Jarvis Taxpayers Assn. v. City of Roseville* (2002) 97 Cal.App.4th 637, 645, 119 Cal.Rptr.2d 91 [reaching the same conclusion].)

Thus, we agree that water service fees, being fees for property-related services, may be fees or charges within the meaning of article XIII D. But we do not agree that *all* water service charges are necessarily subject to the restrictions that article XIII D imposes on fees and charges. Rather, we conclude that a water service fee is a fee or charge under article XIII D if, but only if, it is imposed "upon a person as an incident of property ownership." (Art. XIII D, § 2, subd. (e).) A fee for ongoing water service through an existing connection is imposed "as an incident of property ownership" because it requires nothing other than normal ownership and use of property. But a fee for making a new connection to the system is not imposed "as an incident of property ownership" because it results from the owner's voluntary decision to apply for the connection.

***134** Any doubt on this point is removed by considering the requirements that article XIII D imposes on property-related fees and charges. As with assessments, article XIII D requires local government agencies to identify the **428** parcels affected by a property-related fee or charge. Specifically, it requires the agency to identify "[t]he parcels **529** upon which a fee or charge is proposed for imposition." (Art. XIII D, § 6, subd. (a)(1).) As we have explained, it is impossible for the District to comply with such a requirement for connection charges, because the District cannot determine in advance which property owners will apply for water service connection. As with assessments, this impossibility of compliance strongly suggests that connection fees for new users are not subject to article XIII D's restrictions on property-related fees.

Because the connection fee, including the fire suppression charge, is not a property-related fee or charge within the meaning of article XIII D, it is not subject to article XIII D's prohibition on property-related fees or charges for general governmental services.

IV. AMENDMENT OF AN ORDINANCE BY A RESOLUTION

[9] Government Code section 66016, part of the Mitigation Fee Act (Gov.Code, § 66000 et seq.), provides in subdivision (b): "Any action by a local agency to levy a new fee or service charge or to approve an increase in an existing fee or service charge shall be taken only by ordinance *or resolution.*" (Italics added.) We agree with the Court of Appeal that this provision authorizes the District to use a resolution to increase existing connection fees, and that this authorization applies even when the fees were initially imposed by an ordinance.

Arguing to the contrary, plaintiffs assert that the Mitigation Fee Act is procedural rather than substantive. In other words, it does not give local water districts substantive authority to impose fees, but instead it merely regulates the manner in which fees may be imposed. But whether a fee imposed by ordinance may be amended by resolution is essentially a question of procedure, not substance. Therefore, we may and do construe Government Code section 66016 as giving the District authority to use a resolution to

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

amend a fee ordinance.

In support of their position that the District may not use a resolution to amend an ordinance imposing a connection fee, plaintiffs rely on *Cavalier Acres, Inc. v. San Simeon Acres Community Services District* (1984) 151 Cal.App.3d 798, 199 Cal.Rptr. 4(*Cavalier Acres*), in which the Court of Appeal concluded that a community services district could impose or increase water charges only by ordinance. In reaching this conclusion, the *Cavalier Acres* Court of Appeal relied on Government Code section 61621.5 and Health and Safety Code section 5471. Relying on the rule of construction that when two statutory provisions conflict, the one that is more specific controls, ***429** the *Cavalier Acres* Court of Appeal stated that, as applied to water charges imposed by a community services district, Government Code section 61621.5 and Health and Safety Code section 5471 were both more specific than Government Code section 66016.

Government Code section 61621.5 is part of the Community Services District Law (Gov.Code, § 61000 et seq.). As here relevant, it provides: "Except as otherwise provided in this section, a district may *by ordinance* adopt regulations binding upon all persons to govern the construction and use of its facilities and property, including regulations imposing reasonable charges for the use thereof." (Gov.Code, § 61621.5, subd. (a), italics added.) By its ***135** terms, this provision applies only to charges for the use of a community services district's *facilities,* not charges for its *services.* The Community Services District Law gives districts authority to impose charges for services, including charges for water, in a different section, Government Code section 61621. (See *Waterman Convalescent Hospital, Inc. v. Jurupa Community Services Dist.* (1996) 53 Cal.App.4th 1550, 1552-1553, 62 Cal.Rptr.2d 264.) As relevant here, it provides: "A district may prescribe, revise and collect rates or other charges for the services and facilities furnished by it...." (Gov.Code, § 61621.) Nothing in this provision requires a community services district to act by ordinance rather than by resolution when, as here, it revises and prescribes the charges for water service.

Health and Safety Code section 5471 is part of article 4 ("Sanitation and Sewerage Systems") of chapter 6 ("General Provisions with Respect to Sewers") of part 3 ("Community Facilities") of division 5 ("Sanitation") of **530 the Health and Safety Code. As relevant here, it reads: "In addition to the powers granted in the principal act, *any entity* shall have power, *by an ordinance* approved by a two-thirds vote of the members of the legislative body thereof, to prescribe, revise and collect, fees, tolls, rates, rentals, or other charges, including *water,* sewer standby or immediate availability charges, for services and facilities furnished by it, either within or without its territorial limits, in connection with its *water,* sanitation, storm drainage, or sewerage system...." (Italics added.)

Health and Safety Code section 5471 does not apply to the District because it is not an "entity" within the meaning of this provision. Health and Safety Code section 5470 states that " '[e]ntity' means and includes counties, cities and counties, cities, sanitary districts, county sanitation districts, sewer maintenance districts, and other public corporations and districts authorized to acquire, construct, maintain and operate sanitary sewers and sewerage systems." The District is a public agency organized as a community services district under the Community Services District Law (Gov.Code, § 61000 et seq.) to provide water service. Nothing in the record indicates it is authorized ***430** to construct, maintain, or operate sewers or sewerage systems. In this respect, *Cavalier Acres, supra,* 151 Cal.App.3d 798, 199 Cal.Rptr. 4, is distinguishable because the community services district at issue there provided both water and sewer services. (See *id.* at p. 800, 199 Cal.Rptr. 4.)

Moreover, even if we assume that Health and Safety Code section 5471 applies to the District, that provision, by its terms, confers authority "[i]n addition to" the authority otherwise granted to a public entity. In other words, its main purpose is to supplement rather than to limit a public agency's authority to impose charges for water or sewer services in connection with a water or sewerage system. For a public agency organized as a community services district, the "principal act" (*ibid.*) providing its authority is the Community Services District Law (Gov.Code, § 61000 et seq.). As we have seen, Government Code section 61621 authorizes community services districts to establish charges for water services without requiring that they act by ordinance rather than by resolution, and Government Code section 66016, part of the Mitigation Fee Act (Gov.Code, § 66000 et seq.), ex-

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

pressly authorizes districts to use either a resolution or an ordinance to impose or increase a service charge. We do not read Health and Safety Code section 5471 as limiting or abrogating that authority.

Again, we find *Cavalier Acres, supra,* 151 Cal.App.3d 798, 199 Cal.Rptr. 4, to be ***136** distinguishable. In 1984, when the Court of Appeal decided *Cavalier Acres,* the wording of Health and Safety Code section 5471 was materially different. The introductory phrase ("In addition to the powers granted in the principal act") was not present, having been added later by amendment. (Stats.1988, ch. 706, § 1, p. 2348.) The 1988 amendment demonstrates the Legislature's intent that Health and Safety Code section 5471 not be read as limiting the powers conferred on public entities by the laws under which they were organized.

V. CONCLUSION

Before beginning to provide water service to real property through a new connection, the District requires its new customers to pay a capacity fee and a fire suppression fee. Both of these fees are used to fund capital improvements, the former to the water system and the latter to the volunteer fire department. Because these fees are imposed only on the self-selected group of water service applicants, and not on real property that the District has identified or is able to identify, and because neither fee can ever become a charge on the property itself, we conclude that neither fee is subject to the restrictions that article XIII D imposes on property assessments and property-related fees. We also conclude that the District could properly use a resolution to amend an ordinance establishing these fees.

***431** The judgment of the Court of Appeal is reversed and the matter is remanded to that court with directions to affirm the trial court's judgment.

SINCLAIR PAINT COMPANY, Plaintiff and Respondent,
v.
STATE BOARD OF EQUALIZATION, Defendant and Appellant; DEPARTMENT OF HEALTH SERVICES et al., Interveners and Appellants.
No. S054115.

Supreme Court of California
June 26, 1997.

SUMMARY

The trial court granted a paint company summary judgment in the company's action against the Board of Equalization for a refund of fees paid pursuant to an assessment under the Childhood Lead Poisoning Prevention Act of 1991 (Health & Saf. Code, § 105275 et seq.). The trial court found that the fees were taxes, and thus they were invalid since the Legislature passed the act by a simple majority, rather than by the two-thirds majority required by Cal. Const., art. XIII A, § 3 (Prop. 13). (Superior Court of Sacramento County, No. CV541310, Joe S. Gray, Judge.) The Court of Appeal, Third Dist., No. C021559, affirmed.

The Supreme Court reversed the judgment of the Court of Appeal. The court held that the Court of Appeal erred in ruling that "fees" assessed on manufacturers or other persons contributing to environmental lead contamination, pursuant to the Childhood Lead Poisoning Prevention Act of 1991, were in legal effect "taxes" required to be enacted by a two-thirds vote of the Legislature under Prop. 13. Rather, the fees imposed were bona fide regulatory fees. The act requires manufacturers and other persons whose products have exposed children to lead contamination to bear a fair share of the cost of mitigating the adverse health effects their products created in the community. The shifting of costs of providing evaluation, screening, and medically necessary follow-up services for potential child victims of lead poisoning from the public to those persons deemed responsible for that poisoning is a reasonable police power decision. The fact that the fees were charged after, rather than before, the product's adverse effects were realized was immaterial to the question whether the measure imposed valid regulatory fees rather than taxes. Also, if regulation is the primary purpose of a fee, the mere fact that revenue is also obtained does not make the imposition a tax. (Opinion by Chin, J., with George, C. J., Mosk, Kennard, Baxter, Werdegar, JJ., and Armstrong, J., [FN*] concurring.)

FN* Associate Justice of the Court of Appeal, Second District, Division Five, assigned by the Chief Justice pursuant to article VI, section 6 of the California Constitution.

HEADNOTES

Classified to California Digest of Official Reports

(1) Property Taxes § 7.2--Constitutional Provisions--Proposition 13.
The purpose of Prop. 13 was to assure effective real property tax relief by means of an interlocking package consisting of a real property tax rate limitation (Cal. Const., art. XIII A, § 1), a real property assessment limitation (Cal. Const., art. XIII A, § 2), a restriction on state taxes (Cal. Const., art. XIII A, § 3), and a restriction on local taxes (Cal. Const., art. XIII A, § 4). Since any tax savings resulting from the operation of Cal. Const., art. XIII A, §§ 1 and 2, could be withdrawn or depleted by additional or increased state or local levies of other than property taxes, Cal. Const., art. XIII A, §§ 3 and 4, combine to place restrictions upon the imposition of such taxes.

(2a, 2b, 2c) Taxation § 2--Validity of Taxation Legislation-- Proposition 13--Fees Assessed Under Childhood Lead Poisoning Prevention Act-- Applicability of Supermajority Requirement:Property Taxes § 7.8--Proposition 13.
The Court of Appeal erred in ruling that "fees" assessed on manufacturers or other persons contributing to environmental lead contamination, pursuant to the Childhood Lead Poisoning Prevention Act of 1991 (Health & Saf. Code, § 105275 et seq.), which the Legislature had enacted by a simple majority, were in legal effect "taxes" required to be enacted by a two-thirds vote of the Legislature under Prop. 13 (Cal. Const., art. XIII A, § 3). Rather, the fees im-

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

posed were bona fide regulatory fees. The act requires manufacturers and other persons whose products have exposed children to lead contamination to bear a fair share of the cost of mitigating the adverse health effects their products created in the community. The shifting of costs of providing evaluation, screening, and medically necessary follow-up services for potential child victims of lead poisoning from the public to those persons deemed responsible for that poisoning is a reasonable police power decision. The fact that the fees were charged after, rather than before, the product's adverse effects were realized was immaterial to the question whether the measure imposed valid regulatory fees rather than taxes. Also, if regulation is the primary purpose of a fee, the mere fact that revenue is also obtained does not make the imposition a tax.
[See 8 Witkin, Summary of Cal. Law (9th ed. 1988) Constitutional Law, § 784.]
(3) Property Taxes § 7.6--Constitutional Provisions--Proposition 13-- Assessments as Fees or Taxes:Taxation § 3--Construction.
In determining under Prop. 13 (Cal. Const., art. XIII A, § 3), whether impositions are "taxes" or "fees" is a question of law for the appellate courts to decide on independent review of the facts. The term "tax" has no fixed meaning, and the distinction between taxes and fees is frequently blurred, taking on different meanings in different contexts. In general, taxes are imposed for revenue purposes, rather than in return for a specific benefit conferred or privilege granted. Most taxes are compulsory rather than imposed in response to a voluntary decision to develop or to seek other government benefits or privileges. But compulsory fees may be deemed legitimate fees rather than taxes.

(4a, 4b) Property Taxes § 7.8--Constitutional Provisions--Proposition 13--Special Taxes:Taxation § 3--Construction.
There are three general categories of fees or assessments involved in disputes concerning whether they are in legal effect "special taxes" required to be enacted by a two-thirds vote of the Legislature under Prop. 13 (Cal. Const., art. XIII A, §§ 3 and 4). They are (1) special assessments, based on the value of benefits conferred on property, (2) development fees, exacted in return for permits or other government privileges, and (3) regulatory fees, imposed under the police power. Special assessments on property or similar business charges, in amounts reasonably reflecting the value of the benefits conferred by improvements, are not "special taxes." Similarly, development fees exacted in return for building permits or other governmental privileges are not special taxes if the amount of the fees bears a reasonable relation to the development's probable costs to the community and benefits to the developer. Also, fees charged in connection with regulatory activities which fees do not exceed the reasonable cost of providing services necessary to the activity for which the fee is charged and which are not levied for unrelated revenue purposes, are not special taxes.

(5) Property Taxes § 7.8--Constitutional Provisions--Proposition 13-- Assessments as Regulatory Fee:Taxation § 3--Construction.
In order to show that an imposition is a regulatory fee and not a special tax under Prop. 13 (Cal. Const., art. XIII A, § 3), the government should prove (1) the estimated costs of the service or regulatory activity, and (2) the basis for determining the manner in which the costs are apportioned, so that charges allocated to a payor bear a fair or reasonable relationship to the payor's burdens on or benefits from the regulatory activity.

CHIN, J.

In 1991, by simple majority vote, the Legislature enacted the Childhood Lead Poisoning Prevention Act of 1991 (the Act) (Stats. 1991, ch. 799, § 3, amended Stats. 1995, ch. 415, § 5; see Health & Saf. Code, ***870** § 105275 et seq.). [FN1] The Act provided evaluation, screening, and medically necessary follow-up services for children who were deemed potential victims of lead poisoning. The Act's program was entirely supported by "fees" assessed on manufacturers or other persons contributing to environmental lead contamination. (See §§ 105305, 105310.) The question arises whether these fees were in legal effect "taxes" required to be enacted by a two-thirds vote of the Legislature. (See Cal. Const., art. XIII A, § 3.)

> FN1 All further statutory references are to the Health and Safety Code unless otherwise noted.

Contrary to the trial court and Court of Appeal, we conclude that the Act imposed bona fide regulatory fees, not taxes, because the Legislature imposed the fees to mitigate the actual or anticipated adverse effects of the fee payers' operations, and under the Act the amount of the fees must bear a reasonable relationship to those adverse effects. Accordingly, the trial court erred in granting summary judgment to award plaintiff Sinclair Paint Company (Sinclair) a refund of the fees it paid under the Act.

We take the following statement of uncontradicted facts largely from the Court of Appeal opinion in this case. Sinclair paid $97,825.26 in fees for 1991. After the Board of Equalization (the Board) denied Sinclair's administrative claim for refund, Sinclair filed a complaint for refund, alleging the fees assessed under section 105310 were "actually taxes imposed by the California [L]egislature in violation of Proposition 13, Article XIIIA, Section 3 of the California Constitution." The court granted the request of the Department of Health Services (the Department) for leave to intervene. It also granted a similar request to intervene by Ray Cochenour and Cardaryl Commodore, representatives of a class of children suffering from lead poisoning, and People United for a Better Oakland, an unincorporated association whose members include the Act's intended beneficiaries (collectively Cochenour).

Sinclair moved for summary judgment, claiming the Act was invalid on its face because it was not passed by the requisite two-thirds majority vote of the Legislature. The court agreed the Act imposed an unconstitutional tax and granted Sinclair's motion.

The Board, the Department, and Cochenour appealed, contending the Act involves a regulatory fee, not a tax. Appellants also argued the court erred in granting Sinclair summary judgment without compelling it to produce discovery and improperly relied on legislative history in determining the Act's constitutionality. The Court of Appeal affirmed the judgment, concluding that the Act was unconstitutional on its face and rejecting appellants' other claims. We reverse the Court of Appeal's judgment. ***871**

Discussion

I. *The Childhood Lead Poisoning Prevention Act of 1991*

When the Legislature enacted the Act in 1991, it explained the Act's background and purpose in findings that described the numerous health hazards children face when exposed to lead toxicity and declared four state "goals," namely, (1) evaluating, screening, and providing case management for children at risk of lead poisoning, (2) identifying sources of lead contamination responsible for this poisoning, (3) identifying and utilizing programs providing adequate case management for children found to have lead poisoning, and (4) providing education on lead-poisoning detection and case management to state health care providers. (Stats. 1991, ch. 799, § 1.)

The Act directs the Department to adopt regulations

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

establishing a standard of care for evaluation, screening (i.e., measuring lead concentration in blood), and medically necessary follow-up services for children determined to be at risk of lead poisoning. (§ 105285; see § 105280, subd. (e).) If a child is identified as being at risk of lead poisoning, the Department must ensure "appropriate case management," i.e., "health care referrals, environmental assessments, and educational activities" needed to reduce the child's exposure to lead and its consequences. (§§ 105280, subd. (a), 105290.) Additionally, the Act requires the Department to collect data and report on the effectiveness of case management efforts. (§ 105295.)

The Department has "broad regulatory authority to fully implement and effectuate the purposes" of the Act. (§ 105300.) This authority "include[s], but is not limited to," the development of protocols for screening and for appropriate case management; the designation of laboratories qualified to analyze blood specimens for lead concentrations, and the monitoring of those laboratories for accuracy; the development of reporting procedures by laboratories; reimbursement for state-sponsored services related to screening and case management; establishment of lower lead concentrations in whole blood than those specified by the United States Centers for Disease Control for lead poisoning; notification to parents or guardians of the results of blood-lead testing and environmental assessment; and establishment of a periodicity schedule for evaluating childhood lead poisoning. (§ 105300.)

The Act states that its program of evaluation, screening, and follow-up is supported *entirely* by fees collected under the Act: "Notwithstanding the scope of activity mandated by this chapter, in no event shall this chapter be interpreted to require services necessitating expenditures in any fiscal year in excess of the fees, and earnings therefrom, collected pursuant to Section ***872** 105310. This chapter shall be implemented only to the extent fee revenues pursuant to Section 105310 are available for expenditure for purposes of this chapter." (§ 105305.)

Section 105310 imposes the fees at issue here. In pertinent part, that section imposes fees on manufacturers and other persons formerly and/or presently engaged in the stream of commerce of lead or products containing lead, or who are otherwise responsible for identifiable sources of lead, which have significantly contributed and/or currently contribute to environmental lead contamination. (§ 105310, subd. (a).) The Department must determine fees based on the manufacturer's or other person's past and present responsibility for environmental lead contamination, or its "market share" responsibility for this contamination. (§ 105310, subd. (b).)

Those persons able to show that their industry did not contribute to environmental lead contamination, or that their lead-containing product does not and did not "result in quantifiably persistent environmental lead contamination," are exempt from paying the fees. (§ 105310, subd. (d).)

The Legislature has authorized the Department to adopt regulations establishing the specific fees to be assessed the parties identified in section 105310, subdivision (a). (§ 105310, subd. (b).) The formula for calculating fees attributable to leaded architectural coatings, including ordinary house paint, is set forth in California Code of Regulations, title 17, section 33020.

II. *Proposition 13*

(1) In June 1978, California voters added article XIII A, commonly known as the Jarvis-Gann Property Tax Initiative or Proposition 13 (article XIII A), to the state Constitution. The initiative's purpose was to assure effective real property tax relief by means of an "interlocking 'package' " consisting of a real property tax rate limitation (art. XIII A, § 1), a real property assessment limitation (art. XIII A, § 2), a restriction on state taxes (art. XIII A, § 3), and a restriction on local taxes (art. XIII A, § 4). (*Amador Valley Joint Union High Sch. Dist.* v. *State Bd. of Equalization* (1978) 22 Cal.3d 208, 231 [149 Cal.Rptr. 239, 583 P.2d 1281] (*Amador Valley*); see also *County of LosAngeles* v. *Sasaki* (1994) 23 Cal.App.4th 1442, 1451 [29 Cal.Rptr.2d 103].)

Section 3 of article XIII A restricts the enactment of changes in state taxes, as follows: "From and after the effective date of this article, any changes in State taxes enacted for the purpose of increasing revenues collected pursuant thereto whether by increased rates or changes in methods ***873** of computation must be imposed by an Act passed by not less than two-thirds of all members ... of the Legislature, except that no new ad valorem taxes on real property, or sales or

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

transaction taxes on the sales of real property may be imposed."

Section 4 of article XIII A imposes similar restrictions on local entities: "Cities, Counties and special districts, by a two-thirds vote of the qualified electors of such district, may impose *special taxes* on such district, except ad valorem taxes on real property or a transaction tax or sales tax on the sale of real property within such City, County or special district." (Italics added.)

As we explained in *Amador Valley*, "... since any tax savings resulting from the operation of sections 1 and 2 [of article XIII A] could be withdrawn or depleted by additional or increased state or local levies of other than property taxes, sections 3 and 4 combine to place restrictions upon the imposition of such taxes." (*Amador Valley*, *supra*, 22 Cal.3d at p. 231.)

III. *Taxes or Fees?*

(2a) Are the "fees" section 105310 imposes in legal effect "taxes enacted for the purpose of increasing revenues" under article XIII A, section 3, and therefore subject to a two-thirds majority vote? Although we have found no cases that interpret the language of section 3, several California appellate decisions have considered whether various fees are really "special taxes" under article XIII A, section 4. (See also *City and County of San Francisco v. Farrell* (1982) 32 Cal.3d 47, 57 [184 Cal.Rptr. 713, 648 P.2d 935] ["special taxes" are taxes levied for a specific purpose rather than for general governmental purposes]; Gov. Code, § 50076 [excluding from the term "special tax" in article XIII A, section 4, "any fee which does not exceed the reasonable cost of providing the service or regulatory activity for which the fee is charged and which is not levied for general revenue purposes"].) Because of the close, "interlocking" relationship between the various sections of article XIII A (see *Amador Valley*, *supra*, 22 Cal.3d at p. 231), we believe these "special tax" cases may be helpful, though not conclusive, in deciding the case before us. The reasons why particular fees are, or are not, "special taxes" under article XIII A, section 4, may apply equally to section 3 cases. [FN2]

FN2 We are not here concerned with issues arising under constitutional amendments effected by a recent initiative measure (Proposition 218) adopted at the November 5, 1996, General Election. That measure contains new restrictions on local agencies' power to impose fees and assessments.

We first consider certain general guidelines used in determining whether "taxes" are involved in particular situations. (3) The cases agree that ***874** whether impositions are "taxes" or "fees" is a question of law for the appellate courts to decide on independent review of the facts. (*Bixel Associates v. City of Los Angeles* (1989) 216 Cal.App.3d 1208, 1216 [265 Cal.Rptr. 347]; *California Bldg. Industry Assn. v. Governing Bd.* (1988) 206 Cal.App.3d 212, 234 [253 Cal.Rptr. 497]; *Russ Bldg. Partnership v. City and County of San Francisco* (1987) 199 Cal.App.3d 1496, 1504 [246 Cal.Rptr. 21].)

The cases recognize that "tax" has no fixed meaning, and that the distinction between taxes and fees is frequently "blurred," taking on different meanings in different contexts. (*Russ Bldg. Partnership v. City and County of San Francisco*, *supra*, 199 Cal.App.3d at p. 1504;*Terminal Plaza Corp. v. City and County of San Francisco* (1986) 177 Cal.App.3d 892, 905 [223 Cal.Rptr. 379]; *Mills v. County of Trinity* (1980) 108 Cal.App.3d 656, 660 [166 Cal.Rptr. 674]; *County of Fresno* v. *Malmstrom* (1979) 94 Cal.App.3d 974, 983-984 [156 Cal.Rptr. 777].) In general, taxes are imposed for revenue purposes, rather than in return for a specific benefit conferred or privilege granted. (*Shapell Industries, Inc. v. Governing Board* (1991) 1 Cal.App.4th 218, 240 [1 Cal.Rptr.2d 818]; *County of Fresno* v. *Malmstrom*, *supra*, 94 Cal.App.3d at p. 983 ["Taxes are raised for the general revenue of the governmental entity to pay for a variety of public services."].) Most taxes are compulsory rather than imposed in response to a voluntary decision to develop or to seek other government benefits or privileges. (*Shapell Industries, Inc. v. Governing Board*, *supra*, 1 Cal.App.4th at p. 240;*Russ Bldg. Partnership v. City and County of San Francisco*, *supra*, 199 Cal.App.3d at pp. 1505-1506; see *Terminal Plaza Corp. v. City and County of San Francisco*, *supra*, 177 Cal.App.3d at p. 907.) But compulsory fees may be deemed legitimate fees rather than taxes. (See *Kern County Farm Bureau v. County of Kern* (1993) 19 Cal.App.4th 1416, 1424 [23 Cal.Rptr.2d 910].)

(4a) The "special tax" cases have involved three gen-

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

eral categories of fees or assessments: (1) special assessments, based on the value of benefits conferred on property; (2) development fees, exacted in return for permits or other government privileges; and (3) regulatory fees, imposed under the police power. Although these three categories may overlap in a particular case, we consider them separately.

The cases uniformly hold that *special assessments* on property or similar business charges, in amounts reasonably reflecting the value of the benefits conferred by improvements, are not "special taxes" under article XIII A, section 4. (*Evans v. City of San Jose* (1992) 3 Cal.App.4th 728, 735-739 [4 Cal.Rptr.2d 601] [assessments on businesses for downtown promotion]; *J. W. Jones Companies v. City of San Diego* (1984) 157 Cal.App.3d 745, ***875** 750-758 [203 Cal.Rptr. 580] [facilities benefit assessments]; *City Council v. South* (1983) 146 Cal.App.3d 320, 332 [194 Cal.Rptr. 110] [special assessments on real property]; *County of Fresno v. Malmstrom*, *supra*, 94 Cal.App.3d at pp. 984-985 [special assessments for construction of streets].)

Similarly, *development fees* exacted in return for building permits or other governmental privileges are not special taxes if the amount of the fees bears a reasonable relation to the development's probable costs to the community and benefits to the developer. (*Shapell Industries, Inc. v. Governing Board*, *supra*, 1 Cal.App.4th at p. 240 [school facilities fees]; *Bixel Associates v. City of Los Angeles*, *supra*, 216 Cal.App.3d at pp. 1211, 1218-1219 [fire hydrant fees]; *California Bldg. Industry Assn. v. Governing Bd.*, *supra*, 206 Cal.App.3d at pp. 235-237 [school facilities development fees]; *Russ Bldg. Partnership v. City and County of San Francisco*, *supra*, 199 Cal.App.3d at pp. 1504-1506 [transit impact fees]; *Beaumont Investors v. Beaumont-Cherry Valley Water Dist.* (1985) 165 Cal.App.3d 227, 235-238 [211 Cal.Rptr. 567] [new facilities water hookup fees]; *Trent Meredith, Inc.* v. *City of Oxnard* (1981) 114 Cal.App.3d 317, 325-328 [170 Cal.Rptr. 685] [fees as precondition for building permits]; *Mills v. County of Trinity*, *supra*, 108 Cal.App.3d at pp. 661-663 [fees for processing subdivision, zoning, and land use applications]; see *Ehrlich v. City of Culver City* (1996) 12 Cal.4th 854, 898 [50 Cal.Rptr.2d 242, 911 P.2d 429] (conc. opn. of Mosk, J.).)

According to Sinclair, because the present fees have been imposed solely to defray the cost of the state's program of evaluation, screening, and follow-up services for children determined to be at risk for lead poisoning, they are not analogous to either special assessments or development fees, for they neither reimburse the state for special benefits conferred on manufacturers of lead-based products nor compensate the state for governmental privileges granted to those manufacturers. As the Court of Appeal observed, the fees challenged here "do not constitute payment for a government benefit or service. The program described in the Act bears no resemblance to regulatory schemes involving special assessments, developer fees, or efforts to recoup the cost of processing land use applications where the benefit analysis is typically applied. [Citations.] The face of the Act makes clear the funds collected pursuant to section 105310 are used to benefit children exposed to lead, not Sinclair or other manufacturers in the stream of commerce for products containing lead."

(2b) Appellants argue, however, that the challenged fees fall squarely within a third recognized category not dependent on government-conferred benefits or privileges, namely, *regulatory fees* imposed under the police power, rather than the taxing power. We agree. ***876**

(4b) We have acknowledged that the term "special taxes" in article XIII A, section 4, " 'does not embrace fees charged in connection with regulatory activities which fees do not exceed the reasonable cost of providing services necessary to the activity for which the fee is charged and which are not levied for unrelated revenue purposes.' [Citations.]" (*Pennell v. City of San Jose* (1986) 42 Cal.3d 365, 375 [228 Cal.Rptr. 726, 721 P.2d 1111] (*Pennell*), affd. on other grounds *sub nom. Pennell v. San Jose* (1988) 485 U.S. 1 [108 S.Ct. 849, 99 L.Ed.2d 1], quoting from *Mills v. County of Trinity*, *supra*, 108 Cal.App.3d at pp. 659-660; see *City of Oakland v. Superior Court* (1996) 45 Cal.App.4th 740, 760-762 [53 Cal.Rptr.2d 120] [upholding regulatory fees charged to alcoholic beverage sale licensees to support pilot project to address public nuisances associated with those sales]; *Kern County Farm Bureau v. County of Kern*, *supra*, 19 Cal.App.4th at pp. 1422-1425 [upholding landfill assessment based on land use to reduce illegal waste disposal]; *City of Dublin v. County of Alameda* (1993) 14 Cal.App.4th 264, 280-285 [17 Cal.Rptr.2d 845] [upholding waste dis-

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

posal surcharge imposed on waste haulers]; *Evans v. City of San Jose*, *supra*, 3 Cal.App.4th at p. 737;*San Diego Gas & Electric Co.* v. *San Diego County Air Pollution Control Dist.* (1988) 203 Cal.App.3d 1132, 1145-1149 [250 Cal.Rptr. 420] (*SDG&E*) [upholding emissions-based formula for recovering direct and indirect costs of pollution emission permit programs]; *United Business Com.* v . *City of San Diego* (1979) 91 Cal.App.3d 156, 166-168 [154 Cal.Rptr. 263] (*United Business*) [upholding fees for inspecting and inventorying on-premises advertising signs].)

Pennell upheld rental unit fees that a city imposed under its rent control ordinance to assure it recovered the actual costs of providing and administering a rental dispute hearing process. (*Pennell*, *supra*, 42 Cal.3d at p. 375.) We explained in *Pennell* that regulatory fees in amounts necessary to carry out the regulation's purpose are valid despite the absence of any perceived "benefit" accruing to the fee payers. (*Id.* at p. 375, fn. 11; see also *SDG&E*, *supra*, 203 Cal.App.3d at p. 1146, fn. 18;*Mills* v. *County ofTrinity*, *supra*, 108 Cal.App.3d at p. 661.)

We observe that Sinclair, in moving for summary judgment, did not contend that the fees exceed in amount the reasonable cost of providing the protective services for which the fees are charged, or that the fees were levied for any *unrelated* revenue purposes. (See *Pennell*, *supra*, 42 Cal.3d at p. 375.) Moreover, Sinclair has not yet sought to establish that the amount of the fees bears no reasonable relationship to the social or economic "burdens" that Sinclair's operations generated. (See *SDG&E*, *supra*, 203 Cal.App.3d at p. 1146; see also § 105310, subds. (b), (d); *Sea & Sage Audubon Society, Inc.* v. *Planning Com.* (1983) 34 Cal.3d 412, 421 [194 Cal.Rptr. 357, 668 P.2d ***877** 664] [persons challenging fees have burden of establishing invalidity].) Sinclair does contend, however, that the Act is not *regulatory* in nature, being primarily aimed at producing revenue.

According to Sinclair, the challenged fees were in effect "taxes" because the compulsory revenue measure that imposed them was not part of a *regulatory* effort. The Court of Appeal agreed, relying on prior cases indicating that where payments are exacted solely for *revenue* purposes and give the right to carry on the business with no further conditions, they are taxes. (E.g., *United Business*, *supra*, 91 Cal.App.3d at p. 165.) The Court of Appeal held that "Placing the factors distinguishing taxes and fees along a continuum, we conclude the monies paid by Sinclair pursuant to the Act are more like taxes than fees. [¶] *There is nothing on the face of the Act to show the fees collected are used to regulate Sinclair.* Apart from mere calculation of the payment, the Department's regulatory authority involves implementation of the program to evaluate, screen, and provide followup services to children at risk for lead poisoning. The Act does not require Sinclair to comply with any other conditions; it merely requires Sinclair to pay what the Department determines to be its share of the program cost."

Contrary to the Court of Appeal, we believe that section 105310 imposes bona fide regulatory fees. It requires manufacturers and other persons whose products have exposed children to lead contamination to bear a fair share of the cost of mitigating the adverse health effects their products created in the community. Viewed as a "mitigating effects" measure, it is comparable in character to similar police power measures imposing fees to defray the actual or anticipated adverse effects of various business operations.

From the viewpoint of general police power authority, we see no reason why statutes or ordinances calling on polluters or producers of contaminating products to help in mitigation or cleanup efforts should be deemed less "regulatory" in nature than the initial permit or licensing programs that allowed them to operate. Moreover, imposition of "mitigating effects" fees in a substantial amount (Sinclair allegedly paid $97,825.26 in 1991) also "regulates" future conduct by deterring further manufacture, distribution, or sale of dangerous products, and by stimulating research and development efforts to produce safer or alternative products. (Cf. *SDG&E*, *supra*, 203 Cal.App.3d at p. 1147, fn. 20 [emissions-based fees provide incentive to use nonpollutant fuels].)

Sinclair disputes the state's authority to impose industry-wide "remediation fees" to compensate for the adverse societal effects generated by an industry's products. To the contrary, the case law previously cited or discussed clearly indicates that the police power is broad enough to include ***878** mandatory remedial measures to mitigate the *past, present, or future* adverse impact of the fee payer's operations, at least where, as here, the measure requires a causal

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

connection or nexus between the product and its adverse effects. (See *City of Oakland v. Superior Court*, *supra*, 45 Cal.App.4th at pp. 760-762;*Kern County Farm Bureau v. County of Kern*, *supra*, 19 Cal.App.4th at pp. 1422-1425;*City of Dublin v. County of Alameda*, *supra*, 14 Cal.App.4th at pp. 284-285;*SDG&E*, *supra*, 203 Cal.App.3d at pp. 1146-1149;*United Business*, *supra*, 91 Cal.App.3d at p. 168;*Russ Bldg. Partnership v. City and County of San Francisco*, *supra*, 199 Cal.App.3d at pp. 1504-1506 [fees to pay for increased transit costs]; *J. W. Jones Companies v. City of San Diego*, *supra*, 157 Cal.App.3d at pp. 755, 758 [fees to defray costs of additional public facilities]; *Trent Meredith, Inc.* v. *City of Oxnard*, *supra*, 114 Cal.App.3d at p. 325 [fees to reduce growth impact of new subdivision]; see also *Western Indemnity Co. v. Pillsbury* (1915) 170 Cal. 686, 694 [151 P. 398] [police power authorizes legislation necessary or proper for protection of legitimate public interest]; *County of Plumas* v . *Wheeler* (1906) 149 Cal. 758, 761-764 [87 P. 909] [broad legislative discretion to regulate business, including license fees or charges]; 8 Witkin, Summary of Cal. Law (9th ed. 1988) Constitutional Law, § 784, p. 311 ["police power is simply the power of sovereignty or power to govern-the inherent reserved power of the state to subject individual rights to reasonable regulation for the general welfare"]; see generally, 6A McQuillan, The Law of Municipal Corporations (3d rev. ed. 1997) Municipal Police Power and Ordinances, § 24.01 et seq., p. 7 et seq.)

SDG&E involved regulatory fees comparable in some respects to the fees challenged here. (*SDG&E*, *supra*, 203 Cal.App.3d 1132.) There, 1982 legislation (see § 42311) empowered local air pollution control districts to apportion the costs of their permit programs among all monitored polluters according to a formula based on the amount of emissions they discharged. (See *SDG&E*, *supra*, 203 Cal.App.3d at p. 1135.) (5) The *SDG&E* court observed that "to show a fee is a regulatory fee and not a special tax, the government should prove (1) the estimated costs of the service or regulatory activity, and (2) the basis for determining the manner in which the costs are apportioned, so that charges allocated to a payor bear a fair or reasonable relationship to the payor's burdens on or benefits from the regulatory activity." (*Id.* at p. 1146, fn. omitted; see *Beaumont Investors v. Beaumont-Cherry Valley Water Dist.*, *supra*, 165 Cal.App.3d at pp. 234-235.)

In *SDG&E*, the amount of the regulatory fees was limited to the reasonable costs of each district's program, and the allocation of costs based on emissions "fairly relates to the permit holder's burden on the district's programs." (*SDG&E*, *supra*, 203 Cal.App.3d at p. 1146.) Accordingly, the ***879** court concluded that the fees were not "special taxes" under article XIII A, section 4. (*SDG&E*, *supra*, 203 Cal.App.3d at p. 1148.)

As the court observed in *SDG&E*, "Proposition 13's goal of providing effective property tax relief is not subverted by the increase in fees or the emissions-based apportionment formula. A reasonable way to achieve Proposition 13's goal of tax relief is to shift the costs of controlling stationary sources of pollution from the tax-paying public to the pollution-causing industries themselves ...." (*SDG&E*, *supra*, 203 Cal.App.3d at p. 1148.) (2c) In our view, the shifting of costs of providing evaluation, screening, and medically necessary follow-up services for potential child victims of lead poisoning from the public to those persons deemed responsible for that poisoning is likewise a reasonable police power decision. (See also *Mills* v. *County of Trinity*, *supra*, 108 Cal.App.3d at p. 663;*County of Fresno v. Malmstrom*, *supra*, 94 Cal.App.3d at p. 985 [special assessments have no impact on government spending].)

The fact that the challenged fees were charged after, rather than before, the product's adverse effects were realized is immaterial to the question whether the measure imposes valid regulatory fees rather than taxes. *City of Oakland v. Superior Court* seems close on point. There, the court upheld city fees imposed on retailers of alcoholic beverages to defray the cost of providing and administering hearings into nuisance problems associated with the prior sale of those beverages. The court first observed that "If a business imposes an unusual burden on city services, a municipality may properly impose fees pursuant to its police powers" to assure that the persons responsible "pay their fair share of the cost of government." (*City of Oakland v. Superior Court*, *supra*, 45 Cal.App.4th at p. 761.) The court concluded that "The ordinance's primary purpose is regulatory-to create an environment in which nuisance and criminal activities associated with alcoholic beverage retail establishments may be reduced or eliminated. Thus, the fee imposed ... is not a tax imposed to pay general revenue to the

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

local governmental entity, but is a regulatory fee intended to defray the cost of providing and administering the hearing process set out in the ordinance. [Citation.]" (*Id.* at p. 762.)

The court in *United Business* applied the "regulation/revenue" distinction to conclude that sign inventory fees adopted to recover the city's cost of inventorying signs and bringing them into conformance with law were regulatory fees, not revenue-raising taxes. The court observed that, under the police power, municipalities may impose fees for the purpose of legitimate regulation, and not mere revenue-raising, if the fees do not exceed the reasonably necessary expense of the regulatory effort. (*United Business*, ***880** *supra*, 91 Cal.App.3d at p. 165, and authorities cited.) Quoting with approval from an earlier decision, the court noted that, if revenue is the primary purpose, and regulation is merely incidental, the imposition is a tax, but if regulation is the primary purpose, the mere fact that revenue is also obtained does not make the imposition a tax. (*Ibid.*) Moreover, according to *United Business,* if a fee is exacted for revenue purposes, and its payment gives the right to carry on business without any further conditions, it is a tax. (*Ibid.*; see also *City of Oakland v. Superior Court*, *supra*, 45 Cal.App.4th at p. 761;*County of Plumas* v. *Wheeler*, *supra*, 149 Cal. at p. 763 [fee in amount greater than reasonably needed to regulate business "cannot stand as an exercise of the police power"]; *Mills* v. *County of Trinity*, *supra*, 108 Cal.App.3d at pp. 659-660;*City & County of San Francisco v. Boss* (1948) 83 Cal.App.2d 445, 450-451 [189 P.2d 32].)

The Court of Appeal, citing *United Business,* stressed that the challenged fees were exacted solely for revenue purposes, and their payment gave Sinclair and others the right to carry on the business without any further conditions. We see two flaws in that analysis. First, *all* regulatory fees are necessarily aimed at raising "revenue" to defray the cost of the regulatory program in question, but that fact does not automatically render those fees "taxes." As stated in *United Business,* if regulation is the primary purpose of the fee measure, the mere fact that the measure also generates revenue does not make the imposition a tax. (*United Business*, *supra*, 91 Cal.App.3d at p. 165; see also *Mills* v. *County of Trinity*, *supra*, 108 Cal.App.3d at p. 660 [rejecting broad definition of "tax" as including all fees and charges that exact money for public purposes].)

Second, we find inconclusive the fact that the Act permits Sinclair and other producers to carry on their operations without any further conditions *specified in the Act itself.* As we have indicated, fees can "regulate" business entities without directly licensing them by mitigating their operations' adverse effects. Moreover, as appellants observe, the Act is part of a broader regulatory scheme by which, under various state and federal statutes, the state regulates Sinclair and other manufacturers in the stream of commerce for products containing lead. That being so, Sinclair's payment of the challenged fees did not confer the right to carry on business without any further conditions or regulation.

The Court of Appeal rejected appellants' argument invoking other state and federal regulations: "First, there is nothing on the face of the Act or the accompanying statement of legislative purpose which links the Act's programs for children at risk for lead poisoning with the cited state or federal statutes regulating lead. Second, none of the fees collected pursuant to ***881** section 105310 are used to fund those regulatory efforts." However, it is undisputed that Sinclair and other manufacturers of lead-based products remain subject to government regulation, that payment of the challenged fees therefore does not entitle those manufacturers to operate free of regulation, and that the state must use the funds it collects under section 105310 *exclusively* for mitigating the adverse effects of lead poisoning of children, and not for general revenue purposes. (§ 105310, subd. (f).)

Under existing case law, we can reasonably characterize the challenged fees as *regulatory fees* rather than as taxes. Accordingly, we conclude the trial court erred in granting Sinclair summary judgment on the constitutional issues. Of course, Sinclair should be permitted to attempt to prove at trial that the amount of fees assessed and paid exceeded the reasonable cost of providing the protective services for which the fees were charged, or that the fees were levied for unrelated revenue purposes. (See *Pennell*, *supra*, 42 Cal.3d at p. 375.) Additionally, Sinclair will have the opportunity to try to show that no clear nexus exists between its products and childhood lead poisoning, or that the amount of the fees bore no reasonable relationship to the social or economic "burdens" its operations generated. (*SDG&E*, *supra*, 203 Cal.App.3d at p. 1146; see also § 105310, subds. (b),

BARRY SULLIVAN, Appellant,
v.
CITY OF LOS ANGELES et al., Respondents.
Civ. No. 19325.

District Court of Appeal, Second District, Division 3, California.
Mar. 20, 1953.

HEADNOTES

(1) Buildings § 2--Fire Limit Ordinances.
Reasonable regulations governing the construction of wooden buildings within fire limits are within the police power.
Power to forbid or restrict repair of wooden building within fire limits, notes, 26 **A.L.R.** 1219; 56 **A.L.R.** 878. See, also, **Cal.Jur.**, Buildings, § 8; **Am.Jur.**, Buildings, § 17 et seq.
(2) Health § 8--Plumbing.
Reasonable regulations governing methods and devices for the conveyance of sewage from private dwellings in municipalities are within the police power.
Validity of regulations as to plumbers and plumbing, note, 22 **A.L.R.2d** 816.
(3) Constitutional Law § 109--Police Power--Conclusiveness of Legislative Determination.
Except where the court can say that a police regulation has no just relation to the object which it purports to carry out, and no reasonable tendency to preserve or protect the public safety, health, comfort or morals, the decision of the legislative body as to the necessity or reasonableness of the regulation is conclusive.
See **Cal.Jur.**, Constitutional Law, § 117; **Am.Jur.**, Constitutional Law, § 306.
(4) Municipal Corporations § 125--Police Power--Scope.
A local legislative body may, in the exercise of its police power, make and enforce ordinances to regulate or prohibit a thing or act which is of such a nature that it may become a nuisance or may be injurious to the public health if not suppressed or regulated.

(5) Municipal Corporations § 125--Police Power--Scope.
The exercise of the police power is not limited to the regulation of such things as have already become nuisances or have been declared to be such by the judgment of a court.

(6) Buildings § 1.1--Municipal Ordinances.
In the exercise of the police power a municipality may regulate the manner of the construction and occupation of buildings to the end of safeguarding the health of their occupants and lessening the fire hazard.

(7) Health § 10--Officers--Inspection.
When the work or alteration proposed is in accordance with sanitary regulations, an inspection thereof by officers duly authorized is a proper preliminary requirement and may be conducted, at the proper time, to the end that the public health will be preserved and protected.

(8) Health § 3--Regulations.
Legislation with respect to the preservation and protection of the public health will not be set aside unless the legislative discretion is obviously wrong.

(9) Buildings § 1.1--Municipal Ordinances.
City ordinances which forbid one to construct or maintain a canvas carport are not invalid merely because they permit his neighbor to continue to maintain an old wooden building as to which there is no evidence that it was not erected in conformity with ordinances then existing, since the legislative body may guard against the creation or extension of threatened evils without undertaking to wipe out every similar existing evil where a more sweeping enactment would work undue hardship.

(10) Buildings § 1.1--Municipal Ordinances.
A discrimination between buildings erected and those to be built is proper in the enactment of laws prohibiting the future construction of wooden buildings within certain boundaries.

SUMMARY

APPEAL from a judgment of the Superior Court of Los Angeles County and from an order denying a

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

new trial. Geo. A. Dockweiler, Judge. Judgment affirmed; appeal from order dismissed.

Action for a declaration of rights under building and plumbing codes of a city and for an injunction in which defendant city cross-complained for an injunction requiring plaintiff to comply with such codes. Judgment for defendant city on cross-complaint, affirmed.

COUNSEL

Gordon Leslie Cooper for Appellant.

Ray L. Chesebro, City Attorney, Bourke Jones and Alan G. Campbell, Assistant City Attorneys, for Respondents.

VALLEE, J.

Plaintiff sued the city of Los Angeles for a declaration of his rights under the building and plumbing codes of the city, and for an injunction restraining the city from enforcing them against him. The city cross-complained for an injunction requiring plaintiff to comply with the codes. The judgment was for the city on the cross-complaint. Plaintiff appeals from the judgment and from an order denying his motion for a new trial. Since the latter order is nonappealable, the appeal therefrom will be dismissed.

Plaintiff owns a parcel of realty in fire district No. 2 in Los Angeles, which is improved with a two-story brick building. Without first obtaining a permit from the Department of Building and Safety, he constructed about a 25- foot square carport in the rear yard. It consisted of a framework of pipes and scantlings covered with a flammable tarpaulin. With the intention of constructing a rest room as an addition to his building, plaintiff roughed in the waste lines in the rear yard for two toilets. After completing this preliminary step, the project was either abandoned or postponed. No toilets were installed nor was the site enclosed or protected by a roof. Plaintiff stuffed plaster of Paris into the sewer openings.

The building code of the city required a construction permit for every structure, and required the roof covering of every building or structure in fire district No. 2 to be fire retardant, the exterior walls to be constructed entirely of incombustible materials or at least one-hour fire- resistive construction. The plumbing code required that toilet bends, unconnected to a fixture, should be securely capped with a standard cast iron or other metallic noncorrosive plug, and that the plug should be securely leaded and caulked in place under the supervision of a plumbing inspector.

The court found that the carport did not conform to the requirements of the building code, and that the maintenance of the toilet bends was in violation of the plumbing code. The judgment directed plaintiff to remove all canvas and tarpaulin material from the carport, and enjoined him from maintaining ***810** it without first securing a permit from the city for the construction of the structure and without constructing it in accordance with the building code, and ordered him either to remove the toilet bends, and plug, cover, and conceal the sewer connections in accordance with the plumbing code, or under the supervision of a city plumbing inspector to securely lead and caulk the openings as provided by the code, or to install flush toilets as provided by the code.

Plaintiff contends the applicable ordinances are not within the police power; that they deprive him of his property without due process of law in that they restrain his free use of the property, and that they deny him the equal protection of the laws.

Plaintiff's property is located in a fire district as fixed by an ordinance of the city. (1, 2) It is elementary that reasonable regulations governing the construction of wooden buildings within fire limits and governing methods and devices for the conveyance of sewage from private dwellings in municipalities, are within the police power. (*Maguire v. Reardon,* 41 Cal.App. 596 [183 P. 303],affd. 255 U.S. 271 [41 S.Ct. 255, 65 L.Ed. 625]; *In re Nicholls,* 74 Cal.App. 504 [241 P. 399].)

(3) "[E]xcept where the court can see, in the light of facts properly brought to its knowledge, that a given police regulation has no just relation to the object which it purports to carry out, and no reasonable tendency to preserve or protect the public safety, health, comfort, or morals, the decision of the legislative body as to the necessity or reasonableness of the regulation in question is conclusive." (*Odd Fellows' Cemetery Assn. v. San Francisco,* 140 Cal. 226, 233 [73 P. 987].) (4) A local legislative body may, in the

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

exercise of its police power, make and enforce ordinances to regulate or prohibit a thing or act which is of such a nature that it may become a nuisance or may be injurious to the public health if not suppressed or regulated. (5) The exercise of the police power is not limited to the regulation of such things as have already become nuisances or have been declared to be such by the judgment of a court. (*Odd Fellows' Cemetery Assn. v. San Francisco, supra.*)(6) In the exercise of the police power a municipality may regulate the manner of the construction and occupation of buildings to the end of safeguarding the health of their occupants, and lessening the fire hazard. (*Matter of Stoltenberg,* 165 Cal. 789 [134 P. 971].) In *Ex parte Fiske,* 72 Cal. 125, 127 [13 P. 310], the court declared "[I]t ***811** has become the settled law that a state,- and under our system a municipality of the state,- in order to protect the property of all its citizens from the ravages of fire, may establish fire limits, and regulate or prevent the use of wooden buildings within such limits; and that, although this may disturb the enjoyment of the rights of an individual, he is, in contemplation of law, compensated by sharing the general benefits derived from it."

"Regulation by ordinance of methods and devices for the conveyance of sewage from private dwellings in municipalities is recognized as an exercise of that branch of the police power which pertains to the public health; and the word 'plumbing' is held to include the pipes, fittings and fixtures for the conveyance of such sewage." (*In re Nicholls,* 74 Cal.App. 504, 507 [241 P. 399].) (7) When the work or alteration proposed is in accordance with sanitary regulations, an inspection thereof by officers duly authorized is a proper preliminary requirement and may be conducted, at the proper time, to the end that the public health be preserved and protected (*In re Nicholls, supra,* 508.) (8) Legislation with respect to the preservation and protection of the public health will not be set aside unless the legislative discretion is obviously wrong. (*Natural Milk Prod. Assn. v. City etc. of San Francisco,* 20 Cal.2d 101 [124 P.2d 25].) No such showing is made here.

(9) Plaintiff's principal complaint appears to be that while the city ordinances forbid him to construct or maintain a canvas carport they permit his neighbor to continue to maintain an old wooden building as to which there was no evidence that it was not erected in conformity with ordinances then existing. The Legislature may guard against the creation or extension of threatened evils without undertaking to wipe out every similar existing evil where a more sweeping enactment would work undue hardship. In *Matter of Stoltenberg,* 165 Cal. 789 [134 P. 971], the state Tenement Housing Act of 1911 had detailed provisions regulating the mode of construction and occupation of all tenement houses. There the petitioner contended that the act was invalid because different requirements were set up for houses built before the act and those constructed subsequently. The court said that (p. 794) "there is a substantial, inherent, logical difference between tenement houses already constructed and those to be built, and that this difference was one that the legislature might fairly make the basis of the different treatment that it has accorded to the two classes." (See, also, *McCloskey v. ***812** Kreling,* 76 Cal. 511 [18 P. 433].) (10) A discrimination between buildings erected and those to be built has been recognized as proper in the enactment of laws prohibiting the future construction of wooden buildings within certain boundaries. (*Maguire v. Reardon,* 41 Cal.App. 596 [183 P. 303],affd. 255 U.S. 271 [41 S.Ct. 255, 65 L.Ed. 625]; *Bancroft v. Goldberg, Bowen & Co.,* 166 Cal. 416 [137 P. 18].)

A small entryway had been attached to the rear wall of plaintiff's building. The pleadings made an issue of whether it had been constructed in violation of the city building ordinances. No evidence was received from which the court could determine the exact date it was built or what the requirements of the building ordinances were at that time. Consequently, the court did not undertake to settle any issue about this addition and granted no relief to either side. Since the court did not make any declaration relative to the entryway, the matter is moot.

The ordinances attacked are directed to the preservation of the public safety and health, and are well within the scope of the police power.

The appeal from the order denying a new trial is dismissed. The judgment is affirmed.

Shinn, P. J., and Wood (Parker), J., concurred. ***813**

CITY OF COVINA
AGENDA ITEM COMMENTARY

MEETING DATE: June 21, 2005 **ITEM NO.:** CC 11

STAFF SOURCE: Vince Mastrosimone, Director of Public Works
Charles Redden, Environmental Services Manager

ITEM TITLE: Adopt Resolution approving storm water inspection fees to be included with charges for Business Licenses for certain industrial/commercial facilities.

STAFF RECOMMENDATION:
Adopt Resolution No. 05-6455, approving storm water inspection fees to be included with charges for Business Licenses for certain industrial/commercial facilities.

GENERAL, FUND IMPACT:
$24,850 is in the FY 2005-2006 Environmental Services Budget to pay for 416 inspections of which 122 are restaurants. If the inspection fees bringing the revenue into Environmental Services are not approved, the expenses will have to be paid from the General Fund.

BACKGROUND:
To comply with the National Pollutant Discharge Elimination System (storm water) Permit, the City is required to conduct storm water compliance inspections at certain industrial/commercial facilities. We use a private contractor for the industrial facilities and the charge is approximately $140 per inspection. The County Department of Health Services inspects the restaurants and charges approximately $70 per inspection.

The charges for these inspections should be passed on to the facilities being inspected as a cost of doing business in Los Angeles County. "Storm Water Inspection Fees" have been added to the budget "Charts of Accounts – REVENUES" under the "Refuse/Waste Revenue" section. The annual fee would be half of the cost of the inspection since the facilities are inspected every two years. The fee would be collected when the Business License is purchased or renewed as the fee is based on the facility's Standard Industrial Classification (SIC) code. The code list is attached to the Resolution (Exhibit A) approving the fee schedule. The restaurant (SIC code 5812) fee would be $35. The fee for all other facilities would be $70.

EXHIBITS:
A. Resolution

RESOLUTION NO. 05-

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF COVINA, CALIFORNIA, APPROVING STORM WATER INSPECTION FEES TO BE INCLUDED WITH CHARGES FOR BUSINESS LICENSES FOR CERTAIN INDUSTRIAL/COMMERCIAL FACILITIES.

WHEREAS, the National Pollutant Discharge Elimination System (storm water) permit issued by the Regional Water Quality Control Board, Los Angeles, requires that the City of Covina inspect certain industrial/commercial facilities for compliance with the storm water program; and

WHEREAS, the State has not provided funding for this activity.

NOW, THEREFORE, BE IT RESOLVED AND ORDERED by the City Council of the City of Covina, as follows:

SECTION 1. A storm water inspection fee shall be added to the annual cost of the Business License for the industrial/commercial facilities listed in the attachment. The fee will be $35 for restaurants (Standard Industrial Classification (SIC) code 5812) and $70 for all other SIC codes listed.

SECTION 2. The City Clerk shall certify to the adoption of this resolution.

PASSED, APPROVED AND ADOPTED this day of June, 2005.

Peggy Delach, Mayor

ATTEST:

Rosie Fabian, City Clerk

APPROVED AS TO FORM:

Under section 303(d) of the Clean Water Act, states, territories, and authorized tribes are required to develop lists of impaired waters. These are waters that are too polluted or otherwise degraded to meet the water quality standards set by states, territories, or authorized tribes. The law requires that these jurisdictions establish priority rankings for waters on the lists and develop TMDLs for these waters. A Total Maximum Daily Load, or TMDL, is a calculation of the maximum amount of a pollutant that a waterbody can receive and still safely meet water quality standards.

How Does Proposition 218 Affect Local Authority to Finance Water Programs?

- *Background.* Proposition 218, approved by the state's voters in 1996, restricts local governments' authority to raise property owner fees, taxes, and assessments. The measure also permits residents to use the initiative process to repeal or reduce local fees, taxes, and assessments. The provisions of Proposition 218 affect the financing of water programs, including water supply delivery, flood control, and stormwater services, as discussed below.

Water Supply Delivery Service

Many local governments charge property owners user fees for water delivery. Prior to increasing these fees, a government must notify fee payers, hold a hearing, and reject the increase if a majority of the fee payers submit written protests. In some cases, Proposition 218 does not allow governments to charge property owners user fees. For example, government may not impose fees to finance the future expansion of a water system. To raise revenues for these purposes, government may impose taxes, assessments, or fees on developers. (We discuss Proposition 218's requirements regarding these other revenue sources below.)

Stormwater Services

Local governments finance stormwater clean-up services from revenues raised from a variety of fees and, less frequently, through taxes. Property owner fees for stormwater services typically require approval by two-thirds of the voters, or a majority of property owners. Developer fees and fees imposed on businesses that contribute to urban runoff, in contrast, are not restricted by Proposition 218 and may be approved by a vote of the governing body. Taxes for stormwater services require approval by two-thirds of the electorate.

NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM (NPDES)
GENERAL PERMIT FOR
STORM WATER DISCHARGES ASSOCIATED WITH
CONSTRUCTION ACTIVITY (GENERAL PERMIT)

BACKGROUND

In 1972, the Federal Water Pollution Control Act (also referred to as the Clean Water Act [CWA]) was amended to provide that the discharge of pollutants to waters of the United States from any point source is unlawful unless the discharge is in compliance with an NPDES permit. The 1987 amendments to the CWA added Section 402(p) which establishes a framework for regulating municipal and industrial storm water discharges under the NPDES Program. On November 16, 1990, the U.S. Environmental Protection Agency (USEPA) published final regulations that establish storm water permit application requirements for specified categories of industries. The regulations provide that discharges of storm water to waters of the United States from construction projects that encompass five (5) or more acres of soil disturbance are effectively prohibited unless the discharge is in compliance with an NPDES Permit. Regulations (Phase II Rule) that became final on December 8, 1999 expand the existing NPDES program to address storm water discharges from construction sites that disturb land equal to or greater than one (1) acre and less than five (5) acres (small construction activity). The regulations require that small construction activity, other than those regulated under an individual or Regional Water Quality Control Board General Permit, must be permitted no later than March 10, 2003.

While federal regulations allow two permitting options for storm water discharges (individual permits and General Permits), the SWRCB has elected to adopt only one statewide General Permit at this time that will apply to all storm water discharges associated with construction activity, except from those on Tribal Lands, in the Lake Tahoe Hydrologic Unit, and those performed by the California Department of Transportation (Caltrans). Construction on Tribal Lands is regulated by an USEPA permit, the Lahontan Regional Water Control Board adopted a separate NPDES permit for the Lake Tahoe Hydrologic Unit, and the SWRCB adopted a separate NPDES permit for Caltrans projects. This General Permit requires all dischargers where construction activity disturbs one acre or more, to:

1. Develop and implement a Storm Water Pollution Prevention Plan (SWPPP) which specifies Best Management Practices (BMPs) that will prevent all construction pollutants from contacting storm water and with the intent of keeping all products of erosion from moving off site into receiving waters.

2. Eliminate or reduce nonstorm water discharges to storm sewer systems and other waters of the nation.

3. Perform inspections of all BMPs.

This General Permit shall be implemented and enforced by the nine California Regional Water Quality Control Boards (RWQCBs).

The General Permit accompanying this fact sheet regulates storm water runoff from construction sites. Regulating many storm water discharges under one permit will greatly reduce the otherwise overwhelming administrative burden associated with permitting individual storm water discharges. Dischargers shall submit a Notice of Intent (NOI) to obtain coverage under this General Permit. It is expected that as the storm water program develops, the RWQCBs may issue General Permits or individual permits containing more specific permit provisions. When this occurs, those dischargers will no longer be regulated by this General Permit.

On August 19, 1999, the State Water Resources Control Board (SWRCB) reissued the General Construction Storm Water Permit (Water Quality Order 99-08-DWQ referred to as "General Permit"). The San Francisco BayKeeper, Santa Monica BayKeeper, San Diego BayKeeper, and Orange Coast Keeper filed a petition for writ of mandate challenging the General Permit in the Superior Court, County of Sacramento. The Court issued a judgment and writ of mandate on September 15, 2000. The Court directed the SWRCB to modify the provisions of the General Permit to require permittees to implement specific sampling and analytical procedures to determine whether Best Management Practices (BMPs) implemented on a construction site are: (1) preventing further impairment by sediment in storm waters discharged directly into waters listed as impaired for sediment or silt, and (2) preventing other pollutants, that are known or should be known by permittees to occur on construction sites and that are not visually detectable in storm water discharges, from causing or contributing to exceedances of water quality objectives. The monitoring provisions in the General Permit have been modified pursuant to the court order.

TYPES OF CONSTRUCTION ACTIVITY COVERED BY THIS GENERAL PERMIT

Construction activity subject to this General Permit includes clearing, grading, disturbances to the ground such as stockpiling, or excavation that results in soil disturbances of at least one acre of total land area. Construction activity that results in soil disturbances of less than one acre is subject to this General Permit if the construction activity is part of a larger common plan of development that encompasses one or more acres of soil disturbance or if there is significant water quality impairment resulting from the activity. Construction activity does not include routine maintenance to maintain original line and grade, hydraulic capacity, or original purpose of the facility, nor does it include emergency construction activities required to protect public health and safety. Dischargers should confirm with the local RWQCB whether or not a particular routine maintenance activity is subject to this General Permit.

A construction project which includes a dredge and/or fill discharge to any jurisdictional surface water (e.g., wetland, channel, pond, or marine water) will also need a CWA Section 404 permit

STATE WATER RESOURCES CONTROL BOARD (STATE WATER BOARD)
WATER QUALITY ORDER NO. 97-03-DWQ
NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM (NPDES)
GENERAL PERMIT NO. CAS000001 (GENERAL PERMIT)

WASTE DISCHARGE REQUIREMENTS (WDRS)
FOR
DISCHARGES OF STORM WATER ASSOCIATED WITH INDUSTRIAL ACTIVITIES
EXCLUDING CONSTRUCTION ACTIVITIES

The State Water Board finds that:

1. Federal regulations for storm water discharges were issued by the U.S. Environmental Protection Agency (U.S. EPA) on November 16, 1990 (40 Code of Federal Regulations [CFR] Parts 122, 123, and 124). The regulations require operators of specific categories of facilities where discharges of storm water associated with industrial activity (storm water) occur to obtain an NPDES permit and to implement Best Available Technology Economically Achievable (BAT) and Best Conventional Pollutant Control Technology (BCT) to reduce or prevent pollutants associated with industrial activity in storm water discharges and authorized non-storm discharges.

2. This General Permit shall regulate storm water discharges and authorized non-storm water discharges from specific categories of industrial facilities identified in Attachment 1, storm water discharges and authorized non-storm water discharges from facilities as designated by the Regional Water Quality Control Boards (Regional Water Boards), and storm water discharges and authorized non-storm water discharges from other facilities seeking General Permit coverage. This General Permit may also regulate storm water discharges and authorized non-storm water discharges from facilities as required by U.S. EPA regulations. This General Permit shall regulate storm water discharges and authorized non-storm water discharges previously regulated by San Francisco Bay Regional Water Board Order, No.92-11 (as amended by Order No. 92-116). This General Permit excludes storm water discharges and non-storm water discharges that are regulated by other individual or general NPDES permits, storm water discharges and non-storm water discharges from construction activities, and storm water discharges and non-storm water discharges excluded by the Regional Water Boards for coverage by this General Permit. Attachment 2 contains the addresses and telephone numbers of each Regional Water Board office.

3. To obtain coverage for storm water discharges and authorized non-storm water discharges pursuant to this General Permit, operators of facilities (facility operators) must submit a Notice of Intent (NOI), in accordance with the Attachment 3

instructions, and appropriate annual fee to the State Water Board. This includes facility operators that have participated in U.S. EPA's group application process.

4. This General Permit does not preempt or supersede the authority of local agencies to prohibit, restrict, or control storm water discharges and authorized non-storm water discharges to storm drain systems or other water-courses within their jurisdictions as allowed by State and Federal law.

5. If an individual NPDES permit is issued to a facility operator otherwise subject to this General Permit or an alternative NPDES general permit is subsequently adopted which covers storm water discharges and/or authorized non-storm water discharges regulated by this General Permit, the applicability of this General Permit to such discharges is automatically terminated on the effective date of the individual NPDES permit or the date of approval for coverage under the subsequent NPDES general permit.

6. Effluent limitations and toxic and effluent standards established in Sections 208(b), 301, 302, 303(d), 304, 306, 307, and 403 of the Federal Clean Water Act (CWA), as amended, are applicable to storm water discharges and authorized non-storm water discharges regulated by this General Permit.

7. This action to adopt an NPDES general permit is exempt from the provisions of the California Environmental Quality Act (Public Resources Code Section 21100, et seq.) in accordance with Section 13389 of the California Water Code.

8. Federal regulations (40 CFR Subchapter N) establish effluent limitations guidelines for storm water discharges from some facilities in ten industrial categories.

9. For facilities which do not have established effluent limitation guidelines for storm water discharges in 40 CFR Subchapter N, it is not feasible at this time to establish numeric effluent limitations. This is due to the large number of discharges and the complex nature of storm water discharges. This is also consistent with the U.S. EPA's August 1, 1996 "Interim Permitting Approach for Water Quality Based Effluent Limitations in Storm Water Permits."

10. Facility operators are required to comply with the terms and conditions of this General Permit. Compliance with the terms and conditions of this General Permit constitutes compliance with BAT/BCT requirements and with requirements to achieve water quality standards. This includes the development and implementation of an effective Storm Water Pollution Prevention Plan (SWPPP) to reduce or prevent pollutants associated with industrial activity in storm water discharges and authorized non-storm water discharges.

11. Best Management Practices (BMPs) to reduce or prevent pollutants associated with industrial activity in storm water discharges and authorized non-storm water discharges are appropriate where numeric effluent limitations are infeasible, and the implementation of BMPs is adequate to achieve compliance with BAT/BCT and with water quality standards.

12. The State Water Board has adopted a Watershed Management Initiative that encourages watershed management throughout the State. This General Permit recognizes the Watershed Management Initiative by supporting the development of watershed monitoring programs authorized by the Regional Water Boards.

13. Following adoption of this General Permit, the Regional Water Boards shall enforce its provisions.

14. Following public notice in accordance with State and Federal laws and regulations, the State Water Board held a public hearing on November 12, 1996 and heard and considered all comments pertaining to this General Permit. A response to all significant comments has been prepared and is available for public review.

15. This Order is an NPDES General Permit in compliance with Section 402 of the CWA and shall take effect upon adoption by the State Water Board.

16. All terms that are defined in the CWA, U.S. EPA storm water regulations and the Porter-Cologne Water Quality Control Act will have the same definition in this General Permit unless otherwise stated.

IT IS HEREBY ORDERED that all facility operators required to be regulated by this General Permit shall comply with the following:

A. DISCHARGE PROHIBITIONS:

1. Except as allowed in Special Conditions (D.1.) of this General Permit, materials other than storm water (non-storm water discharges) that discharge either directly or indirectly to waters of the United States are prohibited. Prohibited non-storm water discharges must be either eliminated or permitted by a separate NPDES permit.

2. Storm water discharges and authorized non-storm water discharges shall not cause or threaten to cause pollution, contamination, or nuisance.

B. EFFLUENT LIMITATIONS:

1. Storm water discharges from facilities subject to storm water effluent limitation guidelines in Federal regulations (40 CFR

Subject: Public Comments on Draft Staff Analysis Concerning Los Angeles Area Municipal Storm Water and Urban Runoff Dischargers' Test Claims 03-TC-04, 03-TC-19, 03-TC-20, 03-TC-21 ("LA Municipal Stormwater Permit Test Claims")

Dear Ms. Higashi:

These comments are being submitted on behalf of the Bay Area Stormwater Management Agencies Association ("BASMAA") with regard to the Commission on State Mandates' ("Commission's") draft staff analysis of the LA Municipal Stormwater Permit Test Claims. BASMAA is a consortium of eight area-wide municipal stormwater programs in the San Francisco Bay Area, collectively representing 90 municipal agencies, including 79 cities and 7 counties.

Because their own municipal stormwater permits are in the process of being reissued by the California Regional Water Quality Control Board, San Francisco Bay Region in the form of a consolidated "municipal regional stormwater permit" ("MRP") that is proposed to entail requirements both similar to, and going well beyond, those that are the subject of the LA Municipal Stormwater Permit Test Claims, BASMAA members have a strong interest in the matters pending before the Commission and its forthcoming decisions thereon.[1] Accordingly, BASMAA Executive Board members and their counsel have reviewed the Commission staff's draft analysis concerning the LA Municipal Stormwater Permit Test Claims and offer the following comments for the Commission's consideration:

1) **This is a matter of Statewide importance with broad implications**. As set forth in the staff's draft analysis, the issues the Commission will decide in the context of the LA Municipal Stormwater Permit Test Claims – whether the types of highly detailed and often ambitious requirements imposed by California's Regional Water Quality Control Boards in municipal stormwater permits result from the State's exercise of discretion beyond the mandates imposed through the federal Clean Water Act, and, if so, whether such State-mandated requirements are unfunded – will affect not only local governments and taxpayers in the Los Angeles

Bay Area
Stormwater Management
Agencies Association
1515 Clay Street
Suite 1400
Oakland, CA 94612
510.622.2326
www.basmaa.org

[1] This letter is therefore also relevant to the test claims pending before the Commission concerning the municipal stormwater permit previously issued in San Diego County (File 07-TC- 09); BASMAA therefore requests that these comments also be considered and made part of the record with respect to the latter proceeding.

area, but ultimately those in the San Diego and San Francisco Bay-Delta areas and elsewhere throughout the State as well. Municipalities and Water Boards will undoubtedly look to the decision in this matter in upcoming municipal stormwater permitting matters. The Commission should therefore consider the broader implications of its forthcoming decisions and the reasoning that stands behind them with care and in light of the fundamental purpose for which it was established.

2) **This is fundamentally a matter of public finance, not water quality**. We all support clean water and a healthy environment. However, the issues pending before the Commission are really about whether the directives to local governments surrounding these issues were made at the federal or State level and how related local public services to improve water quality and reduce pollutants in stormwater and urban runoff are to be financed. They are *not* about whether or not such measures are needed, whether the particular measures in question make sense, or even whether the California Water Quality Control Boards have sufficient authority to impose them. While these latter issues are properly the subject of debate before the Boards themselves and, if necessary, in the State's courts, they are not properly within the Commission's purview and the Commission's staff is correct not to let its draft analysis rest on them or provide undue deference to the State Board's or U.S. EPA Region 9's advocacy views here.

3) **The Commission must keep the voter's objectives paramount**. Under a string of California Supreme Court decisions, our State's law is clear and consistent with regard to its direction regarding the implementation of initiative statutes, particularly those amending the State's Constitution: heed and work to fulfill the intent and objectives of the State's voters. The Commission must avoid embracing highly technical arguments and analyses and remember to assess the issues before it from the perspective of the voter who pulled the "yes" lever in the voting booth based on *their* (rather than a lawyer or even a judge's) likely understanding of the Proposition that was placed before them.

4) **The Commission's staff have correctly concluded that the municipal stormwater permit requirements at issue here are new programs and/or higher levels of service resulting from the State's exercise of discretion**. BASMAA appreciates and supports the Commission staff's thorough and well reasoned analysis of the federal vs. state mandate issues raised by the LA Municipal Stormwater Permit Test Claims. The assertion that the federal Clean Water Act's "maximum extent practicable" ("MEP") standard for municipal stormwater permitting allows a Water Quality Control Board to define as the federal minimum anything they say they think is practicable or needed to achieve water quality standards is contrary to the State's case law, lacks credibility, and begs the question of what the federal Clean Water Act actually mandates rather than allows a delegated state permit writer to require as a matter of discretion. We agree with the conclusions in the draft staff analysis that highly prescriptive permit provisions, such as those that are the subject of the LA Municipal Stormwater Permit Test Claims, go beyond the federal Clean Water Act's mandates and reflect an exercise of discretion sufficient to render the requirement a State mandate.

5) **The Commission's staff have not yet provided the Commission with a sufficient analysis of permissible/impermissible stormwater fee issues.** BASMAA also has carefully considered the portion of the Commission staff's analysis concerning the issue of whether the State mandates at issue in the LA Municipal Stormwater Permit Test Claims are funded or unfunded. Unfortunately, this section of the Commission staff's analysis looks at the LA Municipal Stormwater Permit Test Claims too myopically and therefore falls short in its consideration of all potentially relevant issues and appellate court precedents that need to be presented to the Commission to serve the interest of the public.

Beyond this, as broader matter of Statewide import, it is essential for the Commission to recognize and address, in this proceeding, the distinguishing fact that many non-federally mandated requirements in the State's municipal stormwater permits (such as highly prescriptive water quality monitoring and total maximum daily load implementation tasks designed to address widespread conditions of water quality impairment, to name just two) relate to local communities and their residents (rather than specific business activities) broadly, require public services that are essentially incident to real property ownership, and/or may only be financed via non-regulatory fees that remain subject to Proposition 218 or increased property taxes per se.[2] In addition, in many instances, due to joint power authorities, special districts, and other political configurations, it is often the case that many State-mandated municipal stormwater permit requirements fall on agencies which have no authority to impose regulatory fees or for which certain exemptions from Proposition 218 (such as those concerning the imposition of fees for water treatment or refuse collection) may not be applicable. In fact, the municipal stormwater permit requirements which do not lend themselves to regulatory fees (such as the two mentioned above) or qualify from exemptions to Proposition 218 have historically required, and will increasingly require, a more significant percentage of local agencies' stormwater program budgets to address than will the types of requirements that might arguably be subject to funding through locally-imposed regulatory fees.

Accordingly, BASMAA requests that this portion of the Commission staff's analysis be revised to revisit the conclusions reached with regard to the "funded vs. unfunded" nature of the requirements that are the subject of LA Municipal Stormwater Permit Test Claims and also to recognize and distinguish that there are many types of municipal stormwater permit requirements that do not give rise to the possibility of regulatory fees and therefore may well be "unfunded" State mandates.

---

[2] Over the last five years, there have been three attempts to pass State legislation (ACA 10, ACA 13, and SCA 12) that would place a State Constitutional Amendment before the voters to create a further exemption to Proposition 218 for municipal stormwater fees on the ballot. All have failed. Since all of the case law cited by the Commission's staff in this section of their analysis preceded both the Salinas decision and this additional legislative history, both of which go much more directly to the stormwater-related fee issues, it is readily distinguishable. Additional precedents on Proposition 218 related cases have been decided by the appellate courts since the Salinas decision that should be carefully reviewed by the Commission.

* * * * * * *

In sum, while it appreciates and applauds the Commission staff's efforts to date, BASMAA remains concerned that the staff's work is not yet complete and believes that further analysis and discussion of the funding issues relating to The Los Angeles Municipal Stormwater Permit Test Claims and to various types of State mandates for municipal stormwater permits needs to be delineated and brought before the Commission. These concerns are by no means merely theoretical – over the last 15+ years, the requirements and scope of California's municipal stormwater permitting program have increased significantly from simply developing and implementing stormwater management programs as envisioned in U.S. EPA's regulations. Many of these increased requirements entail both new programs and higher levels of service that address widespread conditions and serve a community's residents at large; they are distinguishable from the focus of the Commission staff's current analysis and are not tied to increased local regulatory programs so they cannot be financed through so-called "regulatory" fees.

Accordingly, due to fiscal constraints and competing local needs (such as police and fire protection services), there is now a critical need to both prioritize and phase many municipal stormwater program requirements currently under consideration by the California Regional Water Quality Control Boards so federal legal mandates are addressed and State add-ons to federal minimums are either curtailed or tied to the provision of supplemental funding from the State itself.

We ask the Commission for its help by considering these comments and directing its staff to revise their draft analysis of the LA Municipal Stormwater Permit Test Claims in a manner which addresses our concerns.

Very truly yours,

Donald P. Freitas, Chair
Bay Area Stormwater Management Agencies Association

Enclosure

Los Angeles County Review
Commission on State Mandates Draft Staff Analysis
Municipal Storm Water and Urban Runoff Discharges Test Claims

The County of Los Angeles [County] has reviewed the Commission on State Mandates [Commission] draft staff analysis of four consolidated storm water test claims[1].

State Mandates

The County seeks reimbursement for the following state mandates contained in Los Angeles Regional Water Quality Control Board ("Regional Board") Order No. 01-182 ("Order"):

a. Part 4.c.2.a [Inspection of certain commercial facilities to prevent those facilities from discharging waste into waters of the state and to assure compliance with state law], pages 28-31;

b. Part 4.c.2.b [Inspection of industrial facilities to determine compliance with the State's program that regulates discharge of storm water from industrial facilities, including compliance with State Water Resources Control Board ("State Water Board") permits], page 31;

c. Part 4.E. [Inspection of construction sites to determine those sites' compliance with the State's program that regulates discharge of storm water from those sites, including compliance with State Water Board permits], pages 42-45;

d. Part 4.F.5.c.3 [Installation and maintenance of trash receptacles at transit stops], pages 48-49.

[1] Originally, test claims 03-TC-04 (*Transit Trash Receptacles*) and 03-TC-19 (*Inspection of Industrial/Commercial Facilities)* were filed by the County of Los Angeles in September 2003. Test claim 03-TC-21 (*Storm water Pollution Requirements*) was filed by the Cities of Baldwin Park, Bellflower, Cerritos, Covina, Downey, Monterey Park, Pico Rivera, Signal Hill, South Pasadena, and West Covina on September 30, 2003. Test claim 03-TC-20 (*Waste Discharge Requirements*) was filed by Cities of Artesia, Beverly Hills, Carson, La Mirada, Monrovia, Norwalk, Rancho Palos Verdes, San Marino, and Westlake Village on September 30, 2003.

Commission Findings

In Commission's 63 page analysis, issued on April 30, 2009, staff identified the following requirements of a reimbursable state mandated program to be met by claimants:

a. "... the permit is an executive order within the meaning of article XIII B section 6 and Government Code section 17516." Staff Analysis [SA], page 20.

b. "The duty to apply for an NPDES permit is not within the claimants' discretion." SA, page 21.

c. "... the state freely chose to impose the transit trash receptacle requirement on the permittees because neither the federal statute nor the regulations require it. Nor do they require minimum control measures as defined in 40 CFR § 122.34 to include: 1) Public education and outreach on storm water impacts; (2) Public involvement/participation; (3) Illicit discharge detection and elimination. (4) Construction site storm water runoff control; (5) Post-construction storm water management in new development and redevelopment.; (6) Pollution prevention/good housekeeping for municipal operations." SA, page 27.

d. "Because installing and maintaining trash receptacles at transit stops is not expressly required of cities or counties or municipal separate storm sewer dischargers in the federal statutes or regulations, these are activities that "mandate costs that exceed the mandate in the federal law or regulation." SA, page 28.

e. "Staff finds that the permit activities constitute a program within the meaning of article XIII B, section 6. The permit activities are limited to local governmental entities. The permit defines the "permittees" as the County of Los Angeles and 84 incorporated cities within the Los Angeles County Flood Control District (Permit, p. 1 & attachment A). The permit lists no private entities as "permittees." Moreover, the permit provides a service to the public by preventing or abating pollution in waterways and beaches in Los Angeles County. (Or as stated on page 13 of the permit: "The objective of this Order is to protect the beneficial uses of receiving

waters in Los Angeles County.") Therefore, staff finds that the permit is a program within the meaning of article XIII B, section 6." SA, page 46.

f. "Staff finds that local agencies were not required by state or federal law to place and maintain trash receptacles at transit stops before the permit was adopted. Whether or not most cities or counties do so, as argued by the State Water Board in its April 2008 comments, is not relevant to finding a state-mandated new program or higher level of service because even if they do, Government Code section 17565 states: "If a local agency ... at its option, has been incurring costs which are subsequently mandated by the state, the state shall reimburse the local agency ... for those costs incurred after the operative date of the mandate." Because the transit trash requirement is newly mandated by the permit, and based on the plain language of part 4F5c3 of the permit, staff finds that it is a new program or higher level of service to place trash receptacles at transit stops and maintain them as specified in the permit. For the same reason, staff finds that the inspections and enforcement activities at industrial and commercial facilities, including restaurants, automotive service facilities, retail gasoline outlets, automotive dealerships, and phase I facilities (in parts 4C2a & 4C2b of the permit) as well as inspection and enforcement at construction sites (in part 4E of the permit) are a new program or higher level of service. These were not required activities of the permittees prior to the permit's adoption." SA, pages 46-47.

g. "In sum, staff finds that all the permit provisions at issue in this test claim impose a new program or higher level of service within the meaning of article XIII B, section 6 of the California Constitution." SA, page 47.

h. "These [claimant] declarations illustrate that the costs associated with the permit activities exceed $1,000." SA, page 48.

i. Commission staff found the funding disclaimer in Government Code section 17556, subdivision (a), does not apply. Staff explained that "... the claimants did not request "legislative authority" to implement the permit, and the record lacks any resolutions adopted by the claimants. Therefore, staff found that the claimants did not

request the activities in the permit within the meaning of Government Code section 17556, subdivision (a)." SA, page 48.

Commission staff, however, concluded that the municipal storm water and urban runoff discharge costs claimed by the County are subject to the funding disclaimer in Government Code section 17556, subdivision (d)[2]. SA, page 62. If true, reimbursement would be prohibited. But it is not.

No Bus Fee Authority

The County finds that it has no fee authority to recover its costs of complying with the bus stop trash requirements in Order No. 01-182. Previously, as noted by Commission staff, " ... both the State Board and the county argue the ability or merits of imposing a trash fee on transit [bus] users" [SA, page 53].

In staff's current analysis, no explicit bus fee authority is cited to rebut the arguments of the State Board and County. Staff merely indicate that "... regardless of whom the fees are imposed on, the authority to impose them exists in section 40059 of the Public Resources Code" [SA, page 53].

Public Resources Code, § 40059[3], according to Commission staff "... provides local governments with broad authority over the "level of services, charges and fees..." [SA, page 53]. Presumably, under staff's analysis, the County could impose trash fees on bus operators. But this is not possible. Under *BIBER ELECTRIC CO., Inc. v. CITY OF SAN CARLOS, 181, Cal.App.2d 342,* attached as Exhibit One, the Court explains:

> "Granting the validity of the proposition that an exercise of police power in the regulation of a municipal affair will take precedence

[2] Government Code section 17556, subdivision (d), states: "The commission shall not find costs mandated by the state, as defined in Section 17514, in any claim submitted by a local agency ... if, after a hearing, the commission finds any one of the following: [¶]...[¶] (d) The local agency ... has the authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service".

[3] Public Resources Code section 40059, subdivision (a), states that "Notwithstanding any other provision of law, each county, city, district, or other local governmental agency may determine all of the following: (1) Aspects of solid waste handling which are of local concern, including, but not limited to, frequency of collection, means of collection and transportation, level of services, charges and fees, and nature, location, and extent of providing solid waste handling services."

> over a State statute (cf. Nat. Milk Producers Ass'n of California v. City, etc., of S. F., 20 Cal.2d 101, 124 P.2d 25), the argument again fails because the ordinance is not a business license ordinance. Its connection with the enforcement of the business license ordinance is entirely incidental and indirect. The fee charged is not a business license but a license upon vehicles using city streets, matters which are clearly governed by section 9250***344** et sequitur of the 1959 Vehicle Code (§ 372 et seq. of 1935 Code)."

Therefore, the County could not impose a fee upon bus operators governed by section 9250***344** et sequitur of the 1959 Vehicle Code (§ 372 et seq. of 1935 Code). Here, a local fee authority is in conflict with general laws. Accordingly, the direct grant of police power under article XI, section 7, of the California Constitution is unavailable[4]. Accordingly, the authority to impose transit trash fees upon bus operators is not available.

In addition, there is no fee authority to impose a fee on bus riders as the mandated storm water pollution prevention activities would benefit all county residents, not just a special class of residents riding buses. Clearly, all county residents benefit from clean water.

Previously, the Commission found that all county residents benefit from enhanced emergency firefighter services. Imposing a fee on them was held to be invalid. The Commission explains, on page 4 of this decision[5], that:

> "The state also suggests the program's costs could be recovered from all County residents, but this argument ignores the purpose for the enactment of article XIII B, which was to prohibit taxing local residents for state mandated programs. We find that a statutory grant of authority to recover program costs which, in reality, cannot county be meaningfully exercised, is a legally insufficient payment recovery provision."

Therefore, the County is unable to recover transit trash costs by imposing fees on bus riders or operators. In addition, the County has no authority to impose such fees without voter approval.

[5] "Remand of Sudden Infant Death Syndrome Training for Firefighters" Statement of Decision, Test Claim Number CSM 4412, adopted December 17, 1998.

Proposition 218 Bus Stop Property Fees

The County does not have sufficient fee authority to recover the costs of installing and maintaining trash receptacles at bus stop properties. Voter approval for such fees under Proposition 218 is required. Commission staff argue otherwise. They claim that voter approval is not required for imposition of the proposed fees in light of the exception from voter approval for "fees or charges for sewer, water, and refuse collection services". Specifically, staff contend that "... refuse collection is expressly exempted from Proposition's 218 majority vote requirement (article XIII D, § 6, subd. (c))".

However, the purpose of installing and maintaining trash receptacles at bus stop properties is to exclude trash from storm water drainage system, not the routine collection of residential or commercial trash. In this regard, the City of Santa Clarita [City] in their Proposition 218 storm water fee proposal to voters propose "trash excluders".

On page 3 of the City's "Storm water Pollution Prevention Fee, Rate Analysis Report", [attached as Exhibit Two, the City notes that:

> "These [trash excluders] are devices installed inside catch basins to prevent trash, litter and debris on the streets from getting into the storm drain system. Each device costs between $2,000 and $2,300 to install. Staff anticipates an additional cost of $600,000 to retrofit all 264 catch basins if this requirement is retained."

Certainly, trash receptacles at bus stops to prevent trash, litter and debris on the streets from getting into the storm drain system serve the same purpose as trash excluders and must meet Proposition's 218 voter approval requirements.

Therefore, the County has insufficient fee authority to impose bus stop property fees as well as insufficient fee authority to impose regulatory fees on bus operators and riders.

Proposition 218 Storm Water Inspection Fees

Storm water inspection costs are often part of Proposition's 218 storm water pollution prevention fee proposals to voters. For example the City of Santa Clarita notes, on page two of their "Storm water Pollution Prevention Fee, Rate Analysis Report", that:

"In order to provide for the safety of the residents of the City and protect property in the City from the damage associated with flooding and to meet water quality requirements of the NPDES permit issued to the City by the LA-RWQCB and SWRCB, it is necessary to design, construct, operate, maintain, improve and replace storm drainage facilities which collect storm and surface water runoff and convey and treat such runoff in a safe manner to an acceptable point of discharge. It is also necessary to inspect, monitor, and take enforcement action related to illegal dumping, illicit discharges, and various water quality concerns. In order to properly fund such facilities and activities, the City Council has determined that it is necessary to impose on all properties in the City a user charge for storm drainage service." [Emphasis added.]

Santa Clarita's storm water pollution prevention fee, and the inspection fees claimed herein, are designed to recover the costs of "storm water drainage" systems, not "sewer" systems exempt from the voter approval requirements of Proposition 218. The Attorney General in Opinion No. 97-1104 (March 5, 1998), attached as Exhibit Three, distinguishes the two systems and explains that:

"The main issue to be resolved is whether prior voter approval is required for imposition of the proposed fees in light of the exception from voter approval for "fees or charges for sewer, water, and refuse collection services." (Cal. Const., art. XIII D, § 6, subd. (c).) If the fees are for sewer, water, or refuse collection services, no voter approval is necessary. First, as for sewer services, the term "sewer" is often used differently in different contexts.(See, e.g., Pub. Util. Code, § 230.5.) We note that subdivision (a) of section 5 of article XIII D refers to "[a]ny assessment imposed exclusively to finance the capital costs or maintenance and operation expenses for sidewalks, streets, sewers, water, flood control, drainage system, or vector control." Such language in a related constitutional provision supports application of the following rule of statutory construction: "If a statute on a particular subject omits a particular provision, inclusion of that provision in another related statute indicates an intent the provision is not applicable to the statute from which it was omitted." (*In re Marquis D.* (1995) 38 Cal.App.4th 1813, 1827.) **Footnote No. 3** Placing "flood control, drainage systems" in section 5 of article XIII D while omitting such terms in section 6's voter approval exemption

clause evidences an intent to require prior voter approval of new or additional storm drainage system fees.

The Legislature has similarly distinguished sewer systems from storm drainage systems in various statutory schemes. For example, Government Code section 63010, subdivision (i) describes the two separately as follows:

". . . . . .

"(3) 'Drainage and flood control' includes ditches, canals, levees, pumps, dams, conduits, pipes, storm sewers, and dikes necessary to keep or direct water away from people, equipment, buildings, and other protected areas as may be established by lawful authority, as well as the acquisition, improvement, maintenance, and management of floodplain areas and all equipment used in the maintenance and operation of the foregoing.

". . . . . .

"(10) 'Sewage collection and treatment' includes pipes, pumps, and conduits that collect wastewater from residential, manufacturing, and commercial establishments, the equipment, structures, and facilities used in treating wastewater to reduce or eliminate impurities or contaminants, and the facilities used in disposing of, or transporting, remaining sludge, as well as all equipment used in the maintenance and operation of the foregoing.

". . . . . ."

Health and Safety Code section 5471 likewise differentiates between sewer systems and storm drainage systems, as does the organic act under which the District was formed and continues to operate (see Stats. First x. Sess. 1952, ch. 17, p. 351; Deering's Wat.--Uncod. Acts, Act 8934; West's Water Code--App., ch. 67). **Footnote No. 4** Any remaining doubt is removed by applying the following principle of statutoryconstruction recently reaffirmed in *City of Lafayette* v. *East Bay Mun. Utility Dist.* (1993) 16 Cal.App.4th 1005, 1017:

". . . 'Exceptions to the general rule of a statute are to be strictly construed. In interpreting exceptions to the general statute courts include only those circumstances which are within the words and reason of the exception. . . . One seeking to be excluded from the sweep of the general statute must establish that the exception applies.'

[Citations.]" If storm drainage system fees are not fees for "sewer . . . services," are they fees for "water . . . services" within the meaning of article XIII D, section 6, subdivision (c)? Government Code section 53750, subdivision (m) defines "water" for purposes of article XIII D as "any system of public improvements intended to provide for the production, storage, supply, treatment, or distribution of water."

While there may be some temporary storage of water in connection with a storm drainage system, it is apparent that the District's drainage and flood control system is designed to do the opposite of that which the Legislature's definition of "water . . . services" contemplates. The District's storm drainage system does not produce water or supply it to end users. Rather than distributing water, it collects and removes it. The District does not treat any water flowing into its storm drainage system. Consequently, the exception from voter approval in Article XIII D, section 6, subdivision (c), for "water . . . services" is inapplicable."

There is additional evidence that storm water pollution prevention fees such as those claimed herein are not exempt from Proposition 218 voter approval requirements. Specifically, SCA 18 (2009), attached as Exhibit 4, seeks to add storm water pollution prevention fees for the same type of services, as are claimed herein, to the three current types of services which are exempt from the requirements of Proposition 218. The new storm water fee exemption language in SCA 18 is italicized as follows:

" Voter Approval for New or Increased Fees and Charges.

Except for fees or charges for sewer, water, and *storm water and urban runoff management, or* refuse collection services, no property related *a property-related* fee or charge shall *not* be imposed or increased unless and until that fee or charge is submitted and approved by a majority vote of the property owners of the property subject to the fee or charge or, at the option of the agency, by a two-thirds vote of the electorate residing in the affected area. The election shall be conducted not less than 45 days after the public hearing. An agency may adopt procedures similar to those for increases in assessments in the conduct of elections under this subdivision."

It should be noted that the title assigned by Commission staff to the subject consolidated test claims is "Municipal Storm Water and Urban Runoff Discharges". This is similar to the new exemption in SCA 18: "*storm water and urban runoff management*". Therefore, under SCA 18, now pending in the State Legislature, the County would have sufficient fee authority. However, under current law, it does not.

Accordingly, the storm water pollution prevention inspection fees claimed herein are subject to the voter approval requirements of Proposition 218. As such, the County has insufficient inspection fee authority.

Insufficient Regulatory Inspection Fee Authority

No express fee authority to recover inspection costs is to be found. In this regard, Commission staff note that "... the issue of local fee authority for the municipal storm water permit activities is one of first impression for the Commission. Although there are no authorities directly on point (except Pub. Res. Code, § 40059) ... some legal principles emerge that guide the analysis" Staff Analysis [SA] page 51.

However, even Public Resources Code, § 40059 does not refer to fees to recover the costs of inspection activities. The only types of activities covered by this section are enumerated in § 40059, subdivision (a) as follows:

> "Notwithstanding any other provision of law, each county, city, district, or other local governmental agency may determine all of the following: (1) Aspects of solid waste handling which are of local concern, including, but not limited to, frequency of collection, means of collection and transportation, level of services, charges and fees, and nature, location, and extent of providing solid waste handling services."

Accordingly, Public Resources Code, § 40059 provides no express authority to charge inspection fees. Moreover, the broad phrase "... Aspects of solid waste handling which are of local concern, including, but not limited to ..." [emphasis added] should not be inferred to include acknowledged state mandated inspections.

Also, Commission staff acknowledge that the inspection fee authority to inspect commercial and industrial facilities and construction sites under

"Health and Safety Code section 5471[6] is insufficient. In particular, staff note that section 5471:

> "... makes no mention of "inspecting" commercial or industrial facilities. Rather, the fee revenues are used for "maintenance and operation" of storm drainage facilities. Thus, for the types of businesses regulated by the permit (restaurants, automotive service facilities, retail gasoline outlets, automotive dealerships, phase I facilities, as defined, and construction sites) staff cannot find that the claimants have statutory fee authority sufficient to pay for the mandated program because "operation and maintenance" of storm drainage facilities does not encompass the state-mandated inspections of the facilities or construction sites specified in the permit." [Emphasis added.] SA, page 54.

It should be noted that the State was given fee authority to cover the costs of inspecting general industrial facilities and construction sites in Chapter 775, Statutes of 1997 [AB 1186]. Before the County was delegated the inspection duties claimed herein, the California Regional Water Quality Control Boards [Regional Board] were solely responsible for inspection and regulatory compliance issues associated with general industrial and construction storm water programs and, under AB 1186, were required to spend not less than 50% of State permit fee revenues on such issues.

However, according to the AB 1186 Bill Analysis of the Senate Committee on Agriculture and Water Resources, attached as Exhibit 5, the inspection and regulatory work loads associated with general industrial and construction storm water programs of Regional Boards was getting out-of-hand. This analysis explains why on page 2:

> "1. According to the proponents of this bill, California's 1994 Water Quality Inventory Report states that storm waters and urban run-off are the leading sources of pollution in California estuaries

[6] Section 5471 provides that [A]any entity shall have power, by an ordinance approved by a two-thirds vote of the members of the legislative body thereof, to prescribe, revise and collect, fees, tolls, rates, rentals, or other charges for services and facilities furnished by it, either within or without its territorial limits, in connection with its water, sanitation, storm drainage, or sewerage system. .... Revenues derived under the provisions in this section, shall be used only for the acquisition, construction, reconstruction, maintenance, and operation of water systems and sanitation, storm drainage, or sewerage facilities .... "

and ocean waters. Proponents argue that non-compliance is rampant, with approximately 10,000 industries in the Los Angeles area alone who are required but have failed to obtain storm water permits. Further, proponents point out that the Los Angeles Regional Water Quality Control Board has only two staff to contact, educate, and control each site and question whether adequate revenues are returned to the regional boards for this program. This bill would require at least 50% of the revenues collected under this program to be returned to the regional boards and would further require the regional boards to use at least 50% of the money received for inspection and regulatory compliance issues associated with industrial and construction storm water programs.

2. The SWRCB indicates that at least 50% of the moneys in the Waste Discharge Permit Fund are already allocated to regional boards for use in enforcing the storm water program. The SWRCB indicates that approximately $3.2 million is collected annually from the storm water program, and approximately $2.4 million goes back to the regional boards. Further, the SWRCB indicates that it has an accounting system that ensures revenues go back to the originating program and region.

3. Recent amendments to this bill address concerns expressed by the SWRCB and remove the opposition of the SWRCB. Specifically, the amendments eliminate the creation of a special account in the Waste Discharge Permit Fund, and instead only require a separate accounting of the revenues received under the program. The amendments further require at least 50% of the revenues to go back to the regional board from which they were collected, which is consistent with the current practice of the SWRCB.

4. The recent amendments further address the issue of accountability of the funds at the regional level by requiring the regional boards to use at least 50% of the amount received solely on storm water inspection and regulatory compliance issues associated with the program.

5. The California Environmental Protection Agency has recently stepped up its efforts to require industries to obtain permits through

mailings to facility operators. Operators could be in violation of federal law and facing with fines up to $25,000 per day."

It is not surprising then that a few years after AB 1186 was enacted that claimants were delegated inspection and regulatory duties under the test claimed permit to help address "rampant" noncompliance --- "... with approximately 10,000 industries in the Los Angeles area alone who are required but have failed to obtain storm water permits". However, no the State fee revenue was provided to claimants to perform these inspections. As a consequence, the State was compensated for work the claimants did. Or put another way, the state was compensated for work the State did not do.

To correct the unearned State compensation problem, the Legislature proposed sharing the State fees. In this regard, the Legislative Counsel explains in their digest to SB 2058 (2002), attached as Exhibit 6, that:

> " ... all fees collected for permits for the discharge of storm water by municipalities and industries be accounted for separately in the fund. The bill would also provide that not less than 50% of the money collected from general industrial or construction storm water permits, upon appropriation by the Legislature, would be used by the California regional water quality control board with jurisdiction over the permitted industry or construction site that generated the fee, to carry out storm water programs in the region. The bill would further provide that a portion of the money collected from the fees from all storm water discharge permits, upon appropriation by the Legislature, would be used by the city, county, or city and county, in which the fee was collected, solely to assist the local government to control pollutants or meet water quality standards from storm water dischargers that are subject to a general in dustrial or construction storm water permit under the NPDES permit program to be separately accounted for, by region, in the Waste Discharge Permit Fund. <u>The board would require each regional board that receives money that is generated from general industrial or construction storm water permit fees to allocate 25% of those funds to counties and cities to carry out storm water programs in that region</u> . [Emphasis added.]

The purpose of SB 2058 is explained in the SB 2058 Bill Analysis of the Senate Committee on Environmental Quality, attached as Exhibit 7, as follows:

"The regulation of storm water discharges has become increasing controversial over the past several years. The controversy has been enhanced by lawsuits that resulted in judicial orders to regional water quality control boards to manage indirect sources of water pollution in order to mitigate the effects of runoff on impaired water bodies and by repeated ocean beach closures because of bacterial contamination from storm drain flows. ... The purpose of this bill is to provide a subsidy to cities and counties to assist them in complying with the requirements of municipal storm water permits. The subsidy is taken from permit fee revenue paid by industrial and construction storm water dischargers." [Emphasis added.]

Apparently, SB 2058 recognized that cities and counties have insufficient fee authority to recover their permit costs, including their inspection costs claimed herein. In essence, the State pocketed the fee revenue while making the County and cities do the work. Unfortunately, SB 2058 never was enacted --- and cities and counties have not recovered the costs as claimed herein.

Recently, SB 310 (2009), attached as Exhibit 8, proposes to provide cities and counties with storm water regulatory or user-based fee authority, currently unavailable under existing law. Specifically, SB 310 proposes to add Section 16103 to the Water Code as follows:

"(a) In addition to making use of other financing mechanisms that are available to local agencies to fund watershed improvement plans and plan measures and facilities, a county, city, special district, or combination thereof may impose fees on activities that generate or contribute to runoff, storm water, or surface runoff pollution, to pay the costs of the preparation of a watershed improvement plan, and the implementation of a watershed improvement plan that is approved by a regional board~~, if the plan will facilitate compliance with one or more water quality requirements~~. Fees imposed pursuant to this section shall be reasonably related to the actual or anticipated past, present, or future adverse effects of the fee payer's activities. "Activities," for purposes of this subdivision, include all the activities, operations, means the operations and existing structures and improvements subject to regulation under an NPDES permit for municipal separate storm sewer systems.

(b) A county, city, special district, or combination thereof may plan, design, implement, construct, operate, and maintain controls and facilities to improve water quality, including controls and facilities related to the diversion, interception infiltration, retention and reuse, diversion, interception, filtration, or collection of surface runoff, including urban runoff, storm water, and other forms of runoff, the treatment of pollutants in runoff or other waters subject to water quality regulatory requirements, the return of diverted and treated waters to receiving water bodies, the enhancement of beneficial uses of waters of the state, or the beneficial use or reuse of diverted waters.

(c) The fees authorized under subdivision (a) may be imposed as user-based or regulatory fees consistent with this chapter." [Emphasis added.]

Of course, when SB 310 passes, cities and counties will have storm water user-based or regulatory fee authority. Until then, none is available.

The common thread in the [above] legislative proposals is that under existing law claimants have insufficient fee authority.

Conclusion

Accordingly, for all of the above reasons, reimbursement for providing State-permitted industrial and commercial facility and construction site inspections and public transit trash removal services pursuant to the Regional Water Board's Executive Order Number 01-182, Permit Number CAS004001, issued December 13, 2001, is required.

Los Angeles County Review
Commission on State Mandates Draft Staff Analysis
Municipal Storm Water and Urban Runoff Discharges Test Claims

Declaration of Leonard Kaye

Leonard Kaye makes the following declaration and statement under oath:

I, Leonard Kaye, Los Angeles County's [County] representative in this matter, have prepared the attached review of the Commission on State Mandates draft staff analysis of the Municipal Storm Water and Urban Runoff Discharges test claims filed by the County.

Specifically, I declare that I have examined the County's State mandated duties and resulting costs in implementing the test claim legislation, and find that such costs as set forth in the subject test claims, are, in my opinion, are reimbursable "costs mandated by the State", as defined in Government Code section 17514:

> " ' Costs mandated by the State' means any increased costs which a local agency or school district is required to incur after July 1, 1980, as a result of any statute enacted on or after January 1, 1975, or any executive order implementing any statute enacted on or after January 1, 1975, which mandates a new program or higher level of service of an existing program within the meaning of Section 6 of Article XIII B of the California Constitution."

I am personally conversant with the foregoing facts and if so required, I could and would testify to the statements made herein.

I declare under penalty of perjury under the laws of the State of California that the foregoing is true and correct of my own knowledge, except as to the matters which are therein stated as information or belief, and as to those matters I believe them to be true.

District Court of Appeal, First District, Division 2, California.

BIBER ELECTRIC CO., Inc., a corporation, Plaintiff and Respondent,

v.

CITY OF SAN CARLOS, a municipal corporation, et al., Defendants and Appellants.

Civ. 19011.

May 26, 1960.
Rehearing Denied June 24, 1960.
Hearing Denied July 20, 1960.

Action for declaratory relief and injunction against enforcement of city ordinance which required that every commercial vehicle driven on city streets by any person or firm subject to city's business licensing provisions have displayed on it a certain emblem issued by city. The Superior Court, San Mateo County, Arthur L. Mundo, J., held the ordinance unconstitutional, and city appealed. The District Court of Appeal, Good, J. pro tem., held that the fee for additional emblems required by ordinance was not adjunct of business licensing but rather involved a fee for the use of city streets by commercial vehicles of business licenses, an area pre-empted by state Vehicle Code so that trial court correctly enjoined enforcemet of ordinance.

Affirmed.

Although memorandum opinion filed by trial judge discussed several propositions other than the single reason for the judgment as stated in the findings of fact, appellate court need not discuss all propositions in memorandum opinion since the appeal is from the judgment and not from the memorandum of the judgment.

****261 *342** Melvin E. Cohn, City Atty., Michael Aaronson, Asst. City Atty., San Carlos, for appellants.

Dinkelspiel & Dinkelspiel, Redwood City, for respondent.

***343** GOOD, Justice pro tem.

In this action plaintiff sought declaratory relief and to enjoin enforcement of San Carlos' Ordinance No. 462 (codified section 4038) adopted October 14, 1958. The ordinance required the owner of every commercial vehicle driven on any San Carlos street by any person or firm subject to business licensing within said city to display a certain emblem on or near the left

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

door of such vehicle. Each business licensee was entitled to one such emblem without fee and a charge of $1.00 was imposed for each additional emblem that might be required by a licensee. Plaintiff was an electrical contractor and subject to the San Carlos business license ordinance. It operated eight vehicles in its business. The preamble to Ordinance 462 recites that ready identification of business licensees would be facilitated by the use of such emblems and they 'would, therefore, facilitate the policing of said City.'Defendant appeals from a judgment declaring the ordinance unconstitutional. The declaratory judgment is supported by a specific finding that the ordinance is invalid because it attempts to impose additional requirements in fields that are pre-empted by the State of California.

262 [1] The defendant argues that the imposition of a **business license fee measured by the number of commercial vehicles of a firm using its streets is not an attempt to enter into a field pre-empted by the State. The argument might be valid if the charge imposed by the ordinance was a **business license fee.** But by its very terms, the taxable transaction involved in this ordinance is the use of city streets by commercial vehicles of business licensees. The city's next argument is that the ordinance in question is not regulatory because any licensee can procure the emblem without examination or investigation and, therefore, is a valid exercise of the police power as applied to a municipal affair, namely, the enforcement of the business license ordinance of said city. Granting the validity of the proposition that an exercise of police power in the regulation of a municipal affair will take precedence over a State statute (cf. Nat. Milk Producers Ass'n of California v. City, etc., of S. F., 20 Cal.2d 101, 124 P.2d 25), the argument again fails because the ordinance is not a business license ordinance. Its connection with the enforcement of the business license ordinance is entirely incidental and indirect. The fee charged is not a business license but a license upon vehicles using city streets, matters which are clearly governed by section 9250*344 et sequitur of the 1959 Vehicle Code (§ 372 et seq. of 1935 Code). Its violation is a misdemeanor and prosecution would lie independently and separately from a possible violation of the business license ordinance.

[2] The city is correct in its contention that section 458 of the 1935 Vehicle Code does not of itself support the finding of pre-emption. This section provided that the provisions of division 9 of that code should be uniform throughout the State of California and proscribed the enactment or enforcement of ordinances by local authorities on matters covered by this division unless express authorization was granted therein. Registration and licensing of motor vehicles were provided for in division 6. However, the policy of uniformity of laws affecting taxation, regulation and control of motor vehicles throughout the State of California has long been recognized as extending to more than the traffic rules and regulations of division 9. Thus, the weight limits set forth in section 88 of the 1923 Motor Vehicle Act were held to be a pre-empted field in Atlas Mixed Mortar Co. v. City of Burbank, 202 Cal. 660, 262 P. 334 decided in 1927. The fact that in 1935 section 713 of the Vehicle Code[FN1] gave municipalities express authority (subject to one exception, here of no consequence) to enact ordinances to limit use of their streets by commercial vehicles in excess of gross weights to be fixed by such ordinance does not affect the authority of the Atlas decision. Cf. Agnew v. City of Los Angeles, 51 Cal.2d 1, 330 P.2d 385.In the enactment of the 1959 Vehicle Code, section 458 has become section 21 and the words 'this division' have been changed to the inclusive words 'this code' thus providing present statutory authority for the proposition that unless express authority is granted, a local government has no authority to regulate or control any matter covered by the Vehicle Code. This is but a statutory expression of what was recognized as law in Atlas and cases therein cited and, also, what may have been recognized by the Legislature itself in its grant to local authorities by section 459(b)[FN2] of the power to license and regulate vehicles for hire, thus impliedly prohibiting the licensing of other vehicles. For the foregoing reasons we are of the opinion that the ordinance was in fact an attempt by the city to impose an additional license fee in a field pre-empted by the State and the judgment of the trial court was correct.

FN1. Now Vehicle Code 1959, § 35701 et seq.

FN2. Now Vehicle Code 1959, § 21100(b).

[3] The memorandum opinion filed by the trial judge *345 discussed several propositions other than the single reason for the judgment as stated in the findings of fact. These propositions were discussed at length in the briefs but because an appeal is from **263 the judgment and not from a memorandum (In re Estate

of Bullock, 133 Cal.App.2d 542, at page 549, 284 P.2d 960, at page 965) the remaining propositions need not be discussed. However, nothing in this opinion is intended to hold that a revenue producing business license ordinance may not graduate its license fees according to the number of vehicles used in a business. The reasonableness of such a classification is not presently before us. Neither is the question whether or not if such a classification were validly imposed a city could a sticker type receipt or other identifying emblem to be displayed on the vehicles of such licensees.

The judgment is affirmed.

Rate Analysis Report

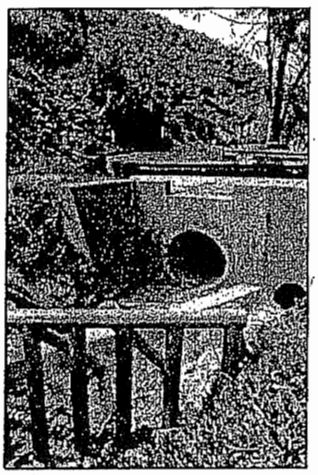
for the

Stormwater Pollution Prevention Fee

For the

City of Santa Clarita

Los Angeles County, California



February 23, 2009

Introduction

The City of Santa Clarita (City) is considering updating its current Stormwater Pollution Prevention Fee, which is being levied per Chapter 15.50 of the Santa Clarita Municipal Code and the California Health and Safety Code Section 5471 et seq.

The purpose of this Rate Analysis Report is to:

- Review the Stormwater Pollution Prevention Fee and improvements currently being funded.
- Review the requirements of Article XIIID of the State Constitution (Proposition 218) relating to requirements for apportioning the costs associated with the City's stormwater runoff system.
- Analyze and recommend an appropriate rate structure and provide estimated rates based on cost data information provided by the City.

Proposition 218 Requirements

This fee must comply with the provisions of Article XIIID of the California Constitution (Proposition 218). Section 6.b of Proposition 218 has the following requirements for all "new, extended, imposed or increased" fees and charges:

1) "Revenues derived from the fee or charge shall not exceed the funds required to provide the property-related service."

2) "Revenues derived from the fee or charge shall not be used for any purpose other than that for which the fee or charge was imposed."

3) "The amount of a fee or charge imposed upon any parcel or person as an incident of property ownership shall not exceed the proportional cost of the service attributable to the parcel."

4) "No fee or charge may be imposed for a service unless that service is actually used by, or immediately available to, the owner of the property in question. Fees or charges based on potential or future use of service are not permitted. Standby charges, whether characterized as charges or assessments, shall be classified as assessments and shall not be imposed without compliance with [the assessment section of this code]."

5) "No fee or charge may be imposed for general governmental services including, but not limited to, police, fire, ambulance or library services where the service is available to the public at large in substantially the same manner as it is to property owners."

Background Information

In accordance with the Federal Clean Water Act of 1972, the United States Environmental Protection Agency (EPA) is required to establish regulations setting forth National Pollution Discharge Elimination System (NPDES) permit standards. The enactment of 1987 amendments to the Federal Clean Water Act (Act) of 1972 imposes permit requirements for discharge of storm waters. The Act allows the EPA to delegate its NPDES permitting authority to states with an approved environmental regulatory program. The State of California is one of the delegated states.

The responsibility for implementing various NPDES permits in the State of California has been delegated to the State Water Resources Control Board (SWRCB). The SWRCB administers NPDES authority through its nine Regional Boards. In anticipation of the issuance of the Federal regulations, the Los Angeles County Department of Public Works (LACDPW), together with 86 other cities,

applied to the Los Angeles Regional Water Quality Control Board (LA-RWQCB) and SWRCB for an "early" permit. On June 18, 1990, the NPDES permit for Stormwater/Urban Runoff Discharge in Los Angeles County was issued. Los Angeles County is the designated "Principal Permittee" with the 86 cities given the opportunity to become Co-Permittees. The City of Santa Clarita is the only incorporated City in the Los Angeles County portion of the Santa Clara River watershed. The Santa Clara River runs 86 miles from Acton to Ventura, eventually reaching the Pacific Ocean. The City is approximately 45 miles from the Pacific Ocean. The Santa Clara River provides habitat to hundreds of plant and animal species, 16 of which are threatened or endangered. The Santa Clara River provides roughly 50% of the water supply to the Santa Clarita Valley area.

In May 1992, the City provided the County with a letter of intention to participate as a Co-Permittee with the County in the application of a NPDES permit. The City is one of 86 other co-permittee agencies that filed a letter of intention to participate in the County's NPDES Permit No. CA0061154 at that time. Since then, there have been three stormwater NPDES Permits issued to the group, the most recent one issued in 2001. A new NPDES Permit for the stormwater program in Los Angeles County is anticipated to be issued in 2009.

The City of Santa Clarita is in somewhat of a unique situation with regard to stormwater management. Being a relatively new city, most of the street and drainage systems were developed during the process of land development under the supervision of Los Angeles County. Both before and after incorporation in 1987, the ownership of drainage facilities, once constructed, have been transferred to the Los Angeles County Flood Control District (LACFCD). However, in the past few years the LACFCD has not been processing title transfer requests in a timely manner. As a result, there are currently approximately 230 storm drains in the City that are maintained by the County and 200 storm drains that are still the responsibility of the developer for maintenance. Many of the privately maintained storm drains will probably become the City's at some future time. The public streets, which are a part of the primary storm drainage system, are owned and maintained by the City. The storm drainage catch basins in the street present a mix of ownership and responsibility with some owned by LACFCD and others by the City.

In order to provide for the safety of the residents of the City and protect property in the City from the damage associated with flooding and to meet water quality requirements of the NPDES permit issued to the City by the LA-RWQCB and SWRCB, it is necessary to design, construct, operate, maintain, improve and replace storm drainage facilities which collect storm and surface water runoff and convey and treat such runoff in a safe manner to an acceptable point of discharge. It is also necessary to inspect, monitor, and take enforcement action related to illegal dumping, illicit discharges, and various water quality concerns. In order to properly fund such facilities and activities, the City Council has determined that it is necessary to impose on all properties in the City a user charge for storm drainage service.

In addition to existing costs, the City anticipates significant increased costs for compliance with the new NPDES Permit to be issued by the LA-RWQCB and SWRCB in 2009. There is a significant monitoring requirement anticipated. Currently, Los Angeles County pays for a single mass emissions monitoring station on the Santa Clara River. The anticipated, new requirements will increase the monitoring sites significantly. Los Angeles County has stated it will not pay for the increased monitoring. Staff estimates the increased monitoring will likely cost $1.5 million during the first year if the requirements are retained as written in the Ventura County NPDES Permit. If significant pollution levels are found, monitoring costs will likely increase; if not, the monitoring costs could decrease. Staff cannot anticipate the cost increase associated with significant pollution levels. There are hundreds of pollutants to monitor for that the City has little experience with mitigating. The expense of response largely depends on the type of pollutant, if any, found. For

example, bacteria requires disinfection, metals requires filtration, etc. However, treatment for certain types of pollutants can be profoundly expensive.

Another anticipated, additional requirement are trash excluders. These are devices installed inside catch basins to prevent trash, litter and debris on the streets from getting into the storm drain system. Each device costs between $2,000 and $2,300 to install. Staff anticipates an additional cost of $600,000 to retrofit all 264 catch basins if this requirement is retained. Other treatment best management practices that may be required include creating infiltration rain gardens surrounding catch basins and one or two large scale infiltration projects. Rain gardens essentially create planted areas around catch basins to capture flows from the street before entering the storm drain system. They force the flows to infiltrate into the ground before entering the Santa Clara River. Large scale infiltration projects divert flows that enter the storm drain system. These flows are treated and infiltrated in large land areas, such as parks, preventing much of the flows from reaching the surface water, such as rivers. Staff anticipates costs for rain gardens on inlets/streets at a cost of approximately $2,000,000 annually for 20 years. The large scale infiltration projects may cost $10 million or more between 2009 and 2014.

Services Funded

Expenditures from the revenue generated from the Stormwater Utility fee are intended to comply with the requirements set forth in the NPDES permit. The activities and services funded by this fee include, but are not limited to:

1. Administration and oversight of the requirements set forth in the NPDES permit to various City departments, developments, and local agencies.
2. Prepare ordinances and resolutions designed to remain in compliance with the rules and regulations required by the NPDES permit, the Clean Water Act, and the Porter-Cologne Act.
3. Respond to and investigate incidents of illicit discharges and illegal connections to the storm drain system.
4. Periodically inspect facilities for proper handling of materials, chemicals, pollutants, garbage, waste, and debris and prevent any discharges to the storm drain system.
5. Regularly clean and provide maintenance of catch basins, the flowline, and storm drainage facilities.
6. Installation and maintenance of water quality devices required to keep pollutants out of the storm drain system.
7. Discourage illegal dumping or discharge of pollutants into the storm drain system by stenciling all City-owned catch basins with a "No Dumping" message.
8. Provide street sweeping to keep litter and debris from entering the storm drain system.
9. Augment public education and outreach programs in regards to the proper use and function of the storm drainage system and the receiving waters.
10. Develop programs to promote, publicize, and facilitate public reporting of illicit discharges to the storm drain system.

11. Encourage the proper disposal of household hazardous waste (HHW) to prevent the improper disposal to the storm drain system or to the sewer system.

12. Discourage the improper disposal of litter, garden clippings, leaves, and pet waste into the street or the storm drain system.

Rate Structure Analysis

Section 6.b of Article XIIID of the State Constitution (Proposition 218) states that:

> "The amount of a fee or charge imposed upon any parcel or person as an incident of property ownership shall not exceed the proportional cost of the service attributable to the parcel."
>
> and
>
> "No fee or charge may be imposed for a service unless that service is actually used by, or immediately available to, the owner of the property in question."

By definition, all properties that shed stormwater into the City's Stormwater drainage system use, or are served by, the City's stormwater drainage system. The amount of use attributed to each parcel is measurable by the amount of storm runoff contributed by the property, which is directly proportional to the amount of impervious area on a parcel (such as buildings and concrete). The more impervious area on a property, the more storm runoff the property generates, the more demand placed on the storm drain system.

The amount each parcel uses the stormwater drainage system is computed by the following formula:

(Parcel Area) x (Impervious Percentage) = Drainage Units

The typical percent impervious (% Impervious) for land uses in the City, as provided in the Los Angeles County Flood Control District Hydrology Manual, updated January 2006, have been applied for the purposes of estimating the runoff generated by each property. These are shown in Table 1 on the following page.

The more Drainage Units a parcel has, the more storm run-off it generates, and the more it uses and impacts the stormwater drainage system.

It is standard practice to relate other land uses to a developed single family home, instead of working exclusively with Drainage Units. The City's parcel database shows that over 60% of the parcels within the City are designated as Single Family Residential (SFR) parcels, and the median size of a SFR parcel is approximately 7,000 square feet (0.16 acre). Therefore, it makes sense to relate all parcels to this median residential property. Therefore, the runoff from a 0.16-acre SFR parcel is set equal to one Equivalent Residential Unit (ERU) and this base ERU is calculated as follows:

(0.16 acres of area) x 42% = 0.0672 Drainage Units = 1 ERU

Table 1, below, provides a preliminary summary of Drainage Units and ERU's for the various land uses in the City.

Table 1 – Drainage Unit Summary Table

Drainage Land Use	Parcels	Acres	% Imp	Drainage Units	ERU's

SFR-1	1,099	779.8717	formula	279.168057	4,154.2866
SFR Rural	927	2,233.6513	formula	422.670130	6,289.7341
Undev Park	74	253.5892	2%	5.071784	75.4730
Vacant	3,572	10,547.4373	1%	105.474373	1,569.5591
	54,409	28,243.7333		8,788.314520	130,778.4896

SFR properties are separated into three (3) groups and their impervious percentage is calculated as follows:

SFR Category	Drainage Unit Formula
SFR-0.5 – SFR parcels 0.5 acres or less	acres x 42% (max = 0.21)
SFR-1 – SFR parcels 0.5 – 1 acres	(0.21) + (acres – 0.5) x 21% (max = 0.315)
SFR-Rural – SFR parcels more than 1 acre	(0.315) + (acres – 1.0) x 10%

Multi-Family Residential (MFR) and Condominium (CNDO) units are split into categories by the density, or number of dwelling units per acre (DU/Ac) as follows:

MFR or Condo Category	Density	% Impervious
High Density	Greater than 18 DU/Ac	90%
Med Density	10 – 18 DU/Ac	86%
Low Density	Less than 10 DU/Ac	55%

Condominium unit parcel areas are calculated one of two ways:

1) either by using the sizes of the individual unit and the common area parcels separately, or

2) by dividing the total area of the condominium complex (which includes the common area) by the number of condominium units, and the total imperviousness of the entire complex is attributed to each individual condo parcel in the complex. (This divides the runoff of the entire complex to each of the individual units.) Because these condominium common areas are taken into consideration in this manner, they are exempt from the charge.

The latter calculation has been made when the individual unit areas are not readily available. These two ways of calculating the charges are considered nearly equivalent when applied. With the first method, the common area property is charged and paid by the Home Owner Associations which are passed on to the individual units. With the second method, the common area property is added into the individual units. Therefore, proportionality has been maintained.

Within the City of Santa Clarita and the Santa Clara River Watershed, there are many separate drainage areas of various terrain and with inlets, pipes and channels made of various materials and in various conditions. The storm drain system discharges to the Santa Clara River and its tributaries. The Santa Clara River provides habitat to hundreds of plant and animal species. It also provides about 50% of the area's water supply.

All parcels draining into City-maintained drainage infrastructure are proposed to be charged the same user fee rate per ERU for stormwater runoff treatment. The Stormwater Pollution Prevention Fee is proposed in perpetuity.

For the purposes of this report, City-maintained drainage infrastructure includes streets, pipes, inlets, outlets, and natural drainage courses, and is also referred to as the "City's stormwater drainage system." Parcels related to these types of property uses are exempt from the runoff charge, as they are part of the infrastructure being funded. Also exempt from the runoff charge is Caltrans right-of-way, because Caltrans handles its own runoff under a separate NPDES permit.

Elementary through High Schools (El-Hi Schools) have been looked at on an individual basis to determine the actual percent impervious for each property, as properties with this use had a wide range of impervious percentages.

Properties that had previously submitted appeals to the charge have been reviewed and a determination has been made on a parcel-by-parcel basis as to the applicability of the appeal to this methodology.

Cost Estimate

Table 2 – FY 09-10 Estimated Expenditures and Revenues

FY 09-10 Expenditures	
Personnel	$802,500
Office, Equipment and Program Costs	$206,000
Street Sweeping	$832,000
Professional and Contractual Services	$304,800
Storm Drain Facility Repair	$86,000
General Fund Overhead Allocation	$448,800
Subtotal 09-10 Expenditures:	$2,680,100
Anticipated New Permit Expenditures (actual costs unknown)	
New Permit - Increase in Monitoring	$1,500,000
New Permit - CIP - Trash Excluders	$600,000
New Permit - Regional Water Quality Devices	$2,000,000
Subtotal Anticipated New Permit Expenditures:	$4,100,000
Reserves	
50% Operating Reserve	$3,390,050
(Less Site-Specific Reserve)	($192,370)
Equipment Replacement Reserve	$392,072
Subtotal Reserves:	$3,589,752
Total Expenditures:	**$10,369,852**

FY 09-10 Revenues	
Interest	$121,180
Stormwater SUSMP	$7,650
Stormwater SWPPP	$4,080
Miscellaneous Revenue	$123,110
Operating Transfers in	$171,920
Site-Specific - Bridgeport	$24,050
Site-Specific - Creekside	$21,620
Site-Specific - Hidden Creek	$20,200
Site-Specific - Hart Pony	$5,790
Estimated Fund Balance - July 1, 2009	$3,663,326
Subtotal Revenues:	$4,162,926
City Contribution:	$3,395,226
Total Revenues:	**$7,558,152**
Stormwater Pollution Prevention Fee Requirement:	**$2,811,700**

Fee Calculations

The estimated annual costs for the proposed storm drain improvements are $2,811,700 in as shown above. Dividing that by the total number of ERU's in the City, the estimated annual Stormwater Pollution Prevention Fee rate is **$21.50 per ERU.**

This rate would be the proposed maximum fee rate for fiscal year 2009-10 (FY 09-10). The maximum rate will be increased each subsequent Fiscal Year by the annual change in the Consumer Price Index (CPI), during the preceding year, for All Urban Consumers, for the Los Angeles, Riverside and Orange County areas, published by the United States Department of Labor, Bureau of Labor Statistics (or a reasonably equivalent index should the stated index be discontinued).

The actual rate to be levied each year will be as approved by the City Council at a public hearing, after they consider an Annual Fee Report outlining the estimated annual costs of the program.

Table 3 provides sample fee calculations for various land uses and parcel sizes.

Table 3 – Sample Calculations

Land Use Designation	Parcel Area (sf)	Parcel Area (ac)	x	Percent Imperv.	=	Drainage Units	/	0.0672	=	ERU's	FY 09-10 Max. Annual Fee = $21.5/ERU
SFR- 0.5	3,500	0.08	x	42%	=	0.033600	/	0.0672	=	0.5000	$10.75
SFR- 0.5	5,000	0.11	x	42%	=	0.046200	/	0.0672	=	0.6875	$14.78
SFR- 0.5	7,000	0.16	x	42%	=	0.067200	/	0.0672	=	1.0000	$21.50
SFR- 0.5	12,000	0.28	x	42%	=	0.117600	/	0.0672	=	1.7500	$37.62

SFR = Single Family Residential 0.0672 = Drainage Units per median SFR ERU = Equivalent Residential Unit

Note: Condominium parcel areas include a prorata share of the common areas of the complex.

It should be noted that 50% of all Single Family homes will have a charge equal to or less than the median fee of $21.50.

The Preliminary Charge Roll, which is a listing of each parcel to be charged a fee and its proposed maximum fee for FY 2009-10, is on file in the office of the City Clerk.

Appeals Process

If a property owner disagrees with the calculation of his or her fee, based on the parcel area and estimated impervious percentage assigned to the property, then the property owner may appeal the calculation as follows:

1. Property owner must provide written documentation explaining the reason why the charge should be changed. This documentation must include:

a. The name, phone number, mailing address, and email address, if available, of the property owner.

b. The Assessor's Parcel Number (APN) of the property in question.

2. If additional documentation is required or insufficient documentation was submitted, a representative of the Public Works Department or his or her designee (Staff) will notify the property owner in writing.

3. Once Staff has determined that sufficient documentation has been submitted, Staff will perform the initial review. Staff will notify the property owner in writing within four (4) weeks from the time sufficient documentation was submitted as to whether or not the fee amount will be changed.

   a. If the determination is to change the fee amount, then the new fee amount will be documented within the City's fee database.

   b. If the determination is that the fee should not be changed, the property owner can appeal Staff's decision to the City Engineer. The appeal must be made in writing and returned no later than four (4) weeks from the date of mailing of Staff's initial review decision. The City Engineer will notify the property owner in writing within four (4) weeks from the date of receipt of the appeal as to whether or not the fee amount will be changed.

      If the owner of any parcel shall have reason to feel that the computation of the ERU count for his/her parcel is not correct, that person may file an appeal with the City Engineer in the manner prescribed by the City Engineer. The City Engineer will consider all data provided by the appellant and shall render a decision in writing. The decision of the City Engineer will be final with respect to City action on the appeal.

Appeals will be accepted annually up until June 30 for inclusion on the following fiscal year's property tax roll submittal. However, if an appeal is granted by Staff or the City Engineer that does not permit inclusion for the following fiscal year's property tax roll submittal, a reimbursement will be provided to the property owner by the City.

Respectfully submitted:

OFFICE OF THE ATTORNEY GENERAL
State of California

DANIEL E. LUNGREN
Attorney General

OPINION	:	
	:	No. 97-1104
of	:	
	:	March 5, 1998
DANIEL E. LUNGREN Attorney General	:	
ANTHONY M. SUMMERS Deputy Attorney General	:	

THE HONORABLE MIKE THOMPSON, MEMBER OF THE CALIFORNIA STATE SENATE, has requested an opinion on the following question:

1. Does the method by which the Vallejo Sanitation and Flood Control District calculates the monthly user fees charged for the operation and maintenance of its storm drainage system meet constitutional requirements?

2. Is the Vallejo Sanitation and Flood Control District required to obtain prior voter approval when revising the methodology by which it calculates its storm drainage system monthly user fees, resulting in an increased amount being charged certain persons?

CONCLUSIONS

1. The method by which the Vallejo Sanitation and Flood Control District calculates the monthly user fees charged for the operation and maintenance of its storm drainage system does not meet constitutional requirements.

2. The Vallejo Sanitation and Flood Control District is required to obtain prior voter approval when revising the methodology by which it calculates its storm drainage system monthly user fees, resulting in an increased amount being charged certain persons.

ANALYSIS

The Vallejo Sanitation and Flood Control District ("District") operates a sanitation sewer system and a storm drainage system for its customers. (See *English Manor Corp.* v. *Vallejo*

Sanitation & Flood Control Dist. (1974) 42 Cal.App.3d 996, 1000.) The two systems are operated separately, with the sewer system connecting to a water treatment plant and the storm drainage system transporting water directly into San Francisco Bay. **Footnote No. 1**

The customers of the District are charged separately for maintaining the two systems. Currently only those persons who are connected to the sewer system are charged monthly fees to maintain the storm drainage system. If a parcel is vacant or otherwise not connected to the sewer system, no storm drainage system user fees are imposed. Hence, owners of parcels used for storage facilities, parking lots, or other uses that do not require a sewer connection escape the fees.

1. Validity of the Fees

The first question presented for resolution is whether the District's method of imposing its storm drainage system monthly user fees meets constitutional requirements. We conclude that it does not.

At the November 5, 1996, general election, state voters approved Proposition 218, adding articles XIII C and XIII D to the Constitution. The two constitutional amendments generally require prior voter approval for new or increased general taxes (Cal. Const., art. XIII C, § 2, subd. (b)), special taxes (Cal. Const., art. XIII C, § 2, subd. (d)), assessments (Cal. Const., art. XIII D, § 4, subds. (d), (e)), and fees and charges (Cal. Const. art. XIII D, § 6, subd. (c)). Among the specific constitutional requirements is that fees and charges "imposed upon any parcel . . . shall not exceed the proportional cost of the service attributable to the parcel." (Cal. Const., art. XIII D, § 6, subd. (b) (3).) The first question focuses on this latter constitutional provision.

It is evident that a storm drainage system is designed to benefit individual parcels of property. It transports runoff water from rainstorms and other sources into channels and waterways, rather than allowing the water to flood areas where it might damage property. These purposes are confirmed by statutes enacted by the Legislature to implement article XIII D of the Constitution. Government Code section 53750 provides in part:

"For purposes of Article XIII C and Article XIII D of the California Constitution and this article:

". . . . . .

"(d) 'Drainage System' means any system of public improvements that is intended to provide for erosion control, landslide abatement, or for other types of water drainage.

". . . . . .

"(f) 'Flood control' means any system of public improvements that is intended to protect property from overflow by water.

". . . . . ."

The owners of land used for such purposes as storage buildings and parking lots are benefitted by the District's storm drainage system services. Yet they are not charged any fees if they are not connected to the District's sewer system. It necessarily follows that the District's costs associated with operating and maintaining the system are borne totally by those connected to the sewer system. Therefore, those who *are* charged the fees must pay more than the proportional cost of the services attributable to their own parcels. This is not permissible under article XIII D, section 6, subdivision (b)(3) of the Constitution. **Footnote No. 2**

We conclude that the method by which the District charges monthly user fees for its storm drainage system services does not meet constitutional requirements.

2. Prior Voter Approval

The District intends to establish a new schedule of storm drainage system fees that will be based upon the proportional cost of storm drainage services provided to each parcel, a schedule that will take into account the amount of impervious area of each developed parcel. Accordingly, persons in the District who currently have no sewer connections will be subject to the storm drainage system fees for the first time.

The second question presented for resolution concerns whether the voters of the District must approve the proposed change in calculating the new monthly user fees for operating and maintaining the District's storm drainage system. We conclude that an election must be held and approval given.

At the core of this question is subdivision (c) of section 6 of article XIII D of the Constitution, which provides:

"Except for fees or charges for sewer, water, and refuse collection services, no property related fee or charge shall be imposed or increased unless and until that fee or charge is submitted and approved by a majority vote of the property owners of the property subject to the fee or charge or, at the option of the agency, by a two-thirds vote of the electorate residing in the affected area. . . ."

A fee or charge is "property related" if it is for "a public service having a direct relationship to property ownership." (Cal. Const., art. XIII D, § 2, subd. (h).) Subdivision (e) of section 2 of article XIII D states:

"'Fee' or 'charge' means any levy other than an ad valorem tax, a special tax, or an assessment, imposed by an agency upon a parcel or upon a person as an incident of property ownership, including a user fee or charge for a property related service."

In contrast, an "assessment" is defined in subdivision (b) of section 2 of article XIII D as follows:

"'Assessment' means any levy or charge upon real property by an agency for a special benefit conferred upon the real property. 'Assessment' includes, but is not limited to, 'special assessment,' 'benefit assessment,' 'maintenance assessment' and 'special assessment tax.'"

The District plans to impose the new monthly rates as "fees" for providing storm drainage "services" to its customers rather than as "assessments" to cover the cost of providing its storm drainage system as a "benefit" to the parcels within the District. Because of the conclusion we reach, it makes little analytical difference whether the establishment of "fees" or "assessments" is involved here.

Undoubtedly, the new monthly fees will be "property related," since they will be based upon the amount of impervious area of each developed parcel. As observed in answer to the first question, the District's storm drainage system is intended to serve directly the property within the drainage area. (See Gov. Code, § 53750, subds. (d), (f).)

The main issue to be resolved is whether prior voter approval is required for imposition of the proposed fees in light of the exception from voter approval for "fees or charges for sewer, water, and refuse collection services." (Cal. Const., art. XIII D, § 6, subd. (c).) If the fees are for sewer, water, or refuse collection services, no voter approval is necessary.

First, as for sewer services, the term "sewer" is often used differently in different contexts. (See, e.g., Pub. Util. Code, § 230.5.) We note that subdivision (a) of section 5 of article XIII D refers to "[a]ny assessment imposed exclusively to finance the capital costs or maintenance and operation expenses for sidewalks, streets, sewers, water, flood control, drainage system, or vector control." Such language in a related constitutional provision supports application of the following rule of statutory construction: "If a statute on a particular subject omits a particular provision, inclusion of that provision in another related statute indicates an intent the provision is not applicable to the statute from which it was omitted." (*In re Marquis D.* (1995) 38 Cal.App.4th 1813, 1827.) Footnote No. 3 Placing "flood control, drainage systems" in section 5 of article XIII D while omitting such terms in section 6's voter approval exemption clause evidences an intent to require prior voter approval of new or additional storm drainage system fees.

The Legislature has similarly distinguished sewer systems from storm drainage systems in various statutory schemes. For example, Government Code section 63010, subdivision (i) describes the two separately as follows:

"..... .....

"(3) 'Drainage and flood control' includes ditches, canals, levees, pumps, dams, conduits, pipes, storm sewers, and dikes necessary to keep or direct water away from people, equipment, buildings, and other protected areas as may be established by lawful authority, as well as the acquisition, improvement, maintenance, and management of floodplain areas and all equipment used in the maintenance and operation of the foregoing.

"..... .....

"(10) 'Sewage collection and treatment' includes pipes, pumps, and conduits that collect wastewater from residential, manufacturing, and commercial establishments, the equipment, structures, and facilities used in treating wastewater to reduce or eliminate impurities or

contaminants, and the facilities used in disposing of, or transporting, remaining sludge, as well as all equipment used in the maintenance and operation of the foregoing.

"....."

Health and Safety Code section 5471 likewise differentiates between sewer systems and storm drainage systems, as does the organic act under which the District was formed and continues to operate (see Stats. First Ex. Sess. 1952, ch. 17, p. 351; Deering's Wat.--Uncod. Acts, Act 8934; West's Water Code--App., ch. 67). Footnote No. 4

Any remaining doubt is removed by applying the following principle of statutory construction recently reaffirmed in *City of Lafayette* v. *East Bay Mun. Utility Dist.* (1993) 16 Cal.App.4th 1005, 1017:

". . . 'Exceptions to the general rule of a statute are to be strictly construed. In interpreting exceptions to the general statute courts include only those circumstances which are within the words and reason of the exception. . . . One seeking to be excluded from the sweep of the general statute must establish that the exception applies.' [Citations.]"

If storm drainage system fees are not fees for "sewer . . . services," are they fees for "water . . . services" within the meaning of article XIII D, section 6, subdivision (c)? Government Code section 53750, subdivision (m) defines "water" for purposes of article XIII D as "any system of public improvements intended to provide for the production, storage, supply, treatment, or distribution of water."

While there may be some temporary storage of water in connection with a storm drainage system, it is apparent that the District's drainage and flood control system is designed to do the opposite of that which the Legislature's definition of "water . . . services" contemplates. The District's storm drainage system does not produce water or supply it to end users. Rather than distributing water, it collects and removes it. The District does not treat any water flowing into its storm drainage system. Consequently, the exception from voter approval in Article XIII D, section 6, subdivision (c), for "water . . . services" is inapplicable.

Finally, we note that prior voter approval is required only if the fees or charges are "imposed or increased." (Cal. Const., art. XIII D, § 6, subd. (c).) Here, the District proposes to change its method of calculating the fees in question, which revision will impose the fees on some property owners who have not previously been charged. The Legislature has addressed this issue in Government Code section 53750:

"For purposes of Article XIII C and Article XIII D of the California Constitution and this article:

"....."

"(h)(1) 'Increased,' when applied to a tax, assessment, or property-related fee or charge, means a decision by an agency that does either of the following:

"(A) Increases any applicable rate used to calculate the tax, assessment, fee or charge.

"(B) Revises the methodology by which the tax, assessment, fee or charge is calculated, if that revision results in an increased amount being levied on any person or parcel.

"(2) A tax, fee, or charge is not deemed to be 'increased' by an agency action that does either or both of the following:

"(A) Adjusts the amount of a tax or fee or charge in accordance with a schedule of adjustments, including a clearly defined formula for inflation adjustment that was adopted by the agency prior to November 6, 1996.

"(B) Implements or collects a previously approved tax, or fee or charge, so long as the rate is not increased beyond the level previously approved by the agency, and the methodology previously approved by the agency is not revised so as to result in an increase in the amount being levied on any person or parcel.

"(3) A tax, assessment, fee or charge is not deemed to be 'increased' in the case in which the actual payments from a person or property are higher than would have resulted when the agency approved the tax, assessment, or fee or charge, if those higher payments are attributable to events other than an increased rate or revised methodology, such as a change in the density, intensity, or nature of the use of land.

"......"

The District will be revising the methodology by which the storm drainage system monthly user fees are calculated, resulting in an increased amount being charged certain persons. The formula is newly developed to reflect the proportional cost of the services attributable to each landowner served. (See Cal. Const., art. XIII D, § 6, subd. (b)(3).) Hence, the proposed adjusted fees will be "imposed or increased" for purposes of article XIII D.

No other constitutional or statutory provision appears to affect our determination. We conclude that the District is required to obtain prior voter approval when revising the methodology by which it calculates its storm drainage system monthly user fees, resulting in an increased amount being charged certain persons.

* * * * * .

Footnote No. 1
We are informed that in a few localities, the sewer system and storm drainage system are combined, with both connecting to a water treatment plant. The operation of such combined systems is beyond the scope of this opinion.

Footnote No. 2
The *storm drainage* fees charged by the District are based upon the amount of *sewer system* usage attributable to a parcel. We have not been informed of any relationship between sewer usage and the District's proportional cost of providing storm drainage services to a particular parcel. (See fn. 1.)

Footnote No. 3
Rules of statutory interpretation "apply as well to the interpretation of constitutional provisions." (*Lungren* v. *Deukmejian* (1988) 45 Cal.3d 727, 735.)

Footnote No. 4
As previously noted, in a few localities the sewer system and storm drainage system are combined and connect to a water treatment plant. (See fn. 1.)

Senate Constitutional Amendment No. 18

Introduced by Senators Liu and Yee

March 10, 2009

Senate Constitutional Amendment No. 18—A resolution to propose to the people of the State of California an amendment to the Constitution of the State, by amending Section 6 of Article XIII D thereof, relating to local government finance.

LEGISLATIVE COUNSEL'S DIGEST

SCA 18, as introduced, Liu. Local government: property-related fees.

The California Constitution, with the exception of fees or charges for sewer, water, and refuse collection services, conditions the imposition or increase of a property-related fee or charge upon approval by either a majority vote of the owners of the properties subject to the fee or charge or, at the option of the agency imposing the fee or charge, by a ⅔ vote of the voters residing in the area affected by the fee or charge.

This measure would additionally exclude fees and charges for stormwater and urban runoff management from these approval requirements for the imposition or increase of a property-related fee or charge.

Vote: ⅔. Appropriation: no. Fiscal committee: no. State-mandated local program: no.

Resolved by the Senate, the Assembly concurring, That the Legislature of the State of California at its 2009–10 Regular Session commencing on the first day of December 2008, two-thirds of the membership of each house concurring, hereby proposes to the people of the State of California, that the Constitution of the State be amended as follows:

That Section 6 of Article XIII D thereof is amended to read:

SEC. 6. Property Related Fees and Charges. (a) Procedures for New or Increased Fees and Charges. An agency shall follow the procedures pursuant to this section in imposing or increasing any fee or charge as defined pursuant to this article, including, but not limited to, the following:

(1) The parcels upon which a fee or charge is proposed for imposition shall be identified. The amount of the fee or charge proposed to be imposed upon each parcel shall be calculated. The agency shall provide written notice by mail of the proposed fee or charge to the record owner of each identified parcel upon which the fee or charge is proposed for imposition, the amount of the fee or charge proposed to be imposed upon each, the basis upon which the amount of the proposed fee or charge was calculated, the reason for the fee or charge, together with the date, time, and location of a public hearing on the proposed fee or charge.

(2) The agency shall conduct a public hearing upon the proposed fee or charge not less than 45 days after mailing the notice of the proposed fee or charge to the record owners of each identified parcel upon which the fee or charge is proposed for imposition. At the public hearing, the agency shall consider all protests against the proposed fee or charge. If written protests against the proposed fee or charge are presented by a majority of owners of the identified parcels, the agency shall not impose the fee or charge.

(b) Requirements for Existing, New or Increased Fees and Charges. A fee or charge shall not be extended, imposed, or increased by any agency unless it meets all of the following requirements:

(1) Revenues derived from the fee or charge shall not exceed the funds required to provide the property related service.

(2) Revenues derived from the fee or charge shall not be used for any purpose other than that for which the fee or charge was imposed.

(3) The amount of a fee or charge imposed upon any parcel or person as an incident of property ownership shall not exceed the proportional cost of the service attributable to the parcel.

(4) ~~No~~ *A* fee or charge ~~may~~ *shall not* be imposed for a service, unless that service is ~~actually~~ used by, or immediately available to, the owner of the property in question. Fees or charges based on potential or future use of a service are not permitted. Standby charges, whether characterized as charges or assessments, shall

be classified as assessments and shall not be imposed without compliance with Section 4.

(5) ~~No~~ *A* fee or charge ~~may~~ *shall not* be imposed for general governmental services including, but not limited to, police, fire, ambulance, or library services, ~~where~~ *if* the service is available to the public at large in substantially the same manner as it is to property owners. Reliance by an agency on any parcel map, including, but not limited to, an assessor's parcel map, may be considered a significant factor in determining whether a fee or charge is imposed as an incident of property ownership for purposes of this article. In any legal action contesting the validity of a fee or charge, the burden shall be on the agency to demonstrate compliance with this article.

(c) Voter Approval for New or Increased Fees and Charges. Except for fees or charges for sewer, water, ~~and~~ *stormwater and urban runoff management, or* refuse collection services, ~~no property related~~ *a property-related* fee or charge shall *not* be imposed or increased unless and until that fee or charge is submitted and approved by a majority vote of the property owners of the property subject to the fee or charge or, at the option of the agency, by a two-thirds vote of the electorate residing in the affected area. The election shall be conducted not less than 45 days after the public hearing. An agency may adopt procedures similar to those for increases in assessments in the conduct of elections under this subdivision.

(d) Beginning July 1, 1997, all fees or charges shall comply with this section.

O

SENATE COMMITTEE ON AGRICULTURE AND WATER RESOURCES
Jim Costa, Chairman

AB 1186 (Knox)
As Amended July 10, 1997
Hearing Date: July 31, 1997
Fiscal: Yes
Consultant: Linda Adams

PURPOSE OF BILL:

To direct funds collected through storm water permit fees to programs designed to reduce storm water pollution.

PRIOR ACTIONS:

Assembly Water, Parks & Wildlife	11-1
Assembly Appropriations	14-5
Assembly Floor	50-22

BACKGROUND:

The Porter-Cologne Water Quality Control Act establishes the State Water Resources Control Board (SWRCB) and nine regional water quality control boards (regional boards) charged with protecting the quality of waters in the state.

Current law requires regional boards to establish waste discharge requirements (WDR's) for any proposed discharge in order to implement relevant water quality control plans. Holders of WDR's are required to pay an annual fee, up to a maximum of $10,000 for the ability to discharge waste.

U.S. Environmental Protection Agency (EPA) regulations, pursuant to the national pollutant discharge elimination system (NPDES), require the operators of certain industrial facilities to obtain a permit to discharge storm water from their facilities. In California, this permit is called the General Industrial Activities Storm Water Permit, administered by the SWRCB.

Current storm water permit fees are set at $10,000 for areawide urban storm water discharges for areas with a population greater than 100,000, $5,000 for areawide urban storm water discharges for areas with a population less than 100,000, $250 for industries discharging into a municipal storm water system, and $500 for all other dischargers.

Permit fees are deposited into the Waste Discharge Permit Fund. The money in the Fund is available for expenditure by the SWRCB, to carry out the purposes of the Porter-Cologne Act.

PROPOSED LAW:

Requires the fees collected from storm water dischargers that are subject to an NPDES permit to be separately accounted for in the Waste Discharge Permit Fund.

Requires at least 50% of the moneys accounted for under this program to be available and used, upon appropriation by the Legislature, by the regional board with jurisdiction over the permitted industry that generated the fee to carry out industrial and construction storm water programs in the particular region.

Requires each regional board receiving the moneys for this program to expend at least 50% of those monies solely on storm water inspection and regulatory compliance issues associated with industrial and construction storm water programs.

COMMENTS:

1. According to the proponents of this bill, California's 1994 Water Quality Inventory Report states that storm waters and urban run-off are the leading sources of pollution in California estuaries and ocean waters. Proponents argue that non-compliance is rampant, with approximately 10,000 industries in the Los Angeles area alone who are required but have failed to obtain storm water permits. Further, proponents point out that the Los Angeles Regional Water Quality Control Board has only two staff to contact, educate, and control each site and question whether adequate revenues are returned to the regional boards for this program.

This bill would require at least 50% of the revenues collected under this program to be returned to the regional boards and would further require the regional boards to use at least 50% of the money received for inspection and regulatory compliance issues associated with industrial and construction storm water programs.

2. The SWRCB indicates that at least 50% of the moneys in the Waste Discharge Permit Fund are already allocated to regional

boards for use in enforcing the storm water program. The SWRCB indicates that approximately $3.2 million is collected annually from the storm water program, and approximately $2.4 million goes back to the regional boards. Further, the SWRCB indicates that it has an accounting system that ensures revenues go back to the originating program and region.

3. Recent amendments to this bill address concerns expressed by the SWRCB and remove the opposition of the SWRCB. Specifically, the amendments eliminate the creation of a special account in the Waste Discharge Permit Fund, and instead only require a separate accounting of the revenues received under the program. The amendments further require at least 50% of the revenues to go back to the regional board from which they were collected, which is consistent with the current practice of the SWRCB.

4. The recent amendments further address the issue of accountability of the funds at the regional level by requiring the regional boards to use at least 50% of the amount received solely on storm water inspection and regulatory compliance issues associated with the program.

5. The California Environmental Protection Agency has recently stepped up its efforts to require industries to obtain permits through mailings to facility operators. Operators could be in violation of federal law and facing with fines up to $25,000 per day.

6. Technical correction : On page 3, line 21, "account" should be "fund".

SB 2058 Senate Bill - AMENDEDBILL NUMBER: SB 2058 AMENDED
BILL TEXT

AMENDED IN SENATE APRIL 17, 2002

INTRODUCED BY Senator Morrow

FEBRUARY 22, 2002

An act to amend Section 13260 of the Water Code, relating to water quality.

LEGISLATIVE COUNSEL'S DIGEST

SB 2058, as amended, Morrow. Water quality: storm water permit fees: disposition.

Under existing law, the State Water Resources Control Board and the California regional water quality control boards prescribe waste discharge requirements for the discharge of storm water by municipalities and industries in accordance with the federal national pollutant discharge elimination system (NPDES) permit program. Existing law requires each person for whom waste discharge requirements have been prescribed to submit an annual fee, for deposit in the Waste Discharge Permit Fund for expenditure by the State Water Resources Control Board, upon appropriation by the Legislature, for the purpose of carrying out the Porter-Cologne Water Quality Control Act. Existing law further requires that the fees collected from the storm water discharges that are subject to a general industrial or construction storm water permit under the NPDES permit program to be accounted for separately in the fund and authorizes that not less than 50% of the money in the account those funds be used, upon appropriation by the Legislature, by the California regional water quality control board with jurisdiction over the permitted industry or construction site that generated the fee, to carry out storm water programs in the region.

This bill would require that all fees collected for permits for the discharge of storm water by municipalities and industries be accounted for separately in the fund. The bill would also provide that not less than 50% of the money collected from general industrial or construction storm water permits, upon appropriation by the Legislature, would be used by the California regional water quality control board with jurisdiction over the permitted industry or construction site that generated the fee, to carry out storm water programs in the region. The bill would further provide that a portion of the money collected from the fees from all storm water discharge permits, upon appropriation by the Legislature, would be used by the city, county, or city and county, in which the fee was collected, solely to assist the local government to control pollutants or meet water quality standards from storm water dischargers that are subject to a general industrial or construction storm water permit under the NPDES permit program to be separately accounted for, by region, in the Waste Discharge Permit Fund. The board would require each regional board

that receives money that is generated from general industrial or construction storm water permit fees to allocate 25% of those funds to counties and cities to carry out storm water programs in that region .

Vote: majority. Appropriation: no. Fiscal committee: yes. State-mandated local program: no.

THE PEOPLE OF THE STATE OF CALIFORNIA DO ENACT AS FOLLOWS:

SECTION 1. Section 13260 of the Water Code is amended to read:

13260. (a) All of the following persons shall file with the appropriate regional board a report of the discharge, containing the information which may be required by the regional board:

(1) Any person discharging waste, or proposing to discharge waste, within any region that could affect the quality of the waters of the state, other than into a community sewer system.

(2) Any person who is a citizen, domiciliary, or political agency or entity of this state discharging waste, or proposing to discharge waste, outside the boundaries of the state in a manner that could affect the quality of the waters of the state within any region.

(3) Any person operating, or proposing to construct, an injection well.

(b) No report of waste discharge need be filed pursuant to subdivision (a) if the requirement is waived pursuant to Section 13269.

(c) Every person subject to subdivision (a) shall file with the appropriate regional board a report of waste discharge relative to any material change or proposed change in the character, location, or volume of the discharge.

(d) (1) Each person for whom waste discharge requirements have been prescribed pursuant to Section 13263 shall submit an annual fee not to exceed ten thousand dollars ($10,000) according to a reasonable fee schedule established by the state board. Fees shall be calculated on the basis of total flow, volume, number of animals, or area involved.

(2) (A) Subject to subparagraph (B), any fees collected pursuant to this section shall be deposited in the Waste Discharge Permit Fund which is hereby created. The money in the fund is available for expenditure by the state board, upon appropriation by the Legislature, for the purposes of carrying out this division.

(B) (i) Notwithstanding subparagraph (A), the fees collected pursuant to this section from storm water dischargers that are subject to a general industrial or construction storm water permit under the national pollutant discharge elimination system (NPDES) shall be separately accounted for , by region, in the Waste Discharge Permit Fund.

(ii) Not less than 50 percent of the money collected as fees from general industrial or construction storm water discharges separately accounted for in the Waste Discharge Permit Fund

(ii) Not less than 50 percent of the money in the Waste Discharge Permit Fund that is separately accounted for pursuant to clause (i) is available, upon appropriation by the Legislature, for expenditure by the regional board with jurisdiction over the permitted industry or construction site that generated the fee to carry out storm water programs in the region. Upon

appropriation of the Legislature, a portion of the money collected from fees from all municipal and industrial or construction storm water discharges that is separately accounted for in the Waste Discharge Permit Fund shall be used by the city, county, or city and county, in which the fee was collected, solely for purposes of assisting the local government to control pollutants or meet water quality standard. site that generated the fee for storm water programs in the region.

(iii) Each regional board that receives money pursuant to clause (ii) shall spend not less than 50 percent of that money solely on storm water inspection and regulatory compliance issues associated with industrial and construction storm water programs.

(iv) Each regional board that receives money pursuant to clause (ii) shall allocate 25 percent of that money to counties and cities to carry out storm water programs in the region.

(3) Any person who would be required to pay the annual fee prescribed by paragraph (1) for waste discharge requirements applicable to discharges of solid waste, as defined in Section 40191 of the Public Resources Code, at a waste management unit that is also regulated under Division 30 (commencing with Section 40000) of the Public Resources Code, and who is or will be subject to the fee imposed pursuant to Section 46801 of the Public Resources Code in the same fiscal year, shall be entitled to a waiver of the annual fee for the discharge of solid waste at the waste management unit imposed by paragraph (1) upon verification by the state board of payment of the fee imposed by Section 48000 of the Public Resources Code, and provided that the fee established pursuant to Section 48000 of the Public Resources Code generates revenues sufficient to fund the programs specified in Section 48004 of the Public Resources Code and the amount appropriated by the Legislature for those purposes is not reduced.

(e) Each report of waste discharge for a new discharge submitted under this section shall be accompanied by a fee equal in amount to the annual fee for the discharge. If waste discharge requirements are issued, the fee shall serve as the first annual fee. If waste discharge requirements are waived pursuant to Section 13269, all or part of the fee shall be refunded.

(f) (1) On or before January 1, 1990, the state board shall adopt, by emergency regulations, a schedule of fees authorized under subdivisions (d) and (j). The total revenue collected each year through annual and filing fees shall be set at an amount equal to the revenue levels set forth in the Budget Act for this activity. The state board shall automatically adjust the annual and filing fees each fiscal year to conform with the revenue levels set forth in the Budget Act for this activity. If the state board determines that the revenue collected during the preceding year was greater than, or less than, the revenue levels set forth in the Budget Act, the state board may further adjust the annual filing fees to compensate for the over and under collection of revenue.

(2) The emergency regulations adopted pursuant to this subdivision, or subsequent adjustments to the annual fees, shall be adopted by the state board in accordance with Chapter 3.5 (commencing with Section 11340) of Part 1 of Division 3 of Title 2 of the Government Code. The adoption of these regulations is an emergency and shall be considered by the Office of Administrative Law as necessary for the immediate preservation of the public peace, health, safety, and general welfare. Notwithstanding Chapter 3.5

(commencing with Section 11340) of Part 1 of Division 3 of Title 2 of the Government Code, any emergency regulations adopted by the state board, or adjustments to the annual fees made by the state board pursuant to this section, shall not be subject to review by the Office of Administrative Law and shall remain in effect until revised by the state board.

(g) The state board shall adopt regulations setting forth reasonable time limits within which the regional board shall determine the adequacy of a report of waste discharge submitted under this section.

(h) Each report submitted under this section shall be sworn to, or submitted under penalty of perjury.

(i) The regulations adopted by the state board pursuant to subdivision (f) shall include a provision that annual fees shall not be imposed on those who pay fees under the National Pollutant Discharge Elimination System until the time when those fees are again due, at which time the fees shall become due on an annual basis.

(j) Facilities for confined animal feeding or holding operations, including dairy farms, which have been issued waste discharge requirements or exempted from waste discharge requirements prior to January 1, 1989, are exempt from subdivision (d). If the facility is required to file a report under subdivision (c) after January 1, 1989, the report shall be accompanied by a filing fee, to be established by the state board in accordance with subdivision (f), not to exceed two thousand dollars ($2,000), and the facility shall be exempt from any annual fee.

(k) Any person operating or proposing to construct an oil, gas, or geothermal injection well subject to paragraph (3) of subdivision (a), shall not be required to pay a fee pursuant to subdivision (d), if the injection well is regulated by the Division of Oil and Gas of the Department of Conservation, in lieu of the appropriate California regional water quality control board, pursuant to the memorandum of understanding, entered into between the state board and the Department of Conservation on May 19, 1988. This subdivision shall remain operative until the memorandum of understanding is revoked by the state board or the Department of Conservation.

(l) In addition to the report required by subdivision (a), before any person discharges mining waste, the person shall first submit the following to the regional board:

(1) A report on the physical and chemical characteristics of the waste that could affect its potential to cause pollution or contamination. The report shall include the results of all tests required by regulations adopted by the board, any test adopted by the Department of Toxic Substances Control pursuant to Section 25141 of the Health and Safety Code for extractable, persistent, and bioaccumulative toxic substances in a waste or other material, and any other tests that the state board or regional board may require, including, but not limited to, tests needed to determine the acid-generating potential of the mining waste or the extent to which hazardous substances may persist in the waste after disposal.

(2) A report that evaluates the potential of the discharge of the mining waste to produce, over the long term, acid mine drainage, the discharge or leaching of heavy metals, or the release of other hazardous substances.

(m) Except upon the written request of the regional board, a report of waste discharge need not be filed pursuant to subdivision (a) or (c) by a user of recycled water that is being supplied by a

supplier or distributor of recycled water for whom a master recycling permit has been issued pursuant to Section 13523.1.

Re: Public Comments on Draft Staff Analysis Concerning Los Angeles Area Municipal Storm Water and Urban Runoff Dischargers' Test Claims 03-TC-04, 03-TC-19, 03-TC-20, 03-TC-21 ("LA Municipal Stormwater Permit Test Claims")

Dear Ms. Higashi:

These comments are submitted on behalf of the League of California Cities ("League") and the California State Association of Counties ("CSAC") with regard to the Commission's draft Staff Analysis of the LA Municipal Stormwater Permit Test Claims dated April 10, 2009. The League is an association representing the interests of the 480 California cities. CSAC is an association representing the interests of the 58 counties in California.

California cities and counties that are subject to regulation by Regional Water Quality Control Boards throughout the state have a significant interest in the Commission's decision on these test claims. Although these test claims only affect cities and counties regulated by the LA Regional Water Quality Control Board, other Regional Boards will look to this proceeding in determining to what extent they will be able to regulate stormwater discharge without triggering the constitutional requirement to reimburse state mandates on local agencies.[1]

Cities and counties are under increasing strain due to reduced revenues resulting from the current economic conditions. In addition, the Governor's current budget proposal seeks to pull the Proposition 1A (2004) trigger and borrow $2,000,000,000 in local property tax to help close the state's budget gap.[2] Further, the passage of Proposition 218 restricts the ability of a local legislative body to adopt new taxes, fees, and assessments without first

[1] Cal. Const. Art. XIIIB, sec. 6.
[2] Cal. Const. Art. XIII, sec. 25.5.

seeking voter approval or going through a majority protest ballot procedure.[3] This becomes particularly difficult for cities and counties where state agencies, like the Regional Boards, impose new regulations that don't take into account how cities and counties will fund compliance with the new regulations, or whether the results anticipated from the new regulations actually justify the new costs being imposed. To the extent the Commission finds state mandates to be exempt from reimbursement, cities and counties will have to fund these mandates out of increasingly scarce fiscal resources, and be forced to make difficult decisions as to where to find the funds to cover the mandate. And a conclusion that the city or county can simply raise a fee ignores the fiscal and legal realities with which cities and counties are faced.

1. THE LEAGUE AND CSAC AGREE WITH THE DRAFT STAFF ANALYSIS THAT THE REGULATIONS APPROVED BY THE LA REGIONAL BOARD ARE MANDATES.

The League and CSAC agree with the Staff Analysis that the LA Municipal Stormwater Permit imposes new programs or require cities and counties to provide a higher level of service. The mandates imposed by the LA Regional Board are in excess of the Clean Water Act's maximum extent practicable (MEP) standard for stormwater permits, and therefore, they are not a federal mandate.

2. THE LEAGUE AND CSAC QUESTION WHETHER THE DECISIONS IN *CONNELL* AND *COUNTY OF FRESNO* CAN ANY LONGER BE CITED AS GOOD AUTHORITY FOR THE CONSTITUTIONALITY OF GOVERNMENT CODE SEC. 17556(d) GIVEN THE VOTER APPROVAL OF PROPOSITION 218.

Unfortunately the League and CSAC disagree with the Staff Analysis' conclusion that most of the state mandates are exempt from reimbursement under Government Code sec. 17556(d). The Staff Analysis quotes extensively from the Supreme Court decision in *County of Fresno v. State of California* and a Court of Appeal decision in *Connell v. Superior Court* in arguing that Government Code sec. 17556(d) is constitutional. Article XIIIB sec. 6 does not explicitly provide that a local agency's ability to impose a fee to cover the mandate's cost is an exception to reimbursement. In *County of Fresno*, Justice Mosk construed the constitutional language of Article XIIIB, sec. 6 that "read in its textual and historical context section 6 of article XIIIB requires subvention only when the costs in question are recovered *solely from tax revenues*."[4] But the Supreme Court did acknowledge that Article XIIIB, sec. 6 was included in Proposition 4 out of the

[3] Cal. Const. Art. XIIIC and XIIID

[4] *County of Fresno v. State of California* (1991) 53 Cal.3d 482, 487 (italics in original).

recognition that article XIIIA "severely restricted the taxing powers of local governments, and that the provision was "intended to preclude the state from shifting financial responsibility for carrying out governmental functions onto local entities ill-equipped to handle the task."[5]

The opinion in *County of Fresno* was issued in 1991. The constitutional landscape changed in 1996 with the voter adoption of Proposition 218, which added Article XIIIC and Article XIIID. Proposition 218 was entitled the "Right to Vote on Taxes Act." Proposition 218 expanded restrictions on local government fund raising by allowing the voters to repeal or reduce taxes, assessments, fees and charges through the initiative process, reiterates the requirement for voter approval for both special taxes and general taxes, and imposes procedural and substantive limitations on assessments of real property and certain types of fees.[6] Proposition 218 contains a finding that the Act protects taxpayers by limiting the methods by which local governments exact revenue from taxpayers without their consent. Section 5 of Proposition 218 entitled "Liberal Construction" provides that the Act shall be liberally construed to effectuate its purpose of limiting local government revenue and enhancing taxpayer consent.

Proposition 218 and the subsequent court decisions it spawned have limited a local legislative body's ability to impose new or increased taxes, fees, assessments, or charges without first obtaining voter approval, or doing a majority protest ballot. In contrast, in 1991 a local legislative body's ability to unilaterally impose new and increased fees, assessments, and charges was much less constrained.

Therefore, the adoption of Proposition 218 has knocked the analytical underpinnings from under *County of Fresno*, and calls into question whether the Supreme Court, if asked to review the issue today, would continue to follow this opinion. We note that the *Connell* decision, which was decided after Proposition 218 was approved by the voters, does not provide insight as to how the courts view Proposition 218 in the context of section 17556(d) because the court explicitly states that it has no need to consider the effect, if any, Proposition 218 might have on the issues in the case.[7] Further, we are not aware of any post-Proposition 218 published cases that directly address the impact of Proposition 218 on the constitutionality of sec. 17556(d).

The League and CSAC urge the Commission to reject the Staff Analysis with respect to its discussion of *County of Fresno* and *Connell*, and to use your independent judgment in deciding whether sec. 17556(d) should continue to be applied. Further, given the recent

[6] League of California Cities, Proposition 218 Implementation Guide, 2007 Ed. at 5

[7] *Connell v. Superior Court* 59 Cal.App.4th 382, 403 (1997).

court decision in *California School Boards Association*,[8] the Commission should not let the mere fact that sec. 17556(d) was adopted by the Legislature influence the decision either.

The League and CSAC supports the argument made by the county and cities, discussed in the Staff Analysis beginning on page 50, as to the legal and practical difficulties of imposing fees, and we urge the Commission to conclude that sec. 17556(d) does not apply to the mandates at issue here.

3. THE LEAGUE AND CSAC URGE THAT TO THE EXTENT THERE MAY BE LEGAL DOUBT WHETHER A LOCAL AGENCY HAS THE AUTHORITY TO IMPOSE A FEE, THE COMMISSION SHOULD NOT FIND THE SECTION 17556(d) EXCEPTION APPLIES.

To the extent that the Commission may be prepared to accept the Staff Analysis' conclusion that local agencies have the authority to impose fees to recover costs of municipal stormwater permit activities, we urge the Commission to be cautious where solid legal authority is not present. As the Staff Analysis at page 51 admits, the local fee authority of local agencies in this area is a matter of first impression for the Commission. Therefore, the League and CSAC urge the Commission to tread carefully.

The League and CSAC agree that cities and counties have broad police power authority to impose regulatory fees.[9] But it is not unlimited. The Staff Analysis cites to *Sinclair Paint* and *Apartment Assoc.* to conclude that regulatory fees for preventative inspections would be upheld by the courts if properly adopted. While the court in *Apartment Assoc.* concluded that the city's inspection fee was regulatory in nature, it noted that "the mere fact that a levy is regulatory...or touches on business activities...is not enough, by itself, to remove it from article XIII D's scope."[10]

While the League believes that most properly-adopted regulatory fees are not subject to the Proposition 218 requirements, we cannot state with certainty that this is true with every case. The courts continue to examine and refine the outer limits of Proposition

---

[8] *California School Boards Association v. State of California* (2009) 171 Cal.App.4th 1183.

[9] Special districts that also may be subject to a stormwater permit may not have as broad of authority as cities and counties.

[10] *Apartment Assoc. of Los Angeles County v. City of Los Angeles* (2001) 24 Cal.4th 830, at 838. Proposition 218 Implementation Guide, 2007 Ed. at 55.

218, and therefore, caution is required when making broad statements regarding its application.[11]

The League and CSAC urge the Commission not to conclude for these test claims that cities and counties may impose fees to cover the costs of the mandates at issues as such a blanket conclusion is not supported by the law, and future adoption of any locally imposed fees may still be subject to legal challenge. The Commission's belief that such a challenge would not be successful is not sufficient to impose the unfair burden on cities and counties not only to adopt the fee, but also to defend any potential lawsuits.

4. THE LEAGUE AND CSAC URGE THAT TO THE EXTENT THERE IS NO PERSON UPON WHICH THE LOCAL AGENCY CAN IMPOSE A FEE FOR A PARTICULAR MANDATE, THE COMMISSION SHOULD NOT FIND THE SECTION 17556(d) EXCEPTION TO THAT MANDATE.

The Staff Analysis at page 53 argues that cities and counties have authority over the "nature, location, and extent of providing solid waste handling services."[12] The Staff Analysis then goes on to conclude that this authority extends to the placement and maintenance of trash receptacles at transit stops, and that the statute provides local agencies broad authority over the level of services, charges and fees. The Staff Analysis concludes that because this statutory authority exists, the exception in sec. 17556(d) applies. But the Staff Analysis does not discuss upon whom this fee would be imposed. This concern is dismissed with citation to the *Connell* opinion that economic feasibility is not relevant to the inquiry. But the concern is not whether it is "economically feasible;" it is a matter of whether it is legally feasible. If the city or county owned and operated the transit system, and owned the transit stops as well, conceivably it could impose a fee on its ridership. But what happens when the transit system is owned and operated by a transit district? The city or county would have no legal ability to impose a fee on the district's ridership, or to require the district to collect a fee on behalf of the city or county.[13] Further, Proposition 218 imposes procedural and substantive requirements on imposing assessments on adjacent businesses and residences so that such an assessment could not be imposed by the local agency without the consent of the affected businesses and residents. Further, the revenues derived from such an assessment would likely not be sufficient to cover the entire costs because the assessment would have to take into account that the transit ridership is contributing the bulk of the need for the trash

---

[11] For example, it was not until 2006 that the Supreme Court held conclusively that water rates were subject to Proposition 218. *Bighorn-Desert View Water Agency v. Verjil*, (2006) 39 Cal.4th 205

[12] Cal. Pub. Resources Code sec. 40059.

[13] And it is questionable whether this would meet the requirements of sec. 17556(d) in that the local agency does not have the authority to impose the fee.

receptacles, not the adjacent businesses and residents. So the local agency would need to use tax revenues to backfill the revenue gap and cover the costs of the mandate. This is exactly what Proposition 4 was adopted to prevent.

Further, refuse handling in some cities and counties may be handled by a separate public agency. In many cities and counties, a sanitation district has the exclusive authority to provide refuse handling services within the district's jurisdiction. In these cases, the county or city would have no authority to place trash receptacles, or impose a fee within the district's territory.

While not every city and county may have these legal constraints, the Commission should not find that the sec. 17556(d) exception applies where some local agencies may not have the ability to offset mandated costs.

CONCLUSION

The League and CSAC request that the Commission revisit the exception in Sec. 17556(d), and conclude that under current Constitutional restrictions imposed on cities and counties, the fee exception should no longer be applied where the Commission concludes that a mandate is a state mandate. If the Commission rejects our argument, we further request that the Commission not find the exception applicable where some legal doubt remains as to the authority of cities and counties to impose fees exists, or where the authority to impose a fee is merely illusory.

Very truly yours,

Patrick Whitnell, General Counsel

PROOF OF SERVICE
STATE OF CALIFORNIA - COUNTY OF SACRAMENTO

I, the undersigned, declare that I am a citizen of the United States and am employed in the City and County of Sacramento, State of California. I am over the age of 18 and not a party to this action; my business address is: 1400 K Street, Sacramento, CA 95814.

On June 4, 2009, I served the document(s) described as: **Public Comments on Draft Staff Analysis Concerning Los Angeles Area Municipal Storm Water and Urban Runoff Dischargers' Test Claims 03-TC-04, 03-TC-19, 03-TC-20, 03-TC-21 ("LA Municipal Stormwater Permit Test Claims")** in this action by placing true copies thereof enclosed in sealed envelopes addressed as follows:

PLEASE SEE ATTACHED SERVICE LIST

[X] (**BY MAIL**) I am "readily familiar" with the firm's practice for collection and processing correspondence for mailing. Under that practice it would be deposited with the U.S. Postal Service on that same day with postage thereon fully prepaid at Sacramento, California in the ordinary course of business. I am aware that on motion of the party served, service is presumed invalid if postal cancellation date or postage meter date is more than one day after date of deposit for mailing in affidavit.

[ ] (**BY FAX**) I transmitted, pursuant to Rules 2001 et seq., the above described document(s) by facsimile machine (which complied with Rule 2003(3)), to the above-listed facsimile number(s). The transmission originated from facsimile phone number (916) 658-8240 and was reported as complete and without error. The facsimile machine properly issued a transmission report, a copy of which is attached hereto.

[ ] (**BY PERSONAL SERVICE**) I caused such envelope(s) to be delivered by hand to the offices of the addressee(s).

[ ] (**BY OVERNIGHT DELIVERY**) I caused said envelope(s) to be delivered overnight via an overnight delivery service in lieu of delivery by mail to the addressee(s).

Executed on June 4, 2009 at Sacramento, California.

[X] (**STATE**) I declare under penalty of perjury under the laws of the State of California that the foregoing is true and correct.

Janet M. Reynolds

CONSOLIDATED TEST CLAIM NOS. 03-TC-04, 03-TC-19, 03-TC-20, 03-TC-21
Municipal Storm Water and Urban Runoff Discharges

CLAIMANT CITIES' COMMENTS ON DRAFT STAFF ANALYSIS

I. INTRODUCTION

Claimants Cities of Artesia, Beverly Hills, Carson, Norwalk, Rancho Palos Verdes, Westlake Village, Azusa, Commerce, Vernon, Bellflower, Covina, Downey, Monterey Park and Signal Hill are gratified that the staff of the Commission have accepted their position that the requirements of the Los Angeles County municipal stormwater permit, Order No. 01-182 ("Permit") of the California Regional Water Quality Control Board, Los Angeles Region ("LA Regional Board"), at issue in this consolidated test claim are in fact "state mandates."

In so doing, staff has correctly rejected the arguments of the State Water Resources Control Board and L.A. Regional Board (collectively, the "State Board") and the Department of Finance that these requirements, for the placement and maintenance of trash receptacles at transit stops (Permit Part 4.F.5(c)(3)), for the inspection of industrial facilities and construction sites subject to state general stormwater permits (Parts 4.C.2(b) and 4.E) and for the inspection of certain commercial facilities (Part 4.C.2(a)) were in fact federally mandated provisions, were not uniquely applicable to municipalities or were proposed by the claimants themselves.

The requirements at issue in this test claim all were imposed on claimants by the LA Regional Board as mandates that went well beyond the requirements of the federal Clean Water Act and accompanying regulations. The requirements were uniquely aimed at municipalities and were not in fact proposed by claimants.

Claimants have carefully reviewed the Draft Staff Analysis and its proposed conclusions regarding the ability of claimants to assess fees sufficient to fund the state mandates identified in the Analysis. Claimants disagree with the Draft Staff Analysis with respect to its conclusions on fee authority to recoup the costs of the transit stop trash receptacle mandate, as will be discussed below. Claimants also disagree with the Draft Staff Analysis as to its conclusions on the mandate to inspect facilities covered by the state-issued general stormwater permits, as will also be discussed below.[1]

[1] Claimants' comments are not directed towards the claimants' ability to assess fees for inspections of the other commercial establishments, i.e. restaurants and automotive service facilities, retail gasoline outlets and automobile dealerships, or Phase I facilities or construction sites that are not required to hold a state-issued general industrial or general construction stormwater permit.

II. COMMENTS ON DRAFT STAFF ANALYSIS REGARDING FINDING OF FEE AUTHORITY

The following sections set forth claimants' comments on the conclusion in the Draft Staff Analysis that claimants have adequate fee authority under their police powers or state statutes to recoup the costs of the placement and maintenance of transit stop trash receptacles and the costs of the inspection of industrial facilities and construction sites covered by state general stormwater permits. While claimants agree that the issue is of "first impression" for the Commission (Draft Staff Analysis, 51), claimants disagree that the legal principles identified by staff should lead to the conclusion that claimants have fee authority. Instead, the facts and the law should lead the Commission to find for claimants.

A. *Claimants Do Not Have Authority to Assess Fees For the Costs of Installing and Maintaining Transit Stop Trash Receptacles*

Claimants have previously asserted (in rebuttal comments filed on June 25, 2008) that they lack authority to levy fees to recoup the costs of installing and maintaining trash receptacles. The transit stop trash receptacle requirement, set forth in Part 4.F.5(c)(3) of the Permit, has been found by staff to be a state mandate. *See* Draft Staff Analysis, 24-29.

Citing Government Code section 17556(d), the Draft Staff Analysis notes that the Commission cannot find a cost to be mandated by the state if a local agency "has the authority to levy service charges, fees or assessments sufficient to pay for the mandated program or increased level of service." Draft Staff Analysis, 48. The question facing the Commission is whether claimants have authority to levy such service charges, fees or assessments.

Preliminarily, staff, citing *Connell v. Superior Court* (1997) 59 Cal.App.4th 382, argues that if a city has "authority" to levy fees, even if those fees are not economically sufficient to pay for the mandated program, this defeats the finding of a state mandate requiring a subvention of funds. The question of what constitutes "authority," however, was not fully analyzed by staff. Claimants are not arguing that the costs associated with the installation and maintenance of transit stop trash receptacles cannot be recouped in an economic sense. The cities are contending that they have no "authority" to obtain the fees in the first place, since the parties creating the burden leading to their placement are immune from the imposition of city fees. Moreover, claimants cannot assess the fees generally against property owners or against businesses because such a fee would represent a "special tax."

Connell does not address this key question. *Connell* involved a statute that, on its face, gave the water districts specific authority to charge their customers (who were receiving the benefits of water supply services) for the cost of complying with a regulatory amendment that increased the cost of those services. The "authority" of the districts was clear. Here, unlike in *Connell* and the other authorities cited by staff,

claimants do not have such authority. As discussed below, claimants do not have authority to assess these costs against the beneficiaries of the receptacles or the persons the entities responsible for the burden, i.e., the transit users or the transit agencies. Claimants also cannot recover such costs from property owners or through business license fees, since the benefit of the receptacles has no relationship to either property owners generally or to businesses, and thus the fees would represent a "special tax." Neither under their general police power nor under a savings clause provision of the Public Resources Code do claimants have authority to assess a fee to recoup of the cost of this state mandate.

1. *Claimants Cannot Assess Regulatory Fees Under Their Police Powers to Recoup the Costs of Installing and Maintaining Transit Stop Trash Receptacles*

In order for a fee to be a "fee" and not a "special tax," there must be a causal connection or nexus between the person or entity paying the fee and the benefit or burden being addressed. If there is no such causal connection or nexus, the fee is a special tax. *Sinclair Paint v. State Board of Equalization* (1997) 5 Cal.4th 866, 876-78. The staff's draft analysis does not address this question with respect to trash receptacles. It does not identify a group of persons or businesses that have a causal connection with the trash receptacles and upon whom a fee can be assessed. The logical group would be transit riders or operators. As discussed below, however, claimants do not have the authority to assess such fees.

The Draft Staff Analysis first asserts, at 51-53, that local agencies have "fee authority under the police power" to pay for the costs of installing and maintaining transit stop trash receptacles, relying principally on *Sinclair Paint, supra*, in support of that conclusion. *Sinclair Paint*, however, supports the claimants' position here.

In *Sinclair*, a paint company challenged the imposition of a statutory fee used to provide health care services to children who suffered from lead paint poisoning. The fee was assessed against paint companies based on their sales volume. Sinclair challenged the fee on the ground that it was an illegal tax which had not been passed by a two-thirds vote of the Legislature, as required under the California Constitution.

In holding that the lead paint assessment was a regulatory fee and not a tax, the Supreme Court affirmed the requirement that there be a relationship between the entities being assessed and the benefit obtained or burden addressed. The Court stated: "[T]he case law . . . indicates that the police power is broad enough to include mandatory remedial measures to mitigate the *past, present, or future* adverse impact of the fee payer's operations, at least where, as here, **the measure requires a causal connection or nexus between the product and its adverse effects."** 15 Cal. 4th at 877-78 (italicized emphasis in original; bold emphasis supplied).

The issue of a causal nexus, a relationship between the fee and the activities of the party on whom the fee was being assessed, was vital to the Supreme Court's analysis, and

it must inform the Commission's analysis here. Simply assessing a fee against persons with no direct responsibility or benefit from the activities funded by the fee is not a proper exercise of the police power. This was recognized by the Supreme Court in *Sinclair Paint.* The Court specifically noted that on remand to the trial court, Sinclair would "have the opportunity to try to show that no clear nexus exists between its products and childhood lead poisoning . . . ." 15 Cal.4th at 881. Obviously, a failure to show such nexus would negate the proposition that there was in fact a regulatory "fee" rather than a tax.

Other courts examining whether a particular fee constituted a "regulatory fee" and not a special tax require that "the charges allocated to a payor bear a fair or reasonable relationship to the payor's burdens on or benefits from the regulatory activity." *San Diego Gas & Electric Co. v. San Diego County Air Pollution Control Dist.* (1988) 203 Cal.App.3d 1132, 1146 (quoting *Beaumont Investors v. Beaumont-Cherry Valley Water Dist.* (1985) 165 Cal.App.3d 227, 235.) In *San Diego Gas,* the court found that permit fees that were higher based on greater emissions from a source and that were used to recover an air district's costs not identified with a specific polluter was not a special tax because the district had shown that it incurred greater costs to regulate higher-emission sources. *Id.* at 1147-48. The court therefore concluded that the district had established that the emission-based fees "are reasonably related to the district's costs of regulating a permit holder's air pollution, and thus are not a special tax." *Id.* at 1148. The court in *San Diego Gas* thus found the necessary relationship between the imposition of the fee and its payor.

Likewise, in *California Assn. of Professional Scientists v. Department of Fish and Game* (2000) 79 Cal.App.4th 935, cited in the Draft Staff Analysis, the court held that a flat fee imposed to pay for environmental reviews of timber harvesting plans was an appropriate regulatory fee and not a tax. While holding that the Department had "flexibility" in apportioning the costs of the regulatory program, the court still found that a relationship between the fee and the payor was required, noting that "[w]e agree with the notion that shifting the costs of environmental protection to those who seek to impact our natural resources does not subvert the objectives embodied in Proposition 13." *Id.* at 950.

Municipalities can impose different kinds of fees in addition to regulatory fees, including "user fees" (a fee charged for the cost of using some service) or "development fees" (a fee that bears a reasonable relationship to the development's probable cost to the community). *Bay Area Cellular Telephone Co. v. City of Union City* (2008) 162 Cal.App.4th 686, 694-95. However, all of these types of fees bear a similar characteristic: a relationship between the payor and the purpose for the fee. The court in *Evans v. City of San Jose* (1992) 3 Cal.App.4th 728, 738, explained the relationship issue:

> With each of these cases [regulatory fees, user fees or development fees], a discrete group receives a benefit (for example, a permit to build or inspection of produce) or a service (for example, providing and administering a rental dispute mediation and arbitration hearing process) or a permanent public improvement

(such as a local park or landscaped median islands on a local road) which inures to the benefit of that discrete group. The public as a whole may be incidentally benefited, but the discrete group is specially benefited by the expenditure of these funds. . . . The public should not be required to finance an expenditure through taxation which benefits only a small segment of the population. . . . If it is asked to do so, it must agree by a two-thirds vote. On the other hand, where the burden for these expenditures is borne by the group specifically benefited by them, Proposition 13 is not implicated.

(citations omitted).

Here, there is no group upon which the claimants can assess a fee that has a relationship with the trash receptacles. The trash receptacles either benefit the public at large by preventing trash from getting into the street and waters of the state or the discrete group of transit users and operators. The burden is created by the transit riders. The Permit does not require claimants to place trash receptacles every 250 feet along main thoroughfares or in front of certain business establishments. It only requires them to place the receptacles *at transit stops*. Accordingly, the cost of the trash being addressed derives from the transit riders who are littering the trash and would otherwise cause it to accumulate at that location. The State Board clearly recognized that the trash receptacle program was imposed because of transit users when it asserted in its comments: "Any additional costs associated with trash removal at these transit stops, a service cities already provide, *could be borne by transit users through higher transit fees.*" State Board comment letter at 19 (emphasis supplied).

The only group of persons or entities that have a relationship to the trash generation is transit users or the transit entities themselves. The staff's draft analysis does not address whether the claimants can assess transit users or transit operators with a regulatory fee that would offset the cost of providing this service. Examination of this question highlights the claimants' inability to assess such a fee.

2. *Claimants Cannot Assess Fees On Transit Agencies or Increase Transit Fares to Recoup the Costs of Installing and Maintaining Trash Receptacles*

The claimants subject to the trash receptacle requirement in Permit Part 4.F.5(c)(3) do not have the authority to recoup the cost of the receptacles through fees on transit riders or owners. For example, with respect to the Metropolitan Transit Authority ("MTA"), the largest public transit operator in Los Angeles County, state law places the authority to set transit fares exclusively with the MTA's board, and not individual cities situated on the MTA's route. *See* Pub. Util. Code section 30638 ("the rates and charges for service furnished pursuant to this part shall be fixed by a vote of two-thirds of all of the members of the board . . . ."), applicable to the MTA pursuant to Pub. Util. Code section 130051.14. Thus the claimants have no authority to assess transit riders.

Similarly, a city cannot assess such fees against the MTA itself as a condition of allowing the MTA into the city. The MTA Board has exclusive jurisdiction to establish MTA routes and stops. See Pub. Util. Code section 30631 (MTA may "operate . . . control or use . . . stations . . . and any and all other facilities necessary or convenient for rapid transit service . . . over public streets . . . together with all physical structures necessary or convenient for the access of persons and vehicles thereto . . . ."). This section is applicable to MTA pursuant to Pub. Util. Code section 130051.14. Thus, a city has no authority to condition the MTA's use of a station on the payment of a fee for the placement and maintenance of trash receptacles.

Likewise, Foothill Transit, which operates buses within the San Gabriel and Pomona Valleys (and whose member municipalities include the County of Los Angeles and the City of Azusa, claimants herein), also has sole authority to establish fares within its service area as well as bus routes. Declaration of Kevin O. McDonald, Deputy Executive Director, Foothill Transit, attached hereto, ¶¶ 2, 7. A member city of Foothill Transit cannot receive funds from the agency to repay it for the cost of establishing trash receptacles. McDonald Declaration, ¶ 6. Thus, a member city could not to recover the costs of transit stop trash receptacles by charging the Foothill Transit for such services or receiving payment from the agency.

Thus, there is no way that claimants could, in fact, recoup the costs of placing trash receptacles at transit stops either through higher transit fares or through some fees levied on transit operators. Staff's draft analysis does not address this issue.

3. Claimants Cannot Use Their Police Power to Assess Fees On Property Owners or Businesses to Recoup The Cost of the Trash Receptacles

A city also cannot assess trash receptacle maintenance costs on top of existing property trash fees because to do so would be to collect more than the actual cost of the collection, and thus create a "special tax." A fee that is not tied to the proportional cost of a service and which is imposed to fund a specific program is, in reality, a "special tax." Government Code section 50076. *See also Bay Area Cellular, supra,* 162 Cal.App.4th at 699.

This point is further demonstrated by examining the definition of "property-related fees," which are defined in California Constitution Article XIII D, sections 6(b)(3)-(4) to be limited to those "imposed on any parcel or person as an incident of property ownership" and in an amount which "shall not exceed the proportional cost of the service attributable to the parcel." In addition, the fee must be for a service that "is actually used by, or immediately available to, the owner of the property in question. Fees or charges based on potential or future use of a service are not permitted."

Were a city to attempt to recoup the transit stop trash receptacle cost from property owners as part of their trash collection fees, the additional amount would not qualify as a "property-related fee." The fee obviously would not be a fee imposed "as an incident of property ownership" since the fee was intended to fund trash receptacles at

transit stops, not the property on which the fee was imposed. Also, the fee would by necessity exceed the proportional cost of the service attributable to the parcel because there would, in fact, be no service to the parcel. Finally, the receptacles would not provide a service "immediately available to the owners" (such as would be the case for trash pickup at a residence), but merely a "potential or future use of a service" (such as if the property owner used the receptacle while waiting for a bus). Such a use may, of course, never occur.

Staff does not explain how claimants are supposed to assess the fee pursuant to their police power, other than to cite an ordinance adopted by claimant City of Covina. Draft staff analysis, 53. However, that ordinance applies *only* to the costs associated with the inspection of businesses. *See* City of Covina ordinance, attached to the draft staff analysis. It does not apply to the installation and maintenance of trash receptacles.

A city cannot recoup the cost or trash receptacle through increased business license fees, since there again is no relationship between the activities of the business and the placement of the trash receptacles. The business is not benefiting from the trash receptacle placement at transit stops, nor is it contributing to the burden of trash. That benefit/burden is on the transit users or operators. Such a fee placed on businesses therefore would be a special tax.

4. Local Agencies Do Not Have Statutory Fee Authority To Assess Property Owners For the Cost of Installing and Maintaining Transit Stop Trash Receptacles

The Draft Staff Analysis asserts, at 53-54, that Pub. Res. Code section 40059(a) gives local agencies "statutory authority" to recoup the costs of transit stop receptacle installation and maintenance. Staff further asserts that such authority exists, "[r]egardless of whom the fees would be imposed on." Draft Staff Analysis, 53. However, this statute does not authorize claimants to collect fees sufficient to pay for the costs of installing and maintaining the transit trash receptacles.

Section 40059(a) was adopted as a "savings provision" in legislation establishing the Integrated Waste Management Board, to ensure that local trash collection agreements would not be affected by the IWMB legislation. In *Waste Resource Technologies v. Department of Public Health* (1994) 23 Cal.App.4th 299 the court held that the statute reflected Legislature's intent to allow for local regulation of waste collection. *Id.* at 308-09 (validating city's exclusive refuse contract). The statute was not intended as an *imprimatur* for local agencies to assess fees on their residents or on businesses to pay for the costs of trash generated by transit users when that requirement was established not as a matter of local choice but rather state mandate.

Staff asserts that the statute "provides local governments with broad authority over the 'level of services charges and fees.'" Draft Staff Analysis, 53. However, section 40059(a) states that it applies to "[a]spects of solid waste handling *which are of local concern . . .*" (emphasis supplied). The requirement in the Permit to place transit

stop trash receptacles is fundamentally *not* a matter of local concern but rather a regional and state concern, the quality of the state's water in water courses that traverse the Los Angeles basin. This concern goes beyond the specific, local boundaries of the individual cities. Moreover, as the draft staff analysis recognizes, this is a state concern, one that "the state freely chose to impose" on claimants. Draft Staff Analysis, 27. The installation of trash receptacles is a requirement of the *state,* adopted through the Regional Board's Permit, not one freely elected by the claimants or other permittees.

Finally, attempting to exercise fee authority under this statute poses the same problem as discussed with respect to claimants' police power "authority" – how are the local agencies to assess such fees, assuming that they have the statutory "authority" to assess them? The fee cannot be constitutionally assessed on property owners or businesses because there is no direct relationship between the property and the generation of the trash in question. The fees assessed on property owners and businesses must be proportionate to the costs incurred by the city to dispose of the trash. This cost does not include the cost of the trash receptacles. Thus, adding to property trash fees the cost of maintaining transit stop trash receptacles raises the same "special tax" issues as noted above with respect to the police powers discussion. And, the "authority" provided in Pub. Res. Code section 40059(a) will not allow claimants to seek the cost of the receptacles from transit users or transit operators, since those operators have exclusive jurisdiction over fares and routes, as discussed above.

5. *The Imposition of a "Fee" on Property Owners for Transit Stop Receptacles, Even If It Were Not a Special Tax, Still Would Require a Vote Under Proposition 218 (Article XIII D of the California Constitution)*

As discussed above, claimants cannot assess property owners a fee to pay for the costs of the placement and maintenance of transit stop trash receptacles because such fee would, in fact, be considered as a "special tax." Nonetheless, even if such an assessment were considered to be a property-related fee, it would still be subject to a vote as required by Proposition 218, Article XIII D of the California Constitution.

Staff asserts that imposing a fee on property owners for the cost of installing and maintaining transit stop trash receptacles would not constitute a "special tax," since Proposition 218, adopted as Article XIII D, section 6 of the California Constitution, exempts property-related fees for "sewer, water, or refuse collection services." Draft Staff Analysis, 60. This conclusion, however, ignores the fact that the transit stop trash receptacles are not intended for refuse collection within the meaning of Proposition 218, but instead to prevent stormwater pollution.

The court's decision in *Howard Jarvis Taxpayers Ass'n v. City of Salinas* (2002) 98 Cal.App.4th 1351 governs here. The Court of Appeal in that case was faced the question of whether a property assessment for stormwater cleanup violated Proposition 218. First, the court rejected the city's argument that the fee was not property-related, finding that the city's attempt to assess property owners a stormwater drainage fee based

on the amount of impervious area on their property was in fact a property-related assessment since it was "a fee for a public service having a direct relationship to the ownership of developed property" and "was not proportional to the amount of services requested or used by the occupant, but on the physical properties of the parcel." *Id.* at 1355.

The court then went on to dismiss the city's attempt to characterize the assessment as one for "sewer services" (and thus exempt from the voting requirements of Proposition 218) because the stormwater system was distinct from the sanitary sewer system and that the purpose of the fee was "not just to provide drainage service to property owners, but to monitor and control pollutants that might enter the storm water before it is discharged into natural bodies of water." *Id.* at 1358.

The purpose of the state mandate requiring the placement and maintenance of transit stop trash receptacles is to "control pollutants that might enter the storm water," not as part of "refuse collection services". It therefore would not be exempt from Proposition 218 requirements. In reaching this conclusion, the Commission must keep in mind "the voters' intent that the constitutional provision be liberally construed to curb the rise in 'excessive' taxes, assessments, and fees exacted by local governments without taxpayer consent . . . and that exceptions to a general rule of enactment must be strictly construed." *Id.* at 1357-58.

Thus, while claimants believe that an assessment of property owners to pay for the transit stop receptacles would represent a "special tax," even were the assessment to be characterized as a fee, it would not be allowed under Proposition 218 without the vote required.

B. ***Claimants Cannot Assess Fees On Industrial Facilities and Construction Sites For the Costs of Conducting Inspections Required Under State General Stormwater Permits***

Parts 4.C.2(b) and 4.E of the Permit require claimants to conduct inspections of so-called "Phase I" industrial facilities covered by the statewide General Industrial Activities Storm Water Permit ("GIASP") and construction sites subject to the statewide General Construction Activity Storm Water Permit ("GCASP"). Both the GIASP and the GCASP are issued by the State Board and, as staff found, the requirement to conduct inspections of such facilities and sites constitutes a state mandate. Draft Staff Analysis, 40; 44-45.

Pursuant to Water Code section 13260(d)(2)(i), the State Board is authorized to establish an annual fee schedule for collecting fees from the persons subject to the GIASP and GCASP requirements. The Legislature further provided, in Water Code section 13260(d)(2)(iii), that regional boards are to receive monies specified for the inspection of the industrial and constructions sites covered by the GCASP and GIASP programs. This is appropriate, given that the State Board determined that the regional boards should bear responsibility for the enforcement of those permits. *See* State Board Order No. 97-03-

DWQ (adopting the GIASP), Finding 13: "following adoption of this general permit, *the regional water boards shall enforce its provisions*." (emphasis added). Part F(1)(A) of the GIASP provides that "Regional Water boards . . . [i]implement the provisions of this General Permit, including, but not limited, . . . conducting compliance inspections, and taking enforcement actions." *See also* State Board Order No. 99-08-DWQ (adopting the GCASP), Finding 11: "Following adoption of this General Permit, the RWQCBs shall enforce the provisions herein . . . ." Part D.1 of the GCASP specifically provides that "RWQCBs shall . . . implement the provisions of this General Permit. Implementation of this General Permit may include, but is not limited to . . . conducting compliance inspections, and taking enforcement actions."

These provisions, taken together, indicate that both the Legislature and the State Board intended that the obligation to inspect Phase I industrial facilities under the statewide GIASP program and construction sites under the statewide GCASP program to fall to the regional boards and that the costs of all such inspections be paid for by the GIASP and GCASP permit holders in fees to the State Board. Nonetheless, the Permit requires inspections of these facilities and sites to be carried out by permittees under the Permit, without the Regional Board sharing of any of the funds collected to carry out those inspections.

What the Regional Board has done in the Permit is exactly what Article XIII B, section 6 of the California Constitution was intended to address: shift to local governments the financial responsibility to provide public services where the state has already received the money to fully provide those services. As the Court of Appeal in *Hayes v. Commission on State Mandates* (1992) 11 Cal.App.4th 1564, 1578 held, "The subvention requirement is intended to prevent the state from transferring the costs of government from itself to local agencies."

Staff correctly judged these requirements of the Permit to be state mandates, but has concluded that claimants are not entitled to a subvention of state funds because they can raise fees from the state permit holders who have already paid the State Board for the same inspection services. Claimants respectfully disagree.

1. *Local Fees For The Inspection of Phase I Industrial Facilities and Construction Sites, Where Fees For Such Inspections Have Already Been Collected by the State, Are Preempted*

In response to the arguments of claimants that a local stormwater inspection fee would be preempted, staff argues that there is nothing in Water Code section 13260 or the State Board regulations that "expressly preempt, or indicates that the state fee authority would preempt" a local regulatory fee. Draft Staff Analysis, 56. Staff also argues that a local fee would not duplicate state law "because the local fee would not be coextensive with state law." *Id.*

As the state Supreme Court has held, the issue of preemption is not limited to "express" preemption. Preemption can also occur when the local regulation has entered a

field fully occupied" by state law. *See American Financial Services Assn. v. City of Oakland* (2005) 34 Cal.4th 1239, 1252 ("Where the Legislature has adopted statutes governing a particular subject matter, its intent with regard to occupying the field to the exclusion of all local regulation is not be measured alone by the language used but by the whole purpose and scope of the legislative scheme" quoting *Tolman v. Underhill* (1952) 39 Cal.2d 708, 712).

Here, the Legislature adopted a statute that specifically established a mechanism for fees to be assessed on GIASP and GCASP holders, for those funds to be segregated and sent to the regional boards, and for a specified amount of those funds ("not less than 50 percent of the money") to be used by the regional boards "solely" on stormwater inspection and regulatory compliance issues associated with industrial and construction stormwater programs. Water Code section 13260(d)(2)(iii). Such a specific determination as to the destination of the funds for the purposes of inspection and compliance evidences the intent of the Legislature that the issue of funding for GIASP and GCASP inspections be "fully occupied."

Staff is correct in noting that the Phase I industrial facilities are not co-extensive with the other commercial establishments (restaurants, service stations, etc.) also to be inspected under the Permit (Draft Staff Analysis, 56). This does not avoid the double taxation, however, with respect to the inspections of GIASP and GCASP permit holders. With respect to them, the inspection and fee program is not complimentary, but *duplicative*. Staff further notes that with respect to the industrial facilities, the Permit does not require inspections by permittees if the Regional Board has inspected them within the past 24 months. (Draft Staff Analysis, 57). This waiver does not apply, however, to the inspection of construction sites (as acknowledged by staff, Draft Staff Analysis, 58). It also does not apply to the Permit requirement for inspection of the state-permitted facilities for all facilities *not* inspected by the Regional Board.

Staff's discussion of *City of Oakland v. Superior Court* (1996) 45 Cal.App.4th 740 also does not support its arguments. Unlike the municipality in that case, claimants are not here seeking funding for a purely local regulatory program, but rather for the costs of inspecting facilities *subject to a state permit for their compliance with that state permit.*

2. *Assessing Fees Against Permit Holders For Inspections They Have Already Paid For Represents a Special Tax*

The California Legislature and courts have plainly held that fees which exceed the reasonable cost of providing services are a "special tax," and not a fee that could excuse the requirement for a subvention of state funds. *See* Government Code section 50076; *e.g., California Ass'n of Professional Scientists, supra,* 79 Cal.App.4th at 948; *Mills v. County of Trinity* (1980) 108 Cal.App.3d 656, 659-60. By forcing the claimants to recover their costs for inspecting the state-permitted GIASP and GCASP facilities and sites, the Regional Board has created such a special tax.

As set forth above, claimants are required to inspect the state-permitted facilities and sites despite the fact that the persons holding those permits already have paid the state for the cost of those inspections. Thus, to the extent that the claimants' inspections duplicate the scope of the state inspections, the fees constitute a "special tax."

Staff's citation of *City of Rancho Cucamonga v. Regional Water Quality Control Board* (2006) 135 Cal.App.4th 1377 is inapposite. Staff states that the reasoning of the case "is instructive because a local regulatory fee could be used for local-government inspections, and the state fee is for state or regional inspections under the general statewide permits." Draft Staff Analysis, 59. Again, however, the inspections for which a subvention of funds is being sought here are those inspections under the general statewide permits, not "local-government inspections."

III. CONCLUSION

Staff has concluded, that the requirements identified by claimants in these consolidated Test Cases are, in fact, state mandates. This is an important and correct finding.

At the same, without identifying how claimants are to do so, staff has concluded that a subvention of funds is not required because claimants have "authority" to recoup the costs of placing trash receptacles at transit stops or to inspect *state-permitted* facilities or construction sites that have already and annually paid the state for the full costs of those inspections. Claimants have demonstrated however, that in fact they do not have "authority" to recoup these costs and, as a result, claimants are entitled to reimbursement of these costs.

For the foregoing reasons, Claimants again respectfully request that the Commission approve these test claims.

DECLARATION OF KEVIN O. McDONALD

I, Kevin O. McDonald, hereby declare and state as follows:

1. I am Deputy Executive Director of Foothill Transit, which operates public bus transit lines in 21 Los Angeles County cities and unincorporated Los Angeles County. I have personal and first-hand knowledge of the matters set forth herein and could, if called upon, testify competently thereto.

2. Foothill Transit was created in 1988. It provides bus service to approximately 15 million riders annually within a 327 square mile area of the San Gabriel and Pomona Valleys in Los Angeles County.

3. Foothill Transit is comprised of 21 member cities and the County of Los Angeles. Foothill Transit operates pursuant to the Foothill Transit Joint Powers Agreement ("JPA").

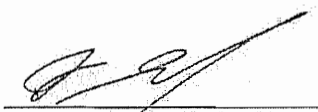
4. Fares for Foothill Transit riders are established by the Governing Board of Foothill Transit. No individual member city or the County can establish fares independently of the Governing Board.

5. The JPA does not provide for monies collected in fares to be distributed back to individual member cities or the County for any purpose except to reimburse costs associated with the administration of Foothill Transit itself.

6. The costs of establishing a trash receptacle at a bus stop to comply with a stormwater permit would not be considered a Foothill Transit administrative cost for which a member city or the County could obtain reimbursement.

7. Routes for Foothill Transit bus lines are establish by majority vote of the Governing Board. No member city or the County of Los Angeles can block a route or require Foothill Transit to pay a fee for the right to operate bus stops in the city or the County.

I declare under penalty of perjury under the laws of the State of California that the foregoing is true and correct. Executed this 5th day of June 2009 at West Covina, California.



Kevin O. McDonald

Article 3.5

VOTER–APPROVED SPECIAL TAXES

Sec.

50075. Legislative intent.
50076. Definition.
50077. Ordinance or resolution; election; collection.

Article 3.5 was added by Stats.1979, c. 903, p. 3112, § 1, eff. Sept. 22, 1979.

§ 50075. Legislative intent

It is the intent of the Legislature to provide all cities, counties, and districts with the authority to impose special taxes, pursuant to the provisions of Article XIII A of the California Constitution.

(Added by Stats.1979, c. 903, p. 3112, § 1, eff. Sept. 22, 1979. Amended by Stats.1980, c. 672, § 1, eff. July 20, 1980.)

Historical Note

The 1980 amendment substituted "cities, counties, and districts" for "cities and counties" and substituted "pursuant" for "subject".

§ 130051.14. References to abolished Commission and district

On and after April 1, 1993, any reference in this part, or in any other provision of law or regulation, to the Southern California Rapid Transit District or to the Los Angeles County Transportation Commission or to the county transportation commission in general shall be deemed to refer to the Los Angeles County Metropolitan Transportation Authority.

(Added by Stats.1992, c. 60 (A.B.152), § 16.)

§ 130051.15. Assumption of rights and obligations

(a) Upon the abolishment of the Southern California Rapid Transit District and the Los Angeles County Transportation Commission, the Los Angeles County Metropolitan Transportation Authority shall assume the rights and obligations of the district and the commission under any contract to which the district or the commission is a party and which is to be performed, in whole or in part, on or after January 1, 1993. All real and personal property owned by the district or the commission shall be transferred to the authority by operation of law.

(b) The Los Angeles County Metropolitan Transportation Authority shall assume, without any condition whatsoever, all responsibilities and obligations previously assumed by the Southern California Rapid Transit District or the Los Angeles County Transportation Commission with regard to the full funding agreement, including all agreements pursuant to Section 13(c) of the Urban Mass Transportation Act of 1964 which relate to the full funding agreement, with the Federal Transit Administration for the funding of the Los Angeles County Metro Rail Project. It is the intent of the Legislature that nothing in this act shall enlarge or diminish the projects covered or any rights or obligations under any existing agreements pursuant to Section 13(c).

(c) The Los Angeles County Metropolitan Transportation Authority shall not, until April 1, 1993, renew or extend any personal services contract entered into between either the Los Angeles County Transportation Commission or the Southern California Rapid Transit District and an employee or former employee of either agency prior to January 1, 1993.

(Added by Stats.1992, c. 60 (A.B.152), § 17.)

§ 130051.16. Collective bargaining agreements or labor obligations; extent of assumption

Notwithstanding any other provision of law, the Los Angeles County Metropolitan Transportation Authority shall assume the duties, obligations, and liabilities of the Southern California Rapid Transit District, including those duties, obligations, and liabilities arising from or relating to collective bargaining agreements or labor obligations imposed by state or federal law, only to the extent that the authority is acting pursuant to specific duties, obligations, liabilities, rights, or powers to which it succeeded as a result of the abolishment of the district pursuant to Section 130051.13.

(Added by Stats.1992, c. 60 (A.B.152), § 18.)

§ 130051.17. Acceptance of gifts by members and employees of authority; adoption of ordinance prior to contract approval gifts of travel; violations

(a) Prior to the approval of any contract by the Los Angeles County Metropolitan Transportation Authority, or by any organizational unit of the authority, the authority shall adopt an ordinance comparable to Chapter 9.5 (commencing with Section 89500) of Title 9 of the Government Code, which regulates the acceptance of gifts by members of the authority, * * * members of the board of an

§ 30638. Fixing of reasonable rates, fees or charges; vote requirement; objectives for revenues

(a) The rates, fees, and charges for service or rights furnished, leased, or otherwise transferred pursuant to this part, including, but not limited to, station cost-sharing, connector fees, and land or air rights sales or leasing, shall be fixed by a vote of two-thirds of all of the members of the board and shall be reasonable. Insofar as practicable, the rates, fees, and charges shall be determined and fixed so as to result in revenue which will make the transit system self-supporting and shall be sufficient to accomplish all of the following:

(1) Pay the operating expenses of the district.

(2) Provide for repairs, maintenance, and depreciation of works owned or operated by the district.

(3) Provide for the purchase, lease, or acquisition of equipment under Article 3 (commencing with Section 30940) of Chapter 7.

(4) Provide for the payment of the interest and principal of the bonded debt, subject to the applicable provisions of this part authorizing the issuance and retirement of bonds.

(5) Provide for the payment of contracts, agreements, leases, equipment, trust certificates, and other legal liabilities assumed under Chapter 8 (commencing with Section 31000).

* * *

(b) After making any current allocations of funds required for the purposes prescribed by paragraphs (1) to (5), inclusive, of subdivision (a) and by the terms of any indebtedness incurred under Article 1 (commencing with Section 30900), Article 2 (commencing with Section 30930), and Article 5 (commencing with Section 30960) of Chapter 7, the board may provide funds for any purpose the board deems necessary and desirable to carry out the purposes of this part.

(c) This section does not constitute a covenant to the holders of any bonds or other evidences of indebtedness of the district unless the ordinance, resolution, or indenture providing for the issuance of those instruments so provides.

JUDGES: Opinion by Sims, J., with Puglia, P. J., and Nicholson, J., concurring.

OPINION BY: SIMS

OPINION

SIMS, J.

This case involves a dispute as to whether a statewide regulatory amendment, increasing the level of purity required when reclaimed wastewater is used for certain types of irrigation, constitutes a state-mandated program for which water districts are entitled to reimbursement from the state. (*Cal. Const., art. XIII B, § 6* (hereafter, section 6); [1] *Gov. Code, § 17500 et seq.*; former *Rev. & Tax. Code, § 2201 et seq.*) The State Controller and State Treasurer appeal from a trial court judgment granting petitions for writ of mandate brought by Santa Margarita Water District (SMWD), Marin Municipal Water District, Irvine Ranch Water District and Santa Clara Valley Water District (the Districts), seeking to enforce a State Board of Control (the Board) decision which found the regulatory amendment constituted a reimbursable state mandate. [2] Appellants contend the trial court erred because (1) the amendment did not constitute a new program or higher level of service in an existing program; (2) the Districts' claim was abolished when the statutory basis for their claim--former *Revenue and Taxation Code section 2207*--was repealed before their rights were reduced to final judgment, and (3) the Districts' authority to levy fees to pay for the increased costs defeats their claim of a reimbursable mandate. Appellants also challenge the trial court's determination that they were collaterally estopped from challenging the Board's decision (finding a reimbursable state mandate) by their failure timely to seek judicial review of the administrative decision. We shall conclude the Districts' authority to levy fees defeats their claim of a reimbursable mandate, and appellants are not collaterally estopped from raising this matter. We therefore need not address the other contentions. Treating this appeal from a nonappealable judgment as an extraordinary writ petition, we shall direct the trial court to vacate its judgment and enter a new judgment denying the Districts' petitions.

1 Section 6 provides: "Whenever the Legislature or any state agency mandates a new program or higher level of service on any local government, the state shall provide a subvention of funds to reimburse such local government for the costs of such program or increased level of service, except that the Legislature may, but need not, provide such subvention of funds for the following

mandates: [P] (a) Legislative mandates requested by the local agency affected; [P] (b) Legislation defining a new crime or changing an existing definition of a crime; or [P] (c) Legislative mandates enacted prior to January 1, 1975, or executive orders or regulations initially implementing legislation enacted prior to January 1, 1975."

2 The trial court first held proceedings in the matter of the petition filed by the SMWD. The other three water districts had filed petitions, which were consolidated and awaiting hearing. The parties to the consolidated case filed a stipulation indicating they did not wish to relitigate the entitlement issues already decided by Judge Ford in the SMWD case, and they stipulated to assignment of their cases to Judge Ford pursuant to *California Rules of Court, rule 213* (assignment to one judge for all or limited purposes), for determination of amounts as to each district. The judgment expressly covers the petitions of all four districts.

FACTUAL AND PROCEDURAL BACKGROUND

In 1975, the State Department of Health Services (DHS) adopted regulations (*Cal. Code Regs., tit. 22, § 60301-* 60357) implementing *Water Code section 13521*, which provides: "The State Department of Health Services shall establish uniform statewide recycling criteria for each varying type of use of recycled water where the use involves the protection of public health." *Section 60313* [3] *of title 22 of the California Code of Regulations* prescribed the level of purity required for reclaimed water to be used for landscape irrigation.

3 *California Code of Regulations, title 22, section 60313*, initially provided: "Landscape Irrigation. Reclaimed water used for the irrigation of golf courses, cemeteries, lawns, parks, playgrounds, freeway landscapes, and landscapes in other areas where the public has access shall be at all times an adequately disinfected, oxidized wastewater. The wastewater shall be considered adequately disinfected if at some location in the treatment process the median number of coliform organisms does not exceed 23 per 100 milliliters, as determined from the bacteriological results of the last 7 days for which analyses have been completed." (Former *§ 60313*, Cal. Code Regs., tit. 22, Register 75. No. 14 (Apr. 5, 1975).)

In May 1976, SMWD adopted a plan to develop a wastewater reclamation system. In August 1976, SMWD filed an application with the responsible regional water quality control board (Water Control Board) for a permit to discharge wastewater from the proposed reclamation system. SMWD also planned to provide reclaimed water for irrigation, potentially to 2,173 acres of land.

In February 1977, the Water Control Board issued SMWD a permit for operation of a reclamation system--the Oso Creek facility. The permit required SMWD to comply with all applicable wastewater reclamation regulations then in effect.

In late 1977, SMWD learned DHS might be considering modifications to the California Code of Regulations, title 22 regulations.

In August 1978, SMWD completed construction of the Oso Creek facility, at a cost of $ 17 million.

In September 1978, DHS amended the regulations. The amendment to *California Code of Regulations, title 22, section 60313* [4] increased the level of purity required before reclaimed wastewater could be used for the irrigation of parks, playgrounds and school yards. It is this amendment which allegedly constituted a state-mandated cost. SMWD modified its facility to comply with the amended regulations, completing the modifications in 1983.

4 *Section 60313* of California Code of Regulations, title 22, as amended, provides: "(a) Reclaimed water used for the irrigation of golf courses, cemeteries, freeway landscapes, and landscapes in other areas where the public has similar access or exposure shall be at all times an adequately disinfected, oxidized wastewater. The wastewater shall be considered adequately disinfected if the median number of coliform organisms in the effluent does not exceed 23 per 100 milliliters, as determined from the bacteriological results of the last 7 days for which analyses have been completed, and the number of coliform organisms does not exceed 240 per 100 milliliters in any two consecutive samples.

"(b) Reclaimed water used for the irrigation of parks, playgrounds, schoolyards, and other areas where the public has similar access or exposure shall be at all times an adequately disinfected, oxidized, coagulated, clarified, filtered wastewater or a wastewater treated by a sequence of unit processes that will assure an equivalent degree of treatment and reliability. The wastewater shall be considered adequately disinfected if the median number of coliform organisms in the effluent does not exceed 2.2 per 100 milliliters, as determined from the bacteriological results of the last 7 days for which analyses have been completed, and the number of coliform organisms does not exceed 23 per 100 milliliters in any sample."

On October 1, 1982, SMWD filed a "test claim" [5] with the Board, alleging the regulatory amendment relating to the use of reclaimed wastewater constituted a new program or higher level of service. The test claim was made pursuant to former *Revenue and Taxation Code section 2231*, [6] which required reimbursement to local agencies for costs mandated by the state (see now *Gov. Code, § 17561* [7]), and former *Revenue and Taxation Code section 2207, subdivisions (a)* and *(b)* [8] defining "costs mandated by the state." (See now *Gov. Code, § 17514.* [9]) The test claim also cited section 6 (fn. 1, *ante*).

5 At the time in question, "test claim" meant "the first claim filed with the State Board of Control alleging that a particular statute or executive order imposes a mandated cost on such local agency or school district." (Former *Rev. & Tax. Code, § 2218*; Stats. 1980, ch. 1256, § 7, p. 4249.) "Estimated claims" and "reimbursement claims" were used to make specific demand against an appropriation made for the purpose of paying such claims. (*Ibid.*)

A similar structure, distinguishing between "test claims" and various "reimbursement claims" or "entitlement claims" continues presently in *Government Code sections 17521- 17522.*

At the time in question, the statutory procedure provided that if the Board found a mandate, it did not determine the amount to be reimbursed to the test claimant; rather, the Board then adopted a statewide cost estimate which was reported to the Legislature. (Stats. 1980, ch. 1256, p. 4246 et seq.; Stats. 1982, ch. 734, p. 2911 et seq.) It was the State Controller who determined specific amounts to be reimbursed, after the Legislature appropriated funds for that purpose. (*Ibid.*)

6 Former *Revenue and Taxation Code section 2231* provided in part: "(a) The state shall reimburse each local agency for all 'costs mandated by the state,' as defined in *Section 2207. . . .*" (Stats. 1982, ch. 1586, § 3, p. 6264.)

7 *Government Code section 17561* provides in part: "(a) The state shall reimburse each local agency and school district for all 'costs mandated by the state,' as defined in *Section 17514. . . .*"

8 Former *Revenue and Taxation Code section 2207* provided in part: " 'Costs mandated by the state' means any increased costs which a local agency is required to incur as a result of the following: [P] (a) Any law enacted after January 1, 1973, which mandates a new program or an increased level of service of an existing program; [P] (b) Any executive order issued after January 1, 1973, which mandates a new program . . . ." (Stats. 1980, ch. 1256, § 4, pp. 4247-4248.)

The test claim did *not* invoke other subdivisions of former *Revenue and Taxation Code section 2207*, concerning "(c) Any executive order issued after January 1, 1973, which (i) implements or interprets a state statute and (ii), by such implementation or interpretation, increases program levels above the levels required prior to January 1, 1973. [P] . . . [P] . . . (h) Any statute enacted after January 1, 1973, or executive order issued after January 1, 1973, which adds new requirements to an existing optional program or service and thereby increases the cost of such program or service if the local agencies have no reasonable alternatives other than to continue the optional program." (Stats. 1980, ch. 1256, § 4, pp. 4247-4248.) Since these subdivisions were not invoked, we have no need to consider them.

9 *Government Code section 17514* provides: " 'Costs mandated by the state' means any increased costs which a local agency or school district is required to incur after July 1, 1980, as a result of any statute enacted on or after January 1, 1975, or any executive order implementing any statute enacted on or after January 1, 1975, which mandates a new program or higher level of service of an existing program within the meaning of Section 6 . . . ."

On July 28, 1983, the Board determined the amended regulations imposed state mandated costs. In so doing, the Board rejected the position of state agencies seeking denial of the claim on the ground that local agencies are not mandated to use reclaimed water and because, if local agencies do choose to use it, they can recover the cost in charges made to purchasers of the water.

On January 19, 1984, the Board adopted "Parameters and Guidelines" establishing criteria for payment of claims to water districts pursuant to this mandate. (Former *Rev. & Tax. Code, § 2253.2*; Stats. 1982, ch. 734, § 10, pp. 2916-2917; *Gov. Code, § 17557.*)

On May 31, 1984, the Board amended its Parameters and Guidelines to provide for reimbursement of SMWD's cost of preparing and presenting the test claim.

In June 1984, the Board, pursuant to former *Revenue and Taxation Code section 2255*, [10] submitted to the Legislature a statewide cost estimate of $ 14 million for this mandate. The Legislature did not appropriate any funds for the mandate in 1984.

10 Former *Revenue and Taxation Code section 2255* provided: "At least twice each calendar year the Board of Control shall report to the Legislature on the number of mandates it has found and the estimated statewide costs of such mandates. Such report shall identify the statewide costs estimated for each such mandate and the reasons for recommending reimbursement. . . . Immediately on receipt of such report a local governmental claims bill shall be introduced in the Legislature. The local government claims bill, at the time of its introduction, shall provide for an appropriation sufficient to pay the estimated costs of such mandates, pursuant to the provisions of this article." (Stats. 1980, ch. 1256, § 20, p. 4255.)

The current provision is contained in *Government Code section 17600*, which provides: "At least twice each calendar year the commission shall report to the Legislature on the number of mandates it has found pursuant to Article 1 (commencing with Section 17550) and the estimated statewide costs of these mandates. This report shall identify the statewide costs estimated for each mandate and the reasons for recommending reimbursement."

In 1985, the Legislature included an appropriation of almost $ 14 million for this state-mandated cost in the budget, but the Governor vetoed the appropriation.

In 1986, a bill including $ 945,000 for the subject mandate was introduced, but the bill was not enacted.

On January 27, 1987, SMWD filed in the trial court a petition for writ of mandate pursuant to *Code of Civil Procedure section 1085*. The petition sought an order directing (1) the State Controller to issue a warrant "to pay the State's obligation to SMWD for its 'costs mandated by the state' " and (2) the State Treasurer to pay the Controller's warrant.

At a hearing, the trial court upheld the Board's decision that the amended regulations required a higher level of service and held the doctrines of waiver and collateral estoppel applied to that decision, such that the state, by failing to challenge the Board's decision within the three-year statute of limitations, was barred from challenging it now. However, the trial court did allow the state to argue that the amended regulations did not come within the definition of "program," as that word had recently been defined in *County of Los Angeles v. State of California (1987) 43 Cal. 3d 46, 56 [233 Cal. Rptr. 38, 729 P.2d 202]*.

The trial court recognized that, since there was no appropriation for this mandate in the state budget, the court could not grant the relief sought by SMWD (an order directing the Controller to issue a warrant and the Treasurer to pay it) unless the court found the existence of funds reasonably available in the state budget which could be tapped for this purpose. The trial court stated it was not prepared to find the existence of funds reasonably available without a full evidentiary hearing. Rather than use the Board's statewide estimate, the court believed it needed to know the amount to which each water district would be entitled before it could determine whether there were funds reasonably available in the budget. The trial court ruled the exact amount of money to be reimbursed to the Districts had never been determined and referred the matter to a referee to make that determination.

In February 1989, a court-appointed referee began evidentiary hearings to determine the amount of reimbursement for each water district.

In 1989, the Legislature repealed former *Revenue and Taxation Code section 2207* (fn. 8, *ante*), defining "costs mandated by the state." (Stats. 1989, ch. 589, § 7, p. 1978.)

On July 29, 1994, appellants filed in the trial court a motion for judgment on the pleadings/motion to dismiss, arguing repeal of former *Revenue and Taxation Code section 2207* destroyed any right to reimbursement and divested the court of jurisdiction to proceed. The motion also revisited the issue presented to and rejected by the Board, that the water districts' authority to levy fees defeated a finding that the costs were reimbursable.

In February 1995, the trial court issued its ruling denying appellants' motion for judgment on the pleadings and for dismissal. The court in its minute order determined repeal of former *Revenue and Taxation Code section 2207* in 1989 had not destroyed the Districts' right to reimbursement pursuant to the Board's decision, because the Board's decision was reduced to "final judgment" before the statutory repeal. The court said the Board's decision on July 28, 1983, became final in July 1986, when the applicable three-year statute of limitations for seeking judicial review lapsed. The Board's decision therefore conclusively established the Districts' right to reimbursement, and appellants were collaterally estopped from challenging the Board's decision. The court further said no discernible injustice or public interest precluded this application of collateral estoppel; rather, justice would be furthered by allowing the Districts to enforce their right to reimbursement as established by the Board.

The trial court further said the statutory authority of the Districts to levy service charges and assessments (Former *Rev. & Tax. Code, § 2253.2, subd. (b)(4)*; [11] Stats. 1982, ch. 734, § 10, p. 2916; *Gov. Code, § 17556* [12]) did not bar reimbursement for state-mandated costs. "When the Board determined that the 1978 amendment

of the regulations establishing reclamation criteria imposed reimbursable state-mandated costs, it rejected the argument of the State Departments of Health Services and Finance that the costs were not reimbursable pursuant to former *Revenue and Taxation Code section 2253(b)(4)* and implicitly determined, in accordance with the presentation of [Santa Margarita Water District] that [the Districts] did not have sufficient authority to levy service charges and assessments to pay for the increased level of service mandated by the 1978 regulatory amendment. This implicit determination, resolving a mixture of legal and factual issues, became final and binding on respondents under the doctrine of collateral estoppel when they failed to seek judicial review of the Board's decision within the three-year limitations period."

> 11 At the time SMWD filed its test claim, former *Revenue and Taxation Code section 2253.2* provided in part: "(b) The Board of Control shall not find a reimbursable mandate . . . in any claim submitted by a local agency . . . if, after a hearing, the board finds that: [P] . . . [P] (4) The local agency . . . has the authority to levy service charges, fees or assessments sufficient to pay for the mandated program or level of service." (Stats. 1982, ch. 734, § 10, p. 2916.)
>
> 12 *Government Code section 17556* provides in part: "The [Commission on State Mandates (formerly the Board of Control)] shall not find costs mandated by the state, as defined in *Section 17514*, in any claim submitted by a local agency or school district, if, after a hearing, the commission finds that: [P] . . . [P] (d) The local agency or school district has the authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service."

At a further hearing concerning the amount owed to each water district, the trial court stated it had erred in referring the matter to a referee and should have rendered a judgment directing the Controller to determine the amounts owed.

On June 3, 1996, the trial court entered a judgment stating (1) the Board's decision was final at the time the petitions were filed in the trial court; (2) the state mandate is a program for which reimbursement is due under *County of Los Angeles v. State of California, supra, 43 Cal. 3d 46*; (3) the court having concluded it was inappropriate for the court to determine amounts of reimbursement, the Controller was directed to make that determination. The court directed issuance of a writ commanding the Controller to determine the amounts due to the Districts.

Appellants appeal from the judgment.

The Districts filed a cross-appeal, but we dismissed the cross-appeal pursuant to stipulation of the parties.

DISCUSSION

I. *Appealability*

Because the petition sought an order directing the Controller to issue a warrant and the Treasurer to pay a warrant but the judgment merely ordered the Controller to determine amounts without disposing of those matters, and because the record reflected the trial court's recognition that it could not order issuance or payment of warrants unless it determined appropriated funds for such expenditures were reasonably available in the state budget [13] (*Carmel Valley Fire Protection Dist. v. State of California (1987) 190 Cal. App. 3d 521, 538-541 [234 Cal. Rptr. 795]*)--a determination requiring an evidentiary hearing which was not held--we requested supplemental briefing on the question whether the judgment was a final appealable judgment, as opposed to an interlocutory judgment.

> 13 The petition for writ of mandate alleged there was a continuously appropriated State Mandates Claims Fund upon which the Legislature had placed restrictions which on their face made the fund inapplicable to the mandate at issue in this case. The petition further alleged these restrictions were unconstitutional, such that upon a judicial declaration of their unconstitutionality, there would exist funds reasonably available to pay SMWD. The trial court made no ruling on these matters. In this appeal, we need not and do not decide the propriety of the remedy sought by the Districts.

An appealable judgment or order is a jurisdictional prerequisite to an appeal. (*Code Civ. Proc., § 904.1*; 9 Witkin, Cal. Procedure (4th ed. 1997) Appeal, § 13-14, pp. 72-73.)

An interlocutory judgment is not appealable; generally, a judgment is interlocutory if anything further in the nature of judicial action on the part of the trial court is essential to a final determination of the rights of the parties. (*Lyon v. Goss (1942) 19 Cal. 2d 659, 669-670 [123 P.2d 11]*.)

In their supplemental briefs, both sides maintain the judgment is a final appealable judgment but for different reasons. Both sides are wrong.

Appellants assert the judgment is final because nothing further remains to be done by the trial court. According to appellants, the Controller, after determin-

ing what amounts are due, is supposed to submit that amount to the Legislature to appropriate the funds (though the judgment contains no such direction). Appellants assert that, if the Legislature does not appropriate the funds, the Districts' remedy would be to file a new action in the superior court to enforce the court's prior order, and to compel payment out of funds already appropriated and reasonably available for the expenditures. Appellants assert it is thus premature to consider whether appropriated funds are reasonably available to pay any reimbursement due.

The Districts' supplemental brief, while agreeing the judgment is a final appealable judgment, disputes appellants' view of what happens after the Controller determines the amounts. The Districts maintain the trial court intended for appellants to pay the amounts determined by the Controller, despite the judgment's failure so to state. The Districts claim the unresolved factual question of the existence of available appropriated funds in the budget is merely "an administrative detail" which need not be addressed by the court except in a proceeding to enforce the judgment in the event appellants refuse to pay.

Both sides are wrong. Nothing in the judgment requires the Controller to submit an appropriations bill to the Legislature, and appellants cite no authority that would require such a procedure--which would duplicate steps previously undertaken in this case without success. Nor does anything in the judgment call for issuance or payment of warrants. *Carmel Valley Fire Protection Dist.* v. *State of California, supra, 190 Cal. App. 3d 521*--a case discussed in the trial court and on appeal--recognized that a court violates the separation of powers doctrine if it purports to compel the Legislature to appropriate funds, but no such violation occurs if the court orders payment from an existing appropriation. (*Id. at pp. 538-539.*) Thus, the Districts' view of this matter as an administrative detail for a later postjudgment enforcement proceeding is unsupported.

We recognize this litigation arises from a "test claim," which merely determines whether a state-mandated cost exists. (See fn. 5, *ante.*) Perhaps no issue of payment should arise at all at the test claim stage, though neither side so argues.

In any event, the judgment plainly leaves matters undecided.

We conclude the judgment is interlocutory and therefore not appealable.

Nevertheless, on our own motion, we shall exercise our discretion to treat the appeal as a writ petition and shall grant review on that basis. (*Morehart v. County of Santa Barbara (1994) 7 Cal. 4th 725, 743-744 [29 Cal. Rptr. 2d 804, 872 P.2d 143]* [treating appeal as writ petition is authorized means for obtaining review of interlocutory judgments].) We shall exercise our discretion to treat the appeal as a writ petition in the interest of justice and judicial economy, because the merits of the dispositive issues have been fully briefed, both sides urge review, and the judgment compels the Controller to engage in complex factfinding determinations which may be moot if the trial court erred on the merits of the mandate issues. Given the difficulties in discerning how the former statutory process of test claims was supposed to work in practice, we believe the interests of justice and judicial economy are best served by reviewing the judgment rather than dismissing the appeal.

We stress, however, that our review is limited to contentions raised in the briefs--which do not raise issues of the propriety of the remedy sought by the Districts. We express no view on whether the remedy sought by the Districts was an available or appropriate remedy.

II. *Standard of Review*

In reviewing the trial court's ruling on a writ of mandate, the appellate court is ordinarily confined to an inquiry as to whether the findings and judgment of the trial court are supported by substantial evidence. (*Evans v. Unemployment Ins. Appeals Bd. (1985) 39 Cal. 3d 398, 407 [216 Cal. Rptr. 782, 703 P.2d 122].*) However, where the facts are undisputed and the issues present questions of law, the appellate court is not bound by the trial court's decision but may make its own determination. (*Ibid.*)

III. *Collateral Estoppel*

We first address the trial court's determination that appellants were collaterally estopped from challenging the Board's determination of state-mandated cost (except for the ability to address the effect of a new Supreme Court case defining "program"). The trial court stated the Board's decision became final for collateral estoppel purposes in July 1986, when the statute of limitations for judicial review expired.

Appellants contend the trial court erred in applying collateral estoppel, because there was no "final judgment" for collateral estoppel purposes, since the amount of reimbursement had yet to be determined.

We conclude it is not necessary to decide the parties' dispute as to whether the requirements of administrative collateral estoppel are met, because even assuming the elements are met, the doctrine of collateral estoppel should be disregarded pursuant to the public interest exception.

Thus, our Supreme Court declined to apply collateral estoppel in a state-mandated costs case in *City of Sacramento v. State of California (1990) 50 Cal. 3d 51,*

64-65 [266 Cal. Rptr. 139, 785 P.2d 522] (*Sacramento II*). There, a city and a county filed claims with the Board seeking subvention of costs imposed by a statute (Stats. 1978, ch. 2, p. 6 et seq., referred to in *Sacramento II* as "chapter 2/78") which extended mandatory coverage under the state unemployment insurance law to include state and local governments. The Board found there was no state-mandated program and denied the claims. On mandamus, the trial court overruled the Board and found the costs reimbursable. We affirmed the trial court in a published opinion. (*City of Sacramento v. State of California (1984) 156 Cal. App. 3d 182 [203 Cal. Rptr. 258]* (*Sacramento I*).) On remand, the Board determined the amounts due on the claims, but the Legislature refused to appropriate the necessary funds. The city filed a class action seeking among other things payment of the state-mandated costs. The trial court granted summary judgment for the state on the grounds the statute did not impose state-mandated costs. The Supreme Court upheld the trial court's decision.

The Supreme Court in *Sacramento II* rejected the local agencies' argument that the state was collaterally estopped from relitigating the issue whether a state-mandated cost existed, because *Sacramento I* "finally" decided the matter. (*Sacramento II, supra, 50 Cal. 3d at p. 64.*) The Supreme Court said: "Generally, collateral estoppel bars the party to a prior action, or one in privity with him, from relitigating issues finally decided against him in the earlier action. [Citation.] '. . . But when the issue is a question of law rather than of fact, the prior determination is not conclusive either if injustice would result or if the public interest requires that relitigation not be foreclosed. . . .' [Citation.]

"Even if the formal prerequisites for collateral estoppel are present here, the public-interest exception governs. Whether chapter 2/78 costs are reimbursable under article XIII B and parallel statutes constitutes a pure question of law. The *state* was the losing party in *Sacramento I*, and also the only entity legally affected by that decision. Thus, strict application of collateral estoppel would foreclose any reexamination of the holding of that case. The state would remain bound, and no other person would have occasion to challenge the precedent.

"Yet the consequences of any error transcend those which would apply to mere private parties. If the result of *Sacramento I* is wrong but unimpeachable, taxpayers statewide will suffer unjustly the consequences of the state's continuing obligation to fund the chapter 2/78 costs of local agencies. . . ." (*Sacramento II, supra, 50 Cal. 3d at p. 64*, original italics.)

The Supreme Court also rejected the argument that res judicata applied. "Of course, res judicata and the rule of final judgments bar us from disturbing individual claims or causes of action, on behalf of specific agencies, which have been finally adjudicated and are no longer subject to review. [Citations.] However, the issues presented in the current action are not limited to the validity of any such finally adjudicated individual claims. Rather, they encompass the question of defendants' subvention obligations *in general* under chapter 2/78." (*Sacramento II, supra, 50 Cal. 3d at p. 65*, original italics.)

If this court's opinion finding a reimbursable mandate in *Sacramento I* did not constitute a final adjudication precluding further consideration of the matter, a fortiori the Board's decision in the instant case does not constitute a final adjudication precluding further consideration. Thus, here, as in *Sacramento II*, the issues presented are not limited to the validity of any finally adjudicated individual claim, but encompass the question of subvention obligations in general under the regulatory amendment of wastewater purification standards. If the Board's decision is wrong but unimpeachable, taxpayers statewide would suffer unjustly the consequences of a continuing obligation to fund the costs of local water districts. We reject the Districts' argument that no public interest exists in this case because only a few local entities are involved.

The Districts suggest application of the public interest exception to collateral estoppel would nullify the legislative intent to avoid multiple proceedings by creating a comprehensive and exclusive procedure for handling state mandated costs issues in the administrative forum. (E.g., *Gov. Code, § 17500.* [14]) However, we are bound by Supreme Court authority applying the public interest exception in a state-mandated costs case. (*Auto Equity Sales, Inc. v. Superior Court (1962) 57 Cal. 2d 450 [20 Cal. Rptr. 321, 369 P.2d 937].*) Moreover, contrary to the Districts' implication, the administrative decision is not the final word; the statutory scheme authorizes judicial review of the administrative decision. (*Gov. Code, § 17559*; former *Rev. & Tax. Code, § 2253.5*; Stats. 1977, ch. 1135, § 12, p. 3650.) Additionally, the instant judicial proceeding was initiated by the Districts, not by appellants. Thus, in this case application of the public interest exception to collateral estoppel is not creating multiple proceedings.

14 *Government Code section 17500* provides in part: "The Legislature finds and declares that the existing system for reimbursing local agencies . . . for the costs of state-mandated local programs has not provided for the effective determination of the state's responsibilities under Section 6 . . . . The Legislature finds and declares that the failure of the existing process to adequately and consistently resolve the complex legal questions involved in the determination of state-mandated

> costs has led to an increasing reliance by local agencies and school districts on the judiciary and, therefore, in order to relieve unnecessary congestion of the judicial system, it is necessary to create a mechanism which is capable of rendering sound quasi-judicial decisions and providing an effective means of resolving disputes over the existence of state-mandated local programs. [P] It is the intent of the Legislature in enacting this part to provide for the implementation of Section 6 . . . and to consolidate the procedures for reimbursement of statutes specified in the Revenue and Taxation Code with those identified in the Constitution. Further, the Legislature intends that the Commission on State Mandates, as a quasi-judicial body, will act in a deliberative manner in accordance with the requirements of Section 6 . . ."

In light of the Supreme Court's decision in *Sacramento II*, we disregard earlier authority of an intermediate appellate court which applied administrative collateral estoppel to a question of law in a state-mandated costs case without express discussion of the public interest exception. (*Carmel Valley Fire Protection Dist.* v. *State of California, supra, 190 Cal. App. 3d at p. 536.*)

We conclude that, insofar as appellants' contentions present questions of law, the public interest exception to administrative collateral estoppel governs, and we shall therefore address the legal arguments raised in appellants' brief.

IV. *Authority to Levy Fees*

Appellants contend that, even if the regulatory amendment is a new program for state mandated costs purposes, the Districts' authority to levy fees defeats a determination that the costs are reimbursable. We agree.

At the time SMWD filed its test claim, former *Revenue and Taxation Code section 2253.2* provided in part:

"(b) The Board of Control shall not find a reimbursable mandate, pursuant to either Section 2250 of this code or to *Section 905.2 of the Government Code*, in any claim submitted by a local agency or school district, pursuant to *subdivision (a) of Section 2218*, if, after a hearing, the board finds that:

"

"(4) The local agency or school district has the authority to levy service charges, fees or assessments sufficient to pay for the mandated program or level of service." [15] (Stats. 1982, ch. 734, § 10, p. 2917; Stats. 1980, ch. 1256, § 15, pp. 4253-4254.)

15 This case presents no issue concerning any distinction between "service charges, fees or assessment," as used in the statute. The parties on appeal frame the issue in terms of the authority to levy "fees." We adopt their usage for the sake of simplicity.

The same provision is currently contained in *Government Code section 17556.* [16]

16 *Government Code section 17556* provides in part: "The commission [formerly the Board] shall not find costs mandated by the state, as defined in *Section 17514*, in any claim submitted by a local agency or school district, if, after a hearing, the commission finds that: [P] . . . [P] (d) The local agency or school district has the authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service. . . ."

The facial constitutionality of this provision was upheld in *County of Fresno v. State of California (1991) 53 Cal. 3d 482 [280 Cal. Rptr. 92, 808 P.2d 235].* The *Fresno* court rejected an argument that the statute was facially unconstitutional as conflicting with section 6 (fn. 1, *ante*), which contains no exclusion of reimbursement where the local agency has authority to levy fees. Section 6 requires subvention only when the costs in question can be recovered solely from tax revenues. (*53 Cal. 3d at p. 487.*) *Government Code section 17556, subdivision (d)*, "effectively construes the term 'costs' in the constitutional provision as excluding expenses that are recoverable from sources other than taxes. Such a construction is altogether sound." (*County of Fresno v. State of California, supra, 53 Cal. 3d at p. 487.*)

Here, appellants contend that, at all pertinent times, the water districts have had *authority* to levy fees to cover the costs at issue in this case. They cite provisions such as *Water Code section 35470*, which provides: "Any district formed on or after July 30, 1917, may, in lieu in whole or in part of raising money for district purposes by assessment, make water available to the holders of title to land or the occupants thereon, and may fix and collect charges therefor. The charges may include standby charges to holders of title to land to which water may be made available, whether the water is actually used or not. The charges may vary in different months and in different localities of the district to correspond to the cost and value of the service, and the district may use so much of the proceeds of the charges as may be necessary to defray the ordinary operation or maintenance expenses of the district and for any other lawful district purpose."

We agree this statute on its face authorizes the Districts to levy fees sufficient to pay the costs involved with the regulatory amendment. We thus shall conclude the Board erred in finding a right to reimbursement despite this authority to levy fees, and we shall conclude appellants are not collaterally estopped from pressing this point.

The Districts do not dispute they have authority to levy fees for the costs involved in this case. Instead they argue the real issue is whether they had "sufficient" authority. They claim this issue was a mixed question of law and fact, and appellants should be collaterally estopped from raising it. [17]

> 17 The Districts assert appellants are relying on evidence that was not before the Board. However, they do not explain what they mean or give us any reference to appellants' brief. We therefore disregard the assertion.

We agree with appellants that the public interest exception to collateral estoppel should be applied here, because the issue presents a pure question of law. The Districts tried to make it a factual issue, but we shall explain why the facts presented by the District were immaterial.

Thus, in proceedings before the Board (where *Water Code section 35470* was cited to the Board by state agencies), SMWD did not argue it lacked "authority" to levy fees for this purpose. Instead, SMWD argued and presented evidence that it would not be economically desirable to do so. SMWD submitted declarations stating that rates necessary to cover the increased costs would render the reclaimed water unmarketable and would encourage users to switch to potable water. SMWD maintained that imposition of higher fees on users would contravene the legislative policy expressed in *Water Code section 13512*, which directs the state to undertake all possible steps to encourage development of wastewater reclamation facilities.

The Board made no express finding concerning this issue. The record contains only the Board minutes, which reflect a motion was made "To find a mandate and continue the issue regarding the claimant's ability to levy a service charge, to the parameters and guidelines process." There was no second to the motion. A motion was then made to find the regulatory amendment contained a reimbursable mandate. The motion carried. The minutes then state: "DISCUSSION: Chairperson Yost disagreed with the motion as she felt the claimant could recover their costs by levying a service charge . . . ." The Board's Parameters and Guidelines stated in part: "If service charges or assessments were levied to defray the cost of the new criteria, the claim must be reduced by the amount received from such charges or assessment."

In proceedings before the trial court, SMWD admitted the district had the authority to levy fees but argued existence of authority was not enough, and the real question was whether it was economically feasible to levy fees sufficient to pay the mandated costs. Thus, SMWD's counsel stated at the hearing in the trial court: "The state keeps focusing on the question of whether the authority to issue, to assess fees and charges exists, and we have never contested that it didn't.

"But the statute which says that the Board cannot find the existence of a mandate if there's authority to assess fees and charges, and then the critical phrase, 'sufficient to pay for the mandated costs,' that's the condition with [*sic*] which they cannot satisfy.

"We proved that, the Board of Control hearing, through economic evidence. We proved it through testimony that the market was absolutely inelastic in terms of reclaimed water and potable water, that if you raise the price of reclaimed water over the potable water, that people would then buy the potable water, and that's all in the record.

"And so we showed that even though we have the authority, it was not sufficient to pay . . . ."

We note the record also reflects comments by SMWD's counsel to the trial court, that its customers were paying the increased costs as an "advance" against the state's obligation. The court pointed out users' payment of increased costs disproved the economic evidence SMWD had presented to the Board, that it could not raise its prices without losing its customers. The record also contains indications that the Districts funded the increased costs by diverting money from other sources. As will appear, we need not address this evidence, because it is not relevant to the question of authority to levy fees sufficient to fund the increased costs imposed by the regulatory amendment, which is a question of law in this case.

The trial court's minute order stated the districts' authority to levy fees did not bar reimbursement for state-mandated costs, because the Board "implicitly determined" the districts did not have "sufficient" authority to levy fees to pay for the increased service mandated by the 1978 regulatory amendment, and this "implicit determination, resolving a mixture of legal and factual issues, became final and binding on [appellants] under the doctrine of collateral estoppel when they failed to seek judicial review of the Board's decision within the three-year limitations period."

On appeal, appellants argue the sole inquiry is whether the local agency has "authority" to levy fees

sufficient to pay the costs, and it does not matter whether the local agency, for economic reasons, finds it undesirable to exercise that authority. Appellants argue this presents a question of law, such that the public interest exception to collateral estoppel would apply (assuming the requirements of collateral estoppel are otherwise met).

We agree with appellants. In construing statutes, our primary task is to determine the lawmakers' intent. (*Brown v. Kelly Broadcasting Co. (1989) 48 Cal. 3d 711, 724 [257 Cal. Rptr. 708, 771 P.2d 406].*) To determine intent, we look first to the words themselves. (*Ibid.*) "If the language is clear and unambiguous there is no need for construction, nor is it necessary to resort to indicia of the intent of the Legislature . . . ." (*Lungren v. Deukmejian (1988) 45 Cal. 3d 727, 735 [248 Cal. Rptr. 115, 755 P.2d 299].*)

Here, the statute is clear and unambiguous. On its face the statute precludes reimbursement where the local agency has "authority" to levy fees sufficient to pay for the mandated program or level of service. The legal meaning of "authority" includes the "Right to exercise powers; . . ." (Black's Law Dict. (6th ed. 1990) p. 133, col. 1.) The lay meaning of "authority" includes "the power or right to give commands [or] take action . . . ." (Webster's New World Dict. (3d college ed. 1988) p. 92.) Thus, when we commonly ask whether a police officer has the "authority" to arrest a suspect, we want to know whether the officer has the legal sanction to effect the arrest, not whether the arrest can be effected as a practical matter.

Thus, the plain language of the statute precludes reimbursement where the local agency has the authority, i.e., the right or the power, to levy fees sufficient to cover the costs of the state-mandated program.

The Districts in effect ask us to construe "authority," as used in the statute, as a practical ability in light of surrounding economic circumstances. However, this construction cannot be reconciled with the plain language of the statute and would create a vague standard not capable of reasonable adjudication. Had the Legislature wanted to adopt the position advanced by the Districts, it would have used "reasonable ability" in the statute rather than "authority."

The question is whether the Districts have authority, i.e., the right or power, to levy fees sufficient to cover the costs. The Districts clearly have authority to levy fees sufficient to cover the costs at issue in this case. *Water Code section 35470* authorizes the levy of fees to "correspond to the cost and value of the service," and the fees may be used "to defray the ordinary operation or maintenance expenses of the district and for any other lawful district purpose." The Districts do not demonstrate that anything in *Water Code section 35470* limits the authority of the Districts to levy fees "sufficient" to cover their costs.

Thus, the economic evidence presented by SMWD to the Board was irrelevant and injected improper factual questions into the inquiry.

On appeal, the Districts briefly argue economic undesirability of levying fees constitutes a lack of authority to levy fees sufficient to cover costs. They claim the evidence before the Board showed SMWD "could not" increase its fees because it was already charging as much for reclaimed as it was for potable water. However, the cited portion of the record does not show SMWD "could not" increase its fees but only that an increase would render reclaimed water unmarketable and encourage users to switch to potable water. The Districts cite no authority supporting their construction of former *Revenue and Taxation Code section 2253.2* (now *Gov. Code, § 17556*) that *authority* to levy fees sufficient to cover costs turns on economic feasibility. We have seen the plain language of the statute defeats the Districts' position.

Since the issue in this case presented a question of law, we conclude the public interest exception to collateral estoppel applies. (*Sacramento II, supra, 50 Cal. 3d at p. 64.*)

The Districts argue application of the public interest exception in this case raises policy concerns about the finality of administrative decisions on state-mandated costs, because if collateral estoppel does not apply in this case, it will never apply. However, we merely hold, in accordance with Supreme Court pronouncement, that the public interest exception to collateral estoppel applies under the circumstances of this case to this state-mandated cost issue which presents solely a question of law.

The Districts argue any fees levied by the districts "cannot exceed the cost to the local agency to provide such service," because such excessive fees would constitute a special tax. However, the districts fail to explain how this is an issue. No one is suggesting the districts levy fees that exceed their costs.

The Districts cite evidence presented to the referee in the aborted hearing to determine amounts owed to each District, that SMWD's director of finance testified SMWD has other sources of revenue from other services it provides (such as sewer service), maintains separate accounts, and borrowed funds internally from other accounts to cover costs incurred as a result of the subject mandate. The Districts assert this testimony reflects that SMWD "recognized the legal limitations on its authority to impose fees for the services that it provides." How-

ever, nothing in this evidence demonstrates any legal limitations on the authority to levy the necessary fees.

The Districts say appellants appear to believe the Districts should require users of other services to subsidize the Districts' cost of reclaiming and selling wastewater, through excessive user fees. However, we do not read appellants' brief as presenting any such argument and in any event do not base our decision on that ground.

In a footnote, the Districts make the passing comment: "In light of the adoption of Proposition 218, which added Articles XIII C and XIII D to the California Constitution this past November [1996], the authority of local agencies to recover costs for many services will be impacted by the requirement to secure the approval by majority vote of the property owners voting, to levy or to increase property related fees. See Section 6, Article XIII D." The Districts do not contend that the services at issue in this appeal are among the "many services" impacted by Proposition 218. We therefore have no need to consider what effect, if any, Proposition 218 might have on the issues in this case.

We conclude the Districts were not entitled to reimbursement of state-mandated costs, because they had authority to levy fees sufficient to pay for the level of service mandated by the 1978 regulatory amendment. Appellants were not collaterally estopped from raising this issue in the trial court. We thus conclude the Districts' mandamus petitions should have been denied. We therefore need not address appellants' contentions that (1) the regulatory amendment did not constitute a new program or higher level of service, or (2) any right to reimbursement was abolished upon repeal of former *Revenue and Taxation Code section 2207.*

DISPOSITION

Let a peremptory writ of mandate issue, directing the trial court to vacate its judgment and enter a new judgment denying the Districts' petitions for writ of mandate. Appellants shall recover their costs on appeal.

Puglia, P. J., and Nicholson, J., concurred.

The petition of real parties in interest for review by the Supreme Court was denied February 25, 1998.

OPINION BY: CHIN

OPINION

CHIN, J.

In 1991, by simple majority vote, the Legislature enacted the Childhood Lead Poisoning Prevention Act of 1991 (the Act) (Stats. 1991, ch. 799, § 3, amended Stats. 1995, ch. 415, § 5; see *Health & Saf. Code, § 105275 et seq.*). [1] The Act provided evaluation, screening, and medically necessary follow-up services for children who were deemed potential victims of lead poisoning. The Act's program was entirely supported by "fees" assessed on manufacturers or other persons contributing to environmental lead contamination. (See § 105305, 105310.) The question arises whether these fees were in legal effect "taxes" required to be enacted by a two-thirds vote of the Legislature. (See *Cal. Const., art. XIII A, § 3.*)

1 All further statutory references are to the Health and Safety Code unless otherwise noted.

Contrary to the trial court and Court of Appeal, we conclude that the Act imposed bona fide regulatory fees, not taxes, because the Legislature imposed the fees to mitigate the actual or anticipated adverse effects of the fee payers' operations, and under the Act the amount of the fees must bear a reasonable relationship to those adverse effects. Accordingly, the trial court erred in granting summary judgment to award plaintiff Sinclair Paint Company (Sinclair) a refund of the fees it paid under the Act.

We take the following statement of uncontradicted facts largely from the Court of Appeal opinion in this case. Sinclair paid $ 97,825.26 in fees for 1991. After the Board of Equalization (the Board) denied Sinclair's administrative claim for refund, Sinclair filed a complaint for refund, alleging the fees assessed under *section 105310* were "actually taxes imposed by the California [L]egislature in violation of Proposition 13, Article XIIIA, Section 3 of the California Constitution." The court granted the request of the Department of Health Services (the Department) for leave to intervene. It also granted a similar request to intervene by Ray Cochenour and Cardaryl Commodore, representatives of a class of children suffering from lead poisoning, and People United for a Better Oakland, an unincorporated association whose members include the Act's intended beneficiaries (collectively Cochenour).

Sinclair moved for summary judgment, claiming the Act was invalid on its face because it was not passed by the requisite two-thirds majority vote of the Legislature. The court agreed the Act imposed an unconstitutional tax and granted Sinclair's motion.

The Board, the Department, and Cochenour appealed, contending the Act involves a regulatory fee, not a tax. Appellants also argued the court erred in granting Sinclair summary judgment without compelling it to produce discovery and improperly relied on legislative history in determining the Act's constitutionality. The Court of Appeal affirmed the judgment, concluding that the Act was unconstitutional on its face and rejecting appellants' other claims. We reverse the Court of Appeal's judgment.

DISCUSSION

I. *The Childhood Lead Poisoning Prevention Act of 1991*

When the Legislature enacted the Act in 1991, it explained the Act's background and purpose in findings that described the numerous health hazards children face when exposed to lead toxicity and declared four state "goals," namely, (1) evaluating, screening, and providing case management for children at risk of lead poisoning, (2) identifying sources of lead contamination responsible for this poisoning, (3) identifying and utilizing programs providing adequate case management for children found to have lead poisoning, and (4) providing education on lead-poisoning detection and case management to state health care providers. (Stats. 1991, ch. 799, § 1.)

The Act directs the Department to adopt regulations establishing a standard of care for evaluation, screening (i.e., measuring lead concentration in blood), and medically necessary follow-up services for children determined to be at risk of lead poisoning. (§ 105285; see § 105280, subd. (e).) If a child is identified as being at risk of lead poisoning, the Department must ensure "appropriate case management," i.e., "health care referrals, environmental assessments, and educational activities" needed to reduce the child's exposure to lead and its consequences. (§ 105280, subd. (a), 105290.) Additionally, the Act requires the Department to collect data and report on the effectiveness of case management efforts. (§ 105295.)

The Department has "broad regulatory authority to fully implement and effectuate the purposes" of the Act. (§ 105300.) This authority "include[s], but is not limited to," the development of protocols for screening and for appropriate case management; the designation of laboratories qualified to analyze blood specimens for lead concentrations, and the monitoring of those laboratories for accuracy; the development of reporting procedures by laboratories; reimbursement for state-sponsored services related to screening and case management; establishment of lower lead concentrations in whole blood than those specified by the United States Centers for Disease Control for lead poisoning; notification to parents or guardians of the results of blood-lead testing and environmental assessment; and establishment of a periodicity schedule for evaluating childhood lead poisoning. (§ 105300.)

The Act states that its program of evaluation, screening, and follow-up is supported *entirely* by fees collected under the Act: "Notwithstanding the scope of activity mandated by this chapter, in no event shall this chapter be interpreted to require services necessitating expenditures in any fiscal year in excess of the fees, and earnings therefrom, collected pursuant to *Section 105310*. This chapter shall be implemented only to the extent fee revenues pursuant to *Section 105310* are available for expenditure for purposes of this chapter." (§ 105305.)

Section 105310 imposes the fees at issue here. In pertinent part, that section imposes fees on manufacturers and other persons formerly and/or presently engaged in the stream of commerce of lead or products containing lead, or who are otherwise responsible for identifiable sources of lead, which have significantly contributed

and/or currently contribute to environmental lead contamination. (*§ 105310, subd. (a).*) The Department must determine fees based on the manufacturer's or other person's past and present responsibility for environmental lead contamination, or its "market share" responsibility for this contamination. (*§ 105310, subd. (b).*)

Those persons able to show that their industry did not contribute to environmental lead contamination, or that their lead-containing product does not and did not "result in quantifiably persistent environmental lead contamination," are exempt from paying the fees. (*§ 105310, subd. (d).*)

The Legislature has authorized the Department to adopt regulations establishing the specific fees to be assessed the parties identified in *section 105310, subdivision (a).* (*§ 105310, subd. (b).*) The formula for calculating fees attributable to leaded architectural coatings, including ordinary house paint, is set forth in *California Code of Regulations, title 17, section 33020.*

II. *Proposition 13*

In June 1978, California voters added article XIII A, commonly known as the Jarvis-Gann Property Tax Initiative or Proposition 13 (article XIII A), to the state Constitution. The initiative's purpose was to assure effective real property tax relief by means of an "interlocking 'package' " consisting of a real property tax rate limitation (art. XIII A, § 1), a real property assessment limitation (art. XIII A, § 2), a restriction on state taxes (art. XIII A, § 3), and a restriction on local taxes (art. XIII A, § 4). (*Amador Valley Joint Union High Sch. Dist.* v. *State Bd. of Equalization (1978) 22 Cal. 3d 208, 231 [149 Cal. Rptr. 239, 583 P.2d 1281]* (*Amador Valley*); see also *County of Los Angeles v. Sasaki (1994) 23 Cal. App. 4th 1442, 1451 [29 Cal. Rptr. 2d 103].*)

Section 3 of article XIII A restricts the enactment of changes in state taxes, as follows: "From and after the effective date of this article, any changes in State taxes enacted for the purpose of increasing revenues collected pursuant thereto whether by increased rates or changes in methods of computation must be imposed by an Act passed by not less than two-thirds of all members . . . of the Legislature, except that no new ad valorem taxes on real property, or sales or transaction taxes on the sales of real property may be imposed."

Section 4 of article XIII A imposes similar restrictions on local entities: "Cities, Counties and special districts, by a two-thirds vote of the qualified electors of such district, may impose *special taxes* on such district, except ad valorem taxes on real property or a transaction tax or sales tax on the sale of real property within such City, County or special district." (Italics added.)

As we explained in *Amador Valley*, ". . . since any tax savings resulting from the operation of sections 1 and 2 [of article XIII A] could be withdrawn or depleted by additional or increased state or local levies of other than property taxes, sections 3 and 4 combine to place restrictions upon the imposition of such taxes." (*Amador Valley, supra*, 22 Cal. 3d at p. 231.)

III. *Taxes or Fees?*

Are the "fees" *section 105310* imposes in legal effect "taxes enacted for the purpose of increasing revenues" under article XIII A, section 3, and therefore subject to a two-thirds majority vote? Although we have found no cases that interpret the language of section 3, several California appellate decisions have considered whether various fees are really "special taxes" under article XIII A, section 4. (See also *City and County of San Francisco v. Farrell (1982) 32 Cal. 3d 47, 57 [184 Cal. Rptr. 713, 648 P.2d 935]* ["special taxes" are taxes levied for a specific purpose rather than for general governmental purposes]; *Gov. Code, § 50076* [excluding from the term "special tax" in article XIII A, section 4, "any fee which does not exceed the reasonable cost of providing the service or regulatory activity for which the fee is charged and which is not levied for general revenue purposes"].) Because of the close, "interlocking" relationship between the various sections of article XIII A (see *Amador Valley, supra*, 22 Cal. 3d at p. 231), we believe these "special tax" cases may be helpful, though not conclusive, in deciding the case before us. The reasons why particular fees are, or are not, "special taxes" under article XIII A, section 4, may apply equally to section 3 cases. [2]

> 2 We are not here concerned with issues arising under constitutional amendments effected by a recent initiative measure (Proposition 218) adopted at the November 5, 1996, General Election. That measure contains new restrictions on local agencies' power to impose fees and assessments.

We first consider certain general guidelines used in determining whether "taxes" are involved in particular situations. The cases agree that whether impositions are "taxes" or "fees" is a question of law for the appellate courts to decide on independent review of the facts. (*Bixel Associates v. City of Los Angeles (1989) 216 Cal. App. 3d 1208, 1216 [265 Cal. Rptr. 347]*; *California Bldg. Industry Assn. v. Governing Bd. (1988) 206 Cal. App. 3d 212, 234 [253 Cal. Rptr. 497]*; *Russ Bldg. Partnership v. City and County of San Francisco (1987) 199 Cal. App. 3d 1496, 1504 [246 Cal. Rptr. 21].*)

The cases recognize that "tax" has no fixed meaning, and that the distinction between taxes and fees is fre-

quently "blurred," taking on different meanings in different contexts. (*Russ Bldg. Partnership v. City and County of San Francisco, supra, 199 Cal. App. 3d at p. 1504*; *Terminal Plaza Corp. v. City and County of San Francisco (1986) 177 Cal. App. 3d 892, 905 [223 Cal. Rptr. 379]*; *Mills v. County of Trinity (1980) 108 Cal. App. 3d 656, 660 [166 Cal. Rptr. 674]*; *County of Fresno v. Malmstrom (1979) 94 Cal. App. 3d 974, 983-984 [156 Cal. Rptr. 777]*.) In general, taxes are imposed for revenue purposes, rather than in return for a specific benefit conferred or privilege granted. (*Shapell Industries, Inc. v. Governing Board (1991) 1 Cal. App. 4th 218, 240 [1 Cal. Rptr. 2d 818]*; *County of Fresno v. Malmstrom, supra, 94 Cal. App. 3d at p. 983* ["Taxes are raised for the general revenue of the governmental entity to pay for a variety of public services."].) Most taxes are compulsory rather than imposed in response to a voluntary decision to develop or to seek other government benefits or privileges. (*Shapell Industries, Inc. v. Governing Board, supra, 1 Cal. App. 4th at p. 240*; *Russ Bldg. Partnership v. City and County of San Francisco, supra, 199 Cal. App. 3d at pp. 1505-1506*; see *Terminal Plaza Corp. v. City and County of San Francisco, supra, 177 Cal. App. 3d at p. 907*.) But compulsory fees may be deemed legitimate fees rather than taxes. (See *Kern County Farm Bureau v. County of Kern (1993) 19 Cal. App. 4th 1416, 1424 [23 Cal. Rptr. 2d 910]*.)

The "special tax" cases have involved three general categories of fees or assessments: (1) special assessments, based on the value of benefits conferred on property; (2) development fees, exacted in return for permits or other government privileges; and (3) regulatory fees, imposed under the police power. Although these three categories may overlap in a particular case, we consider them separately.

The cases uniformly hold that *special assessments* on property or similar business charges, in amounts reasonably reflecting the value of the benefits conferred by improvements, are not "special taxes" under article XIII A, section 4. (*Evans v. City of San Jose (1992) 3 Cal. App. 4th 728, 735-739 [4 Cal. Rptr. 2d 601]* [assessments on businesses for downtown promotion]; *J. W. Jones Companies v. City of San Diego (1984) 157 Cal. App. 3d 745, 750-758 [203 Cal. Rptr. 580]* [facilities benefit assessments]; *City Council v. South (1983) 146 Cal. App. 3d 320, 332 [194 Cal. Rptr. 110]* [special assessments on real property]; *County of Fresno v. Malmstrom, supra, 94 Cal. App. 3d at pp. 984-985* [special assessments for construction of streets].)

Similarly, *development fees* exacted in return for building permits or other governmental privileges are not special taxes if the amount of the fees bears a reasonable relation to the development's probable costs to the community and benefits to the developer. (*Shapell Industries, Inc. v. Governing Board, supra, 1 Cal. App. 4th at p. 240* [school facilities fees]; *Bixel Associates v. City of Los Angeles, supra, 216 Cal. App. 3d at pp. 1211, 1218-1219* [fire hydrant fees]; *California Bldg. Industry Assn. v. Governing Bd., supra, 206 Cal. App. 3d at pp. 235-237* [school facilities development fees]; *Russ Bldg. Partnership v. City and County of San Francisco, supra, 199 Cal. App. 3d at pp. 1504-1506* [transit impact fees]; *Beaumont Investors v. Beaumont-Cherry Valley Water Dist. (1985) 165 Cal. App. 3d 227, 235-238 [211 Cal. Rptr. 567]* [new facilities water hookup fees]; *Trent Meredith, Inc.* v. *City of Oxnard (1981) 114 Cal. App. 3d 317, 325-328 [170 Cal. Rptr. 685]* [fees as precondition for building permits]; *Mills v. County of Trinity, supra, 108 Cal. App. 3d at pp. 661-663* [fees for processing subdivision, zoning, and land use applications]; see *Ehrlich v. City of Culver City (1996) 12 Cal. 4th 854, 898 [50 Cal. Rptr. 2d 242, 911 P.2d 429]* (conc. opn. of Mosk, J.).)

According to Sinclair, because the present fees have been imposed solely to defray the cost of the state's program of evaluation, screening, and follow-up services for children determined to be at risk for lead poisoning, they are not analogous to either special assessments or development fees, for they neither reimburse the state for special benefits conferred on manufacturers of lead-based products nor compensate the state for governmental privileges granted to those manufacturers. As the Court of Appeal observed, the fees challenged here "do not constitute payment for a government benefit or service. The program described in the Act bears no resemblance to regulatory schemes involving special assessments, developer fees, or efforts to recoup the cost of processing land use applications where the benefit analysis is typically applied. [Citations.] The face of the Act makes clear the funds collected pursuant to *section 105310* are used to benefit children exposed to lead, not Sinclair or other manufacturers in the stream of commerce for products containing lead."

Appellants argue, however, that the challenged fees fall squarely within a third recognized category not dependent on government-conferred benefits or privileges, namely, *regulatory fees* imposed under the police power, rather than the taxing power. We agree.

We have acknowledged that the term "special taxes" in article XIII A, section 4, " 'does not embrace fees charged in connection with regulatory activities which fees do not exceed the reasonable cost of providing services necessary to the activity for which the fee is charged and which are not levied for unrelated revenue purposes.' [Citations.]" (*Pennell v. City of San Jose (1986) 42 Cal. 3d 365, 375 [228 Cal. Rptr. 726, 721 P.2d 1111]* (*Pennell*), affd. on other grounds *sub nom. Pennell v. San Jose (1988) 485 U.S. 1 [108 S. Ct. 849, 99*

L. Ed. 2d 1], quoting from *Mills v. County of Trinity, supra, 108 Cal. App. 3d at pp. 659-660*; see *City of Oakland v. Superior Court (1996) 45 Cal. App. 4th 740, 760-762 [53 Cal. Rptr. 2d 120]* [upholding regulatory fees charged to alcoholic beverage sale licensees to support pilot project to address public nuisances associated with those sales]; *Kern County Farm Bureau v. County of Kern, supra, 19 Cal. App. 4th at pp. 1422-1425* [upholding landfill assessment based on land use to reduce illegal waste disposal]; *City of Dublin v. County of Alameda (1993) 14 Cal. App. 4th 264, 280-285 [17 Cal. Rptr. 2d 845]* [upholding waste disposal surcharge imposed on waste haulers]; *Evans v. City of San Jose, supra, 3 Cal. App. 4th at p. 737*; *San Diego Gas & Electric Co.* v. *San Diego County Air Pollution Control Dist. (1988) 203 Cal. App. 3d 1132, 1145-1149 [250 Cal. Rptr. 420]* (*SDG&E*) [upholding emissions-based formula for recovering direct and indirect costs of pollution emission permit programs]; *United Business Com.* v. *City of San Diego (1979) 91 Cal. App. 3d 156, 166-168 [154 Cal. Rptr. 263]* (*United Business*) [upholding fees for inspecting and inventorying on-premises advertising signs].)

Pennell upheld rental unit fees that a city imposed under its rent control ordinance to assure it recovered the actual costs of providing and administering a rental dispute hearing process. (*Pennell, supra, 42 Cal. 3d at p. 375.*) We explained in *Pennell* that regulatory fees in amounts necessary to carry out the regulation's purpose are valid despite the absence of any perceived "benefit" accruing to the fee payers. (*Id. at p. 375, fn. 11*; see also *SDG&E, supra*, 203 Cal. App. 3d at p. 1146, fn. 18; *Mills v. County of Trinity, supra, 108 Cal. App. 3d at p. 661.*)

We observe that Sinclair, in moving for summary judgment, did not contend that the fees exceed in amount the reasonable cost of providing the protective services for which the fees are charged, or that the fees were levied for any *unrelated* revenue purposes. (See *Pennell, supra, 42 Cal. 3d at p. 375.*) Moreover, Sinclair has not yet sought to establish that the amount of the fees bears no reasonable relationship to the social or economic "burdens" that Sinclair's operations generated. (See *SDG&E, supra*, 203 Cal. App. 3d at p. 1146; see also *§ 105310, subds. (b), (d)*; *Sea & Sage Audubon Society, Inc.* v. *Planning Com. (1983) 34 Cal. 3d 412, 421 [194 Cal. Rptr. 357, 668 P.2d 664]* [persons challenging fees have burden of establishing invalidity].) Sinclair does contend, however, that the Act is not *regulatory* in nature, being primarily aimed at producing revenue.

According to Sinclair, the challenged fees were in effect "taxes" because the compulsory revenue measure that imposed them was not part of a *regulatory* effort. The Court of Appeal agreed, relying on prior cases indicating that where payments are exacted solely for *revenue* purposes and give the right to carry on the business with no further conditions, they are taxes. (E.g., *United Business, supra*, 91 Cal. App. 3d at p. 165.) The Court of Appeal held that "Placing the factors distinguishing taxes and fees along a continuum, we conclude the monies paid by Sinclair pursuant to the Act are more like taxes than fees. [P] *There is nothing on the face of the Act to show the fees collected are used to regulate Sinclair.* Apart from mere calculation of the payment, the Department's regulatory authority involves implementation of the program to evaluate, screen, and provide follow-up services to children at risk for lead poisoning. The Act does not require Sinclair to comply with any other conditions; it merely requires Sinclair to pay what the Department determines to be its share of the program cost."

Contrary to the Court of Appeal, we believe that *section 105310* imposes bona fide regulatory fees. It requires manufacturers and other persons whose products have exposed children to lead contamination to bear a fair share of the cost of mitigating the adverse health effects their products created in the community. Viewed as a "mitigating effects" measure, it is comparable in character to similar police power measures imposing fees to defray the actual or anticipated adverse effects of various business operations.

From the viewpoint of general police power authority, we see no reason why statutes or ordinances calling on polluters or producers of contaminating products to help in mitigation or cleanup efforts should be deemed less "regulatory" in nature than the initial permit or licensing programs that allowed them to operate. Moreover, imposition of "mitigating effects" fees in a substantial amount (Sinclair allegedly paid $ 97,825.26 in 1991) also "regulates" future conduct by deterring further manufacture, distribution, or sale of dangerous products, and by stimulating research and development efforts to produce safer or alternative products. (Cf. *SDG&E, supra*, 203 Cal. App. 3d at p. 1147, fn. 20 [emissions-based fees provide incentive to use nonpollutant fuels].)

Sinclair disputes the state's authority to impose industry-wide "remediation fees" to compensate for the adverse societal effects generated by an industry's products. To the contrary, the case law previously cited or discussed clearly indicates that the police power is broad enough to include mandatory remedial measures to mitigate the *past, present, or future* adverse impact of the fee payer's operations, at least where, as here, the measure requires a causal connection or nexus between the product and its adverse effects. (See *City of Oakland v. Superior Court, supra, 45 Cal. App. 4th at pp. 760-762*; *Kern County Farm Bureau v. County of Kern, supra, 19 Cal. App. 4th at pp. 1422-1425*; *City of Dublin v. County of Alameda, supra, 14 Cal. App. 4th at pp. 284-285*; *SDG&E, supra*, 203 Cal. App. 3d at pp. 1146-1149;

nited Business, *supra*, 91 Cal. App. 3d at p. 168; *Russ Bldg. Partnership v. City and County of San Francisco, supra, 199 Cal. App. 3d at pp. 1504-1506* [fees to pay for increased transit costs]; *J. W. Jones Companies v. City of San Diego, supra, 157 Cal. App. 3d at pp. 755, 758* [fees to defray costs of additional public facilities]; *Trent Meredith, Inc.* v. *City of Oxnard, supra, 114 Cal. App. 3d at p. 325* [fees to reduce growth impact of new subdivision]; see also *Western Indemnity Co. v. Pillsbury (1915) 170 Cal. 686, 694 [151 P. 398]* [police power authorizes legislation necessary or proper for protection of legitimate public interest]; *County of Plumas v. Wheeler (1906) 149 Cal. 758, 761-764 [87 P. 909]* [broad legislative discretion to regulate business, including license fees or charges]; 8 Witkin, Summary of Cal. Law (9th ed. 1988) Constitutional Law, § 784, p. 311 ["police power is simply the power of sovereignty or power to govern--the inherent reserved power of the state to subject individual rights to reasonable regulation for the general welfare"]; see generally, 6A McQuillan, The Law of Municipal Corporations (3d rev. ed. 1997) Municipal Police Power and Ordinances, § 24.01 et seq., p. 7 et seq.)

SDG&E involved regulatory fees comparable in some respects to the fees challenged here. (*SDG&E*, *supra*, 203 Cal. App. 3d 1132.) There, 1982 legislation (see § 42311) empowered local air pollution control districts to apportion the costs of their permit programs among all monitored polluters according to a formula based on the amount of emissions they discharged. (See *SDG&E*, *supra*, 203 Cal. App. 3d at p. 1135.) The *SDG&E* court observed that "to show a fee is a regulatory fee and not a special tax, the government should prove (1) the estimated costs of the service or regulatory activity, and (2) the basis for determining the manner in which the costs are apportioned, so that charges allocated to a payor bear a fair or reasonable relationship to the payor's burdens on or benefits from the regulatory activity." (*Id. at p. 1146*, fn. omitted; see *Beaumont Investors v. Beaumont-Cherry Valley Water Dist., supra, 165 Cal. App. 3d at pp. 234-235.*)

In *SDG&E*, the amount of the regulatory fees was limited to the reasonable costs of each district's program, and the allocation of costs based on emissions "fairly relates to the permit holder's burden on the district's programs." (*SDG&E*, *supra*, 203 Cal. App. 3d at p. 1146.) Accordingly, the court concluded that the fees were not "special taxes" under article XIII A, section 4. (*SDG&E*, *supra*, 203 Cal. App. 3d at p. 1148.)

As the court observed in *SDG&E*, "Proposition 13's goal of providing effective property tax relief is not subverted by the increase in fees or the emissions-based apportionment formula. A reasonable way to achieve Proposition 13's goal of tax relief is to shift the costs of controlling stationary sources of pollution from the taxpaying public to the pollution-causing industries themselves . . . ." (*SDG&E*, *supra*, 203 Cal. App. 3d at p. 1148.) In our view, the shifting of costs of providing evaluation, screening, and medically necessary follow-up services for potential child victims of lead poisoning from the public to those persons deemed responsible for that poisoning is likewise a reasonable police power decision. (See also *Mills v. County of Trinity, supra, 108 Cal. App. 3d at p. 663*; *County of Fresno v. Malmstrom, supra, 94 Cal. App. 3d at p. 985* [special assessments have no impact on government spending].)

The fact that the challenged fees were charged after, rather than before, the product's adverse effects were realized is immaterial to the question whether the measure imposes valid regulatory fees rather than taxes. *City of Oakland v. Superior Court* seems close on point. There, the court upheld city fees imposed on retailers of alcoholic beverages to defray the cost of providing and administering hearings into nuisance problems associated with the prior sale of those beverages. The court first observed that "If a business imposes an unusual burden on city services, a municipality may properly impose fees pursuant to its police powers" to assure that the persons responsible "pay their fair share of the cost of government." (*City of Oakland v. Superior Court, supra, 45 Cal. App. 4th at p. 761.*) The court concluded that "The ordinance's primary purpose is regulatory--to create an environment in which nuisance and criminal activities associated with alcoholic beverage retail establishments may be reduced or eliminated. Thus, the fee imposed . . . is not a tax imposed to pay general revenue to the local governmental entity, but is a regulatory fee intended to defray the cost of providing and administering the hearing process set out in the ordinance. [Citation.]" (*Id. at p. 762.*)

The court in *United Business* applied the "regulation/revenue" distinction to conclude that sign inventory fees adopted to recover the city's cost of inventorying signs and bringing them into conformance with law were regulatory fees, not revenue-raising taxes. The court observed that, under the police power, municipalities may impose fees for the purpose of legitimate regulation, and not mere revenue raising, if the fees do not exceed the reasonably necessary expense of the regulatory effort. (*United Business*, *supra*, 91 Cal. App. 3d at p. 165, and authorities cited.) Quoting with approval from an earlier decision, the court noted that, if revenue is the primary purpose, and regulation is merely incidental, the imposition is a tax, but if regulation is the primary purpose, the mere fact that revenue is also obtained does not make the imposition a tax. (*Ibid.*) Moreover, according to *United Business*, if a fee is exacted for revenue purposes, and its payment gives the right to carry on business without any further conditions, it is a tax. (*Ibid.*; see also *City of Oak-*

land v. Superior Court, supra, 45 Cal. App. 4th at p. 761; *County of Plumas v. Wheeler, supra, 149 Cal. at p. 763* [fee in amount greater than reasonably needed to regulate business "cannot stand as an exercise of the police power"]; *Mills v. County of Trinity, supra, 108 Cal. App. 3d at pp. 659-660*; *City & County of San Francisco v. Boss (1948) 83 Cal. App. 2d 445, 450-451 [189 P.2d 32]*.)

The Court of Appeal, citing *United Business*, stressed that the challenged fees were exacted solely for revenue purposes, and their payment gave Sinclair and others the right to carry on the business without any further conditions. We see two flaws in that analysis. First, *all* regulatory fees are necessarily aimed at raising "revenue" to defray the cost of the regulatory program in question, but that fact does not automatically render those fees "taxes." As stated in *United Business*, if regulation is the primary purpose of the fee measure, the mere fact that the measure also generates revenue does not make the imposition a tax. (*United Business*, *supra*, 91 Cal. App. 3d at p. 165; see also *Mills v. County of Trinity, supra, 108 Cal. App. 3d at p. 660* [rejecting broad definition of "tax" as including all fees and charges that exact money for public purposes].)

Second, we find inconclusive the fact that the Act permits Sinclair and other producers to carry on their operations without any further conditions *specified in the Act itself*. As we have indicated, fees can "regulate" business entities without directly licensing them by mitigating their operations' adverse effects. Moreover, as appellants observe, the Act is part of a broader regulatory scheme by which, under various state and federal statutes, the state regulates Sinclair and other manufacturers in the stream of commerce for products containing lead. That being so, Sinclair's payment of the challenged fees did not confer the right to carry on business without any further conditions or regulation.

The Court of Appeal rejected appellants' argument invoking other state and federal regulations: "First, there is nothing on the face of the Act or the accompanying statement of legislative purpose which links the Act's programs for children at risk for lead poisoning with the cited state or federal statutes regulating lead. Second, none of the fees collected pursuant to *section 105310* are used to fund those regulatory efforts." However, it is undisputed that Sinclair and other manufacturers of lead-based products remain subject to government regulation, that payment of the challenged fees therefore does not entitle those manufacturers to operate free of regulation, and that the state must use the funds it collects under *section 105310 exclusively* for mitigating the adverse effects of lead poisoning of children, and not for general revenue purposes. (*§ 105310, subd. (f)*.)

Under existing case law, we can reasonably characterize the challenged fees as *regulatory fees* rather than as taxes. Accordingly, we conclude the trial court erred in granting Sinclair summary judgment on the constitutional issues. Of course, Sinclair should be permitted to attempt to prove at trial that the amount of fees assessed and paid exceeded the reasonable cost of providing the protective services for which the fees were charged, or that the fees were levied for unrelated revenue purposes. (See *Pennell, supra, 42 Cal. 3d at p. 375*.) Additionally, Sinclair will have the opportunity to try to show that no clear nexus exists between its products and childhood lead poisoning, or that the amount of the fees bore no reasonable relationship to the social or economic "burdens" its operations generated. (*SDG&E*, *supra*, 203 Cal. App. 3d. at p. 1146; see also *§ 105310, subds. (b), (d)*.)

DISPOSITION

The judgment of the Court of Appeal, affirming the trial court's grant of summary judgment in Sinclair's favor, is reversed.

SAN DIEGO GAS & ELECTRIC COMPANY, Plaintiff and Appellant, v. SAN DIEGO COUNTY AIR POLLUTION CONTROL DISTRICT et al., Defendants and Respondents; INDUSTRIAL ENVIRONMENTAL ASSOCIATION OF SAN DIEGO COUNTY et al., Interveners and Appellants

No. D006647

Court of Appeal of California, Fourth Appellate District, Division One

203 Cal. App. 3d 1132; *250 Cal. Rptr. 420*; *1988 Cal. App. LEXIS 765*

August 17, 1988

SUBSEQUENT HISTORY: The petition of intervenors & appellants for review by the Supreme Court was denied November 10, 1988.

PRIOR-HISTORY: Superior Court of San Diego County, No. 579211, Patricia D. Benke, Judge.

COUNSEL: Lisa C. Anderson, Timothy W. Tower and Michael R. Weinstein for Plaintiff and Appellant.

Lloyd M. Harmon, Jr., County Counsel, Daniel J. Wallace, Chief Deputy County Counsel, and Barbara Baird, Deputy County Counsel, for Defendants and Respondents.

James L. McBride, County Counsel (Ventura), and James W. Thonis, Assistant County Counsel, as Amici Curiae on behalf of Defendants and Respondents.

Latham & Watkins, David L. Mulliken, Christoper W. Garrett, Timothy C. Stutler, Stephen McConnell, Kristine L. Wilkes and Laurens H. Silver for Interveners and Appellants.

JUDGES: Opinion by Work, J., with Wiener, Acting P. J., and WoodWorth, J., * concurring.

* Assigned by the Chairperson of the Judicial Council.

OPINION BY: WORK

OPINION

In this case we hold the San Diego County Air Pollution Control District (district or APCD) may recover actual costs of operation which are not reasonably identifiable with specific industrial polluters (indirect costs) by apportioning them among all monitored polluters according to a formula based on the amount of emissions discharged by a stationary pollution source. In reaching this result, we find the "emissions-based" formula adopted by the district is neither a prohibited "special tax" (see *Cal. Const., art. XIII A, § 4* (Prop. 13)) nor beyond the district's statutory authority. For the following reasons we affirm the judgment.

Factual And Procedural Background

San Diego Gas & Electric Company (SDG&E) [1] unsuccessfully petitioned for mandate challenging a change in the San Diego County APCD's method of apportioning the costs of its permit programs among stationary sources of pollution required to obtain operating permits under *Health and Safety Code* [2] *section 42311*. As explained more fully below, *section 42311* was amended in 1982 to allow a local air pollution control district to fully (rather than partially) recover the costs of its permit programs through permit fees, with a view to decreasing the district's reliance on government funding. [3] The APCD incrementally implemented its expanded authority to cover its costs through fees by phasing in fee increases for permits. In prior years, the district's direct costs were apportioned among the permit holders based on a formula derived from labor costs incurred in the permit programs. After a public hearing and a workshop for permit holders, the district's fee system was changed to a two-tiered system commencing in fiscal year 1986-1987--still apportioning direct costs based on the labor stan-

dard, but adding indirect costs to the fees and apportioning them by a formula derived from the amount of emissions discharged by a stationary pollution source. (APCD Rule 40.) The district considered a variety of factors before adopting the new formula. The various types of stationary sources of pollution are divided into separate fee schedules (i.e., abrasive blasting equipment, asphalt roofing kettles, rock drills, brick manufacturing plants, fish canneries, etc.). The permitted sources are charged (1) a fee for a permit to construct and operate, based on time and material charges, and (2) an annual permit renewal fee, to pay for ongoing implementation, enforcement and related activities.

1 The Industrial Environmental Association (IEA) of San Diego County participated in the action as an intervener. SDG&E and intervener IEA are referred to collectively in this opinion as SDG&E unless specific reference is made to intervener IEA.

2 All subsequent statutory references are to the Health and Safety Code unless otherwise specified.

3 The local air pollution control districts are responsible for controlling air pollution from all sources other than vehicular sources, whereas the State Air Resources Board is responsible for controlling vehicular sources. (§ 39002.) Section 42300 authorizes every district board to establish a permit system requiring permits for the operation of equipment which causes air pollution.

APCD costs related to the permitted sources of pollution are separated into three groups: (1) direct (identified with a specific fee schedule); (2) direct add-on (directly related to the permit system but not attributable to a specific fee schedule--i.e., labor tracking, permit coding, permit system related training, etc.); and, (3) indirect (related to the overall program but not directly related to permit activity--i.e., personnel matters, rule development, correspondence, complaint investigations, hearing board participation, consultation with other agencies, etc.).

The fee schedules for the direct costs and direct add-on costs are based on data obtained from a labor-tracking system. Actual labor expended (direct costs) on activities related to a specific fee schedule are charged against that fee schedule. The total labor cost tracked for each fee schedule is then divided by the number of fee units within that schedule to obtain the average labor cost per fee unit. Direct add-on costs, which are directly attributable to the permit system but not to a specific fee schedule, are added to the permit renewal fees based on the ratio of total labor expended within a specific permit renewal fee schedule to the total labor expended within all permit fee schedules. Thus, the higher direct cost permit renewal fee schedules receive a larger share of the direct add-on costs.

Amended Rule 40 permits recouping indirect costs through additional renewal permit fees based on the average pollution generated by a facility within a specific industry, rather than based on the labor-tracking system described above for direct costs. The San Diego County APCD argues an emissions-based fee schedule for indirect costs more equitably distributes permit program costs among large and small polluters. In contrast, if the indirect costs were recovered through the same labor-tracking formula used for direct costs, small polluters would pay more than their proportionate contribution to pollution.

An Emissions-Based Fee Schedule Is Within Statutory Guidelines

Original enactments

Sections 42311 and *40510* were enacted in 1975 and 1976.

Section 40510, pertaining to the south coast district board, [4] contains specific language authorizing fees to be based on emissions. That section states: "The south coast district board may adopt a fee schedule for the issuance of variances and permits to cover the cost of planning, inspection, and monitoring related thereto. . . .

4 The south coast district board was created to control air pollution in the Counties of Los Angeles, Orange, Riverside, and San Bernardino, in recognition of the critical air pollution problems existing in the South Coast Air Basin. (§§ 40402, 40410, 40412.)

"*The fees may be varied according to the quantity of emissions and the effect of such emissions on the ambient air quality within the south coast district.*" (*§ 40510*, italics added.)

In contrast, *section 42311*, pertaining to local district boards, including San Diego's APCD, does not mention emissions as a basis for charging fees. At the time of its 1975 enactment, the section stated: "'(a) A district board may adopt, by regulation, a schedule of fees not exceeding the estimated cost of issuing permits and inspection pertaining to such issuance to be paid for the issuance of permits. Every person applying for a permit shall pay the fee required by the schedule.'" (41B West's Ann. Health & Saf. Code (1986 ed.) (hereinafter West's) *§ 42311*, p. 320.)

Section 42311 has been amended several times, but still does not specify emissions as a basis for apportioning fees. Thus, SDG&E contends since *section 40510*

expressly authorizes the south coast district board to base fees on emissions, whereas *section 42311* makes no such specification for local districts, the Legislature has shown an intent not to allow local districts to base fees on emissions. An extensive legislative history convinces us the district's emission fee policy is within its statutory powers.

Section 42311 (Assem. Bill No. 1758) and *section 40510* (Assem. Bill No. 250) were introduced as bills by Assemblyman Lewis during the 1975-1976 legislative sessions. *Section 42311* was derived from former section 24267, enacted in 1947, utilizing essentially the same language. [5] *Section 40510* was a new statute. Assembly Bill No. 250 was introduced on December 13, 1974, amended to add the emissions language on April 3, 1975, and enacted on July 3, 1976. Assembly Bill No. 1758 was introduced April 14, 1975, and enacted on September 22, 1975.

> 5 Former section 24267 stated: "The air pollution control board may provide by regulation a schedule of fees not exceeding the estimated cost of issuing such permits and inspection pertaining to such issuance to be paid for the issuance of such permits. Every person applying for a permit shall pay the fee required by such schedule." (Stats. 1947, ch. 632, p. 1647.)

After its 1975 enactment, *section 42311*'s fee language was amended several times. In 1979, the section was rewritten to state: "'A district board may adopt, by regulation, a schedule of fees for each fiscal year, commencing with the 1979-80 fiscal year, to be paid for the issuance and renewal of permits. *Such schedule of fees shall not exceed the estimated cost for such fiscal year of (1) evaluation and issuance of permits, (2) inspection*, including source testing and surveillance, of sources for which a permit or permits have been issued, to the extent such inspection is for the purpose of determining whether such sources are in compliance with all applicable permit conditions and all applicable orders, rules, or regulations . . ., and (3) *Implementation and enforcement of permit terms* and conditions.' "[6] (West's *supra*, *§ 42311*, p. 321, italics added.)

> 6 The 1979 statute (and the current statute) also stated that the estimated costs were not to exceed the estimated costs for the immediately preceding fiscal year, with an adjustment no greater than the change in the California Consumer Price Index, and that any revenues from the fees which exceed the cost of the activities should be carried over in the subsequent fiscal year and the schedule of fees changed to reflect the carryover.

The 1979 amendment also added subdivision (c) (current subdivision (e)) which states that *section 42311* does not apply to the south coast district board, which is governed by *section 40510*. (West's, *supra*, *§ 42311*, p. 321.)

Interpretation of section 42311 before 1982 amendment

The Governor's proposed budget for fiscal year July 1982-June 1983 sought to decrease subvention funding of local districts by 80 percent. Faced with local districts' claims they would not be able to support themselves with such a drastic cut in state funds, the legislative analysis of the budget bill for the fiscal year 1982-1983 deferred recommending what the level of state funding to the local districts should be pending evaluation of how support of the districts could be accomplished. This report stated that to offset the proposed reduction in state support, the administration intended to seek legislation authorizing local districts to charge emission fees to cover operating costs noting that under current law only the south coast district had such authority. [7] The emissions fees concept had been recommended in a December 1980 study prepared for the legislative analyst's office which noted emissions fees were advantageous because they imposed a portion of the cost to control pollution on its sources and provided an incentive for emissions reduction. Although observing collection of emissions fees would make most districts self-supporting, the legislative analyst deferred its recommendation on the level of state support until legislation permitting the fees to be levied could be enacted and fee schedules put in place in each district.

> 7 In contrast, in an August 1982 letter, the Counsel for the State Air Resources Board responded to a local district's inquiry, referring to the language of *section 42311* as of 1979, and opining a fee schedule which was based on emissions was a permissible method of allocating the district's costs.

1982 amendment of section 42311

Effective October 1, 1982, *section 42311* was amended to state: "'A district board may adopt, by regulation, a schedule of annual fees to be paid for the evaluation, issuance, and renewal of permits *to cover the cost of district programs* related to permitted stationary sources authorized or required under the provisions of Division 26 (commencing with Section 39000) that are not otherwise funded. . . .'" (West's, *supra*, *§ 42311*, p. 321, italics added.)

The 1982 bills to amend *section 42311* (Sen. Bill No. 1326 and Sen. Bill No. 1477) originally included emissions fees language as contained in *section 40510*--

i.e., a sentence would have been added stating the fees may vary according to the quantity of emissions and according to the effect of the emissions on air quality. In a May 1982 letter from the chairman of the Senate Committee on Local Government (Senator Marks), reference was made to that committee's reasons for recommending deletion of the emissions language. Marks's letter, addressed to the Chairman of the Senate Committee on Finance (Senator Alquist), stated: "When I wrote to you on April 1, regarding the Local Government Committee's recommendations on SB 1326 and SB 1477, I attached a background report comparing the two bills. An ambiguity in that report has caused some local officials and industry representatives to ask for clarification.

"The first sentence of the second paragraph on page six ought to read: 'The Committee agreed to require APCDs to levy fees by ordinance to pay for programs that are not otherwise funded, but deleted language which appeared to limit these fees to emissions fees. [8] The committee's action neither decreased nor increased APCDs' current ability to use emissions fees.

> 8 The first sentence of the second paragraph on page 6 of the Local Government Committee's background report, dated April 1, 1982, had stated: "The Committee agreed to require APCDs to levy fees by ordinance to pay for programs that are not otherwise funded, but declined to allow emissions fees." Earlier staff analysis reports of the committee, dated March 17 and 31, 1982, respectively, had stated: "Others are also concerned that the ability to vary fees based on quantity and air pollution effects may allow APCDs to require expensive instack monitoring devices. The Committee may wish . . . to specifically declare that the bill does not require the installation of measuring units"; and "Some are concerned that the language in both bills that permits APCDs to vary fees based on quantity and air pollution effects may allow districts to require emissions fees. The Committee may wish to delete this language."

"Thank you for your consideration of this clarification." (Fn. added.)

The 1982 amendment also added subdivision (g) deleted in 1985) requiring the legislative analyst to review the fee systems' capability to finance the activities of local districts, evaluate the overall equity and reasonableness of the fees as they affect segments industry and agriculture which pay the fees, and report the findings and recommendations to the Legislature by October 1, 1983. (West's, *supra*, *§ 42311*, p. 321.) In the 1982 statute, the Legislature stated its intent was to investigate new opportunities for reducing the costs of administering programs in which the state and counties share responsibility, and the legislative analyst was requested to work with county officials and estimate the savings to the state and counties if certain proposals were implemented, along with the probable effects on program beneficiaries, and to submit progress reports to the Legislature by January 1, 1983, and July 1, 1983, and a final report by January 1, 1984. (Stats. 1982, ch. 1638, § 11, p. 6665.) [9]

> 9 The 1982 amendment also added subdivision (b) (current subd. (c)) providing that the district board could adopt a fee schedule for fiscal years ending before July 1, 1984 (extended to 1986 in a 1984 amendment) to offset loss of state and federal subvention funds (which the legislature found was necessary to provide a transition period to develop an equitable funding mechanism for local districts). The 1982 amendment added subdivision (e) (current subd. (f)) providing that the district board should hold a public meeting before adopting a regulation establishing fees and make information available indicating the amount of cost required to provide the service for which the fee is charged and the revenue sources anticipated to provide the service.

1983 legislative analyst report

The legislative analyst report on "Financing Air Pollution Control" dated October 1983 summarizes past developments, including the proposed (but essentially not enacted) cuts in state funding of local districts for the 1982-1983 fiscal year. The report described the 1982 amendments to *section 42311* (ch. 1638), noting that chapter 1638 expanded the purposes for which permit fee revenue may be used. Further, the report observed: "The general understanding of the Legislature and the districts during consideration of Chapter 1638 appears to have been that the districts would adopt 'emission' fees. Because the Legislature continued funding for subventions last year, however, only two districts exercised their authority to establish fees. . . .

"The type of fees authorized in chapter 1638 is not defined. Moreover, our preliminary work on this report indicated that the nature of emission fees and the role of these fees in financing air pollution activities is not clear from a conceptual standpoint.

"In recognition of this, we have attempted in this report to refine the concept of emission fees and incorporate it in a system for financing state and local air quality activities." [10]

> 10 This information is obtained from the introduction to the 1983 legislative analyst's report. The report itself was not included in the record.

The executive summary of the 1983 legislative analyst's report notes that in submitting the 1982-1983 budget, the governor proposed "legislation be enacted authorizing the districts to charge fees for stationary source emissions in order to replace the revenues lost" as a result of the proposed 80 percent reduction in state subventions to local districts. The report characterized the 1982 amendments as "authorizing districts to impose emission fees." [11]

11 Since the report had already observed that the type of fees authorized in the 1982 amendments were not defined, the legislative analyst was apparently interpreting the 1982 amendments as impliedly authorizing emissions fees.

1985 amendments

In 1985, the Legislature added the last sentence to *subdivision (a) of section 42311*, stating, "Nothing in this subdivision precludes the district from recovering, through its schedule of annual fees, the estimated reasonable costs of district programs related to permitted stationary sources," [12] The 1985 amendments also added two new subdivisions, (b) and (h). Subdivision (b) allows the district board to charge a deposit prior to evaluating a permit application, and requires that the district refund any significant portion of the deposit which exceeds the actual reasonable cost of evaluating the application. Subdivision (h) allows the district to charge fees for permit holders emitting toxic air contaminants based on the direct and indirect costs of district activities relating to each toxic air contaminant. [13]

12 Letter, dated March and June 1985, from Santa Barbara's county counsel to legislators urged support of the 1985 amendments for the following reasons. The amendments were necessary to clarify that a local district is entitled to fully recover its actual costs for the evaluation, issuance and renewal of permits, which was the Legislature's original intention. This intent was not clearly reflected in the existing language of the statute, since it could be interpreted as limiting a local district from recovering its actual costs for permit processing during any year where those costs exceed the prior year's costs plus an increase in the Consumer Price Index. Such an interpretation would cause extreme hardship in Santa Barbara County where the extraordinary rate of growth in the oil and gas industry has caused a corresponding expansion in the effort to evaluate and issue permits.

13 A copy of the current language of *section 42311* is attached at the end of this opinion, as an appendix.

Our statutory analysis involves two concepts: (1) the extent to which a local district may recoup costs by collecting fees from permit holders (rather than relying on government funds); and, (2) the methods by which a district may allocate program costs between permit holders. As we discuss below, *section 42311* has expanded the authority of the district so that it may now recover all costs related to permitted stationary sources through fees. Further, *section 42311* now partially addresses the methods by which the district may allocate certain costs among permit holders. That is, subdivision (b) allows a local district to charge a deposit for evaluating a permit application based only on the actual cost of the evaluation. Subdivision (h) allows a district to assess fees against those emitting toxic air contaminants based on the actual costs of programs related to those toxins. Other than these two specific cost items, however, the statute does not address how the remaining costs involved in issuing and renewing permits may be allocated. Moreover, the statute from its inception has been silent as to how the district may allocate among permit holders the indirect costs pertaining to the overall permit program but not attributable to any specific permit activity or permit holder.

As amended in 1979, *section 42311* specified the activities for which fees could be charged (i.e., costs of evaluating and issuing permits, of inspecting for compliance with permit conditions and regulations, and of implementing and enforcing permit terms and conditions). The 1982 amendment expanded the language of *section 42311*, broadly stating fees could be charged for evaluating, issuing and renewing permits to "cover the cost" of the district's programs.

SDG&E and the district do not dispute that under the 1979 statute the district could only charge fees to cover the costs directly pertaining to the permits, whereas under the 1982 statute, the district can now charge fees to cover all costs of its program, including indirect costs not related to a specific permit activity. [14] The Legislature indicated its intent in the 1982 statute that the government's cost of administering the program be decreased and that systems be studied to determine whether fees could finance the districts. The 1985 amendment, by the adding the last sentence to subdivision (a), clarified that all reasonable costs could be recovered through fees.

14 Focusing in on *subdivision (b) of section 42311*, IEA meritlessly argues that the district is only entitled to charge fees to cover the costs of evaluating permit applications. The 1985 amendment to subdivision (a) clarified that the district may charge fees to recover the estimated reasonable costs of its programs.

The legislative history of *section 42311* suggests the Legislature, at least by 1982, contemplated the districts should use an emissions-based fee schedule to support their operations. The 1982-1983 legislative analyst's budget report referred to the desirability of emissions fees. The 1983 legislative analyst's report on air pollution control financing explicitly stated the general understanding of the Legislature and the districts during consideration of Chapter 1638 was the districts would adopt emissions fees, and the report characterized the 1982 amendments as authorizing emissions fees.

SDG&E notes the legislative analyst in the 1982-1983 budget report expressed an opinion that under current legislation, only the south coast district, not the local districts, had the authority to base fees on emissions, [15] and the 1982 and subsequent amendments did not include a reference to the use of emissions fees. At the time of the 1982-1983 budget report, the 1979 statute was in effect, which statute was interpreted as not authorizing the recoupment through fees of indirect costs of the permit program. It is these indirect costs, recoverable under the 1982 amendments, which San Diego's APCD has apportioned based on emissions. Thus, even if arguendo the 1979 statute were interpreted as not allowing direct costs to be apportioned based on emissions, [16] it does not necessarily follow the 1982 statute does not allow indirect costs to be apportioned based on emissions.

15 SDG&E also points to a staff report of the Assembly Subcommittee on Air Quality, dated 22, 1975, which could arguably (but need not necessarily) be viewed as suggesting the same interpretation. The report states the bill creating the south coast district board gives it all the powers and duties of the county and regional districts, with specified exceptions, and in addition grants it "the following additional powers and duties." The report then proceeds to list 14 features of the bill, one of which is the provision that the south coast district could vary its fees according to emissions.

16 Since the 1979 statute was silent as to how the costs should be allocated among the permit holders, the legislative analyst's interpretation was not compelled.

Moreover, the budget report suggests the desirability of a district-implemented fee system based on emissions, and this legislative understanding was again acknowledged in the 1983 legislative analyst's report. Thus, regardless of whether under the 1979 statute the district had authority to base fees on emissions, the 1982 amendment clearly contemplated such authority. Although the 1982 amendment did not expressly authorize the use of emissions fees, there is no indication in the legislative history suggesting the Legislature determined, contrary to the legislative analyst's recommendations, that costs-apportionment should *not* be based on emissions.

Given the strong recommendation by the legislative analyst that emissions fees were an appropriate method of paying for the costs of the districts' programs and the lack of a contrary recommendation, the implication urged by SDG&E arising from the failure to include the proposed emissions fees language in the 1982 amendment is not convincing. As suggested in the May 1982 letter from Senator Marks clarifying an ambiguity on the emissions issue, the language appears to have been deleted to ensure the statute was not construed as *requiring* the fees be based on emissions. (*Ravettino v. City of San Diego (1945) 70 Cal.App.2d 37, 47 [160 P.2d 52]* [delegation of power to local government, without providing mode for carrying power into effect, impliedly gives right to select lawful and reasonable means].)

The express reference to the possibility of using emissions as a basis for the south coast district board's fees in *section 40510* is not sufficient to overcome the strong indications of legislative intent in the legislative analysts's reports pertaining to *section 42311*. The general rule that where a statute contains a critical phrase, omission of that phrase from a similar statute on the same subject shows a different legislative intent (see *Craven v. Crout (1985) 163 Cal.App.3d 779, 783 [209 Cal.Rptr. 649]*), cannot be reasonably applied to this statutory scheme. Construing the Legislature's decision not to include the reference to emissions in *section 42311* as precluding the use of fees based on emissions, gives undue weight to a rule of legislation by implication and ignores the concrete evidence of intent favoring an emissions-based system in the legislative analyst reports.

Analyzing the various subdivisions of *section 42311*, intervener IEA argues the Legislature has evinced a general intent that the districts only charge fees to a permit holder for the work related to that permit holder's permit, and not for work done on another's permit. This argument ignores the fact the San Diego district's fee schedule uses an emissions-based, rather than labor-based, apportionment method only for those indirect costs which are related to the overall permit program but which cannot be directly attributed to any specific permit activity or fee schedule. Thus, the emissions-based schedule does not charge a permit holder for work on another's permit, since these indirect costs by definition do not involve a specific permit holder.

This Emissions-based Fee Schedule Is Not A Special Tax Under Proposition 13

California Constitution, article XIII A, section 4 (§ 4), enacted in June 1978 as part of Proposition 13, provides: "Cities, counties and special districts, by a two-thirds vote of the qualified electors of such district, may impose special taxes on such district, except ad valorem taxes on real property or a transaction tax or sales tax on the sale of real property within such City, County, or special district."

The parties dispute whether this district is a "special district" within the meaning of Proposition 13 (see *Los Angeles County Transportation Com. v. Richmond (1982) 31 Cal.3d 197, 206-208 [182 Cal.Rptr. 324, 643 P.2d 941]*; *Huntington Park Redevelopment Agency v. Martin (1985) 38 Cal.3d 100, 106-107 [211 Cal.Rptr. 133, 695 P.2d 220]*). [17] We need not resolve this issue, because the record readily shows these emissions-based fees are a regulatory fee, not a "special tax," and outside the purview of section 4.

17 In *Los Angeles County Transportation Com. v. Richmond, supra, 31 Cal.3d at pages 207-208*, our Supreme Court narrowly defined a "special district" as a local entity empowered to levy *property* taxes. The court held since the Los Angeles County Transportation Commission--which was authorized to adopt a retail transaction and use tax if approved by a majority of the voters--was not authorized to levy property taxes, it was not a special district, and thus a majority, not a two-thirds, vote of the electorate was sufficient to adopt the tax. SDG&E argues, inter alia, that although the district does not have the power to levy property taxes, the emissions-based fee schedule was levied by the board of supervisors (sitting as the district's governing body, the Air Pollution Control Board), and the board of supervisors does have the power to levy property taxes.

Proposition 13 was enacted to give effective property tax relief. (*Amador Valley Joint Union High Sch. Dist. v. State Bd. of Equalization (1978) 22 Cal.3d 208, 231 [149 Cal.Rptr. 239, 583 P.2d 1281]*.) Article XIII A of the Constitution consists of four major elements: a real property tax limitation (§ 1), a real property assessment limitation (§ 2), a restriction on state taxes (§ 3), and a restriction on local taxes (§ 4). (*Id. at pp. 220, 231.*) Section 4 is a limitation on the imposition of "special taxes" by local entities because it requires a two-thirds vote of the local electorate. (*Id. at pp. 220, 231, 242*; *Los Angeles County Transportation Com. v. Richmond, supra 31 Cal.3d at p. 201.*) Sections 3 and 4 were included to restrict imposition of additional or increased state or local taxes other than property taxes which would effectively withdraw or deplete the property tax savings in sections 1 and 2. (*Amador Valley Joint Union High Sch. Dist. v. State Bd. of Equalization, supra, 22 Cal.3d at p. 231*; *Huntington Park Redevelopment Agency v. Martin, supra, 38 Cal.3d at p. 105.*)

A "special tax" under section 4 does not embrace fees charged in connection with regulatory activities which do not exceed the reasonable cost of providing services necessary to the activity for which the fee is charged and are not levied for unrelated revenue purpose. (*Pennell v. City of San Jose (1986) 42 Cal.3d 365, 375 [228 Cal.Rptr. 726, 721 P.2d 1111]*; *Gov. Code, § 50076*; *Mills* v. *County of Trinity* (1980) Cal.App.3d 656, 661 [*166 Cal.Rptr. 674]*; see generally, *United Business Com. v. City of San Diego (1979) 91 Cal.App.3d 156, 165-167 [154 Cal.Rptr. 263]*, describing distinctions between regulatory fee and revenue-raising tax.)

As stated in *Beaumont Investors* v. *Beaumont-Cherry Valley Water Dist. (1985) 165 Cal.App.3d 227, 235 [211 Cal.Rptr. 567]*, to show a fee is a regulatory fee and not a special tax, the government should prove (1) the estimated costs of the service or regulatory activity, and (2) the basis for determining the manner in which the costs are apportioned, so that charges allocated to a payor bear a fair or reasonable relationship to the payor's burdens on or benefits from the regulatory activity. [18]

18 To show regulatory fee is not a special tax, it is not necessary for the payor to perceive the regulation as a "benefit." A regulatory fee may be imposed under the police power when the fee constitutes an amount necessary to carry out the purposes and provisions of the regulation. (See *Pennell v. City of San Jose, supra, 42 Cal.3d at p. 375*; see also *Mills* v. *County of Trinity, supra*, 108 Cal.App.3d at p. 661.)

Here, the terms of *section 42311* limit the amount of fees which may be charged to the reasonable costs of the district's programs. The mandate action did not challenge the reasonableness of the district's costs, but only the method of apportioning those costs based on emissions. [19] The record shows the allocation of costs based on emissions fairly relates to the permit holder's burden on the district's programs.

19 Intervener IEA's brief at one point vaguely asserts the district took no steps to "determine the precise costs of regulation and the appropriate formula for apportioning those costs." It is clear a challenge to the district's method of estimating its costs was not raised below, and it may not be raised for the first time on appeal. (*San Marcos Water Dist. v. San Marcos Unified School Dist. (1986) 42 Cal.3d 154, 168 [228 Cal.Rptr. 47, 720 P.2d 935]*.) In any event, the record indicates indirect costs are estimated based on labor activity

reports for the previous fiscal adjusted for changes in the Consumer Price Index.

The district's report explains in detail the rationale and method used for apportioning the costs on an emissions-based, rather than labor-based, standard for apportioning indirect costs. If the labor-based standard, already used to apportion direct costs, were also used for indirect costs small polluters would pay fees greater than their proportionate contribution to pollution, whereas large polluters would pay proportionately less. For example, under the labor-based system for direct costs, service stations pay about 34 percent of the total annual permit renewal fees, and emit cumulatively only 1 percent of the industrial pollution. In contrast, the 31 major polluters pay about 13 percent of the fees, but emit 38 percent of the industrial pollution and 51 percent of the pollution from permitted facilities. Moreover, using an emissions-based standard for indirect costs would provide an incentive to large polluters to reduce existing emissions to reduce fees. [20]

20 As explained more specifically, the labor-based standard provides an incentive to maintain ongoing *compliance* with pollution control requirements to keep district enforcement costs, and thereby fees, down. However, it provides no incentive to *lower emissions*. For example, SDG&E can burn oil as well as natural gas in its power plants, both in compliance with requirements, but more pollution is generated when oil is burning. The emissions-based fees would provide an incentive to use natural gas instead of oil.

Although recommending the use of an emissions-based standard for indirect costs, the report also presents alternative methods of allocating the costs. That is, all permit fees (direct and indirect) could be based on the amount of emissions on the premise fees should be based on a facility's share of pollution. The disadvantage to such a system is that small polluters would experience a windfall; for example, the average service station would pay $ 25 rather than the current $ 375 annual fee; thereby taking away the incentive for small operators to maintain their equipment. Alternatively, all fees, including indirect costs, could be allocated based on the labor standard used for direct costs. As stated above, the disadvantage would be the inequity of having small polluters paying much more than their proportionate share; for example, service stations would pay about 30 percent of the additional fees while emitting only about 1 percent of the industrial pollution.

The district's determination that a purely labor-based standard results in small polluters paying fees greater than their proportionate share of pollution reasonably justifies using an emissions-based standard to more equitably divide the costs based on the amount of pollution caused.

SDG&E argues the district has not specifically shown how the amount of emissions generated by a pollution source increase the district's indirect costs citing the *Beaumont* case in support of its argument. In *Beaumont Investors* v. *Beaumont-Cherry Valley Water Dist., supra*, 165 Cal.App.3d at pages 236-238, the court found no evidence in the record showing how the estimated costs of the anticipated government activity were ascertained or apportioned. In contrast here, the district's method of estimating its costs was not challenged, and the district's report details the apportionment method and its rationale. There is no reason to require the district to show precisely how more emissions generate more costs to justify the emissions-based apportionment formula. The purpose for the district's existence is to achieve and maintain air quality standards (§ 40001), thus from an overall perspective it is reasonable to allocate costs based on a premise that the more emissions generated by a pollution source, the greater the regulatory job of the district. [21]

21 The district argues major polluters cost the district more because if not for their existence, it would have a reduced need to extensively regulate smaller sources of pollution. SDG&E responds the major source of pollution is from transportation sources, and contrary to the district's assertion, the district would have to regulate small stationary polluters even if the big stationary polluters did not operate. We are not presented here with issues pertaining to the division of responsibility for pollution between transportation and stationary sources of pollution, nor need we rely on the district's analysis of how big polluters require regulation of small polluters. *Section 42311* allows the district to impose fees to cover the costs of its programs pertaining to stationary sources of pollution, and for the reasons we state above, the emissions-based formula is a reasonable method of apportionment among the stationary permit holders.

Moreover, the district diligently evaluated the various methods of apportioning costs, and recommended a two-tiered system, utilizing both a labor and emissions apportionment standard, seeking to distribute the financial burden of controlling pollution in proportion to a stationary source's contribution to pollution, and to provide incentives for sources to control their pollution. No further showing is necessary to establish the emissions-based fees are reasonably related to the district's costs of regulating a permit holder's air pollution, and thus are not a special tax. (Cf. *White v. County of San Diego (1980)*

26 Cal.3d 897, 905 [163 Cal.Rptr. 640, 608 P.2d 728]; *J. W. Jones Companies v. City of San Diego (1984) 157 Cal.App.3d 745, 755, 756, 758 [203 Cal.Rptr. 580]*.)

SDG&E also argues the emissions-based fees thwart the purpose of Proposition 13 since they are designed to replace lost revenues from Proposition 13 without subjecting them to a two-thirds vote of the electorate. [22] The argument is misplaced in the context of this action since it is not the emissions-based formula itself, but rather the 1982 amendment to *section 42311* (allowing full cost recovery through fees) which serves to replace lost government funding. The emissions formula is merely a method of allocating the increased fees among the permit holders, and even if only the labor-based formula urged by SDG&E was used, the fees would still be increased to replace public funds. Proposition 13's goal of providing effective property tax relief is not subverted by the increase in fees or the emissions-based apportionment formula. A reasonable way to achieve Proposition 13's goal of tax relief is to shift the costs of controlling stationary sources of pollution from the tax-paying public to the pollution-causing industries themselves, an accomplishment of the 1982 amendments to *section 42311* and the emissions-based fee schedule. (See *Mills* v. *County of Trinity, supra*, 108 Cal.App.3d at p. 663.)

22 This assertion is made in connection with the argument that the APCD is a "special district." Although we need not address the special district issue, we respond to the argument pertaining to the circumvention of Proposition 13 since it is an underlying theme used to challenge the validity of the emissions-based fees.

Judgment affirmed.

OPINION BY: RAYE

OPINION

RAYE, J.

In this appeal we consider whether the Legislature ran afoul of the supermajority requirement of article XIII A of the California Constitution when it imposed a flat fee per environmental review by the Department of Fish and Game (Fish and Game). More precisely, we must determine whether the exactions imposed by *section 711.4 of the Fish and Game Code* [1] constitute a regulatory fee or a tax.

1 Further statutory references to sections of an undesignated code are to this code.

Determining whether an exaction is a fee or a tax has been a recurring chore since 1978 when the voters in California enacted comprehensive and constitutional tax reform. (Cal. Const., art. XIII A (the Jarvis-Gann Property Tax Initiative or Proposition 13).) An act to increase state taxes must be passed by two-thirds of the members of the Legislature and an increase in local taxes must be passed by a two-thirds vote of the qualified electors. (*Cal. Const., art. XIII A, § 3 & 4.*) Fees, by contrast, are not subject to the supermajority limitation of article XIII A. Albert Mills, an appellant in both cases, insists the environmental review fees charged by Fish and Game pursuant to section 711.4 constitute a tax and, therefore, are unconstitutional because the statute was passed by slightly less than a two-thirds majority.

It is well established that the amount of fees collected must not surpass the cost of the regulatory services

or programs they are designed to support. We must decide whether there must be a direct correlation between the amount of a fee imposed on a specific payor and the benefits received or burdens imposed by the payor's activity. More to the point, is a flat regulatory fee in legal effect a tax subject to the supermajority requirement of California Constitution, article XIII A?

We conclude that as long as the cumulative amount of the fees does not surpass the cost of the regulatory program or service and the record discloses a reasonable basis to justify distributing the cost among payors, a fee does not become a tax simply because each payor is required to pay a predetermined fixed amount. Flat fees are not in legal effect taxes. Based on the evidentiary record before us, we find that the Legislature did not violate California Constitution, article XIII A by imposing a flat regulatory fee on those who submit project proposals to Fish and Game for the environmental review necessary to protect fish and wildlife. The consequences of our ruling to the multiple parties in these consolidated cases are explained below.

PROCEDURAL BACKGROUND

Section 711.4, enacted by the Legislature in 1990, set a fee schedule to defray a portion of the costs incurred by Fish and Game in meeting its environmental review obligations under the California Environmental Quality Act and the Z'Berg-Nejedly Forest Practice Act of 1973. (§ 711.4, subds. (a), (b), (c) & (d); *Pub. Resources Code, § 4511, 21000 et seq.*) Section 711.4 states in relevant part: "(a) The department shall impose and collect a filing fee in the amount prescribed in subdivision (d) to defray the costs of managing and protecting fish and wildlife trust resources, including, but not limited to, consulting with other public agencies, reviewing environmental documents, recommending mitigation measures, developing monitoring requirements for purposes of the California Environmental Quality Act . . ., consulting pursuant to *Section 21104.2 of the Public Resources Code*, and other activities protecting those trust resources identified in the review pursuant to the California Environmental Quality Act. [P] (b) The filing fees shall be proportional to the cost incurred by the department and shall be annually reviewed and adjustments recommended to the Legislature in an amount necessary to pay the full costs of department programs as specified." For projects for which a negative declaration has been prepared, the filing fee set by the Legislature is $ 1,250 and for projects for which an environmental impact report has been prepared, the filing fee is $ 850. (§ 711.4, subd. (d)(3) & (4).) "The county clerk may charge a documentary handling fee of twenty-five dollars ($ 25) per filing in addition to the filing fee specified in subdivision (d)." (§ 711.4, subd. (e).)

Albert W. Mills challenged the constitutionality of section 711.4 in a declaratory relief action he filed in July 1991. He sought declaratory and injunctive relief in a first cause of action and a refund of his fees in a second cause of action. A demurrer was sustained without leave to amend to the second cause of action. Fish and Game sought a writ of mandate to compel the trial court to dismiss the entire complaint because Mills had not filed a claim for a tax refund. We summarily denied the petition for the writ. The trial court denied a subsequent motion for judgment on the pleadings on the same ground asserted in the writ petition.

In 1992 the Legislature amended the statute to expand the exemptions for projects for which no fees were required. The amendment passed by a two-thirds majority vote.

The case was tried in the summer of 1994 and the following spring the trial court issued a statement of decision. The court found that although the statute was not unconstitutional on its face, on the evidence received by the court, it was unconstitutionally applied. Before the statement of decision was filed and a judgment was entered, the parties settled the lawsuit. Fish and Game agreed to refund Mills's fees, to pay his attorney fees, and to cease collection of the fees statewide.

Employees of Fish and Game, however, filed a petition for a writ of mandate to compel Fish and Game to resume collection of the fees and to pursue retroactive collection. Mills intervened in the writ proceedings, which were then consolidated with the declaratory relief action.

The trial court again ruled that section 711.4 was unconstitutional as applied but that, in the absence of an appellate finding that the statute was unconstitutional, the ruling could only be applied to Mills. (*Cal. Const., art. III, § 3.5.*) The court ordered Fish and Game to reinstate enforcement and to retroactively collect the fees. The settlement order in the declaratory relief action was modified to conform to the judgment in the writ proceedings. The settlement order provides in pertinent part that section 711.4 is not unconstitutional on its face but is unconstitutional as applied to Mills; Fish and Game is enjoined from collecting fees from Mills but is not otherwise prohibited from collecting fees.

Mills appeals both judgments. On appeal from the judgment in the declaratory relief action, he maintains section 711.4 is unconstitutional on its face and, consequently, Fish and Game must be enjoined from collecting all fees. Fish and Game urges us to dismiss the appeal on multiple grounds: Mills lacks standing because, under the terms of the settlement, he is not aggrieved; the constitutionality of section 711.4 is moot because it was amended by a two-thirds majority; and the trial court

lacked jurisdiction because Mills failed to exhaust his administrative remedies by filing a claim for a tax refund. Fish and Game also appeals. We granted the Pacific Legal Foundation's request to file an amicus curiae brief echoing Mills's constitutional attack on the statute.

For the reasons discussed herein, we affirm in part and reverse in part the judgment entered in the declaratory relief action. Because we have concluded that section 711.4 is a valid regulatory fee, and was therefore constitutionally enacted, Mills's appeal from the judgment entered in the writ proceedings is moot. That appeal is dismissed.

DISCUSSION

I *

* See footnote, *ante*, page 935.

. . . .

II

Before we apply the ever-growing body of case law involving post-Proposition 13 fees and taxes, it is essential to understand the statutory world in which Fish and Game lives and section 711.4 was born. The language of these statutes resolves some of the issues raised by Mills and provides the necessary background to analyze others.

Mills argues that Fish and Game does not operate a regulatory program and, therefore, the fee is not regulatory in nature. We disagree. Fish and Game is only one small part of a huge regulatory system in place in this state to protect and sustain the environment, but it plays a vital regulatory role under the California Environmental Quality Act (CEQA). (*Pub. Resources Code, § 21000 et seq.*) CEQA guidelines specifically list Fish and Game as a trustee agency, a status which imposes certain obligations. Fish and Game must be consulted before a determination is made as to whether a negative declaration or an environmental impact report is required for a particular project. (*Pub. Resources Code, § 21080.3, subd. (a).*) If an environmental impact report is required, Fish and Game must comment as to the scope and contents of this document. (*Pub. Resources Code, § 21080.4, subd. (a).*) Later in the process, Fish and Game may be required to submit a proposed program to monitor the mitigation measures. (*Pub. Resources Code, § 21081.6.*) The same obligations are imposed by documents which function as environmental assessment documents such as timber harvest plans. (*Environmental Protection Information Center, Inc. v. Johnson (1985) 170 Cal. App. 3d 604, 626 [216 Cal. Rptr. 502].) Fish and Game Code section 1802 also requires Fish and Game to consult with lead and responsible agencies.*

Fish and Game also has comparable obligations under the Forest Practice Act. (*Pub. Resources Code, § 4511 et seq.*) Like the responsibility conferred on it under CEQA, Fish and Game must review the impact of a timber harvest plan on fish and wildlife. The Department of Forestry and Fire Protection cannot approve a timber harvest plan until it has consulted with Fish and Game. (*Pub. Resources Code, § 4582.6.*)

Under both CEQA and the Forest Practice Act, Fish and Game is an essential link in a comprehensive attempt to safeguard the environment. The fact that Fish and Game does not operate an independent regulatory program with a correlative accounting system does not detract from its regulatory role. The law is not so narrowly drawn. In a similar vein, the court in *Sinclair Paint Co. v. State Bd. of Equalization (1997) 15 Cal. 4th 866 [64 Cal. Rptr. 2d 447, 937 P.2d 1350]* observed: "From the viewpoint of general police power authority, we see no reason why statutes or ordinances calling on polluters or producers of contaminating products to help in mitigation or cleanup efforts should be deemed less 'regulatory' in nature than the initial permit or licensing programs that allowed them to operate. Moreover, imposition of 'mitigating effects' fees in a substantial amount . . . also 'regulates' future conduct by deterring further manufacture, distribution, or sale of dangerous products, and by stimulating research and development efforts to produce safer or alternative products." (*Id. at p. 877.*)

Having charged Fish and Game with the responsibility to manage and protect fish and wildlife through the environmental review process, the Legislature enacted a fee statute to fund Fish and Game's review functions. There are two parts of section 711.4 which are germane to the constitutional question before us.

The Legislature expressly addressed proportionality. Section 711.4, subdivision (b) states: "The filing fees shall be proportional to the cost incurred by the department and shall be annually reviewed and adjustments recommended to the Legislature in an amount necessary to pay the full costs of department programs as specified."

Although the Legislature mandated a flat fee financing mechanism, it also provided an exemption for those projects with a de minimis impact on fish and wildlife. Section 711.4, subdivision (d)(1) provides: "For a project which is found by the lead or certified regulatory agency to be de minimis in its effect on fish and wildlife, no filing fee shall be paid, whether or not a negative declaration or an environmental impact report is prepared pursuant to the California Environmental Quality Act." In fact, 68 percent of the projects are found to be de minimis and a fee is not required.

In sum, the Legislature has given Fish and Game a critical regulatory role in the complex regulatory structure created to safeguard precious environmental resources. At the same time, the Legislature created a flat fee system to finance Fish and Game's environmental review. That system, by statute, must be proportional to the overall cost of environmental review, but only those who propose development projects which have more than a de minimis impact upon fish and wildlife are required to bear the cost of review. We must determine whether the Legislature violated the Constitution by establishing such a fee system with less than a two-thirds vote.

III

In 1991 the Legislature enacted the Childhood Lead Poisoning Prevention Act to provide evaluation, screening, and follow-up services for children who were at risk of suffering lead poisoning. The program of screening and treatment under the act was to be paid entirely by fees paid by those who contributed to lead contamination. In *Sinclair Paint Co. v. State Bd. of Equalization, supra, 15 Cal. 4th 866*, the Supreme Court concluded the act imposed bona fide regulatory fees, not taxes.

Sinclair is the first published case in the post-Proposition 13 era to consider whether a state, rather than a local, fee is in legal effect a tax. "Section 3 of article XIII A restricts the enactment of changes in state taxes, as follows: 'From and after the effective date of this article, any changes in State taxes enacted for the purpose of increasing revenues collected pursuant thereto whether by increased rates or changes in methods of computation must be imposed by an Act passed by not less than two-thirds of all members . . . of the Legislature, except that no new ad valorem taxes on real property, or sales or transaction taxes on the sales of real property may be imposed. ' " (*Sinclair Paint Co. v. State Bd. of Equalization, supra, 15 Cal. 4th at pp. 872-873.*) By contrast, there have been an abundance of cases in which courts have struggled to characterize a local exaction as a fee or a "special tax" under *California Constitution, article XIII A, section 4.* In *Sinclair*, the Supreme Court announced that "[b]ecause of the close, 'interlocking' relationship between the various sections of article XIII A" the section 4 cases "may be helpful, though not conclusive" in deciding cases under section 3. (*15 Cal. 4th at p. 873.*)

The court also reiterated the fundamental principle that "whether impositions are 'taxes' or 'fees' is a question of law for the appellate courts to decide on independent review of the facts." (*Sinclair Paint Co. v. State Bd. of Equalization, supra, 15 Cal. 4th at p. 874.*) Ordinarily, "taxes are imposed for revenue purposes, rather than in return for a specific benefit conferred or privilege granted" and "[m]ost taxes are compulsory rather than imposed in response to a voluntary decision to develop or to seek other government benefits or privileges." (*Id. at pp. 873-874, 64 Cal. Rptr. 2d 447, 937 P.2d 1350.*)

Sinclair was particularly helpful in identifying three very different kinds of fees or assessments, viz. special assessments, development fees and regulatory fees. (See also *Isaac v. City of Los Angeles (1998) 66 Cal. App. 4th 586, 596 [77 Cal. Rptr. 2d 752].*) As the court pointed out, special assessments are based on the value of benefits conferred on property, and development fees are exacted in return for permits or other government privileges. Regulatory fees, enacted under the police power, are an entirely different animal. The parties have failed to distinguish between these types of fees and, consequently, have extracted general principles from cases involving one type of fee and applied them to cases involving a completely different type of fee. We have focused our research on those cases, like *Sinclair*, involving regulatory fees.

General principles have emerged. Fees charged for the associated costs of regulatory activities are not special taxes under an article XIII A, section 4 analysis if the " ' "fees do not exceed the reasonable cost of providing services necessary to the activity for which the fee is charged and [they] are not levied for unrelated revenue purposes." ' " (*Sinclair Paint Co. v. State Bd. of Equalization, supra, 15 Cal. 4th at p. 876*; *Townzen v. County of El Dorado (1998) 64 Cal. App. 4th 1350, 1359 [76 Cal. Rptr. 2d 281].*) "A regulatory fee may be imposed under the police power when the fee constitutes an amount necessary to carry out the purposes and provisions of the regulation." (*San Diego Gas & Electric Co. v. San Diego County Air Pollution Control Dist. (1988) 203 Cal. App. 3d 1132, 1146, fn. 18 [250 Cal. Rptr. 420].*) "Such costs . . . include all those incident to the issuance of the license or permit, investigation, inspection, administration, maintenance of a system of supervision and enforcement." (*United Business Com. v. City of San Diego (1979) 91 Cal. App. 3d 156, 165 [154 Cal. Rptr. 263].*) Regulatory fees are valid despite the absence of any perceived "benefit" accruing to the fee payers. (*Pennell v. City of San Jose (1986) 42 Cal. 3d 365, 375 [228 Cal. Rptr. 726, 721 P.2d 1111]*, affd. on other grounds *sub nom. Pennell v. City of San Jose (1988) 485 U.S. 1 [108 S. Ct. 849, 99 L. Ed. 2d 1].*) Legislators "need only apply sound judgment and consider 'probabilities according to the best honest viewpoint of informed officials' in determining the amount of the regulatory fee." (*United Business Com. v. City of San Diego, supra, 91 Cal. App. 3d at p. 166.*)

The government bears the burden of proof. (*Beaumont Investors v. Beaumont-Cherry Valley Water Dist. (1985) 165 Cal. App. 3d 227, 235 [211 Cal. Rptr. 567].*)

It must establish (1) the estimated costs of the service or regulatory activity, and (2) the basis for determining the manner in which the costs are apportioned, so that charges allocated to a payor bear a fair or reasonable relationship to the payor's burdens on or benefits from the regulatory activity. (*Id. at pp. 234-235.*) "Courts [look] to a variety of evidence in determining whether the agency has satisfied that burden, not all of it prepared before the adoption of the ordinance." (*City of Dublin v. County of Alameda (1993) 14 Cal. App. 4th 264, 282 [17 Cal. Rptr. 2d 845].*)

City of Dublin v. County of Alameda, supra, 14 Cal. App. 4th 264, provides guidance on the quantum of proof necessary to establish the requisite fee-cost ratio. By initiative, the voters in Alameda County enacted a comprehensive recycling plan. Under the law, the plan was to be funded from a recycling fund created by a $ 6 per ton surcharge on materials dumped in the county landfills. The issue presented was whether the evidence before the trial court established that the surcharge would not exceed the reasonably necessary costs of the programs it would fund. The Court of Appeal considered both the estimated costs of the programs and the basis for determining the apportionment of those costs.

The court wrote: "The trial court concluded that the requisite fee-cost relationship was not established because Measure D's programs are not yet developed and their costs cannot presently be calculated with certainty, but such specificity is not required. Instead, the record need only demonstrate a reasonable relationship between the fees to be charged and the *estimated* cost of the service or program to be provided; that requirement may be satisfied by evidence showing only that the fees will generate substantially less than the anticipated costs." (*City of Dublin v. County of Alameda, supra, 14 Cal. App. 4th at p. 283*, original italics.)

In a similar case, the Court of Appeal addressed the quantum of proof and proportionality. "Plaintiffs fault the report for failing to include 'site-specific' data showing a 'close connection' between new development and the fees to be imposed. However, their citation to 'taking' cases shows that they are blurring legal principles. [Citation.] The fee at issue here is a general one applied to all new residential development and valid if supported by a reasonable relationship between the amount of the fee and estimated cost of services. Site-specific review is neither available nor needed." (*Garrick Development Co. v. Hayward Unified School Dist. (1992) 3 Cal. App. 4th 320, 333-334 [4 Cal. Rptr. 2d 897].*)

Fish and Game met its burden of showing that the amount of fees generated by *section 711.4* was far less than the cost of the environmental reviews provided. There was evidence that $ 11 million had been collected in fees, but the cost of the reviews was in excess of $ 20 million. Thus, the fees were not revenue raising in that they did not generate income which surpassed the cost of the services provided.

The more difficult issue is determining what latitude the Legislature has in establishing the amount of a fee imposed on an individual payor. Fish and Game argues the fees have no indicia of a tax. Since there is sufficient evidence to demonstrate that collectively the amount of the fees do not exceed the cost of the regulatory program they are collected to support, they urge us to uphold the constitutionality of *section 711.4*. Mills, on the other hand, insists Fish and Game failed to prove the more specific requirement that the fees are proportionate to the service provided or the burden imposed. He insists the flat fee is a tax because there is no individual correlation between the amount of the fee and the cost of the benefit or burden. Whether the Legislature retains the flexibility to mandate a flat fee by a simple majority vote is the crux of this case.

Sinclair is noteworthy for its expansive legitimation of regulatory fees. Under the formula approved by the Supreme Court, paint manufacturers are assessed fees based on their market share or their past and present responsibility for environmental lead contamination. (*Sinclair Paint Co. v. State Bd. of Equalization, supra, 15 Cal. 4th at p. 872.*) Market share is a novel methodology for assessing fees. Nevertheless, the court permitted present fees to be determined on the basis of past conduct when not only were fees nonexistent, but the dangers of lead-based paint were unknown.

As broad as the implications of *Sinclair* are, the Supreme Court did not have to reach the troublesome issue of proportionality, because paint manufacturers were assessed fees in proportion to their share of the market. Moreover, Sinclair, in moving for summary judgment, did not seek to establish that the amount of the fees bore no reasonable relationship to the social or economic burdens its operations generated. The court noted that Sinclair would have the opportunity at trial "to try to show that no clear nexus exists between its products and childhood lead poisoning, or that the amount of the fees bore no reasonable relationship to the social or economic 'burdens' its operations generated." (*Sinclair, supra, 15 Cal. 4th at p. 881, 64 Cal. Rptr. 2d 447, 937 P.2d 1350.*)

Close to 20 years ago, we articulated the same rule to Mills in his earlier constitutional challenge to fees charged for processing land use applications. In *Mills v. County of Trinity (1980) 108 Cal. App. 3d 656 [166 Cal. Rptr. 674]*, we stated: " '[T]he special tax' referred to in section 4 of article XIII A does not embrace fees charged in connection with regulatory activities which fees do not exceed the reasonable cost of providing services neces-

sary to the activity for which the fee is charged and which are not levied for unrelated revenue purposes." (*Id. at pp. 659-660.*) In *Mills* as in *Sinclair*, however, the case was remanded "for a factual determination of whether the fees in question are reasonably compensatory for the costs occasioned by the regulated activities." (*Mills*, at p. 660.)

Flat regulatory fees were upheld in *Pennell v. City of San Jose, supra, 42 Cal. 3d 365.* In *Pennell*, a rent control ordinance imposed a flat annual fee on each rental unit. It was "designed to defray the costs of providing and administering the hearing process prescribed in the ordinance, not to pay general revenue to the local government." (*Id. at p. 375.*) The court concluded: "It is well settled that a municipality under the police power may impose a regulatory fee when, as here, the fee constitutes an amount necessary to carry out the purpose and provisions of the regulation." (*Id. at p. 375, fn. 11.*)

The court in *Pennell* appeared satisfied that the cumulative amount of the fee would support the administration and implementation of the hearing process without an examination of the benefits to be derived by individual lessees. Many lessors would never avail themselves of the hearing process at all and yet under the rent control ordinance, they, like the lessees who would petition for hearing, were required to pay the fee. *Pennell* does not require the government to prove proportionality on an individual basis. Under *Pennell,* the significant inquiry is whether the amount of the fees collected under the ordinance exceed the cost of the regulatory program they are collected to support. Proportionality is measured collectively to assure that the fee is indeed regulatory and not revenue raising.

While Mills cites many cases for the general proposition that fees must be apportioned according to some formula for ascertaining the benefits received or the burdens imposed by the payor's activity, he fails to cite a single regulatory fee case in which a fee was found to be a tax because the government failed to sustain its burden of proving a reasonable apportionment. On this pivotal point, the cases require close examination for what they require and for what they do not.

Two cases involve regulatory fees, like those before us, enacted to defray the costs of programs to mitigate damage to the environment. In *San Diego Gas & Electric Co. v. San Diego County Air Pollution Control Dist., supra, 203 Cal. App. 3d 1132* (*San Diego Gas & Electric Co.), and Brydon v. East Bay Mun. Utility Dist. (1994) 24 Cal. App. 4th 178 [29 Cal. Rptr. 2d 128]*, the Courts of Appeal upheld fee structures against challenges they constituted special taxes. Both cases discuss the apportionment issue at some length.

In *San Diego Gas & Electric Co., supra*, a utility company challenged an air pollution district's method of apportioning the costs of its permit programs by apportioning them among all monitored polluters according to a formula based on the amount of emissions discharged by a stationary pollution source. The emissions-based formula allowed the district to charge additional renewal permit fees based on the average pollution generated by a facility within a specific industry. The court wrote: "SDG&E argues the district has not specifically shown how the amount of emissions generated by a pollution source increase the district's indirect costs . . . . There is no reason to require the district to show precisely how more emissions generate more costs to justify the emission-based apportionment formula. The purpose for the district's existence is to achieve and maintain air quality standards (§ 40001), thus from an overall perspective it is reasonable to allocate costs based on a premise that the more emissions generated by a pollution source, the greater the regulatory job of the district." (*203 Cal. App. 3d at pp. 1147-1148*, fn. omitted.)

In rejecting *San Diego Gas & Electric Co.*'s argument that the emissions-based formula eroded the intent of the voters in enacting California Constitution, article XIII A, the court explained that "Proposition 13's goal of providing effective property tax relief is not subverted by the increase in fees or the emissions-based apportionment formula. A reasonable way to achieve Proposition 13's goal of tax relief is to shift the costs of controlling stationary sources of pollution from the tax-paying public to the pollution-causing industries themselves, an accomplishment of the 1982 amendments to *[Health and Safety Code] section 42311* and the emissions-based fee schedule." (*San Diego Gas & Electric Co., supra, 203 Cal. App. 3d at pp. 1148-1149.*)

In *Brydon,* water customers challenged a new rate structure as a special tax. The inclined rate structure increased price per cubic foot for increased usage. The Court of Appeal found *San Diego Gas & Electric Co.* "a sustainable analogy." "Just as the regulatory scheme set forth by the [air pollution control district] was designed to achieve a legislatively mandated ecological objective, so is the inclined block rate structure of the District a response to state-mandated water-resource conservation requirements." (*Brydon v. East Bay Mun. Utility Dist., supra, 24 Cal. App. 4th at p. 192.*) The court emphasized the latitude necessary to set the amount of fees to meet the regulatory objectives. " In pursuing a constitutionally and statutorily mandated conservation program, cost allocations for services provided are to be judged by a standard of reasonableness with some flexibility permitted to account for system-wide complexity. [Citation.] [P] . . . [P] . . . In short, California Constitution, article XIII A does not apply to every regulatory fee simply

because, as applied to one or another of the payor class, the fee is disproportionate to the service rendered." (*Id. at pp. 193-194.*)

Hence, both cases narrow the breadth of California Constitution, article XIII A as applied to regulatory fees. Both suggest a flexible assessment of proportionality within a broad range of reasonableness in setting fees. In *San Diego Gas & Electric Co.,* the use of a formula to distribute indirect costs was sustained, while in *Brydon* an inclined block rate schedule allowed the water district to discourage water consumption. Neither relied on the kind of exact apportionment calculation urged by Mills.

Still, *San Diego Gas & Electric Co.* and *Brydon*, unlike *Pennell*, did not involve flat fees. While the formula or rate structure may not have been exact, each bore some relationship to the benefit reaped or the burden imposed by the payor. Put another way, the payors had some control over the amount of the regulatory fee they were compelled to pay by the degree to which their respective activities impacted the environment. The more they polluted the air and consumed the water, the more they paid.

We acknowledge that in this case Mills had no comparable control over the amount of the fees he was charged to review his timber harvest plan. The amount of the fees is expressly set forth in section 711.4. Nevertheless, we hold that a regulatory fee, to survive as a fee, does not require a precise cost-fee ratio. A regulatory fee is enacted for purposes broader than the privilege to use a service or to obtain a permit. Rather, the regulatory program is for the protection of the health and safety of the public. The legislative body charged with enacting laws pursuant to the police power retains the discretion to apportion the costs of regulatory programs in a variety of reasonable financing schemes. An inherent component of reasonableness in this context is flexibility. We agree with the notion that shifting the costs of environmental protection to those who seek to impact our natural resources does not subvert the objectives embodied in Proposition 13. Hence, a regulatory fee does not violate California Constitution, article XIII A when the fees collected do not surpass the costs of the regulatory programs they support and the cost allocations to individual payors have a reasonable basis in the record.

IV

The record before us is a vivid illustration of the need for flexibility in establishing the amount of regulatory fees. Regulatory fees, unlike other types of user fees, often are not easily correlated to a specific, ascertainable cost. This may be due to the complexity of the regulatory scheme and the multifaceted responsibilities of the department or agency charged with implementing or enforcing the applicable regulations; the multifaceted responsibilities of each of the employees who are charged with implementing or enforcing the regulations; the intermingled functions of various departments as well as intermingled funding sources; and expansive accounting systems which are not designed to track specific tasks.

Mills asserts that these problems preclude a finding of a fee. He points out that Fish and Game did not conduct the kind of study now accepted within the expert field of user fee analysis to ascertain with precision the justifiable amount of a proposed fee based on the costs involved in providing the service. He criticizes the change in accounting systems in July 1991 which obfuscates the data necessary to make credible calculations, and he bemoans the incomprehensibility of the new CALSTARS accounting system as it relates to a user fee analysis. He insists that depositing the fees into Fish and Game's preservation fund is tantamount to a tax since the preservation fund operates as a general fund for Fish and Game. And he provides many examples of how disproportionate the fees are as to certain payors. Although most projects only receive a cursory review, there is a substantial variance in the amount of time spent on more in-depth reviews, varying from a few minutes to a few weeks, with the burden falling most heavily on small timberland owners.

This evidence is undisputed. There is no question that a flat fee will seldom represent the exact cost of providing a service. Fish and Game does not pretend such a correlation exists. Since we have determined that state regulatory fees are different from other user fees, the question presented is whether the evidence in this record is sufficient to sustain the legislative determination that a flat fee system is a reasonable means to allocate the costs of environmental review. [3]

> 3 Evidence of the legislative history of *section 711.4* was admitted at trial. Legislative history can be relevant to a determination whether an exaction is a fee or a tax. (*Centex Real Estate Corp. v. City of Vallejo (1993) 19 Cal. App. 4th 1358, 1362 [24 Cal. Rptr. 2d 48].*) Here, the trial court found the costs of environmental review exceeded the amount of the fees, but it found imposition of a flat fee arbitrary. Without the benefit of the Supreme Court's holding in *Sinclair* and the broad analysis of regulatory fees, the trial court narrowly construed *section 711.4* as a user fee requiring the amount of the fees to reflect the cost of the service provided the payor. Because we have decided that a flat fee may be a reasonable allocation of the costs of a regulatory fee and the trial court found Fish and Game had met its

burden of proof on this issue, the legislative history cited by the trial court is unnecessary.

Mills fails to appreciate the difference between regulatory fees and more typical user fees. At trial, he offered an expert from the new cottage industry of analysts and advisers to local governments on how to legitimize their fees in the litigious climate spawned by Proposition 13. That expert's testimony reflects his misguided assumption that all fees are created equal and that, to survive constitutional attack, they must be supported by exhaustive studies, unassailable time keeping, and a precise cost-fee analysis.

He insisted that a cost analysis study was not only advisable, but necessary. "So that is why I am saying it is possible for Fish and Game to do a kind of cost analysis study. My question then would be, secondly, do they now have that in place? Have they kept track? Have they required their staff to fill in reports? I mean, they might be able to do it starting now. But have they done it? Nothing has been submitted to me showing a tracking process of the steps taken and breaking down the specific tasks and functions.

"I recall this being referenced to the fact the administrative or bookkeeping costs were too high to do that. Frankly, my judgment is that becomes a cop-out. It is not too difficult. You can organize and set up, especially in today's computerized world with P.C.'s on half the staff desks.

"Attorneys have to bill by the minutes. They have to keep track of their time.

"It is perfectly possible to keep track of time. And I think, frankly, my judgment might be that if it is difficult, if your staff are not now doing those things systematically, it needs a whole retraining and regearing."

He opined that absent retraining, regearing, studies, and analysis, a fee could not survive a constitutional challenge. He went on to suggest a rather unique correlation between the time spent and the benefits achieved. Having testified he could not find a direct relationship between payment of a fee and providing any service, he stated: "There is no discussion of what happens as a result of the reviews. You know, do more spotted owls get saved? More fish saved? Or what. There is no functional relationship." Again he opined that in order to sustain the constitutionality of the fee, Fish and Game must document how a forest was saved or how many spotted owls were saved by the staff.

Fish and Game urges us to dismiss his opinion for several reasons: He had never reviewed the data supporting imposition of a state fee, he did not conduct any study to determine whether the *section 711.4* flat fees were reasonable or proportional, and he had no familiarity with CEQA or the regulatory landscape in which Fish and Game must operate, not to mention that his proffered opinion constituted an inadmissible conclusion of law.

We need not address these specific deficiencies because we believe his testimony serves to highlight the fundamental distinction between a user fee and a regulatory fee. His testimony is predicated on many faulty assumptions based on user fees when there is an obvious correlation between cost and benefit. Moreover, in many cases, a statute demands that the amount of a fee be commensurate with the value of a service provided or the cost of a burden imposed. (See, e.g., *Gov. Code, § 50076, 66001.*) No comparable statutes apply to this state-imposed regulatory fee.

From the vantage point of one who earns a living studying user fees and counseling local governments on how to insulate their fees from constitutional attack, it is not surprising he would overlook the vast discrepancy between a fee imposed or a privilege accorded an individual and a fee that apportions and distributes the collective costs of a regulation. In the latter case, the many factors this expert described as deficiencies become the reasonable justification for imposing a flat fee. That is, the Legislature may have determined that the administrative cost and burden of a statewide fee, including expensive studies and accounting, was too high when a simpler, flat fee could be imposed. Moreover, often, as here, measuring the benefits is amorphous. The Legislature could reasonably eschew a graduated fee structure based on an accounting of owls that were spared and forests that survived. He failed to understand that a legislative body in determining the amount of a regulatory fee is legitimately hampered by the many factors he describes as necessary to support a user fee.

The Legislature determined that the fee must be paid when a notice of determination is entered. Mills argues the timing of the exaction is unfair and unreasonable because many payors pay for reviews they never receive and others receive a bargain price for an extensive and time-consuming study. It is not our role to assess the wisdom of legislation from either a public policy or public relations perspective. We are asked only to determine whether section 711.4 imposes a fee or a tax. The record discloses several reasonable justifications for imposing a flat fee.

Fish and Game offered testimony that the imposition of an hourly fee for any environmental review would discourage early consultation. Often developers contact Fish and Game to discuss potential adverse impacts of a proposed project before any plans are submitted. Fish and Game then has the opportunity to engage in a collaborative process to eliminate or mitigate impacts on

fish and wildlife before resources have been committed to a particular development plan.

The record also discloses that the environmental review process for a CEQA project or a timber harvest plan can involve various biologists at the regional level, consultation with biologists at headquarters and review of various data bases. Moreover, the biologists often work on several projects simultaneously and perform work which benefits all the projects. Consequently, the evidence suggests it would be cumbersome and expensive to account for multiple biologists' time, from multiple regions, working multiple projects.

The evidentiary thrust to Fish and Game's argument is that the cost of performing its duties under CEQA and the Forest Practice Act far exceeds the revenue generated under section 711.4. (*City of Dublin v. County of Alameda, supra, 14 Cal. App. 4th at p. 282.*) Under the accounting system dismantled in 1991, Fish and Game employees recorded their time and charged the time to various codes. Before changing to a new system, the employees' time sheets were surveyed and analyzed. A new coding system was predicated on these surveys and analyses. Mills complains that the new system camouflages and inflates the true costs of environmental review.

The trial court found Fish and Game met its burden of proving the cost of its environmental review programs. The court wrote, "While Plaintiff attacks the Department's method of converting its costs under its old accounting system to the new accounting program, the authorities do not require absolute precision. Rather, as long as the estimate of costs is a reasonable one, it will be upheld."

We need not perform an appellate audit of Fish and Game's accounting systems. Having reviewed the entire record, we are satisfied there is sufficient evidence to support the trial court's finding that the cost of comprehensive environmental review far surpasses the amount of fees generated under section 711.4. " '[W]e would be demanding the impossible by insisting on rigorously supported findings.' [Citation.] All that our review requires is that we are able to determine that the [Legislature] acted after finding a reasonable relationship between the fee and the need to which the development contributes." (*Shapell Industries, Inc. v. Governing Board (1991) 1 Cal. App. 4th 218, 247 [1 Cal. Rptr. 2d 818].*) Mills squabbles about the costs associated with the review of Fish and Game's own projects, the preparation of resource databases, and a few other relatively small items. His argument, like his expert's testimony, proves the point. Complex regulatory programs involve complex accounting methodologies which render a more conventional "user fee" assessment impractical or expensive.

There is also evidence that the administrative costs to implement an extensive and comprehensive time-reporting system would be high. The evidence shows that biologists often simultaneously perform the preliminary work establishing resource data for several projects and consult and research issues relating to many different projects. It is reasonable to assess a flat fee and thereby reduce the cost and administrative difficulty of accounting for the services provided for each individual project. Moreover, collection of a flat fee at a uniform time eases the administrative burden of collection and provides certainty to those who submit project proposals.

Fish and Game provides an apt analogy to demonstrate the reasonableness of flat fees. The Legislature has adopted a flat filing fee for filing an action in superior court whether the matter is a simple case requiring little time and attention or a complex case requiring intensive judicial resources from pretrial motions through a lengthy trial. By statute, statewide judicial fees cannot be increased or decreased by counties to provide any kind of graduated structure. (*Gov. Code, § 54985, subd. (c)(1).*) The fees imposed by section 711.4 are quite similar. Like a civil action, the environmental review may be time and staff intensive or it may be summarily handled. In neither case does the fee operate as a tax just because a prescribed amount is charged to all who avail themselves of the opportunity to obtain discretionary government services.

Finally, plaintiff also challenges the Legislature's decision to charge a higher fee for the filing of a negative declaration than for other environmental documents. As explained by a Fish and Game senior environmental specialist supervisor at trial, the standard for a negative declaration is that a project have no adverse impact on the environment. Thus, Fish and Game has the responsibility to make sure the disclosure of the possible impacts is complete and to assure any mitigation measures are adequate. Often, the proposed mitigation measures are inadequate, and Fish and Game staff must work with the lead agency and with the project proponent to develop an acceptable negative declaration document. The supervisor testified that his staff probably spends more time on the review of a negative declaration than for the review of an equivalent size project with EIR (environmental impact report) documentation. Hence, because of project information collection cost and the time spent negotiating mitigation measures, Fish and Game's costs are generally higher for negative declarations. There is a sufficient reasonable basis for the legislative decision to charge more for the review of a negative declaration than for the review of an environmental impact report.

V

We need not address the many other issues raised by the parties in these consolidated cases rendered moot by our finding that *section 711.4* does constitute a regulatory fee. Moreover, we dismiss Mills's second appeal because it too is rendered moot by our finding. In the underlying case, the California Association of Professional Scientists sought to enjoin the settlement entered into by Mills and Fish and Game in the original action. The crux of the appeal is whether the trial court properly restricted its constitutional ruling to Mills alone. Since we have upheld the constitutionality of *section 711.4*, we need not decide whether the trial court erred by invoking *article III, section 3.5 of the California Constitution* to limit the scope of its constitutional ruling.

Many of the arguments raised by Mills, and echoed by his expert at trial, are rooted in the perception that a flat fee is unfair. They object vociferously to the disparity between the amount of the fee and the services provided for different projects. This may be so. The scope of our inquiry, however, is not whether the fee is fair but whether the fee is, in legal effect, a tax. This case is not a challenge to the legislative power to enact a fee, nor is it a substantive constitutional challenge to the fee. We were asked to make the legal determination as to whether it is a fee exclusively for the purpose of determining whether it was properly enacted by a majority vote. Constrained by the limited scope of appellate review, we have concluded the Legislature did not violate California Constitution, article XIII A by enacting the *section 711.4* fees by a simple majority vote. Any further challenge to the equity of a flat fee structure must be presented to the Legislature for the issue is political, not constitutional.

DISPOSITION

The appeal in case No. C023075 is dismissed. The judgment in case No. C023184 is affirmed in part and reversed in part as explained above. In both cases, Mills shall pay the costs on appeal.

Sims, Acting P. J., and Nicholson, J., concurred.

The petition of appellant Albert W. Mills for review by the Supreme Court was denied July 12, 2000.

OPINION BY: Rivera

OPINION

RIVERA, J.--This case presents the question of whether a fee imposed on telephone lines by defendant City of Union City (the City) to fund its 911 emergency communication system is a special tax that must be approved by two-thirds of the voters in the City. The trial court ruled it was a tax, and entered judgment against the City and in favor of the plaintiffs in this action for declaratory relief. [1] We affirm.

1 The plaintiffs in this action are Bay Area Cellular Telephone Company doing business as AT&T Wireless Services; GTE Mobilnet of California Limited Partnership doing business as Verizon Wireless; Cingular Wireless LLC; Silvano Mendoza; and Walid Achikzai (collectively plaintiffs).

I. BACKGROUND

The Legislature enacted the Warren-911-Emergency Assistance Act (*Gov. Code,* [2] *§ 53100 et seq.*) (the Warren Act) in 1972. The Warren Act declared that the establishment of a uniform, statewide emergency number was a matter of statewide concern, and required every local public agency to establish and operate, or to be part of, a "basic system" that automatically connects a person dialing the digits 911 to a public safety answering point. (*§§ 53100, 53107, 53109.*)

2 All undesignated statutory references are to the Government Code.

In 2003, the City established an "Emergency Communication System Response Fee" (the Fee) (City Mun. Code, ch. 7.20) by adopting ordinance No. 617-03 (the Ordinance). The Fee was imposed on "every person who maintains access to the 911 communication system by subscribing to local telephone service within the City of Union City. ... [W]ith respect to wireless telephone services, a person shall be construed to subscribe to local telephone service within the City of Union City if he or she has a 'place of primary use,' as such term is defined in the Mobile Telecommunications Sourcing Act, *4 U.S.C. Section 124(8)*, within the geographic boundaries of the City." [3] (City Mun. Code, ch. 7.20, § 7.20.040, subd. A.) The Fee is paid on a flat rate, per-line basis, in an amount established by city council resolution. (*Id.*, subd. B.) Certain access lines are exempted from the Fee, including coin-operated telephones, nonprofit hospitals, and nonprofit educational organizations. (*Id.*, § 7.20.050.) The Fee is collected from the telephone subscriber by the service supplier, which remits the revenues to the City. (*Id.*, § 7.20.070, subd. A.) The revenues collected are deposited into an emergency response fund, to be used only for the expenses of the 911 communication system. (*Id.*, § 7.20.080.) They are never commingled with any other City funds. The Fee was expected to recover 75 percent of the operating, maintenance, and improvement costs for the City's emergency communication system. After calculating the costs of the system, [4] the City distributed the cost among all access lines by dividing the cost by the estimated number of lines in the City, including those that were exempt from the Fee. Regular access lines are charged $ 3.22 per month; trunk lines--with the capacity of nine individual access lines--are charged $ 29.98 per month; and high-capacity trunk lines--with the capacity of 216 individual access lines--are charged $ 77.28 per month.

3 Title *4 United States Code section 124(8)* defines " 'place of primary use' " to mean "the street address representative of where the customer's use of the mobile telecommunications service primarily occurs, which must be--[¶] (A) the residential street address or the primary business street address of the customer; and [¶] (B) within the licensed service area of the home service provider."

4 The parties disagreed below on whether the City's calculation of the costs of the system was overinclusive. For purposes of our analysis, we will assume that the Fee covers less than the total cost of operating the system.

The pertinent facts regarding the emergency communication system and the Fee are largely undisputed. The City operates an emergency dispatch system available to persons dialing 911 from a location within the City. Before the Ordinance went into effect, 911 services were funded from the City's general fund. In fiscal year 2004-2005, after the Ordinance went into effect, 911 services were funded from the general fund and from revenues obtained under the Ordinance. Funds from the Ordinance were designed to finance improvements to and operation of the City's "enhanced" 911 communication system, which the Ordinance provided would include selective routing, automatic number identification, automatic location identification, and wireless 911 access. (City Mun. Code, ch. 7.20, §§ 7.20.010, subd. A, 7.20.020, subd. A.)

The City describes the system as "a multi-point Emergency Communication Response System that allows individuals located within Union City dialing the digits 9-1-1, or designated seven-digit police and fire emergency numbers, or City business phone lines, to gain direct access to an emergency communication center that provides emergency services dispatch." Calls to a seven-digit emergency line and to 911 are handled by the same dispatchers in the same manner. However, the City's enhanced 911 system automatically provides the location and number identification for the caller. Wireless 911 calls are answered initially by the California Highway Patrol, which forwards those emergency calls needing a police response to the City police department's seven-digit emergency line.

Over 99 percent of households in the City have telephone service, and the City is unaware of anyone in the City who is not part of a household with an access line or of anyone who maintains a place of employment in the City without an access line. Any person physically in the City has access to the emergency communication system. The City has not limited access to either the system or emergency services to those who are subject to the Fee. Telephone subscribers who are subject to the Fee but have not paid it are not denied access to the 911 system and emergency services.

Plaintiffs brought this action for declaratory relief in June 2004. They alleged in their first cause of action that the Fee was an invalid tax in violation of *California Constitution, article XIII C, section 2* (Proposition 218); in their second cause of action that the Fee was an illegal property-related fee in violation of Proposition 218; in their third cause of action that it was an illegal special tax under *section 50076* as to wireless phone subscribers and required voter approval under Proposition 218; and in their fourth cause of action that it was an illegal fee imposed on wireless subscribers.

Plaintiffs moved for summary adjudication of the first cause of action, and the trial court granted the motion. The City made a cross-motion for summary adjudication of the first, second, and third causes of action. The

trial court denied the cross-motion on the ground that the accompanying separate statement of undisputed material facts did not comply with California Rules of Court, former rule 342. [5] At plaintiffs' request, the court dismissed the remaining causes of action, and entered judgment in favor of plaintiffs, declaring that the Fee was a special tax under California law, and that it was void because it was enacted without a vote of the electorate in violation of California Constitution, articles XIII A and XIII C. This timely appeal ensued.

5 The California Rules of Court have since been renumbered. Former rule 342 is now *rule 3.1350* (hereafter *rule 3.1350*).

II. DISCUSSION

A. *Guiding Legal Principles*

Proposition 218, passed by the voters in 1996, added articles XIII C and XIII D to the California Constitution. As pertinent here, Proposition 218 defines a "special tax" as "any tax imposed for specific purposes, including a tax imposed for specific purposes, which is placed into a general fund" (*Cal. Const., art. XIII C, § 1, subd. (d)*), and provides that no local government may impose, extend, or increase any special tax unless the electorate has approved it by a two-thirds vote (*id., § 2, subd. (d)*). The proposition, entitled the "Right to Vote on Taxes Act," included this statement of purpose: " 'The people of the State of California hereby find and declare that Proposition 13 was intended to provide effective tax relief and to require voter approval of tax increases. However, local governments have subjected taxpayers to excessive tax, assessment, fee and charge increases that not only frustrate the purposes of voter approval for tax increases, but also threaten the economic security of all Californians and the California economy itself. This measure protects taxpayers by limiting the methods by which local governments exact revenue from taxpayers without their consent.' (See Historical Notes, 2A West's Ann. Cal. Const. (2004 supp.) foll. *art. XIII C, § 1*, p. 55; *Apartment Assn. of Los Angeles County[, Inc. v. City of Los Angeles (2001)] 24 Cal.4th [830,] 838 [102 Cal. Rptr. 2d 719, 14 P.3d 930].*)" (*Barratt American, Inc. v. City of San Diego (2004) 117 Cal.App.4th 809, 816 [12 Cal. Rptr. 3d 132].*) Section 5 of Proposition 218 required that the provisions of the act be "liberally construed to effectuate its purposes of limiting local government revenue and enhancing taxpayer consent." (Ballot Pamp., Gen. Elec. (Nov. 5, 1996) text of Prop. 218, § 5, p. 109, reprinted at Historical Notes, 2A West's Ann. Cal. Const. (2008 supp.) foll. *art. XIII C, § 1*, p. 85 (Historical Notes).)

Certain kinds of impositions for specific purposes, however, are treated not as special taxes subject to the voter approval requirements but as fees not subject to those requirements. Whether an imposition is a tax or a fee is a question of law for the appellate court to decide on an independent review of the facts. (*Sinclair Paint Co. v. State Bd. of Equalization (1997) 15 Cal.4th 866, 873-874 [64 Cal. Rptr. 2d 447, 937 P.2d 1350]* (*Sinclair*); *California Assn. of Prof. Scientists v. Department of Fish & Game (2000) 79 Cal.App.4th 935, 944 [94 Cal. Rptr. 2d 535]*; *Northwest Energetic Services, LLC v. California Franchise Tax Bd. (2008) 159 Cal.App.4th 841, 854 [71 Cal. Rptr. 3d 642]* (*Northwest Energetic*).)

Our Supreme Court in *Sinclair, supra, 15 Cal.4th at pages 873-874*, discussed "certain general guidelines used in determining whether 'taxes' are involved in particular situations." [6] As the court noted: "The cases recognize that 'tax' has no fixed meaning, and that the distinction between taxes and fees is frequently 'blurred,' taking on different meanings in different contexts. [Citations.] In general, taxes are imposed for revenue purposes, rather than in return for a specific benefit conferred or privilege granted. [Citations.] Most taxes are compulsory rather than imposed in response to a voluntary decision to develop or to seek other government benefits or privileges. [Citations.] But compulsory fees may be deemed legitimate fees rather than taxes. [Citation.] [¶] The 'special tax' cases have involved three general categories of fees or assessments: (1) special assessments, based on the value of benefits conferred on property; (2) development fees, exacted in return for permits or other government privileges; and (3) regulatory fees, imposed under the police power." (*Sinclair, at p. 874.*) In connection with the last category, the court in *Kern County Farm Bureau v. County of Kern (1993) 19 Cal.App.4th 1416, 1421 [23 Cal. Rptr. 2d 910]* (*Kern County*) stated: ? ?Special taxes must be distinguished from regulatory fees imposed under the police power, which are not subject to the constitutional provision [since they are not taxes at all]. [Citation.] Special taxes do not encompass fees charged to particular individuals in connection with regulatory activities or services when those fees do not exceed the reasonable cost of providing the service or activity for which the fee is charged, and are not levied for unrelated revenue purposes.' " (See also *Collier v. City and County of San Francisco (2007) 151 Cal.App.4th 1326, 1346 [60 Cal. Rptr. 3d 698].*) [7]

6 *Sinclair* was decided under California Constitution, article XIII A, which was approved by the voters in 1978 as Proposition 13. (*Sinclair, supra, 15 Cal.4th at p. 872.*) However, cases decided under Proposition 13 have been used in analyzing the provisions of Proposition 218. (See *Howard Jarvis Taxpayers Assn. v. City of San Diego*

(1999) 72 Cal.App.4th 230, 239-240 [84 Cal. Rptr. 2d 804].)

7 The difference between regulatory measures and taxes was described in *Oakland Raiders v. City of Berkeley (1976) 65 Cal. App. 3d 623 [137 Cal. Rptr. 648]*. There, the court noted that the ordinance in question contained "no provision which would regulate the conduct of anyone who is subject to the ordinance," and went on to conclude that "[w]here [a] statute contains no regulatory provisions, but only provides for the subjects and amounts of taxation," it is a tax. (*Id. at p. 627.*) Similarly, the court in *United Business Com. v. City of San Diego (1979) 91 Cal. App. 3d 156, 165 [154 Cal. Rptr. 263]*, stated: " ' "If revenue is the primary purpose and regulation is merely incidental the imposition is a tax; while if regulation is the primary purpose the mere fact that incidentally a revenue is also obtained does not make the imposition a tax ... [.]" [Citations.]' " In short, "[a] 'regulatory fee' is an imposition that funds a regulatory program." (*Northwest Energetic, supra, 159 Cal.App.4th at p. 857.*)

The courts have also recognized that certain "user fees" are not taxes. (See *Isaac v. City of Los Angeles (1998) 66 Cal.App.4th 586, 596-597 [77 Cal. Rptr. 2d 752]* (*Isaac*).) In *Isaac*, the court described user fees as "those which are charged only to the person actually using the service; the amount of the charge is generally related to the actual goods or services provided." (*Id.* at p. 597.) Thus, a user fee is "payment for a specific commodity purchased." (*Ibid.*; see also *Utility Audit Co., Inc. v. City of Los Angeles (2003) 112 Cal.App.4th 950, 957 [5 Cal. Rptr. 3d 520]* [sewer service fees].)

Despite these classifications, a revenue measure "may have attributes of more than one of the traditional revenue devices, and may be valid despite the measure's 'hybrid' nature." (*Kern County, supra, 19 Cal.App.4th at p. 1422.*) Therefore, a local government may "seek to justify a revenue device under alternative classifications." (*Ibid.*)

The court in *Isaac* made clear that regardless of the type of fee, it must bear some reasonable relation to the benefits and costs associated with the service: A special assessment is based on the benefit to the specific property; a development fee is not considered a special tax if it bears a reasonable relation to the development's probable cost to the community and benefits derived from the community; a regulatory fee is limited to "the reasonable cost of the services necessary for the activity for which the fee is charged and for carrying out the purpose of the regulation"; and a user fee is charged to the person using the service and its amount is related to the goods and services actually provided. (*Isaac, supra, 66 Cal.App.4th at pp. 595-597.*) Thus, in explaining the reasons that regulatory and development fees and special assessments are not regarded as special taxes, the court in *Evans v. City of San Jose (1992) 3 Cal.App.4th 728, 738 [4 Cal. Rptr. 2d 601]* (*Evans*), stated, "With each of these cases, a discrete group receives a benefit (for example, a permit to build or inspection of produce) or a service (for example, providing and administering a rental dispute mediation and arbitration hearing process) or a permanent public improvement (such as a local park or landscaped median islands on a local road) which inures to the benefit of that discrete group. The public as a whole may be incidentally benefitted, but the discrete group is specially benefitted by the expenditure of these funds. [Citations.] The public should not be required to finance an expenditure through taxation which benefits only a small segment of the population."

A tax, on the other hand, can be levied " ' "without reference to peculiar benefits to particular individuals or property." ' [Citations.] Indeed, '[n]othing is more familiar in taxation than the imposition of a tax upon a class or upon individuals who enjoy no direct benefit from its expenditure, and who are not responsible for the condition to be remedied.' " (*Knox v. City of Orland (1992) 4 Cal.4th 132, 142 [14 Cal. Rptr. 2d 159, 841 P.2d 144].*)

B. *The Fee Is a Special Tax*

The principles discussed above lead us to conclude that the Fee is a special tax, and as such is subject to Proposition 218. As noted by the trial court, the parties "essentially concede[d] that the 911 Charge does not fit into the category of a special assessment, a development fee, or a regulatory fee," [8] and the issue was whether the Fee was properly characterized as a user fee rather than a tax. In concluding the Fee was a tax, the court pointed out that those who paid the Fee received no benefit not received by those who did not pay (and thus by the general public), thereby negating the distinguishing feature of a user fee.

8 In its answer to the complaint, the City admitted the Fee was not a regulatory fee. The Ordinance provided that it was enacted "solely to provide revenue for eligible project costs and eligible operating costs," and that it was "not enacted for regulatory purposes or for general revenue purposes." (City Mun. Code, ch. 7.20, § 7.20.010, subd. D.) On appeal, the City asserts that the Fee "arguably advances a regulatory purpose," but fails to identify any such purpose.

On appeal, the City acknowledges that the Fee does not fall neatly into any of the recognized categories of fees, stating: "The 911 Fee at issue here ... defies simple classification." The reason the Fee defies such classifica-

tion is that it does not share the essential characteristics of the assessments and fees that have been held not to be special taxes. Most fundamentally, there is no discrete group that is specially benefitted by the imposition. (See *Evans, supra, 3 Cal.App.4th at p. 738.*) The 911 system benefits every inhabitant of the City, and in fact benefits anyone who is in the City when an emergency arises, whether or not an inhabitant and whether or not subject to the Fee. The Fee inures to the benefit of the public as a whole, not to any particular group within the public. (See *ibid.*)

Furthermore, the Fee is not charged for *use* of the 911 system, but for *access* to the system, whether or not a resident ever places an emergency call. The access is to a system that is part of a governmental service. In enacting the Warren Act, the Legislature declared that it was in the public interest to shorten the time required for a citizen to request and receive emergency aid, that the establishment of a uniform emergency number was a matter of statewide concern, and that one of the purposes of the act was to encourage local governments to develop and improve emergency communication procedures and facilities so as to be able to respond quickly to 911 emergency calls. (*§ 53100, subd. (b).*) We see no principled distinction between an imposition charged simply for access to a governmental service that is equally available to the public as a whole and a special tax.

The City disagrees, arguing that the Fee does not have the characteristics of a tax. According to the City, "[t]he Fee is voluntary, is paid by phone service subscribers in exchange for efficient 911 access, and does not raise revenues for the City's general fund." We have already rejected the argument that the Fee is imposed in exchange for "access" to a governmental service and therefore is not a tax. And the fact that the Fee does not raise revenues for the City's general fund does not change our conclusion. The essence of a special tax "is that its proceeds are earmarked or dedicated in some manner to a specific project or projects" (*Neecke v. City of Mill Valley (1995) 39 Cal.App.4th 946, 956 [46 Cal. Rptr. 2d 266]*), and Proposition 218's definition of special taxes encompasses "any tax imposed for specific purposes" (*Cal. Const., art. XIII C, § 1, subd. (d)*). Although Proposition 218 specifies that a special tax includes a tax imposed for specific purposes even if the proceeds are placed into a general fund (see *Howard Jarvis Taxpayers Assn. v. City of Roseville (2003) 106 Cal.App.4th 1178, 1185 [132 Cal. Rptr. 2d 1]*), it is not limited to such taxes but by its terms encompasses those placed into a separate fund.

Finally, we also reject the City's contention that the Fee is not a special tax because it is voluntary. According to the City, the Fee's voluntary nature is shown by the fact that--while the Fee is compulsory for nonexempt individuals and businesses with telephone service--those subject to the Fee voluntarily consented to pay it when they chose to obtain telephone service. For this contention, the City relies on *Richmond v. Shasta Community Services Dist. (2004) 32 Cal.4th 409 [9 Cal. Rptr. 3d 121, 83 P.3d 518]* (*Richmond*). There, our Supreme Court concluded that a capacity charge for new water service connections did not violate the restrictions on assessments of article XIII D of the California Constitution and was consistent with Proposition 218's goal to enhance taxpayer consent, stating that presumably any costs imposed on customers receiving service through *existing* connections would be subject to Proposition 218's voter approval requirements, and that customers who apply for *new* connections "give consent by the act of applying." (*Richmond, at pp. 418, 420.*)

Richmond does not lead to the conclusion that the Fee is not a special tax. The question there was not whether the charge for new water service connections was a special tax or a fee, but whether it was an assessment subject to the procedures and requirements of *California Constitution, article XIII D, section 4.* (*Richmond, supra, 32 Cal.4th at pp. 418-425.*) In any case, the Fee is fundamentally different from the charge in *Richmond* in at least two respects. First, it is not imposed in exchange for the voluntary decision to seek a governmental service, but is instead imposed in response to the decision to seek telephone service from a private provider. Second, the Ordinance does not restrict the Fee to *new* telephone customers, but applies to all persons who maintain telephone service--many of whom presumably did not contemplate the fee when signing up for telephone service. [9]

> 9 We note that the compulsory nature of an imposition does not in itself transform a valid fee into a tax. (See *Kern County, supra, 19 Cal.App.4th at p. 1424.*)

Nor are we persuaded by the City's reference to *Pajaro Valley Water Management Agency v. Amrhein (2007) 150 Cal.App.4th 1364 [59 Cal. Rptr. 3d 484]* (*Pajaro Valley*). There, the court concluded that a groundwater augmentation charge was an incident of property ownership and hence subject to the restrictions of California Constitution, article XIII D, part of Proposition 218, which restricts the power of public agencies to impose a ?levy other than an ad valorem tax, a special tax, or an assessment, ... upon a parcel or upon a person as an incident of property ownership, including a user fee or charge for a property related service." (*Cal. Const., art. XIII D, § 2, subd. (e)*; see *Pajaro Valley, at pp. 1384-1393.*) Before deciding that the charge was an incident of property ownership, the court rejected the argument that it was a special tax, reasoning that although the charge was intended to finance improvements, and thus to raise

revenue (see *Sinclair, supra, 15 Cal.4th at p. 874*), it was also "charged in return for the benefit of ongoing groundwater extraction and the service of securing the water supply for everyone in the basin" (*Pajaro Valley, supra, 150 Cal.App.4th at p. 1381*; see *id. at pp. 1379-1381*). The charge in *Pajaro Valley*, however, was based either on actual consumption of water (in the case of large water users with metered wells) or an estimated use rate; for residential users, this rate was based on the estimated average rate of consumption per dwelling; and for unmetered agricultural use it was based on a number of factors, including the type of crop grown on the land. The charges could be adjusted if a well's estimated consumption did not accurately reflect the amount extracted. (*Id. at p. 1374.*) Here, the Fee is not based on actual or estimated use of emergency services, but simply on the presence of a telephone line, whether or not that line is ever used to call the City's emergency communication system. As we have discussed, such a charge is not a legitimate user fee.

The City argues, however, that *section 50076* establishes that the Fee is not a special tax. [10] *Section 50076* was enacted in 1979, and was part of legislation intended to provide cities, counties and districts with authority to impose special taxes pursuant to Proposition 13. (*§ 50075.*) *Section 50076* provides: "As used in this article, 'special tax' shall not include any fee which does not exceed the reasonable cost of providing the service or regulatory activity for which the fee is charged and which is not levied for general revenue purposes." The City points out that the revenues generated by the Fee do not exceed the cost of providing 911 services and that the Fee is not levied for general revenue purposes. Therefore, the City contends, the Fee is not a special tax.

> 10 We grant plaintiffs' request for judicial notice filed March 28, 2007. We have considered the legislative history of *section 50076* provided, but do not find it helpful in resolving the issue before us.

This argument misses the point. *Section 50076* on its face applies to fees imposed for services or regulatory activities provided by local entities. As we have discussed, the Fee does not fall into either of these categories. The Ordinance provided that it was not enacted for regulatory purposes, and the City has not suggested any regulatory purpose it might serve. Nor is the Fee imposed for "service[s]." The Fee must be paid by all nonexempt telephone service subscribers in the City--encompassing virtually all nonexempt households and businesses--whether or not they ever use 911 services. A fee for *access* to a governmental service is not the same as a fee for *use* of that service. [11]

> 11 Indeed, if it were, Proposition 218 could easily become meaningless. Taxes paid by the public to fund police or fire services available to all could be renamed "public safety access fees" and be exempt from the voter approval requirements. Taxes paid to maintain city streets could be renamed "road access fees." The list of possibilities is endless.

The City also relies on *Carlsbad Mun. Water Dist. v. QLC Corp. (1992) 2 Cal.App.4th 479 [3 Cal. Rptr. 2d 318]*. There, in considering *section 50076* and Proposition 13, the court explained: "The term 'special taxes' must be strictly construed and ambiguities resolved so as to limit the situations to which the two-thirds requirement applies because of the inherently undemocratic requirement that the tax must be approved by a supermajority of the electors." (*Carlsbad, at pp. 485-486.*) We doubt the applicability of this rule to cases decided under Proposition 218, which provides that it should be "*liberally* construed to effectuate its purposes of limiting local government revenue and enhancing taxpayer consent." (Historical Notes, *supra*, foll. *Cal. Const., art. XIII C, § 1*, p. 85, italics added.) In any case, as we have discussed, even under the reasoning of the cases decided under Proposition 13, we conclude that the Fee is a special tax.

Our conclusion is bolstered by the treatment of a state surcharge authorized by the Emergency Telephone Users Surcharge Act (*Rev. & Tax. Code, § 41001 et seq.*). This legislation, enacted in 1976, imposes on telephone users a surcharge to fund state and local agencies' costs associated with providing and administering 911 service, including installation and ongoing expenses of providing a 911 emergency phone number system. (*Id., §§ 41020, 41136, 41150.*) [12] The act defines the surcharge as "a tax levied by this state." (*Id., § 41013.*) Although the City has chosen to provide enhanced services rather than a basic system, the Fee effectively does what the surcharge does--provides revenues to fund a governmental service available to all.

> 12 *Revenue and Taxation Code section 41020, subdivision (a)* imposes a surcharge "on amounts paid by every person in the state for intrastate telephone communication service in this state ... ." Revenues generated by the surcharge are to be used, among other things, to pay refunds authorized by the Emergency Telephone Users Surcharge Act; to pay the State Board of Equalization for the cost of administering the act; to pay the Department of General Services for its costs in administering the 911 emergency telephone number system; and to pay for the installation of, and ongoing expenses for, communication ser-

vices supplied to local agencies, including a basic system, a basic system with telephone central office identification, a system employing automatic call routing, and approved incremental costs. (*Rev. & Tax. Code, § 41136.*)

Accordingly, we conclude the trial court was correct in granting summary adjudication to plaintiffs on their cause of action.

C. *The City's Motion for Summary Adjudication*

The City moved for summary adjudication on plaintiffs' first, second, and third causes of action. Each of these causes of action alleged that the Fee violated Proposition 218. The trial court denied the City's motion not on the merits, but on the procedural ground that the separate statement of undisputed material facts did not comply with *rule 3.1350*. The City contends the trial court abused its discretion in refusing to consider its motion on the merits.

We have already concluded the trial court was correct when it ruled that plaintiffs were entitled to summary adjudication in their favor on the first cause of action. After the court made its ruling, the trial court dismissed the remaining causes of action at plaintiffs' request and entered judgment in plaintiffs' favor. In the circumstances, no decision we make on this procedural issue would affect the outcome of the case, and we need not consider it. (See *Giles v. Horn (2002) 100 Cal.App.4th 206, 226-227 [123 Cal. Rptr. 2d 735].*)

The judgment is affirmed.

III. DISPOSITION

Ruvolo, P. J., and Sepulveda, J., concurred.

Appellant's petition for review by the Supreme Court was denied August 13, 2008, S164219. Baxter, J., Werdegar, J., and Corrigan, J., did not participate therein.

OPINION BY: COTTLE, J.

OPINION

Appellant Elaine Evans challenges here, as she did in the trial court, the facial constitutionality of those provisions of *Streets and Highways Code section 36500 et seq.* and San Jose Ordinance No. 22960 which authorize imposition of assessments on businesses for the purposes of general downtown promotion, the furnishing of music, and other expenditures unrelated to capital improvements. The trial court entered summary judgment in favor of the City of San Jose (city), ostensibly on the ground that Evans failed to exhaust her administrative remedies. For reasons we shall explain, we affirm the judgment.

FACTS

On October 6, 1988, at a public hearing, the City Council of San Jose adopted a resolution of intention to establish a business improvement district (BID), pursuant to *Streets and Highways Code section 36500 et seq.* (the Act), to promote the downtown area. [1] After the hearing, each of the businesses in the proposed district was notified that a hearing would be held on October 20, 1988, to consider establishing the BID. The businesses were told, "If you wish to support or oppose the establishment of the BID you may do so in person at the hearing or by writing the City Council. State law provides that the BID may not be established if the City Council receives protests in writing against its establishment from businesses which would pay a majority of the charges proposed." At the bottom of the notice, each holder of a valid business license was entitled to check one of the following two boxes: " I support the BID proposed by the San Jose Downtown Association," or " I oppose the BID proposed by the San Jose Downtown Association and *hereby register a protest pursuant to Section 36523 of the California Streets & Highways Code."* (Italics added.)

1 After the resolution of intention was passed, the Legislature amended without substantially changing the Parking and Business Improvement Area Law of 1979 (*Sts. & Hy. Code, § 36500 et seq.*). In this appeal, however, we consider only the 1979 Act.

Evans, who owns a 21-unit apartment building in the proposed district, received one of these notices. She sent the ballot in to the city council as requested, indicating she opposed the proposed BID and she was accordingly "registering a protest pursuant to *Section 36523 of the California Streets & Highways Code.*" She also sent a

letter to the mayor and city council members announcing her opposition to the BID because of "the manner in which it [was] to be financed." She observed that she already had to pay sewer fees, housing fees, rent mediation fees, utility tax, and a business license tax, all in addition to her real property taxes. She complained that her property was "enough on the outer fringe of a geographical district that it did not qualify for city aid, but close enough to pay for promotional events." She asked, "How much more do you think a business [such as mine where the occupancy rate has dropped to 25%%] is able to pay?"

Both Evans's ballot and her letter were marked "received" by the city prior to the public hearing. Her ballot was presumably one of the 90 received by the city opposing the BID. The city also received 29 ballots supporting it. In addition to the ballots, the following documents were filed at the October 20, 1988, public hearing; a feasibility analysis, a petition signed by 274 businesses favoring establishment of the BID, a recommendation from the assistant city manager, 242 business reply cards supporting formation of the BID, a list of the affected businesses, and an affidavit of mailing. Five citizens spoke in opposition to the district, and six spoke in favor.

City approved the BID and passed Ordinance No. 22960, entitled "An Ordinance of the City of San Jose Establishing the Downtown San Jose Business Improvement District Pursuant to the Parking and Business Improvement Area Law of 1979" at its October 20th meeting. The stated purpose of the ordinance was to fund: "A. Decoration of any public place in the area. [P] B. Promotion of public events which are to take place on or in public places in the area. [P] C. Furnishing of music in any public place in the area. [P] D. The general promotion of business activities in the area."

The ordinance contained the specific finding that "the businesses lying within the Area will be benefitted by the expenditure of the funds raised by the assessments or charges proposed to be levied." It provided that the charge for each apartment or hotel would be $ 5 per room or $ 150 minimum per year, beginning in the third year. The first year would be one- third that amount and the second year two-thirds.

Evans paid the 1989 and 1990 assessments "under protest" and subsequently submitted a written claim for refund to the city. She filed the instant action on January 23, 1990, seeking a refund of the assessments paid and a declaration that the Act and ordinance were unconstitutional "on their face to the extent they purport to authorize the imposition of 'assessments' for the provision of music, decorations, promotions, etc., without a two-thirds vote of the people."

Both city and Evans filed cross motions for summary judgment. After a hearing on November 21, 1990, the court issued the following minute order: "The motion by the plaintiff is denied; no jurisdiction-administrative remedies have not been exhausted. [P] The motion of the defendant is granted."

Evans timely appealed from the judgment entered on January 30, 1991.

DISCUSSION

On appeal, Evans contends (1) the court erred in ruling that she did not exhaust her administrative remedies, and (2) the BID assessments were unconstitutionally imposed and collected. As we shall explain, we agree with the first proposition but disagree with the second.

It is fundamental in California, as elsewhere, that before a party may obtain judicial review of a final administrative determination, she must first exhaust her administrative remedies. "It is not a matter of judicial discretion, but is a fundamental rule of procedure .... Exhaustion of the administrative remedy is a jurisdictional prerequisite to resort to the courts." (*Abelleira v. District Court of Appeal (1941) 17 Cal.2d 280, 293 [109 P.2d 942, 132 A.L.R. 715].*) [2]

2 In *Abelleira*, "[t]he question [presented was] whether boards and commissions, charged with the administration of a statute, may carry on their administrative proceedings to completion before being subjected to judicial review." (*Id., at p. 286.*) The court reasoned that if a court allowed a suit to be maintained prior to a final administrative determination, it would be interfering with the subject matter jurisdiction of another tribunal. (*Id., at p. 293.*)

At the summary judgment motion, city asserted, and the trial court agreed, that Evans had not pursued the remedies available to her under the Act. In support of its position, city cited numerous cases in which a litigant was denied judicial review for failing to first exhaust available administrative remedies. These included *Abelleira, supra, 17 Cal.2d 280* (under the California Unemployment Insurance Act, an adjustment unit of the Employment Commission would determine whether unemployed workers were entitled to benefits; where payment was ordered, the employer could appeal to a referee; the referee would hold a hearing, take evidence and examine witnesses; after the referee issued written findings, the employer could appeal again to the commission. In *Abelleira*, the employer filed suit before the second appeal was complete); *United States v. Superior Court (1941) 19 Cal.2d 189 [120 P.2d 26]* (shippers and handlers of citrus fruits could petition the Secretary of Agriculture for a modification of a marketing agreement or-

der; they did so but filed suit before a determination on the modification had been made); *People v. Coit Ranch, Inc. (1962) 204 Cal.App.2d 52 [21 Cal.Rptr. 875]* (cantaloupe growers did not follow appeals procedure contained in a marketing order issued pursuant to California Marketing Act of 1937); *Flores v. Los Angeles Turf Club (1961) 55 Cal.2d 736 [13 Cal.Rptr. 201, 361 P.2d 921]* (appellant failed to follow detailed procedures governing appeals to the California Horse Racing Board); *Metcalf v. County of Los Angeles (1944) 24 Cal.2d 267 [148 P.2d 645]* (rock crushing company sought to enjoin enforcement of zoning ordinance prohibiting rock crushing but failed to apply under section 21 of the applicable ordinance to have its property excepted from the restriction; the company also failed to apply under another ordinance for a license to operate a rock quarry); *Tushner v. Griesinger (1959) 171 Cal.App.2d 599 [341 P.2d 416]* (further hearings before an examiner relating to suspension or revocation of real estate brokers' licenses were still pending when action filed); *Alexander v. State Personnel Bd. (1943) 22 Cal.2d 198 [137 P.2d 433]* (petition seeking review of State Personnel Board decision discharging petitioner from service properly dismissed where no petition for rehearing was filed within the time prescribed by the Civil Service Act).

Two common threads link these cases: a detailed administrative procedure was available, and the appellant either ignored it or did not await a final determination before seeking judicial intervention. Here, in contrast, the administrative remedies--though existent--were neither exhaustive nor detailed and did not provide several levels of administrative review. Furthermore, with respect to the limited remedies available, Evans pursued them to the extent possible.

City cites three cases, two written in 1904, for the proposition that the exhaustion doctrine is applicable to a challenge to the formation of an assessment district. In *O'Dea v. Mitchell (1904) 144 Cal. 374 [77 P. 1020]*, the enabling legislation provided that " 'objections *to the extent* of the district' may be made in writing by interested parties within ten days after the expiration of the time of publication of notice; that the clerk shall lay such objection before the council, and the council at its next meeting shall fix a time for hearing the objections; that the clerk shall notify the objectors; that the council shall hear and pass upon the objections, and its decision shall be final and conclusive; that if the objections be sustained all proceedings shall be stopped, but if overruled the proceedings shall continue. This is a remedy which the party interested should, at least in the first instance, avail himself of; and appellants not having done so, and having allowed the work to progress and to be completed without objection, cannot now be heard to make the objection which they should have made before the work commenced and at the time and in the manner prescribed in the statute, where the error, if any, could have been corrected. [Citation.]" (*Id., at p. 378.*) Thus, the court held that submitting a written objection would have satisfied the aggrieved owner's obligation to exhaust his administrative remedies. That is what Evans did here.

In *Duncan v. Ramish (1904) 142 Cal. 686, 692 [76 P. 661]*, the court observed that "where the property-owner has an opportunity given him, under the prescribed proceedings, to appear and contest the question before the legislative body, the determination of that body on the subject of benefits is final, and that if he fails to appear he thereby admits the finality of the determination." In the present case Evans was given an opportunity to register a protest pursuant to the Act by checking the appropriate box on her ballot. She not only did that but she also wrote the city council prior to its public hearing.

In *Teeter v. Los Angeles (1930) 209 Cal. 685 [290 P. 11]*, the court held that "under the Street Improvement Act of 1911, ... all protests against proposed work must be first filed and pursued before the city council, and all objections not so made shall be deemed waived." (*Id., at p. 688.*) Here Evans filed and pursued her protest to the formation of the BID before the city council; she sent in her ballot formally registering a protest and a separate letter further explaining her objections to the proposed BID.

City also argues that the protest procedure set forth in *Streets and Highways Code section 36523* is not the administrative remedy Evans was obligated to exhaust. It makes this claim in spite of the fact that no other remedies are specified in the Act. However, city claims we should infer other remedies from the following: because a public hearing [3] is required to establish a BID, and because the public *can* appear at that hearing, the public must appear if it wishes later to seek judicial review of the administrative agency's decision. (Cf. *Duncan v. Ramish, supra, 142 Cal. at p. 692.*) Under the facts of this case, we must disagree. This Act set out a specific protest procedure. Evans followed that procedure. She also wrote a letter to the city council which was received and considered prior to the public hearing. We conclude that Evans satisfied her obligations to pursue administrative remedies.

3 City actually claims that two public hearings are called for in the Act, one when the BID is established and one when the resolution of intention is passed. However, the Act does not require a public hearing for the resolution of intention. That requirement city infers from *Government Code section 54950* which generally provides that because "public commissions, boards and

> councils and the other public agencies in this State exist to aid in the conduct of the people's business[,] ... their actions be taken openly and ... their deliberations be conducted openly." Furthermore, at the hearing on the resolution of intention, "public testimony would be heard but ... limited to the scheduling of the public hearing [establishing the BID]." Thus, Evans would not have been permitted to object to the formation of the BID even if she had attended the hearing at which the resolution of intention was passed.

We therefore turn to the second issue: whether the Act and ordinance are unconstitutional on their face, at least "to the extent they purport to authorize the imposition of 'assessments' for the provision of music, decorations, promotions, etc., without a two-thirds vote of the people."

On June 6, 1978, the voters of this state passed by initiative a measure known as Proposition 13, which added article XIII A to the California Constitution. Its purpose was to provide "effective real property tax relief" to the taxpayers of California. (*Amador Valley Joint Union High Sch. Dist. v. State Board of Equalization (1978) 22 Cal.3d 208, 230 [149 Cal.Rptr. 239, 583 P.2d 1281]*.) "Article XIII A consists of four major elements, a real property *tax rate* limitation (§ 1), a real property *assessment* limitation (§ 2), a restriction on *state* taxes (§ 3), and a restriction on *local* taxes (§ 4)." (*Id., at p. 231*, italics in original.) This appeal raises the issue of whether the Act and ordinance run afoul of section 4, which places restrictions on local taxes.

Section 4 [4] of article XIII A (hereafter section 4) limits the ability of cities, counties, and special districts [5] to impose "special taxes" by requiring the district to first obtain approval of two-thirds of the qualified electors in the district. The purpose of this section is to prevent the government from recouping its losses from decreased property taxes, due to Proposition 13, by imposing or increasing other taxes. (*Huntington Park Redevelopment Agency v. Martin (1985) 38 Cal.3d 100 [211 Cal.Rptr. 133, 695 P.2d 220]*.)

> 4 That provision provides: "Cities, counties and special districts, by a two-thirds vote of the qualified electors of such district, may impose special taxes on such district, except ad valorem taxes on real property or a transaction tax or sales tax on the sale of real property within such City, County or special district."
>
> 5 In *Rider v. County of San Diego (1991) 1 Cal.4th 1 [2 Cal.Rptr.2d 490, 820 P.2d 1000]*, the Supreme Court defined "special districts" as "any local taxing agency created to raise funds for city or county purposes to replace revenues lost by reason of the restrictions of Proposition 13." (*Id., at p. 11*.)

In the present case, the Act and ordinance authorize imposition of an "assessment" for downtown promotion without requiring approval by two-thirds of the electorate. If such an assessment is a "special tax," its imposition would be unconstitutional. The remainder of this opinion deals with the question of whether an assessment for downtown promotion is a special tax or whether it is some other type of revenue-generating procedure.

Recently the Supreme Court clarified its earlier pronouncement in *City and County of San Francisco v. Farrell (1982) 32 Cal.3d 47 [184 Cal.Rptr. 713, 648 P.2d 935]*, that "special taxes" were those "levied for a specific purpose rather than ... a levy placed in the general fund to be utilized for *general governmental purposes*." It explained that that definition "would allow a municipality to recover completely any property tax revenues lost under Proposition 13 merely by enacting an alternative form of taxation, the revenues of which being earmarked for general government purposes." (*Rider v. County of San Diego, supra, 1 Cal.4th 1, 14*, citing with approval dis. opn. of Richardson, J., in *Farrell, supra.*) The *Rider* court opined that a "more reasonable interpretation of section 4, consistent with *Farrell's* [citation] guidelines, is that a 'special tax' is one levied to fund a specific governmental project or program, such as the construction and financing of the County's justice facilities." (32 Cal.3d at p. 15.)

Evans contends the Act and ordinance on their face impose a "special tax" without requiring a concurring vote of two-thirds of the electorate; therefore, she argues they violate section 4 and are unconstitutional.

We disagree. Proposition 13 generally and section 4 specifically do not apply at all to certain revenue-generating procedures employed by local governments. For example, section 4 does not embrace fees charged in connection with regulatory activities that do not exceed the reasonable cost of providing services necessary to the activity for which the fees are charged. (See e.g., *Pennell v. City of San Jose (1986) 42 Cal.3d 365, 375 [228 Cal.Rptr. 726, 721 P.2d 1111]* [ordinance may impose rental unit fee which does not exceed sum necessary to cover costs of administering prescribed hearing process]; *Trent Meridith, Inc. v. City of Oxnard (1981) 114 Cal.App.3d 317 [170 Cal.Rptr. 685]* [requirement that a subdivider either pay fees or dedicate land to a local school district to relieve conditions of overcrowding caused by the development not a special tax but rather a valid exercise of the police power]; *Mills v. County of Trinity (1980) 108 Cal.App.3d 656 [166 Cal.Rptr. 674]* [fees for county services in processing subdivision, zoning, and other land-use applications not a "special tax"

within the meaning of Proposition 13]; *Terminal Plaza Corp. v. City and County of San Francisco (1986) 177 Cal.App.3d 892, 905 [223 Cal.Rptr. 379]* [fees for land-use regulatory activities outside realm of special taxes].) Numerous statutory schemes impose fees on business entities to defray the costs of policing and regulating those activities. (See e.g., *Food & Agr. Code, § 66621 et seq.* [fees imposed on the handlers of iceberg lettuce to pay for administering Iceberg Lettuce Commission]; *Food & Agr. Code, § 65600 et seq.* [similar fees for grape growers].)

Likewise, section 4 does not apply to special assessments. (E.g., *Solvang Mun. Improvement Dist. v. Board of Supervisors (1980) 112 Cal.App.3d 545 [169 Cal.Rptr. 391]*, criticized on another ground in *City of San Diego v. Holodnak (1984) 157 Cal.App.3d 759, 763 [203 Cal.Rptr. 797]*; *County of Fresno v. Malmstrom (1979) 94 Cal.App.3d 974 [156 Cal.Rptr. 777]*; *City Council v. South (1983) 146 Cal.App.3d 320 [194 Cal.Rptr. 110]*.) Special assessments are charges imposed by a local district " ' "upon real property within a pre-determined district, made under express legislative authority for defraying in whole or in part the expense of a permanent public improvement therein ...." ' [Citation.]" (*San Marcos Water Dist. v. San Marcos Unified School Dist. (1986) 42 Cal.3d 154, 161 [228 Cal.Rptr. 47, 720 P.2d 935]*.)

The assessment on businesses for downtown promotion is not a true special assessment. [6] It is neither a charge on real property nor is its purpose to pay for permanent public improvements specifically benefitting the assessed real property. However, the fact that it is not a true special assessment does not necessarily mean it is a special tax within the meaning of section 4. The reasons the regulatory and development fee cases and the special assessment cases are exempt from the reach of Proposition 13 are the same reasons the Act and ordinance should also be exempt from its reach. With each of these cases, a discrete group receives a benefit (for example, a permit to build or inspection of produce) or a service (for example, providing and administering a rental dispute mediation and arbitration hearing process) or a permanent public improvement (such as a local park or landscaped median islands on a local road) which inures to the benefit of that discrete group. The public as a whole may be incidentally benefitted, but the discrete group is specially benefitted by the expenditure of these funds. (Cf. *City of Baldwin Park v. Stoskus (1972) 8 Cal.3d 563, 568 [105 Cal.Rptr. 325, 503 P.2d 1333, 59 A.L.R.3d 525]*; *San Diego Gas & Elec. Co. v. Sinclair (1963) 214 Cal.App.2d 778 [29 Cal.Rptr. 769]*.) The public should not be required to finance an expenditure through taxation which benefits only a small segment of the population. (Cf. *Rider v. County of San Diego, supra, 1 Cal.4th 1* [1/2 percent sales tax imposed to fund construction of justice facilities].) If it is asked to do so, it must agree by a two-thirds vote. On the other hand, where the burden for these expenditures is borne by the group specifically benefitted by them, Proposition 13 is not implicated.

6 Within a year after Proposition 13 was passed, the Legislature enacted the Parking and Business Improvement Area Law of 1979. The Parking and Business Improvement Area Law of 1965 (*Sts. & Hy. Code, § 36000 to 36081*) had referred to "taxes" for the "acquisition, construction or maintenance of parking facilities for the benefit of the area. [P] (b) Decoration of any public place in the area. [P] (c) Promotion of public events which are to take place on or in public places in the area. [P] (d) Furnishing of music in any public place in the area. [P] (e) The general promotion of retail trade activities in the area."

The 1979 Act, on the other hand, referred to "assessments" for the "acquisition, construction, or maintenance of parking facilities for the benefit of the area. [P] (b) Decoration of any public place in the area. [P] (c) Promotion of public events which are to take place on or in public places in the area. [P] (d) Furnishing of music in any public place in the area. [P] (e) The general promotion of business activities in the area." (Stats. 1979, ch. 372, § 1, p. 1246.)

The 1989 revision provides, no doubt to avoid the sweep of Proposition 13, that "Assessments levied under this part are not special taxes." (*Sts. & Hy. Code, § 36504*.) However, as the court observed in *Rider v. County of San Diego, supra, 1 Cal.4th 1*, "reliance on the Legislature's designation of the tax ... is of minor importance in light of the realities underlying its adoption and its probable object and effect. [Citation.] The statute at issue was undoubtedly drafted with section 4 ... firmly in mind." (*Id., at pp. 14-15*.)

The Legislature and city each determined that downtown businesses would be benefitted from establishment of a BID. The city specifically found "that the businesses lying within the Area will be benefitted by the expenditure of the funds raised by the assessments or charges proposed to be levied." The Mayor of San Jose wrote Evans explaining that the BID would "provide funds to make a pleasant atmosphere for Downtown residents to live" and would "attract residents and patrons," obviously to the benefit of downtown landlords and businesses. [7] The San Jose Downtown Association explained that the "objective of downtown revitalization

will remain unchanged: to give more and more San Joseans reasons to come downtown to live, work, shop and play." [8]

7 Evans emphasized that she was making a facial attack on the Act and ordinance and that the issue of benefit to her, therefore, need not be reached. We observe, nevertheless, that the potential benefit to her from downtown revitalization was extraordinary; she stated she had only a 25 percent occupancy rate.

8 Likewise, the Legislature declared in section 3 that the Act "is an urgency statute necessary for the immediate preservation of the public peace, health, or safety within the meaning of Article IV and shall go into immediate effect. The facts constituting such necessity are: [P] Parking and business improvement areas provide vital services which are necessary for the benefit of the business and commercial activity of the state. In order for these vital services not to be discontinued because of a lack of revenue, it is necessary that this act take effect immediately." (Stats. 1979, ch. 372, § 3, p. 1250.)

The Act challenged here is neither a true regulatory fee nor a true special assessment. Nevertheless it is analogous to those other schemes which impose the financial burden for a special benefit upon the person or entity receiving that benefit. The City of San Jose and the Legislature have determined that downtown promotion inures to the benefit of businesses and landlords within the BID because the funds are used to make the downtown area a safer, cleaner, and more economically viable area. Under these circumstances, where the business license holder is specially benefitted, we hold that the assessment is not a "special tax" as contemplated by article XIII A of the California Constitution.

For the foregoing reasons and not because Evans failed to exhaust her administrative remedies, the judgment is affirmed. Costs on appeal to respondent.

Capaccioli, Acting P. J., and Premo, J., concurred.

Appellant's petition for review by the Supreme Court was denied April 29, 1992.

OPINION

The City and County of San Francisco (City) has a long-standing practice of granting to private entities what amounts to an exclusive franchise to collect refuse. The issue presented is whether the City's authority to enter into this type of arrangement survived passage of the California Integrated Waste Management Act of 1989. [1] We conclude that the City still has the power to grant an exclusive refuse collection permit.

1 This enactment (which shall be cited hereinafter as the Waste Management Act or the Act) comprises Division 30 ("Waste Management") commencing with *section 40000 of the Public Resources Code*. Subsequent statutory references are to this code unless otherwise indicated.

BACKGROUND

In November of 1932 the voters of San Francisco adopted an initiative measure entitled the Refuse Collection and Disposal Ordinance (Ordinance). [2] It divides the City into 97 "routes for the collection of refuse." Permits to collect or dispose of refuse from each of these routes are issued by the City's director of public health. Since the 1930's the only permit recipients have been Golden Gate Disposal Company and Sunset Scavenger Company (or their predecessors in interest), which are subsidiaries of Norcal Solid Waste Systems, Inc. As a general proposition, they alone are authorized to collect, transport, or dispose of "refuse," which the Ordinance comprehensively defines as "all waste and discarded materials from dwelling places, households, apartment houses, stores, office buildings, restaurants, hotels, institutions and all commercial establishments, including waste or discarded food, animal and vegetable matter from all kitchens thereof, waste paper, cans, glass, ashes, and boxes and cuttings from trees, lawns and gardens." [3] A permit is not, however, required for the collection, transportation,

or disposal of "waste paper or other refuse having a commercial value."

2 The Ordinance, which was subsequently amended in 1946, 1954, and 1960, appears as appendix A to the City's charter.

3 Excluded from the definition of refuse are "debris and waste construction materials, including wood, brick, plaster, glass, cement, wire, and other ferrous materials, derived from the construction of or the partial or total demolition of buildings or other structures."

The Ordinance--most recently amended in 1960--makes no mention of recycling which generated this litigation. Initially and primarily concerned with the collection of construction debris excluded from the Ordinance's definition of refuse (see fn. 3, *ante*), and having been blocked in their efforts to enter the recycling field, plaintiffs Waste Resource Technologies and L & K Debris Box Service, Inc., sought an injunction allowing "the collection and recycling, for a fee, of commercially valuable 'dry waste', consisting of cardboard, newspaper and other paper products, plastic bottles, sheet plastic, metal products, Styrofoam packing waste, discarded wood, and other similar commercially valuable materials."

Extensive proceedings before the trial court culminated with entry of a final judgment denying injunctive relief to plaintiffs but granting it to Norcal's subsidiaries; [4] plaintiffs were permanently restrained from soliciting, contracting, collecting, or transporting "refuse, as defined in . . . the . . . Ordinance," for a fee. Plaintiffs thereafter perfected this timely appeal.

4 A third Norcal subsidiary, Sanitary Fill Company, became a party during the course of proceedings in the trial court. It describes itself as owner and operator of "a transfer station . . . where in excess of 600,000 tons of refuse" collected annually by Golden Gate and Sunset Scavenger are processed and transported to the City's landfill site.

REVIEW

Plaintiffs attack the judgment with an array of challenges to the City's power under the Ordinance to grant and enforce an exclusive permit system which prevents plaintiffs from continuing their collection and recycling operations. Mustering a number of arguments derived from provisions of the Waste Management Act, which they claim gives them a right to collect and recycle discarded materials not within its definition of solid waste, plaintiffs contend that the City's exclusivity arrangements are now prohibited by state law. The premise for these arguments is that the Ordinance is preempted by the Act. Turning to the permit exemption the Ordinance gives to "waste paper or other refuse having commercial value," plaintiffs claim that the City's interpretation of this language has been unreasonable and arbitrary. Lastly, plaintiffs submit that if the City's course of action does not run afoul of the Waste Management Act, it nevertheless exceeds the City's police powers and thus infringes constitutional rights belonging to plaintiffs and those who contract for plaintiffs' services. Plaintiffs also contend that, as to them, the City should be deemed estopped from its enforcement of the Ordinance.

Because it proves largely dispositive of these arguments, the preemption issue will be addressed first.

I

The City has constitutional authorization to "make and enforce within its limits all local, police, sanitary, or other ordinances and regulations not in conflict with general laws." (*Cal. Const., art. XI, § 7.*) Prior to passage of the Waste Management Act, a substantial body of law upheld the police power of a municipality or unit of local government to legislate on the issue of refuse. [5] Equally well established was the concomitant right to grant an exclusive franchise or permit for refuse collection. (E.g., *Reduction Company v. Sanitary Works (1905) 199 U.S. 306, 316-317 [50 L.Ed. 204, 208-209, 26 S.Ct. 100]*; *In re Zhizhuzza (1905) 147 Cal. 328, 335 [81 P. 955]*; *Matula v. Superior Court (1956) 146 Cal.App.2d 93, 98-99 [303 P.2d 871]*; *Ponti v. Burastero (1952) 112 Cal.App.2d 846, 851-853 [247 P.2d 597]*; *Davis v. City of Santa Ana (1952) 108 Cal.App.2d 669, 676-677 [239 P.2d 656]*; *In re Sozzi (1942) 54 Cal.App.2d 304, 306 [129 P.2d 40]*; 7 McQuillin, Law of Municipal Corporations (3d ed. 1989) § 24.242, 24.245, 24.249-24.251.)

5 For the moment, we use "refuse" as an inclusive generic having no different meaning from other, equally familiar terms (e.g., trash, garbage, rubbish, etc.).

Preemption can be either express or implied. The Waste Management Act does not include anything like the plain language needed for express preemption. [6] Preemption by implication exists when the scope or the goal of state legislation necessitates the abrogation of local regulation. This is what plaintiffs obliquely contend has been done to the Ordinance by the Act. The governing principles are familiar and fixed:

6 Such as "The Legislature . . . finds that divergent and competing local tax measures imposed on financial corporations impair the uniform statewide regulation of banks and financial corporations. For this reason . . . the Legislature declares that the state, by this amendment, has pre-

empted such local taxation" (Stats. 1979, ch. 1150, § 20, p. 4220) and "It is the intent of the Legislature that this article preempt all local regulations . . . concerning the transportation of hazardous waste . . .. No state agency, city, city and county, county, or other political subdivision of this state, including, but not limited to, a chartered city, city and county, or county, shall adopt or enforce any ordinance or regulation which is inconsistent with the rules and regulations adopted . . . pursuant to this article." (*Health & Saf. Code, § 25167.3.*)

For additional examples of state legislation held to oust local efforts, see *In re Murphy (1923) 190 Cal. 286, 288 [212 P. 30]*; *Ex parte Daniels (1920) 183 Cal. 636, 641 [192 P. 442, 21 A.L.R. 1172]*.

"In determining whether the Legislature has preempted by implication to the exclusion of local regulation we must look to the whole purpose and scope of the legislative scheme. There are three tests: '(1) the subject matter has been so fully and completely covered by general law as to clearly indicate that it has become exclusively a matter of state concern; (2) the subject matter has been partially covered by general law couched in such terms as to indicate clearly that a paramount state concern will not tolerate further or additional local action; or (3) the subject matter has been partially covered by general law, and the subject is of such a nature that the adverse effect of a local ordinance on the transient citizens of the state outweighs the possible benefit to the municipality.' . . . [P] Preemption by implication of legislative intent may not be found when the Legislature has expressed its intent to permit local regulations. Similarly, it should not be found when the statutory scheme recognizes local regulations." (*People* ex rel. *Deukmejian v. County of Mendocino (1984) 36 Cal.3d 476, 485 [204 Cal.Rptr. 897, 683 P.2d 1150]* [citations omitted]; accord, *IT Corp.* v. *Solano County Bd. of Supervisors (1991) 1 Cal.4th 81, 90-91, 94 [2 Cal.Rptr.2d 513, 820 P.2d 1023]* [text & fn. 10].)

The purposes of the Waste Management Act are "to reduce, recycle, and reuse solid waste generated in the state to the maximum extent feasible in an efficient and cost-effective manner to conserve water, energy and other natural resources, to protect the environment, to improve regulation of existing solid waste landfills, to ensure that new solid waste landfills are environmentally sound, to improve permitting procedures for solid waste management facilities, and to specify the responsibilities of local governments to develop and implement integrated waste management programs" (§ 40052). Diminishing landfill space was a particular concern. (See *§ 40000, 41780, 42861, 42870-42871, 46001.*)

The Legislature intended to establish a "comprehensive program for solid waste management" (§ 40002) and the purview of the Waste Management Act is indeed broad, extending to what is done with "metallic discards" (§ 42160-42165), a variety of paper products (§ 42200-42222, 42550-42563, 42750-42791), composted materials (§ 42230-42247), plastics (§ 42300-42380), retreaded tires (§ 42400-42416), lead-acid and household batteries (§ 42440-42450), household hazardous waste (§ 47000-47550), and oil (§ 48600-48691).

The Act reconstituted a state Integrated Waste Management Board (§ 40400-40510) with the power to adopt "minimum standards" for solid waste handling and disposal (§ 43020; see § 40502). This board has many responsibilities, among which are approving the integrated waste management plans that all cities and counties must prepare (§ 41750, 41800), regulating closed and active landfills (§ 43500-43606, 46000-46507), and administering a fund taking in $20 million annually (§ 47900-48008; see § 46801). The board is also vested with the power to enforce the Act using a number of corrective actions (e.g., cease-and-desist orders, cleanup orders, civil penalties) (§ 43300, 45000-45201).

But if the scope of the Waste Management Act is broad, it was not achieved by elbowing local government off the stage. Quite the contrary, the Legislature expressly declared that ". . . the responsibility for solid waste management is a shared responsibility between the state and local governments" (§ 40001, subd. (a)), and that local governmental responsibilities "are integral to the successful implementation" of the Act (§ 40703, subd. (a)). There are numerous provisions directing the state board to consult and coordinate with local governmental agencies (§ 40703, 40914, 43301, 43307) and provide them with myriad types of assistance and information (§ 40001, subd. (b), 40910, 41791.2, 42500, 42501, 42511, 42540, 42600, subds. (e)-(f), 42650, 43217, 47003, 47103). It is the cities and counties, each of which must designate a "local enforcement agency," that have the primary responsibility for policing the Act, with the state board providing oversight (§ 43200-43309, 44001-44018, 44100-44106, 44300-44817, 45000-45407).

In order to sustain plaintiffs' preemption claim, we would have to conclude that with passage of the Waste Management Act the state's entry into the field of refuse collection and disposal is so overshadowing that it obliterates all vestiges of local power as to a subject where municipalities have traditionally enjoyed a broad measure of autonomy. The difficulties to such a conclusion are simply too great.

It should be apparent from the preceding statutory survey that the Waste Management Act looks to a part-

nership between the state and local governments, with the latter retaining a substantial measure of regulatory independence and authority. When the Legislature wanted to forbid local initiatives, it knew and used language appropriate to that goal in the Act. [7] The very narrow express quashing of local power in the Act undermines plaintiffs' claim of implied preemption. (See *IT Corp.* v. *Solano County Bd. of Supervisors, supra, 1 Cal.4th 81 at pp. 94-95.*)

> 7 The conspicuously unique flat taboo in the Waste Management Act is section 43208, which provides that ". . . no local governing body may enact, issue, enforce, suspend, revoke, or modify any ordinance, regulation, law, license, or permit . . . so as to prohibit or unreasonably regulate the operation of, or the disposal, treatment, or recovery of resources from solid wastes" by a specified type of facility.

In addition, much in the Waste Management Act indicates that the Legislature did not intend a wholesale preclusion of political subdivisions' regulatory power. There are many provisions attesting to the Legislature's desire to have state and local authorities work together in a cooperative effort. The Act leaves unimpaired local authority to "impose and enforce reasonable land use conditions or restrictions on solid waste management facilities" (§ 40053; see § 41851, 42023, 43208). It also includes an express grant of authority for local government to legislate increased penalties for unauthorized removal of specified materials (§ 41954). Moreover, the provision directing the state board to promulgate "minimum standards for solid waste handling . . . and disposal" (§ 43020) clearly suggests the possibility of local governments adopting additional standards. This also weighs against implied preemption. (See *Candid Enterprises, Inc.* v. *Grossmont Union High School Dist. (1985) 39 Cal.3d 878, 886-888 [218 Cal.Rptr. 303, 705 P.2d 876].*)

Courts "will be reluctant to infer legislative intent to preempt a field covered by municipal regulation when there is a significant local interest to be served that may differ from one locality to another." (*Fisher v. City of Berkeley (1984) 37 Cal.3d 644, 707 [209 Cal.Rptr. 682, 693 P.2d 261].*) The Waste Management Act was in large measure a consolidation and recodification of existing law. (See Stats. 1989, ch. 1095, § 32, pp. 3899-3900; Legis. Counsel's Dig., Assem. Bill No. 939, 4 Stats. 1989 (Reg. Sess.) Summary Dig., p. 409.) Prior to its passage courts accepted that, state legislation notwithstanding, the dominant role in refuse handling belonged to localities. (E.g., *City of Fresno v. Pinedale County Water Dist. (1986) 184 Cal.App.3d 840, 847 [229 Cal.Rptr. 275]*; *Matula v. Superior Court, supra, 146 Cal.App.2d at pp. 99-101.*) The antecedent statutes were viewed as acknowledging that allowance had to be made for "the unique circumstances of individual communities" and that the Legislature had therefore "empowered local governments to adopt refuse regulations which would best serve the local public interest." (*City of Camarillo v. Spadys Disposal Service (1983) 144 Cal.App.3d 1027, 1031 [193 Cal.Rptr. 22].*)

It is self-evident that the way in which Los Angeles deals with refuse may be entirely different from the approach of a small rural town. Provisions of the Waste Management Act demonstrate that the Legislature took account of this reality. It knew that factors such as geography and population density might require a different approach (see § 40973, 41782, 42500, 46203). Local conditions transcending city or county boundaries might require collection and disposal to be handled on a regional basis, and the Legislature encouraged such efforts (see § 40001, subd. (b), 40002, 41791.2). It therefore made provision in the Act for the creation and operation of regional agencies (§ 40970-40975), garbage disposal districts (§ 49000-49050), and garbage and refuse disposal districts (§ 49100-49195).

Touching all of these points, and close to being dispositive by itself, is section 40059 (Government Code former section 66757). Given its importance, it deserves quotation in full:

"(a) Notwithstanding any other provision of law, each county, city, [8] district or other local governmental agency may determine all of the following:

> 8 As the state's sole city and county, San Francisco qualifies as both a city and a county for purposes of the Waste Management Act (§ 40115).

"(1) Aspects of solid waste handling which are of local concern, including, but not limited to, frequency of collection, means of collection and transportation, level of services, charges and fees, and nature, location, and extent of providing solid waste handling services.

"(2) Whether the services are to be provided by means of nonexclusive franchise, contract, license, permit, or otherwise, either with or without competitive bidding, or if, in the opinion of its governing body, the public health, safety, and well-being so require, by partially exclusive or wholly exclusive franchise, contract, license, permit, or otherwise, either with or without competitive bidding. The authority to provide solid waste handling services may be granted under terms and conditions prescribed by the governing body of the local governmental agency by resolution or ordinance.

"(b) Nothing in this division modifies or abrogates in any manner either of the following:

"(1) Any franchise previously granted or extended by any county or other local governmental agency.

"(2) Any contract, license, or any permit to collect solid waste previously granted or extended by a city, county, or a city and county."

A number of conclusions--all of which are adverse to plaintiffs--can be extracted from this statute. First, the Legislature recognized that not every aspect of the solid waste problem could be handled in the Waste Management Act; the infinite details of actual day-to-day operations could not be resolved in Sacramento. Second, the Legislature further recognized that those details should more appropriately be specified by local authorities with greater knowledge of local conditions. Third, the Legislature made express provision for this element of local regulation. Fourth, the Legislature left local authorities the option of deciding that local circumstances attending solid waste handling would be best served by an exclusive service. [9] The gist of these conclusions is the Legislature's considered opinion that there was no need for statewide uniformity which outweighed the advantages of local governments retaining the power to handle problems peculiar to their communities.

9 The trial court had before it evidence that most local governments in California have opted for exclusive garbage collection arrangements. The fact that 78 municipalities appear as amici in support of the City tends to show that the practice is indeed widespread.

We do not believe that the Waste Management Act represents a fundamental change in the Legislature's traditional outlook towards the subject of waste handling. Section 40059--as well as the entire scope of the Act--establishes the Legislature's awareness that " 'substantial[] geographic, economic, ecological or other distinctions are persuasive of the need for local control' " and thus precludes the subject from being " 'comprehensively dealt with at the state level.' " (*Galvan v. Superior Court (1969) 70 Cal.2d 851, 863-864 [76 Cal.Rptr. 642, 452 P.2d 930]*.) Beyond question, the Act not only anticipates and tolerates, but as a practical matter demands, supplementary local regulation to spell out the details of solid waste collection and disposal. This is "convincing evidence that the state legislative scheme was not intended to occupy the field." (*IT Corp.* v. *Solano County Bd. of Supervisors, supra, 1 Cal.4th at p. 94, fn. 10.*) These factors demonstrate that there is no exclusive or even paramount state concern which requires disabling traditional local power in this area. There being no argument made concerning the impact upon transient citizens, not one of the three tests for implied preemption is satisfied. We find no legislative intent to displace deeply entrenched local authority. (See *City of Dublin v. County of Alameda (1993) 14 Cal.App.4th 264, 275-279 [17 Cal.Rptr.2d 845]*.) Moreover, we conclude that the City's Ordinance harmonizes with the Waste Management Act and furthers its purpose.

II

With the preemption issue decided, plaintiffs' remaining contentions are very easily resolved.

Plaintiffs' arguments construing various provisions of the Waste Management Act look to finding statutory authorization for their conduct. The jumping-off point for all of these creative arguments is the premise that the Ordinance, having been preempted, is no longer a factor. But because the Ordinance is not preempted, it is the governing authority; it is the Act which has become irrelevant.

As for plaintiffs' claim that the materials they wish to collect do not pose a genuine threat to public health or safety and thus are beyond the reach of municipal police power, the City's contrary determination is to be taken as "well-nigh conclusive." (*Berman v. Parker (1954) 348 U.S. 26, 32 [99 L.Ed. 27, 37, 75 S.Ct. 98]*.) The factors explored in the following paragraphs support the plausibility of that determination, which must therefore be upheld. (E.g., *Miller v. Board of Public Works (1925) 195 Cal. 477, 490 [234 P. 381, 38 A.L.R. 1479]*; *Ex parte Lacey (1895) 108 Cal. 326, 328-329 [41 P. 411]*.) Once that is done, the subject matter nestles comfortably within the City's valid police powers. (E.g., *City of Fresno v. Pinedale County Water Dist., supra, 184 Cal.App.3d at p. 847.*) Those powers, which have been described as "whatever will promote the peace, comfort, convenience, and prosperity" of the City's citizens (*Escanaba Co.* v. *Chicago (1882) 107 U.S. 678, 683 [27 L.Ed. 442, 445, 2 S.Ct. 185]*) should "not be lightly limited." (*Miller v. Board of Public Works, supra, at pp. 484-485.*) They are presumed exercised in good faith and a constitutional manner. (E.g., *Ex parte Hadacheck (1913) 165 Cal. 416, 421-422 [132 P. 584]*; *Barenfeld v. City of Los Angeles (1984) 162 Cal.App.3d 1035, 1040 [209 Cal.Rptr. 8]*.) Plaintiffs have not established otherwise.

An ordinance enacted pursuant to a municipality's police powers may be nullified if palpably unreasonable, arbitrary, or capricious. (E.g., *Barenfeld v. City of Los Angeles, supra, 162 Cal.App.3d at p. 1040*; *Brix v. City of San Rafael (1979) 92 Cal.App.3d 47, 50-51 [154 Cal.Rptr. 647]*.) As previously mentioned, the Ordinance requires no permit for collection and disposal of "waste paper or other refuse having a commercial value." The city attorney initially interpreted "commercial value"

from the standpoint of the collector of the refuse, but since 1964 has advised that "commercial value" should be viewed from the vantage point of the producer of the refuse. The City demonstrated that the different perspectives are intrinsically linked and are in fact somewhat circular. In brief, it has shown that the economic advantages accruing from exclusivity result in lower charges (for residential as opposed to commercial users) and increased efficiency in a number of programs (e.g., a curbside recycling program) that benefit refuse producers. [10] Although reasonable minds could differ as to the wisdom of the policy behind it, the City's revised interpretation is now of long duration and must be respected as not unreasonable, arbitrary, or capricious. (E.g., *Miller v. Board of Public Works, supra, 195 Cal. 477 at p. 490*; *DeYoung v. City of San Diego (1983) 147 Cal.App.3d 11, 18 [194 Cal.Rptr. 722]*.)

10 It would not be improper for the City to think that new entrants into the waste field would be inimical to the public good by hindering efficient and effective enforcement of the Ordinance. (See *City of Fresno v. Pinedale County Water Dist., supra, 184 Cal.App.3d 840, 847*; *Sievert v. City of National City (1976) 60 Cal.App.3d 234, 237 [131 Cal.Rptr. 358]*.)

Plaintiffs submit that the ordinance violates their "explicit constitutional property rights . . . to work and earn a living from any legitimate business pursuit." Although plaintiffs are probably not entitled to argue that the manner in which the City enforces the Ordinance infringes upon the rights of plaintiffs' once and future customers to acquire, possess, protect, and dispose of property (see *In re Cregler (1961) 56 Cal.2d 308, 313 [14 Cal.Rptr. 289, 363 P.2d 305]*), we will reach the merits because they are so clear-cut. It having already been shown that the Ordinance may be validly enforced as within the City's police powers, long-established authority holds that intrusions upon property incidental to the exercise of those powers, are accepted as *damnum absque injuria*. (E.g., *Reduction Company v. Sanitary Works*, *supra*, 199 U.S. 306, 324-325 [50 L.Ed.2d 204, 212-213]; *In re Zhizhuzza, supra, 147 Cal. at p. 335*; *In re Pedrosian (1932) 124 Cal.App. 692, 700-701 [13 P.2d 389]*.) As stated by our Supreme Court, ". . . the very essence of the police power . . . is that the deprivation of individual rights and property cannot prevent its operation" (*Beverly Oil Co. v. City of Los Angeles (1953) 40 Cal.2d 552, 557 [254 P.2d 865]*).

As for plaintiffs' estoppel argument, we will not address the merits of this factual issue which is unveiled here for the first time. (See *California Teachers' Assn. v. Governing Board (1983) 145 Cal.App.3d 735, 746 [193 Cal.Rptr. 650]*; *Coast Electric Co. v. Industrial Indemnity Co. (1983) 144 Cal.App.3d 879, 886, fn. 3 [193 Cal.Rptr. 74]*.)

The judgment is affirmed.

Anderson, P. J., and Reardon, J., concurred.

OPINION

ELIA, J.

In this "reverse validation" action, plaintiff taxpayers challenged a storm drainage fee imposed by the City of Salinas. Plaintiffs contended that the fee was a "property-related" fee requiring voter approval, pursuant to *California Constitution, article XIII D, section 6, subdivision (c)*, which was added by the passage of Proposition 218. The trial court ruled that the fee did not violate this provision because (1) it was not a property-related fee and (2) it met the exemption for fees for sewer and water services. We disagree with the trial court's conclusion and therefore reverse the order.

BACKGROUND

In an effort to comply with the 1987 amendments to the federal Clean Water Act (*33 U.S.C. § 1251 et seq.*; *40 C.F.R. § 122.26(a) et seq. (2001)*), the Salinas City Council took measures to reduce or eliminate pollutants contained in storm water, which was channeled in a drainage system separate from the sanitary and industrial waste systems. On June 1, 1999, the city council enacted two ordinances to fund and maintain the compliance program. These measures, ordinance Nos. 2350 and 2351, added former chapters 29 and 29A, respectively, to the Salinas City Code. Former section 29A-3 allowed the city council to adopt a resolution imposing a "Storm Water Management Utility fee" to finance the improvement of storm and surface water management facilities. The fee would be imposed on "users of the storm water drainage system."

On July 20, 1999, the city council adopted resolution No. 17019, which established rates for the storm and surface water management system. The resolution specifically states: "There is hereby imposed on each and every developed parcel of land within the City, and the owners and occupiers thereof, jointly and severally, a storm drainage fee." The fee was to be paid annually to the City "by the owner or occupier of each and every developed parcel in the City who shall be presumed to be the primary utility rate payer . . . ." The amount of the fee was to be calculated according to the degree to which the property contributed runoff to the City's drainage facilities. That contribution, in turn, would be measured by the amount of "impervious area" [1] on that parcel.

1 "Impervious Area," according to resolution No. 17019, is "any part of any developed parcel

> of land that has been modified by the action of persons to reduce the land's natural ability to absorb and hold rainfall. This includes any hard surface area which either prevents or retards the entry of water into the soil mantle as it entered under natural conditions pre-existent to development, and/or a hard surface area which causes water to run off the surface in greater quantities or at an increased rate of flow from the flow present under natural conditions pre-existent to development."

Undeveloped parcels--those that had not been altered from their natural state--were not subject to the storm drainage fee. In addition, developed parcels that maintained their own storm water management facilities or only partially contributed storm or surface water to the City's storm drainage facilities were required to pay in proportion to the amount they did contribute runoff or used the City's treatment services.

On September 15, 1999, plaintiffs filed a complaint under *Code of Civil Procedure section 863* to determine the validity of the fee. [2] Plaintiffs alleged that this was a property-related fee that violated *article XIII D, section 6, subdivision (c), of the California Constitution* because it had not been approved by a majority vote of the affected property owners or a two-thirds vote of the residents in the affected area. The trial court, however, found this provision to be inapplicable on two grounds: (1) the fee was not "property related" and (2) it was exempt from the voter-approval requirement because it was "related to" sewer and water services.

> 2 Plaintiffs are the Howard Jarvis Taxpayers Association, the Monterey Peninsula Taxpayers Association, and two resident property owners.

DISCUSSION

Article XIII D was added to the California Constitution in the November 1996 election with the passage of Proposition 218, the Right to Vote on Taxes Act. Section 6 of article XIII D [3] requires notice of a proposed property-related fee or charge and a public hearing. If a majority of the affected owners submit written protests, the fee may not be imposed. (§ 6, subd. (a)(2).) The provision at issue is section 6, subdivision (c) (hereafter section 6(c)), which states, in relevant part: "Except for fees or charges for sewer, water, and refuse collection services, no property-related fee or charge shall be imposed or increased unless and until that fee or charge is submitted and approved by a majority vote of the property owners of the property subject to the fee or charge or, at the option of the agency, by a two-thirds vote of the electorate residing in the affected area."

> 3 All further unspecified section references are to article XIII D of the California Constitution.

Section 2 defines a "fee" under this article as a levy imposed "upon a parcel or upon a person as an incident of property ownership, including a user fee or charge for a property-related service." (§ 2, subd. (e).) A "property-related service" is "a public service having a direct relationship to property ownership." (§ 2, subd. (h).) The City maintains that the storm drainage fee is not a property-related fee, but a "user fee" which the property owner can avoid simply by maintaining a storm water management facility on the property. Because it is possible to own property without being subject to the fee, the City argues this is not a fee imposed "as an incident of property ownership" or "for a property-related service" within the meaning of section 2.

We cannot agree with the City's position. Resolution No. 17019 plainly established a property-related fee for a property-related service, the management of storm water runoff from the "impervious" areas of each parcel in the City. The resolution expressly stated that "each owner and occupier of a developed lot or parcel of real property within the City, is served by the City's storm drainage facilities" and burdens the system to a greater extent than if the property were undeveloped. Those owners and occupiers of developed property "should therefore pay for the improvement, operation and maintenance of such facilities." Accordingly, the resolution makes the fee applicable to "*each and every developed parcel* of land within the City." (Italics added.) This is not a charge directly based on or measured by use, comparable to the metered use of water or the operation of a business, as the City suggests. (See *Apartment Assn. of Los Angeles County, Inc. v. City of Los Angeles (2001) 24 Cal. 4th 830, 838 [102 Cal. Rptr. 2d 719, 14 P.3d 930]* [art. XIII D inapplicable to inspection fee imposed on private landlords; *Howard Jarvis Taxpayers Assn. v. City of Los Angeles (2000) 85 Cal. App. 4th 79 [101 Cal. Rptr. 2d 905]* [water usage rates are not within the scope of art. XIII D].)

The "Proportional Reduction" clause on which the City relies does not alter the nature of the fee as property related. [4] A property owner's operation of a private storm drain system reduces the amount owed to the City to the extent that runoff into the City's system is reduced. The fee nonetheless is a fee for a public service having a direct relationship to the ownership of developed property. The City's characterization of the proportional reduction as a simple "opt-out" arrangement is misleading, as it suggests the property owner can avoid the fee altogether by declining the service. Furthermore, the reduction is not proportional to the amount of services requested or used by the occupant, but on the physical properties of the parcel. Thus, a parcel with a large "impervious area"

(driveway, patio, roof) would be charged more than one consisting of mostly rain-absorbing soil. Single-family residences are assumed to contain, on average, a certain amount of impervious area and are charged $ 18.66 based on that assumption.

4 According to the public works director, proportional reductions were not anticipated to apply to a large number of people.

Proposition 218 specifically stated that "[t]he provisions of this act shall be liberally construed to effectuate its purposes of limiting local government revenue and enhancing taxpayer consent." (Prop. 218, § 5; reprinted at Historical Notes, 2A West's Ann. Cal.Const. (2002 supp.) foll. art. XIII C, p. 38 [hereafter Historical Notes].) We are obligated to construe constitutional amendments in accordance with the natural and ordinary meaning of the language used by the framers--in this case, the voters of California--in a manner that effectuates their purpose in adopting the law. (*Amador Valley Joint Union High Sch. Dist. v. State Bd. of Equalization (1978) 22 Cal. 3d 208, 244-245 [149 Cal. Rptr. 239, 583 P.2d 1281]*; *Arden Carmichael, Inc. v. County of Sacramento (2000) 93 Cal. App. 4th 507, 514-515 [113 Cal. Rptr. 2d 248]*; *Board of Supervisors v. Lonergan (1980) 27 Cal. 3d 855, 863 [167 Cal. Rptr. 820, 616 P.2d 802].*) To interpret the storm drainage fee as a use-based charge would contravene one of the stated objectives of Proposition 218 by "frustrat[ing] the purposes of voter approval for tax increases." (Prop. 218, § 2.) We must conclude, therefore, that the storm drainage fee "burden[s] landowners *as landowners*," and is therefore subject to the voter-approval requirements of article XIII D unless an exception applies. (*Apartment Assn. of Los Angeles County, Inc. v. City of Los Angeles, supra, 24 Cal. 4th at p. 842.*)

EXCEPTION FOR "SEWER" OR "WATER" SERVICE

As an alternative ground for its decision, the trial court found that the storm drainage fee was "clearly a fee related to 'sewer' and 'water' services." The exception in section 6(c) applies to fees "for sewer, water, and refuse collection services." Thus, the question we must next address is whether the storm drainage fee was a charge *for* sewer service or water service.

The parties diverge in their views as to whether the reach of *California Constitution, article XIII D, section 6(c)* extends to a storm drainage system as well as a sanitary or industrial waste sewer system. The City urges that we rely on the "commonly accepted" meaning of "sewer," noting the broad dictionary definition of this word. [5] The City also points to *Public Utilities Code section 230.5* and the Salinas City Code, which describe storm drains as a type of sewer. [6]

5 Webster's Third New International Dictionary, for example, defines "sewer" as "1: a ditch or surface drain 2: an artificial usu. subterranean conduit to carry off water and waste matter (as surface water from rainfall, household waste from sinks or baths, or waste water from industrial works)." (Webster's 3d New Internat. Dict. (1993) p. 2081.) The American Heritage Dictionary also denotes the function of "carrying off sewage or rainwater." (American Heritage College Dict. (3d ed. 1997) p. 1248.) On the other hand, the Random House Dictionary of the English Language (2d ed. 1987) page 1754, does not mention storm or rainwater in defining "sewer" as "an artificial conduit, usually underground, for carrying off waste water and refuse, as in a town or city."

6 *Public Utilities Code section 230.5* defines "Sewer system" to encompass all property connected with "sewage collection, treatment, or disposition for sanitary or drainage purposes, including . . . all drains, conduits, and outlets for surface or storm waters, and any and all other works, property or structures necessary or convenient for the collection or disposal of sewage, industrial waste, or surface or storm waters." Salinas City Code section 36-2, subdivision (31) defines "storm drain" as "a sewer which carries storm and surface waters and drainage, but which excludes sewage and industrial wastes other than runoff water."

Plaintiffs "do not disagree that storm water is carried off in storm sewers," but they argue that we must look beyond mere definitions of "sewer" to examine the legal meaning in context. Plaintiffs note that the storm water management system here is distinct from the sanitary sewer system and the industrial waste management system. Plaintiffs' position echoes that of the Attorney General, who observed that several California statutes differentiate between management of storm drainage and sewerage systems. [7] *(81 Ops.Cal.Atty.Gen. 104, 106 (1998).)* Relying extensively on the Attorney General's opinion, plaintiffs urge application of a different rule of construction than the plain-meaning rule; they invoke the maxim that "if a statute on a particular subject omits a particular provision, inclusion of that provision in another related statute indicates an intent [that] the provision is not applicable to the statute from which it was omitted." (*In re Marquis D. (1995) 38 Cal. App. 4th 1813, 1827 [46 Cal. Rptr. 2d 198].*) Thus, while section 5, which addresses assessment procedures, refers to exceptions specifically for "*sewers*, water, flood control, [and] *drainage sys-*

tems" (italics added), the exceptions listed in section 6(c) pertain only to "sewer, water, and refuse collection services." Consequently, in plaintiffs' view, the voters must have intended to exclude drainage systems from the list of exceptions to the voter-approval requirement.

> 7 For example, *Government Code section 63010* specifies "storm sewers" in delimiting the scope of " '[d]rainage,' " while separately identifying the facilities and equipment used for " '[s]ewage collection and treatment.' " (*Gov. Code, § 63010, subd. (q)(3), (10).*) *Government Code section 53750*, part of the Proposition 218 Omnibus Implementation Act, explains that for purposes of articles XIII C and article XIII D " '[d]rainage system' " means "any system of public improvements that is intended to provide for erosion control, landslide abatement, or for other types of water drainage." *Health and Safety Code section 5471* sets forth government power to collect fees for "services and facilities . . . in connection with its water, sanitation, storm drainage, or sewerage system."

The statutory construction principles invoked by both parties do not assist us. The maxim proffered by plaintiffs, "although useful at times, is no more than a rule of reasonable inference" and cannot control over the lawmakers' intent. (*California Fed. Savings & Loan Assn. v. City of Los Angeles (1995) 11 Cal. 4th 342, 350 [45 Cal. Rptr. 2d 279, 902 P.2d 297]*; *Murillo v. Fleetwood Enterprises, Inc. (1998) 17 Cal. 4th 985, 991 [73 Cal. Rptr. 2d 682, 953 P.2d 858]*.) On the other hand, invoking the plain-meaning rule only begs the question of whether the term "sewer services" was intended to encompass the more specific sewerage with which most voters would be expected to be familiar, or all types of systems that use sewers, including storm drainage and industrial waste. The popular, nontechnical sense of sewer service, particularly when placed next to "water" and "refuse collection" services, suggests the service familiar to most households and businesses, the sanitary sewerage system.

We conclude that the term "sewer services" is ambiguous in the context of both section 6(c) and Proposition 218 as a whole. We must keep in mind, however, the voters' intent that the constitutional provision be construed liberally to curb the rise in "excessive" taxes, assessments, and fees exacted by local governments without taxpayer consent. (Prop. 218, §§ 2, 5; reprinted at Historical Notes, *supra*, p. 38.) Accordingly, we are compelled to resort to the principle that exceptions to a general rule of an enactment must be strictly construed, thereby giving "sewer services" its narrower, more common meaning applicable to sanitary sewerage. [8] (Cf. *Estate of Banerjee (1978) 21 Cal. 3d 527, 540 [147 Cal. Rptr. 157, 580 P.2d 657]*; *City of Lafayette v. East Bay Mun. Utility Dist. (1993) 16 Cal. App. 4th 1005 [20 Cal. Rptr. 2d 658]*.)

> 8 Sanitary sewerage carries "putrescible waste" from residences and businesses and discharges it into the sanitary sewer line for treatment by the Monterey Regional Water Pollution Control Agency. (Salinas City Code, § 36-2, subd. (26).)

The City itself treats storm drainage differently from its other sewer systems. The stated purpose of ordinance No. 2350 was to comply with federal law by reducing the amount of pollutants discharged into the storm water, and by preventing the discharge of "non-storm water" into the storm drainage system, which channels storm water into state waterways. According to John Fair, the public works director, the City's storm drainage fee was to be used not just to provide drainage service to property owners, but to monitor and control pollutants that might enter the storm water before it is discharged into natural bodies of water. [9] The Salinas City Code contains requirements addressed specifically to the management of storm water runoff. [10] (See, e.g., Salinas City Code, §§ 31-802.2, 29-15.)

> 9 Resolution No. 17019 defined "Storm Drainage Facilities" as "the storm and surface water sewer drainage systems comprised [*sic*] of storm water control facilities and any other natural features [that] store, control, treat and/or convey surface and storm water. The Storm Drainage Facilities shall include all natural and man-made elements used to convey storm water from the first point of impact with the surface of the earth to a suitable receiving body of water or location internal or external to the boundaries of the City. . . ." The "storm drainage system" was defined to include pipes, culverts, streets and gutters, "storm water sewers," ditches, streams, and ponds. (See also Salinas City Code, former § 29-3, subd. (l) [defining "storm drainage system"].)
>
> 10 Storm water under ordinance No. 2350 includes "stormwater runoff, snowmelt runoff, and surface runoff and drainage." (Salinas City Code, former § 29-3, subd. (dd).)

For similar reasons we cannot subscribe to the City's suggestion that the storm drainage fee is "for . . . water services." *Government Code section 53750*, enacted to explain some of the terms used in articles XIII C and XIII D, defines " '[w]ater' " as "any system of public improvements intended to provide for the production, storage, supply, treatment, or distribution of water." (*Gov. Code, § 53750, subd. (m).*) The average voter would en-

vision "water service" as the supply of water for personal, household, and commercial use, not a system or program that monitors storm water for pollutants, carries it away, and discharges it into the nearby creeks, river, and ocean.

We conclude that article XIII D required the City to subject the proposed storm drainage fee to a vote by the property owners or the voting residents of the affected area. The trial court therefore erred in ruling that ordinance Nos. 2350 and 2351 and Resolution No. 17019 were valid exercises of authority by the city council.

DISPOSITION

The judgment is reversed. Costs on appeal are awarded to plaintiffs.

Premo, Acting P. J., and Mihara, J., concurred.

A petition for a rehearing was denied July 2, 2002, and respondents' petition for review by the Supreme Court was denied August 28, 2002.

OPINION BY: BROWN

OPINION

BROWN, J.--"Predatory lending" is a term generally used to characterize a range of abusive and aggressive lending practices, including deception or fraud, charging excessive fees and interest rates, making loans without regard to a borrower's ability to repay, or refinancing loans repeatedly over a short period of time to

incur additional fees without any economic gain to the borrower. Predatory lending is most likely to occur in the rapidly growing "subprime" mortgage market, which is a market generally providing access to borrowers with impaired credit, limited income, or high debt relative to their income. Mortgages in this market tend to be in smaller amounts, and with faster prepayments and significantly higher interest rates and fees, than "prime" mortgages.

In 2001, California enacted legislation to combat predatory lending practices that typically occur in the subprime home mortgage market. (*Fin. Code,* [1] §§ 4970-4979.8 (Division 1.6).) [2] Eight days before Division 1.6 was signed into law by the Governor, the City of Oakland adopted an ordinance regulating predatory lending practices in the Oakland home mortgage market. [3]

1 All further undesignated statutory references are to this code.

2 Assembly Bill No. 489 (2001-2002 Reg. Sess.) (Assembly Bill No. 489) added Division 1.6. (Stats. 2001, ch. 732, §§ 1, 3-5.) A trailer bill, Assembly Bill No. 344 (2001-2002 Reg. Sess.) (Assembly Bill No. 344), made certain changes to Division 1.6. (Stats. 2001, ch. 733, §§ 1-10.) Both bills were signed into law on October 10, 2001.

3 Oakland's "Anti-Predatory Lending Ordinance" (Oak. Ord. No. 12361 CMS) is codified at Oakland Municipal Code chapter 5.33 (Ordinance). The City of Oakland also amended its linked banking services ordinance to require lenders seeking to do business with the City or participate in certain projects or programs that involved the City, to certify that neither they nor their affiliates engage in predatory lending practices, and adopted a resolution seeking a similar certification from financial institutions desiring to participate in any development projects financed by the Redevelopment Agency. There is no dispute that the validity of the other measures depends on the validity of the Ordinance, and we do not discuss them further.

We consider whether the Ordinance is preempted by Division 1.6, and if not, whether the Ordinance is nevertheless preempted by *Civil Code section 1916.12*. We conclude that the Ordinance is preempted by Division 1.6, and therefore reverse the judgment of the Court of Appeal.

I. Factual and Procedural Background[4]

4 Because there was no petition for rehearing in the Court of Appeal, we take our statement of facts largely from that court's opinion. (*Cal. Rules of Court, rule 28(c)(2)*; *People v. Hernandez (2004) 33 Cal.4th 1040, 1045 [16 Cal. Rptr. 3d 880, 94 P.3d 1080]*.)

On October 15, 2001, American Financial Services Association (AFSA) filed this action against the City of Oakland and the Redevelopment Agency of the City of Oakland (City) seeking a declaration that the Ordinance was preempted by state law, and an injunction against its enforcement. On October 25, 2001, by stipulated order, the Ordinance was stayed pending, as relevant here, final resolution of this action. In December 2001, the trial court denied AFSA's motion for a preliminary injunction against enforcement of the Ordinance, and AFSA appealed from that order.

The parties then filed cross-motions for summary judgment. On June 21, 2002, the trial court entered an order finding that the Ordinance was preempted to the extent that it exempted federally chartered lending institutions from its restrictions. The court held that the sentence exempting such institutions should be severed from the Ordinance. Subject to elimination of the federal exemption, the court denied AFSA's summary judgment motion and granted the City's. Judgment was entered severing the sentence exempting federal lenders, dismissing AFSA's complaint, and deeming the Ordinance valid as modified.

AFSA appealed from the judgment, and the City cross-appealed. The Court of Appeal ordered the appeals and cross-appeal consolidated. The court held the Ordinance was not preempted by either Division 1.6 or *Civil Code section 1916.12*. It reversed the trial court's judgment insofar as it ordered severance of the portion of the Ordinance exempting federally chartered lenders from its coverage. In all other respects, the judgment was affirmed. AFSA's appeal from the denial of its motion for a preliminary injunction was dismissed as moot.

We granted AFSA's petition for review.

II. Discussion

A. *Background*

According to its legislative history, the purpose of Division 1.6 was to regulate and thereby curtail predatory lending practices that typically occur in the subprime mortgage market. [5] Division 1.6 applies to any "covered loan," which is a "consumer loan in which the original principal balance of the loan does not exceed" $ 250,000 "in the case of a mortgage or deed of trust," and either of two conditions are met. [6] (*§ 4970, subd. (b)(1)(A), (B)*.) A "consumer loan" is defined as "a consumer credit transaction that is secured by real property located in this state used, or intended to be used or occu-

pied, as the principal dwelling of the consumer that is improved by a one-to-four residential unit." (*§ 4970, subd. (d)*.) A consumer loan does not include a bridge loan, a reverse mortgage, an open line of credit as defined by federal regulation, or a "consumer credit transaction that is secured by rental property or second homes." (*§ 4970, subd. (d)*.)

5 Division 1.6 does not use the term "subprime," and the term has no standard industry definition. (U.S. Dept. of the Treasury & U.S. Dept. of Housing and Urban Development, Joint Rep., Curbing Predatory Home Mortgage Lending (June 2000) p. 27.) It generally, however, refers to loans in smaller amounts, with significantly higher interest rates and fees, and faster prepayments, than "prime loans." (*Id.*, p. 28.) "Predatory lending occurs primarily in the subprime mortgage lending market." (*Id.*, p. 2.) Both Division 1.6 and the Ordinance address predatory practices regarding such high-cost loans, and the legislative history of Division 1.6 is replete with references to "subprime" lending. Therefore, like the Court of Appeal, we will at times refer to both the Ordinance and Division 1.6 as regulating predatory practices in the "subprime" mortgage market.

6 "For a mortgage or deed of trust, the annual percentage rate at consummation of the transaction will exceed by more than eight percentage points the yield on Treasury securities having comparable periods of maturity on the 15th day of the month immediately preceding the month in which the application for the extension of credit is received by the creditor" or the "total points and fees payable by the consumer at or before closing for a mortgage or deed of trust will exceed 6 percent of the total loan amount." (*§ 4970, subd. (b)(1)(A), (B)*.)

Division 1.6 contains numerous prohibitions and limitations with respect to covered loans. For example, a person who originates covered loans shall not (1) "make a covered loan that finances points and fees in excess of" the higher of $ 1,000 or 6 percent of the original principal balance, exclusive of points and fees (*§ 4979.6*); (2) "make or arrange a covered loan unless at the time the loan is consummated, the person reasonably believes the consumer ... will be able to make the scheduled payments to repay the obligation based" on specified factors (*§ 4973, subd. (f)(1)*); (3) "pay a contractor under a home-improvement contract from the proceeds of a covered loan other than by an instrument payable to the consumer," both the consumer and the contractor, or under certain circumstances to a third party escrow agent (*id., subd. (g)*); (4) "recommend or encourage a consumer to default on an existing consumer loan or other debt in connection with the solicitation or making of a covered loan that refinances all or any portion of the existing consumer loan or debt" (*id., subd. (h)*); (5) "refinance or arrange for the refinancing of a consumer loan such that the new loan is a covered loan that is made for the purpose of refinancing, debt consolidation or cash out, that does not result in an identifiable benefit to the consumer" after considering various factors (*id., subd. (j)*); (6) "steer, counsel, or direct any prospective consumer to accept a loan product with a risk grade less favorable than the risk grade that the consumer would qualify for" based on certain information (*id., subd. (l)(1)*); (7) "finance, directly or indirectly, into a consumer loan or finance to the same borrower within 30 days of a consumer loan any credit life, credit disability, credit property, or credit unemployment insurance premiums, or any debt cancellation or suspension agreement fees, provided that credit insurance premiums, debt cancellation, or suspension fees calculated and paid on a monthly basis shall not be considered financed by the person originating the loan" (*§ 4979.7*); (8) structure a loan transaction as an open-end credit plan for the purpose of evading Division 1.6 if the "loan would have been a covered loan if the loan had been structured as a closed end loan" (*§ 4973, subd. (m)(1)*); (9) divide any loan transaction into separate parts for the purpose of evading Division 1.6 (*§ 4973, subd. (m)(2)*); or (10) "act in any manner, whether specifically prohibited by this section or of a different character [*sic*], that constitutes fraud" (*id., subd. (n)*).

Moreover, a covered loan shall not (1) include a "prepayment fee or penalty after the first 36 months after the date of" loan consummation, but "may include a prepayment fee or penalty up to the first 36 months after the date of" loan consummation under certain conditions (*§ 4973, subd. (a)(1), (2)*); (2) "contain a provision for negative amortization such that the payment schedule for regular monthly payments causes the principal balance to increase, unless the covered loan is a first mortgage" and appropriate disclosure made (*id., subd. (c)*); (3) "include terms under which periodic payments required under the loan are consolidated and paid in advance from the loan proceeds" (*id., subd. (d)*); (4) "contain a provision that increases the interest rate as a result of a default" except under certain circumstances (*id., subd. (e)*); (5) generally "contain a call provision that permits the lender, in its sole discretion, to accelerate the indebtedness" (*id., subd. (i)*); or (6) be made unless a seven-paragraph disclosure form set forth in *section 4973, subdivision (k)(1)*, which includes encouragement to the borrower to consider financial counseling, is provided to the consumer no later than three business days before signing of the loan documents. A "covered loan with a term of 5 years or less may not provide at origination for a payment schedule with regular periodic payments that when aggregated

do not fully amortize the principal balance as of the maturity date of the loan." (*§ 4973, subd. (b)(1).*) "For a payment schedule that is adjusted to account for the seasonal or irregular income of the consumer, the total installments in any year shall not exceed the amount of one year's worth of payments on the loan." (*§ 4973, subd. (b)(2).*) In addition, a "person who provides brokerage services to a borrower in a covered loan transaction by soliciting lenders or otherwise negotiating a consumer loan secured by real property, is the fiduciary of the consumer, and any violation of the person's fiduciary duties shall be a violation of" *section 4979.5.* (*§ 4979.5, subd. (a).*) "Except for a broker or a person who provides brokerage services," however, "no licensed person or subsequent assignee shall have administrative, civil, or criminal liability for a violation of" *section 4979.5.* (*§ 4979.5, subd. (b).*)

Similarly, the Ordinance regulates predatory lending practices in home loans in Oakland. (Oak. Mun. Code, §§ 5.33.010, 5.33.030.) A "home loan" does not include a reverse mortgage, and is defined as a "loan of money, including without limitation a line of credit or an open-end credit plan," if certain criteria apply. (*Id.*, § 5.33.030.) One criteria is that the "principal amount of the loan does not exceed the current conforming first mortgage loan size limit for a single-family dwelling as established by the Federal National Mortgage Association." (*Ibid.*) Since January 1, 2005, that amount has been $ 359,650. [7] In addition, the borrower must incur the loan primarily for personal, family, or household uses, and the loan must be secured in whole or in part by a deed of trust, mortgage, or similar security device on real property located within Oakland. (Oak. Mun. Code, § 5.33.030.) The real property must (or will) contain either one to four residential units or "individual residential units of condominiums or cooperatives," one of which is or will be the borrower's principal dwelling. (*Ibid.*)

7 (Http://www.fanniemae.com/aboutfm/loanlimits.jhtml?p=About+Fannie+Mae&s=Loan+Limits [as of Jan. 31, 2005].)

A "high-cost" home loan is a home loan that meets one of two specified thresholds. [8] (Oak. Mun. Code, § 5.33.030.) The Court of Appeal observed that the " 'high-cost home loan' interest rate and fee thresholds are both lower than the threshold levels for 'covered loans' set by [Division 1.6]. ..." "[I]t is undisputed that the high-cost loan provisions of the Ordinance would apply to all home loans falling under the 'covered loan' provisions of the state statute, and also reach some loans that do not come under the state law provisions."

8 The "annual percentage rate of the loan equals or exceeds (a) by more than 3 percentage points, if the home loan is a first mortgage, or (b) by more than 5 percentage points, if the home loan is a junior mortgage, the rate set by the required net yield for a 90-day standard mandatory delivery commitment for a first mortgage loan from either the Federal National Mortgage Association (FannieMae) or the Federal Home Loan Mortgage Association, whichever is greater, as such yield is reported on the fifteenth day of the month immediately preceding the month in which the application for the home loan is received by the lender; or (2) the total points and fees on the loan equal or exceed either 5% of the total loan amount or $ 800, whichever amount is greater. If the terms of the home loan provide for an initial or introductory period during which the annual percentage rate is lower than that which will apply after the end of such initial or introductory period, then the annual percentage rate to be considered for purposes of this definition is the rate which applies after the initial or introductory period. If the terms of the home loan provide for an annual percentage rate that varies in accordance with an index plus a margin, then the annual percentage rate to be considered for purposes of this definition is the rate that is in effect on the date of loan consummation. In the case of a home loan with a regular interest rate that varies in accordance with an index plus a margin, but with an initial or introductory interest rate established in some other manner, the annual percentage rate to be considered is the rate that would have been in effect on the date of loan consummation were the regular rate determined by the index plus the margin to apply, that is, the fully-indexed rate on the date of loan consummation." (Oak. Mun. Code, § 5.33.030.)

Like Division 1.6, the Ordinance contains numerous prohibitions and limitations with respect to home loans and "high-cost" home loans. The Ordinance prohibits prepayment penalties for high-cost and certain refinanced home loans, and limits prepayment penalties for other home loans. (Oak. Mun. Code, § 5.33.040(A).) For home loans generally, no lender may (1) "finance any credit life, credit disability, credit property, or credit unemployment insurance, or any other life or health insurance premiums when making a home loan"; (2) "recommend or encourage a borrower to default or not to make a payment on a home loan or any other debt, when such lender action is in connection with the closing or planned closing of a home loan that refinances all or part of the borrower's debt"; or (3) "make a home loan that violates

any applicable provision" of certain federal laws regulating lending. (Oak. Mun. Code, § 5.33.040(B), (C), (D).)

In addition, the following practices are prohibited for high-cost home loans: (1) making the loan without obtaining written certification from an independent and approved housing or credit counselor that the borrower has contacted the counselor and either received counseling about the advisability of the loan transaction or waived in writing the counseling option; (2) making a loan unless the lender reasonably believes the borrower will be able to make the scheduled payments based on certain detailed criteria; (3) financing points and fees exceeding $ 800 or 5 percent of the loan amount, whichever is greater; (4) making a loan "that includes terms under which more than two periodic payments required under the loan are consolidated and paid in advance from the loan proceeds provided to the borrower"; (5) charging a fee to modify, renew, extend, or amend a loan or defer any payment, except under certain conditions; (6) including terms that allow the lender to accelerate the indebtedness in its discretion except for certain circumstances; (7) including a provision increasing the interest rate if the borrower defaults or is delinquent, except in certain circumstances; (8) making a loan that "pays off all or part of an existing home loan or other debt of the borrower, and the borrower does not receive a reasonable and tangible net benefit from the new high-cost home loan considering all the circumstances," as delineated; and (9) making a loan that "pays off all or part of an existing home loan, and such existing loan" is a specified government or nonprofit loan unless an independent housing or credit counselor has determined that the refinance is in the borrower's best interests. (Oak. Mun. Code, § 5.33.050.)

Thus, Division 1.6 and the Ordinance are similar in that they regulate the same subject matter, i.e., predatory lending practices in home mortgages. However, Division 1.6 and the Ordinance differ in significant respects with regard to how they regulate these predatory practices. For example, Division 1.6 does "not impose liability on an assignee that is a holder in due course" and the provisions of the division do not apply to "persons chartered by Congress to engage in secondary mortgage market transactions." (*Fin. Code, § 4979.8.*) The Ordinance expressly applies to a holder in due course. (Oak. Mun. Code, § 5.33.070 ["Any person who purchases or is otherwise assigned a home loan is subject to all claims, actions and defenses related to that home loan that the borrower, the City Attorney, or others could assert against the original lender"].) Moreover, Division 1.6 permits prepayment penalties under certain conditions during the first 36 months of the loan; the Ordinance prohibits them for all high-cost and certain refinanced home loans, and limits them for other home loans. (*Fin. Code, § 4973, subd. (a)*; Oak. Mun. Code, § 5.33.040(A).) In addition, Division 1.6 requires that borrowers be encouraged in writing to seek loan counseling; the Ordinance prohibits a high-cost home loan being made without either the borrower receiving loan counseling or giving the credit counselor a written waiver of counseling. (*Fin. Code, § 4973, subd. (k)(1)*; Oak. Mun. Code, § 5.33.050(A).)

In addition to other enforcement mechanisms, Division 1.6 and the Ordinance both allow for civil and criminal penalties and for civil enforcement by borrowers, including punitive damages. (*Fin. Code, §§ 4975, subd. (c), 4977, subds. (b), (c), 4978, subds. (a), (b)(2)*; Oak. Mun. Code, §§ 5.33.080, 5.33.100.) However, Division 1.6 imposes civil penalties up to $ 25,000 per violation; the Ordinance imposes such penalties up to the amount of $ 50,000. (*Fin. Code, § 4977, subd. (b)*; Oak. Mun. Code, § 5.33.080(D).) Under Division 1.6, the amounts collected from such civil penalties are to be used by the "licensing agency, subject to appropriation by the Legislature, for the purposes of education and enforcement in connection with abusive lending practices." (*Fin. Code, § 4977, subd. (g)*.) The amounts collected by the Ordinance presumably simply go into the city coffers. Punitive damages are available under Division 1.6 "upon a finding that such damages are warranted pursuant to *Section 3294 of the Civil Code*" (*Fin. Code, § 4978, subd. (b) (2)*, which requires "clear and convincing evidence that the defendant has been guilty of oppression, fraud, or malice" (*Civ. Code, § 3294, subd. (a)*); the Ordinance allows punitive damages "if the court determines by clear and convincing evidence that the lender has shown reckless disregard for the rights of the borrower." (Oak. Mun. Code, § 5.33.080(A)(5).) Division 1.6 provides that nothing in *section 4978*, which addresses civil liability, "is intended, nor shall be construed, to abrogate existing common law provisions prohibiting double recovery of damages." (*Fin. Code, § 4978, subd. (c)*.) The Ordinance, however, expressly notes its remedies "are cumulative. The protections and remedies provided under this chapter are in addition to other protections and remedies that may be otherwise available under law. Nothing in this chapter is intended to limit the rights of any injured person to recover damages or pursue any other legal or equitable action under any other applicable law or legal theory." (Oak. Mun. Code, § 5.33.080(E).)

We now turn to the question of whether these similarities and differences may coexist or, if instead, the Ordinance is preempted by Division 1.6.

B. *Analysis*

"Under *article XI, section 7 of the California Constitution*, '[a] county or city may make and enforce within its limits all local, police, sanitary, and other ordinances

and regulations not in conflict with general laws.' " (*Sherwin-Williams Co. v. City of Los Angeles (1993) 4 Cal.4th 893, 897 [16 Cal. Rptr. 2d 215, 844 P.2d 534]* (*Sherwin-Williams*).) In addition, charter cities such as Oakland may adopt and enforce ordinances that conflict with general state laws, provided the subject of the regulation is a "municipal affair" rather than one of "statewide concern." (*Cal. Const., art. XI, § 5*; [9] Oak. City Charter, § 106; see *Johnson v. Bradley (1992) 4 Cal.4th 389, 399 [14 Cal. Rptr. 2d 470, 841 P.2d 990]*.) Here, however, the City reasonably concedes regulation of predatory practices in mortgage lending is one of statewide concern. Under these circumstances, the parties agree that if the Ordinance conflicts with state law, it is preempted.

> 9 *California Constitution, article XI, section 5, subdivision (a)* provides: "It shall be competent in any city charter to provide that the city governed thereunder may make and enforce all ordinances and regulations in respect to municipal affairs, subject only to restrictions and limitations provided in their several charters and in respect to other matters they shall be subject to general laws. City charters adopted pursuant to this Constitution shall supersede any existing charter, and with respect to municipal affairs shall supersede all laws inconsistent therewith."

A conflict between state law and an ordinance exists if the ordinance duplicates or is coextensive therewith, is contradictory or inimical thereto, or enters an area either expressly or impliedly fully occupied by general law. (*Sherwin-Williams, supra, 4 Cal.4th at pp. 897-898.*) Relying solely on the Legislature's failure to include express preemption language and the unique local interests of Oakland, the City contends that Division 1.6 sets only "statewide minimum standards, not statewide uniform standards, for subprime home mortgage lending." We conclude that in enacting Division 1.6 the Legislature has impliedly fully occupied the field of regulation of predatory practices in home mortgage lending, and hence the Ordinance is preempted on this ground.

"[I]t is well settled that local regulation is invalid if it attempts to impose additional requirements in a field which is fully occupied by statute." (*Tolman v. Underhill (1952) 39 Cal.2d 708, 712 [249 P.2d 280]* (*Tolman*).) "[L]ocal legislation enters an area that is 'fully occupied' by general law when the Legislature has expressly manifested its intent to 'fully occupy' the area [citation], or when it has impliedly done so in light of one of the following indicia of intent: '(1) the subject matter has been so fully and completely covered by general law as to clearly indicate that it has become exclusively a matter of state concern; (2) the subject matter has been partially covered by general law couched in such terms as to indicate clearly that a paramount state concern will not tolerate further or additional local action; or (3) the subject matter has been partially covered by general law, and the subject is of such a nature that the adverse effect of a local ordinance on the transient citizens of the state outweighs the possible benefit to the' locality [citations]." (*Sherwin-Williams, supra, 4 Cal.4th at p. 898.*)

Here, of course, there is no express preemption language in Division 1.6. However, there are clear indications of the Legislature's implicit intent to fully occupy the field of regulation of predatory lending tactics in home mortgages.

"Where the Legislature has adopted statutes governing a particular subject matter, its intent with regard to occupying the field to the exclusion of all local regulation is not to be measured alone by the language used but by the whole purpose and scope of the legislative scheme." (*Tolman, supra, 39 Cal.2d at p. 712*; *Wilson v. Beville (1957) 47 Cal.2d 852, 859 [306 P.2d 789]* (*Wilson*) [same]; see *In re Lane (1962) 58 Cal.2d 99, 102-103 [22 Cal. Rptr. 857, 372 P.2d 897]* (*Lane*).) "State regulation of a subject may be so complete and detailed as to indicate an intent to preclude local regulation. [Citations.] In this connection it may be significant that the subject is one which ... requires uniform treatment throughout the state." (*Chavez v. Sargent (1959) 52 Cal.2d 162, 177 [339 P.2d 801]* (*Chavez*), disapproved on other grounds in *Petri Cleaners, Inc. v. Automotive Employees, etc., Local No. 88 (1960) 53 Cal.2d 455, 474-475 [2 Cal. Rptr. 470, 349 P.2d 76]*.)

"The denial of power to a local body when the state has preempted the field is not based solely upon the superior authority of the state. It is a rule of necessity, based upon the need to prevent dual regulations that could result in uncertainty and confusion. Thus, the term 'conflict' as used in *section 11 of article XI* has been held not to be limited to a mere conflict in language, but applies equally to a conflict of jurisdiction." (*Abbott v. City of Los Angeles (1960) 53 Cal.2d 674, 682 [3 Cal. Rptr. 158, 349 P.2d 974]*.) "Whenever the Legislature has seen fit to adopt a general scheme for the regulation of a particular subject, the entire control over whatever phases of the subject are covered by state legislation ceases as far as local legislation is concerned." (*Lane, supra, 58 Cal.2d at p. 102*; *id. at p. 105* ["where the state has fully occupied the field, there is no room for additional requirements by local legislation"]; *Wilson, supra, 47 Cal.2d at p. 859* ["general rule that charter provisions cannot control in matters of statewide concern where the state has occupied the field"].) "Where a statute and an ordinance are identical it is obvious that the field sought to be covered by the ordinance has already been occu-

pied by state legislation." (*Pipoly v. Benson (1942) 20 Cal.2d 366, 371 [125 P.2d 482]*.)

Thus, in *Wilson, supra, 47 Cal.2d at page 856*, we held that a person seeking compensation for a municipal taking does not lose his claim by failing to file it with the city as required by the city charter. We observed the "exercise of the power of eminent domain is a matter of statewide concern." (*Id. at p. 859.*) "The Legislature has provided a complete and detailed system for exercising the right of eminent domain and assessing compensation," such that charter provisions making more onerous the recovery of compensation were invalid. (*Id. at pp. 859-861*; *id. at p. 860* ["*The Legislature has fully occupied the field of eminent domain*"].) "If the city may enact such legislation or charter provisions the land owner is denied equal protection of the laws for the state statute would fix the limitation where the condemnor was a public utility but a different one would prevail where the condemnor was a municipal corporation. There is no distinction between such condemnors. The city along with public utilities are made equally liable by the Constitution." (*Id. at p. 861.*)

Similarly, in *Eastlick v. City of Los Angeles (1947) 29 Cal.2d 661, 665 [177 P.2d 558]* (*Eastlick*), the plaintiff's claim in a personal injury action based on state law "concededly was complete as measured by the requirements of the state law." However, the city argued judgment in the plaintiff's favor should be reversed because of her failure to itemize the damages in her claim as required by the city charter. (*Id. at pp. 664-665.*) We held that the Legislature had provided "a general scheme for the presentation of such liability claims to be effective throughout the state. ... [W]ith respect to the subjects covered, the [state] statute occupies the entire field and it impliedly precludes control to that extent by municipal or local regulation." (*Id. at p. 666.*) A municipality "may not impose more onerous conditions affecting any other matter covered by the statute, such as the contents of the claim." (*Id. at p. 667.*) "[T]he provisions of that statute 'are exclusive' in regulating the presentation of claims arising under the Public Liability Act, and no city charter provisions relating to the presentation of claims, whether adopted before or after the effective date of the statute, are applicable within the field covered thereby." (*Id. at p. 668.*)

Likewise in *Birkenfeld v. City of Berkeley (1976) 17 Cal.3d 129, 152 [130 Cal. Rptr. 465, 550 P.2d 1001]* , we held that a charter city's "requirement that landlords obtain certificates of eviction before seeking repossession of rent-controlled units cannot stand in the face of state statutes that fully occupy the field of landlord's possessory remedies." We observed that requiring "landlords to fulfill the elaborate prerequisites for the issuance of a certificate of eviction by the rent control board before they commence the [state] statutory proceeding would nullify the intended summary nature of the remedy." (*Id. at p. 151.*) Citing *Wilson, supra, 47 Cal.2d 852*, and *Eastlick, supra, 29 Cal.2d 661*, we also noted that "[c]ity charter provisions purporting to impose far less burdensome prerequisites upon the exercise of statutory remedies have been held to be invalid invasions of the field fully occupied by the statute." (*Birkenfeld, at p. 152*; see *Healy v. Industrial Acc. Com. (1953) 41 Cal.2d 118, 122 [258 P.2d 1]* [If "there is any conflict between charter provisions and the compensation sections of the Labor Code, the latter must prevail. Under power expressly granted to it by the Constitution, the Legislature has established a complete system of workmen's compensation which obviously is a subject of state-wide concern, and it is well settled that in such matters the general law is paramount"]; *Lane, supra, 58 Cal.2d at pp. 103-105* ["city ordinance attempting to make sexual intercourse between persons not married to each other criminal is in conflict with the state law and is void" given the "Penal Code sections covering the criminal aspects of sexual activity are so extensive in their scope that they clearly show an intention by the Legislature to adopt a general scheme for the regulation of this subject," and "although living in a state of cohabitation and adultery is prohibited [citation], neither simple fornication or adultery alone nor living in a state of cohabitation and fornication has been made a crime in this state"]; *Isaac v. City of Los Angeles (1998) 66 Cal.App.4th 586, 599 [77 Cal. Rptr. 2d 752]* (*Issac*) [ordinance giving a utility lien priority over other recorded liens invalid "because it disrupts California's statewide statutory scheme of lien priority"]; *id. at p. 600* ["lien priorities on real property a matter of statewide concern because statewide uniformity in lien priority is essential"].)

Like the statutory schemes considered in *Wilson*, *Eastlick*, and *Birkenfeld*, Division 1.6 comprehensively regulates predatory lending practices in home mortgages. It delineates at length what mortgages are covered, what lending acts are prohibited, who can be held liable for violations of Division 1.6, the various enforcement mechanisms available, who may invoke such enforcement mechanisms, and defenses to such violations. The provisions of Division 1.6 "are so extensive in their scope that they clearly show an intention by the Legislature to adopt a general scheme for the regulation of" predatory lending tactics in home mortgages. (*Lane, supra, 58 Cal.2d at p. 103.*)

Moreover, in regulating such lending tactics in home mortgages, the Legislature was not suddenly entering an area previously governed by municipalities and unexplored at a statewide level. To the contrary, as the City acknowledges, regulation of mortgage lenders has historically occurred at the state, not the municipal, level.

(See, e.g., *Fin. Code, §§ 5000 et seq.* [Savings Association Law], *50000 et seq.* [California Residential Mortgage Lending Act]; *Civ. Code, §§ 2947-2955.5* [mortgage of real property provisions].) In determining whether the Legislature intended to occupy the field of regulation of predatory home mortgage lending, we consider this historical role, and view Division 1.6 not in isolation, but as part of an overall legislative scheme addressing mortgage lending. As the Legislative Counsel's Digest to Division 1.6 notes, "Existing law provides for regulation of banks and savings associations by the Department of Financial Institutions. Existing law provides for regulation of real estate brokers by the Department of Real Estate. Existing law provides for regulation of finance lenders and residential mortgage lenders by the Department of Corporations. Existing law provides that willful violations of provisions governing savings associations, real estate brokers, and residential mortgage lenders are crimes. [¶] This bill would impose various requirements on consumer loans secured by specified real property, defined as 'covered loans.' " (Stats. 2001, ch. 732.)

Indeed, when asked at oral argument, the City could point to no other instance in over 150 years of state history where a municipality had attempted to regulate mortgage lending. Thus, state activity in the area of regulation of mortgage lending was not only historically dominant, it was exclusive. (Cf. *United States v. Locke (2000) 529 U.S. 89, 108 [146 L. Ed. 2d 69, 120 S. Ct. 1135]* [finding no presumption against federal preemption regarding regulation of maritime commerce]; compare *Bronco Wine Co. v. Jolly (2004) 33 Cal.4th 943, 974 [17 Cal. Rptr. 3d 180, 95 P.3d 422]* [strong presumption against federal preemption of state wine label regulation given that state activity in this area historically extensive and dominant].) Thus, mortgage lending is unlike the area of gun control law, on which the City and the dissent rely, in which courts have concluded that the Legislature has chosen to legislate narrowly, and "rather than intending to deprive municipalities of their police power to regulate handgun sales, ... has been cautious about depriving local municipalities of aspects of their constitutional police power to deal with local conditions." (*California Rifle & Pistol Assn., Inc. v. City of West Hollywood (1998) 66 Cal.App.4th 1302, 1318 [78 Cal. Rptr. 2d 591]*; see *Great Western Shows, Inc. v. County of Los Angeles (2002) 27 Cal.4th 853, 865, 866 [118 Cal. Rptr. 2d 746, 44 P.3d 120]* (*Great Western*) [noting state laws regulating gun shows expressly refer to applicable local laws]; dis. opn., *post*, at pp. 1267, 1272.) As one amicus curiae notes, the City does not demonstrate that in the area of regulating residential mortgages, the Legislature has attempted "to tread lightly on a narrow path."

Moreover, it is beyond peradventure that effective regulation of mortgage lending, and in particular here abusive practices in such lending, "requires uniform treatment throughout the state." (*Chavez, supra, 52 Cal.2d at p. 177*; see *Northern Cal. Psychiatric Society v. City of Berkeley (1986) 178 Cal. App. 3d 90, 101 [223 Cal. Rptr. 609]* [" 'Certain areas of human behavior command statewide uniformity, especially the regulation of statewide commercial activities' "].) California's housing market is one of its most critical, and securities based on home loans in this market are sold not only on a statewide, but on a national level. (Eggert, *Held Up in Due Course: Predatory Lending, Securitization, and the Holder in Due Course Doctrine* (2002) *35 Creighton L. Rev. 503, 536* ["Through securitization, the source of capital for mortgage funding has been transferred from the savings industry, which used deposits to fund loans, to the capital markets and the portfolios of institutional investors"].) Commercial reality today would confound any effective regulation of mortgage lending based on potentially hundreds of competing and inconsistent measures at the local level. Rather, centralized command over such mortgage lending practices provides an essential "regulatory lever." (*California Fed. Savings & Loan Assn. v. City of Los Angeles (1991) 54 Cal.3d 1, 23 [283 Cal. Rptr. 569, 812 P.2d 916]* (*Calif. Fed.*).)

We therefore conclude that through the enactment of Division 1.6, the Legislature has fully occupied the field of regulation of predatory tactics in home mortgages. While in other cases the determination of whether the state and local laws occupy the same "field" may be somewhat nuanced, little is left to the imagination of even the most casual reader here. Both Division 1.6 and the Ordinance regulate predatory lending tactics in home mortgages, and do so in parallel fashion. The Ordinance, like Division 1.6, addresses at length what mortgages are covered, what lending acts are prohibited, who can be held liable for violations of the Ordinance, the various enforcement mechanisms available, who may invoke such enforcement mechanisms, and defenses to such violations. As previously observed, it is undisputed the Ordinance applies to at least all home loans covered by Division 1.6. Moreover, the Ordinance regulates many of the same predatory practices addressed by Division 1.6, and prevalent in subprime lending, such as excessive prepayment fees, making loans without any reasonable expectation they can be repaid, refinancing with no benefit to the borrower, encouraging default on an existing loan in connection with refinancing that loan, financing unnecessary products such as credit insurance, unfairly accelerating indebtedness, and financing excessive points and fees. Thus, the Ordinance is not supplementary legislation that in other contexts might be allowed, but a line-item veto of those policy decisions by the Legislature with which the City disagrees. In revisiting this area

fully occupied by state law, the Ordinance undermines the considered judgments and choices of the Legislature, and is therefore preempted.

In drafting Division 1.6, the Legislature balanced two compelling and competing considerations, i.e., the need to protect particularly vulnerable consumers from predatory lending practices and the concern that homeowners not be unduly hindered in accessing the equity in their own homes. (See, e.g., Sen. Judiciary Com., Analysis of Assem. Bill No. 489 (2001-2002 Reg. Sess.) as amended June 21, 2001, p. 2 ["Although many subprime lenders offer a vital service to some low-income borrowers who would not otherwise qualify for credit, many other low-income borrowers have been victimized by improper practices ... referred to ... as 'predatory practices' "]; Assem. Republican Bill Analysis, Analysis of Assem. Bill No. 489 (2001-2002 Reg. Sess.) as amended Sept. 6, 2001, p. 3 [noting federal regulators "believe that responsible sub-prime lending can expand credit access for consumers," and that "'a practice that can be abusive in some contexts can also-in [the] absence of fraud or deception-be highly beneficial to consumers ... . Well meaning but haphazard reactions on the part of the regulators ... may have the unintended consequence of hurting those whom we intend to help'"]; Assem. Com. on Appropriations, Analysis of Assem. Bill No. 489 (2001-2002 Reg. Sess.) as amended May 1, 2001, p. 2 ["The cycle of high-cost loan refinancing can ultimately deplete the homeowner's equity and result in foreclosure"].) While destructive lending practices occur most often in connection with subprime lending, such lending is not inherently abusive, and has enabled an entire class of individuals with impaired credit to enter the housing market or access the equity in their homes. (See U.S. Gov. Accounting Off., Rep. on Federal and State Agencies Face Challenges in Combating Predatory Lending, testimony of David G. Wood before Sen. Special Com. on Aging (Feb. 24, 2004) p. 4.) Severe regulation of subprime lending might cause lenders to cease making such loans in California, or preclude borrowers from obtaining a loan based on equity in their home even though such loans can serve a legitimate need. (Cal. Dept. of Real Estate, Enrolled Bill Rep. on Assem. Bill No. 489 (2001-2002 Reg. Sess.) Sept. 27, 2001, p. 7.) Moreover, increased regulation generally entails additional cost, decreasing further the availability of loan funds to subprime borrowers. Thus, the Legislature was aware regulation of certain predatory practices in mortgage lending, practices which occur most often in the subprime market, could have the unintended consequence of hurting those the legislation was intended to help, and sought to balance these competing concerns. The Ordinance, and the possibility of other divergent and competing local measures throughout California, upsets that balance. By analogy to federal preemption law, the Ordinance "'stands as an obstacle to the accomplishment and execution of the full purposes and objectives'" of the Legislature. (*Volt Info. Sciences v. Leland Stanford Jr. U. (1989) 489 U.S. 468, 477 [103 L. Ed. 2d 488, 109 S. Ct. 1248]*.)

Taking just one example, Division 1.6 expressly does "not impose liability on an assignee that is a holder in due course" and the provisions of the division do not apply to "persons chartered by Congress to engage in secondary mortgage market transactions." (*Fin. Code, § 4979.8.*) The Ordinance expressly imposes such liability. (Oak. Mun. Code, § 5.33.070.) Such an extension of liability to "[a]ny person who purchases or is otherwise assigned a home loan" (*ibid.*) may result in secondary purchasers being hesitant or unwilling to purchase mortgages originating in Oakland. Should other cities adopt a similar extension of liability, [10] subprime lending could conceivably be sharply curtailed in the state, despite the Legislature's efforts to avoid such an event. As AFSA observes, the Ordinance "not only contradicts a careful legislative choice, [it] threatens to disrupt secondary market transactions, interrupting the flow of loan capital to this state," and "divide the state's economy into tiny geographic markets."

> 10 Los Angeles has already done so in its anti-predatory loan ordinance, added January 29, 2003. (L.A. Mun. Code, ch. XVIII, art. 1, § 181.07, subd. (B) ["Any person who purchases or is otherwise assigned a High-Cost Refinance Home Loan is subject to all claims, actions, and defenses related to that High-Cost Refinance Home Loan that the Borrower could assert against the original Lender"].)

Thus, contrary to the City's and the dissent's assertion, Division 1.6 does not set "statewide minimum" standards beyond which municipalities are free to regulate. (Dis. opn., *post*, at p. 1271; *id.* at p. 1275.) Rather, the Legislature's full occupation of this field preempts the Ordinance's regulation even of those mortgages not addressed by Division 1.6, such as loans between $ 250,000 and $ 359,650. For the reasons cited above, it is difficult to imagine how the state could maintain a centralized and uniform command in regulating predatory tactics in home mortgages if municipalities were free to regulate the area with respect to loans in amounts in excess of the state statutory ceiling.

Thus, in *Lane* we held that a city ordinance, making criminal sexual conduct the state Penal Code did not, was preempted because the state had fully occupied the field of regulation of sexual conduct by enacting a detailed legislative scheme. (*Lane, supra, 58 Cal.2d at pp. 103-105*; see *Issac, supra, 66 Cal.App.4th at p. 601* ["absence of any specific statewide legislation ... does not create a statutory loophole inviting local legislation, be-

cause of the pervasive statutory scheme already in place governing lien priority"].) Similarly here, the Legislature's decision that certain mortgages, such as loans in excess of $ 250,000, are not subject to regulation under Division 1.6 must be respected, and is not an invitation for municipal regulation. The Legislature may reasonably have concluded that mortgages in excess of the statutory ceiling were less likely to be attended by the predatory practices that it sought to curtail, and hence borrowers should have greater freedom to contract in this area. (See U.S. Dept. of the Treasury & U.S. Dept. of Housing and Urban Development, Joint Rep., Curbing Predatory Home Mortgage Lending, *supra*, p. 28 [noting on average subprime loans are smaller than prime loans].) As one amicus curiae notes, "California's housing market is one of the most vital sectors of its economy. The balances struck by the Legislature in this critical area therefore must be seen as a reflection of the Legislature's reasoned assessment of the competing needs to provide mortgage capital to the broadest possible segment of the populace while, at the same time, discouraging unfair lending practices throughout the state. Local governments should not be free to undermine the Legislature's efforts in this area ... by striking different policy balances of their own."

The City and the dissent essentially assert, however, that Oakland has a higher incidence of subprime lending and the predatory tactics associated with such lending than other areas of the state, and hence may suffer more than other parts of California the resulting blight and poverty such tactics can foster. (Dis. opn., *post*, at pp. 1268-1271, 1275.) Assuming this is correct, and while these would be important local concerns, they do not give the City a license to regulate a highly complex financial area comprehensively addressed by state law. Such an approach would mean that any city which claimed to experience a disproportionate number of foreclosures, or instances of securities fraud, could simply write its own measures regardless of any confusion these competing measures may foster. Rather, the state's interest in uniformity in the area of mortgage lending law demonstrably transcends the concerns of a particular municipality, and is a "convincing basis for legislative action ... based on sensible, pragmatic considerations." (*Calif. Fed., supra, 54 Cal.3d at p. 18.*) In this situation, the City must "defer to legislative estimates regarding the significance of a given problem and the responsive measures that should be taken toward its resolution." (*Id. at p. 24.*)

The City relies on certain language in *Sherwin-Williams, supra, 4 Cal.4th at page 904*, taken out of context, to support its argument that the failure on the part of the Legislature to include express preemption language means that it had no implied intent to preempt. In *Sherwin-Williams*, there existed at all relevant times a statute that provided, "'Nothing in this code shall invalidate an ordinance of, nor be construed to prohibit the adoption of an ordinance by, a city, city and county, or county, if such ordinance regulates the sale of aerosol containers of paint or other liquid substances capable of defacing property.'" (*Sherwin-Williams, at p. 899*, quoting former Pen. Code, § 594.5.) We observed that former Penal Code section 594.1, the statute at issue, as originally enacted in 1981, had regulated aerosol paint containers larger than six ounces in section 1, an express preemption provision regarding sales and possession of such aerosol containers in section 2, and a no reimbursement provision in section 3. (*Sherwin-Williams, at p. 900.*) In 1988, former Penal Code section 594.1 was amended such that it generally applied to all aerosol paint containers in section 1, and had a no reimbursement provision in section 2. No express preemption provision was included in the 1988 amendment. (*Sherwin-Williams, at pp. 900-901.*)

We found that the amended *section 594.1 of the Penal Code* did not preempt a local ordinance governing the display of aerosol paint containers and marker pens. (*Sherwin-Williams, supra, 4 Cal.4th at pp. 895-896, 906.*) In so doing, we made the following statement, on which the City relies: "In both 1981 and 1988, the Legislature was acting, and presumably knew that it was acting, in the context of *Penal Code section 594.5*, which by its very terms would render any aerosol paint legislation 'non-preemptive,' at least as to sales. Hence, in both years, it was obligated, and presumably knew that it was obligated, to take affirmative steps if it intended to preempt. In 1981, it took such steps: it included the preemption declaration. In 1988, it did nothing. It certainly knew how to copy: in the earlier year, it inserted a 'no reimbursement' clause; in the later, it inserted a similar clause. To our mind, the conclusion is clear. In 1981, it expressly intended to preempt. In 1988, it impliedly intended not to." (*Sherwin-Williams, at p. 904.*)

As can be seen, *Sherwin-Williams* was decided based on a significantly different statutory landscape than we encounter here. Unlike *Sherwin-Williams*, the City points to no language in Division 1.6 which states that nothing in its provisions shall invalidate a local ordinance if such ordinance regulates predatory mortgage lending practices. Hence, the Legislature's failure to include an express preemption provision in Division 1.6 does not ineluctably mean there is no implied preemption. Significantly, aside from the Savings Association Law (*Fin. Code, § 5000 et seq.*), at least two other state laws governing mortgage lenders, the California Residential Mortgage Lending Act (*Fin. Code, § 50000 et seq.*), and the mortgage of real property provisions in the Civil Code (*Civ. Code, §§ 2947- 2955.5*), do not have an

express preemption provision. Indeed, the City does not point out for us any state mortgage lending law that has an express preemption provision.

The City and the dissent rely on testimony at a Senate subcommittee hearing held shortly before the passage of Division 1.6, urging inclusion of an express preemption provision, and the fact that several members of the Legislature had a brief conversation regarding preemption at that subcommittee hearing, in asserting Division 1.6 does not impliedly preempt the Ordinance. (Dis. opn., *post*, at pp. 1266-1267.)

Of course, by definition, the Legislature's implicit full occupation of a field occurs only when there is no express intent in the state law. We disagree with the Court of Appeal's statement that "when the Legislature is silent on preemption, courts presume there is *no* intent to preempt." Adopting this approach would be a notable departure from our implied preemption precedents. Instead, in such circumstances we consider factors including the language and scope of the adopted measure, the history behind the adopted measure, and the history of regulation in the area, as we have done in this and other field preemption cases. (E.g., *Great Western, supra, 27 Cal.4th at pp. 860-867*; *Tolman, supra, 39 Cal.2d at p. 712* [Legislature's "intent with regard to occupying the field to the exclusion of all local regulation is not to be measured alone by the language used but by the whole purpose and scope of the legislative scheme"].) Neither the City nor the dissent offers a reason why we would not consider such language, scope, and purpose merely because at some point during the bill enactment process the issue of express preemption may have arisen. Nor do they demonstrate that these traditional indicators of legislative intent point toward allowing hundreds of cities in California to enact their own mortgage lending laws, an area historically regulated by the state.

Taken to its logical extreme, the City's and the dissent's approach would eliminate the doctrine of implied preemption at least to the extent someone somewhere ever suggested to the Legislature an express preemption clause would be useful, and the Legislature declined to adopt that suggestion. Such a standard would be easily manipulable, and would punish constituents who attempt to educate the Legislature about their concerns to the extent their concerns were not addressed in the precise manner proposed to the Legislature. Moreover, for well over a century, mortgage lending has occurred at the state, not municipal level, and the effects of such regulation are no longer simply statewide, but national. While we cannot know the reasons for the absence of express preemption language, the Legislature is deemed to be aware of existing law, and may have comfortably assumed that given such state dominance in mortgage lending regulation, and having omitted express preemption provisions in other mortgage lending laws without such an omission being read as a license for local regulation, that an express preemption provision was unnecessary. Indeed, unlike the dissent, we are reluctant to reward the opponents of preemption when nothing in the statutory language or history suggests they persuaded the Legislature to consider relinquishing its historical control of this particular regulatory field and to tolerate municipal, and possibly conflicting, regulation.

In addition, our prior cases establish that even when the Legislature amends a bill to add a provision, and then deletes that provision in a subsequent version of the bill, this failure to enact the provision is of little assistance in determining the intent of the Legislature. (*Graham v. DaimlerChrysler Corp. (2004) 34 Cal.4th 553, 573, fn. 5 [21 Cal. Rptr. 3d 31, 21 Cal. Rptr. 3d 331]* [" 'Unpassed bills, as evidence of legislative intent, have little value' "]; *People v. Sparks (2002) 28 Cal.4th 71, 87, fn. 20 [120 Cal. Rptr. 2d 508, 47 P.3d 289]* [same]; *Sherwin-Williams, supra, 4 Cal.4th at p. 904, fn. 6* [same].) How much less value is there in determining legislative intent when no version of a bill was ever amended to include a provision, here express preemption, suggested by a member of the public? Similarly, we have repeatedly observed that "statements of an individual legislator, including the author of a bill, are generally not considered in construing a statute, as the court's task is to ascertain the intent of the Legislature as a whole in adopting a piece of legislation." (*Quintano v. Mercury Casualty Co. (1995) 11 Cal.4th 1049, 1062 [48 Cal. Rptr. 2d 1, 906 P.2d 1057].*) "

> 11 The dissent bases much of its position on a "concession" by AFSA that "'the Legislature could say nothing for or against preemption *without risking defeat* of'" Assembly Bill No. 489. (Dis. opn., *post*, at p. 1266; *id.* at p. 1267.) The dissent points to no evidence AFSA was involved in the legislative process of Division 1.6 even as an interested constituent. More critically, we have repeatedly concluded, as noted above, that even the statements of individual legislators are not generally considered in construing a statute. Of how much less worth is a third party's opinion regarding that legislative process? Indeed, discerning legislative intent from an outside party's "concession" appears not only a novel but a problematic approach. Had AFSA not made such a "concession," would the dissent then find there was preemption? As in the case of comments from constituents to the Legislature, on which the dissent also relies, our preemption principles simply cannot be so arbitrary and malleable.

> Even if there was competent evidence the Legislature had debated and rejected the notion of including an express preemption clause, and deliberately decided to remain silent, such history would merely show that lawmakers left the preemption issue exactly where it would have been if nothing had been said during the bill enactment process. Under such circumstances, and contrary to what the dissent claims, there would still be no basis for straying from our traditional examination of the language, scope, and purpose of the enacted statutory scheme in determining whether the Legislature manifested an implicit intent to occupy the field and preempt all local regulation. Considering that language, scope, and purpose here, as delineated at length above, we find clear indications of such an intent, and conclude the Ordinance is preempted.

Moreover, while the possibility of including express preemption language may have arisen at one committee hearing, and in certain letters from constituents, [12] it is scarcely mentioned in the remainder of Division 1.6's legislative history. Rather, in that history, the Legislature was instead focused on what the terms of the antipredatory lending law should be, which, as we have concluded, is its role in this area. Thus, in various bill analyses recounting bases for opposition to Assembly Bill No. 489 and in letters from Assembly Republican Leader Dave Cox and Senate Republican Whip Raymond Haynes to Governor Davis urging a veto of that bill, there is no mention of the absence of an express preemption provision. (See, e.g., Assem. Republican Caucus, Analysis of Assem. Bill No. 489 as amended Sept. 6, 2001, p. 2; Assem. Republican Caucus, Analysis of Assem. Bill No. 489 as amended Apr. 5, 2001, pp. 1-2; Assemblyman Dave Cox, letter to Governor Gray Davis (Sept. 25, 2001) p. 1; Sen. Raymond Haynes, letter to Governor Gray Davis (Sept. 18, 2001) p. 1.)

> 12 It is noteworthy that one such letter writer, FannieMae, expressly *withdrew* its opposition to Assembly Bill No. 489, and *then* urged the bill authors to consider adding an express preemption provision. (FannieMae, letter to Sen. Machado and Assemblywoman Migden (Sept. 13, 2001) p. 1.) Similarly, the California Mortgage Bankers Association noted it had withdrawn its opposition to Assembly Bill No. 489, was now neutral on both Assembly Bill Nos. 489 and 344, and *then* mentioned it looked forward to working with the Legislature on an express preemption provision. (Cal. Mortgage Bankers Assn., letter to Sen. Machado and Assemblywoman Migden (Oct. 4, 2001) p. 1.)

Similarly, in recounting the opposition arguments to Assembly Bill Nos. 489 and 344 (the cleanup bill for Assembly Bill No. 489), the enrolled bill reports for the State and Consumer Services Agency, the Department of Real Estate, and the Department of Financial Institutions do not mention the absence of an express preemption provision. Thus, the Department of Real Estate enrolled bill report states, "[s]ome lenders may leave the California market limiting access to capital for those who need it most. In addition, this bill would effectively preclude equity based lending for covered loans even though it has been demonstrated such loans have served a legitimate need." (Dept. of Real Estate, Enrolled Bill Rep. on Assem. Bill No. 489, Sept. 27, 2001, p. 7.) Under "[v]otes," the enrolled bill report notes, "[m]any [m]embers who voted 'no' expressed concerns that the passage of the bill would cause lenders to cease making subprime loans in California. In addition, many [m]embers who voted 'no' expressed concern that this bill would preclude a borrower from obtaining a loan solely based on the equity in the property, even though such loans may serve a legitimate need." (*Ibid.*; State and Consumer Services Agency, Enrolled Bill Rep. on Assem. Bill No. 489, Sept. 20, 2001, p. 7 ["Could eliminate a source of funding for a segment of consumers that are not served by traditional, mainstream lenders (the same argument that is applied to payday loans). Could make California loans undesirable for purchase and investment. Bankers argue that legitimate lenders that charge higher fees and interest rates to people with poor credit to compensate for the greater risk of default (known as subprime lending) will be unfairly restricted"]; Dept of Financial Inst., Enrolled Bill Rep. on Assem. Bill No. 489, Sept. 27, 2001, p. 8 ["[T]here is some concern as to the [e]ffect the provisions of this bill will have on the subprime market. As illustrated by the departure of some licensees in North Carolina, some lenders may leave California's lending market. The effect on the subprime market could be the reduction of mortgage credit available to higher risk borrowers who do not otherwise qualify in the prime market"]; Dept. of Real Estate, Enrolled Bill Rep. on Assem. Bill No. 344, Sept. 27, 2001, pp. 2, 4.) The Department of Corporations enrolled bill report did note among other arguments in opposition to Assembly Bill No. 489 that "[i]ndustry groups argue that AB 489 should expressly preempt local ordinances which exceed the protections afforded by this bill. Without preempting city or county ordinances, lenders will continue to be exposed to non-uniform restrictions imposed by various municipalities throughout California." (Dept. of Corporations, Enrolled Bill Rep. on Assem. Bill No. 489, Sep. 27, 2001, p. 8.) However, this restatement of an argument made by certain industry groups does not purport to reflect debate within the Legislature. [13]

13 Other than the statements of individual legislators at one Senate subcommittee hearing, and testimony by constituents at that same hearing, which we have already discussed, the dissent cites nothing in the legislative history of Division 1.6 to support its repeated assertion that the Legislature "consciously considered including express preemption language in the statewide statute ... , but ultimately omitted any such language from the statute as one of the essential elements of a compromise that led to the enactment of the legislation." (Dis. opn., *post*, at p. 1265, fn. omitted; see, e.g., *ibid.* ["Here, there is considerable extrinsic evidence ... that the Legislature specifically considered and purposefully rejected an express preemption clause despite extensive lobbying for the inclusion of express preemption language in the state statute"]; *id.* at p. 1261["the issue of preemption was arguably at the forefront of the debate over Assembly Bill No. 489"]; *id.* at p. 1267 ["silence on the preemption issue was not inadvertent but deliberate, part of a legislative compromise"];*ibid.* ["passage of the bill hinged on the inclusion or exclusion of express preemption language"]; *id.* at p. 1271 ["All we can be certain of is that Division 1.6 was the product of a legislative compromise, and that the compromise included deliberate silence on the matter of preemption"].)

The Court of Appeal also noted that the Governor in signing Assembly Bill No. 489 expressly lamented the fact it did not contain express preemption language, and the Legislative Counsel opined a local ordinance would be valid to the extent it did not conflict with state law. We may not consider such postenactment events as a Governor's signing statement, and not even the City relies on this circumstance. Moreover, the Legislative Counsel's generalized and routine discussion of preemption law is not evidence the Legislature believed an ordinance such as the one challenged here would survive a preemption challenge. The Legislative Counsel expressly observed, "Because we have not been provided with a specific local government ordinance regulating high-cost mortgage lending, we ... discuss generally the grounds for preemption of a local government ordinance by state law." (Deputy Legis. Counsel L. Erik Lange, letter to Sen. Machado (Sept. 7, 2001) p. 1.)

AFSA also claims that the Ordinance is preempted by Division 1.6 because it duplicates and contradicts state law and the Ordinance is preempted by *Civil Code section 1916.12*. Since we conclude the Ordinance is preempted because by enacting Division 1.6 the Legislature has fully occupied the field of regulation of predatory practices in home loans, we need not address these additional preemption arguments.

Disposition

The judgment of the Court of Appeal is reversed, and the case remanded to that court for further proceedings consistent with this opinion.

Baxter, J., Werdegar, J., and Chin, J., concurred.

DISSENT BY: GEORGE

DISSENT

GEORGE, C. J., Dissenting.--I respectfully dissent.

Past California cases establish that a general statewide statute will be held to preempt all local legislative measures only when the state legislation, explicitly or impliedly, "clearly indicates" that the Legislature intended to fully occupy the field and preclude all local regulation. (*Sherwin-Wlliams Co. v. City of Los Angeles, (1993) 4 Cal.4th 893, 898 [16 Cal. Rptr. 2d 215, 844 P.2d 534]*.) Here, the Legislature consciously considered including express preemption language in the statewide statute (division 1.6 of the *Financial Code, §§ 4970-4979.8*), [1] but ultimately omitted any such language from the statute as one of the essential elements of a compromise that led to the enactment of the legislation. In view of this legislative background--which demonstrates that the statute does not "clearly indicate" a legislative intent to preempt all local legislation--and the distinctive local interest that the City of Oakland has in adopting stringent and effective measures to protect its residents from the predatory lending practices at issue, I cannot agree with the majority that Division 1.6 properly may be found to preempt the Ordinance in its entirety. [2]

1 For convenience, like the majority opinion, I shall refer to the relevant state statute as "Division 1.6," and the relevant local legislation as the "Ordinance."

2 Because the majority concludes that the Ordinance is invalid in its entirety, I do not reach the question whether some individual provisions of the local enactment may be inconsistent with Division 1.6 and for that reason preempted by that legislation.

I

Unlike our previous implied preemption cases, this is not simply a case in which the Legislature was silent about preemption. Here, there is considerable extrinsic evidence, and a concession from the party arguing in favor of preemption, that the Legislature specifically considered and purposefully rejected an express preemp-

tion clause despite extensive lobbying for the inclusion of express preemption language in the state statute. As plaintiff American Financial Services Association (AFSA) itself acknowledges, there were strongly held disagreements over preemption between industry representatives and consumer proponents of the bill. Indeed, the record reveals that the subprime lending industry vigorously lobbied for express preemption language.

Under normal circumstances, the mere absence of express preemption language would not be dispositive. But here the party arguing in support of preemption explicitly has admitted that there were insufficient votes in the Legislature to enact the bill with an express preemption provision. Specifically, AFSA's brief acknowledges that "the Legislature could say nothing for or against preemption *without risking defeat* of [Assembly Bill No.] 489. So it elected to remain silent." (Italics added.) The majority fails to acknowledge or afford appropriate consideration to this admission.

Moreover, contrary to the majority's reading of the relevant legislative history, I believe this history supports AFSA's concession. This is not a situation where the preemption issue was abstract or peripheral. Indeed, the issue of preemption was arguably at the forefront of the debate over Assembly Bill No. 489 (2001-2002 Reg. Sess.) (Assembly Bill No. 489). For instance, the members of the Senate Banking Committee that forged the legislative compromise that led to passage of the bill heard testimony from Oakland City Councilman Ignacio de la Fuente regarding the imminent passage of the Ordinance. In response to this testimony, a committee member expressed concern that without express preemption language, there would be a host of different lending policies from community to community. In response, the bill's co-author, Assemblywoman Migden, stated at the August 27, 2001, hearing on Assembly Bill No. 489 by the Senate Banking, Commerce and International Trade Committee: "We're trying to make sure that everyone can live with the bill, industry and consumers alike and ... we've decided ... to be silent on [preemption], which does lend different interpretations."

At the same hearing, the committee also heard from numerous financial industry representatives who urged the committee to include preemption language. (Adam Bass of Ameriquest Mortgage Company: "preemption is a major issue"; John Ross, Mortgage Bankers Assn.: "preemption is a big issue for our members"; Brian Kennealy of the Responsible Mortgage Lenders Coalition: "preemption is a very, very important issue to us and our members"; Eleanda Delgado of Irwin Home Equity Corp., agreeing with the others; Bernard Nevins, Cal. Assn. of Industrial Bankers: preemption "can't hurt and it would be very bad if you didn't do it"; Phil Eisenberg, American Internat. Group: "the preemption issue is fundamental. It's not cursory. It's not a medium-sized issue. It's fundamental"; Tom McMorrow, Countrywide Mortgage and First Union: "Preemption remains fundamental.") This effort by the financial industry to include express preemption language in the statute further establishes that silence on the preemption issue was not inadvertent but deliberate, part of a legislative compromise "to make sure that everyone can live with this bill, industry and consumers alike ... ." The majority's assertion that the Legislature's silence on preemption was inadvertent, or that the Legislature believed that express preemption language was unnecessary, is simply untenable.

The majority minimizes the foregoing history by arguing that although an express preemption issue "may have arisen" at some point during the bill enactment process, the issue was peripheral. As noted, this ignores AFSA's concession that the issue of express preemption not only "arose," but threatened to derail passage of the bill. Thus, this is not simply a case where "someone somewhere ... suggested to the Legislature an express preemption clause would be useful, and the Legislature declined to adopt that suggestion." (Maj. opn., *ante*, at p. 1261.) This is a case where passage of the bill hinged on the inclusion or exclusion of express preemption language. Thus, this is not a case where the city relies on the mere absence of express preemption to argue against implied preemption. There is significantly more evidence of deliberate exclusion of a preemption provision here, and the majority's concern about the demise of the doctrine of implied preemption is unwarranted.

Nonetheless, it can be argued, as AFSA does, that the stalemate on the preemption issue neither supports nor undermines a conclusion as to preemption, and that the court should resort to certain default rules about preemption that it has developed over the years. But one of those rules, indeed the principal rule, is that legislative intent be clearly indicated. As the Court of Appeal noted in *California Rifle & Pistol Assn. v. City of West Hollywood (1998) 66 Cal.App.4th 1302, 1317 [78 Cal. Rptr. 2d 591]*, the Legislature's failure to include express preemption language may be critical. "Claims of implied preemption must be approached carefully, because they by definition involve situations in which there is no express preemption. Since preemption depends upon *legislative intent*, such a situation necessarily begs the question of why, if preemption was legislatively *intended*, the Legislature did not simply say so, as the Legislature has done many times in many circumstances." (*Ibid.*) Hence, the rule has developed that implied preemption properly can be found only when the circumstances "clearly indicate" a legislative intent to preempt. (*Sherwin-Williams Co. v. City of Los Angeles, supra, 4 Cal.4th 893, 898.*) The need for such a "clear indication" is especially acute when the extrinsic evidence and the concession of the

parties demonstrate that the Legislature declined to adopt an express preemption provision because such a provision would not command a majority of the Legislature. A legislative stalemate on preemption is not an indication of a clear intent to preempt local legislation.

II

The majority's emphasis on state uniformity and historical regulation patterns also fails to acknowledge properly the respect this court traditionally has accorded to localities regarding issues that have a unique local impact. As we stated in *Fisher v. City of Berkeley (1984) 37 Cal.3d 644, 707 [209 Cal. Rptr. 682, 693 P.2d 261]*, "[w]e will be reluctant to infer legislative intent to preempt a field covered by municipal regulation where there is a significant local interest to be served that may differ from one locality to another." I am particularly troubled by the majority's express disapproval of the Court of Appeal's contention that " 'when the Legislature is silent on preemption, courts presume there is *no* intent to preempt.' " (Maj. opn., *ante*, at p. 1261.) To the contrary, as the Court of Appeal aptly observed in *Gluck v. County of Los Angeles (1979) 93 Cal. App. 3d 121, 133 [155 Cal. Rptr. 435]*, the common thread of our preemption cases is that "if there is a significant local interest to be served from one locality to another then the presumption favors the validity of the local ordinance against an attack of state preemption."

The regulation of predatory lending undoubtedly is an area of statewide concern. Nevertheless, I am not persuaded that the field is *exclusively* so, thus leaving no room for local regulation. "The significant issue in determining whether local regulation should be permitted depends upon a 'balancing of two conflicting interests: (1) the needs of local governments to meet the special needs of their communities; and (2) the need for uniform state regulation.' ... [¶] That basic issue, in turn, may in a specific instance be fragmented into the component issues which combine to effect its resolution such as whether local legislators are more aware of and better able to regulate appropriately the problems of their areas, whether substantial geographic, economic, ecological or other distinctions are persuasive of the need for local control, and whether local needs have been adequately recognized and comprehensively dealt with at the state level. Certain areas of human behavior command statewide uniformity, especially the regulation of statewide commercial activities and the conduct of transient individuals, so that mobility may not be burdened unreasonably." (*Robins v. County of Los Angeles (1966) 248 Cal. App. 2d 1, 9 [56 Cal. Rptr. 853]*.)

As the court made clear in *Robins*, although the need for state uniformity is an important consideration in resolving preemption questions, the interests of the locality also are entitled to considerable weight. "The pervasive question to be answered is: Does the demand for uniformity throughout the state outweigh the needs of local governments to handle problems peculiar to their communities." (*Tri County Apartment Assn. v. City of Mountain View (1988) 196 Cal. App. 3d 1283, 1294 [242 Cal. Rptr. 438]*.)

The record in this case establishes that Oakland's Ordinance was adopted because many low-income homeowners in the City of Oakland were targeted by unethical mortgage lenders using predatory lending practices. Many low- and moderate-income homeowners in Oakland were unable to obtain conventional legitimate financing. Local conditions allowed predatory lenders to thrive, and their practices unfairly stripped homes of equity value and resulted in a number of unjust home foreclosures. Often, through fraudulent means, homeowners were charged exorbitant fees and interest rates and unfairly were persuaded to incur mortgage debt in excess of their needs or ability to pay. The record reflects that the Oakland City Council, in passing the ordinance in question, found that the predatory lending problem in Oakland was particularly aggravated "because of the high number of minority and low income homeowners in Oakland, and the pressures of gentrification in certain neighborhoods that increase property values and home equity," which have led to a situation in which "Oakland residents in low income areas have been perceived to be 'the house rich and the cash poor' and thus are prime targets for predatory lending practices."

Oakland's findings mirror the conclusions of the United States Department of Housing and Urban Development (HUD) in an analysis of almost one million mortgages reported nationwide in calendar year 1998 under the *Home Mortgage Disclosure Act*. (See HUD Rep., Unequal Burden: Income and Racial Disparities in Subprime Lending in America (Apr. 2000), http://www.hud.gov/library/bookshelf18/pressrel/subprime.html [as of Jan. 31, 2005] (HUD Report).) HUD's detailed analysis reached four critical conclusions: (1) from 1993 to 1998, the number of subprime refinance loans increased tenfold; [3] (2) subprime loans are three times more likely in low-income neighborhoods than in high-income neighborhoods; (3) subprime loans are five times more likely in African-American neighborhoods than in White neighborhoods; and (4) homeowners in high-income African-American neighborhoods are twice as likely as homeowners in low-income White neighborhoods to have subprime loans. [4] HUD concluded that its analysis "clearly demonstrates the exponential growth in subprime lending and its disproportionate impact on low-income and particularly, minority homeowners and communities throughout the nation." (See HUD Rep., *supra*,

http://www.hud.gov/library/bookshelf18/pressrel/subprime.html.)

> 3 The subprime mortgage market is a market providing credit access to borrowers who might not qualify for traditional financing, such as those with impaired credit, limited income, or high debt-to-income ratios.
>
> HUD reports that in 1993, there were 80,000 subprime refinance loans reported under the Home Mortgage Disclosure Act. By 1998, this number had increased by more than 900 percent to 790,000. "The magnitude and speed of the increase in subprime lending alone--almost 1000% in just five years--creates a critical need for greater scrutiny and concern. While the rapid growth of subprime lending may, on the surface, appear to be good news for higher-risk borrowers, behind the numbers there is some evidence that some portion of subprime lending is occurring with borrowers whose credit would qualify them for conventional loans. Subprime lending may expose borrowers to higher up-front fees and interest rates than they would bear if they had obtained prime loans." (HUD Rep., *supra*, http://www.hud.gov/library/bookshelf18/pressrel/subprime.html.)
>
> 4 HUD also analyzed the prevalence of subprime loans in five urban areas (Atlanta, Philadelphia, New York, Chicago, and Baltimore), concluding that a study of the five cities "gives a good sense that the trends identified above are consistent at the metropolitan level." (HUD Rep., *supra*, http://www.hud.gov/library/bookshelf18/pressrel/subprime.html.)

As HUD's conclusions illustrate, Oakland's particular interest in regulating subprime loans goes beyond merely protecting its particularly vulnerable citizens. As one amicus curiae points out, "predatory lending is not just a consumer protection issue; it is a *community development* issue, because it threatens the stability of lower income homeowning neighborhoods ... . [¶] Predatory home mortgage lending has enormous impacts on targeted neighborhoods. Predatory lending practices, particularly the phenomenon of 'asset based lending,' contribute to an increase in the number of foreclosures. This can result in abandoned houses and blighted neighborhoods and contribute to the physical and economic deterioration of lower-income, minority, and inner city communities. 'Foreclosures, especially in low- and moderate-income neighborhoods turn what might be typically viewed as a consumer protection problem ... into a community development problem, in which increased foreclosures lead to property abandonment and blight.' " (Quoting HUD Rep., Recommendations to Curb Predatory Home Mortgage Lending (June 2000) pp. 24-25, available online at http://www.treas.gov/press/releases/reports/treasrpt.pdf [as of Jan. 31, 2005].)

In view of the community degradation caused by predatory lending, Oakland reasonably could have concluded that it was important to include holders in due course within the Ordinance's purview. The bulk sale of mortgage loans on the secondary market is the primary profit incentive for subprime mortgage lenders. (See Eggert, *Held up in Due Course: Predatory Lending, Securitization, and the Holder in Due Course Doctrine* (2002) *35 Creighton L.Rev. 503, 577* [noting that a primary reason for the rapid growth of the industry "is that the existence of ready capital available to lenders through the securitization of subprime loans has dramatically increased their ability to make those loans"].) The innovation of selling mortgage loans in bulk is, in fact, what fueled the enormous growth of the subprime mortgage industry. (See *id. at p. 578*) As the City of Oakland points out, "sales of subprime loans by predatory lenders is the inducement and profit-basis for their business practice of encouraging ever higher and larger loans to subprime borrowers, i.e. larger 'inventory' of loans for sale to others--all to the detriment of the consumer public." Thus, Oakland reasonably could have concluded that because the bulk of subprime loans are sold on the secondary market, the Ordinance would have significantly greater deterrence effect if borrowers were able to invoke the defense of predatory lending in a foreclosure or other enforcement action against the secondary buyers who otherwise might be immune from liability. Otherwise, as one amicus curiae points out, "[s]ince most subprime loans are sold on the secondary market, the lack of assignee liability provides little incentive to the industry to clean up its practices."

The Legislature was free to conclude that treatment of predatory lending requires statewide uniformity. Alternatively, however, it could conclude that only a statewide minimum standard of conduct is necessary, and that local jurisdictions have some freedom to additionally regulate predatory lenders pursuant to the municipal police power to prevent urban decay and neighborhood blight. Because of the local, varying nature of the problem, this is not a case in which having differing local standards is wholly illogical. (Cf. *Tolman v. Underhill (1952) 39 Cal.2d 708, 713 [249 P.2d 280]* [loyalty oaths for state employees requires uniform treatment]; *Northern Cal. Psychiatric Society v. City of Berkeley (1986) 178 Cal. App. 3d 90, 102 [223 Cal. Rptr. 609]* [no special local interest with regard to regulation of electroshock therapy].) All we can be certain of is that Division

1.6 was the product of a legislative compromise, and that the compromise included deliberate silence on the matter of preemption.

As discussed above, predatory lending is characterized by loans that are aggressively marketed to borrowers who often cannot afford the payments and eventually default on the loans. The city argues that the high rate of default and foreclosure has led to the degradation of entire neighborhoods and has contributed to the already substantial problem of urban blight in Oakland. The field of predatory lending regulation is one in which conditions peculiar to the locality are likely to differ from place to place and where supplemental regulation may well fall within the realm of local government. (*Gluck v. City of Los Angeles, supra, 93 Cal. App. 3d 121, 133* [upholding a Los Angeles ordinance regulating the placement and display of news racks on public rights-of-way].)

This court has acknowledged that the balance of power between state and local municipalities recognizes that a one-size-fits-all solution is not always in the best interest of the residents of a particular community. (See, e.g., *California Rifle & Pistol Assn. v. City of West Hollywood, supra, 66 Cal.App.4th 1302, 1318* [recognizing the need for caution in "depriving local municipalities of aspects of their constitutional police power to deal with local conditions"].) Keeping this in mind, courts have taken care to harmonize the general law and the localized need for municipal regulation even where the record reveals a pronounced statewide interest and a comprehensive statewide scheme relating to the field. (See, e.g., *People v. Butler (1967) 252 Cal. App. 2d 584 [60 Cal. Rptr. 659]* [upholding ordinance prohibiting consumption of alcoholic beverages on public streets despite a comprehensive statewide scheme relating to such beverages]; *Gleason v. Municipal Court (1964) 226 Cal. App. 2d 584 [38 Cal. Rptr. 226]* [upholding local ordinance proscribing loitering despite the then broad sweep of *Penal Code section 647*].) The case before us falls squarely within this line of precedent.

The cases cited by the majority do not compel a contrary conclusion. Although our numerous preemption cases resist easy harmonization, one theme that emerges is that those municipal ordinances that have been found to be preempted have been seen as subverting, in some tangible way, the purpose and intent of the state statute. This is true of each of the cases relied upon by the majority. In *Wilson v. Beville (1957) 47 Cal.2d 852 [306 P.2d 789]*, we invalidated a local ordinance that attempted to impose conditions more stringent than those imposed by the state on the exercise of the power of eminent domain by specifying a shorter statute of limitations for the filing of a claim. There, we observed that a "city charter cannot give a shorter time, make more onerous the recovery of compensation, than the legislation has." (*Id. at p. 861*). We also observed that "a municipality may not curtail or abridge the rights so granted [right to recover for tort] by specifying, through charter provision, a shorter time limitation ... than the period fixed by the statute." (*Ibid.*, italics omitted, citing *Eastlick v. City of Los Angeles (1947) 29 Cal.2d 661, 666 [177 P.2d 558]*.) The local legislation thus undermined the statute by making the recovery of compensation more onerous. As such, the local ordinance was invalid because the Legislature had "provided a complete and detailed system for exercising the right of eminent domain and assessing compensation." (*Wilson v. Beville, supra, 47 Cal.2d at p. 860*.)

Similarly, in *Eastlick*, we struck down a requirement in the Los Angeles City Charter that required a personal injury claimant to itemize the damages in her claim. The requirements for a personal injury claim under state law did not require such specificity. (*Eastlick v. City of Los Angeles, supra, 29 Cal.2d 661, 666.*) Again, as in *Wilson*, the locality had attempted to abridge and circumscribe a state law right, thereby undermining the purpose of the state regulation. (*Ibid.*) Likewise, in *Birkenfeld v. City of Berkeley (1976) 17 Cal.3d 129, 152 [130 Cal. Rptr. 465, 550 P.2d 1001]*, we invalidated a provision in the Berkeley City Charter that attempted to impose additional restrictions on a landlord's right to evict a tenant. There, we observed that requiring "landlords to fulfill the elaborate prerequisites for the issuance of a certificate of eviction by the rent control board before they commence the [state] statutory proceeding would nullify the intended summary nature of the [statutory] remedy." (*Id. at p. 151.*) In *Isaac v. City of Los Angeles (1998) 66 Cal.App.4th 586, 600 [77 Cal. Rptr. 2d 752]*, the Court of Appeal held that an ordinance that gave utility liens priority over other recorded liens was preempted "because it disrupts California's statewide statutory scheme of lien priority" by giving the utility lien a priority over other liens that the state has determined should have priority.

The common theme running through these cases is that a locality may not impose additional burdensome requirements upon the exercise of state statutory remedies that undermine the very purpose of the state statute. Here, we are presented with a fundamentally different relationship between the state statute and local regulations. The Ordinance does not appear to undermine any of the stated goals of Division 1.6. To the contrary, the ordinance grants borrowers additional rights not afforded under state law, such as restrictions on prepayment penalties, mandatory credit counseling, and the opportunity to present defenses to secondary buyers of their mortgages if the borrowers have been victimized by predatory lending practices. Far from subverting Division 1.6, the Ordinance furthers the stated goal of the state legislation

by providing additional protections to the low-income borrowers in Oakland who are especially vulnerable to predatory lending practices.

The majority argues, however, that the Ordinance *does* disrupt the balance struck by the Legislature in enacting Division 1.6. The majority asserts that Division 1.6 balanced "the need to protect particularly vulnerable consumers from predatory lending practices and the concern homeowners not be unduly hindered in accessing the equity in their own homes." (Maj. opn., *ante*, at p. 1257.) The majority observes that "[s]evere regulation of subprime lending might cause lenders to cease making such loans in California, or preclude borrowers from obtaining a loan based on equity in their home even though such loans can serve a legitimate need. ... Thus, the Legislature was aware regulation of certain predatory practices in mortgage lending, practices which occur most often in the subprime market, could have the unintended consequence of hurting those the legislation was intended to help, and sought to balance these competing concerns. The Ordinance, and the possibility of other divergent and competing local measures throughout California, upsets that balance." (*Id.*, at pp. 1257-1258.)

Although it undoubtedly is true that the Legislature struck a balance to ensure passage of the bill, the balance was the product of compromise between consumer protection interests and finance industry interests. In order to glean the intent of the Legislature regarding preemption, we must examine the entirety of that compromise, and not selective parts of it. As discussed above, that compromise included the omission of any provision relating to preemption of local legislation. Yet, the majority concludes that preemption nonetheless was intended, emphasizing the Legislature's supposedly overriding concern regarding the threat that patchwork regulation might pose to low-income borrowers' access to capital. This emphasis on the need to prevent undue regulation ignores the principal purpose of Division 1.6, which is to improve consumer protection against predatory lending practices, *not* to protect lenders from unduly restrictive regulation.

The majority's implicit assumption is that Oakland's Ordinance, by providing for stricter regulation of certain areas of subprime lending, necessarily will cause lenders to cease making loans in Oakland and in California as a whole. (Maj. opn., *ante*, at pp. 1257-1258.) Had a majority of the Legislature agreed with that proposition, however, it could be expected that the legislation would have included a provision expressly preempting local legislation. The conscious omission of an explicit preemption provision demonstrates that the Legislature could not agree that local legislation would undermine or impair the objectives of the state legislation. Furthermore, should the undesirable consequences forecast by the majority come to pass, the Legislature, of course, would be free to step in and add an express preemption provision to Division 1.6.

The majority also places great emphasis on the City's admission that in more than 150 years of California history, no municipality has attempted to regulate mortgage lending. (Maj. opn, *ante*, at p. 1255.) [5] But we never have required a locality to prove a historical practice of regulation to establish the validity of a local regulation. Rather, as outlined above, the proper inquiry requires a clear indication of legislative intent and a studied balance between the need for state uniformity and the particular interest of the locality. Although historical regulatory patterns may be significant in assessing legislative intent, we must assess that history in context. The subprime mortgage industry has undergone tremendous growth in recent years. (See *ante*, fn. 3.) [6] During that period, predatory lending has had a grossly disproportionate impact on low-income and minority homeowners and communities. Under these circumstances, it is reasonable that the communities most affected would see a need to take action to protect their residents.

5 Of course, as the majority acknowledges, Oakland is not the only municipality seeking to regulate in this field. Los Angeles also recently enacted an Ordinance regulating predatory lending practices. (L.A. Mun. Code, ch. XVIII, art. 1, § 181.07, subd. (B).)

6 Moreover, the Legislature was aware that historically, the subject of subprime lending has not been addressed by existing regulation. A bill analysis stating the purposes of Assembly Bill No. 489 states that "[t]he licensing laws under which subprime lenders operate predate the development of the subprime market and therefore did not envision the types of problems that have arisen in this market. In fact many real estate loans are specifically exempted from consumer protections in these laws." (Assem. Com. on Appropriations, Analysis of Assem. Bill No. 489 as amended May 1, 2001, p. 3.)

Thus, despite the circumstance that mortgage regulation historically has occurred at the state rather than the local level, we must recognize the concerns implicated by the recent rapid escalation of predatory lending. In view of the documented evidence that predatory lending is especially pervasive in low-income and minority neighborhoods, it is beyond dispute that Oakland and other similarly situated localities have a more significant interest in regulating subprime lending than localities that, because of demographics and composition, are not targeted in similar ways. Local regulation thus is not only constitutionally valid, but practically vital to the

affected communities. Although predatory lending certainly is a matter of statewide concern, the specific interests of the communities most affected by the banned practices make the regulation of this field particularly amenable to local variations. Oakland's own interest in preventing predatory lending provides ample justification for that locality's enactment of stricter and more protective regulations designed to ensure that its residents receive adequate information before saddling themselves with financial obligations that could prove devastating.

In sum, I agree with the city and the decision of the Court of Appeal below that Division 1.6 establishes a floor, not a ceiling, for the regulation of predatory lending practices. As the majority recognizes, the rule of implied preemption is a " 'rule of necessity, based upon the need to prevent dual regulations which could result in uncertainty and confusion.' " (Maj. opn., *ante,* at p. 1252.) As discussed above, the Ordinance provides added protections for its citizens that will not result in uncertainty or confusion, and absent a clearly evident legislative intent I believe the Ordinance is not preempted. [7]

7 Although the majority does not reach the point, I note that AFSA also argues that because the Ordinance does not apply to federally chartered lenders, it is preempted by *Civil Code section 1916.12*, which creates a mechanism for the state to respond to changes in federal lending laws by adopting conforming changes in the regulation of state lenders. I agree with the Court of Appeal that *Civil Code section 1916.12* does not preempt the Ordinance. *Section 1916.12* does not evidence a legislative intent to preempt and does not mandate absolute parity in the treatment of federal and state lenders at either the state or municipal level, and thus does not preempt the Ordinance.

I would affirm the judgment of the Court of Appeal, upholding the validity of Oakland's antipredatory lending ordinance.

Kennard, J., and Moreno, J., concurred.

PRIOR-HISTORY: APPEAL from the Superior Court of San Bernardino County, No. RCV 071613, Shahla Sabet, Judge.

COUNSEL: James L. Markman; Richards, Watson & Gershon, John J. Harris and Evan J. McGinley for Plaintiff and Appellant.

Bill Lockyer, Attorney General, Mary E. Hackenbracht, Assistant Attorney General, Richard Magasin and Jennifer F. Novak, Deputy Attorneys General, for Defendants and Respondents.

JUDGES: Gaut J., with Hollenhorst, Acting P. J. and Richli J., concurring.

OPINION BY: GAUT

OPINION

GAUT, J.--

1. Introduction

This case involves environmental regulation of municipal storm sewers that carry excess water runoff to the Santa Ana River as it passes through San Bernardino County on its way to the Pacific Ocean. Federal and state laws impose regulatory controls on storm sewer discharges. Municipalities are required to obtain and comply with a federal regulatory permit limiting the quantity and quality of water runoff that can be discharged from these storm sewer systems.

In this instance, the Regional Water Quality Control Board for the Santa Ana Region (the Regional Board) conducted public hearings and then issued a comprehensive 66-page municipal storm sewer permit governing 18 local public entities. Two permittees, the City of Rancho Cucamonga and the City of Upland, among others, filed an administrative appeal with the State Water Resources Control Board (the State Board.) The State Board summarily dismissed the appeal. The Cities of Rancho Cucamonga and Upland [1] then filed a petition for writ of mandate and complaint against the State Board and the Regional Board.

1 Upland is not a party to this appeal.

The trial court sustained without leave to amend the demurrer of the State Board to the entire action. It sustained the demurrer as to four causes of action and granted the motion to strike of the Regional Board. After a hearing, the trial court denied the petition for writ of mandate.

Both procedurally and substantively, the City of Rancho Cucamonga challenges the conditions imposed by the NPDES [2] permit and waste discharge requirements (the 2002 permit). It contends the procedure by which

the 2002 permit was adopted was not legal, that the 2002 permit's conditions are not appropriate for the area, and that the permit's requirements are too expensive. Because we conclude the permit was properly adopted and its conditions and requirements are appropriate, we reject these contentions.

2 The National Pollutant Discharge Elimination System.

2. The National Pollutant Discharge Elimination System

California cases have repeatedly explained the complicated web of federal and state laws and regulations concerning water pollution, especially storm sewer discharge into the public waterways. (*City of Burbank v. State Water Resources Control Bd. (2005) 35 Cal.4th 613, 619-621 [26 Cal. Rptr. 3d 304, 108 P.3d 862]* (*Burbank*); *Building Industry Assn. of San Diego County v. State Water Resources Control Board (2004) 124 Cal.App.4th 866, 872-875 [22 Cal. Rptr. 3d 128]* (*Building Industry*); *Communities for a Better Environment v. State Water Resources Control Bd. (2003) 109 Cal.App.4th 1089, 1092-1094 [1 Cal. Rptr. 3d 76]* (*Communities*); *WaterKeepers Northern California v. State Water Resources Control Bd. (2002) 102 Cal.App.4th 1448, 1451-1453 [126 Cal. Rptr. 2d 389]*).

For purposes of this case, the important point is described by the California Supreme Court in *Burbank*: "Part of the Federal Clean Water Act [*33 U.S.C. § 1251 et seq.*] is the National Pollutant Discharge Elimination System (NPDES), '[t]he primary means' for enforcing effluent limitations and standards under the Clean Water Act. (*Arkansas v. Oklahoma [(1992) 503 U.S. 91, 101 [117 L. Ed. 2d 239, 112 S. Ct. 1046]]*.) The NPDES sets out the conditions under which the federal [Environmental Protection Agency] or a state with an approved water quality control program can issue permits for the discharge of pollutants in wastewater. (*33 U.S.C. § 1342(a) & (b)*.) In California, wastewater discharge requirements established by the regional boards are the equivalent of the NPDES permits required by federal law. (*§ 13374*.)" (*Burbank, supra, 35 Cal.4th at p. 621*.)

California's Porter-Cologne Act (*Wat. Code, § 13000 et seq.*) establishes a statewide program for water quality control. Nine regional boards, overseen by the State Board, administer the program in their respective regions. (*Wat. Code, §§ 13140, 13200 et seq., 13240*, and *13301*.) *Water Code sections 13374* and *13377* authorize the Regional Board to issue federal NPDES permits for five-year periods. (*33 U.S.C. § 1342, subd.(b)(1)(B)*.)

As discussed more fully in part 6 *post*, the state-issued NPDES permits are subject to the informal hearing procedures set forth for administrative adjudications. (*Gov. Code, § 11445.10 et seq.*; *Cal. Code Regs., tit. 23, § 647 et seq.*) The issuance of permits is specifically excluded from the procedures for administrative regulations and rulemaking. (*Gov. Code, §§ 11340 et seq., 11352*.)

3. Factual and Procedural Background

The Regional Board issued the first NPDES permit for San Bernardino County in 1990. The principal permittee was the San Bernardino Flood Control District (the District). The 1990 permit required the permittees to develop and implement pollution control measures, using "best management practices" and monitoring programs, to eliminate illegal discharges and connections, and to obtain any necessary legal authority to do so. The management programs could be existing or new.

In 1993, the District developed the NPDES drain area management program (DAMP).

The second NPDES permit was issued in 1996 and was based on the report of waste discharge (ROWD) prepared by the principal permittee and copermittees, including Rancho Cucamonga. The 1996 permit proposed extending the existing program, which included inspections of industrial and commercial sources; policies for development and redevelopment; better public education; and implementation of a monitoring program. It offered a commitment to reduce pollutants to the "maximum extent practicable."

In 2000, the permittees submitted another ROWD to renew their NPDES permit. The 2000 ROWD proposed continuing to implement and develop water quality management and monitoring programs.

Based on the 2000 ROWD, the Regional Board staff created five successive drafts of the 2002 permit, incorporating written comments by Rancho Cucamonga and others and comments made during two public workshops. Some of the comments addressed the economic considerations of anticipated prohibitive compliance costs.

The notice of the public hearing to consider adoption of the 2002 permit hearing announced: "relevant Regional Board files are incorporated into the record;" the governing procedures were those for an informal hearing procedure as set forth in "*Title 23, California Code of Regulations, Section 647 et seq.*;" and "Hearings before the Regional Water Board are not conducted pursuant to *Government Code section 11500 et seq.*," the alternative formal hearing procedure for administrative adjudication. The notice was mailed to all permittees. The accompanying "fact sheet," which was publicly circulated, offered further information about the conduct and nature of the hearing and the legal and factual

grounds for the Regional Board's recommendation to adopt the 2002 permit.

The informal public hearing was conducted on April 26, 2002. Neither Rancho Cucamonga nor any of the permittees objected to the form or substance of the hearing. Ultimately, after a staff presentation and testimony, including a statement from Rancho Cucamonga's counsel, the Regional Board adopted the 2002 permit. After the State Board dismissed their administrative appeal, Rancho Cucamonga and Upland filed the instant action.

The operative pleading is the second amended petition for writ of mandate and complaint. The petition alleges that the State Board and the Regional Board acted illegally and in excess of their jurisdiction in developing, adopting and implementing the 2002 permit. Based on 26 pages of general allegations, the petition asserts eight causes of action, alleging the State Board and the Regional Board violated *sections 13241*, *13263*, and *13360 of the Water Code* (the Porter-Cologne Act); the California Environmental Quality Act (*Pub. Resources Code, § 21000 et seq.*); the California Administrative Procedure Act (*Gov. Code, §§ 11340-11529*); the California Constitution; and the federal Clean Water Act; and seeking declaratory and injunctive relief.

The State Board successfully opposed the action on demurrer. The Regional Board eliminated four causes of action, the fourth, fifth, seventh, and eighth by demurrer and motion to strike. On the remaining four causes of action, the trial court found in favor of the Regional Board.

4. State Board's Demurrer

Rancho Cucamonga maintains the trial court should not have sustained the demurrer of the State Board without leave to amend because the State Board is the ultimate authority on state-issued NPDES permits, and, therefore, was properly joined as a party: "Because the State Board has for all intents and purposes adopted the rules and policies of general application upon which the Permit is based, it is clearly a proper party to this action."

The difficulty with Rancho Cucamonga's theory of liability against the State Board is, to quote Gertrude Stein about the City of Oakland, "There is no there there." (Stein, Everybody's Autobiography (1937).) In other words, Rancho Cucamonga's allegations against the State Board lack any substance. Instead, Rancho Cucamonga launches an unspecific attack on the State Board without identifying any particular problems. The petition makes the unexceptional allegation that the State Board formulates general water control policy which it implements and enforces through regional boards. It also alleges the State Board has not complied with the Administrative Procedure Act but it does not identify any objectionable policies or how there is no compliance. Instead the petition complains about a State Board letter directing that all NPDES permits follow consistent principles regarding standard urban storm water mitigation plans. Additionally, the petition maintains the 2002 permit included new reporting requirements and increased costs of compliance.

But the foregoing allegations did not articulate any improper State Board conduct. The 2002 permit, issued by the Regional Board and not by the State Board, is not subject to formal rulemaking procedures. (*Gov. Code, § 11352, subd. (b).*) The State Board's letter, explaining a precedential decision concerning mitigation plans, is not an example of formal rulemaking. (*Gov. Code, § 11425.60, subd. (b).*) By dismissing Rancho Cucamonga's administrative appeal concerning the 2002 permit, the State Board declined to become involved and the Regional Board's decision to issue the permit became final and subject to judicial review. (*People ex rel Cal. Regional Wat. Quality Control Bd. v. Barry (1987) 194 Cal.App.3d 158, 177 [239 Cal. Rptr. 349].*) But the State Board was not made a proper party by reason of its dismissal of the administrative appeal.

Furthermore, even if Rancho Cucamonga had identified any cognizable claim against the State Board, it would have been barred by the 30-day statute of limitations for challenging an improperly adopted State Board regulation or order. (*Wat. Code, § 13330*; *Gov. Code, § 11350.*)

We hold the trial court properly sustained without leave to amend the State Board's demurrer to the second amended petition for writ of mandate and complaint.

5. Standard of Review for Petition for Writ of Mandate

In deciding a petition for writ of mandate, the trial court exercises its independent judgment. (*Code Civ. Proc., § 1094.5, subd. (c)*; *Wat. Code, § 13330, subd. (d)*; *Building Industry, supra, 124 Cal.App.4th at p. 879.*) But, "[i]n exercising its independent judgment, a trial court must afford a strong presumption of correctness concerning the administrative findings ... . [¶] ... [¶] ... Because the trial court ultimately must exercise its own independent judgment, that court is free to substitute its own findings after first giving due respect to the agency's findings." (*Fukuda v. City of Angels (1999) 20 Cal.4th 805, 817-818 [85 Cal. Rptr. 2d 696, 977 P.2d 693]* (*Fukuda*).)

On appeal, the reviewing court determines whether substantial evidence supports the trial court's factual determinations. (*Fukuda, supra, 20 Cal.4th at p. 824*; *Building Industry, supra, 124 Cal.App.4th at p. 879.*) The trial court's legal determinations receive a de novo review with consideration being given to the agency's

interpretations of its own statutes and regulations. (*Building Industry, supra, at p. 879*; *Nasha v. City of Los Angeles (2004) 125 Cal.App.4th 470, 482 [22 Cal. Rptr. 3d 772]*.)

6. Rancho Cucamonga's Objections to the Administrative Record and Lack of Notice

The notice of the administrative hearing for adoption of the 2002 permit included the statement that the Regional Board's files would be incorporated as part of the record. Before trial on the writ petition, Rancho Cucamonga attempted to raise an omnibus objection to the entire administrative record and a specific objection to four documents, three studies about marine pollution and one economic study. The trial court ruled the objections had been waived by not making them before or at the time of the hearing. Applying the presumption of administrative regularity, we affirm the trial court's evidentiary ruling. (*Mason v. Office of Admin. Hearings (2001) 89 Cal.App.4th 1119, 1131 [108 Cal. Rptr. 2d 102]*.)

The reasons given by Rancho Cucamonga as to why the trial court should have sustained its objections to all or part of the administrative record are that it did not waive its objections to the record because Rancho Cucamonga did not know the hearing was adjudicative; the Regional Board did not provide notice of an informal hearing (*Gov. Code, § 11445.30*); and Rancho Cucamonga never had an opportunity to object to the administrative record.

As noted previously, *Government Code section 11352, subdivision (b)*, makes the issuance of an NPDES permit exempt from the rulemaking procedures of the Administrative Procedure Act. Permit issuance is a quasi-judicial, not a quasi-legislative, rulemaking proceeding: "The exercise of discretion to grant or deny a license, permit or other type of application is a quasi-judicial function." (*Sommerfield v. Helmick (1997) 57 Cal.App.4th 315, 320 [67 Cal. Rptr. 2d 51]*; see *City of Santee v. Superior Court (1991) 228 Cal.App.3d 713, 718 [279 Cal. Rptr. 22]*.)

Instead, the Regional Board correctly followed the administrative adjudication procedures (*Gov. Code, § 11445.10 et seq.*) and the companion regulations at *California Code of Regulations, title 23, sections 647-648.8* for informal adjudicative public hearings. These procedures were announced in the notice of hearing which also stated that *Government Code section 11500 et seq.*, governing formal administrative adjudication hearings, would not apply, thus satisfying *Government Code section 11445.30* requiring notice of an informal hearing procedure. At the time of the hearing, Rancho Cucamonga did not object to the informal procedure. Rancho Cucamonga's effort to argue that federal notice requirements (*40 C.F.R. § 124.8, subd. (b)(6)(ii)* (2005)) should also have been followed fails because this involved a state-issued NPDES permit adopted according to California procedures.

Because Rancho Cucamonga was given notice that the hearing on the permit would proceed as an informal administrative adjudication, it cannot successfully argue it was relieved of the obligation to object to the administrative record at the time of the hearing. An informal administrative adjudication contemplates liberality in the introduction of evidence. (*23 Cal. Code Regs., tit. 23, §§ 648, subd. (d), 648.5.1.*) If Rancho Cucamonga wished to object to the informal hearing procedures, including the liberal introduction of evidence, it should have raised its objections as provided by statute and regulation before or at the time of the hearing (*Gov. Code, §§ 11445.30, 11445.40, 11445.50*; *23 Cal. Code Regs., tit. 23, § 648.7*), not a year later in the subsequent civil proceeding.

7. Economic Considerations for Issuance of NPDES Permit

Rancho Cucamonga's next assignment of error is that the Regional Board failed to consider the economic impact of the requirements of the 2002 permit by not conducting a cost-benefit analysis. Rancho Cucamonga relies on the California Supreme Court's *Burbank* opinion, in which the court held: "When ... a regional board is considering whether to make the pollutant restrictions in a wastewater discharge permit *more stringent* than federal law requires, California law allows the board to take into account economic factors, including the wastewater discharger's cost of compliance." (*Burbank, supra, 35 Cal.4th at p. 618.*) Rancho Cucamonga contends that the 2002 permit exceeds federal requirements and that, therefore, this case should be remanded for a consideration of economic factors. (See *ibid.*; *Wat. Code, § 13241, subd. (d).*)

The two problems with this argument are the trial court found there was no evidence that the 2002 permit exceeded federal requirements and Rancho Cucamonga does not explain now how it does so. There was also evidence that the 2002 permit was based on a fiscal analysis and a cost-benefit analysis. In the absence of the foundational predicate and in view of evidence that cost was considered, Rancho Cucamonga's contention on this point fails.

We also reject Rancho Cucamonga's related procedural argument that the Regional Board's motion to strike was impermissible as piecemeal adjudication. (*Regan Roofing v. Superior Court (1994) 24 Cal.App.4th 425, 432-436*; *Lilienthal & Fowler v. Superior Court (1993) 12 Cal.App.4th 1848, 1851-1855 [16 Cal. Rptr. 2d 458]*.)

It is well recognized a court may strike all or part of a pleading as it did in this instance. (*Code Civ. Proc., §§ 431.10, 436*; *PH II, Inc. v. Superior Court (1995) 33 Cal.App.4th 1680, 1682-1683 [40 Cal. Rptr. 2d 169]*.)

8. Substantial Evidence

Rancho Cucamonga also challenges the trial court's independent factual determination that sufficient evidence supports the findings of the Regional Board. Rancho Cucamonga's main contention is that the 2002 permit was not distinctively crafted for San Bernardino County but, instead, copied a similar permit for other counties without identifying any particular water quality impairment in San Bernardino County caused by the permittees. In other words, no evidence in the record supports issuance of the 2002 permit and the trial court did not identify any such evidence in its statement of decision.

One problem with Rancho Cucamonga's foregoing argument is that the Clean Water Act requires an NPDES permit to be issued for *any* storm sewer discharge, whether there is any actual impairment in a particular region. (*33 U.S.C. § 1342*; *Communities, supra, 109 Cal.App.4th at pp. 1092-1093*.) Therefore, Rancho Cucamonga's contention that the permit fails to identify impaired water bodies in the region is beside the point.

In its statement of decision, the trial court discussed the inadequacy of the arguments and evidence cited by Rancho Cucamonga and concluded: "The San Bernardino Permit is based in part on the Basin Plan for this region. It is also based on the permittees' own reports and monitoring within this region ... . It incorporates the permittees' management program, which is unique to these cities and county." The trial court included a citation to the 1993 DAMP report's "Geographic Description of the Drainage Area," which discusses the specific conditions present in San Bernardino County.

On appeal, Rancho Cucamonga faults the trial court for not presenting a more detailed description of the evidence supporting the issuance of the permit. We do not think the trial court, or this court, must bear that burden.

First, "[a]n agency may ... rely upon the opinion of its staff in reaching decisions, and the opinion of staff has been recognized as constituting substantial evidence. (*Coastal Southwest Dev. Corp. v. California Coastal Zone Conservation Com. (1976) 55 Cal.App.3d 525, 535-536 [127 Cal. Rptr. 775]*.)" (*Browning-Ferris Industries v. City Council (1986) 181 Cal.App.3d 852, 866 [226 Cal. Rptr. 575]*.) Here the Regional Board adopted the recommendation of its staff in issuing the permit. And, as the record shows, the staff's recommendation was based on the previous 1990 and 1996 permits, the 1993 DAMP report and the 2000 ROWD, the permittees' application for renewal of the 1996 permit, as well as more general water quality factors. The evidence contradicts Rancho Cucamonga's assertion, that "the Regional Board simply copied verbatim the NPDES Permit for North Orange County, a coastal region with markedly different water quality conditions and problems."

As part of the trial court's consideration of the petition for writ of mandate, Rancho Cucamonga and the Regional Board directed the court to review specific items of evidence contained in the administrative record. In its opposing brief, the Regional Board offered a detailed account of the evidence supporting the issuance of the permit. The trial court indicated it had reviewed the parties' submissions before ruling. It discussed the evidence at the hearing on the petition and referred to it in its statement of decision. (*Lala v. Maiorana (1959) 166 Cal.App.2d 724, 731 [333 P.2d 862]*.) Rancho Cucamonga had the burden of showing the Board abused its discretion or its findings were not supported by the facts. (*Building Industry, supra, 124 Cal.App.4th at pp. 887-888*.) To the extent it attempted to do so at the trial court level, it was not successful.

This court has independently reviewed the record with particular attention to the evidence as emphasized by the parties. We do not, however, find it incumbent upon us or the trial court to review the many thousands of pages submitted on appeal and identify the particular evidence that constitutes substantial evidence. Instead, we deem the trial court's findings sufficient and not affording any grounds for reversal. (*Building Industry, supra, 124 Cal.App.4th at p. 888*; see *Weisz Trucking Co., Inc. v. Emil R. Wohl Construction (1970) 13 Cal.App.3d 256, 264 [91 Cal. Rptr. 489]*, citing *Perry v. Jacobsen (1960) 184 Cal.App.2d 43, 50 [7 Cal. Rptr. 177]*.)

9. Safe Harbor Provision

As it did repeatedly below, Rancho Cucamonga maintains the 2002 permit violates section 402(k) of the Clean Water Act (*33 U.S.C. § 1342(k)*), because the permit does not include "safe harbor" language, providing that, if a permittee is in full compliance with the terms and conditions of its permit, it cannot be found in violation of the Clean Water Act. (*U.S. Public Interest v. Atlantic Salmon (1st Cir. 2003) 339 F.3d 23, 26*; *EPA v. State Water Resources Control Board (1976) 426 U.S. 200, 205 [48 L.Ed.2d 578, 96 S.Ct. 2022]*.) The trial court found there was no statutory right to a "safe harbor" provision to be included as the term of the permit. We agree.

This seems like much ado about nothing because *33 United States Code section 1342 (k)*, already affords Rancho Cucamonga the protection it seeks: "Compliance with a permit issued pursuant to this section shall be

deemed compliance, for purposes of *sections 1319* and *1365* of this title, with *sections 1311*, *1312*, *1316*, *1317*, and *1343* of this title, except any standard imposed under *section 1317* of this title for a toxic pollutant injurious to human health." Rancho Cucamonga does not cite any persuasive authority as to why this statutory protection had to be duplicated as a provision in the 2002 permit.

Furthermore, the 2002 permit complied with the State Board's water quality order No. 99-05, a precedential decision requiring NPDES permits to omit "safe harbor" language used in earlier permits. A permit without "safe harbor" language was upheld in *Building Industry, supra, 124 Cal.App.4th at page 877.* The trial court did not err.

10. Maximum Extent Practicable

Rancho Cucamonga protests that the 2002 permit's discharge limitations/prohibitions exceed the federal requirement that storm water dischargers should "reduce the discharge of pollutants to the maximum extent practicable." (*33 U.S.C. § 1342(p)(3)(B)(iii).*) The trial court, however, found there was no evidence presented that the 2002 permit exceeded federal requirements. Because there is no evidence, the issue presented is hypothetical and, therefore, premature. (*Building Industry, supra, 124 Cal.App.4th at p. 890.*)

Additionally, as Rancho Cucamonga recognizes, *Building Industry* rejected the contention that a "regulatory permit violates federal law because it allows the Water Boards to impose municipal storm sewer control measures more stringent than a federal standard known as 'maximum extent practicable.' [Citation.] [Fn. omitted.] ... [W]e ... conclude the Water Boards had the authority to include a permit provision requiring compliance with state water quality standards." (*Building Industry, supra, 124 Cal.App.4th at p. 871.*) The *Burbank* case, allowing for consideration of economic factors when federal standards are exceeded, does not alter the analysis in this case where there was no showing that federal standards were exceeded and where there was evidence that economic factors were considered. Furthermore, like the permit in *Building Industries*, the 2002 permit contemplates controlling discharge of pollutants to the maximum extent practicable through a "cooperative iterative process where the Regional Water Board and Municipality work together to identify violations of water quality standards." (*Building Industry, supra, at p. 890.*) The 2002 permit does not exceed the maximum extent practicable standard.

11. The Requirements of the 2002 Permit

Rancho Cucamonga lastly complains the requirements of the 2002 permit are "overly prescriptive," illegally dictating the manner of compliance and improperly delegating to the permittees the inspection duties of the State Board and the Regional Board. Rancho Cucamonga's arguments contradict the meaning and spirit of the Clean Water Act.

In creating a permit system for dischargers from municipal storm sewers, Congress intended to implement actual programs. (*National Resources Defense Council, Inc. v. Costle (D.C. Cir. 1977) 186 U.S. App.D.C. 147 [568 F.2d 1369, 1375].*) The Clean Water Act authorizes the imposition of permit conditions, including: "management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants." (*33 U.S.C. § 1342(p)(3)(B)(iii).*) The act authorizes states to issue permits with conditions necessary to carry out its provisions. (*33 U.S.C. § 1342(a)(1).*) The permitting agency has discretion to decide what practices, techniques, methods and other provisions are appropriate and necessary to control the discharge of pollutants. (*National Resources Defense Council v. U.S. EPA (1992) 966 F.2d 1292, 1308.*) That is what the Regional Board has created in the 2002 permit.

Rancho Cucamonga's reliance on *Water Code section 13360* is misplaced because that code section involves enforcement and implementation of state water quality law, (*Wat. Code, § 13300 et seq.*) not compliance with the Clean Water Act (*Wat. Code, § 13370 et seq.*) The federal law preempts the state law. (*Burbank, supra, 35 Cal.4th at p. 618.*) The Regional Board must comply with federal law requiring detailed conditions for NPDES permits.

Furthermore, the 2002 permit does afford the permittees discretion in the manner of compliance. It is the permittees who design programs for compliance, implementing best management practices selected by the permittees in the DAMP report and approved by the Regional Board. Throughout the permit, the permittees are granted considerable autonomy and responsibility in maintaining and enforcing the appropriate legal authority; inspecting and maintaining their storm drain systems according to criteria they develop; establishing the priorities for their own inspection requirements; and establishing programs for new development. The development and implementation of programs to control the discharge of pollutants is left largely to the permittees.

More particularly, we agree with the Regional Board that the permit properly allocated some inspection duties to the permittees. As part of their ROWD application for a permit, the permittees proposed to "Conduct Inspection, Surveillance, and Monitoring. Carry out all inspections, surveillance, and monitoring procedures necessary

to determine compliance and noncompliance with permit conditions including the prohibition on illicit discharges to the municipal storm drain system." The ROWD also discussed continuing existing inspection programs.

Water Code section 13383 provides that as part of compliance with the Clean Water Act, the Regional Board may establish inspection requirements for any pollutant discharger. Federal law, either expressly or by implication, requires NPDES permittees to perform inspections for illicit discharge prevention and detection; landfills and other waste facilities; industrial facilities; construction sites; certifications of no discharge; non-stormwater discharges; permit compliance; and local ordinance compliance. (*40 C.F.R. 122.26(d), (g)* (2005); *33 U.S.C. § 1342(p)(3)(B)(ii).*) Permittees must report annually on their inspection activities. (*40 C.F.R. § 122.42(c)(6)* (2005).)

Rancho Cucamonga claims it is being required to conduct inspections for facilities covered by other state-issued general permits. Rancho Cucamonga and the other permittees are responsible for inspecting construction and industrial sites and commercial facilities within their jurisdiction for compliance with and enforcement of local municipal ordinances and permits. But the Regional Board continues to be responsible under the 2002 NPDES permit for inspections under the general permits. The Regional Board may conduct its own inspections but permittees must still enforce their own laws at these sites. (*40 C.F.R. § 122.26(d)(2)* (2005).)

12. Disposition

Rancho Cucamonga is the only of the original 18 permittees still objecting to the 2002 NPDES permit. It has not successfully demonstrated that substantial evidence does not support the trial court's factual determinations or the trial court erred in its interpretation and application of state and federal law.

We affirm the judgment and order the prevailing parties to recover their costs on appeal.

Hollenhorst, Acting P. J., and Richli, J., concurred.

On February 27, 2006, the opinion was modified to read as printed above.

ALBERT MILLS, Plaintiff and Respondent, v. COUNTY OF TRINITY et al., Defendants and Appellants

Civ. No. 18866

Court of Appeal of California, Third Appellate District

108 Cal. App. 3d 656; *166 Cal. Rptr. 674*; *1980 Cal. App. LEXIS 2093*

July 28, 1980

SUBSEQUENT HISTORY: Respondent's petition for a hearing by the Supreme Court was denied September 24, 1980.

PRIOR-HISTORY: Superior Court of Trinity County, No. 7030, Clyde H. Small, Judge. +

+ Assigned by the Chairperson of the Judicial Council.

COUNSEL: Ronald Barbatoe, District Attorney, for Defendants and Appellants.

Wells, Wingate & Small, W. Leonard Wingate and Edward A. Shuttle as Amici Curiae on behalf of Defendants and Appellants.

David R. Hammer for Plaintiff and Respondent.

Ronald A. Zumbrun, John H. Findley, Thomas E. Hookano and James L. Meyer as Amici Curiae on behalf of Plaintiff and Respondent.

JUDGES: Opinion by Puglia, P. J., with Reynoso, J., and DeCristoforo, J., + concurring.

+ Assigned by the Chairperson of the Judicial Council.

OPINION BY: PUGLIA

OPINION

Following enactment of article XIII A of the California Constitution (Prop. 13 on the June 6, 1978, ballot, commonly known as the Jarvis-Gann initiative), the Trinity County Board of Supervisors adopted resolution No. 73-78 providing both increased and new fees for county services in processing subdivision, zoning, and other land-use applications. Plaintiff Mills then brought this action in the superior court against the county and its board challenging the constitutionality of the resolution and seeking to bar its enforcement through mandate and declaratory and injunctive relief. The trial court sustained plaintiff's claim that as a matter of law the new and increased fees under resolution No. 73-78 constitute a "special tax" within the meaning of article XIII A and thus cannot be imposed without a two-thirds affirmative vote of the electors of Trinity County. Since the board of supervisors had adopted the resolution without submitting it to the county electorate for approval, the court ordered summary judgment in plaintiff's favor and issued a peremptory writ of mandate. The writ ordered defendants to "desist and refrain from enforcing the provisions of Resolution Number 73-78" and further directed defendants to refund any and all monies received pursuant to the provisions of the resolution which exceeded amounts in effect under prior fee schedules.

Defendants appealed and filed an accompanying petition for a writ of supersedeas. We issued the writ, restraining enforcement of the judgment pending disposi-

tion of this appeal. (*Mills v. County of Trinity (1979) 98 Cal.App.3d 859 [159 Cal.Rptr. 679]*.)

Although in its generality, article XIII A is not fatally vague, "in a number of particulars [it] is imprecise and ambiguous" (*Amador Valley Joint Union High Sch. Dist. v. State Bd. of Equalization (1978) 22 Cal.3d 208, 245 [149 Cal.Rptr. 239, 583 P.2d 1281]*) "and over a period of time will require judicial, legislative and administrative construction" (*id., at p. 244*). We are now called upon in this appeal to determine whether the new and increased fees exacted by resolution No. 73-78 constitute a "special tax" within the meaning of section 4 of article XIII A. That provision states: "Cities, Counties and special districts, by a two-thirds vote of the qualified electors of such district, may impose special taxes on such district, except ad valorem taxes on real property or a transaction tax or sales tax on the sale of real property within such City, County or special district."

Utilizing the established rules of construction applicable to the interpretation of constitutional provisions (see *Amador Valley, supra , 22 Cal.3d at pp. 245-246*), we conclude that the "special tax" referred to in section 4 of article XIII A does not embrace fees charged in connection with regulatory activities which fees do not exceed the reasonable cost of providing services necessary to the activity for which the fee is charged and which are not levied for unrelated revenue purposes. Accordingly, we shall reverse and remand for a factual determination of whether the fees in question are reasonably compensatory for the costs occasioned by the regulated activities.

"Tax" is a term without fixed definition. The word may be construed narrowly or broadly depending on its particular context and the purpose for which the definition is to be used. (See *Crawford v. Herringer (1978) 85 Cal.App.3d 544, 548-551 [149 Cal.Rptr. 578]*; *City of Glendale v. Trondsen (1957) 48 Cal.2d 93, 99-100 [308 P.2d 1]*.) In its broadest sense, a tax includes all charges upon persons or property for the support of government or for public purposes. (*City of Madera v. Black (1919) 181 Cal. 306, 310-311 [184 P. 397]*; Webster's New Internat. Dict. (3d ed. 1971) p. 2345.) In narrower contexts, the word has been construed to exclude charges to particular individuals which do not exceed the value of the governmental benefit conferred upon or the service rendered to the individuals (*County of Fresno v. Malmstrom (1979) 94 Cal.App.3d 974, 984 [156 Cal.Rptr. 777]*; *Crawford v. Herringer, supra, 85 Cal.App.3d at p. 550*), and to exclude charges against particular individuals for governmental regulatory activities where the fees involved do not exceed the reasonable expense of the regulatory activities (*United Business Com. v. City of San Diego (1979) 91 Cal.App.3d 156, 165 [154 Cal.Rptr. 263]*).

Initiative measures as well as other general constitutional provisions should be interpreted liberally to give full effect to the framers' objective and the growing needs of the people. (*Amador Valley, supra, 22 Cal.3d at pp. 244-245*.) Animated by the foregoing principle, the trial court construed "tax" in its broadest meaning holding that, as used in section 4 of article XIII A, it "includes all charges, however labeled, which are to exact money for the support of government or for public purposes." However, were we to accept the trial court's broad definition, the initiative measure as so construed would prohibit any increase in fees for governmental activities conferring a direct benefit on the specific individual who is charged for such benefit without the prior approval of two-thirds of the electors. In other words, a county would be powerless to raise charges for proprietary functions such as hospital services, public transportation, and garbage collection without the two-thirds stamp of approval. We do not believe the state electors intended to put local government in such a fiscal straightjacket.

Conceding that such a draconian result was probably never intended by the electorate, plaintiff asserts the interpretation adopted by the trial court would exclude from the meaning of "special tax" fees charged for governmental activities *primarily* for the benefit of individuals and only incidentally for the benefit of the public. The minor premise of plaintiff's argument is that land-use charges imposed on the developer pursuant to the government's police power are primarily for the benefit of the public at large. Plaintiff thus concludes that such charges constitute taxes within the meaning of section 4 of article XIII A. Defendants, while not disputing the applicability of the "primary purpose" test, contend that it is the developer who is the primary beneficiary of an approval for land subdivision since the value of the land increases; the public, defendants assert, is merely the indirect beneficiary.

We eschew the public versus individual primary purpose test as a solvent of the instant litigation. The trial court also recognized the difficulty of embarking on such "spongy terrain" since all governmental activities by definition serve a public purpose. Under such a test, every charge imposed in connection with land-use activities as well as all other regulatory activities undertaken pursuant to the police power might well be categorized as a "special tax" since the police power is constitutional only if adopted to promote the health, safety, and welfare of the public as a whole. (*Euclid v. Ambler Realty Co. (1926) 272 U.S. 365, 387 [71 L.Ed. 303, 310, 47 S.Ct. 114, 54 A.L.R. 1016]*; *Associated Homebuilders etc. Inc. v. City of Livermore (1976) 18 Cal.3d 582, 604 [135 Cal.Rptr. 41, 557 P.2d 473, 92 A.L.R.3d 1038]*.)

We rely instead on statutory and judicial precedent (see *County of Sacramento v. Hickman (1967) 66 Cal.2d 841, 850 [59 Cal.Rptr. 609, 428 P.2d 593]*) and contemporaneous legislative construction (*Amador Valley, supra, 22 Cal.3d at p. 245*) in determining that the state electorate did not intend to include within the meaning of "special tax" reasonable costs for processing land-use permits and applications.

Traditionally, courts have determined whether a local governmental charge denominated a regulatory fee is an exercise of the police power or the power to raise revenue by analyzing the use of the fee involved rather than relying on its label. (*United States Com. v. City of San Diego, supra, 91 Cal.App.3d at p. 165.*) The general rule is that a regulatory fee must not "exceed the sum reasonably necessary to cover the costs of the regulatory purpose sought" in order to be considered as a fee rather than a guise for a tax. (*Ibid.*; see also *County of Plumas v. Wheeler (1906) 149 Cal. 758, 763 [87 P. 909]*; 5 Witkin, Summary of Cal. Law (8th ed. 1974) Taxation, § 5, pp. 3991-3992; 9 McQuillin, Municipal Corporations (3d ed. 1978) § 26.15, p. 29.) As long as the local enactments are not in conflict with general laws, the power to impose valid regulatory fees is not dependent on any legislatively authorized taxing power but exists pursuant to the direct grant of police power under *article XI, section 7, of the California Constitution*. (*County of Plumas v. Wheeler, supra, 149 Cal. at pp. 761, 763.*) Land-use regulations fulfill a legitimate public welfare purpose under the police power. (*Associated Homebuilders etc. Inc. v. City of Livermore, supra, 18 Cal.3d at p. 604*; *Associated Homebuilders etc. Inc. v. City of Walnut Creek (1971) 4 Cal.3d 633, 651 [94 Cal.Rptr. 630, 484 P.2d 606, 43 A.L.R.3d 847].*) Moreover, with respect to subdivision map activities in particular, *Government Code section 66451.2* provides that ". . . local [agencies] may establish *reasonable* fees for the processing of tentative, final and parcel maps and for other procedures required or authorized by [the Subdivision Map Act] or local ordinance." (Italics added.)

Senate Bill No. 785, enacted in September 1979 after the enactment of article XIII A and the county's adoption of resolution No. 73-78, is sufficiently contemporaneous to serve as an interpretive guide. Its purpose is to furnish legislative authorization for counties and general law cities to impose special taxes subject to the two-thirds requirement of article XIII A. *Section 50076*, added to the Government Code by Senate Bill No. 785, clarifies the meaning of "special tax" as follows: "As used in this article, *'special tax' shall not include any fee which does not exceed the reasonable cost of providing the service or regulatory activity for which the fee is charged and which is not levied for general revenue purposes*." (Italics added.) Where the Legislature has enacted a law in light of a particular constitutional provision, a settled rule of construction is that the Legislature's interpretation of uncertain constitutional terms is entitled to great deference by the courts. (*San Francisco v. Industrial Acc. Com. (1920) 183 Cal. 273, 279 [191 P. 26]*; *Methodist Hosp. of Sacramento v. Saylor (1971) 5 Cal.3d 685, 692-693 [97 Cal.Rptr. 1, 488 P.2d 161].*)

In addition, the "special tax" referred to in section 4 of article XIII A has been judicially construed to exclude special assessments charged for improvements to individual properties which do not exceed the benefits the assessed properties receive from the improvement. (*County of Fresno v. Malmstrom, supra, 94 Cal.App.3d at p. 984.*) The *Malmstrom* interpretation is consistent with that expressed by the Legislature in Senate Bill No. 785 (*Gov. Code, § 50076*).

Ballot arguments and analyses presented to the electorate may be helpful in determining the probable meaning of an initiative's uncertain language. (*Amador Valley, supra, 22 Cal.3d at pp. 245-246.*) Here, the arguments in favor of the constitutional initiative "support a conclusion that the article is aimed at *general* taxes and governmental spending." (Original italics; *County of Fresno v. Malmstrom, supra, 94 Cal.App.3d at p. 981.*) There is nothing in the ballot arguments supporting article XIII A suggesting an intent to prevent local government from exacting fees reasonably commensurate with the cost of regulatory activity from those at whose instance the activity is conducted.

Finally, support for the Legislature's interpretation of "special taxes" is found in an initiative measure subsequently adopted by the California electorate in 1979; the measure placed limitations on governmental spending. (Cal. Const., art. XIII B.) Although applicable only to article XIII B, the phrase, "proceeds of taxes," is defined there as including, but not restricted to "all tax revenues and the proceeds to an entity of government, from (i) regulatory licenses, user charges, and user fees to the extent that such proceeds *exceed* the costs reasonably borne by such entity in providing the regulation, product, or service, . . ." (Italics added; *Cal. Const., art. XIII B, § 8, subd. (c).*)

Informed by those sources recognized as germane to the task of statutory interpretation, we conclude that "special taxes" under *article XIII A, section 4 of the California Constitution* do not embrace fees for land-use regulatory activities where the fees charged to particular applicants do not exceed the reasonable cost of the regulatory activities and are not levied for unrelated revenue purposes. Since the trial court held the fees imposed by resolution No. 73-78 constitute a "special tax" as a matter of law, the factual question whether or not such fees exceed the reasonable cost of the related regulatory activity

has never been litigated. On remand that issue must be tried.

The judgment is reversed and the cause remanded for further proceedings consistent with this opinion.

PROOF OF SERVICE

I am employed in Los Angeles County. I am over the age of 18 and not a party to this action. My business address is 624 S. Grand Avenue, 22nd Floor, Los Angeles, California 90017.

On June 5, 2009 I served the foregoing document, described as

CLAIMANT CITIES' COMMENTS ON DRAFT STAFF ANALYSIS

☐ the original of the document
☒ true copies of the document

in separate sealed envelopes addressed as follows:

See Attached Service List

☒ **BY U.S. MAIL**: I sealed and placed such envelope for collection and mailing to be deposited on the same day at Los Angeles, California. The envelopes were mailed with postage thereon fully prepaid. I am readily familiar with Burhenn & Gest LLP's practice of collection and processing corresponding for mailing. Under this practice, documents are deposited with the U.S. Postal Service on the same day that is stated in the proof of service, with postage fully prepaid at Los Angeles, California in the ordinary course of business.

☐ **BY FEDERAL EXPRESS**: I am familiar with the firm's practice of collecting and processing correspondence for delivery via Federal Express. Under that practice, it would be picked up by Federal Express on that same day at Los Angeles, California and delivered to the parties as listed on this Proof of Service the following business morning.

☐ **BY FACSIMILE**: I caused the above referenced document to be transmitted via facsimile to the parties as listed on this Proof of Service.

☐ **BY PERSONAL SERVICE**: I personally delivered such envelope by hand to the office of the addressee(s).

☐ **STATE**: I declare under penalty of perjury under the laws of the state of California that the above is true and correct.

☒ **FEDERAL**: I declare that I am employed in the office of a member of the bar of this court at whose direction the service was made.

Executed on June 5, 2009 at Los Angeles, California.

Dear Ms. Higashi:

COMMISSION ON STATE MANDATES – RESPONSE TO DRAFT STAFF ANALYSIS RE: *MUNICIPAL STORM WATER AND URBAN RUNOFF DISCHARGES* 03-TC-04, 03-TC-19, 03-TC-20, 03-TC-21

The State Water Resources Control Board (State Water Board) thanks the Commission staff for its thorough review of these test claims. We agree with the conclusion and staff recommendation, denying the test claims. We do, however, have significant concerns with some of the discussion and findings in the draft staff analysis. We believe that the Commission staff has misunderstood some fundamental aspects of the federal program, which are explained in more detail in the enclosed memorandum.

The municipal storm water program is a federal regulatory program intended to reduce the most significant water pollution problem that exists today. In 1972, the United States Congress adopted the Clean Water Act, which amended the earlier Federal Water Pollution Control Act. The most significant aspect of the 1972 amendments was the prohibition on all discharges of pollutants to waters of the United States (generally, lakes, rivers, and oceans) except in compliance with a federal national pollutant discharge elimination system (NPDES) permit. Before the Clean Water Act was adopted, pollution was rampant, and the major causes were discharges from large industrial plants and from sanitary sewer systems, which are operated by local agencies (publicly owned treatment works, or POTWs).

In 1972, California became the first state in the nation to issue these federal NPDES permits in lieu of issuance by the United States Environmental Protection Agency (U.S. EPA). In stepping into the federal government's role, the State Water Board and the nine regional water quality control boards (Regional Water Boards) became the agencies that issue these federal permits to industries and local agencies in California—the same permits that would otherwise have been issued by U.S. EPA. California is the regulator of discharges of pollutants to federal waters within California; it did not take on the responsibility to comply with or pay for others to comply with these federal permits issued to dischargers.

In 1987, the Congress noted that the traditional sources of water pollution had been largely controlled and that the most significant unregulated source of pollution was storm water runoff. (Unlike discharges from factories and POTWs, storm water runoff generally does not go through a treatment process.) In response, Congress amended the Clean Water Act, requiring industrial dischargers and municipal separate storm sewer systems (MS4s) to obtain NPDES permits. The amendments include more stringent requirements for the industrial sources than for the MS4s. As the federal NPDES permitting authority in California, the State Water Board and Regional Water Boards were required by federal law to issue these permits to industrial facilities and to local agencies.

The test claims concern an MS4 permit adopted by our Los Angeles Regional Water Board pursuant to the federal regulations and the federal Clean Water Act. The County of Los Angeles, the Los Angeles Flood Control District, and 85 cities in the county applied for the permit. The terms of the permit were challenged in court, and the California Court of Appeal approved the entire permit, specifically finding that the permit complies with federal law and that it does not exceed federal law. That decision, along with its findings and conclusions, is binding on the claimants, who were parties to the litigation. This permit is clearly a federal mandate that Congress imposed directly on local agencies through the 1987 amendments to the Clean Water Act. There is no "shifting" of responsibility from the state to local agencies—the state was never charged with the responsibility of controlling municipal storm water pollution. The state's role is exclusively to issue and administer the permits that govern the municipalities' federally mandated obligations; the local agencies discharge pollutants to federal waters and are mandated by federal law to reduce pollutants in these discharges to the maximum extent practicable.

The Commission staff's report provides a detailed analysis of many of the issues associated with the test claims, but takes an overly simplistic view of the Clean Water Act's municipal storm water permitting scheme. Essentially, the staff analysis looks for the permit requirements in federal law, and not finding the text of the contested provisions in federal law, concludes that certain provisions of the permit may therefore be considered state mandates. This approach fails to recognize that NPDES storm water permits, whether issued by U.S. EPA or California's Water Boards, are designed to translate the general federal mandate into specific programs and enforceable requirements. Whether issued by U.S. EPA or the California's Water Boards, the federal NPDES permit will identify specific requirements for municipalities to reduce pollutants in their storm water to the maximum extent practicable. The federally required pollutant reduction is a federal mandate. The fact that state agencies have responsibility for specifying the federal permit requirements for municipalities does not convert the federal mandate upon municipalities into a state mandate.

In summary, the mandate in the permit is a federal mandate that federal law specifically applies to local agencies. While there could be circumstances where a California Water Board imposed requirements on a local agency more onerous than required by federal law, that is not the case here. A court has already found that the MS4 permit does not exceed the federal pollutant reduction standard. The permit itself complies with federal law and does not impose any additional requirements beyond what the federal law requires. There has been no shifting of responsibility from the state to local agencies. The federal mandate applies to both private and public dischargers, the only difference being that the MS4s have less stringent requirements

than industries. Therefore, the costs are federally-mandated, and they do not constitute a program limited to local agencies. We request that the staff analysis be revised.

Sincerely,

Dorothy Rice

DATE: June 5, 2009

SUBJECT: COMMISSION ON STATE MANDATES – RESPONSE TO DRAFT STAFF ANALYSIS RE: *MUNICIPAL STORM WATER AND URBAN RUNOFF DISCHARGES* 03-TC-04, 03-TC-19, 03-TC-20, 03-TC-21

On April 18, 2008, the State Water Resources Control Board (State Water Board) and the Los Angeles Regional Water Quality Control Board (Los Angeles Water Board) submitted lengthy comments on the Test Claims. We will not repeat those comments here. Instead, this memorandum attempts to explain and rectify some areas of confusion concerning the federal permitting scheme as described in the draft staff analysis.

The claimants sought a federal permit allowing them to discharge pollutants in storm water runoff to the nation's waters. Federal law required the claimants (not the state) to obtain a federal permit. As required by federal law, the Los Angeles Water Board issued the permit. As required by federal law, the permit required claimants to implement practices that would reduce the pollutants to "the maximum extent practicable." In a related lawsuit, the claimants alleged that the permit required practices in excess of the minimum federal requirements. The California Court of Appeal found that the permit does not exceed the minimum federal requirements that applied to the claimants. The claimants do not qualify for reimbursement for their costs to comply with the permit under Article XIIIB, Section (6) of the Constitution because the costs are directly mandated on the claimants by federal law. While we agree with the conclusion of the draft staff analysis that the test claims be denied, it is critical that the portions of the analysis describing this federal mandate be revised.

FEDERAL LAW REQUIRES THAT LOCAL AGENCIES OBTAIN NPDES PERMITS FROM CALIFORNIA WATER BOARDS

Since 1972, the federal Clean Water Act[1] has prohibited "any person" from discharging pollutants to waters of the United States, except in compliance with a national pollutant discharge elimination system (NPDES) permit[2]. "Person" is defined in the Clean Water Act as: "an individual, corporation, partnership, association, State, *municipality*, commission, or *political subdivision of a State*, or any interstate body."[3] Thus, the federal law clearly mandates that local agencies must obtain permits—it is the discharger of pollutants who must obtain the permit. States can be listed as dischargers and be required to obtain permits where they discharge pollutants. For example, state prisons and state universities operate sewage treatment plants or industrial facilities that require NPDES permits.

The Clean Water Act provides that NPDES permits shall be issued by the United States Environmental Protection Agency (U.S. EPA), but that as soon as U.S. EPA promulgated guidelines, the Governor of each state could request authorization to be the permitting authority for discharges within its borders.[4] Once a state program has been approved, the U.S. EPA no longer has authority to issue NPDES permits in the state, except under very limited circumstances.[5] All state-issued permits must comply with U.S. EPA's regulations.[6] The federal law mandates that all NPDES permits that are issued within the state of California must be issued by either the State Water Board or the appropriate regional water quality control board.[7] California was the first state in the nation to be authorized to issue NPDES permits, in 1972.

In 1987, Congress amended the federal Clean Water Act to mandate that dischargers of storm water runoff obtain NPDES permits and comply with specified substantive requirements.[8] While the original Clean Water Act had been interpreted by courts, as early as 1977, to require permits for storm water discharges, U.S. EPA had never adopted regulations implementing that requirement. The 1987 amendments to the Clean Water Act specifically required NPDES permits be issued to municipal separate storm sewer systems (MS4s) and to discharges of storm water from industrial activities.[9] "Municipality" is defined in the federal law to include "a city, town, borough, county, parish, district, association, or other public body created by or pursuant to State law and having jurisdiction over disposal of sewage, industrial wastes, or other

---

[1] Federal Water Pollution Control Act, 33 U.S.C. § 1251 et seq.; popular name, Clean Water Act (CWA).

[2] CWA § 301(a) (33 U.S.C. § 1311(a)). Generally, waters of the U.S. include lakes, rivers, wetlands, and oceans.

[3] CWA § 502(5) (33 U.S.C. § 1362(5)). (Emphasis added.)

[4] CWA § 402(b) (33 U.S.C. § 1342(b)).

[5] CWA § 402(c) (33 U.S.C. § 1342(c)).

[6] CWA § 402(c)(2) (33 U.S.C. § 1342(c)(2)).

[7] CWA § 402(b) (33 U.S.C. § 1342(b)); Wat. Code § 13370 et seq.

[8] CWA § 402(p) (33 U.S.C. § 1342(p)).

[9] CWA § 402(p)(2) (33 U.S.C. § 1342(p)(2)).

wastes."[10] The permit requirements for the MS4s are less stringent than for the industrial sites.[11]

In sum, the federal Clean Water Act requires that local agencies that operate MS4s must obtain NPDES permits. The federal Clean Water Act requires that, when a state issues permits in lieu of U.S. EPA, the NPDES permits must comply with the substantive provisions of federal law. The U.S. EPA cannot issue NPDES permits in California, and if municipalities were to operate their MS4s without an NPDES permit, they would be in violation of federal law and subject to enforcement actions by U.S. EPA and to citizen suits authorized by federal law.[12]

FEDERAL LAW MANDATES THE PERMIT THAT WAS ISSUED, WHICH IS LESS STRINGENT THAN PERMITS FOR PRIVATE INDUSTRY

Regulating storm water discharges is generally considered to be more difficult than regulating traditional point sources. Traditional point sources include discharges from factories, from refineries, and from the sanitary sewer treatment systems (publicly owned treatment works or POTWs) that local agencies operate. These traditional point sources have engineered treatment systems, and the NPDES permits for these facilities generally contain numeric effluent limitations that must be met at the end of the discharge pipe. Numeric effluent limitations are pollutant restrictions placed on the discharge, with the restriction expressed as concentration and/or mass limits for specific constituents. The Clean Water Act states that such facilities must meet technology-based limitations, and where necessary to meet ambient water quality standards, more stringent water quality-based effluent limitations.[13] The Clean Water Act states that storm water discharges from industrial sites must meet all of these requirements, but that MS4s have a less stringent standard: the permit "shall require controls to reduce the discharge of pollutants to the maximum extent practicable."[14]

In the test claims at issue, the question of whether the state issued a permit that exceeded the minimum federal standard of reducing pollutants to the maximum extent practicable (MEP) has already been answered in the negative. The California Court of Appeal has already determined that the very permit before the Commission *does not exceed the federal minimum requirements*. The claimants were petitioners in that litigation and are bound by the Court of Appeal's determination.

[10] CWA § 502(4) (33 U.S.C. § 1362(4)).

[11] CWA § 402(p)(3) (33 U.S.C. § 1342(p)(3)).

[12] CWA § 505 (33 U.S.C. § 1365).

[13] CWA § 301(b) (33 U.S.C. § 1311(b)).

[14] CWA § 402(p)(3)(B) (33 U.S.C. § 1342(p)(3)(B)).

THE DRAFT STAFF ANALYSIS INCORRECTLY APPLIES THE *HAYES* CASE: THE STATE DID NOT SHIFT THE COST OF THE FEDERAL MANDATE TO THE LOCAL AGENCIES – THE FEDERAL MANDATE IS ON THE LOCAL AGENCIES AND NOT ON THE STATE

The draft staff analysis oversimplifies and misconstrues the federal Clean Water Act when it equates the decision in 1972 by California to administer the NPDES permit program with the obligation of the claimants to comply with their NPDES permit.

On page 24 of the draft staff analysis, it states: "The federal statutory scheme indicates that California is neither required to have an NPDES program nor to issue stormwater permits." The analysis goes on to state: "Based on. . . Water Code section 13370, in which California voluntarily adopts the permitting program, and on the federal statutes. . . that authorized but do not expressly require states to have this program, the state has freely chosen to effect the stormwater permit program." (Footnote omitted.) The analysis then cites *Hayes v. Commission on State Mandates.*[15]

In general, a federal mandate is not subject to reimbursement. In *Hayes*, the federal Education of the Handicapped Act imposed requirements on *the state* and the state "freely chose" to shift those costs to local agencies.[16] The court stated: "A central purpose of the principle of state subvention is to prevent the state from shifting the cost of government from itself to local agencies."[17] Thus, the court held that if there is a federal mandate on the state, and the state "freely chooses" to shift the mandate to local agencies, the costs constitute a reimbursable state mandate.[18]

In the test claims under consideration in this proceeding, the draft staff analysis treats the state's decision to *administer* the NPDES permit program in 1972 as the "choice" referred to in *Hayes*. That analysis is completely wrong, and results in an analysis whose results are absurd on their face. It is true that in 1972, California became the first state to administer the NPDES program in lieu of U.S. EPA. But administering the permit program—issuing permits to dischargers and enforcing compliance with federal law—is not the same thing as complying with the permits themselves. The federal Clean Water Act requires municipalities to apply for an NPDES that requires pollutant reductions to the maximum extent practicable. The state's "choice" to administer the program in lieu of the federal government does not alter the federal requirement on municipalities to reduce pollutants in these discharges to the maximum extent practicable.

The federal mandate is imposed specifically upon the municipalities that own and operate MS4s discharging pollutants to the nation's waters. There are times when the state (or a state agency) owns and operates an MS4. In those instances, the state agency is subject to its own

---

[15] (1992) 11 Cal.App.4th 1564.

[16] *Hayes, supra* at 1587 states: "Since the 1975 amendment, the Education of the Handicapped Act has required recipient states to demonstrate a policy that assures all handicapped children the right to a free appropriate education."

[17] *Id.*, at 1593.

[18] *Id.*, at 1594.

NPDES permit issued by the State Water Board. For instance, the California Department of Transportation (Caltrans) is subject to its own NPDES permit, issued by the State Water Board.[19] This demonstrates how the staff analysis misconstrues *Hayes* in applying it to California's decision to issue permits in lieu of the U.S. EPA. The Clean Water Act specifies who must obtain an NPDES permit and what level of pollutant reduction they must achieve. The fact that California administers the NPDES program in lieu of U.S. EPA does not change the NPDES permitting requirements for Caltrans or the test claimants, which are mandates upon the persons who discharge pollutants.

Clean Water Act section 402(p) requires that permits be issued to "municipal separate storm sewer systems." It requires that the entities that own and operate these systems obtain NPDES permits that require them to undertake practices that reduce the pollutants to the MEP. In this case, the federal mandate is directly on the local agencies because they own and operate the MS4 in Los Angeles County. There has been no shifting of responsibility from the state to the local agencies. There is no mandate on the state to obtain or to comply with the NPDES permit for the claimants' MS4.

BECAUSE A COURT OF APPEAL HAS FOUND THAT THE PERMIT DOES NOT EXCEED THE MINIMUM FEDERAL MANDATE, THE COMMISSION CANNOT FIND THAT THE STATE HAS IMPOSED A NEW PROGRAM OR HIGHER LEVEL OF SERVICE

The test claims come to the Commission following two state appellate decisions regarding the actual permit at issue here. In the first decision, an appeals court upheld the permit following a challenge by several permittees, including the claimants.[20] In *County of Los Angeles v. Commission on State Mandates*,[21] the second case, the court remanded these test claims to the Commission. Relying on the California Supreme Court case of *City of Burbank v. State Water Resources Control Board*,[22] the court in *Commission, supra*, noted that NPDES permits may have both state and federal requirements.[23] The court pointed to the claimants' arguments that a permit *could* include state mandates that exceed the federal mandates, and stated that if the state chose to impose such costs on the local agencies, then reimbursement may be required. In consideration of these issues, the court remanded the test claims to the Commission.

At the time of the remand, the court in *County of Los Angeles v. State Water Resources Control Board, supra,* had already reached the conclusion that the permit did not exceed the federal minimum requirements for MS4 permits. This conclusion was in the unreported portion of the decision, but its findings and conclusions are binding on the test claimants, who were parties to the permit challenge. The court stated: "Plaintiffs argue the permit imposes conditions more stringent than required by the federal Clean Water Act."[24] The court concluded: "These

[24] *County of Los Angeles v. State Water Resources Control Board, supra*, unpublished version (Attachment No. 26 to Response to Test Claims), at p.19.

contentions have no merit."[25] The court found that the permit in total does not exceed the federal requirement of MEP:

> "The permit explicitly states it is intended to provide a cost-effective storm water pollution program to the maximum extent possible. The permit applies the same cost-effective analysis to efforts to reduce the flow of pollutants into receiving waters. Moreover, the regional board in its findings referred to a report specifying how the 'maximum extent practicable' requirement includes considerations of costs and benefit."[26]

The Court of Appeal found that the permit did not exceed the federal minimum requirement that the municipal storm water permittees must reduce pollutants in their discharge to the maximum extent practicable. There is no state mandate in excess of the federal mandate, and the test claims do not qualify for reimbursement.

The draft staff analysis appears to concede that the decision in *County of Los Angeles v. State Water Resources Control Board, supra,* statements submitted by U.S. EPA, and the federal regulations and guidance all require that the permit must include practices such as the inspection and trash collection requirements. But the draft analysis takes an overly simplistic view of the Clean Water Act's municipal storm water permitting scheme. Essentially, the staff analysis looks for the permit requirements in federal law, and not finding the text of the contested provisions in federal law, concludes that certain provisions of the permit may therefore be considered state mandates. This approach fails to recognize that NPDES storm water permits, whether issued by U.S. EPA or California's Water Boards, are designed to translate the general federal mandate into specific programs and enforceable requirements. Whether issued by U.S. EPA or the California's Water Boards, the federal NPDES permit will identify specific requirements for municipalities to reduce pollutants in their storm water to the maximum extent practicable. The federally required pollutant reduction is a federal mandate.

The Clean Water Act mandates that the *permit* "shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants."[27] This section has been interpreted by the Ninth Circuit Court of Appeal to require states that issue NPDES permits to specify the required controls in the permit.[28] The federal law requires that the specific requirements that will achieve MEP be inserted in the permit, and when the State is the permit program administrator, the state is expressly required by federal law to specify these controls in MS4 permits, as would the US EPA. The state has done no more than follow federal law to include specific requirements that achieve MEP in the permit. The fact that state

[27] CWA § 402(p)(3)(B)(iii) (33 U.S.C. § 1342(p)(3)(B)(iii)). The reference to the Administrator is only for permits issued within states that do not administer the NPDES program. See, § 402(b) (33 U.S.C. § 1342(b)).

[28] *Natural Resources Defense Council, Inc. v. U.S. EPA* (1992) 966 F.2d 1292, 1308.

agencies have responsibility for specifying the federal permit requirements for municipalities does not convert the federal mandate into a state mandate.

EVEN THOUGH MUNICIPALITIES ARE SINGLED OUT IN THE FEDERAL STORM WATER LAW, THE LAW IS ONE OF GENERAL APPLICATION

The draft staff analysis finds that the permit activities constitute a program subject to subvention because they "are limited to local governmental entities." The analysis correctly notes that the permittees are all local agencies, but it fails to consider that private entities must also receive NPDES permits for storm water discharges, and that those permits must include *more stringent* requirements than the requirements in the test claims. Where local agencies have separate, but similar requirements as private entities, there is no reimbursable mandate.[29]

The federal Clean Water Act requires persons who discharge storm water from industrial activities or from municipal separate storm sewer systems to obtain NPDES permits.[30] The industrial dischargers must comply with all of the requirements that any NPDES permit must contain,[31] including installing best practicable control technology currently available for conventional pollutants,[32] best available technology economically achievable for toxic pollutants,[33] and any more stringent limitation necessary to meet water quality standards and any other federal law or regulations.[34] NPDES permits for municipal storm water discharges, on the other hand, generally only include requirements established to reduce the discharge of pollutants to the maximum extent practicable.[35] It is clear that the municipal dischargers have a less stringent federal mandate than the industries. In ruling that municipal permits are not required by statute to achieve compliance with ambient water quality standards, the Ninth Circuit Court of Appeal referred to "Congress' choice to *exempt* municipal storm-sewer discharges from strict compliance with [§ 301]."[36]

In *City of Richmond v. Commission on State Mandates*,[37] the court held that where municipalities have separate but not more stringent, requirements than private entities, there is no program subject to reimbursement. In *Richmond*, local governments were newly required to pay double death benefits for local safety members, under both the public retirement system and workers' compensation. The court noted that the revised law had eliminated a prior exemption from providing workers' compensation death benefits for safety employees, putting

[37] 64 Cal.App.4th 1190 (1998).

the local agencies on an equal footing with private entities. Here, the municipal entities are not on an equal footing; they are *exempt* from meeting the more stringent requirements that private industry must meet. The fact that a separate statutory provision applies to municipalities—where that provision is less stringent than the provision that applies to private industry—does not create a program eligible for reimbursement.

Accordingly, the State Water Board respectfully requests that the draft staff analysis be modified to reflect that the mandate to obtain and comply with MS4 NPDES permits is a federal mandate, imposed directly on the municipalities that operate the MS4s, and that at least insofar as the MS4 permit imposes requirements that are consistent with the federally mandated MEP standard, that Article XIIIB, section (6) is inapplicable.

United States Code Annotated Currentness
Title 33. Navigation and Navigable Waters (Refs & Annos)
Chapter 26. Water Pollution Prevention and Control (Refs & Annos)
Subchapter V. General Provisions
→ **§ 1365. Citizen suits**

(a) Authorization; jurisdiction

Except as provided in subsection (b) of this section and section 1319(g)(6) of this title, any citizen may commence a civil action on his own behalf--

(1) against any person (including (i) the United States, and (ii) any other governmental instrumentality or agency to the extent permitted by the eleventh amendment to the Constitution) who is alleged to be in violation of (A) an effluent standard or limitation under this chapter or (B) an order issued by the Administrator or a State with respect to such a standard or limitation, or

(2) against the Administrator where there is alleged a failure of the Administrator to perform any act or duty under this chapter which is not discretionary with the Administrator.

The district courts shall have jurisdiction, without regard to the amount in controversy or the citizenship of the parties, to enforce such an effluent standard or limitation, or such an order, or to order the Administrator to perform such act or duty, as the case may be, and to apply any appropriate civil penalties under section 1319(d) of this title.

(b) Notice

No action may be commenced--

(1) under subsection (a)(1) of this section--

(A) prior to sixty days after the plaintiff has given notice of the alleged violation (i) to the Administrator, (ii) to the State in which the alleged violation occurs, and (iii) to any alleged violator of the standard, limitation, or order, or

(B) if the Administrator or State has commenced and is diligently prosecuting a civil or criminal action in a court of the United States, or a State to require compliance with the standard, limitation, or order, but in any such action in a court of the United States any citizen may intervene as a matter of right.

(2) under subsection (a)(2) of this section prior to sixty days after the plaintiff has given notice of such action to the Administrator,

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

except that such action may be brought immediately after such notification in the case of an action under this section respecting a violation of sections 1316 and 1317(a) of this title. Notice under this subsection shall be given in such manner as the Administrator shall prescribe by regulation.

(c) Venue; intervention by Administrator; United States interests protected

(1) Any action respecting a violation by a discharge source of an effluent standard or limitation or an order respecting such standard or limitation may be brought under this section only in the judicial district in which such source is located.

(2) In such action under this section, the Administrator, if not a party, may intervene as a matter of right.

(3) Protection of interests of United States

Whenever any action is brought under this section in a court of the United States, the plaintiff shall serve a copy of the complaint on the Attorney General and the Administrator. No consent judgment shall be entered in an action in which the United States is not a party prior to 45 days following the receipt of a copy of the proposed consent judgment by the Attorney General and the Administrator.

(d) Litigation costs

The court, in issuing any final order in any action brought pursuant to this section, may award costs of litigation (including reasonable attorney and expert witness fees) to any prevailing or substantially prevailing party, whenever the court determines such award is appropriate. The court may, if a temporary restraining order or preliminary injunction is sought, require the filing of a bond or equivalent security in accordance with the Federal Rules of Civil Procedure.

(e) Statutory or common law rights not restricted

Nothing in this section shall restrict any right which any person (or class of persons) may have under any statute or common law to seek enforcement of any effluent standard or limitation or to seek any other relief (including relief against the Administrator or a State agency).

(f) Effluent standard or limitation

For purposes of this section, the term "effluent standard or limitation under this chapter" means (1) effective July 1, 1973, an unlawful act under subsection (a) of section 1311 of this title; (2) an effluent limitation or other limitation under section 1311 or 1312 of this title; (3) standard of performance under section 1316 of this title; (4) prohibition, effluent standard or pretreatment standards under section 1317 of this title; (5) certification under section 1341 of this title; (6) a permit or condition thereof issued under section 1342 of this title, which is in effect under this chapter (including a requirement applicable by reason of section 1323 of this title); or (7) a regulation under section 1345(d) of this title,. [FN1]

(g) "Citizen" defined

For the purposes of this section the term "citizen" means a person or persons having an interest which is or may

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

be adversely affected.

(h) Civil action by State Governors

A Governor of a State may commence a civil action under subsection (a) of this section, without regard to the limitations of subsection (b) of this section, against the Administrator where there is alleged a failure of the Administrator to enforce an effluent standard or limitation under this chapter the violation of which is occurring in another State and is causing an adverse effect on the public health or welfare in his State, or is causing a violation of any water quality requirement in his State.

1. Constitutionality

Clean Water Act's citizen suit provision did not effectively abrogate states' Eleventh Amendment immunity;

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

Congress did not intend to abrogate that immunity and was not empowered to do so under commerce clause. Froebel v. Meyer, E.D.Wis.1998, 13 F.Supp.2d 843, affirmed 217 F.3d 928, rehearing and rehearing en banc denied , certiorari denied 121 S.Ct. 769, 531 U.S. 1075, 148 L.Ed.2d 669. Commerce ⚷ 80; Federal Courts ⚷ 265

Citizen suit provision, which permits citizens to bring actions for violation of Clean Water Act, but which requires citizens to notify Environmental Protection Agency and permits federal government to intervene at any time, did not aggrandize legislative branch at expense of executive branch, did not violate constitutional principle of separation of powers, and did not unduly interfere with executive enforcement of Act. Chesapeake Bay Foundation, Inc. v. Bethlehem Steel Corp., D.Md.1987, 652 F.Supp. 620. Constitutional Law ⚷ 2390; Environmental Law ⚷ 166

2. Purpose

Primary function of the Clean Water Act (CWA) provision for citizen suits is to enable private parties to assist in enforcement efforts where federal and state authorities appear unwilling to act. Lockett v. E.P.A., C.A.5 (La.) 2003, 319 F.3d 678. Environmental Law ⚷ 226

The citizens' suit provisions of this section were designed to supplement and expedite administrative action to abate violations of this chapter; recourse to the courts is appropriate only when the administrative action taken is less than adequate. Com. of Mass. v. U. S. Veterans Administration, C.A.1 (Mass.) 1976, 541 F.2d 119. Environmental Law ⚷ 226

Private suits in the United States district courts based upon alleged violations of "effluent limitations" of this chapter are provided for by this section as an additional means of enforcement. American Frozen Food Institute v. Train, C.A.D.C.1976, 539 F.2d 107, 176 U.S.App.D.C. 105. Environmental Law ⚷ 226

Congress did not intend to limit or prevent potential Clean Water Act (CWA) remedies that might otherwise be available against state under *Ex parte Young* doctrine, and thus federal court had jurisdiction over claim brought by landowner against state Department of Environmental Quality (DEQ) and gas company, seeking to halt runoff onto land from methane production activities; citizen's suit provision of CWA evidenced congressional intent to allow individuals to seek traditional remedial powers of federal court to extent permitted by Eleventh Amendment. Swartz v. Beach, D.Wyo.2002, 229 F.Supp.2d 1239. Federal Courts ⚷ 269; Federal Courts ⚷ 272

Purpose of Clean Water Act's (CWA) private enforcement provision is to foster agency enforcement and to act as alternative enforcement mechanism absent agency enforcement. Williams Pipe Line Co. v. Bayer Corp., S.D.Iowa 1997, 964 F.Supp. 1300. Environmental Law ⚷ 226

Individuals or groups which bring citizen suits pursuant to Clean Water Act are acting as private attorney generals and, accordingly, purpose of suit is to protect and advance public's interest in pollution-free waterways rather than to promote private interests. Pennsylvania Environmental Defense Foundation v. Bellefonte Borough, M.D.Pa.1989, 718 F.Supp. 431. Environmental Law ⚷ 226

The inclusion in this chapter of this section providing for citizen suits indicates that Congress specifically intended that the interests of private citizens be protected by this chapter. Loveladies Property Owners Ass'n, Inc. v. Raab, D.C.N.J.1975, 430 F.Supp. 276, affirmed 547 F.2d 1162, certiorari denied 97 S.Ct. 2949, 432 U.S. 906, 53 L.Ed.2d 1077. Environmental Law ⚷ 226

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

It was congressional intent to supplement administrative enforcement of this chapter with enforcement by citizen suits, and also to put strong reliance on administrative enforcement, generally allowing citizen enforcement only after Administrator has had opportunity to bring his powers of enforcement to bear on the polluter. Save Our Sound Fisheries Ass'n v. Callaway, D.C.R.I.1977, 429 F.Supp. 1136. Environmental Law 226

Special citizen suits provision of this section was intended to encourage citizen participation in the enforcement of this chapter. State of Minn., by Spannaus v. Callaway, D.C.Minn.1975, 401 F.Supp. 524, reversed on other grounds 543 F.2d 1198, certiorari denied 97 S.Ct. 1672, 430 U.S. 977, 52 L.Ed.2d 373. Environmental Law 226

3. Construction with other laws

The incorporation of the civil penalties section of the Clean Water Act (CWA) and the Resource Conservation and Recovery Act (RCRA) into each Act's respective citizen suit section encompasses all the terms of the penalty provisions, including their limitations. U.S. Dept. of Energy v. Ohio, U.S.Ohio 1992, 112 S.Ct. 1627, 503 U.S. 607, 118 L.Ed.2d 255, on remand 965 F.2d 1401. Environmental Law 223

Citizen enforcement suit under Clean Water Act (CWA) based on use of chemicals regulated by FIFRA could proceed even if pesticide application claimed to violate CWA did not also constitute substantial violation of FIFRA; CWA's citizen suit provision did not become inoperative under those circumstances. No Spray Coalition, Inc. v. City of New York, C.A.2 (N.Y.) 2003, 351 F.3d 602, on remand 2005 WL 1354041. Environmental Law 170; Environmental Law 226

Unlike Clean Water Act (CWA), FIFRA does not provide for citizen enforcement. No Spray Coalition, Inc. v. City of New York, C.A.2 (N.Y.) 2003, 351 F.3d 602, on remand 2005 WL 1354041. Environmental Law 459

Requirement in provision of Clean Water Act (CWA) barring citizen suits for any violation for which state has commenced and is diligently prosecuting an action under comparable state law, that state law be "comparable" to CWA should be read broadly to permit states flexibility in deciding how to enforce anti-pollution laws. Lockett v. E.P.A., C.A.5 (La.) 2003, 319 F.3d 678. Environmental Law 226

Offer of judgment rule was inapplicable to citizen suits brought under Clean Water Act (CWA); applying rule to citizens suits under CWA would violate the Rules Enabling Act, as it would create enormous disincentives and discourage plaintiffs, who were serving public interest, from vigorously prosecuting CWA claims, thereby thwarting intention of Congress. North Carolina Shellfish Growers Ass'n v. Holly Ridge Associates, LLC., E.D.N.C.2003, 278 F.Supp.2d 654, 357 N.C. 1429. Federal Civil Procedure 2725

Court could require city to provide New York Department of Environmental Conservation (DEC) with all information needed to issue a discharge permit, and, pursuant to its authority under All Writs Act, could order DEC, as third-party defendant to action, to complete application process and issue discharge permit within 18 months after court's order, as part of injunctive relief granted to non-profit fishing associations in citizen suit against city under Clean Water Act (CWA) for city's use of tunnel to transfer drinking water from reservoir into trout stream without discharge permit. Catskill Mountains Chapter of Trout Unlimited, Inc. v. City of New York, N.D.N.Y.2003, 244 F.Supp.2d 41, affirmed in part and remanded 451 F.3d 77, certiorari denied 127 S.Ct. 1373, 167 L.Ed.2d 160. Environmental Law 700

Congress did not intend to limit or prevent potential Clean Water Act (CWA) remedies that might otherwise be available against state under *Ex parte Young* doctrine, and thus federal court had jurisdiction over claim brought by landowner against state Department of Environmental Quality (DEQ) and gas company, seeking to halt run-off onto land from methane production activities; citizen's suit provision of CWA evidenced congressional intent to allow individuals to seek traditional remedial powers of federal court to extent permitted by Eleventh Amendment. Swartz v. Beach, D.Wyo.2002, 229 F.Supp.2d 1239. Federal Courts 269; Federal Courts 272

Fact that Congress, under Clean Water Act compliance, chose to give citizens authority in some circumstances to act as private attorneys general was not indication that Congress intended to cut off additional remedies otherwise available to citizens for review of agency action, such as action under Administrative Procedure Act ("APA") that gives district court jurisdiction to review any final agency action for which there is no other adequate remedy. Sierra Club v. Pena, N.D.Ohio 1996, 915 F.Supp. 1381, affirmed 120 F.3d 623, rehearing and suggestion for rehearing en banc denied. Administrative Law And Procedure 701; Environmental Law 641

If plaintiff can bring suit against responsible federal agencies under Clean Water Act (CWA), that action precludes additional suit under Administrative Procedure Act (APA), but where plaintiff's claims are not covered by citizen suit provision of CWA, plaintiff can maintain action against responsible federal agencies under APA. Environmental Defense Fund v. Tidwell, E.D.N.C.1992, 837 F.Supp. 1344. Administrative Law And Procedure 660; Environmental Law 641

4. Law governing

Action by state in federal district court alleging creation of public nuisance by water pollution is governed by federal law, although considerations of state standards may be relevant. Illinois v. City of Milwaukee, Wis., U.S.1972, 92 S.Ct. 1385, 406 U.S. 91, 31 L.Ed.2d 712. Federal Courts 433

In area of interstate water pollution, this chapter precludes application of one state's common or statutory law to determine liability and afford a remedy for discharges within another state. People of State of Ill. v. City of Milwaukee, C.A.7 (Ill.) 1984, 731 F.2d 403, certiorari denied 105 S.Ct. 979, 469 U.S. 1196, 83 L.Ed.2d 981, certiorari denied 105 S.Ct. 980, 469 U.S. 1196, 83 L.Ed.2d 981. States 18.31

Amendments in 1972 to this section displaced federal common-law remedy for nuisances resulting from discharge of pollutants into navigable waters before 1972; therefore, Illinois's claim against an in-state industrial polluter of Lake Michigan was preempted with respect to pollution before and after 1972. People of State of Ill. v. Outboard Marine Corp., Inc., C.A.7 (Ill.) 1982, 680 F.2d 473. Environmental Law 170

When interstate pollution dispute governed by Clean Air Act is litigated in state court, procedural law of forum state and statutory or common law of source state must be applied. Ashland Oil, Inc. v. Kaufman, W.Va.1989, 384 S.E.2d 173, 181 W.Va. 728. Environmental Law 633

5. Statutory or common law rights unrestricted--Generally

Citizen suit provision of this section which states that nothing in this section restricts any right which any person may have under any statute or common law to seek enforcement of any effluent standard or limitation does not permit federal courts to employ federal common law to establish more stringent standards than those set forth under this chapter and its attendant regulations; the language merely means that the provision for citizen suits

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

does not revoke other remedies. City of Milwaukee v. Illinois and Michigan, U.S.Ill.1981, 101 S.Ct. 1784, 451 U.S. 304, 68 L.Ed.2d 114, on remand 731 F.2d 403. Environmental Law ⚿ 170

Remedy for action of Administrator in exempting federal agencies and instrumentalities from compliance with states' proposed water pollution permit programs was not limited to action brought under "citizen suit" provisions of this section. People of State of Cal. ex rel. State Water Resources Control Bd. v. E.P.A., C.A.9 1975, 511 F.2d 963, certiorari granted 95 S.Ct. 2655, 422 U.S. 1041, 45 L.Ed.2d 693, reversed on other grounds 96 S.Ct. 2022, 426 U.S. 200, 48 L.Ed.2d 578, on remand 538 F.2d 290. Environmental Law ⚿ 641

Provision of this section to the effect that nothing in this section shall restrict any right which any person might have under any statute or common law to seek enforcement of any effluent standard or limitation or to seek any other relief allows further enforcement of antipollution standards arising under other statutes or state common law but it does not create a separate ground for enforcement of this section. Love v. New York State Dept. of Environmental Conservation, S.D.N.Y.1981, 529 F.Supp. 832. Environmental Law ⚿ 226

Provisions of this section relating to preservation of citizens' statutorial common-law rights does not create a federal cause of action. Hanks v. Costle, E.D.Va.1980, 501 F.Supp. 195. Environmental Law ⚿ 226

6. ---- Nuisance claims, statutory or common law rights unrestricted

Clean Water Act did not bar aggrieved Vermont landowners from bringing nuisance claim pursuant to law of source state, New York. International Paper Co. v. Ouellette, U.S.Vt.1987, 107 S.Ct. 805, 479 U.S. 481, 93 L.Ed.2d 883, on remand 823 F.2d 545. States ⚿ 18.31

Federal pollution control laws did not preclude action to enjoin hotel-casino projects in Lake Tahoe Basin as constituting interstate nuisances. California Tahoe Regional Planning Agency v. Jennings, C.A.9 (Nev.) 1979, 594 F.2d 181, certiorari denied 100 S.Ct. 133, 444 U.S. 864, 62 L.Ed.2d 86. States ⚿ 18.31

Clean Water Act (CWA) did not bar Oklahoma city from asserting Arkansas law nuisance claim against poultry business that disposed of poultry waste, containing phosphorus, at Arkansas city's wastewater treatment plant, although wastewater treatment plant had Clean Water Act (CWA) permit authorizing discharge of phosphorus. City of Tulsa v. Tyson Foods, Inc., N.D.Okla.2003, 258 F.Supp.2d 1263, vacated pursuant to settlement. States ⚿ 18.91; Waters And Water Courses ⚿ 196

Savings clause in Clean Water Act citizen's suit provision preserved state law remedies to the extent that the action did not otherwise thwart goal of Clean Water Act, and thus did not preempt nuisance suit brought under law of affected state. Washington Suburban Sanitary Com'n v. CAE-Link Corp., Md.1993, 622 A.2d 745, 330 Md. 115, certiorari denied 114 S.Ct. 288, 510 U.S. 907, 126 L.Ed.2d 238. Nuisance ⚿ 59; States ⚿ 18.31

Under the "savings clause" of the Federal Water Pollution Control Act, an order requiring a regional sanitary commission to build and operate a composting site in an industrial park did not require the commission to build a site that emitted obnoxious odors that invaded the property of others and thus did not preempt neighboring property owners' state law nuisance actions. CAE-Link Corp. v. Washington Suburban Sanitary Com'n, Md.App.1992, 602 A.2d 239, 90 Md.App. 604, certiorari granted 609 A.2d 312, 327 Md. 304, affirmed 622 A.2d 745, 330 Md. 115, certiorari denied 114 S.Ct. 288, 510 U.S. 907, 126 L.Ed.2d 238. Nuisance ⚿ 41; States ⚿ 18.31; Nuisance ⚿ 18

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

7. Effluent violation

Conditions set forth in state-issued National Pollutant Discharge Elimination System (NPDES) permit, which was approved by Environmental Protection Agency (EPA), qualified as "an effluent standard or limitation under this chapter," within meaning of citizen-suit provision of Clean Water Act (CWA), and federal court thus had jurisdiction over property's owner's CWA claims against owner of adjoining property, alleging violations of state-issued permit. Parker v. Scrap Metal Processors, Inc., C.A.11 (Ga.) 2004, 386 F.3d 993, rehearing and rehearing en banc denied 125 Fed.Appx. 979, 2004 WL 2806000. Environmental Law 226

Discharge of any "pollutant" without National Pollution Discharge Elimination System (NPDES) permit is unlawful act under Clean Water Act (CWA) and, thus, may be basis of CWA citizen suit even if Environmental Protection Agency (EPA) has not established applicable effluent limitation or permit for "pollutant" at issue; although CWA initially limited citizen suits to enforcement of existing EPA regulations, Congress' failure to prevent expiration of those limits evinced intent to allow citizen suits even if failure to obtain permit could be explained by administrative default. Sierra Club, Lone Star Chapter v. Cedar Point Oil Co. Inc., C.A.5 (Tex.) 1996, 73 F.3d 546, certiorari denied 117 S.Ct. 57, 519 U.S. 811, 136 L.Ed.2d 20. Environmental Law 226

Without existence of an effluent discharge of some kind, there is no coverage under Clean Water Act citizens' suit provision for failure to obtain required permit. Save Our Community v. U.S. E.P.A., C.A.5 (Tex.) 1992, 971 F.2d 1155. Environmental Law 226

Persons seeking to bring citizen's action under the Clean Water Act against cattle feedlot proved continuous or intermittent violation; feedlot was point source and did not have National Pollutant Discharge Elimination System (NPDES) permit and there was reasonable likelihood of intermittent or sporadic discharges in event of future chronic rainfall event which would not reach 25-year, 24-hour level. Carr v. Alta Verde Industries, Inc., C.A.5 (Tex.) 1991, 931 F.2d 1055, rehearing denied.

Challengers to resale of timber by Forest Service were not entitled to maintain action under the citizen suit provision of the Clean Water Act to enforce state water quality standards affected by nonpoint sources; applicable provision of statute which referred to "effluent limitations" were by definition applicable only to point sources. Oregon Natural Resources Council v. U.S. Forest Service, C.A.9 (Or.) 1987, 834 F.2d 842. Environmental Law 226

Environmental organization satisfied Clean Water Act's (CWA) prerequisite to citizen suit to enforce effluent standard or limitation, which required them to allege violation of such standard or limitation, when they alleged in their complaint that state officials discharged pollutants or industrial stormwater without National Pollutant Discharge Elimination System (NPDES) permit. Northwest Environmental Defense Center v. Brown, D.Or.2007, 476 F.Supp.2d 1188. Environmental Law 226

Fact that quantities of contaminants discharged from wastewater treatment facility regularly exceeded legally permissible limits rendered sewer district and town liable under Clean Water Act (CWA). Hudson Riverkeeper Fund, Inc. v. Yorktown Heights Sewer Dist., S.D.N.Y.1996, 949 F.Supp. 210. Environmental Law 226

Injury sustained by citizen's group was "fairly traceable" to tannery operator's alleged violation of Clean Water Act, giving citizen's group standing to sue tannery for discharges of pollutants in excess of effluent standards, even if publicly owned treatment works (POTW) into which tannery discharged wastewater was in compliance with its own permit limitations, since violation of federal categorical pretreatment standards contributed to water

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

pollution, such that POTW's compliance did not absolve tannery's alleged violation of pretreatment standards. Atlantic States Legal Foundation, Inc. v. Karg Bros., Inc., N.D.N.Y.1993, 841 F.Supp. 51. Environmental Law 652

Association of neighbors did not have standing under the Clean Water Act to seek injunction against construction of underground sewage retention basin where association pointed to no "effluent standard" which proposed basin would violate and where the Environmental Protection Agency grant decision involved discretion. Association of Significantly Impacted Neighbors v. City of Livonia, E.D.Mich.1991, 765 F.Supp. 389. Environmental Law 652

With respect to months where indirect discharger was in violation of monthly average limitations for effluent discharge, it would be deemed to have committed 30 violations. International Union, United Auto. Aerospace and Agr. Implement Workers of America, AFL-CIO v. Amerace Corp., Inc., D.N.J.1990, 740 F.Supp. 1072. Environmental Law 197

Complaint alleging that developers discharged sand, soil, solid wastes and other pollutants into stream leading onto plaintiff's property and that developers did not obtain permit for such discharges alleged violation of this chapter and jurisdiction lay in federal district court under this section permitting citizens suits for prospective injunctive relief against persons who violate effluent standard or limitation. Love v. New York State Dept. of Environmental Conservation, S.D.N.Y.1981, 529 F.Supp. 832. Environmental Law 700

Absent violation of a previously promulgated effluent standard or order of Environmental Protection Agency with respect to such a standard, this section did not authorize citizens' suit against village and various village officials seeking to enjoin construction of certain residential development projects. Town of North Hempstead v. Village of North Hills, E.D.N.Y.1979, 482 F.Supp. 900. Environmental Law 700

8. Permit violation

Dairy farm's alleged failure to have permit before certain date could not be subject of Clean Water Act (CWA) citizen suit, where farm had permit coverage after that date. Coon ex rel. Coon v. Willet Dairy, LP, C.A.2 (N.Y.) 2008, 536 F.3d 171. Environmental Law 226

Evidence supported jury's finding that defendant property owner and operators of scrap metal business located on property engaged in continuing violation of Clean Water Act (CWA), although defendants obtained National Pollutant Discharge Elimination System (NPDES) permit before suit was commenced, in view of evidence that defendants had not yet done any storm water monitoring or implemented any storm water plan, as required by the permit. Parker v. Scrap Metal Processors, Inc., C.A.11 (Ga.) 2004, 386 F.3d 993, rehearing and rehearing en banc denied 125 Fed.Appx. 979, 2004 WL 2806000. Environmental Law 230

Where citizen suit under the Clean Water Act (CWA) was commenced several months after Louisiana Department of Environmental Quality (DEQ) initiated administrative penalty action against village for release of untreated sewage, exception to CWA provision barring citizen suits when state was diligently prosecuting action under comparable state law, which allowed citizen suit when action was filed prior to commencement of state's action, did not apply. Lockett v. E.P.A., C.A.5 (La.) 2003, 319 F.3d 678. Environmental Law 226

Environmental organization alleged in good faith a continuing violation of Clean Water Act, giving it standing to sue under citizen suit provision of Clean Water Act for paper company's failure to file reports required by its

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

discharge permit, by asserting that the company was required to take samples on a monthly basis and maintain records and file reports and that it had not filed a complete report at the time that the lawsuit was filed, even though it had been operating under the permit for three years. Sierra Club v. Simkins Industries, Inc., C.A.4 (Md.) 1988, 847 F.2d 1109, rehearing denied, certiorari denied 109 S.Ct. 3185, 491 U.S. 904, 105 L.Ed.2d 694. Environmental Law 652

Multiple, sporadic, and past violations of various effluent limitations contained in national pollutant discharge elimination system permits could not form the basis of citizens' lawsuits under Clean Water Act. Sierra Club v. Shell Oil Co., C.A.5 (La.) 1987, 817 F.2d 1169, certiorari denied 108 S.Ct. 501, 484 U.S. 985, 98 L.Ed.2d 500, rehearing denied 108 S.Ct. 1065, 484 U.S. 1083, 98 L.Ed.2d 1027. Environmental Law 226

Condition in State Pollutant Discharge Elimination System (SPDES) permit which required that water intake structure reflect the "best technology available" for minimizing adverse environmental impact was not so vague or ambiguous as to be useless, lacking in meaning, or unenforceable in a citizen suit brought under the Clean Water Act. Hudson Riverkeeper Fund, Inc. v. Orange and Rockland Utilities, Inc., S.D.N.Y.1993, 835 F.Supp. 160. Environmental Law 197

In order to prevail in cases involving allegations of ongoing noncompliance with conditions of permit under national pollutant discharge elimination system, plaintiffs must prove on the merits that violations are in fact continuous or intermittent; citizen plaintiffs may accomplish this either by proving violations that continue on or after date complaint is filed or by adducing evidence from which reasonable trier of fact could find continuing likelihood of recurrence in intermittent or sporadic violations. Public Interest Research Group of New Jersey v. Yates Industries, Inc., D.N.J.1991, 790 F.Supp. 511. Environmental Law 226; Environmental Law 197

Violation of National Pollutant Discharge Elimination System permit is "ongoing," and can be subject of citizen enforcement action under Clean Water Act, if, in comparing self-reported exceedances before complaint was filed and afterwards, same parameter is exceeded, or violation recurs and cause has not been completely eradicated. Sierra Club v. Union Oil Co. of California, N.D.Cal.1988, 716 F.Supp. 429. Environmental Law 226

Citizen suit under Clean Water Act may seek penalties for violations of expired permit only on basis of those conditions of expired permit which have been carried to current permit and which, therefore, are presently enforced. Public Interest Research Group of New Jersey, Inc. v. Carter-Wallace, Inc., D.N.J.1988, 684 F.Supp. 115. Environmental Law 223

Court's role in action brought under citizen suit provision of the Federal Water Pollution Control Act [33 U.S.C.A. § 1365(a)(1)] is not to determine whether alleged polluter is polluting the waterway, but rather to determine whether Federal Water Pollution Control Act provisions requiring compliance with discharge permits have been violated [33 U.S.C.A. §§ 1342(k), 1344(p)]. Student Public Interest Research Group of New Jersey, Inc. v. P.D. Oil & Chemical Storage, Inc., D.N.J.1986, 627 F.Supp. 1074.

9. Past violations

Provision of Clean Water Act, authorizing private citizens to commence civil action seeking injunctive relief and/or civil penalties, against any person "alleged to be in violation of" conditions of federal or state national pollutant discharge elimination system permit did not confer federal jurisdiction over citizen suits for wholly past violations, which alleged that permittee had violated permit by exceeding effluent limitations on certain

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

pollutants. Gwaltney of Smithfield, Ltd. v. Chesapeake Bay Foundation, Inc., U.S.Va.1987, 108 S.Ct. 376, 484 U.S. 49, 98 L.Ed.2d 306, on remand 844 F.2d 170. Environmental Law 226

A citizen suit under the Clean Water Act is not permitted for purely past violations of the Clean Water Act (CWA). Jones v. E.R. Snell Contractor, Inc., N.D.Ga.2004, 333 F.Supp.2d 1344, affirmed 120 Fed.Appx. 786, 2004 WL 2157261, certiorari denied 125 S.Ct. 1735, 544 U.S. 962, 161 L.Ed.2d 603. Environmental Law 226

Town, as wholly past polluter at landfill site, could not be held liable to citizens under Clean Water Act (CWA) for ongoing discharge of leachate into navigable waters. Aiello v. Town of Brookhaven, E.D.N.Y.2001, 136 F.Supp.2d 81. Environmental Law 226

Clean Water Act (CWA) citizen suit may not be brought for wholly past violations. Old Timer, Inc. v. Black-hawk-Central City Sanitation Dist., D.Colo.1999, 51 F.Supp.2d 1109. Environmental Law 226

Clean Water Act citizen suit, unlike action by government, cannot be brought to recover for wholly past violations; citizens may seek civil penalties only in suit to enjoin or otherwise abate ongoing violation. Concerned Area Residents for The Environment v. Southview Farm, W.D.N.Y.1993, 834 F.Supp. 1410. Environmental Law 226

Mobile home park purchasers could not bring citizens' suit against vendors for failure to remedy past violations of Clean Water Act; since statute only authorized such suits to enjoin or abate violations, it did not apply to former owners who, by virtue of having sold source of violation, no longer had control to abate it. Brossman Sales, Inc. v. Broderick, E.D.Pa.1992, 808 F.Supp. 1209. Environmental Law 226

Private cause of action does not exist under Clean Water Act to recover for wholly past violations of effluent standards of limitation. Atlantic States Legal Foundation, Inc. v. Pan American Tanning Corp., N.D.N.Y.1992, 807 F.Supp. 230, reversed 993 F.2d 1017. Environmental Law 226

If ongoing violations of discharge permit are related to basic underlying problem complained of in citizen suit under the Clean Water Act, fact that past violations show up in one parameter of the permit does not deprive court of jurisdiction even though the postcomplaint violation occurs in a different parameter. Natural Resources Defense Council, Inc. v. Texaco Refining and Marketing, Inc., D.Del.1992, 800 F.Supp. 1, affirmed in part , reversed in part 2 F.3d 493. Environmental Law 641

Court did not have jurisdiction in citizen suit under the Clean Water Act over claims of violations of discharge permit which occurred prior to the filing of the complaint and which did not correspond to any postcomplaint violations. Natural Resources Defense Council, Inc. v. Texaco Refining and Marketing, Inc., D.Del.1992, 800 F.Supp. 1, affirmed in part , reversed in part 2 F.3d 493. Environmental Law 641

Environmental groups established continuing likelihood that future violations might occur in any of the surface water discharge permit parameters that permit holder had been found to have violated in the past, and permit holder's continued violation of both effluent limitations and reporting and monitoring requirements supported conclusion that continuing likelihood existed of discharge violations in general and of reporting and monitoring violations in general. Public Interest Research Group of New Jersey v. Yates Industries, Inc., D.N.J.1991, 790 F.Supp. 511. Environmental Law 207; Environmental Law 206

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

Citizens' suit under Clean Water Act could not be maintained against past owners of private septic system, though system's violations of Act were continuing when suits were filed; past owners were not presently violating Act, as was necessary to maintenance of citizens' suit. Friends of Sakonnet v. Dutra, D.R.I.1990, 738 F.Supp. 623. Environmental Law ⚷ 226

Individual or entity may not maintain citizen suit under Clean Water Act for wholly past violations of the Act. Pennsylvania Environmental Defense Foundation v. Bellefonte Borough, M.D.Pa.1989, 718 F.Supp. 431. Environmental Law ⚷ 226

Citizen suits may be brought under the Federal Water Pollution Control Act [Federal Water Pollution Control Act Amendments of 1972, § 101 et seq., as amended, 33 U.S.C.A. § 1251 et seq.] for past as well as present violations; thus, plaintiff organizations could bring action against permittee for past violations of expired national pollutant discharge elimination system permits. Student Public Interest Research Group of New Jersey, Inc. v. AT & T Bell Laboratories, D.C.N.J.1985, 617 F.Supp. 1190.

Public interest organization could maintain citizen suit under Clean Water Act against paper mill for past violations of wastewater discharge permit even if paper mill was currently in compliance with terms of its permit. Sierra Club v. Simkins Industries, Inc., D.C.Md.1985, 617 F.Supp. 1120, reconsideration denied , affirmed 847 F.2d 1109, rehearing denied, certiorari denied 109 S.Ct. 3185, 491 U.S. 904, 105 L.Ed.2d 694. Environmental Law ⚷ 226

10. Ongoing violations

Unspecified ongoing or continuing violations of Clean Water Act (CWA) alleged against metropolitan sewerage district by environmental groups did not constitute separate and distinct cause of action, for purposes of determining whether state action against district and resulting stipulation had res judicata effect barring groups' CWA citizens' suit under Wisconsin law, given groups' failure to identify such post-stipulation violations in 60-day notice required under CWA, which thus precluded claims based on those violations, and given that continuing violations were related in origin and had same factual basis as pre-stipulation violations, as to which res judicata applied. Friends of Milwaukee's Rivers v. Milwaukee Metropolitan Sewerage Dist., C.A.7 (Wis.) 2004, 382 F.3d 743, rehearing and suggestion for rehearing en banc denied, certiorari denied 125 S.Ct. 1593, 544 U.S. 913, 161 L.Ed.2d 293. Judgment ⚷ 828.15(1)

Dairy operation's discharges of wastewater from truck wash into irrigation canal and misapplication or overapplication of animal wastewaters to field draining into canal constituted "ongoing violations" of Clean Water Act (CWA), as required to support environmental group's CWA action against operation, since such violations had been continuing throughout significant time period, and had reasonable likelihood of recurrence. Community Ass'n for Restoration of the Environment v. Henry Bosma Dairy, C.A.9 (Wash.) 2002, 305 F.3d 943. Environmental Law ⚷ 206

City that sued developers, alleging that development activities caused silt and sediment-laden water to be discharged into lakes and surrounding wetlands, averred that such activities constituted "ongoing violation" of federal law, as required to maintain claim under Clean Water Act (CWA); complaint made good faith allegation that presence of developers' illegally discharged fill material in lakes and wetlands was continuous or intermittent. City of Mountain Park, GA v. Lakeside at Ansley, LLC, N.D.Ga.2008, 560 F.Supp.2d 1288. Environmental Law ⚷ 226

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

Zinc mine operator's violations of provision of its National Pollutant Discharge Elimination System (NPDES) permit requiring it to monitor discharge from its tailings pond were not ongoing, and thus citizen enforcement action under Clean Water Act was not warranted, even if operator could not guarantee that there would be no future failures, where operator had not experienced any violations in three years since installing programmable logic controller, as well as several flow meters and pH probe, at new plant at port site. Adams v. Teck Cominco Alaska, Inc., D.Alaska 2006, 414 F.Supp.2d 925. Environmental Law 226

Clean Water Act (CWA) does not permit citizen suits for wholly past violations; rather, to have standing under CWA, citizen-plaintiff must prove existence of ongoing violations or reasonable likelihood that future violations will occur. Oregon State Public Interest Research Group, Inc. v. Pacific Coast Seafoods Co., D.Or.2005, 361 F.Supp.2d 1232. Environmental Law 650

Plaintiff asserting Clean Water Act (CWA) claims must be able to allege that the violations are ongoing, pointing either to violations that continue on or after the date the complaint is filed or to evidence from which a reasonable trier of fact could find a continuing likelihood of a recurrence in intermittent or sporadic violations. Hiebenthal v. Meduri Farms, D.Or.2002, 242 F.Supp.2d 885. Environmental Law 226

If plaintiff-citizen alleges ongoing violation of Clean Water Act (CWA), it is sufficient to confer jurisdiction on federal district court. Swartz v. Beach, D.Wyo.2002, 229 F.Supp.2d 1239. Environmental Law 226

In order for court to have jurisdiction over citizen suits under Clean Water Act (CWA), existence of ongoing violations must be demonstrated. Frilling v. Village of Anna, S.D.Ohio 1996, 924 F.Supp. 821. Environmental Law 226

Environmental groups' good faith allegation that violations of Clean Water Act (CWA) were occurring at time they filed citizen suit was sufficient to provide district court with jurisdiction over suit. Beartooth Alliance v. Crown Butte Mines, D.Mont.1995, 904 F.Supp. 1168. Environmental Law 673

For purposes of determining whether there are "ongoing violations" required for citizen suit under Clean Water Act (CWA), intermittent or sporadic violations do not cease to be ongoing until date when there is no real likelihood of repetition. Save Our Bays and Beaches v. City and County of Honolulu, D.Hawai'i 1994, 904 F.Supp. 1098. Environmental Law 226

Even if construction had ceased and erosion control measures were in place at construction site which lacked discharge permit required by Clean Water Act, developers remained in violation of Act, absent proof of complete absence of storm runoff; it was discharge of water without permit coverage that violated Act, not construction activity itself. Molokai Chamber of Commerce v. Kukui (Molokai), Inc., D.Hawai'i 1995, 891 F.Supp. 1389. Environmental Law 206

Individual landowners alleging Clean Water Act violation sufficiently charged requisite ongoing violation; complaint alleged that discharges were result of practices and procedures that defendants were continuing to follow, and that actual discharges had occurred since complaint was filed. Concerned Area Residents for The Environment v. Southview Farm, W.D.N.Y.1993, 834 F.Supp. 1410. Environmental Law 673

Exceedances in National Pollutant Discharge Elimination System permit level for phosphorus did not constitute ongoing violation sufficient to support jurisdiction under Clean Water Act, even though there were four exceedances, including two occurring 18 months apart, the latter of the two ten months after the complaint was

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

filed; evidence indicated that one exceedance was caused by malfunction in sight glass which indicated amount of phosphorus being added to biological treatment system, that another of exceedances occurred to shock load of organic materials to treatment facility reducing effectiveness of one biological reactor, and third and final exceedance occurred due to 25-year storm event. Allen County Citizens for the Environment, Inc. v. BP Oil Co., N.D.Ohio 1991, 762 F.Supp. 733, affirmed 966 F.2d 1451. Environmental Law 226

Evidence was sufficient to establish that holder of national pollution discharge elimination system permit had engaged in ongoing violations of Clean Water Act sufficient to confer federal jurisdiction over citizens' suit against holder; although holder had implemented remedial measures in its wastewater treatment system that had proven effective, plaintiffs presented expert testimony indicating that there was some likelihood of recurrence of intermittent violations. Chesapeake Bay Foundation, Inc. v. Gwaltney of Smithfield, Ltd., E.D.Va.1988, 688 F.Supp. 1078, affirmed in part , reversed in part 890 F.2d 690. Environmental Law 230

State which brought citizen suits against Veterans Administration for violation of federal Clean Air Act was not required to allege continuing and ongoing violation of emission standards in order for district court to have subject matter jurisdiction; declining to follow *Hamker v. Diamond Shamrock Chemical Co.*, 756 F.2d 392 (5th Cir.). State of Ala. ex rel. Graddick v. Veterans Admin., M.D.Ala.1986, 648 F.Supp. 1208.

11. Prospective violations

Allegations that plans of the Nuclear Regulatory Commission and operator of nuclear power plant to attempt to partially decontaminate water following accident at the power plant and eventually to release the water into river would constitute discharge of radioactive waste within prohibition of this chapter were sufficient for purposes of subject-matter jurisdiction of the district court under this section and under section 1331 of Title 28. Susquehanna Valley Alliance v. Three Mile Island Nuclear Reactor, C.A.3 (Pa.) 1980, 619 F.2d 231, certiorari denied 101 S.Ct. 893, 449 U.S. 1096, 66 L.Ed.2d 824. Environmental Law 634; Federal Courts 243

12. Aiding and abetting

Aiding and abetting liability exists under the "citizen suit" provision of Federal Water Pollution Control Act. O'Neil v. Q.L.C.R.I., Inc., D.R.I.1990, 750 F.Supp. 551: Environmental Law 226

13. Failure to perform nondiscretionary duty--Generally

Deference must be accorded to Environmental Protection Agency's interpretation of this chapter. Environmental Defense Fund, Inc. v. Costle, C.A.D.C.1981, 657 F.2d 275, 211 U.S.App.D.C. 313. Statutes 219(6.1)

Where plaintiffs were challenging manner in which Administrator performed his duties, rather than his alleged failure to perform a nondiscretionary duty, plaintiffs could not bring suit challenging issuance of National Pollutant Discharge Elimination System permit in district court under mandamus jurisdiction of district court or under this section permitting suit in district court against Administrator for failure to perform a nondiscretionary act. Sun Enterprises, Ltd. v. Train, C.A.2 (N.Y.) 1976, 532 F.2d 280. Federal Courts 11; Federal Courts 194

Determination that landowner's activities were "normal farming" and, thus, did not require wetlands permit under Clean Water Act (CWA), was not correctly characterized as failure to perform "nondiscretionary duty," as required for cause of action against Administrator of Environmental Protection Agency (EPA) under CWA's cit-

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

izen suit provision; rather, allegation was that Army Corps of Engineers performed its duty erroneously. Cascade Conservation League v. M.A. Segale, Inc., W.D.Wash.1996, 921 F.Supp. 692. Environmental Law 146

Citizen suit provision of Clean Water Act (CWA) only authorized suits against Administrator of Environmental Protection Agency (EPA) for failure to perform non-discretionary duties and, thus, precluded citizens' CWA claims against Army Corps of Engineers. Preserve Endangered Areas of Cobb's History, Inc. (P.E.A.C.H.) v. U.S. Army Corps of Engineers, N.D.Ga.1995, 915 F.Supp. 378, reconsideration denied 916 F.Supp. 1557, affirmed 87 F.3d 1242. Environmental Law 226

Corps of Engineers' jurisdictional disclaimer over dredge material discharge area, alleged by citizens to be wetlands, if erroneous, was a failure to perform a mandatory duty and allowed citizen suit under Clean Water Act. Golden Gate Audubon Soc., Inc. v. U.S. Army Corps of Engineers, N.D.Cal.1988, 700 F.Supp. 1549, clarification denied , amended 717 F.Supp. 1417. Environmental Law 146

District court had subject matter jurisdiction over action in which plaintiff sought to compel Environmental Protection Agency to enforce Clean Water Act, section 1251 et seq. of this title, in view of requisite allegation of a failure to perform nondiscretionary duty to issue order requiring compliance with section 1251 et seq. of this title to person found in violation of section 1251 et seq. of this title. Greene v. Costle, W.D.Tenn.1983, 577 F.Supp. 1225.

14. ---- Effluent limitations, failure to perform nondiscretionary duty

Fact that Congress did not explicitly require Environmental Protection Agency to intercede to prescribe total maximum daily load limits for discharge of pollutants in the absence of state action did not preclude determination that states' inaction could have ripened in refusal to act, and if Environmental Protection Agency disapproved states' "constructive submission" of no limits, that failure of Agency to act could amount to failure to perform nondiscretionary duty which could properly be raised in citizen's suit. Scott v. City of Hammond, Ind., C.A.7 (Ill.) 1984, 741 F.2d 992.

Suit brought to enforce conditions imposed pursuant to state law in National Pollutant Discharge Elimination System (NPDES) permit sought to enforce "effluence standard or limitation" under Clean Water Act (CWA) and, thus, citizens had standing under CWA to bring suit; CWA expressly contemplated stricter state effluent and other limitations deemed necessary by state to restore integrity of its waters, allowed state to incorporate those limitations into state-issued permit, and authorized citizen suits to enforce those limitations. Upper Chattahoochee Riverkeeper Fund, Inc. v. City of Atlanta, N.D.Ga.1996, 953 F.Supp. 1541. Environmental Law 656

15. ---- Environmental impact statements, failure to perform nondiscretionary duty

Neither Federal Mandamus Act, section 1361 of Title 28, nor this section provided jurisdiction for federal district court to review Environmental Protection Agency's failure to object to issuance of state water discharge permit, since Agency by statute retained discretion to object to specific state National Pollutant Discharge Elimination System permit, and could waive such right of objection; mandamus jurisdiction lay, however, to entertain issue of whether environmental impact statement was required by section 4332 of Title 42 prior to issuance of permit, since such procedure, if required, is mandatory and not discretionary. Chesapeake Bay Foundation, Inc. v. U. S., E.D.Va.1978, 445 F.Supp. 1349. Federal Courts 11; Environmental Law 641

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

16. Diligent prosecution by Administrator or State--Generally

Environmental Protection Agency's (EPA) prosecution of Clean Water Act (CWA) violations against defendants in citizen suit was diligent, and therefore barred citizen suit; EPA chose to investigate and reach a settlement with defendants concerning essentially the same violations alleged in complaint in citizen suit. Karr v. Hefner, C.A.10 (Okla.) 2007, 475 F.3d 1192. Environmental Law 226

Litigation between state and metropolitan sewerage district, and resulting stipulation, that occurred approximately 25 years before environmental groups filed citizens' suit against district under Clean Water Act (CWA) did not qualify as diligent prosecution by state of violations alleged by groups, and thus did not operate to bar groups' action under CWA, regardless of whether violations occurred due to lingering problems which stipulation failed to resolve, or whether violations stemmed from circumstances unrelated to those which stipulation was intended to address. Friends of Milwaukee's Rivers v. Milwaukee Metropolitan Sewerage Dist., C.A.7 (Wis.) 2004, 382 F.3d 743, rehearing and suggestion for rehearing en banc denied, certiorari denied 125 S.Ct. 1593, 544 U.S. 913, 161 L.Ed.2d 293. Environmental Law 226

Citizen suit may be commenced under Clean Water Act if appropriate state or federal authorities do not take action within 60 days following notice by plaintiff to Environmental Protection Agency (EPA), state and violator of alleged violations of Act. Atlantic States Legal Foundation, Inc. v. Eastman Kodak Co., C.A.2 (N.Y.) 1991, 933 F.2d 124. Environmental Law 226

Recommendation by Oregon Department of Environmental Quality (DEQ), that enforcement action be taken against seafood processing facility which could have resulted in administrative penalties, was not "comparable" to action brought by environmental group against seafood processing facility which alleged violation of Clean Water Act (CWA), and thus citizen suit could not be precluded under "diligent prosecution" bar, since DEQ issued non-penalty administrative orders in the past, and even if monetary penalties were assessed by DEQ, monetary penalties under CWA were much higher, and prosecution under CWA provided more stringent standards. Oregon State Public Interest Research Group, Inc. v. Pacific Coast Seafoods Co., D.Or.2004, 341 F.Supp.2d 1170. Environmental Law 226

Under this section allowing citizen's suit under this chapter to proceed unless Environmental Protection Agency diligently prosecutes action for compliance, Agency's actions in entering into consent order with alleged violator did not constitute diligent compliance where the provision in the consent order extending violator's deadline for compliance exceeded Agency's authority. Student Public Interest Research Group of New Jersey, Inc. v. Fritzsche, Dodge & Olcott, Inc., D.C.N.J.1984, 579 F.Supp. 1528, affirmed 759 F.2d 1131.

Fact that Administrator was prosecuting civil action against City of New York for violating this chapter did not deprive district court of subject matter jurisdiction of suit charging the Environmental Protection Agency and the Administrator with violating federal common law of public nuisance since not only was the Administrator's suit filed after instant complaint but the "pending suit" provision of this section applies only to citizen suits against the actual violator. Long Beach Tp. v. City of New York, D.C.N.J.1978, 445 F.Supp. 1203. Environmental Law 226

16a. ---- Stipulations--diligent prosecution by Administrator or State

Stipulation intended to address alleged violations of Clean Water Act (CWA) by metropolitan sewerage district did not establish state's diligent prosecution of civil compliance action against district, such that CWA barred

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

citizens' suit by environmental groups based on same alleged violations, when state court refused to enter stipulation and stipulation was subsequently rescinded by state and district, and therefore stipulation lacked any legally binding effect. Friends of Milwaukee's Rivers v. Milwaukee Metropolitan Sewerage Dist., C.A.7 (Wis.) 2004, 382 F.3d 743, rehearing and suggestion for rehearing en banc denied, certiorari denied 125 S.Ct. 1593, 544 U.S. 913, 161 L.Ed.2d 293. Environmental Law ⚿ 226

16b. ---- Timely commenced action, diligent prosecution by Administrator or State

State's enforcement action against metropolitan sewerage district, and resulting stipulation, did not qualify as timely commenced action that, pursuant to Clean Water Act (CWA), barred related citizens' suit brought against district by environmental groups for alleged CWA violations when state's action was filed after citizens' suit, even though both actions were filed on same day and state had postponed filing its action at groups' request, and even though stipulation was similar to one that state and district previously had timely, but ineffectively, filed in 25-year-old state-court case. Friends of Milwaukee's Rivers v. Milwaukee Metropolitan Sewerage Dist., C.A.7 (Wis.) 2004, 382 F.3d 743, rehearing and suggestion for rehearing en banc denied, certiorari denied 125 S.Ct. 1593, 544 U.S. 913, 161 L.Ed.2d 293. Environmental Law ⚿ 226

17. Enforcement actions

District court's consolidation order for federal and state enforcement actions, under CWA, including consolidation of citizen suit by environmental group, against county and municipality for sanitary sewer overflows, did not destroy legal basis under which environmental organization originally was authorized to file citizen suit, under CWA, in support of award of fees. Sierra Club v. Hamilton County Bd. of County Com'rs, C.A.6 (Ohio) 2007, 504 F.3d 634. Environmental Law ⚿ 716

Only situation in which state could not control all aspects of enforcement of Clean Water Act (CWA) was when it was pursuing something less than judicial enforcement and citizen was pursuing injunction in federal court; consequently, citizen suit that sought injunctive relief could be maintained, although civil penalties were not available because state was pursuing remedy, albeit something less than judicial enforcement. Paper, Allied-Industrial, Chemical And Energy Workers Intern. Union v. Continental Carbon Co., C.A.10 (Okla.) 2005, 428 F.3d 1285. Environmental Law ⚿ 226; Environmental Law ⚿ 700

Environmental Protection Agency's (EPA) authority under Clean Water Act (CWA) to veto United States Army Corps of Engineers' (USACE) issuance of permit to construct 1,526-acre reservoir was discretionary, and, thus, EPA's decision not to veto permit could not form basis for action against EPA under CWA's citizen-suit provision. Alliance To Save Mattaponi v. U.S. Army Corps of Engineers, D.D.C.2007, 515 F.Supp.2d 1. Environmental Law ⚿ 226

Environmental Protection Agency (EPA) was under nondiscretionary duty under Clean Water Act (CWA) to promptly promulgate revised water quality standards upon state's failure to submit its own revisions within 90 days of notice of disapproval, and thus CWA authorized citizen suit to be brought to enforce that nondiscretionary duty. Northwest Environmental Advocates v. U.S. E.P.A., D.Or.2003, 268 F.Supp.2d 1255. Environmental Law ⚿ 188; Environmental Law ⚿ 226

Public interest group's claims for substance violations of Clean Water Act National Pollution Discharge Elimination System (NPDES) permit were not barred as being subject of parallel government enforcement action, where group filed amended complaint alleging violations of permit before Massachusetts Department of Envir-

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

onmental Protection (DEP) or Environmental Protection Agency (EPA) commenced action for same violations. Massachusetts Public Interest Research Group v. ICI Americas Inc., D.Mass.1991, 777 F.Supp. 1032. Environmental Law 226

Actions taken by Environmental Protection Agency (EPA) toward pollutant discharges at Air Force base that exceeded effluent limitations in permits did not involve attempt to enforce those standards and, thus, citizen's suit under Clean Water Act was not precluded; administrative order on consent, establishing schedule for construction of new waste treatment facility and interim effluent limits, was insufficient to protect environment, and the EPA commenced no action to require compliance with effective permit. Public Interest Research Group of New Jersey, Inc. v. Rice, D.N.J.1991, 774 F.Supp. 317. Environmental Law 226

Action by group acting as "private attorneys general" under Federal Clean Water Act seeking damages and injunctive relief relating to hazardous waste landfill was not barred by existence of corollary governmental enforcement effort, although government was actively litigating its action, and dismissal of group's suit would not leave group without remedy; government's effort did not address factual grievances asserted by group whose complaint was directed particularly to claim that drainage ditch and outflow pipe from landfill were illegally discharging pollutants into river. Hudson River Fishermen's Ass'n v. Westchester County, S.D.N.Y.1988, 686 F.Supp. 1044. Environmental Law 226

District court had no authority to dismiss citizen suit brought under Clean Water Act as a result of subsequently filed enforcement action by the United States covering similar issues. Atlantic States Legal Foundation, Inc. v. Koch Refining Co., D.Minn.1988, 681 F.Supp. 609. Environmental Law 226

Where settlement of waste discharge permit violation was achieved as a result of enforcement proceedings in which interested members of public lacked opportunity to be heard on merits of proposed consent order, enforcement proceeding could not be deemed equivalent of court action within meaning of this section, so that citizens' suit to enforce anti-pollution standards of this chapter could properly be entertained by federal district court. Sierra Club v. SCM Corp., W.D.N.Y.1983, 572 F.Supp. 828, appeal dismissed 747 F.2d 99. Environmental Law 226

18. State actions--Generally

State Department of Environmental Protection diligently enforced state Clean Waters Act against city for discharge of sewage effluents into coastal estuary, so as to bar citizen's suit for same violations under Federal Clean Water Act, where Department ordered tests of groundwater monitoring wells, effluent tanks, and discharges ordered new sewer treatment facility plans and enforced sewer hookup moratorium, and Department left possibility of imposing penalties open. North and South Rivers Watershed Ass'n, Inc. v. Town of Scituate, C.A.1 (Mass.) 1991, 949 F.2d 552. Environmental Law 226

Claims brought under Clean Water Act (CWA) by city against developers, alleging that development activities caused silt and sediment-laden water to be discharged into lakes and surrounding wetlands, were properly based upon developers' alleged violations of state-issued National Pollutant Discharge Elimination System (NPDES) permits; permits were required to comply with state water quality standards prohibiting discharge of water with turbidity evidenced by noticeable visual contrast in color of water. City of Mountain Park, GA v. Lakeside at Ansley, LLC, N.D.Ga.2008, 560 F.Supp.2d 1288. Environmental Law 226

State law claims of negligence, private nuisance, and trespass brought by private landowners against corporate

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

landowner and biosolids recycling company, stemming from dispersal of by-product from wastewater treatment facilities, did not implicate substantial federal question under Clean Water Act (CWA), and thus were not preempted; elements of private landowners' nuisance, trespass, and negligence claims were well-settled under Virginia common law and subject to CWA savings clause. Wyatt v. Sussex Surry, LLC, E.D.Va.2007, 482 F.Supp.2d 740. Negligence ⚷ 205; States ⚷ 18.15; Trespass ⚷ 16

Cities' civil action against wastewater treatment company for failure to cure alleged violations of local law was not enforcement action commenced by state that would preclude Clean Water Act (CWA) citizen suit. Ohio Public Interest Research Group v. Laidlaw Environmental Services, Inc., S.D.Ohio 1996, 963 F.Supp. 635. Environmental Law ⚷ 226

For purposes of Clean Water Act (CWA) section barring citizen suits if state has diligently prosecuted civil action, state's denying citizen plaintiffs opportunity to intervene or comment upon consent order in state's civil enforcement action provided basis for holding that civil action was not "diligently prosecuted"; plaintiffs did everything that could reasonably have been done to seek intervention prior to entry of consent order, which was filed simultaneously with state's complaint, but they were not allowed to do so, and state's apparent failure to enact public participation safeguards mandated by implementing regulations of CWA did not alter federal standard of "diligent prosecution," which required those safeguards to be provided and followed. Frilling v. Village of Anna, S.D.Ohio 1996, 924 F.Supp. 821. Environmental Law ⚷ 226

Consent order between paper manufacturing company and Michigan Department of Natural Resources (MDNR) barred citizen's suit under Clean Water Act (CWA) where MDNR diligently prosecuted action under a Michigan statute that was comparable to CWA. Pape v. Menominee Paper Co., Inc., W.D.Mich.1994, 911 F.Supp. 273. Environmental Law ⚷ 226

State's failure to enforce its consent order is some evidence that its prosecution was not "diligent" for purposes of Clean Water Act (CWA) section barring citizen suits if government has commenced and is diligently prosecuting enforcement action. Friends of the Earth, Inc. v. Laidlaw Environmental Services (TOC), Inc., D.S.C.1995, 890 F.Supp. 470. Environmental Law ⚷ 226

Where water reclamation district could not enforce its own show cause order directed at alleged polluter, show cause order was not an action in a court which would bar citizen suit against the alleged polluter under the Clean Water Act. Illinois Public Interest Research Group v. PMC, Inc. Through PMC Specialties Group, N.D.Ill.1993, 835 F.Supp. 1070. Environmental Law ⚷ 226

Citizen suit for violations of federal Water Pollution Control Act permit was not precluded by prior enforcement action against violator by New Jersey Department of Environmental Protection; Department never commenced action in court against violator, no state administrative enforcement action was ever formally commenced, and state law which Department proceeded under was not comparable to federal law. Public Interest Research Group of New Jersey, Inc. v. New Jersey Expressway Authority, D.N.J.1992, 822 F.Supp. 174. Environmental Law ⚷ 226

New Jersey Department of Environmental Protection and Energy order and notice, rather than earlier Department compliance evaluation inspection report which rated fluoropolymer manufacturer's facility "unacceptable," was "commencement" of enforcement proceeding by Department for purposes of Clean Water Act provision barring citizen suits regarding violations with respect to which state has commenced and is diligently prosecuting action under state law and, thus, citizen suit under Act against manufacturer was not barred by provision, in

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

light of fact that plaintiffs sent 60-day notice letter after report, but before order and notice; report made no mention of formal charges, penalties, or hearing and indicated that enforcement action had not yet been initiated but might be in future. Public Interest Research Group of New Jersey, Inc. v. Elf Atochem North America, Inc., D.N.J.1993, 817 F.Supp. 1164. Environmental Law 226

State agency's enforcement actions against city, consisting of investigation and finding of violations of Clean Water Act, and resulting consent agreement between city and agency did not bar citizen's lawsuit filed under Act; enforcement actions taken by agency were administratively initiated and filed with another state agency, and citizen suit was first enforcement action pursued against city in federal court. Hawaii's Thousand Friends, Life of Land, Inc. v. City and County of Honolulu, D.Hawai'i 1992, 806 F.Supp. 225. Environmental Law 226

Clean Water Act citizen's suit alleging that a National Pollutant Discharge Elimination System (NPDES) permit holder had violated the effluent limitations and reporting requirements of its permit was not subject to dismissal because of a state environmental agency's eventual, and as yet unconsummated, settlement with the permit holder, as the agency did not commence suit within the required 60-day notice period. Natural Resources Defense Council, Inc. v. Loewengart & Co., Inc., M.D.Pa.1991, 776 F.Supp. 996. Environmental Law 659

Administrative action by Indiana Department of Environmental Management against holder of National Pollutant Discharge Elimination System (NPDES) permit was not the functional equivalent to action in court under Clean Water Act section, barring citizen's suit if Administrator of Environmental Protection Agency (EPA) or state has commenced and is diligently prosecuting civil or criminal action in court and, thus, administrative action did not bar nonprofit corporation from maintaining citizen's suit; agency did not have power to accord relief that would be substantially equivalent to that available in court. Atlantic States Legal Foundation, Inc. v. Universal Tool & Stamping Co., Inc., N.D.Ind.1990, 735 F.Supp. 1404. Environmental Law 226

Municipality was not a "state," for purposes of statute prohibiting citizen's suit under Federal Water Pollution Control Act if administrator or state has commenced and is diligently prosecuting civil or criminal action to require compliance with an Act standard, limitation or order; therefore, municipality's action against electroplating company seeking compliance with Act standards did not preclude citizen's suit. New York Public Interest Research Group, Inc. v. Limco Mfg. Corp., E.D.N.Y.1987, 697 F.Supp. 608. Environmental Law 226

For purpose of prohibition against commencement of action under Federal Water Pollution Control Act if administrator of state has commenced and is diligently prosecuting action, citizen's federal action was commenced prior to state action brought by Commissioner of Connecticut Department of Environmental Protection; action was "commenced" in federal court on August 6, 1985, when complaint was filed, and in state court when complaint was served on August 7, 1985. Connecticut Fund for Environment, Inc. v. Upjohn Co., D.Conn.1987, 660 F.Supp. 1397.

Fact that State of Connecticut sought to enforce at administrative agency level consent judgment entered in its state court action to enforce terms and conditions of industrial corporation's national pollution discharge elimination system permit did not mean that State was "diligently prosecuting" state court action so as to preclude citizens, under Federal Water Pollution Control Act Amendments of 1972, § 505(b)(1)(B), as amended, 33 U.S.C.A. § 1365(b)(1)(B), from bringing suit in federal district court for declaration that corporation had violated Act on 82 occasions by discharging into navigable waters of United States effluents in excess of levels allowed by its permit. Connecticut Fund for Environment v. L & W Industries, Inc., D.Conn.1986, 631 F.Supp.

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

1289. Environmental Law 226

Actions taken by state after filing of citizen suit under Clean Water Act [Federal Water Pollution Control Act Amendments of 1972, § 101 et seq., as amended, 33 U.S.C.A. § 1251 et seq.] may not be considered as constituting "diligent prosecution" pursuant to 33 U.S.C.A. § 1365(b)(1)(B) which precludes filing of citizen suit in event of "diligent prosecution" by state. Connecticut Fund for the Environment v. Job Plating Co., Inc., D.C.Conn.1985, 623 F.Supp. 207.

Under subsec. (b)(1)(B) of this section providing that a citizens' suit may not be brought if the state has commenced and is diligently prosecuting civil or criminal action, diligent prosecution was not lacking since alleged polluter achieved compliance with consent order entered into with the New York Department of Environmental Conservation; thus, citizens' suit brought pursuant to this section challenging alleged unremedied violations of pollutant discharge system was barred by the Act. Hudson River Sloop Clearwater, Inc. v. Consolidated Rail Corp., N.D.N.Y.1984, 591 F.Supp. 345, affirmed in part , reversed in part 768 F.2d 57. Environmental Law 226

19. ---- Compromise and settlement, state actions

Environmental group could continue to pursue citizen suit under Clean Water Act, notwithstanding settlement between alleged violator and state officials, if violations alleged were in fact continuing or terms of settlement were such that realistic prospect of continuing violations existed. Atlantic States Legal Foundation, Inc. v. Eastman Kodak Co., C.A.2 (N.Y.) 1991, 933 F.2d 124. Compromise And Settlement 16(3)

Absence of meaningful opportunity for citizen plaintiffs to intervene, as result of state agency's settlement of action against operator of wastewater treatment plant regarding violations of National Pollutant Discharge Elimination System (NPDES) permit, triggered heightened scrutiny into settlement of underlying case between agency and operator for purposes of analysis under Clean Water Act (CWA) section barring citizen suits if government has commenced and is diligently prosecuting enforcement action. Friends of the Earth, Inc. v. Laidlaw Environmental Services (TOC), Inc., D.S.C.1995, 890 F.Supp. 470. Environmental Law 226

For purposes of determining whether citizen suit under the Clean Water Act was precluded on ground that violator had paid penalty under state law comparable to federal enforcement provision, the California statute under which refinery agreed to make a $2 million payment to state was not the civil penalty provision but the provision for cease and desist orders, where state agency identified its actions as being under the latter statute, and labeling was not accidental but was part of settlement agreement resulting from lengthy and detailed negotiations. Citizens for a Better Environment-California v. Union Oil Co. of California, N.D.Cal.1994, 861 F.Supp. 889, affirmed 83 F.3d 1111, as amended , certiorari denied 117 S.Ct. 789, 519 U.S. 1101, 136 L.Ed.2d 731. Environmental Law 226

20. Notice requirement--Generally

Louisiana Department of Environmental Quality (DEQ) diligently commenced administrative penalty action against village for releasing untreated sewage, under state statute that was "comparable" to Clean Water Act (CWA), and thus property owners could not maintain CWA citizen suit, arising from village's violations, unless proper notice was given prior to penalty action being commenced, and citizen suit was filed within 120 days of notice; state statute, like CWA, afforded significant citizen participation and provided citizens meaningful opportunity to participate in decision-making process. Lockett v. E.P.A., C.A.5 (La.) 2003, 319 F.3d 678. Environ-

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

mental Law ⚿ 226

Clean Water Act (CWA) section requiring notice letter prior to bringing of citizen suit does not require citizen to give notice to recipient of each individual violation of specific discharge limitation. Public Interest Research Group of New Jersey, Inc. v. Hercules, Inc., C.A.3 (N.J.) 1995, 50 F.3d 1239, on remand 1996 WL 905920. Environmental Law ⚿ 659

Citizen may not sue administrator of Environmental Protection Agency under Federal Water Pollution Control Act until 60 days after citizen has notified administrator, either by certified mail or by personal service, of citizen's intent to sue. Greene v. Reilly, C.A.6 (Tenn.) 1992, 956 F.2d 593. United States ⚿ 127(2)

Petitioners, who were barred by statute of limitations from seeking review of issuance of National Pollutant Discharge Elimination System permit by the Environmental Protection Agency, would, after giving required notice, be able to commence citizen's suit against violator of terms of permit or Administrator or both and would be able to present new evidence pertaining to permit or violations thereof. Sun Enterprises, Ltd. v. Train, C.A.2 (N.Y.) 1976, 532 F.2d 280. Environmental Law ⚿ 226

This section permitted "citizens suit" to compel the Environmental Protection Agency and its Administrator to publish effluent limitation guidelines to be brought under either section 1331 of Title 28 or the Administrative Procedure Act, sections 551 et seq. and 701 et seq. of Title 5, without prior notice to the Administrator. Natural Resources Defense Council, Inc. v. Train, C.A.D.C.1974, 510 F.2d 692, 166 U.S.App.D.C. 312. Environmental Law ⚿ 659

Purpose of notice requirement under citizen's suit provision of Clean Water Act (CWA) is to provide government agencies or permit holders chance to remedy alleged permit violation prior to litigation. Swartz v. Beach, D.Wyo.2002, 229 F.Supp.2d 1239. Environmental Law ⚿ 659

Party seeking to file citizen suit under the Clean Water Act must give notice 60 days before filing the complaint to the administrator of the Environmental Protection Agency (EPA) of the alleged violation, to the state in which the violation is occurring, and to the alleged violator and must show that the suit is not for a wholly past violation of permit. Natural Resources Defense Council, Inc. v. Texaco Refining and Marketing, Inc., D.Del.1992, 800 F.Supp. 1, affirmed in part , reversed in part 2 F.3d 493. Environmental Law ⚿ 659

Provision in Clean Water Act that potential citizen plaintiffs must provide notice to EPA, state, and potential defendant of alleged violations 60 days prior to commencing action is intended to give EPA and state chance to institute action that might preclude need for citizen suit. Connecticut Fund for the Environment v. Job Plating Co., Inc., D.C.Conn.1985, 623 F.Supp. 207.

21. ---- Jurisdictional nature, notice requirement

Clean Water Act provision requiring 60 days' advance notice before commencement of citizen suit against industrial polluter is mandatory condition precedent. National Environmental Foundation v. ABC Rail Corp., C.A.11 (Ala.) 1991, 926 F.2d 1096. Environmental Law ⚿ 659

In suit brought against the Secretary of the Navy and other federal officials by environmental and citizen groups who sought relief against further dumping by the Navy of highly polluted dredge spoil at New London dumping site in Long Island Sound, the district court had jurisdiction to hear plaintiffs' claimed violation of this chapter

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

even though the action was commenced less than 60 days after plaintiffs gave notice of the alleged violation. Natural Resources Defense Council, Inc. v. Callaway, C.A.2 (Conn.) 1975, 524 F.2d 79. Environmental Law 659

The notice provision of this section was intended as a limitation on the new grant of jurisdiction for citizens suits and is not a restriction on federal court jurisdiction over actions maintainable even in the absence of special citizen suits provision. Natural Resources Defense Council, Inc. v. Train, C.A.D.C.1974, 510 F.2d 692, 166 U.S.App.D.C. 312. Environmental Law 659

Strict compliance with provision of Clean Water Act requiring plaintiff to give notice to alleged violators of Act and provide them 60 days to respond before bringing suit is mandatory jurisdictional prerequisite for citizen suit. American Canoe Ass'n, Inc. v. District of Columbia Water and Sewer Authority, D.D.C.2004, 306 F.Supp.2d 30, dismissed 2004 WL 2091485. Environmental Law 659

Failure of plaintiffs to provide their telephone numbers in notice letter to city was reason enough to dismiss their citizen suit under Clean Water Act (CWA) against city for lack of jurisdiction, even if plaintiffs gave their full names and addresses, and city could have looked up telephone numbers in phone book, could have called directory assistance, or could have asked plaintiffs' counsel for their phone numbers. Sierra Club Ohio Chapter v. City of Columbus, S.D.Ohio 2003, 282 F.Supp.2d 756. Environmental Law 659

Sixty-day notice requirement within citizen's suit provision of Clean Water Act (CWA) is mandatory condition precedent to suit. Swartz v. Beach, D.Wyo.2002, 229 F.Supp.2d 1239. Environmental Law 659

Plaintiffs' notice, which was a continuing notice that defendant steelmaker was in violation of the Federal Water Pollution Control Act, was sufficient to satisfy jurisdictional requirement that no action be commenced under the Act prior to 60 days after plaintiff has given notice of the alleged violation. Chesapeake Bay Foundation v. Bethlehem Steel Corp., D.C.Md.1985, 608 F.Supp. 440. Environmental Law 659

Provision of this section requiring that citizen, before bringing action as authorized, give 60 days' notice to administrator, to state in which violation occurred and to any violator of alleged standard or order is absolute on its face and is jurisdictional requirement. Pymatuning Water Shed Citizens for a Hygienic Environment v. Eaton, W.D.Pa.1980, 506 F.Supp. 902, affirmed 644 F.2d 995. Environmental Law 226

District court had jurisdiction of count alleging violation of this chapter under section 1331 of Title 28 notwithstanding fact that notice provisions of this section were not complied with. Environmental Defense Fund, Inc. v. Alexander, N.D.Miss.1980, 501 F.Supp. 742. Federal Courts 218

Notice requirement of this chapter is jurisdictional in nature, and absent any allegation by plaintiffs that notice conditions of this chapter had somehow been satisfied, court did not have jurisdiction to consider citizen's suit based on such chapter. Biederman v. Scharbarth, E.D.Wis.1980, 483 F.Supp. 809. Environmental Law 659

Failure to comply with notice requirements of subsec. (b) of this section, did not deprive district court of subject matter jurisdiction where claim was based on federal common law of public nuisance and was brought under this chapter and section 1331 of Title 28. Long Beach Tp. v. City of New York, D.C.N.J.1978, 445 F.Supp. 1203.

The 60-day notice requirement, for commencement of action, contained in this section and section 1415 of this title is jurisdictional, and court cannot ignore its existence. Save Our Sound Fisheries Ass'n v. Callaway,

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

D.C.R.I.1977, 429 F.Supp. 1136. Environmental Law 659

22. ---- Exemptions, notice requirement

Exception to otherwise applicable 90 day notification delay period before filing suit under citizen suit provision of Resource Conservation and Recovery Act (RCRA) for imminent and substantial endangerment to health or environment could not be based upon general allegation that defendants were "owners" and "operators" of hazardous waste disposal "facility" that disposed of "hazardous waste" and released contaminants from "RCRA-regulated hazardous waste management units," or that defendants somehow were regulated by hazardous waste management provisions. Building and Const. Trades Council of Buffalo, New York and Vicinity v. Downtown Development, Inc., C.A.2 (N.Y.) 2006, 448 F.3d 138. Environmental Law 659

Exemption from Clean Water Act requirement that 60 days' advance notice be given prior to commencement of citizen suit against industrial polluter, applicable to cases brought against Administrator of Environmental Protection Agency (EPA) challenging pollution standards adopted by Administrator, did not apply to action against private polluter. National Environmental Foundation v. ABC Rail Corp., C.A.11 (Ala.) 1991, 926 F.2d 1096. Environmental Law 659

23. ---- Failure to comply, notice requirement

Requirement in citizen suit provision in Clean Water Act (CWA) that notice of intent to sue had to be filed before action could be commenced, although mandatory, was not jurisdictional in strict sense of term, and hence failure to comply with requirement could not be raised for first time on appeal. Lockett v. E.P.A., C.A.5 (La.) 2003, 319 F.3d 678. Environmental Law 659; Environmental Law 682

Citizen's failure to provide notice to owner of private skiing facility in national forest of intent to sue owner for violation of Clean Water Act's (CWA) National Pollutant Discharge Elimination System (NPDES) did not deprive courts of subject matter jurisdiction to consider whether NPDES permit was required, in light of citizen's valid notice of intent to sue to Forest Service under National Environmental Policy Act (NEPA) for approving facility expansion without ensuring that NPDES permit had been issued; NEPA claim subsumed CWA claim and citizen initially sued only Forest Service and owner intervened. Dubois v. U.S. Dept. of Agriculture, C.A.1 (N.H.) 1996, 102 F.3d 1273, certiorari denied 117 S.Ct. 2510, 521 U.S. 1119, 138 L.Ed.2d 1013. Environmental Law 659

Citizen's notice to Environmental Protection Agency (EPA) of alleged point-source discharges in violation of Federal Water Pollution Control Act did not satisfy requirement that citizen provide administrator of EPA with 60 days notice of intent to file suit; thus, citizen could not maintain suit against administrator to insure correction of alleged violations. Greene v. Reilly, C.A.6 (Tenn.) 1992, 956 F.2d 593. United States 127(2)

Where Clean Water Act claim was brought as part of "hybrid" complaint which simultaneously alleged hazardous waste violations under Resource Conservation and Recovery Act, there was no need for plaintiffs to observe the 60-day delay requirement of Clean Water Act prior to bringing suit. Dague v. City of Burlington, C.A.2 (Vt.) 1991, 935 F.2d 1343, certiorari granted in part 112 S.Ct. 964, 502 U.S. 1071, 117 L.Ed.2d 130, reversed in part 112 S.Ct. 2638, 505 U.S. 557, 120 L.Ed.2d 449, on remand 976 F.2d 801. Environmental Law 659

Alleged failure of plaintiffs' notice, that city was operating landfill in violation of Resource Conservation and Recovery Act and Clean Water Act, to comply with content requirements of statutory and regulatory notice pro-

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

visions did not warrant drastic measure of dismissal on appeal after trial on statutory counts. Dague v. City of Burlington, C.A.2 (Vt.) 1991, 935 F.2d 1343, certiorari granted in part 112 S.Ct. 964, 502 U.S. 1071, 117 L.Ed.2d 130, reversed in part 112 S.Ct. 2638, 505 U.S. 557, 120 L.Ed.2d 449, on remand 976 F.2d 801. Environmental Law ⚷ 709; Environmental Law ⚷ 659

Failure of plaintiff to give notice prior to filing suit, as required by subsec. (b) of this section, was not fatal to suit, and, therefore, action was not required to be dismissed and refiled after proper notice where district court stayed proceedings until notice was given to proper persons and entities and 11 months elapsed before court began hearing evidence. Pymatuning Water Shed Citizens for a Hygienic Environment v. Eaton, C.A.3 (Pa.) 1981, 644 F.2d 995. Environmental Law ⚷ 659

Failure to comply with the notice provisions of this section does not foreclose any other right to relief a plaintiff might have under any statute or common law. City of Evansville, Ind. v. Kentucky Liquid Recycling, Inc., C.A.7 (Ind.) 1979, 604 F.2d 1008, certiorari denied 100 S.Ct. 689, 444 U.S. 1025, 62 L.Ed.2d 659. Environmental Law ⚷ 659

Notice letter sent to alleged violator as prerequisite to citizen suit under Clean Water Act (CWA) need not tell alleged violator what would constitute compliance, but rather need only give alleged violator opportunity to identify its own violations and bring itself into compliance voluntarily. American Canoe Ass'n, Inc. v. District of Columbia Water and Sewer Authority, D.D.C.2004, 306 F.Supp.2d 30, dismissed 2004 WL 2091485. Environmental Law ⚷ 659

Environmental organization's letter to city's mayor and administrator of city's department of public utilities alleging that city violated its National Pollutant Discharge Elimination System (NPDES) permit for its storm water sewer system by maintaining hundreds of illegal cross-connections from city's sanitary sewer system was not sufficiently specific to put city on notice of allegations set forth in organization's complaint, and thus organization and its members could not maintain citizen suit against city under Clean Water Act (CWA), even though organization specified which paragraphs of permit city allegedly violated, where letter failed to provide city notice of which of its actions were at issue, particular standard, limitation, or order it was alleged to have violated, or dates or locations of any alleged improper discharges, and complaint alleged violations of paragraphs not mentioned in letter. Sierra Club Ohio Chapter v. City of Columbus, S.D.Ohio 2003, 282 F.Supp.2d 756. Environmental Law ⚷ 659

Failure of plaintiff alleging violations of reporting requirements of National Pollutant Discharge Elimination System (NPDES) permit to comply with notice requirement for bringing citizen suit under Clean Water Act (CWA) was not excused by permit holder's actual notice of alleged violations. Atwell v. KW Plastics Recycling Div., M.D.Ala.2001, 173 F.Supp.2d 1213.

Failure of notice precluded landowner from proceeding with suit claiming that construction of highway near its property violated Clean Water Act prohibition against discharging pollutants into navigable waters; there was no indication that owner had complied with requirement that notice of alleged violation be given to Administrator of Environmental Protection Agency, to state in which violation allegedly occurred, and to alleged violator, at least 60 days before commencement of suit. Trump Hotels & Casino Resorts, Inc. v. Mirage Resorts Inc., D.N.J.1997, 963 F.Supp. 395, affirmed 140 F.3d 478. Environmental Law ⚷ 659

Allegations of violations of coliform limitations of National Pollutant Discharge Elimination System (NPDES) permit in April and May of 1993 were not within terms of notice letter, listing three dates in January and early

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

February of 1994, and notice requirement for citizen suit under Clean Water Act (CWA) was therefore not satisfied as to such allegations. California Sportfishing Protection Alliance v. City of West Sacramento, E.D.Cal.1995, 905 F.Supp. 792. Environmental Law ⚷ 659

Plaintiff in citizen's suit under the Clean Water Act did not satisfy requirements for 60-day notice with respect to charges which were not specifically listed in its notice and could not seek relief on the basis of notice of other, similar violations. Public Interest Research Group of New Jersey, Inc. v. Hercules, Inc., D.N.J.1993, 830 F.Supp. 1525, affirmed in part , reversed in part 50 F.3d 1239, on remand 1996 WL 905920. Environmental Law ⚷ 659

The 60-day notice requirement for citizen's suit under the Clean Water Act was not complied with, with respect to challenge to construction of underground sewage retention basin at particular site, despite the sending of letters to the Environmental Protection Agency objecting to the location chosen. Association of Significantly Impacted Neighbors v. City of Livonia, E.D.Mich.1991, 765 F.Supp. 389. Environmental Law ⚷ 659

Metropolitan sanitary district's suit against Department of Navy alleging that naval station failed to comply with permit district issued to Department to discharge into district's sewer system was not a citizens suit under the Clean Water Act and thus district had no obligation to comply with notice requirements for citizens suit. Metropolitan Sanitary Dist. of Greater Chicago v. U.S. Dept. of Navy, N.D.Ill.1989, 722 F.Supp. 1565, on reconsideration in part 737 F.Supp. 51. Environmental Law ⚷ 659

Court lacked jurisdiction to hear claim of environmental association under Clean Water Act, when group gave Environmental Protection Agency 16 days advance notice of suit, instead of the 60 days required under Act. Protect Our Eagles' Trees (POETs) v. City of Lawrence, Kan., D.Kan.1989, 715 F.Supp. 996. Environmental Law ⚷ 659

Failure of county sanitary authority to formally give federal Environmental Protection Agency and agency officials 60 days' prior notice of suit as required by did not require dismissal where, although formal notice was mailed same day complaint was filed, more than 60 days had passed since federal defendants received such notice, federal defendants had remained firm in defense of their position before and since receipt of notice, federal defendants had not suggested how conduct would have been any different had they properly received formal notice or how absence of notice had prejudiced them, and even if claims were dismissed action would be immediately refiled. Allegheny County Sanitary Authority v. U.S.E.P.A., W.D.Pa.1983, 557 F.Supp. 419, affirmed 732 F.2d 1167. Environmental Law ⚷ 659

The challenge by associations of taxpayers and property owners in Long Beach Island area to private person's filling operations must be dismissed for failure to comply with procedural requirement provision of this section which provides in part that action against Administrator for failure to fulfill his duties may not be commenced prior to 60 days after notice of the action has been given, and that action against private violator of this chapter may not be commenced prior to 60 days after notice of action has been given to Administrator, to the state in which alleged violation occurs and to the violator, and for failure to comply with notice provisions of this section or with provisions of the Agency's regulations. Loveladies Property Owners Ass'n, Inc. v. Raab, D.C.N.J.1975, 430 F.Supp. 276, affirmed 547 F.2d 1162, certiorari denied 97 S.Ct. 2949, 432 U.S. 906, 53 L.Ed.2d 1077. Federal Civil Procedure ⚷ 1741

24. ---- Postcomplaint discharge violations, notice requirement

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

As long as postcomplaint discharge violation is of same type as violation included in notice letter (same parameter, same outfall), no new 60-day notice letter is necessary to include those violations in citizen suit under Clean Water Act (CWA); recipients of notice are on notice of violations of same type, whether past or continuing. Public Interest Research Group of New Jersey, Inc. v. Hercules, Inc., C.A.3 (N.J.) 1995, 50 F.3d 1239, on remand 1996 WL 905920. Environmental Law 659

Notice of noncompliance with terms of National Pollutant Discharge Elimination System permit required under Clean Water Act did not preclude environmental group's amending complaint in citizen enforcement action to allege additional instances of noncompliance based upon facts contained in permanent holder's own records and reported by permit holder itself or to allege additional unreported violations relating to same subject matter. Sierra Club v. Union Oil Co. of California, N.D.Cal.1988, 716 F.Supp. 429. Federal Civil Procedure 839.1

25. ---- Premature actions, notice requirement

Despite 60-day notice requirement of this section with respect to violations of provisions of this chapter, filing of suit only two days after giving notice to relevant agencies did not require dismissal and refiling of premature suit where, at time district court acted, it appeared that agency had had notice of the alleged violation under consideration for more than 60 days. Susquehanna Valley Alliance v. Three Mile Island Nuclear Reactor, C.A.3 (Pa.) 1980, 619 F.2d 231, certiorari denied 101 S.Ct. 893, 449 U.S. 1096, 66 L.Ed.2d 824. Environmental Law 659

Action charging violation of this chapter was premature where it was brought within 40 days of notice of intent to file suit, notwithstanding that no administrative action could cure failure of the defendant to meet past deadlines for planning and construction of sewer tie-in, since increased administrative attention could expedite completion of the project; there was no prima facie claim of futility sufficient to raise issue of constructive compliance with 60-day notice requirement of this section. Com. of Mass. v. U. S. Veterans Administration, C.A.1 (Mass.) 1976, 541 F.2d 119. Environmental Law 660

26. ---- Sufficiency of notice, notice requirement

Environmental group's notice of its citizen suit against county and municipality for violations of CWA, due to sanitary sewer overflows (SSOs) and water in basement (WIB), was sufficient for award of attorney fees for SSO and WIB claims not specifically identified in notice, since environmental group was not restricted to specificity of notice as intervenor who assumed same position as primary litigants, notice contained sufficient information to allow identification of all pertinent aspects of violations without extensive investigation, and violations were closely related. Sierra Club v. Hamilton County Bd. of County Com'rs, C.A.6 (Ohio) 2007, 504 F.3d 634. Environmental Law 716

Notice letters sent by citizen plaintiffs to defendants were inadequate under citizen suit provision of Clean Water Act (CWA); the letters failed to specify a point source and failed to identify with appropriate specificity the laws that defendants allegedly violated. Karr v. Hefner, C.A.10 (Okla.) 2007, 475 F.3d 1192. Environmental Law 659

Notice of citizen suit submitted by environmental groups to plywood company, pursuant to Clean Water Act (CWA), was not sufficiently specific to alert company to claims which groups intended to file; notice informed company that groups intended to contest validity of company's permit, and that solution would be to get a new permit, but notice did not properly cover additional claims that Oregon Department of Environmental Quality

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

(DEQ) could not renew discharge permit beyond its original five-year term, and that, even if it could, company still had to renew its renewal application. ONRC Action v. Columbia Plywood, Inc., C.A.9 (Or.) 2002, 286 F.3d 1137. Environmental Law 659

Environmental organizations' Clean Water Act (CWA) notice letter to shipyard operator, challenging operator's ongoing failure to develop and implement best management practices program (BMP), storm water pollution prevention plan (SWPPP), and monitoring and reporting plan, complied with statutory notice requirements, though letter did not identify any specific date when improper discharges occurred, where letter contained sufficient detail to alert shipyard operator to at least some of its violations, as evidenced by fact that, in response to letter, operator revised its plans, adding sections that specifically made reference to requirements that organizations had identified. Natural Resources Defense Council v. Southwest Marine, Inc., C.A.9 (Cal.) 2000, 236 F.3d 985.

Environmental organization's notice of intent to bring citizen suit against manufacturer sufficiently informed manufacturer that organization was complaining about manufacturer's unauthorized discharges of die casting process wastewater to municipal sewer system, without identifying specific point source at issue, to satisfy jurisdictional requirements of Clean Water Act (CWA), regardless of manufacturer's subsequent conduct in obtaining permit covering discharges from original outfall, and then rerouting discharges to newly defined outfall after building treatment facility. Atlantic States Legal Foundation, Inc. v. Stroh Die Casting Co., C.A.7 (Wis.) 1997, 116 F.3d 814, certiorari denied 118 S.Ct. 442, 522 U.S. 981, 139 L.Ed.2d 379. Environmental Law 659

Precomplaint discharge violations not included in notice letter could be included in citizen suit under Clean Water Act (CWA), even if not listed in subsequent notice; notice letter which included list of discharge violations, by parameter, provided sufficient information for recipients of letter to identify violations of same type (same parameter, same outfall) occurring during and after period covered by notice letter. Public Interest Research Group of New Jersey, Inc. v. Hercules, Inc., C.A.3 (N.J.) 1995, 50 F.3d 1239, on remand 1996 WL 905920. Environmental Law 659

Notice which failed to name two environmental organizations that eventually became sole plaintiffs in Clean Water Act (CWA) citizen suit did not satisfy notice requirements of CWA regulations, and thus, district court lacked subject matter jurisdiction; as neither Environmental Protection Agency (EPA) nor defendant knew that organizations were involved, they were not in position to negotiate with organizations or seek administrative remedy. Washington Trout v. McCain Foods, Inc., C.A.9 (Wash.) 1995, 45 F.3d 1351. Environmental Law 659

Environmental organization that brought Clean Water Act (CWA) citizen suit against paper company, alleging that company was discharging pollutants into river without valid permit, failed to provide adequate notice of alleged CWA violations to Environmental Protection Agency (EPA); notice did not contain fair warning that EPA had acted outside its statutory authority by exceeding five-year limit to act on company's discharge permit renewal application. Natural Resources Council of Maine v. International Paper Co., D.Me.2006, 424 F.Supp.2d 235. Environmental Law 659

Plaintiffs' notice letter alleging that water and sewer authority "has and continues to violate" its National Pollutant Discharge Elimination System (NPDES) permit by failing to maintain vents and vent filters gave authority adequate notice of dates of alleged violation, and thus was sufficient to permit citizens suit under Clean Water Act (CWA), even though letter did not provide specific dates of past violations. American Canoe Ass'n, Inc. v.

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

District of Columbia Water and Sewer Authority, D.D.C.2004, 306 F.Supp.2d 30, dismissed 2004 WL 2091485. Environmental Law ⚿ 659

Environmental organization's letters to city's mayor and administrator of city's department of public utilities alleging that there were hundreds of days of illegal by-passes at wastewater treatment plants, resulting in raw, untreated sewage being discharged in water of United States, were insufficient to put city on notice that allegations set forth in organization's complaint might be brought against them for their alleged violations of plants' National Pollutant Discharge Elimination System (NPDES) permit, and thus organization and its members could not maintain citizen suit against city under Clean Water Act (CWA), where letters did not indicate which particular paragraphs, subparagraphs, or standards in permit were allegedly violated, manner in which they were violated, or dates and specific locations of allegedly improper discharges, complaint alleged violations not referenced in letter, and letter failed to provide name, address, and telephone number of persons giving notice. Sierra Club Ohio Chapter v. City of Columbus, S.D.Ohio 2003, 282 F.Supp.2d 756. Environmental Law ⚿ 659

Landowner seeking to halt effluent runoff from methane production activities provided adequate notice of pending Clean Water Act (CWA) action to gas producer, as required properly to bring citizen's suit under CWA; notice submitted by landowner stated that standard alleged to be violated was CWA, that activity causing violations was discharge of coal bed methane process water from wells operated by producer, that producer was responsible for violations, location of violations, that violations had been occurring continuously, and contact information regarding person providing notice. Swartz v. Beach, D.Wyo.2002, 229 F.Supp.2d 1239. Environmental Law ⚿ 659

Notice by campers association, to Puerto Rico Aqueduct and Sewer Authority (PRASA) and Environmental Protection Agency (EPA) of alleged violation of Clean Water Act (CWA) fulfilled citizen suit's 60-day notice requirement, and thus association had statutory standing, although association had modified its claims in the five years since commencing action; notices informed the pertinent parties of the impending action and the claims to be raised. Puerto Rico Campers' Ass'n. v. Puerto Rico Aqueduct and Sewer Authority, D.Puerto Rico 2002, 219 F.Supp.2d 201. Environmental Law ⚿ 659

Environmental groups' letter to city notifying it that they "intend to sue on behalf of itself and its impacted members. Other interested parties may join in as plaintiffs" did not comply with Clean Water Act (CWA) citizen suit notice requirements by failing to identify individual plaintiffs, even if city had actual knowledge on individual plaintiffs' identities. Community of Cambridge Environmental Health and Community Development Group v. City of Cambridge, D.Md.2000, 115 F.Supp.2d 550.

Notice provided by plaintiffs bringing citizen suit under Clean Water Act (CWA) was insufficient, as plaintiffs failed to identify specific permit provisions and federal regulations which were alleged in their complaint to have been violated; plaintiffs failed to identify specific standards, limitations or orders allegedly violated. Frilling v. Village of Anna, S.D.Ohio 1996, 924 F.Supp. 821. Environmental Law ⚿ 659

Plaintiffs bringing citizen suit under Clean Water Act (CWA) complied with notice requirements; first notice letters sent to defendants contained report from environmental consulting firm describing in detail alleged pollution discharging from drain and, while subsequent formal notices did not contain that report, defendants had actual notice of specific violations alleged, person or persons responsible, location of alleged violation, and that discharge was continuous. Mancuso v. New York State Thruway Authority, S.D.N.Y.1995, 909 F.Supp. 133, affirmed 86 F.3d 289, certiorari denied 117 S.Ct. 481, 519 U.S. 992, 136 L.Ed.2d 375. Environmental Law ⚿

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

659

Notice that on specified dates wastewater treatment plant violated National Pollutant Discharge Elimination System (NPDES) permit limits for coliform, chlorine, biochemical oxygen demand, and total suspended solids satisfied notice requirement for bringing citizen suit under Clean Water Act (CWA) as to those alleged violations. California Sportfishing Protection Alliance v. City of West Sacramento, E.D.Cal.1995, 905 F.Supp. 792. Environmental Law 659

Environmental group's notice letters complaining of plant owner's exceedances of National Pollutant Discharge Elimination System (NPDES) permit, along with which group included list of biochemical oxygen demand (BOD), chemical oxygen demand (COD), pH level, total suspended solids (TSS), copper and zinc exceedances which had occurred at specified plant, were sufficient to allow group to pursue civil penalties under Clean Water Act (CWA) for all BOD, COD, pH, TSS, copper and zinc violations, but were insufficient to permit group to pursue civil penalties for alleged temperature violations, as to which group had not given notice to plant owner or included any specific allegations of temperature exceedances in any past notice letter. Friends of the Earth, Inc. v. Chevron Chemical Co., E.D.Tex.1995, 900 F.Supp. 67. Environmental Law 659

Environmental group's letter to Environmental Protection Agency (EPA) calling upon EPA to perform nondiscretionary duty to take final action regarding state's proposed water quality standards under Clean Water Act (CWA) satisfied requisite's 60-day notice provision of CWA. Defenders of Wildlife v. Browner, D.Ariz.1995, 888 F.Supp. 1005. Environmental Law 659

Environmental organizations collectively gave required 60-day notice to property owner prior to commencing citizen suit under Clean Water Act (CWA), even though three environmental organizations had not given required notice, where two other environmental organizations had. Environmental Defense Fund v. Tidwell, E.D.N.C.1992, 837 F.Supp. 1344. Environmental Law 659

Notice to alleged polluter that named person "and others" intended to file citizen suit under Clean Water Act was insufficient to satisfy notice requirements for suit by plaintiffs other than named person. Washington Trout v. Scab Rock Feeders, E.D.Wash.1993, 823 F.Supp. 819. Environmental Law 659

Landowners' notice to deputy clerk of town and correspondence between one landowner and various state and federal agencies concerning problems on land did not constitute adequate notice under Clean Water Act (CWA) and associated regulations, so that landowners did not have private right of action under CWA; individual and corporate defendants were not served via certified mail or personal service, letters were not sent to defendants but to government agencies which landowner wanted to investigate problems, deputy clerk was not "head of agency" responsible for alleged violation, most of defendants were never named in notices or letters and notices, and letters gave no indication that any CWA violation was being alleged, but alleged negligence or nuisance claims. Bettis v. Town of Ontario, N.Y., W.D.N.Y.1992, 800 F.Supp. 1113. Environmental Law 659

Notice of action under Clean Water Act sent to Chicago District of the United States Corps of Army Engineers, although sent in timely manner, did not give Secretary of Army sufficient notice as it failed to inform Secretary that citizens group believed Corps was violating sections of the Clean Water Act; complaints about local dredging project should have been served on Secretary of Army and should have specified regulations allegedly violated. Canada Community Imp. Soc., Inc. v. City of Michigan City, Ind., N.D.Ind.1990, 742 F.Supp. 1025. Environmental Law 659

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

Although notice of alleged violation of Clean Water Act given by organization before bringing citizen suit could have been more specific, it satisfied regulatory requirements by giving sufficient information to identify the standard which was allegedly violated, the activity which was alleged to constitute a violation, the person responsible, the location of the violation, the dates of the violation, and the identity of the organization giving notice. National Wildlife Federation v. Consumers Power Co., W.D.Mich.1987, 657 F.Supp. 989, reversed 862 F.2d 580. Environmental Law 659

Notice, which was given to Environmental Protection Agency Administrator, Maryland, and alleged violator and which was given at least 60 days before filing of original complaint, put alleged violator and government agencies on notice as to allegations of additional, but similar, violations of national pollutant discharge elimination system permit, which were alleged in amended complaint, and, therefore, complied with statute, that requires citizens to give at least 60 days' notice before filing suit. Chesapeake Bay Foundation, Inc. v. Bethlehem Steel Corp., D.Md.1987, 652 F.Supp. 620. Environmental Law 659

Because one plaintiff organization served adequate notice on defendant under the Federal Water Pollution Control Act [Federal Water Pollution Control Act Amendments of 1972, § 505, as amended, 33 U.S.C.A. § 1365], that plaintiff and a second plaintiff organization "substantially complied" with the requirements for providing notice of intent to sue. Student Public Interest Research Group of New Jersey, Inc. v. AT & T Bell Laboratories, D.C.N.J.1985, 617 F.Supp. 1190. Environmental Law 659

Where central complaint in both 1982 and 1984 was that defendant was discharging pollutants without valid national pollution discharge elimination system permit, and where to require plaintiffs to file new 60-day notice would not in any way further purposes of 60-day notice requirement of subsec. (b) of this section, but would only give defendants argument to delay lawsuit, there was substantial compliance by plaintiffs with 60-day notice requirement. Kitlutsisti v. Arco Alaska, Inc., D.C.Alaska 1984, 592 F.Supp. 832, appeal dismissed, opinion vacated on other grounds 782 F.2d 800.

Failure of notice served on federal officials to include two dams as sources of violations of this chapter precluded officials from receiving notice sufficient to allow possible administrative resolution of complaints as to those dams and divested court of authority to adjudicate claims of violations relating to them. South Carolina Wildlife Federation v. Alexander, D.C.S.C.1978, 457 F.Supp. 118. Environmental Law 659

Where violation of important statutes by Army Engineers Corps effectively removed plaintiff's opportunity to maintain citizen suit under this section until damage sought to be awarded would have been largely accomplished, plaintiff's expressed interest and concern about dredging project, presented to Corps as early as Jan. 26, 1972, constructively satisfied requirements under provisions of this section authorizing citizen suit and requiring 60-day notice. Save Our Sound Fisheries Ass'n v. Callaway, D.C.R.I.1977, 429 F.Supp. 1136. Environmental Law 659

Where community groups whose members were citizens of District of Columbia and Montgomery County, Maryland, two jurisdictions which are contiguous to flow of Potomac River, on May 10, 1973 gave notices to Administrator and others of actions to enjoin defendants from authorizing further sewer hookup permits which would result in sewage discharges affecting the water quality of the Potomac River, in view of fact that supplemental pleadings were filed more than 60 days after May 10, notice and in view of fact that notice complied in full with spirit of Administrator's regulations, plaintiffs gave proper notices under this section. Montgomery Environmental Coalition v. Fri, D.C.D.C.1973, 366 F.Supp. 261. Environmental Law 659

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

27. Private right of action

Citizen enforcement suit under Clean Water Act (CWA) based on use of chemicals regulated by FIFRA could proceed even if pesticide application claimed to violate CWA did not also constitute substantial violation of FIFRA; CWA's citizen suit provision did not become inoperative under those circumstances. No Spray Coalition, Inc. v. City of New York, C.A.2 (N.Y.) 2003, 351 F.3d 602, on remand 2005 WL 1354041. Environmental Law 170; Environmental Law 226

There is no implied private right of action under provisions of Clean Water Act other than Act's citizen suit provision, so court lacked jurisdiction over claims of township and property owner regarding city's contractual obligations to Environmental Protection Agency under federal grant. Board of Trustees of Painesville Tp. v. City of Painesville, Ohio, C.A.6 (Ohio) 1999, 200 F.3d 396. Environmental Law 641

No implied cause of action existed under statute, which subjects violator of state-issued permit to civil penalty. State of Cal. v. U.S. Dept. of Navy, C.A.9 (Cal.) 1988, 845 F.2d 222. Environmental Law 20

A private right of action for damages is not created against a violator of this chapter in favor of a person injured by pollutant discharges. City of Evansville, Ind. v. Kentucky Liquid Recycling, Inc., C.A.7 (Ind.) 1979, 604 F.2d 1008, certiorari denied 100 S.Ct. 689, 444 U.S. 1025, 62 L.Ed.2d 659. Environmental Law 226

Citizens' groups suing to prevent development of new community to be located astride portion of zone of land supplying water to City of San Antonio failed to state claim for violation of this chapter. Sierra Club v. Lynn, C.A.5 (Tex.) 1974, 502 F.2d 43, rehearing denied 504 F.2d 760, certiorari denied 95 S.Ct. 2001, 421 U.S. 994, 44 L.Ed.2d 484, certiorari denied 95 S.Ct. 2668, 422 U.S. 1049, 45 L.Ed.2d 701, rehearing denied 96 S.Ct. 158, 423 U.S. 884, 46 L.Ed.2d 115. Waters And Water Courses 196

Electric utility had no express or implied right of action under Clean Water Act with respect to its claim that proposed modification of discharge permits issued by state would violate Act. Consolidated Edison Co. of New York, Inc. v. New York State Dept. of Environmental Conservation, S.D.N.Y.1989, 726 F.Supp. 1404. Environmental Law 226

Clean Water Act did not provide developer with private right of action to challenge authority of Army Corps of Engineers to assert jurisdiction, by way of cease-and-desist order, over development site containing wetlands. Fiscella & Fiscella v. U.S., E.D.Va.1989, 717 F.Supp. 1143.

Citizen's suit provision of Clean Water Act did not provide jurisdictional basis for a suit against state officials for their alleged failure to enforce consent orders with dischargers of hazardous pollutants. Proffitt v. Davis, E.D.Pa.1989, 707 F.Supp. 182. Environmental Law 226

There is no private right of action for monetary damages under this chapter, and any fines levied are payable to the government and not to private plaintiff. Sierra Club v. SCM Corp., W.D.N.Y.1984, 580 F.Supp. 862, affirmed 747 F.2d 99.

There is no implied right of action under this chapter against state defendants for improper administration of construction grant program under this chapter. Allegheny County Sanitary Authority v. U.S.E.P.A., W.D.Pa.1983, 557 F.Supp. 419, affirmed 732 F.2d 1167. Environmental Law 226

This section has as its sole purpose providing private parties with mechanism to compel enforcement of effluent

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

standards promulgated pursuant to this chapter and does not authorize private right of action for recovery of damages; the relief authorized by this section is purely prospective. City of Philadelphia v. Stepan Chemical Co., E.D.Pa.1982, 544 F.Supp. 1135, reconsideration denied. Environmental Law 226

This section provides no mechanism for a direct suit in federal court against state for being malfeasant in not properly establishing an effluent standard and in failing to issue any orders to stop ongoing pollution. Love v. New York State Dept. of Environmental Conservation, S.D.N.Y.1981, 529 F.Supp. 832. Environmental Law 226

Neither this chapter nor Rivers and Harbors Act of 1899, section 401 et seq. of this title, provided commercial fishermen, seafood wholesalers, retailers, distributors and processors, restaurateurs, marina, boat, tackle and bait owners, and employees of all above groups with private cause of action against chemical company which allegedly polluted river and bay with kepone. Pruitt v. Allied Chemical Corp., E.D.Va.1981, 523 F.Supp. 975. Waters And Water Courses 74

Developer did not have a private cause of action under the construction grant provisions of this chapter. Chesapeake Bay Village, Inc. v. Costle, D.C.Md.1980, 502 F.Supp. 213. Environmental Law 226

Neither River and Harbors Appropriation Act, section 401 et seq. of this title, nor this chapter created cause of action on behalf of owners of shore property and other individual plaintiffs against United States for alleged negligence of Coast Guard in manner in which it maintained channel buoyage and attempted pollution abatement after oil spill. Burgess v. M/V Tamano, D.C.Me.1974, 373 F.Supp. 839. Shipping 11

28. Jurisdiction--Generally

There was no citizen suit jurisdiction under Clean Water Act in action arising out of sewer authority's efforts to secure Environmental Protection Agency grant for sewer improvements, because regional administrator was entitled to insist upon current state certification as precondition for award of federal assistance. Atlantic City Mun. Utilities Authority v. Regional Adm'r, C.A.3 (N.J.) 1986, 803 F.2d 96. Environmental Law 226

If district court resolved township and sewer authority's claim in their favor, by concluding that Environmental Protection Agency acted in an arbitrary and capricious manner in applying new affordability guidelines to sewer authority's application for federal financial assistance for construction of a sewage treatment plant, the court had authority only to set aside EPA's disapproval as having been based on improper standards; thus, since township and sewer authority had a remedy under Administrative Procedure Act, mandamus jurisdiction over citizens' suit brought to compel administrator of EPA to approve sewer authority's application was inappropriate. Fairview Tp., York County, Com. of Pa. v. U.S.E.P.A., C.A.3 (Pa.) 1985, 773 F.2d 517. Mandamus 3(8)

This section giving district court jurisdiction over actions brought by any citizen against Environmental Protection Agency Administrator for failure to perform nondiscretionary duty or against any person violating effluent standards or limitations under this subchapter did not provide district court with jurisdiction of suit brought by District of Columbia against the Environmental Protection Administration and Maryland seeking to revoke operating permit for advanced wastewater treatment plant that discharged into creek flowing through the District. District of Columbia v. Schramm, C.A.D.C.1980, 631 F.2d 854, 203 U.S.App.D.C. 272. Federal Courts 218

Where this section allowing action in district court challenging alleged violations of effluent limitations or chal-

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

lenging failure of Administrator to perform a nondiscretionary duty provided no jurisdictional basis for plaintiffs' suit challenging issuance of National Pollutant Discharge Elimination System permit, then savings clause of this section could not give district court jurisdiction over suit. Sun Enterprises, Ltd. v. Train, C.A.2 (N.Y.) 1976, 532 F.2d 280. Federal Courts 194

Jurisdiction of claimed violations of this chapter can exist not only under this chapter but also under either section 1331 of Title 28, or the Administrative Procedure Act, sections 551 et seq. and 701 et seq. of Title 5. Natural Resources Defense Council, Inc. v. Callaway, C.A.2 (Conn.) 1975, 524 F.2d 79. Federal Courts 218; Environmental Law 634

Provision of Clean Water Act (CWA) requiring Environmental Protection Agency (EPA) to promulgate water quality standards within 90 days of state's failure to do so did not permit district court to exercise its equitable jurisdiction to order continued adherence to long-term phased schedule of establishing water quality standards that EPA and state had developed, but rather required court to order EPA to perform its duties under CWA. Kansas Natural Resource Council, Inc. v. Whitman, D.Kan.2003, 255 F.Supp.2d 1208. Environmental Law 695

Florida regulations governing state's National Pollutant Discharge Elimination System (NPDES) permit process did not create a non-discretionary "duty or act" sufficient to trigger federal district court's citizen-suit jurisdiction under the Clean Water Act (CWA); regulations could have created either a discretionary duty to issue a permit, which could only be challenged in the United States Circuit Court for the District of Columbia under the Administrative Procedure Act (APA), or a trivial "duty" to assume jurisdiction, which was not tangible enough to provide jurisdiction for the district court. Clean Water Act, §§ 505(a)(2), 33 U.S.C.A. §§ 1365(a)(2); 33 U.S.C.A. §§ 1369(b)(1); Sierra Club v. U.S. E.P.A., D.D.C.2007, 475 F.Supp.2d 29. Environmental Law 226

In citizen's suit under the Clean Water Act, court may exercise jurisdiction over all parameters in permit based on an ongoing violation of any parameter, especially where multiple parameters have been violated in the past. Public Interest Research Group of New Jersey, Inc. v. Hercules, Inc., D.N.J.1993, 830 F.Supp. 1525, affirmed in part , reversed in part 50 F.3d 1239, on remand 1996 WL 905920. Environmental Law 682

Jurisdiction existed for citizen suit alleging violations of federal Water Pollution Control Act, despite contention that no continuing violations were occurring, where violations were alleged to have continued after filing of complaint. Public Interest Research Group of New Jersey, Inc. v. New Jersey Expressway Authority, D.N.J.1992, 822 F.Supp. 174. Environmental Law 226

Bypassing of normal planning and zoning procedures to protect and effectuate court's jurisdiction was necessary, where city's planning and zoning commission would effectively be required by municipal coastal program of city to deny coastal area management site plan approval claimed by city to be required, and such denial would conflict with Connecticut Department of Environmental Protection order and would further frustrate implementation of district court's order requiring compliance with federal Clean Water Act. Mumford Cove Ass'n, Inc. v. Town of Groton, Conn., D.Conn.1986, 647 F.Supp. 671. Environmental Law 634

This chapter did not confer upon district court jurisdiction over action by operator of chemical transloading facility for declaratory judgment as to liability of three chemical companies for alleged release of chemicals at operator's premises, where operator had not demonstrated that it actually was in violation of order issued by state, state having only issued warning notices that point. Bulk Distribution Centers, Inc. v. Monsanto Co., S.D.Fla.1984, 589 F.Supp. 1437. Federal Courts 218

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

County sanitary authority's claim that federal Environmental Protection Agency and agency officials failed to disapprove Pennsylvania's priority system and current project priority list for construction of sewage treatment works under construction grants program of this chapter and that but for such failure authority would have higher priority ranking was claim for misgovernment beyond jurisdiction of Court of Claims. Allegheny County Sanitary Authority v. U.S.E.P.A., W.D.Pa.1983, 557 F.Supp. 419, affirmed 732 F.2d 1167. Federal Courts 1073.1

Requirements for citizen's suit under this chapter had to be met for district court to have jurisdiction over landlord's suit against Environmental Protection Agency, which had begun to clean up property after tenant failed to solve environmental problems, and section 1331 of Title 28, did not give landlord alternative procedure for conferring jurisdiction on court. Caldwell v. Gurley Refining Co., E.D.Ark.1982, 533 F.Supp. 252. Federal Courts 218

29. ---- Abstention, jurisdiction

Where Michigan Watercraft Pollution Control Act of 1970, M.C.L.A. § 323.331 et seq., had not been construed in any Michigan court, its terms were far from clear in particulars that went to foundation of grievance of water carriers association and individual members who owned or operated federally licensed Great Lakes cargo vessels, it was only an assertion of plaintiffs that the Act proscribed discharge of even treated sewage in state waters and the Michigan Act demonstrated concern that Michigan pollution control requirements accord with federal law, authoritative resolution by Michigan courts of the ambiguities was sufficiently likely to avoid or significantly modify federal questions raised as to validity of the Act to warrant abstention by federal court. Lake Carriers' Ass'n v. MacMullan, U.S.Mich.1972, 92 S.Ct. 1749, 406 U.S. 498, 32 L.Ed.2d 257. Federal Courts 47.1

As to Clean Water Act's (CWA) bar against duplicative citizen suits against polluters, applicable in event of commencement of federal or state administrative enforcement action, exception to bar applicable when citizen suit was prior-filed, or when notice of citizen suit was given prior to governmental enforcement action and citizen suit followed within 120 days, was not limited to those instances when administrative enforcement action was of federal origin; i.e., exception to bar also applied where citizen suit, or notice of same, preceded state administrative enforcement action. Black Warrior Riverkeeper, Inc. v. Cherokee Mining, LLC, C.A.11 (Ala.) 2008, 548 F.3d 986. Environmental Law 226

Active oversight of compliance scheme by Oregon Department of Environmental Quality (DEQ) and Oregon's administration of federal National Pollution Discharge Elimination System (NPDES) permit program did not require "*Burford* abstention," in action brought by environmental group against seafood processing facility under Clean Water Act (CWA), since Oregon did not allow for CWA citizen suits, federal district courts had jurisdiction to hear CWA citizen suits, there were no difficult questions of state law presented and group did not plead any state law claims, and federal review would not have interfered with the state's efforts to establish and maintain coherent enforcement policy. Oregon State Public Interest Research Group, Inc. v. Pacific Coast Seafoods Co., D.Or.2004, 341 F.Supp.2d 1170. Federal Courts 47.1

Burford abstention doctrine was not implicated by citizen suit under Clean Water Act (CWA), as statutory scheme contemplated citizen suits as supplement to state government action. Culbertson v. Coats American, Inc., N.D.Ga.1995, 913 F.Supp. 1572. Federal Courts 47.1

Federal district court in Connecticut would not abstain from citizens' action against chemical manufacturer, un-

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

der Federal Water Pollution Control Act, even though Commissioner of Connecticut Department of Environmental Protection had commenced action in state court; state and federal courts were less than two miles apart, possibility that inconsistent rulings on liability question was unlikely in that Department sought relief for alleged violations during three months of 1985 while citizens sought to enjoin further pollution and sought damages for alleged violations since 1981, and states were intended to enforce National Pollutant Discharge Elimination System program. Connecticut Fund for Environment, Inc. v. Upjohn Co., D.Conn.1987, 660 F.Supp. 1397.

Federal district court would not abstain from ruling in action under citizen suit provision of the Federal Water Pollution Control Act [33 U.S.C.A. § 1365(a)(1)] due to state administrative efforts in the same area, as Congress intended citizen suits to supplement state governmental action. Student Public Interest Research Group of New Jersey, Inc. v. P.D. Oil & Chemical Storage, Inc., D.N.J.1986, 627 F.Supp. 1074. Federal Courts 47.1

Abstention was not appropriate in suit based on this chapter challenging city's discharge of pollutants into creek and river under abstention category pertaining to difficult questions of state law bearing on policy problems of substantial public import, since there were no difficult questions of state law presented, parameters of state regulation were effectively set out by a comprehensive set of federal laws and regulations, state has no exclusive control or expertise in enforcement of federal water pollution standards, and there was no reason to believe that state courts had any greater competence in interpreting federal guidelines than federal courts. Brewer v. City of Bristol, Tenn., E.D.Tenn.1983, 577 F.Supp. 519. Federal Courts 47.1

Abstention would be inappropriate in county sanitary authority's action against United States Environmental Protection Agency, Pennsylvania Department of Environmental Resources, and certain agency officials for declaratory and injunctive relief in connection with alleged improper administration of construction grants program under this chapter, notwithstanding that authority had raised same issues in pending state administrative proceeding, where only claims properly before court related to duties of federal defendants under federal law. Allegheny County Sanitary Authority v. U.S.E.P.A., W.D.Pa.1983, 557 F.Supp. 419, affirmed 732 F.2d 1167. Federal Courts 51

30. ---- Pendent jurisdiction

District court entertaining citizens' suit under the Clean Water Act would exercise its pendent jurisdiction and enforce order holding former owner of private septic system, and thus its successors, responsible for correcting system; order arose out of same set of facts and issues that were presented on claim under the Clean Water Act. Friends of Sakonnet v. Dutra, D.R.I.1990, 738 F.Supp. 623. Federal Courts 15

Virginia administrative procedures did not preclude aggrieved riparian state owners from pursuing remedy for violation of Virginia Wetlands Act as pendent state claim to suit brought pursuant to Clean Water Act. City of Norfolk v. Harold, E.D.Va.1987, 662 F.Supp. 959. Federal Courts 15

Where district court's subject matter jurisdiction over action by wetlands owner against real estate developer and others was limited strictly to questions arising from discharge into stream of pollutants which qualified as "dredged or fill material" within meaning of section 1344 of this title, and other state law claims presented substantial additional issues of fact and did not derive from common nucleus of operative facts, court was without pendent jurisdiction to consider state law claims and, even if it had such jurisdiction, would decline to exercise it. Sun Enterprises, Ltd. v. Train, S.D.N.Y.1975, 394 F.Supp. 211, affirmed 532 F.2d 280. Federal Courts 15

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

31. ---- Primary jurisdiction

Doctrine of primary jurisdiction did not bar court from considering injunctive relief aspects of citizen suit alleging that salmon farms released pollutants into water in violation of Clean Water Act (CWA), even though Environmental Protection Agency (EPA) had central responsibility for determining conditions to be placed on salmon farming operations regarding permissible discharge of pollutants, and state was currently working on permit for sea farms to enforce requirements of CWA, where EPA delegated its responsibility to state after failing to act for eleven years on farms' permit applications, and state was more than one year beyond agreed deadline for final permit decision. U.S. Public Interest Research Group v. Atlantic Salmon of Maine, LLC., D.Me.2003, 257 F.Supp.2d 407, stay denied 273 F.Supp.2d 126, affirmed 339 F.3d 23. Environmental Law 664

Doctrine of primary jurisdiction did not bar citizen suit under Clean Water Act (CWA) alleging that gold mine owner and operator was discharging pollutants into navigable waters without National Pollutant Discharge Elimination System (NPDES) permit, even though owner's discharge permit application was pending before state agency; determination of whether owner was unlawfully discharging pollutants without permit did not involve resolution of scientific or technical facts that clearly implicated agency's special expertise and competence, and state had been investigating discharges for at least eight years, but had not yet issued any orders or permits. Sierra Club v. El Paso Gold Mines, Inc., D.Colo.2002, 198 F.Supp.2d 1265, reconsideration denied 2002 WL 33932714, reversed and remanded 421 F.3d 1133, corrected, rehearing granted in part, certiorari denied 126 S.Ct. 1653, 547 U.S. 1065, 164 L.Ed.2d 411. Environmental Law 664

Citizen's suit under this section against manufacturer for violating permits authorizing discharge of pollutants into river was not barred under doctrine of primary jurisdiction by manufacturer's having filed renewal application with EPA where, even if permit were granted, it could not be applied retroactively. Student Public Interest Research Group of New Jersey, Inc. v. Fritzsche, Dodge & Olcott, Inc., D.C.N.J.1984, 579 F.Supp. 1528, affirmed 759 F.2d 1131. Environmental Law 664

32. ---- Subject matter jurisdiction

Conditions set forth in state-issued National Pollutant Discharge Elimination System (NPDES) permit, which was approved by Environmental Protection Agency (EPA), qualified as "an effluent standard or limitation under this chapter," within meaning of citizen-suit provision of Clean Water Act (CWA), and federal court thus had jurisdiction over property's owner's CWA claims against owner of adjoining property, alleging violations of state-issued permit. Parker v. Scrap Metal Processors, Inc., C.A.11 (Ga.) 2004, 386 F.3d 993, rehearing and rehearing en banc denied 125 Fed.Appx. 979, 2004 WL 2806000. Environmental Law 226

Whether district court had subject matter jurisdiction over citizens suit brought under Clean Water Act (CWA) to challenge Florida's Everglades Forever Act (EFA) depended on whether EFA constituted new or revised state water quality standards, which would trigger Environmental Protection Agency (EPA) Administrator's mandatory duty to review new or revised state standards, and thus, district court could not dismiss complaint for lack of subject matter jurisdiction on basis of Florida's representations without independently deciding effect of EFA on existing state standards. Miccosukee Tribe of Indians of Florida v. U.S., E.P.A., C.A.11 (Fla.) 1997, 105 F.3d 599. Environmental Law 641

Extent of court's subject matter jurisdiction over cases in which plaintiff alleges series of discharge permit violations involving multiple discharge parameters in violation of this chapter would be determined by "modified by-parameter standard," rather than "permit-based standard" under which jurisdiction would attach to entire cases,

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

not to individual violations; under modified by-parameter standard, plaintiff could establish at trial that violations were continuous or intermittent either by proving likelihood of recurring violations of same parameter or by proving likelihood that same inadequately corrected source of trouble would cause recurring violations of one or more different parameters. Natural Resources Defense Council, Inc. v. Texaco Refining and Marketing, Inc., C.A.3 (Del.) 1993, 2 F.3d 493. Environmental Law 634

District court had subject matter jurisdiction over claim alleging failure of Environmental Protection Agency (EPA) to promulgate regulation governing power plant cooling-water intake structures pursuant to Clean Water Act (CWA); complaint averred that EPA administrator had non-discretionary duty under CWA to promulgate regulations governing intake structures at existing industrial facilities, but failed to do so. Riverkeeper, Inc. v. U.S. E.P.A., S.D.N.Y.2007, 514 F.Supp.2d 565. Environmental Law 641

District court had subject matter jurisdiction over action brought against seafood companies under Clean Water Act (CWA), alleging illegal discharges of processing waste, where public interest research group's allegations that defendants were committing ongoing violations of National Pollution Discharge Elimination System (NPDES) permit limitations for shrimp, crab, and hand-butchered salmon wastewater were made in good faith. Oregon State Public Interest Research Group, Inc. v. Pacific Coast Seafoods Co., D.Or.2005, 361 F.Supp.2d 1232. Environmental Law 226

Public interest and environmental organizations made good faith allegations of continuing Clean Water Act (CWA) violations by wastewater treatment company as would support finding of subject matter jurisdiction over citizen suit against company for unlawful discharge of pollutants and violations of local pretreatment standards; organizations alleged that illegal discharge was likely to continue due to company's inadequate treatment measures and that continuing violations of CWA and pretreatment standards existed, and supported allegations with provisions of municipal court complaint filed against company by cities and two notifications of continued violation that city issued company after organizations filed suit. Ohio Public Interest Research Group v. Laidlaw Environmental Services, Inc., S.D.Ohio 1996, 963 F.Supp. 635. Environmental Law 673

District court had subject matter jurisdiction over environmental groups' claims in citizen suit under Clean Water Act (CWA) alleging that Administrator of Environmental Protection Agency (EPA) had non-discretionary duty to promulgate regulations requiring that cooling water intake structures reflect best technology available for minimizing adverse environmental impact, and that Administrator had failed to perform that duty; allegations could not be regarded as "insubstantial" or "frivolous" in light of relevant portions of CWA, their legislative history, and judicial decisions addressing them. Cronin v. Browner, S.D.N.Y.1995, 898 F.Supp. 1052. Federal Courts 218

District court had subject matter jurisdiction over suit by nonprofit organizations interested in protection and improvement of quality of water in New Jersey, seeking to hold petroleum marketing terminal operator liable for violations of discharge limitations in its New Jersey Pollutant Discharge Elimination System (NJPDES) permit, absent showing by terminal operator that organizations lacked good faith when they alleged permit violations. Public Interest Research Group of New Jersey v. Star Enterprise, D.N.J.1991, 771 F.Supp. 655, amendment denied. Federal Courts 218

Citizens suit provision did not permit jurisdiction over allegations that Environmental Protection Agency (EPA) failed to promulgate water quality criteria for all identifiable effects of dioxin, not just human cancer effects, and failed to revise criteria to reflect latest scientific knowledge; administrator did not have nondiscretionary duty to

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

publish numerical criteria for all identifiable dioxin effects or to revise criteria from time to time to reflect latest scientific knowledge. Natural Resources Defense Council, Inc. v. U.S. E.P.A., E.D.Va.1991, 770 F.Supp. 1093, reconsideration denied 806 F.Supp. 1263, affirmed 16 F.3d 1395. Environmental Law ⚷ 226; Environmental Law ⚷ 190

Question as to whether proposed modification of discharge permits issued under Clean Water Act would violate settlement agreement between government and electric utility did not raise any question of federal common law, such as would permit district court to exercise federal question jurisdiction. Consolidated Edison Co. of New York, Inc. v. New York State Dept. of Environmental Conservation, S.D.N.Y.1989, 726 F.Supp. 1404. Federal Courts ⚷ 218

District court had jurisdiction to review Corps of Engineers' jurisdictional decision about whether dredge material discharge area was navigable waters or wetlands to allow citizen suit under Clean Water Act where decision was made under memo of understanding with Environmental Protection Agency. Golden Gate Audubon Soc., Inc. v. U.S. Army Corps of Engineers, N.D.Cal.1988, 700 F.Supp. 1549, clarification denied , amended 717 F.Supp. 1417. Environmental Law ⚷ 640

Federal District Court lacked subject-matter jurisdiction over suits brought by environmental group under citizen suit provision of Clean Water Act, 33 U.S.C.A § 1365(a), for violation of effluent standard, limitation or order, where evidence presented in the cases clearly and unequivocally showed that none of the defendants were in violation at time the suits were filed. Sierra Club v. Copolymer Rubber and Chemical Corp., M.D.La.1985, 621 F.Supp. 1013.

32a. Ripeness

Army Corps of Engineers' issuance of nationwide permit (NWP) authorizing discharges of dredged or fill material into waters of the United States associated with surface coal mining and reclamation operations was a final agency action, and therefore environmental groups' facial challenge to NWP under Clean Water Act was ripe for adjudication; issuance of NWP abolished the environmental groups' opportunity to object to proposals to discharge before they were authorized, and the nature of the Corps' permitting process made it difficult to object afterward, there was no process for administrative appeal of NWP authorizations, withholding consideration would cause hardship to the environmental groups, and judicial intervention would not inappropriately interfere with further action by the Corps. 5 U.S.C.A. §§ 704; Ohio Valley Environmental Coalition v. Bulen, S.D.W.Va.2004, 410 F.Supp.2d 450, modified in part 2004 WL 2384841, reconsideration denied 2004 WL 2370689, affirmed in part , vacated in part 429 F.3d 493, rehearing en banc denied 437 F.3d 421. Environmental Law ⚷ 661; Environmental Law ⚷ 662

33. Venue

Venue of citizen suit under the Clean Water Act was proper only in district in which refinery allegedly violating effluent limitations was located. Citizens for a Better Environment-California v. Union Oil Co. of California, N.D.Cal.1994, 861 F.Supp. 889, affirmed 83 F.3d 1111, as amended , certiorari denied 117 S.Ct. 789, 519 U.S. 1101, 136 L.Ed.2d 731. Federal Courts ⚷ 74

Subsec. (c)(1) of this section applies only to citizen suits against a violator and is not applicable to citizen suits against the Administrator for failure to perform a nondiscretionary act or duty; hence, venue of action charging the Environmental Protection Agency and its Administrator with violating this chapter as regards New York

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

City's dumping of garbage and sewage into Hudson River and Atlantic Ocean to allege detriment of plaintiff New Jersey township would lie in the District of New Jersey. Long Beach Tp. v. City of New York, D.C.N.J.1978, 445 F.Supp. 1203. Federal Courts ⚿ 88; Environmental Law ⚿ 635

Venue for action respecting discharges from Blue Plains Plant which was located in District of Columbia was properly laid in District Court for the District of Columbia since subsec. (c)(1) of this section provides that venue for action respecting violation by discharged source of an effluent standard or limitation shall lie "in the judicial district in which such source is located". Montgomery Environmental Coalition v. Fri, D.C.D.C.1973, 366 F.Supp. 261. Environmental Law ⚿ 635

34. Exhaustion of administrative remedies

Failure to exhaust administrative remedies to challenge Regional Water Quality Control Board's cease-and-desist order, entered as part of settlement with oil company to avoid state enforcement action, did not preclude environmental group from bringing citizen suit to challenge oil company's alleged violation of effluent standards under Clean Water Act (CWA) after settlement with board; citizen suit sought to enforce CWA, not to challenge validity of cease-and-desist order. Citizens for a Better Environment-California v. Union Oil Co. of California, C.A.9 (Cal.) 1996, 83 F.3d 1111, as amended , certiorari denied 117 S.Ct. 789, 519 U.S. 1101, 136 L.Ed.2d 731. Environmental Law ⚿ 226

Rule requiring exhaustion of administrative remedies had no application in action to determine whether district court correctly ordered Environmental Protection Agency (EPA) and Michigan Department of Natural Resources (MDNR) to fund 80% of sewer system evaluation survey to be undertaken by a Michigan city; district court had jurisdiction to decide wide range of issues raised by parties in more than ten years of litigation and city was defendant in action from beginning. State of Mich. v. City of Allen Park, C.A.6 (Mich.) 1992, 954 F.2d 1201. Administrative Law And Procedure ⚿ 229; Environmental Law ⚿ 665

The only two limitations on the right of a citizen to bring suit under the Clean Water Act are that the citizen must give 60 days' notice to the Administrator of the Environmental Protection Agency, the state, and the alleged polluter to allow the alleged violator the opportunity to cure his violation or to allow the EPA or the state to commence its own enforcement action and that the citizen may not bring his own action if the Administrator or state has commenced and is diligently prosecuting a civil or criminal action. Proffitt v. Rohm & Haas, C.A.3 (Pa.) 1988, 850 F.2d 1007. Environmental Law ⚿ 226; Environmental Law ⚿ 659

Doctrine of exhaustion of administrative remedies did not prevent district court from considering complaint alleging impending violation of this chapter by the Nuclear Regulatory Commission and operators of nuclear power plant; rather district court under the terms of this section should defer for 60 days, and at that point determine whether violation has been halted by administrative action or otherwise, and if it has not been so halted, citizens' suit goes forward. Susquehanna Valley Alliance v. Three Mile Island Nuclear Reactor, C.A.3 (Pa.) 1980, 619 F.2d 231, certiorari denied 101 S.Ct. 893, 449 U.S. 1096, 66 L.Ed.2d 824. Environmental Law ⚿ 665

Even where the notice provision of this section is not a jurisdictional prerequisite to suit against the Environmental Protection Agency, the courts are entitled to give effect to the salutary purpose underlying the notice provision by resort to the requirement of exhaustion of administrative remedies. Natural Resources Defense Council, Inc. v. Train, C.A.D.C.1974, 510 F.2d 692, 166 U.S.App.D.C. 312. Administrative Law And Procedure ⚿ 229; Environmental Law ⚿ 665

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

Citizen suit under Clean Water Act (CWA) was not barred by any alleged failure of plaintiffs to participate in state administrative process, as plaintiffs fulfilled 60-day notice requirement, which served as statutory exhaustion requirement by allowing agency to act prior to federal court involvement. Culbertson v. Coats American, Inc., N.D.Ga.1995, 913 F.Supp. 1572. Environmental Law ⚷ 665

Developer was required to exhaust administrative remedies before challenging legality of Federal Manual for Identifying and Delineating Jurisdictional Wetlands; there were factual issues whether delineation has been performed, whether Manual was used, whether delineation would differ from survey using preexisting regulations, and whether developer suffered any injury from use of Manual, and wetland delineation was within special expertise of agencies. Mulberry Hills Development Corp. v. U.S., D.Md.1991, 772 F.Supp. 1553. Administrative Law And Procedure ⚷ 229; Environmental Law ⚷ 665

Citizen suit seeking to determine whether the Clean Water Act covers particular discharge or whether defendant is operating in violation of NPDES permit is not subject to doctrine of exhaustion of administrative remedies, but citizen suits seeking to challenge particular effluent limitations that Environmental Protection Act or appropriate state agency has established in permit process are subject to doctrine. National Wildlife Federation v. Consumers Power Co., W.D.Mich.1987, 657 F.Supp. 989, reversed 862 F.2d 580. Administrative Law And Procedure ⚷ 229; Environmental Law ⚷ 665

35. Persons entitled to maintain action--Generally

District court was required to rule on Article III standing of Clean Water Act (CWA) plaintiffs', two non-profit organizations, before determining that they lacked statutory standing because complained-of salt runoff was not "pollutant" under CWA; statutory standing decision was effectively ruling on merits, which could not be made in absence of Article III standing. Alliance For Environmental Renewal, Inc. v. Pyramid Crossgates Co., C.A.2 (N.Y.) 2006, 436 F.3d 82. Environmental Law ⚷ 652

Citizens group's allegations that injuries suffered by its members were "fairly traceable" to landfill operator's alleged failure to obtain Clean Water Act drainage permit satisfied standing requirement that injuries be "fairly traceable" to failure to obtain permit; operator acknowledged that its activities on landfill reduced total acreage of ponds by half and that a government agency had reported that the ponds had considerably less value for wildlife because of drainage. Save Our Community v. U.S. E.P.A., C.A.5 (Tex.) 1992, 971 F.2d 1155. Environmental Law ⚷ 652

To establish standing to redress environmental injury, plaintiffs need not show that particular defendant is only cause of their injury and that, therefore, absent defendant's activities, plaintiffs would enjoy undisturbed use of resource; rather, to meet "fairly traceable" requirement of *Valley Forge*, plaintiffs must merely show that defendant discharges pollutant that causes or contributes to kinds of injuries alleged by plaintiffs. Natural Resources Defense Council, Inc. v. Watkins, C.A.4 (S.C.) 1992, 954 F.2d 974. Environmental Law ⚷ 651

Plaintiff had no standing to challenge propriety of expenditures approved by Environmental Protection Agency pursuant to work plan under this subchapter where two-year planning period was over by the time district court ruled on cross motions for summary judgment, most of the original sums had been spent by that time, even if court could order local agency to refund any illegally spent funds, this would not result in water pollution planning that plaintiff sought, it was not clear that more grants would be forthcoming to local agency, and thus any relief that could be granted by district court would not prevent or redress claimed injury to area waters. Gonzales v. Gorsuch, C.A.9 (Cal.) 1982, 688 F.2d 1263. Environmental Law ⚷ 656

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

Even if the Environmental Protection Agency would decline to prosecute in case of an unavoidable excursion with respect to party holding effluent permit, any citizen would be free to commence an enforcement action which could not be blocked even though the Agency believed suit should not go forward. Marathon Oil Co. v. E.P.A., C.A.9 1977, 564 F.2d 1253. Environmental Law ⚷ 226

Plaintiffs lacked standing, under former section 1160 of this title, to sue county officials or Regional Administrator to eliminate water pollution near their residences. Higginbotham v. Barrett, C.A.5 (Ga.) 1973, 473 F.2d 745. Waters And Water Courses ⚷ 35

Congressional findings that prompted passage of Clean Water Act (CWA), which recognized that uniform, technology-based effluent limitations were necessary to reduce and eliminate pollutants from nation's waters, established causation element of standing in action in which environmental groups, acting on behalf of their members, challenged decision of Environmental Protection Agency (EPA) not to promulgate effluent limitation guidelines (ELGs) and new source performance standards (NSPSs) for storm water discharges by construction and development industry, notwithstanding contention that groups' members had to trace their alleged injuries to construction sites affected by EPA's decision. National Resources Defense Council v. U.S. E.P.A., C.D.Cal.2006, 437 F.Supp.2d 1137. Environmental Law ⚷ 652

Landowner did not have standing to bring claim that pipeline's national pollutant discharge elimination system (NPDES) permit issued for remediation of groundwater contamination did not cover seepage of pollutants from swamp used as part of pipeline's treatment system, thus creating Clean Water Act (CWA) violation, where swamp was not hydrologically connected to landowner's property, and any contamination that reached river through groundwater carrying seepage from swamp did not contaminate landowner's property. Williams Pipe Line Co. v. Bayer Corp., S.D.Iowa 1997, 964 F.Supp. 1300. Environmental Law ⚷ 656

Clean Water Act (CWA) citizens suits are not appropriate simply because plaintiff has more claims than were resolved by prior government enforcement action, or because plaintiff seeks higher civil fines than were leveled by government. Saboe v. State of Or., D.Or.1993, 819 F.Supp. 914. Environmental Law ⚷ 226

Citizens suit provision of the Clean Water Act confers standing to the limits permitted by the Constitution. Natural Resources Defense Council, Inc. v. Texaco Refining and Marketing, Inc., D.Del.1992, 800 F.Supp. 1, affirmed in part , reversed in part 2 F.3d 493. Environmental Law ⚷ 650

Generalized fear of loss of natural environment currently found in subject area of creek was insufficient to give corporation which owned land that would be taken for proposed project and unincorporated conservation authority composed primarily of county residents standing to seek declaratory judgment and injunction prohibiting water and sewer authority from constructing dam pursuant to allegedly expired or invalid section 404 permit, especially as all property acquisitions had been accomplished by voluntary purchases, and corporation's mere speculation of condemnation did not give it standing. Cane Creek Conservation Authority v. Orange Water and Sewer Authority, M.D.N.C.1984, 590 F.Supp. 1123. Environmental Law ⚷ 653

Plaintiff suing under this chapter must demonstrate that it is in category of persons this chapter protects and that it has some special interest in particular waterway that it is seeking to protect, and plaintiff, by demonstrating that it and its members had special interest in reservoir, demonstrated that it was appropriate plaintiff to seek adequate enforcement of effluent standards from sources. Pymatuning Water Shed Citizens for a Hygienic Environment v. Eaton, W.D.Pa.1980, 506 F.Supp. 902, affirmed 644 F.2d 995. Environmental Law ⚷ 226

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

Contractor which built waste water treatment plant lacked standing to bring civil action against regional administrator of the Agency pursuant to this section. J. E. Brenneman Co. v. Schramm, E.D.Pa.1979, 473 F.Supp. 1316.

36. ---- Redress of injuries, persons entitled to maintain action

Environmental organizations satisfied redressability test, as required to establish their standing to bring action contesting Corps of Engineers' issuance, under the Clean Water Act (CWA), of Section 404 permits to fill headwater streams with material from mountaintop removal coal mining; requested declaratory and injunctive relief, requiring Corps to rescind permits and prepare an environmental impact statement (EIS), would alleviate organizations' concerns. Ohio Valley Environmental Coalition v. U.S. Army Corps of Engineers, S.D.W.Va.2007, 479 F.Supp.2d 607. Environmental Law ⚷ 652

National trade association representing builders, land developers and remodelers had prudential standing to bring action in a representational capacity on behalf of its members seeking declaration that general permit issued by United States Army Corps of Engineers (USACE) regulating the discharge of dredged or fill materials into non-tidal upland ditches exceeded USACE's authority under the Clean Water Act (CWA); association's members were among those individuals whose activities were regulated by the CWA, and more specifically by USACE general permits. National Ass'n of Home Builders v. U.S. Army Corps of Engineers, D.D.C.2008, 539 F.Supp.2d 331. Environmental Law ⚷ 652

Member of non-profit environmental organization, who lived several hundred miles away from watershed, nevertheless had individual, particularized injury distinct from organization's institutional interests to bring suit in his own right, as required for organization to have representational standing to bring citizen-suit action under Clean Water Act (CWA) against two lumber companies for alleged violations of National Pollution Discharge Elimination System (NPDES) permit conditions at that watershed, where member visited watershed over dozen times before suit commenced as well as several times during tenure of suit, and he expressed his intent to visit watershed in future. Environmental Protection Information Center v. Pacific Lumber Co., N.D.Cal.2007, 469 F.Supp.2d 803. Environmental Law ⚷ 656

Promulgation by Environmental Protection Agency (EPA) of effluent limitation guidelines (ELGs) and new source performance standards (NSPSs) for storm water discharges by construction and development industry could redress reduced enjoyment of nation's waters suffered by individual members of environmental groups, supporting groups' associational standing to challenge EPA's decision not to promulgate ELGs and NSPSs; such relief had already been deemed by Congress to be critical to reducing pollution, and declarations of members with expert knowledge of impact of storm water discharges showed that requested regulations would likely reduce pollution. National Resources Defense Council v. U.S. E.P.A., C.D.Cal.2006, 437 F.Supp.2d 1137. Environmental Law ⚷ 652

Relief requested for coastal landowners' alleged violation of Clean Water Act (CWA), arising from their ditching activities, including imposition of civil penalties and order compelling landowners to remove illegal fill material and restore waters, as well as obtain all required CWA permits, would redress alleged injuries to use and enjoyment of coastal waters of members of shellfish growers and environmental associations, so as to support finding that associations had representational standing to maintain action against landowners under CWA. North Carolina Shellfish Growers Ass'n v. Holly Ridge Associates, LLC., E.D.N.C.2003, 278 F.Supp.2d 654, 357 N.C. 1429. Environmental Law ⚷ 652

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

Although environmental group might only be awarded civil penalties in enforcement action under Clean Water Act (CWA) against owner of plant for alleged violations of National Pollutant Discharge Elimination System (NPDES) permit, and those penalties would be paid into United States Treasury, such award would satisfy redressability requirement for constitutional standing. Friends of the Earth, Inc. v. Chevron Chemical Co., E.D.Tex.1995, 900 F.Supp. 67. Environmental Law ⚿ 652

Plaintiffs seeking to establish their standing to bring citizen suit under Clean Water Act against fluoropolymer manufacturer were not required to show that they were likely to receive favorable decision but, rather, that, assuming decision favorable to plaintiffs, relief available would be likely to redress their injuries. Public Interest Research Group of New Jersey, Inc. v. Elf Atochem North America, Inc., D.N.J.1993, 817 F.Supp. 1164. Environmental Law ⚿ 656

37. ---- Private attorneys general, persons entitled to maintain action

Citizen suit provision in Clean Water Act is intended to allow private attorneys general to fill in gaps in public enforcement and are proper only if federal, state, and local agencies fail to exercise their enforcement responsibility. Saboe v. State of Or., D.Or.1993, 819 F.Supp. 914. Environmental Law ⚿ 226

Group could act as "private attorneys general" under Federal Clean Water Act to enforce limitation on effluent discharges from county outflow pipe contingent upon establishment at evidentiary hearing that county was intentionally using pipe as point source for pollutant discharge although no permit had been issued to county; obtaining permit is itself important effluent limitation in Federal Clean Water Act which private attorneys general may enforce via citizen suits. Hudson River Fishermen's Ass'n v. Westchester County, S.D.N.Y.1988, 686 F.Supp. 1044. Environmental Law ⚿ 226

38. ---- Environmental organizations, persons entitled to maintain action

Environmental groups alleged sufficient injury in fact to establish standing to seek injunctive relief in action against holder of National Pollutant Discharge Elimination System (NPDES) permit for alleged violation of mercury discharge limits, pursuant to citizen suit provision of Clean Water Act (CWA), even if there was no resulting injury to the environment, as group members alleged that, although they would like to use affected river for recreational purposes, they would not do so due to permit holder's alleged discharges. Friends of the Earth, Inc. v. Laidlaw Environmental Services (TOC), Inc., U.S.S.C.2000, 120 S.Ct. 693, 528 U.S. 167, 163 A.L.R. Fed. 749, 145 L.Ed.2d 610, on remand 208 F.3d 209. Environmental Law ⚿ 652

Owner of property through which stream flowed suffered injury in fact that was fairly traceable to county's operation of waste-treatment plant, as required to confer individual standing upon owner to maintain citizen suit, under Clean Water Act, against county, and thus environmental association of which owner was a member had standing to maintain such suit, because green algae on stream interfered with owner's use of stream, and there was evidence that plant had discharged heat into stream and that heat could cause green algae to proliferate. Piney Run Preservation Ass'n v. County Com'rs of Carroll County, MD, C.A.4 (Md.) 2001, 268 F.3d 255, certiorari denied 122 S.Ct. 1960, 535 U.S. 1077, 152 L.Ed.2d 1021. Environmental Law ⚿ 652; Environmental Law ⚿ 656

Individual members of environmental organizations who alleged they had used creek for recreational activities several times in the past, and that logging company's alleged pollution of creek had impaired their enjoyment of those activities, alleged sufficient injury in fact to bring suit against company in their own right, and organiza-

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

tions thus had standing to bring action under Clean Water Act (CWA) against company for alleged violations of National Pollution Discharge Elimination System (NPDES) permit conditions. 33 U.S.C.A. §§ 1365. Ecological Rights Foundation v. Pacific Lumber Co., C.A.9 (Cal.) 2000, 230 F.3d 1141.

Purported members of nonprofit environmental protection corporation organized under laws of District of Columbia had "indicia of membership" in corporation, and corporation thus had standing to bring citizen suit, under Clean Water Act, alleging that chemical company violated terms of its National Pollution Discharge Elimination System (NPDES) permit, even if corporation had no legal members under corporate laws of District of Columbia; purported members elected corporation's governing body and financed its activities, members voluntarily associated themselves with corporation, and corporation had clearly articulated membership structure. Friends of the Earth, Inc. v. Chevron Chemical Co., C.A.5 (Tex.) 1997, 129 F.3d 826. Environmental Law ⚿ 653

Environmental group established that its injury was fairly traceable to oil company's discharge of produced water into bay for purposes of group's standing to bring suit against oil company for violations of Clean Water Act (CWA); group alleged that oil company lacked National Pollution Discharge Elimination System (NPDES) permit so that any discharge would violate CWA, group member asserted that he had canoed near oil company's facility and intended to continue to do so, group presented expert testimony that oil company's discharges were typical of produced water which had harmful effects on water quality and marine life, and member alleged that produced water contributed to injury and to ability to enjoy canoeing and wildlife. Sierra Club, Lone Star Chapter v. Cedar Point Oil Co. Inc., C.A.5 (Tex.) 1996, 73 F.3d 546, certiorari denied 117 S.Ct. 57, 519 U.S. 811, 136 L.Ed.2d 20. Environmental Law ⚿ 652

Plain language of Clean Water Act (CWA) authorized citizens suit to enforce all permit conditions and, thus, environmental activist group had standing to bring citizens suit to enforce broad state water quality standards included as conditions of National Pollution Discharge Elimination System (NPDES) permit even though permit failed to translate water quality standards into numeric end-of-pipe effluent limitations for combined sewer overflow (CSO) outfalls at issue. Northwest Environmental Advocates v. City of Portland, C.A.9 (Or.) 1995, 56 F.3d 979, rehearing and suggestion for rehearing en banc denied 74 F.3d 945, certiorari denied 116 S.Ct. 2550, 518 U.S. 1018, 135 L.Ed.2d 1069. Environmental Law ⚿ 652; Environmental Law ⚿ 226

Environmental organizations which brought suit under the Clean Water Act satisfied standing requirement that injury be "fairly traceable" to actions of defendant, where members of organizations stated that waterway into which defendant discharged pollutants had an oily or greasy sheen they found offensive, and that defendant's discharge permit contained limits on oil and grease defendant could discharge in its effluent; moreover, reports of defendant to the Environmental Protection Agency (EPA) indicated that defendant had discharged oil and grease in excess of such limits; thus, aesthetic injury suffered by individual members could fairly be traced to defendant's effluent. Public Interest Research Group of New Jersey, Inc. v. Powell Duffryn Terminals Inc., C.A.3 (N.J.) 1990, 913 F.2d 64, rehearing denied, certiorari denied 111 S.Ct. 1018, 498 U.S. 1109, 112 L.Ed.2d 1100. Environmental Law ⚿ 652

Allegations of environmental groups that groups' members resided in vicinity of affected waters and that those members recreated in, on or near, or otherwise used and enjoyed those waters, and that their members health, recreational, aesthetic and environmental interests had been, or were being and would be adversely affected by corporation's illegal pollution discharges satisfied both constitutional requirements of standing and requirement that plaintiff be "citizens" as defined in provision of Clean Water Act [33 U.S.C.A. § 1365(g)] governing cit-

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

izens suits. Chesapeake Bay Foundation v. American Recovery Co., Inc., C.A.4 (Md.) 1985, 769 F.2d 207.

Nonprofit corporation dedicated to protection and restoration of Hudson River had standing to bring citizen suit under Federal Water Pollution Control Act Amendments of 1972, § 505(a), as amended, 33 U.S.C.A. § 1365(a), for railroad's alleged violations of discharge permits issued by New York State Department of Environmental Conservation, where one member of corporation stated he passed River regularly and found pollution in River offensive to his aesthetic values, and other member of corporation averred that his children swam in River , his son occasionally fished in River, and his family had and would continue to picnic along the River. Friends of the Earth v. Consolidated Rail Corp., C.A.2 (N.Y.) 1985, 768 F.2d 57. Environmental Law 653

National Wildlife Federation has standing to enforce duty of Administrator of Environmental Protection Agency to regulate water quality changes caused by dams under National Pollutant Discharge Elimination System. National Wildlife Federation v. Gorsuch, C.A.D.C.1982, 693 F.2d 156, 224 U.S.App.D.C. 41. Environmental Law 652

Environmental organizations satisfied organizational standing requirement, for purposes of standing inquiry in action contesting Corps of Engineers' issuance, under the Clean Water Act (CWA), of Section 404 permits to fill headwater streams with material from mountaintop removal coal mining, where one member of a plaintiff organization had standing to sue in her own right, interest at issue was germane to organization's purpose of improving and preserving the environment, and participation of individual members of the organizations was unnecessary. Ohio Valley Environmental Coalition v. U.S. Army Corps of Engineers, S.D.W.Va.2007, 479 F.Supp.2d 607. Environmental Law 652

Member of non-profit environmental organization had individual, particularized injury distinct from organization's institutional interests to bring suit in his own right, as required for organization to have representational standing to bring citizen-suit action under Clean Water Act (CWA) against two lumber companies for alleged violations of National Pollution Discharge Elimination System (NPDES) permit conditions, where member personally observed sediment in watershed which organization attributed to companies, member's recreational and conservation interests were harmed by sediment deposited without NPDES permit, and member's injuries would have been redressed if companies were enjoined from discharging storm water without NDPES permit. Environmental Protection Information Center v. Pacific Lumber Co., N.D.Cal.2007, 469 F.Supp.2d 803. Environmental Law 656

Environmental organization had standing to bring Clean Water Act (CWA) citizen suit against paper company, alleging that company was discharging pollutants into river without valid permit; complaint stated sufficient facts to establish ongoing violation of CWA since, as of time suit was filed, state Department of Environmental Protection had not issued new discharge permit. Natural Resources Council of Maine v. International Paper Co., D.Me.2006, 424 F.Supp.2d 235. Environmental Law 652

Environmental groups, whose members visited, lived near, recreated near, drove by and/or flew over areas of the state that were visibly harmed by valley fills, surface impoundments, and related surface mining activities, had standing to raise facial challenge to nationwide permit (NWP) authorizing discharges of dredged or fill material into waters of the United States associated with surface coal mining and reclamation operations; threatened injury to groups' interests in the affected areas was concrete and particularized, actual and imminent because Army Corps of Engineers had already issued specific authorizations, and injury was fairly traceable to the challenged action of the Corps, and was likely that the injury would be redressed by a favorable decision. Ohio Valley En-

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

vironmental Coalition v. Bulen, S.D.W.Va.2004, 410 F.Supp.2d 450, modified in part 2004 WL 2384841, reconsideration denied 2004 WL 2370689, affirmed in part , vacated in part 429 F.3d 493, rehearing en banc denied 437 F.3d 421. Environmental Law 652

Public interest research group had representative standing to bring action against seafood companies under Clean Water Act (CWA), alleging illegal discharges of processing waste, where group members had individual standing, primary focus of group was clean water issues, and participation of members was not required, since action sought injunction and civil penalties rather than individual damages. Oregon State Public Interest Research Group, Inc. v. Pacific Coast Seafoods Co., D.Or.2005, 361 F.Supp.2d 1232. Environmental Law 652

Alleged injuries to use and enjoyment of coastal waters by members of shellfish growers and environmental associations were fairly traceable to coastal landowners' ditching activities, so as to support finding that associations had representational standing to maintain action against landowners under Clean Water Act (CWA); evidence showed that landowners' activities could lead to increased fecal coliform levels in adjacent waters, that pollutants on tract could reach waters used by members, and that activities coincided with increased fecal counts in surrounding waters. North Carolina Shellfish Growers Ass'n v. Holly Ridge Associates, LLC., E.D.N.C.2003, 278 F.Supp.2d 654, 357 N.C. 1429. Environmental Law 652

Environmental organization had standing to bring citizen suit under Clean Water Act against wastewater treatment plant for violations of conditions of its National Pollutant Discharge Elimination System permit, where organization alleged that its members could not enjoy swimming, boating or fishing in creek due to toxic pollutants discharged by plant, and that value of members' homes had decreased due to pestilence that emanated from creek. SURCCO v. PRASA, D.Puerto Rico 2001, 157 F.Supp.2d 160, on reconsideration. Environmental Law 652

Clean Water Act did not authorize suit by private entities against director of state's Division of Environmental Protection to remove him from office, based on alleged violation of federal regulation requiring state National Pollution Discharge Elimination System (NPDES) programs to ensure that any board or body approving permits did not include any person who received in last two years a significant portion of income from permit holders or permit applicants; instead, regulation was to be enforced by Environmental Protection Agency (EPA). Ohio Valley Environmental Coalition v. Miano, S.D.W.Va.1998, 66 F.Supp.2d 805. Environmental Law 226

Environmental organization, by and through its representatives, had standing to bring Clean Water Act (CWA) citizens' suit against dairies arising from discharge of animal manure wastes into joint drain which flowed into a river, where representatives owned property in river valley, representatives' recreational use of, and aesthetic enjoyment of, river were restricted due to presence of manure in river and foul odor, one representative's commercial interests in orchard were adversely affected by irrigation pipes being clogged with manure wastewater, dairies discharged manure and animal wastewater into joint drain, and award of civil penalties for CWA violations would have deterrent effect on other polluters of river. Community Ass'n for Restoration of the Environment v. Henry Bosma Dairy, E.D.Wash.1999, 65 F.Supp.2d 1129. Environmental Law 652

Environmental groups had standing to seek declaration that Forest Service was violating Clean Water Act (CWA) by issuing grazing permits without requiring permittees to first obtain certification from state establishing that grazing would not violate state water quality standards; members of groups lived and recreated in area of challenged action, it was admitted that cattle grazing contributed to water pollution, and shown that pollution

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

in creek was related to cattle grazing, and groups were only required to show that procedural requirement was not followed in order to satisfy redressability requirement. Oregon Natural Desert Ass'n v. Thomas, D.Or.1996, 940 F.Supp. 1534, reversed 172 F.3d 1092, certiorari denied 120 S.Ct. 397, 528 U.S. 964, 145 L.Ed.2d 310. Declaratory Judgment 300

Nonprofit environmental protection corporation lacked representational standing to bring private civil enforcement action under citizen suit provision of Clean Water Act (CWA), as corporation failed to demonstrate compliance with its internal bylaws regarding creation of class of members within corporation and, consequently, could not establish that it had any members; corporation failed to show that its board of directors ever took requisite action to create class of members to "populate" corporation, and while informal membership policy would have been appropriate for unincorporated association, it was insufficient for corporation. Friends of the Earth, Inc. v. Chevron Chemical Co., E.D.Tex.1996, 919 F.Supp. 1042, reversed 129 F.3d 826. Environmental Law 653

Environmental organizations had standing under citizen suit provision of Clean Water Act to bring action against indirect sources whose wastewater was treated by publicly owned treatment works (POTW), despite proof that POTW did not violate its effluent standards; indirect sources did not challenge relationship between pollutants unlawfully discharged and type of injury alleged, and release sought would redress injuries alleged. Atlantic States Legal Foundation, Inc. v. Colonial Tanning Corp., N.D.N.Y.1993, 827 F.Supp. 903. Environmental Law 652

Allegations by environmental groups, that members engaged in recreational activities in and around affected waters, would recreate more in areas if waters were not so polluted, and that they are interested in obtaining accurate information regarding amount of pollution discharged into waters stated injury in fact needed to have standing to bring suit for violations of federal Water Pollution Control Act. Public Interest Research Group of New Jersey, Inc. v. New Jersey Expressway Authority, D.N.J.1992, 822 F.Supp. 174. Environmental Law 652

Citizens organization had standing to bring Clean Water Act violation action in federal court; organization alleged and putative polluter admitted it had been discharging effluent into water system continuously without permit from publicly owned treatment works (POTW) for over year prior to suit, organization had satisfied notice requirements, and there was no current enforcement action pending having effect of barring action. Connecticut Fund for Environment v. Acme Electro-Plating, Inc., D.Conn.1993, 822 F.Supp. 57. Environmental Law 652

Environmental watchdog groups had standing to bring citizens' suit seeking to remedy violations of Federal Water Pollution Control Act, where plaintiffs alleged that city water treatment facility was engaged in continuing daily violations of Clean Water Act. Hawaii's Thousand Friends v. City and County of Honolulu, D.Hawai'i 1993, 821 F.Supp. 1368. Environmental Law 652

Affidavits of members of environmental groups were sufficient to establish groups' standing to bring citizen suit under Clean Water Act against owner of chemical plant; members stated that they lived or recreated in vicinity of plant and that their health, recreational, environmental or professional interests were harmed by pollution from plant. Natural Resources Defense Council, Inc. v. Vygen Corp., N.D.Ohio 1992, 803 F.Supp. 97. Environmental Law 652

Environmental organizations had standing to bring citizen's suit under Clean Water Act challenging pollutant discharges at Air Force base exceeding effluent limitations in its permits, based upon interests of their individual

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

members; group alleged sufficient injury in harm to aesthetic, recreational, and environmental interests of members, and demonstrated substantial likelihood that excessive discharges caused their harm and that judicial relief sought would address their injury. Public Interest Research Group of New Jersey, Inc. v. Rice, D.N.J.1991, 774 F.Supp. 317. Environmental Law ⚷ 652

To sue under Clean Water Act, organization must show that defendant's allegedly illegal conduct has caused plaintiff or its members to suffer some actual or threatened injury, that the injury can be fairly traceable to the challenged action, that a favorable decision from the court will likely redress the injury, that members of the organization would have standing to sue in their own right, that the interests which the organization seeks to protect are germane to the organization's purpose, and that neither the claim nor the relief requires participation of individual members in the suit. National Wildlife Federation v. Consumers Power Co., W.D.Mich.1987, 657 F.Supp. 989, reversed 862 F.2d 580. Environmental Law ⚷ 652

National organization dedicated to pursuing legal actions against many sorts of environmental violations, which had no geographical or philosophical ties to Maryland area or the Chesapeake Bay, which declined to publicly name any of its members who were affected by defendant steelmaker's actions in the Patapsco River area, lacked standing to pursue action alleging violations of Federal Water Pollution Control Act in its own right; however, the organization had standing to pursue the action as a representative of some of its members which lived in the area of defendant's discharges and who used the waterways in question. Chesapeake Bay Foundation v. Bethlehem Steel Corp., D.C.Md.1985, 608 F.Supp. 440. Environmental Law ⚷ 652

Where two members of environmental public interest membership organization set forth in affidavits in precise terms specific adverse effects they suffered from alleged unremedied violations by a corporation of its pollutant discharge system, the organization had standing to bring a citizens' suit challenging the alleged unremedied violations. Hudson River Sloop Clearwater, Inc. v. Consolidated Rail Corp., N.D.N.Y.1984, 591 F.Supp. 345, affirmed in part , reversed in part 768 F.2d 57. Environmental Law ⚷ 652

National public interest organization dedicated to protection of environment, whose members retain effective control over direction of the organization, had standing to bring an action on behalf of its members under this chapter alleging that a company was violating its national pollutant discharge elimination system permit. Sierra Club v. Aluminum Co. of America, N.D.N.Y.1984, 585 F.Supp. 842.

39. ---- Indian tribes, persons entitled to maintain action

Indian tribe had standing to seek declaration that Forest Service was violating Clean Water Act (CWA) by issuing grazing permits without requiring permittees to first obtain certification from state establishing that grazing would not violate state water quality standards; tribe had treaty rights in area, which were injured by alleged violations. Oregon Natural Desert Ass'n v. Thomas, D.Or.1996, 940 F.Supp. 1534, reversed 172 F.3d 1092, certiorari denied 120 S.Ct. 397, 528 U.S. 964, 145 L.Ed.2d 310. Declaratory Judgment ⚷ 300

40. ---- Injured persons, persons entitled to maintain action

Citizen suit provisions of this section apply only to persons who can claim some sort of injury and there is no basis for inferring existence of separate cause of action for "injured" as opposed to "noninjured" plaintiffs. Middlesex County Sewerage Authority v. National Sea Clammers Ass'n, U.S.N.J.1981, 101 S.Ct. 2615, 453 U.S. 1, 69 L.Ed.2d 435. Environmental Law ⚷ 547; Environmental Law ⚷ 651; Environmental Law ⚷ 226

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

Operator of hydroelectric power plant had standing under the Clean Water Act (CWA) to challenge revised water flow requirements imposed by the Federal Energy Regulatory Commission (FERC) when it granted operator a license to operate for another 40 years, where operator was the party directly subject to the FERC action in question, and, as applicant for license under consideration, it held an evident interest in the action. Snoqualmie Indian Tribe v. F.E.R.C., C.A.9 2008, 545 F.3d 1207. Environmental Law ⚿ 656

Labor organization adequately stated actual or imminent injury to its members, for purpose of associational standing inquiry in lawsuit under Resource Conservation and Recovery Act (RCRA) and Clean Water Act (CWA), where complaint alleged that members of organization had been exposed to contaminated soil and waste materials while working at subject location, many members drank water from public water supplies drawn from Lake Erie that were being polluted by water migrating through subject location, many members resided and worked near subject location, and many members used Lake Erie and area surrounding subject location for recreation and enjoyed aesthetic value of area. Building and Const. Trades Council of Buffalo, New York and Vicinity v. Downtown Development, Inc., C.A.2 (N.Y.) 2006, 448 F.3d 138. Environmental Law ⚿ 652

Injuries of lake owner arising from smelting facility's repeated violations of National Pollutant Discharge Elimination System (NPDES) permit were redressable for standing purposes by citizen suit under Clean Water Act seeking injunctive relief for continuing and threatened future violations of permit; facility had over 350 discharge violations and 650 monitoring and reporting violations in last year for which record contained evidence. Friends of the Earth, Inc. v. Gaston Copper Recycling Corp., C.A.4 (S.C.) 2000, 204 F.3d 149, on subsequent appeal 263 Fed.Appx. 348, 2008 WL 344689. Environmental Law ⚿ 656

Members of public interest group failed to show threatened injury that could be traced to zirconium carbonate manufacturer's violations of its obligations under its National Pollution Discharge Elimination System (NPDES) permit to monitor and report its discharges of pollutants, and thus, members lacked standing to sue manufacturer under Clean Water Act for such violations; discharges did not injure or cause any threat of injury to members, and despite their claim that manufacturer's failure to report caused them to reduce their recreational use of river and to fear drinking water from river, they made no showing that discharges affected fish toxicity or that discharges affected salinity level of river water that came from treatment plant. Public Interest Research Group of New Jersey, Inc. v. Magnesium Elektron, Inc., C.A.3 (N.J.) 1997, 123 F.3d 111. Environmental Law ⚿ 652

Affidavits from individual environmental group members satisfied injury in fact prong of test for group's standing to bring action under Clean Water Act (CWA) against oil company, even though members merely expressed concern about effect of oil company's produced water discharges and even though all but one member couched injury in terms of future impairment; two affiants lived near discharge area and all affiants used bay for recreational activities dependent on good water quality. Sierra Club, Lone Star Chapter v. Cedar Point Oil Co. Inc., C.A.5 (Tex.) 1996, 73 F.3d 546, certiorari denied 117 S.Ct. 57, 519 U.S. 811, 136 L.Ed.2d 20. Environmental Law ⚿ 652

Environmental organizations claiming that they used state waters and were adversely affected by failure of Environmental Protection Agency (EPA) to establish total maximum daily loads (TMDL) of pollution which could be introduced into waters had standing to compel EPA to perform its obligations under Clean Water Act (CWA) with respect to all waters of state, and not simply those which they could prove they used. Alaska Center for Environment v. Browner, C.A.9 (Wash.) 1994, 20 F.3d 981. Environmental Law ⚿ 652

In action brought against refinery for discharge permit violations under this chapter, environmental groups ad-

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

equately showed that their injuries were traceable to refinery's permit violations; members of environmental groups testified that sight and unpleasant smell of pollution in vicinity of refinery interfered with their enjoyment of bird watching, swimming, boating and fishing in river waterfront parks and that presence of toxic chemicals in waterway inhibited them from eating local fish, and expert testified that effluents placed into river by refinery may poison fish, render areas unsafe for people to swim, and generally limit river as fertile ground for recreation. Natural Resources Defense Council, Inc. v. Texaco Refining and Marketing, Inc., C.A.3 (Del.) 1993, 2 F.3d 493. Environmental Law 652

If discharge from nuclear reactor contributed to pollution interfering with use of river by members of environmental organizations, members and organizations, as representatives, would show injury fairly traceable to discharge and would have standing to sue Department of Energy (DOE), even though members did not return to river immediately upon shutdown of reactor for three years. Natural Resources Defense Council, Inc. v. Watkins, C.A.4 (S.C.) 1992, 954 F.2d 974. Environmental Law 652

Corporation which operated shopping mall and which alleged an aesthetic injury and damages under common-law tort theories, under which it would not be entitled to recover litigation costs could not, by joining suit under § 505 of the Clean Water Act, claim reimbursement of costs, including attorney fees and expert witness expenses. Citizens Coordinating Committee on Friendship Heights, Inc. v. Washington Metropolitan Transit Authority, C.A.D.C.1985, 765 F.2d 1169, 247 U.S.App.D.C. 15. Environmental Law 716; Federal Civil Procedure 2741

Testimony of member of environmental organization, that she suffered direct aesthetic injury, satisfied injury in fact prong of standing inquiry in organization's action contesting Corps of Engineers' issuance, under the Clean Water Act (CWA), of Section 404 permits to fill headwater streams with material from mountaintop removal coal mining; member testified that she frequently traveled to mine area to take photographs and observe aquatic wildlife in streams, but that she would not wade in streams impacted by the mining because of the presence of chemicals used in the mining process. Ohio Valley Environmental Coalition v. U.S. Army Corps of Engineers, S.D.W.Va.2007, 479 F.Supp.2d 607. Environmental Law 652

National trade association representing builders, land developers and remodelers sufficiently alleged injury in fact arising from general permit issued by United States Army Corps of Engineers (USACE) regulating the discharge of dredged or fill materials into non-tidal upland ditches, as required for association to have Article III standing to sue in its own right; association alleged that the permit exceeded USACE's authority under the Clean Water Act (CWA) and burdened association's members by requiring the submission of pre-construction notifications (PCNs), even though the members may not ultimately need approval from USACE for their projects, and that because association was directed by its members to advocate for the appropriate regulation of non-tidal upland ditches, permit hindered association's ability to adequately represent its members. National Ass'n of Home Builders v. U.S. Army Corps of Engineers, D.D.C.2008, 539 F.Supp.2d 331. Environmental Law 652

Allegations of environmental organization's complaint, that individual members of organization used two rivers for recreation and that at least one member had been injured by discharges into the rivers, satisfied "injury in fact" requirement for representational standing to sue Oregon officials and timber companies under Clean Water Act (CWA) for discharging stormwater into rivers from ditches alongside logging roads in state forests without National Pollutant Discharge Elimination System (NPDES) permits. Northwest Environmental Defense Center v. Brown, D.Or.2007, 476 F.Supp.2d 1188. Environmental Law 652

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

Member of non-profit environmental organization, who had been compensated for his work at particular watershed as independent contractor for organization, nevertheless had individual, particularized injury distinct from organization's institutional interests to bring suit in his own right, as required for organization to have representational standing to bring citizen-suit action under Clean Water Act (CWA) against two lumber companies for alleged violations of National Pollution Discharge Elimination System (NPDES) permit conditions at that watershed, where member's alleged injuries did not arise from his position as independent contractor and member could establish standing as member. Environmental Protection Information Center v. Pacific Lumber Co., N.D.Cal.2007, 469 F.Supp.2d 803. Environmental Law 656

Declarations documenting the use of waterways for aesthetic and recreational purposes by environmental groups' individual members, which indicated that members had used, studied, and enjoyed their local waterways for years and that sedimentation, increased turbidity, and pollution resulting from storm water discharges from construction and development sites had decreased members' use of and pleasure in waterways, established that groups' members had suffered injury in fact required for groups' associational standing to challenge decision of Environmental Protection Agency (EPA) not to promulgate effluent limitation guidelines (ELGs) and new source performance standards (NSPSs) for storm water discharges by construction and development industry under Clean Water Act (CWA). National Resources Defense Council v. U.S. E.P.A., C.D.Cal.2006, 437 F.Supp.2d 1137. Environmental Law 652

Members of public interest research group had standing to bring action against seafood companies under Clean Water Act (CWA), alleging illegal discharges of processing waste; complaint averred that members had interest in preserving aesthetic integrity of river, that their enjoyment of river was affected by their concern for water quality and health of fish and wildlife, that their injury was traceable to defendants' wastewater discharge, and that their injuries were redressable by court via injunction or other civil penalty. Oregon State Public Interest Research Group, Inc. v. Pacific Coast Seafoods Co., D.Or.2005, 361 F.Supp.2d 1232. Environmental Law 652

Members of shellfish growers and environmental associations adequately alleged injury in fact, resulting from coastal landowners' alleged actions of violating the Clean Water Act (CWA) and contaminating shellfish beds and surrounding waters with their ditching activities, so as to support finding that associations had representational standing to maintain suit under CWA; members alleged they used area at issue, and that their recreational, aesthetic, and economic interests in area had been impaired or threatened as result of landowners' ditching activities. North Carolina Shellfish Growers Ass'n v. Holly Ridge Associates, LLC., E.D.N.C.2003, 278 F.Supp.2d 654, 357 N.C. 1429. Environmental Law 652

Landowner seeking to halt effluent runoff from methane production activities had proper standing to bring Clean Water Act (CWA) citizen's suit against gas company to enforce effluent limitations established by state, since state water quality standards incorporated into company's National Pollutant Discharge Elimination System (NPDES) permit were enforceable under CWA, and state standards were not more strict than federal program. Swartz v. Beach, D.Wyo.2002, 229 F.Supp.2d 1239. Environmental Law 656

In order to pursue citizens suit under Clean Water Act (CWA), plaintiffs must demonstrate standing by showing injury in fact or invasion of legally protected interest which is concrete and particularized and actual or imminent, causal connection between injury suffered and conduct that is basis for suit, and likelihood that injury will be redressed by favorable decision. Beartooth Alliance v. Crown Butte Mines, D.Mont.1995, 904 F.Supp. 1168. Environmental Law 651

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

Injuries allegedly suffered by members of environmental group, particularly diminished recreational activity, diminished aesthetic beauty, and pollution-contaminated seafood as result of pollution in lake and gulf were sufficient for purposes of constitutional standing to bring private civil enforcement action against plant owner under Clean Water Act for violation of National Pollutant Discharge Elimination System (NPDES) permit. Friends of the Earth, Inc. v. Chevron Chemical Co., E.D.Tex.1995, 900 F.Supp. 67. Environmental Law 652

Party has asserted "injury in fact" which is fairly traceable to Clean Water Act violation by indirect source of water pollution, as required to have standing to sue indirect source, if source's discharges exceed effluent standards, pollutants reached waterway, and those pollutants are of type which cause injury sustained by plaintiffs. Atlantic States Legal Foundation, Inc. v. Karg Bros., Inc., N.D.N.Y.1993, 841 F.Supp. 51. Environmental Law 651

Individual landowners alleged sufficient "injury in fact" to have standing to bring private Clean Water Act claim against farmer using manure fertilizer; complaint alleged aesthetic harm, consisting of intense, obnoxious odors that had caused landowners great inconvenience, discomfort and annoyance. Concerned Area Residents for The Environment v. Southview Farm, W.D.N.Y.1993, 834 F.Supp. 1410. Environmental Law 656

Plaintiffs had standing to bring citizen suit under Clean Water Act against fluoropolymer manufacturer, despite manufacturer's payment of $275,000 under its settlement with New Jersey Department of Environmental Protection and Energy; plaintiffs alleged violations for which maximum penalty available under Act would be close to $60 million and imposition of such penalties would result in further deterrence against future violations by other violators and thereby provide redress to plaintiffs. Public Interest Research Group of New Jersey, Inc. v. Elf Atochem North America, Inc., D.N.J.1993, 817 F.Supp. 1164. Environmental Law 656

Plaintiffs who claimed injury to recreational, aesthetic, and environmental interests had standing to maintain citizen's suit under Clean Water Act alleging that city violated Act by discharging raw sewage into local bodies of water. Hawaii's Thousand Friends, Life of Land, Inc. v. City and County of Honolulu, D.Hawai'i 1992, 806 F.Supp. 225. Environmental Law 656

There was strong connection between plaintiff's request for civil penalties and their claimed injuries in the nature of harm to water, giving them standing to maintain citizen suit under the Clean Water Act against refinery which was allegedly violating discharge permit. Natural Resources Defense Council, Inc. v. Texaco Refining and Marketing, Inc., D.Del.1992, 800 F.Supp. 1, affirmed in part , reversed in part 2 F.3d 493. Environmental Law 656

Members of the plaintiff association, whose affidavits indicated that they had been injured by pollution in creek and that remedial measures they sought against alleged polluter would redress injury, had standing to maintain Clean Water Act citizen's suit for violations of terms of National Pollutant Discharge Elimination System permit. Natural Resources Defense Council, Inc. v. Loewengart & Co., Inc., M.D.Pa.1991, 776 F.Supp. 996. Environmental Law 652

Environmental groups had standing to bring civil action alleging violation of Federal Water Pollution Prevention and Control Act, even if particular members had not suffered injury, where members lived downstream from discharge point, would have used waters downstream more often and eaten fish more often were it not for pollution, alleged excessive pollution could cause irritation for swimmers and harm to aquatic life, alleged harms were fairly traceable, and members' injuries would be redressed by favorable decision. Public Interest Research Group of New Jersey v. Yates Industries, Inc., D.N.J.1991, 757 F.Supp. 438, reconsideration granted in part 790

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

F.Supp. 511. Environmental Law ⚷ 652

Nonprofit membership corporation had standing, under Federal Constitution and citizen suit provision of Clean Water Act, to challenge corporation's violations of its National Pollutant Discharge Elimination System permit based on showing that its members used water into which allegedly illegal discharges flowed; standing was not undermined because members had not explicitly said they were harmed by permit violations, and prefiling contact and authorization from identified individual members was not necessary to confer representational standing. Natural Resources Defense Council, Inc. v. Outboard Marine Corp., N.D.Ill.1988, 692 F.Supp. 801. Environmental Law ⚷ 653

Nonprofit California corporation claiming policy of litigating issues affecting the environment had no standing to seek injunctive relief against, or imposition of fines for, violations of this chapter without demonstrating some injury to some of its members, and noble purpose alone could not serve as substitute for "injury in fact." Sierra Club v. SCM Corp., W.D.N.Y.1984, 580 F.Supp. 862, affirmed 747 F.2d 99. Environmental Law ⚷ 653

In order to have standing to maintain mandamus action against regional administrator of Agency for failure to perform duty of ascertaining that bid specifications for waste water treatment plant did not contain proprietary, exclusionary or discriminatory requirements, plaintiff must show injury in fact within a protected zone of interest. J. E. Brenneman Co. v. Schramm, E.D.Pa.1979, 473 F.Supp. 1316. Mandamus ⚷ 23(1)

Intergovernmental committee formed by Alaskan city, village, and borough to advise city and village on matters related to village's relocation did not have standing to bring action based on alleged violations of the Clean Water Act; there was no allegation that city, borough, or village suffered any injury as a result of the alleged violations or had authorized committee's action, and action was not germane to committee's purpose. Kivalina Relocation Planning Committee v. Teck Cominco Alaska, Inc., D.Alaska 2004, 227 F.R.D. 523, affirmed 141 Fed.Appx. 650, 2005 WL 1939873. Environmental Law ⚷ 654

41. ---- Persons adversely affected, persons entitled to maintain action

For purpose of associational standing inquiry in lawsuit under Resource Conservation and Recovery Act (RCRA) and Clean Water Act (CWA), complaint filed by labor organization did not have to state names of members of organization who had been particularly injured in order for organization to properly allege injury in fact to its members. Building and Const. Trades Council of Buffalo, New York and Vicinity v. Downtown Development, Inc., C.A.2 (N.Y.) 2006, 448 F.3d 138. Environmental Law ⚷ 652

Parties claiming that state waters were adversely affected had standing under Clean Water Act (CWA) to sue Environmental Protection Agency (EPA) to compel EPA to perform its duties under the CWA, even though it was claimed that some of benefit to be derived from cleaner air was dependent in part upon state-agency action in identifying sources of pollution, and that plaintiffs might not obtain benefit because state was not party to lawsuit. Alaska Center for Environment v. Browner, C.A.9 (Wash.) 1994, 20 F.3d 981. Environmental Law ⚷ 656

Nonprofit corporation made up of city taxpayers, residents and homeowners, had standing to sue Environmental Protection Agency alleging that Agency wrongfully denied city permission to install research pilot project to demonstrate method of sewage disposal termed "deep current assimilation," in light of this section specifically authorizing citizen lawsuits, and in light of allegations of corporation's complaint that its members would be adversely affected by pollution of water and contamination of marine life attendant upon alternative method of

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

sewage disposal, which involved secondary treatment of raw sewage through chemical processing. RITE--Research Improves Environment, Inc. v. Costle, C.A.5 (Fla.) 1981, 650 F.2d 1312. Environmental Law 653

Variation in wording between "interested person" standard of subsec. (g) of this section and the "persons having an interest which is or may be adversely affected" of section 1369(b) of this title is of no significance as both provisions incorporate the Sierra Club injury in fact rule for standing. Montgomery Environmental Coalition v. Costle, C.A.D.C.1980, 646 F.2d 568, 207 U.S.App.D.C. 233. Environmental Law 651

National trade association representing builders, land developers and remodelers, sufficiently alleged that it had Article III standing to bring action in a representational capacity on behalf of its members seeking declaration that general permit issued by United States Army Corps of Engineers (USACE) regulating the discharge of dredged or fill materials into non-tidal upland ditches exceeded USACE's authority under the Clean Water Act (CWA); association alleged that permit, which required pre-construction notification for all activities, burdened association's members by requiring the submission of pre-construction notifications (PCNs), even though the members may not ultimately need approval from USACE for their projects, that preparation of PCNs was cumbersome process, and that the interests at stake in this litigation were quite germane to association's ability to ensure its members' unhindered lawful use of their land, given that purpose of association was to represent its members in legal, regulatory, and legislative matters affecting the use and development of their land. National Ass'n of Home Builders v. U.S. Army Corps of Engineers, D.D.C.2008, 539 F.Supp.2d 331. Environmental Law 652

Member of non-profit environmental organization did not suffer personal and particularized injury by alleged harm he suffered by his observations of muddy, turbid water during his many drives over creek in his car, for purpose of representational standing inquiry in citizen-suit action under Clean Water Act (CWA) against two lumber companies for alleged violations of National Pollution Discharge Elimination System (NPDES) permit conditions at that watershed; such indirect contact with area was insufficient to establish standing. Environmental Protection Information Center v. Pacific Lumber Co., N.D.Cal.2007, 469 F.Supp.2d 803. Environmental Law 656

Injuries to New York and Connecticut allegedly resulting from increased pollution from upstream, out-of-state construction and development sites were fairly traceable to decision of Environmental Protection Agency (EPA) not to promulgate, under Clean Water Act (CWA), effluent limitation guidelines (ELGs) and new source performance standards (NSPSs) for storm water discharges of construction and development industry, supporting states' standing to challenge decision, given states' ongoing expense of refining own standards in response to changing conditions and information, legislative findings that national regulations were needed, and states' uncontroverted evidence that discharges from construction and development sites in upstream states with differing discharge standards were polluting their waterbodies. National Resources Defense Council v. U.S. E.P.A., C.D.Cal.2006, 437 F.Supp.2d 1137. Environmental Law 654

Landowner seeking to halt effluent runoff from methane production activities alleged property interest that was adversely affected by producer's ongoing violations of effluent standards, as required to state claim under citizen's suit provision of Clean Water Act (CWA); landowner alleged that his interest in his ranch and its economic viability would be adversely affected by producer's past and continuous discharges of coal bed methane process water, in violation of National Pollutant Discharge Elimination System (NPDES) permit issued by state Department of Environmental Quality (DEQ). Swartz v. Beach, D.Wyo.2002, 229 F.Supp.2d 1239. Environmental

Law ⚷ 226

Member of nonprofit organization did not suffer an injury that supported the organization's Article III standing to bring citizen suit under Clean Water Act against California Department of Boating and Waterways (DBW), although he had witnessed DBW's herbicidal spraying activities and was fishing and recreating less often and stopped eating fish from the waters out of concern for his health, where DBW stopped spraying herbicides pending approval of its application for a national pollutant discharge elimination system (NPDES) permit. San Francisco Baykeeper, Inc. v. Moore, E.D.Cal.2001, 180 F.Supp.2d 1116. Environmental Law ⚷ 652

Citizens groups clearly established representational standing to bring cause of action under Clean Water Act against operator of nuclear energy facility; injury in fact was established from alleged exposure of individual members to environmental contamination caused by illegal discharges, direct causal connection existed between failure to comply with Clean Water Act and exposure to health hazards created by discharging in violation of Act, and exposure to unpermitted discharges would very likely be effectively redressed by ordering compliance with Act. Heart of America Northwest v. Westinghouse Hanford Co., E.D.Wash.1993, 820 F.Supp. 1265. Environmental Law ⚷ 652

Owner and lessees of lakeshore property had standing to bring Clean Water Act action against nearby municipality for alleged improper discharge of effluents from waste treatment system, even though municipality claimed that claimants were entitled only to the correction of present and future problems and that previously taken corrective action had eliminated possibility of further trouble; there was evidence of violations of chlorine residual parameter in month suit was filed, and violation of flow parameter two years after suit was filed, plus evidence of frequent violations of both parameters immediately prior to filing of suit. State Line Fishing & Hunting Club, Inc. v. City of Waskom, Tex., E.D.Tex.1991, 754 F.Supp. 1104. Environmental Law ⚷ 656

Nonprofit corporation had standing to bring citizen's suit under Clean Water Act for manufacturer's alleged violation of terms and conditions of National Pollutant Discharge Elimination System (NPDES) permit; members of nonprofit corporation used waters which manufacturer allegedly polluted, alleged pollution harmed those members, and favorable decision requiring manufacturer to come into compliance with permit and/or imposing civil penalties would redress alleged injuries. Atlantic States Legal Foundation, Inc. v. Universal Tool & Stamping Co., Inc., N.D.Ind.1990, 735 F.Supp. 1404. Environmental Law ⚷ 653

Citizen had standing to bring citizen suit under the Federal Water Pollution Control Act at the time he commenced action against municipality for violation of discharge permit where neither the Environmental Protection Agency nor the state Department of Environmental Resources had prosecuted an action in any court concerning compliance with permit and where citizen proved that his health, recreational, aesthetic or environmental interests had been and would be directly and adversely affected by the allegedly illegal effluent discharges. Proffitt v. Municipal Authority of Borough of Morrisville, E.D.Pa.1989, 716 F.Supp. 845, affirmed 897 F.2d 523.

Citizen taxpayer did not have standing to seek termination of allegedly unnecessary sewerage treatment for discharge of sewage into river, and thus, terminate what he considered would become unnecessary sewer user fee or tax; although taxpayer filed suit against Environmental Protection Agency, sewer user fee was local tax, EPA had no power to impose tax or repeal it, although EPA may have had been mandating superfluous treatment standards, it was up to local governing bodies to seek administrative hearing. Kazmann v. U.S. E.P.A. Through Thomas, M.D.La.1987, 669 F.Supp. 144. Environmental Law ⚷ 656

Organization had standing to sue for past violations of Clean Water Act, even if some of alleged violations oc-

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

curred before organization was founded, as it was quite possible that creek was harmed to such extent that members of organization were affected by violations even though they occurred earlier. Atlantic States Legal Foundation v. Al Tech Specialty Steel Corp., N.D.N.Y.1986, 635 F.Supp. 284. Environmental Law ⚿ 652

Parties who bring action against alleged polluter under citizen suit provision of the Federal Water Pollution Control Act [33 U.S.C.A. § 1365(a)(1)] are not required to show that a certain percentage of the pollution which adversely affects their interests is traceable to alleged polluter's effluent. Student Public Interest Research Group of New Jersey, Inc. v. P.D. Oil & Chemical Storage, Inc., D.N.J.1986, 627 F.Supp. 1074.

Members of plaintiff organizations, who lived near bodies of water affected by permittee's discharges into water and who claimed injury in the form of preclusion from using bodies of water for fishing and recreation, of having to look at ugly waterways, and of having to drink bottled water because of pollution in water supplies, and general public would benefit sufficiently from remedies sought by Federal Water Pollution Control Act [Federal Water Pollution Control Act Amendments of 1972, § 101 et seq., as amended, 33 U.S.C.A. § 1251 et seq.] so as to support organizations' standing to sue for past violations of expired national pollution discharge elimination system permits. Student Public Interest Research Group of New Jersey, Inc. v. AT & T Bell Laboratories, D.C.N.J.1985, 617 F.Supp. 1190. Environmental Law ⚿ 652

Public interest group had standing to challenge paper company's alleged discharge of pollutants into Delaware River in violation of Environmental Protection Agency Discharge permit on basis of group's allegation that its members were denied recreational opportunities, despite company's allegation that its contribution to river's pollution was too small to be discernable. Student Public Interest Research Group of New Jersey, Inc. v. Georgia-Pacific Corp., D.C.N.J.1985, 615 F.Supp. 1419. Environmental Law ⚿ 652

Public interest organizations had standing to bring suit to enjoin oil company from drilling without national pollution discharge elimination system permit, in view of fact that oil company potentially was and currently was discharging large amount of pollutants into Norton Sound illegally, which were waters used by such plaintiffs, and under this chapter, plaintiffs were not required to show that discharges would cause irreparable harm to environment or direct harm to themselves to maintain standing. Kitlutsisti v. Arco Alaska, Inc., D.C.Alaska 1984, 592 F.Supp. 832, appeal dismissed, opinion vacated on other grounds 782 F.2d 800.

Allen Park citizens who brought suit charging Allen Park with failure to proceed with element two of project involving sewage plant alleged interest sufficient to confer standing by claiming that they were residents and homeowners within city of Allen Park whose properties and persons were adversely affected by combined sewer system. State of Mich. v. City of Allen Park, E.D.Mich.1980, 501 F.Supp. 1007. Environmental Law ⚿ 656

Allegations of associations of taxpayers and property owners in Long Beach Island area that their members were "Directly affected" by ecological system of Barnegat Bay, that they enjoy the area's aesthetic benefits, that they used the area for recreational activities, and that the value of the properties they owned in the area would be adversely affected by a deterioration in the environmental quality of the bay were sufficient to confer standing under this section to challenge activities in filling the bay. Loveladies Property Owners Ass'n, Inc. v. Raab, D.C.N.J.1975, 430 F.Supp. 276, affirmed 547 F.2d 1162, certiorari denied 97 S.Ct. 2949, 432 U.S. 906, 53 L.Ed.2d 1077. Environmental Law ⚿ 652

Community groups who alleged that their members were citizens of District of Columbia and Montgomery County, Maryland, two jurisdictions which are contiguous to flow of Potomac River, had standing to maintain action for declaratory and injunctive relief ordering the defendants to refrain from authorizing further sewer

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

hookup permits which would result in sewage discharge affecting the water quality of the Potomac River, as against contention that plaintiffs had no standing because they failed to allege that they or their members individually used the river for any purpose, much less that they used it in any way that would be adversely affected by defendants' actions. Montgomery Environmental Coalition v. Fri, D.C.D.C.1973, 366 F.Supp. 261. Declaratory Judgment 300

42. ---- States, persons entitled to maintain action

A State is a "citizen" under the Clean Water Act (CWA) and a "person" under Resource Conservation and Recovery Act (RCRA) and is thus entitled to sue under the citizen suit sections of those Acts. U.S. Dept. of Energy v. Ohio, U.S.Ohio 1992, 112 S.Ct. 1627, 503 U.S. 607, 118 L.Ed.2d 255, on remand 965 F.2d 1401. Environmental Law 654

Commonwealth of Massachusetts was a "citizen" within meaning of this section and, hence, was authorized to bring suit under provisions of this section charging United States Veterans Administration with violating conditions of its National Pollution Discharge Elimination System permit. Com. of Mass. v. U. S. Veterans Administration, C.A.1 (Mass.) 1976, 541 F.2d 119. Environmental Law 226

States of New York and Connecticut demonstrated sufficient injuries to their proprietary interests to establish standing to challenge decision of Environmental Protection Agency (EPA) not to promulgate, pursuant to Clean Water Act (CWA), effluent limitation guidelines (ELGs) and new source performance standards (NSPSs) for storm water discharges by construction and development industry when states asserted that, in the absence of national standards, they had suffered increased pollution from upstream, out-of-state construction and development sites, that such increased pollution had forced them to take on expense of developing total maximum daily loads (TMDLs) for waterbodies polluted by out-of-state sources, and that continuing absence of national ELGs and NSPSs required them to devote their own resources to developing and refining technology-based permit requirements. National Resources Defense Council v. U.S. E.P.A., C.D.Cal.2006, 437 F.Supp.2d 1137. Environmental Law 654

In order for state enforcement action to bar citizen's suit under Clean Water Act, state enforcement must seek penalties, not mere compliance; Act requires that state commence action under state law comparable with subsection providing for administrative penalties. Molokai Chamber of Commerce v. Kukui (Molokai), Inc., D.Hawai'i 1995, 891 F.Supp. 1389. Environmental Law 226

State is "citizen" capable of maintaining citizen suit under Clean Water Act. U.S. v. City of Toledo, N.D.Ohio 1994, 867 F.Supp. 595. Environmental Law 226

States are not authorized to bring citizen suits under section 505 of the Clean Water Act, Federal Water Pollution Control Act Amendments of 1972, § 505, as amended, 33 U.S.C.A. § 1365. State of California v. Department of Navy, N.D.Cal.1986, 631 F.Supp. 584, affirmed 845 F.2d 222. Environmental Law 226

This section mandates appropriate action by Administrator when violation of this chapter is reported to him, and State was not precluded from bringing civil action against Administrator to compel him to act in proper case. People of State of Ill. ex rel. Scott v. Hoffman, S.D.Ill.1977, 425 F.Supp. 71. Environmental Law 641; Mandamus 73(1)

43. ---- Territories and insular possessions, persons entitled to maintain action

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

Puerto Rico which would sustain injury to its claim of sovereignty over its nonnavigable waters if it was required to comply with federal regulations promulgated under this chapter had standing to bring declaratory judgment action seeking determination as to applicability of such regulations to Puerto Rico's nonnavigable waters. Com. of Puerto Rico v. Alexander, D.C.D.C.1977, 438 F.Supp. 90. Declaratory Judgment 302.1

44. Parties

Citizen-suit provision of Clean Water Act (CWA) did not authorize suit against United States Army Corps of Engineers (USACE). Alliance To Save Mattaponi v. U.S. Army Corps of Engineers, D.D.C.2007, 515 F.Supp.2d 1. Environmental Law 226

Municipality and Oregon Department of Environmental Quality (DEQ) were not "indispensable parties" to citizen suit brought by environmental group against seafood processing facility under Clean Water Act (CWA), since district court was permitted to enforce provisions of CWA with or without presence of administrative agencies, neither municipality nor DEQ claimed any legally protectable interest in the action, court could have fashioned meaningful relief without subjecting facility to multiple or inconsistent obligations, and neither municipality nor DEQ was prejudiced by their absence in the litigation. Oregon State Public Interest Research Group, Inc. v. Pacific Coast Seafoods Co., D.Or.2004, 341 F.Supp.2d 1170. Federal Civil Procedure 219

In Clean Water Act (CWA) citizen's suit brought by landowner seeking to halt effluent runoff from methane production activities, producers of coal bed methane other than defendant gas company whom allegedly also had discharged effluents were not necessary parties to action, and thus would not be subject to joinder; absence of other producers would not preclude any of landowner's requested remedies, disposition of action would not impair or impede other producers' interests, and neither defendant gas company or state would be subject to substantial risk of incurring multiple or inconsistent obligations. Swartz v. Beach, D.Wyo.2002, 229 F.Supp.2d 1239. Federal Civil Procedure 211

Environmental groups that achieved favorable settlement of their claims against Environmental Protection Agency (EPA) under Clean Water Act (CWA) and Endangered Species Act (ESA) were entitled to recover attorney fees relating to formal discovery performed before EPA provided notice of its intent to produce administrative record, where litigation was limited to administrative record pursuant to protective order. American Canoe Ass'n, Inc. v. U.S. E.P.A., E.D.Va.2001, 138 F.Supp.2d 722. Environmental Law 722; Environmental Law 716

State agency, community association, and estate were not indispensable parties to citizen's suit against city alleging violations of Clean Water Act; complete relief could be accorded without these parties, as plaintiffs primarily sought to enjoin city from discharging unprocessed sewage in nearby waters, and parties had not intervened or asserted interest in action since filing of suit. Hawaii's Thousand Friends, Life of Land, Inc. v. City and County of Honolulu, D.Hawai'i 1992, 806 F.Supp. 225. Federal Civil Procedure 211; Federal Civil Procedure 219

45. Sovereign immunity

Inclusion in citizen suit sections of both Clean Water Act (CWA) and Resource Conservation and Recovery Act (RCRA) of United States as "person" went only to clauses subjecting government to suit, and broader waiver could not be inferred; authorization of district courts to impose punitive fines under Acts' civil penalties sections excluded United States from among "persons" who may be fined. U.S. Dept. of Energy v. Ohio, U.S.Ohio 1992,

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

112 S.Ct. 1627, 503 U.S. 607, 118 L.Ed.2d 255, on remand 965 F.2d 1401. Environmental Law ⚿ 223

Citizen suit sections of Clean Water Act (CWA) and Resource Conservation and Recovery Act (RCRA), to extent that they waived federal immunity at all, waived that immunity only from federal law penalties. U.S. Dept. of Energy v. Ohio, U.S.Ohio 1992, 112 S.Ct. 1627, 503 U.S. 607, 118 L.Ed.2d 255, on remand 965 F.2d 1401. United States ⚿ 125(9)

Army Corps of Engineers has sovereign immunity against citizens' Clean Water Act (CWA) suit. Preserve Endangered Areas of Cobb's History, Inc. v. U.S. Army Corps of Engineers, C.A.11 (Ga.) 1996, 87 F.3d 1242. United States ⚿ 125(28.1)

Environmental Protection Agency (EPA) administrator had sovereign immunity against citizens' Clean Water Act (CWA) suit concerning administrator's decision not to overrule Army Corps of Engineers' determination of wetlands permit; administrator's decision was discretionary. Preserve Endangered Areas of Cobb's History, Inc. v. U.S. Army Corps of Engineers, C.A.11 (Ga.) 1996, 87 F.3d 1242. United States ⚿ 50.10(1)

Congress has not waived United States' sovereign immunity to authorize imposition of punitive civil penalties on federal facilities for past violations of Clean Water Act, whether permit is issued by Environmental Protection Agency (EPA) or by the State and approved by EPA. Sierra Club v. Lujan, C.A.10 (Colo.) 1992, 972 F.2d 312. United States ⚿ 125(9)

Even if federal common law of nuisance extends to suits involving pollution originating and having effect in the territorial jurisdiction of the same state, action by Commonwealth of Massachusetts charging United States Veterans Administration with violating such law by discharging effluents from its Bedford, Massachusetts hospital into a tributary of the Shawsheen River, was barred by doctrine of sovereign immunity since the Administration is a federal agency and the action sought relief in form of monetary penalties or court-ordered actions from or by the Administration; waiver of immunity to common law suit could not be found in waiver provisions of subsec. (a) of this section coupled with policy provision of section 1323 of this title subjecting federal installations to this chapter's provisions. Com. of Mass. v. U. S. Veterans Administration, C.A.1 (Mass.) 1976, 541 F.2d 119. United States ⚿ 125(9); United States ⚿ 125(28.1)

Citizen suit provisions of Clean Water Act (CWA) did not abrogate state's sovereign immunity, and thus city could not maintain third-party action against state for indemnification and contribution for monetary penalties for which it was found liable in citizen suit as result of its violations of CWA. Catskill Mountains Chapter of Trout Unlimited Inc. v. City of New York, N.D.N.Y.2002, 207 F.Supp.2d 3.

Army Corps of Engineers had sovereign immunity against citizen suit under Clean Water Act (CWA) based on its alleged failure to enforce terms and conditions of permits issued by Corps to regulate discharge of dredged and fill material into navigable stream, absent showing that Environmental Protection Agency (EPA) was acting in tandem with Corps. Northwest Environmental Defense Center v. U.S. Army Corps of Engineers, D.Or.2000, 118 F.Supp.2d 1115.

Clean Water Act (CWA) section expressly permitting citizen suits against "Administrator" of Environmental Protection Agency (EPA) did not extend waiver of sovereign immunity to include Army Corps of Engineers, despite claim that Administrator had delegated duties to Secretary of Army, such that Corps stood in shoes of EPA; court was not at liberty to rewrite statute in accordance with extrinsic delegations of authority and, moreover, Administrative Procedure Act (APA) provided alternative means of obtaining judicial review of de-

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

termination by Corps. Cascade Conservation League v. M.A. Segale, Inc., W.D.Wash.1996, 921 F.Supp. 692. United States 125(28.1)

As to count of environmental groups' complaint charging federal officials with violating this chapter, sovereign immunity was abolished by provision of this section that any citizen may commence civil action on his own behalf against United States or any other governmental instrumentality or agency for violating effluent standards or limitation in this chapter. South Carolina Wildlife Federation v. Alexander, D.C.S.C.1978, 457 F.Supp. 118. United States 125(9)

Action brought against Environmental Protection Agency and its Administrator under this chapter and based on federal common law of nuisance was not barred by sovereign immunity, notwithstanding want of compliance with notice requirements of this section, i.e., that notice be given Administrator 60 days before commencing action against Administrator for failure to perform a nondiscretionary duty. Long Beach Tp. v. City of New York, D.C.N.J.1978, 445 F.Supp. 1203. United States 125(28.1)

Where funds for construction of storm and sanitary sewer separation system had already been committed by government for expenditure, so that effect of injunctive relief would be only to bar expenditure in particular way, action against Environmental Protection Agency challenging its denial of bidder's protest was not barred by sovereign immunity. Maclean Const. Co. v. U.S. Environmental Protection Agency, W.D.Mich.1976, 432 F.Supp. 242. United States 125(28.1)

The intended objects of this chapter's limited waiver of immunity from state enforcement of effluent standards are federal buildings and installations operated directly by the government, such as penitentiaries, Army bases, post offices, court houses and the like; however, contractor operator of United States owned munitions plant was not a "department, agency, or instrumentality" of the federal government and enjoyed no immunity as result of its relationship with government from state's enforcement of this chapter. U. S. v. Pennsylvania Environmental Hearing Bd., M.D.Pa.1977, 431 F.Supp. 747, affirmed 584 F.2d 1273. States 18.93

It was congressional intent to waive sovereign immunity as to any action brought to enforce this chapter. State of Minn., by Spannaus v. Callaway, D.C.Minn.1975, 401 F.Supp. 524, reversed on other grounds 543 F.2d 1198, certiorari denied 97 S.Ct. 1672, 430 U.S. 977, 52 L.Ed.2d 373. United States 125(5)

46. State defendants

Citizen suit provisions of Clean Water Act (CWA), Resource Conservation and Recovery Act (RCRA), and Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), permitting citizens to sue as private attorneys general in circumstances in which government authorities have, after notice, failed to take steps to remedy particular environmental harms, did not abrogate state sovereign immunity under Eleventh Amendment, but rather were expressly limited by it. Burnette v. Carothers, C.A.2 (Conn.) 1999, 192 F.3d 52, certiorari denied 121 S.Ct. 657, 531 U.S. 1052, 148 L.Ed.2d 560. Federal Courts 265

Eleventh Amendment generally prohibits federal courts from hearing suits brought by private citizens against state governments, without state's consent, and state immunity extends to state agencies and to state officers, who act on behalf of state and can therefore assert state's sovereign immunity. Natural Resources Defense Council v. California Dept. of Transp., C.A.9 (Cal.) 1996, 96 F.3d 420. Federal Courts 265; Federal Courts 269

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

Clean Water Act (CWA) did not prescribe limits on citizen suits in federal court against state officers for violation of CWA, and thereby implicitly authorized federal jurisdiction over claims against director of California Department of Transportation for prospective injunctive relief for violations of CWA to extent permitted by Eleventh Amendment. Natural Resources Defense Council v. California Dept. of Transp., C.A.9 (Cal.) 1996, 96 F.3d 420. Federal Courts 272

Upon proper evidentiary showing at trial, damages could be awarded against New York State Thruway Authority (NYSTA) in citizen suit brought under Clean Water Act (CWA), despite NYSTA's claim of Eleventh Amendment immunity; legislature had directed that all awards and judgments against NYSTA were to be paid out of monies of NYSTA and, therefore, if plaintiffs prevailed, they would receive nothing from state treasury. Mancuso v. New York State Thruway Authority, S.D.N.Y.1995, 909 F.Supp. 133, affirmed 86 F.3d 289, certiorari denied 117 S.Ct. 481, 519 U.S. 992, 136 L.Ed.2d 375. Federal Courts 268.1

Citizen suit provision of Federal Water Pollution Control Act did not authorize action against state officials and methane gas producer based on officials' alleged failure to require producer to comply with effluent limitations adopted under Federal Water Pollution Control Act when issuing national pollutant discharge elimination system permit. Legal Environmental Assistance Foundation, Inc. v. Pegues, M.D.Ala.1989, 717 F.Supp. 784, affirmed 904 F.2d 640. Environmental Law 226

Pennsylvania Environmental Hearing Board was not required to vindicate its effluent standards against contractor or operator of government owned munitions plant by a civil action in a United States district court. U. S. v. Pennsylvania Environmental Hearing Bd., M.D.Pa.1977, 431 F.Supp. 747, affirmed 584 F.2d 1273. Environmental Law 214

47. Indian tribes

"Citizen suit" and accompanying provisions of Clean Water Act (CWA) and Resource Conservation and Recovery Act (RCRA) waived Indian tribe's sovereign immunity in citizen suit brought by environmental organizations against tribe in its capacity as operator of landfill; term "person," as used in relevant sections of Acts, unequivocally included Indian tribes. Atlantic States Legal Foundation v. Salt River Pima-Maricopa Indian Community, D.Ariz.1993, 827 F.Supp. 608. Indians 235

48. Intervention by citizens--Generally

Environmental group was equivalent to "party" able to litigate fully on merits, as intervenor in consolidated actions for federal and state enforcement of CWA, including consolidation of environmental group's citizen suit, against county and municipality for sanitary sewer overflows, where environmental group's consolidated complaint was not mere duplicate of governments' complaints, but was based on allegations that state and federal governments had failed to diligently prosecute ongoing CWA violations for 10 years, and that governments were proposing to consent to settlement inadequate to remedy violations. Sierra Club v. Hamilton County Bd. of County Com'rs, C.A.6 (Ohio) 2007, 504 F.3d 634. Environmental Law 716

Property owners waived arguments, in citizen suit under Clean Water Act (CWA) against, inter alia, village, which were raised for first time in their reply briefs on appeal. Lockett v. E.P.A., C.A.5 (La.) 2003, 319 F.3d 678. Environmental Law 682

Environmental group and its members stated sufficient allegations to classify them as "citizens" entitled to inter-

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

vene in suit by Administrator of Environmental Protection Agency to attain compliance with Clean Water Act. U.S. v. Metropolitan St. Louis Sewer Dist. (MSD), C.A.8 (Mo.) 1989, 883 F.2d 54. Federal Civil Procedure 331

Under 1972 amendments to this section, Illinois had right to intervene in United States action against Illinois industrial polluter of Lake Michigan. People of State of Ill. v. Outboard Marine Corp., Inc., C.A.7 (Ill.) 1982, 680 F.2d 473. Federal Civil Procedure 338

State Stream Pollution Control Board's action to abate a nuisance as a matter of federal common law was not an action to require compliance with a "standard, limitation or order" within meaning of this section, and thus private citizen was not entitled to intervene. Stream Pollution Control Bd. of State of Ind. v. U.S. Steel Corp., C.A.7 (Ind.) 1975, 512 F.2d 1036. Federal Civil Procedure 315

Court would allow environmental association to participate as an amicus curiae in action seeking declaration that United States Army Corps of Engineers (USACE) had no authority to regulate upland ditches, since association sought to support the government's arguments in favor of the validity of its action and its interpretation of the scope of the CWA, and, thus, the court may benefit from association's input. National Ass'n of Home Builders v. U.S. Army Corps of Engineers, D.D.C.2007, 519 F.Supp.2d 89. Amicus Curiae 1

To extent State, like the United States, was seeking abatement in form of injunctive relief that was requested by both parties in suit under Clean Water Act, state could maintain its federal cause of action as citizen-intervenor, despite its failure to give prior notice to alleged violator. U.S. v. City of Toledo, N.D.Ohio 1994, 867 F.Supp. 595. Environmental Law 659

Public interest group and towns located on shore of Massachusetts Bay were not entitled to intervene in case under Federal Water Pollution Control Act, following determination of liability and issuance of long-term scheduling order, to protect their rights to unpolluted bay water, which were allegedly threatened by possible siting of sewage outfall somewhere in bay and by other decisions to be made in cleanup effort, even if some sort of violation of effluent standards should occur in future with siting of outfall; movants were aware of their concerns well before agency began to openly consider placement of sewage outfall, allowing intervention would likely reopen issues already decided in liability phase, movants were entitled to participate in political and administrative fora in which substantive decisions for new treatment system would be made and introduction of new parties would hamper important goal of bringing pollution of harbor under meaningful control as soon as possible. U.S. v. Metropolitan Dist. Com'n, D.Mass.1988, 679 F.Supp. 1154, affirmed in part , appeal dismissed in part 865 F.2d 2.

The absence of an opportunity for intervention in state proceedings, by itself, does not automatically entitle a plaintiff to avoid this section's mandatory preference for administrative, rather than a private citizen enforcement action. Hudson River Sloop Clearwater, Inc. v. Consolidated Rail Corp., N.D.N.Y.1984, 591 F.Supp. 345, affirmed in part , reversed in part 768 F.2d 57. Environmental Law 226

State is "citizen" for purposes of 1972 amendments to this section dealing with the right to intervene in an action under the amendments. National Wildlife Federation v. Ruckelshaus, D.C.N.J.1983, 99 F.R.D. 558. Federal Civil Procedure 338

This section, authorizing intervention of right of a "citizen" having an interest which is or may be adversely affected, does not contemplate limited intervention. U. S. v. Ketchikan Pulp Co., D.C.Alaska 1977, 74 F.R.D. 104.

Federal Civil Procedure ⚷ 315

49. ---- Exhaustion of administrative remedies, intervention by citizens

This section, which confers upon a "citizen" the right to intervene in any enforcement action in which he has an interest, does not make exhaustion of administrative remedies a prerequisite to such intervention, and thus intervention two months after filing of complaint by the United States and filing of proposed consent decree which had been negotiated with pulp company was timely, though intervenors had not participated in administrative and public hearings and though company's duties under the proposed decree were about to begin, where intervenors had rapidly made comments on the proposed decree and attempted to intervene after receiving necessary information. U. S. v. Ketchikan Pulp Co., D.C.Alaska 1977, 74 F.R.D. 104. Federal Civil Procedure ⚷ 320

50. ---- Interests affected, intervention by citizens

Owners of property subject to condemnation for two reservoir projects, conservation groups whose members used property that would be affected by the projects, and contractor's association whose members would be directly affected by injunction against further work on the projects, all had interest sufficient to confer standing upon them to intervene in action brought by state to enforce this chapter. State of Ohio ex rel. Brown v. Callaway, C.A.6 (Ohio) 1974, 497 F.2d 1235. Environmental Law ⚷ 656; Environmental Law ⚷ 652

Landowner seeking to halt effluent runoff from methane production activities alleged property interest that was adversely affected by producer's ongoing violations of effluent standards, as required to state claim under citizen's suit provision of Clean Water Act (CWA); landowner alleged that his interest in his ranch and its economic viability would be adversely affected by producer's past and continuous discharges of coal bed methane process water, in violation of National Pollutant Discharge Elimination System (NPDES) permit issued by state Department of Environmental Quality (DEQ). Swartz v. Beach, D.Wyo.2002, 229 F.Supp.2d 1239. Environmental Law ⚷ 226

Criticisms of proposed consent decree in action brought to compel Administrator of Environmental Protection Agency (EPA) to issue regulations regarding cooling water intake structures did not demonstrate that decree would impair any legally protected interests of electric utilities and associations so as to warrant their intervention; utilities and associations offered no evidence that their views would not be taken into account in administrative process set forth in proposed decree, that their interests would be prejudiced as result of timetable and provisions for its modification contained in decree, or that EPA was under any obligation imposed by proposed decree to issue substantive regulations, or any regulations at all. Cronin v. Browner, S.D.N.Y.1995, 898 F.Supp. 1052. Federal Civil Procedure ⚷ 331; Federal Civil Procedure ⚷ 2397.3

Right to intervene was granted to petitioners by this section, adversely affected interest of proposed intervenors being specific and not generalized concern with chemical dump site issue, but applicants did not have right to intervene under "citizen suit" provision of Resource Conservation and Recovery Act, section 6972 of Title 42, which was more limited. Federal Water Pollution Control Act Amendments of 1972, §§ 505, 505(b)(1), (b)(1)(B), (g), 33 U.S.C.A. §§ 1365, 1365(b)(1), (b)(1)(B), (g). U. S. v. Hooker Chemicals and Plastics Corp., W.D.N.Y.1982, 540 F.Supp. 1067, affirmed 749 F.2d 968. Federal Civil Procedure ⚷ 331

In action under this section, organization alleging that it had members who derived a portion of their livelihood from commercial fisheries which might be impacted by effluent discharge, and organization which alleged that the waters which might be impacted were used by its members for recreation, had standing to intervene, but al-

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

legation of only a generalized interest by third organization was insufficient. U. S. v. Ketchikan Pulp Co., D.C.Alaska 1977, 74 F.R.D. 104. Federal Civil Procedure 331

Allegation that members of environmental organization had significant, judicially protectable interests in the aesthetic, conservational and recreational as well as economic quality of the water sought to be protected by federal regulations did not rise to level of a direct, substantial, legally protectable interest warranting intervention as of right in action brought by power utility companies challenging the regulations. Commonwealth Edison Co. v. Train, N.D.Ill.1976, 71 F.R.D. 391. Federal Civil Procedure 331

51. Remedies available

Compensatory mitigation was an acceptable form of mitigation to offset the environmental degradation of streams and creeks under federal regulations implementing the Clean Water Act and Army Corps of Engineers guidelines. City of Olmsted Falls, Ohio v. U.S. Environmental Protection Agency, C.A.6 (Ohio) 2006, 435 F.3d 632, rehearing and rehearing en banc denied. Environmental Law 191

Trial court did not abuse discretion by ordering Environmental Protection Agency (EPA) to perform its obligations under Clean Water Act (CWA) by ordering EPA to submit to court report on adequacy of water quality monitoring in Alaska, and to propose long-term schedule for establishment of total maximum daily loads (TMDL) of pollution allowed to be discharged into waters, even though EPA claimed that language of CWA did not specifically require it to prepare or present report on water quality monitoring, and that statute relegated pace at which TMDL would be established entirely to EPA's discretion. Alaska Center for Environment v. Browner, C.A.9 (Wash.) 1994, 20 F.3d 981. Environmental Law 695

Limited remedies set forth in citizen-suit provision of Clean Water Act (CWA) did not bar environmental organizations' claim against Environmental Protection Agency (EPA) under Administrative Procedure Act (APA) for EPA's failure to veto permit issued by United States Army Corps of Engineers (USACE) to city for construction of 1,526-acre reservoir. Alliance To Save Mattaponi v. U.S. Army Corps of Engineers, D.D.C.2007, 515 F.Supp.2d 1. Environmental Law 226

If person prevails in citizen's suit under Clean Water Act (CWA), court may order any relief it considers necessary to secure prompt compliance with CWA. Swartz v. Beach, D.Wyo.2002, 229 F.Supp.2d 1239. Environmental Law 695

Citizen suit under Clean Water Act could not be brought to challenge alleged failure of Environmental Protection Agency (EPA) Administrator to comply with statutory mandate to "promptly" prepare and publish water quality standard regulations, as statutory requirement was not categorical mandate depriving EPA of all discretion over timing for preparing and publishing regulations; to resolve case, court would have to define limits of EPA's discretion by looking to legislative language, history and statutory scheme as whole. Defenders of Wildlife v. Browner, D.Ariz.1995, 888 F.Supp. 1005. Environmental Law 641

Plaintiffs are not entitled to "personalized" remedy in Clean Water Act (CWA) citizen suits. Saboe v. State of Or., D.Or.1993, 819 F.Supp. 914. Environmental Law 695

52. Injunction--Generally

Construction of mining disposal facility would adversely affect the environment by destroying trees and other

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

vegetation, and by killing aquatic life, warranting injunction pending conservation groups' appeal of trial court's grant of summary judgment for United States Army Corps of Engineers, Corps officials, and the United States Forest Service in Clean Water Act (CWA) action challenging the Corps' issuance of permit authorizing mining company's construction of facility. Southeast Alaska Conservation Council v. U.S. Army Corps of Engineers, C.A.9 2006, 472 F.3d 1097. Environmental Law ⚷ 700

District court did not abuse its discretion by modifying injunction, which prohibited oil company from discharging produced water from waste treatment facility into bay until it obtained National Pollution Discharge Elimination System (NPDES) permit, in order to allow oil company to attempt to take advantage of grace period under new general NPDES permit issued by Environmental Protection Agency (EPA); modified injunction required oil company to comply with EPA's permit and would still subject oil company to penalties for any violation of injunction or permit, and EPA was more appropriate supervising body than district court. Sierra Club, Lone Star Chapter v. Cedar Point Oil Co. Inc., C.A.5 (Tex.) 1996, 73 F.3d 546, certiorari denied 117 S.Ct. 57, 519 U.S. 811, 136 L.Ed.2d 20. Environmental Law ⚷ 700

Irreparable harm necessary to enjoin further violations of National Pollutant Discharge Elimination System Permit could not be presumed from fact that Clean Water Act had been violated by refinery operator in past; rather, traditional equitable standards were required to be applied in determining whether injunction was appropriate for remedying operator's violations. Natural Resources Defense Council v. Texaco Refining and Marketing, Inc., C.A.3 (Del.) 1990, 906 F.2d 934, on remand 800 F.Supp. 1. Environmental Law ⚷ 700; Environmental Law ⚷ 229

Law does not require Clean Water Act defendant to show there is no conceivable chance that future violation will occur in order to escape imposition of an injunction; defendant only is required to show there is no reasonable expectation that wrong will be repeated. Atlantic States Legal Foundation, Inc. v. Tyson Foods, Inc., C.A.11 (Ala.) 1990, 897 F.2d 1128. Environmental Law ⚷ 700

In the absence of a current violation of the Clean Water Act, an action under the citizens suit provision of the Act may go forward if the citizen-plaintiff fairly alleges a continuing likelihood that the defendant, if not enjoined, will again proceed to violate the Act; declining to follow *Chesapeake Bay Foundation, Inc. v. Gwaltney of Smithfield, Ltd.*, 791 F.2d 304 (4th Cir.). Pawtuxet Cove Marina, Inc. v. Ciba-Geigy Corp., C.A.1 (R.I.) 1986, 807 F.2d 1089, certiorari denied 108 S.Ct. 484, 484 U.S. 975, 98 L.Ed.2d 483. Environmental Law ⚷ 226

Submission of plaintiff's Clean Water Act claim to jury, without objection by city, did not preclude district court from considering plaintiff's request for injunctive relief in view of the fact that jury was only asked to decide legal issue of whether city violated Act while power to grant or deny equitable relief in the form of injunction resided in district court. Jones v. City of St. Clair, C.A.8 (Mo.) 1986, 804 F.2d 478. Environmental Law ⚷ 700

District of Columbia failed to establish that Maryland advanced wastewater treatment plant which discharged effluent into creek which ran through the District was a nuisance so as to entitle District to an injunction. District of Columbia v. Schramm, C.A.D.C.1980, 631 F.2d 854, 203 U.S.App.D.C. 272. Nuisance ⚷ 84

Immediate and permanent injunction against use of non-North American strains of Atlantic salmon in salmon farms was necessary in public interest, pursuant to Clean Water Act (CWA), to protect endangered wild Atlantic salmon populations in Maine; injunction would remove principal hazard posed by farms' operations to health of wild populations and would significantly promote health of species. U.S. Public Interest Research Group v. At-

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

lantic Salmon of Maine, LLC., D.Me.2003, 257 F.Supp.2d 407, stay denied 273 F.Supp.2d 126, affirmed 339 F.3d 23. Environmental Law ⚿ 700

Injunctive relief against future violations of discharge permit was not warranted, notwithstanding past violations, in view of permittee's compliance with administrative consent order entered into with New Jersey Department of Environmental Protection and Energy (NJDEPE), in absence of environmental injury which was permanent or of long duration and in view of permittee's sincere and founded claims of penitence. Public Interest Research Group of New Jersey, Inc. v. Hercules, Inc., D.N.J.1993, 830 F.Supp. 1525, affirmed in part , reversed in part 50 F.3d 1239, on remand 1996 WL 905920. Environmental Law ⚿ 700

Harm to waters in which plaintiffs had cognizable interest could be redressed by injunction barring further violations of discharge permit, so that plaintiffs had standing to maintain citizen suit under the Clean Water Act. Natural Resources Defense Council, Inc. v. Texaco Refining and Marketing, Inc., D.Del.1992, 800 F.Supp. 1, affirmed in part , reversed in part 2 F.3d 493. Environmental Law ⚿ 656

District court would not determine whether injunction could properly issue to prohibit National Pollutant Discharge Elimination System (NPDES) permittee from future violations of terms and conditions of permit, where permit had expired on its own terms before conclusion of litigation regarding violations. Atlantic States Legal Foundation Inc. v. Universal Tool & Stamping Co., Inc., N.D.Ind.1992, 786 F.Supp. 743. Environmental Law ⚿ 700

Environmental groups challenging in citizen's suit under Clean Water Act pollutant discharges at Air Force base in excess of effluent limitations in permits were entitled to permanent injunction requiring that new waste water treatment plant be constructed on schedule, that interim backwash filters be installed to reduce amount of toxic pollutants presently being discharged, that necessary maintenance and repairs be undertaken, and that relevant reports be provided; excessive discharges caused and would continue to cause irreparable harm, issuance of injunction would not cause Air Force undue harm, it was in public interest to reduce pollution, and it was established that excess discharges violated Clean Water Act. Public Interest Research Group of New Jersey, Inc. v. Rice, D.N.J.1991, 774 F.Supp. 317. Environmental Law ⚿ 700

Immediate injunctive relief would not be granted in citizen suit under Clean Water Act challenging city's dumping of leachate in bay, as part of cleanup efforts at landfill, because immediate injunction would be unworkable; permanent injunction would be entered permitting state and municipal defendants reasonable time to develop alternative plan for landfill cleanup. New York Coastal Fishermen's Ass'n v. New York City Dept. of Sanitation, S.D.N.Y.1991, 772 F.Supp. 162. Environmental Law ⚿ 700

Injunctive relief was appropriate to prevent surface water discharge permit holder from allowing future effluent violations in action under Federal Water Pollution Prevention and Control Act where environmental groups had shown actual success on merits, effluent violations where irreparable injuries, risk of future violations was present where permit holder had exceeded discharge parameters at least once since litigation was commenced, and where permit holder had long history of violations prior to commencement of action. Public Interest Research Group of New Jersey v. Yates Industries, Inc., D.N.J.1991, 757 F.Supp. 438, reconsideration granted in part 790 F.Supp. 511. Environmental Law ⚿ 701

Injunction would be issued against violation of Clean Water Act discharge and reporting requirements by indirect discharger found to have committed such violations. International Union, United Auto. Aerospace and Agr. Implement Workers of America, AFL-CIO v. Amerace Corp., Inc., D.N.J.1990, 740 F.Supp. 1072. Environ-

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

mental Law 700

Persons and entities challenging discharge of raw sewage into river caused by failure of private septic system were entitled to preliminary injunction against owners and operators of system requiring removal of sewage from holding tanks; there was sufficient probability of success on merits of claims that owners and operators were in violation of federal and state Clean Water Acts, Rhode Island common law of nuisance and administrative order, irreparable harm would result if pollution was allowed to resume flowing until permanent solution was found and constructed, and owners and operators knew of violations before they bought property containing septic system, made minimal efforts to correct the situation, and executed paper land transactions reducing equity in land by over $2,000,000 without correcting septic system. Friends of Sakonnet v. Dutra, D.R.I.1990, 738 F.Supp. 623. Environmental Law 701

Limited partnerships which were precluded from developing housing on their property due to past failure of owner of water pollution control plant to comply with construction schedule in National Pollution Discharge Elimination System permit were not entitled to injunction requiring owner to comply with the schedule contained in the permit, where owner was in compliance with the schedule and there was no evidence that violation was reasonably expected to recur. Locust Lane v. Swatara Tp. Authority, M.D.Pa.1986, 636 F.Supp. 534. Environmental Law 700

Public interest group which brought citizen suit against paper company under § 505 of Clean Water Act [33 U.S.C.A. § 1365] based on company's alleged violation of Environmental Protection Agency water pollution discharge permit could seek injunction permitting group to establish and operate one year discharge monitoring program to be financed by paper company. Student Public Interest Research Group of New Jersey, Inc. v. Georgia-Pacific Corp., D.C.N.J.1985, 615 F.Supp. 1419. Environmental Law 700

Under this section, owner of land traversed by pond and stream allegedly polluted by defendant could sue for only prospective injunctive relief upon giving 60 days' notice to federal Environmental Protection Agency, the state, and any alleged violator and owner could not recover monetary relief under this section or under federal common law. Love v. New York State Dept. of Environmental Conservation, S.D.N.Y.1981, 529 F.Supp. 832. Environmental Law 700

52a. ---- Balance of hardships, injunction

Balance of hardships favored injunction pending conservation groups' appeal of trial court's grant of summary judgment for United States Army Corps of Engineers, Corps officials, and the United States Forest Service in Clean Water Act (CWA) action challenging the Corps' issuance of permit authorizing mining company's construction of disposal facility; disposal of tailings would not begin for some months, and thus construction activities would not have to begin immediately. Southeast Alaska Conservation Council v. U.S. Army Corps of Engineers, C.A.9 2006, 472 F.3d 1097. Environmental Law 700

52b. ---- Public interest, injunction

Public interest favored injunction pending conservation groups' appeal of trial court's grant of summary judgment for United States Army Corps of Engineers, Corps officials, and the United States Forest Service in Clean Water Act (CWA) action challenging the Corps' issuance of permit authorizing mining company's construction of disposal facility; although the public had an economic interest in the mine, delay in construction activities caused by the injunction would not reduce significantly any future economic benefit that may result from the

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

mine's operation. Southeast Alaska Conservation Council v. U.S. Army Corps of Engineers, C.A.9 2006, 472 F.3d 1097. Environmental Law ⚷ 700

52c. ---- Likelihood of success, injunction

Plaintiffs seeking a preliminary injunction after Army Corps of Engineers issued fill permit for road across wetlands failed to show likelihood of success on merits of claims under Clean Water Act (CWA) in balancing of benefits and detriments, consideration of alternatives and secondary impacts, analysis of public interest, and effects of proposed discharge. Northwest Bypass Group v. U.S. Army Corps of Engineers, D.N.H.2007, 470 F.Supp.2d 30, reconsideration denied 2007 WL 1447687, reconsideration denied 490 F.Supp.2d 184. Environmental Law ⚷ 701

53. Civil penalty

Individualized proof was not required on claims brought by labor organization alleging violation of Resource Conservation and Recovery Act (RCRA) and Clean Water Act (CWA), for purpose of associational standing inquiry, since organization only sought civil penalties and injunctive relief, not money damages. Building and Const. Trades Council of Buffalo, New York and Vicinity v. Downtown Development, Inc., C.A.2 (N.Y.) 2006, 448 F.3d 138. Environmental Law ⚷ 652

Where administrative penalty action against village for releasing untreated sewage was commenced by Louisiana Department of Environmental Quality (DEQ) prior to property owners' filing of notice of intent to sue, under Clean Water Act (CWA), and DEQ's action encompassed all violations included in notice, exception to CWA provision, barring citizen suits in situations in which state was diligently prosecuting actions under comparable state law, did not apply to allow owners' action. Lockett v. E.P.A., C.A.5 (La.) 2003, 319 F.3d 678. Environmental Law ⚷ 226

Alabama statutory scheme under which state environmental agency had issued enforcement order against city's wastewater treatment plant was not "comparable" to federal Clean Water Act (CWA), and thus CWA citizen suit was not barred; although penalty-assessment provisions of state and federal schemes were similar, state law did not contain comparable public-participation provisions. McAbee v. City of Fort Payne, C.A.11 (Ala.) 2003, 318 F.3d 1248, rehearing and rehearing en banc denied 65 Fed.Appx. 716, 2003 WL 1877216. Environmental Law ⚷ 226

Fact that proposed consent decree in citizen suit brought under Clean Water Act (CWA) contained no admission of liability by the defendant did not alter requirement that consent decree call for civil penalty based on prior court determination of liability. Friends of the Earth v. Archer Daniels Midland Co., N.D.N.Y.1992, 780 F.Supp. 95. Federal Civil Procedure ⚷ 2397.2

Penalties for Clean Water Act violations would be linked to citizen plaintiff's proof that polluter had committed postcomplaint violations or that, at time of trial, there was reasonable likelihood that sporadic or intermittent pollution would occur in future. Natural Resources Defense Council, Inc. v. Gould, Inc., D.Mass.1990, 733 F.Supp. 8. Environmental Law ⚷ 223

Penalties could be imposed in citizen suit only for violations committed after filing of complaint under Clean Water Act. Natural Resource Defense Council, Inc. v. Gould, Inc., D.Mass.1989, 725 F.Supp. 634, modified 733 F.Supp. 8. Environmental Law ⚷ 223

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

54. Clean up order

Clean up order would not properly issue against National Pollutant Discharge Elimination System (NPDES) permittee where responsibility for cleaning affected area was within jurisdiction of county drainage board, which had already scheduled clean-up project. Atlantic States Legal Foundation Inc. v. Universal Tool & Stamping Co., Inc., N.D.Ind.1992, 786 F.Supp. 743. Environmental Law 212

55. Enforcement of state regulations

Citizen suit under Clean Water Act (CWA) may not be brought to enforce state regulations, including provisions of state pollutant discharge elimination system (SPDES) permits, which mandate greater scope of coverage than that required by CWA and its implementing regulations. Atlantic States Legal Foundation, Inc. v. Eastman Kodak Co., C.A.2 (N.Y.) 1993, 12 F.3d 353, as amended , certiorari denied 115 S.Ct. 62, 513 U.S. 811, 130 L.Ed.2d 19. Environmental Law 226

56. Attorney fees--Generally

Enhancement for contingency of attorney fees awarded to prevailing party is not permitted under fee-shifting provisions of Solid Waste Disposal Act and Clean Water Act. City of Burlington v. Dague, U.S.Vt.1992, 112 S.Ct. 2638, 505 U.S. 557, 120 L.Ed.2d 449, on remand 976 F.2d 801. Environmental Law 716

Even if Environmental Protection Agency (EPA) found and was required to act upon finding that mine operator was violating Clean Water Act (CWA), pursuant to CWA provision indicating that administrator "shall issue" order requiring violator to comply with CWA or bring civil action, course which was actually taken by EPA, and which rendered moot lawsuit to compel it to act, that of issuing permit to operator, was not mandated by statute and thus did not support, under catalyst theory, recovery of attorney fees by environmental groups which had sued to compel EPA to act. Bravos v. E.P.A., C.A.10 (N.M.) 2003, 324 F.3d 1166, 190 A.L.R. Fed. 643. Environmental Law 716

District court could apply forum-wide market rate covering all of New Jersey in determining "relevant market" for legal services rates, in awarding attorney fees under the Clean Water Act in suit against Air Force, rather than using "southern New Jersey"; evidence in record showed that few southern New Jersey law firms were available that were willing to represent public interest group bringing suit, and record lacked evidence from which geographic boundaries of southern New Jersey market for legal services could be inferred. Public Interest Research Group of New Jersey, Inc. v. Windall, C.A.3 (N.J.) 1995, 51 F.3d 1179, on remand 1995 WL 836144. Environmental Law 716

Environmental groups' suit challenging Army Corp of Engineers' determination that tract of land was not wetlands under Clean Water Act qualified as a citizen's suit for purposes of determining environmental group's entitlement to attorneys' fees. National Wildlife Federation v. Hanson, C.A.4 (N.C.) 1988, 859 F.2d 313, rehearing denied. Environmental Law 715

Fact that district court reviewed Army Corps of Engineers' wetland determination using standards set forth in Administrative Procedure Act did not preclude environmental groups from recovering attorneys' fees under Clean Water Act; Clean Water Act did not establish standards for reviewing wetland determinations, and appropriate standards for reviewing action were contained in Administrative Procedure Act. National Wildlife Federation v. Hanson, C.A.4 (N.C.) 1988, 859 F.2d 313, rehearing denied. Environmental Law 715

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

There was no basis for including a contingency factor in award of attorney fees to plaintiffs following settlement of suit under the Federal Water Pollution Control Act, where there was no trial, recovery was minimal, and risks to plaintiffs' counsel appeared slight. Friends of the Earth v. Eastman Kodak Co., C.A.2 (N.Y.) 1987, 834 F.2d 295. Federal Civil Procedure 2737.13

The Clean Water Act left the awarding of costs and attorneys fees solely to the discretion of the court so that submission to jury of basic question of whether city violated Clean Water Act could not shift to jury responsibility for deciding issue of costs of litigation. Jones v. City of St. Clair, C.A.8 (Mo.) 1986, 804 F.2d 478. Environmental Law 716

Environmental group could not recover from industry intervenors its attorney fees in successfully defending settlement agreement with Environmental Protection Agency, pursuant to which agency agreed to implement toxic pollutant control provisions of Clean Water Act, where intervenors' claims that settlement was inconsistent with recent amendments to Act were plainly not unfounded and were reasonably calculated to advance implementation of Act. Natural Resources Defense Council, Inc. v. Thomas, C.A.D.C.1986, 801 F.2d 457, 255 U.S.App.D.C. 243. Environmental Law 716

No fees could be awarded against government for expenses that citizens group incurred in appeal of district court's order issuing preliminary injunction halting all land clearing on portion of tract not already designated as wetland and requiring federal defendants to prepare final wetland determination within 60 days, and determining which land clearing activities required permit under 33 U.S.C.A. § 1344 where citizens groups prevailed in appeal only over private defendants, not government. Avoyelles Sportsmen's League v. Marsh, C.A.5 (La.) 1986, 786 F.2d 631.

Petition for review of permit decision of Environmental Protection Agency would be deemed a "citizen suit" "brought pursuant to" this section governing citizen suits for purposes of attorney fees even though, procedurally, it was maintained under section 1369 of this title governing petitions for review. Roosevelt Campobello Intern. Park Com'n v. U.S. E.P.A., C.A.1 1983, 711 F.2d 431. Environmental Law 716

Section 2412 of Title 28 which provides for mandatory award of counsel fees to qualified prevailing party in actions brought against the United States, unless its position was substantially justified, applies to petition for counsel fees incurred in review proceeding brought pursuant to this chapter, which provides for award of counsel fees for civil actions brought in the district court but is silent with respect to counsel fees for petitions for review filed in the court of appeals. Natural Resources Defense Council, Inc. v. U.S. E.P.A., C.A.3 1983, 703 F.2d 700. United States 147(16)

In action brought by United States against oil tanker owners to recover costs of cleaning up oil spill, no error occurred in denying attorney fees to United States, where fact of applicability of section 2412 of Title 28 generally barring attorney fee awards meant that absent specific and express authorization by statute, United States could not recover its fees, and neither this chapter nor Rivers and Harbors Act, section 401 et seq. of this title provided such authorization, and Court of Appeals was not cited to any other statute which could govern instant suit, and United States' contention that local 32 L.P.R.A.App. II, Rule 44.4 permitting attorney fees for obstinacy applied was unequivocally refuted by case law. U. S. v. M/V Zoe Colocotroni, C.A.1 (Puerto Rico) 1979, 602 F.2d 12. Federal Civil Procedure 2737.6

A plaintiff's subjective bad faith is not the determinative factor in determining whether to award fees to a prevailing defendant in suit brought under the Clean Water Act (CWA), but if bad faith is present, there might be a

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

stronger basis to support an award of fees. Sierra Club v. Cripple Creek and Victor Gold Mining Co., D.Colo.2006, 509 F.Supp.2d 943. Environmental Law ⚷ 716

Provision of Clean Water Act (CWA) authorizing award of attorney fees to prevailing party in action brought pursuant to citizen suit section of CWA did not authorize fees award in favor of environmental groups who sent 60-day notice of intent to sue and intervened in government's civil enforcement action but who never brought separate citizen suit. U.S. v. Maine Dept. of Transp., D.Me.1997, 980 F.Supp. 546. Environmental Law ⚷ 716

Reasonable market rate for attorneys in Northern District of Indiana, rather than reasonable rate for New York area, applied in awarding attorney fees to prevailing plaintiff represented by New York counsel in action under Clean Water Act brought in Indiana, absent showing that competent Indiana counsel was unavailable; plaintiff made only limited efforts to find counsel in Indiana, and issues presented were not unduly complex. Atlantic States Legal Foundation, Inc. v. Universal Tool & Stamping Co., Inc., N.D.Ind.1992, 798 F.Supp. 522. Environmental Law ⚷ 716

Private citizen who obtained ruling against Army Corps of Engineers, which created defense to enforcement action against port by disclosing jurisdiction, were not entitled to recover attorney fees from Corps under Clean Water Act; private citizens did not sue Corps under enforcement section of Act nor could they do so since that statute allows suits against entities for violation of effluent standard or limitation. Golden Gate Audubon Soc., Inc. v. U.S. Army Corps of Engineers, N.D.Cal.1988, 738 F.Supp. 339. Environmental Law ⚷ 716

Prevailing defendants are entitled to award of attorney fees and costs under Clean Water Act only when they are able to demonstrate that plaintiff's claim was frivolous, meritless, or vexatious. National Wildlife Federation v. Consumers Power Co., W.D.Mich.1989, 729 F.Supp. 62. Federal Civil Procedure ⚷ 2737.3

Affidavits in which local counsel stated that they were not aware of any local law firms who would have been willing to handle the case was insufficient to support application of rate other than the forum rate in awarding attorney fees in action under the Federal Water Pollution Control Act. Student Public Interest Research Group of New Jersey v. Monsanto Co., D.N.J.1989, 727 F.Supp. 876, affirmed 891 F.2d 283. Environmental Law ⚷ 716

Environmental organization and legal foundation which settled action brought under citizens suit provision of Clean Water Act against company which operated wastewater purification plan, alleging over 380 violations of company's state pollutant discharge elimination system permit, enjoyed some success so as to be entitled to award of attorney fees, even though environmental organization and legal foundation were not prevailing parties; company's exceedances of its water permit dropped following service of notice of intent to bring lawsuit and, pursuant to settlement, company made significant contribution to a conservation foundation. Friends of the Earth v. Eastman Kodak Co., W.D.N.Y.1987, 656 F.Supp. 513, affirmed 834 F.2d 295. Environmental Law ⚷ 716

Court was without authority to order award of attorney fees under this section, in that review of what intervenors described as their successes, i.e., the "modifications" they brought about in settlement agreement, revealed that no successes were in fact achieved. U.S. v. Hooker Chemicals & Plastics Corp., W.D.N.Y.1984, 591 F.Supp. 966. Environmental Law ⚷ 716

57. ---- Prevailing party, attorney fees

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

Environmental group was "prevailing party or substantially prevailing party," as required for award of attorney fees as intervenor in consolidated actions for federal and state enforcement of CWA for sanitary sewer overflows, although group was not signatory to final consent decree with county and municipality; environmental group advocated forcefully and persistently for additions and changes resulting in final comprehensive consent decree which would not have come to fruition without group's efforts, was instrumental in appointment of ombudsman to resolve future complaints, and was given authority to inform district court of unenforced violations of decree, and group's unsuccessful objections to final decree were only small part of its efforts in litigation. Sierra Club v. Hamilton County Bd. of County Com'rs, C.A.6 (Ohio) 2007, 504 F.3d 634. Environmental Law 716

Despite being granted partial summary judgment on its claim that city had violated its National Pollutant Discharge Elimination System (NPDES) permit by allowing sanitary sewer overflows to occur unabated, public interest organization did not achieve actual relief on the merits against city, and thus was not "prevailing party" entitled to attorney fees award under Clean Water Act (CWA), when district court merely declared that city had violated its permit and declined to grant other requested relief, including injunction barring city from future permit violations, such that organization could point to no effect that declaration had on city's behavior toward organization, and, having no relief to enforce, did not receive enforceable judgment. Sierra Club v. City of Little Rock, C.A.8 (Ark.) 2003, 351 F.3d 840. Environmental Law 716

Public interest group was not entitled to attorney fees under Clean Water Act section authorizing court, upon "issuing any final order," to award attorney fees "to any prevailing or substantially prevailing party," even though group prevailed on appeal on its claim that it could bring suit for penalties against violator of Act as to whom Environmental Protection Agency (EPA) had already instituted administrative compliance action in same matter; group had not prevailed on what lawsuit originally sought to accomplish, but had only established that district court had jurisdiction to decide suit. Washington Public Interest Research Group (Wash PIRG) v. Pendleton Woolen Mills, C.A.9 (Wash.) 1993, 11 F.3d 883. Environmental Law 716

Environmental groups which obtained some relief requested in Clean Water Act suit pursuant to settlement agreement requiring Idaho to adopt specified water quality standards were not entitled to attorney fee award against Environmental Protection Agency (EPA), even though EPA was named defendant in suit, where district court issued no ruling, interim or final, against EPA, EPA did not participate in settlement negotiations, suit did not serve as catalyst for any actions by EPA, and EPA had consistently argued that state should establish its own water quality standards. Idaho Conservation League, Inc., v. Russell, C.A.9 (Idaho) 1991, 946 F.2d 717. Environmental Law 716

Plaintiff in citizen suit under Clean Water Act may be entitled to award of costs and attorney fees even though settlement agreement is reached between alleged violator and appropriate state authorities after commencement of citizen suit; absent contrary evidence, it may be inferred that existence of citizen suit was motive for alleged violator's settlement and that citizen suit plaintiff is therefore prevailing party. Atlantic States Legal Foundation, Inc. v. Eastman Kodak Co., C.A.2 (N.Y.) 1991, 933 F.2d 124. Environmental Law 716

Environmental groups which successfully demonstrated that Army Corps of Engineers did not undertake necessary investigation to determine whether tract of land was wetlands and that environmental protection agency did not take appropriate corrective action with respect to Corps' determination, were "prevailing parties" and thus were entitled to attorneys' fees under Clean Water Act, whether tract of land was ultimately determined to be wetlands; environmental groups' suit served key purpose of citizen suit provision of Clean Water Act by ensur-

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

ing that agencies fulfilled their duties under Act responsibly. National Wildlife Federation v. Hanson, C.A.4 (N.C.) 1988, 859 F.2d 313, rehearing denied. Environmental Law 715

Riparian landowners were entitled to recover costs and reasonable attorney fees under Clean Water Act [Federal Water Pollution Control Act Amendments of 1972, § 505(d), as amended, 33 U.S.C.A. § 1365(d)] after they substantially prevailed on their claims under the Act. Stoddard v. Western Carolina Regional Sewer Auth., C.A.4 (S.C.) 1986, 784 F.2d 1200. Federal Civil Procedure 2727; Environmental Law 716

Consent decree between the United States and owner and operator of kosher meat processing plant was a judicially sanctioned change in the parties' relationship that conferred prevailing party status on local environmental group in government and group's consolidated actions against owner, alleging that owner repeatedly violated environmental laws by exceeding pretreatment effluent limitations and final effluent limitations in agreement with city pursuant to which it discharged wastewater into Publicly Owned Treatment Works (POTW), for purposes of Clean Water Act (CWA) section providing for an award of attorney fees to prevailing party in an action against an alleged polluter, although group was not a formal party to the consent decree, where consent decree materially altered legal relationship between group and owner, because it wholly foreclosed group from seeking relief against owner under the CWA, and it directly benefited group, insofar as it provided group the relief it had sought, namely, a substantial civil penalty and a cessation of pollution by means of an enforceable judgment. Northeast Iowa Citizens For Clean Water v. Agriprocessors, Inc., N.D.Iowa 2007, 489 F.Supp.2d 881. Environmental Law 716

Prevailing plaintiffs in action against salmon farm operators under Clean Water Act (CWA) were not entitled to recover compensation for attorney fees and costs incurred in connection with administrative proceedings before state and federal environmental agencies, even if state permits were issue in litigation, and agencies had not yet fulfilled their statutory duties to promulgate standards for aquaculture. U.S. Public Interest Research Group v. Stolt Sea Farming, Inc., D.Me.2004, 301 F.Supp.2d 46. Environmental Law 716

Sport fishing associations that prevailed in liability phase of Clean Water Act (CWA) proceeding against city were prevailing parties entitled to recovery of attorney fees and costs associated with litigation. Catskill Mountains Chapter of Trout Unlimited, Inc. v. City of New York, N.D.N.Y.2003, 244 F.Supp.2d 41, affirmed in part and remanded 451 F.3d 77, certiorari denied 127 S.Ct. 1373, 167 L.Ed.2d 160. Environmental Law 716

Clean Water Act (CWA) plaintiff, who was "prevailing party" as to motion on which plaintiff had received final determination, would be allowed to recover as "prevailing party" for legal and expert witness fees incurred in opposing prior motion, which was withdrawn by defendant at eleventh hour, but which nevertheless presented substantially same issues decided in motion on which final determination was received; plaintiff had achieved some vindication of its rights which had received recognition by court, and had established that litigation efforts expended in withdrawn motion were necessary and important factor in obtaining subsequent results. Atlantic States Legal Foundation, Inc. v. Onondaga Dept. of Drainage and Sanitation, N.D.N.Y.1995, 899 F.Supp. 84. Environmental Law 716; Federal Civil Procedure 2741

Environmental organization and two individuals who brought Clean Water Act citizen suit against power company based upon its operation of nuclear power plant were prevailing parties for purposes of award of attorney's fees, where settlement they obtained obligated power company to commit funds which benefited public and which might have benefited environmental organization. Earth Island Institute, Inc. v. Southern California Edison Co., S.D.Cal.1993, 838 F.Supp. 458. Federal Civil Procedure 2737.13

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

Award of attorney fees under the Clean Water Act in favor of the prevailing party is not mandatory; benchmark of an award under fee shifting statute is that the fees assessed against the nonprevailing party be reasonable. Student Public Interest Research Group of New Jersey v. Monsanto Co., D.N.J.1989, 721 F.Supp. 604, on reconsideration 727 F.Supp. 876, affirmed 891 F.2d 283. Environmental Law ⚷ 716

Argument that court should extend the law of another circuit to the facts of the instant case was not frivolous, groundless, baseless or pursued in bad faith, and thus award to prevailing defendants of attorneys' fees and expert witness fees under the Clean Water Act (CWA) was not warranted. Fisher v. Chestnut Mountain Ski Corp., N.D.Ill.2002, 2002 WL 1794238, Unreported.

58. ---- Calculation of lodestar figure, attorney fees

District court acted improperly in applying 50% negative multiplier to lodestar in awarding attorney fees to public interest group in citizen suit under Clean Water Act against Air Force, based on determination that group received injunctive relief but failed to obtain monetary relief; instead, district court should have considered relationship between extent of success and amount of fee award, but only after lodestar was determined. Public Interest Research Group of New Jersey, Inc. v. Windall, C.A.3 (N.J.) 1995, 51 F.3d 1179, on remand 1995 WL 836144. Environmental Law ⚷ 716

Enhancement of lodestar award to prevailing party in action under Resource Conservation and Recovery Act and Clean Water Act is no longer justified on basis of factors such as novelty of issues, complexity of litigation, high quality of representation, or number of people benefited; all these factors are considered subsumed in calculation of lodestar. Dague v. City of Burlington, C.A.2 (Vt.) 1991, 935 F.2d 1343, certiorari granted in part 112 S.Ct. 964, 502 U.S. 1071, 117 L.Ed.2d 130, reversed in part 112 S.Ct. 2638, 505 U.S. 557, 120 L.Ed.2d 449, on remand 976 F.2d 801. Environmental Law ⚷ 719; Environmental Law ⚷ 716

Hourly rates of $220 and $210 for attorneys, $80 for paralegal, and $30 for law clerks were reasonable, for purposes of fixing the lodestar figure, in calculating amount of attorney fees to be awarded local environmental group under the Clean Water Act (CWA), as prevailing party in government and group's consolidated actions against owner and operator of kosher meat processing plant, alleging that owner repeatedly violated environmental laws by exceeding pretreatment effluent limitations and final effluent limitations in agreement with city pursuant to which it discharged wastewater into Publicly Owned Treatment Works (POTW), where attorneys were experienced attorneys in the field of environmental law and their requested rates did not exceed prevailing market rates, and requested rates for the legal assistants did not exceed prevailing market rates for such professionals. Northeast Iowa Citizens For Clean Water v. Agriprocessors, Inc., N.D.Iowa 2007, 489 F.Supp.2d 881. Environmental Law ⚷ 716

Environmental organization and two individuals, who obtained settlement in Clean Water Act citizen suit against power company based upon its operation of nuclear power plant, were not entitled to enhancement of $1.4 million lodestar attorney's fees amount by 1.66 multiplier in computing award of attorney's fees, but rather were entitled to award of lodestar amount, where negotiated fee was disputed, and law firm's premium rates subsumed firm's excellence, skill and experience. Earth Island Institute, Inc. v. Southern California Edison Co., S.D.Cal.1993, 838 F.Supp. 458. Federal Civil Procedure ⚷ 2737.13

Lodestar was appropriate measure of attorney's fees in Clean Water Act action brought by environmental organization and two individuals against power company based upon its operation of nuclear power plant, even though lodestar analysis was not mandatory, as it was guiding light of fee-shifting jurisprudence. Earth Island

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

Institute, Inc. v. Southern California Edison Co., S.D.Cal.1993, 838 F.Supp. 458. Environmental Law 721; Environmental Law 716

In awarding attorney fees in Clean Water Act case, court first determines the hours reasonably spent on the case and multiplies that figure by a reasonable hourly rate of compensation for each attorney involved; using that "lodestar" figure as the starting point, adjustments may be made in light of contingent nature of the case, the quality of the work performed, and the party's degree of success. Student Public Interest Research Group of New Jersey v. Monsanto Co., D.N.J.1989, 721 F.Supp. 604, on reconsideration 727 F.Supp. 876, affirmed 891 F.2d 283. Environmental Law 716

59. ---- Degree of success, attorney fees

City's approval of 42 percent sewer rate increase, in response to request by city's sanitary sewer committee for funding to fulfill committee's obligations to public interest organization under settlement agreement, did not establish relief necessary for organization to be prevailing party for purposes of organization's request for attorney fees award against city, pursuant to Clean Water Act (CWA), in same action giving rise to settlement with committee, notwithstanding contention that city would not have approved increase but for district court's ruling that city had violated its National Pollutant Discharge Elimination System (NPDES) permit and court's retention of jurisdiction in case, when court noted city's history of cooperating with committee and expressly refused to grant injunction compelling cooperation, such that committee's request, rather than finding of permit violation, was source of rate increase. Sierra Club v. City of Little Rock, C.A.8 (Ark.) 2003, 351 F.3d 840. Environmental Law 716

District court was required to consider expressly to what extent attorney fees awarded to environmental group as prevailing party should be adjusted based on group's limited degree of success in Clean Water Act (CWA) action, regardless of fact that polluter had agreed to pay reasonable attorney fees. New Mexico Citizens for Clean Air and Water v. Espanola Mercantile Co., Inc., C.A.10 (N.M.) 1996, 72 F.3d 830. Environmental Law 716

Award of attorney fees to local environmental group, in government and group's consolidated actions against owner and operator of kosher meat processing plant, alleging that owner repeatedly violated environmental laws by exceeding pretreatment effluent limitations and final effluent limitations in agreement with city pursuant to which it discharged wastewater into Publicly Owned Treatment Works (POTW), was "appropriate," for purposes of Clean Water Act (CWA) section providing for an award of attorney fees to prevailing party in an action against an alleged polluter, even if there were a lack of effort and vigor in group's prosecution of its claims, where group, which had standing to sue under the CWA, was a catalyst to consent decree by which the United States and owner settled their dispute, and even though group objected to consent decree it still received much of what it sought. Northeast Iowa Citizens For Clean Water v. Agriprocessors, Inc., N.D.Iowa 2007, 489 F.Supp.2d 881. Environmental Law 716

60. ---- Duplication of effort, attorney fees

District court had to consider possibility of duplication of effort arising from multiple attorneys attending meetings with client, defense counsel and court, for purposes of determining amount of attorney fees to award to prevailing party in Clean Water Act (CWA) action. New Mexico Citizens for Clean Air and Water v. Espanola Mercantile Co., Inc., C.A.10 (N.M.) 1996, 72 F.3d 830. Environmental Law 716

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

61. ---- Compliance with notice requirements, attorney fees

Indian Tribe's failure to provide 60-day's notice required by Clean Water Act (CWA) before bringing suit precluded Tribe from being proper party to suit and, thus, precluded award of attorney fees to Tribe as prevailing party even if another plaintiff had provided sufficient notice. New Mexico Citizens for Clean Air and Water v. Espanola Mercantile Co., Inc., C.A.10 (N.M.) 1996, 72 F.3d 830. Environmental Law 716

Time spent by public interest group in preparing intent to sue letter for citizen suit under Clean Water Act was compensable in award of attorney fees to group as prevailing party, as compliance with notice provision in citizen suit was jurisdictional prerequisite; overruling *Student Public Interest Research Group of New Jersey v. Monsanto Co.*, 721 F.Supp. 604 (D.N.J.). Public Interest Research Group of New Jersey, Inc. v. Windall, C.A.3 (N.J.) 1995, 51 F.3d 1179, on remand 1995 WL 836144. Environmental Law 716

Plaintiffs who sought and obtained injunction prohibiting United States Forest Service from completing construction of paved road and from engaging in commercial timber harvesting or constructing logging roads in portions of national forest were entitled to award of attorney fees pursuant to this chapter, and neither their failure to give formal notice of alleged violation 60 days prior to commencing suit nor fact that violations of federal effluent standards involved were prospective only precluded such award. Northwest Indian Cemetery Protective Ass'n v. Peterson, N.D.Cal.1983, 589 F.Supp. 921. Environmental Law 716

Plaintiffs who sought and obtained injunction prohibiting United States Forest Service from completing construction of paved road and from engaging in commercial timber harvesting or constructing logging roads in portions of national forest were entitled to award of attorney fees pursuant to this chapter, and neither their failure to give formal notice of alleged violation 60 days prior to commencing suit nor fact that violations of federal effluent standards involved were prospective only precluded such award. Northwest Indian Cemetery Protective Ass'n v. Peterson, N.D.Cal.1983, 589 F.Supp. 921. Environmental Law 716

62. ---- Financial condition of party, attorney fees

Economic position of plaintiff was irrelevant to matter of its being awarded attorney fees pursuant to this section and section 1415 of this title. Save Our Sound Fisheries Ass'n v. Callaway, D.C.R.I.1977, 429 F.Supp. 1136. Environmental Law 722; Environmental Law 716

63. ---- Litigation expenses, attorney fees

Where consent decree, in environmental organizations' Clean Water Act (CWA) suit, required Environmental Protection Agency (EPA) to establish Total Maximum Daily Loads (TMDLs), organizations monitoring EPA's compliance with decree could properly recover attorney fees for time needed to examine content of TMDLs, state's underlying water quality limited segment (WQLS) lists, and state-EPA performance partnership agreements (PPAs); organization's monitoring obligation was not exhausted upon determination that TMDLs had been issued, regardless of their content. Sierra Club v. Hankinson, C.A.11 (Ga.) 2003, 351 F.3d 1358. Environmental Law 716

Even if Environmental Protection Agency (EPA) had nondiscretionary duty under Clean Water Act (CWA) to take enforcement action against alleged illegal discharge of pollutants from mining operations, once finding of CWA violation had been made, such that EPA's conduct in issuing permit to mine operator after environmental groups sued to compel EPA to act would qualify as being mandated by law and thus support groups' request for

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

attorney fees under CWA pursuant to catalyst theory, such finding had not been made, given that EPA geologist upon whose conclusions groups relied had not been delegated authority to find violation, and there was no evidence that person with authority to make such a finding had done so. Bravos v. E.P.A., C.A.10 (N.M.) 2003, 324 F.3d 1166, 190 A.L.R. Fed. 643. Environmental Law ⚿ 716

Court would not award $1,391.60 in litigation expenses requested by mine operator who prevailed in Clean Water Act (CWA) suit brought by environmental organizations, since operator provided no itemization of these expenses that demonstrated what they were for or when they were incurred. Sierra Club v. Cripple Creek and Victor Gold Mining Co., D.Colo.2006, 509 F.Supp.2d 943. Environmental Law ⚿ 716

Not every expense which might ordinarily be charged to a firm's fee-paying clients is necessarily reasonable under the attorney fee award provision of the Clean Water Act. Student Public Interest Research Group of New Jersey v. Monsanto Co., D.N.J.1989, 721 F.Supp. 604, on reconsideration 727 F.Supp. 876, affirmed 891 F.2d 283. Environmental Law ⚿ 716

64. ---- Miscellaneous amounts reasonable, attorney fees

In ruling on public interest group's request for attorney fees in Clean Water Act citizen suit brought by it against Air Force, the district court was required to consider Air Force's particular objections to award for hours that were duplicative or unnecessary, rather than merely relying on negative multiplier. Public Interest Research Group of New Jersey, Inc. v. Windall, C.A.3 (N.J.) 1995, 51 F.3d 1179, on remand 1995 WL 836144. Environmental Law ⚿ 716

No upward or downward adjustment was required to the lodestar calculation of $324,644.25 in attorney fees for counsel for mine operators who prevailed in Clean Water Act (CWA) suit brought by environmental organizations, where at time of trial, the matter had been pending for roughly half a decade, the operators needed counsel experienced in the substantive legal area and in trial work, during trial, the parties raised several legal issues for which there was no binding precedent and which required immediate research and resolution, and the stakes at trial were great, in that the organizations had requested more than $1,000,000 in penalties had they prevailed. Sierra Club v. Cripple Creek and Victor Gold Mining Co., D.Colo.2006, 509 F.Supp.2d 943. Environmental Law ⚿ 716

In awarding fees pursuant to Clean Water Act's (CWA) fee shifting provision, court would utilize hourly rates of $75 for travel, $150 for partners, $100 for associates, and $50 for paralegals. Atlantic States Legal Foundation, Inc. v. Onondaga Dept. of Drainage and Sanitation, N.D.N.Y.1995, 899 F.Supp. 84. Federal Civil Procedure ⚿ 2742.5

Hourly rates for attorneys for environmental organization and two individuals, who obtained settlement in Clean Water Act citizen suit against power company based upon its operation of nuclear power plant, which ranged from $145 per hour to $500 per hour, were reasonable for purposes of computing attorney's fees award, where law firm represented that rates were accurate and consistent with firm's normal billing rates. Earth Island Institute, Inc. v. Southern California Edison Co., S.D.Cal.1993, 838 F.Supp. 458. Federal Civil Procedure ⚿ 2737.13

Plaintiffs were entitled to attorney fees for their work in preparing attorney fee petition in connection with Federal Water Pollution Control Act action. Student Public Interest Research Group of New Jersey v. Monsanto Co., D.N.J.1989, 727 F.Supp. 876, affirmed 891 F.2d 283. Environmental Law ⚿ 716

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

Overall reduction of 20% to firm's lodestar was appropriate in computing attorney fees in Clean Water Act action in view of the degree of success obtained, the relative simplicity of proving liability through the defendant's own data, and the economy of time and resources that should have accrued from simultaneous prosecution of 26 similar claims. Student Public Interest Research Group of New Jersey v. Monsanto Co., D.N.J.1989, 721 F.Supp. 604, on reconsideration 727 F.Supp. 876, affirmed 891 F.2d 283. Environmental Law 716

Delay enhancement of lodestar in clean water case was warranted; prevailing market rates and interest rates for period of time during which payment was delayed was offered and chief counsel submitted affidavit in which he stated that he was compelled to draw upon bank line of credit to pay office and staff expenses. Proffitt v. Municipal Authority of Borough of Morrisville, E.D.Pa.1989, 716 F.Supp. 845, affirmed 897 F.2d 523. Environmental Law 716

Lodestar had to be adjusted downward in determining amount of attorney fees and costs to be awarded environmental organization and legal foundation which settled action brought under citizen suit provision of Clean Water Act against company which operated wastewater purification plant, alleging over 380 violations of company's state pollutant discharge elimination system permit, where virtually all of plaintiffs' proof came from monthly discharge monitoring reports prepared by company, which were required to be filed with governmental agencies and settlement provided only that company make contribution of $49,000 to a conservation foundation. Friends of the Earth v. Eastman Kodak Co., W.D.N.Y.1987, 656 F.Supp. 513, affirmed 834 F.2d 295. Environmental Law 716

For purposes of calculating attorney fee award for plaintiffs in a citizens suit under this chapter challenging defendant's unauthorized discharge of oil and solids into a stream, hourly rates of $110, $85, and $75 were reasonable. Citizens Coordinating Committee on Friendship Heights, Inc. v. Washington Metropolitan Area Transit Authority, D.C.D.C.1983, 568 F.Supp. 825. Environmental Law 716

Plaintiffs' prevailing party attorney fee award in their Clean Water Act suit against Secretary of Army, arising from alleged noncompliance at wastewater treatment plant, would be reduced by deduction of all hours spent on motion to hold Secretary in contempt of prior court order, except for fees relating to compliance monitoring, due to plaintiffs' lack of success on motion, where Secretary was already in compliance with decree at time motion was filed, and plaintiffs achieved no success as a result of filing motion. Public Interest Research Group of New Jersey v. Stone, D.N.J.1994, 156 F.R.D. 568. Environmental Law 716

65. Costs

Prevailing plaintiffs in Clean Water Act (CWA) citizen suit could recover fees for non-testifying expert witness who helped monitor consent decree; post-judgment monitoring was needed to protect relief afforded to plaintiffs through consent decree. Sierra Club v. Hankinson, C.A.11 (Ga.) 2003, 351 F.3d 1358. Environmental Law 716

Public interest organization's claim that city violated its National Pollutant Discharge Elimination System (NPDES) permit by failing to implement comprehensive master planning process was not frivolous, unreasonable, or without foundation, in that city's failure to incorporate its comprehensive master planning process into single document made it difficult to determine city's compliance when organization originally brought action, and therefore city was not entitled to award of expert fees as prevailing defendant under Clean Water Act (CWA). Sierra Club v. City of Little Rock, C.A.8 (Ark.) 2003, 351 F.3d 840. Environmental Law 710

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

Although citizen plaintiffs, who had standing under § 505 of the Clean Water Act, could have recovered expert witness costs paid by corporation which joined the action and could have reimbursed the corporation, the corporation, which had no standing under the Act, could not recover such costs; it could recover only that portion of costs that assisted the other claimants' § 505 claim, and then, solely by reimbursement from those parties who had standing. Citizens Coordinating Committee on Friendship Heights, Inc. v. Washington Metropolitan Transit Authority, C.A.D.C.1985, 765 F.2d 1169, 247 U.S.App.D.C. 15. Federal Civil Procedure ⚷ 2741

Court would not award expenses to mine operators who prevailed in Clean Water Act (CWA) suit brought by environmental organizations, where, in accordance with the stipulation between the parties, the clerk of court had awarded $29,000 in costs to the operators. Sierra Club v. Cripple Creek and Victor Gold Mining Co., D.Colo.2006, 509 F.Supp.2d 943. Environmental Law ⚷ 716

For purposes of calculating amount of litigation costs to be awarded local environmental group under the Clean Water Act (CWA), as prevailing party in government and group's consolidated actions against owner and operator of kosher meat processing plant, alleging that owner repeatedly violated environmental laws by exceeding pretreatment effluent limitations and final effluent limitations in agreement with city pursuant to which it discharged wastewater into Publicly Owned Treatment Works (POTW), group's mileage requests totaling $320 were reasonable, where mileage was incurred during a trip to visit group members and during a trip to meet with Environmental Protection Agency (EPA) officials. Northeast Iowa Citizens For Clean Water v. Agriprocessors, Inc., N.D.Iowa 2007, 489 F.Supp.2d 881. Environmental Law ⚷ 716

Prevailing plaintiffs in suit brought under Clean Water Act (CWA) were entitled to recover only one-half of expert's fee, where expert ultimately did not testify at trial, but did assist attorneys in preparation of case. U.S. Public Interest Research Group v. Stolt Sea Farming, Inc., D.Me.2004, 301 F.Supp.2d 46. Environmental Law ⚷ 710

66. Complaint--Generally

It was not necessary that plaintiffs prove their allegation of ongoing noncompliance with conditions of permit under national pollutant discharge elimination system before jurisdiction could attach under provision of Clean Water Act permitting citizen suits concerning alleged violations of conditions of permit; mere allegation of violation was sufficient, since "good faith" pleading requirements were sufficient to protect defendants from frivolous allegations. Gwaltney of Smithfield, Ltd. v. Chesapeake Bay Foundation, Inc., U.S.Va.1987, 108 S.Ct. 376, 484 U.S. 49, 98 L.Ed.2d 306, on remand 844 F.2d 170. Environmental Law ⚷ 673

Plaintiff's mere belief that gun club might again in the future discharge lead shot and clay target debris into Long Island Sound was not sufficient to meet the "in violation" requirement to state cause of action under the Clean Water Act; there was no contention that the club was presently discharging lead shot and clay target debris into Long Island Sound, and club provided evidence that trap and skeet houses, from which targets used were thrown, were dismantled and removed. Connecticut Coastal Fishermen's Ass'n v. Remington Arms Co., Inc., C.A.2 (Conn.) 1993, 989 F.2d 1305. Environmental Law ⚷ 226

For purposes of assessing a citizen plaintiff's allegations of ongoing violations of the Clean Water Act by discharge of pollutants exceeding limits established by National Pollutant Discharge Elimination System permit, court must always look to date complaint was filed; if defendants continued to violate NEPDES permit on and after date complaint was filed, plaintiffs may request both injunctive and civil penalties. Atlantic States Legal Foundation, Inc. v. Tyson Foods, Inc., C.A.11 (Ala.) 1990, 897 F.2d 1128. Environmental Law ⚷ 226; Envir-

onmental Law ⚷ 223; Environmental Law ⚷ 700

Complaint drafted as citizen's suit to require performance by Administrator of Environmental Protection Agency could not be employed to challenge substance or content of agency action. Scott v. City of Hammond, Ind., C.A.7 (Ill.) 1984, 741 F.2d 992. Environmental Law ⚷ 226

Since complaint posited right of recovery solely on provisions of this chapter, which confers no private cause of action independent of citizens suit provisions of this chapter, and contained no allegations of negligence or wrongful conduct on part of the United States other than alleged violations of this chapter, owner of seafood business failed to state cause of action against federal government and city for pollution which forced closing of river from which business had been harvesting shellfish. Davis v. U.S., C.A.4 (Va.) 1983, 722 F.2d 1157, certiorari denied 104 S.Ct. 2151, 466 U.S. 950, 80 L.Ed.2d 537.

Plaintiffs seeking to establish district court's jurisdiction over Clean Water Act citizen suit in which defendant fluoropolymer manufacturer ceased allegedly illegal conduct during pendency of litigation were not required to make good-faith allegations of ongoing violations of each parameter separately; manufacturer's National Pollutant Discharge Elimination System (NPDES) permit could be viewed as a whole, such that good-faith allegations of ongoing violations of any aspect of permit would be enough to establish jurisdiction over past and present violations of all parameters. Public Interest Research Group of New Jersey, Inc. v. Elf Atochem North America, Inc., D.N.J.1993, 817 F.Supp. 1164. Environmental Law ⚷ 226

Plaintiffs in citizen suit under the Clean Water Act who showed 42 violations of discharge permit after the filing of the complaint established court's jurisdiction over 323 precomplaint violations to which the postcomplaint violations corresponded. Natural Resources Defense Council, Inc. v. Texaco Refining and Marketing, Inc., D.Del.1992, 800 F.Supp. 1, affirmed in part , reversed in part 2 F.3d 493. Environmental Law ⚷ 641

Citizens' complaint simply alleged that manufacturing plant violated the Clean Water Act on several occasions more than five years ago, but did not allege that violations continued beyond particular date nor did it allege there was reasonable likelihood that manufacturing plant would violate Clean Water Act in the future, or that manufacturing plant was violating Clean Water Act at time suit was filed, so that complaint failed to state cause of action under Clean Water Act as citizens were suing solely for past violations. Brewer v. Ravan, M.D.Tenn.1988, 680 F.Supp. 1176. Environmental Law ⚷ 673

Allegation in environmental organization's action against corporation under Federal Water Pollution Control Act Amendments that copy of environmental organization's notice-of-violation letter was timely sent to State Department of Environmental Conservation was sufficient to overcome challenge to subject matter jurisdiction on basis of assertion that organization failed to notify Department of alleged violations at least 60 days prior to commencing suit, as required under Act. Sierra Club v. Hanna Furnace Corp., W.D.N.Y.1985, 636 F.Supp. 527. Environmental Law ⚷ 659

Insofar as wetlands owner claimed that real estate developer and others discharged dredged or fill material into stream without having obtained permit from Secretary of Army as required by section 1344 of this title, claim for relief was stated over which district court had subject matter jurisdiction. Sun Enterprises, Ltd. v. Train, S.D.N.Y.1975, 394 F.Supp. 211, affirmed 532 F.2d 280. Federal Courts ⚷ 243

Citizens' complaint was sufficient to state cause of action against Administrator for injunctive relief to require the Administrator to perform certain acts under section 1318(a)(A) of this title providing that the Administrator

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

shall require the owner or operator of any point source to maintain such records and install such equipment as he may reasonably require whenever necessary to carry out the objective of this chapter and under section 1255(d) of this title to conduct, on a priority basis, an accelerated effort to develop, refine, and achieve practical applications of water management and water treatment methods and under section 1255 of this title to conduct within the Environmental Protection Agency or to finance by grants projects demonstrating advanced methods of dealing with certain types of water pollution problems. Committee for Consideration of Jones Falls Sewage System v. Train, D.C.Md.1975, 387 F.Supp. 526. Environmental Law 700

67. ---- Release of dammed waters, complaint

Complaint filed by private environmental groups stated claim for relief on theory that administrator had violated his enforcement duties under this chapter by not issuing order directing Corps of Engineers to comply with its provisions and by not enjoining construction or operation of dam after having been fully informed that water to be released from the dam would contain pollutants. South Carolina Wildlife Federation v. Alexander, D.C.S.C.1978, 457 F.Supp. 118. Environmental Law 209

68. ---- Sewage and sewage treatment works, complaint

County sanitary authority's allegation that federal Environmental Protection Agency and agency officials failed to perform mandatory duty to disapprove Pennsylvania's priority system and project priority list for construction of sewage treatment works as not in compliance with this chapter and its implementing regulations stated cause of action. Allegheny County Sanitary Authority v. U.S.E.P.A., W.D.Pa.1983, 557 F.Supp. 419, affirmed 732 F.2d 1167. Environmental Law 673

Where gravamen of complaint was that defendants were allowing the channeling of more sewage into plant than could be adequately processed affecting the water quality of the Potomac River, a claim capable of relief was stated as to defendants Washington Suburban Sanitary Commission, the Governor of Maryland, the Maryland Department of Health and Mental Hygiene and the Water Resources Administration of Maryland. Montgomery Environmental Coalition v. Fri, D.C.D.C.1973, 366 F.Supp. 261. Declaratory Judgment 303; Environmental Law 195

69. ---- Toxic waste discharges, complaint

Complaint by municipalities and class they sought to represent for alleged damages sustained by reason of discharge by liquid refiner of toxic chemicals into a river from which municipalities drew water for their treatment plant did not state a claim under this section on which relief could be granted. City of Evansville, Ind. v. Kentucky Liquid Recycling, Inc., C.A.7 (Ind.) 1979, 604 F.2d 1008, certiorari denied 100 S.Ct. 689, 444 U.S. 1025, 62 L.Ed.2d 659. Environmental Law 673

Plaintiffs were not required, as prerequisite to citizen suit under Clean Water Act (CWA), to provide notice of specific effluents or pollutants allegedly discharged by water and sewer authority in violation of its National Pollutant Discharge Elimination System (NPDES) permit, where complaint did not allege violations of effluent limitations, but rather identified emission of hydrogen sulfide as permit violation. American Canoe Ass'n, Inc. v. District of Columbia Water and Sewer Authority, D.D.C.2004, 306 F.Supp.2d 30, dismissed 2004 WL 2091485. Environmental Law 659

Fruit processor's discharge of water, produced in process of drying fruit, to irrigate fields, was not a discharge

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

from a point source, as required to support Clean Water Act (CWA) citizen suit against processor, although processor allegedly applied wastewater to its fields in excess of crops' actual absorption of water. Hiebenthal v. Meduri Farms, D.Or.2002, 242 F.Supp.2d 885. Environmental Law 175

Complaint charging that, upon information and belief, dredged spoil which defendants proposed to dump contained polluted and toxic materials, dumping of which would violate applicable effluent and water quality standards and ocean dumping criteria established by Environmental Protection Agency and State of Rhode Island did not properly allege violations of either section 1316 of this title concerning national standards of performance or section 1317 of this title requiring establishment of standards by Administrator, and plaintiff thus failed to bring itself within narrow exceptions to 60-day notice requirement of this section for commencement of action. Save Our Sound Fisheries Ass'n v. Callaway, D.C.R.I.1977, 429 F.Supp. 1136. Environmental Law 659; Environmental Law 673

70. ---- Amendment, complaint

Trial court did not abuse its discretion in denying plaintiffs' motion to amend their complaint to add a Clean Water Act claim after the court had ordered dismissal of their original Clean Water Act claim in view of the fact that new incidents had been disclosed to plaintiffs long before they filed their motion to amend and new incidents concerned matters not within scope of citizens suit provision of Clean Water Act. Pawtuxet Cove Marina, Inc. v. Ciba-Geigy Corp., C.A.1 (R.I.) 1986, 807 F.2d 1089, certiorari denied 108 S.Ct. 484, 484 U.S. 975, 98 L.Ed.2d 483. Federal Civil Procedure 841

Environmental organization was not entitled to amend its complaint in action against Environmental Protection Agency (EPA) and National Marine Fisheries Service (NMFS) regarding state's compliance with Clean Water Act (CWA) in order to assert additional claims relating to state's alleged failure to adopt adequate toxic water quality criteria under CWA, where motion was not filed until over four months after motion for summary judgment was filed and five weeks after parties had completed briefing on motion, new claims involved state actions, not all of which were related to issues contained in current pleadings, and new claims would have greatly expanded scope of litigation that was already wide-ranging. Northwest Environmental Advocates v. U.S. E.P.A., D.Or.2003, 268 F.Supp.2d 1255. Federal Civil Procedure 840; Federal Civil Procedure 841

Individuals and citizens associations suing for injunctive relief restraining defendants from granting permits for sewer hookups into sewer system and requiring defendants to revoke certain existing hookup permits would be permitted to amend complaint to add count asserting that the alleged discharges into the stream system constituted an imminent and substantial endangerment to the health of persons under section 1364 of this title. Committee for Consideration of Jones Falls Sewage System v. Train, D.C.Md.1974, 375 F.Supp. 1148, affirmed 539 F.2d 1006. Federal Civil Procedure 841

71. Defenses--Generally

Permit shield shielded dairy farm from CWA citizen suit alleging that farm did not have permit before certain date; under terms of farm's renewed CWA permit, farm did not have to be fully compliant with its permit until a specific date which was after lawsuit was initiated. Coon ex rel. Coon v. Willet Dairy, LP, C.A.2 (N.Y.) 2008, 536 F.3d 171. Environmental Law 226

Oil company failed to state claim for abuse of process under Texas law concerning environmental group's citizen suit under Clean Water Act (CWA) against oil company concerning its discharges of produced water from waste

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

treatment facility into bay, despite oil company's claim that environmental group's pattern of suing and settling with oil companies was attempt to extort money from oil companies while allowing any illegal conduct to continue; group's consent judgments against other oil companies generally prohibited discharges into bay after grace period, consent judgment terms requiring payment of group's attorney fees was not improper, and Department of Justice and Environmental Protection Agency (EPA) reviewed and approved prior settlements. Sierra Club, Lone Star Chapter v. Cedar Point Oil Co. Inc., C.A.5 (Tex.) 1996, 73 F.3d 546, certiorari denied 117 S.Ct. 57, 519 U.S. 811, 136 L.Ed.2d 20. Process ⚿ 171

Retroactive effect given by the State Water Control Board to National Pollutant Discharge Elimination System permit was not defense in citizens' suit under this chapter to allegations that utility was discharging sewage effluent without a permit during period prior to State Board's action; compliance with permit program was prerequisite to lawful discharge of pollutants, and retroactive application of National Pollutant Discharge Elimination System permit did not excuse discharger from that clear statutory mandate. Menzel v. County Utilities Corp., C.A.4 (Va.) 1983, 712 F.2d 91, rehearing denied 718 F.2d 120. Environmental Law ⚿ 208

Refinery which was alleged to have violated its discharge permit could not establish a "lost sample" defense to claims based on its reports simply by making the terse notation "sample lost except for metals analysis" on the relevant discharge monitoring report (DMR). Natural Resources Defense Council, Inc. v. Texaco Refining and Marketing, Inc., D.Del.1992, 800 F.Supp. 1, affirmed in part , reversed in part 2 F.3d 493. Environmental Law ⚿ 207

Plaintiffs in citizens suit under Federal Water Pollution Control Act were not estopped from asserting violation of Act on ground that chemical manufacturer relied on Connecticut Department of Environmental Protection's representations that numbers in National Pollutant Discharge Elimination System permit were goals, not limitations; order was stated to be National Pollutant Discharge Elimination System permit for Act purposes and chemical manufacturer was expected to know effect of limits contained in that permit and could not reasonably rely on conduct of state agents to contrary. Connecticut Fund for Environment, Inc. v. Upjohn Co., D.Conn.1987, 660 F.Supp. 1397. Estoppel ⚿ 62.2(2); Environmental Law ⚿ 226

Measurement error was not valid basis to defeat organization's motion for summary judgment in its citizen suit for past violations of Clean Water Act. Atlantic States Legal Foundation v. Al Tech Specialty Steel Corp., N.D.N.Y.1986, 635 F.Supp. 284. Environmental Law ⚿ 226

Affirmative defense of upset did not apply to permittee's violations of national pollutant discharge elimination system permits where violations occurred before provision for affirmative defense of upset became effective. Student Public Interest Research Group of New Jersey, Inc. v. AT & T Bell Laboratories, D.C.N.J.1985, 617 F.Supp. 1190. Environmental Law ⚿ 208

Letter from Environmental Protection Agency to oil company which had sought permit for drilling of offshore test well, to effect that because of budgetary considerations a permit could not be issued but agency would exercise its discretion not to prosecute, did not insulate oil company from citizen suits. Kitlutsisti v. Arco Alaska, Inc., D.C.Alaska 1984, 592 F.Supp. 832, appeal dismissed, opinion vacated on other grounds 782 F.2d 800. Estoppel ⚿ 62.2(4)

72. ---- Estoppel, defenses

Action in which environmental group challenged decision of Environmental Protection Agency (EPA) not to

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

promulgate, under Clean Water Act (CWA), effluent limitation guidelines (ELGs) and new source performance standards (NSPSs) for storm water discharges by construction and development industry did not, for claim preclusion purposes, involve same cause of action as group's earlier suit against EPA regarding effluent limitation guidelines, given that second action arose from events which had not yet transpired when earlier suit was settled and so did not involve same transactional nucleus of facts, that consent decree in earlier suit reserved to group the right to challenge EPA's decision not to promulgate ELGs and NSPSs for source categories identified in source plan, that rights involved in two cases were distinct, and that evidence offered in two cases varied to some degree. National Resources Defense Council v. U.S. E.P.A., C.D.Cal.2006, 437 F.Supp.2d 1137. Judgment 566; Judgment 585(3); Judgment 585(5)

Previous lawsuit between oil company which had leased pit and landowner which concerned company's obligations under Federal Water Pollution Control Act (FWPCA) and their obligations to perform under their lease did not preclude Environmental Protection Agency (EPA) from bringing an action pursuant to CERCLA. U.S. v. Gurley Refining Co., E.D.Ark.1992, 788 F.Supp. 1473, affirmed in part , reversed in part 43 F.3d 1188, rehearing and suggestion for rehearing en banc denied, certiorari denied 116 S.Ct. 73, 516 U.S. 817, 133 L.Ed.2d 33. Judgment 715(2)

Although private suits under Clean Water Act represent public interest, Government is not precluded from subsequently filing suit. Antrim Min., Inc. v. Davis, M.D.Pa.1991, 775 F.Supp. 165. Environmental Law 226; Environmental Law 205

73. ---- Laches, defenses

Citizen suit under Clean Water Act to enforce nondiscretionary duty of administrator of Environmental Protection Agency (EPA) is suit to protect public interest and, thus, laches does not apply. Natural Resources Defense Council, Inc. v. Fox, S.D.N.Y.1995, 909 F.Supp. 153. Environmental Law 672

73a. ---- Res judicata, defenses

Doctrine of res judicata barred environmental groups' claims under Clean Water Act (CWA) based on spills from city and county's wastewater collection and treatment system, where Environmental Protection Agency (EPA) was diligently prosecuting claims in separate enforcement action based on identical facts. Sierra Club, Hawaii Chapter v. City and County of Honolulu, D.Hawai'i 2005, 415 F.Supp.2d 1119, on reconsideration in part 486 F.Supp.2d 1185, on reconsideration in part 2008 WL 515963. Administrative Law And Procedure 501; Environmental Law 226

74. Moot questions

Claim alleging violation of Clean Water Act (CWA), which was premised on discharge of polluted water without permit, was not moot at pleading stage by alleged violator's acquisition of permit, where it was unclear whether permit allegedly obtained covered entire site or all areas where alleged violations had been occurring. Building and Const. Trades Council of Buffalo, New York and Vicinity v. Downtown Development, Inc., C.A.2 (N.Y.) 2006, 448 F.3d 138. Environmental Law 663

District Court had jurisdiction in citizen suit alleging that owner of inoperative gold mine violated Clean Water Act (CWA) by discharging pollutants, even though the conduct giving rise to the alleged violation had ceased; plaintiffs alleged that abandoned mine shaft was the point source from which recurring and ongoing discharges

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

were flowing. Sierra Club v. El Paso Gold Mines, Inc., C.A.10 (Colo.) 2005, 421 F.3d 1133, corrected, rehearing granted in part, certiorari denied 126 S.Ct. 1653, 547 U.S. 1065, 164 L.Ed.2d 411. Environmental Law ⚷ 226

Lake association's Clean Water Act (CWA) claim for injunctive relief against purported polluters became moot when purported polluters' national pollution discharge elimination system (NPDES) permit terminated and state agency approved stipulated agreement requiring purported polluters to pay penalties for past permit violations, given lack of evidence showing existence of fact questions regarding whether underlying construction was completed and permit was terminated, or to support claim that permit's termination was wrongfully procured. Comfort Lake Ass'n, Inc. v. Dresel Contracting, Inc., C.A.8 (Minn.) 1998, 138 F.3d 351, rehearing and suggestion for rehearing en banc denied. Environmental Law ⚷ 663

Citizen suit for civil penalties under Clean Water Act was not moot, even though, following series of admitted violations that continued past date on which complaint was filed, defendant entered into settlement with local enforcement agency covering some of the violations and established that any allegedly wrongful behavior could not reasonably be expected to recur; allowing discharger to escape all liability by virtue of its postcomplaint compliance would weaken Act's deterrent effect, and could not be squared with Act's mandatory civil penalty language. Atlantic States Legal Foundation, Inc. v. Pan American Tanning Corp., C.A.2 (N.Y.) 1993, 993 F.2d 1017. Environmental Law ⚷ 663

Cattle feedlot's postdischarge improvements to its wastewater disposal system did not moot citizen's action brought pursuant to the Clean Water Act; feedlot could not adduce evidence from which it was absolutely clear that future discharge would not reasonably be expected to recur but rather, evidence indicated that feedlot might discharge in event of future chronic rainfall event which did not reach 25-year, 24-hour level. Carr v. Alta Verde Industries, Inc., C.A.5 (Tex.) 1991, 931 F.2d 1055, rehearing denied.

Although the Environmental Protection Agency had made it clear that it had no intention of bringing either civil or criminal action against petitioner for inability to conform to effluent limitations in this chapter, where the Agency conceded that it could not foreclose that possibility in the future and that stipulation between the Agency and petitioner would not prevent citizen from seeking imposition of sanctions against petitioner; petitioner's action challenging the Agency's refusal to extend compliance date was not moot. Bethlehem Steel Corp. v. Train, C.A.3 1976, 544 F.2d 657, certiorari denied 97 S.Ct. 1666, 430 U.S. 975, 52 L.Ed.2d 369. Action ⚷ 6; Environmental Law ⚷ 663

Environmental organizations' claims for supplemental and injunctive relief and an order requiring removal of allegedly unlawfully placed fill were mooted by expiration of challenged Clean Water Act (CWA) permit to fill wetlands, where already existing fills were wholly past violations, if violations at all, and any ruling would not relate to an existing standard, limitation, or order. National Parks Conservation Ass'n, Inc. v. U.S. Army Corps of Engineers, S.D.Fla.2008, 574 F.Supp.2d 1314. Environmental Law ⚷ 663

In action brought by environmental organization against paper company, alleging that company was discharging pollutants into river without valid permit, organization's claims for injunctive and declaratory relief were moot; state's issuance of final, enforceable discharge permit, notwithstanding alleged failure of Environmental Protection Agency (EPA) to do so, obviated need for injunction requiring company to cease discharges until permit had issued. Natural Resources Council of Maine v. International Paper Co., D.Me.2006, 424 F.Supp.2d 235. Declaratory Judgment ⚷ 81; Environmental Law ⚷ 663

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

Haulers of waste deposited at landfill demonstrated that it was absolutely clear that alleged violations of Clean Water Act (CWA) could not reasonably be expected to recur and, thus, there was no continuing violation conferring federal jurisdiction in landfill owners' citizen suit for past violations but, rather, CWA claims were moot; haulers had ceased discharging any material onto landfill, at latest, four and one-half years prior to commencement of suit, and rather than being paid for depositing waste at site as in past, haulers were now being sued for doing so, thus creating very little incentive for them to resume such action. Prisco v. State of N.Y., S.D.N.Y.1995, 902 F.Supp. 374. Environmental Law 663

Given conflicting evidence as to likelihood that plant owner would violate total suspended solids (TSS) limits of its National Pollutant Discharge Elimination System (NPDES) permit, owner failed to demonstrate that it was "absolutely clear" that additional TSS violations could not reasonably be expected to occur and, thus, environmental group's claim for injunctive relief in private civil enforcement action under Clean Water Act was not moot. Friends of the Earth, Inc. v. Chevron Chemical Co., E.D.Tex.1995, 900 F.Supp. 67. Environmental Law 663

Citizen's suit under Clean Water Act may be dismissed on ground of defendant's compliance with Act subsequent to filing of complaint, but in order to prove mootness, defendant must show that it is absolutely clear that allegedly wrongful behavior could not reasonably be expected to recur. Molokai Chamber of Commerce v. Kukui (Molokai), Inc., D.Hawai'i 1995, 891 F.Supp. 1389. Environmental Law 696; Environmental Law 663

County's attempt to comply with Clean Water Act (CWA) with respect to controlling leachate discharges from landfill did not render claim for injunction relief in citizen suit moot; it could not be said with absolute certainty that no further violations of CWA would occur. Orange Environment, Inc. v. County of Orange, S.D.N.Y.1994, 860 F.Supp. 1003. Environmental Law 663

Issue of mootness of citizen's suit under the Clean Water Act was to be judged at the time that the complaint was filed, not at the time that the court reached the motion. Public Interest Research Group of New Jersey, Inc. v. Hercules, Inc., D.N.J.1993, 830 F.Supp. 1525, affirmed in part , reversed in part 50 F.3d 1239, on remand 1996 WL 905920. Federal Courts 13.25

Present and future remedial measures imposed on wastewater treatment plants by state orders did not render moot requests for injunctive relief raised in citizen suit under Clean Water Act; until future remedial measures were instituted, permit violations could not be said to have ceased without likelihood of recurrence. Coalition for a Liveable West Side, Inc. v. New York City Dept. of Environmental Protection, S.D.N.Y.1993, 830 F.Supp. 194. Environmental Law 663

Clean Water Act claims by not-for-profit environmental groups against tannery were moot, even though at least nine violations occurred after groups commenced action and thus were not wholly past violations; allegations in complaint of ongoing violations became false due to tannery's postcomplaint remedial measures, and groups presented no evidence to suggest reasonable expectation that any violations would recur. Atlantic States Legal Foundation, Inc. v. Pan American Tanning Corp., N.D.N.Y.1992, 807 F.Supp. 230, reversed 993 F.2d 1017. Environmental Law 663

Public interest group's claims for civil penalties and injunctive relief stemming from flow violations of Clean Water Act National Pollution Discharge Elimination System (NPDES) permit were moot, where defendant company had been issued subsequent permit during litigation with more relaxed terms, only a few violations under

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

previous permit would have constituted violations under subsequent permit, there had been no flow violations of subsequent permit for the 15 months in which it had been in effect, and allegedly wrongful behavior could not reasonably be expected to recur. Massachusetts Public Interest Research Group v. ICI Americas Inc., D.Mass.1991, 777 F.Supp. 1032. Environmental Law 663; Environmental Law 223

Burden is on alleged polluter to demonstrate mootness of action brought under "private litigant" provisions of Clean Water Act (CWA). Tobyhanna Conservation Ass'n v. Country Place Waste Treatment Facility, M.D.Pa.1991, 769 F.Supp. 739. Environmental Law 663

Citizen's suit under Clean Water Act for violations of National Pollutant Discharge Elimination System (NPDES) permit was not moot given absence of evidence that holder of permit would not violate its permit in the future. Atlantic States Legal Foundation, Inc. v. Universal Tool & Stamping Co., Inc., N.D.Ind.1990, 735 F.Supp. 1404. Environmental Law 663

Citizen suit under Federal Water Pollution Control Act, which was filed before polluter's permit expired, was not barred by supersession of that permit by subsequent permit; prayer for relief included equitable remedies which resulted in consent order against future violations. Public Interest Research Group of New Jersey v. U.S. Metals Refining Co., D.N.J.1987, 681 F.Supp. 237. Environmental Law 663

Environmental conservation organizations' action against manufacturer challenging manufacturer's alleged violations of National Pollutant Discharge Elimination System permit was not moot even if manufacturer had achieved compliance with permit since action was filed. Sierra Club v. C.G. Mfg., Inc., D.Mass.1985, 638 F.Supp. 492. Federal Courts 13.25

Expiration of national pollutant discharge elimination system permit did not preclude relief in form of civil penalties sought by public interest organization under this chapter for violations of NPDES permit; however, to extent organization sought relief to enjoin company's further violations of outdated permit, such request for relief was moot. Sierra Club v. Aluminum Co. of America, N.D.N.Y.1984, 585 F.Supp. 842. Environmental Law 700; Environmental Law 223; Environmental Law 663

75. Dismissal

In view of the fact that at the time plaintiffs brought suit under citizens suit provision of Clean Water Act alleging violations of permit that limited defendant's discharge of process wastewater, defendant had ceased operating under permit because of its completion of tie-in arrangement with municipal treatment facility, there was no reasonably likelihood that defendant's alleged infractions would continue, and thus action was properly dismissed. Pawtuxet Cove Marina, Inc. v. Ciba-Geigy Corp., C.A.1 (R.I.) 1986, 807 F.2d 1089, certiorari denied 108 S.Ct. 484, 484 U.S. 975, 98 L.Ed.2d 483. Environmental Law 226

District court's ability to protect defendants from duplicative litigation under Clean Water Act [33 U.S.C.A. § 1251 et seq.] includes consolidation, citizen intervention and intervention of government in citizen suit, but does not include dismissal of previously filed citizen suit when government subsequently files suit. Chesapeake Bay Foundation v. American Recovery Co., Inc., C.A.4 (Md.) 1985, 769 F.2d 207.

Where Environmental Protection Agency had commenced proceedings to issue National Pollution Discharge Elimination System permit to sewage treatment plant, Environmental Protection Agency was vested with primary jurisdiction over issue whether sanitary commission had exceeded its allotted share of sewage treatment

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

capacity of such plant, resulting in violation of promulgated water quality standards, and suit by citizens' environmental groups to enjoin sanitary commission from exceeding its share of sewage treatment capacity would therefore be dismissed. Montgomery Environmental Coalition Citizens Coordinating Committee on Friendship Heights v. Washington Suburban Sanitary Commission, C.A.D.C.1979, 607 F.2d 378, 197 U.S.App.D.C. 64. Environmental Law ⚷ 664

76. Stay

Even assuming that salmon farm operator would be permitted by Court of Appeals to pursue appeal from civil contempt order that enjoined operator's further violation of order restraining its introduction of new class of fish into its net pens, stay of civil contempt order pending appeal was not warranted, inasmuch as there was not strong likelihood that operator would achieve success on merits of appeal, any financial harm suffered by operator had not been shown to be irreparable in nature and occurred solely due to operator's own conduct in disregarding likely effect of court's prior rulings on the merits of case and by disregarding order underlying contempt finding, any harm done to operator by denial of stay would not outweigh injury to environmental group's interests by granting of stay, and stay would not further public's interests in court's enforcement of Clean Water Act (CWA). U.S. Public Interest Research Group v. Atlantic Salmon of Maine, LLC, D.Me.2003, 262 F.Supp.2d 1. Contempt ⚷ 66(5)

Court which certified for appeal issue of adequacy of notice of certain alleged permit violations would stay citizen suit under the Clean Water Act concerning other related violations pending resolution of the issue on appeal. Public Interest Research Group of New Jersey, Inc. v. Hercules, Inc., D.N.J.1993, 830 F.Supp. 1549. Federal Courts ⚷ 684.1

Court would not stay environmental association's Clean Water Act action against waste treatment company pending evaluation of company's recently installed breakpoint chlorination and dechlorination system; discovery would be allowed to proceed to logical conclusion at which time properly substantiated dispositive motions would be submitted to court. Tobyhanna Conservation Ass'n v. Country Place Waste Treatment Co., M.D.Pa.1989, 734 F.Supp. 667. Action ⚷ 68

Association's citizen action under the Federal Water Pollution Control Act, with respect to commercial plant, would be stayed until upgraded waste water facility at plant was operational, given likelihood that action would be rendered moot when upgraded system was operational. Atlantic States Legal Foundation, Inc. v. Tyson Foods, Inc., N.D.Ala.1988, 682 F.Supp. 1186. Action ⚷ 68

Suit for violation of Clean Water Act brought by environmental organization against manufacturer would be stayed pending Supreme Court decision as to whether citizen's suit can be brought solely for past violations of the Clean Water Act. Sierra Club v. Coca-Cola Corp., M.D.Fla.1987, 673 F.Supp. 1555. Action ⚷ 69(5)

Even if citizens group were not barred by automatic stay from proceeding with proposed suit under Clean Water Act based upon postpetition activities of Chapter 11 debtor operator of open pit taconite mine, group would be enjoined from proceeding with suit on ground that suit would impose burdens not offset by any discernible benefit; debtor was working under active oversight and involvement of state agency to resolve environmental problems, and currently had proposed and implemented remedial activity for correcting problems. In re Chateaugay Corp., Bkrtcy.S.D.N.Y.1990, 118 B.R. 19. Bankruptcy ⚷ 2368

Although environmental public interest membership organization violated automatic stay by bringing citizen's

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

suit under this section against debtor-in-possession, district court would not hold organization in civil contempt where the organization apparently lacked a sufficient understanding of the bankruptcy laws to appreciate requirement that it needed to lift a stay in bankruptcy court prior to bringing the action and where organization had not acted in bad faith in bringing the suit. In re Revere Copper and Brass, Inc., Bkrtcy.S.D.N.Y.1983, 29 B.R. 584, affirmed 32 B.R. 725. Bankruptcy 2465.2

77. Compromise and settlement

Proposed consent decree settling citizen's suit brought under Clean Water Act, which decree required defendant to make payments to environmental organizations, was not in violation of Act; defendant did not admit liability, and thus payments did not constitute "civil penalties" which would have to be paid only to United States Treasury, and Act does not preclude private parties from entering into settlements which do not require defendant to tender civil penalties to United States. Sierra Club, Inc. v. Electronic Controls Design, Inc., C.A.9 (Or.) 1990, 909 F.2d 1350. Federal Civil Procedure 2397.2

Proposed consent decree settling litigation under Clean Water Act was not "fair, reasonable and equitable," and was thus rejected; it was not product of good faith negotiations, as it was negotiated between government and single defendant, government relied on defendant to develop much of technical data upon which it relied in formulating decree and remediation plan, and public comments identified significant shortcomings in proposed remediation plan and cast doubt on government's assessment of appropriate penalty for alleged violation. U.S. v. Telluride Co., D.Colo.1994, 849 F.Supp. 1400. Federal Civil Procedure 2397.2

Proposed consent decree providing for study of nonpoint source pollution of river which arose from action brought under citizen suits provisions of the Federal Water Pollution Control Act was to be approved; study was described with sufficient precision, was closely related to alleged violations, and furthered objectives of Act. Atlantic States Legal Foundation, Inc. v. Simco Leather Corp., N.D.N.Y.1991, 755 F.Supp. 59. Federal Civil Procedure 2397.2

Because of absence of proof that borough's sewage treatment plant was presently violating or would violate applicable pollutant discharge limits, it was impermissible in citizen suit brought under Clean Water Act to disapprove proposed consent decree solely for reason that it did not contain provision requiring borough to pay civil penalty to the United States. Pennsylvania Environmental Defense Foundation v. Bellefonte Borough, M.D.Pa.1989, 718 F.Supp. 431. Federal Civil Procedure 2397.3

Consent decree settling dispute under Clean Water Act was at odds with Act and would not be approved; money to be paid under settlement was scheduled to go to private organizations rather than federal treasury as required by the Act in that decree provided for payment of money to nonprofit organization as trustee which in turn would distribute money to designated private, nonprofit environmental organizations and Act did not authorize any private party to recover damages for violations of the Act. Sierra Club, Inc. v. Electronic Controls Design, Inc., D.Or.1989, 703 F.Supp. 875, reversed 909 F.2d 1350. Federal Civil Procedure 2397.3

Proposed consent decree under which civil penalty of $50,000 would be imposed on manufacturer for discharging excess quantities of pollutants from its citrus processing plant into a small stream would not denigrate seriousness of past violations, encourage future violations, or in any other way disserve goals of Clean Water Act, and thus, proposed consent decree would be entered. Sierra Club v. Coca-Cola Corp., M.D.Fla.1987, 673 F.Supp. 1555. Federal Civil Procedure 2397.2

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

Where, as to violations sued upon in case involving effluent discharge requirements of this chapter, proposed consent decree fully satisfied liability of defendants and did not preclude citizen's suits for different violations or attempt to preclude citizen's suits to force Environmental Protection Agency to enforce decree, decree, which precluded further suits for specific violations in question, did not unlawfully grant immunity from citizen's suits for future violations of permit. U. S. v. Ketchikan Pulp Co., D.C.Alaska 1977, 430 F.Supp. 83. Federal Civil Procedure 2397.2

Fair, reasonable, and equitable consent decree settling citizens' suit alleging that city violated Clean Water Act (CWA) would be approved, despite contention by nonparty United States that decree should provide for payment of $250,000 civil penalty based on determination of city's liability, where consent decree required city to undertake several expensive curative actions that would benefit community and environment; no public purpose would be served by requiring that city pay civil penalty to United States. Hawaii's Thousand Friends, Life of Land, Inc. v. City and County of Honolulu, D.Hawai'i 1993, 149 F.R.D. 614. Federal Civil Procedure 2397.2

Once intervenors had been given opportunity to object to proposed consent decree in case involving effluent discharge requirements of this chapter, they had their appropriate day in court and judgment on consent could be entered despite their objections. U. S. v. Ketchikan Pulp Co., D.C.Alaska 1977, 74 F.R.D. 104.

78. Limitations

If notice of intent to sue under Clean Water Act (CWA) that property owners sent to Louisiana Department of Environmental Quality (DEQ), which did not include name of Secretary of DEQ, was sufficient, 120 day limitations period in which property owners had to bring Clean Water Act (CWA) claim against village began to run when owners sent notice. Lockett v. E.P.A., C.A.5 (La.) 2003, 319 F.3d 678. Environmental Law 671

General federal five-year limitation period, and not California's three-year limitations period, applied to citizen action seeking enforcement of civil penalties under Clean Water Act. Sierra Club v. Chevron U.S.A., Inc., C.A.9 (Cal.) 1987, 834 F.2d 1517. Federal Courts 424

Organizations' claims alleging that the Environmental Protection Agency (EPA) failed to exercise its discretionary duty under Clean Water Act (CWA) to review state's antidegradation policy accrued, and six-year limitations period began to run, when EPA began considering the provisions in question. Kentucky Waterways Alliance v. Johnson, W.D.Ky.2006, 426 F.Supp.2d 612, affirmed in part, reversed in part and remanded 540 F.3d 466, rehearing denied. Environmental Law 671

Environment group's claim against water and sewer authority under Clean Water Act (CWA) for violating terms and conditions of its National Pollutant Discharge Elimination System (NPDES) permit by failing to install odor controlled carbon filters on vents located on Park Service property did not accrue when authority stopped maintaining filters on vents, but rather was ongoing violation for which suit was timely. American Canoe Ass'n, Inc. v. District of Columbia Water and Sewer Authority, D.D.C.2004, 306 F.Supp.2d 30, dismissed 2004 WL 2091485. Environmental Law 671

General five-year federal statute of limitations applied to citizen action seeking enforcement of civil penalties under Clean Water Act (CWA). U.S. Public Interest Research Group v. Atlantic Salmon of Maine, LLC., D.Me.2003, 257 F.Supp.2d 407, stay denied 273 F.Supp.2d 126, affirmed 339 F.3d 23. Environmental Law 670

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

For limitations purposes, continued failure of state to establish total maximum daily loads (TMDLs) for polluted waters created continuing duty on part of Administrator of Environmental Protection Agency (EPA) to disapprove of state's action and to promulgate TMDLs for state; failure of Administrator is repeated, and therefore new cause of action accrues, whenever Administrator's duties are triggered by either nonsubmission or inadequate submission by state "from time to time." Natural Resources Defense Council, Inc. v. Fox, S.D.N.Y.1995, 909 F.Supp. 153. Environmental Law ⚷ 671

No statute of limitations applies to citizen suits brought under Federal Water Pollution Control Act. Public Interest Research Group of New Jersey v. U.S. Metals Refining Co., D.N.J.1987, 681 F.Supp. 237. Environmental Law ⚷ 670

Two-year statute of limitations for enforcement of penalties under New Jersey law could not be employed in partial bar of claims against nuclear generating facility for pollution of water courses brought by environmental groups which assumed role of private Attorneys General in order to bring citizen suits under Federal Water Pollution Control Act. Student Public Interest Research Group of New Jersey, Inc. v. Jersey Cent. Power & Light Co., D.N.J.1986, 642 F.Supp. 103. Environmental Law ⚷ 670

79. Summary judgment

When plaintiff bringing citizens' lawsuit under Clean Water Act has alleged ongoing violation, but fails to demonstrate fact issue about whether defendant is "in violation," trial court should grant summary judgment for defendant on merits, instead of dismissing for want of jurisdiction. Sierra Club v. Shell Oil Co., C.A.5 (La.) 1987, 817 F.2d 1169, certiorari denied 108 S.Ct. 501, 484 U.S. 985, 98 L.Ed.2d 500, rehearing denied 108 S.Ct. 1065, 484 U.S. 1083, 98 L.Ed.2d 1027. Federal Civil Procedure ⚷ 2498.3

Genuine issues of material fact as to whether fecal coliform, a pollutant, traveled from coastal landowners' tract of land to water covered by the Clean Water Act (CWA), and as to whether alleged increase in fecal coliform levels in such navigable water was related to landowners' ditching activities, precluded summary judgment in citizen suit under CWA. North Carolina Shellfish Growers Ass'n v. Holly Ridge Associates, LLC., E.D.N.C.2003, 278 F.Supp.2d 654, 357 N.C. 1429. Federal Civil Procedure ⚷ 2498.3

Genuine issues of material fact existed as to whether environmental organization asserting Clean Water Act (CWA) claims against sewer district and town suffered injury in fact from discharge, from wastewater treatment plant, of pollutants in excess of limits set by applicable state permits, precluding summary judgment against organization for lack of standing. Hudson Riverkeeper Fund, Inc. v. Yorktown Heights Sewer Dist., S.D.N.Y.1996, 949 F.Supp. 210. Federal Civil Procedure ⚷ 2498.3

County's past violations of Clean Water Act (CWA) with respect to leachate discharges into river from landfill did not entitle citizen suit plaintiffs to summary judgment where it could not be said that future violations would occur establishing need for injunctive relief. Orange Environment, Inc. v. County of Orange, S.D.N.Y.1994, 860 F.Supp. 1003. Federal Civil Procedure ⚷ 2498.3

Affidavit of expert contending that river water intakes at electric power facility did not utilize best technology available raised genuine issue of fact in citizen suit brought under the Clean Water Act as to whether utility violated condition of discharge permit requiring utilization of best technology available to minimize adverse environmental impact, precluding summary judgment. Hudson Riverkeeper Fund, Inc. v. Orange and Rockland Utilities, Inc., S.D.N.Y.1993, 835 F.Supp. 160. Federal Civil Procedure ⚷ 2498.3

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

Material issue of fact as to whether farmer's alleged discharges of pollutants originated from requisite "point source" precluded summary judgment for farmer, in Clean Water Act citizen suit challenging farmer's use of water-laden manure as fertilizer; surface run-off of contaminated waters, once channeled or collected, could constitute discharge by point source. Concerned Area Residents for The Environment v. Southview Farm, W.D.N.Y.1993, 834 F.Supp. 1410. Federal Civil Procedure ⚷ 2498.3

Discharge monitoring reports and laboratory reports showing that polluter violated discharge limits in permit issued under federal Water Pollution Control Act maybe relied on by court in granting summary judgment as to liability. Public Interest Research Group of New Jersey, Inc. v. New Jersey Expressway Authority, D.N.J.1992, 822 F.Supp. 174. Environmental Law ⚷ 228

Surface water discharge permit holder's evidence of testing error in Discharge Monitoring Reports was too speculative to defeat citizen's motion for summary judgment in action under Federal Water Pollution Prevention and Control Act for permit holder's discharge of effluents in excess of permit levels since evidence showed nothing more than theories by permit holder as to why specific discharge exceedances occurred but did not show that errors existed in actual tests performed. Public Interest Research Group of New Jersey v. Yates Industries, Inc., D.N.J.1991, 757 F.Supp. 438, reconsideration granted in part 790 F.Supp. 511. Federal Civil Procedure ⚷ 2498.3

80. Admissibility of evidence

Exclusion in Clean Water Act action of settlement agreement in prior litigation reached between polluter's subsidiary and some of citizens in instant Clean Water Act case was within trial court's discretion. U.S. E.P.A. v. City of Green Forest, Ark., C.A.8 (Ark.) 1990, 921 F.2d 1394, rehearing denied, certiorari denied 112 S.Ct. 414, 502 U.S. 956, 116 L.Ed.2d 435. Environmental Law ⚷ 228

Evidence of national pollution discharge elimination system permit holder's violations in some parameters is admissible as evidence that future violations are likely in other parameters, particularly where numerous parameters have been violated on many occasions since filing of suit. Public Interest Research Group of New Jersey v. Yates Industries, Inc., D.N.J.1991, 790 F.Supp. 511. Environmental Law ⚷ 228

Letters from state and federal environmental protection agencies indicating that alleged water polluter's discharge did not comply with its discharge permit effluent limitations established that alleged water polluter was in violation of its discharge permit, for purposes of action under the Federal Water Pollution Control Act [33 U.S.C.A. § 1251 et seq.]. Student Public Interest Research Group of New Jersey, Inc. v. P.D. Oil & Chemical Storage, Inc., D.N.J.1986, 627 F.Supp. 1074. Environmental Law ⚷ 206

Discharge reports required to be kept by manufacturer under permits authorizing discharge of pollutants into river could be used as admissions to establish its liability for violating the permits. Student Public Interest Research Group of New Jersey, Inc. v. Fritzsche, Dodge & Olcott, Inc., D.C.N.J.1984, 579 F.Supp. 1528, affirmed 759 F.2d 1131. Evidence ⚷ 222(2)

81. Review

Court of Appeals had discretion to consider issue of whether Clean Water Act (CWA) preempted maritime common law on punitive damages in action arising from grounding of supertanker and resulting oil spill in Alaska, although defendant oil company did not raise the issue until almost 13 months after stipulated motions deadline,

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

which was imposed after jury returned punitive damages verdict. Exxon Shipping Co. v. Baker, U.S.2008, 128 S.Ct. 2605, 171 L.Ed.2d 570. Federal Courts ⚷ 634

In order for state law to be "comparable" to Clean Water Act (CWA), and thus for state's enforcement action to bar CWA citizen suit, penalty assessment, public participation and judicial review provisions of state law each must be roughly comparable to corresponding classes of federal provisions. McAbee v. City of Fort Payne, C.A.11 (Ala.) 2003, 318 F.3d 1248, rehearing and rehearing en banc denied 65 Fed.Appx. 716, 2003 WL 1877216. Environmental Law ⚷ 226

Court reviewing grant of summary judgment reviews all issues de novo, applying same test as district court. Wilson v. JOB, Inc., C.A.5 (La.) 1992, 958 F.2d 653. Federal Courts ⚷ 776

Determination whether environmental preservation was more central to public interest than national security interest was not appropriate function of Court of Appeals reviewing denial of preliminary injunction against reopening of nuclear reactor until completion of cooling tower. Natural Resources Defense Council, Inc. v. Watkins, C.A.4 (S.C.) 1992, 954 F.2d 974. Environmental Law ⚷ 687

Court of Appeals had jurisdiction to hear environmental organization's appeal from district court's refusal to enter consent judgment settling citizen's suit brought under Clean Water Act. Sierra Club, Inc. v. Electronic Controls Design, Inc., C.A.9 (Or.) 1990, 909 F.2d 1350. Federal Courts ⚷ 576.1

Suit seeking review of regulations promulgated by the Administrator of Environmental Protection Agency establishing standards of performance for new point sources in the coal-mining industry, on grounds that the regulations specifically deferred promulgation of regulations that would apply to those water-polluting discharges attributable to closed or abandoned mines was citizen's suit seeking to compel the Administrator to perform a nondiscretionary duty and, as such, should have been brought in federal district court, despite contention that suit was properly brought in the court of appeals on ground that it challenged deficient regulation and that the subject of the deferred regulations had been included in the scope of the administrative proceedings. Com. of Pa., Dept. of Environmental Resources v. E.P.A., C.A.3 1980, 618 F.2d 991, rehearing granted in part. Federal Courts ⚷ 1134

Plaintiffs's disagreement with court's conclusion that Army Corps of Engineers, in issuing permit to fill wetlands for road construction project, had rebutted the presumption under the Clean Water Act (CWA), that there were practicable alternatives to the project, was not ground for reconsideration of court's order denying plaintiffs's motion for preliminary injunction; court had applied the same standard for alternatives analysis as urged by plaintiffs. Northwest Bypass Group v. U.S. Army Corps of Engineers, D.N.H.2007, 490 F.Supp.2d 184. Environmental Law ⚷ 701

Discovery in Clean Water Act (CWA) and Endangered Species Act (ESA) citizen suit claims is limited to administrative record, unless record fails to explain administrative action, agency relied on materials or documents not included in administrative record, or record needs to be supplemented in order to explain or clarify technical terms or other difficult subject matter included. American Canoe Ass'n, Inc. v. U.S. E.P.A., E.D.Va.1999, 46 F.Supp.2d 473. Environmental Law ⚷ 675

In examining proposed consent decree settling litigation under Clean Water Act, district court's role is not to substitute its judgment of what constitutes appropriate settlement or to reform decree; nevertheless, court may not abdicate its responsibility to ensure that decree upholds important policies underlying Act simply because

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

government advises court that it should defer to Environmental Protection Agency's judgment. U.S. v. Telluride Co., D.Colo.1994, 849 F.Supp. 1400. Federal Civil Procedure ⚿ 2397.2

82. Remand

Supreme Court had discretion to remit dispute with respect to alleged pollution of Lake Michigan to appropriate district court for resolution. Illinois v. City of Milwaukee, Wis., U.S.1972, 92 S.Ct. 1385, 406 U.S. 91, 31 L.Ed.2d 712. Federal Courts ⚿ 443

Action under Clean Water Act in which consent decree was entered would be remanded to district court for it to determine in first instance whether intervenors had private enforceable right under provision of Act requiring the Environmental Protection Agency (EPA) and state to provide for, encourage, and assist with public participation in development and enforcement of any plan. U.S. v. Metropolitan St. Louis Sewer Dist. (MSD), C.A.8 (Mo.) 1992, 952 F.2d 1040. Environmental Law ⚿ 698

In citizen enforcement action under Clean Water Act, appellate court judgment determining that holder of national pollutant discharge elimination system permit was liable for past violations of permit was amended in light of Supreme Court's decision in *Gwaltney v. Chesapeake Bay Foundation* to contain requirement that permit holder's liability for past violations be subject to citizens group's ability to prove on remand existence of ongoing violations or reasonable likelihood of continued violations; group could prove ongoing violations either by proving violations that continued on or after date complaint was filed or by adducing evidence from which reasonable trier of fact could find continuing likelihood of recurrence in intermittent or sporadic violations, which were violations that did not cease to be ongoing until date there was no real likelihood of repetition. Sierra Club v. Union Oil Co. of California, C.A.9 (Cal.) 1988, 853 F.2d 667, on remand 716 F.Supp. 429. Environmental Law ⚿ 226; Environmental Law ⚿ 709

In determining whether Clean Water Act conferred federal jurisdiction over citizens' suit against holder of national pollutant discharge elimination system permit, remand was required for direct finding by district court as to whether citizens had proved at trial that permittee had engaged in intermittent or sporadic violations of permit, so as to constitute ongoing violation; citizens had to prove violations continued on or after date complaint was filed or present evidence from which reasonable trier of fact could find continuing likelihood of recurrence of intermittent or sporadic violations, and district court was entitled to consider whether remedial actions were taken to cure violations, ex ante probability that such remedial measures would be effective and any other evidence bearing on whether risk of continued violation had been completely eradicated when citizens filed suit. Chesapeake Bay Foundation, Inc. v. Gwaltney of Smithfield, Ltd., C.A.4 (Va.) 1988, 844 F.2d 170, on remand 688 F.Supp. 1078. Environmental Law ⚿ 709

Material question of fact, on whether permittee's failure to comply with requirements of permit as regards discharge of treated effluent into stream was mere isolated occurrence or possible recurring problem caused by designed deficiencies in its system, precluded entry of summary judgment for permittee in action under "private litigant" provisions of Clean Water Act. Tobyhanna Conservation Ass'n v. Country Place Waste Treatment Facility, M.D.Pa.1991, 769 F.Supp. 739. Federal Civil Procedure ⚿ 2498.3

Suits to recover damages resulting from alleged escape of hazardous or toxic materials from waste site did not "arise under" any federal statute, for removal purposes; plaintiffs had consistently sought to litigate state claims in state court and had apparently foregone federal remedies to pursue any available state relief, and claims set forth in complaint did not raise substantial issues requiring construction of federal environmental laws and regu-

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

lations which, though containing provisions for private enforcement, did not permit recovery of compensatory damages and preserved states' rights to legislate in areas and individuals' rights to pursue state remedies. Boone v. DuBose, M.D.La.1988, 718 F.Supp. 479.

STATE WATER RESOURCES CONTROL BOARD
901 P STREET
SACRAMENTO, CALIFORNIA
JULY 15, 1999

FACT SHEET
FOR
NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM (NPDES) PERMIT FOR STORM WATER DISCHARGES FROM THE STATE OF CALIFORNIA, DEPARTMENT OF TRANSPORTATION (CALTRANS) PROPERTIES, FACILITIES, AND ACTIVITIES (ORDER NO. 99 – 06 - DWQ)

BACKGROUND

In 1972, The Federal Water Pollution Control Act [also referred to as the Clean Water Act (CWA)] was amended to provide that the discharge of pollutants to waters of the United States from any point source is unlawful, unless the discharge is in compliance with an NPDES permit. The 1987 amendments to the CWA added section 402(p) which directs that storm water discharges are point source discharges and establishes a framework for regulating municipal and industrial storm water discharges under the NPDES program. On November 16, 1990, the U.S. Environmental Protection Agency (USEPA) promulgated final regulations that establish the storm water permit requirements.

Pursuant to these regulations, storm water permits are required for discharges from a municipal separate storm sewer system (MS4) serving a population of 100,000 or more. USEPA defined MS4 to include road systems owned by states which are in an area with a population greater than 100,000. The regulations also specified a requirement for storm water permits from 11 categories of industry, including construction activities where the construction activity disturbs five acres or more.

In California, the MS4s were issued individual NPDES permits by the Regional Water Quality Control Boards (RWQCB). Caltrans is currently under permit in all of the areas of California that have been determined to require an MS4 permit with the exception of the Salinas area. Industrial activities are covered by General Permits that have been adopted by the State Water Resources Control Board (SWRCB). Caltrans currently seeks coverage under the NPDES General Permit for Construction Activities (Construction General Permit) for construction activities that are over five acres. The exception to this is in the Lake Tahoe area, where the RWQCB adopted its own Construction General Permit for projects over five acres and Waste Discharge Requirements (WDRs) for projects under five acres.

In 1996, Caltrans requested that the SWRCB, consider adopting a single NPDES permit for storm water discharges from all Caltrans properties, facilities, and activities that would cover both the MS4 requirements and the statewide Construction General Permit requirements. The federal regulations allow for the issuance of system-wide MS4 NPDES permits. Caltrans submitted an application for a permit with a draft Storm Water Management Plan (SWMP) in August 1996. The SWRCB gave Caltrans comments on the SWMP and received a revised SWMP from Caltrans in March 1997. Because the RWQCBs have issued NPDES storm water permits to all of the areas currently requiring a permit, with the exception of the Salinas area, this permit was not considered a new storm water permit, and a Part I and Part II application were not required.

The "Interpretative Policy Memorandum on Reapplication Requirements for Municipal Separate Storm Sewer Systems" issued by USEPA on May 17, 1996 outlines the requirements for permittees seeking a second Municipal NPDES Storm Water Permit. The requirements are: (1) name and address of the applicant; (2) name and title of primary administrative and technical contacts; and (3) proposed changes or improvements to the storm water management program and monitoring activities for the upcoming five-year term of the permit. In addition, USEPA recommends that the applicant provide identification of any previously unidentified water bodies and a summary of any known water quality impacts.

This permit is intended to cover all municipal storm water activities by Caltrans in California, both in areas that require an MS4 permit and areas that do not currently require a permit. It is also intended to cover all Caltrans construction activities that require a permit under the federal regulations. It directs that all existing storm water permits for discharges from Caltrans properties, facilities, and activities should be rescinded. RWQCBs may in the future issue individual storm water permits for Caltrans construction activities, as explained below.

This permit shall be implemented and enforced by the nine RWQCBs.

PROHIBITIONS

This permit authorizes storm water and authorized nonstorm water discharges from Caltrans properties, facilities, and activities. This permit prohibits discharges of material other than storm water (nonstorm water discharges) that are not authorized by this permit.

EFFLUENT LIMITATIONS

NPDES permits for storm water discharges must meet all applicable provisions of sections 301 and 402 of the CWA. These provisions require control of pollutant discharges to the Maximum Extent Practicable (MEP) for the MS4 permit requirements and to the standard of Best Available Technology Economically Achievable/Best Conventional Technology (BAT/BCT) for Construction General Permit requirements. It

also requires dischargers to implement more stringent controls, if necessary, to meet water quality standards.

It is not feasible at this time to establish numeric effluent limitations for storm water. The reasons why establishment of numeric effluent limitations is not feasible are discussed in detail in SWRCB Orders No. WQ 91-03 and WQ 91-04. Therefore, this permit allows Caltrans to implement Best Management Practices (BMPs) to comply with the requirements of this permit.

RECEIVING WATER LIMITATIONS

Storm water discharges shall not cause or contribute to a violation of an applicable water quality standard. This permit requires Caltrans to reduce or prevent pollutants in storm water discharges and authorized nonstorm water discharges through the development and implementation of BMPs which constitutes compliance with either MEP or BAT/BCT, whichever is applicable. Storm water discharges must also be in compliance with water quality standards. If receiving water quality standards are exceeded, Caltrans is required to submit a written report providing additional BMPs or other measures to be taken that will be implemented to achieve water quality standards.

MS4 PERMIT REQUIREMENTS

MS4 permit requirements are to be implemented to MEP. These requirements are addressed in the SWMP that is an integral and enforceable component of this NPDES Permit. However, the SWMP also refers to other documents that Caltrans has prepared which give the detailed discussion of how the program elements are to be implemented. Where the SWMP was determined to be inadequate, further requirements are outlined in the permit. Caltrans will submit changes to the SWMP on an annual basis. Substantive changes to the SWMP will require approval by the SWRCB.

The SWMP which was submitted in August 1996 defined terms in the development of the program in a way that is inconsistent with the definitions in Title 40 of the Code of Federal Regulations Section 122.22 (40 CFR 122.22). Caltrans is required to rewrite the SWMP in a manner that is consistent with the definitions in the regulations. Caltrans also uses terms such as "winter season" and "significant erodible slope" which are not used in the regulations. Caltrans uses terms such as these to determine the scope of the program, with the understanding that Caltrans is responsible for discharges at all times during the year, and that if implementation of the program using these terms leads to discharge of pollutants, the terms will have to be redefined.

Caltrans is required to submit a revised SWMP within 90 days of the adoption of this permit. Because the SWMP is an integral and enforceable part of this permit, this revised SWMP will be presented to the State Board for approval. The incorporation of this revised SWMP into the permit will be made pursuant to the federal regulations for NPDES permit modification found at 40 CFR Section 122.62 and 40 CFR Section 124.

Caltrans has developed a BMP program for control of pollutants from existing facilities and for new and reconstructed facilities as part of the SWMP. This BMP program must be revised to reflect the definition of pollutant in the federal requirements, including a reevaluation of BMPs. The evaluation of the feasibility of structural BMPs in the SWMP does not reflect the current state of knowledge among other transportation agencies. BMPs are rejected that are routinely used by other transportation agencies. Therefore, the BMP selection in the SWMP does not meet MEP. The federal regulations require the consideration of structural BMPs where they are appropriate. MEP cannot be met without the consideration of structural BMPs. The fact that a BMP has not been used before is not an adequate reason to reject its use if other factors make it appropriate

In addition to the annual submittal of the SWMP, this permit also requires Caltrans to submit a workplan that explains how the program will be implemented in each Region. The purpose of the workplan is to bring the theoretical and proposed program of the SWMP to the practical and implementable level at the regional, watershed and water body level. Through the workplan process, Caltrans will be able to discuss the implementation of the program and show how their priorities will address specific local needs.

The MS4 permit requirements include:

Coordination with Local Agencies

This permit requires Caltrans to develop a program for communication with local agencies and coordination with other MS4 programs where the programs overlap geographically with Caltrans facilities.

Legal Authority

In the April 1998 SWMP, Caltrans submitted a certification of adequate legal authority to implement the program. Through implementation of a storm water program, Caltrans may find that the legal authority is, in fact, not adequate. This permit requires Caltrans to reevaluate the legal authority each year and recertify that it is adequate. Caltrans must submit the analysis of the legal authority as part of the Annual Report each year. If it becomes clear that the legal authority is not adequate to fully implement the SWMP and the requirements of the permit, Caltrans must seek the authority necessary for implementation of the program.

Fiscal Analysis

Caltrans must maintain adequate funding to implement an effective storm water program and must submit an analysis of the funding each year. This includes a report on the funding that is dedicated to storm water as well as an estimate of the funding that has been allocated to various program elements that is not included in the storm water

program funding. An example of this would be to estimate the funding that has been made available to the Maintenance Program to implement the development of Maintenance Facility Pollution Prevention Program Plans (FPPP) and to implement the BMPs that are necessary for water quality. In addition, Caltrans is required to seek adequate funding from the legislature for an effective storm water program.

Vegetation Control Program

This permit requires Caltrans to develop a program for vegetation control that minimizes the use of agricultural chemicals and maximizes the use of appropriate native and adapted vegetation for erosion control and filtering of runoff.

Storm Water System Management

This permit requires Caltrans to develop a program to monitor and clean storm drain inlets. For storm water structures that contain excessive material on a regular basis, Caltrans must determine if an Illicit Connection/Illegal Discharge (IC/ID) Detection investigation is warranted or if an enhanced BMP program is required for the drainage area. Vegetation in storm channels may reduce erosion from these channels and provide filtration and may be subject to sections 401 and 404 of the CWA.

Accidental Spills

This permit requires Caltrans to notify the MS4 permittee of any spills that may have an impact on the MS4's ability to comply with its municipal storm water permit. This means any spill that could reach the MS4 permittee's storm drain system in a large enough quantity to impact the system. Caltrans must also notify the RWQCB of any spill that may reach a receiving water and have an adverse effect on the receiving water. Generally, this notification would be limited to spills that are large enough to require cleanup or lane closure, but only if the spill could have an impact on water quality.

Illicit Connection/Illegal Discharge (IC/DC) Detection

This permit requires Caltrans to have a program to detect and investigate IC/IDs. Because Caltrans is different from a typical municipality, it is not intended that Caltrans should do routine inspections of their system for illicit connections. It is unlikely that a discharger would have access to the Caltrans storm drain system to make an illicit connection. It is also not intended that Caltrans would do routine field screening for illegal discharges. The Caltrans system is too large and spread out for this to be effective. However, Caltrans is required to train field maintenance personnel to recognize IC/IDs and to respond to them. Caltrans is also required to have a method for receiving and responding to public complaints.

Characterization of Discharges

In the areas which require an MS4 permit, Caltrans is required to characterize discharges as specified in 40 CFR 122.26(iv)(d)(1) and (2) over the life of the permit. This requirement was to be done as part of the Part II application for the initial permits that Caltrans received in these areas; so for most areas, this data should already be available. The purpose of this requirement is to provide Caltrans with adequate information about the storm drain system to effectively implement the program. This characterization is a one time requirement. If adequate information was submitted under the original Part II application, this requirement is satisfied and the data should be used as the basis for the Regional Workplans.

Maintenance Facilities

This permit requires Caltrans to prepare FPPP for all maintenance facilities, implement BMP programs at each facility as necessary and periodically inspect each facility. Monitoring is only required as part of the overall monitoring program to determine the effectiveness of the BMP program.

Training and Public Education

The Training and Public Education component consists of three parts to address the three major audiences that Caltrans must address. The three audiences are Caltrans employees, Caltrans contractors, and the general public. Caltrans has prioritized these three parts and has developed and implemented programs for the first two audiences. The program for the final part, which addresses the general public, will be developed and implemented during this permit period.

The detailed requirements in the permit outlining what is to be included in a public education component were recommended by the Public Information/Public Participation Subcommittee of the California Storm Water Quality Task Force. The members of this committee are all responsible for public education programs throughout the State and have experience in developing public education programs.

Program Evaluation and Monitoring

This permit requires Caltrans to evaluate the effectiveness and adequacy of the storm water program on an annual basis. This includes both monitoring and a self-audit of the program. Caltrans has submitted a three-year monitoring strategy that will be updated annually. Caltrans will also be required to submit a detailed monitoring program prior to the upcoming rainy season for each year. The monitoring is intended to demonstrate the effectiveness of its storm water and nonstorm water programs and specifically to achieve the following objectives:

1. Characterization of storm water discharges, including pollutant concentrations and mass loadings, from locations representative of Caltrans owned properties, facilities, and activities. Of particular interest is the discharge of high volume systems which discharge to areas subject to or sensitive to beach closures;

2. Evaluation of effectiveness of maintenance activity control measures;

3. Evaluation of effectiveness of maintenance facility pollution prevention plans;

4. Evaluation of effectiveness of construction erosion prevention and control measures;

5. Evaluation of effectiveness of permanent control measures; and

6. Evaluation of effectiveness of highway operation control measures.

Caltrans has also submitted a Guidance Manual for Stormwater Monitoring Protocols which specifies the manner in which monitoring is to be undertaken.

In addition to monitoring, Caltrans must perform a program audit each year to determine how well the program is being implemented and whether the program is actually adequate. Caltrans must submit an outline of this audit six months in advance of the Annual Report so that the SWRCB can evaluate the methods to be used to perform the audit.

Region Specific Concerns

Each of the RWQCBs was given the opportunity to specify specific water quality concerns in their Region that required special conditions. At this time, these requirements are limited to items that Caltrans is currently responsible for either under a current NPDES permit or under a RWQCB Basin Plan. Region-specific concerns have been identified in the Lahontan RWQCB. Some of the requirements are specific to the Lake Tahoe Hydrologic Unit and are based on the unique quality of the resource. Other requirements are applicable to the entire region.

To accommodate the concerns about the Lake Tahoe Hydrologic Unit, the Lahontan RWQCB has placed requirements in the RWQCB Basin Plan that are, therefore, requirements of this permit. They include (1) numeric effluent limits for storm water, (2) nonstorm water discharge prohibitions, (3) a requirement for the capture and treatment of all storm water from the 20-year storm, (4) erosion control guidelines for high mountain areas, (5) construction site and maintenance facility inspection requirements, and (6) a winter ban on soil disturbance throughout the Lake Tahoe Hydrologic Unit and other high mountain portions of the Region. If the Basin Plan requirements that are referenced in this NPDES Permit are changed during the life of this NPDES Permit,

Caltrans can request that the terms of this permit be changed to reflect the changes in the Basin Plan.

In addition, the Lahontan RWQCB requires Caltrans to meet some specific requirements in their construction program. These include involving the RWQCB in the design of the project and early submittal of Storm Water Pollution Prevention Plans (SWPPP).

The Lahontan RWQCB requires that Caltrans submit information to them about the program to control snow and ice throughout the Region. This requirement includes the submittal of information about the use of abrasives and deicing agents throughout the Region, including the location of the use, the source and chemistry of the deicing agents and abrasives, and the volume of abrasive and deicing agents used on individual highway segments. For example, Caltrans must report separately on abrasives and deicing agents use within the Lake Tahoe Hydrologic Unit by volume of material used on State Route 50, State Route 89, State Route 28, and State Route 267, rather than providing only the total volume used in the Lake Tahoe Hydrologic Unit or within a specific Caltrans District. In the Truckee River Hydrologic Unit, the reports would be volume of material used on State Route 89S, State Route 89N, State Route 267, and Interstate 80.

Caltrans is required to develop a monitoring program that evaluates the effectiveness of BMPs used to recover abrasives and deicing materials and that evaluates the impacts of abrasives and deicing materials on surface waters within the Lake Tahoe Hydrologic Unit. A report on the use of deicing agents and abrasives is required each year as part of the Annual Report.

CONSTRUCTION PERMIT REQUIREMENTS

Construction activities which disturb five acres or more outside of the Lake Tahoe Hydrologic Area are currently required to be covered by the Construction General Permit. The current Construction General Permit is SWRCB Order 99- DWQ.

The Lahontan RWQCB has developed an NPDES Storm Water Permit for construction projects that involve more than five acres of soil disturbance and non-NPDES waste discharge requirements for construction projects for projects less than five acres within the Lake Tahoe Hydrologic Unit. The current Lahontan Construction Permit is Lahontan RWQCB Board Order 6-93-63. The WDRs for small projects are contained in Lahontan RWQCB Board Order 6-91-31. All projects within the Lake Tahoe Hydrologic Area are currently subject to one of these two Board Orders depending on the size of the project.

Storm water discharges from all Caltrans construction projects will be covered by this permit except for those projects that the RWQCB determines should be covered by an individual permit. Caltrans will be required to notify the RWQCB that a project is to be covered under this permit at least 30-days prior to the onset of construction. This 30-day

notification under this permit is the equivalent of filing a Notice of Intent (NOI) under the Construction General Permit.

The RWQCB can require submittal of the SWPPP up to 30 days prior to the onset of soil disturbance, require changes to the SWPPP, perform inspections, and take enforcement action. Caltrans can negotiate an alternative process with the appropriate RWQCB if an alternative method of complying with the requirement for early submittal of the SWPPP is appropriate.

The permit requires Caltrans to implement an effective construction storm water program. The program that Caltrans plans to implement is contained in their SWMP. This plan, in turn, refers to BMP manuals and the Standard Specifications that contain the details of the BMP implementation.

Caltrans must implement an effective construction storm water program during the entire year throughout the State. Because the construction storm water program will be implemented year round, regardless of whether or not Caltrans elects to implement baseline or more advanced erosion control measures, any discharges of material not authorized by this permit is a violation.

Caltrans construction projects may involve soils that contain lead in quantities that meet the State definition of hazardous waste but not the federal definition. The Department of Toxic Substances Control (DTSC) has issued waivers allowing Caltrans to use these soils in construction projects under a narrow range of conditions. In addition to the waivers, Caltrans also needs authorization from the RWQCB to allow the use of these soils. Caltrans is required to obtain WDRs from the RWQCB for the use of these soils.

ANNUAL REPORT

This permit requires Caltrans to submit an Annual Report each April. The Annual Report will contain (1) an evaluation of the previous year's program, (2) the results of the program audit, including information about compliance with the construction requirements and maintenance facility requirements, (3) a vegetation management report, (4) an IC/ID report, (5) a nonstorm water discharge report, (6) an analysis of the legal authority, (7) an analysis of the fiscal resources for the coming year, (8) a report on the training and public education program, and (9) reports on the regional requirements. The Annual Report must also contain a monitoring report and a monitoring plan for the upcoming year and workplans for each of the regions. There is a one year lag in the reporting of the monitoring program and the program audit in the Annual Report. This lag is intended to allow Caltrans the time to adequately analyze the data that has been generated.

STATE WATER RESOURCES CONTROL BOARD

ORDER NO. 99 - 06 - DWQ
NPDES NO. CAS000003

NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM (NPDES) PERMIT
STATEWIDE STORM WATER PERMIT
AND
WASTE DISCHARGE REQUIREMENTS (WDRs)
FOR THE
STATE OF CALIFORNIA, DEPARTMENT OF TRANSPORTATION (CALTRANS)

The State Water Resources Control Board (SWRCB) finds that:

1. **NPDES PERMIT APPLICATION**: On September 5, 1996, Caltrans, located at 1120 N Street, Sacramento, California 95814 submitted an NPDES Permit application for storm water discharges from the Caltrans highways, properties, facilities, and activities throughout the State of California for Caltrans headquarters and for the District offices including: the North Coast region (District 1), Northern Central Valley and Far Northeastern region (District 2), Sacramento area (District 3), San Francisco Bay area (District 4), Central Coast (District 5), Lower Central Valley (District 6), Los Angeles Basin (District 7), San Bernardino area (District 8), Mono/Inyo area (District 9), Middle Central Valley (District 10), San Diego area (District 11), and Orange County (District 12). The application was accepted on October 4, 1996. As part of the application, Caltrans submitted a Storm Water Management Plan (SWMP) and Monitoring Plan. The SWMP and Monitoring Plan were amended in March 1997 and again in April 1998. The application is considered an application for permit reissuance because Caltrans is currently under permit in all of the parts of the State for which a Municipal Separate Storm Sewer System (MS4) permit is currently required. The MS4 permits that Caltrans holds, the permitting agency, the adoption date, and expiration date are shown in Table 1.

//

TABLE 1
CURRENT CALTRANS STORM WATER PERMITS

RWQCB	Caltrans District	Board Order	NPDES Permit Number	Adoption Date	Expiration Date
North Coast	4	97-119	CA0025038	10/22/97	10/22/02
San Francisco Bay	4 and 10	94-098	CAS029998	8/17/94	8/27/99
Los Angeles	7	90-079	CA0061654	6/18/90	6/18/95
Central Valley	6	94-244	CA0083500	9/16/94	9/1/99
Central Valley	3, 4, 6 and 10	95-001	CA0083640	1/27/95	1/1/00
Lahontan	3	6-93-62	CAS616002	6/11/93	6/11/98
Colorado River Basin	8 and 11	94-038	CAS617001	11/15/94	11/17/99
Santa Ana River	8 and 12	94-5	CA8000279	7/8/94	7/8/99
San Diego	8,11, and 12	97-08	CAS029998	3/12/97	3/12/02

2. **FEDERAL AUTHORITY**: In 1972, the Federal Water Pollution Control Act (also referred to as the Clean Water Act [CWA]) was amended to provide that the discharge of pollutants to waters of the United States from any point source is effectively prohibited unless the discharge is in compliance with an NPDES Permit. The 1987 amendments to the CWA added section 402(p) that establishes a framework for regulating municipal and industrial storm water discharges under the NPDES Permit Program.

3. **STATE AUTHORITY:** California Water Code section 13376 provides that any person discharging or proposing to discharge pollutants to waters of the United States must apply for and obtain WDRs. (For this permit, the State term "WDRs" is equivalent to the federal term "NPDES permits" as used in the CWA). Furthermore, municipal and industrial storm water discharges are discharges of waste that could affect the quality of the waters of the State. Applicable State of California regulations are contained in the California Code of Regulations (CCR), Title 23, Division 3, Chapter 9.

4. **CALTRANS DISCHARGES SUBJECT TO MUNICIPAL STORM WATER PERMIT REGULATIONS**: On November 16, 1990, the U.S. Environmental Protection Agency (USEPA) promulgated final regulations that establish application requirements for storm water permits codified at Title 40 of the Code of Federal Regulations (CFR), Section 122.26 (40 CFR 122.26). Federal regulations 40 CFR 122.26(a)(iii) and (iv) require that NPDES storm water permits be issued for discharges from large and medium MS4s. The regulations define "municipal separate storm sewer" to mean "a conveyance or system of conveyances (including roads with drainage systems, municipal streets, catch basins, curbs, gutters, ditches, manmade channels, or storm drains): (i) owned or operated by a State, city, town, borough, county, . . .". Caltrans, as the owner of an MS4, is subject to an NPDES Permit in those areas of the State subject to an MS4 storm water permit. Caltrans performs activities that impact storm water quality. These activities include operation of roads and highways, construction activities, and maintenance activities.

To enable Caltrans to implement a uniform storm water program, this NPDES Permit will cover storm water discharges from all Caltrans highways, properties, activities and facilities throughout the State.

5. **CALTRANS DISCHARGES SUBJECT TO CONSTRUCTION STORM WATER PERMIT REGULATIONS:** Federal regulations (40 CFR 122.26) require discharges of storm water associated with construction activity including clearing, grading, and excavation activities (except operations that result in disturbance of less than five acres of total land area and which are not part of a larger common plan of development or sale) to obtain an NPDES Permit and to implement Best Management Practices (BMPs) that achieve the performance standards of Best Available Technology economically achievable/Best Conventional Pollutant Control Technology (BAT/BCT) to reduce or eliminate storm water pollution.

6. **STORM WATER DISCHARGE DEFINITION:** Storm water discharges consist only of those discharges that originate from precipitation events. Storm water is defined in 40 CFR 122.26(b)(13) as storm water runoff, snowmelt runoff, and surface runoff and drainage. During precipitation events, storm water picks up and transports pollutants into and through municipal storm water conveyance systems and ultimately to waters of the United States.

7. **NONSTORM WATER DISCHARGE DEFINITION:** Nonstorm water discharges consist of all discharges from a municipal storm water conveyance system which do not originate from precipitation events (i.e., all discharges from a conveyance system other than storm water). Nonstorm water discharges include illicit discharges, nonprohibited discharges, and NPDES permitted discharges. An illicit discharge is defined in 40 CFR 122.26(b)(2) as "any discharge to a municipal storm sewer that is not composed entirely of storm water except discharges pursuant to an NPDES Permit (other than the NPDES Permit for discharges from the MS4) and discharges resulting from fire fighting activities." Nonstorm water discharges are addressed in Provision B of this permit.

8. **PERFORMANCE STANDARDS:** CWA section 402(p) establishes two different performance standards for storm water discharges. NPDES permits issued for MS4 storm water discharges require controls to reduce the discharge of pollutants to the Maximum Extent Practicable (MEP). Caltrans can reduce pollutants to MEP through the effective implementation of BMPs. NPDES Permits issued for industrial storm water discharges (including construction activities) must meet BAT for toxic pollutants and BCT for conventional pollutants. In addition, storm water discharges may not cause or contribute to exceedance of water quality standards. The requirements for compliance with water quality standards are described in Provision C., Receiving Water Limitations.

9. **CALTRANS ACTIVITIES:** Caltrans is primarily responsible for the design, construction, management, and maintenance of the State highway system, including freeways, bridges, tunnels, maintenance facilities, and related properties, and facilities.

10. **CALTRANS BUDGET:** Caltrans derives funding from federal, State, and local government sources. The annual operating budget for Caltrans is determined through the

State's financial planning process. The final determination on the budget is made by the Legislature and the Governor.

11. **REGIONAL WATER QUALITY CONTROL BOARD (RWQCB) BASIN PLANS:** Each RWQCB has adopted a Basin Plan containing the policies, prohibitions and requirements that apply to that Region. Caltrans is subject to the policies and prohibitions and requirements contained in these Basin Plans in the Region in which the Basin Plan is applicable.

12. **CALTRANS DISCHARGES:** Caltrans discharges consist of storm water and nonstorm water runoff generated from (a) maintenance and operation of State-owned highways, freeways, and roads; (b) maintenance facilities; (c) other properties, facilities, activities, and construction projects; (d) permanent discharges from subsurface dewatering, and (e) temporary construction related dewatering which discharge directly or through municipal storm water conveyance systems to surface water bodies in the State. These surface water bodies include creeks, rivers, reservoirs, lakes; wetlands, lagoons, estuaries, bays, and the Pacific Ocean and tributaries thereto. These surface waters are waters of the United States as defined in 40 CFR 122.2. This permit regulates storm water discharges on Caltrans highways, properties, and facilities.

13. **POTENTIAL POLLUTANTS IN CALTRANS DISCHARGES:** Discharges of storm water from the Caltrans owned rights-of-way, properties, facilities, and activities, including storm water management activities in construction, maintenance, and operation of State-owned highways within the State of California have been shown to be contributors of pollutants to waters of the United States. As such, the discharge of storm water may be causing or threatening to cause violations of water quality objectives. The quality and quantity of these discharges vary considerably and are affected by hydrology, geology, land use, season, and sequence and duration of hydrologic events. Pollutants occur in both the storm water discharges and nonstorm water discharges. Pollutant sources from Caltrans rights-of-way, properties, facilities, and activities include motor vehicles, highway maintenance, construction site runoff, maintenance facility runoff, illegal dumping, spills, and landscaping care. Pollutant categories include metals (such as copper, lead, and zinc), synthetic organics (petroleum products and pesticides), sediment, nutrients (nitrogen and phosphorus fertilizers), debris, oxygen demanding substances (decaying vegetation, animal waste, and other organic matter), and other pollutants which may cause aquatic toxicity in the receiving waters.

14. **STORM WATER MANAGEMENT PLAN (SWMP):** The SWMP submitted by Caltrans describes a framework for management of storm water discharges during the term of this permit. The title page and table of contents of the SWMP are attached to this NPDES Permit. The SWMP describes the Caltrans facilities, the institutional arrangements within Caltrans, legal authorities, funding, training and public education and participation, the annual reporting program evaluation process, and monitoring studies to be undertaken. The SWMP includes a discussion of activities to be implemented by each of the Divisions within Caltrans, including programs for design and construction, maintenance, and additional region-specific programs to be undertaken. Revisions to the SWMP for subsequent years will be submitted to the SWRCB as part of the Annual Reporting and Program Evaluation Process. This NPDES Permit directs Caltrans to implement its

SWMP. Where the SWMP was found to be inadequate, this NPDES Permit directs Caltrans to fulfill additional requirements and specifies what these requirements are.

Caltrans SWMP must be revised in accordance with the Provisions of this NPDES Permit to address concerns about the scope, detail of proposed actions, and time frame for implementation.

Caltrans began implementation of this SWMP in March 1997.

15. **ENFORCEABILITY OF THE SWMP:** The SWMP and modifications or revisions to the SWMP that are approved, in accordance with Provision F.1 of this NPDES Permit, and future year workplans to be submitted, in accordance with the SWMP and Provision F.1 of this NPDES Permit, are integral to and an enforceable component of this NPDES Permit.

16. **LOCAL MUNICIPALITIES:** The RWQCBs have issued NPDES Permits for the discharge of storm water from municipal storm water conveyance systems to municipalities in California which require these permits. Caltrans operates highways and highway-related properties, activities, and facilities that cross through all of these permitted areas. Some storm water discharges from Caltrans-owned rights-of-way, properties, facilities, and activities discharge to storm water conveyance systems managed by these municipalities. Some storm water discharges from these municipalities discharge to storm water conveyance systems managed by Caltrans.

17. **LOCAL CONTROL:** This NPDES Permit does not preempt or supersede the authority of local municipal agencies to prohibit, restrict, or control storm water discharges and authorized nonstorm water discharges to storm drain systems or other watercourses within their jurisdictions as allowed by State and federal law.

18. **CALTRANS CONSTRUCTION PROGRAM:** Caltrans performs construction activities that are required to have NPDES Permits for storm water discharges from the construction site. This NPDES Permit will effectively regulate storm water discharges from construction projects within the Caltrans rights-of-way. Caltrans will not be required to obtain coverage under the State NPDES General Permit for Construction Activities (Construction General Permit), SWRCB Board Order 92-08 DWQ.

19. **DREDGE AND FILL MATERIALS:** This NPDES Permit does not authorize discharges of fill or dredged material regulated by the U.S. Army Corps of Engineers under CWA section 404 and does not constitute a waiver of water quality certification under CWA section 401.

20. **RECEIVING WATER LIMITATIONS:** The impact of storm water runoff from highway facilities on the water quality of receiving waters is highly variable. For this reason, this NPDES Permit does not include numeric effluent limitations. Instead, this NPDES Permit will emphasize the use of BMPs to control storm water pollution and the establishment of a monitoring program to determine the impact of storm water runoff from highways on receiving water bodies. The Lahontan RWQCB does have numeric effluent limits for storm water discharges for the Tahoe Basin in the Basin Plan. These numeric effluent limits also appear in their Regional Construction Permits (RWQCB Board Orders

6-91-31 and 6-93-63) and the Caltrans MS4 Permit RWQCB Board Order No. 6-93-62) for the Tahoe Basin, and these limits apply to this NPDES Permit in that area.

It is the SWRCBs intent that this NPDES Permit shall ensure attainment of applicable water quality objectives and protection of the beneficial uses of receiving waters. This NPDES Permit, therefore, includes standard requirements to the effect that discharges shall not cause or contribute to violations of water quality objectives nor shall they cause certain conditions to occur which create a condition of nuisance or water quality impairment in receiving waters. "Standard" language is the standard for storm water permits; it is not the same as the "standard" language for other NPDES permits. Accordingly, the SWRCB is requiring that these standard requirements be addressed through the implementation of control measures to reduce pollutants in storm water discharges.

Receiving water limitations in this NPDES Permit are based on the federal CWA, RWQCB Basin Plans and policies, USEPA Guidance, Best Professional Judgement, and BMPs.

21. **CALIFORNIA ENVIRONMENTAL QUALITY ACT (CEQA)**: The action to adopt an NPDES Permit is exempt from Provisions of the CEQA (CEQA: Public Resources Code section 21100, et. seq.), pursuant to section 13389 of the California Water Code.

22. **PUBLIC NOTIFICATION**: The SWRCB has notified Caltrans and all known interested agencies and persons of its intent to prescribe an NPDES Permit and WDRs for said discharge and has provided them with an opportunity for a public meeting and an opportunity to submit comments.

23. **PUBLIC HEARING**: The SWRCB in a public meeting held on June 9, 1998 heard and considered all comments pertaining to this NPDES Permit. The permit was adopted at a public meeting held on July 15, 1999.

24. **RWQCB ENFORCEMENT**: Following adoption of this NPDES Permit, the RWQCBs shall enforce the Provisions.

25. **IMPLEMENTATION:** This NPDES permit is in compliance with section 402 of the CWA and shall take effect upon adoption by the SWRCB.

26. **ANTI-DEGRADATION:** This NPDES Permit is consistent with the anti-degradation Provision, section 40 CFR 131.12 and SWRCB Resolution 68-16.

IT IS HEREBY ORDERED that all MS4 storm water permits issued to Caltrans by RWQCBs shall be rescinded insofar as they apply to Caltrans.

IT IS HEREBY ORDERED that in order to meet the Provisions contained in Division 7 of the California Water Code and regulations adopted thereunder and the Provisions of the Federal CWA and the regulations and guidelines adopted thereunder, Caltrans shall comply with the following: (***REPORTING REQUIREMENTS ARE SHOWN IN ITALICS WITH ALL CAPITAL LETTERS***):

A. GENERAL DISCHARGE PROHIBITIONS

1. Any discharge from Caltrans rights-of-way or Caltrans properties, facilities, and activities within those rights-of-way that is not composed entirely of "storm water" to waters of the United States is prohibited unless authorized pursuant to Section B of this NPDES Permit. For some discharges, Caltrans may also need to obtain Water Quality Certification under CWA S2. The discharge of runoff from Caltrans owned rights-of-way or Caltrans properties, facilities, and activities to waters of the United States which have not been reduced to the MEP is prohibited. The discharge of runoff from construction sites containing pollutants which have not been reduced using BAT for toxic pollutants and BCT for conventional pollutants to waters of the United States is prohibited.

2. The discharge of pollutants or dredged or fill material to waters of the United States, except as authorized by an NPDES Permit or a dredged or fill material permit (subject to the exemption described in California Water Code (CWC) section 13376), is prohibited.

3. The discharge of waste to waters of the State in a manner causing or threatening to cause a condition of pollution or nuisance defined in CWC section 13050, is prohibited.

4. The dumping, deposition, or discharge of waste by Caltrans directly into waters of the State or adjacent to such waters in any manner that may allow its being transported into the waters is prohibited unless authorized by the RWQCB.

5. The discharge of any radiological, chemical, or biological warfare agent into waters of the State is prohibited. The discharge shall not contain toxic substances in concentrations that are toxic to or that produce detrimental physiological responses in human, plant, animal, or aquatic life.

6. The discharge of sand, silt, clay, or other earthen materials from any activity, including land grading and construction, in quantities which cause deleterious bottom deposits, turbidity, or discoloration in waters of the State or which unreasonably affect or threaten to affect beneficial uses of such waters, is prohibited.

7. Wastes or wastewater from road sweeping vehicles or from other maintenance or construction activities shall not be discharged to any surface waters or to any storm drain leading to surface water bodies.

Caltrans shall achieve the pollutant reductions described in General Discharge Prohibitions A.2. above through implementation of the SWMP described in General Requirements, Provision E., below.

B. NONSTORM WATER DISCHARGE PROHIBITIONS

1. Caltrans shall effectively prohibit nonstorm water discharges into its storm water conveyance system unless such discharges are either:

   a. authorized by a separate NPDES permit; or

   b. authorized in accordance with Nonstorm Water Discharge Prohibition B.2. of this NPDES Permit.

2. Exempted Discharges.

   In carrying out nonstrom Water Discharge Prohibition B.1. of this NPDES Permit, the following nonstorm water discharges need not be prohibited unless they are identified as sources of pollutants to receiving waters:

   a. flows from riparian habitats or wetlands;
   b. diverted stream flows;
   c. springs;
   d. rising ground waters; and
   e. uncontaminated ground water infiltration.

   If any of the above categories of discharges or sources of such discharges are identified as sources of pollutants to receiving waters, then such categories or sources shall be addressed as conditionally exempted discharges in accordance with Prohibition B.3.

3. Conditionally Exempted Discharges

   The following nonstorm water discharges need not be prohibited if identified by either Caltrans or the Executive Director as not being sources of pollutants to receiving waters or if appropriate control measures to minimize the adverse impacts of such sources are developed and implemented under the SWMP in accordance with Prohibition B.4.:

   a. uncontaminated pumped ground water;
   b. foundation drains;
   c. water from crawl space pumps;
   d. footing drains;
   e. air conditioning condensate;
   f. irrigation water;
   g. landscape irrigation;
   h. lawn or garden watering;
   i. planned and unplanned discharges from potable water sources;
   j. water line and hydrant flushing;
   k. individual residential car washing; and
   l. discharges or flows from emergency fire fighting activities.

4. Caltrans shall identify and describe the categories of discharges 3.a through 3.l that are to be exempt from Prohibition B.1 in the Annual Report. For each such category, Caltrans shall identify and describe as necessary and appropriate to the category either documentation that the discharges are not sources of pollutants to receiving waters or circumstances in which they are not found to be sources of pollutants to receiving waters. Otherwise, Caltrans shall describe (a) control measures to reduce pollutants to the maximum extent practicable and minimize the adverse impacts of such sources, (b) procedures and Performance Standards for their implementation, (c) procedures for notifying the SWRCB of these discharges, and (d) procedures for monitoring and record management. Such submissions shall be deemed to be incorporated into the SWMP unless disapproved by the Executive Director. If necessary, on a case-by-case basis, Caltrans shall prohibit any individual or class of nonstorm water discharge(s) listed above that is determined by Caltrans to be a significant source of pollutants to waters of the United States.

5. Permit Authorization for Exempted Discharges

   a. Discharges of nonstorm water from sources owned or operated by Caltrans are authorized and permitted by this Order, if they are in accordance with the conditions of this Provision and the SWMP.

   b. Any RWQCB may require dischargers of nonstorm water other than Caltrans to apply for and obtain coverage under an NPDES permit and comply with the control measures developed by Caltrans pursuant to Provision B. Nonstorm water discharges that are in compliance with such control measures may be accepted by Caltrans and are not subject to Prohibition B.1. Caltrans may refer nonstorm water dischargers to the Caltrans system to the RWQCB for permitting or enforcement.

   c. Caltrans may propose additional categories of nonstorm water discharges to be included in the exemption to Discharge Prohibition B.1. Such proposals are subject to approval in accordance with the NPDES permit regulations.

6. If a RWQCB Executive Officer determines that any individual or class of nonstorm water discharge(s) listed in Nonstorm Water Discharge Prohibition B.2 or B.3. above may be a significant source of pollutants to waters of the United States in that region, the RWQCB Executive Officer may require Caltrans to monitor and submit a report on the discharge and to follow the procedures outlined in Nonstorm Water Prohibition B.4. The RWQCB may require that discharge cease in the event that nonstorm water discharges are a significant source of pollutants to waters of the United States.

7. Caltrans shall examine all illicit connection/illegal discharge (IC/ID) investigation results for the presence of elevated levels of pollutants (e.g., chlorine, sediments, or surfactants) which may be the result of one or more classes of nonprohibited nonstorm water discharge(s) identified in Nonstorm Water Discharge Prohibition B.2. or B.3. above. If such elevated levels of pollutants are commonly present, Caltrans

shall conduct a follow-up investigation to identify the source of the elevated pollutants.

8. Discharges or flows from health and safety emergencies, such as fire fighting activities and accident response, shall be addressed only when such flows are identified by Caltrans to be significant sources of pollutants to waters of the United States. *(It is not the intention of the SWRCB for Caltrans to prohibit, under any circumstances, the discharge of water or other fire retardants that flow into storm water conveyance systems as a result of their use for protection of life and public or private property. However, there may be instances when specified BMPs are appropriate for fire fighting flows).* Although this NPDES Permit does not prohibit these discharges, they may still be subject to regulation under the federal and/or State law.

9. Caltrans shall submit a ***COMPREHENSIVE NONSTORM WATER REPORT*** each year as part of the Annual Report. This report shall include the analysis of each category of discharge, and the BMPs to be implemented for each category. Caltrans must also periodically evaluate the effectiveness of the modified BMPs by examining illicit discharge/illegal dumping investigation results and take any further action necessary to reduce such pollutant concentrations.

C. RECEIVING WATER LIMITATIONS

C-1- RECEIVING WATER LIMITATIONS FOR MUNICIPAL ACTIVITIES:

1. The discharge of storm water from a facility or activity that causes or contributes to the violation of water quality standards or water quality objectives (collectively WQSs) is prohibited.

2. The discharges shall not cause the following conditions to create a condition of nuisance or to adversely affect beneficial uses of waters of the State:

   a. Floating, suspended solids, or deposited macroscopic particulate matter, or foam;

   b. Bottom deposits or aquatic growths;

   c. Alteration of temperature, turbidity, or apparent color beyond present natural background levels;

   d. Visible, floating, suspended, or deposited oil or other products of petroleum origin, and /or;

   e. Toxic or deleterious substances present in concentrations or quantities which will cause deleterious effects on aquatic biota, wildlife, or waterfowl, or which render any of these unfit for human consumption

either at levels created in the receiving waters or as a result of biological concentration.

3. Caltrans shall comply with Parts C-1.1. and 2. of this permit through timely implementation of control measures and other actions to reduce pollutants in the discharges in accordance with the SWMP and other requirements of this permit including any modifications; the SWMP shall be designed to achieve compliance with Parts C-1.1. and 2. of this permit; if exceedance(s) of WQSs persist notwithstanding implementation of the SWMP and other requirements of this permit, the permittee shall assure compliance with Parts C-1.1. and 2. of this permit by complying with the following procedure:

   a. Upon a determination by either Caltrans or the RWQCB that discharges are causing or contributing to an exceedance of an applicable WQS, Caltrans shall promptly notify and thereafter submit a report to the appropriate RWQCB. The report shall describe BMPs that are currently being implemented and additional BMPs that will be implemented to prevent or reduce any pollutants that are causing or contributing to the exceedance of water quality standards. The report may be incorporated in the annual update to the SWMP unless the RWQCB directs an earlier submittal. The report shall include an implementation schedule. The RWQCB may require modifications to the report;

   b. Submit any modifications to the report required by the RWQCB within 30 days of notification;

   c. Within 30 days following approval of the report described above by the RWQCB, Caltrans shall revise the SWMP and monitoring program to incorporate the approved modified BMPs that have been and will be implemented, the implementation schedule, and any additional monitoring required; and

   d. Implement the revised SWMP and monitoring program in accordance with the approved schedule.

4. So long as Caltrans has complied with the procedures set forth in Receiving Water Limitations C-1-3. above and are implementing the revised SWMP, Caltrans does not have to repeat the same procedure for continuing or recurring exceedances of the same receiving water limitations unless directed by the RWQCB to develop additional BMPs.

C-2-RECEIVING WATER LIMITATIONS FOR CONSTRUCTION ACTIVITIES:

1. Storm water discharges and authorized nonstorm water discharges to any surface or ground water shall not adversely impact human health or the environment.

2. The SWPPP developed for the construction activity covered by this NPDES Permit

shall be designed and implemented such that storm water discharges and authorized nonstorm water discharges shall not cause or contribute to an exceedance of any applicable water quality standards contained in a Statewide Water Quality Control Plan and/or the applicable RWQCB's Basin Plan.

3. Should it be determined by Caltrans, SWRCB or RWQCB staff that storm water discharges and/or authorized nonstorm water discharges are causing or contributing to an exceedance of an applicable water quality standard, Caltrans shall:

   a. Implement corrective measures immediately following discovery that water quality standards were exceeded, followed by notification of the RWQCB by telephone as soon as possible but no later than 48 hours after the discharge has been discovered. This notification shall be followed by a report within 14 days to the appropriate RWQCB, unless otherwise directed by the RWQCB, describing (1) the nature and case of the water quality standard exceedance; (2) the BMPs currently being implemented; (3) any additional BMPs which will be implemented to prevent or reduce pollutants that are causing or contributing to the exceedance of water quality standards; and (4) any maintenance or repair of BMPs. This report shall include an implementation schedule for corrective actions and shall describe the actions taken to reduce the pollutants causing or contributing to the exceedance.

   b. Caltrans shall revise its SWPPP and monitoring program immediately after the report to the RWQCB to incorporate the additional BMPs that have been and will be implemented, the implementation schedule, and any additional monitoring needed.

   c. Nothing in this section shall prevent the appropriate RWQCB from enforcing any provisions of this permit while Caltrans prepares and implements the above report.

D. RWQCB AUTHORITIES

1. Following adoption of this permit, RWQCBs shall implement the Provisions of this permit. Implementation of this permit may include, but is not limited to, reviewing SWPPPs, reviewing Maintenance Facility Pollution Prevention Plans (FPPPs), reviewing monitoring reports, conducting compliance inspections, conducting monitoring, reviewing the Annual Reports and taking enforcement actions.

2. RWQCBs may require submittal of, require changes to, specify a format for, and enforce Provisions of SWPPPs and FPPPs. RWQCBs may also designate projects which do not meet the acreage requirements based upon water quality concerns and require SWPPPs. RWQCBs may require that Caltrans submit all SWPPPs automatically up to 30 days in advance of the onset of construction.

3. RWQCBs may require retention of records for more than three years.

4. RWQCBs may require additional monitoring and reporting program requirements and may provide guidance on monitoring plan implementation.

5. RWQCBs may require Caltrans to conduct additional site inspections, submit reports and certifications, to perform water quality sampling and analysis of discharges from construction sites, roadways and maintenance facilities.

6. RWQCB staff may inspect Caltrans facilities and construction sites.

7. The RWQCB Executive Officer may require Caltrans to monitor and submit a report on nonstorm water discharges that have been determined to be a source of pollutants in the region.

8. RWQCB may issue Caltrans other individual storm water NPDES permits, particularly for large construction projects or other discharges beyond the scope of this permit.

E. GENERAL REQUIREMENTS

In order to meet the federal requirements contained in the CWA and the corresponding regulations contained in the 40 CFR 122.26, Caltrans shall:

1. Maintain and implement an effective SWMP. The SWMP shall identify and describe the BMPs used to control or reduce pollutants to waters of the United States to MEP for the Municipal Storm Water Management activities (all activities except construction). For the Construction Management Program, the SWMP shall identify and describe BMPs used to control or reduce pollutants to waters of the United States that meet BAT/BCT. BMP development is a fluid and dynamic process, and the menu of BMPs contained in the SWMP may require changes over time as experience is gained and/or the state of the art progresses. The SWMP shall be reviewed annually and modified as necessary to maintain an effective program. The SWMP shall reflect the principles that storm water management is to be a year-round proactive program to eliminate or control pollutants at their source or to reduce them from the discharge by either structural or nonstructural means when elimination at the source is not possible. The ***REVISED SWMP*** shall be submitted to the SWRCB's Executive Director by April 1 as part of the Annual Report (40 CFR 122.26 (d)(vi)) each year. In accordance with NPDES Permit regulations, significant changes to the program will be taken to the SWRCB for approval. Caltrans shall change all other appropriate manuals to reflect modifications to the SWMP.

2. In addition to the revised SWMP, Caltrans shall submit ***REGIONAL WORKPLANS*** (workplans) each year for each region by April 1 as part of the Annual Report each year. The workplans will be forwarded to the appropriate RWQCB's Executive Officer for approval. The workplan shall cover all activities to be undertaken by the Districts in the region and shall address the water bodies in the region, the impact of the Caltrans discharge on the water body and the BMPs and monitoring program to be implemented in the region, and changes that are to be made to the previous year's

program. The workplan shall also include identification of high risk areas, such as locations where spills from Caltrans owned rights-of-way, activities or facilities can discharge directly to municipal or domestic water supply reservoirs or ground water percolation facilities, and consideration of appropriate spill containment and spill prevention control measures for these new areas. Because the BMP programs and monitoring program are described in other documents, this workplan shall describe how the various programs will be implemented in the Region.

3. The SWMP shall define terms in a manner that is consistent with the definitions in 40 CFR 122.2. This includes, but is not limited to, the definitions for pollutant, waters of the United States, and point source. Where there is a conflict between the SWMP and the permit language, the permit language shall govern.

4. The SWMP shall include or describe procedures for implementing the following:

CHAPTER 1.	PROGRAM OVERVIEW (Provision F)
CHAPTER 2.	PROGRAM MANAGEMENT (Provision G)
CHAPTER 3.	CONSTRUCTION PROGRAM MANAGEMENT (Provision H)
CHAPTER 4.	MAINTENANCE PROGRAM MANAGEMENT (Provision I)
CHAPTER 5.	TRAINING AND PUBLIC EDUCATION (Provision J)
CHAPTER 6.	PROGRAM EVALUATION/REPORTING (Provision K)
CHAPTER 7.	LOCATION SPECIFIC REQUIREMENTS (Provision L)

F. PROGRAM OVERVIEW

Caltrans shall implement the program specified in the SWMP. Caltrans shall also implement any additional requirements contained in this Provision F.

1. Caltrans must reevaluate and revise the BMP program in the SWMP to reflect the definition of pollutant in the federal regulations. The selection of BMPs must reflect the need to meet MEP, or where appropriate, BAT/BCT and water quality standards. It is appropriate to address pollutants known to be in a waste stream, even if there is not yet any documented evidence of adverse effect. Decisions regarding storm water management should be made in response to site-specific circumstances, depending on the location and nature of the activity in question and the local receiving water conditions. In geographic areas in which the requirements in effect prior to adoption of this permit are more stringent than the requirements of this permit, Caltrans will specify in the SWMP and regional workplans, a program which is at least as stringent as the prior requirements for that area. In no event shall the BMP program in any part of the State be less stringent than it was under the prior requirements.

2. The revised SWMP shall be submitted within 90 days of the adoption of the permit. Until such time as Caltrans has an approved SWMP, Caltrans will continue to meet the requirements that were in effect under the permits adopted by RWQCBs.

3. Caltrans shall include an analysis of the feasibility of structural controls in the BMP selection process. At a minimum, a consideration of structural controls for water

quality improvement shall be included in the design of any new construction or major reconstruction or repair projects.

The SWMP shall be updated each year as part of the Annual Report and shall contain the following elements:

a. A listing of appropriate control measures, including design, operation, and maintenance specifications, referenced by facility type, location, and other suitable factors. (Suitable factors may include prevention and control of erosion and sedimentation, source control of potential pollutants, control of pathogens, control and treatment of runoff, spill containment, and protection of wetlands and water quality resources);

b. An effective operation and maintenance program for BMPs;

c. Consideration of pollution prevention and pollutant removal factors, including spill containment and corresponding operation and maintenance requirements in the design of facility drainage structures and other features;

d. Development and implementation of policies, programs, procedures, and standards to improve pollutant removal and water quality benefits of landscape design after construction is completed;

e. A description of how these BMPs will be developed, constructed and maintained by the Environmental Engineering, Project Development, Construction, and Maintenance Branches and other affected functional offices and branches;

f. A ***BMP SELECTION REPORT*** which presents the revisions to the BMP programs (including both structural and nonstructural BMP candidates) to be implemented in the coming year along with the process used for evaluating the revised BMPs. The process shall include a mechanism for public input and review during the BMP selection process; and

g. A mechanism for evaluating new treatment and control technologies and for considering these technologies as part of the BMP programs. A ***NEW TECHNOLOGY REPORT*** is required as part of the Annual Report each year.

4. Storm Water Drainage System Retrofitting: In urban areas subject to a MS4 permit, Caltrans shall seek opportunities to retrofit the Storm Water Drainage System for water quality improvement whenever a section of the rights-of-way undergoes significant construction or reconstruction. Permanent control measures shall be implemented, both to control erosion and to control runoff of pollutants resulting from normal use of Caltrans facilities such as highways.

   a. Controls that shall be considered: Techniques that capture and or reduce the amount of pollutants, especially sediment from entering the storm drain system

or receiving water. Cost effectiveness is a factor in the consideration of controls.

b. Treatment controls that have proven to be cost prohibitive to date and therefore need not be considered for most situations include reverse osmosis, ion exchange, and granular activated carbon.

G. PROGRAM MANAGEMENT

Caltrans shall implement the program specified in their SWMP. Caltrans shall also implement any additional requirements contained in this Provision G.

.1. Coordination with MS4 Permittees

a. Caltrans is expected to comply with lawful requirements of municipalities, counties, drainage districts, and other local and or regional agencies regarding discharges of storm water to separate storm sewer systems or other watercourses under the jurisdiction of the local and or regional agencies. These include, but are not limited to applicable requirements in MS4 storm water programs developed to comply with NPDES Permits issued by the RWQCBs to local agencies.

b. Caltrans shall submit a ***MUNICIPAL COORDINATION PLAN*** to the SWRCB Executive Director within 90 days of the adoption of the Permit for approval. The plan shall describe the approach that Caltrans will take in establishing communication, coordination, cooperation, and collaboration of Caltrans storm water management activities and other pertinent activities with MS4 storm water management programs including establishing agreements with municipalities, flood control departments, or districts as necessary or appropriate. Caltrans shall report on the progress of this interagency cooperation in each Annual Report.

2. Legal Authority

a. Caltrans shall establish and maintain adequate legal authority through ordinance, statute, permit, contract or other means to control discharges to and from Caltrans properties, facilities and activities pursuant to 40 CFR 122.26(d)(2)(i)(A-F).

b. Caltrans has provided a statement certified by its chief legal counsel that Caltrans has adequate legal authority to implement and enforce each of the key regulatory requirements contained in 40 CFR 122.26(d)(2)(i)(A-F). Caltrans shall submit annually, as part of the Annual Report, an ***ANALYSIS OF THE ADEQUACY OF LEGAL AUTHORITY*** based on Caltrans experiences during the previous year and explain and justify whatever conclusions are reached in the annual certification of legal authority.

3. Fiscal Resources

a. Caltrans shall maintain adequate fiscal resources to maintain compliance with this NPDES Permit. This includes but is not limited to:

(1) implementing and maintaining all BMPs identified in the SWMP,

(2) maintaining an effective storm water monitoring program, and

(3) retaining adequate trained personnel to manage the storm water program.

b. Caltrans shall submit a ***FISCAL ANALYSIS*** of the storm water program expenditures within 90 days of the adoption of this permit and shall include one for the 3rd year and 5th year of the Permit period in the Annual Report submitted April 1. At a minimum, the fiscal analysis shall show the allocation of funds to the Districts for compliance with this permit; the funding of the program elements; and a comparison of actual past year expenditures with the current year's expenditures and next year's proposed expenditures. The 3rd year report shall show how Caltrans funding met the goals set out for the program in the first two years. The 5th year report shall contain the budget analysis for the next permit period.

4. Policies: Caltrans shall identify policies needed to resolve conflicts between implementation of the storm water program and current standard practices and policies.

5. Inspection Program: Caltrans shall have an inspection program to insure actions are implemented and facilities are constructed, operated, and maintained in accordance with this NPDES Permit and the SWMP. The program shall include training for inspection personnel, documentation of field activities, a reporting system that can be used to track effectiveness of control measures, enforcement procedures (or referral for enforcement) for noncompliance, and responsibilities and responsible personnel of all affected functional offices and branches.

H. CONSTRUCTION PROGRAM MANAGEMENT

Caltrans shall implement the program specified in the SWMP. Caltrans shall also implement any additional requirements contained in this Provision H.

1. Caltrans shall have a program to control all construction in the rights-of-way. This includes both construction by Caltrans, construction done under contract for Caltrans, and construction done by local government agencies or other third parties on Caltrans or nonCaltrans projects. The program must include:

a. review of construction site plans;

b. requirement of structural and nonstructural BMPs;

c. site inspections and enforcement; and

d. education of construction site operators.

The program must be implemented year round on all construction projects in all parts of the State. The SWMP must be revised to address these requirements and have a program and a schedule for inspections.

2. The Construction Management Program shall be in compliance with requirements of the NPDES General Permit for Construction Activities (Construction General Permit) not including NOI filing. The current Construction General Permit is SWRCB Board Order 92-08--DWQ.

Terms that are defined in the Construction General Permit will have the same definition for the construction portion of this NPDES Permit.

3. The Lahontan RWQCB has adopted an NPDES Storm Water Permit for construction projects that involve more than five acres of soil disturbance and nonNPDES WDRs for construction projects for projects less than five acres within the Lake Tahoe Hydrologic Unit. The current nonNPDES Lahontan Construction Permit is Board Order 6-93-63. The WDRs for small projects are contained in Lahontan RWQCB Board Order 6-91-31. Projects in the Lake Tahoe Hydrologic Unit must be in compliance with the Provisions of the Lahontan RWQCB Order that is applicable to the project. The Lahontan RWQCB has also developed erosion control guidelines for high mountain areas throughout the region. Caltrans shall follow these guidelines in the appropriate parts of the region.

4. Caltrans shall plan, site, and develop roads and highways in a manner that protects water quality, beneficial uses of water and minimizes erosion and sedimentation .

5. Caltrans shall site, design, and maintain bridge structures so that sensitive and valuable aquatic ecosystems and areas providing water quality benefits are protected from adverse effects.

6. Caltrans shall limit the application, generation, and migration of toxic substances from construction sites.

7. Caltrans shall implement adequate erosion and sediment control BMPs during the interim period between completion of construction and final landscaping activities.

8. The following items apply to construction activities:

a. A report of ***NOTIFICATION OF CONSTRUCTION*** for all construction projects shall be submitted to the appropriate RWQCB at least 30 days prior to the start of construction. The tentative start date, tentative duration, location of construction, description of project, an estimate of the number of affected acres, resident engineer in charge of the project, and telephone number of the resident

engineer shall be reported. If a resident engineer has not been assigned at the time of notification, information about the construction field office should be provided and the resident engineer information provided when the assignment is made.

b. A site specific SWPPP shall be developed and implemented for each construction project as required by the State Construction General Permit (or the appropriate Lahontan RWQCB Permit). The RWQCBs can designate projects under five acres which pose a threat to water quality as being subject to the conditions of this permit and can require the development and implementation of an SWPPP from these projects. For projects that may have a significant potential water quality impact, Caltrans is encouraged to involve the RWQCB staff in the planning stages. The SWPPP shall contain a BMP program that meets the performance standards of BAT/BCT. The resident engineer shall approve the SWPPP prior to construction and ensure that the SWPPP is effectively implemented. The SWPPP shall contain all of the elements required by the Construction General Permit. Caltrans is responsible for having an effective SWPPP at all times and for implementing the SWPPP at an appropriate level through the entire year. RWQCB staff has the authority to require the submittal of an ***SWPPP*** at any time, including up to 30 days prior to commencement of significant soil disturbance activities; to require changes to the SWPPP; and to enforce the provisions of the SWPPP.

   The SWPPP shall contain a BMP program for any mobile operations that are used in the construction project. This includes operations such as asphalt recycling, concrete mixing, crushing, and storage of materials that are established by the contractor within the construction site or on other property specifically arranged for and provided by Caltrans for execution of the project.

   The SWPPP shall apply to all areas that are directly related to the construction activity, including but not limited to staging areas, storage yards, material borrow areas and storage areas, access roads, etc., whether or not they reside within the Caltrans rights-of-way.

c. Monitoring and inspection of construction sites shall be done in accordance with the Provisions of the Construction General Permit. Noncompliance shall be reported in accordance with the plan to be submitted under Program Evaluation and Reporting Provision K.2.a.

d. A ***NOTICE OF COMPLETION*** shall be submitted to the RWQCB upon completion of the construction and stabilization of the site. A project will be considered complete when the criteria for final stabilization in the Construction General Permit are met.

9. Caltrans has applied for and received variances from the California Department of Toxic Substances Control (DTSC) for the reuse of some soils that contain lead. Notification that projects involve soils that are subject to this variance shall be provided to the appropriate RWQCB(s) in writing 30 days prior to advertisement for

bids to allow a determination by the RWQCB(s) of the need for development of WDRs.

I. MAINTENANCE PROGRAM MANAGEMENT

Caltrans shall implement the program specified in the SWMP. Caltrans shall also implement any additional requirements contained in this Provision I.

1. Highway Maintenance Activities

   a. Caltrans shall develop and implement runoff management programs and systems for existing roads, highways, and bridges to reduce runoff pollutant concentrations and volumes entering surface waters.

      (1) Identify priority and watershed pollutant reduction opportunities (e.g., improvements to existing urban runoff control structures).

      (2) Establish schedules for implementing appropriate controls.

      (3) Identify road segments with slopes that are prone to erosion and discharge of sediment and stabilize these slopes to the extent possible.

   b. Vegetation Control: Caltrans shall revise the Vegetative Control Program to reflect the following elements:

      (1) Enhancement of the use of appropriate native and adapted vegetation throughout all Caltrans rights-of way for the purpose of preventing erosion and removing pollutants in storm water and nonstorm water runoff.

      (2) Application of herbicides in a manner that minimizes or eliminates the discharge of herbicides to receiving waters. Factors to be considered include timing in relation to expected precipitation events, proximity to water bodies, and the effects of using combinations of chemicals.

      (3) Caltrans shall apply nutrients at rates necessary to establish and maintain vegetation without causing significant nutrient runoff to surface water.

      (4) In places where Caltrans has already developed vegetation control management plans, Caltrans shall continue to implement these plans and integrate them into their overall statewide plan. In instances where elements of these plans are to be changed or dropped, Caltrans shall discuss the changes in the workplan portion of the Annual Report.

   c. Storm Water Drainage System Facilities Maintenance

      (1) Caltrans shall remove all waste from those inlets that pose a significant threat to water quality on an annual basis prior to the winter season each

year. All waste removed from drain inlets shall be managed in accordance with all applicable laws and regulations, including CCR Title 27, Division 2, Subdivision 1.

(2) Drain inlets which contain significant materials must be considered for an IC/ID investigation and considered for an enhanced BMP program focused on reducing the sources of the material found in the inlet.

2. Highway Surveillance Activities

a. Accidental Spills

(1) Caltrans will follow Office of Emergency Services (OES) procedures for reporting highway spills.

(2) A report of ***DISCHARGE OR THREAT OF DISCHARGE NOTIFICATION*** will be made under the following conditions: Caltrans will notify the owner/operator of the MS4 or the principal permittee as soon as practicable, but no later than 24 hours after onset of or threat of discharge of any discharge or threat of discharge which can cause adverse conditions to the storm sewer system or the receiving water that is not covered by OES procedures from a highway to a storm sewer system subject to an MS4 permit.

(3) A report of ***DISCHARGE OR THREAT OF DISCHARGE NOTIFICATION*** will be made immediately to the RWQCB of any discharge which can cause adverse conditions to the storm sewer system or the receiving water, with a follow up in writing within 24 hours. Adverse conditions include but are not limited to serious violations or serious threatened violations of WDRs, significant spills of petroleum products or toxic chemicals, or serious damage to control facilities that could affect compliance. Caltrans shall perform follow-up monitoring of major spills and/or perform confirmation sampling to ensure that threats to waters of the United States have been eliminated as determined by the local RWQCB. (This Provision applies to highway operation, not construction projects. Provisions for reporting discharges are contained in the Construction General Permit).

b. IC/ID Detection Program: Caltrans shall implement the IC/ID Detection Element described in the SWMP in conjunction with the legal authority with the following changes:

(1) Detection of IC/IDs: Caltrans shall develop procedures for receiving and investigating public complaints including establishing telephone numbers which the public can use to report IC/IDs and shall post these numbers in places where illegal dumping is found to be a problem.

(2) Investigation of each IC/ID: Caltrans shall develop procedures to conduct investigations of every IC/ID to identify the source. These procedures may include further field screening (observations and field analyses), collection and laboratory analysis of samples (upstream and downstream), smoke or dye tests, video taping with a remote control camera, or other appropriate means.

(3) Elimination of IC/IDs: Caltrans shall eliminate all identified IC/IDs as expeditiously as possible. In addition to reporting IC/IDs to the municipal authorities and to the RWQCBs, Caltrans shall use its own legal authority to eliminate IC/IDs.

(4) Caltrans shall develop a procedure to track all reports of IC/IDs and the action taken on them. A ***REPORT ON THE IC/ID PROGRAM*** will be required each year as part of the Annual Report.

(5) Caltrans shall report on the program developed under this Provision as part of the April 2000 Annual Report. (***DEVELOPMENT OF IC/ID PROGRAM***).

3. Program for Highway Maintenance Facilities

a. Caltrans shall prepare Maintenance FPPPs for all maintenance facilities. Because these facilities are considered municipal activities rather than industrial activities, these FPPPs must have BMP programs that reduce pollutants to MEP.

b. Generic FPPP elements can be used for activities that are performed at more than one maintenance facility; however, each site must be evaluated separately and provided with appropriate site specific BMPs.

c. RWQCB staff has the authority to require the submittal of a FPPP at any time, to require changes to a FPPP, and to require the implementation of the Provisions of a FPPP.

J. TRAINING AND PUBLIC EDUCATION

Caltrans shall implement the program specified in the SWMP. Caltrans shall also implement any additional requirements contained in this Provision J.

In areas where Caltrans is already participating in an areawide Public Education Program, Caltrans will continue participation. The Public Education Program shall address the three main audiences that impact Caltrans storm water discharges. The three audiences are: Caltrans Employees; Caltrans Construction Contractors, and the General Public. The program shall contain the following elements for each of these groups:

1. Caltrans Employees

a. Caltrans shall implement the program specified in the SWMP.

b. Caltrans shall provide frequent educational reminders to employees to reinforce the training.

2. Caltrans Construction Contractors

a. Caltrans shall implement the program specified in the SWMP.

b. Caltrans shall provide outreach to contractors to raise their awareness of the problems and causes of storm water pollution and to reinforce their training.

3. General Public

a. ***PLAN FOR DEVELOPMENT AND IMPLEMENTATION OF A PUBLIC EDUCATION PROGRAM***: Caltrans shall submit a plan for approval by the SWRCB Executive Director within 180 days of adoption of this NPDES permit for development and implementation of a Public Education Program that includes education of the general public and commercial and industrial entities whose actions may impair storm water quality discharged from Caltrans properties, facilities and activities. In areas where a Caltrans is already part of a Public Education Program with other MS4 permittees, Caltrans must continue with their participation in the program. (***PLAN FOR DEVELOPMENT AND IMPLEMENTATION OF A PUBLIC EDUCATION PROGRAM***)

b. The plan shall include the following elements:

(1) Research--A plan for conducting research on public behavior that affects the quality of Caltrans runoff. The information gathered will form the foundation for all the public education conducted.

(2) Public Education Strategy--Develop a three-year public education strategy. The strategy should be based on the research conducted and must include goals and objectives to be achieved regarding changing behaviors.

(3) Mass Media Advertising--Develop and conduct an advertising campaign as a focal point of the public education strategy. The campaign should focus on the behaviors of concern and should be designed to motivate the public to change those behaviors. The public education campaigns may be done as a cooperative effort with other MS4 permittees.

c. Upon approval of the submitted plan, Caltrans shall implement the plan to develop a Public Education Program. The ***PUBIC EDUCATION PROGRAM PROGRESS REPORT*** on the progress made on the public education program development will be made as part of the Annual Report each year. A proposed ***PUBLIC EDUCATION PROGRAM*** will be submitted with the Annual Report in 2001. The ***PUBLIC EDUCATION PROGRAM*** shall be submitted with the

Annual Report in 2002. Caltrans will begin implementation of the plan in April 2002.

K. PROGRAM EVALUATION AND REPORTING

Caltrans shall implement the program specified in the SWMP. Caltrans shall also implement any additional requirements contained in this Provision K.

1. Characterization of Discharges: Caltrans shall develop a plan to identify and describe existing major discharges and points of discharge, as defined in 40 CFR 122.26(iv)(d)(1 and 2), to surface water bodies in areas subject to the MS4 permit requirements and to identify and describe other discharge points as funding allows. Caltrans shall also provide information concerning major existing structural controls (such as the location of detention basins, infiltration basins, etc.). Characterization should be done in phases with the highest priority given to discharge points that are part of BMP studies and in areas where these discharges fit into ongoing watershed characterization studies. For discharges that contain pollutants, Caltrans shall investigate the source of the pollutants and, where appropriate, eliminate the IC/ID or implement BMP programs. The plan shall also identify procedures for notifying the RWQCB and affected municipal storm water management agencies of these discharges and future planned discharges and procedures for monitoring and record management. Discharges which Caltrans cannot control, such as discharges from other parties over which Caltrans has no authority, shall be referred to the appropriate regulatory agency for appropriate action. The ***PLAN FOR CHARACTERIZATION STUDIES***, describing how the studies shall be carried out, shall be submitted with the 1999 Annual Report. Characterization studies shall be completed by April 1, 2003.

2. Receiving Water Monitoring: Caltrans has submitted a three-year monitoring strategy that outlines the research monitoring that it intends to undertake in the next three years. The ***MONITORING STRATEGY REPORT UPDATE*** will be updated annually based on the results of previous years' monitoring and in response to the needs of the program and the funding available. The updated Monitoring Strategy Report will be submitted as part of each Annual Report.

   a. Caltrans shall submit to the SWRCB by April 1, 2000 and each April 1 thereafter a ***MONITORING AND REPORTING PROGRAM*** acceptable to the Executive Director that shall identify and justify sampling locations, frequencies, and methods, suite of pollutants to be analyzed, analytical methods, and quality assurance procedures. Alternative monitoring methods (special projects, literature review, visual observations, use of indicator parameters, etc.) may be proposed with justification. Current MS4 Permits for Caltrans have monitoring requirements. Results of the monitoring efforts undertaken under RWQCB MS4 Permits may be submitted to fulfill these monitoring requirements.

   The RWQCB Executive Officers are authorized to require additional monitoring and reporting by Caltrans when additional information is needed to assess

existing or potential adverse impacts by storm water discharges, to evaluate effectiveness of storm water pollution prevention or control measures, or to demonstrate compliance with permit requirements.

3. Compliance Monitoring and Evaluation

a. Caltrans shall prepare a plan to be submitted as part of the Annual Report due April 1, 2000 explaining how the RWQCBs will be notified about noncompliance. The plan shall include the identification in each Office and Region, the parties to notify and receive the notification. The notification shall identify the type(s) of noncompliance, describe the actions necessary to achieve compliance, and include a time schedule, subject to the modifications by the RWQCB indicating when compliance will be achieved. Noncompliance notifications must be submitted verbally within 5 working days, with written followup within 30 days of identification of noncompliance. (***REPORTING OF NONCOMPLIANCE***)

b. Construction site monitoring and inspections shall be carried out as required by the Construction General Permit or the applicable Lahontan RWQCB Permit.

c. Maintenance Facility Compliance Monitoring

(1) Caltrans is required to conduct periodic inspections. The purpose of the inspections is to identify areas contributing to a discharge of storm water associated with the maintenance facility activities and to evaluate whether control practices to reduce pollutant loadings identified in the FPPP are adequate and properly implemented or whether additional control practices are needed. A record of the inspections must include the date of the inspection, the individual(s) who performed the inspection, and the observations.

(2) Any noncompliance shall be reported to the RWQCB in accordance with the plan to be submitted under Program Evaluation and Reporting Provision K.3.a.

(3) The RWQCB may require Caltrans to conduct additional site inspections, to submit reports and certifications, or to perform sampling and analysis.

(4) Records of all inspections, compliance certifications, and noncompliance reporting must be retained for a period of at least three years. With the exception of noncompliance reporting, Caltrans is not required to submit these records unless otherwise requested.

(5) Monitoring at all maintenance facilities is not required.

d. Overall Management Program Effectiveness:

Caltrans shall perform a self-audit of the storm water program each year to determine (1) if the program is being implemented as required by this NPDES Permit, the SWMP, and the guidance documents prepared by Caltrans; and (2) if the program specified by the SWMP and the guidance documents is adequate. The results of this ***SELF-AUDIT*** shall be submitted by April 1, 2000 and as a part of the Annual Report thereafter to the SWRCB Executive Director. Caltrans may use any method to evaluate program effectiveness and shall identify the direct and indirect measurements that will be used to track the long-term effectiveness. An outline of the proposed audit is to be submitted by February 1 of each year so that the SWRCB and RWQCBs can evaluate the measures to be used.

4. Reporting

Caltrans shall submit 13 copies of an ***ANNUAL REPORT*** to the SWRCB Executive Director by April 1 each year starting on April 1, 2000. The Annual Report shall contain the data and a summary and analysis of the data collected in the previous year. The report due on April 1, 2000 will cover data collected during the winter of 1998-1999. Reports that are required from Caltrans include the items listed in Table 2.

TABLE 2
COMPILATION OF REPORTING REQUIREMENTS

Provision	Requirement	Date Required
B.9	Comprehensive Nonstorm Water Report	Every Annual Report
E.1, F.1	Revised SWMP, including Revisions to the BMP Programs with Justification and Public Input	Every Annual Report
E.2	Regional Workplans	Every Annual Report
F.2.f	BMP Selection Report	Every Annual Report
F.2.g	New Technology Report	Every Annual Report
G.1.b	Municipal Coordination Plan	April 1, 2000
G.1.b	Municipal Coordination Program Report	Every Annual Report
G.2.b	Analysis of the Adequacy of Legal Authority	Every Annual Report
G.3.b	Fiscal Analysis	90 days from adoption
G.3.b	Fiscal Analysis	3rd and 5th year Annual Report
H.8.a	Notification of Construction	At least 30 days prior to construction
H.8.b	SWPPP	Request by RWQCB
H.8.d	Notice of Completion	Upon final stabilization
I.2.a.(2)	Discharge or Threat of Discharge Notification to MS4 Permittee	Upon discharge or threat of discharge
I.2.a.(3)	Discharge or Threat of Discharge Notification to RWQCB	Upon discharge or threat of discharge
I.2.b.(4)	Report on the IC/ID Program	Every Annual Report
I.2.b.(5)	Development of IC/ID Program	April 1, 2000
I.3.c	FPPP	Request by RWQCB
J.3.a	Plan for Development and Implementation of a Public Education Program	April 1, 2000
J.3.c	Public Education Program Progress Report	Every Annual Report
J.3.c	Public Education Program	April 1, 2003
K.1	Plan for Characterization Studies	April 1, 2000
K.2	Monitoring Strategy Report Update	Every Annual Report
K.2.a	Monitoring and Reporting Program	Every Annual Report
K.3.a	Reporting of Noncompliance	April 1, 2000
K.3.d	Self Audit	Every Annual Report
L.10.a	De-icer Monitoring Proposal	Every Annual Report
L.10.b	De-icer Report	June 1, 2000
M.7	Report of Waste Discharge	180 days prior to expiration of permit

These reporting requirements are contained in the text of the NPDES Permit. If there is a discrepancy between the text of the NPDES Permit and this table, the text of the NPDES Permit contains the requirement.

L. LOCATION SPECIFIC REQUIREMENTS

Caltrans shall implement the program specified in the SWMP. Caltrans shall also implement any additional requirements contained in this Provision L.

Lahontan Region: The Water Quality Control Plan for the Lahontan Region (Basin Plan) has additional requirements which have been historically applied to Caltrans permits and which apply to this NPDES Permit in the Lahontan Region. These requirements include:

1. Numerical effluent limitations for storm water discharges within the Lake Tahoe Hydrologic Unit, as specified in Table 5.6-1 on page 5.6-4 of the Basin Plan.

2. Caltrans shall comply with all Waste Discharge Prohibitions specified in sections 4.1 and 5.2 of the Basin Plan.

3. The following nonstorm water discharges which are permitted under Nonstorm Water Provision B.2. of this NPDES permit are prohibited within the Lahontan Region:

   a. Water line-flushing discharges.

   b. Ground or surface water pumping discharges associated with construction activities that would violate numerical effluent limitations within the Lake Tahoe Hydrologic Unit or receiving water objectives throughout the Lahontan Region, as specified on pages 3-3 through 3-56 of the Basin Plan.

   c. Potable water resource discharges.

   d. Uncontaminated pumped ground water discharges that would violate numerical effluent limitations within the Lake Tahoe Hydrologic Unit or receiving water objectives throughout the Lahontan Region, as specified on pages 3-3 through 3-56 of the Basin Plan.

   e. Air conditioning condensate discharges (not applicable to vehicles).

4. Storm water/urban runoff collection, treatment, and/or infiltration disposal facilities shall be designed, installed, and maintained for the discharge of storm water runoff from all impervious surfaces generated by the 20-year, one-hour design storm (1) within the Lake Tahoe Hydrologic Unit (one inch of rain), (2) within the Truckee River Hydrologic Unit (3/4-inch of rain), (3) within the East Fork Carson River and West Fork Carson River Hydrologic Units (one inch of rain), and (4) within the Mammoth Creek Hydrologic Unit above the 7,000-foot elevation (one inch of rain). All Caltrans facilities within the Lake Tahoe Hydrologic Unit must be retrofitted to comply with this requirement by the Year 2008. If site conditions do not allow for adequate on site disposal, all site runoff must be treated to meet applicable Effluent Limits and/or Receiving Water Limitations specified in the Basin Plan. Runoff in excess of the design storm and generated by the facility or within the project site shall only be discharged to a storm drain or stabilized drainage adequate to convey the 100-year 24-hour flow. The RWQCB Executive Officer may approve alternative mitigation measures.

   All Caltrans facilities within the Lake Tahoe Hydrologic Unit must be retrofitted to comply with this provision by the Year 2008. Caltrans shall continue to participate in the Capital Improvement Program (CIP), as described in volume IV of the CWA Section 208 Water Quality Management Plan (208 Plan). The purpose of the CIP is to identify projects, develop an implementation program, and develop a funding mechanism for storm water runoff and erosion control projects in the Lake Tahoe Hydrologic Unit.

5. All construction/maintenance projects shall comply with Erosion Control Guidelines for the Lake Tahoe Hydrologic Unit, Erosion Control Guidelines for the Truckee River Hydrologic Unit, and Erosion Control Guidelines for the North Lahontan Region where applicable.

6. Caltrans shall inspect active project sites and maintenance facilities prior to, during, and after storms to ensure that BMPs are functioning adequately and preventing the discharge of pollutants to surface waters or storm water conveyance systems that discharge to surface waters.

7. Unless granted a variance by the RWQCB Executive Officer, there shall be neither removal of vegetation nor disturbance of existing ground surface conditions between October 15 of any year and May 1 of the following year, except when there is an emergency situation that threatens the public health or welfare. This prohibition period applies to the Lake Tahoe, Truckee River, East Fork Carson River, and West Fork Carson River Hydrologic Units and above the 5,000-foot elevation in the portions of Mono and Inyo Counties within the Lahontan Region.

8. Project Review Requirements

   a. Caltrans shall participate in early project design consultation for all projects within the Lake Tahoe, Truckee River, and Mammoth Creek Hydrologic Units. This requirement also applies to projects involving more than five acres of soil disturbance or that require a CWA section 404 permit throughout the Lahontan Region. Caltrans shall solicit RWQCB staff review when project development/design is at the 50 percent design level. Consultation with RWQCB staff shall continue throughout the remainder of the design development and environmental review process.

   b. Caltrans shall submit an SWPPP or a Water Pollution Control Plan for RWQCB staff review and approval no later than 30 days prior to beginning construction activities. RWQCB staff's proposed modifications shall be included within the plans prior to beginning construction activities.

9. Snow and Ice Control

   Where abrasives and/or de-icing agents are used on highways within the Lahontan Region, the following shall be recorded:

   a. Location of the source of abrasives materials.

   b. Types and chemistry of de-icing agents.

      (1) Deicing salt shall be analyzed for: total phosphorus, total nitrogen, iron, and percent NaCl.

(2) Alternative deicers shall be analyzed for: total nitrogen, and total phosphorus.

c. Type and chemistry of abrasives with the gradation and percent organic matter. Gradation and percent organic matter shall be determined from composite samples. The composite samples shall be taken from one stockpile that represents all deliveries from the originating source. Composite samples shall be taken from every new delivery from a new originating source.

(1) Abrasives shall be analyzed for: volatile solids, iron, total nitrogen, total phosphorus, and total reactive phosphorus.

d. Volume of abrasives and deicing agents used on individual highway's segments.

10. Reporting/Notification Issues

a. Caltrans shall submit a monitoring program proposal that evaluates the effectiveness of BMPs used to recover abrasives and deicing materials and that evaluates the impacts of abrasives and deicing materials on surface waters within the Lake Tahoe Hydrologic Unit. The proposal shall include monitoring locations and sampling and analysis methodologies. The proposal shall be submitted within 180 days of adoption of this NPDES Permit for review and approval by the Lahontan RWQCB Executive Officer. (***DEICER MONITORING PROPOSAL***)

b. A report shall be submitted, as part of the Annual Report each year describing the results of the abrasives and deicing materials analysis and the annual results of the above-referenced monitoring program involving BMP effectiveness and surface water impacts. The report shall also include a summary of Caltrans CIP activities, including progress on implementing the CIP, and project effectiveness. Project effectiveness has historically been documented with photographs including preproject photographs, photographs taken during the spring following project completion, and photographs taken two years following project completion. If photographs or project site inspections indicate that the project is not fully meeting project objectives, Caltrans shall include within the report a corrective action plan and a schedule that will meet the project objectives. (***DEICER REPORT***)

11. Caltrans shall immediately notify the RWQCB by telephone, not later than 24 hours, whenever an adverse condition occurs as a result of a discharge with written confirmation following within two weeks. An adverse condition includes, but is not limited to, a serious violation or a serious threatened violation of conditions specified in this NPDES Permit, significant discharges of spills of petroleum products or toxic chemicals, or serious damage to control facilities that could affect compliance.

M. OTHER PROVISIONS

1. Caltrans shall ensure that all personnel whose decisions or activities could affect storm water quality are familiar with the contents of this NPDES Permit.

2. Caltrans shall comply with all conditions and limitations of this NPDES Permit upon adoption of this NPDES Permit. Any NPDES Permit noncompliance constitutes a violation of the CWA and the CWC and is grounds for enforcement action pursuant to the CWA and CWC, NPDES Permit termination, or denial of a renewal application.

3. This NPDES Permit does not authorize violation of any federal, State, or local law or regulation.

4. Caltrans shall properly operate and maintain at all times any facilities and systems of treatment and control (and related appurtenances) which are installed or used by Caltrans to achieve compliance with the conditions of this NPDES Permit and with the requirements of SWPPPs. Proper operation and maintenance also includes adequate laboratory controls and appropriate quality assurance procedures.

5. This NPDES Permit does not convey any property rights of any sort or any exclusive privileges, authorize any injury to private property or any invasion of personal rights, nor any infringement of federal, State, or local laws or regulations.

6. Caltrans shall comply with the Standard Provisions for NPDES Permit found at 40 CFR 122.41 and 40 CFR 122.42(c).

7. This NPDES Permit expires five years from date of adoption, 2004, and Caltrans shall file a complete Report of Waste Discharge in accordance with Title 23, CCR, at least 180 days in advance of such date as an application for issuance of a new Board Order. (***REPORT OF WASTE DISCHARGE***)

8. This Board Order shall serve as an NPDES Permit pursuant to section 402 of the Federal CWA, as amended, and shall become effective at the end of ten (10) days from the date of the Board Meeting which this NPDES Permit was adopted by the SWRCB, provided that the Regional Administrator, USEPA, has no objections.

9. This NPDES Permit may be modified, revoked and reissued, or terminated for cause. The filing of a request by Caltrans for an NPDES Permit modification, revocation and reissuance, or termination or a notification of planned changes or anticipated noncompliance does not stay any NPDES Permit condition. Causes for modification include the promulgation of new regulations or adoption of new regulations by the SWRCB or the RWQCBs, including revisions to the RWQCB Basin Plans.

10. Signatory Requirements

a. All permit applications, reports, or information submitted to the RWQCB, SWRCB, and/or USEPA shall be signed by either a principal Executive Officer, Executive Director, or ranking elected official. [40 CFR 122.22(a)]

b. All reports required by this NPDES Permit and other information requested by the RWQCB, SWRCB, or US EPA shall be signed by a person described in Other Provisions 10.a. of this Provision or by a duly authorized representative of that person. A person is a duly authorized representative only if:

(1) The authorization is made in writing by a person described in Other Provisions 10.a. of this Provision;

(2) The authorization specifies either an individual or a position having responsibility for the overall operation of the regulated facility or activity, such as the position of plant manager, operator of a well or a well field, superintendent, position of equivalent responsibility, or an individual or position having overall responsibility for environmental matters for the company. (A duly authorized representative may thus be either a named individual or any individual occupying a named position); and

(3) The written authorization is submitted to the RWQCB. [40 CFR 122.22(b)]

c. Changes to authorization: If an authorization under Other Provisions 10.b. of this Provision is no longer accurate because a different individual or position has responsibility for the overall operation of the facility, a new authorization satisfying the requirements of Other Provisions 10.b. of this Provision must be submitted to the RWQCB prior to or together with any reports, information, or applications to be signed by an authorized representative. [40 CFR 122.22(c)].

d. Certification: Any person signing a document under Other Provisions 10.a. or b. of this Provision shall make the following certification:

"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is true, accurate, and complete to the best of my knowledge and belief. I

am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment of knowing violations. [40 CFR 122.22(d)]

e. The CWA provides that any person who knowingly makes any false statement, representation, or certification in any record or other document submitted or required to be maintained under this NPDES Permit, including monitoring reports or reports of compliance or noncompliance, upon conviction, shall be punished by a fine of not more than $10,000 per violation, imprisonment for not more than two years per violation, or by both.

CERTIFICATION

The undersigned, Administrative Assistant to the SWRCB, does hereby certify that the foregoing is a full, true, and correct copy of an order duly and regularly adopted at a meeting of the State Water Resources Control Board held on July 15, 1999.

DEPARTMENT OF FINANCE

ARNOLD SCHWARZENEGGER, GOVERNOR

915 L STREET ■ SACRAMENTO CA ■ 95814-3706 ■ WWW.DOF.CA.GOV

June 19, 2009

RECEIVED
JUN 2 2 2009
COMMISSION ON
STATE MANDATES

Ms. Paula Higashi
Executive Director
Commission on State Mandates
980 Ninth Street, Suite 300
Sacramento, CA 95814

Dear Ms. Higashi:

As requested in your letter dated April 10, 2009 referencing the Los Angeles Regional Quality Control Board's Permit No. 01-182 CAS004001 (test claim permit), the Department of Finance (Finance) has reviewed the Commission's draft staff analysis for the consolidated test claims, "Municipal Storm Water and Urban Runoff Discharges," submitted by the County of Los Angeles and several cities (claimants).

Finance agrees with Commission's staff recommendation that the local agencies have sufficient authority to levy regulatory fees related to dischargers of pollutants pursuant to Public Resources Code Section 40059 and Section 7, Article XI of the California Constitution. We also agree that fees would be upheld in court if the fee is not a special tax, does not exceed the reasonable cost of the services, and is levied for related revenue purposes. As a result, the costs incurred by the local agencies are not reimbursable within the meaning of Section 6, Article XIII B of the California Constitution. Therefore, the test claim should be denied.

Finance disagrees with the Commission's draft staff analysis that the test claim permit and its provisions are state imposed reimbursable mandates absent fee authority, because the role of the Los Angeles Regional Quality Control Board (Water Board) as an "administrator" under the federal Clean Water Act (CWA) is voluntary. Finance believes that the test claim permit and its provisions are federal mandates because all dischargers are required to obtain permits, and the United States Environmental Protection Agency (EPA) and appellate court case support that the provisions of the test claim permit do not exceed the federal mandate.

Finance also asserts that the test claim permit is a federal mandate regardless of the Water Board's "voluntary" authority to administer, develop, issue, and enforce National Pollutant Discharge Elimination System (NPDES) permits for the federal government. Finance believes the test claim permit is a federal mandate because the duty to apply for a NPDES permit is required by federal law on public and private dischargers. The federal CWA mandates that dischargers (public and private) apply for and receive permits regulating discharges of pollutants. Specifically, Section 402(p)(3) of the CWA identifies the permit requirement for industrial discharges and municipal discharges. Therefore, the Water Board is imposing the test claim permit on the local agencies because the federal requirement of a permit is imposed directly by federal law on dischargers, in this case, local agencies. Pursuant to subdivision (c) of Government Code Section 17556, the test claim permit is not a reimbursable state mandate if it is imposed upon local agencies by federal law.

Finance continues to assert that the specific activities of the test claim permit do not exceed federal law even though they are not explicitly noted in the CWA. In *County of Los Angeles v. State Water Resources Control Board* (2006) 143 Cal. App.4th 985, the appellate court held that the Water Board did not exceed the federal law mandating the test claim permit. The conditions of the test claim permit were found to be practical and cost-effective. Pursuant to subdivision (c) of Government Code Section 17556, an executive order that is mandated by a federal law and results in costs is not a reimbursable state mandate unless the executive order mandates costs that exceed the mandate in that federal law.

Pursuant to the CWA, the Water Board, as the administrator, coordinates the detailed permit provisions with local agencies to meet the following federal NPDES permit requirements: (1) prohibit non-stormwater discharges, and (2) reduce the discharge of pollutants to the maximum extent practicable. Permits may include best management practices, control techniques and system, design and engineering methods, and other provisions deemed appropriate for the control of pollutants [CWA, Title 33, U.S.C., Section 1342(p)(3)(B)(ii) and (iii)]. Finance notes that United States EPA has the authority to veto permits. The EPA did not veto the test claim permit and, in fact, issued a letter verifying that the test claim permit complies with, and does not exceed, the federal law. Therefore, the provisions of the test claim permit coordinated by the Water Board are federal mandates.

Finance also notes that the test claim permit is different from the issue addressed in *Long Beach Unified School District v. State of California* (*Long Beach*), as identified on page 23 of the draft staff analysis. In *Long Beach,* it was found that the courts had suggested certain steps and approaches might be helpful in alleviating racial segregation issues, while the state executive order and guidelines required specific actions. Here, the federal law requires NPDES permits to include specified requirements. Because the provisions of an NPDES permit are required by federal law to be specified, the test claim permit is a federal mandate and is not a reimbursable state mandate within the meaning of Section 6, Article XIII B of the California Constitution.

In conclusion, Finance believes that the test claim permit and its provisions are federal mandates, and that the test claim should be denied pursuant to both subdivisions (c) and (d) of Government Code Section 17556.

As required by the Commission's regulations, a "Proof of Service" has been enclosed indicating that the parties included on the mailing list which accompanied your April 10, 2009 letter have been provided with copies of this letter via either United States Mail or, in the case of other state agencies, Interagency Mail Service.

If you have any questions regarding this letter, please contact Carla Castañeda, Principal Program Budget Analyst at (916) 445-3274.

Sincerely,

Diana L. Ducay
Program Budget Manager

STATE OF CALIFORNIA

IN RE DISMISSAL OF PORTIONS OF TEST CLAIM: California Regional Water Quality Control Board, Los Angeles Region, Executive Order Number 01-182, Permit Number CAS004001 (December 13, 2001), Parts 1 & 2, Pages 16-18; Part 4C & E, Pages 27-34 and 42-45; and Part 4F(5) & (6), Pages 48-51. Originally filed on September 30, 2003; And Re-filed on October 3, 2007 pursuant to Peremptory Writ of Mandate Issued by the Los Angeles County Superior Court (Case Nos. BS089769 and Bs089785) and Affirmed in *County of Los Angeles v. Commission on State Mandates* (2007) 150 Cal.App.4th 898; Parts 1; 2; 4.C2.c; 4.F.5.a; 4F.5.b; and 4.F.6 withdrawn on November 13, 2008, By Cities of Bellflower, Covina, Downey, Monterey Park, and Signal Hill, Claimants.	Case No.: 03-TC-21 *Stormwater Pollution Control Requirements* STATEMENT OF DECISION PURSUANT TO GOVERNMENT CODE SECTION 17500 ET SEQ.; CALIFORNIA CODE OF REGULATIONS, TITLE 2, DIVISION 2, CHAPTER 2.5, ARTICLE 7 (Adopted on January 30, 2009)

STATEMENT OF DECISION

On November 13, 2008, the claimants requested withdrawal of portions of the test claim filing (Parts 1; 2; 4.C2.c; 4.F.5.a; 4F.5.b; and 4.F.6) on *Stormwater Pollution Control Requirements (03-TC-21)*. Claimants' request was served in writing, and a sixty-day notice of this withdrawal and dismissal was provided pursuant to California Code of Regulations, title 2, section 1183.08.

No interested parties objected to the claimant's request for withdrawal, or took over the claim by substitution of the parties, on or before January 11, 2009.

CONCLUSION

IT IS HEREBY ORDERED that Parts 1; 2; 4.C2.c; 4.F.5.a; 4F.5.b; and 4.F.6 of the test claim filing, *Stormwater Pollution Control Requirements* (03-TC-21), is dismissed, without prejudice, pursuant to California Code of Regulations, title 2, section 1183.08.

Any claimant may file a new test claim on the above-referenced test claim legislation. However, any such claim shall be subject to a new filing date and to the statute of limitations pursuant to Government Code section 17551.

HKATHLEEN CONNELL, as Controller, etc., et al., Petitioners,
v.
THE SUPERIOR COURT OF SACRAMENTO COUNTY, Respondent; SANTA MARGARITA WATER DISTRICT et al., Real Parties in Interest.
No. C024295.

Court of Appeal, Third District, California.
Nov. 20, 1997.

SUMMARY

Several Water districts brought mandamus proceedings against the State Controller to enforce a State Board of Control decision that a statewide regulatory amendment, which increases the level of purity required when reclaimed wastewater is used for certain types of irrigation, constitutes a state-mandated program for which water districts are entitled to reimbursement from the state. The trial court entered a judgment that the state mandate was a program for which reimbursement was due, and it directed the Controller to determine the amounts of reimbursement. (Superior Court of Sacramento County, Nos. CV347181, CV357155, CV357156 and CV357950, James Timothy Ford, Judge.)

The Court of Appeal ordered issuance of a writ of mandate directing the trial court to vacate its judgment and enter a new judgment denying the petitions for a writ of mandate. The court held that because the judgment plainly left matters undecided, the judgment was interlocutory and therefore was not appealable; however, the court treated the appeal as a writ petition. On the merits, the court held that the public interest exception to the doctrine of administrative collateral estoppel precluded application of the doctrine to the legal issues raised by defendant. The issues presented were not limited to the validity of any finally adjudicated individual claim, but encompassed the question of subvention obligations in general under the regulatory amendment of wastewater purification standards. The court further held that even if the amendment constitutes a new program for state-mandated costs purposes, the costs are not reimbursable, since the water districts have the authority to levy fees to pay for the program (Wat. Code, § 35470). Rev. & Tax. Code, former § 2253.2 (now Gov. Code, § 17556), provides that the board shall not find a reimbursable cost if the local agency has the "authority," i.e., the right or power, to levy service charges, fees, or assessments sufficient to pay for the mandated program. The plain language of the statute precludes a construction of "authority" to mean a practical ability in light of surrounding economic circumstances. The court also held that the public interest exception to the doctrine of administrative collateral estoppel permitted the Controller to raise that issue in the trial court. (Opinion by Sims, J., with Puglia, P. J., and Nicholson, J., concurring.)

HEADNOTES

Classified to California Digest of Official Reports

(1a, 1b) Appellate Review § 17--Decisions Appealable--Final Judgment-- Necessity For Further Orders. A judgment entered in litigation to determine whether a statewide regulatory amendment, which increases the level of purity required when reclaimed wastewater is used for certain types of irrigation, constitutes a state-mandated program for which water districts are entitled to reimbursement from the state, was not a final judgment and thus was not appealable. The challenging parties' petition sought an order directing the State Controller to issue a warrant and the State Treasurer to pay a warrant, but the judgment merely ordered the Controller to determine amounts without disposing of those matters. The record reflected the trial court's recognition that it could not order issuance or payment of warrants unless it determined appropriated funds for such expenditures were reasonably available in the state budget, but the necessary evidentiary hearing on that issue was not held. Because the judgment plainly left matters undecided, the judgment was interlocutory and therefore not appealable.

(2) Appellate Review § 10--Jurisdiction--Appealable

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

Judgment.
An appealable judgment or order is a jurisdictional prerequisite to an appeal.
[See 9 Witkin, Cal. Procedure (4th ed. 1997) Appeal, §§ 13-14.]
(3) Appellate Review § 17--Decisions Appealable--Interlocutory Judgment.
An interlocutory judgment is not appealable; generally, a judgment is interlocutory if anything further in the nature of judicial action on the part of the trial court is essential to a final determination of the rights of the parties.

(4) Mandamus and Prohibition § 44--Mandamus--To Courts--Appeal--Scope of Review.
In reviewing a trial court's ruling on a petition for a writ of mandate, the appellate court is ordinarily confined to an inquiry as to whether the findings and judgment of the trial court are supported by substantial evidence. However, where the facts are undisputed and the issues present questions of law, the appellate court is not bound by the trial court's decision but may make its own determination.

(5) Judgments § 81--Res Judicata--Administrative Collateral Estoppel-- Public Interest Exception--Board of Control Decision.
In litigation by several water districts against the State Controller to enforce a State Board of Control decision that a statewide regulatory amendment, which increases the level of purity required when reclaimed wastewater is used for certain types of irrigation, constitutes a state-mandated program for which water districts are entitled to reimbursement from the state, the public interest exception to the doctrine of administrative collateral estoppel precluded application of the doctrine to the legal issues raised by defendant. The issues presented were not limited to the validity of any finally adjudicated individual claim, but encompassed the question of subvention obligations in general under the regulatory amendment of wastewater purification standards. If the board's decision was wrong but unimpeachable, taxpayers statewide would suffer unjustly the consequences of a continuing obligation to fund the costs of local water districts.
[See 7 Witkin, Cal. Procedure (4th ed. 1997) Judgment, § 339.]
(6a, 6b) State of California § 11--Fiscal Matters--Reimbursement for State-mandated Costs--Standards for Reclaimed Wastewater--Authority of Water Districts to Levy Fees.
Even if a statewide regulatory amendment, which increases the level of purity required when reclaimed wastewater is used for certain types of irrigation, constitutes a new program for state-mandated costs purposes, the costs are not reimbursable, since the water districts have the authority to levy fees to pay for the program (Wat. Code, § 35470). Rev. & Tax. Code, former § 2253.2 (now Gov. Code, § 17556), provides that the Board of Control shall not find a reimbursable cost if the local agency has the "authority," i.e., the right or power, to levy service charges, fees, or assessments sufficient to pay for the mandated program. The plain language of the statute precludes a construction of "authority" to mean a practical ability in light of surrounding economic circumstances.

(7) Statutes § 29--Construction--Language--Legislative Intent.
In construing statutes, a court's primary task is to determine the lawmakers' intent. To determine intent, the court looks first to the words themselves. If the language is clear and unambiguous there is no need for construction, nor is it necessary to resort to indicia of the intent of the Legislature.

(8) Judgments § 81--Res Judicata--Administrative Collateral Estoppel-- Public Interest Exception--Legal Issue.
In litigation by several water districts against the State Controller to enforce a State Board of Control decision that a statewide regulatory amendment, which increases the level of purity required when reclaimed wastewater is used for certain types of irrigation, constitutes a state-mandated program for which water districts are entitled to reimbursement from the state, the public interest exception to the doctrine of administrative collateral estoppel permitted defendant to raise the purely legal issue that Rev. & Tax. Code, former § 2253.2 (now Gov. Code, § 17556), precluded reimbursement. The statute provides that the Board of Control shall not find a reimbursable cost if the local agency has the "authority," i.e., the right or power, to levy service charges, fees, or assessments sufficient to pay for the mandated program, and plaintiffs have such authority. The board's finding to the contrary was thus not binding.

COUNSEL

Daniel E. Lungren, Attorney General, Floyd D. Shimomura, Assistant Attorney General, Linda A. Cabatic and Susan R. Oie, Deputy Attorneys General, for Petitioners.

No appearance for Respondent.

James A. Curtis for Real Parties in Interest.

SIMS, J.

This case involves a dispute as to whether a statewide regulatory amendment, increasing the level of purity required when reclaimed wastewater is used for certain types of irrigation, constitutes a state-mandated program for which water districts are entitled to reimbursement from the state. (Cal. Const., art. XIII B, § 6 (hereafter, section 6); [FN1] Gov. Code, § 17500 et seq.; former Rev. & Tax. Code, § 2201 et seq.) The State Controller and State Treasurer appeal from a trial court judgment granting ***386** petitions for writ of mandate brought by Santa Margarita Water District (SMWD), Marin Municipal Water District, Irvine Ranch Water District and Santa Clara Valley Water District (the Districts), seeking to enforce a State Board of Control (the Board) decision which found the regulatory amendment constituted a reimbursable state mandate. [FN2] Appellants contend the trial court erred because (1) the amendment did not constitute a new program or higher level of service in an existing program; (2) the Districts' claim was abolished when the statutory basis for their claim-former Revenue and Taxation Code section 2207-was repealed before their rights were reduced to final judgment, and (3) the Districts' authority to levy fees to pay for the increased costs defeats their claim of a reimbursable mandate. Appellants also challenge the trial court's determination that they were collaterally estopped from challenging the Board's decision (finding a reimbursable state mandate) by their failure timely to seek judicial review of the administrative decision. We shall conclude the Districts' authority to levy fees defeats their claim of a reimbursable mandate, and appellants are not collaterally estopped from raising this matter. We therefore need not address the other contentions. Treating this appeal from a nonappealable judgment as an extraordinary writ petition, we shall direct the trial court to vacate its judgment and enter a new judgment denying the Districts' petitions.

FN1 Section 6 provides: "Whenever the Legislature or any state agency mandates a new program or higher level of service on any local government, the state shall provide a subvention of funds to reimburse such local government for the costs of such program or increased level of service, except that the Legislature may, but need not, provide such subvention of funds for the following mandates: [¶] (a) Legislative mandates requested by the local agency affected; [¶] (b) Legislation defining a new crime or changing an existing definition of a crime; or [¶] (c) Legislative mandates enacted prior to January 1, 1975, or executive orders or regulations initially implementing legislation enacted prior to January 1, 1975."

FN2 The trial court first held proceedings in the matter of the petition filed by the SMWD. The other three water districts had filed petitions, which were consolidated and awaiting hearing. The parties to the consolidated case filed a stipulation indicating they did not wish to relitigate the entitlement issues already decided by Judge Ford in the SMWD case, and they stipulated to assignment of their cases to Judge Ford pursuant to California Rules of Court, rule 213 (assignment to one judge for all or limited purposes), for determination of amounts as to each district. The judgment expressly covers the petitions of all four districts.

Factual and Procedural Background

In 1975, the State Department of Health Services (DHS) adopted regulations (Cal. Code Regs., tit. 22, §§ 60301-60357) implementing Water Code section 13521, which provides: "The State Department of Health Services shall establish uniform statewide recycling criteria for each varying type of use of recycled water where the use involves the protection of

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

public health." Section 60313 [FN3] of title 22 of the California Code of Regulations prescribed the level of purity required for reclaimed water to be used for landscape irrigation. ***387**

> FN3 California Code of Regulations, title 22, section 60313, initially provided: "Landscape Irrigation. Reclaimed water used for the irrigation of golf courses, cemeteries, lawns, parks, playgrounds, freeway landscapes, and landscapes in other areas where the public has access shall be at all times an adequately disinfected, oxidized wastewater. The wastewater shall be considered adequately disinfected if at some location in the treatment process the median number of coliform organisms does not exceed 23 per 100 milliliters, as determined from the bacteriological results of the last 7 days for which analyses have been completed." (Former § 60313, Cal. Code Regs., tit. 22, Register 75. No. 14 (Apr. 5, 1975).)

In May 1976, SMWD adopted a plan to develop a wastewater reclamation system. In August 1976, SMWD filed an application with the responsible regional water quality control board (Water Control Board) for a permit to discharge wastewater from the proposed reclamation system. SMWD also planned to provide reclaimed water for irrigation, potentially to 2,173 acres of land.

In February 1977, the Water Control Board issued SMWD a permit for operation of a reclamation system-the Oso Creek facility. The permit required SMWD to comply with all applicable wastewater reclamation regulations then in effect.

In late 1977, SMWD learned DHS might be considering modifications to the California Code of Regulations, title 22 regulations.

In August 1978, SMWD completed construction of the Oso Creek facility, at a cost of $17 million.

In September 1978, DHS amended the regulations. The amendment to California Code of Regulations, title 22, section 60313 [FN4] increased the level of purity required before reclaimed wastewater could be used for the irrigation of parks, playgrounds and school yards. It is this amendment which allegedly constituted a state-mandated cost. SMWD modified its facility to comply with the amended regulations, completing the modifications in 1983. ***388**

> FN4 Section 60313 of California Code of Regulations, title 22, as amended, provides: "(a) Reclaimed water used for the irrigation of golf courses, cemeteries, freeway landscapes, and landscapes in other areas where the public has similar access or exposure shall be at all times an adequately disinfected, oxidized wastewater. The wastewater shall be considered adequately disinfected if the median number of coliform organisms in the effluent does not exceed 23 per 100 milliliters, as determined from the bacteriological results of the last 7 days for which analyses have been completed, and the number of coliform organisms does not exceed 240 per 100 milliliters in any two consecutive samples.
>
> "(b) Reclaimed water used for the irrigation of parks, playgrounds, schoolyards, and other areas where the public has similar access or exposure shall be at all times an adequately disinfected, oxidized, coagulated, clarified, filtered wastewater or a wastewater treated by a sequence of unit processes that will assure an equivalent degree of treatment and reliability. The wastewater shall be considered adequately disinfected if the median number of coliform organisms in the effluent does not exceed 2.2 per 100 milliliters, as determined from the bacteriological results of the last 7 days for which analyses have been completed, and the number of coliform organisms does not exceed 23 per 100 milliliters in any sample."

On October 1, 1982, SMWD filed a "test claim" [FN5] with the Board, alleging the regulatory amendment relating to the use of reclaimed wastewater constituted a new program or higher level of service. The test claim was made pursuant to former Revenue and Taxation Code section 2231, [FN6] which required reimbursement to local agencies for costs mandated by

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

bursement to local agencies for costs mandated by the state (see now Gov. Code, § 17561 [FN7]), and former Revenue and Taxation Code section 2207, subdivisions (a) and (b) [FN8] defining "costs mandated by the state." (See now Gov. Code, § 17514. [FN9]) The test claim also cited section 6 (fn. 1, *ante*).***389**

FN5 At the time in question, "test claim" meant "the first claim filed with the State Board of Control alleging that a particular statute or executive order imposes a mandated cost on such local agency or school district." (Former Rev. & Tax. Code, § 2218; Stats. 1980, ch. 1256, § 7, p. 4249.) "Estimated claims" and "reimbursement claims" were used to make specific demand against an appropriation made for the purpose of paying such claims. (*Ibid.*)

A similar structure, distinguishing between "test claims" and various "reimbursement claims" or "entitlement claims" continues presently in Government Code sections 17521-17522.

At the time in question, the statutory procedure provided that if the Board found a mandate, it did not determine the amount to be reimbursed to the test claimant; rather, the Board then adopted a statewide cost estimate which was reported to the Legislature. (Stats. 1980, ch. 1256, p. 4246 et seq.; Stats. 1982, ch. 734, p. 2911 et seq.) It was the State Controller who determined specific amounts to be reimbursed, after the Legislature appropriated funds for that purpose. (*Ibid.*)

FN6 Former Revenue and Taxation Code section 2231 provided in part: "(a) The state shall reimburse each local agency for all 'costs mandated by the state,' as defined in Section 2207...." (Stats. 1982, ch. 1586, § 3, p. 6264.)

FN7 Government Code section 17561 provides in part: "(a) The state shall reimburse each local agency and school district for all 'costs mandated by the state,' as defined in Section 17514...."

FN8 Former Revenue and Taxation Code section 2207 provided in part: " 'Costs mandated by the state' means any increased costs which a local agency is required to incur as a result of the following: [¶] (a) Any law enacted after January 1, 1973, which mandates a new program or an increased level of service of an existing program; [¶] (b) Any executive order issued after January 1, 1973, which mandates a new program ...." (Stats. 1980, ch. 1256, § 4, pp. 4247-4248.)

The test claim did *not* invoke other subdivisions of former Revenue and Taxation Code section 2207, concerning "(c) Any executive order issued after January 1, 1973, which (i) implements or interprets a state statute and (ii), by such implementation or interpretation, increases program levels above the levels required prior to January 1, 1973. [¶] ... [¶] ... (h) Any statute enacted after January 1, 1973, or executive order issued after January 1, 1973, which adds new requirements to an existing optional program or service and thereby increases the cost of such program or service if the local agencies have no reasonable alternatives other than to continue the optional program." (Stats. 1980, ch. 1256, § 4, pp. 4247-4248.) Since these subdivisions were not invoked, we have no need to consider them.

FN9 Government Code section 17514 provides: " 'Costs mandated by the state' means any increased costs which a local agency or school district is required to incur after July 1, 1980, as a result of any statute enacted on or after January 1, 1975, or any executive order implementing any statute enacted on or after January 1, 1975, which mandates a new program or higher level of service of an existing program within the meaning of Section 6 ...."

On July 28, 1983, the Board determined the amended regulations imposed state mandated costs. In so doing, the Board rejected the position of state agencies

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

seeking denial of the claim on the ground that local agencies are not mandated to use reclaimed water and because, if local agencies do choose to use it, they can recover the cost in charges made to purchasers of the water.

On January 19, 1984, the Board adopted "Parameters and Guidelines" establishing criteria for payment of claims to water districts pursuant to this mandate. (Former Rev. & Tax. Code, § 2253.2; Stats. 1982, ch. 734, § 10, pp. 2916-2917; Gov. Code, § 17557.)

On May 31, 1984, the Board amended its Parameters and Guidelines to provide for reimbursement of SMWD's cost of preparing and presenting the test claim.

In June 1984, the Board, pursuant to former Revenue and Taxation Code section 2255, [FN10] submitted to the Legislature a statewide cost estimate of $14 million for this mandate. The Legislature did not appropriate any funds for the mandate in 1984.

> FN10 Former Revenue and Taxation Code section 2255 provided: "At least twice each calendar year the Board of Control shall report to the Legislature on the number of mandates it has found and the estimated statewide costs of such mandates. Such report shall identify the statewide costs estimated for each such mandate and the reasons for recommending reimbursement.... Immediately on receipt of such report a local governmental claims bill shall be introduced in the Legislature. The local government claims bill, at the time of its introduction, shall provide for an appropriation sufficient to pay the estimated costs of such mandates, pursuant to the provisions of this article." (Stats. 1980, ch. 1256, § 20, p. 4255.)
>
> The current provision is contained in Government Code section 17600, which provides: "At least twice each calendar year the commission shall report to the Legislature on the number of mandates it has found pursuant to Article 1 (commencing with Section 17550) and the estimated statewide costs of these mandates. This report shall identify the statewide costs estimated for each mandate and the reasons for recommending reimbursement."

In 1985, the Legislature included an appropriation of almost $14 million for this state-mandated cost in the budget, but the Governor vetoed the appropriation.

In 1986, a bill including $945,000 for the subject mandate was introduced, but the bill was not enacted.

On January 27, 1987, SMWD filed in the trial court a petition for writ of mandate pursuant to Code of Civil Procedure section 1085. The petition sought an order directing (1) the State Controller to issue a warrant "to pay the State's obligation to SMWD for its 'costs mandated by the state' " and (2) the State Treasurer to pay the Controller's warrant. ***390**

At a hearing, the trial court upheld the Board's decision that the amended regulations required a higher level of service and held the doctrines of waiver and collateral estoppel applied to that decision, such that the state, by failing to challenge the Board's decision within the three-year statute of limitations, was barred from challenging it now. However, the trial court did allow the state to argue that the amended regulations did not come within the definition of "program," as that word had recently been defined in *County of Los Angeles v. State of California* (1987) 43 Cal.3d 46, 56 [233 Cal.Rptr. 38, 729 P.2d 202].

The trial court recognized that, since there was no appropriation for this mandate in the state budget, the court could not grant the relief sought by SMWD (an order directing the Controller to issue a warrant and the Treasurer to pay it) unless the court found the existence of funds reasonably available in the state budget which could be tapped for this purpose. The trial court stated it was not prepared to find the existence of funds reasonably available without a full evidentiary hearing. Rather than use the Board's statewide estimate, the court believed it needed to know the amount to which each water district would be entitled before it could determine whether there were funds reasonably available in the budget. The trial court ruled the exact amount of money to be reimbursed to the Districts had never been determined and referred the matter to a referee to make

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

that determination.

In February 1989, a court-appointed referee began evidentiary hearings to determine the amount of reimbursement for each water district.

In 1989, the Legislature repealed former Revenue and Taxation Code section 2207 (fn. 8, *ante*), defining "costs mandated by the state." (Stats. 1989, ch. 589, § 7, p. 1978.)

On July 29, 1994, appellants filed in the trial court a motion for judgment on the pleadings/motion to dismiss, arguing repeal of former Revenue and Taxation Code section 2207 destroyed any right to reimbursement and divested the court of jurisdiction to proceed. The motion also revisited the issue presented to and rejected by the Board, that the water districts' authority to levy fees defeated a finding that the costs were reimbursable.

In February 1995, the trial court issued its ruling denying appellants' motion for judgment on the pleadings and for dismissal. The court in its minute order determined repeal of former Revenue and Taxation Code section 2207 in 1989 had not destroyed the Districts' right to reimbursement pursuant to the Board's decision, because the Board's decision was reduced to "final judgment" before the statutory repeal. The court said the Board's ***391** decision on July 28, 1983, became final in July 1986, when the applicable three-year statute of limitations for seeking judicial review lapsed. The Board's decision therefore conclusively established the Districts' right to reimbursement, and appellants were collaterally estopped from challenging the Board's decision. The court further said no discernible injustice or public interest precluded this application of collateral estoppel; rather, justice would be furthered by allowing the Districts to enforce their right to reimbursement as established by the Board.

The trial court further said the statutory authority of the Districts to levy service charges and assessments (Former Rev. & Tax. Code, § 2253.2, subd. (b)(4); [FN11] Stats. 1982, ch. 734, § 10, p. 2916; Gov. Code, § 17556 [FN12]) did not bar reimbursement for state-mandated costs. "When the Board determined that the 1978 amendment of the regulations establishing reclamation criteria imposed reimbursable state-mandated costs, it rejected the argument of the State Departments of Health Services and Finance that the costs were not reimbursable pursuant to former Revenue and Taxation Code section 2253(b)(4) and implicitly determined, in accordance with the presentation of [Santa Margarita Water District] that [the Districts] did not have sufficient authority to levy service charges and assessments to pay for the increased level of service mandated by the 1978 regulatory amendment. This implicit determination, resolving a mixture of legal and factual issues, became final and binding on respondents under the doctrine of collateral estoppel when they failed to seek judicial review of the Board's decision within the three-year limitations period."

> FN11 At the time SMWD filed its test claim, former Revenue and Taxation Code section 2253.2 provided in part: "(b) The Board of Control shall not find a reimbursable mandate ... in any claim submitted by a local agency ... if, after a hearing, the board finds that: [¶] ... [¶] (4) The local agency ... has the authority to levy service charges, fees or assessments sufficient to pay for the mandated program or level of service." (Stats. 1982, ch. 734, § 10, p. 2916.)

> FN12 Government Code section 17556 provides in part: "The [Commission on State Mandates (formerly the Board of Control)] shall not find costs mandated by the state, as defined in Section 17514, in any claim submitted by a local agency or school district, if, after a hearing, the commission finds that: [¶] ... [¶] (d) The local agency or school district has the authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service."

At a further hearing concerning the amount owed to each water district, the trial court stated it had erred in referring the matter to a referee and should have rendered a judgment directing the Controller to determine the amounts owed.

On June 3, 1996, the trial court entered a judgment

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

stating (1) the Board's decision was final at the time the petitions were filed in the trial court; (2) ***392** the state mandate is a program for which reimbursement is due under *County of Los Angeles v. State of California, supra*, 43 Cal.3d 46; (3) the court having concluded it was inappropriate for the court to determine amounts of reimbursement, the Controller was directed to make that determination. The court directed issuance of a writ commanding the Controller to determine the amounts due to the Districts.

Appellants appeal from the judgment.

The Districts filed a cross-appeal, but we dismissed the cross-appeal pursuant to stipulation of the parties.

Discussion

I. *Appealability*

(1a) Because the petition sought an order directing the Controller to issue a warrant and the Treasurer to pay a warrant but the judgment merely ordered the Controller to determine amounts without disposing of those matters, and because the record reflected the trial court's recognition that it could not order issuance or payment of warrants unless it determined appropriated funds for such expenditures were reasonably available in the state budget [FN13] (*Carmel Valley Fire Protection Dist. v. State of California* (1987) 190 Cal.App.3d 521, 538-541 [234 Cal.Rptr. 795])-a determination requiring an evidentiary hearing which was not held-we requested supplemental briefing on the question whether the judgment was a final appealable judgment, as opposed to an interlocutory judgment.

> FN13 The petition for writ of mandate alleged there was a continuously appropriated State Mandates Claims Fund upon which the Legislature had placed restrictions which on their face made the fund inapplicable to the mandate at issue in this case. The petition further alleged these restrictions were unconstitutional, such that upon a judicial declaration of their unconstitutionality, there would exist funds reasonably available to pay SMWD. The trial court made no ruling on these matters. In this appeal, we need not and do not decide the propriety of the remedy sought by the Districts.

(2) An appealable judgment or order is a jurisdictional prerequisite to an appeal. (Code Civ. Proc., § 904.1; 9 Witkin, Cal. Procedure (4th ed. 1997) Appeal, §§ 13-14, pp. 72-73.)

(3) An interlocutory judgment is not appealable; generally, a judgment is interlocutory if anything further in the nature of judicial action on the part of the trial court is essential to a final determination of the rights of the parties. (*Lyon v. Goss* (1942) 19 Cal.2d 659, 669-670 [123 P.2d 11].)

(1b) In their supplemental briefs, both sides maintain the judgment is a final appealable judgment but for different reasons. Both sides are wrong. ***393**

Appellants assert the judgment is final because nothing further remains to be done by the trial court. According to appellants, the Controller, after determining what amounts are due, is supposed to submit that amount to the Legislature to appropriate the funds (though the judgment contains no such direction). Appellants assert that, if the Legislature does not appropriate the funds, the Districts' remedy would be to file a new action in the superior court to enforce the court's prior order, and to compel payment out of funds already appropriated and reasonably available for the expenditures. Appellants assert it is thus premature to consider whether appropriated funds are reasonably available to pay any reimbursement due.

The Districts' supplemental brief, while agreeing the judgment is a final appealable judgment, disputes appellants' view of what happens after the Controller determines the amounts. The Districts maintain the trial court intended for appellants to pay the amounts determined by the Controller, despite the judgment's failure so to state. The Districts claim the unresolved factual question of the existence of available appropriated funds in the budget is merely "an administrative detail" which need not be addressed by the court except in a proceeding to enforce the judgment in the event appellants refuse to pay.

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

Both sides are wrong. Nothing in the judgment requires the Controller to submit an appropriations bill to the Legislature, and appellants cite no authority that would require such a procedure-which would duplicate steps previously undertaken in this case without success. Nor does anything in the judgment call for issuance or payment of warrants. *Carmel Valley Fire Protection Dist.* v. *State of California, supra,* 190 Cal.App.3d 521-a case discussed in the trial court and on appeal-recognized that a court violates the separation of powers doctrine if it purports to compel the Legislature to appropriate funds, but no such violation occurs if the court orders payment from an existing appropriation. (*Id.* at pp. 538-539.)Thus, the Districts' view of this matter as an administrative detail for a later postjudgment enforcement proceeding is unsupported.

We recognize this litigation arises from a "test claim," which merely determines whether a state-mandated cost exists. (See fn. 5, *ante.*)Perhaps no issue of payment should arise at all at the test claim stage, though neither side so argues.

In any event, the judgment plainly leaves matters undecided.

We conclude the judgment is interlocutory and therefore not appealable.

Nevertheless, on our own motion, we shall exercise our discretion to treat the appeal as a writ petition and shall grant review on that basis. (*Morehart* ***394*** v. *County of Santa Barbara* (1994) 7 Cal.4th 725, 743-744 [29 Cal.Rptr.2d 804, 872 P.2d 143] [treating appeal as writ petition is authorized means for obtaining review of interlocutory judgments].) We shall exercise our discretion to treat the appeal as a writ petition in the interest of justice and judicial economy, because the merits of the dispositive issues have been fully briefed, both sides urge review, and the judgment compels the Controller to engage in complex factfinding determinations which may be moot if the trial court erred on the merits of the mandate issues. Given the difficulties in discerning how the former statutory process of test claims was supposed to work in practice, we believe the interests of justice and judicial economy are best served by reviewing the judgment rather than dismissing the appeal.

We stress, however, that our review is limited to contentions raised in the briefs-which do not raise issues of the propriety of the remedy sought by the Districts. We express no view on whether the remedy sought by the Districts was an available or appropriate remedy.

II. *Standard of Review*

(4) In reviewing the trial court's ruling on a writ of mandate, the appellate court is ordinarily confined to an inquiry as to whether the findings and judgment of the trial court are supported by substantial evidence. (*Evans v. Unemployment Ins. Appeals Bd.* (1985) 39 Cal.3d 398, 407 [216 Cal.Rptr. 782, 703 P.2d 122].) However, where the facts are undisputed and the issues present questions of law, the appellate court is not bound by the trial court's decision but may make its own determination. (*Ibid.*)

III. *Collateral Estoppel*

We first address the trial court's determination that appellants were collaterally estopped from challenging the Board's determination of state-mandated cost (except for the ability to address the effect of a new Supreme Court case defining "program"). The trial court stated the Board's decision became final for collateral estoppel purposes in July 1986, when the statute of limitations for judicial review expired.

Appellants contend the trial court erred in applying collateral estoppel, because there was no "final judgment" for collateral estoppel purposes, since the amount of reimbursement had yet to be determined.

(5) We conclude it is not necessary to decide the parties' dispute as to whether the requirements of administrative collateral estoppel are met, because even assuming the elements are met, the doctrine of collateral estoppel should be disregarded pursuant to the public interest exception. ***395**

Thus, our Supreme Court declined to apply collateral estoppel in a state-mandated costs case in *City of Sacramento v. State of California* (1990) 50 Cal.3d 51, 64-65 [266 Cal.Rptr. 139, 785 P.2d 522] (*Sacra-*

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

mento II). There, a city and a county filed claims with the Board seeking subvention of costs imposed by a statute (Stats. 1978, ch. 2, p. 6 et seq., referred to in *SacramentoII* as "chapter 2/78") which extended mandatory coverage under the state unemployment insurance law to include state and local governments. The Board found there was no state-mandated program and denied the claims. On mandamus, the trial court overruled the Board and found the costs reimbursable. We affirmed the trial court in a published opinion. (*City of Sacramento v. State of California* (1984) 156 Cal.App.3d 182 [203 Cal.Rptr. 258](*Sacramento I*).) On remand, the Board determined the amounts due on the claims, but the Legislature refused to appropriate the necessary funds. The city filed a class action seeking among other things payment of the state-mandated costs. The trial court granted summary judgment for the state on the grounds the statute did not impose state-mandated costs. The Supreme Court upheld the trial court's decision.

The Supreme Court in *Sacramento II* rejected the local agencies' argument that the state was collaterally estopped from relitigating the issue whether a state-mandated cost existed, because *Sacramento I* "finally" decided the matter. (*Sacramento II*, *supra*, 50 Cal.3d at p. 64.) The Supreme Court said: "Generally, collateral estoppel bars the party to a prior action, or one in privity with him, from relitigating issues finally decided against him in the earlier action. [Citation.] '... But when the issue is a question of law rather than of fact, the prior determination is not conclusive either if injustice would result or if the public interest requires that relitigation not be foreclosed....' [Citation.]

"Even if the formal prerequisites for collateral estoppel are present here, the public-interest exception governs. Whether chapter 2/78 costs are reimbursable under article XIII B and parallel statutes constitutes a pure question of law. The *state* was the losing party in *Sacramento I*, and also the only entity legally affected by that decision. Thus, strict application of collateral estoppel would foreclose any reexamination of the holding of that case. The state would remain bound, and no other person would have occasion to challenge the precedent.

"Yet the consequences of any error transcend those which would apply to mere private parties. If the result of *Sacramento I* is wrong but unimpeachable, taxpayers statewide will suffer unjustly the consequences of the state's continuing obligation to fund the chapter 2/78 costs of local agencies...." (*Sacramento II*, *supra*, 50 Cal.3d at p. 64, original italics.) ***396**

The Supreme Court also rejected the argument that res judicata applied. "Of course, res judicata and the rule of final judgments bar us from disturbing individual claims or causes of action, on behalf of specific agencies, which have been finally adjudicated and are no longer subject to review. [Citations.] However, the issues presented in the current action are not limited to the validity of any such finally adjudicated individual claims. Rather, they encompass the question of defendants' subvention obligations *in general* under chapter 2/78." (*Sacramento II*, *supra*, 50 Cal.3d at p. 65, original italics.)

If this court's opinion finding a reimbursable mandate in *Sacramento I* did not constitute a final adjudication precluding further consideration of the matter, a fortiori the Board's decision in the instant case does not constitute a final adjudication precluding further consideration. Thus, here, as in *Sacramento II*, the issues presented are not limited to the validity of any finally adjudicated individual claim, but encompass the question of subvention obligations in general under the regulatory amendment of wastewater purification standards. If the Board's decision is wrong but unimpeachable, taxpayers statewide would suffer unjustly the consequences of a continuing obligation to fund the costs of local water districts. We reject the Districts' argument that no public interest exists in this case because only a few local entities are involved.

The Districts suggest application of the public interest exception to collateral estoppel would nullify the legislative intent to avoid multiple proceedings by creating a comprehensive and exclusive procedure for handling state mandated costs issues in the administrative forum. (E.g., Gov. Code, § 17500. [FN14]) However, we are bound by Supreme Court authority applying the public interest exception in a state-mandated costs case. (*Auto Equity Sales, Inc. v. Superior Court* (1962) 57 Cal.2d 450 [20 Cal.Rptr. 321,

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

369 ***397** P.2d 937].) Moreover, contrary to the Districts' implication, the administrative decision is not the final word; the statutory scheme authorizes judicial review of the administrative decision. (Gov. Code, § 17559; former Rev. & Tax. Code, § 2253.5; Stats. 1977, ch. 1135, § 12, p. 3650.) Additionally, the instant judicial proceeding was initiated by the Districts, not by appellants. Thus, in this case application of the public interest exception to collateral estoppel is not creating multiple proceedings.

> FN14 Government Code section 17500 provides in part: "The Legislature finds and declares that the existing system for reimbursing local agencies ... for the costs of state-mandated local programs has not provided for the effective determination of the state's responsibilities under Section 6 .... The Legislature finds and declares that the failure of the existing process to adequately and consistently resolve the complex legal questions involved in the determination of state-mandated costs has led to an increasing reliance by local agencies and school districts on the judiciary and, therefore, in order to relieve unnecessary congestion of the judicial system, it is necessary to create a mechanism which is capable of rendering sound quasi-judicial decisions and providing an effective means of resolving disputes over the existence of state-mandated local programs. [¶] It is the intent of the Legislature in enacting this part to provide for the implementation of Section 6 ... and to consolidate the procedures for reimbursement of statutes specified in the Revenue and Taxation Code with those identified in the Constitution. Further, the Legislature intends that the Commission on State Mandates, as a quasi-judicial body, will act in a deliberative manner in accordance with the requirements of Section 6 ...."

In light of the Supreme Court's decision in *Sacramento II*, we disregard earlier authority of an intermediate appellate court which applied administrative collateral estoppel to a question of law in a state-mandated costs case without express discussion of the public interest exception. (*Carmel Valley Fire Protection Dist.* v. *State of California*, *supra*, 190 Cal.App.3d at p. 536.)

We conclude that, insofar as appellants' contentions present questions of law, the public interest exception to administrative collateral estoppel governs, and we shall therefore address the legal arguments raised in appellants' brief.

IV. *Authority to Levy Fees*

(6a) Appellants contend that, even if the regulatory amendment is a new program for state mandated costs purposes, the Districts' authority to levy fees defeats a determination that the costs are reimbursable. We agree.

At the time SMWD filed its test claim, former Revenue and Taxation Code section 2253.2 provided in part:

"(b) The Board of Control shall not find a reimbursable mandate, pursuant to either Section 2250 of this code or to Section 905.2 of the Government Code, in any claim submitted by a local agency or school district, pursuant to subdivision (a) of Section 2218, if, after a hearing, the board finds that:

. . . . . .

"(4) The local agency or school district has the authority to levy service charges, fees or assessments sufficient to pay for the mandated program or level of service." [FN15](Stats. 1982, ch. 734, § 10, p. 2917; Stats. 1980, ch. 1256, § 15, pp. 4253-4254.) ***398**

> FN15 This case presents no issue concerning any distinction between "service charges, fees or assessment," as used in the statute. The parties on appeal frame the issue in terms of the authority to levy "fees." We adopt their usage for the sake of simplicity.

The same provision is currently contained in Government Code section 17556. [FN16]

> FN16 Government Code section 17556 provides in part: "The commission [formerly

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

> the Board] shall not find costs mandated by the state, as defined in Section 17514, in any claim submitted by a local agency or school district, if, after a hearing, the commission finds that: [¶] ... [¶] (d) The local agency or school district has the authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service...."

The facial constitutionality of this provision was upheld in *County of Fresno v. State of California* (1991) 53 Cal.3d 482 [280 Cal.Rptr. 92, 808 P.2d 235]. The *Fresno* court rejected an argument that the statute was facially unconstitutional as conflicting with section 6 (fn. 1, *ante*), which contains no exclusion of reimbursement where the local agency has authority to levy fees. Section 6 requires subvention only when the costs in question can be recovered solely from tax revenues. (53 Cal.3d at p. 487.) Government Code section 17556, subdivision (d), "effectively construes the term 'costs' in the constitutional provision as excluding expenses that are recoverable from sources other than taxes. Such a construction is altogether sound." (*County of Fresno v. State of California*, *supra*, 53 Cal.3d at p. 487.)

Here, appellants contend that, at all pertinent times, the water districts have had *authority* to levy fees to cover the costs at issue in this case. They cite provisions such as Water Code section 35470, which provides: "Any district formed on or after July 30, 1917, may, in lieu in whole or in part of raising money for district purposes by assessment, make water available to the holders of title to land or the occupants thereon, and may fix and collect charges therefor. The charges may include standby charges to holders of title to land to which water may be made available, whether the water is actually used or not. The charges may vary in different months and in different localities of the district to correspond to the cost and value of the service, and the district may use so much of the proceeds of the charges as may be necessary to defray the ordinary operation or maintenance expenses of the district and for any other lawful district purpose."

We agree this statute on its face authorizes the Districts to levy fees sufficient to pay the costs involved with the regulatory amendment. We thus shall conclude the Board erred in finding a right to reimbursement despite this authority to levy fees, and we shall conclude appellants are not collaterally estopped from pressing this point.

The Districts do not dispute they have authority to levy fees for the costs involved in this case. Instead they argue the real issue is whether they had ***399** "sufficient" authority. They claim this issue was a mixed question of law and fact, and appellants should be collaterally estopped from raising it. [FN17]

> FN17 The Districts assert appellants are relying on evidence that was not before the Board. However, they do not explain what they mean or give us any reference to appellants' brief. We therefore disregard the assertion.

We agree with appellants that the public interest exception to collateral estoppel should be applied here, because the issue presents a pure question of law. The Districts tried to make it a factual issue, but we shall explain why the facts presented by the District were immaterial.

Thus, in proceedings before the Board (where Water Code section 35470 was cited to the Board by state agencies), SMWD did not argue it lacked "authority" to levy fees for this purpose. Instead, SMWD argued and presented evidence that it would not be economically desirable to do so. SMWD submitted declarations stating that rates necessary to cover the increased costs would render the reclaimed water unmarketable and would encourage users to switch to potable water. SMWD maintained that imposition of higher fees on users would contravene the legislative policy expressed in Water Code section 13512, which directs the state to undertake all possible steps to encourage development of wastewater reclamation facilities.

The Board made no express finding concerning this issue. The record contains only the Board minutes, which reflect a motion was made "To find a mandate and continue the issue regarding the claimant's ability to levy a service charge, to the parameters and guidelines process." There was no second to the motion. A

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

motion was then made to find the regulatory amendment contained a reimbursable mandate. The motion carried. The minutes then state: "Discussion: Chairperson Yost disagreed with the motion as she felt the claimant could recover their costs by levying a service charge ...." The Board's Parameters and Guidelines stated in part: "If service charges or assessments were levied to defray the cost of the new criteria, the claim must be reduced by the amount received from such charges or assessment."

In proceedings before the trial court, SMWD admitted the district had the authority to levy fees but argued existence of authority was not enough, and the real question was whether it was economically feasible to levy fees sufficient to pay the mandated costs. Thus, SMWD's counsel stated at the hearing in the trial court: "The state keeps focusing on the question of whether the authority to issue, to assess fees and charges exists, and we have never contested that it didn't.

"But the statute which says that the Board cannot find the existence of a mandate if there's authority to assess fees and charges, and then the critical ***400** phrase, 'sufficient to pay for the mandated costs,' that's the condition with [*sic*] which they cannot satisfy.

"We proved that, the Board of Control hearing, through economic evidence. We proved it through testimony that the market was absolutely inelastic in terms of reclaimed water and potable water, that if you raise the price of reclaimed water over the potable water, that people would then buy the potable water, and that's all in the record.

"And so we showed that even though we have the authority, it was not sufficient to pay ...."

We note the record also reflects comments by SMWD's counsel to the trial court, that its customers were paying the increased costs as an "advance" against the state's obligation. The court pointed out users' payment of increased costs disproved the economic evidence SMWD had presented to the Board, that it could not raise its prices without losing its customers. The record also contains indications that the Districts funded the increased costs by diverting money from other sources. As will appear, we need not address this evidence, because it is not relevant to the question of authority to levy fees sufficient to fund the increased costs imposed by the regulatory amendment, which is a question of law in this case.

The trial court's minute order stated the districts' authority to levy fees did not bar reimbursement for state-mandated costs, because the Board "implicitly determined" the districts did not have "sufficient" authority to levy fees to pay for the increased service mandated by the 1978 regulatory amendment, and this "implicit determination, resolving a mixture of legal and factual issues, became final and binding on [appellants] under the doctrine of collateral estoppel when they failed to seek judicial review of the Board's decision within the three-year limitations period."

On appeal, appellants argue the sole inquiry is whether the local agency has "authority" to levy fees sufficient to pay the costs, and it does not matter whether the local agency, for economic reasons, finds it undesirable to exercise that authority. Appellants argue this presents a question of law, such that the public interest exception to collateral estoppel would apply (assuming the requirements of collateral estoppel are otherwise met).

We agree with appellants. (7) In construing statutes, our primary task is to determine the lawmakers' intent. (*Brown v. Kelly Broadcasting Co.* (1989) 48 Cal.3d 711, 724 [257 Cal.Rptr. 708, 771 P.2d 406].) To determine intent, we look first to the words themselves. (*Ibid.*) "If the language is clear ***401** and unambiguous there is no need for construction, nor is it necessary to resort to indicia of the intent of the Legislature ...." (*Lungren v. Deukmejian* (1988) 45 Cal.3d 727, 735 [248 Cal.Rptr. 115, 755 P.2d 299].)

(6b) Here, the statute is clear and unambiguous. On its face the statute precludes reimbursement where the local agency has "authority" to levy fees sufficient to pay for the mandated program or level of service. The legal meaning of "authority" includes the "Right to exercise powers; ..." (Black's Law Dict. (6th ed. 1990) p. 133, col. 1.) The lay meaning of "authority" includes "the power or right to give commands [or] take action ...." (Webster's New

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

World Dict. (3d college ed. 1988) p. 92.) Thus, when we commonly ask whether a police officer has the "authority" to arrest a suspect, we want to know whether the officer has the legal sanction to effect the arrest, not whether the arrest can be effected as a practical matter.

Thus, the plain language of the statute precludes reimbursement where the local agency has the authority, i.e., the right or the power, to levy fees sufficient to cover the costs of the state-mandated program.

The Districts in effect ask us to construe "authority," as used in the statute, as a practical ability in light of surrounding economic circumstances. However, this construction cannot be reconciled with the plain language of the statute and would create a vague standard not capable of reasonable adjudication. Had the Legislature wanted to adopt the position advanced by the Districts, it would have used "reasonable ability" in the statute rather than "authority."

The question is whether the Districts have authority, i.e., the right or power, to levy fees sufficient to cover the costs. The Districts clearly have authority to levy fees sufficient to cover the costs at issue in this case.Water Code section 35470 authorizes the levy of fees to "correspond to the cost and value of the service," and the fees may be used "to defray the ordinary operation or maintenance expenses of the district and for any other lawful district purpose." The Districts do not demonstrate that anything in Water Code section 35470 limits the authority of the Districts to levy fees "sufficient" to cover their costs.

Thus, the economic evidence presented by SMWD to the Board was irrelevant and injected improper factual questions into the inquiry.

On appeal, the Districts briefly argue economic undesirability of levying fees constitutes a lack of authority to levy fees sufficient to cover costs. They claim the evidence before the Board showed SMWD "could not" ***402** increase its fees because it was already charging as much for reclaimed as it was for potable water. However, the cited portion of the record does not show SMWD "could not" increase its fees but only that an increase would render reclaimed water unmarketable and encourage users to switch to potable water. The Districts cite no authority supporting their construction of former Revenue and Taxation Code section 2253.2 (now Gov. Code, § 17556) that *authority* to levy fees sufficient to cover costs turns on economic feasibility. We have seen the plain language of the statute defeats the Districts' position.

(8) Since the issue in this case presented a question of law, we conclude the public interest exception to collateral estoppel applies. (*Sacramento II*, *supra*, 50 Cal.3d at p. 64.)

The Districts argue application of the public interest exception in this case raises policy concerns about the finality of administrative decisions on state-mandated costs, because if collateral estoppel does not apply in this case, it will never apply. However, we merely hold, in accordance with Supreme Court pronouncement, that the public interest exception to collateral estoppel applies under the circumstances of this case to this state-mandated cost issue which presents solely a question of law.

The Districts argue any fees levied by the districts "cannot exceed the cost to the local agency to provide such service," because such excessive fees would constitute a special tax. However, the districts fail to explain how this is an issue. No one is suggesting the districts levy fees that exceed their costs.

The Districts cite evidence presented to the referee in the aborted hearing to determine amounts owed to each District, that SMWD's director of finance testified SMWD has other sources of revenue from other services it provides (such as sewer service), maintains separate accounts, and borrowed funds internally from other accounts to cover costs incurred as a result of the subject mandate. The Districts assert this testimony reflects that SMWD "recognized the legal limitations on its authority to impose fees for the services that it provides." However, nothing in this evidence demonstrates any legal limitations on the authority to levy the necessary fees.

The Districts say appellants appear to believe the Districts should require users of other services to subsidize the Districts' cost of reclaiming and selling wastewater, through excessive user fees. However, we do not read appellants' brief as presenting any

© 2009 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

such argument and in any event do not base our decision on that ground. ***403**

In a footnote, the Districts make the passing comment: "In light of the adoption of Proposition 218, which added Articles XIII C and XIII D to the California Constitution this past November [1996], the authority of local agencies to recover costs for many services will be impacted by the requirement to secure the approval by majority vote of the property owners voting, to levy or to increase property related fees. See Section 6, Article XIII D." The Districts do not contend that the services at issue in this appeal are among the "many services" impacted by Proposition 218. We therefore have no need to consider what effect, if any, Proposition 218 might have on the issues in this case.

We conclude the Districts were not entitled to reimbursement of state-mandated costs, because they had authority to levy fees sufficient to pay for the level of service mandated by the 1978 regulatory amendment. Appellants were not collaterally estopped from raising this issue in the trial court. We thus conclude the Districts' mandamus petitions should have been denied. We therefore need not address appellants' contentions that (1) the regulatory amendment did not constitute a new program or higher level of service, or (2) any right to reimbursement was abolished upon repeal of former Revenue and Taxation Code section 2207.

Disposition

Let a peremptory writ of mandate issue, directing the trial court to vacate its judgment and enter a new judgment denying the Districts' petitions for writ of mandate. Appellants shall recover their costs on appeal.

Puglia, P. J., and Nicholson, J., concurred.
The petition of real parties in interest for review by the Supreme Court was denied February 25, 1998. ***404**

APARTMENT ASSOCIATION OF LOS ANGELES COUNTY, INC., et al., Plaintiffs and Appellants,
v.
CITY OF LOS ANGELES, Defendant and Respondent.
No. S082645.

Supreme Court of California
Jan. 8, 2001.

SUMMARY

A city council, seeking to establish and fund a program to remedy substandard housing conditions, adopted an ordinance that required the owners of all residential rental properties subject to inspection under the program to pay a fee. An apartment association and other groups with similar interests brought an action for declaratory and injunctive relief against the city, alleging that the fee ordinance was unconstitutional and therefore void as a charge upon real property under Prop. 218 (Cal. Const., art. XIII D). The trial court sustained the city's demurrer without leave to amend, finding that the fee was not subject to the constitutional requirements, and entered judgment for the city. (Superior Court of Los Angeles County, No. BC195216, Charles W. McCoy, Jr., Judge.) The Court of Appeal, Second Dist., Div. One, No. B130243, reversed.

The Supreme Court reversed the judgment of the Court of Appeal. The court held that this ordinance did not fall within the scope of Cal. Const., art. XIII D, which only restricts fees imposed directly on property owners in their capacity as such. The inspection fee was not imposed on landlords in their capacity as property owners, but rather in their capacity as business owners. This constitutional provision does not refer to fees imposed on an incident of property ownership, but rather to fees imposed on a parcel or a person as an incident of property ownership; this distinction was crucial to this case. According to its plain meaning, Cal. Const., art. XIII D applies only to exactions levied solely by virtue of property ownership. This inspection fee was imposed because the property was being rented; it ceased along with the business operation, whether or not ownership remained in the same hands. (Opinion by Mosk, J., with George, C. J., Kennard, Werdegar, and Chin, JJ., concurring. Dissenting opinion by Brown, J., with Baxter, J., concurring (see p. 845).)

HEADNOTES

Classified to California Digest of Official Reports

(1) Appellate Review § 145--Scope of Review--Questions of Law and Fact-- Interpretation of Constitutional Provision.
The interpretation of a constitutional provision, passed by voter initiative, is a question of law for the appellate courts to decide on independent review of the facts.

(2a, 2b, 2c) Property Taxes § 7.6--Real Property Tax Limitation-- Proposition 218--Construction--In Context of Proposition 13.
Prop. 218, which added Cal. Const., art. XIII C and art. XIII D, can best be understood against its historical background, which began in 1978 with the adoption of Prop. 13, the purpose of which was to cut local property taxes. Prop. 218 buttressed the limitations in Prop. 13 on ad valorem property taxes and special taxes by placing analogous restrictions on assessments, fees, and charges. Prop. 218 must be construed in the context of Prop. 13. Prop. 218 focuses on exactions, whether they be called taxes, fees, or charges, that are directly associated with property ownership.

(3a, 3b, 3c, 3d, 3e) Property Taxes § 7.6--Real Property Tax Limitation--Proposition 218:Municipalities § 54--Ordinances--Fee Imposed on Owners of Residential Rental Properties--Validity.
A city ordinance that required payment of a fee by the owners of all residential rental properties subject to inspection under a program designed to remedy substandard housing conditions did not fall within the scope of Prop. 218 (Cal. Const., art. XIII D), which only restricts fees imposed directly on property owners in their capacity as such. The inspection fee was not imposed on landlords in their capacity as property owners, but rather in their capacity as business owners. This constitutional provision does not refer to
