The Court of Appeal affirmed the judgment insofar as it provided that section 6 requires the state to fund the CMS program. The Court of Appeal also affirmed the trial court's finding that the state had required San Diego to spend at least \$ 41 million on the CMS program in fiscal years 1989-1990 and 1990-1991. However, the Court of Appeal reversed those portions of the judgment determining the final reimbursement amount and specifying the state funds from which the state was to satisfy the judgment. It remanded the matter to the Commission to determine the reimbursement amount and appropriate statutory remedies. We then granted the state's petition for review.

[**322] [***144] IV. SUPERIOR COURT JURISDICTION

(2a) Before reaching the merits of the appeal, we must address the state's assertion that the superior court lacked jurisdiction to hear San [*86] Diego's mandate claim. According to the state, in *Kinlaw, supra*, 54 Cal. 3d 326, we "unequivocally held that the orderly determination of [unfunded] mandate questions demands that only one claim on any particular alleged mandate be entertained by the courts at any given time." Thus, if a test claim is pending, "other potential claims must be held in abeyance . . ." Applying this principle, the state asserts

that, since "the test claim litigation was pending" in the Los Angeles action when San Diego filed its cross-complaint seeking mandamus relief, "the superior court lacked jurisdiction from the outset, and the resulting judgment is a nullity. That defect cannot be cured by the settlement of the test claim, which occurred after judgment was entered herein."

In *Kinlaw*, we held that [HN9]individual taxpayers and recipients of government benefits lack standing to enforce section 6 because the applicable administrative procedures, which "are the exclusive means" for determining and enforcing the state's section 6 obligations, "are available only to local agencies and school districts directly affected by a state mandate . . ." (*Kinlaw, supra*, 54 Cal. 3d at p. 328.) In reaching this conclusion, we explained that the reimbursement right under section 6 "is a right given by the Constitution to local agencies, not individuals either as taxpayers or recipients of government benefits and services." (*Id.* at p. 334.) We concluded that "[n]either public policy nor practical necessity compels creation of a judicial remedy by which individuals may enforce the right of the county to such revenues." (*Id.* at p. 335.)

In finding that individuals do not have standing to enforce the section 6 rights of local agencies, we made several observations in *Kinlaw* pertinent to operation of the statutory process as it applies to entities that do have standing. Citing Government Code section 17500, we explained that "the Legislature enacted comprehensive administrative procedures for resolution of claims arising out of section 6 . . . because the absence of a uniform procedure had resulted in inconsistent rulings on the existence of state mandates, unnecessary litigation, reimbursement delays, and, apparently, resultant uncertainties in accommodating reimbursement requirements in the budgetary process." (*Kinlaw, supra*, 54 Cal. 3d at p. 331.) Thus, the governing statutes "establish[] procedures which exist for the express purpose of avoiding multiple proceedings, judicial and administrative, addressing the same claim that a reimbursable state mandate has been created." (*Id.* at p. 333.) Specifically, "[t]he legislation establishes a test-claim procedure to expeditiously resolve disputes affecting multiple agencies . . ." (*Id.* at p. 331.) Describing the Commission's application of the test-claim procedure to claims regarding exclusion of adult MIP's from Medi-Cal, we observed: "The test claim by the County of Los Angeles was filed prior to that [*87] proposed by Alameda County. The Alameda County claim was rejected for that reason. (See [Gov. Code] § 17521.) Los Angeles County permitted San Bernardino County to join in its claim which the Commission accepted as a test claim intended to resolve the [adult MIP exclusion] issues . . . Los Angeles County declined a request from Alameda County

that it be included in the test claim . . ." (*Id.* at p. 331, fn. 4.)

Consistent with our observations in *Kinlaw*, we here agree with the state that the trial court should not have proceeded to resolve San Diego's claim for reimbursement under section 6 while the Los Angeles action was pending. A contrary conclusion would undermine one of "the express purpose[s]" OF THE STATUTORY PROCEDURE: to "avoid[] multiple proceedings . . . addressing the same claim that a reimbursable state mandate has been created." (*Kinlaw, supra*, 54 Cal. 3d at p. 333.)

(3) However, we reject the state's assertion that the error was jurisdictional. [HN10] The power of superior courts to perform mandamus review [**323] [***145] of administrative decisions derives in part from article VI, section 10 of the California Constitution. (*Bixby v. Pierno* (1971) 4 Cal. 3d 130, 138 [93 Cal. Rptr. 234, 481 P.2d 242]; *Lipari v. Department of Motor Vehicles* (1993) 16 Cal. App. 4th 667, 672 [20 Cal. Rptr. 2d 246].) That section gives "[t]he Supreme Court, courts of appeal, [and] superior courts . . . original jurisdiction in proceedings for extraordinary relief in the nature of mandamus . . ." (Cal. Const., art. VI, § 10.) "The jurisdiction thus vested may not lightly be deemed to have been destroyed." (*Garrison v. Rourke* (1948) 32 Cal. 2d 430, 435 [196 P.2d 884], overruled on another ground in *Keane v. Smith* (1971) 4 Cal. 3d 932, 939 [95 Cal. Rptr. 197, 485 P.2d 261].) "While the courts are subject to reasonable statutory regulation of procedure and other matters, they will maintain their constitutional powers in order effectively to function as a separate department of government. [Citations.] Consequently an intent to defeat the exercise of the court's jurisdiction will not be supplied by implication." (*Garrison, supra*, at p. 436.) (2b) Here, we find no statutory provision that either "expressly provide[s]" (*id.* at p. 435) or otherwise "clearly indicate[s]" (*id.* at p. 436) that the Legislature intended to divest all courts other than the court hearing the test claim of their mandamus jurisdiction.

Rather, following *Dowdall v. Superior Court* (1920) 183 Cal. 348 [191 P. 685] (*Dowdall*), we interpret the governing statutes as simply vesting primary jurisdiction in the court hearing the test claim. In *Dowdall*, we determined the jurisdictional effect of Code of Civil Procedure former section 1699 on actions to settle the account of trustees of a testamentary trust. Code of Civil Procedure former section 1699 provided in part: "Where any trust [*88] has been created by or under any will to continue after distribution, the Superior Court shall not lose jurisdiction of the estate by final distribution, but shall retain jurisdiction thereof for the purpose of the settlement of accounts under the trust." (Stats. 1889, ch. 228, § 1, p. 337.) We explained that, under this section, "the superior court, sitting in probate upon the distribu-

tion of an estate wherein the will creates a trust, retain[ed] jurisdiction of the estate for the purpose of the settlement of the accounts under the trust." (*Dowdall, supra*, 183 Cal. at p. 353.) However, we further observed that "the superior court of each county in the state has general jurisdiction in equity to settle trustees' accounts and to entertain actions for injunctions. This jurisdiction is, in a sense, concurrent with that of the superior court, which, by virtue of the decree of distribution, has jurisdiction of a trust created by will. The latter, however, is the primary jurisdiction, and if a bill in equity is filed in any other superior court for the purpose of settling the account of such trustee, that court, upon being informed of the jurisdiction of the court in probate and that an account is to be or has been filed therein for settlement, should postpone the proceeding in its own case and allow the account to be settled by the court having primary jurisdiction thereof." (*Ibid.*)

Similarly, we conclude that, [HN11]under the statutes governing determination of unfunded mandate claims, the court hearing the test claim has primary jurisdiction. Thus, if an action asserting the same unfunded mandate claim is filed in any other superior court, that court, upon being informed of the pending test claim, should postpone the proceeding before it and allow the court having primary jurisdiction to determine the test claim.

However, a court's erroneous refusal to stay further proceedings does not render those further proceedings void for lack of jurisdiction. As we explained in *Dowdall*, [HN12]a court that refuses to defer to another court's primary jurisdiction "is not without jurisdiction." (*Dowdall, supra*, 183 Cal. at p. 353.) Accordingly, notwithstanding pendency of the Los Angeles action, the trial court here did not lack jurisdiction to determine San Diego's mandamus petition. (See *Collins v. Ramish* (1920) 182 Cal. 360, 366-369 [188 P. 550] [although trial court erred in refusing to abate action because of former action pending, new trial was not warranted on issues that the trial court correctly decided]; *People ex rel. Garamendi v. American Autoplan, Inc.* (1993) 20 Cal. App. 4th 760, 772 [***146] [25 Cal. Rptr. 2d 192] [**324] (*Garamendi*) ["rule of exclusive concurrent jurisdiction is not 'jurisdiction' in the sense that failure to comply renders subsequent proceedings void"]; *Stearns v. Los Angeles City School Dist.* (1966) 244 Cal. App. 2d 696, 718 [53 Cal. Rptr. 482, 21 A.L.R.3d 164] [where trial court errs in failing to stay proceedings in [*89] deference to jurisdiction of another court, reversal would be frivolous absent errors regarding the merits].)¹¹

¹¹ In *Garamendi, supra*, 20 Cal. App. 4th at pages 771-775, the court discussed procedural requirements for raising a claim that another

court has already exercised its concurrent jurisdiction. Given our conclusion that the trial court's error here was not jurisdictional, we express no opinion about this discussion in *Garamendi* or the sufficiency of the state's efforts to raise the issue in this case.

The trial court's failure to defer to the primary jurisdiction of the court hearing the Los Angeles action did not prejudice the state. Contrary to the state's assertion, the trial court did not "usurp" the Commission's "authority to determine, in the first place, whether or not legislation creates a mandate." The Commission had already exercised that authority in the Los Angeles action. Moreover, given the settlement of the Los Angeles action, which included vacating the judgment in that action, the trial court's exercise of jurisdiction here did not result in one of the principal harms that the statutory procedure seeks to prevent: multiple decisions regarding an unfunded mandate question. Finally, the lack of an administrative record specifically relating to San Diego's claim did not prejudice the state [HN13]because the threshold determination of whether a statute imposes a state mandate is an issue of law. (*County of Fresno v. Lehman* (1991) 229 Cal. App. 3d 340, 347 [280 Cal. Rptr. 310].) To the extent that an administrative record was necessary, the record developed in the Los Angeles action could have been submitted to the trial court.¹² (See *Los Angeles Unified School Dist. v. State of California* (1988) 199 Cal. App. 3d 686, 689 [245 Cal. Rptr. 140].)

¹² Notably, in discussing the options still available to San Diego, the state asserts that San Diego "might have been able to go to superior court and file a [mandamus] petition based on the record of the prior test claim."

We also find that, on the facts of this case, San Diego's failure to submit a test claim to the Commission before seeking judicial relief did not affect the superior court's jurisdiction. [HN14]Ordinarily, counties seeking to pursue an unfunded mandate claim under section 6 must exhaust their administrative remedies. (*Central Delta Water Agency v. State Water Resources Control Bd.* (1993) 17 Cal. App. 4th 621, 641 [21 Cal. Rptr. 2d 453]; *County of Contra Costa v. State of California* (1986) 177 Cal. App. 3d 62, 73-77 [222 Cal. Rptr. 750] (*County of Contra Costa*)). However, counties may pursue section 6 claims in superior court without first resorting to administrative remedies if they "can establish an exception to" the exhaustion requirement. (*County of Contra Costa, supra*, 177 Cal. App. 3d at p. 77.) The futility exception to the exhaustion requirement applies if a county can "state with assurance that the [Commission] would rule adversely in its own particular case. [Cita-

tions.]" (*Lindeleaf v. Agricultural Labor Relations Bd.* (1986) 41 Cal. 3d 861, 870 [226 Cal. Rptr. 119, 718 P.2d 106]; see also *County of Contra Costa, supra*, 177 Cal. App. 3d at pp. 77-78.)

[*90] We agree with the trial court and the Court of Appeal that the futility exception applied in this case. As we have previously noted, San Diego invoked this exception by alleging in its cross-complaint that the Commission's denial of its claim was "virtually certain" because the Commission had "previously denied the claims of other counties, ruling that county medical care programs for [adult MIP's] are not state-mandated and, therefore, counties are not entitled to reimbursement" Given that the Commission rejected the Los Angeles claim (which alleged the same unfunded mandate claim that San Diego alleged) and appealed the judicial reversal of its decision, the trial court correctly determined that further attempts to seek relief from the Commission would have been futile. Therefore, we reject the state's jurisdictional argument and proceed to the merits of the appeal.

[**325] [***147] V. EXISTENCE OF A MANDATE UNDER SECTION 6

(4) In determining whether there is a mandate under section 6, we turn to our decision in *Lucia Mar Unified School Dist. v. Honig* (1988) 44 Cal. 3d 830 [244 Cal. Rptr. 677, 750 P.2d 318] (*Lucia Mar*). There, we discussed section 6's application to Education Code section 59300, which "requires a school district to contribute part of the cost of educating pupils from the district at state schools for the severely handicapped." (*Lucia Mar, supra*, at p. 832.) Before 1979, the Legislature had statutorily required school districts "to contribute to the education of pupils from the districts at the state schools [citations]" (*Id.* at pp. 832-833.) The Legislature repealed the statutory requirements in 1979 and, on July 12, 1979, the state assumed full-funding responsibility. (*Id.* at p. 833.) On July 1, 1980, when section 6 became effective, the state still had full-funding responsibility. On June 28, 1981, Education Code section 59300 took effect. (*Lucia Mar, supra*, at p. 833.)

Various school districts filed a claim seeking reimbursement under section 6 for the payments that Education Code section 59300 requires. The Commission denied the claim, finding that the statute did not impose on the districts a new program or higher level of service. The trial court and Court of Appeal agreed, the latter "reasoning that a shift in the funding of an existing program is not a new program or a higher level of service" under section 6. (*Lucia Mar, supra*, 44 Cal. 3d at p. 834.)

We reversed, finding that a contrary result would "violate the intent underlying section 6" (*Lucia Mar, supra*, 44 Cal. 3d at p. 835.) That section "was intended

to preclude the state from shifting to local agencies the financial responsibility for providing public services in view of the[] [*91] restrictions on the taxing and spending power of the local entities" that articles XIII A and XIII B of the California Constitution imposed. (*Lucia Mar, supra*, at pp. 835-836.) "The intent of the section would plainly be violated if the state could, while retaining administrative control of programs it has supported with state tax money, simply shift the cost of the programs to local government on the theory that the shift does not violate section 6 . . . because the programs are not 'new.' Whether the shifting of costs is accomplished by compelling local governments to pay the cost of entirely new programs created by the state, or by compelling them to accept financial responsibility in whole or in part for a program which was funded entirely by the state before the advent of article XIII B, the result seems equally violative of the fundamental purpose underlying section 6" (*Id.* at p. 836, italics added, fn. omitted.) We thus concluded in *Lucia Mar* "that because [Education Code] section 59300 shifts partial financial responsibility for the support of students in the state-operated schools from the state to school districts--an obligation the school districts did not have at the time article XIII B was adopted--it calls for [the school districts] to support a 'new program' within the meaning of section 6." (*Ibid.*, fn. omitted.)

The similarities between *Lucia Mar* and the case before us "are striking. In *Lucia Mar*, prior to 1979 the state and county shared the cost of educating handicapped children in state schools; in the present case from 1971-197[8] the state and county shared the cost of caring for [adult MIP's] under the Medi-Cal program. . . . [F]ollowing enactment of [article XIII A], the state took full responsibility for both programs." (*Kinlaw, supra*, 54 Cal. 3d at p. 353 (dis. opn. of Broussard, J.)) As to both programs, the Legislature cited adoption of article XIII A of the California Constitution, and specifically its effect on tax revenues, as the basis for the state's assumption of full funding responsibility. (Stats. 1979, ch. 237, § 10, p. 493; Stats. 1979, ch. 282, § 106, p. 1059.) "Then in 1981 (for handicapped children) and 1982 (for [adult MIP's]), the state sought to shift some of the burden back to the counties." (*Kinlaw, supra*, [**326] [***148] 54 Cal. 3d at p. 353 (dis. opn. of Broussard, J.))

Adopting the Commission's analysis in the Los Angeles action, the state nevertheless argues that *Lucia Mar* "is inapposite." The school program at issue in *Lucia Mar* "had been wholly operated, administered and financed by the state" and "was unquestionably a 'state program.'" " 'In contrast,' " the state argues, " 'the program here has never been operated or administered by the State of California. The counties have always borne legal and financial responsibility for' " it under section

17000 and its predecessors. ¹³ The courts have interpreted section 17000 as "impos[ing] upon counties a duty to [*92] provide hospital and medical services to indigent residents. [Citations.]" (*Board of Supervisors v. Superior Court* (1989) 207 Cal. App. 3d 552, 557 [254 Cal. Rptr. 905].) Thus, the state argues, the source of San Diego's obligation to provide medical care to adult MIP's is section 17000, not the 1982 legislation. Moreover, because the Legislature enacted section 17000 in 1965, and section 6 does not apply to "mandates enacted prior to January 1, 1975," there is no reimbursable mandate. Finally, the state argues that, because section 17001 give counties "complete discretion" in setting eligibility and service standards under section 17000, there is no mandate. A contrary conclusion, the state asserts, "would erroneously expand the definition of what constitutes a 'new program' under" section 6. As we explain, we reject these arguments.

13 "County General Assistance in California dates from 1855, and for many years afforded the only form of relief to indigents." (*Mooney v. Pickett* (1971) 4 Cal. 3d 669, 677 [94 Cal. Rptr. 279, 483 P.2d 1231] (*Mooney*).) Section 17000 is substantively identical to former section 2500, which was enacted in 1937. (Stats. 1937, chs. 369, 464, pp. 1097, 1406.)

A. The Source and Existence of San Diego's Obligation

1. The Residual Nature of the Counties' Duty Under Section 17000

The state's argument that San Diego's obligation to provide medical care to adult MIP's predates the 1982 legislation contains numerous errors. First, the state misunderstands San Diego's obligation under section 17000. That [HN15]section creates "the residual fund" to sustain indigents "who cannot qualify . . . under any specialized aid programs." (*Mooney, supra*, 4 Cal. 3d at p. 681, italics added; see also *Board of Supervisors v. Superior Court, supra*, 207 Cal. App. 3d at p. 562; *Boehm v. Superior Court* (1986) 178 Cal. App. 3d 494, 499 [223 Cal. Rptr. 716] [general assistance "is a program of last resort"].) By its express terms, the statute requires a county to relieve and support indigent persons *only* "when such persons are not supported and relieved by their relatives or friends, by their own means, or by state hospitals or other state or private institutions." (§ 17000.) ¹⁴ "Consequently; to the extent that the state or federal governments provide[d] care for [adult MIP's], the [C]ounty's obligation to do so [was] reduced" (*Kinlaw, supra*, 54 Cal. 3d at p. 354, fn. 14 (dis. opn. of Broussard, J.)) ¹⁵

14 See also *County of Los Angeles v. Frisbie* (1942) 19 Cal. 2d 634, 639 [122 P.2d 526] (construing former section 2500); *Jennings v. Jones* (1985) 165 Cal. App. 3d 1083, 1091 [212 Cal. Rptr. 134] (counties must support all indigent persons "having no other means of support"); *Union of American Physicians & Dentists v. County of Santa Clara* (1983) 149 Cal. App. 3d 45, 51, fn. 10 [196 Cal. Rptr. 602]; *Rogers v. Detrich* (1976) 58 Cal. App. 3d 90, 95 [128 Cal. Rptr. 261] (counties have duty of support "where such support is not otherwise furnished").

15 In asserting that Medi-Cal coverage did not supplant San Diego's obligation under section 17000, the dissent incorrectly relies on *Madera Community Hospital v. County of Madera* (1984) 155 Cal. App. 3d 136 [201 Cal. Rptr. 768] (*Madera*) and *Cooke, supra*, 213 Cal. App. 3d 401. (Dis. opn. of Kennard, J., *post*, at p. 115.) In *Madera*, the court voided a county ordinance that extended county benefits under section 17000 only to persons "meeting all eligibility standards for the Medi-Cal program." (*Madera, supra*, 155 Cal. App. 3d at p. 150.) The court explained: "Because all funding for the Medi-Cal program comes from either the federal or the state government . . . , [c]ounty has denied any financial obligation whatsoever from county funds for the medical care of its indigent and poor residents." (*Ibid.*) Thus, properly understood, *Madera* held only that Medi-Cal does not relieve counties of their obligation to provide medical care to persons who are "indigent" within the meaning of section 17000 but who are ineligible for Medi-Cal. The limit of *Madera's* holding is apparent from the court's reliance on a 1979 opinion of the Attorney General discussing the scope of a county's authority under section 17000. (*Madera, supra*, 155 Cal. App. 3d at pp. 151-152.) The Attorney General explained that "[t]he county obligation [under section 17000] to provide general relief extends to those indigents who do not qualify under specialized aid programs, . . . including Medi-Cal." (62 Ops.Cal.Atty.Gen. 70, 71, fn. 1 (1979).) Moreover, the *Madera* court expressly recognized that state and federal programs "alleviate, to a greater or lesser extent, [a] [c]ounty's burden." (*Madera, supra*, 155 Cal. App. 3d at p. 151.) In *Cooke*, the court simply made a passing reference to *Madera* in dictum describing the coverage history of Medi-Cal. (*Cooke, supra*, 213 Cal. App. 3d at p. 411.) It neither analyzed the issue before us nor explained the meaning of the dictum that the dissent cites.

[**327] [***149] As we have explained, the state began providing adult MIP's with medical care under Medi-Cal in 1971. Although it initially required counties to [*93] contribute generally to the costs of Medi-Cal, it did not set forth a specific amount for coverage of MIP's. The state was primarily responsible for the costs of the program, and the counties were simply required to contribute funds to defray the state's costs. Beginning with the 1978-1979 fiscal year, the state paid all costs of the Medi-Cal program, including the cost of medical care for adult MIP's. Thus, when section 6 was adopted in November 1979, to the extent that Medi-Cal provided medical care to adult MIP's, San Diego bore no financial responsibility for these health care costs. ¹⁶

16 As we have previously explained, even before 1971 the state, through the county option, assumed much of the financial responsibility for providing medical care to adult MIP's.

The California Attorney General has expressed a similar understanding of Medi-Cal's effect on the counties' medical care responsibility under section 17000. After the 1971 extension of Medi-Cal coverage to MIP's, Fresno County sought an opinion regarding the scope of its duty to provide medical care under section 17000. It asserted that the 1971 repeal of former section 14108.5, which declared the Legislature's concern with the counties' problems in caring for indigents not eligible for Medi-Cal, evidenced a legislative intent to preempt the field of providing health services. (56 Ops.Cal.Atty.Gen., *supra*, at p. 571.) The Attorney General disagreed, concluding that the 1971 change "did not alter the duty of the counties to provide medical care to those indigents not eligible for Medi-Cal." (*Id.* at p. 569.) The Attorney General explained: "The statement of concern acknowledged the obligation of counties to continue to provide medical assistance under section 17000; the removal of the statement of concern was not accompanied by elimination of such duty on the part of the counties, *except as the addition of [MIP's] to the Medi-Cal program would remove the burden on the counties to provide medical care for such persons.*" (*Id.* at p. 571, italics added.)

[*94] Indeed, the Legislature's statement of intent in an uncodified section of the 1982 legislation excluding adult MIP's from Medi-Cal suggests that it also shared our understanding of section 17000. Section 8.3 of the 1982 Medi-Cal revisions expressly declared the Legislature's intent "[i]n eliminating [M]edically [I]ndigent [A]dults from the Medi-Cal program" (Stats. 1982, ch. 328, § 8.3, p. 1575; Stats. 1982, ch. 1594, § 86, p. 6357.) It stated in part: "It is further the intent of the Legislature to provide counties with as much flexibility as possible in organizing county health services to serve *the population being transferred.*" (Stats. 1982, ch. 328,

§ 8.3, p. 1576; Stats. 1982, ch. 1594, § 86, p. 6357, italics added.) If, as the state contends, counties had always been responsible under section 17000 for the medical care of adult MIP's, the description of adult MIP's as "the population being transferred" would have been inaccurate. By so describing adult MIP's, the Legislature indicated its understanding that counties did not have this responsibility while adult MIP's were eligible for Medi-Cal. These sources fully support our rejection of the state's argument that the 1982 legislation did not impose a mandate because, under section 17000, counties had always borne the responsibility for providing medical care to adult MIP's.

2. The State's Assumption of Full Funding Responsibility for Providing Medical Care to Adult MIP's Under Medi-Cal

To support its argument that it never relieved counties of their obligation under section [**328] [***150] 17000 to provide medical care to adult MIP's, the state characterizes as "temporary" the Legislature's assumption of full-funding responsibility for adult MIP's. According to the state, "any ongoing responsibility of the county was, at best, only temporarily, partially, alleviated (and never supplanted)." The state asserts that the Court of Appeal thus "erred by focusing on one phase in th[e] shifting pattern of arrangements" for funding indigent health care, "a focus which led to a myopic conclusion that the state alone is forever responsible for funding the health care for" adult MIP's.

A comparison of the 1978 and 1979 statutes that eliminated the counties' share of Medi-Cal costs refutes the state's claim. The Legislature expressly limited the effect of the 1978 legislation to one fiscal year, providing that the state "shall pay" each county's Medi-Cal cost share "for the period from July 1, 1978, to June 30, 1979." (Stats. 1978, ch. 292, § 33, p. 610.) The Legislative Counsel's Digest explained that this section would require the state to pay "[a]ll county costs for Medi-Cal" for "the 1978-79 fiscal year only." (Legis. Counsel's Dig., Sen. Bill No. 154, 4 Stats. 1978 (Reg. Sess.), Summary Dig., p. 71.) The digest further explained that the purpose of the bill containing this section was "the *partial* relief of local government from the *temporary* difficulties brought about by the approval of Proposition 13." [*95] (*Id.* at p. 70, italics added.) Clearly, the Legislature knew how to include words of limitation when it intended the effects of its provisions to be temporary.

By contrast, the 1979 legislation contains no such limiting language. It simply provided: "Section 14150 of the Welfare and Institutions Code is repealed." (Stats. 1979, ch. 282, § 74, p. 1043.) In setting forth the need to enact the legislation as an urgency statute, the Legisla-

ture explained: "The adoption of Article XIII A . . . may cause the curtailment or elimination of programs and services which are vital to the state's public health, safety, education, and welfare. In order that such services not be interrupted, it is necessary that this act take effect immediately." (Stats. 1979, ch. 282, § 106, p. 1059.) In describing the effect of this legislation, the Legislative Counsel first explained that, "[u]nder existing law, the counties pay a specified annual share of the cost of" Medi-Cal. (Legis. Counsel's Dig., Assem. Bill No. 8, 4 Stats. 1979 (Reg. Sess.), Summary Dig., p. 79.) Referring to the 1978 legislation, it further explained that "[f]or the 1978-79 fiscal year only, the state pays . . . [P] . . . [a]ll county costs for Medi-Cal" (*Ibid.*) The 1979 legislation, the digest continued, "provid[ed] for state assumption of all county costs of Medi-Cal." (*Ibid.*) We find nothing in the 1979 legislation or the Legislative Counsel's summary indicating a legislative intent to eliminate the counties' cost share of Medi-Cal only temporarily.

The state budget process for the 1980-1981 fiscal year confirms that the Legislature's assumption of all Medi-Cal costs was not viewed as "temporary." In the summary of his proposed budget, then Governor Brown described Assembly Bill No. 8, 1981-1982 Regular Session, generally as "a long-term local financing measure" (Governor's Budget for 1980-1981 as submitted to Legislature (1979-1980 Reg. Sess.) Summary of Local Government Fiscal Relief, p. A-30) through which "[t]he total cost of [the Medi-Cal] program was *permanently* assumed by the State" (*Id.* at p. A-32, italics added.) Similarly, in describing to the Joint Legislative Budget Committee the Medi-Cal funding item in the proposed budget, the Legislative Analyst explained: "Item 287 includes the state cost of 'buying out' the county share of Medi-Cal expenditures. Following passage of Proposition 13, [Senate Bill No.] 154 appropriated \$ 418 million to relieve counties of all fiscal responsibility for Medi-Cal program costs. Subsequently, [Assembly Bill No.] 8 was enacted, *which made permanent state assumption of county Medi-Cal costs.*" (Legis. Analyst, Rep. to Joint Legis. Budget Com., Analysis of 1980-1981 Budget Bill, Assem. Bill No. 2020 (1979-1980 Reg. Sess.) at p. 721, italics added.) Thus, the state errs in asserting that the 1979 legislation eliminated the counties' financial support of Medi-Cal "only temporarily."

[*96] [**329] [***151] 3. *State Administration of Medical Care for Adult MIP's Under Medi-Cal*

The state argues that, unlike the school program before us in *Lucia Mar. supra*, 44 Cal. 3d 830, which "had been wholly operated, administered and financed by the state," the program for providing medical care to adult MIP's "has never been operated or administered by" the state. According to the state, Medi-Cal was simply a

state "reimbursement program" for care that section 17000 required counties to provide. The state is incorrect.

One of the legislative goals of Medi-Cal was "to allow eligible persons to secure basic health care in the same manner employed by the public generally, and without discrimination or segregation based purely on their economic disability." (Stats. 1966, Second Ex. Sess. 1965, ch. 4, § 2, p. 104.) "In effect, this meant that poorer people could have access to a private practitioner of their choice, and not be relegated to a county hospital program." (*California Medical Assn. v. Brian* (1973) 30 Cal. App. 3d 637, 642 [106 Cal. Rptr. 555].) Medi-Cal "provided for reimbursement to both public and private health care providers for medical services rendered." (*Lackner. supra*, 97 Cal. App. 3d at p. 581.) It further directed that, "[i]nsofar as practical," public assistance recipients be afforded "free choice of arrangements under which they shall receive basic health care." (Stats. 1966, Second Ex. Sess. 1965, ch. 4, § 2, p. 115.) Finally, since its inception, Medi-Cal has permitted county boards of supervisors to "prescribe rules which authorize the county hospital to integrate its services with those of other hospitals into a system of community service which offers free choice of hospitals to those requiring hospital care. The intent of this section is to eliminate discrimination or segregation based on economic disability so that the county hospital and other hospitals in the community share in providing services to paying patients and to those who qualify for care in public medical care programs." (§ 14000.2.) Thus, "Medi-Cal eligibles were to be able to secure health care in the same manner employed by the general public (i.e., in the private sector or at a county facility)." (1974 Legis. Analyst's Rep., *supra*, at p. 625; see also Preliminary Rep., *supra*, at p. 17.) By allowing eligible persons "a choice of medical facilities for treatment," Medi-Cal placed county health care providers "in competition with private hospitals." (*Hall. supra*, 23 Cal. App. 3d at p. 1061.)

Moreover, administration of Medi-Cal over the years has been the responsibility of various state departments and agencies. (§ 10720-10721, 14061-14062, 14105, 14203; *Belsh. supra*, 13 Cal. 4th at p. 751; *Morris. supra*, 67 Cal. 2d at p. 741; Summary of Major Events, *supra*, at pp. 2-3, 15.) Thus, [HN16]"[i]n adopting the Medi-Cal program the state Legislature, for the most part, shifted indigent medical care from being a county responsibility to a State [*97] responsibility under the Medi-Cal program. [Citation.]" (*Bay General Community Hospital v. County of San Diego* (1984) 156 Cal. App. 3d 944, 959 [203 Cal. Rptr. 184] (*Bay General*); see also Preliminary Rep., *supra*, at p. 18 [with certain exceptions, Medi-Cal "shifted to the state" the responsibility for administration of the medical care pro-

vided to eligible persons].) We therefore reject the state's assertion that, while Medi-Cal covered adult MIP's, county facilities were the sole providers of their medical care, and counties both operated and administered the program that provided that care.

The circumstances we have discussed readily distinguish this case from *County of Los Angeles v. Commission on State Mandates* (1995) 32 Cal. App. 4th 805 [38 Cal. Rptr. 2d 304], on which the state relies. There, the court rejected the claim that Penal Code section 987.9, which required counties to provide criminal defendants with certain defense funds, imposed an unfunded state mandate. Los Angeles filed the claim after the state, which had enacted appropriations between 1977 and 1990 "to reimburse counties for their costs under" the statute, made no appropriation for the 1990-1991 fiscal year. (*County of Los Angeles v. Commission on State Mandates, supra*, at p. 812.) In rejecting the claim, [**330] [***152] the court first held that there was no state mandate because Penal Code section 987.9 merely implemented the requirements of federal law. (*County of Los Angeles v. Commission on State Mandates, supra*, at pp. 814-816.) Thus, the court stated, "[a]ssuming, arguendo, the provisions of [Penal Code] section 987.9 [constituted] a new program" under section 6, there was no state mandate. (*County of Los Angeles v. Commission on State Mandates, supra*, at p. 818.) Here, of course, it is unquestionably the state that has required San Diego to provide medical care to indigent persons.

In dictum, the court also rejected the argument that, under *Lucia Mar, supra*, 44 Cal. 3d 830, the state's "decision not to reimburse the counties for their programs under [Penal Code] section 987.9" imposed a new program by shifting financial responsibility for the program to counties. (*County of Los Angeles v. Commission on State Mandates, supra*, 32 Cal. App. 4th at p. 817.) The court explained: "In contrast [to *Lucia Mar*], the program here has never been operated or administered by the State of California. The counties have always borne legal and financial responsibility for implementing the procedures under [Penal Code] section 987.9. The state merely reimbursed counties for specific expenses incurred by the counties in their operation of a program for which they had a primary legal and financial responsibility." (*Ibid.*) Here, as we have explained, between 1971 and 1983, the state administered and bore financial responsibility for the medical care that adult MIP's received under Medi-Cal. The Medi-Cal program was not simply a [*98] method of reimbursement for county costs. Thus, the state's reliance on this dictum is misplaced. ¹⁷

17 Because *County of Los Angeles v. Commission on State Mandates, supra*, 32 Cal. App. 4th 805, is distinguishable, we need not (and do not)

express an opinion regarding the court's analysis in that decision or its conclusions.

In summary, our discussion demonstrates the Legislature excluded adult MIP's from Medi-Cal *knowing* and *intending* that the 1982 legislation would trigger the counties' responsibility to provide medical care as providers of last resort under section 17000. Thus, through the 1982 legislation, the Legislature attempted to do precisely that which the voters enacted section 6 to prevent: "transfer[] to [counties] the fiscal responsibility for providing services which the state believed should be extended to the public." ¹⁸ (*County of Los Angeles, supra*, 43 Cal. 3d at p. 56; see also *City of Sacramento v. State of California, supra*, 50 Cal. 3d at p. 68 [A "central purpose" of section 6 was "to prevent the state's transfer of the *cost of government* from *itself* to the local level".]) Accordingly, we view the 1982 legislation as having mandated a "new program" on counties by "compelling them to accept financial responsibility in whole or in part for a program," i.e., medical care for adult MIP's, "which was funded entirely by the state before the advent of article XIII B." ¹⁹ (*Lucia Mar, supra*, 44 Cal. 3d at p. 836.)

18 The state properly does not contend that the provision of medical care to adult MIP's is not a "program" within the meaning of section 6. (See *County of Los Angeles, supra*, 43 Cal. 3d at p. 56 [section 6 applies to "programs that carry out the governmental function of providing services to the public".])

19 Alternatively, the 1982 legislation can be viewed as having mandated an increase in the services that counties were providing through existing section 17000 programs, by adding adult MIP's to the indigent population that counties already had to serve under that section. (See *County of Los Angeles, supra*, 43 Cal. 3d at p. 56 ["subvention requirement for increased or higher level of service is directed to state mandated increases in the services provided by local agencies in existing 'programs' ".])

A contrary conclusion would defeat the purpose of section 6. Under the state's interpretation of that section, because section 17000 was enacted before 1975, the Legislature could eliminate the *entire* Medi-Cal program and shift to the counties under section 17000 complete financial responsibility for medical care that the state has been providing [**331] [***153] since 1966. However, the taxing and spending limitations imposed by articles XIII A and XIII B would greatly limit the ability of counties to meet their expanded section 17000 obligation. "County taxpayers would be forced to accept new taxes or see the county forced to cut existing pro-

grams further" (*Kinlaw, supra*, 54 Cal. 3d at p. 351 (dis. opn. of Broussard, J.)) As we have previously explained, the voters, recognizing that articles XIII A and XIII B left counties "ill equipped" to assume such increased financial responsibilities, adopted section 6 precisely to avoid this result. (*County of Los Angeles, [*99] supra*, 43 Cal. 3d at p. 61.) Thus, it was the voters who decreed that we must, as the state puts it, "focus[] on one phase in th[e] shifting pattern of [financial] arrangements" between the state and the counties. Under section 6, the state simply cannot "compel[] [counties] to accept financial responsibility in whole or in part for a program which was funded entirely by the state before the advent of article XIII B" ²⁰ (*Lucia Mar. supra*, 44 Cal. 3d at p. 836.)

20 In reaching a contrary conclusion, the dissent ignores the electorate's purpose in adopting section 6. The dissent also mischaracterizes our decision. We do not hold that "whenever there is a change in a state program that has the effect of increasing a county's financial burden under section 17000 there must be reimbursement by the state." (Dis. opn. of Kennard, J., *post*, at p. 116.) Rather, we hold that [HN17]section 6 prohibits the state from shifting to counties the costs of state programs for which the state assumed complete financial responsibility before adoption of section 6. Whether the state may discontinue assistance that it initiated after section 6's adoption is a question that is not before us.

B. County Discretion to Set Eligibility and Service Standards

(5a) The state next argues that, because San Diego had statutory discretion to set eligibility and service standards, there was no reimbursable mandate. Citing section 16704, the state asserts that the 1982 legislation required San Diego to spend MISA funds "only on those whom the county deems eligible under § 17000," "gave the county exclusive authority to determine the level and type of benefits it would provide," and required counties "to include [adult MIP's] in their § 17000 eligibility only to the extent state funds were available and then only for 3 years." (Original emphasis.) ²¹ According to the state, under section 17001, "[t]he counties [*100] have complete discretion over the determination of eligibility, scope of benefits and how the services will be provided."

21 [HN18]As amended in 1982, section 16704, subdivision (c)(1), provided in relevant part: "The [county board of supervisors] shall assure that it will expend [MISA] funds only for the health services specified in Sections 14132 and 14021

provided to persons certified as eligible for such services pursuant to Section 17000 and shall assure that it will incur no less in net costs of county funds for county health services in any fiscal year than the amount required to obtain the maximum allocation under Section 16702." (Stats. 1982, ch. 1594, § 70, p. 6346.) [HN19]Section 16704, subdivision (c)(3), provided in relevant part: "Any person whose income and resources meet the income and resource criteria for certification for services pursuant to Section 14005.7 other than for the aged, blind, or disabled, shall not be excluded from eligibility for services to the extent that state funds are provided. Such persons may be held financially liable for these services based upon the person's ability to pay. A county may not establish a payment requirement which would deny medically necessary services. This section shall not be construed to mandate that a county provide any specific level or type of health care service . . . [HN20]. The provisions of this paragraph shall become inoperative if a court ruling is issued which decrees that the provisions of this paragraph mandates [*sic*] that additional state funds be provided and which requires that additional state reimbursement be made to counties for costs incurred under this paragraph. This paragraph shall be operative only until June 30, 1983, unless a later enacted statute extends or deletes that date." (Stats. 1982, ch. 1594, § 70, pp. 6346-6347.)

22 [HN21]Section 17001 provides: "The board of supervisors of each county, or the agency authorized by county charter, shall adopt standards of aid and care for the indigent and dependent poor of the county or city and county."

The state exaggerates the extent of a county's discretion under section 17001. It is true "case law . . . has recognized that [HN22]section 17001 confers broad discretion upon the counties in performing their statutory duty to provide general assistance benefits to needy residents. [Citations.]" (*Robbins v. [**332] [***154] Superior Court* (1985) 38 Cal. 3d 199, 211 [211 Cal. Rptr. 398, 695 P.2d 695] (*Robbins*)). However, there are "clear-cut limits" to this discretion. (*Ibid.*) (6) The counties may exercise their discretion "only within fixed boundaries. In administering General Assistance relief the county acts as an agent of the state. [Citation.] [HN23]When a statute confers upon a state agency the authority to adopt regulations to implement, interpret, make specific or otherwise carry out its provisions, the agency's regulations must be consistent, not in conflict with the statute, and reasonably necessary to effectuate its purpose. (Gov. Code, § 11374)." (*Mooney, supra*, 4

Cal. 3d at p. 679.) Thus, the counties' eligibility and service standards must "carry out" the objectives of section 17000. (*Mooney, supra*, 4 Cal. 3d at p. 679; see also *Poverty Resistance Center v. Hart* (1989) 213 Cal. App. 3d 295, 304-305 [261 Cal. Rptr. 545]; § 11000 ["provisions of law relating to a public assistance program shall be fairly and equitably construed to effect the stated objects and purposes of the program"].) County standards that fail to carry out section 17000's objectives "are void and no protestations that they are merely an exercise of administrative discretion can sanctify them." (*Morris, supra*, 67 Cal. 2d at p. 737.) [HN24] Courts, which have "final responsibility for the interpretation of the law," must strike them down. (*Id.* at p. 748.) Indeed, despite the counties' statutory discretion, "courts have consistently invalidated . . . county welfare regulations that fail to meet statutory requirements. [Citations.]" (*Robbins, supra*, 38 Cal. 3d at p. 212.)

1. Eligibility

(5b) Regarding eligibility, we conclude that counties must provide medical care to all adult MIP's. As we emphasized in *Mooney*, [HN25] section 17000 requires counties to relieve and support "all indigent persons lawfully resident therein, "when such persons are not supported and relieved by their relatives" or by some other means." (*Mooney, supra*, 4 Cal. 3d at p. 678; see also *Bernhardt v. Board of Supervisors* (1976) 58 Cal. App. 3d 806, 811 [130 Cal. Rptr. 189].) Moreover, section 10000 declares that the statutory "purpose" of division 9 of the Welfare and Institutions Code, which includes section 17000, "is to provide for protection, care, and assistance to the [*101] people of the state in need thereof, and to promote the welfare and happiness of all of the people of the state by providing appropriate aid and services to all of its needy and distressed." (Italics added.) Thus, [HN26] counties have no discretion to refuse to provide medical care to "indigent persons" within the meaning of section 17000 who do not receive it from other sources.²³ (See *Bell v. Board of Supervisors* (1994) 23 Cal. App. 4th 1695, 1706 [28 Cal. Rptr. 2d 919] [eligibility standards may not "defeat the purpose of the statutory scheme by depriving qualified recipients of mandated support"]; *Washington v. Board of Supervisors* (1993) 18 Cal. App. 4th 981, 985 [22 Cal. Rptr. 2d 852] [courts have repeatedly "voided county ordinances which have attempted to redefine eligibility standards set by state statute"].)

23 We disapprove *Bay General, supra*, 156 Cal. App. 3d at pages 959-960, insofar as it (1) states that a county's responsibility under section 17000 extends only to indigents as defined by the county's board of supervisors, and (2) suggests that a county may refuse to provide medical care

to persons who are "indigent" within the meaning of section 17000 but do not qualify for Medi-Cal.

Although section 17000 does not define the term "indigent persons," the 1982 legislation made clear that all adult MIP's fall within this category for purposes of defining a county's obligation to provide medical care.²⁴ As part of its exclusion of adult MIP's, that legislation required counties to participate in the MISA program. (Stats. 1982, ch. 1594, § 68, 70, 86, pp. 6343-6347, 6357.) Regarding that program, the 1982 legislation amended section 16704, subdivision (c)(1), to require [**333] [***155] that a county board of supervisors, in applying for MISA funds, "assure that it will expend such funds only for [specified] health services . . . provided to persons certified as eligible for such services pursuant to Section 17000 . . ." (Stats. 1982, ch. 1594, § 70, p. 6346.) At the same time, the 1982 legislation amended section 16704, subdivision (c)(3), to provide that "[a]ny person whose income and resources meet the income and resource criteria for certification for services pursuant to Section 14005.7 other than for the aged, blind, or disabled, shall not be excluded from eligibility for services to the extent that state funds are provided." (Stats. 1982, ch. 1594, § 70, p. 6346.) As the state correctly explains, under this provision, "counties had to include [Medically Indigent Adults] in their [section 17000 eligibility] standards. By requiring counties to make all adult MIP's eligible for services paid for with MISA funds, while at the same time requiring counties to promise to spend such funds *only* on those certified as eligible under section 17000, the Legislature established that all adult MIP's are "indigent persons" for purposes of the counties' duty to provide medical care under section 17000. Otherwise, the counties could not comply with their promise.

24 Our conclusion is limited to this aspect of a county's duty under section 17000. We express no opinion regarding the scope of a county's duty to provide other forms of relief and support under section 17000.

[*102] Our conclusion is not affected by language in section 16704, subdivision (c)(3), making it "operative only until June 30, 1985, unless a later enacted statute extends or deletes that date."²⁵ As we have explained, the subdivision established that [HN27] adult MIP's are "indigent persons" within the meaning of section 17000 for medical care purposes. As we have also explained, section 17000 requires counties to relieve and support all "indigent persons." Thus, even if the state is correct in asserting that section 16704, subdivision (c)(3), is now inoperative and no longer prohibits counties from excluding adult MIP's from eligibility for medical services, section 17000 has that effect.²⁶

25 The 1982 legislation made the subdivision operative until June 30, 1983. (Stats. 1982, ch. 1594, § 70, p. 6347.) In 1983, the Legislature repealed and reenacted section 16704, and extended the operative date of subdivision (c)(3) to June 30, 1985. (Stats. 1983, ch. 323, § 131.1, 131.2, pp. 1079-1080.)

26 Given our analysis, we express no opinion about the statement in Cooke, supra, 213 Cal. App. 3d at page 412, footnote 9, that the "life" of section 16704, subdivision (c)(3), "was implicitly extended" by the fact that the "paragraph remains in the statute despite three subsequent amendments to the statute"

Additionally, the coverage history of Medi-Cal demonstrates that the Legislature has always viewed all adult MIP's as "indigent persons" within the meaning of section 17000 for medical care purposes. As we have previously explained, when the Legislature created the original Medi-Cal program, which covered only categorically linked persons, it "declar[ed] its concern with the problems which [would] be facing the counties with respect to the medical care of indigent persons who [were] not covered" by Medi-Cal, "whose medical care [had to] be financed entirely by the counties in a time of heavily increasing medical costs." (Stats. 1966, Second Ex. Sess. 1965, ch. 4, § 2, p. 116 [enacting former § 14108.5].) Moreover, to ensure that the counties' Medi-Cal cost share would not leave counties "with insufficient funds to provide hospital care for those persons not eligible for Medi-Cal," the Legislature also created the county option. (Hall, supra, 23 Cal. App. 3d at p. 1061.) Through the county option, "the state agreed to assume all county health care costs . . . in excess of county costs incurred during the 1964-1965 fiscal year, adjusted for population increases." (Lackner, supra, 97 Cal. App. 3d at p. 586.) Thus, the Legislature expressly recognized that the categorically linked persons initially eligible for Medi-Cal did not constitute all "indigent persons" entitled to medical care under section 17000, and required the state to share in the financial responsibility for providing that care.

In adding adult MIP's to Medi-Cal in 1971, the Legislature extended Medi-Cal coverage to noncategorically linked persons "who [were] financially unable to pay for their medical care." (Legis. Counsel's Dig., Assem. Bill No. 949, 3 Stats. 1971 (Reg. Sess.) Summary Dig., p. 83.) This [*103] description was consistent with prior judicial decisions that, for purposes of a county's duty to provide "indigent persons" with hospitalization, [***156] had [***334] defined the term to include a person "who has insufficient means to pay for his maintenance in a private hospital after providing for those

who legally claim his support." (Goodall v. Brite (1936) 11 Cal. App. 2d 540, 550 [54 P.2d 510].)

Moreover, the fate of amendments to section 17000 proposed at the same time suggests that, in the Legislature's view, the category of "indigent persons" entitled to medical care under section 17000 extended even *beyond* those eligible for Medi-Cal as MIP's. The June 17, 1971, version of Assembly Bill No. 949 amended section 17000 by adding the following: "however, the health needs of such persons shall be met under [Medi-Cal]." (Assem. Bill No. 949 (1971 Reg. Sess.) § 53.3, as amended June 17, 1971.) The Assembly deleted this amendment on July 20, 1971. (Assem. Bill No. 949 (1971 Reg. Sess.) as amended July 20, 1971, p. 37.) Regarding this change, the Assembly Committee on Health explained: "The proposed amendment to Section 17000, . . . which would have removed the counties' responsibilities as health care provider of last resort, is deleted. This change was originally proposed to clarify the guarantee to hold counties harmless from additional Medi-Cal costs. It is deleted since it cannot remove the fact that counties are, by definition, a 'last resort' for any person, with or without the means to pay, who does not qualify for federal or state aid." (Assem. Com. on Health, Analysis of Assem. Bill No. 949 (1971 Reg. Sess.) as amended July 20, 1971 (July 21, 1971), p. 4.)

The Legislature's failure to amend section 17000 in 1971 figured prominently in the Attorney General's interpretation of that section only two years later. In a 1973 published opinion, the Attorney General stated that the 1971 inclusion of MIP's in Medi-Cal "did not alter the duty of the counties to provide medical care to those indigents not eligible for Medi-Cal." (56 Ops.Cal.Atty.Gen., *supra*, at p. 569.) He based this conclusion on the 1971 legislation, relevant legislative history, and "the history of state medical care programs." (*Id.* at p. 570.) The opinion concluded: "The definition of medically indigent in [the chapter establishing Medi-Cal] is applicable only to that chapter and *does not include all those enumerated in section 17000*. If the former medical care program, by providing care only for a specific group, public assistance recipients, did not affect the responsibility of the counties to provide such service under section 17000, we believe the most recent expansion of the medical assistance program does not affect, *absent an express legislative intent to the contrary*, the duty of the counties under section 17000 to continue to provide services to those eligible under section 17000 but not under [Medi-Cal]." (*Ibid.*, italics added.) [HN28]The Attorney General's opinion, although not binding, is entitled to considerable weight. [*104] (Freedom Newspapers, Inc. v. Orange County Employees Retirement System (1993) 6 Cal. 4th 821, 829 [25 Cal. Rptr. 2d 148, 863 P.2d 218].) Absent controlling

authority, it is persuasive because we presume that the Legislature was cognizant of the Attorney General's construction of section 17000 and would have taken corrective action if it disagreed with that construction. (*California Assn. of Psychology Providers v. Rank* (1990) 51 Cal. 3d 1, 17 [270 Cal. Rptr. 796, 793 P.2d 2].)

In this case, of course, we need not (and do not) decide whether San Diego's obligation under section 17000 to provide medical care extended beyond adult MIP's. Our discussion establishes, however, that the obligation extended at least that far. The Legislature has made it clear that all adult MIP's are "indigent persons" under section 17000 for purposes of San Diego's obligation to provide medical care. Therefore, the state errs in arguing that San Diego had discretion to refuse to provide medical care to this population. ²⁷

27 Although asserting that nothing required San Diego to provide "all" adult MIP's with medical care, the state never precisely identifies which adult MIP's were legally entitled to medical care and which ones were not. Nor does the state ever directly assert that some adult MIP's were not "indigent persons" under section 17000. On the contrary, despite its argument, the state seems to suggest that San Diego's medical care obligation under section 17000 extended even beyond adult MIP's. It asserts: "At no time prior to or following 1983 did Medi-Cal ever provide medical services to, or pay for medical services provided to, all persons who could not afford such services and therefore might be deemed 'medically indigent.' . . . For some period prior to 1983, Medi-Cal paid for services for some indigent adults under its 'medically indigent adults' category. . . . [A]t no time did the state ever assume financial responsibility for all adults who are too indigent to afford health care." (Original emphasis.)

[**335] [***157] 2. *Service Standards*

(7) A number of statutes are relevant to the state's argument that San Diego had discretion in setting service standards. Section 17000 requires in general terms that counties "relieve and support" indigent persons. Section 10000, which sets forth the purpose of the division containing section 17000, declares the "legislative intent that aid shall be administered and services provided promptly and humanely, with due regard for the preservation of family life," so "as to encourage self-respect, self-reliance, and the desire to be a good citizen, useful to society." (§ 10000.) "[HN29]Section 17000, as authoritatively interpreted, mandates that medical care be provided to indigents and section 10000 requires that such care be provided promptly and humanely. The duty is

mandated by statute. There is no discretion concerning whether to provide such care . . ." (*Tailfeather v. Board of Supervisors* (1996) 48 Cal. App. 4th 1223, 1245 [56 Cal. Rptr. 2d 255] (*Tailfeather*).)

Courts construing section 17000 have held that [HN30]it "imposes a mandatory duty upon all counties to provide 'medically necessary care,' not just [*105] emergency care. [Citation.]" (*County of Alameda v. State Bd. of Control* (1993) 14 Cal. App. 4th 1096, 1108 [18 Cal. Rptr. 2d 487]; see also *Gardner v. County of Los Angeles* (1995) 34 Cal. App. 4th 200, 216 [40 Cal. Rptr. 2d 271]; § 16704.1 [prohibiting a county from requiring payment of a fee or charge "before [it] renders medically necessary services to . . . persons entitled to services under Section 17000"].) It further "ha[s] been interpreted . . . to impose a minimum standard of care below which the provision of medical services may not fall." (*Tailfeather, supra*, 48 Cal. App. 4th at p. 1239.) In *Tailfeather*, the court stated that "section 17000 requires provision of medical services to the poor at a level which does not lead to unnecessary suffering or endanger life and health . . ." (*id.* at p. 1240.) In reaching this conclusion, it cited *Cooke, supra*, 213 Cal. App. 3d at page 404, which held that section 17000 requires counties to provide "dental care sufficient to remedy substantial pain and infection." (See also § 14059.5 [defining "[a] service [as] 'medically necessary' . . . when it is reasonable and necessary to protect life, to prevent significant illness or significant disability, or to alleviate severe pain"].)

During the years for which San Diego sought reimbursement, Health and Safety Code section 1442.5, former subdivision (c) (former subdivision (c)), also spoke to the level of services that counties had to provide under Welfare and Institutions Code section 17000. ²⁸ As enacted in September 1974, [HN31]former subdivision (c) provided that, whether a county's duty to provide care to all indigent people "is fulfilled directly by the county or through alternative means, the availability of services, and the quality of the treatment received by people who cannot afford to pay for their health care shall be the same as that available to nonindigent people receiving health care services in private facilities in that county." (Stats. 1974, ch. 810, § 3, p. 1765.) The express "purpose and intent" of the act that contained former subdivision (c) was "to insure that the duty of counties to provide health care to indigents [was] properly and continuously fulfilled." (Stats. 1974, ch. 810, § 1, p. 1764.) Thus, until its repeal in September 1992, ²⁹ former subdivision (c) "[r]equire[d] that the availability and quality of services provided to indigents directly by the county or alternatively be the same as that available to nonindigents in private facilities in that county." (Legis. Counsel's Dig., Sen. Bill No. 2369, 2 Stats. 1974 (Reg. Sess.) Summary Dig., p. 130; see also *Gardner v.* [**336] [***158]

County of Los Angeles, supra, 34 Cal. App. 4th at p. 216; [*106] *Board of Supervisors v. Superior Court, supra*, 207 Cal. App. 3d at p. 564 [former subdivision (c) required that care provided "be comparable to that enjoyed by the nonindigent"].) ³⁰ "For the 1990-91 fiscal year," the Legislature qualified this obligation by providing: "nothing in [former] subdivision (c) . . . shall require any county to exceed the standard of care provided by the state Medi-Cal program. Notwithstanding any other provision of law, counties shall not be required to increase eligibility or expand the scope of services in the 1990-91 fiscal year for their programs." (Stats. 1990, ch. 457, § 23, p. 2013.)

28 The state argues that former subdivision (c) is irrelevant to our determination because, like section 17000, it "predate[d] 1975." Our previous analysis rejecting this argument in connection with section 17000 applies here as well.

29 Statutes 1992, chapter 719, section 2, page 2882, repealed former subdivision (c) and enacted a new subdivision (c) in its place. This urgency measure was approved by the Governor on September 14, 1992, and filed with the Secretary of State on September 15, 1992.

30 [HN32] We disapprove *Cooke, supra*, 213 Cal. App. 3d at page 410, to the extent it held that Health and Safety Code section 1442.5, former subdivision (c), was merely "a limitation on a county's ability to close facilities or reduce services provided in those facilities," and was irrelevant absent a claim that a "county facility was closed [or] that any services in [the] county . . . were reduced." Although former subdivision (c) was contained in a section that dealt in part with closures and service reductions, nothing limited its reach to that context.

Although we have identified statutes relevant to service standards, we need not here define the precise contours of San Diego's statutory health care obligation. The state argues generally that San Diego had discretion regarding the services it provided. However, the state fails to identify either the specific services that San Diego provided under its CMS program or which of those services, if any, were not required under the governing statutes. Nor does the state argue that San Diego could have eliminated all services and complied with statutory requirements. Accordingly, we reject the state's argument that, because San Diego had some discretion in providing services, the 1982 legislation did not impose a reimbursable mandate. ³¹

31 During further proceedings before the Commission to determine the amount of reimbursement due San Diego, the state may argue

that particular services available under San Diego's CMS program exceeded statutory requirements.

VI. MINIMUM REQUIRED EXPENDITURE

(8) The Court of Appeal held that, under the governing statutes, the Commission must initially determine the precise amount of any reimbursement due San Diego. It therefore reversed the damages portion of the trial court's judgment and remanded the matter to the Commission for this determination. Nevertheless, the Court of Appeal affirmed the trial court's finding that the Legislature required San Diego to spend at least \$ 41 million on its CMS program for fiscal years 1989-1990 and 1990-1991. In affirming this finding, the Court of Appeal relied primarily on section 16990, subdivision (a), as it read at all relevant times. The state contends this provision did not mandate that San Diego spend any minimum amount on the CMS program. It further asserts that the Court of Appeal's "ruling in effect sets a damages baseline, in contradiction to [its] ostensible reversal of the damage award."

[*107] Former section 16990, subdivision (a), set forth the financial maintenance-of-effort requirement for counties that received funding under the California Healthcare for the Indigent Program (CHIP). The Legislature enacted CHIP in 1989 to implement Proposition 99, the Tobacco Tax and Health Protection Act of 1988 (codified at Rev. & Tax. Code, § 30121 et seq.). Proposition 99, which the voters approved on November 8, 1988, increased the tax on tobacco products and allocated the resulting revenue in part to medical and hospital care for certain persons who could not afford those services. (*Kennedy Wholesale, Inc. v. State Bd. of Equalization* (1991) 53 Cal. 3d 245, 248, 254 [279 Cal. Rptr. 325, 806 P.2d 1360].) During the 1989-1990 and 1990-1991 fiscal years, [HN33] former section 16990, subdivision (a), required counties receiving CHIP funds, "at a minimum," to "maintain a level of financial support of county funds for health services at least equal to its county match and any overmatch of county funds in the 1988-89 fiscal year," adjusted annually as provided. (Stats. 1989, ch. 1331, § 9, p. 5427.) Applying this provision, the Court of Appeal affirmed the trial court's finding that the state had required San Diego to spend in fiscal years 1989-1990 and 1990-1991 [***337] [***159] at least \$ 41 million on the CMS program.

We agree with the state that this finding is erroneous. Unlike participation in MISA, which was mandatory, participation in CHIP was voluntary. In establishing CHIP, the Legislature appropriated funds "for allocation to counties *participating* in" the program. (Stats. 1989, ch. 1331, § 10, p. 5436, italics added.) Section 16980, subdivision (a), directed the State Department of Health

Services to make CHIP payments "upon application of the county assuring that it will comply with" applicable provisions. Among the governing provisions were former sections 16990, subdivision (a), and 16995, subdivision (a), which provided: "To be eligible for receipt of funds under this chapter, a county may not impose more stringent eligibility standards for the receipt of benefits under Section 17000 or reduce the scope of benefits compared to those which were in effect on November 8, 1988." (Stats. 1989, ch. 1331, § 9, p. 5431.)

However, San Diego has cited no provision, and we have found none, that *required* eligible counties to participate in the program or apply for CHIP funds. Through Revenue and Taxation Code section 30125, which was part of Proposition 99, the electorate directed that funds raised through Proposition 99 "shall be used to supplement existing levels of service and not to fund existing levels of service." (See also Stats. 1989, ch. 1331, § 1, 19, pp. 5382, 5438.) Counties not wanting to supplement their existing levels of service, and which therefore did not want CHIP funds, were not bound by the program's requirements. Those counties, including San Diego, that chose [*108] to seek CHIP funds did so voluntarily.³² Thus, the Court of Appeal erred in concluding that former section 16990, subdivision (a), mandated a minimum funding requirement for San Diego's CMS program.

32 Consistent with the electorate's direction, in its application for CHIP funds, San Diego assured the state that it would "[e]xpend [CHIP] funds only to supplement existing levels of services provided and not to fund existing levels of service . . ." Because San Diego's initial decision to seek CHIP funds was voluntary, the evidence it cites of state threats to withhold CHIP funds if it eliminated the CMS program is irrelevant.

Nor did former section 16991, subdivision (a)(5), which the trial court and Court of Appeal also cited, establish a minimum financial obligation for San Diego's CMS program. Former section 16991 generally "establish[ed] a procedure for the allocation of funds to each county receiving funds from the [MISA] . . . for the provision of services to persons meeting certain Medi-Cal eligibility requirements, based on the percentage of newly legalized individuals under the federal Immigration Reform and Control Act (IRCA)." (Legis. Counsel's Dig., Assem. Bill No. 75, 4 Stats. 1989 (Reg. Sess.) Summary Dig., p. 548.) Former section 16991, subdivision (a)(5), required the state, for fiscal years 1989-1990 and 1990-1991, to reimburse a county if its combined allocation from various sources was less than the funding it received under section 16703 for fiscal year 1988-1989.³³ Nothing about this state reimbursement

requirement imposed on San Diego a minimum funding requirement for its CMS program.

33 [HN34]Former section 16991, subdivision (a)(5), provided in full: "If the sum of funding that a county received from its allocation pursuant to Section 16703, the amount of reimbursement it received from federal State Legalization Impact Assistance Grant [(SLIAG)] funding for indigent care, and its share of funding provided in this section is less than the amount of funding the county received pursuant to Section 16703 in fiscal year 1988-89 the state shall reimburse the county for the amount of the difference. For the 1990-91 fiscal year, if the sum of funding received from its allocation, pursuant to Section 16703 and the amount of reimbursement it received from [SLIAG] Funding for indigent care that year is less than the amount of funding the county received pursuant to Section 16703 in the 1988-89 fiscal year, the state shall reimburse the amount of the difference. If the department determines that the county has not made reasonable efforts to document and claim federal SLIAG funding for indigent care, the department shall deny the reimbursement." (Stats. 1989, ch. 1331, § 9, p. 5428.)

Thus, we must reverse the judgment insofar as it finds that former sections 16990, subdivision (a), and 16991, subdivision (a)(5), established a \$ 41 million spending floor for San Diego's CMS program. Instead, the various statutes that we have previously discussed (e.g., § 10000, 17000, and Health & [**338] [***160] Saf. Code, § 1442.5, former subd. (c)), the cases construing those statutes, and any other relevant authorities must guide the Commission's determination of the level of services that San Diego had to provide and any reimbursement to which it is entitled.

[*109] VII. REMAINING ISSUES

(9) The state raises a number of additional issues. It first complains that a mandamus proceeding under Code of Civil Procedure section 1085 was an improper vehicle for challenging the Commission's position. It asserts that, under Government Code section 17559, review by administrative mandamus under Code of Civil Procedure section 1094.5 is the exclusive method for challenging a Commission decision denying a mandate claim. The Court of Appeal rejected this argument, reasoning that the trial court had jurisdiction under Code of Civil Procedure section 1085 because, under section 6, the state has a ministerial duty of reimbursement when it imposes a mandate.

Like the Court of Appeal, but for different reasons, we reject the state's argument. [HN35]"[M]andamus pursuant to [Code of Civil Procedure] section 1094.5, commonly denominated 'administrative' mandamus, is mandamus still. It is not possessed of 'a separate and distinctive legal personality. It is not a remedy removed from the general law of mandamus or exempted from the latter's established principles, requirements and limitations.' [Citations.] The full panoply of rules applicable to 'ordinary' mandamus applies to 'administrative' mandamus proceedings, except where modified by statute. [Citations.]" (*Woods v. Superior Court* (1981) 28 Cal. 3d 668, 673-674 [170 Cal. Rptr. 484, 620 P.2d 1032].) Where the entitlement to mandamus relief is adequately alleged, a trial court may treat a proceeding brought under Code of Civil Procedure section 1085 as one brought under Code of Civil Procedure section 1094.5 and should deny a demurrer asserting that the wrong mandamus statute has been invoked. (*Woods, supra*, 28 Cal. 3d at pp. 673-674; *Anton v. San Antonio Community Hosp.* (1977) 19 Cal. 3d 802, 813-814 [140 Cal. Rptr. 442, 567 P.2d 1162].) Thus, even if San Diego identified the wrong mandamus statute, the error did not affect the trial court's ability to grant mandamus relief.

"In any event, distinctions between traditional and administrative mandate have little impact on this appeal . . ." (*McIntosh v. Aubry* (1993) 14 Cal. App. 4th 1576, 1584 [18 Cal. Rptr. 2d 680].) [HN36]The determination whether the statutes here at issue established a mandate under section 6 is a question of law. (*County of Fresno v. Lehman, supra*, 229 Cal. App. 3d at p. 347.) In reaching our conclusion, we have relied on no facts that are in dispute. Where, as here, a "purely legal question" is at issue, courts "exercise independent judgment . . . , no matter whether the issue arises by traditional or administrative mandate. [Citations.]" (*McIntosh, supra*, 14 Cal. App. 4th at p. 1584.) As the state concedes, even under Code of Civil Procedure section 1094.5, a judgment must "be reversed if based on erroneous conclusions of law." Thus, any differences between the two mandamus statutes have had no impact on our analysis.

[*110] The state next contends that the trial court prejudicially erred in denying the "peremptory disqualification" motion that the Director of the Department of Finance filed under Code of Civil Procedure section 170.6. We will not review this ruling, however, because [HN37]it is reviewable only by writ of mandate under Code of Civil Procedure section 170.3, subdivision (d). (*People v. Webb* (1993) 6 Cal. 4th 494, 522-523 [24 Cal. Rptr. 2d 779, 862 P.2d 779]; *People v. Hull* (1991) 1 Cal. 4th 266 [2 Cal. Rptr. 2d 526, 820 P.2d 1036].)

Nor can we address the state's argument that the trial court erred in granting a preliminary injunction. The May 1991 order granting the [HN38]preliminary injunction

was "immediately and separately appealable" under Code of Civil Procedure section 904.1, subdivision (a)(6). (*Art Movers, Inc. v. Ni West, Inc.* (1992) 3 Cal. App. 4th 640, 645 [4 Cal. Rptr. 2d 689].) Thus, the state's attempt to challenge the order in an appeal filed after entry of final judgment in December 1992 [**339] [***161] was untimely. ³⁴ (See *Chico Feminist Women's Health Center v. Scully* (1989) 208 Cal. App. 3d 230, 251 [256 Cal. Rptr. 194].) Moreover, the state's attempt to appeal the order granting the preliminary injunction is moot because of (1) the trial court's July 1 order granting a peremptory writ of mandate, which expressly "supersede[d] and replace[d]" the preliminary injunction order and (2) entry of final judgment. (*Sheward v. Citizens' Water Co.* (1891) 90 Cal. 635, 638-639 [27 P. 439]; *People v. Morse* (1993) 21 Cal. App. 4th 259, 264-265 [25 Cal. Rptr. 2d 816]; *Art Movers, Inc., supra*, 3 Cal. App. 4th at p. 647.)

34 Despite its argument here, when it initially appealed, the state apparently recognized that it could no longer challenge the May 1991 order. In its March 1993 notice of appeal, it appealed only from the judgment entered December 18, 1992, and did not mention the May 1991 order.

Finally, the state requests that we reverse the trial court's reservation of jurisdiction regarding an award of attorney fees. This request is premature. In the judgment, the trial court "retain[ed] jurisdiction to determine any right to and amount of attorneys' fees . . ." This provision does not declare that San Diego in fact has a right to an award of attorney fees. Nor has San Diego asserted such a right. As San Diego states, at this point, "[t]here is nothing for this Court to review." We will not give an advisory ruling on this issue.

VIII. DISPOSITION

The judgment of the Court of Appeal is affirmed insofar as it holds that the exclusion of adult MIP's from Medi-Cal imposed a mandate on San Diego within the meaning of section 6. The judgment is reversed insofar as it holds that the state required San Diego to spend at least \$ 41 million on the CMS program in fiscal years 1989-1990 and 1990-1991. The matter is [*111] remanded to the Commission to determine whether, and by what amount, the statutory standards of care (e.g., *Health & Saf. Code, § 1442.5*, former subd. (c); *Welf. & Inst. Code, § 10000, 17000*) forced San Diego to incur costs in excess of the funds provided by the state, and to determine the statutory remedies to which San Diego is entitled.

George, C. J., Mosk, J., Baxter, J., Anderson, J., * and Aldrich, J., ** concurred.

* Presiding Justice, Court of Appeal, First Appellate District, Division Four, assigned by the Chief Justice pursuant to article VI, section 6 of the California Constitution.

** Associate Justice, Court of Appeal, Second Appellate District, Division Three, assigned by the Chief Justice pursuant to article VI, section 6 of the California Constitution.

DISSENT BY: KENNARD

DISSENT

KENNARD, J.

I dissent.

As part of an initiative measure placing spending limits on state and local government, the voters in 1979 added article XIII B to the California Constitution. Section 6 of this article provides that when the state "mandates a new program or higher level of service on any local government," the state must reimburse the local government for the cost of such program or service. Under subdivision (c) of this constitutional provision, however, the state "may, but need not," provide such reimbursement *if the state mandate was enacted before January 1, 1975*. (Cal. Const., art. XIII B, § 6, subd. (c).) Subdivision (c) is the critical provision here.

Because the counties have for many decades been under a state mandate to provide for the poor, a mandate that existed before the voters added article XIII B to the state Constitution, the express language of subdivision (c) of section 6 of article XIII B exempts the state from any *legal obligation* to reimburse the counties for the cost of medical care to the needy. The fact that for a certain period after 1975 the state directly paid under the state Medi-Cal program for these costs did not lead to the creation of a new mandate once the state stopped doing so. To hold to the contrary, as the majority does, is to render subdivision (c) a nullity.

The issue here is not whether the poor are entitled to medical care. They are. The issue is whether the state or the counties must pay for this care. The majority places this obligation on the state. The counties' [*340] [***162] win, however, may be a pyrrhic victory. For, in anticipation of today's decision, the Legislature has enacted legislation that will drastically reduce the counties' share of other state revenue, as discussed in part III below.

I

Beginning in 1855, California imposed a legal obligation on the counties to take care of their poor. (*Mooner v. Pickett* (1971) 4 Cal. 3d 669, 677-678 [*112] [94 Cal. Rptr. 279, 483 P.2d 1231].) Since 1965, this obliga-

tion has been codified in Welfare and Institutions Code section 17000. (Stats. 1965, ch. 1784, § 5, p. 4090.) That statute states in full: "Every county and every city and county shall relieve and support all incompetent, poor, indigent persons, and those incapacitated by age, disease, or accident, lawfully resident therein, when such persons are not supported and relieved by their relatives or friends, by their own means, or by state hospitals or other state or private institutions." (Welf. & Inst. Code, § 17000.) Included in this is a duty to provide medical care to indigents. (*Board of Supervisors v. Superior Court* (1989) 207 Cal. App. 3d 552, 557 [254 Cal. Rptr. 905].)

A brief overview of the efforts by federal, state, and local governments to furnish medical services to the poor may be helpful.

Before March 1, 1966, the date on which California began its Medi-Cal program, medical services for the poor "were provided in different ways and were funded by the state, county, and federal governments in varying amounts." (Assem. Com. on Public Health, Preliminary Rep. on Medi-Cal (Feb. 29, 1968) p. 3.) The Medi-Cal program, which California adopted to implement the federal Medicaid program (42 U.S.C. § 1396 et seq.; see *Morris v. Williams* (1967) 67 Cal. 2d 733, 738 [63 Cal. Rptr. 689, 433 P.2d 697]), at first limited eligibility to those persons "linked" to a federal categorical aid program by being over age 65, blind, disabled, or a member of a family with dependent children. (Legis. Analyst, Rep. to Joint Legis. Budget Com., Analysis of 1971-1972 Budget Bill, Sen. Bill No. 207 (1971 Reg. Sess.), pp. 548, 550.) Persons not linked to federal programs were ineligible for Medi-Cal; they could obtain medical care from the counties. (*County of Santa Clara v. Hall* (1972) 23 Cal. App. 3d 1059, 1061 [100 Cal. Rptr. 629].)

In 1971, the Legislature revised Medi-Cal by extending coverage to certain so-called "noncategorically linked" persons, or "medically indigent persons." (Stats. 1971, ch. 577, § 12, 13, 22.5, 23, pp. 1110-1111, 1115.) The revisions included a formula for determining each county's share of Medi-Cal costs for the 1972-1973 fiscal year, with increases in later years based on the assessed value of property. (*Id.* at § 41, 42, pp. 1131-1133.)

In 1978, California voters added to the state Constitution article XIII A (Proposition 13), which severely limited property taxes. In that same year, to help the counties deal with the drastic drop in local tax revenue, the Legislature assumed the counties' share of Medi-Cal costs. (Stats. 1978, ch. 292, § 33, p. 610.) In 1979, the Legislature relieved the counties of their obligation to share in Medi-Cal costs. (Stats. 1979, ch. 282, § 106, p. 1059.) [*113] Also in 1979, the voters added to the state Constitution article XIII B, which placed spending

limits on state and local governments and added the mandate/reimbursement provisions at issue here.

In 1982, the Legislature removed from Medi-Cal eligibility the category of "medically indigent persons" that had been added in 1971. The Legislature also transferred funds for indigent health care services from the state to the counties through the Medically Indigent Services Account. (Stats. 1982, ch. 328, § 6, 8.3, 8.5, pp. 1574-1576; Stats. 1982, ch. 1594, § 19, 86, pp. 6315, 6357.) Medically Indigent Services Account funds were then combined with county health service funds to provide health care to persons not eligible for Medi-Cal (Stats. 1982, ch. 1594, § 86, p. 6357), and counties were to provide health services to persons in this category "to the extent that state funds are provided" (*id.*, § 70, p. 6346).

From 1983 through June 1989, the state fully funded San Diego County's program for furnishing medical care to the poor. Thereafter, in fiscal years 1989-1990 and 1990-1991, the state partially funded San Diego County's program. In early 1991, however, the state refused to provide San Diego County full funding for the 1990-1991 fiscal year, prompting a threat by the county to terminate its indigent medical care program. This in turn led the Legal Aid Society of San Diego to file an action against the County of San Diego, asserting that Welfare and Institutions Code section 17000 imposed a legal obligation on the county to provide medical care to the poor. The county cross-complained against the state. The county argued that the state's 1982 removal of the category of "medically indigent persons" from Medi-Cal eligibility mandated a "new program or higher level of service" within the meaning of section 6 of article XIII B of the California Constitution, because it transferred the cost of caring for these persons to the county. Accordingly, the county contended, section 6 required the state to reimburse the county for its cost of providing such care, and prohibited the state from terminating reimbursement as it did in 1991. The county eventually reached a settlement with the Legal Aid Society of San Diego, leading to a dismissal of the latter's complaint.

While the County of San Diego's case against the state was pending, litigation was proceeding in a similar action against the state by the County of Los Angeles and the County of San Bernardino. In that action, the Superior Court for the County of Los Angeles entered a judgment in favor of Los Angeles and San Bernardino Counties. The state sought review in the Second District Court of Appeal in Los Angeles. In December 1992, the parties to the Los Angeles case entered into a settlement agreement providing for dismissal of the appeal and vacating of the superior court judgment. [*114] The

Court of Appeal thereafter ordered that the superior court judgment be vacated and that the appeal be dismissed.

The County of San Diego's action against the state, however, was not settled. It proceeded on the county's claim against the state for reimbursement of the county's expenditures for medical care to the indigent. ¹ The majority holds that the county is entitled to such reimbursement. I disagree.

1 I agree with the majority that the superior court had jurisdiction to decide this case. (Maj. opn., *ante*, at pp. 85-90.)

II

Article XIII B, section 6 of the California Constitution provides: "Whenever the Legislature or any state agency mandates a new program or higher level of service on any local government, the state shall provide a subvention of funds to reimburse such local government for the costs of such program or increased level of service, *except that the Legislature may, but need not, provide such subvention of funds for the following mandates: [P] . . . [P] (c) Legislative mandates enacted prior to January 1, 1975, or executive orders or regulations initially implementing legislation enacted prior to January 1, 1975.*" (Italics added.) ²

2 Section 6 of article XIII B pertains to two types of mandates: new programs and higher levels of service. The words "such subvention" in the first paragraph of this constitutional provision makes the subdivision (c) exemption applicable to both types of mandates.

Of importance here is Welfare and Institutions Code section 17000 (hereafter sometimes section 17000). It imposes a legal obligation on the counties to provide, among other things, medical services to the poor. (*Board of Supervisors v. Superior Court, supra*, 207 Cal. App. 3d at p. 557; *County of San Diego v. Vilorio* (1969) 276 Cal. App. 2d 350, 352 [80 Cal. Rptr. 869].) Section 17000 was enacted long before, and has existed continuously since, January 1, 1975, the date set forth in subdivision (c) of section 6 of article XIII B of the California Constitution. Thus, section 17000 falls within subdivision (c)'s language of "[l]egislative mandates enacted prior to January 1, 1975," rendering it exempt from the reimbursement provision of section 6.

Contrary to the majority's conclusion, the Legislature's 1982 legislation removing the category of "medically indigent persons" from Medi-Cal did not meet California Constitution, article XIII B, section 6's requirement of imposing on local government "a new program or higher level of service," and therefore did not entitle the counties to reimbursement [*342] [*164]

from the state under section 6 of article XIII B. The counties' legal obligation to provide medical care arises from section 17000, not from the subsequently enacted [*115] 1982 legislation. The majority itself concedes that the 1982 legislation merely "trigger[ed] the counties' responsibility to provide medical care as providers of last resort under section 17000." (Maj. opn., ante, at p. 98.) Although certain actions by the state and the federal government during the 1970's and 1980's may have alleviated the counties' financial burden of providing medical care for the indigent, those actions did not supplant or remove the counties' existing legal obligation under section 17000 to furnish such care. (*Cooke v. Superior Court* (1989) 213 Cal. App. 3d 401, 411 [261 Cal. Rptr. 706]; *Madera Community Hospital v. County of Madera* (1984) 155 Cal. App. 3d 136, 151 [201 Cal. Rptr. 768].)

The state's reimbursement obligation under section 6 of article XIII B of the California Constitution arises only if, after January 1, 1975, the date mentioned in subdivision (c) of section 6, the state imposes on the counties "a new program or higher level of service." That did not occur here. As I pointed out above, the counties' legal obligation to provide for the poor arises from section 17000, enacted long before the January 1, 1975, cutoff date set forth in subdivision (c) of section 6. That statutory obligation remained in effect when, during a certain period after 1975, the state assumed the financial burden of providing medical care to the poor, in an effort to help the counties deal with a drastic drop in local revenue as a result of the voters' passage of Proposition 13, which severely limited property taxes. Because the counties' statutory obligation to provide health care to the poor was created before 1975 and has existed unchanged since that time, the state's 1982 termination of Medi-Cal eligibility for "medically indigent persons" did not create a "new program or higher level of service" within the meaning of section 6 of article XIII B, and therefore did not obligate the state to reimburse the counties for their expenditures in health care for the poor.

III

In imposing on the state a legal obligation to reimburse the counties for their cost of furnishing medical services to the poor, the majority's holding appears to bail out financially strapped counties. Not so.

Today's decision will immediately result in a reduction of state funds available to the counties. Here is why. In 1991, the Legislature added section 11001.5 to the Revenue and Taxation Code, providing that 24.33 percent of the moneys collected by the Department of Motor Vehicles as motor vehicle license fees must be deposited in the State Treasury to the credit of the Local Revenue Fund. In anticipation of today's decision, the Legislature stated in subdivision (d) of this statute: "This section

shall cease to be operative on [*116] the first day of the month following the month in which the Department of Motor Vehicles is notified by the Department of Finance of a final judicial determination by the California Supreme Court or any California court of appeal [that]: [P] . . . [P] (2) The state is obligated to reimburse counties for costs of providing medical services to medically indigent adults pursuant to Chapters 328 and 1594 of the Statutes of 1982." (*Rev. & Tax. Code, § 11001.5*, subd. (d); see also *id.*, § 10753.8, subd. (b).)

The loss of such revenue, which the Attorney General estimates at "hundreds of millions of dollars," may put the counties in a serious financial bind. Indeed, realization of the scope of this revenue loss appears to explain why the County of Los Angeles, after a superior court victory in its action seeking state reimbursement for the cost of furnishing medical care to "medically indigent persons," entered into a settlement with the state under which the superior court judgment was effectively obliterated by a stipulated reversal. (See *Nearv v. Regents of University of California* (1992) 3 Cal. 4th 273 [10 Cal. Rptr. 2d 859, 834 P.2d 119].) In a letter addressed to the Second District Court of Appeal, sent while the County of Los Angeles was engaged in settlement negotiations with the state, the county's attorney referred to the legislation mentioned above in these terms: "This legislation was quite clearly written with this case in mind. Consequently, [**343] [***165] to pursue this matter, the County of Los Angeles risks losing a funding source it must have to maintain its health services programs at current levels. The additional funding that might flow to the County from a final judgment in its favor in this matter, is several years away and is most likely of a lesser amount than this County's share of the vehicle license fees." (Italics added.) Thus, the County of Los Angeles had apparently determined that a legal victory entitling it to reimbursement from the state for the cost of providing medical care to the category of "medically indigent persons" would not in fact serve its economic interests.

I have an additional concern. According to the majority, whenever there is a change in a state program that has the effect of increasing a county's financial burden under section 17000 there must be reimbursement by the state. This means that so long as section 17000 continues to exist, an increase in state funding to a particular county for the care of the poor, once undertaken, may be irreversible, thus locking the state into perpetual financial assistance to that county for health care to the needy. This would, understandably, be a major disincentive for the Legislature to ever increase the state's funding of a county's medical care for the poor.

The rigidity imposed by today's holding will have unfortunate consequences should the state's limited fi-

nancial resources prove insufficient to [*117] reimburse the counties under section 6 of article XIII B of the California Constitution for the "new program or higher level of service" of providing medical care to the poor under section 17000. In that event, the state may be required to modify this "new program or higher level of service" in order to reconcile the state's reimbursement obligation with its finite resources and its other financial commitments. Such modifications are likely to take the form of limitations on eligibility for medical care or on the amount or kinds of medical care that the counties must provide to the poor under section 17000. A more flexible system--one that actively encouraged shared state and county responsibility for indigent medical care, using a variety of innovative funding mechanisms--would be less likely to result in a curtailment of medical services to the poor.

And if the Legislature is unable or unwilling to appropriate funds to comply with the majority's reimbursement order, the law allows the county to file "in the Superior Court of the County of Sacramento an action in declaratory relief to declare the mandate unenforceable and enjoin its enforcement." (Gov. Code, § 17612, subd. (c)); see maj. opn., *ante*, at p. 82.) Such a declaration would do nothing to alleviate the plight of the poor.

Conclusion

The dispute in this case ultimately arises from a collision between the taxing limitations on the counties imposed by article XIII A of the state Constitution and the preexisting, open-ended mandate imposed on them under Welfare and Institutions Code section 17000 to provide medical care for the poor. As I have explained, the Legislature's assumption thereafter of some of the resulting financial burden to the counties did not repeal section

17000's mandate, nor did the Legislature's later termination of its financial support create a new mandate. In holding to the contrary, the majority imposes on the Legislature an obligation that the Legislature does not have under the law.

I recognize that my resolution of this issue--that under existing law the state has *no legal obligation* to reimburse the counties for health expenditures for the poor--would leave the counties in the same difficult position in which they find themselves now: providing funding for indigent medical care while maintaining other essential public services in a time of fiscal austerity. But complex policy questions such as the structuring and funding of indigent medical care are best left to the counties, the Legislature, and ultimately the electorate, rather than to the courts. It is the counties that must figure out how to allocate the limited budgets imposed on them by the electorate's adoption of articles XIII A and XIII B of the California Constitution among indigent medical care programs and a host of other pressing [*118] and essential needs. It is the Legislature that must decide whether to furnish financial assistance to the counties so [***166] they [**344] can meet their section 17000 obligations to provide for the poor, and whether to continue to impose the obligations of section 17000 on the counties. It is the electorate that must decide whether, given the ever-increasing costs of meeting the needs of indigents under section 17000, counties should be afforded some relief from the taxing and spending limits of articles XIII A and XIII B, both enacted by voters' initiative. These are hard choices, but for the reasons just given they are better made by the representative branches of government and the electorate than by the courts.

STATE MANDATES, Defendant and Respondent; KERN HIGH SCHOOL DIS-
TRICT et al., Real Parties in Interest and Respondents.**

No. S109219.

SUPREME COURT OF CALIFORNIA

30 Cal. 4th 727; 68 P.3d 1203; 134 Cal. Rptr. 2d 237; 2003 Cal. LEXIS 3353; 2003
Daily Journal DAR 5463

May 22, 2003, Decided
May 22, 2003, Filed

PRIOR HISTORY: Superior Court of Sacramento County, No. C037645, No. 00CS00866, Ronald B. Robie Judge.

Department of Finance v. Commission on State Mandates, 100 Cal. App. 4th 243, 2002 Cal. App. LEXIS 4406, 122 Cal. Rptr. 2d 447 (Cal. App. 3d Dist., 2002)

DISPOSITION: The judgment of the Court of Appeal is reversed.

CASE SUMMARY:

PROCEDURAL POSTURE: The Court of Appeal of California, Third Appellate District, Sacramento County, held that respondents, California Commission on State Mandates, representing the real parties in interest and respondent school districts, had a right to reimbursement for their costs in complying with the statutory notice and agenda requirements related to voluntary state education-related programs. Appellant, the California Department of Finance, sought review.

OVERVIEW: A number of statutes established various school-related educational programs. One example was the School-Based Pupil Motivation and Maintenance Program and Dropout Recovery Act, Cal. Educ. Code § 54720 et seq. Participating school districts were granted funds to operate such programs and were required to establish school site councils or advisory committees to administer the program. Subsequent legislation required

new statutory notice and agenda requirements related to public meetings concerning such programs. The department of finance asserted that, because local entities were not required to participate in the programs, the State, had not imposed a "mandate," and the State was not responsible for said notice and agenda costs. On the other hand, the commission asserted the school districts were legally "compelled" to incur such costs and were entitled to reimbursement. The appellate court held the school districts did not have a right to reimbursement from the State. The funded programs did not amount to a reimbursable state mandate, they were not "compelled" upon the districts, and a portion of the provided funds could be used for the notice and agenda costs at issue.

OUTCOME: The appellate court held that the claimants failed to establish that they were entitled to reimbursement with regard to any of the program costs issue. The judgment of the lower court was reversed.

CORE TERMS: claimant, school districts, state mandate, agenda, notice, reimbursable, reimbursement, compelled, funded, incur, compulsion, advisory committees, local governments, local entity, local agencies, italics, eminent domain, mandated, curiae, school site, funding, optional, taxation, spending, goodwill, entity's, elect, reasonable alternative, federal mandate, education programs

[HN1]A number of statutes establish various school-related educational programs, such as the School-Based Pupil Motivation and Maintenance Program and Dropout Recovery Act, Cal. Educ. Code § 54720 et seq., Programs to Encourage Parental Involvement, Cal. Educ. Code § 11500 et seq., and the federal Indian Education Program, 20 U.S.C.S. § 7421 et seq. (former 25 U.S.C.S. § 2604 et seq. Under these statutes, participating school districts are granted state or federal funds to operate the program, and are required to establish school site councils or advisory committees that help administer the program. Program funding often is substantial. Funding is provided by the state for school improvement programs, at least in-part, under Cal. Educ. Code §§ 52010 et seq., and Cal. Educ. Code §§ 62000, 62000.2(b) and 62002.

Administrative Law > Governmental Information > Public Meetings > General Overview

Education Law > Administration & Operation > Boards of Elementary & Secondary Schools > Proceedings

[HN2] Cal. Educ. Code § 35147 generally exempts school district councils and advisory committees of nine specific programs from compliance with all provisions of the Brown Act, Cal. Gov't. Code § 54950.5 et seq., and imposes instead its own separately described requirement that all such councils and advisory committees related to those nine programs be open to the public, provide notice of meetings, and post meeting agendas.

Governments > Local Governments > Administrative Boards

[HN3]See Cal. Gov't. Code § 54952.

Administrative Law > Governmental Information > Public Meetings > General Overview

Education Law > Administration & Operation > Boards of Elementary & Secondary Schools > Proceedings

Governments > Local Governments > Administrative Boards

[HN4]See Cal. Educ. Code § 35147.

Education Law > Administration & Operation > Boards of Elementary & Secondary Schools > Proceedings

Education Law > Funding > Allocation

Governments > State & Territorial Governments > Finance

[HN5]The statutory notice and agenda requirements of Cal. Educ. Code § 35147 impose reimbursable state mandates for the costs of preparing meeting agendas, posting agendas, and providing the public an opportunity to address the respective school district councils or committees.

Governments > Local Governments > Finance

Governments > State & Territorial Governments > Finance

[HN6]Cal. Const. art. XIII A limits the spending authority of state and local government.

Governments > Local Governments > Finance

Governments > State & Territorial Governments > Finance

[HN7]See Cal. Const. art. XIII B, § 6.

Education Law > Administration & Operation > School Districts > Financial Liabilities

Governments > Local Governments > Finance

Governments > State & Territorial Governments > Finance

[HN8]Cal. Const. art. XIII B, § 6 recognizes that Cal. Const. arts. XIII A and XIII B severely restrict the taxing and spending powers of local governments. Its purpose is to preclude the state from shifting financial responsibility for carrying out governmental functions to local agencies, which are "ill equipped" to assume increased financial responsibilities because of the taxing and spending limitations that Cal. Const. arts. XIII A and XIII B impose. A reimbursable state mandate does not arise merely because a local entity finds itself bearing an "additional cost" imposed by state law. The additional expense incurred by a local agency or school district arising as an incidental impact of a law which applied generally to all entities is not the type of expense that the voters had in mind when they adopted Cal. Const. art. XIII B, § 6.

Governments > Local Governments > Administrative Boards

Governments > Local Governments > Finance

Governments > State & Territorial Governments > Finance

[HN9]Extension of the subvention requirements to costs "incidentally" imposed on local governments will require the legislature to assess the fiscal effect on local agencies of each law of general application. Moreover, it will subject much general legislation to the supermajority vote required to pass a companion local-government revenue bill. Each such necessary appropriation will, in turn, cut into the state's article Cal. Const. art. XIII B spending limit. Cal. Const. art. XIII B, § 8(a). Nothing in the language, history, or apparent purpose of Cal. Const. art. XIII B suggests such far-reaching limitations on legitimate state power.

[HN13]See former Cal. Rev. & Tax Code § 2207.5.

Governments > Local Governments > Finance
[HN14]Former Cal. Rev. and Tax. Code §§ 2231 and 2207 served as the model for Cal. Const. art. XIII B, § 6, and contemplated a narrow definition of reimbursable state mandate, and not the subsequently expanded definition of reimbursable state mandate found in the 1981 amendments to the California Revenue and Taxation Code.

Education Law > Administration & Operation > School Districts > Financial Liabilities

Education Law > Instruction > Curricula > Standards Governments > State & Territorial Governments > Finance

[HN15]See Cal. Gov't Code § 17514.

Governments > Local Governments > Finance
Governments > State & Territorial Governments > Finance

Tax Law > State & Local Taxes > General Overview

[HN16]In the legislature's 1984 overhaul of the statutory scheme implementing Cal. Const. art. XIII B, § 6, the legislature embraced and codified the narrow definition of reimbursable state mandate set out in former Cal. Rev. & Tax Code § 2207 (and construed in City of Merced) as the appropriate test in implementing the constitutional provision. The legislature limited the continued use of the broader definition of a statutorily imposed reimbursable state mandate (set out in the amendments to former Cal. Rev. & Tax Code §§ 2207 and 2207.5, effective in mid-1981) to a small and ever-decreasing number of cases. Five years later, the legislature repealed former Cal. Rev. & Tax Code §§ 2207 and 2207.5, thereby finally discarding the broad definition of statutorily imposed reimbursable state mandate found in former Cal. Rev. & Tax Code §§ 2207(h) and 2207.5(h).

Education Law > Administration & Operation > School Districts > Financial Liabilities

Governments > Local Governments > Finance
Governments > State & Territorial Governments > Finance

[HN17]Particularly in the context of school funding, based upon the language of Cal. Const. art. XIII B, § 6, and the statutory and case law history, the drafters and the electorate must have intended that a reimbursable state mandate arises only if a local entity is "required" or "commanded," that is, legally compelled to participate in a program (or to provide a service) that, in turn, leads unavoidably to increasing the costs incurred by the entity.

Education Law > Administration & Operation > School Districts > Financial Liabilities

Governments > Local Governments > Finance
Governments > State & Territorial Governments > Finance

[HN18]Particularly in the context of school funding, activities undertaken at the option or discretion of a local government entity (that is, actions undertaken without any legal compulsion or threat of penalty for nonpartici-

pation) do not trigger a state mandate and hence do not require reimbursement of funds, even if the local entity is obliged to incur costs as a result of its discretionary decision to participate in a particular program or practice.

Education Law > Administration & Operation > Boards of Elementary & Secondary Schools > Proceedings

Education Law > Administration & Operation > School Districts > Financial Liabilities

Real Property Law > Eminent Domain Proceedings > Constitutional Limits & Rights > Just Compensation

[HN19]If a school district elects to participate in or continue participation in any underlying voluntary education-related funded program, the district's obligation to comply with the notice and agenda requirements of Cal. Educ. Code § 35147, as related to that program does not constitute a reimbursable state mandate.

Education Law > Administration & Operation > School Districts > Financial Liabilities

Governments > State & Territorial Governments > Finance

[HN20]In the context of school district financing, the proper focus under a legal compulsion inquiry is upon the nature of a claimant's participation in the underlying programs themselves.

Education Law > Funding > Allocation

Governments > Local Governments > Finance

Public Health & Welfare Law > Social Services > Native Americans

[HN21]The American Indian Early Childhood Education Program, Cal. Educ. Code § 52060 et seq., which implements projects designed to develop and test educational models to increase reading and math competence of students in preschool and early grades, states that school districts "may apply" to be included in the project, Cal. Educ. Code § 52063) and, if accepted to participate, will receive program funding. Cal. Educ. Code § 52062. Cal. Educ. Code § 52065 in turn states that each school district that receives funds provided by § 52062 shall establish a district wide American Indian advisory committee for American Indian early childhood education.

Education Law > Administration & Operation > Boards of Elementary & Secondary Schools > Authority

Education Law > Administration & Operation > School Districts > Financial Liabilities

Governments > State & Territorial Governments > Finance

[HN22]Participation in most of the programs listed in Cal. Educ. Code § 35147 is voluntary, and the obligation to establish or maintain a site council or advisory committee arises only if a district elects to participate in, or continue to participate in, the particular program.

Education Law > Administration & Operation > Boards of Elementary & Secondary Schools > Authority

Education Law > Administration & Operation > Boards of Elementary & Secondary Schools > Proceedings

Education Law > Instruction > Curricula > Curriculum Committees

[HN23]See Cal. Educ. Code § 52010.

Education Law > Administration & Operation > Boards of Elementary & Secondary Schools > Authority

Education Law > Administration & Operation > Boards of Elementary & Secondary Schools > Proceedings

Education Law > Instruction > Curricula > Curriculum Committees

[HN24]Reasonably construed, the statutory scheme require only that a school district adopt "policies" (i.e., a plan) "to ensure" that if the district elects to participate in the California School Improvement Program, a school site council will, "prior to phase-in" of the district wide program, exist at each school, so that each individual school will be able to decide whether it wishes to participate in the district's program. In other words, the statutory scheme require that districts adopt policies or plans for school site councils, but the statutes do not require that districts adopt councils themselves unless the district first elects to participate in the underlying program.

Education Law > Administration & Operation > Boards of Elementary & Secondary Schools > Authority

Education Law > Instruction > Curricula > Curriculum Committees

[HN25]Prior to a school beginning to develop a program plan, the district first must establish a local school site council that in turn will consider whether or not it wishes the local school to participate in the program. Cal. Educ. Code § 52850 et seq. and Cal. Educ. Code § 54720 et seq. The statutes make it clear that these requirements apply "only to school districts and schools which participate in" the respective programs. Cal. Educ. Code §§

52850, 54722. Each statutory scheme provides that school site councils shall be established at each school which participates in the program. Cal. Educ. Code §§ 52852 and 54722.

*Education Law > Funding > Allocation
Education Law > Students > Bilingual Students
Governments > Local Governments > Finance*

[HN26]The appellate court finds nothing to suggest that a school district is precluded from using a portion of the funds obtained from the state for the implementation of an underlying funded program to pay associated notice and agenda costs. Indeed, the Chacon-Moscone Bilingual-Bicultural Education program explicitly authorizes school districts to do so. Under Cal. Educ. Code § 52168(b) school districts may claim funds appropriated for purposes of expenditures in, but not limited to reasonable district administrative expenses. It is plain that the costs of complying with program-related notice and agenda requirements qualify as "reasonable district administrative expenses." Therefore, even if the appellate court assume for purposes of analysis that school districts are legally compelled to participate in the funded Chacon-Moscone Bilingual-Bicultural Education program, the appellate court views the state's provision of program funding as satisfying, in advance, any reimbursement requirement.

*Education Law > Administration & Operation > School Districts > Financial Liabilities
Governments > Local Governments > Finance
Governments > State & Territorial Governments > Finance*

[HN27]It is conceivable, with regard to some programs, that increased compliance costs imposed by the state might become so great, or funded program grants might become so diminished, that funded program benefits would not cover the compliance costs, or that expenditure of granted program funds on administrative costs might violate a spending limitation set out in applicable regulations or statutes. In those circumstances, a compulsory program participant likely would be able to establish the existence of a reimbursable state mandate under Cal. Const. art. XIII B, § 6.

*Governments > Local Governments > Finance
Governments > State & Territorial Governments > Finance*

[HN28]See Cal. Const. art. XIII B, § 9.

Governments > Legislation > Interpretation

[HN29]It is well settled that constitutional enactments must receive a liberal, practical common-sense construction which will meet changed conditions and the growing needs of the people. While a constitutional amendment should be construed in accordance with the natural and ordinary meaning of its words, the literal language of enactments may be disregarded to avoid absurd results and to fulfill the apparent intent of the framers.

*Education Law > Administration & Operation > School Districts > Creation
Governments > Local Governments > Administrative Boards
Governments > State & Territorial Governments > Relations With Governments*

[HN30]Unlike the federal-state relationship, sovereignty is not an issue between state and local governments. School districts are agencies of the state, and not separate or distinct political entities.

*Governments > Local Governments > Finance
Governments > State & Territorial Governments > Finance*

[HN31]Cal. Const. art. XIII B, § 6's purpose is to preclude the state from shifting financial responsibility for carrying out governmental functions to local agencies, which are "ill equipped" to assume increased financial responsibilities. In light of that purpose, the appellate court does not foreclose the possibility that a reimbursable state mandate under Cal. Const. art. XIII B, § 6, properly might be found in some circumstances in which a local entity is not legally compelled to participate in a program that requires it to expend additional funds.

*Education Law > Students > Bilingual Students
Governments > Local Governments > Finance
Public Health & Welfare Law > Social Services > Native Americans*

[HN32]Authority to use program funds obtained from the state to pay associated notice and agenda costs is explicit, or at least strongly implied in the federal Indian Education Program, 20 U.S.C.S. § 7425(d), the California School Improvement Program, Cal. Educ. Code § 63000(c) and (g), and the McAteer Act, Cal. Educ. Code § 63001.

*Education Law > Administration & Operation > Boards of Elementary & Secondary Schools > Proceedings
Governments > State & Territorial Governments > Finance*

[HN33]In the context of the expenditure of granted program funds on the notice and agenda costs, applicable statutory provisions appear to set the limit for such expenses for the same program at no more than 15 percent of granted program funds. Cal. Educ. Code §§ 63000(c) and 63001.

Education Law > Administration & Operation > School Districts > Financial Liabilities

Education Law > Funding > Allocation Governments > State & Territorial Governments > Finance

[HN34]Presumably, a school district will continue to participate in optional funded programs only if it determines that the best interests of the district and its students are served by participation. In other words, if, on balance, the funded program, even with strings attached, is deemed beneficial. And, presumably, a school district will decline participation if and when it determines that the costs of program compliance outweigh the funding benefits.

Education Law > Administration & Operation > School Districts > Financial Liabilities

Education Law > Funding > Allocation Governments > State & Territorial Governments > Finance

[HN35]Although it is completely understandable that a participant in a funded program may be disappointed when additional requirements (with their attendant costs) are imposed as a condition of continued participation in the program, just as such a participant will be disappointed if the total amount of the annual funds provided for the program is reduced by legislative or gubernatorial action, the circumstance that the legislature has determined that the requirements of an ongoing elective program should be modified does not render a local entity's decision whether to continue its participation in the modified program any less voluntary. Cal. Const. art. XIII B, § 6, provides no right of reimbursement when the state reduces revenue granted to local government. The appellate court rejects the suggestion that the state cannot legally provide school districts with funds for voluntary programs, and then effectively reduce that funding grant by requiring school districts to incur expenses in order to meet conditions of program participation.

Education Law > Administration & Operation > School Districts > Financial Liabilities

Education Law > Funding > Allocation Governments > Local Governments > Finance

[HN36]A claimant that elects to discontinue participation in a state optional funded program does not face certain and severe penalties such as double taxation or other "draconian" consequences, but simply must adjust to the withdrawal of grant money along with the lifting of program obligations. Such circumstances do not constitute a reimbursable state mandate for purposes of Cal. Const. art. XIII B, § 6.

SUMMARY:

CALIFORNIA OFFICIAL REPORTS SUMMARY

The Department of Finance brought an administrative mandate proceeding against the Commission on State Mandates, challenging its decision that two statutes--requiring school site councils and advisory committees for certain educational programs to provide notice of meetings and to post agendas for those meetings--constituted a reimbursable state mandate under Cal. Const., art. XIII B, § 6. The trial court denied the petition. (Superior Court of Sacramento County, No. 00CS00866, Ronald B. Robie, Judge.) The Court of Appeal, Third Dist., No. C037645, rejected the department's position, concluding that a state mandate is established when the local governmental entity has no reasonable alternative and no true choice but to participate in the program, and incurs the additional costs associated with an increased or higher level of service.

The Supreme Court reversed the judgment of the Court of Appeal. The court held that the statute do not constitute a reimbursement state mandate. Thus, the claimants (two public school districts and a county) were not entitled to reimbursement. The claimants could not show that they were legally compelled to incur notice and agenda costs, and hence entitled to reimbursement from the state, based merely upon the circumstance that the notice and agenda provisions were mandatory elements of education-related programs in which the claimants participated, without regard to whether the claimants' participation was voluntary or compelled. If a school district elects to participate in any underlying voluntary education-related funded program, the obligation to comply with the notice and agenda requirements related to that program does not constitute a reimbursement state mandate. In this case, the claimants were not legally compelled to participate in eight of the nine underlying funded programs. Even if the claimants were legally compelled to participate in one of the nine programs, they were nevertheless not entitled to reimbursement from the state for such expenses, since they were free at all relevant times to use funds provided by the state for that program to pay required program expenses, including notice and agenda costs. The court further held that the claimants failed to show that they were

compelled to participate in the underlying programs. Moreover, the costs associated with the notice and agenda requirements were modest, and nothing in the governing statutes or regulations suggested that a school district was precluded from using a portion of the program funds obtained from the state to pay associated notice and agenda costs. (Opinion by George, C.J., expressing the unanimous view of the court.)

CALIFORNIA OFFICIAL REPORTS HEADNOTES

Classified to California Digest of Official Reports

(1) State of California § 11--Fiscal Matters--Reimbursable State Mandate--School Programs--Statutory Requirements to Provide Notice and to Post Agenda of Meetings--Participation in Programs as Legally Compelled. --In proceedings to determine whether statute, requiring school site councils and advisory committees for certain educational programs to provide notice of meetings and to post agendas for those meetings, were reimbursable mandates under Cal. Const., art. XIII B, § 6, the Court of Appeals erred in concluding that the claimants (two public school districts and a county) were entitled to reimbursement. The claimants could not show that they were legally compelled to incur notice and agenda costs, and hence entitled to reimbursement from the state, based merely upon the circumstance that the notice and agenda provisions were mandatory elements of education-related programs in which the claimants participated, without regard to whether the claimants' participation was voluntary or compelled. If a school district elects to participate in any underlying voluntary education-related funded program, the obligation to comply with the notice and agenda requirements related to that program does not constitute a reimbursement state mandate. The proper focus under a legal compulsion inquiry is upon the nature of the claimants' participation in the underlying programs themselves. In this case, the claimants were not legally compelled to participate in eight of the nine underlying funded programs. Even if the claimants were legally compelled to participate in one of the nine programs, they were nevertheless not entitled to reimbursement from the state for such expenses, since they were free at all relevant times to use funds provided by the state for that program to pay required program expenses, including notice and agenda costs.

[See 9 Witkin, Summary of Cal. Law (9th ed. 1989) Taxation, § 123A.]

(2a) (2b) (2c) State of California § 11--Fiscal Matters--Reimbursement State Mandate--School Pro-

grams--Statutory Requirements to Provide Notice and to Post Agenda of Meetings--Participation in Programs as Compelled--As Practical Matter. --In proceedings to determine whether statutes, requiring school site councils and advisory committees for certain educational programs to provide notice of meetings and to post agendas for those meetings, were reimbursable mandates under Cal. Const., art. XIII B, § 6, in which claimants (two public school districts and a county) failed to show that they were legally compelled to participate in the underlying funded programs and incur notice and agenda costs, the claimants also failed to show that, as a practical matter, they were compelled to participate in the underlying programs. Although the claimants sought to show that they had no true choice other than to participate in the programs, and that the absence of a reasonable alternative to participation was a de facto mandate, they did not face penalties such as double taxation or other severe consequences for not participating, and hence they were not mandated under Cal. Const., art. XIII, § 6, to incur increased costs. Moreover, the costs associated with the notice and agenda requirements were modest, and nothing in the governing statutes or regulations suggested that a school district from the state to pay associated notice and agenda costs. The asserted compulsion stemmed only from the circumstance that the claimants found the benefits of various funded programs too beneficial to refuse. However, the state is not prohibited from providing school districts with funds for voluntary programs, and then effectively reducing that grant by requiring the districts to incur expenses in order to meet conditions of program participation.

(3) Municipalities § 23--Powers--Relationship Between State and Local Governments. --Unlike the federal-state relationship, sovereignty is not an issue between state and local governments.

(4) State of California § 11--Fiscal Matters--Reimbursable State Mandate--Purpose. --The purpose of Cal. Const., art. XIII B, § 6 (reimbursable state mandates), is to preclude the state from shifting financial responsibility for carrying out governmental functions to local agencies, which are ill equipped to assume increased financial responsibilities.

COUNSEL: Bill Lockyer, Attorney General, Andrea Lynn Hoch, Chief Assistant Attorney General, Manuel M. Medeiros and Louis R. Mauro, Assistant Attorneys General, Catherine M. Van Aken and Leslie R. Lopez, Deputy Attorneys General, for Plaintiff and Appellant.

Paul M. Starkey, Camille Shelton and Eric D. Feller for Defendant and Respondent.

Jo Anne Sawyerknoll, Jose A. Gonzales and Arthur M. Palkowitz for Real Party in Interest and Respondent San Diego Unified School District.

No appearance by Real Parties in Interest and Respondents Kern High School District and County of Santa Clara.

Ruth Sorensen for California State Association of Counties, City of Buena Vista, City of Carlsbad, City of Dixon, City of Indian Wells, City of La Habra Heights, City of Merced, City of Monterey, City of Plymouth, City and County of San Francisco, City of San Luis Obispo, City of San Pablo, City of Tracy and City of Walnut Creek as Amici Curiae on behalf of Real Parties in Interest and Respondents.

Diana McDonough, Harold M. Freiman, Cynthia A. Schwerin and Lozano Smith for California School Boards Association, through its Education Legal Alliance as Amici Curiae on behalf of Real Parties in Interest and Respondents.

JUDGES: (Opinion by George, C. J., expressing the unanimous view of the court.)

OPINION BY: GEORGE

OPINION

[*730] [**1205] [***240] Article XIII B, section 6, of the California Constitution

provides: "Whenever the Legislature or any state agency mandates a new program or higher level of service on any local government, the State shall provide a subvention of funds to reimburse such local government for the costs of such program or increased level of service" (Hereafter article XIII B, § 6.)

Real parties in interest--two public school districts and a county (hereafter claimants)--participate in various education-related programs that are funded by the state and, in some instances, by the federal government. Each of these underlying funded programs in turn requires participating public school districts to establish and utilize specified school councils and advisory committees. Statutory provisions enacted in the mid-1990's require that such school councils and advisory committees provide notice of meetings, and post agendas for those meetings. (See Gov. Code, § 54952; Ed. Code, § 35147.) [*731] We granted review to determine whether claimants have a right to reimbursement from the state for their costs in complying with these statutory notice and agenda requirements.

We conclude, contrary to the Court of Appeal, that claimants are not entitled to reimbursement under the circumstances presented here. Our conclusion is based on the following determinations:

First, we reject claimants' assertion that they have been legally compelled to incur notice and agenda costs, and hence are entitled to reimbursement from the state, based merely upon the circumstance that the notice and agenda provisions are mandatory elements of education-related programs in which claimants have participated, without regard to whether a claimant's participation in the underlying program is voluntary or compelled. Second, we conclude that as to *eight* of the nine underlying funded programs here at issue, claimants have not been legally compelled to participate in those programs, and hence cannot establish a reimbursable state mandate as to those programs based upon a theory of legal compulsion. Third, assuming (without deciding) that claimants have been legally compelled to participate in *one* of the nine programs, we conclude that claimants nonetheless have no entitlement to reimbursement from the state for such expenses, because they have been free at all relevant times to use funds provided by the state for that program to pay required program expenses--including the notice and agenda costs here at issue.

Finally, we reject claimants' alternative contention that even if they have not been *legally* compelled to participate in the underlying funded programs, as a *practical* matter they have been compelled to do so and hence to incur notice and agenda-related costs. Although we do not foreclose the possibility that a reimbursable state mandate might be found in circumstances short of legal compulsion--for example, if the state were to impose a substantial penalty (independent of the program funds at issue) upon any local entity that declined to participate in a given program--claimants here faced no such practical compulsion. Instead, although claimants argue that they have had "no true option or choice" other than to participate in the underlying funded educational programs, the asserted compulsion in this case stems only from the circumstance that claimants have found the benefits of various funded programs "too good to refuse"--even though, as a condition of program participation, they have been forced to incur some costs. On the facts presented, the [***241] cost of compliance with conditions of participation in these funded programs does not amount to a reimbursable state mandate.

Accordingly, we shall reverse the judgment of the Court of Appeal.

I.

[HN1] [**1206] [*732] A number of statutes establish various school-related educational programs, such as the School-Based Pupil Motivation and Maintenance Program and Dropout Recovery Act (Ed. Code, § 54720 et seq.), Programs to Encourage Parental Involvement (Ed. Code, § 11500 et seq.), and the federal Indian Education Program (20 U.S.C. § 7421 et seq. [former 25 U.S.C. § 2604 et seq.]). Under these statutes, participating school districts are granted state or federal funds to operate the program, and are required to establish school site councils or advisory committees that help administer the program. Program funding often is substantial--for example, on a statewide basis, funding provided by the state for school improvement programs (see Ed. Code, § 52010 et seq., §§ 62000, 62000.2, subd. (b), 62002) for the 1998-1999 fiscal year totaled approximately \$ 394 million. (Cal. Dept. of Ed., Rep., Budget Act of 1998 (Nov. 1998) p. 52.)

In the mid-1990's, the Legislature passed legislation designed to make the operations of the councils and advisory committees related to such programs more open and accessible to the public. First, effective April 1, 1994, the Legislature enacted Government Code section 54952, which expanded the reach of the Ralph M. Brown Act (Brown Act) (Gov. Code, § 54950.5 et seq.)--California's general open meeting law--to apply to all such official local advisory bodies.¹ Second, effective July 21, 1994, Education Code section 35147 superseded Government Code section 54952, with respect to the application of the Brown Act to designated councils and advisory committees. Although the earlier (Government Code) statute had made *all* local government councils and advisory committees subject to *all* provisions of the Brown Act, [HN2]the later (Education Code) statute generally exempts councils and advisory committees of nine specific programs from compliance with all provisions of the Brown Act, and imposes instead its own separately described requirement that all such councils and advisory committees related to those nine programs be open to the public, provide notice of meetings, and post meeting agendas.²

1 Government Code section 54952, a provision of the Brown Act, provides in relevant part: [HN3]"As used in this chapter, 'legislative body' means: [P] (a) The governing body of a local agency or any other local body created by state or federal statute. [P] (b) A commission, committee, board, or other body of a local agency, whether permanent or temporary, decisionmaking or advisory, created by charter, ordinance, resolution, or formal action of a legislative body. . . ."

2 Education Code section 35147 provides in relevant part: [HN4]"(a) Except as specified in this section, any meeting of the councils or com-

mittees specified in subdivision (b) is exempt from . . . the Ralph M. Brown Act. . . . [P] (b) The councils and schoolsite advisory committees established pursuant to Sections 52012, 52065, 52176, and 52852, subdivision (b) of Section 54425, Sections 54444.2, 54724, and 62002.5, and committees formed pursuant to Section 11503 or Section 2604 of Title 25 of the United States Code, are subject to this section. [P] (c) Any meeting held by a council or committee specified in subdivision (b) shall be open to the public and any member of the public shall be able to address the council or committee during the meeting on any item within the subject matter jurisdiction of the council or committee. Notice of the meeting shall be posted at the schoolsite, or other appropriate place accessible to the public, at least 72 hours before the time set for the meeting. The notice shall specify the date, time, and location of the meeting and contain an agenda describing each item of business to be discussed or acted upon. The council or committee may not take any action on any item of business unless that item appeared on the posted agenda or unless the council or committee members present, by unanimous vote, find that there is a need to take immediate action and that the need for action came to the attention of the council or committee subsequent to the posting of the agenda. . . ."

The nine school site councils and advisory committees specified in subdivision (b), above, were established as part of the following programs: The school improvement program (Ed. Code, § 52010 et seq.; see *id.*, §§ 62000, 62000.2, subd. (b), 62002) [a general program that disburses funds for all aspects of school operation and performance]; the American Indian Early Childhood Education Program (Ed. Code, § 52060 et seq.); the Chacon-Moscone Bilingual-Bicultural Education Act of 1976 (Ed. Code, § 52160 et seq.; see *id.*, 62000, 62000.2, subd. (d)); the School-Based Program Coordination Act (Ed. Code, § 52850 et seq. [a program designed to coordinate various categorical aid programs]); the McAteer Act (Ed. Code, § 54400 et seq. [various compensatory education programs for "disadvantaged minors"]); the Migrant Children Education Programs (Ed. Code, § 54440 et seq.); the School-Based Pupil Motivation and Maintenance Program and Dropout Recovery Act (Ed. Code, § 54720 et seq. [a program designed to address truancy and dropout issues]); the Programs to Encourage Parental Involvement (Ed. Code, § 11500 et seq.); and the federal Indian

Education Program (20 U.S.C. § 7421 et seq., [former 25 U.S.C. § 2601 et seq.].)

[**1207] [***242] [*733] Compliance with these notice and agenda rules in turn imposed various costs on the affected councils and committees. Claimants Kern High School District, San Diego Unified School District, and County of Santa Clara filed "test claims" (see Gov. Code, § 17521) with the Commission on State Mandates (Commission), seeking reimbursement for the costs incurred by school councils and advisory committees in complying with the new statutory notice and agenda requirements. (See generally *Kinlaw v. State of California* (1991) 54 Cal.3d 326, 331-333 [285 Cal. Rptr. 66, 814 P.2d 1308] [describing legislative procedures implementing California Constitution article XIII B, section 6].) ³ In a statement of decision issued in mid-April 2002, the Commission found in favor of claimants. It concluded that [HN5]the statutory notice and agenda requirements impose reimbursable state mandates for the costs of preparing meeting agendas, posting agendas, and providing the public an opportunity to address the respective council or committee.

3 In December 1994, Santa Clara County filed the first test claim, asserting that Government Code section 54952 imposed a reimbursable state mandate. In December 1995, Kern High School District filed a test claim asserting that Education Code section 35147 imposes a reimbursable state mandate. These two claims were consolidated, and San Diego Unified School District was added as a coclaimant.

[*734] Acting through the Department of Finance, the State of California (hereafter Department of Finance or Department) thereafter brought this administrative mandate proceeding under Government Code section 17559, subdivision (b), to challenge the Commission's decision. The San Diego Unified School District took the lead role on behalf of claimants; the Kern High School District and the County of Santa Clara did not appear in the court proceedings below and have not appeared in this court.

In November 2000, the trial court, agreeing with the Commission, denied the mandate petition. ⁴ The Department of Finance [***243] appealed, arguing that the school councils and advisory committees at issue serve categorical aid programs in which school districts participate "voluntarily," often as a condition of receiving state or federal program funds. The Department of Finance asserted that the state has not *compelled* school districts to participate in or accept funding for any of those underlying programs--and hence has not required the establishment of any of the councils and committees that serve the programs. Instead, the Department of

Finance argued, the state merely has set out reasonable conditions and rules that must be adhered to if a local entity elects to participate in a program and receive program funding. Accordingly, the Department of Finance asserted, because local entities are not required to undertake or continue to participate in the programs, the state, by enacting Government Code section 54952 and Education Code section 35147, has not imposed a "mandate," as that term is used in article XIII B, section 6. It follows, the Department of Finance asserted, that claimants have no right to reimbursement under article XIII B, section 6.

4 The trial court stated: "Two primary issues are raised in this matter. The first issue is whether the 1993 amendments to the Brown Act [that is, enactment of Government Code section 54952] and the 1994 enactment of . . . [Education Code section 35147] mandate a new program or higher level of service. The Court concludes that they do. The second issue is whether a reimbursable state mandate is created only when an advisory council or committee which is subject to the Brown Act is required by state law. The Court concludes that it is not."

In a July 2002 decision, the Court of Appeal rejected the position taken by the Department of Finance. The appellate court concluded that a state mandate is established under article XIII B, section 6, when the local governmental entity has "no reasonable alternative" and "no true choice but to participate" in the program, and incurs the additional costs associated with an increased or higher level of service. ⁵

5 The Court of Appeal also concluded that Government Code section 54952 and Education Code section 35147 establish a "higher level of service" under article XIII B, section 6. We need not and do not review that determination here, and express no view on the validity of that conclusion.

[**1208] We granted review to consider the Court of Appeal's construction of the term "state mandate" as it appears in article XIII B, section 6.

[*735] II.

Article XIII A (adopted by the voters in 1978 as Proposition 13), [HN6]limits the *taxing* authority of state and local government. Article XIII B (adopted by the voters in 1979 as Proposition 4) limits the *spending* authority of state and local government.

Article XIII B, section 6, provides as follows: [HN7]"Whenever the Legislature or any state agency mandates a new program or higher level of service on

any local government, the State shall provide a subvention of funds to reimburse such local government for the costs of such program or increased level of service, except that the Legislature may, but need not, provide such subvention of funds for the following mandates: [P] (a) Legislative mandates requested by the local agency affected; [P] (b) Legislation defining a new crime or changing an existing definition of a crime; or [P] (c) Legislative mandates enacted prior to January 1, 1975, or executive orders or regulations initially implementing legislation enacted prior to January 1, 1975." Article XIII B became operative on July 1, 1980. (*Id.*, § 10.)

We have observed that article XIII B, section 6 [HN8]"recognizes that articles XIII A and XIII B severely restrict the taxing and spending powers of local governments. [Citation.] Its purpose is to preclude the state from shifting financial responsibility for carrying out governmental functions to local agencies, which are 'ill equipped' to assume increased financial responsibilities because of the taxing and spending limitations that articles XIII A and XIII B impose." [***244] (*County of San Diego v. State of California* (1997) 15 Cal.4th 68, 81 [61 Cal. Rptr. 2d 134, 931 P.2d 312] (*County of San Diego*)). We also have observed that a reimbursable state mandate does not arise merely because a local entity finds itself bearing an "additional cost" imposed by state law. (*County of Los Angeles v. State of California* (1987) 43 Cal.3d 46, 55-57 [233 Cal. Rptr. 38, 729 P.2d 202].) The additional expense incurred by a local agency or school district arising as an "incidental impact of a law which applied generally to all . . . entities" is not the "type of expense . . . [that] the voters had in mind when they adopted section 6 of article XIII B." (*Lucia Mar Unified School Dist. v. Honig* (1999) 44 Cal. 3d 830, 835 [244 Cal. Rptr.677, 750 P.3d 318]; see also *County of Fresno v. State of California* (1991) 53 Cal.3d 482, 487 [280 Cal. Rptr. 92, 808 P.2d 235]; *City of Sacramento v. State of California* (1990) 50 Cal.3d 51, 70 [266 Cal. Rptr. 139, 785 P.2d 522] (*City of Sacramento*). °)

6 As we observed in *City of Sacramento, supra*, 50 Cal.3d at page 70, [HN9]"extension of the subvention requirements to costs 'incidentally' imposed on local governments would require the Legislature to assess the fiscal effect on local agencies of each law of general application. Moreover, it would subject much general legislation to the supermajority vote required to pass a companion local-government revenue bill. Each such necessary appropriation would, in turn, cut into the *state's* article XIII B spending limit. ([Art. XIII B.] § 8, subd. (a).)" We reaffirmed that "nothing in the language, history, or apparent purpose of article XIII B suggested such

far-reaching limitations on legitimate state power." (50 Cal.3d at p. 70.)

The focus in many of the prior cases that have addressed article XIII B, section 6, has been upon the meaning of the terms "new program" or [*736] "increased level of service." In the present case, we are concerned with the meaning of state "mandate."

III.

A.(1)

In its briefs, the Department of Finance asserts that article XIII B, section 6, reflects an intent on the part of the drafters and the electorate to limit reimbursement to costs that are forced upon local governments as a matter of legal compulsion. The Commission's briefs take a similar approach, arguing that reimbursement under the constitutional provision requires a showing that a local entity was "ordered or commanded" to incur added costs. At oral argument, both the Department and the Commission retreated somewhat from these positions, and suggested [**1209] that legal compulsion may not be a necessary condition of a finding of a reimbursable state mandate in all circumstances. For the reasons explained below, although we shall analyze the legal compulsion issue, we find it unnecessary in this case to decide whether a finding of legal compulsion is *necessary* in order to establish a right to reimbursement under article XIII B, section 6, because we conclude that even if there are some circumstances in which a state mandate may be found in the absence of legal compulsion, the circumstances presented in this case do not constitute such a mandate.

1.

The Department of Finance and the Commission maintain that the drafters of article XIII B, section 6, borrowed that provision's basic idea and structure--and the gist of its "state mandate" language--from then existing statutes. (See generally *Hayes v. Commission on State Mandates* (1992) 11 Cal.App.4th 1564, 1577-1581 [15 Cal. Rptr. 2d 547].) At the time of [***245] the drafting and enactment of article XIII B, section 6, former Revenue and Taxation Code section 2231, subdivision (a) (currently Gov. Code, § 17561, subd. (a)) provided: [HN10]"The state shall reimburse each local agency for all 'costs mandated by the state,' as defined in Section 2207 . . ." And at that same time, former Revenue and Taxation Code section 2207 (currently Gov. Code, § 17514) provided: " [HN11]"Costs mandated by the state' means any increased costs which a local agency is required to incur as a result of the [*737] following: [P] (a) Any law enacted after January 1, 1973, which mandates a new program or an increased level of service of an existing program"

As the Department of Finance observes, we frequently have looked to ballot materials in order to inform our understanding of the terms of a measure enacted by the electorate. (See, e.g., *County of Fresno v. State of California*, *supra*, 53 Cal.3d 482, 487 [reviewing ballot materials concerning art. XIII B].) The Department stresses that the ballot materials pertaining to article XIII B in two places suggested that a state mandate comprises something that a local government entity is required or forced to do. The Legislative Analyst stated: " 'State mandates' are *requirements imposed* on local governments by legislation or executive orders." (Ballot Pamp., Special Statewide Elec. (Nov. 6, 1979) Prop. 4, p. 16, italics added.) Similarly, the measure's proponents stated that the provision would "not allow the state governments to *force* programs on local governments without the state paying for them." (*Id.*, arguments in favor of Prop. 4, p. 18, capitalization removed, italics added.) The Department concludes that the ballot materials fail to suggest that a reimbursable state mandate might be found to exist outside the context of legal compulsion.

The Department of Finance and the Commission also assert that subsequent judicial construction of former Revenue and Taxation Code sections 2231 and 2207 -upon which, as just discussed, article XIII B, section 6, apparently was based--suggests that a narrow meaning was accorded the term "state mandate" at the time article XIII B, section 6, was enacted. The Department relies primarily upon *City of Merced v. State of California* (1984) 153 Cal. App. 3d 777 [200 Cal. Rptr. 642] (*City of Merced*). Claimants and amici curiae on their behalf assert that *City of Merced* either is distinguishable or was wrongly decided. We proceed to describe *City of Merced* at some length.

In *City of Merced*, *supra*, 153 Cal. App. 3d 777, the city wished either to purchase or to condemn (under its eminent domain authority) certain privately owned real property. If the city were to elect to proceed by eminent domain, it would be required by a then recent enactment (Code of Civ. Proc., § 1263.510) to compensate the property owner for loss of its "business goodwill." The city did elect to proceed by eminent domain, and in April 1980 the Merced Superior Court issued a final order in condemnation, directing the city to pay the property owner for the latter's loss of business goodwill. The city did so and then sought reimbursement from the state, arguing that the new statutory requirement that it compensate for business goodwill amounted to a reimbursable state mandate. (*City of Merced*, at p. 780.)

[**1210] [*738] The constitutional reimbursement provision contained in article XIII B, section 6, did not become operative until July 1, 1980. Accordingly, the City of Merced sought reimbursement under the then existing statutory authority--Revenue and Taxation Code

former sections 2231 and 2207 -which, as noted, apparently had [***246] served as the model for the constitutional provision.

The State Board of Control--which at the time exercised the authority now exercised by the Commission--agreed with the City of Merced and found a reimbursable state mandate. (*City of Merced*, *supra*, 153 Cal. App. 3d 777, 780.) The city's approved claim for reimbursement "was included, along with other similar claims, as a [budget] line item in chapter 1090, Statutes of 1981." (*Ibid.*) The Legislature, however, refused to authorize the reimbursement, and directed the board not to accept, or submit, any future claim for reimbursement for business goodwill costs. (*Ibid.*)

The City of Merced then sought a writ of mandate commanding the Legislature to provide reimbursement. The trial court denied that request, and the Court of Appeal affirmed. The court concluded that, as a matter of law, the city's increased costs flowing from its election to condemn the property did not constitute a reimbursable state mandate. (*City of Merced*, *supra*, 153 Cal. App. 3d 777, 781-783.) The court reasoned: "[W]hether a city or county decides to exercise eminent domain is, essentially, an option of the city or county, rather than a mandate of the state. The fundamental concept is that the city or county is not required to exercise eminent domain. If, however, the power of eminent domain is exercised, then the city will be required to pay for loss of goodwill. Thus, payment for loss of goodwill is not a state-mandated cost." (*Id.*, at p. 783.)

The court in *City of Merced*, *supra*, 153 Cal. App. 3d 777, found its construction of former Revenue and Taxation Code sections 2231 and 2207 as those statutory provisions read at the time they served as the model for article XIII B, section 6 to be confirmed by the subsequent legislative action amending former Revenue and Taxation Code section 2207 (and related section 2207.5). As the court explained: ". . . Senate Bill No. 90 (Russell), 1979-1980 Regular Session . . . added Revenue and Taxation Code section 2207, subdivision (h): [P] ' [HN12]"Costs mandated by the state" means any increased costs which a local agency is required to incur as the result of the following: [P] . . . [P] (h) Any statute enacted after January 1, 1973, or executive order issued after January 1, 1973, which *adds new requirements to an existing optional program or service* and thereby increases the cost of such program or service *if the local agencies have no reasonable alternatives other than to continue the optional program.*" (*City of Merced*, *supra*, 153 Cal. App. 3d 777, 783-784, italics added.)

[*739] (Of relevance here, Senate Bill No. 90 (1979-1980 Reg. Sess.) also added a substantively identical provision to former Revenue and Taxation Code

section 2207.5 -a specialized section that addressed reimbursable state mandates as they related to a school district.)⁷

7 Revised section 2207.5 provided that "[HN13]"costs mandated by the state' means any increased costs which a school district is required to incur as a result of . . . [P] . . . [P] (h) Any statute enacted after January 1, 1973, or executive order issued after January 1, 1978, which adds new requirements to an existing optional program or service and thereby increases the cost of such program or service *if the school districts have no reasonable alternatives other than to continue the optional program.*" (Stats. 1980, ch. 1256, § 5, pp. 4248-4249, eff. July 1, 1981, italics added.)

The court in *City of Merced* continued: "Senate Bill No. 90 became effective on July 1, 1981, [more than a year] after plaintiff incurred the cost of business goodwill for which it seeks reimbursement. Subdivision (h) appears to have been included [***247] in the bill to provide for reimbursement of increased costs in an optional program such as eminent domain when the local agency has no reasonable alternative to eminent domain. The legislative history of Senate Bill No. 90 supports the conclusion that subdivision (h) was added to Revenue and Taxation Code section 2207 to extend state liability rather than to clarify [**1211] existing law." (*City of Merced, supra*, 153 Cal. App. 3d 777, 784, italics added.)

After examining two legislative committee reports,⁸ the court in *City of Merced, supra*, 153 Cal. App. 3d 777, asserted that they "characterize Senate Bill No. 90 as expanding the definition of local reimbursable costs. The Legislative Analyst's Report . . . on Senate Bill No. 90 similarly includes a statement that the bill expands the definition of state-mandated costs. Such characterizations of the purpose of Senate Bill No. 90 are consistent only with the conclusion that, *until that bill was enacted, increased costs incurred in an optional program such as eminent domain were not state mandated.* Thus the cost of business goodwill for which plaintiff was required [by Code of Civil Procedure, section 1263.510] to pay in April 1980, was not a state-mandated cost. It follows that the trial court properly denied the [*740] petition for a writ of mandamus to compel payment of that cost." (*City of Merced, supra*, 153 Cal. App. 3d 777, 785, italics added.)

8 The court in *City of Merced* asserted: "The Report of the Assembly Revenue and Taxation Committee . . . includes a statement: '*SB 90 further defines "mandated costs" in Sections 4 and 5 to include the following: [P] . . . [P] e. Where a*

statute or executive order adds *new requirements to an existing optional program*, which increases costs if the local agency has no reasonable alternative than to continue that optional program.' (Rep., p. 1, italics in original.) [P] Additionally, the Ways and Means Committee's Staff Analysis . . . notes that Senate Bill No. 90: 'Expands the definition of *local* reimbursable costs mandated and paid by the state to include: [P] . . . [P] e. Statutes or executive orders adding *new requirements to an existing optional program*, which increases costs if the local agency has no reasonable alternative than to continue that optional program.' (P. 2, italics in original.)" (*City of Merced, supra*, 153 Cal. App. 3d at p. 784.)

In other words, the court in *City of Merced* concluded that [HN14]former Revenue and Taxation Code sections 2231 and 2207, as they read at the time they served as the model for article XIII B, section 6, contemplated a narrow definition of reimbursable state mandate, and not the subsequently expanded definition of reimbursable state mandate found in the 1981 amendments to the Revenue and Taxation Code. ⁹

9 We need not, and do not, decide whether the court in *City of Merced, supra*, 153 Cal. App. 3d 777, correctly characterized the statutory history of the 1981 amendments to the Revenue and Taxation Code.

A few months after the Court of Appeal filed its opinion in *City of Merced, supra*, 153 Cal. App. 3d 777, the Legislature overhauled the law pertaining to state mandates and reimbursements by amending both the Revenue and Taxation Code and the Government Code. (Stats. 1984, ch. 1459, p. 5113.) The Department of Finance and the Commission assert that two aspects of the legislative overhaul are particularly relevant to the issue we address here.

First, the Department of Finance and the Commission assert that the Legislature enacted a new section of the Government Code--section 17514 -in order to implement the reimbursable-state-mandate directive of article XIII B, section 6. ¹⁰ The [***248] Department and the Commission assert that in enacting that provision, the Legislature readopted the original, *narrow* definition of reimbursable state mandate found in the initial versions of former Revenue and Taxation Code section 2207 -which, the Department and the Commission maintain, existed at the time article XIII B, section 6 was drafted and adopted, and which defined "costs mandated by the state" as those "which a local agency is *required* to incur." (See Stats. 1975, ch. 486, § 1.8, p. 997 [Rev. & Tax. Code, § 2207]; Stats. 1977, ch. 1135, § 5, p. 3646 [Rev. & Tax. Code, § 2207]; Stats. 1984, ch. 1459, § 1,

p. 5114 [Gov. Code, § 17514], italics added.) This same statutory language also had been recently construed at that time in City of Merced, supra, 153 Cal. App. 3d 777, as recognizing [**1212] as a reimbursable state mandate only that imposed when the local entity is legally compelled to engage in the underlying practice or program.

10 Government Code section 17514 reads: [HN15] "Costs mandated by the state" means any increased costs which a local agency or school district is *required* to incur after July 1, 1980, as a result of any statute enacted on or after January 1, 1975, or any executive order implementing any statute enacted on or after January 1, 1975, which mandates a new program or higher level of service of an existing program within the meaning of Section 6 of Article XIII B of the California Constitution." (Italics added.)

[*741] Second, the Department of Finance and the Commission observe, in enacting Government Code section 17514, the Legislature also provided that the use of the broader definition contained in the *amended* versions of Revenue and Taxation Code former sections 2207 and 2207.5 (which became effective July 1, 1981) should be phased out, but that the definition could be used to determine claims that arose prior to 1985. (See Stats. 1984, ch. 1459, § 1, p. 5123; 68 Ops.Cal.Atty.Gen. 224 (1985).)

In other words, the Department of Finance and the Commission assert, [HN16] in the Legislature's 1984 overhaul of the statutory scheme implementing article XIII B, section 6, the Legislature embraced and codified the narrow definition of reimbursable state mandate set out in former Revenue and Taxation Code section 2207 (and construed in City of Merced) as the appropriate test in implementing the constitutional provision. Moreover, the Department and the Commission maintain, the Legislature limited the continued use of the broader definition of a statutorily imposed reimbursable state mandate (set out in the amendments to former Revenue and Taxation Code, sections 2207 and 2207.5, effective in mid-1981) to a small and ever-decreasing number of cases. Five years later, the Legislature repealed former Revenue and Taxation Code sections 2207 and 2207.5 (see Stats. 1989, ch. 589, §§ 7 & 8, p. 1978)--thereby finally discarding the broad definition of statutorily imposed reimbursable state mandate found in subdivision (h) of each of those statutes.

As noted above, the Department of Finance and the Commission assert in their briefs that [HN17] based upon the language of article XIII B, section 6, and the statutory and case law history described above, the drafters and the electorate must have intended that a reimbursable

state mandate arises only if a local entity is "required" or "commanded" --that is, legally compelled--to participate in a program (or to provide a service) that, in turn, leads unavoidably to increasing the costs incurred by the entity. (City of Merced, supra, 153 Cal. App. 3d 777, 783; see also Long Beach Unified School District v. State of California (1990) 225 Cal. App. 3d 155, 174 [275 Cal. Rptr. 449] [construing the term "mandates," for purposes of art. XIII B, § 6, "in the ordinary sense of 'orders' or 'commands' "]; [***249] County of Sonoma v. Commission on State Mandates (2000) 84 Cal.App.4th 1264, 1284 [101 Cal. Rptr. 2d 784] (County of Sonoma) [Legislature's interpretation of art. XIII B, § 6, in Gov. Code, 17514, as limited to "costs which a . . . school district is *required to incur*" is entitled to great weight].) ¹¹

11 Although, as described immediately below (in pt. III.A.2.), the Commission attempts to defend on other grounds its determination below in favor of claimants, the Commission strongly disputes the Court of Appeal's broad interpretation of state mandate as encompassing circumstances in which a local entity is not "ordered or commanded" to perform a task that in turn requires it to incur additional costs. [*742]

2.

Claimants and amici curiae on their behalf assert that even if "legal compulsion" is the governing standard, they meet that test because, they argue, claimants have been legally compelled to incur compliance costs under Government Code section 54952 and Education Code section 35147, subdivision (c). The Commission--but not the Department--supports claimants' proposed application of the legal compulsion test.

In so arguing, claimants focus upon the circumstance that a school district *that participates* in one of the underlying programs listed in Education Code section 35147, subdivision (b), must comply with program requirements, including the statutory notice and agenda obligations, set out in Government Code section 54952 and Education Code section 35147, subdivision (c). Claimants assert: "[O]nce [a district] participates in one of the educational programs at issue, it does not thereafter have the option of performing that activity in a manner that avoids incurring costs mandated by amended Government Code section 54952 and Education Code section 35147."

[**1213] The Department of Finance, relying upon City of Merced, supra, 153 Cal. App. 3d 777, asserts that claimants err by focusing upon a school district's legal obligation to comply with program conditions, rather than focusing upon whether the school district has a legal obligation to participate in the underlying

program to which the conditions attach. As suggested above, the core point articulated by the court in *City of Merced* is that [HN18]activities undertaken at the option or discretion of a local government entity (that is, actions undertaken without any legal compulsion or threat of penalty for nonparticipation) do not trigger a state mandate and hence do not require reimbursement of funds--even if the local entity is obliged to incur costs as a result of its discretionary decision to participate in a particular program or practice. (*Id.*, at p. 783.) Claimants concede that *City of Merced* conflicts with their contrary view, but they assert that the opinion is distinguishable and ask us to decline to follow, or extend, that decision.

Claimants stress--as we acknowledged above--that *City of Merced*, *supra*, 153 Cal. App. 3d 777, was decided in the context of an eminent domain proceeding, and that the appellate court was engaged in construing the *statutory* reimbursement scheme rather than *article XIII B, section 6*. Claimants also assert that although the City of Merced had discretion whether or [*743] not to exercise its power of eminent domain, and was under no compulsion to do so, in the present case "school site council and advisory committee meetings cannot be held in a manner that avoids application of [the requirements of] Government Code section 54952 and Education Code section 35147."

The points relied upon by claimants neither call into doubt nor persuasively distinguish [***250] *City of Merced*, *supra*, 153 Cal. App. 3d 777 [200 Cal. Rptr. 642]. The truer analogy between that case and the present case is this: In *City of Merced*, the city was under no legal compulsion to resort to eminent domain--but when it elected to employ that means of acquiring property, its obligation to compensate for lost business goodwill was not a reimbursable state mandate, because the city was not required to employ eminent domain in the first place. Here as well, [HN19]if a school district elects to participate in or continue participation in any underlying *voluntary* education-related funded program, the district's obligation to comply with the notice and agenda requirements related to that program does not constitute a reimbursable state mandate.¹²

12 The Commission further attempts to distinguish *City of Merced*, *supra*, 153 Cal. App. 3d 777, by observing that the eminent domain statute at issue in that case made clear, in the *same* statute that imposed the requirement that an entity employing eminent domain also compensate for lost business goodwill, the discretionary nature of the decision whether to acquire property by purchase or instead by eminent domain. The Commission argues that no such express statement concerning local government discretion is set out

in the statutes here at issue. As we explain *post*, part III.A.3.a., however, the underlying program statutes at issue in this case (with one possible exception--see *post*, pt. III.A.3.b.) make it clear that school districts retain the discretion not to participate in any given underlying program--and, as we explain *post*, footnote 22, the circumstance that the notice and agenda requirements of these elective programs were enacted *after* claimants first chose to participate in the programs does not make claimants' choice to continue to participate in those programs any less voluntary.

We therefore reject claimants' assertion that merely because they participate in one or more of the various education-related funded programs here at issue, the costs they incurred in complying with program conditions have been legally compelled and hence constitute reimbursable state mandates. We instead agree with the Department of Finance, and with *City of Merced*, *supra*, 153 Cal. App. 3d 777, that [HN20]the proper focus under a legal compulsion inquiry is upon the nature of claimants' participation in the underlying programs themselves.

3.

Turning to that question--and without deciding whether a finding of legal compulsion to participate in an underlying program is *necessary* in order to establish a right to reimbursement under article XIII B, section 6--we [*744] conclude, upon review of the [**1214] applicable statutes, that claimants are, and have been, free from legal compulsion as to eight of the nine underlying funded programs here at issue. As to one of the funded programs, we shall assume, for purposes of analysis, that a district's participation in the program is in fact legally compelled.

a.

It appears to be conceded that, as to most of the nine education-related funded programs at issue, school districts are not legally compelled to participate in those programs. For example, [HN21]the American Indian Early Childhood Education Program (Ed. Code, § 52060 et seq.), which implements projects designed to develop and test educational models to increase reading and math competence of students in preschool and early grades, states that school districts "may apply" to be included in the project (*id.*, § 52063) and, if accepted to participate, will receive program funding (*id.*, § 52062). Education Code section 52065 in turn states that each school district that receives funds provided by section 52062 "shall establish a districtwide [***251] American Indian advisory committee for American Indian early childhood education." Plainly, a school district's initial and continued participation in the program is voluntary, and the

obligation to establish or maintain an advisory committee arises only if the district elects to participate in, or continue to participate in, the program. Although the language of most of the other implementing statutes varies, they generally follow this same approach, with the same result: [HN22]Participation in most of the programs listed in Education Code section 35147 is voluntary, and the obligation to establish or maintain a site council or advisory committee arises only if a district elects to participate in, or continue to participate in, the particular program.

Although *claimants* do not assert that they have been legally compelled to participate in *any* underlying program for which they have sought reimbursement for their compliance costs--and, indeed, their briefing suggests the opposite¹³--the Commission and amicus curiae Education Legal Alliance assert that the school improvement program (a "sunsetting," but still funded, program that disburses funds for all aspects of school operation and performance; Ed. Code, § 52012 et seq., §§ 62000, 62000.2, subd. (b), 62002) legally compels school districts to establish site councils without regard to whether the district participates in the underlying funded program to which the site councils apply. The Commission and amici curiae rely upon Education Code section 52010, which states in relevant part: [HN23]"*With the exception of [*745] subdivisions (a) and (b) of Section 52011, the provisions of this chapter shall apply only to school districts and schools which participate in school improvement programs authorized by this article.*" (Italics added.) Section 52011, subdivision (b), in turn provides that "EACH SCHOOL DISTRICT SHALL: [P] . . . [P] (b) *Adopt policies to ensure that prior to scheduled phase-in, a school site council as described in Section 52012 is established at each school site to consider whether or not it wishes the local school to participate in the school improvement program.*" (Italics added.)

13 Claimants at one point characterize themselves as having "*decided* to participate in the programs listed in Education Code section 35147." (Italics in added.)

The Commission and amici curiae read these provisions as requiring all schools and school districts throughout the state to "establish a school site council even if the school [or district] does not participate in the school improvement program. " We disagree. [HN24]Reasonably construed, the statutes require only that a school district adopt "policies" (i.e., a *plan*) "to ensure" that *if* the district elects to participate in the School Improvement Program, a school site council *will*, "prior to phase-in" of the districtwide program, exist at each school, so that each individual school will be able to decide whether it wishes to participate in the district's

program. In other words, the statutes require that districts adopt policies or plans for school site councils--but the statutes do not require that districts adopt councils themselves unless the district first elects to participate in the underlying program.¹⁴

14 Amicus curiae California School Boards Association suggests that provisions of two other programs--the School-Based Program Coordination Act (Ed. Code, § 52850 et seq.) and the School-Based Pupil Motivation and Maintenance Program and Dropout Recovery Act (Ed. Code, § 54720 et seq.)--require that site councils be established, whether or not the school district participates in the underlying program. In both instances, the statutes make it clear that [HN25]"prior to a school beginning to develop a [program] plan," the district first must establish a local school site council that in turn will "consider whether or not it wishes the local school to participate in the" program. Amicus curiae misreads the statutes; in both instances, the statutes make it clear that these requirements apply "only to school districts and schools *which participate in*" the respective programs (see Ed. Code, §§ 52850, 54722, italics added), and each statutory scheme provides that school site councils "shall be established at each school *which participates in*" the program. (*Id.*, §§ 52852, 54722, italics added.)

[**1215] [***252] We therefore conclude that, as to eight of the nine funded programs, the statutory notice and agenda obligations exist and apply to claimants only because they have *elected* to participate in, or continue to participate in, the various underlying funded programs--and hence to incur notice and agenda costs that are a condition of program participation. Accordingly, no reimbursable state mandate exists with regard to any of these programs based upon a theory that such costs were incurred under legal compulsion.¹⁵

15 In this case, we have no occasion to decide whether a reimbursable state mandate would arise in a situation in which a local entity voluntarily has elected to participate in a program but also has committed to continue its participation for a specified number of years, and the state imposes additional requirements at a time when the local entity is not free to end its participation. [*746]

b.

The Commission and amicus curiae Education Legal Alliance also assert that the Chacon-Moscone Bilingual-Bicultural Education Act of 1976 (another "sunsetting," but still funded, program; Ed. Code, § 52160 et

seq., 62000, 62000.2, subd. (d), 62002) legally compels school districts to establish advisory committees, regardless whether the district participates in the underlying funded program to which the advisory committees apply. The Commission and amicus curiae rely upon Education Code section 52176's command that each school district with more than 50 pupils of limited English language proficiency, and each school within that district with more than 20 pupils of such proficiency, "*shall* establish a districtwide [or individual school site] advisory committee on bilingual education." (*Id.*, subds. (a) & (b), italics added.)

The Department of Finance responds that because the Chacon-Moscone Bilingual-Bicultural Education program sunsetted in 1987, school districts that have participated in that program since that date have done so not as a matter of legal compulsion, but by their own choice made when they applied for and were granted such program funds.

We note some support for the Department's view. Education Code section 64000 et seq., which governs the funding application process, includes the "sunsetted" Chacon-Moscone Bilingual-Bicultural Education program as one of many optional programs for which a district *may* seek funding. (*Id.*, subd. (a)(4).) But, the Commission argues, another statutory provision suggests that Chacon-Moscone Bilingual-Bicultural Education program advisory committees are mandatory in any event. The Commission notes that section 62002.5 provides that advisory committees "which are in existence pursuant to statutes or regulations as of January 1, 1979, *shall continue* subsequent to termination of funding for the programs sunsetted by this chapter." (Italics added.)

We need not, and do not, determine whether claimants have been legally compelled to participate in the Chacon-Moscone Bilingual-Bicultural Education program, or to maintain a related advisory committee. Even if we assume for purposes of analysis that claimants have been legally compelled to participate in the Chacon-Moscone Bilingual-Bicultural Education [***253] program, we nevertheless conclude that under the circumstances here presented, [*747] the costs necessarily incurred in complying with the notice and agenda requirements under that funded program do not entitle claimants to obtain reimbursement under article XIII B, section 6, because the state, in providing program funds to claimants, already has provided funds that may be used to cover the necessary notice and agenda-related expenses.

[**1216] We note that, based upon the evaluations made by the Commission, the costs associated with the notice and agenda requirements at issue in this case appear rather modest. ¹⁶ And, even more significantly,

[HN26] we have found nothing to suggest that a school district is precluded from using a portion of the funds obtained from the state for the implementation of the underlying funded program to pay the associated notice and agenda costs. Indeed, the Chacon-Moscone Bilingual-Bicultural Education program explicitly authorizes school districts to do so. (See Ed. Code, § 52168, subd. (b) ["School districts may claim funds appropriated for purposes of this article for expenditures in, but not limited to, the following categories: [P] . . . [P] (6) Reasonable district administrative expenses"]) We believe it is plain that the costs of complying with program-related notice and agenda requirements qualify as "[r]easonable district administrative expenses." Therefore, even if we assume for purposes of analysis that school districts have been legally compelled to participate in the funded Chacon-Moscone Bilingual-Bicultural Education program, we view the state's provision of program funding as satisfying, in advance, any reimbursement requirement.

16 Costs of compliance with the notice and agenda requirements have been estimated as amounting to approximately \$ 90 per meeting for the 1994-1995 fiscal year, and incrementally larger amounts in subsequent years, up to \$ 106 per meeting for the 2000-2001 fiscal year, for each committee or advisory council. (See State Controller, State Mandated Costs Claiming Instrns. No. 2001-08, School Site Councils and Brown Act Reform (June 4, 2001), Parameters and Guidelines (Mar. 29, 2001) [and implementing forms].) Under these formulae, a district that has 10 schools, each with one council or advisory committee that meets 10 times a year, would be forced to incur approximately \$ 9,000 to \$ 10,000 in costs to comply with statutory notice and agenda requirements. Presumably, such costs are minimal relative to the funds allocated by the state to the school district under these programs. (We hereby grant the Commission's request that we take judicial notice of these and related documents, and of the Commission's December 13, 2001 Statewide Cost Estimate for reimbursement to school districts of notice and agenda-related expenses.)

[HN27] It is conceivable, with regard to some programs, that increased compliance costs imposed by the state might become so great--or funded program grants might become so diminished--that funded program benefits would not cover the compliance costs, or that expenditure of granted program funds on administrative costs might violate a spending limitation set out in applicable regulations or statutes. In those circumstances, a compulsory program participant likely would be able to

establish the existence of a reimbursable [*748] state mandate under article XIII B, section 6. But that certainly is not the situation faced by claimants in this case. At most, claimants, by being compelled to incur notice and agenda compliance costs--and pay those costs from program funds--have suffered a relatively minor diminution of program funds available to them for substantive program purposes. The circumstance that the program funds claimants may have wished to use exclusively for substantive program activities are [***254] thereby reduced, does not in itself transform the related costs into a reimbursable state mandate. (See County of Sonoma, supra, 84 Cal.App.4th 1264 [art. XIII B, § 6, provides no right of reimbursement when the state *reduces* revenue granted to local government].) Nor is there any reason to believe that use of granted program funds to pay the relatively modest costs here at issue would violate any applicable spending limitation. ¹⁷

17 With regard to the Chacon-Moscone Bilingual-Bicultural Education program, claimants assert that "[s]tate regulations place a ceiling on the amount of program funds that may be expended for indirect costs at three percent of the district's funding" (5 Cal. Code Regs., §§ 3900(g) & 3947(a).) As the Department observes, applicable statutory provisions appear to set the limit for such expenses for the *same* program at no more than 15 percent of granted program funds. (See Ed. Code, §§ 63000, subd. (d), 63001.) Even assuming, for purposes of analysis, that the regulation, and not the statute, applies with regard to this program, it seems clear that the notice and agenda costs here at issue fall far below 3 percent of granted program funds. Indeed, claimants concede: "The notice and agenda costs at issue are administrative costs that appear to fall within [the regulatory] provisions."

We therefore conclude that because claimants are and have been free to use funds [**1217] from the Chacon-Moscone Bilingual-Bicultural Education program to pay required program expenses (including the notice and agenda costs here at issue), claimants are not entitled under article XIII B, section 6, to reimbursement from the state for such expenses.

B.(2a)

Claimants contend that even if they have not been *legally compelled* to participate in most of the programs listed in Education Code section 35147, subdivision (b), and hence have not been *legally required* to incur the related notice and agenda costs, they nevertheless have been compelled as a practical matter to participate in those programs and hence to incur such costs. Claimants assert that school districts have "had no true option or

choice but to participate in these [underlying education-related] programs. *This absence of a reasonable alternative to participation is a de facto mandate.*" As explained below, on the facts of this case, we disagree.

[*749] 1.

Claimants and amici curiae supporting them, relying upon this court's broad interpretation of the federal mandate provision of article XIII B, section 9, ¹⁸ in City of Sacramento, supra, 50 Cal.3d 51, 70-76, assert that we should recognize and endorse such a broader construction of section 6 of that article--a construction that does not limit the definition of a reimbursable state mandate to circumstances of *legal* compulsion.

18 That provision states: [HN28]" 'Appropriations subject to limitation' for each entity of government do not include: [P] . . . [P] (b) Appropriations required to comply with mandates of the courts or the federal government which, without discretion, require an expenditure for additional services or which unavoidably make the provision of existing services more costly."

In City of Sacramento, supra, 50 Cal.3d 51, we considered whether various federal "incentives" for states to extend unemployment insurance coverage to all public employees constituted a reimbursable [***255] state mandate under article XIII B, section 6, or a federal mandate within the meaning of article XIII B, section 9.

We concluded in City of Sacramento, supra, 50 Cal.3d 51, that there was no reimbursable state mandate under article XIII B, section 6, because the implementing state legislation did not impose any new or increased "program or service," or "unique" requirement, upon local entities. (City of Sacramento, at pp. 66-70.)

Turning to the question whether the state legislation constituted a "federal mandate" under article XIII B, section 9, we acknowledged in City of Sacramento, supra, 50 Cal.3d 51, that there was no legal compulsion requiring the states to participate in the federal plan to extend unemployment insurance coverage to all public employees. We nevertheless found that the costs related to the program constituted a federal mandate, for purposes of article XIII B, section 9. Our opinion concluded that because the financial consequences to the state and its residents of failing to participate in the federal plan were so onerous and punitive--we characterized the consequences as amounting to "certain and severe federal penalties" including "double . . . taxation" and other "draconian" measures (City of Sacramento, at p. 74)--as a practical matter, for purposes of article XIII B, section 9, the state was mandated to participate in the federal plan to extend unemployment insurance coverage.

[*750] Claimants, echoing the reasoning of the Court of Appeal below, assert that because this court in *City of Sacramento, supra*, 50 Cal.3d 51, broadly construed the term "federal mandate"--to include not only the situation in which a state or local entity is itself legally compelled to participate in a program and thereby incur costs, but also the situation in which the governmental entity's participation in the federal program is the coerced result of severe penalties that would be imposed for noncompliance--consistency requires that we afford a similarly broad construction to the concept of a state mandate. In other words, claimants argue, the word "mandate," used in [**1218] two separate sections of article XIII B, should not be given two different meanings.

The Department and the Commission disagree. They assert that, to begin with, a finding of a *federal mandate* under section 9 of article XIII B has a wholly different purpose and effect as compared with a finding of a *state mandate* under section 6 of that article. The Department and the Commission argue that although a finding of a state mandate may result in reimbursement from the state to a local entity for costs incurred by the local entity, expenditures made in order to comply with a federal mandate are excluded from the constitutional spending cap imposed by article XIII B upon any affected state or local entity, because such expenditures are not considered to be an exercise of the state or local authority's discretionary spending authority.

Moreover, the Department and the Commission assert, our conclusion in *City of Sacramento, supra*, 50 Cal.3d 51, regarding the proper construction of article XIII B, section 9, relied upon "crucial facts" (*City of Sacramento*, at p. 73) that do not pertain to the wholly separate issue that we face here--the proper interpretation of article XIII B, section 6. They observe that, as we explained in *City of Sacramento*, when article XIII B was enacted: "First, the power of the federal government to impose its direct regulatory will on state and local agencies was *then* sharply in doubt. ¹⁹ Second, in conformity with [***256] this principle, the vast bulk of cost-producing federal influence on government at the state and local levels was by inducement or incentive rather than direct [legal] compulsion. That remains so to this day. [P] Thus, if article XIII B's reference to 'federal mandates' were limited to strict legal compulsion by the federal government, it would have been largely superfluous. [HN29]It is well settled that 'constitutional . . . enactments must receive a liberal, practical common-sense construction which will meet changed conditions and the growing needs of the people. [Citations.] . . .' ([*751] *Amador Valley Joint Union High Sch. Dist. v. State Bd. of Equalization* (1978) 22 Cal.3d 208, 245 [149 Cal. Rptr. 239, 583 P.2d 1281].) While '[a]

constitutional amendment should be construed in accordance with the natural and ordinary meaning of its words[,] [citation] [, t]he literal language of enactments may be disregarded to avoid absurd results and to fulfill the apparent intent of the framers. [Citations.]' (*Ibid.*)" (*City of Sacramento, supra*, 50 Cal.3d 51, 73, fns. omitted.)

19 See discussion in *City of Sacramento, supra*, 50 Cal.3d at pages 71-73.

The Department of Finance and the Commission argue that these factors have no bearing upon the proper interpretation of what constitutes a state mandate under article XIII B, section 6(3). They assert that, unlike the federal government, which for a time was severely restricted in its ability to directly impose legal requirements upon the states (see *City of Sacramento, supra*, 50 Cal.3d 51, 71-73), the State of California has suffered no such restriction, vis-a-vis local government entities, except in matters involving purely local affairs. ²⁰ (2b) Accordingly, the Department and the Commission argue, in contrast with the situation we faced when construing article XIII B, section 9, we would not render superfluous the restriction in section 6 of that article, were we narrowly to interpret its term "mandate" to include only programs in which local entities are legally compelled to participate.

20 [HN30]Unlike the federal-state relationship, sovereignty is not an issue between state and local governments. Claimant school districts are agencies of the state, and not separate or distinct political entities. (See *California Teachers Assn. v. Huff* (1992) 5 Cal.App.4th 1513, 1524 [7 Cal. Rptr. 2d 699].)

We find it unnecessary to resolve whether our reasoning in *City of Sacramento, supra*, 50 Cal.3d 51, applies with regard to the proper interpretation of the term "state mandate" in section 6 of article XIII B. Even assuming, for purposes of analysis only, that our construction of the term "federal mandate" in *City of Sacramento, supra*, 50 Cal.3d 51, applies equally in [**1219] the context of article XIII B, section 6, for reasons set out below we conclude that, contrary to the situation we described in that case, claimants here have not faced "certain and severe . . . penalties" such as "double . . . taxation" and other "draconian" consequences (*City of Sacramento, supra*, 50 Cal.3d at p. 74), and hence have not been "mandated," under article XIII B, section 6 to incur increased costs.

2.

(4) As we observed in *County of San Diego, supra*, 15 Cal.4th 68, 81, article XIII B, section 6's

[HN31]"purpose is to preclude the state from shifting [*752] financial responsibility for carrying out governmental functions to local agencies, which are 'ill equipped' to assume increased financial responsibilities."(2c) In light of that purpose, we do not [***257] foreclose the possibility that a reimbursable state mandate under article XIII B, section 6, properly might be found in some circumstances in which a local entity is not legally compelled to participate in a program that requires it to expend additional funds.

As noted, claimants argue that they have had "no true option or choice" but to participate in the various programs here at issue, and hence to incur the various costs of compliance, and that "the absence of a reasonable alternative to participation is a de facto [reimbursable state] mandate." In the same vein, amici curiae on behalf of claimants emphasize that as a practical matter, many school districts depend upon categorical funding for various programs. Amicus curiae California State Association of Counties asks us to interpret article XIII B, section 6, as providing state reimbursement for programs that are "*indirectly* state mandated." (Italics added.) Amicus curiae Education Legal Alliance goes so far as to assert that unless we recognize a right to reimbursement for costs such as those here at issue, "California schools could be forced to [forgo] participation in important categorical programs that supply necessary financial and educational support to those segments of the student population that need the most assistance. Alternatively, California schools could be forced to cut other student programs or services to fund these procedural requirements."

The record in the case before us does not support claimants' characterization of the circumstances in which they have been forced to operate, and provides no basis for resolving the accuracy of amici curiae's warnings and predictions. Indeed, we are skeptical of the assertions of claimants and amici curiae.

As observed *ante* (fn. 16), the costs associated with the notice and agenda requirements at issue in this case appear rather modest. Moreover, the parties have not cited, nor have we found, anything in the governing statutes or regulations, or in the record, to suggest that a school district is precluded from using a portion of the program funds obtained from the state to pay associated notice and agenda costs. As noted above, under the Chacon-Moscone Bilingual-Bicultural Education program (Ed. Code, § 52168, subd. (b)(6)), such authority has been granted. As to three of the remaining programs here at issue, [HN32]such authority also is explicit, or at least strongly implied. (See 20 U.S.C. § 7425(d) [federal Indian Education Program]; [*753] Ed. Code, §§ 63000, subds. (c), (g), 63001 [school improvement program and McAteer Act].) We do not perceive any reason

why the Legislature would contemplate a different rule for any of the other programs here at issue, and claimants have advanced no such reason. ²¹

21 Nor is there any reason to believe that expenditure of granted program funds on the notice and agenda costs at issue would violate any spending limitation set out in applicable regulations or statutes. Claimants assert that with regard to the school improvement programs, state regulations (Cal. Code Regs., tit. 5, §§ 3900, subd. (b), 3947 subd. (a)) limit spending on administrative expenses to no more than 3 percent of granted program funds. As the Department observes, [HN33]applicable statutory provisions appear to set the limit for such expenses for the *same* program at no more than 15 percent of granted program funds. (See Ed. Code, §§ 63000, subd. (c), 63001.) But even assuming, for purposes of analysis, that the regulations apply with regard to this program, claimants have made no showing that the notice and agenda costs here at issue exceed 3 percent of granted program funds. As noted *ante*, at page 732, statewide program grants for the school improvement programs alone amounted to approximately \$ 394 million in fiscal year 1998-1999. According to the Commission, statewide notice and agenda costs for *all nine* of the programs here at issue amounted to only \$ 5.2 million during that same period. (See Com. on State Mandates, Adopted Statewide Cost Estimate, Dec. 13, 2001, p. 1.)

Similarly, claimants have not demonstrated that the notice and agenda costs here at issue exceed the administrative costs spending limitations set for the federal Indian Education Program (see 20 U.S.C. § 7425(d) [5 percent limitation]) and for the McAteer Act's "compensatory education programs" (see Ed. Code, §§ 63000, subds. (g), 63001 [15 percent limitation].)

[**1220] [***258] As to each of the optional funded programs here at issue, school districts are, and have been, free to decide whether to (i) continue to participate and receive program funding, even though the school district also must incur program-related costs associated with the notice and agenda requirements, or (ii) decline to participate in the funded program. [HN34]Presumably, a school district will continue to participate only if it determines that the best interests of the district and its students are served by participation--in other words, if, *on balance*, the funded program, even with strings attached, is deemed beneficial. And, presumably, a school district will decline participation if and

when it determines that the costs of program compliance outweigh the funding benefits.

In essence, claimants assert that their participation in the education-related programs here at issue is so beneficial that, as a practical matter, they feel they must participate in the programs, accept program funds, and--by virtue of Government Code section 54952 and Education Code section 35147 -incur expenses necessary to comply with the procedural conditions imposed on program participants. [HN35] Although it is completely understandable that a participant in a funded program may be disappointed when additional requirements (with their attendant costs) are imposed as a condition of [*754] continued participation in the program, just as such a participant would be disappointed if the total amount of the annual funds provided for the program were reduced by legislative or gubernatorial action, the circumstance that the Legislature has determined that the requirements of an ongoing elective program should be modified does not render a local entity's decision whether to continue its participation in the modified program any less voluntary.²² (See County of Sonoma, supra, 84 Cal.App.4th 1264 [Art. XIII B, § 6, provides no right of reimbursement when the state *reduces* revenue granted to local government].) We reject the suggestion, implicit in claimants' argument, that the state cannot legally provide school districts with funds for voluntary programs, and then effectively reduce that funding grant by requiring school districts to incur expenses in order to meet conditions of program participation.

22 Claimants assert that the notice and agenda requirements were imposed for the first time by Government Code section 54952 and Education Code section 35147 in the mid-1990's--"after the school districts decided to participate in the programs listed in Education Code section 35147." Even if we assume, contrary to the opposing po-

sition of the Department of Finance, that claimants first were subjected to notice and agenda requirements only after their respective school districts elected to participate in the programs, a school district's *continued* participation in the programs would be no less voluntary. As noted above, school districts have been, and remain, legally free to decline to continue to participate in the eight programs here at issue.

In sum, the circumstances presented in the case before us do not constitute the type of nonlegal compulsion that reasonably could constitute, in claimants' phrasing, a "de facto" reimbursable state mandate. Contrary to the situation that we described in City of Sacramento, 50 Cal.3d 51 [266 Cal. Rptr. 139, 785 P.2d 522], [HN36] [***259] a claimant that elects to discontinue participation in one of the programs here at issue does not face "certain and severe . . . penalties" such as "double . . . taxation" or other "draconian" consequences (*id.*, at p. 74), but simply must adjust to the withdrawal of grant money along with the lifting of program obligations. Such circumstances do not constitute a reimbursable [**1221] state mandate for purposes of article XIII B, section 6.

IV

For the reasons stated, we conclude that claimants have failed to establish that they are entitled to reimbursement under article XIII B, section 6 of the California Constitution, with regard to any of the program costs here at issue.

[*755] The judgment of the Court of Appeal is reversed.

Kennard, J., Baxter, J., Werdegar, J., Chin, J., Brown, J., and Moreno, J., concurred.

No. C009519

COURT OF APPEAL OF CALIFORNIA, THIRD APPELLATE DISTRICT

11 Cal. App. 4th 1564; 15 Cal. Rptr. 2d 547; 1992 Cal. App. LEXIS 1498; 93 Cal. Daily Op. Service 17; 93 Daily Journal DAR 18

December 30, 1992, Decided

SUBSEQUENT HISTORY: [***1] Review Denied April 1, 1993, Reported at 1993 Cal. LEXIS 1988. Lucas, C.J., Kennard, J., and Arabian, J., are of the opinion the petition should be granted.

PRIOR HISTORY: Superior Court of Sacramento County, No. 352795, Eugene T. Gualco, Judge.

DISPOSITION: The judgment is affirmed.

CASE SUMMARY:

PROCEDURAL POSTURE: Appellant Riverside Schools sought review from a decision of the Superior Court of Sacramento County (California), which set aside an administrative decision that all local special education costs were state mandated and subject to state reimbursement and, denied appellant's writ of mandate that would have ordered respondent controller to issue a warrant in payment of its claim.

OVERVIEW: Appellant Riverside Schools filed claims seeking state reimbursement for alleged state-mandated costs incurred in connection with special education programs. After lengthy proceedings, the administrative agency decided that all local special education costs were state mandated and subject to reimbursement. On appeal, the lower court issued a writ of administrative mandate

directing the agency to reconsider the matter and denying appellant's petition for a writ of mandate that would have directed issuance of a warrant in payment of its claim. The court affirmed the lower court decision and clarified the criteria to be applied by the administrative agency. The court concluded that, all financial assistance or funds under the Rehabilitation Education Act, 29 U.S.C.S. § 794 (1973) or, under the Education of the Handicapped Act, 20 U.S.C.S. § 1400 et seq., were federally mandated and thus, appellant was not entitled to reimbursement from the state for these types of programs.

OUTCOME: The court affirmed the judgment of the lower court, which set aside an administrative decision that all local special education costs were state mandated and subject to state reimbursement because the special education costs were federally mandated and thus, appellant Riverside Schools was not entitled to reimbursement from the state for these types of programs.

CORE TERMS: subvention, educational, reimbursement, mandated, special education, Handicapped Act, federal mandate, handicapped children, local agencies, school district's, handicapped, levels of service, local government's, local school districts, state-mandated, federal government, spending, accommodate, taxing, state mandates, funding, local agency, new programs, appropriation, Rehabilitation Act, state subvention, entity, fiscal year, Handicapped Act, public education

*Education Law > Departments of Education > State
Departments of Education > Authority
Education Law > Departments of Education > U.S.
Department of Education > Authority*

[HN1]Essentially, the constitutional rule of state subvention provides that the state is required to pay for any new governmental programs, or for higher levels of service under existing programs, that it imposes upon local governmental agencies.

Education Law > Students > Right to Education

[HN2]States typically do purport to guarantee all of their children the opportunity for a basic education. In fact, in this state basic education is regarded as a fundamental All basic educational programs are essentially affirmative action activities in the sense that educational agencies are required to evaluate and accommodate the educational needs of the children in their districts.

*Education Law > Departments of Education > U.S.
Department of Education > Authority
Education Law > Discrimination > Individuals With
Disabilities Education Act > Coverage
Governments > Legislation > Statutory Remedies &
Rights*

[HN3]Since the 1975 amendment, the Education of the Handicapped Act requires recipient states to demonstrate a policy that assures all handicapped children the right to a free appropriate education, 20 U.S.C.S. § 1412(1). The act is not merely a funding statute; rather, it establishes an enforceable substantive right to a free appropriate public education in recipient states.

*Civil Rights Law > Protection of Disabled Persons >
Rehabilitation Act > Remedies
Constitutional Law > Supremacy Clause > General
Overview
Governments > State & Territorial Governments > Re-
lations With Governments*

[HN4]Federal financial assistance is not the only incentive for a state to comply with the Education of the Handicapped Act, 20 U.S.C.S. § 1400 et seq. Congress intends the act to serve as a means by which state and local educational agencies can fulfill their obligations under the equal protection and due process provisions of the Constitution and under § 504 of the Rehabilitation Act of 1973, 29 U.S.C.S. § 794. Accordingly, where it is appli-

cable the act supersedes claims under the Civil Rights Act, 42 U.S.C.S. § 1983 and § 504 of the Rehabilitation Act of 1973, and the administrative remedies provided by the act constitute the exclusive remedy of handicapped children and their parents or other representatives.

*Administrative Law > Judicial Review > General Over-
view*

*Constitutional Law > Supremacy Clause > General
Overview*

*Education Law > Discrimination > Individuals With
Disabilities Education Act > Enforcement*

[HN5]As a result of the exclusive nature of the Education of the Handicapped Act, 20 U.S.C.S. § 1415(e)(2), dissatisfied parties in recipient states must exhaust their administrative remedies under the act before resorting to judicial intervention. This gives local agencies the first opportunity and the primary authority to determine appropriate placement and to resolve disputes. If a party is dissatisfied with the final result of the administrative process then he or she is entitled to seek judicial review in a state or federal court. In such a proceeding the court independently reviews the evidence but its role is restricted to that of review of the local decision and the court is not free to substitute its view of sound educational policy for that of the local authority.

*Constitutional Law > State Constitutional Operation
Education Law > Students > Right to Education*

[HN6]The constitutional provision requires state subvention when the Legislature or any State agency mandates a new program or higher level of service on local agencies. Cal. Const., art. XIII B, § 6.

*Constitutional Law > State Constitutional Operation
Governments > Legislation > Interpretation*

[HN7]As a general rule and unless the context clearly requires otherwise, reviewing court must assume that the meaning of a term or phrase is consistent throughout the entire act or constitutional article of which it is a part.

SUMMARY:

CALIFORNIA OFFICIAL REPORTS SUMMARY

Two school districts filed claims with the State Board of Control for state reimbursement of alleged state-mandated costs incurred in connection with special education programs. The board determined that the costs were state mandated and subject to reimbursement by the state. In a mandamus proceeding, the trial court entered a judgment by which it issued a writ of administrative

mandate directing the Commission on State Mandates (the successor to the board) to set aside the board's administrative decision and to reconsider the matter in light of an intervening decision by the California Supreme Court, and by which it denied the petition of one of the school districts for a writ of mandate that would have directed the State Controller to issue a warrant in payment of the district's claim. (Superior Court of Sacramento County, No. 352795, Eugene T. Gualco, Judge.)

The Court of Appeal affirmed. It held that the 1975 amendments to the federal Education of the Handicapped Act (20 U.S.C. § 1401 et seq.) constituted a federal mandate with respect to the state. However, even though the state had no real choice in deciding whether to comply with the act, the act did not necessarily require the state to impose all of the costs of implementation upon local school districts. The court held that to the extent the state implemented the act by freely choosing to impose new programs or higher levels of service upon local school districts, the costs of such programs or higher levels of service are state-mandated and subject to subvention under Cal. Const., art. XIII B, § 6. Thus, on remand to the commission, the court held, the commission was required to focus on the costs incurred by local school districts and on whether those costs were imposed by federal mandate or by the state's voluntary choice in its implementation of the federal program. (Opinion by Sparks, Acting P. J., with Davis and Scotland, JJ., concurring.)

HEADNOTES

CALIFORNIA OFFICIAL REPORTS HEADNOTES

Classified to California Digest of Official Reports

(1) State of California § 11 -- Fiscal Matters -- Reimbursement to Local Governments -- State-mandated Costs: Words, Phrases, and Maxims -- Subvention. --"Subvention" generally means a grant of financial aid or assistance, or a subsidy. The constitutional rule of state subvention provides that the state is required to pay for any new governmental programs, or for higher levels of service under existing programs, that it imposes upon local governmental agencies. This does not mean that the state is required to reimburse local agencies for any incidental cost that may result from the enactment of a state law; rather, the subvention requirement is restricted to governmental services that the local agency is required by state law to provide to its residents. The subvention requirement is intended to prevent the state from transferring the costs of government from itself to local agencies. Reimbursement is required when the state freely chooses to impose on local agencies any peculiarly go-

vernmental cost which they were not previously required to absorb.

(2) Schools § 4 -- School Districts -- Relationship to State. --A school district's relationship to the state is different from that of local governmental entities such as cities, counties, and special districts. Education and the operation of the public school system are matters of statewide rather than local or municipal concern. Local school districts are agencies of the state and have been described as quasi-municipal corporations. They are not distinct and independent bodies politic. The Legislature's power over the public school system is exclusive, plenary, absolute, entire, and comprehensive, subject only to constitutional constraints. The Legislature has the power to create, abolish, divide, merge, or alter the boundaries of school districts. The state is the beneficial owner of all school properties, and local districts hold title as trustee for the state. School moneys belong to the state, and the apportionment of funds to a school district does not give the district a proprietary interest in the funds. While the Legislature has chosen to encourage local responsibility for control of public education through local school districts, that is a matter of legislative choice rather than constitutional compulsion, and the authority that the Legislature has given to local districts remains subject to the ultimate and nondelegable responsibility of the Legislature.

(3) Property Taxes § 7.8 -- Real Property Tax Limitation -- Exemptions and Special Taxes -- Federally Mandated Costs. --Pursuant to Rev. & Tax. Code, § 2271 (local agency may levy rate in addition to maximum property tax rate to pay costs mandated by federal government that are not funded by federal or state government), costs mandated by the federal government are exempt from an agency's taxing and spending limits.

(4) State of California § 11 -- Fiscal Matters -- Reimbursement to Local Governments -- State-mandated Costs -- Costs Incurred Before Effective Date of Constitutional Provision. --Since Cal. Const., art. XIII B, requiring subvention for state mandates enacted after Jan. 1, 1975, had an effective date of July 1, 1980, a local agency may seek subvention for costs imposed by legislation after Jan. 1, 1975, but reimbursement is limited to costs incurred after July 1, 1980. Reimbursement for costs incurred before July 1, 1980, must be obtained, if at all, under controlling statutory law.

(5) Schools § 53 -- Parents and Students -- Right or Duty to Attend -- Handicapped Children -- Federal Rehabilitation Act -- Obligations Imposed on Districts. --Section 504 of the federal Rehabilitation Act of 1973 (29 U.S.C. § 794) does not only obligate local

school districts to prevent handicapped children from being excluded from school. States typically purport to guarantee all of their children the opportunity for a basic education. In California, basic education is regarded as a fundamental right. All basic educational programs are essentially affirmative action activities in the sense that educational agencies are required to evaluate and accommodate the educational needs of the children in their districts. Section 504 does not permit local agencies to accommodate the educational needs of some children while ignoring the needs of others due to their handicapped condition. The statute imposes an obligation upon local school districts to take affirmative steps to accommodate the needs of handicapped children.

(6) Schools § 53 -- Parents and Students -- Right or Duty to Attend -- Handicapped Children -- Education of the Handicapped Act. --The federal Education of the Handicapped Act (20 U.S.C. § 1401 et seq.), which since its 1975 amendment has required recipient states to demonstrate a policy that assures all handicapped children the right to a free appropriate education, is not merely a funding statute; rather, it establishes an enforceable substantive right to a free appropriate public education in recipient states. Congress intended the act to establish a basic floor of opportunity that would bring into compliance all school districts with the constitutional right to equal protection with respect to handicapped children. It is also apparent that Congress intended to achieve nationwide application.

(7) Civil Rights § 6 -- Education -- Handicapped -- Scope of Federal Statute. --Congress intended the Education of the Handicapped Act (20 U.S.C. § 1401 et seq.) to serve as a means by which state and local educational agencies could fulfill their obligations under the equal protection and due process provisions of the Constitution and under section 504 of the Rehabilitation Act of 1973 (29 U.S.C. § 794). Accordingly, where it is applicable, the act supersedes claims under the Civil Rights Act (42 U.S.C. § 1983) and section 504, and the administrative remedies provided by the act constitute the exclusive remedy of handicapped children and their parents or other representatives. As a result of the exclusive nature of the Education of the Handicapped Act, dissatisfied parties in recipient states must exhaust their administrative remedies under the act before resorting to judicial intervention.

(8a) (8b) State of California § 11 -- Fiscal Matters -- Reimbursement to Local Governments -- State-mandated Costs -- Special Education: Schools § 4 -- School Districts; Financing; Funds -- Special Education Costs -- Reimbursement by State. --The 1975 amendments to the federal Education of the Han-

dicapped Act (20 U.S.C. § 1401 et seq.) constituted a federal mandate with respect to the state. However, even though the state had no real choice in deciding whether to comply with the act, the act did not necessarily require the state to impose all of the costs of implementation upon local school districts. To the extent the state implemented the act by freely choosing to impose new programs or higher levels of service upon local school districts, the costs of such programs or higher levels of service are state mandated and subject to subvention under Cal. Const., art. XIII B, § 6. Thus, on remand of a proceeding by school districts to the Commission on State Mandates for consideration of whether special education programs constituted new programs or higher levels of service mandated by the state entitling the districts to reimbursement, the commission was required to focus on the costs incurred by local school districts and whether those costs were imposed by federal mandate or by the state's voluntary choice in its implementation of the federal program.

(9) State of California § 11 -- Fiscal Matters -- Reimbursement to Local Governments -- Federally Mandated Costs. --The constitutional subvention provision (Cal. Const., art. XIII B, § 6) and the statutory provisions which preceded it do not expressly say that the state is not required to provide a subvention for costs imposed by a federal mandate. Rather, that conclusion follows from the plain language of the subvention provisions themselves. The constitutional provision requires state subvention when "the Legislature or any State agency mandates a new program or higher level of service" on local agencies. Likewise, the earlier statutory provisions required subvention for new programs or higher levels of service mandated by legislative act or executive regulation. When the federal government imposes costs on local agencies, those costs are not mandated by the state and thus would not require a state subvention. Instead, such costs are exempt from local agencies' taxing and spending limitations. This should be true even though the state has adopted an implementing statute or regulation pursuant to the federal mandate, so long as the state had no "true choice" in the manner of implementation of the federal mandate.

(10) Statutes § 28 -- Construction -- Language -- Consistency of Meaning Throughout Statute. --As a general rule and unless the context clearly requires otherwise, it must be assumed that the meaning of a term or phrase is consistent throughout the entire act or constitutional article of which it is a part.

(11) State of California § 11 -- Fiscal Matters -- Reimbursement to Local Governments -- Federally Mandated Costs -- Subvention. --Subvention prin-

principles are part of a more comprehensive political scheme. The basic purpose of the scheme as a whole was to limit the taxing and spending powers of government. The taxing and spending powers of local agencies were to be "frozen" at existing levels with adjustments only for inflation and population growth. Since local agencies are subject to having costs imposed upon them by other governmental entities, the scheme provides relief in that event. If the costs are imposed by the federal government or the courts, then the costs are not included in the local government's taxing and spending limitations. If the costs are imposed by the state, then the state must provide a subvention to reimburse the local agency. Nothing in the scheme suggests that the concept of a federal mandate should have different meanings depending upon whether one is considering subvention or taxing and spending limitations. Thus, the criteria set forth in a California Supreme Court case concerning whether costs mandated by the federal government are exempt from an agency's taxing and spending limits are applicable when subvention is the issue.

(12) State of California § 11 -- Fiscal Matters -- Reimbursement to Local Governments -- State-mandated Costs -- Special Education -- Applicable Criteria in Determining Whether Subvention Required. --In a proceeding for a writ of mandate to direct the Commission on State Mandates to set aside an administrative decision by the State Board of Control (the commission's predecessor), in which the board found that all local special education costs were state mandated and thus subject to state reimbursement, the trial court did not err in determining that the board failed to consider the issues under the appropriate criteria as set forth in a California Supreme Court case concerning whether costs mandated by the federal government are exempt from an agency's taxing and spending limits. The board relied upon the "cooperative federalism" nature of the Education of the Handicapped Act (20 U.S.C. § 1401 et seq.) without any consideration of whether the act left the state any actual choice in the matter. It also relied on litigation involving another state. However, under the criteria set forth in the Supreme Court's case, the litigation in the other state did not support the board's decision but in fact strongly supported a contrary result.

(13) Courts § 34 -- Decisions and Orders -- Prospective and Retroactive Decisions -- Opinion Elucidating Existing Law. --In a California Supreme Court case concerning whether costs mandated by the federal government are exempt from an agency's taxing and spending limits, the court elucidated and enforced existing law. Under such circumstances, the rule of retrospective operation controls. Thus, in a proceeding for a writ of mandate to direct the Commission on State Mandates to

set aside an administrative decision by the State Board of Control (the commission's predecessor), in which the board found that all local special education costs were state mandated and thus subject to state reimbursement, the trial court correctly applied the Supreme Court decision to the litigation pending before it.

OPINION BY: SPARKS, Acting P. J.

OPINION

[*1570] [**550] This appeal involves a decade-long battle over claims for subvention by two county superintendents of schools [***2] for reimbursement for mandated special education programs. Section 6 of article XIII B of the California Constitution directs, with exceptions not relevant here, that "[w]henever the Legislature or any State agency mandates a new program or higher level of service on any local government, the State shall provide a subvention of funds to reimburse such local government for the costs of such program or increased level of service, ..." The issue on appeal is whether the special education programs in question constituted new programs or higher levels of service mandated by the state entitling the school districts to reimbursement under section 6 of article XIII B of the California Constitution and related statutes for the cost of implementing them or whether these programs were instead mandated by the federal government for which no reimbursement is due.

The Santa Barbara County Superintendent of Schools and the Riverside County Superintendent of Schools each filed claims with the Board of Control for state reimbursement for alleged state-mandated costs incurred in connection with special education programs. After a lengthy administrative process, the Board of Control rendered a decision [***3] finding that all local special education costs were state mandated and subject to state reimbursement. That decision was then successfully challenged in the Sacramento County Superior Court. The superior court entered a judgment by which it: (1) issued a writ of administrative mandate (Code Civ. Proc., § 1094.5), directing the Commission on State Mandates (the successor to the Board of [*1571] Control) to set aside the administrative decision and to reconsider the matter in light of the California Supreme Court's intervening decision in City of Sacramento v. State of California (1990) 50 Cal.3d 51 [266 Cal.Rptr. 139, 785 P.2d 522]; and (2) denied the Riverside County Superintendent of School's petition for a writ of mandate (Code Civ. Proc., § 1085), which would have directed the State Controller to issue a warrant in payment of the claim. The Riverside County Superintendent of Public Schools appeals. We shall clarify the criteria to be applied by the Commission on State Mandates on remand and affirm the judgment.

I. THE PARTIES

This action was commenced in July 1987 by Jesse R. Huff, then the Director of the [***4] California Department of Finance. Huff petitioned for a writ of administrative mandate to set aside the administrative decision which found all the special education costs to be state mandated. On appeal Huff appears as a respondent urging that we affirm the judgment.

The Commission on State Mandates (the Commission) is the administrative agency which now has jurisdiction over local agency claims for reimbursement for state-mandated costs. (Gov. Code, § 17525.) In this respect the Commission is the successor to the Board of Control. The Board of Control rendered the administrative decision which is at issue here. Since an appropriation for payment of these claims was not included in a local government claims bill before January 1, 1985, administrative jurisdiction over the claims has been transferred from the Board of Control to the Commission. (Gov. Code, § 17630.) The Commission is the named defendant in the petition for a writ of administrative mandate. In the trial court and on appeal the Commission has appeared as the agency having administrative jurisdiction over the claims, but has not expressed a position on the merits of the litigation.

[**551] The Santa Barbara County Superintendent [***5] of Schools (hereafter Santa Barbara) is a

claimant for state reimbursement of special education costs incurred in the 1979-1980 fiscal year. Santa Barbara is a real party in interest in the proceeding for administrative mandate. Santa Barbara has not appealed from the judgment of the superior court and, although a nominal respondent on appeal, has not filed a brief in this court.

The Riverside County Superintendent of Schools (hereafter Riverside) represents a consortium of school districts which joined together to provide special education programs to handicapped students. Riverside seeks reimbursement for special education costs incurred in the 1980-1981 fiscal year. [*1572] Riverside is a real party in interest in the proceeding for writ of administrative mandate. It filed a cross-petition for a writ of mandate directing the Controller to pay its claim. Riverside is the appellant in this appeal.

The State of California and the State Treasurer are named cross-defendants in Riverside's cross-petition for a writ of mandate. They joined with Huff in this litigation. The State Controller is the officer charged with drawing warrants for the payment of moneys from the State [***6] Treasury upon a lawful appropriation. (Cal. Const., art. XVI, § 7.) The State Controller is a named defendant in Riverside's petition for a writ of mandate. In the trial court and on appeal the State Controller expresses no opinion on the merits of Riverside's reimbursement claim, but asserts that the courts lack authority to compel him to issue a warrant for payment of the claim in the absence of an appropriation for payment of the claim.

In addition to the briefing by the parties on appeal, we have permitted a joint amici curiae brief to be filed in support of Riverside by the Monterey County Office of Education, the Monterey County Office of Education Special Education Local Planning Area, and 21 local school districts.

II. FACTUAL AND PROCEDURAL BACKGROUND

The Legislature has provided an administrative remedy for the resolution of local agency claims for reimbursement for state mandates. In County of Contra Costa v. State of California (1986) 177 Cal.App.3d 62 [222 Cal.Rptr. 750], at pages 71 and 72, we described these procedures as follows (with footnotes deleted): "Section 2250 [Revenue & Taxation Code] and those following [***7] it provide a hearing procedure for the determination of claims by local governments. The State Board of Control is required to hear and determine such claims. (§ 2250.) For purposes of such hearings the board consists of the members of the Board of Control provided for in part 4 (commencing with § 13900) of division 3 of title 2 of the Government Code, together

with two local government officials appointed by the Governor. (§ 2251.) The board was required to adopt procedures for receiving and hearing such claims. (§ 2252.) The first claim filed with respect to a statute or regulation is considered a 'test claim' or a 'claim of first impression.' (§ 2218, subd. (a).) The procedure requires an evidentiary hearing where the claimant, the Department of Finance, and any affected department or agency can present evidence. (§ 2252.) If the board determines that costs are mandated, then it must adopt parameters and guidelines for the reimbursement of such claims. (§ 2253.2.) The claimant or the state is entitled to commence an action in administrative mandate pursuant to Code of Civil Procedure section 1094.5 to set aside a decision of the board on the grounds that the board's decision [***8] is not supported by substantial evidence. (§ 2253.5.)

[*1573] "At least twice each calendar year the board is required to report to the Legislature on the number of mandates it has found and the estimated statewide costs of these mandates. (§ 2255, subd. (a).) In addition to the estimate of the statewide costs for each mandate, the report must also contain the reasons for recommending reimbursement. (§ 2255, subd. (a).) Immediately upon receipt of the report a local government claims bill shall be introduced in the Legislature which, when introduced, must contain an appropriation sufficient to pay for the estimated costs of the mandates. [**552] (§ 2255, subd. (a).) In the event the Legislature deletes funding for a mandate from the local government claims bill, then it may take one of the following courses of action: (1) include a finding that the legislation or regulation does not contain a mandate; (2) include a finding that the mandate is not reimbursable; (3) find that a regulation contains a mandate and direct that the Office of Administrative Law repeal the regulation; (4) include a finding that the legislation or regulation contains a reimbursable mandate and direct that the [***9] legislation or regulation not be enforced against local entities until funds become available; (5) include a finding that the Legislature cannot determine whether there is a mandate and direct that the legislation or regulation shall remain in effect and be enforceable unless a court determines that the legislation or regulation contains a reimbursable mandate in which case the effectiveness of the legislation or regulation shall be suspended and it shall not be enforced against a local entity until funding becomes available; or (6) include a finding that the Legislature cannot determine whether there is a reimbursable mandate and that the legislation or regulation shall be suspended and shall not be enforced against a local entity until a court determines whether there is a reimbursable mandate. (§ 2255, subd. (b).) If the Legislature deletes funding for a mandate from a local government claims bill but does not follow one of the above courses of ac-

tion or if a local entity believes that the action is not consistent with article XIII B of the Constitution, then the local entity may commence a declaratory relief action in the Superior Court of the County of Sacramento to declare [***10] the mandate void and enjoin its enforcement. (§ 2255, subd. (c).)

"Effective January 1, 1985, the Legislature has established a new commission to consider and determine claims based upon state mandates. This is known as the Commission on State Mandates and it consists of the Controller, the Treasurer, the Director of Finance, the Director of the Office of Planning and Research, and a public member with experience in public finance, appointed by the Governor and approved by the Senate. (Gov. Code, § 17525.) 'Costs mandated by the state' are defined as 'any increased costs which a local agency or school district is required to incur after July 1, 1980, as a result of any statute enacted after January 1, 1975, or any executive order implementing any statute enacted on or after January 1, 1975, which [*1574] mandates a new program or higher level of service of an existing program within the meaning of Section 6 of Article XIII B of the California Constitution.' (Gov. Code, § 17514.) The procedures before the Commission are similar to those which were followed before the Board of Control. (Gov. Code, § 17500 et seq.) Any claims which had not been included in a local government claims [***11] bill prior to January 1, 1985, were to be transferred to and considered by the commission. (Gov. Code, § 17630; [Rev. & Tax. Code.] § 2239.)"

On October 31, 1980, Santa Barbara filed a test claim with the Board of Control seeking reimbursement for costs incurred in the 1979-1980 fiscal year in connection with the provision of special education services as required by Statutes 1977, chapter 1247, and Statutes 1980, chapter 797. Santa Barbara asserted that these acts should be considered an ongoing requirement of increased levels of service.

Santa Barbara's initial claim was based upon the "mandate contained in the two bills specified above [which require] school districts and county offices to provide full and formal due process procedures and hearings to pupils and parents regarding the special education assessment, placement and the appropriate education of the child." Santa Barbara asserted that state requirements exceeded those of federal law as reflected in section 504 of the Rehabilitation Act of 1973 (29 U.S.C. § 794).¹ Santa [**553] Barbara's initial claim was for \$ 10,500 in state-mandated costs for the 1979-1980 fiscal year.

1 Section 794 of title 29 of the United States Code will of necessity play an important part in our discussion of the issues presented in this case.

That provision was enacted as section 504 of the Rehabilitation Act of 1973. (Pub.L. No. 93-112, tit. V, § 504 (Sept. 26, 1973) 87 Stat. 394.) It has been amended several times. (Pub.L. No. 95-602, tit. I, § 119, 122(d)(2) (Nov. 6, 1978) 92 Stat. 2982, 2987 [Rehabilitation, Comprehensive Services, and Developmental Disabilities Act of 1978]; Pub.L. No. 99-506, tit. I, § 103(d)(2)(B), tit. X, § 1002(e)(4) (Oct. 21, 1986) 100 Stat. 1810, 1844; Pub.L. No. 100-259, § 4 (Mar. 22, 1988) 102 Stat. 29; Pub.L. No. 100-630, tit. II, § 206(d) (Nov. 7, 1988) 102 Stat. 3312.) The decisional authorities universally refer to the statute as "section 504." We will adhere to this nomenclature and subsequent references to section 504 will refer to title 29, United States Code, section 794.

[***12] During the administrative proceedings Santa Barbara amended its claim to reflect the following state-mandated activities alleged to be in excess of federal requirements: (1) the extension of eligibility to children younger and older than required by federal law; (2) the establishment of procedures to search for and identify children with special needs; (3) assessment and evaluation; (4) the preparation of "Individual Education Plans" (IEP's); (5) due process hearings in placement determinations; (6) substitute teachers; and (7) staff development programs. Santa Barbara was claiming reimbursement in excess of \$ 520,000 for the cost of these services during the 1979- 1980 fiscal year.

[*1575] Also, during the administrative proceedings the focus of federally mandated requirements shifted from section 504 of the Rehabilitation Act to federal Public Law No. 94-142, which amended the Education of the Handicapped Act. (20 U.S.C. § 1401 et seq.)²

2 The Education of the Handicapped Act was enacted in 1970. (Pub.L. No. 91-230, tit. VI (Apr. 13, 1970) 84 Stat. 175.) It has been amended many times. The amendment of primary interest here was enacted as the Education for All Handicapped Children Act of 1975. (Pub.L. No. 94-142 (Nov. 29, 1975) 89 Stat. 774.) The 1975 legislation significantly amended the Education of the Handicapped Act, but did not change its short title. The Education of the Handicapped Act has now been renamed the Individuals with Disabilities Education Act. (Pub.L. No. 101-476, tit. IX, § 901(b)(21) (Oct. 30, 1990) 104 Stat. 1143; Pub.L. No. 101-476, tit. IX, § 901b; Pub.L. No. 102-119, § 25(b) (Oct. 7, 1991) 105 Stat. 607.) Since at all times relevant here the federal act was known as the Education of the Handicapped Act, we will adhere to that nomenclature.

[***13] The Board of Control adopted a decision denying Santa Barbara's claim. The board concluded that the Education of the Handicapped Act resulted in costs mandated by the federal government, that state special education requirements exceed those of federal law, but that "the resulting mandate is not reimbursable because the Legislature already provides funding for all Special Education Services through an appropriation in the annual Budget Act."

Santa Barbara sought judicial review by petition for a writ of administrative mandate. The superior court found the administrative record and the Board of Control's findings to be inadequate. Judgment was rendered requiring the Board of Control to set aside its decision and to rehear the matter to establish a proper record, including findings. That judgment was not appealed.

On October 30, 1981, Riverside filed a test claim for reimbursement of \$ 474,477 in special education costs incurred in the 1980-1981 fiscal year. Riverside alleged that the costs were state mandated by chapter 797 of Statutes 1980. The basis of Riverside's claim was Education Code section 56760, a part of the state special education funding formula which, according [***14] to Riverside, "mandates a 10%% cap on ratio of students served by special education and within that 10%% mandates the ratio of students to be served by certain services." Riverside explained that chapter 797 of Statutes 1980 was enacted as urgency legislation effective July 28, 1980, and that at that time it was already "locked into" providing special education services to more than 13 percent of its students in accordance with prior state law and funding formulae.³

3 The 1980 legislation required that a local agency adopt an annual budget plan for special education services. (Ed. Code, § 56200.) Education Code section 56760 provided that in the local budget plan the ratio of students to be served should not exceed 10 percent of total enrollment. However, those proportions could be waived for undue hardship by the Superintendent of Public Instruction. (Ed. Code, § 56760, 56761.) In addition, the 1980 legislation included provisions for a gradual transition to the new requirements. (Ed. Code, § 56195 et seq.) The transitional provisions included a guarantee of state funding for 1980-1981 at prior student levels with an inflationary adjustment of 9 percent. (Ed. Code, § 56195.8.) The record indicates that Riverside applied for a waiver of the requirements of Education Code section 56760, but that the waiver request was denied due to a shortage of state funding. It also appears that Riverside did not receive all of the 109 percent funding guarantee under

Education Code section 56195.8. In light of the current posture of this appeal we need not and do not consider whether the failure of the state to appropriate sufficient funds to satisfy its obligations under the 1980 legislation can be addressed in a proceeding for the reimbursement of state-mandated costs or must be addressed in some other manner.

[**15] [**554] The Riverside claim, like Santa Barbara's, evolved over time with increases in the amount of reimbursement sought. Eventually the Board of [*1576] Control denied Riverside's claim for the same reasons the Santa Barbara claim was denied. Riverside sought review by petition for a writ of administrative mandate. In its decision the superior court accepted the board's conclusions that the Education of the Handicapped Act constitutes a federal mandate and that state requirements exceed those of the federal mandate. However, the court disagreed with the board that any appropriation in the state act necessarily satisfies the state's subvention obligation. The court concluded that the Board of Control had failed to consider whether the state had fully reimbursed local districts for the state-mandated costs which were in excess of the federal mandate, and the matter was remanded for consideration of that question. That judgment was not appealed.

On return to the Board of Control, the Santa Barbara claim and the Riverside claim were consolidated. The Board of Control adopted a decision holding that all special education costs under Statutes 1977, chapter 1247, and Statutes 1980, chapter [**16] 797, are state-mandated costs subject to subvention. The board reasoned that the federal Education of the Handicapped Act is a discretionary program and that section 504 of the Rehabilitation Act does not require school districts to implement any programs in response to federal law, and therefore special education programs are optional in the absence of a state mandate.

The claimants were directed to draft, and the Board of Control adopted, parameters and guidelines for reimbursement of special education costs. The board submitted a report to the Legislature estimating that the total statewide cost of reimbursement for the 1980-1981 through 1985-1986 fiscal years would be in excess of \$ 2 billion. Riverside's claim for reimbursement for the 1980-1981 fiscal year was now in excess of \$ 7 million. Proposed legislation which would have appropriated funds for reimbursement of special education costs during the 1980-1981 through 1985- 1986 fiscal years failed to pass in the Legislature. (Sen. Bill No. 1082 (1985-1986 Reg. Sess.)) A separate bill which would have appropriated funds to reimburse Riverside [*1577] for its 1980-1981 claim also failed to pass. (Sen. Bill No. 238 [**17] (1987-1988 Reg. Sess.))

At this point Huff, as Director of the Department of Finance, brought an action in administrative mandate seeking to set aside the decision of the Board of Control. Riverside cross-petitioned for a writ of mandate directing the state, the Controller and the Treasurer to issue a warrant in payment of its claim for the 1980-1981 fiscal year.

The superior court concluded that the Board of Control did not apply the appropriate standard in determining whether any portion of local special education costs are incurred pursuant to a federal mandate. The court found that the definition of a federal mandate set forth by the *Supreme Court in City of Sacramento v. State of California, supra*, 50 Cal.3d 51, "marked a departure from the narrower 'no discretion' test" of this court's earlier decision in *City of Sacramento v. State of California* (1984) 156 Cal.App.3d 182 [203 Cal.Rptr. 258]. It further found that the standard set forth in the high court's decision in *City of Sacramento* "is to be applied retroactively." Accordingly, the superior court issued a [**18] peremptory writ of mandate directing the Commission on State Mandates to set aside [**555] the decision of the Board of Control, to reconsider the claims in light of the decision in *City of Sacramento v. State of California, supra*, 50 Cal.3d 51, and "to ascertain whether certain costs arising from Chapter 797/80 and Chapter 1247/77 are federally mandated, and if so, the extent, if any, to which the state-mandated costs exceed the federal mandate." Riverside's cross-petition for a writ of mandate was denied. This appeal followed.

III. PRINCIPLES OF SUBVENTION

(1) "Subvention" generally means a grant of financial aid or assistance, or a subsidy. (See Webster's Third New Internat. Dict. (1971) p. 2281.) As used in connection with state-mandated costs, the basic legal requirements of subvention can be easily stated; it is in the application of the rule that difficulties arise.

[HN1]Essentially, the constitutional rule of state subvention provides that the state is required to pay for any new governmental programs, or for higher levels of service under existing programs, that it imposes upon local governmental agencies. (*County of Los Angeles v. State of California* (1987) 43 Cal.3d 46, 56 [233 Cal.Rptr. 38, 729 P.2d 202].) [**19] This does not mean that the state is required to reimburse local agencies for any incidental cost that may result from the enactment of a state law; rather, the subvention requirement is restricted to governmental services which the local agency is required by [*1578] state law to provide to its residents. (*City of Sacramento v. State of California, supra*, 50 Cal.3d at p. 70.) The subvention requirement is intended to prevent the state from transferring the costs of government from itself to local agen-

cies. (*Id.* at p. 68.) Reimbursement is required when the state "freely chooses to impose on local agencies any peculiarly 'governmental' cost which they were not previously required to absorb." (*Id.* at p. 70, italics in original.)

The requirement of subvention for state-mandated costs had its genesis in the "Property Tax Relief Act of 1972" which is also known as "SB 90" (Senate Bill No. 90). (*City of Sacramento v. State of California, supra*, 156 Cal.App.3d at p. 188.) That act established limitations upon the power of local governments to levy taxes and concomitantly prevented [***20] the state from imposing the cost of new programs or higher levels of service upon local governments. (*Ibid.*) The Legislature declared: "It is the intent in establishing the tax rate limits in this chapter to establish limits that will be flexible enough to allow local governments to continue to provide existing programs, that will be firm enough to insure that the property tax relief provided by the Legislature will be long lasting and that will afford the voters in each local government jurisdiction a more active role in the fiscal affairs of such jurisdictions." (Rev. & Tax. Code, former § 2162, Stats. 1972, ch. 1406, § 14.7, p. 2961.)⁴ The act provided that the state would pay each county, city and county, city, and special district the sums which were sufficient to cover the total cost of new state-mandated costs. (See Rev. & Tax. Code, former § 2164.3, Stats. 1972, ch. 1406, § 14.7, pp. 2962-2963.) New state-mandated costs would arise from legislative action or executive regulation after January 1, 1973, which mandated a new program or higher level of service under an existing mandated program. (*Ibid.*)

4 In addition to requiring subventions for new state programs and higher levels of service, Senate Bill No. 90 required the state to reimburse local governments for revenues lost by the repeal or reduction of property taxes on certain classes of property. In this connection the Legislature said: "It is the purpose of this part to provide property tax relief to the citizens of this state, as undue reliance on the property tax to finance various functions of government has resulted in serious detriment to one segment of the taxpaying public. The subventions from the State General Fund required under this part will serve to partially equalize tax burdens among all citizens, and the state as a whole will benefit." (*Gov. Code, § 16101*, Stats. 1972, ch. 1406, § 5, p. 2953.)

[***21] (2) [**556] (See fn. 5.) Senate Bill No. 90 did not specifically include school districts in the group of agencies entitled to reimbursement for state-mandated costs.⁵ (Rev. & Tax. Code, former § 2164.3, Stats. 1972, ch. 1406, § 14.7, pp. 2962-2963.) In

fact, at that time methods of financing education in this state were [*1579] undergoing fundamental reformation as the result of the litigation in *Serrano v. Priest* (1971) 5 Cal.3d 584 [96 Cal.Rptr. 601, 487 P.2d 1241, 41 A.L.R.3d 1187]. At the time of the *Serrano* decision local property taxes were the primary source of school revenue. (*Id.* at p. 592.) In *Serrano*, the California Supreme Court held that education is a fundamental interest, that wealth is a suspect classification, and that an educational system which produces disparities of opportunity based upon district wealth would violate principles of equal protection. (*Id.* at pp. 614-615, 619.) A major portion of Senate Bill No. 90 constituted new formulae for state and local contributions to education in a legislative response to the decision in *Serrano*. (Stats. 1972, ch. 1406, § 1.5-2.74, pp. 2931-2953. See *Serrano v. Priest* (1976) 18 Cal.3d 728, 736-737 [135 Cal.Rptr. 345, 557 P.2d 929].) [***22] ⁶

5 A school district's relationship to the state is different from that of local governmental entities such as cities, counties, and special districts. Education and the operation of the public school system are matters of statewide rather than local or municipal concern. (*California Teachers Assn. v. Huff* (1992) 5 Cal.App.4th 1513, 1524 [7 Cal.Rptr.2d 699].) Local school districts are agencies of the state and have been described as quasi-municipal corporations. (*Ibid.*) They are not distinct and independent bodies politic. (*Ibid.*) The Legislature's power over the public school system has been described as exclusive, plenary, absolute, entire, and comprehensive, subject only to constitutional constraints. (*Ibid.*) The Legislature has the power to create, abolish, divide, merge, or alter the boundaries of school districts. (*Id.* at p. 1525.) The state is the beneficial owner of all school properties and local districts hold title as trustee for the state. (*Ibid.*) School moneys belong to the state and the apportionment of funds to a school district does not give the district a proprietary interest in the funds. (*Ibid.*) While the Legislature has chosen to encourage local responsibility for control of public education through local school districts, that is a matter of legislative choice rather than constitutional compulsion and the authority that the Legislature has given to local districts remains subject to the ultimate and nondelegable responsibility of the Legislature. (*Id.* at pp. 1523-1524.)

[***23]

6 After the first *Serrano* decision, the United States Supreme Court held that equal protection does not require dollar-for-dollar equality between school districts. (*San Antonio School*

District v. Rodriguez (1973) 411 U.S. 1, 33-34 48-56, 61-62 [36 L.Ed.2d 16, 42-43, 51-56, 59-60, 93 S.Ct. 1278].) In the second *Serrano* decision, the California Supreme Court adhered to the first *Serrano* decision on independent state grounds. (*Serrano v. Priest, supra*, 18 Cal.3d at pp. 761-766.) The court concluded that Senate Bill No. 90 and Assembly Bill No. 1267, enacted the following year (Stats. 1973, ch. 208, p. 529 et seq.), did not satisfy equal protection principles. (*Serrano v. Priest, supra*, 18 Cal.3d at pp. 776-777.) Additional complications in educational financing arose as the result of the enactment of article XIII A of the California Constitution at the June 1978 Primary Election (Proposition 13), which limited the taxes which can be imposed on real property and forced the state to assume greater responsibility for financing education (see Ed. Code, § 41060), and the enactment of Propositions 98 and 111 in 1988 and 1990, respectively, which provide formulae for minimum state funding for education. (See generally *California Teachers Assn. v. Huff, supra*, 5 Cal.App.4th 1513.)

[***24] The provisions of Senate Bill No. 90 were amended and refined in legislation enacted the following year. (Stats. 1973, ch. 358.) Revenue and Taxation Code section 2231, subdivision (a), was enacted to require the state to reimburse local agencies, including school districts, for the full costs of new programs or increased levels of service mandated by the Legislature after January 1, 1973. Local agencies except school districts were also entitled to reimbursement for costs mandated by executive regulation after January 1, 1973. (Rev. & Tax. Code, § 2231, subd. (d)), added by Stats. 1973, ch. 358, § 3, p. 783 [*1580] and repealed by Stats. 1986, ch. 879, § 23, p. 3045.) In subsequent years legislation was enacted to entitle school districts to subvention for state-mandated costs imposed by legislative acts after January 1, 1973, or by executive regulation after January 1, 1978. (Rev. & Tax. Code, former § 2207.5, added by Stats. 1977, ch. 1135, § 5, p. 3646 and amended by Stats. 1980, ch. 1256, § 5, pp. 4248-4249.)

[**557] In the 1973 legislation, Revenue and Taxation Code section 2271 was enacted to provide, among other things: "A local agency may levy, or have levied on its behalf, [***25] a rate in addition to the maximum property tax rate established pursuant to this chapter (commencing with Section 2201) to pay costs mandated by the federal government or costs mandated by the courts or costs mandated by initiative enactment, which are not funded by federal or state government." (3) In this respect costs mandated by the federal government are exempt from an agency's taxing and spending limits.

(*City of Sacramento v. State of California, supra*, 50 Cal.3d at p. 71, fn. 17.)

At the November 6, 1979, General Election, the voters added article XIII B to the state Constitution by enacting Proposition 4. That article imposes spending limits on the state and all local governments. For purposes of article XIII B the term "local government" includes school districts. (Cal. Const., art. XIII B, § 8, subd. (d).) The measure accomplishes its purpose by limiting a governmental entity's annual appropriations to the prior year's appropriations limit adjusted for changes in the cost of living and population growth, except as otherwise provided in the article. (Cal. Const., art. XIII B, § 1.)⁷ The appropriations subject [***26] to limitation do not include, among other things: "Appropriations required to comply with mandates of the courts or the federal government which, without discretion, require an expenditure for additional services or which unavoidably make the provision of existing services more costly." (Cal. Const., art. XIII B, § 9, subd. (b).)

7 As it was originally enacted, article XIII B required that all governmental entities return revenues in excess of their appropriations limits to the taxpayers through tax rate or fee schedule revisions. In Proposition 98, adopted at the November 1988 General Election, article XIII B was amended to provide that half of state excess revenues would be transferred to the state school fund for the support of school districts and community college districts. (See Cal. Const., art. XVI, § 8.5; *California Teachers Assn. v. Huff, supra*, 5 Cal.App.4th 1513.)

Like its statutory predecessor, the constitutional initiative measure includes a provision [***27] designed "to preclude the state from shifting to local agencies the financial responsibility for providing public services in view of these restrictions on the taxing and spending power of the local entities." (*Lucia Mar Unified School Dist. v. Honig* (1988) 44 Cal.3d 830, 835-836 [244 Cal.Rptr. 677, 750 P.2d 318].) Section 6 of article XIII B of the state Constitution provides: "Whenever the Legislature or any State agency mandates a new program or higher level of service on any local government, the [*1581] State shall provide a subvention of funds to reimburse such local government for the costs of such program or increased level of service, except that the Legislature may, but need not, provide such subvention of funds for the following mandates: [P] (a) Legislative mandates requested by the local agency affected; [P] (b) Legislation defining a new crime or changing an existing definition of a crime; or [P] (c) Legislative mandates enacted prior to January 1, 1975, or executive orders or

regulations initially implementing legislation enacted prior to January 1, 1975."

Although article XIII B of the state Constitution [***28] requires subvention for state mandates enacted after January 1, 1975, the article had an effective date of July 1, 1980. (Cal. Const., art. XIII B, § 10.) (4) Accordingly, under the constitutional provision, a local agency may seek subvention for costs imposed by legislation after January 1, 1975, but reimbursement is limited to costs incurred after July 1, 1980. (*City of Sacramento v. State of California*, supra, 156 Cal.App.3d at pp. 190-193.) Reimbursement for costs incurred before July 1, 1980, must be obtained, if at all, under controlling statutory law. (See 68 Ops.Cal.Atty.Gen. 244 (1985).)

The constitutional subvention provision, like the statutory scheme before it, requires state reimbursement whenever "the Legislature or any State agency" mandates a new program or higher level of service. (Cal. Const., art. XIII B, § 6.) Accordingly, it has been held that state [**558] subvention is not required when the federal government imposes new costs on local governments. (*City of Sacramento v. State of California*, supra, 156 Cal.App.3d at p. 188; see also *Carmel Valley Fire Protection Dist. v. State of California* (1987) 190 Cal.App.3d 521, 543 [234 Cal.Rptr. 795].) [***29] In our *City of Sacramento* decision this court held that a federal program in which the state participates is not a federal mandate, regardless of the incentives for participation, unless the program leaves state or local government with no discretion as to alternatives. (156 Cal.App.3d at p. 198.)

In its *City of Sacramento* opinion, * the California Supreme Court rejected this court's earlier formulation. In doing so the high court noted that the vast bulk of cost-producing federal influence on state and local government is by inducement or incentive rather than direct compulsion. (50 Cal.3d at p. 73.) However, "certain regulatory standards imposed by the federal government [*1582] under 'cooperative federalism' schemes are coercive on the states and localities in every practical sense." (*Id.* at pp. 73-74.) The test for determining whether there is a federal mandate is whether compliance with federal standards "is a matter of true choice," that is, whether participation in the federal program "is truly voluntary." (*Id.* at p. 76.) The court went on to say: "Given the variety [***30] of cooperative federal-state-local programs, we here attempt no final test for 'mandatory' versus 'optional' compliance with federal law. A determination in each case must depend on such factors as the nature and purpose of the federal program; whether its design suggests an intent to coerce; when state and/or local participation began; the penalties, if any, assessed for withdrawal or refusal to participate or comply; and any other legal and practical consequences

of nonparticipation, noncompliance, or withdrawal." (*Ibid.*)

8 The Supreme Court's decision in *City of Sacramento* was not a result of direct review of this court's decision. The Supreme Court denied a petition for review of this court's *City of Sacramento* decision. After the Board of Control had adopted parameters and guidelines for reimbursement under this court's decision, the Legislature failed to appropriate the funds necessary for such reimbursement. The litigation which resulted in the Supreme Court's *City of Sacramento* decision was commenced as an action to enforce the result on remand from this court's *City of Sacramento* decision. (See 50 Cal.3d at p. 60.)

[***31] IV. SPECIAL EDUCATION

The issues in this case cannot be resolved by consideration of a particular federal act in isolation. Rather, reference must be made to the historical and legal setting of which the particular act is a part. Our consideration begins in the early 1970's.

In considering the 1975 amendments to the Education of the Handicapped Act, Congress referred to a series of "landmark court cases" emanating from 36 jurisdictions which had established the right to an equal educational opportunity for handicapped children. (See *Smith v. Robinson* (1984) 468 U.S. 992, 1010 [82 L.Ed.2d 746, 763, 104 S.Ct. 3457].) Two federal district court cases, *Pennsylvania Ass'n, Ret'd Child. v. Commonwealth of Pa.* (E.D.Pa. 1972) 343 F.Supp. 279 (see also *Pennsylvania Ass'n, Retard. Child. v. Commonwealth of Pa.* (E.D.Pa. 1971) 334 F.Supp. 1257), and *Mills v. Board of Education of District of Columbia* (D.D.C. 1972) 348 F.Supp. 866, were the most prominent of these judicial decisions. (See *Hendrick Hudson Dist. Bd. of Ed. v. Rowley* (1982) 458 U.S. 176, 180, fn. 2 [73 L.Ed.2d 690, 695, 102 S.Ct. 3034].) [***32]

In the Pennsylvania case, an association and the parents of certain retarded children brought a class action against the commonwealth and local school districts in the commonwealth, challenging the exclusion of retarded children from programs of education and training in the public schools. (*Pennsylvania Ass'n, Ret'd Child. v. Commonwealth of Pa.*, supra, 343 F.Supp. at p. 282.) The matter was assigned to a three-judge panel which heard evidence on the plaintiffs' due process and equal protection claims. (*Id.* at p. 285.) The parties [**559] then agreed to resolve the litigation by means of a consent [*1583] judgment. (*Ibid.*) The consent agreement required the defendants to locate and evaluate all children in need of special education services, to reevaluate placement decisions periodically, and to accord due

process hearings to parents who are dissatisfied with placement decisions. (*Id.* at pp. 303-306.) It required the defendants to provide "a free public program of education and training appropriate to the child's capacity." (*Id.* at p. 285, italics deleted.)

In view of the consent agreement the district court was not required to resolve the plaintiffs' equal [***33] protection and due process contentions. Rather, it was sufficient for the court to find that the suit was not collusive and that the plaintiffs' claims were colorable. The court found: "Far from an indication of collusion, however, the Commonwealth's willingness to settle this dispute reflects an intelligent response to overwhelming evidence against [its] position." (*Pennsylvania Ass'n, Ret'd. Child. v. Commonwealth of Pa.*, *supra*, 343 F.Supp. at p. 291.) The court said that it was convinced the due process and equal protection claims were colorable. (*Id.* at pp. 295-296.)

In the *Mills* case, an action was brought on behalf of a number of school-age children with exceptional needs who were excluded from the Washington, D.C., public school system. (*Mills v. Board of Education of District of Columbia*, *supra*, 348 F.Supp. at p. 868.) The district court concluded that equal protection entitled the children to a public-supported education appropriate to their needs and that due process required a hearing with respect to classification decisions. (*Id.* at pp. 874-875.) The court said: "If sufficient funds are not available to finance [***34] all of the services and programs that are needed and desirable in the system then the available funds must be expended equitably in such manner that no child is entirely excluded from a publicly supported education consistent with his needs and ability to benefit therefrom. The inadequacies of the District of Columbia Public School System whether occasioned by insufficient funding or administrative inefficiency, certainly cannot be permitted to bear more heavily on the 'exceptional' or handicapped child than on the normal child." (*Id.* at p. 876.)

In the usual course of events, the development of principles of equal protection and due process as applied to special education, which had just commenced in the early 1970's with the authorities represented by the *Pennsylvania* and *Mills* cases, would have been fully expounded through appellate processes. However, the necessity of judicial development was truncated by congressional action. In the Rehabilitation Act of 1973, section 504, Congress provided: "No otherwise qualified handicapped individual in the United States, as defined in section 706(7) [now 706(8)] of this title, [*1584] shall, solely by reason of his handicap, [***35] be excluded from the participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance" (29

U.S.C. § 794, Pub.L. No. 93- 112, tit. V, § 504 (Sept. 26, 1973) 87 Stat. 394.)⁹ Since federal assistance to education is pervasive (see, e.g., Ed. Code, § 12000- 12405, 49540 et seq., 92140 et seq.), section 504 was applicable to virtually all public educational programs in this and other states.

9 In section 119 of the Rehabilitation, Comprehensive Services, and Developmental Disabilities Act of 1978, the application of section 504 was extended to federal executive agencies and the United States Postal Service. (Pub.L. No. 95-602, tit. I, § 119 (Nov. 6, 1978) 92 Stat. 2982.) The section is now subdivided and includes subdivision (b), which provides that the section applies to all of the operations of a state or local governmental agency, including local educational agencies, if the agency is extended federal funding for any part of its operations. (29 U.S.C. § 794.) This latter amendment was in response to judicial decisions which had limited the application of section 504 to the particular activity for which federal funding is received. (See *Consolidated Rail Corporation v. Darrone* (1984) 465 U.S. 624, 635-636 [79 L.Ed.2d 568, 577-578, 104 S.Ct. 1248].)

[***36] The Department of Health, Education and Welfare (HEW) promulgated regulations to ensure compliance with section 504 [**560] by educational agencies.¹⁰ The regulations required local educational agencies to locate and evaluate handicapped children in order to provide appropriate educational opportunities and to provide administrative hearing procedures in order to resolve disputes. The federal courts concluded that section 504 was essentially a codification of the equal protection rights of citizens with disabilities. (See *Halderman v. Pennhurst State School & Hospital* (E.D.Pa. 1978) 446 F.Supp. 1295, 1323.) Courts also held that section 504 embraced a private cause of action to enforce its requirements. (*Sherry v. New York State Ed. Dept.* (W.D.N.Y. 1979) 479 F.Supp. 1328, 1334; *Doe v. Marshall* (S.D.Tex. 1978) 459 F.Supp. 1190, 1192.) It was further held that section 504 imposed upon school districts and other public educational agencies "the duty of analyzing individually the needs of each handicapped student and devising a program which will enable each individual handicapped student to receive [***37] an appropriate, free public education. The failure to perform this analysis and structure a program suited to the needs of each handicapped child, constitutes discrimination against that child and a failure to provide an appropriate, free [*1585] public education for the handicapped child." (*Doe v. Marshall*, *supra*, 459 F.Supp. at p. 1191. See also *David H. v. Spring Branch Independent School Dist.* (S.D.Tex. 1983) 569 F.Supp. 1324, 1334; *Hal-*

derman v. Pennhurst State School & Hospital, supra,
446 F.Supp. at p. 1323.)

10 HEW was later dissolved and its responsibilities are now shared by the federal Department of Education and the Department of Health and Human Services. The promulgation of regulations to enforce section 504 had a somewhat checkered history. Initially HEW determined that Congress did not intend to require it to promulgate regulations. The Senate Public Welfare Committee then declared that regulations were intended. By executive order and by judicial decree in Cherry v. Mathews (D.D.C. 1976) 419 F.Supp. 922, HEW was required to promulgate regulations. The ensuing regulations were embodied in title 45 Code of Federal Regulations part 84, and are now located in title 34 Code of Federal Regulations part 104. (See Southeastern Community College v. Davis (1979) 442 U.S. 397, 404, fn. 4 [60 L.Ed.2d 980, 987, 99 S.Ct. 2361]; N. M. Ass'n for Retarded Citizens v. State of N. M. (10th Cir. 1982) 678 F.2d 847, 852.)

[***38] (5) Throughout these proceedings Riverside, relying upon the decision in Southeastern Community College v. Davis, supra, 442 U.S. 397 [60 L.Ed.2d 980], has contended that section 504 cannot be considered a federal mandate because it does not obligate local school districts to take any action to accommodate the needs of handicapped children so long as they are not excluded from school. That assertion is not correct.

In the Southeastern Community College case a prospective student with a serious hearing disability sought to be admitted to a postsecondary educational program to be trained as a registered nurse. As a result of her disability the student could not have completed the academic requirements of the program and could not have attended patients without full-time personal supervision. She sought to require the school to waive the academic requirements, including an essential clinical program, which she could not complete and to otherwise provide full-time personal supervision. That demand, the Supreme Court held, was beyond the scope of section 504, which did not require the school to modify its program affirmatively [***39] and substantially. (442 U.S. at pp. 409-410 [60 L.Ed.2d at pp. 990-991].)

The Southeastern Community College decision is inapposite. States typically do not guarantee their citizens that they will be admitted to, and allowed to complete, specialized postsecondary educational programs. State educational institutions often impose stringent admittance and completion requirements for such programs in higher education. In the Southeastern Community College case the Supreme Court simply held that an in-

stitution of higher education need not lower or effect substantial modifications of its standards in order to accommodate a handicapped person. (442 U.S. at p. 413 [60 L.Ed.2d at pp. 992-993].) The court did not hold that a primary or secondary [**561] educational agency need do nothing to accommodate the needs of handicapped children. (See Alexander v. Choate (1985) 469 U.S. 287, 301 [83 L.Ed.2d 661, 672, 105 S.Ct. 712].)

[HN2]States typically do purport to guarantee all of their children the opportunity for a basic [***40] education. In fact, in this state basic education is regarded as a fundamental right. (Serrano v. Priest, supra, 18 Cal.3d at pp. 765-766.) All basic educational programs are essentially affirmative action activities in the sense that educational agencies are required to evaluate and accommodate [*1586] the educational needs of the children in their districts. Section 504 would not appear to permit local agencies to accommodate the educational needs of some children while ignoring the needs of others due to their handicapped condition. (Compare Lau v. Nichols (1974) 414 U.S. 563 [39 L.Ed.2d 1, 94 S.Ct. 786], which required the San Francisco Unified School District to take affirmative steps to accommodate the needs of non-English speaking students under section 601 of the Civil Rights Act of 1964.)

Riverside's view of section 504 is inconsistent with congressional intent in enacting it. The congressional record makes it clear that section 504 was perceived to be necessary not to combat affirmative animus but to cure society's benign neglect of the handicapped. [***41] The record is replete with references to discrimination in the form of the denial of special educational assistance to handicapped children. In Alexander v. Choate, supra, 469 U.S. at pages 295 to 297 [83 L.Ed.2d at pages 668-669], the Supreme Court took note of these comments in concluding that a violation of section 504 need not be proven by evidence of purposeful or intentional discrimination. With respect to the Southeastern Community College v. Davis, supra, 442 U.S. 397 case, the high court said: "The balance struck in Davis requires that an otherwise qualified handicapped individual must be provided with meaningful access to the benefit that the grantee offers. The benefit itself, of course, cannot be defined in a way that effectively denies otherwise qualified handicapped individuals the meaningful access to which they are entitled; to assure meaningful access, reasonable accommodations in the grantee's program or benefit may have to be made. ..." (Alexander v. Choate, supra, 469 U.S. at p. 301 [83 L.Ed.2d at p. 672], [***42] fn. omitted.)

Federal appellate courts have rejected the argument that the Southeastern Community College case means that pursuant to section 504 local educational agencies need do nothing affirmative to accommodate the needs

of handicapped children. (*N. M. Ass'n for Retarded Citizens v. State of N. M.*, *supra*, 678 F.2d at pp. 852-853; *Tatro v. State of Texas* (5th Cir. 1980) 625 F.2d 557, 564 [63 A.L.R. Fed. 844].) ¹¹ We are satisfied that section 504 does impose an obligation upon local school districts to accommodate the needs of handicapped children. However, as was the case with constitutional principles, full judicial development of section 504 as it relates to special education in elementary and secondary school districts was truncated by congressional action.

11 Following a remand and another decision by the Court of Appeals, the *Tatro* litigation, *supra*, eventually wound up in the Supreme Court. (*Irving Independent School Dist. v. Tatro* (1984) 468 U.S. 883 [82 L.Ed.2d 664, 104 S.Ct. 3371].) However, by that time the Education of the Handicapped Act had replaced section 504 as the means for vindicating the education rights of handicapped children and the litigation was resolved, favorably for the child, under that act.

[**43] [*1587] In 1974 Congress became dissatisfied with the progress under earlier efforts to stimulate the states to accommodate the educational needs of handicapped children. (*Hendrick Hudson Dist. Bd. of Ed. v. Rowley*, *supra*, 458 U.S. at p. 180 [73 L.Ed.2d at p. 695].) These earlier efforts had included a 1966 amendment to the Elementary and Secondary Education Act of 1965, and the 1970 version of the Education of the Handicapped Act. (*Ibid.*) The prior acts had been grant programs that did not contain specific guidelines for a state's use of grant funds. (*Ibid.*) In 1974 Congress greatly increased federal funding for education of the handicapped and simultaneously required recipient ^[**562] states to adopt a goal of providing full educational opportunities to all handicapped children. ([73 L.Ed.2d at pp. 695-696].) The following year Congress amended the Education of the Handicapped Act by enacting the Education for All Handicapped Children Act of 1975. ([73 L.Ed.2d at p. 696].)

[HN3] Since the 1975 amendment, the Education ^[**44] of the Handicapped Act has required recipient states to demonstrate a policy that assures all handicapped children the right to a free appropriate education. (20 U.S.C. § 1412(1).) (6) The act is not merely a funding statute; rather, it establishes an enforceable substantive right to a free appropriate public education in recipient states. (*Smith v. Robinson*, *supra*, 468 U.S. at p. 1010 [82 L.Ed.2d at p. 764].) To accomplish this purpose the act incorporates the major substantive and procedural requirements of the "right to education" cases which were so prominent in the congressional consideration of the measure. (*Hendrick Hudson Dist. Bd. of Ed. v. Rowley*, *supra*, 458 U.S. at p. 194 [73 L.Ed.2d at p.

704].) The substantive requirements of the act have been interpreted in a manner which is "strikingly similar" to the requirements of section 504 of the Rehabilitation Act of 1973. (*Smith v. Robinson*, *supra*, 468 U.S. at pp. 1016-1017 [82 L.Ed.2d at p. 768].) The Supreme ^[**45] Court has noted that Congress intended the act to establish "a basic floor of opportunity that would bring into compliance all school districts with the constitutional right to equal protection with respect to handicapped children." (*Hendrick Hudson Dist. Bd. of Ed. v. Rowley*, *supra*, 458 U.S. at p. 200 [73 L.Ed.2d at p. 708] citing the House of Representatives Report.) ¹²

12 Consistent with its "basic floor of opportunity" purpose, the act does not require local agencies to maximize the potential of each handicapped child commensurate with the opportunity provided nonhandicapped children. Rather, the act requires that handicapped children be accorded meaningful access to a free public education, which means access that is sufficient to confer some educational benefit. (*Ibid.*)

It is demonstrably manifest that in the view of Congress the substantive requirements of the 1975 amendment to the Education of the Handicapped Act were commensurate with the ^[**46] constitutional obligations of state and local ^[*1588] educational agencies. Congress found that "State and local educational agencies have a responsibility to provide education for all handicapped children, but present financial resources are inadequate to meet the special educational needs of handicapped children;" and "it is in the national interest that the Federal Government assist State and local efforts to provide programs to meet the educational needs of handicapped children in order to assure equal protection of the law." (20 U.S.C. former § 1400(b)(8) & (9).) ¹³

13 That Congress intended to enforce the Fourteenth Amendment to the United States Constitution in enacting the Education of the Handicapped Act has since been made clear. In *Dellmuth v. Muth* (1989) 491 U.S. 223 at pages 231-232 [105 L.Ed.2d 181, 189-191, 109 S.Ct. 2397], and the court noted that Congress has the power under section 5 of the Fourteenth Amendment to abrogate a state's Eleventh Amendment immunity from suit in federal court, but concluded that the Education of the Handicapped Act did not clearly evince such a congressional intent. In 1990 Congress responded by expressly abrogating state sovereign immunity under the act. (20 U.S.C. § 1403.)

[**47] It is also apparent that Congress intended the act to achieve nationwide application: "It is the pur-

pose of this chapter to assure that all handicapped children have available to them, within the time periods specified in section 1412(2)(B) of this title, a free appropriate public education which emphasizes special education and related services designed to meet their unique needs, to assure that the rights of handicapped children and their parents or guardians are protected, to assist States and localities to provide for the education of all handicapped children, and to assess and assure the effectiveness of efforts to educate handicapped children." (20 U.S.C. former § 1400(c).)

[**563] In order to gain state and local acceptance of its substantive provisions, the Education of the Handicapped Act employs a "cooperative federalism" scheme, which has also been referred to as the "carrot and stick" approach. (See *City of Sacramento v. State of California*, *supra*, 50 Cal.3d at pp. 73-74; *City of Sacramento v. State of California*, *supra*, 156 Cal.App.3d at p. 195.) [***48] As an incentive Congress made substantial federal financial assistance available to states and local educational agencies that would agree to adhere to the substantive and procedural terms of the act. (20 U.S.C. § 1411, 1412.) For example, the administrative record indicates that for fiscal year 1979- 1980, the base year for Santa Barbara's claim, California received \$ 71.2 million in federal assistance, and during fiscal year 1980-1981, the base year for Riverside's claim, California received \$ 79.7 million. We cannot say that such assistance on an ongoing basis is trivial or insubstantial.

Contrary to Riverside's argument, [HN4]federal financial assistance was not the only incentive for a state to comply with the Education of the Handicapped Act. (7) Congress intended the act to serve as a means by which state and [*1589] local educational agencies could fulfill their obligations under the equal protection and due process provisions of the Constitution and under section 504 of the Rehabilitation Act of 1973. Accordingly, where it is applicable the act supersedes claims under the Civil Rights Act (42 U.S.C. § 1983) [***49] and section 504 of the Rehabilitation Act of 1973, and the administrative remedies provided by the act constitute the exclusive remedy of handicapped children and their parents or other representatives. (*Smith v. Robinson*, *supra*, 468 U.S. at pp. 1009, 1013, 1019 [82 L.Ed.2d at pp. 763, 766, 769].)¹⁴

14 In *Smith v. Robinson*, *supra*, the court concluded that since the Education of the Handicapped Act did not include a provision for attorney fees, a successful complainant was not entitled to an award of such fees even though such fees would have been available in litigation under section 504 of the Rehabilitation Act of 1973 or section 1983 of the Civil Rights Act. Congress

reacted by adding a provision for attorney fees to the Education of the Handicapped Act. (20 U.S.C. § 1415(e)(4)(B).)

[HN5]As a result of the exclusive nature of the Education of the Handicapped [***50] Act, dissatisfied parties in recipient states must exhaust their administrative remedies under the act before resorting to judicial intervention. (*Smith v. Robinson*, *supra*, 468 U.S. at p. 1011 [82 L.Ed.2d at p. 764].) This gives local agencies the first opportunity and the primary authority to determine appropriate placement and to resolve disputes. (*Ibid.*) If a party is dissatisfied with the final result of the administrative process then he or she is entitled to seek judicial review in a state or federal court. (20 U.S.C. § 1415(e)(2).) In such a proceeding the court independently reviews the evidence but its role is restricted to that of review of the local decision and the court is not free to substitute its view of sound educational policy for that of the local authority. (*Hendrick Hudson Dist. Bd. of Ed. v. Rowley*, *supra*, 458 U.S. at pp. 206-207 [73 L.Ed.2d at p. 712].) And since the act provides the exclusive remedy for addressing a handicapped child's right to an appropriate education, where the act applies a party [***51] cannot pursue a cause of action for constitutional violations, either directly or under the Civil Rights Act (42 U.S.C. § 1983), nor can a party proceed under section 504 of the Rehabilitation Act of 1973. (*Smith v. Robinson*, *supra*, 468 U.S. at pp. 1013, 1020 [82 L.Ed.2d at pp. 766, 770].)

Congress's intention to give the Education of the Handicapped Act nationwide application was successful. By the time of the decision in *Hendrick Hudson Dist. Bd. of Ed. v. Rowley*, *supra*, all states except New Mexico had become recipients under the act. (458 U.S. at pp. 183-184 [73 L.Ed.2d at p. 698].) It is important at this point in our discussion to consider the experience of New Mexico, both because the Board of Control relied upon that state's failure to adopt the Education [**564] of the Handicapped Act as proof that the act is not federally mandated, and because it illustrates the consequences of a failure to adopt the act. [*1590]

In *N. M. Ass'n for Retarded Citizens v. State of N. M.* (D.N.M., 1980) 495 F.Supp. 391, [***52] a class action was brought against New Mexico and its local school districts based upon the alleged failure to provide a free appropriate public education to handicapped children. The plaintiffs' causes of action asserting constitutional violations were severed and stayed pending resolution of the federal statutory causes of action. (*Id.* at p. 393.) The district court concluded that the plaintiffs could not proceed with claims under the Education of the Handicapped Act because the state had not adopted that act and, without more, that was a governmental decision within the state's power. (*Id.* at p. 394.)¹⁵ The court then

considered the cause of action under section 504 and found that both the state and its local school districts were in violation of that section by failing to provide a free appropriate education to handicapped children within their territories. (495 F.Supp. at pp. 398-399.)

15 The plaintiffs alleged that the failure of the state to apply for federal funds under the Education of the Handicapped Act was itself an act of discrimination. The district court did not express a view on that question, leaving it for resolution in connection with the constitutional causes of action. (Ibid.)

[***53] After the district court entered an injunctive order designed to compel compliance with section 504, the matter was appealed. (*N. M. Ass'n for Retarded Citizens v. State of N. M.*, *supra*, 678 F.2d 847.) The court of appeals rejected the defendants' arguments that the plaintiffs were required to exhaust state administrative remedies before bringing their action and that the district court should have applied the doctrine of primary jurisdiction to defer ruling until the Office of Civil Rights could complete its investigation into the charges. (*Id.* at pp. 850-851.) The court also rejected the defendants' arguments that section 504 does not require them to take action to accommodate the needs of handicapped children and that proof of disparate treatment is essential to a violation of section 504. (678 F.2d at p. 854.) The court found sufficient evidence in the record to establish discrimination against handicapped children within the meaning of section 504. (678 F.2d at p. 854.) However, the reviewing court concluded that the district court had applied an erroneous standard in reaching its decision, [***54] and the matter was remanded for further proceedings. (*Id.* at p. 855.)

On July 19, 1984, during the proceedings before the Board of Control, a representative of the Department of Education testified that New Mexico has since implemented a program of special education under the Education of the Handicapped Act. We have no doubt that after the litigation we have just recounted New Mexico saw the handwriting on the wall and realized that it could either establish a program of special education with federal financial assistance under the Education of the Handicapped Act, or be compelled through litigation to accommodate the educational needs of handicapped [*1591] children without federal assistance and at the risk of losing other forms of federal financial aid. In any event, with the capitulation of New Mexico the Education of the Handicapped Act achieved the nationwide application intended by Congress. (20 U.S.C. § 1400(c).)

California's experience with special education in the time period leading up to the adoption of the Education of the Handicapped Act is examined as a case study in

Kirp et al., *Legal Reform of Special Education: Empirical [***55] Studies and Procedural Proposals* (1974) 62 Cal.L.Rev. 40, at pages 96 through 115. As this study reflects, during this period the state and local school districts were struggling to create a program to accommodate adequately the educational needs of the handicapped. (*Id.* at pp. 97-110.) Individuals and organized groups, such as the California Association for the Retarded and the California Association for Neurologically Handicapped Children, were exerting pressure through political and other means at every level of the educational system. (Ibid.) Litigation was becoming so prevalent [**565] that the authors noted: "Fear of litigation over classification practices, prompted by the increasing number of lawsuits, is pervasive in California." (*Id.* at p. 106, fn. 295.)¹⁶

16 Lawsuits primarily fell into three types: (1) Challenges to the adequacy or even lack of available programs and services to accommodate handicapped children. (*Id.* at p. 97, fns. 255, 257.) (2) Challenges to classification practices in general, such as an over tendency to classify minority or disadvantaged children as "retarded." (*Id.* at p. 98, fns. 259, 260.) (3) Challenges to individual classification decisions. (*Id.* at p. 106.) In the absence of administrative procedures for resolving classification disputes, dissatisfied parents were relegated to self-help remedies, such as pestering school authorities, or litigation. (*Ibid.*)

[***56] In the early 1970's the state Department of Education began working with local school officials and university experts to design a "California Master Plan for Special Education." (Kirp et al., *Legal Reform of Special Education: Empirical Studies and Procedural Proposals*, *supra*, 62 Cal.L.Rev. at p. 111.) In 1974 the Legislature enacted legislation to give the Superintendent of Public Instruction the authority to implement and administer a pilot program pursuant to a master plan adopted by State Board of Education in order to determine whether services under such a plan would better meet the needs of children with exceptional needs. (Stats. 1974, ch. 1532, § 1, p. 3441, enacting Ed. Code, § 7001.) In 1977 the Legislature acted to further implement the master plan. (Stats. 1977, ch. 1247, especially § 10, pp. 4236-4237, enacting Ed. Code, § 56301.) In 1980 the Legislature enacted urgency legislation revising our special education laws with the express intent of complying with the 1975 amendments to the Education of the Handicapped Act. (Stats. 1980, ch. 797, especially § 9, pp. 2411-2412, enacting Ed. Code, § 56000.)

As this history demonstrates, in determining whether to [***57] adopt the requirements of the Education of the Handicapped Act as amended in 1975, our [*1592]

Legislature was faced with the following circumstances: (1) In the *Serrano* litigation, our Supreme Court had declared basic education to be a fundamental right and, without even considering special education in the equation, had found our educational system to be violative of equal protection principles. (2) Judicial decisions from other jurisdictions had established that handicapped children have an equal protection right to a free public education appropriate to their needs and due process rights with regard to placement decisions. (3) Congress had enacted section 504 of the Rehabilitation Act of 1973 to codify the equal protection rights of handicapped children in any school system that receives federal financial assistance and to threaten the state and local districts with the loss of all federal funds for failure to accommodate the needs of such children. (4) Parents and organized groups representing handicapped children were becoming increasingly litigious in their efforts to secure an appropriate education for handicapped children. (5) In enacting the 1975 amendments to [***58] the Education of the Handicapped Act, Congress did not intend to require state and local educational agencies to do anything more than the Constitution already required of them. The act was intended to provide a means by which educational agencies could fulfill their constitutional responsibilities and to provide substantial federal financial assistance for states that would agree to do so.

(8a) Under these circumstances we have no doubt that enactment of the 1975 amendments to the Education of the Handicapped Act constituted a federal mandate under the criteria set forth in *City of Sacramento v. State of California, supra*, 50 Cal.3d at page 76. The remaining question is whether the state's participation in the federal program was a matter of "true choice" or was "truly voluntary." The alternatives were to participate in the federal program and obtain federal financial assistance and the procedural protections accorded by the act, or to decline to participate and face a barrage of litigation with no real defense and ultimately be compelled to accommodate the educational needs of handicapped children in any event. We conclude [***59] that so far [**566] as the state is concerned the Education of the Handicapped Act constitutes a federal mandate.

V. SUBVENTION FOR SPECIAL EDUCATION

Our conclusion that the Education of the Handicapped Act is a federal mandate with respect to the state marks the starting point rather than the end of the consideration which will be required to resolve the Santa Barbara and Riverside test claims. In *City of Sacramento v. State of California, supra*, 50 Cal.3d at pages 66 through 70, the California Supreme Court concluded that the costs at issue in that case (unemployment insurance premiums) were not subject to state subvention because

they were incidental to a law of general [*1593] application rather than a new governmental program or increased level of service under an existing program. The court addressed the federal mandate issue solely with respect to the question whether the costs were exempt from the local government's taxing and spending limitations. (*Id.* at pp. 70-71.) It observed that prior authorities had assumed that if a cost was federally mandated it could not be a state mandated cost subject to subvention, and [***60] said: "We here express no view on the question whether 'federal' and 'state' mandates are mutually exclusive for purposes of state subvention, but leave that issue for another day. ..." (*Id.* at p. 71, fn. 16.) The test claims of Santa Barbara and Riverside present that question which we address here for the guidance of the Commission on remand.

(9) The constitutional subvention provision and the statutory provisions which preceded it do not expressly say that the state is not required to provide a subvention for costs imposed by a federal mandate. Rather, that conclusion follows from the plain language of the subvention provisions [HN6]themselves. The constitutional provision requires state subvention when "the Legislature or any State agency mandates a new program or higher level of service" on local agencies. (Cal. Const., art. XIII B, § 6.) Likewise, the earlier statutory provisions required subvention for new programs or higher levels of service mandated by legislative act or executive regulation. (See Rev. & Tax. Code, former § 2164.3 [Stats. 1972, ch. 1406, § 14.7, pp. 2962-2963], 2231 [Stats. 1973, ch. 358, § 3, pp. 783-784], 2207 [Stat. 1975, ch. 486, § 1.8, pp. 997-998], 2207.5 [***61] [Stats. 1977, ch. 1135, § 5, pp. 3646-3647].) When the federal government imposes costs on local agencies those costs are not mandated by the state and thus would not require a state subvention. Instead, such costs are exempt from local agencies' taxing and spending limitations. This should be true even though the state has adopted an implementing statute or regulation pursuant to the federal mandate so long as the state had no "true choice" in the manner of implementation of the federal mandate. (See *City of Sacramento v. State of California, supra*, 50 Cal.3d at p. 76.)

This reasoning would not hold true where the manner of implementation of the federal program was left to the true discretion of the state. A central purpose of the principle of state subvention is to prevent the state from shifting the cost of government from itself to local agencies. (*City of Sacramento v. State of California, supra*, 50 Cal.3d at p. 68.) Nothing in the statutory or constitutional subvention provisions would suggest that the state is free to shift state costs to local agencies [***62] without subvention merely because those costs were imposed upon the state by the federal government. In our

view the determination whether certain costs were imposed upon a local agency by a federal mandate must focus upon the local agency which [*1594] is ultimately forced to bear the costs and how those costs came to be imposed upon that agency. If the state freely chose to impose the costs upon the local agency as a means of implementing a federal program then the costs are the result of a reimbursable state mandate regardless whether the costs were imposed [**567] upon the state by the federal government.

The Education of the Handicapped Act is a comprehensive measure designed to provide all handicapped children with basic educational opportunities. While the act includes certain substantive and procedural requirements which must be included in a state's plan for implementation of the act, it leaves primary responsibility for implementation to the state. (20 U.S.C. § 1412, 1413.) (8b) In short, even though the state had no real choice in deciding whether to comply with the federal act, the act did not necessarily require the state to impose all of [***63] the costs of implementation upon local school districts. To the extent the state implemented the act by freely choosing to impose new programs or higher levels of service upon local school districts, the costs of such programs or higher levels of service are state mandated and subject to subvention.

We can illustrate this point with a hypothetical situation. Subvention principles are intended to prevent the state from shifting the cost of state governmental services to local agencies and thus subvention is required where the state imposes the cost of such services upon local agencies even if the state continues to perform the services. (*Lucia Mar Unified School Dist. v. Honig, supra*, 44 Cal.3d at pp. 835-836.) The Education of the Handicapped Act requires the state to provide an impartial, state-level review of the administrative decisions of local or intermediate educational agencies. (20 U.S.C. § 1415(c), (d).) Obviously, the state could not shift the actual performance of these new administrative reviews to local districts, but it could attempt to shift the costs to local districts [***64] by requiring local districts to pay the expenses of reviews in which they are involved. An attempt to do so would trigger subvention requirements. In such a hypothetical case, the state could not avoid its subvention responsibility by pleading "federal mandate" because the federal statute does not require the state to impose the costs of such hearings upon local agencies. Thus, as far as the local agency is concerned, the burden is imposed by a state rather than a federal mandate.

In the administrative proceedings the Board of Control did not address the "federal mandate" question under the appropriate standard and with proper focus on local school districts. In its initial determination the board concluded that the Education of the Handicapped Act

constituted a federal mandate and that the state-imposed costs on local school districts in excess of the federally imposed costs. However, the board did not consider the [*1595] extent of the state-mandated costs because it concluded that any appropriation by the state satisfied its obligation. On Riverside's petition for a writ of administrative mandate the superior court remanded to the Board of Control to consider whether [***65] the state appropriation was sufficient to reimburse local school districts fully for the state-mandated costs. On remand the board clearly applied the now-discredited criteria set forth in this court's decision in *City of Sacramento v. State of California, supra*, 156 Cal.App.3d 182, and concluded that the Education of the Handicapped Act is not a federal mandate at any level of government. Under these circumstances we agree with the trial court that the matter must be remanded to the Commission for consideration in light of the criteria set forth in the Supreme Court's *City of Sacramento* decision. We add that on remand the Commission must focus upon the costs incurred by local school districts and whether those costs were imposed *on local districts* by federal mandate or by the state's voluntary choice in its implementation of the federal program.

VI. RIVERSIDE'S OBJECTIONS

In light of this discussion we may now consider Riverside's objections to the trial court's decision to remand the matter to the Commission for reconsideration.

Riverside asserts that the California Supreme Court opinion in *City of Sacramento* is not [***66] on point because the court did not address the federal mandate question with respect to state subvention principles. Riverside implies that the definition of a federal mandate may be different [**568] with respect to state subvention than with respect to taxing and spending limitations. [HN7] (10) As a general rule and unless the context clearly requires otherwise, we must assume that the meaning of a term or phrase is consistent throughout the entire act or constitutional article of which it is a part. (*Lungren v. Davis* (1991) 234 Cal.App.3d 806, 823 [285 Cal.Rptr. 777].) (11) Subvention principles are part of a more comprehensive political scheme. The basic purpose of the scheme as a whole was to limit the taxing and spending powers of local agencies. The taxing and spending powers of local agencies were to be "frozen" at existing levels with adjustments only for inflation and population growth. Since local agencies are subject to having costs imposed upon them by other governmental entities, the scheme provides relief in that event. If the costs are imposed by the federal government or the courts, then the costs are not included in the local government's [***67] taxing and spending limitations. If the costs are imposed by the state then the state must provide a sub-

vention to reimburse the local agency. Nothing in this scheme suggests that the concept of a federal mandate should have different meanings depending upon whether one is considering subvention or taxing and spending limitations. Accordingly, we reject the claim that the criteria set forth in [*1596] the Supreme Court's *City of Sacramento* decision do not apply when subvention is the issue.

(12) Riverside asserts that the trial court erred in concluding that the Board of Control did not consider the issues under the appropriate criteria and that the board did in fact consider the factors set forth in the Supreme Court's *City of Sacramento* decision. From our discussion above it is clear that we must reject these assertions. In its decision the board relied upon the "cooperative federalism" nature of the Education of the Handicapped Act without any consideration whether the act left the state any actual choice in the matter. In support of its conclusion the board relied upon the New Mexico litigation which we have also discussed. However, as we have pointed out, under [***68] the criteria set forth in the Supreme Court's *City of Sacramento* decision, the New Mexico litigation does not support the board's decision but in fact strongly supports a contrary result. We are satisfied that the trial court correctly concluded that the board did not apply the appropriate criteria in reaching its decision.

Riverside asserts that the Supreme Court's *City of Sacramento* decision elucidated and enforced prior law and thus no question of retroactivity arises. (See *Donaldson v. Superior Court* (1983) 35 Cal.3d 24, 37 [196 Cal.Rptr. 704, 672 P.2d 110].) (13) We agree that in *City of Sacramento* the Supreme Court elucidated and enforced existing law. Under such circumstances the rule of retrospective operation controls. (See also *Wellenkamp v. Bank of America* (1978) 21 Cal.3d 943, 953-954 [148 Cal.Rptr. 379, 582 P.2d 970]; *County of Los Angeles v. Faus* (1957) 48 Cal.2d 672, 680-681 [312 P.2d 680].) Pursuant to that rule the trial court correctly applied the *City of Sacramento* decision to the [***69] litigation pending before it. As we have seen, that deci-

sion supports the trial court's determination to remand the matter to the Commission for reconsideration.

Riverside asserts that if further consideration under the criteria of the Supreme Court's *City of Sacramento* decision is necessary then the trial court should have, and this court must, engage in such consideration to reach a final conclusion on the question. To a limited extent we agree. In our previous discussion we have concluded that under the criteria set forth in *City of Sacramento*, the Education of the Handicapped Act constitutes a federal mandate as far as the state is concerned. We are satisfied that is the only conclusion which may be drawn and we so hold as a matter of law. However, that conclusion does not resolve the question whether new special education costs were imposed upon local school districts by federal mandate or by state choice in the implementation of the federal program. The issues were not addressed by the parties or the Board of Control in this light. The [*1597] Commission on State Mandates is the entity with the responsibility for considering the issues in [**569] the first instance [***70] and which has the expertise to do so. We agree with the trial court that it is appropriate to remand the matter to the Commission for reconsideration in light of the appropriate criteria which we have set forth in this appeal.

In view of the result we have reached we need not and do not consider whether it would be appropriate otherwise to fashion some judicial remedy to avoid the rule, based upon the separation of powers doctrine, that a court cannot compel the State Controller to make a disbursement in the absence of an appropriation. (See *Carmel Valley Fire Protection Dist. v. State of California*, supra, 190 Cal.App.3d at pp. 538-541.)

DISPOSITION

The judgment is affirmed.

Davis, J., and Scotland, J., concurred. The petition of plaintiff and respondent for review by the Supreme Court was denied April 1, 1993. Lucas, C.J., Kennard, J., and Arabian, J., were of the opinion that the petition should be granted.

August 30, 1991

PRIOR HISTORY: Superior Court of Alameda County, No. 632120-4, Henry Ramsey, Jr., and Demetrios P. Agretelis, Judges.

DISPOSITION: The judgment of the Court of Appeal is reversed.

SUMMARY:**CALIFORNIA OFFICIAL REPORTS SUMMARY**

Medically indigent adults and taxpayers brought an action pursuant to *Code Civ. Proc.*, § 526a, against the state, alleging that it had violated *Cal. Const.*, art. XIII B, § 6 (reimbursement of local governments for state-mandated new programs), by shifting its financial responsibility for the funding of health care for the poor onto the county without providing the necessary funding, and that as a result the state had evaded its constitutionally mandated spending limits. The trial court granted summary judgment for the State after concluding plaintiffs lacked standing to prosecute the action. (Superior Court of Alameda County, No. 632120-4, Henry Ramsey, Jr., and Demetrios P. Agretelis, Judges.) The Court of Appeal, First Dist., Div. Two, Nos. A041426 and A043500, reversed.

The Supreme Court reversed the judgment of the Court of Appeal, holding the administrative procedures established by the Legislature (*Gov. Code*, § 17500 et seq.), which are available only to local agencies and school districts directly affected by a state mandate, were the exclusive means by which the state's obligations under *Cal. Const.*, art. XIII B, § 6, were to be determined

and enforced. Accordingly, the court held plaintiffs lacked standing to prosecute the action. (Opinion by Baxter, J., with Lucas, C. J., Panelli, Kennard, and Arabian, JJ., concurring. Separate dissenting opinion by Broussard, J., with Mosk, J., concurring.)

HEADNOTES**CALIFORNIA OFFICIAL REPORTS HEADNOTES**

Classified to California Digest of Official Reports, 3d Series

(1) State of California § 7--Actions--State-mandated Costs--Reimbursement--Exclusive Statutory Remedy. -- *Gov. Code*, § 17500 et seq., creates an administrative forum for resolution of state mandate claims arising under *Cal. Const.*, art. XIII B, § 6, and establishes procedures which exist for the express purpose of avoiding multiple proceedings, judicial and administrative, addressing the same claim that a reimbursable state mandate has been created. The statutory scheme also designates the Sacramento County Superior Court as the venue for judicial actions to declare unfunded mandates invalid. In view of the comprehensive nature of the legislative scheme, and from the expressed intent, the Legislature has created what is clearly intended to be a comprehensive and exclusive procedure by which to implement and enforce *Cal. Const.*, art. XIII B, § 6.

(2) State of California § 7--Actions--State-mandated Costs--Reimbursement--Private Action to Enforce--Standing. --In an action by medically indigent adults and taxpayers seeking to enforce *Cal. Const.*, art.

54 Cal. 3d 326, *; 814 P.2d 1308, **;
285 Cal. Rptr. 66, ***; 1991 Cal. LEXIS 3745

XIII B, § 6, for declaratory and injunctive relief requiring the state to reimburse the county for the cost of providing health care services to medically indigent adults who, prior to 1983, had been included in the state Medi-Cal program, the Court of Appeal erred in holding that the existence of an administrative remedy (*Gov. Code, § 17500 et seq.*) by which affected local agencies could enforce their constitutional right under art. XIII B, § 6 to reimbursement for the cost of state mandates did not bar the action. Because the right involved was given by the Constitution to local agencies and school districts, not individuals either as taxpayers or recipients of government benefits and services, the administrative remedy was adequate to fully implement the constitutional provision. The Legislature has the authority to establish procedures for the implementation of local agency rights under art. XIII B, § 6; unless the exercise of a constitutional right is unduly restricted, a court must limit enforcement to the procedures established by the Legislature. Plaintiffs' interest, although pressing, was indirect and did not differ from the interest of the public at large in the financial plight of local government. Relief by way of reinstatement to Medi-Cal pending further action by the state was not a remedy available under the statute, and thus was not one which a court may award.

[See 7 **Witkin**, Summary of Cal. Law (9th ed. 1988) Constitutional Law, § 112.]

COUNSEL: Stephen D. Schear, Stephen E. Ronfeldt, Armando M. Menocal III, Lois Salisbury, Laura Schulkind and Kirk McInnis for Plaintiffs and Appellants.

Catherine I. Hanson, Astrid G. Meghrigian, Alice P. Mead, Alan K. Marks, County Counsel (San Bernardino), Paul F. Mordy, Deputy County Counsel, De Witt W. Clinton, County Counsel (Los Angeles), Robert M. Fessler, Assistant County Counsel, Frank J. DaVanzo, Deputy County Counsel, Weissburg & Aronson, Mark S. Windisch, Carl Weissburg and Howard W. Cohen as Amici Curiae on behalf of Plaintiffs and Appellants.

John K. Van de Kamp and Daniel E. Lungren, Attorneys General, N. Eugene Hill, Assistant Attorney General, Richard M. Frank, Asher Rubin and Carol Hunter, Deputy Attorneys General, for Defendants and Respondents.

JUDGES: Opinion by Baxter, J., with Lucas, C. J., Pannelli, Kennard, and Arabian, JJ., concurring. Separate dissenting opinion by Broussard, J., with Mosk, J., concurring.

OPINION BY: BAXTER

OPINION

[*328] [**1309] [***67] Plaintiffs, medically indigent adults and taxpayers, seek to enforce section 6 of article XIII B (hereafter, section 6) of the California Constitution through an action for declaratory and injunctive relief. They invoked the jurisdiction of the superior court as taxpayers pursuant to *Code of Civil Procedure section 526a* and as persons affected by the alleged failure of the state to comply with section 6. The superior court granted summary judgment for defendants State of California and Director of the Department of Health Services, after concluding that plaintiffs lacked standing to prosecute the action. On appeal, the Court of Appeal held that plaintiffs have standing and that the action is not barred by the availability of administrative remedies.

[**1310] [***68] We reverse. The administrative procedures established by the Legislature, which are available only to local agencies and school districts directly affected by a state mandate, are the exclusive means by which the state's obligations under section 6 are to be determined and enforced. Plaintiffs therefore lack standing.

I

State Mandates

Section 6, adopted on November 6, 1979, as part of an initiative measure imposing spending limits on state and local government, also imposes on the state an obligation to reimburse local agencies for the cost of most programs and services which they must provide pursuant to a state mandate if the local agencies were not under a preexisting duty to fund the activity. It provides:

[*329] "Whenever the Legislature or any state agency mandates a new program or higher level of service on any local government, the state shall provide a subvention of funds to reimburse such local government for the costs of such program or increased level of service, except that the Legislature may, but need not, provide such subvention of funds for the following mandates:

"(a) Legislative mandates requested by the local agency affected;

"(b) Legislation defining a new crime or changing an existing definition of a crime; or

"(c) Legislative mandates enacted prior to January 1, 1975, or executive orders or regulations initially implementing legislation enacted prior to January 1, 1975."

A complementary provision, section 3 of article XIII B, provides for a shift from the state to the local agency of a portion of the spending or "appropriation" limit of the state when responsibility for funding an activity is shifted to a local agency:

"The appropriations limit for any fiscal year . . . shall be adjusted as follows: [para.] (a) In the event that the financial responsibility of providing services is transferred, in whole or in part, . . . from one entity of government to another, then for the year in which such transfer becomes effective the appropriations limit of the transferee entity shall be increased by such reasonable amount as the said entities shall mutually agree and the appropriations limit of the transferor entity shall be decreased by the same amount."

II

Plaintiffs' Action

The underlying issue in this action is whether the state is obligated to reimburse the County of Alameda, and shift to Alameda County a concomitant portion of the state's spending limit, for the cost of providing health care services to medically indigent adults who prior to 1983 had been included in the state Medi-Cal program. Assembly Bill No. 799 (1981-1982 Reg. Sess.) (AB 799) (Stats. 1982, ch. 328, p. 1568) removed medically indigent adults from Medi-Cal effective January 1, 1983. At the time section 6 was adopted, the state was funding Medi-Cal coverage for these persons without requiring any county financial contribution.

Plaintiffs initiated this action in the Alameda County Superior Court. They sought relief on their own behalf and on behalf of a class of similarly [*330] situated medically indigent adult residents of Alameda County. The only named defendants were the State of California, the Director of the Department of Health Services, and the County of Alameda.

In the complaint for declaratory and injunctive relief, plaintiffs sought an injunction compelling the state to restore Medi-Cal eligibility to medically indigent adults or to reimburse the County of Alameda for the cost of providing health care to those persons. They also prayed for a declaration that the transfer of responsibility from the state-financed Medi-Cal program to the counties without adequate reimbursement violated the California Constitution.¹

¹ The complaint also sought a declaration that the county was obliged to provide health care services to indigents that were equivalent to those available to nonindigents. This issue is not before us. The County of Alameda aligned itself with plaintiffs in the superior court and did not oppose plaintiffs' effort to enforce section 6.

[**1311] [***69] At the time plaintiffs initiated their action neither Alameda County, nor any other county or local agency, had filed a reimbursement

claim with the Commission on State Mandates (Commission).²

² On November 23, 1987, the County of Los Angeles filed a test claim with the Commission. San Bernardino County joined as a test claimant. The Commission ruled against the counties, concluding that no state mandate had been created. The Los Angeles County Superior Court subsequently granted the counties' petition for writ of mandate (*Code Civ. Proc.*, § 1094.5), reversing the Commission, on April 27, 1989. (No. C-731033.) An appeal from that judgment is presently pending in the Court of Appeal. (*County of Los Angeles v. State of California*, No. B049625.)

Whether viewed as an action seeking restoration of Medi-Cal benefits, one to compel state reimbursement of county costs, or one for declaratory relief, therefore, the action required a determination that the enactment of AB 799 created a state mandate within the contemplation of section 6. Only upon resolution of that issue favorably to plaintiffs would the state have an obligation to reimburse the county for its increased expense and shift a portion of its appropriation limit, or to reinstate Medi-Cal benefits for plaintiffs and the class they seek to represent.

The gravamen of the action is, therefore, enforcement of section 6.³

³ Plaintiffs argue that they seek only a declaration that AB 799 created a state mandate and an injunction against the shift of costs until the state decides what action to take. This is inconsistent with the prayer of their complaint which sought an injunction requiring defendants to restore Medi-Cal eligibility to all medically indigent adults until the state paid the cost of full health services for them. It is also unavailing.

An injunction against enforcement of a state mandate is available only after the Legislature fails to include funding in a local government claims bill following a determination by the Commission that a state mandate exists. (*Gov. Code*, § 17612.) Whether plaintiffs seek declaratory relief and/or an injunction, therefore, they are seeking to enforce section 6.

All further statutory references are to the Government Code unless otherwise indicated.

[*331] III

Enforcement of Article XIII B, Section 6

In 1984, almost five years after the adoption of article XIII B, the Legislature enacted comprehensive ad-

ministrative procedures for resolution of claims arising out of section 6. (§ 17500.) The Legislature did so because the absence of a uniform procedure had resulted in inconsistent rulings on the existence of state mandates, unnecessary litigation, reimbursement delays, and, apparently, resultant uncertainties in accommodating reimbursement requirements in the budgetary process. The necessity for the legislation was explained in *section 17500*:

"The Legislature finds and declares that the existing system for reimbursing local agencies and school districts for the costs of state-mandated local programs has not provided for the effective determination of the state's responsibilities under *Section 6 of Article XIII B of the California Constitution*. The Legislature finds and declares that the failure of the existing process to adequately and consistently resolve the complex legal questions involved in the determination of state-mandated costs has led to an increasing reliance by local agencies and school districts on the judiciary and, therefore, in order to relieve unnecessary congestion of the judicial system, *it is necessary to create a mechanism which is capable of rendering sound quasi-judicial decisions and providing an effective means of resolving disputes over the existence of state-mandated local programs.*" (Italics added.)

In part 7 of division 4 of title 2 of the Government Code, "State-Mandated Costs," which commences with *section 17500*, the Legislature created the Commission (§ 17525), to adjudicate disputes over the existence of a state mandated program (§§ 17551, 17557) and to adopt procedures for submission and adjudication of reimbursement claims (§ 17553). The five-member Commission includes the Controller, the Treasurer, the Director of Finance, the Director of the Office of Planning and [*1312] [***70] Research, and a public member experienced in public finance. (§ 17525.)

The legislation establishes a test-claim procedure to expeditiously resolve disputes affecting multiple agencies (§ 17554), ⁴ establishes the method of [*332] payment of claims (§§ 17558, 17561), and creates reporting procedures which enable the Legislature to budget adequate funds to meet the expense of state mandates (§§ 17562, 17600, 17612, *subd. (a)*.)

4 The test claim by the County of Los Angeles was filed prior to that proposed by Alameda County. The Alameda County claim was rejected for that reason. (See § 17521.) Los Angeles County permitted San Bernardino County to join in its claim which the Commission accepted as a test claim intended to resolve the issues the majority elects to address instead in this proceeding. Los Angeles County declined a request from Alameda County that it be included in

the test claim because the two counties' systems of documentation were so similar that joining Alameda County would not be of any benefit. Alameda County and these plaintiffs were, of course, free to participate in the Commission hearing on the test claim. (§ 17555.)

Pursuant to procedures which the Commission was authorized to establish (§ 17553), local agencies ⁵ and school districts ⁶ are to file claims for reimbursement of state-mandated costs with the Commission (§§ 17551, 17560), and reimbursement is to be provided only through this statutory procedure. (§§ 17550, 17552.)

5 "'Local agency' means any city, county, special district, authority, or other political subdivision of the state." (§ 17518.)

6 "'School district' means any school district, community college district, or county superintendent of schools." (§ 17519.)

The first reimbursement claim filed which alleges that a state mandate has been created under a statute or executive order is treated as a "test claim." (§ 17521.) A public hearing must be held promptly on any test claim. At the hearing on a test claim or on any other reimbursement claim, evidence may be presented not only by the claimant, but also by the Department of Finance and any other department or agency potentially affected by the claim. (§ 17553.) Any interested organization or individual may participate in the hearing. (§ 17555.)

A local agency filing a test claim need not first expend sums to comply with the alleged state mandate, but may base its claim on estimated costs. (§ 17555.) The Commission must determine both whether a state mandate exists and, if so, the amount to be reimbursed to local agencies and school districts, adopting "parameters and guidelines" for reimbursement of any claims relating to that statute or executive order. (§ 17557.) Procedures for determining whether local agencies have achieved statutorily authorized cost savings and for offsetting these savings against reimbursements are also provided. (§ 17620 *et seq.*) Finally, judicial review of the Commission decision is available through petition for writ of mandate filed pursuant to *Code of Civil Procedure section 1094.5*. (§ 17559.)

The legislative scheme is not limited to establishing the claims procedure, however. It also contemplates reporting to the Legislature and to departments and agencies of the state which have responsibilities related to funding state mandates, budget planning, and payment. The parameters and guidelines adopted by the Commission must be submitted to the Controller, who is to pay subsequent claims arising out of the mandate. (§ 17558.) Executive orders mandating costs are to be ac-

accompanied by an appropriations [*333] bill to cover the costs if the costs are not included in the budget bill, and in subsequent years the costs must be included in the budget bill. (§ 17561, subds. (a) & (b).) Regular review of the costs is to be made by the Legislative Analyst, who must report to the Legislature and recommend whether the mandate should be continued. (§ 17562.) The Commission is also required to make semiannual reports to the Legislature of the number of mandates found and the estimated reimbursement cost to the state. (§ 17600.) The Legislature must then adopt a "local government claims bill." If that bill does not include funding for a state mandate, an affected local agency or school district may seek a declaration from the superior court for the County of Sacramento that the mandate is unenforceable, [**1313] [***71] and an injunction against enforcement. (§ 17612.)

Additional procedures, enacted in 1985, create a system of state-mandate apportionments to fund reimbursement. (§ 17615 et seq.)

(1) It is apparent from the comprehensive nature of this legislative scheme, and from the Legislature's expressed intent, that the exclusive remedy for a claimed violation of section 6 lies in these procedures. The statutes create an administrative forum for resolution of state mandate claims, and establishes procedures which exist for the express purpose of avoiding multiple proceedings, judicial and administrative, addressing the same claim that a reimbursable state mandate has been created. The statutory scheme also designates the Sacramento County Superior Court as the venue for judicial actions to declare unfunded mandates invalid (§ 17612).

The legislative intent is clearly stated in *section 17500*: "It is the intent of the Legislature in enacting this part to provide for the implementation of *Section 6 of Article XIII B of the California Constitution* and to consolidate the procedures for reimbursement of statutes specified in the Revenue and Taxation Code with those identified in the Constitution. . . ." And *section 17550* states: "Reimbursement of local agencies and school districts for costs mandated by the state shall be provided pursuant to this chapter."

Finally, *section 17552* provides: "This chapter shall provide *the sole and exclusive procedure* by which a local agency or school district may claim reimbursement for costs mandated by the state as required by *Section 6 of Article XIII B of the California Constitution*." (Italics added.)

In short, the Legislature has created what is clearly intended to be a comprehensive and exclusive procedure by which to implement and enforce section 6.

[*334] IV

Exclusivity

(2) Plaintiffs argued, and the Court of Appeal agreed, that the existence of an administrative remedy by which affected local agencies could enforce their right under section 6 to reimbursement for the cost of state mandates did not bar this action because the administrative remedy is available only to local agencies and school districts.

The Court of Appeal recognized that the decision of the County of Alameda, which had not filed a claim for reimbursement at the time the complaint was filed, was a discretionary decision which plaintiffs could not challenge. (*Dunn v. Long Beach L. & W. Co. (1896) 114 Cal. 605, 609, 610-611 [46 P. 607]*; *Silver v. Watson (1972) 26 Cal.App.3d 905, 909 [103 Cal.Rptr. 576]*; *Whitson v. City of Long Beach (1962) 200 Cal.App.2d 486, 506 [19 Cal.Rptr. 668]*; *Elliott v. Superior Court (1960) 180 Cal.App.2d 894, 897 [5 Cal.Rptr. 116]*.) The court concluded, however, that public policy and practical necessity required that plaintiffs have a remedy for enforcement of section 6 independent of the statutory procedure.

The right involved, however, is a right given by the Constitution to local agencies, not individuals either as taxpayers or recipients of government benefits and services. Section 6 provides that the "state shall provide a subvention of funds *to reimburse . . . local governments . . .*" (Italics added.) The administrative remedy created by the Legislature is adequate to fully implement section 6. That Alameda County did not file a reimbursement claim does not establish that the enforcement remedy is inadequate. Any of the 58 counties was free to file a claim, and other counties did so. The test claim is now before the Court of Appeal. The administrative procedure has operated as intended.

The Legislature has the authority to establish procedures for the implementation of local agency rights under section 6. Unless the exercise of a constitutional right is unduly restricted, the court must limit enforcement to the procedures established by the Legislature. (*People v. [**1314] [***72] Western Air Lines, Inc. (1954) 42 Cal.2d 621, 637 [268 P.2d 723]*; *Chesney v. Byram (1940) 15 Cal.2d 460, 463 [101 P.2d 1106]*; *County of Contra Costa v. State of California (1986) 177 Cal.App.3d 62, 75 [222 Cal.Rptr. 750]*.)

Plaintiffs' argument that they must be permitted to enforce section 6 as individuals because their right to adequate health care services has been compromised by the failure of the state to reimburse the county for the cost [*335] of services to medically indigent adults is unpersuasive. Plaintiffs' interest, although pressing, is indirect and does not differ from the interest of the public at large in the financial plight of local government. Al-

54 Cal. 3d 326, *; 814 P.2d 1308, **;
285 Cal. Rptr. 66, ***; 1991 Cal. LEXIS 3745

though the basis for the claim that the state must reimburse the county for its costs of providing the care that was formerly available to plaintiffs under Medi-Cal is that AB 799 created a state mandate, plaintiffs have no right to have any reimbursement expended for health care services of any kind. Nothing in article XIII B or other provision of law controls the county's expenditure of the funds plaintiffs claim must be paid to the county. To the contrary, *section 17563* gives the local agency complete discretion in the expenditure of funds received pursuant to section 6, providing: "Any funds received by a local agency or school district pursuant to the provisions of this chapter may be used for any public purpose."

The relief plaintiffs seek in their prayer for state reimbursement of county expenses is, in the end, a reallocation of general revenues between the state and the county. Neither public policy nor practical necessity compels creation of a judicial remedy by which individuals may enforce the right of the county to such revenues. The Legislature has established a procedure by which the county may claim any revenues to which it believes it is entitled under section 6. That test-claim statute expressly provides that not only the claimant, but also "any other interested organization or individual may participate" in the hearing before the Commission (§ 17555) at which the right to reimbursement of the costs of such mandate is to be determined. Procedures for receiving any claims must "provide for presentation of evidence by the claimant, the Department of Finance and any other affected department or agency, *and any other interested person.*" (§ 17553. Italics added.) Neither the county nor an interested individual is without an opportunity to be heard on these questions. These procedures are both adequate and exclusive.⁷

⁷ Plaintiffs' argument, that the Legislature's failure to make provision for individual enforcement of section 6 before the Commission demonstrates an intent to permit legal actions, is not persuasive. The legislative statement of intent to relegate all mandate disputes to the Commission is clear. A more likely explanation of the failure to provide for test cases to be initiated by individuals lies in recognition that (1) because section 6 creates rights only in governmental entities, individuals lack sufficient beneficial interest in either the receipt or expenditure of reimbursement funds to accord them standing; and (2) the number of local agencies having a direct interest in obtaining reimbursement is large enough to ensure that citizen interests will be adequately represented.

The alternative relief plaintiffs seek -- reinstatement to Medi-Cal pending further action by the state -- is not a remedy available under the statute, and thus is not one which this court may award. The remedy for the failure to fund a program is a declaration that the mandate is unenforceable. That relief is available only after the Commission has determined that a mandate exists [*336] and the Legislature has failed to include the cost in a local government claims bill, and only on petition by the county. (§ 17612.)⁸

⁸ Plaintiffs are not without a remedy if the county fails to provide adequate health care, however. They may enforce the obligation imposed on the county by *Welfare and Institutions Code sections 17000 and 17001*, and by judicial action. (See, e.g., *Mooney v. Pickett* (1971) 4 Cal.3d 669 [94 Cal.Rptr. 279, 483 P.2d 1231].)

Moreover, the judicial remedy approved by the Court of Appeal permits resolution of the issues raised in a state mandate claim without the participation of those officers and individuals the Legislature deems necessary to a full and fair exposition and resolution of the issues. Neither the Controller nor the Director of Finance [**1315] [***73] was named a defendant in this action. The Treasurer and the Director of the Office of Planning and Research did not participate. All of these officers would have been involved in determining the question as members of the Commission, as would the public member of the Commission. The judicial procedures were not equivalent to the public hearing required on test claims before the Commission by *section 17555*. Therefore, other affected departments, organizations, and individuals had no opportunity to be heard.⁹

⁹ For this reason, it would be inappropriate to address the merits of plaintiff's claim in this proceeding. (Cf. *Dix v. Superior Court* (1991) 53 Cal.3d 442 [279 Cal.Rptr. 834, 807 P.2d 1063].) Unlike the dissent, we do not assume that in representing the state in this proceeding, the Attorney General necessarily represented the interests and views of these officials.

Finally, since a determination that a state mandate has been created in a judicial proceeding rather than one before the Commission does not trigger the procedures for creating parameters and guidelines for payment of claims, or for inclusion of estimated costs in the state budget, there is no source of funds available for compliance with the judicial decision other than the appropriations for the Department of Health Services. Payment from those funds can only be at the expense of another program which the department is obligated to fund. No public policy supports, let alone requires, this result.

The superior court acted properly in dismissing this action.

The judgment of the Court of Appeal is reversed.

DISSENT BY: BROUSSARD

DISSENT

ROUSSARD, J.

I dissent. For nine years the Legislature has defied the mandate of article XIII B of the California Constitution (hereafter article XIII B). Having transferred responsibility for the care of medically indigent adults (MIA's) to county governments, the Legislature has failed to provide the counties with sufficient money to meet this responsibility, yet the [*337] Legislature computes its own appropriations limit as if it fully funded the program. The majority, however, declines to remedy this violation because, it says, the persons most directly harmed by the violation -- the medically indigent who are denied adequate health care -- have no standing to raise the matter. I disagree, and will demonstrate that (1) plaintiffs have standing as citizens to seek a declaratory judgment to determine whether the state is complying with its constitutional duty under article XIII B; (2) the creation of an administrative remedy whereby counties and local districts can enforce article XIII B does not deprive the citizenry of its own independent right to enforce that provision; and (3) even if plaintiffs lacked standing, our recent decision in *Dix v. Superior Court* (1991) 53 Cal.3d 442 [279 Cal.Rptr. 834, 807 P.2d 1063] permits us to reach and resolve any significant issue decided by the Court of Appeal and fully briefed and argued here. I conclude that we should reach the merits of the appeal.

On the merits, I conclude that the state has not complied with its constitutional obligation under article XIII B. To prevent the state from avoiding the spending limits imposed by article XIII B, section 6 of that article prohibits the state from transferring previously state-financed programs to local governments without providing sufficient funds to meet those burdens. In 1982, however, the state excluded the medically indigent from its Medi-Cal program, thus shifting the responsibility for such care to the counties. Subvention funds provided by the state were inadequate to reimburse the counties for this responsibility, and became less adequate every year. At the same time, the state continued to compute its spending limit as if it fully financed the entire program. The result is exactly what article XIII B was intended to prevent: the state enjoys a falsely inflated spending limit; the county is compelled to assume a burden it cannot afford; and the medically indigent receive inadequate health care.

I. Facts and Procedural History

Plaintiffs -- citizens, taxpayers, and persons in need of medical care -- allege that [**1316] [***74] the state has shifted its financial responsibility for the funding of health care for MIA's to the counties without providing the necessary funding and without any agreement transferring appropriation limits, and that as a result the state is violating article XIII B. Plaintiffs further allege they and the class they claim to represent cannot, consequently, obtain adequate health care from the County of Alameda, which lacks the state funding to provide it. The county, although nominally a defendant, aligned [*338] itself with plaintiffs. It admits the inadequacy of its program to provide medical care for MIA's but blames the absence of state subvention funds.¹

1 The majority states that "Plaintiffs are not without a remedy if the county fails to provide adequate health care They may enforce the obligation imposed on the county by *Welfare and Institutions Code sections 17000 and 17001*, and by judicial action." (Maj. opn., ante, p. 336, fn. 8)

The majority fails to note that plaintiffs have already tried this remedy, and met with the response that, owing to the state's inadequate subvention funds, the county cannot afford to provide adequate health care.

At hearings below, plaintiffs presented uncontradicted evidence regarding the enormous impact of these statutory changes upon the finances and population of Alameda County. That county now spends about \$ 40 million annually on health care for MIA's, of which the state reimburses about half. Thus, since article XIII B became effective, Alameda County's obligation for the health care of MIA's has risen from zero to more than \$ 20 million per year. The county has inadequate funds to discharge its new obligation for the health care of MIA's; as a result, according to the Court of Appeal, uncontested evidence from medical experts presented below shows that, "The delivery of health care to the indigent in Alameda County is in a state of shambles; the crisis cannot be overstated" "Because of inadequate state funding, some Alameda County residents are dying, and many others are suffering serious diseases and disabilities, because they cannot obtain adequate access to the medical care they need" "The system is clogged to the breaking point. . . . All community clinics . . . are turning away patients." "The funding received by the county from the state for MIAs does not approach the actual cost of providing health care to the MIAs. As a consequence, inadequate resources available to county health services jeopardize the lives and health of thousands of people"

The trial court acknowledged that plaintiffs had shown irreparable injury, but denied their request for a preliminary injunction on the ground that they could not prevail in the action. It then granted the state's motion for summary judgment. Plaintiffs appealed from both decisions of the trial court.

The Court of Appeal consolidated the two appeals and reversed the rulings below. It concluded that plaintiffs had standing to bring this action to enforce the constitutional spending limit of article XIII B, and that the action is not barred by the existence of administrative remedies available to counties. It then held that the shift of a portion of the cost of medical indigent care by the state to Alameda County constituted a state-mandated new program under the provisions of article XIII B, which triggered that article's provisions requiring a subvention of funds by the state to reimburse Alameda [*339] County for the costs of such program it was required to assume. The judgments denying a preliminary injunction and granting summary judgment for defendants were reversed. We granted review.

II. Standing

A. *Plaintiffs have standing to bring an action for declaratory relief to determine whether the state is complying with article XIII B.*

Plaintiffs first claim standing as taxpayers under *Code of Civil Procedure section 526a*, which provides that: "An action to obtain a judgment, restraining and preventing any illegal expenditure of, waste of, or injury to, the estate, funds, or other property of a county . . . , may be maintained [*1317] [***75] against any officer thereof, or any agent, or other person, acting in its behalf, either by a citizen resident therein, or by a corporation, who is assessed for and is liable to pay, or, within one year before the commencement of the action, has paid, a tax therein. . . ." As in *Common Cause v. Board of Supervisors* (1989) 49 Cal.3d 432, 439 [261 Cal.Rptr. 574, 777 P.2d 610], however, it is "unnecessary to reach the question whether plaintiffs have standing to seek an injunction under *Code of Civil Procedure section 526a*, because there is an independent basis for permitting them to proceed." Plaintiffs here seek a declaratory judgment that the transfer of responsibility for MIA's from the state to the counties without adequate reimbursement violates article XIII B. A declaratory judgment that the state has breached its duty is essentially equivalent to an action in mandate to compel the state to perform its duty. (See *California Assn. of Psychology Providers v. Rank* (1990) 51 Cal.3d 1, 9 [270 Cal.Rptr. 796, 793 P.2d 2], which said that a declaratory judgment establishing that the state has a duty to act provides relief equivalent to mandamus, and makes issuance of the writ unnecessary.) Plaintiffs further seek a mandatory injunction requiring

that the state pay the health costs of MIA's under the Medi-Cal program until the state meets its obligations under article XIII B. The majority similarly characterize plaintiffs' action as one comparable to mandamus brought to enforce section 6 of article XIII B.

We should therefore look for guidance to cases that discuss the standing of a party seeking a writ of mandate to compel a public official to perform his or her duty.² Such an action may be brought by any person "beneficially interested" in the issuance of the writ. (*Code Civ. Proc.*, § 1086.) In *Carsten* [*340] v. *Psychology Examining Com.* (1980) 27 Cal.3d 793, 796 [166 Cal.Rptr. 844, 614 P.2d 276], we explained that the "requirement that a petitioner be 'beneficially interested' has been generally interpreted to mean that one may obtain the writ only if the person has some special interest to be served or some particular right to be preserved or protected over and above the interest held in common with the public at large." We quoted from Professor Davis, who said, "One who is in fact adversely affected by governmental action should have standing to challenge that action if it is judicially reviewable." (Pp. 796-797, quoting 3 Davis, *Administrative Law Treatise* (1st ed. 1958) p. 291.) Cases applying this standard include *Stocks v. City of Irvine* (1981) 114 Cal.App.3d 520 [170 Cal.Rptr. 724], which held that low-income residents of Los Angeles had standing to challenge exclusionary zoning laws of suburban communities which prevented the plaintiffs from moving there; *Taschner v. City Council*, *supra*, 31 Cal.App.3d 48, which held that a property owner has standing to challenge an ordinance which may limit development of the owner's property; and *Felt v. Waughop* (1924) 193 Cal. 498 [225 P. 862], which held that a city voter has standing to compel the city clerk to certify a correct list of candidates for municipal office. Other cases illustrate the limitation on standing: *Carsten v. Psychology Examining Com.*, *supra*, 27 Cal.3d 793, held that a member of the committee who was neither seeking a license nor in danger of losing one had no standing to challenge [*1318] [***76] a change in the method of computing the passing score on the licensing examination; *Parker v. Bowron* (1953) 40 Cal.2d 344 [254 P.2d 6] held that a union official who was neither a city employee nor a city resident had no standing to compel a city to follow a prevailing wage ordinance; and *Dunbar v. Governing Board* (1969) 275 Cal.App.2d 14 [79 Cal.Rptr. 662] held that a member of a student organization had standing to challenge a college district's rule barring a speaker from campus, but persons who merely planned to hear him speak did not.

2 It is of no importance that plaintiffs did not request issuance of a writ of mandate. In *Taschner v. City Council* (1973) 31 Cal.App.3d 48, 56 [107 Cal.Rptr. 214] (overruled on other

grounds in *Associated Home Builders etc., Inc. v. City of Livermore* (1976) 18 Cal.3d 582, 596 [135 Cal.Rptr. 41, 557 P.2d 473, 92 A.L.R.3d 1038]), the court said that "[a]s against a general demurrer, a complaint for declaratory relief may be treated as a petition for mandate [citations], and where a complaint for declaratory relief alleges facts sufficient to entitle plaintiff to mandate, it is error to sustain a general demurrer without leave to amend."

In the present case, the trial court ruled on a motion for summary judgment, but based that ruling not on the evidentiary record (which supported plaintiffs' showing of irreparable injury) but on the issues as framed by the pleadings. This is essentially equivalent to a ruling on demurrer, and a judgment denying standing could not be sustained on the narrow ground that plaintiffs asked for the wrong form of relief without giving them an opportunity to correct the defect. (See *Residents of Beverly Glen, Inc. v. City of Los Angeles* (1973) 34 Cal.App.3d 117, 127-128 [109 Cal.Rptr. 724].)

No one questions that plaintiffs are affected by the lack of funds to provide care for MIA's. Plaintiffs, except for plaintiff Rabinowitz, are not merely citizens and taxpayers; they are medically indigent persons living in Alameda County who have been and will be deprived of proper medical care if funding of MIA programs is inadequate. Like the other plaintiffs here, [*341] plaintiff Kinlaw, a 60-year-old woman with diabetes and hypertension, has no health insurance. Plaintiff Spier has a chronic back condition; inadequate funding has prevented him from obtaining necessary diagnostic procedures and physiotherapy. Plaintiff Tsosie requires medication for allergies and arthritis, and claims that because of inadequate funding she cannot obtain proper treatment. Plaintiff King, an epileptic, says she was unable to obtain medication from county clinics, suffered seizures, and had to go to a hospital. Plaintiff "Doe" asserts that when he tried to obtain treatment for AIDS-related symptoms, he had to wait four to five hours for an appointment and each time was seen by a different doctor. All of these are people personally dependent upon the quality of care of Alameda County's MIA program; most have experienced inadequate care because the program was underfunded, and all can anticipate future deficiencies in care if the state continues its refusal to fund the program fully.

The majority, however, argues that the county has no duty to use additional subvention funds for the care of MIA's because under *Government Code section 17563* "[a]ny funds received by a local agency . . . pursuant to the provisions of this chapter may be used for any public

purpose." Since the county may use the funds for other purposes, it concludes that MIA's have no special interest in the subvention.³

3 The majority's argument assumes that the state will comply with a judgment for plaintiffs by providing increased subvention funds. If the state were instead to comply by restoring Medi-Cal coverage for MIA's, or some other method of taking responsibility for their health needs, plaintiffs would benefit directly.

This argument would be sound if the county were already meeting its obligations to MIA's under *Welfare and Institutions Code section 17000*. If that were the case, the county could use the subvention funds as it chose, and plaintiffs would have no more interest in the matter than any other county resident or taxpayer. But such is not the case at bar. Plaintiffs here allege that the county is not complying with its duty, mandated by *Welfare and Institutions Code section 17000*, to provide health care for the medically indigent; the county admits its failure but pleads lack of funds. Once the county receives adequate funds, it must perform its statutory duty under *section 17000 of the Welfare and Institutions Code*. If it refused, an action in mandamus would lie to compel performance. (See *Mooney v. Pickett* (1971) 4 Cal.3d 669 [94 Cal.Rptr. 279, 483 P.2d 1231].) In fact, the county has made clear throughout this litigation that it would use the subvention funds to provide care for MIA's. The majority's conclusion that plaintiffs lack a special, beneficial interest in the state's compliance with article XIII B ignores the practical realities of health care funding.

Moreover, we have recognized an exception to the rule that a plaintiff must be beneficially interested. "Where the question is one of public right [*342] and the object of the mandamus is to procure the enforcement of a public duty, the relator need not show that he has any legal or special interest in the result, since it is sufficient that he is interested as a citizen in having the laws executed and the duty in question [**1319] [***77] enforced." (*Bd. of Soc. Welfare v. County of L. A.* (1945) 27 Cal.2d 98, 100-101 [162 P.2d 627].) We explained in *Green v. Obledo* (1981) 29 Cal.3d 126, 144 [172 Cal.Rptr. 206, 624 P.2d 256], that this "exception promotes the policy of guaranteeing citizens the opportunity to ensure that no governmental body impairs or defeats the purpose of legislation establishing a public right. . . . It has often been invoked by California courts. [Citations.]"

Green v. Obledo presents a close analogy to the present case. Plaintiffs there filed suit to challenge whether a state welfare regulation limiting deductibility of work-related expenses in determining eligibility for

aid to families with dependent children (AFDC) assistance complied with federal requirements. Defendants claimed that plaintiffs were personally affected only by a portion of the regulation, and had no standing to challenge the balance of the regulation. We replied that "[t]here can be no question that the proper calculation of AFDC benefits is a matter of public right [citation], and plaintiffs herein are certainly citizens seeking to procure the enforcement of a public duty. [Citation.] It follows that plaintiffs have standing to seek a writ of mandate commanding defendants to cease enforcing [the regulation] in its entirety." (29 Cal.3d at p. 145.)

We again invoked the exception to the requirement for a beneficial interest in *Common Cause v. Board of Supervisors*, supra, 49 Cal.3d 432. Plaintiffs in that case sought to compel the county to deputize employees to register voters. We quoted *Green v. Obledo*, supra, 29 Cal.3d 126, 144, and concluded that "[t]he question in this case involves a public right to voter outreach programs, and plaintiffs have standing as citizens to seek its vindication." (49 Cal.3d at p. 439.) We should reach the same conclusion here.

B. *Government Code sections 17500-17630 do not create an exclusive remedy which bars citizen-plaintiffs from enforcing article XIII B.*

Four years after the enactment of article XIII B, the Legislature enacted *Government Code sections 17500 through 17630* to implement article XIII B, section 6. These statutes create a quasi-judicial body called the Commission on State Mandates, consisting of the state Controller, state Treasurer, state Director of Finance, state Director of the Office of Planning and Research, and one public member. The commission has authority to "hear and decide upon [any] claim" by a local government that it "is entitled to be reimbursed by the state" for costs under article XIII B. (*Gov. Code*, § 17551, [*343] subd. (a).) Its decisions are subject to review by an action for administrative mandamus in the superior court. (See *Gov. Code*, § 17559.)

The majority maintains that a proceeding before the Commission on State Mandates is the exclusive means for enforcement of article XIII B, and since that remedy is expressly limited to claims by local agencies or school districts (*Gov. Code*, § 17552), plaintiffs lack standing to enforce the constitutional provision.⁴ I disagree, for two reasons.

4 The majority emphasizes the statement of purpose of *Government Code section 17500*: "The Legislature finds and declares that the existing system for reimbursing local agencies and school districts for the costs of state-mandated local programs has not provided for the effective

determination of the state's responsibilities under section 6 of article XIII B of the California Constitution. The Legislature finds and declares that the failure of the existing process to adequately and consistently resolve the complex legal questions involved in the determination of state-mandated costs has led to an increasing reliance by local agencies and school districts on the judiciary, and, therefore, in order to relieve unnecessary congestion of the judicial system, it is necessary to create a mechanism which is capable of rendering sound quasi-judicial decisions and providing an effective means of resolving disputes over the existence of state-mandated local programs."

The "existing system" to which *Government Code section 17500* referred was the Property Tax Relief Act of 1972 (*Rev. & Tax. Code*, §§ 2201-2327), which authorized local agencies and school boards to request reimbursement from the state Controller. Apparently dissatisfied with this remedy, the agencies and boards were bypassing the Controller and bringing actions directly in the courts. (See, e.g., *County of Contra Costa v. State of California* (1986) 177 Cal.App.3d 62 [222 Cal.Rptr. 750].) The legislative declaration refers to this phenomena. It does not discuss suits by individuals.

[**1320] [***78] First, *Government Code section 17552* expressly addressed the question of exclusivity of remedy, and provided that "[t]his chapter shall provide the sole and exclusive procedure by which a local agency or school district may claim reimbursement for costs mandated by the state as required by Section 6 of Article XIII B of the California Constitution." (Italics added.) The Legislature was aware that local agencies and school districts were not the only parties concerned with state mandates, for in *Government Code section 17555* it provided that "any other interested organization or individual may participate" in the commission hearing. Under these circumstances the Legislature's choice of words -- "the sole and exclusive procedure by which a local agency or school district may claim reimbursement" -- limits the procedural rights of those claimants only, and does not affect rights of other persons. *Expressio unius est exclusio alterius* -- "the expression of certain things in a statute necessarily involves exclusion of other things not expressed." (*Henderson v. Mann Theatres Corp.* (1976) 65 Cal.App.3d 397, 403 [135 Cal.Rptr. 266].)

The case is similar in this respect to *Common Cause v. Board of Supervisors*, supra, 49 Cal.3d 432. Here defendants contend that the counties' right of action under *Government Code sections 17551-17552* impliedly ex-

cludes [*344] any citizen's remedy; in *Common Cause* defendants claimed the Attorney General's right of action under *Elections Code section 304* impliedly excluded any citizen's remedy. We replied that "the plain language of *section 304* contains no limitation on the right of private citizens to sue to enforce the section. To infer such a limitation would contradict our long-standing approval of citizen actions to require governmental officials to follow the law, expressed in our expansive interpretation of taxpayer standing [citations], and our recognition of a 'public interest' exception to the requirement that a petitioner for writ of mandate have a personal beneficial interest in the proceedings [citations]." (49 Cal.3d at p. 440, fn. omitted.) Likewise in this case the plain language of *Government Code sections 17551-17552* contain no limitation on the right of private citizens, and to infer such a right would contradict our long-standing approval of citizen actions to enforce public duties.

The United States Supreme Court reached a similar conclusion in *Rosado v. Wyman* (1970) 397 U.S. 397 [25 L.Ed.2d 442, 90 S.Ct. 1207]. In that case New York welfare recipients sought a ruling that New York had violated federal law by failing to make cost-of-living adjustments to welfare grants. The state replied that the statute giving the Department of Health, Education and Welfare authority to cut off federal funds to noncomplying states constituted an exclusive remedy. The court rejected the contention, saying that "[w]e are most reluctant to assume Congress has closed the avenue of effective judicial review to those individuals most directly affected by the administration of its program." (P. 420 [25 L.Ed.2d at p. 460].) The principle is clear: the persons actually harmed by illegal state action, not only some administrator who has no personal stake in the matter, should have standing to challenge that action.

Second, article XIII B was enacted to protect taxpayers, not governments. Section 1 and 2 of article XIII B establish strict limits on state and local expenditures, and require the refund of all taxes collected in excess of those limits. Section 6 of article XIII B prevents the state from evading those limits and burdening county taxpayers by transferring financial responsibility for a program to a county, yet counting the cost of that program toward the limit on state expenditures.

These provisions demonstrate a profound distrust of government and a disdain for excessive government spending. An exclusive remedy under which only governments can enforce article XIII B, and the taxpayer-citizen can appear only if a government [**1321] [***79] has first instituted proceedings, is inconsistent with the ethos that led to article XIII B. The drafters of article XIII B and the voters who enacted it would not accept that the state Legislature -- the principal body

regulated by the article -- could establish a procedure [*345] under which the only way the article can be enforced is for local governmental bodies to initiate proceedings before a commission composed largely of state financial officials.

One obvious reason is that in the never-ending attempts of state and local government to obtain a larger proportionate share of available tax revenues, the state has the power to coerce local governments into forgoing their rights to enforce article XIII B. An example is the Brown-Presley Trial Court Funding Act (*Gov. Code, § 77000 et seq.*), which provides that the county's acceptance of funds for court financing may, in the discretion of the Governor, be deemed a waiver of the counties' rights to proceed before the commission on all claims for reimbursement for state-mandated local programs which existed and were not filed prior to passage of the trial funding legislation. ⁵ The ability of state government by financial threat or inducement to persuade counties to waive their right of action before the commission renders the counties' right of action inadequate to protect the public interest in the enforcement of article XIII B.

5 "(a) The initial decision by a county to opt into the system pursuant to Section 77300 shall constitute a waiver of all claims for reimbursement for state-mandated local programs not theretofore approved by the State Board of Control, the Commission on State Mandates, or the courts to the extent the Governor, in his discretion, determines that waiver to be appropriate; provided, that a decision by a county to opt into the system pursuant to Section 77300 beginning with the second half of the 1988-89 fiscal year shall not constitute a waiver of a claim for reimbursement based on a statute chaptered on or before the date the act which added this chapter is chaptered, which is filed in acceptable form on or before the date the act which added this chapter is chaptered. A county may petition the Governor to exempt any such claim from this waiver requirement; and the Governor, in his discretion, may grant the exemption in whole or in part. The waiver shall not apply to or otherwise affect any claims accruing after initial notification. Renewal, renegotiation, or subsequent notification to continue in the program shall not constitute a waiver. [para.] (b) The initial decision by a county to opt into the system pursuant to Section 77300 shall constitute a waiver of any claim, cause of action, or action whenever filed, with respect to the Trial Court Funding Act of 1985, Chapter 1607 of the Statutes of 1985, or Chapter 1211 of the Statutes of 1987." (*Gov. Code, § 77203.5*, italics added.)

54 Cal. 3d 326, *; 814 P.2d 1308, **;
285 Cal. Rptr. 66, ***; 1991 Cal. LEXIS 3745

"As used in this chapter, 'state-mandated local program' means any and all reimbursements owed or owing by operation of either Section 6 of Article XIII B of the California Constitution, or Section 17561 of the Government Code, or both." (Gov. Code, § 77005, italics added.)

The facts of the present litigation also demonstrate the inadequacy of the commission remedy. The state began transferring financial responsibility for MIA's to the counties in 1982. Six years later no county had brought a proceeding before the commission. After the present suit was filed, two counties filed claims for 70 percent reimbursement. Now, nine years after the 1982 legislation, the counties' claims are pending before the Court of Appeal. After that court acts, and we decide whether to review its decision, the matter may still have to go back to the commission for hearings to [*346] determine the amount of the mandate -- which is itself an appealable order. When an issue involves the life and health of thousands, a procedure which permits this kind of delay is not an adequate remedy.

In sum, effective, efficient enforcement of article XIII B requires that standing to enforce that measure be given to those harmed by its violation -- in this case, the medically indigent -- and not be vested exclusively in local officials who have no personal interest at stake and are subject to financial and political pressure to overlook violations.

C. *Even if plaintiffs lack standing this court should nevertheless address and resolve the merits of the appeal.*

Although ordinarily a court will not decide the merits of a controversy if the plaintiffs lack standing (see *McKinny v. Board of Trustees* (1982) 31 Cal.3d 79, 90 [181 Cal.Rptr. 549, 642 P.2d 460]), we recognized [**1322] [***80] an exception to this rule in our recent decision in *Dix v. Superior Court*, *supra*, 53 Cal.3d 442 (hereafter *Dix*). In *Dix*, the victim of a crime sought to challenge the trial court's decision to recall a sentence under *Penal Code* section 1170. We held that only the prosecutor, not the victim of the crime, had standing to raise that issue. We nevertheless went on to consider and decide questions raised by the victim concerning the trial court's authority to recall a sentence under *Penal Code* section 1170, subdivision (d). We explained that the sentencing issues "are significant. The case is fully briefed and all parties apparently seek a decision on the merits. Under such circumstances, we deem it appropriate to address [the victim's] sentencing arguments for the guidance of the lower courts. Our discretion to do so under analogous circumstances is well settled. [Citing cases explaining when an appellate court can decide an issue despite mootness.]" (53 Cal.3d

at p. 454.) In footnote we added that "Under article VI, section 12, subdivision (b) of the California Constitution . . . , we have jurisdiction to 'review the decision of a Court of Appeal in any cause.' (Italics added.) Here the Court of Appeal's decision addressed two issues -- standing and merits. Nothing in article VI, section 12(b) suggests that, having rejected the Court of Appeal's conclusion on the preliminary issue of standing, we are foreclosed from 'review[ing]' the second subject addressed and resolved in its decision." (Pp. 454-455, fn. 8.)

I see no grounds on which to distinguish *Dix*. The present case is also one in which the Court of Appeal decision addressed both standing and merits. It is fully briefed. Plaintiffs and the county seek a decision on the merits. While the state does not seek a decision on the merits in this proceeding, its appeal of the superior court decision in the mandamus proceeding brought by the County of Los Angeles (see maj. opn., *ante*, p. 330, fn. 2) shows that it is not opposed to an appellate decision on the merits.

[*347] The majority, however, notes that various state officials -- the Controller, the Director of Finance, the Treasurer, and the Director of the Office of Planning and Research -- did not participate in this litigation. Then in a footnote, the majority suggests that this is the reason they do not follow the *Dix* decision. (Maj. opn., *ante*, p. 336, fn. 9.) In my view, this explanation is insufficient. The present action is one for declaratory relief against the state. It is not necessary that plaintiffs also sue particular state officials. (The state has never claimed that such officials were necessary parties.) I do not believe we should refuse to reach the merits of this appeal because of the nonparticipation of persons who, if they sought to participate, would be here merely as amici curiae.⁶

6 It is true that these officials would participate in a proceeding before the Commission on State Mandates, but they would do so as members of an administrative tribunal. On appellate review of a commission decision, its members, like the members of the Public Utilities Commission or the Workers' Compensation Appeals Board, are not respondents and do not appear to present their individual views and positions. For example, in *Lucia Mar Unified School Dist. v. Honig* (1988) 44 Cal.3d 830 [244 Cal.Rptr. 677, 750 P.2d 318], in which we reviewed a commission ruling relating to subvention payments for education of handicapped children, the named respondents were the state Superintendent of Public Instruction, the Department of Education, and the Commission on State Mandates. The individual

54 Cal. 3d 326, *, 814 P.2d 1308, **;
285 Cal. Rptr. 66, ***; 1991 Cal. LEXIS 3745

members of the commission were not respondents and did not participate.

The case before us raises no issues of departmental policy. It presents solely an issue of law which this court is competent to decide on the briefs and arguments presented. That issue is one of great significance, far more significant than any raised in *Dix*. Judges rarely recall sentencing under *Penal Code section 1170, subdivision (d)*; when they do, it generally affects only the individual defendant. In contrast, the legal issue here involves immense sums of money and affect budgetary planning for both the state and counties. State and county governments need to know, as soon as possible, what their [**1323] [***81] rights and obligations are; legislators considering proposals to deal with the current state and county budget crisis need to know how to frame legislation so it does not violate article XIII B. The practical impact of a decision on the people of this state is also of great importance. The failure of the state to provide full subvention funds and the difficulty of the county in filling the gap translate into inadequate staffing and facilities for treatment of thousands of persons. Until the constitutional issues are resolved the legal uncertainties may inhibit both levels of government from taking the steps needed to address this problem. A delay of several years until the Los Angeles case is resolved could result in pain, hardship, or even death for many people. I conclude that, whether or not plaintiffs have standing, this court should address and resolve the merits of the appeal.

D. Conclusion as to standing.

As I have just explained, it is not necessary for plaintiffs to have standing for us to be able to decide the merits of the appeal. Nevertheless, I conclude [*348] that plaintiffs have standing both as persons "beneficially interested" under *Code of Civil Procedure section 1086* and under the doctrine of *Green v. Obledo, supra, 29 Cal.3d 126*, to bring an action to determine whether the state has violated its duties under article XIII B. The remedy given local agencies and school districts by *Government Code sections 17500- 17630* is, as *Government Code section 17552* states, the exclusive remedy by which those bodies can challenge the state's refusal to provide subvention funds, but the statute does not limit the remedies available to individual citizens.

III. Merits of the Appeal

A. State funding of care for MIA's.

Welfare and Institutions Code section 17000 requires every county to "relieve and support" all indigent or incapacitated residents, except to the extent that such persons are supported or relieved by other sources. ⁷ From 1971 until 1982, and thus at the time article XIII B

became effective, counties were not required to pay for the provision of health services to MIA's, whose health needs were met through the state-funded Medi-Cal program. Since the medical needs of MIA's were fully met through other sources, the counties had no duty under *Welfare and Institutions Code section 17000* to meet those needs. While the counties did make general contributions to the Medi-Cal program (which covered persons other than MIA's) from 1971 until 1978, at the time article XIII B became effective in 1980 the counties were not required to make any financial contributions to Medi-Cal. It is therefore undisputed that the counties were not required to provide financially for the health needs of MIA's when article XIII B became effective. The state funded all such needs of MIA's.

7 *Welfare and Institutions Code section 17000* provides that "[e]very county . . . shall relieve and support all incompetent, poor, indigent persons, and those incapacitated by age, disease, or accident, lawfully resident therein, when such persons are not supported and relieved by their relatives or friends, by their own means, or by state hospitals or other state or private institutions."

In 1982, the Legislature passed Assembly Bill No. 799 (1981-1982 Reg. Sess.; Stats. 1982, ch. 328, pp. 1568-1609) (hereafter AB No. 799), which removed MIA's from the state-funded Medi-Cal program as of January 1, 1983, and thereby transferred to the counties, through the County Medical Services Plan which AB No. 799 created, the financial responsibility to provide health services to approximately 270,000 MIA's. AB No. 799 required that the counties provide health care for MIA's, yet appropriated only 70 percent of what the state would have spent on MIA's had those persons remained a state responsibility under the Medi-Cal program.

Since 1983, the state has only partially defrayed the costs to the counties of providing health care to MIA's. Such state funding to counties was [*349] initially relatively constant, generally more than \$ 400 million per year. By 1990, however, state [***82] funding [**1324] had decreased to less than \$ 250 million. The state, however, has always included the full amount of its former obligation to provide for MIA's under the Medi-Cal program in the year preceding July 1, 1980, as part of its article XIII B "appropriations limit," i.e., as part of the base amount of appropriations on which subsequent annual adjustments for cost-of-living and population changes would be calculated. About \$ 1 billion has been added to the state's adjusted spending limit for population growth and inflation *solely* because of the state's inclusion of all MIA expenditures in the appropriation limit established for its base year, 1979-1980. The state has not made proportional increases in the sums

54 Cal. 3d 326, *, 814 P.2d 1308, **;
285 Cal. Rptr. 66, ***; 1991 Cal. LEXIS 3745

provided to counties to pay for the MIA services funded by the counties since January 1, 1983.

B. *The function of article XIII B.*

Our recent decision in *County of Fresno v. State of California* (1991) 53 Cal.3d 482, 486-487 [280 Cal.Rptr. 92, 808 P.2d 235] (hereafter *County of Fresno*), explained the function of article XIII B and its relationship to article XIII A, enacted one year earlier:

"At the June 6, 1978, Primary Election, article XIII A was added to the Constitution through the adoption of Proposition 13, an initiative measure aimed at controlling ad valorem property taxes and the imposition of new 'special taxes.' (*Amador Valley Joint Union High Sch. Dist. v. State Bd. of Equalization* (1978) 22 Cal.3d 208, 231-232 [149 Cal.Rptr. 239, 583 P.2d 1281].) The constitutional provision imposes a limit on the power of state and local governments to adopt and levy taxes. (*City of Sacramento v. State of California* (1990) 50 Cal.3d 51, 59, fn. 1 [266 Cal.Rptr. 139, 785 P.2d 522] (*City of Sacramento*).)

"At the November 6, 1979, Special Statewide Election, article XIII B was added to the Constitution through the adoption of Proposition 4, another initiative measure. That measure places limitations on the ability of both state and local governments to appropriate funds for expenditures.

"Articles XIII A and XIII B work in tandem, together restricting California governments' power both to levy and to spend [taxes] for public purposes.' (*City of Sacramento, supra*, 50 Cal.3d at p. 59, fn. 1.)

"Article XIII B of the Constitution was intended . . . to provide 'permanent protection for taxpayers from excessive taxation' and 'a reasonable way to provide discipline in tax spending at state and local levels.' (See *County of Placer v. Corin* (1980) 113 Cal.App.3d 443, 446 [170 Cal.Rptr. 232], quoting and following Ballot Pamp., Proposed Stats. and Amends. to Cal. Const. with arguments to voters, Special Statewide Elec. (Nov. 6, 1979), argument [*350] in favor of Prop. 4, p. 18.) To this end, it establishes an 'appropriations limit' for both state and local governments (*Cal. Const., art. XIII B, § 8, subd. (h)*) and allows no 'appropriations subject to limitation' in excess thereof (*id.*, § 2). [*] (See *County of Placer v. Corin, supra*, 113 Cal.App.3d at p. 446.) It defines the relevant 'appropriations subject to limitation' as 'any authorization to expend during a fiscal year the proceeds of taxes' (*Cal. Const., art. XIII B, § 8, subd. (b).*)" (*County of Fresno, supra*, 53 Cal.3d at p. 486.)

8 Article XIII B, section 1 provides: "The total annual appropriations subject to limitation of the state and of each local government shall not ex-

ceed the appropriations limit of such entity of government for the prior year adjusted for changes in the cost of living and population except as otherwise provided in this Article."

Under section 3 of article XIII B the state may transfer financial responsibility for a program to a county if the state and county mutually agree that the appropriation limit of the state will be decreased and that of the county increased by the same amount.⁹ [***1325] [***83] Absent such an agreement, however, section 6 of article XIII B generally precludes the state from avoiding the spending limits it must observe by shifting to local governments programs and their attendant financial burdens which were a state responsibility prior to the effective date of article XIII B. It does so by requiring that "Whenever the Legislature or any state agency mandates a new program or higher level of service on any local government, the state shall provide a subvention of funds to reimburse such local government for the cost of such program or increased level of service . . ." ¹⁰

9 Section 3 of article XIII B reads in relevant part: "The appropriations limit for any fiscal year . . . shall be adjusted as follows:

"(a) In the event that the financial responsibility of providing services is transferred, in whole or in part . . . from one entity of government to another, then for the year in which such transfer becomes effective the appropriation limit of the transferee entity shall be increased by such reasonable amount as the said entities shall mutually agree and the appropriations limit of the transferor entity shall be decreased by the same amount. . . ."

10 Section 6 of article XIII B further provides that the "Legislature may, but need not, provide such subvention of funds for the following mandates: (a) Legislative mandates requested by the local agency affected; (b) Legislation defining a new crime or changing an existing definition of a crime; or (c) Legislative mandates enacted prior to January 1, 1975, or executive orders or regulations initially implementing legislation enacted prior to January 1, 1975." None of these exceptions apply in the present case.

"Section 6 was included in article XIII B in recognition that article XIII A of the Constitution severely restricted the taxing powers of local governments. (See *County of Los Angeles [v. State of California]* (1987) 43 Cal.3d 46, 61 [233 Cal.Rptr. 38, 729 P.2d 202].) The provision was intended to preclude the state from shifting financial responsibility for carrying out governmental functions onto local entities that were ill equipped to handle the task. (*Ibid.*; see *Lucia Mar Unified School*

54 Cal. 3d 326, *, 814 P.2d 1308, **;
285 Cal. Rptr. 66, ***; 1991 Cal. LEXIS 3745

Dist. v. Honig, supra, 44 Cal.3d 830, 836, fn. 6.) Specifically, it was designed to protect the tax [*351] revenues of local governments from state mandates that would require expenditure of such revenues." (*County of Fresno, supra, 53 Cal.3d at p. 487.*)

C. *Applicability of article XIII B to health care for MIA's.*

The state argues that care of the indigent, including medical care, has long been a county responsibility. It claims that although the state undertook to fund this responsibility from 1979 through 1982, it was merely temporarily (as it turned out) helping the counties meet their responsibilities, and that the subsequent reduction in state funding did not impose any "new program" or "higher level of service" on the counties within the meaning of section 6 of article XIII B. Plaintiffs respond that the critical question is not the traditional roles of the county and state, but who had the fiscal responsibility on November 6, 1979, when article XIII B took effect. The purpose of article XIII B supports the plaintiffs' position.

As we have noted, article XIII A of the Constitution (Proposition 13) and article XIII B are complementary measures. The former radically reduced county revenues, which led the state to assume responsibility for programs previously financed by the counties. Article XIII B, enacted one year later, froze both state and county appropriations at the level of the 1978-1979 budgets -- a year when the budgets included state financing for the prior county programs, but not county financing for these programs. Article XIII B further limited the state's authority to transfer obligations to the counties. Reading the two together, it seems clear that article XIII B was intended to limit the power of the Legislature to retransfer to the counties those obligations which the state had assumed in the wake of Proposition 13.

Under article XIII B, both state and county appropriations limits are set on the basis of a calculation that begins with the budgets in effect when article XIII B was enacted. If the state could transfer to the county a program for which the state at that time had full financial responsibility, the county could be forced to assume additional financial obligations without the right to appropriate additional moneys. The state, at the same time, would get credit toward its appropriations limit for expenditures it did not pay. County taxpayers [**1326] [***84] would be forced to accept new taxes or see the county forced to cut existing programs further; state taxpayers would discover that the state, by counting expenditures it did not pay, had acquired an actual revenue surplus while avoiding its obligation to refund revenues

in excess of the appropriations limit. Such consequences are inconsistent with the purpose of article XIII B.

Our decisions interpreting article XIII B demonstrate that the state's subvention requirement under section 6 is not vitiated simply because the [*352] "program" existed before the effective date of article XIII B. The alternate phrase of section 6 of article XIII B, "higher level of service[,]" . . . must be read in conjunction with the predecessor phrase 'new program' to give it meaning. Thus read, it is apparent that *the subvention requirement for increased or higher level of service is directed to state mandated increases in the services provided by local agencies in existing 'programs.'*" (*County of Los Angeles v. State of California (1987) 43 Cal.3d 46, 56 [233 Cal.Rptr. 38, 729 P.2d 202]*, italics added.)

Lucia Mar Unified School Dist. v. Honig, supra, 44 Cal.3d 830, presents a close analogy to the present case. The state Department of Education operated schools for severely handicapped students, but prior to 1979 *school districts were required by statute to contribute* to education of those students from the district at the state schools. In 1979, in response to the restrictions on school district revenues imposed by Proposition 13, the statutes requiring such district contributions were repealed and the state assumed full responsibility for funding. The state funding responsibility continued until June 28, 1981, when *Education Code section 59300* (hereafter *section 59300*), requiring school districts to share in these costs, became effective.

The plaintiff districts filed a test claim before the commission, contending they were entitled to state reimbursement under section 6 of article XIII B. The commission found the plaintiffs were not entitled to state reimbursement, on the rationale that the increase in costs to the districts compelled by *section 59300* imposed no new program or higher level of services. The trial and intermediate appellate courts affirmed on the ground that *section 59300* called for only an "adjustment of costs" of educating the severely handicapped, and that "*a shift in the funding of an existing program is not a new program or a higher level of service*" within the meaning of article XIII B. (*Lucia Mar Unified School Dist. v. Honig, supra, 44 Cal.3d at p. 834*, italics added.)

We reversed, rejecting the state's theories that the funding shift to the county of the subject program's costs does not constitute a new program. "[There can be no] doubt that although the schools for the handicapped have been operated by the state for many years, the program was new insofar as plaintiffs are concerned, since *at the time section 59300 became effective* they were not required to contribute to the education of students from their districts at such schools. [para.] . . . To hold, under the circumstances of this case, that a shift in funding of

an existing program from the state to a local entity is not a new program as to the local agency would, we think, violate the intent underlying section 6 of article XIII B. That article imposed spending limits on state and local governments, and it followed by one year the adoption by initiative of article XIII A, which severely limited the taxing [*353] power of local governments. . . . [para.] The intent of the section would plainly be violated if the state could, while retaining administrative control [1] of programs it has supported with state [***85] tax money, [**1327] simply shift the cost of the programs to local government on the theory that the shift does not violate section 6 of article XIII B because the programs are not 'new.' Whether the shifting of costs is accomplished by compelling local governments to pay the cost of entirely new programs created by the state, or by compelling them to accept financial responsibility in whole or in part for a program which was funded entirely by the state before the advent of article XIII B, the result seems equally violative of the fundamental purpose underlying section 6 of that article." (*Lucia Mar Unified School Dist. v. Honig, supra, 44 Cal.3d at pp. 835-836, fn. omitted, italics added.*)

11 The state notes that, in contrast to the program at issue in *Lucia Mar*, it has not retained administrative control over aid to MIA's. But the quoted language from *Lucia Mar*, while appropriate to the facts of that case, was not intended to establish a rule limiting article XIII B, section 6, to instances in which the state retains administrative control over the program that it requires the counties to fund. The constitutional language admits of no such limitation, and its recognition would permit the Legislature to evade the constitutional requirement.

The state seeks to distinguish *Lucia Mar* on the ground that the education of handicapped children in state schools had never been the responsibility of the local school district, but overlooks that the local district had previously been required to contribute to the cost. Indeed the similarities between *Lucia Mar* and the present case are striking. In *Lucia Mar*, prior to 1979 the state and county shared the cost of educating handicapped children in state schools; in the present case from 1971-1979 the state and county shared the cost of caring for MIA's under the Medi-Cal program. In 1979, following enactment of Proposition 13, the state took full responsibility for both programs. Then in 1981 (for handicapped children) and 1982 (for MIA's), the state sought to shift some of the burden back to the counties. To distinguish these cases on the ground that care for MIA's is a county program but education of handicapped children a state program is to rely on arbitrary labels in place of financial realities.

The state presents a similar argument when it points to the following emphasized language from *Lucia Mar Unified School Dist. v. Honig, supra, 44 Cal.3d 830*: "[B]ecause section 59300 shifts partial financial responsibility for the support of students in the state-operated schools from the state to school districts -- an obligation the school districts did not have at the time article XIII B was adopted -- it calls for plaintiffs to support a 'new program' within the meaning of section 6." (P. 836, fn. omitted, italics added.) It urges *Lucia Mar* reached its result *only* because the "program" requiring school district funding in that case *was not required by statute* at the effective date of [*354] article XIII B. The state then argues that the case at bench is distinguishable because it contends Alameda County had a continuing obligation *required by statute* antedating that effective date, which had only been "temporarily" ¹² suspended when article XIII B became effective. I fail to see the distinction between a case -- *Lucia Mar* -- in which no existing statute as of 1979 imposed an obligation on the local government and one -- this case -- in which the statute existing in 1979 imposed no obligation on local government.

12 The state's repeated emphasis on the "temporary" nature of its funding is a form of post hoc reasoning. At the time article XIII B was enacted, the voters did not know which programs would be temporary and which permanent.

The state's argument misses the salient point. As I have explained, the application of section 6 of article XIII B does not depend upon when the program was created, but upon who had the burden of funding it when article XIII B went into effect. Our conclusion in *Lucia Mar* that the educational program there in issue was a "new" program as to the school districts was not based on the presence or absence of any antecedent statutory obligation therefor. *Lucia Mar* determined that whether the program was new *as to the districts* depended on *when* they were compelled to assume the obligation to partially fund an existing program which they had not funded at the time article XIII B became effective.

The state further relies on two decisions, *Madera Community Hospital v. County of Madera* (1984) 155 Cal.App.3d 136 [201 Cal.Rptr. 768] and *Cooke v. Superior Court* (1989) 213 Cal.App.3d 401 [261 Cal.Rptr. 706], which hold that the county has a statutory obligation to provide medical care for indigents, but that it need not provide precisely [**1328] [***86] the same level of services as the state provided under Medi-Cal. ¹³ Both are correct, but irrelevant to this case. ¹⁴ The county's obligation to MIA's is defined by *Welfare and Institutions Code section 17000*, not by the former Medi-Cal program. ¹⁵ If the [*355] state, in transferring an

54 Cal. 3d 326, *, 814 P.2d 1308, **;
285 Cal. Rptr. 66, ***; 1991 Cal. LEXIS 3745

obligation to the counties, permits them to provide less services than the state provided, the state need only pay for the lower level of services. But it cannot escape its responsibility entirely, leaving the counties with a state-mandated obligation and no money to pay for it.

13 It must, however, provide a *comparable* level of services. (See *Board of Supervisors v. Superior Court* (1989) 207 Cal.App.3d 552, 564 [254 Cal.Rptr. 905].)

14 Certain language in *Madera Community Hospital v. County of Madera*, *supra*, 155 Cal.App.3d 136, however, is questionable. That opinion states that the "Legislature intended that County bear an obligation to its poor and indigent residents, *to be satisfied from county funds*, notwithstanding federal or state programs which exist concurrently with County's obligation and alleviate, to a greater or lesser extent, County's burden." (P. 151.) *Welfare and Institutions Code section 17000* by its terms, however, requires the county to provide support to residents only "when such persons are not supported and relieved by their relatives or friends, by their own means, or by state hospitals or other state or private institutions." Consequently, to the extent that the state or federal governments provide care for MIA's, the county's obligation to do so is reduced pro tanto.

15 The county's right to subvention funds under article XIII B arises because its duty to care for MIA's is a state-mandated responsibility; if the county had no duty, it would have no right to funds. No claim is made here that the funding of medical services for the indigent shifted to Alameda County is not a program "mandated" by

the state; i.e., that Alameda County has any option other than to pay these costs. (*Lucia Mar Unified School Dist. v. Honig*, *supra*, 44 Cal.3d at pp. 836-837.)

The state's arguments are also undercut by the fact that it continues to use the approximately \$ 1 billion in spending authority, generated by its previous total funding of the health care program in question, as a portion of its initial *base spending limit* calculated pursuant to sections 1 and 3 of article XIII B. In short, the state may maintain here that care for MIA's is a county obligation, but when it computes its appropriation limit it treats the entire cost of such care as a state program.

IV. Conclusion

This is a time when both state and county governments face great financial difficulties. The counties, however, labor under a disability not imposed on the state, for article XIII A of the Constitution severely restricts their ability to raise additional revenue. It is, therefore, particularly important to enforce the provisions of article XIII B which prevent the state from imposing additional obligations upon the counties without providing the means to comply with these obligations.

The present majority opinion disserves the public interest. It denies standing to enforce article XIII B both to those persons whom it was designed to protect -- the citizens and taxpayers -- and to those harmed by its violation -- the medically indigent adults. And by its reliance on technical grounds to avoid coming to grips with the merits of plaintiffs' appeal, it permits the state to continue to violate article XIII B and postpones the day when the medically indigent will receive adequate health care.

LONG BEACH UNIFIED SCHOOL DISTRICT, Plaintiff and Appellant, v. THE STATE OF CALIFORNIA et al., Defendants and Appellants; MARK H. BLOODGOOD, as Auditor-Controller, etc., et al., Defendants and Respondents

No. B033742

Court of Appeal of California, Second Appellate District, Division Five

225 Cal. App. 3d 155; 275 Cal. Rptr. 449; 1990 Cal. App. LEXIS 1198

November 15, 1990

SUBSEQUENT HISTORY: [***1] Appellants' petitions for review by the Supreme Court were denied February 28, 1991. Lucas, C. J., did not participate therein.

PRIOR HISTORY: Superior Court of Los Angeles County, No. C606020, Robert I. Weil, Judge.

DISPOSITION: We conclude that because the doctrines of collateral estoppel and waiver are inapplicable to the facts of this case, the trial court should have allowed State to challenge the decisions of the Board. However, we also determine, as a question of law, that the Executive Order requires local school boards to provide a higher level of service than is required constitutionally or by case law and that the Executive Order is a reimbursable state mandate pursuant to article XIII B, section 6 of the California Constitution. Former Revenue and Tax Code section 2234 does not provide reimbursement of the subject claim. Based on uncontradicted evidence, we modify the decision of the trial court by striking as sources of reimbursement the Special Fund for Economic Uncertainties "or similarly designated accounts." We also modify the judgment to include charging orders against certain funds appropriated through subsequent budget acts. We affirm the decision of the trial court that the Fines [***2] and Forfeitures Funds are not "reasonably available" to satisfy the Claim. Finally, we remand the matter to the trial court to determine whether at the time of its order, unexpended, unencumbered funds sufficient to satisfy the judgment remained in the approved budget line item account numbers. The trial court is also directed to determine this

same issue with respect to the charging order. The judgment is affirmed as modified. Each party is to bear its own costs on appeal.

CASE SUMMARY:

PROCEDURAL POSTURE: Appellant state challenged an order from the Superior Court of Los Angeles County (California) stating that it was required to reimburse cross-appellant school district for mandated expenditures to integrate the schools, and cross-appellant challenged that part of the order stating that certain funds were not available for this reimbursement.

OVERVIEW: The California Department of Education issued an executive order mandating expenditures to integrate the schools, and when the legislature deleted the requested funding from its budget, cross-appellant school district filed a petition to compel reimbursement after the Board of Control approved the claim. The trial court stated that appellant state was required to make these reimbursements and designated specific funds as reasonably available for the payments, but also ruled that certain funds were not available for these payments. On appeal, the court affirmed the decision as modified, holding that the doctrines of collateral estoppel and waiver were inapplicable and that the trial court should have allowed appellant to challenge the initial decisions of Board of Control in this matter. However, the court concluded that as a matter of law the executive order was a reimbursable state mandate pursuant to Cal. Const. art. XIII B, § 6, not pursuant to former Cal. Rev. & Tax.

Code § 2234. The court modified the decision by striking certain funds as sources of reimbursement and affirmed that portion of the order stating that certain funds were not available for the payments.

OUTCOME: The court affirmed the order stating that appellant state was required to reimburse cross-appellant school district for mandated expenditures to integrate the schools because the executive order was a reimbursable state mandate under the California constitution and modified the designated funds for payment. The case was remanded to determine if unexpended, unencumbered funds existed in the approved budget line item account numbers.

CORE TERMS: reimbursement, executive order, school district, expenditure, mandated, reimburse, state-mandated, appropriation, state mandate, local governments, reasonably available, reimbursable, budget, levels of service, line item, segregation, funding, appropriated, alleviate, local agencies, ethnic, collateral estoppel, fiscal years, estoppel, guidelines, entity, desegregation, special fund, controller, budgets acts

Administrative Law > Judicial Review > General Overview

Civil Procedure > Judgments > Preclusion & Effect of Judgments > Estoppel > Collateral Estoppel

[HN1]Collateral estoppel precludes a party from relitigating in a subsequent action matters previously litigated and determined. The traditional elements of collateral estoppel include the requirement that the prior judgment be "final."

Administrative Law > Agency Adjudication > Decisions > Collateral Estoppel

Civil Procedure > Judgments > Preclusion & Effect of Judgments > Estoppel > Collateral Estoppel

Environmental Law > Litigation & Administrative Proceedings > Judicial Review

[HN2]Finality for the purposes of administrative collateral estoppel may be understood as a two-step process: (1) the decision must be final with respect to action by the administrative agency (Cal. Civ. Proc. Code § 1094.5(a)); and (2) the decision must have conclusive effect. A decision attains the requisite administrative finality when the agency has exhausted its jurisdiction and possesses no further power to reconsider or rehear the claim. Next, the decision must have conclusive effect. In other words, the decision must be free from di-

rect attack. A direct attack on an administrative decision may be made by appeal to the superior court for review by petition for administrative mandamus. Cal. Civ. Proc. Code § 1094.5. A decision will not be given collateral estoppel effect if such appeal has been taken or if the time for such appeal has not lapsed.

Civil Procedure > Pleading & Practice > Defenses, Demurrers & Objections > Waiver & Preservation

Civil Procedure > Appeals > Standards of Review

[HN3]A waiver occurs when there is an existing right, actual or constructive knowledge of its existence, and either an actual intention to relinquish it, or conduct so inconsistent with an intent to enforce the right as to induce a reasonable belief that it has been waived.) Ordinarily, the issue of waiver is a question of fact which is binding on the appellate court if the determination is supported by substantial evidence. However, the question is one of law when the evidence is not in conflict and is susceptible of only one reasonable inference.

Governments > State & Territorial Governments > Relations With Governments

[HN4]See Cal. Const. art. XIII B, § 6.

Constitutional Law > State Constitutional Operation

[HN5]In construing the meaning of the Cal. Const. art. VIII B, § 6, the court must determine the intent of the voters by first looking to the language itself that should be construed in accordance with the natural and ordinary meaning of its words.

Civil Procedure > Jurisdiction > Subject Matter Jurisdiction > Jurisdiction Over Actions > General Overview Civil Procedure > Remedies > Writs > Common Law Writs > Mandamus

[HN6]Lack of subject matter jurisdiction may be raised at any time.

Governments > Legislation > Interpretation

[HN7]A statute should be construed with reference to the whole system of law of which it is a part in order to ascertain the intent of the legislature. The legislative history of a statute may be considered in ascertaining legislative design.

Constitutional Law > Separation of Powers

Governments > Courts > Authority to Adjudicate

[HN8]A trial court cannot compel the legislature either to appropriate funds or to pay funds not yet appropriated. Cal. Const. art. III, § 3; art. XVI, § 7. However, no violation of the separation of powers doctrine occurs when a trial court orders appropriate expenditures from already existing funds. The test is whether such funds are reasonably available for the expenditures in question. Funds are "reasonably available" for reimbursement when the purposes for which those funds were appropriated are generally related to the nature of costs incurred. There is no requirement that the appropriations specifically refer to the particular expenditure or must past administrative practice sanction coverage from a particular fund.

SUMMARY:

CALIFORNIA OFFICIAL REPORTS SUMMARY

A school district filed a claim with the state Board of Control asserting that its expenditures related to its efforts to alleviate racial and ethnic segregation in its schools had been mandated by the state through an executive order (in the form of regulations issued by the state Department of Education) and were reimbursable pursuant to former Rev. & Tax. Code, § 2234, and Cal. Const., art. XIII B, § 6. The board approved the claim, but the Legislature deleted the requested funding from an appropriations bill and enacted a "finding" that the executive order did not impose a statemandated local program. The district then filed a petition to compel reimbursement pursuant to Code Civ. Proc., § 1085, and a complaint for declaratory relief. The trial court ruled that the doctrines of administrative collateral estoppel and waiver prevented the state from challenging the board's decisions. The court's judgment in favor of the district identified certain funds previously appropriated by the Legislature as "reasonably available" for reimbursement of the claimed expenditures. (Superior Court of Los Angeles County, No. C606020, Robert I. Weil, Judge.)

The Court of Appeal modified the trial court's decision by striking as sources of reimbursement the Special Fund for Economic Uncertainties "or similarly designated accounts," and by including charging orders against certain funds appropriated through subsequent budget acts. The court affirmed the judgment as so modified and remanded to the trial court to determine whether at the time of its order, there were, in the funds from which reimbursement could properly be paid, unexpended, unencumbered funds sufficient to satisfy the judgment. The court held that since the doctrines of collateral estoppel and waiver were inapplicable to the facts of the case, the trial court should have allowed the state to challenge the board's decisions. However, the court also held that the executive order required local school boards to provide a higher level of service than is required constitutionally or

by case law and that the order was a reimbursable state mandate pursuant to Cal. Const., art. XIII B, § 6. The court further held that former Rev. & Tax. Code, § 2234, did not provide reimbursement of the subject claim. (Opinion by Lucas, P. J., with Ashby and Boren, JJ., concurring.)

HEADNOTES

CALIFORNIA OFFICIAL REPORTS HEADNOTES

Classified to California Digest of Official Reports, 3d Series

(1a) (1b) (1c) (1d) Judgments § 88--Collateral Estoppel--Finality of Judgment--Administrative Order--Where Appeal Still Possible. --In an action by a school district against the state to compel the state to reimburse the district for expenditures related to its efforts to alleviate racial and ethnic segregation, the doctrine of administrative collateral estoppel was inapplicable and did not prevent the state from litigating whether the state Board of Control properly considered the subject claim and whether the claim was reimbursable. The board had approved the claim but the Legislature had deleted the requested funding from an appropriations bill. The board's decisions were administratively final, for collateral estoppel purposes, since no party requested reconsideration within the applicable 10-day period, and no statute or regulation provided for further consideration of the matter by the board. However, a decision will not be given collateral estoppel effect if an appeal has been taken or if the time for such appeal has not lapsed. The applicable statute of limitations for review of the board's decisions was three years, and the school district's action was filed before this period lapsed.

(2) Judgments § 88--Collateral Estoppel--Finality of Judgment. --Collateral estoppel precludes a party from relitigating in a subsequent action matters previously litigated and determined. The traditional elements of collateral estoppel include the requirement that the prior judgment be "final."

(3a) (3b) Administrative Law § 81--Judicial Review and Relief--Finality of Administrative Action--For Collateral Estoppel Purposes. --Finality for the purposes of administrative collateral estoppel may be understood as a two-step process: the decision must be final with respect to action by the administrative agency, and the decision must have conclusive effect. A decision attains the requisite administrative finality when the agency has exhausted its jurisdiction and possesses no further power to reconsider or rehear the claim. To have

conclusive effect, the decision must be free from direct attack.

(4) Limitation of Actions § 30--Commencement of Period. --A statute of limitations commences to run at the point where a cause of action accrues and a suit may be maintained thereon.

(5a) (5b) (5c) Estoppel and Waiver § 23--Waiver--State's Right to Contest Board of Control's Findings as to State-mandated Costs. --In an action by a school district against the state to compel the state to reimburse the district for expenditures related to its efforts to alleviate racial and ethnic segregation, the doctrine of waiver did not preclude the state from contesting the state Board of Control's previous findings that the subject claim was reimbursable (the Legislature subsequently deleted the requested funding from an appropriations bill). The statute of limitations applicable to an appeal by the state from the board's decisions had not run at the time the state raised its affirmative defenses in the district's action, and this assertion of defenses was inconsistent with an intent on the state's part to waive its right to contest the board's decisions.

(6) Estoppel and Waiver § 19--Waiver--Requisites. --A waiver occurs when there is an existing right, actual or constructive knowledge of its existence, and either an actual intention to relinquish it, or conduct so inconsistent with an intent to enforce the right as to induce a reasonable belief that it has been waived. Ordinarily the issue of waiver is a question of fact that is binding on the appellate court if the determination is supported by substantial evidence. However, the question is one of law when the evidence is not in conflict and is susceptible of only one reasonable inference.

(7) Estoppel and Waiver § 6--Equitable Estoppel--Challenge to State Board of Control's Findings as to State-mandated Costs--Absence of Confidential Relationship. --In an action by a school district against the state to compel the state to reimburse the district for expenditures related to its efforts to alleviate racial and ethnic segregation, the state was not equitably estopped from challenging the state Board of Control's decisions finding that the subject claim was reimbursable as a state-mandated cost (the Legislature subsequently deleted the requested funding from an appropriations bill). In the absence of a confidential relationship, the doctrine of equitable estoppel is inapplicable where there is a mistake of law. There was no confidential relationship, and since the statute of limitations did not bar the state from litigating the mandate and reimbursability issues, the doctrine was inapplicable.

(8) Appellate Review § 145--Function of Appellate Court--Questions of Law. --On appeal by the state in an action by a school district to compel the state to reimburse the district for expenditures related to its efforts to alleviate racial and ethnic segregation, the appellate court's conclusion that the trial court erred in failing to consider the merits of the state's challenge to the state Board of Control's decisions that the subject claims were reimbursable as state-mandated costs did not require that the matter be remanded to the trial court for a full hearing, since the question of whether a cost is state-mandated is one of law.

(9a) (9b) (9c) Schools § 4--School Districts; Financing; Funds--Reimbursement of State-mandated Costs--Desegregation Expenditures. --A school district was entitled to reimbursement pursuant to Cal. Const., art. XIII B, § 6 (reimbursement of local governments for state-mandated costs or increased levels of service), for expenditures related to its efforts to alleviate racial and ethnic segregation in its schools, since an executive order (in the form of regulations issued by the state Department of Education) required a higher level of service and constituted a state mandate. The requirements of the order went beyond constitutional and case law requirements in that they required specific actions to alleviate segregation. Although under Cal. Const., art. XIII B, § 6, subd. (c), the state has discretion whether to reimburse pre-1975 mandates that are either statutes or executive orders implementing statutes, it cannot be inferred from this exception that reimbursability is otherwise dependent on the form of the mandate. Further, the district's claim was not defeated by Gov. Code, §§ 17561 and 17514, limiting reimbursement to certain costs incurred after July 1, 1980, the effective date of Cal. Const., art. XIII B, since the limitations contained in those sections are confined to the exception contained in Cal. Const., art. XIII B, § 6, subd. (c).

(10) State of California § 11--Fiscal Matters--Reimbursement to Local Governments for State-mandated Costs. --The subvention requirement of Cal. Const., art. XIII B, § 6 (reimbursement of local governments for state-mandated costs or increased levels of service), is directed to state-mandated increases in the services provided by local agencies in existing "programs." The drafters and electorate had in mind the commonly understood meaning of the term--programs that carry out the governmental function of providing services to the public, or laws that, to implement a state policy, impose unique requirements on local governments and do not apply generally to all residents and entities in the state.

[See 9 Witkin, Summary of Cal. Law (9th ed. 1989) Taxation, § 123.]

(11) Constitutional Law § 13--Construction of Constitutions--Language of Enactments. --In construing a constitutional provision enacted by the voters, a court must determine the intent of the voters by first looking to the language itself, which should be construed in accordance with the natural and ordinary meaning of its words.

(12) State of California § 11--Fiscal Matters--Reimbursement to Local Governments for State-mandate Costs--Executive Order as Mandate. --In Cal. Const., art. XIII B, § 6 (reimbursement of local governments for state-mandated costs or increased levels of service), "mandates" means "orders" or "commands," concepts broad enough to include executive orders as well as statutes. The concern that prompted the inclusion of § 6 in art. XIII B was the perceived attempt by the state to enact legislation or adopt administrative orders creating programs to be administered by local agencies, thereby transferring to those agencies the fiscal responsibility for providing services that the state believed should be extended to the public. It is clear that the primary concern of the voters was the increased financial burdens being shifted to local government, not the form in which those burdens appeared.

(13) Administrative Law § 88--Judicial Review and Relief--Exhaustion of Administrative Remedies--Claim by School District for Reimbursement of State-mandated Costs. --A school district did not fail to exhaust its administrative remedies in seeking reimbursement for expenditures related to its efforts to alleviate racial and ethnic segregation, based on its claim that the expenditures were mandated by a state executive order, where the state Board of Control approved the district's reimbursement claim, even though the state Commission on State Mandates subsequently succeeded to the functions of the board and the district never made a claim to the commission. The board's decisions in favor of the district became administratively final before the commission was in place, and there was no evidence that the commission did not consider these decisions by the board to be final. Although the commission was given jurisdiction over all claims that had not been included in a local government claims bill enacted before January 1, 1985, the subject claim was included in such a bill (which was signed into law only after the recommended appropriation was deleted). Under the statutory scheme, the district pursued the only relief that a disappointed claimant at such a juncture could pursue--an action in declaratory relief to declare an executive order void or unenforceable and to enjoin its enforcement. There was no requirement to seek further administrative review.

(14) Courts § 20--Subject Matter Jurisdiction--When Issue May Be Raised. --Lack of subject matter jurisdiction may be raised at any time.

(15a) (15b) Schools § 4--School Districts; Financing; Funds--Reimbursement of State-mandated Costs--Desegregation Expenditures--Applicability of Statute Requiring Reimbursement of Subsequently Mandated Costs. --A school district was not entitled to reimbursement on the basis of former Rev. & Tax. Code, § 2234 (reimbursement of school district for costs it is incurring that are subsequently mandated by a state), for expenditures related to its efforts to alleviate racial and ethnic segregation in its schools, since the executive order (in the form of regulations issued by the state Department of Education) that required the district to take specific actions to alleviate segregation fell outside the purview of § 2234. The "subsequently mandated" provision of § 2234 originally was contained in sections that set forth specific date limitations, and the Legislature likewise intended to limit claims made pursuant to § 2234. The use of the language "subsequently mandated" merely describes an additional circumstance in which the state will reimburse costs. Since the executive order fell outside the January 1, 1978, limits set by Rev. & Tax. Code, § 2207.5, Rev. & Tax. Code, § 2234, did not provide reimbursement to the district.

(16) Statutes § 39--Construction--Giving Effect to Statute--Conformation of Parts. --A statute should be construed with reference to the whole system of law of which it is a part in order to ascertain the intent of the Legislature. The legislative history of the statute may be considered in ascertaining legislative design.

(17a) (17b) (17c) Constitutional Law § 40--Distribution of Governmental Powers--Judicial Power--Appropriation of Funds--Reimbursement of State-mandated Costs. --In an action by a school district against the state to compel the state to reimburse the district for expenditures related to its efforts to alleviate racial and ethnic segregation, the trial court's award of reimbursement to the district, on the ground that the district's expenditures were mandated by an executive order, from appropriated funds and specified budgets and accounts did not constitute an invasion of the province of the Legislature or a judicial usurpation of the republican form of government guaranteed by U.S. Const., art. IV, § 4, except insofar as it designated the Special Fund for Economic Uncertainties as a source for reimbursement. The specified line item accounts for the Department of Education, the Commission on State Mandates, and the Reserve for Contingencies and Emergencies provided funds for a broad range of activities similar to those specified in the executive order and thus were reasonably

available for reimbursement. However, remand to the trial court was necessary to determine whether these sources contained sufficient unexhausted funds to cover the award.

(18) Constitutional Law § 40--Distribution of Governmental Powers--Judicial Power--Appropriation of Funds. --A court cannot compel the Legislature either to appropriate funds or to pay funds not yet appropriated. However, no violation of the separation of powers doctrine occurs when a court orders appropriate expenditures from already existing funds. The test is whether such funds are reasonably available for the expenditures in question. Funds are "reasonably available" for reimbursement of local government expenditures when the purposes for which those funds were appropriated are generally related to the nature of costs incurred. There is no requirement that the appropriation specifically refer to the particular expenditure, nor must past administrative practice sanction coverage from a particular fund.

(19) Appellate Review § 162--Modification--To Add Charge Order. --An appellate court is empowered to add a directive that a trial court order be modified to include charging orders against funds appropriated by subsequent budgets acts.

(20) Schools § 4--School Districts; Financing; Funds--Reimbursement of State-mandated Costs--Desegregation Expenditures--Effect of Legislative Finding That Costs Not State-mandated. --A school district was entitled to reimbursement pursuant to Cal. Const., art. XIII B, § 6 (reimbursement of local governments for state-mandated costs or increased levels of service), for expenditures related to its efforts to alleviate racial and ethnic segregation in its schools, notwithstanding that after the state Board of Control approved the district's reimbursement claim, the Legislature enacted a "finding" that the executive order requiring the district to undertake desegregation activities did not impose a state-mandated local program. Unsupported legislative disclaimers are insufficient to defeat reimbursement. The district had a constitutional right to reimbursement, and the Legislature could not limit that right.

(21) Schools § 4--School Districts; Financing; Funds--Reimbursement of State-mandated Costs--Desegregation Expenditures--Department of Education Budget as Source. --In an action by a school district against the state to compel the state to reimburse the district for expenditures related to its efforts to alleviate racial and ethnic segregation, the trial court, after finding that the executive order requiring the district to undertake desegregation activities was a reim-

bursable state mandate, did not err in ordering reimbursement to take place in part from the state Department of Education budget. Logic dictated that department funding be the initial and primary source for reimbursement: given the fact that the executive order was issued by the department, the evidence overwhelmingly supported the trial court's finding of a general relationship between the department budget items and the reimbursable expenditures.

(22) Interest § 8--Rate--Reimbursement of School District's State-mandated Costs. --In an action by a school district against the state to compel the state to reimburse the district for expenditures related to its efforts to alleviate racial and ethnic segregation, the trial court, after finding that the executive order requiring the district to undertake desegregation activities was a reimbursable state mandate, did not err in awarding the district interest at the legal rate (Cal. Const., art. XV, § 1, par. (2)), rather than at the rate of 6 percent per annum pursuant to Gov. Code, § 926.10, Gov. Code, § 926.10, is part of the California Tort Claims Act (Gov. Code, § 900 et seq.), which provides a statutory scheme for the filing of claims against public entities for alleged injuries. It makes no provision for claims for reimbursement for state-mandated expenditures.

(23) Schools § 4--School Districts; Financing; Funds--Reimbursement of State-mandated Costs--Desegregation Expenditures--County Fines and Forfeitures Funds as Source. --In an action by a school district against the state to compel the state to reimburse the district for expenditures related to its efforts to alleviate racial and ethnic segregation, the trial court, after finding that the executive order requiring the district to undertake desegregation activities was a reimbursable state mandate, did not err in determining that moneys in the Fines and Forfeiture Funds in the custody and possession of the county auditor-controller for transfer to the state treasury were not reasonably available for reimbursement purposes. There was no evidence in the record showing the use of those funds once they were transmitted to the state, nor was there any evidence indicating that those funds were then reasonably available to satisfy the district's claim. It could not be concluded as a matter of law that a general relationship existed between the funds and the nature of the costs incurred pursuant to the executive order. Further, there was no ground on which the funds could be made available to the district while in the possession of the auditor-controller.

OPINION

[*163] [**454] Introduction

Long Beach Unified School District (LBUSD) filed a claim with the Board of Control of the State of California [***3] (Board), asserting that certain expenditures related to its efforts to alleviate racial and ethnic segregation in its schools had been mandated by the state through regulations (Executive Order) issued by the Department of Education (DOE) and were [*164] reimbursable pursuant to former Revenue and Taxation Code section 2234 and article XIII B, section 6 of the California Constitution. The Board eventually approved the claim and reported to the Legislature its recommendation that funds be appropriated to cover the statewide estimated costs of compliance with the Executive Order. When the Legislature deleted the requested funding from an appropriations bill, LBUSD filed a petition to compel reimbursement (Code Civ. Proc., § 1085) and complaint for declaratory relief. The trial court held that the doctrines of administrative collateral estoppel and waiver prevented the state from challenging the decisions of the Board, and it gave judgment to LBUSD. It also ruled that certain funds previously appropriated by the Legislature were "reasonably available" for reimbursement of the claimed expenditures, subject to audit by the state Controller.

We conclude that the doctrines of collateral [***4] estoppel and waiver are inapplicable to the facts of this case. However, we determine as a question of law that the Executive Order requires local school boards to provide a higher level of service than is required either constitutionally or by case law and that the Executive Order is a reimbursable state mandate pursuant to article XIII B, section 6 of the California Constitution. We also decide that former Revenue and Taxation Code section 2234 does not provide for reimbursement of the claim.

Based on uncontradicted evidence, we modify the decision of the trial court regarding which budget line item account numbers provide "reasonably available" funds to reimburse LBUSD for appropriate expenditures under the claim. We further modify the decision to include charging orders against funds appropriated by subsequent budget acts. Finally, we remand the matter to the trial court to determine whether at the time of its order unexpended, unencumbered funds sufficient to satisfy the judgment remained in the approved budget line item account numbers. The trial court must resolve this same issue with respect to the charging order.

[**455] Background and Procedural History

The California Property [***5] Tax Relief Act of 1972 (Stats. 1972, ch. 1406, § 1, p. 2931) limited the power of local governmental entities to levy property taxes. It also mandated that when the state requires such entities to provide a new program or higher level of service, the state must reimburse those costs. Over time, amendments to the California Constitution and numerous legislative changes impacted both the right and procedure for obtaining reimbursement.

[*165] Sometime prior to September 8, 1977, LBUSD, at its option, voluntarily began to incur substantial costs to alleviate the racial and ethnic segregation of students within its jurisdiction.

On or about the above date, DOE adopted certain regulations which added sections 90 through 101 to title 5 of the California Administrative Code, effective September 16, 1977. We refer to these regulations as the Executive Order.

The Executive Order and related guidelines for implementation required in part that school districts which identified one or more schools as either having or being in danger of having segregation of its minority students "shall, no later than January 1, 1979, and each four years thereafter, develop and adopt a reasonably feasible [***6] plan for the alleviation and prevention of racial and ethnic segregation of minority students in the district."

On or about June 4, 1982, LBUSD submitted a "test claim" (Claim) ¹ to the Board for reimbursement of \$ 9,050,714 -- the total costs which LBUSD claimed it had incurred during fiscal years 1977-1978 through 1981-1982 for activities required by the Executive Order and guidelines. LBUSD cited former Revenue and Taxation Code section 2234 as authority for the requested reimbursement, asserting that the costs had been "subsequently mandated" by the state. ²

1 Former Revenue and Taxation Code section 2218 defines "test claim" as "the first claim filed

with the State Board of Control alleging that a particular statute or executive order imposes a mandated cost on such local agency or school district." (Stats. 1980, ch. 1256, § 7, p. 4249.)

2 All statutory references are to the Revenue and Taxation Code unless otherwise stated.

Former section 2234 provided: "If a local agency or a school district, at its option, has been incurring costs which are subsequently mandated by the state, the state shall reimburse the local agency or school district for such costs incurred after the operative date of such mandate." (Stats. 1980, ch. 1256, § 11, pp. 4251-4252.)

[***7] The Board denied the Claim on the grounds that it had no jurisdiction to accept a claim filed under section 2234. LBUSD petitioned superior court for review of the Board decision. (Code Civ. Proc., § 1094.5.) That court concluded the Board had jurisdiction to accept a section 2234 claim and ordered it to hear the matter on its merits. The Board did not appeal this decision.

On February 16, 1984, the Board conducted a hearing to consider the Claim. LBUSD presented written and oral argument that the Claim was reimbursable pursuant to section 2234 and, in addition, under article XIII B, section 6 of the California Constitution. DOE and the State Department [*166] of Finance (Finance) participated in the hearing. ³ The Board concluded that the Executive Order constituted a state mandate. On April 26, 1984, the Board adopted parameters and guidelines proposed by LBUSD for reimbursement of the expenditures. No state entity either sought reconsideration of the Board decisions, [*456] available pursuant to former section 633.6 of the California Administrative Code, ⁴ or petitioned for judicial review. ⁵

3 The DOE recommended that the Claim be denied on the grounds that the requirements of the Executive Order were constitutionally mandated and court ordered and because the Executive Order was effective prior to January 1, 1978 (issues discussed *post*). However, counsel for the DOE expressed dismay that school districts which had voluntarily instituted desegregation programs had been having problems receiving funding from the Legislature, while schools which had been forced to do so had been receiving "substantial amounts of money."

A spokesman from Finance recalled there had been some doubt whether the Board had jurisdiction to hear a 2234 claim. He stated that, assuming the Board did have jurisdiction, the Executive Order contained at least one state

mandate, which possibly consisted of administrative kinds of tasks related to the identification of "problem areas and the like."

[***8]

4 Former section 633.6 of the California Administrative Code (now renamed California Code of Regulations) provided in relevant part: "(b) Request for Reconsideration. [para.] (1) A request for reconsideration of a Board determination on a specific test claim . . . shall be filed, in writing, with the Board of Control, no later than ten (10) days after any determination regarding the claim by the Board" (Title 2, Cal. Admin. Code)

5 Former section 2253.5 provided: "A claimant or the state may commence a proceeding in accordance with the provisions of Section 1094.5 of the Code of Civil Procedure to set aside a decision of the Board of Control on the grounds that the board's decision is not supported by substantial evidence. The court may order the board to hold another hearing regarding such claim and may direct the board on what basis the claim is to receive a rehearing." (Stats. 1978, ch. 794, § 8, p. 2551.)

In December 1984, pursuant to former section 2255, the Board reported to the Legislature the number of mandates it had found and the estimated statewide costs of each mandate. [***9] With respect to the Executive Order mandate, the Board adopted an estimate by Finance that reimbursement of school districts, including LBUSD, for costs expended in compliance with the Executive Order would total \$ 95 million for fiscal years 1977-1978 through 1984-1985. The Board recommended that the Legislature appropriate that amount.

Effective January 1, 1985, the Commission on State Mandates (Commission) succeeded to the functions of the Board. (Gov. Code, §§ 17525, 17630.)

On March 4, 1985, Assembly Bill No. 1301 was introduced. It included an appropriation of \$ 95 million to the state controller "for payment of claims of school districts seeking reimbursable state-mandated costs incurred pursuant to [the Executive Order]" On June 27, the Assembly amended the bill by deleting this \$ 95 million appropriation and adding a [*167] "finding" that the Executive Order did not impose a state-mandated local program. ⁶ On September 28, 1985, the Governor approved the bill as amended.

6 Former Section 2255 provided in part: "(b) If the Legislature deletes from a local government claims bill funding for a mandate imposed either by legislation or by a regulation . . . , it may take one of the following courses of action: (1) In-

clude a finding that the legislation or regulation does not contain a mandate . . ." (Stats. 1982, ch. 1638, § 7, p. 6662.)

[***10] On June 26, 1986, LBUSD petitioned for writ of mandate (Code Civ. Proc., § 1085) and filed a complaint for declaratory relief against defendants State of California; Commission; Finance; DOE; holders of the offices of State Controller and State Treasurer and holder of the office of Auditor-Controller of the County of Los Angeles, and their successors in interest. LBUSD requested issuance of a writ of mandate commanding the respondents to comply with section 2234 (fn. 2, *ante*)⁷ and, in an amended petition, its successor, Government Code section 17565, and with California Constitution, article XIII B, section 6.⁸ It further requested respondents to reimburse LBUSD \$ 24,164,593 for fiscal years 1977-1978 through 1982-1983, \$ 3,850,276 for fiscal years 1983-1984 and 1984-1985, and accrued interest, for activities mandated by the Executive Order.

7 The language of Government Code section 17565 is nearly identical to that of section 2234 (fn. 2, *ante*), and provides: "If a local agency or a school district, at its option, has been incurring costs which are subsequently mandated by the state, the state shall reimburse the local agency or school district for those costs incurred after the operative date of the mandate." (Stats. 1986, ch. 879, § 10, p. 3043.)

[***11]

8 Article XIII B, section 6 provides in pertinent part: "Whenever the Legislature or any state agency mandates a new program or higher level of service on any local government, the state shall provide a subvention of funds to reimburse such local government for the costs of such program or increased level of service . . ."

The trial court let stand the conclusion of the Board that the Executive Order constituted a reimbursable state mandate and ruled in favor of LBUSD. No party requested a statement of decision.

The judgment stated that the Executive Order constituted a reimbursable state mandate which state entities could not challenge because of the doctrines of administrative collateral estoppel and waiver. It provided that certain previously appropriated [**457] funds were "reasonably available" to reimburse LBUSD for its claimed expenditures, applicable interest, and court costs. The judgment also stated that funds denominated the "Fines and Forfeitures Funds," under the custody of the Auditor-Controller of the County of Los Angeles, were not reasonably available. The judgment further decreed [***12] that the State Controller retained the

right to audit the claims and records of LBUSD to verify the amount of the reimbursement award sum.

[*168] State respondents (State) and DOE separately filed timely notices of appeal, and LBUSD cross-appealed.⁹

9 Although an "Amended Notice to Prepare Clerk's Transcript" filed by DOE on April 11, 1988, requests the clerk of the superior court to incorporate in the record its notice of appeal filed April 1, 1988, this latter document does not appear in the record before us, and the original apparently is lost within the court system. Respondent LBUSD received a copy of the notice on April 4, 1988.

Discussion

State asserts that neither the doctrine of collateral estoppel nor the doctrine of waiver is applicable to this case, the costs incurred by LBUSD are not reimbursable, and the remedy authorized by the trial court is inconsistent with California law and invades the province of the Legislature, a violation of article IV, section 4 of the United States Constitution.

The [***13] thrust of the DOE appeal is that its budget is not an appropriate source of funding for the reimbursement.

LBUSD has argued in its cross-appeal that an additional source of funding, the "Fines and Forfeiture Funds," should be made available for reimbursement of its costs and, in supplementary briefing, requests this court to order a modification of the judgment to include as "reasonably available funding" specific line item accounts from the 1988-1989 and 1989-1990 state budgets.

I. State Not Barred From Challenging Decisions of the Board

A. Administrative Collateral Estoppel

(1a) State first contends that the doctrine of administrative collateral estoppel is not applicable to the facts of this case and does not prevent State from litigating whether the Board properly considered the subject claim and whether the claim is reimbursable.

(2) [HN1] Collateral estoppel precludes a party from relitigating in a subsequent action matters previously litigated and determined. (Teitelbaum Furs, Inc. v. Dominion Ins. Co., Ltd. (1962) 58 Cal.2d 601, 604 [25 Cal.Rptr. 559, 375 P.2d 439].) The traditional elements of collateral estoppel include the requirement [***14] that the prior judgment be "final." (*Ibid.*)

(3a) [HN2]Finality for the purposes of administrative collateral estoppel may be understood as a two-step process: (1) the decision must be final with [*169] respect to action by the administrative agency (see Code Civ. Proc., § 1094.5, subd. (a)); and (2) the decision must have conclusive effect (Sandoval v. Superior Court (1983) 140 Cal.App.3d 932, 936-937 [190 Cal.Rptr. 29]).

A decision attains the requisite administrative finality when the agency has exhausted its jurisdiction and possesses "no further power to reconsider or rehear the claim. [Fn. omitted]" (Chas. L. Harney, Inc. v. State of California (1963) 217 Cal.App.2d 77, 98 [31 Cal.Rptr. 524].)

(1b) In the case at bar, former section 633.6 of the Administrative Code provided a 10-day period during which any party could request reconsideration of any Board determination (fn. 4, *ante*). The Board decided on February 16, 1984, that the Executive Order constituted a state mandate, and on April 26, 1984, it adopted parameters and guidelines for the reimbursement of the claimed expenditures. No party requested [***15] reconsideration, no statute or regulation provided for further consideration of the matter by the Board (see, e.g., Olive Pro-ration etc. Com. v. Agri. etc. Com. (1941) 17 Cal.2d 204, 209 [109 P.2d 918]), and the decisions became administratively final on February [*458] 27, 1984, and May 7, 1984, respectively ¹⁰ (Ziganto v. Taylor (1961) 198 Cal.App.2d 603, 607 [18 Cal.Rptr. 229]).

10 We take judicial notice pursuant to Evidence Code section 452, subdivision (h), that February 26, 1984, and May 6, 1984, fall on Sundays.

(3b) Next, the decision must have conclusive effect. (Sandoval v. Superior Court, *supra*, 140 Cal.App.3d 932, 936-937.) In other words, the decision must be free from direct attack. (People v. Sims (1982) 32 Cal.3d 468, 486 [186 Cal.Rptr. 77, 651 P.2d 321].) A direct attack on an administrative decision may be made by appeal to the superior court for review [***16] by petition for administrative mandamus. (Code Civ. Proc., § 1094.5.)

(1c) A decision will not be given collateral estoppel effect if such appeal has been taken or if the time for such appeal has not lapsed. (Sandoval v. Superior Court, *supra*, 140 Cal.App.3d at pp. 936-937; Producers Dairy Delivery Co. v. Sentry Ins. Co. (1986) 41 Cal.3d 903, 911 [226 Cal.Rptr. 558, 718 P.2d 920].) The applicable statute of limitations for such review in the case at bar is three years. (Carmel Valley Fire Protection Dist. v.

State of California (1987) 190 Cal.App.3d 521, 534 [234 Cal.Rptr. 795]; Green v. Obledo (1981) 29 Cal.3d 126, 141, fn. 10 [172 Cal.Rptr. 206, 624 P.2d 256].)

(4) A statute of limitations commences to run at the point where a cause of action accrues and a suit may be maintained thereon. (Dillon v. Board of Pension Comm'rs. (1941) 18 Cal.2d 427, 430 [116 P.2d 37, 136 A.L.R. 800].)

(1d) In the instant case, State's causes of action accrued when the Board made the two decisions [***17] adverse to State on February 16 and April 26, 1984, [*170] as discussed. State did not request reconsideration, and the decisions became administratively final on February 27 and May 7, 1984. ¹¹ For purposes of discussion, we will assume the applicable three-year statute of limitations period for the two Board decisions commenced on February 28 and May 8, 1984, and ended on February 28 and May 8, 1987. ¹² LBUSD filed its petition for ordinary mandamus (Code Civ. Proc., § 1085) and complaint for declaratory relief on June 26, 1986. At that point, the limitations periods had not run against State and the Board decisions lacked the necessary finality to satisfy that requirement of the doctrine of administrative collateral estoppel. ¹³

11 We do not address the contention of LBUSD that State failed to exhaust its administrative remedies (Abelleira v. District Court of Appeal (1941) 17 Cal.2d 280, 292 [109 P.2d 942, 132 A.L.R. 715]; Morton v. Superior Court (1970) 9 Cal.App.3d 977, 982 [88 Cal.Rptr. 533]) and therefore State cannot assert its affirmative defenses in response to the petition and complaint of the school district. Traditionally, the doctrine has been raised as a bar only with respect to the party seeking judicial relief, not against the responding party (*ibid.*); we have found no case holding otherwise.

[***18]

12 If State had sought reconsideration and its request been denied, or if its request had been granted but the matter again decided in favor of LBUSD, the Board decision would have been final 10 days after the Board action, and at that point the statute would have commenced to run against State.

13 State argues that its statute of limitations did not commence until the legislation was enacted without the appropriation (Sept. 28, 1985), citing Carmel Valley Fire Protection Dist. v. State of California, *supra*, 190 Cal.App.3d at page 548. However, Carmel Valley held that the claimant does not exhaust its administrative remedies and cannot come under the court's jurisdiction until

the legislative process is complete, which occurred in that case when the legislation was enacted without the subject appropriations. At that point, *Carmel Valley* reasoned, the state had breached its duty to reimburse, and the claimant's right of action in traditional mandamus accrued. (*Ibid.*) However, *Carmel Valley* decided, as do we in the case at bar, that the state's statute of limitations commenced on the date the Board made decisions adverse to its interests. (*Id.* at p. 534.)

In addition, we see no reason to permit State to rely on the fortuitous actions of the Legislature, an independent branch of government, to bail it out of obligations established in the distant past by state agents -- especially given the lengthy three-year statute of limitations. (Compare, e.g., Gov. Code, § 11523 [mandatory time limit within which to petition for administrative mandamus can be 30 days after last day on which administrative reconsideration can be ordered]; Lab. Code, § 1160.8, and *Jackson & Perkins Co. v. Agricultural Labor Relations Board* (1978) 77 Cal.App.3d 830, 834 [144 Cal.Rptr. 166] [30 days from issuance of board order even if party has filed a motion to reconsider].)

[***19] [**459] *B. Waiver*

(5a) State also asserts that the doctrine of waiver is not applicable.

(6) [HN3] A waiver occurs when there is "an existing right; actual or constructive knowledge of its existence; and either an actual intention to relinquish it, or conduct so inconsistent with an intent to enforce the right as to induce [*171] a reasonable belief that it has been waived. [Citations.]" (*Carmel Valley Fire Protection Dist. v. State of California*, supra, 190 Cal.App.3d at p. 534.) Ordinarily, the issue of waiver is a question of fact which is binding on the appellate court if the determination is supported by substantial evidence. (*Napa Association of Public Employees v. County of Napa* (1979) 98 Cal.App.3d 263, 268 [159 Cal.Rptr. 522].) However, the question is one of law when the evidence is not in conflict and is susceptible of only one reasonable inference. (*Glendale Fed. Sav. & Loan Assn. v. Marina View Heights Dev. Co.* (1977) 66 Cal.App.3d 101, 151-152 [135 Cal.Rptr. 802].)

(5b) In the instant case, the right to contest the findings of the Board is at issue, and there is no dispute that [***20] the state was aware of the existence of this right. As discussed, the statute of limitations had not run when State raised its affirmative defenses, and during

this time State could have filed a separate petition for administrative mandamus.

(7) (See fn. 14.)

(5c) State's assertion of its affirmative defenses during this period is inconsistent with an intent to waive its right to contest the Board decisions, and therefore the doctrine of waiver is not applicable.¹⁴

14 LBUSD contends that State should be equitably estopped from challenging the Board decisions. In the absence of a confidential relationship, the doctrine of equitable estoppel is inapplicable where there is a mistake of law. (*Gilbert v. City of Martinez* (1957) 152 Cal.App.2d 374, 378 [313 P.2d 139]; *People v. Stuyvesant Ins. Co.* (1968) 261 Cal.App.2d 773, 784 [68 Cal.Rptr. 389].) There is no confidential relationship herein, and since we conclude as a matter of law and contrary to the trial court that the statute of limitations does not bar State from litigating the mandate and reimbursability issues, the doctrine is inapplicable.

[***21] *II. Issue of State Mandate*

(8) Ordinarily, our conclusion that the trial court erred in failing to consider the merits of the State's challenge to the decisions of the Board would require that the matter be remanded to the trial court for a full hearing. However, because the question of whether a cost is state mandated is one of law in the instant case (cf. *Carmel Valley Fire Protection Dist. v. State of California*, supra, 190 Cal.App.3d at p. 536), we now decide that the expenditures are reimbursable pursuant to article XIII B, section 6 of the California Constitution and that no relief is available under section 2234.¹⁵

15 We invited State, DOE, and LBUSD to submit additional briefing on the following issues: "1. Can it be determined as a question of law whether sections 90 through 101 of Title 5 of the California Administrative Code [Executive Order] constitute a state mandate within the meaning of article XIII B, section 6 of the California Constitution? 2. Do the above sections constitute such mandate?" State and LBUSD submitted additional argument; DOE declined the invitation.

[***22] [*172] *A. Recovery Under Article XIII B, Section 6*

(9a) On November 6, 1979, California voters passed initiative measure Proposition 4, which added article XIII B to the state Constitution. This measure, a corollary to the previously passed Proposition 13 (art. XIII A, which restricts governmental taxing authority), placed limits on the growth of state and local government appropriations. It also provided reimbursement to local governments for the costs of complying with certain requirements mandated by the state. LBUSD argues that section 6 of this provision is an additional ground for reimbursement.

1. The Executive Order Requires a Higher Level of Service

In relevant part article XIII B, section 6 (Section 6) provides: [HN4]"Whenever the Legislature or any state agency mandates a new program or higher level of service on any [**460] local government, the state shall provide a subvention of funds to reimburse such local government for the costs of such program or increased level of service"

(10) The subvention requirement of Section 6 "is directed to state mandated increases in the services provided by local agencies in existing 'programs.'" (*County of Los Angeles v. State of California* (1987) 43 Cal.3d 46, 56 [233 Cal.Rptr. 38, 729 P.2d 202].) [***23] "[T]he drafters and the electorate had in mind the commonly understood meanings of the term -- programs that carry out the governmental function of providing services to the public, or laws which, to implement a state policy, impose unique requirements on local governments and do not apply generally to all residents and entities in the state." (*Ibid.*)

(9b) In the instant case, although numerous private schools exist, education in our society is considered to be a peculiarly governmental function. (Cf. *Carmel Valley Fire Protection Dist. v. State of California, supra*, 190 Cal.App.3d at p. 537.) Further, public education is administered by local agencies to provide service to the public. Thus public education constitutes a "program" within the meaning of Section 6.

State argues that the Executive Order does not mandate a higher level of service -- or a new program -- because school districts in California have a constitutional duty to make an effort to eliminate racial segregation in the public schools. In support of its argument, State cites *Brown v. Board of Education* (1952) 347 U.S. 483, 495 [98 L.Ed. 873, 881, 74 S.Ct. 686, 38 A.L.R.2d 1180]; [***24] *Jackson v. Pasadena City School District* (1963) 59 Cal.2d 876, 881 [31 Cal.Rptr. 606, 382 P.2d 878]; *Crawford v. Board of Education* (1976) 17

Cal.3d 280 [130 Cal.Rptr. 724, 551 P.2d 28] and cases cited therein; and *National Assn. for Advancement of Colored People v. San Bernardino* [*173] *City Unified Sch. Dist.* (1976) 17 Cal.3d 311 [130 Cal.Rptr. 744, 551 P.2d 48]. These cases show that school districts do indeed have a constitutional obligation to alleviate racial segregation, and on this ground the Executive Order does not constitute a "new program." However, although school districts are required to "take steps, insofar as reasonably feasible, to alleviate racial imbalance in schools regardless of its cause[]" (*Crawford, supra*, at p. 305, italics omitted, citing *Jackson*), the courts have been wary of requiring specific steps in advance of a demonstrated need for intervention (*Crawford*, at pp. 305-306; *Jackson, supra*, at pp. 881-882; *Swann v. Board of Education* (1971) 402 U.S. 1, 18-21 [28 L.Ed.2d 554, 567-570, 91 S.Ct. 1267]). [***25] On the other hand, courts have required specific factors be considered in determining whether a school is segregated (*Keyes v. School District No. 1, Denver, Colo.* (1973) 413 U.S. 189, 202-203 [37 L.Ed.2d 548, 559-560, 93 S.Ct. 2686]; *Jackson, supra*, at p. 882).

The phrase "higher level of service" is not defined in article XIII B or in the ballot materials. (*County of Los Angeles v. State of California, supra*, 43 Cal.3d 46, 50.) A mere increase in the cost of providing a service which is the result of a requirement mandated by the state is not tantamount to a higher level of service. (*Id.*, at pp. 54-56.) However, a review of the Executive Order and guidelines shows that a higher level of service is mandated because their requirements go beyond constitutional and case law requirements. Where courts have suggested that certain steps and approaches may be helpful, the Executive Order and guidelines require specific actions. For example, school districts are to conduct mandatory biennial [***26] racial and ethnic surveys, develop a "reasonably feasible" plan every four years to alleviate and prevent segregation, include certain specific elements in each plan, and take mandatory steps to involve the community, including public hearings which have been advertised in a specific manner. While all these steps fit within the "reasonably feasible" description of *Jackson* and *Crawford*, the point is that these steps are no longer merely being suggested as options which the local school district may [**461] wish to consider but are required acts. These requirements constitute a higher level of service. We are supported in our conclusion by the report of the Board to the Legislature regarding its decision that the Claim is reimbursable: "[O]nly those costs that are above and beyond the regular level of service for like pupils in the district are reimbursable."

2. The Executive Order Constitutes a State Mandate

For the sake of clarity we quote Section 6 in full: "Whenever the Legislature or any state agency mandates a new program or higher level of service on any local government, the state shall provide a subvention of funds to [*174] reimburse such local government for the [***27] costs of such program or increased level of service, except that the Legislature may, but need not, provide such subvention of funds for the following mandates: [para.] (a) Legislative mandates requested by the local agency affected; [para.] (b) Legislation defining a new crime or changing an existing definition of a crime; or [para.] (c) *Legislative mandates enacted prior to January 1, 1975, or executive orders or regulations initially implementing legislation enacted prior to January 1, 1975.*" (Italics added.) This amendment became effective July 1, 1980. (Art. XIII B, § 10.) Again, the Executive Order became effective September 16, 1977.

State argues there is no constitutional ground for reimbursement because (a) with reference to the language of exception (c) of Section 6, the Executive Order is neither a statute nor an executive order or regulation implementing a statute; (b) recent legislation limits reimbursement to certain costs incurred after July 1, 1980, the effective date of the constitutional amendment; and (c) LBUSD failed to exhaust administrative procedures for reimbursement of Section 6 claims (Gov. Code, § 17500 et seq.). We conclude that recovery is available [***28] under Section 6.

(a) *Form of Mandate*

State argues the Executive Order is not a state mandate because, with reference to exception (c) of Section 6, it is neither a statute nor an executive order implementing a statute.

(11) [HN5] In construing the meaning of Section 6, we must determine the intent of the voters by first looking to the language itself (County of Los Angeles v. State of California, supra, 43 Cal.3d 46, 56), which "'should be construed in accordance with the natural and ordinary meaning of its words.' [Citation.]" (ITT World Communications, Inc. v. City and County of San Francisco (1985) 37 Cal.3d 859, 865 [210 Cal.Rptr. 226, 693 P.2d 811].) The main provision of Section 6 states that whenever the Legislature or any state agency "mandates" a new program or higher level of service, the state must provide reimbursement.

(12) We understand the use of "mandates" in the ordinary sense of "orders" or "commands," concepts broad enough to include executive orders as well as statutes. As has been noted, "[t]he concern which prompted the inclusion of section 6 in article XIII B was the perceived

[***29] attempt by the state to enact legislation *or adopt administrative orders* creating programs to be administered by local agencies, thereby transferring to those agencies the fiscal responsibility for providing services which the state believed should be extended to the public." (County of Los Angeles v. State of California, supra, 43 Cal.3d at p. 56.) It is clear that the primary concern of the voters was the increased financial [*175] burdens being shifted to local government, not the form in which those burdens appeared.

We derive support for our interpretation by reference to the ballot summary presented to the electorate. (Cf. Amador Valley Joint Union High Sch. Dist. v. State Bd. of Equalization (1978) 22 Cal.3d 208, 245-246 [149 Cal.Rptr. 239, 583 P.2d 1281].) The legislative analyst determined that the amendment would limit the rate of growth of governmental appropriations, require the return of taxes which exceeded amounts appropriated, and "[r]equire the state to reimburse local governments for the costs of complying with 'state mandates.'" [**462] The term "state mandates" was [***30] defined as "requirements imposed on local governments by legislation *or executive orders.*" (Italics added; Ballot Pamp., Proposed Amend. to Cal. Const. with arguments to voters, Special Statewide Elec. (Nov. 6, 1979) p. 16.)

(9c) Although exception (c) of Section 6 gives the state discretion whether to reimburse pre-1975 mandates which are either statutes or executive orders implementing statutes, we do not infer from this exception that reimbursability is otherwise dependent on the form of the mandate. We conclude that since the voters provided for mandatory reimbursement except for the three narrowly drawn exceptions found in (a), (b), and (c), there was no intent to exclude recovery for state mandates in the form of executive orders. Further, as State sets forth in its brief, the adoption of the Executive Order was "arguably prompted" by the decision in Crawford v. Board of Education, supra, 17 Cal.3d 280, a case decided after the 1975 cutoff date of exception (c). Since case law and statutory law are of equal force, there appears to be no basis on which to exclude executive orders which implement case law or constitutional law [***31] while permitting reimbursement for executive orders implementing statutes. We see no relationship between the proposed distinction and the described purposes of the amendment (County Los Angeles v. State of California, supra, 43 Cal.3d at p. 56; County of Los Angeles v. Department of Industrial Relations (1989) 214 Cal.App.3d 1538, 1545 [263 Cal.Rptr. 351]).

(b) *Recent Legislative Limits*

State contends that LBUSD cannot claim reimbursement under Section 6 because Government Code sections 17561 (Stats. 1986, ch. 879, § 6, p. 3041) and

17514 (Stats. 1984, ch. 1459, § 1, p. 5114) limit such recovery to mandates created by statutes or executive orders implementing statutes, and only for costs incurred after July 1, 1980.

As discussed above, the voters did not intend to limit reimbursement of costs only to those incurred pursuant to statutes or executive orders implementing [*176] statutes except as set forth in exception (c) of Section 6. We presume that when the Legislature passed Government Code sections 17561 and 17514 it was aware of Section 6 as a related law and intended to maintain a consistent [***32] body of rules. (*Fuentes v. Workers' Comp. Appeals Bd.* (1976) 16 Cal.3d 1, 7 [128 Cal.Rptr. 673, 547 P.2d 449].) As discussed above, the limitations suggested by State are confined to exception (c).

Further, the state must reimburse costs incurred pursuant to mandates enacted after January 1, 1975, although actual payments for reimbursement were not required to be made prior to July 1, 1980, the effective date of Section 6. (*Carmel Valley Fire Protection Dist. v. State of California*, *supra*, 190 Cal.App.3d at pp. 547-548; *City of Sacramento v. State of California* (1984) 156 Cal.App.3d 182, 191-194 [203 Cal.Rptr. 258], disapproved on other grounds in *County of Los Angeles v. State of California*, *supra*, 43 Cal.3d at p. 58, fn. 10.)

(c) Administrative Procedures

The Legislature passed Government Code section 17500 et seq. (Stats. 1984, ch. 1459, § 1, p. 5113), effective January 1, 1985 (Stats. 1984, ch. 1459, § 1, p. 5123), to aid the implementation of Section 6 and to consolidate the procedures for reimbursement [***33] under statutes found in the Revenue and Taxation Code. This legislation created the Commission, which replaced the Board, and instituted a number of procedural changes. (Gov. Code, §§ 17525, 17527, subd. (g), 17550 et seq.) The Legislature intended the new system to provide "the sole and exclusive procedure by which a local agency or school district" could claim reimbursement. (Gov. Code, § 17552.)

(13) State argues that since LBUSD never made its claim before the Commission, it failed to exhaust its administrative [**463] remedies and cannot now receive reimbursement under section 6.

As discussed, the Board decisions favorable to LBUSD became administratively final in 1984. The Commission was not in place until January 1, 1985. There is no evidence in the record that the Commission did not consider these decisions to be final.

State argues the Commission was given jurisdiction over all claims which had not been included in a local

government claims bill enacted before January 1, 1985. (Gov. Code, § 17630.) State is correct. However, the subject claim was included in such a bill, but the bill was signed into law after the recommended appropriation had been deleted. Under the statutory [***34] scheme, the only relief offered a disappointed claimant at such juncture is an action in declaratory relief to declare a subject executive order void [*177] (former Rev. & Tax Code, § 2255, subd. (c); Stats. 1982, ch. 1638, § 7, pp. 6662-6663) or unenforceable (Gov. Code, § 17612, subd. (b); Stats. 1984, ch. 1459, § 1, p. 5121) and to enjoin its enforcement. LBUSD pursued this remedy and in addition petitioned for writ of mandate (Code Civ. Proc., § 1085) to compel reimbursement. There is no requirement to seek further administrative review. Indeed, to do so after the Legislature has spoken would appear to be an exercise in futility.

We conclude that Section 6 provides reimbursement to LBUSD because the Executive Order required a higher level of service and because the Executive Order constitutes a state mandate.

B. Section 2234

As set forth in the procedural history of this case, the Board originally declined to consider the Claim as a claim made under section 2234 on the ground that it lacked jurisdiction to do so. LBUSD petitioned for judicial relief, and the trial court held that the Board had jurisdiction and must consider the claim on its merits. The Board did not [***35] appeal that decision. State raised the jurisdiction issue as an affirmative defense to the second petition for writ of mandate filed by LBUSD and presents it again for our consideration.

(14) Of course, [HN6]lack of subject matter jurisdiction may be raised at any time. (*Stuck v. Board of Medical Examiners* (1949) 94 Cal.App.2d 751, 755 [211 P.2d 389].)

Former section 2250 provided: "The State Board of Control, pursuant to the provisions of this article, shall hear and decide upon a claim by a local agency or school district that such local agency or school district has not been reimbursed for *all costs mandated by the state as required by Section 2231 or 2234.* [para.] Notwithstanding any other provision of law, this article shall provide the sole and exclusive procedure by which the Board of Control shall hear and decide upon a claim that a local agency or school district has not been reimbursed for *all costs mandated by the state as required by Section 2231 or 2234.*" (Italics added; Stats. 1978, ch. 794, § 5, p. 2549.) Given the clear, unambiguous language of the statute, there is no need for construction. (*West Covina Hospital v. Superior Court* (1986) 41 Cal.3d 846, 850 [226 Cal.Rptr. 132, 718 P.2d 119, 60 A.L.R.4th 1257].)

[***36] (15a) We conclude that the Board had jurisdiction to consider a claim filed under former section 2234. However, as discussed below, the 1977 Executive Order falls outside the purview of section 2234.

Former section 2231 provided: "(a) . . . The state shall reimburse each school district only for those 'costs mandated by the state', as defined in [*178] Section 2207.5." (Stats. 1982, ch. 1586, § 3, p. 6264.) In part, former section 2207.5 defines "costs mandated by the state" as increased costs which a school district is required to incur as a result of certain new programs or certain increased program levels or services mandated by an executive order issued *after* January 1, 1978. (Stats. 1980, ch. 1256, § 5, pp. 4248-4249.) As previously stated, the Executive Order in the case at bar was issued September 8, 1977.

Former section 2234, pursuant to which LBUSD initially filed its claim, does not itself contain language indicating a time limitation: "If a local agency or a school district, at its option, has been incurring costs which are subsequently mandated by the state, the state shall reimburse the [**464] local agency or school district for such costs incurred after the operative [***37] date of such mandate." (Stats. 1980, ch. 1256, § 11, p. 4251.)

State asserts that the January 1, 1978, limitation of sections 2231 and 2207.5 applies to section 2234, preventing reimbursement for costs expended pursuant to the September 8, 1977, Executive Order; LBUSD argues section 2234 is self-contained and without time limitation.

(16) It is a fundamental rule of statutory construction that [HN7]a statute should be construed with reference to the whole system of law of which it is a part in order to ascertain the intent of the Legislature. (*Moore v. Panish* (1982) 32 Cal.3d 535, 541 [186 Cal.Rptr. 475, 652 P.2d 32]; *Pitman v. City of Oakland* (1988) 197 Cal.App.3d 1037, 1042 [243 Cal.Rptr. 306].) The legislative history of a statute may be considered in ascertaining legislative design. (*Walters v. Weed* (1988) 45 Cal.3d 1, 10 [246 Cal.Rptr. 5, 752 P.2d 443].)

The earliest version of section 2234 is found in former section 2164.3, subdivision (f), which provided reimbursement to a city, county, or special district for "a service or program [provided] at its [***38] option which is subsequently mandated by the state . . ." Reimbursement was limited to costs mandated by statutes or executive orders enacted or issued after January 1, 1973. (Stats. 1972, ch. 1406, § 3, pp. 2962-2963.)

In 1973, section 2164.3 was amended to provide reimbursement to school districts for costs mandated by statutes enacted after January 1, 1973 (subd. (a)), *but it expressly excluded school districts from reimbursement for costs mandated by executive orders* (subd. (d)). (Stats. 1973, ch. 208, § 51, p. 565.) Later that same year, the Legislature repealed section 2164.3 (Stats. 1973, ch. 358, § 2, p. 779) and added section 2231, which took over the pertinent [*179] reimbursement provisions of section 2164.3 virtually unchanged. (Stats. 1973, ch. 358, § 3, pp. 779, 783-784.)

In 1975, the Legislature removed the time limitation language from section 2231 and incorporated it into a new section, 2207. (Stats. 1975, ch. 486, § 1.8, pp. 997-998.) After this change, section 2231 then provided in pertinent part: "(a) The state shall reimburse each local agency for all 'costs mandated by the state', as defined in Section 2207. *The state shall reimburse each school [***39] district only for those 'costs mandated by the state' specified in subdivision (a) of Section 2207 . . .*" (Italics added; Stats. 1975, ch. 486, § 7, pp. 999-1000.) Subdivision (a) of section 2207 limited reimbursement solely to costs mandated by statutes enacted after January 1, 1973.

At this same juncture, the Legislature further amended section 2231 by deleting the provision for "subsequently mandated" services or programs and incorporating that provision into a new section 2234 (Stats. 1975, ch. 486, § 9, p. 1000), the section under which LBUSD would eventually make its claim. The substance of section 2234 (see fn. 2, *ante*) remained unchanged until its repeal in 1986. (Stats. 1977, ch. 1135, § 8.6, p. 3648; Stats. 1980, ch. 1256, § 11, pp. 4251-4252; Stats. 1986, ch. 879, § 25, p. 3045.)

Next, section 2231 was amended to show that with regard to school districts, "costs mandated by the state" were now defined by a new section 2207.5. (Stats. 1977, ch. 1135, § 7, pp. 3647-3648.) Section 2207.5 limited reimbursement to costs mandated by statutes enacted after January 1, 1973, and *executive orders issued after January 1, 1978*. (Stats. 1977, ch. 1135, § 5, pp. [***40] 3646-3647.) (No further pertinent amendments to section 2231 occurred; see Stats. 1978, ch. 794, § 1.1, p. 2546; Stats. 1980, ch. 1256, § 8, pp. 4249-4250; Stats. 1982, ch. 734, § 3, p. 2912.) The distinction between statutes and executive orders was preserved when section 2207.5 was amended in 1980 (Stats. 1980, ch. 1256, § 5, pp. 4248-4249) and was in effect at the time of the Board hearing.

(15b) This survey teaches us that with respect to the reimbursement process, the Legislature has treated school districts differently than it has treated other local government entities. The Legislature initially did not

give school districts the right to recover costs mandated by executive orders; and when this option was made available, the [**465] effective date differed from that applicable to other entities. The Legislature consistently limited reimbursement of costs by reference to the effective dates of statutes and executive orders and nothing indicates the state intended recovery of costs to be open-ended.

[*180] Because the "subsequently mandated" provision of section 2234 originally was contained in sections which set forth specific date limitations (former sections 2164.3 and 2231), we conclude [***41] the Legislature likewise intended to limit claims made pursuant to section 2234. The use of the language "subsequently mandated" merely describes an additional circumstance in which the state will reimburse costs, provided the claimant meets other requirements. Since the September 1977 Executive Order falls outside the January 1, 1978, limit set by section 2207.5, section 2234 does not provide for reimbursement to LBUSD.

III. The Award

The full text of the award as provided by the judgment is set forth in an appendix to this opinion. In part, the judgment states that there are appropriated funds in budgets for the DOE, the Commission, the Reserve for Contingencies or Emergencies, and the Special Fund for Economic Uncertainties, "or similarly designated accounts" which are "reasonably available" to reimburse LBUSD for the state mandated costs it has incurred. (Appendix, pars. 3, 2.) The State Controller is commanded to pay the claims plus interest "at the legal rate" from the described appropriations for fiscal years 1984-1985 through 1987-1988 and "subsequently enacted State Budget Acts." (Appendix, par. 7.) The judgment declares that the deletion of funding for reimbursement [***42] of costs incurred in compliance with the Executive Order was invalid and unconstitutional. (Appendix, par. 12.) Finally, the Fines and Forfeiture Funds in the custody of the Auditor-Controller of Los Angeles County are held to be not reasonably available for reimbursement. (Appendix, par. 5.)

A. State Position

(17a) State contends the trial court's award is contrary to California law, asserting that it constitutes an invasion of the province of the Legislature and therefore a judicial usurpation of the republican form of government guaranteed by the United States Constitution, Article IV, section 4.

(18) [HN8] A court cannot compel the Legislature either to appropriate funds or to pay funds not yet appropriated. (Cal. Const., art. III, § 3; art. XVI, § 7; Mandel v. Myers (1981) 29 Cal.3d 531, 540 [174 Cal.Rptr. 841, 629 P.2d 935]; Carmel Valley Fire Protection Dist. v. State of California, supra, 190 Cal.App.3d at p. 538.) However, no violation of the separation of powers doctrine occurs when a court orders appropriate expenditures from already existing funds. (Mandel, at p. 540; Carmel Valley, at [***43] pp. 539-540.) The test is whether such funds are "reasonably available for the [*181] expenditures in question . . ." (Mandel, at p. 542; Carmel Valley, at pp. 540-541.) Funds are "reasonably available" for reimbursement when the purposes for which those funds were appropriated are "generally related to the nature of costs incurred . . ." (Carmel Valley, at p. 541.) There is no requirement that the appropriation specifically refer to the particular expenditure (Mandel at pp. 543-544, Carmel Valley at pp. 540; Committee to Defend Reproductive Rights v. Cory (1982) 132 Cal.App.3d 852, 857-858 [183 Cal.Rptr. 475]), nor must past administrative practice sanction coverage from a particular fund (Carmel Valley, at p. 540).

(17b) As previously stated, the trial court found the subject funds were "reasonably available." No party requested a statement of decision, and therefore it is implied that the trial court found all facts necessary to support its judgment. (Michael [**466] U. v. Jamie B. (1985) 39 Cal.3d 787, 792-793 [218 Cal.Rptr. 39, 705 P.2d 362]; Homestead Supplies, Inc. v. Executive Life Ins. Co. (1978) 81 Cal.App.3d 978, 984 [147 Cal.Rptr. 22].) [***44] We now examine the record to ascertain whether substantial evidence supports the decision of the trial court.

The Board having approved reimbursement under the Executive Order, reported to the Legislature that "[t]he categories of reimbursable costs include, but are not limited to: (1) voluntary pupil assignment or reassignment programs, (2) magnet schools or centers, (3) transportation of pupils to alternative schools or programs, (5) [sic, no item (4)] racially isolated minority schools, (6) costs of planning, recruiting, administration and/or evaluation, and (7) overhead costs." The guidelines set out comprehensive steps to be taken by school districts in order to be in compliance with the Executive Order.

The peremptory writ of mandate, issued the same date as the judgment, designated funds in specific account numbers and, in addition, a special fund as available for reimbursement. We take judicial notice of the relevant budget enactments and Government Code sec-

tions 16418 and 16419 (Evid. Code, §§ 459, subd. (a), 452) and address these designations seriatim.

The line item account numbers for the DOE for fiscal years 1984-1985 through 1987-1988 set forth in the writ are [***45] as follows: 6100-001-001, 6100-001-178, 6100-015-001, 6100-101-001, 6100-114-001, 6100-115-001, 6100-121-001, 6100-156-001, 6100-171-178, 6100-206-001, 6100-226-001.

An examination of the relevant budget acts Statutes 1985, chapter 111; Statutes 1986, chapter 186; Statutes 1987, chapter 135; and final budgetary changes as published by the Department of Finance for each year, shows [*182] that appropriations in the 11 DOE line item account numbers have supported a very broad range of activities including reimbursement of costs for both mandated and voluntary integration programs, assessment programs, child nutrition, meals for needy pupils, participation in educational commissions, administration costs of various programs, proposal review, teacher recruitment, analysis of cost data, school bus driver instructor training, shipping costs for instructional materials, local assistance for school district transportation aid, summer school programs, local assistance to districts with high concentrations of limited- and non-English-speaking children, adult education, driver training, Urban Impact Aid, and cost of living increases for specific programs. Further evidence regarding the [***46] uses of these funds is found in the deposition testimony of William C. Pieper, Deputy Superintendent for Administration with the State Department of Education, who stated that local school districts were being reimbursed for the costs of desegregation programs from line item account numbers 6100-114-001 and 6100-115-001 in the 1986 State Budget Act.

Comparing the requirements of the Executive Order and guidelines with the broad range of activities supported by the DOE budget, we conclude that the subject funds, although not specifically appropriated for the reimbursement in question, were generally related to the nature of the costs incurred.

With regard to the Commission, the writ sets out three line item account numbers: 8885-001-001; 8885-101-001; and 8885-101-214. A review of the relevant budget acts shows that the first line item provides funding for support of the Commission, and line item number 8885-101-001 provides funding specifically for local assistance "in accordance with the provisions of Section 6 of Article XIII B of the California Constitution . . ." (Stats. 1986, ch. 186.) Line item number 8885-101-214 also provides funds for "local assistance." Since the Commission [***47] was created specifically to effect reimbursements for qualifying claims, we con-

clude there is a general relationship between the purpose of the appropriations and the requirements of the Executive Order.

Line item 9840-001-001 of the Reserve for Contingencies or Emergencies defines "contingencies" as "proposed expenditures [**467] arising from unexpected conditions or losses for which no appropriation, or insufficient appropriation, has been made by law and which, in the judgment of the Director of Finance, constitute cases of actual necessity." (All relevant budget acts.) In the instant case, previous to the issuance of the Executive Order, LBUSD could not have anticipated the expenditures necessary to bring it into compliance. Further, the Legislature refused to appropriate the necessary funds [*183] to directly reimburse the district for these expenditures. The necessity exists by virtue of the writ and judgment issued by the trial court. Therefore, this line item, and three others which also support the reserve (9840-001-494, 9840-001-988, 9840-011-001) are generally related to the costs.¹⁶

16 The costs do not come within past or current definitions of "emergency," which are, respectively, as follows. "[P]roposed expenditures arising from unexpected conditions or losses for which no appropriation, or insufficient appropriation, has been made by law and which in the judgment of the Director of Finance require immediate action to avert undesirable consequences or to preserve the public peace, health or safety." (Fiscal years 1984-1985, 1985-1986.) "[E]xpenditure incurred in response to conditions of disaster or extreme peril which threaten the health or safety of persons or property within the state." (Fiscal years 1986-1987 forward.)

[***48] Finally the writ lists as sources of reimbursement the Special Fund for Economic Uncertainties "or similarly designated accounts . . ." An examination of Government Code sections 16418 and 16419 relating to the special fund shows only one use of this reserve: establishment of the Disaster Relief Fund "for purposes of funding disbursements made for response to and recovery from the earthquake, aftershocks, and any other related casualty." No evidence in the record indicates a general relationship between this purpose and the costs incurred by LBUSD. We conclude, therefore, that this source of funding cannot be used for reimbursement. This source is stricken from the judgment.

The description of further sources of funding as "similarly designated accounts" fails to sufficiently identify these sources and we therefore strike this part of the judgment.

In a supplemental brief, LBUSD requests this court to take judicial notice of the Budget Acts of 1988-1989 (Stats. 1988, ch. 313) and 1989-1990 (Stats. 1989, ch. 93) pursuant to the Evidence Code (Evid. Code, §§ 451, subd. (a), 452, subd. (a), 452, subd. (c), 459) and to order that the amounts set forth in the judgment and writ be [***49] satisfied from specific line item accounts in these later budgets and from the Special Fund for Economic Uncertainties.¹⁷

17 LBUSD identifies the line items accounts as follows: DOE -- 6110-001-001, 6110-001-178, 6110-015-001, 6110-101-001, 6110-114-001, 6110-115-001, 6110-121-001, 6110-156-001, 6110-171-178, 6110-226-001, 6110-230-001; Commission -- 8885-001-001, 8885-101-001, 8885-101-214; Reserve for Contingencies or Emergencies -- 9840-001-001, 9840-001-494, 9840-001-988, 9840-011-001.

(19) "An appellate court is empowered to add a directive that the trial court order be modified to include charging orders against funds appropriated by subsequent budget acts. [Citation.]" (Carmel Valley, supra, 190 Cal.App.3d at p. 557.)

(17c) We have reviewed the designated budget acts and conclude that the specified line item accounts for DOE, the Commission, [*184] and the Reserve for Contingencies and Emergencies provide funds for a broad range of activities similar to those set out above and therefore [***50] are generally related to the nature of the costs incurred. However, for the reasons previously discussed, we decline to designate the Special Fund for Economic Uncertainties as a source for reimbursement.

While we have concluded that certain line item accounts are generally related to the nature of the costs incurred, there must also be evidence that at the time of the order the enumerated budget items contained sufficient funds to cover the award. (Gov. Code, § 12440; Mandel v. Myers, supra, 29 Cal.3d at p. 543; Carmel Valley, supra, 190 Cal.App.3d at p. 541; cf. Baggett v. Dunn (1886) 69 Cal. 75, 78 [10 P. 125]; Marshall v. Dunn (1886) 69 Cal. 223, 225 [10 P. 399].) The record before [**468] us contains evidence regarding balances at various points in time for some of the line item accounts, but that evidence is primarily in the form of uninterpreted statistical data. We have not found a clear statement which would satisfy this requirement. Furthermore, not every line item was in existence every fiscal year. In addition, those which [***51] entered the budgetary process did not always survive it unscathed. Therefore, we remand the matter to the trial court to determine with regard to the line item account numbers

approved above whether funds sufficient to satisfy the award were available at the time of the order. (Cf. County of Sacramento v. Loeb (1984) 160 Cal.App.3d 446, 454-455 [206 Cal.Rptr. 626].) If the trial court determines that the unexhausted funds remaining in the specified appropriations are insufficient, the trial court order can be further amended to reach subsequent appropriated funds. (County of Sacramento at p. 457; Serrano v. Priest (1982) 131 Cal.App.3d 188, 198 [182 Cal.Rptr. 387].)

(20) Having concluded that certain appropriations are generally available to reimburse LBUSD, we turn to an additional issue raised by State: that the "finding" by the Legislature that the Executive Order does not impose a "state-mandated local program" prevents reimbursement.

Unsupported legislative disclaimers are insufficient to defeat reimbursement. (Carmel Valley, supra, 190 Cal.App.3d at pp. 541-544.) As discussed, [***52] LBUSD, pursuant to Section 6, has a constitutional right to reimbursement of its costs in providing an increased service mandated by the state. The Legislature cannot limit a constitutional right. (Hale v. Bohannon (1952) 38 Cal.2d 458, 471 [241 P.2d 4].)

B. DOE Contentions

DOE is sympathetic to LBUSD's position. On appeal, it takes no stand on the issue whether the Executive Order constitutes a state mandate within [*185] the meaning of Section 6.

(21) The thrust of its appeal is that, if there is a mandate, the DOE budget is an inappropriate source of funding in comparison with other budget line item accounts included in the order.

We conclude to the contrary because logic dictates that DOE funding be the initial and primary source for reimbursement. As discussed, the test set forth in Mandel and Carmel Valley is whether there is a general relationship between budget items and reimbursable expenditures. Since the Executive Order was issued by DOE, it is not surprising that the evidence overwhelmingly supports the finding of the trial court that this general relationship exists with regard to the DOE budget.

While we also have concluded [***53] that certain line item accounts for entities other than DOE are also appropriate sources of funding, the record does not provide the statistical data necessary to determine how far the order will reach with regard to these additional sources of support.

DOE also contends that reimbursement for expenditures in fiscal years 1977-1978, 1978-1979, and 1979-1980 cannot be awarded under Section 6 because

the amendment was not effective until July 1, 1980. As discussed, this argument has been previously rejected. (*Carmel Valley Fire Protection Dist. v. State of California*, *supra*, 190 Cal.App.3d at pp. 547-548; *City of Sacramento v. State of California*, *supra*, 156 Cal.App.3d 182, 191-194, disapproved on other grounds in *County of Los Angeles v. State of California*, *supra*, 43 Cal.3d 46, 58, fn. 10.)

(22) Finally, DOE contends that interest should have been awarded at the rate of 6 percent per annum pursuant to Government Code section 926.10 rather than at the legal rate provided under article XV, section 1, paragraph (2) of the California Constitution.

Government Code section [***54] 926.10 is part of the California Tort Claims Act (Gov. Code, § 900 et seq.) which provides a statutory scheme for the filing of claims against public entities for alleged injuries; it makes no provision for claims for reimbursement [**469] for state mandated expenditures. In *Carmel Valley* a judgment awarding interest at the legal rate was affirmed. (*Carmel Valley Fire Protection Dist. v. State of California*, *supra*, 190 Cal.App.3d at p. 553.) We decline the invitation of DOE to apply another rule.

C. Cross Appeal of LBUSD

(23) LBUSD seeks reversal of that part of the judgment holding that monies in the Fines and Forfeitures Funds in the custody and possession of [*186] cross-respondent Auditor-Controller of the County of Los Angeles (County Controller) for transfer to the state treasury are not reasonably available for reimbursement of its state mandated expenditures.¹⁸

18 In its first amended petition, LBUSD listed the following code sections as appropriate sources of reimbursement: "Penal Code Sections 1463.02, 1463.03, 1403.5A and 1464; Government Code Sections 13967, 26822.3 and 72056; Health and Safety Code Section 11502; and Vehicle Code Sections 1660.7, 42003, and 41103.5."

[***55] As previously stated, funds are "reasonably available" when the purposes for which those funds were appropriated are generally related to the nature of the costs incurred. (*Carmel Valley*, *supra*, 190 Cal.App.3d at pp. 540-541.) LBUSD does not cite, nor have we found, any evidence in the record showing the use of those funds once they are transmitted to the state and that those funds are then "reasonably available" to satisfy the Claim. We cannot conclude as a matter of law that a general relationship exists between those funds and the nature of the costs incurred pursuant to the Executive Order. LBUSD has failed to carry its burden of

proof and the trial court correctly decided these funds were not "reasonably available" for reimbursement.

Nor have we concluded that there is any ground on which the funds could be made available to LBUSD while in the possession of the county Auditor-Controller. The instant case differs from *Carmel Valley* wherein we affirmed an order which authorized a county to satisfy its claims against the state by offsetting fines and forfeitures it held which were due the state. The *Carmel Valley*, *supra*, 190 Cal.App.3d 521, [***56] holding was based on the right of offset as "a long-established principle of equity." (*Id.* at p. 550.) That is a different standard than the standard of "generally related to the nature of costs incurred." In the case at bar there is no set-off relationship between county and LBUSD.

We conclude that because the doctrines of collateral estoppel and waiver are inapplicable to the facts of this case, the trial court should have allowed State to challenge the decisions of the Board. However, we also determine, as a question of law, that the Executive Order requires local school boards to provide a higher level of service than is required constitutionally or by case law and that the Executive Order is a reimbursable state mandate pursuant to article XIII B, section 6 of the California Constitution. Former Revenue and Tax Code section 2234 does not provide reimbursement of the subject claim.

[*187] Based on uncontradicted evidence, we modify the decision of the trial court by striking as sources of reimbursement the Special Fund for Economic Uncertainties "or similarly designated accounts." We also modify the judgment to include charging orders against [***57] certain funds appropriated through subsequent budget acts.

We affirm the decision of the trial court that the Fines and Forfeitures Funds are not "reasonably available" to satisfy the Claim.

Finally, we remand the matter to the trial court to determine whether at the time of its order, unexpended, unencumbered funds sufficient to satisfy the judgment remained in the approved budget line item account numbers. The trial court is also directed to determine this same issue with respect to the charging order.

The judgment is affirmed as modified. Each party is to bear its own costs on appeal.

[*188] [**470] Appendix

The superior court judgment provides in pertinent part: "It Is Ordered, Adjudged and Decreed That: "1. The requirements contained in Title 5, California Administrative Code, Sections 90-101 constitute a reimbursable State-mandate which cannot be challenged by State

Respondents or Respondent DOE because of the doctrines of administrative collateral estoppel and waiver.

"2. There are appropriated funds from specified line items in the 1984, 1985, 1986 and 1987 budgets which are 'reasonably available' to reimburse Petitioner for State-mandated costs it has occurred [*sic*] as [***58] a result of its compliance with the requirements of Title 5, California Administrative Code, Sections 90-101.

"3. The funds appropriated by the Legislature for:

"(a) the support of the Department of Education, including, but not limited, to the Department's General Fund;

"(b) the Commission on State Mandates, including, but not limited to the State Mandates Claim Fund; and

"(c) the 'Reserve for Contingencies or Emergencies', 'Special Fund for Economic Uncertainties' or similarly designated accounts, are 'reasonably available' and may properly be and should be encumbered and expended for the reimbursement of State-mandated costs in the amount of \$ 28,014,869.00, plus applicable interest, as incurred by Petitioner and as computed by Petitioner in compliance with Parameters and Guidelines adopted by the State Board of Control.

"4. The law in effect at the time that Petitioner's claim was processed provided for the computation of a specific claim amount for specific fiscal years based on Parameters and Guidelines, or claiming instructions, adopted in April 1984 and a Statewide Cost Estimate adopted on August 23, 1984, both of which are administrative actions of the State Board of Control [***59] which have not been challenged by State Respondents. The computations made pursuant to the Parameters and Guidelines and Statewide Cost Estimate are specific and ascertainable and subject to audit by the State Controller under Government Code section 17558.

"5. The Court decrees that State funds entitled the 'Fines and Forfeitures Funds' under the custody and control of Respondent Bloodgood, are not reasonably available for satisfaction of Petitioner's claim for reimbursement of State-mandated costs.

"6. A peremptory writ of mandamus shall issue under the seal of this Court, commanding State Respondents and Respondent Doe to comply with Article XIII B, Section 6 of the California Constitution and Government Code Section 17565 and reimburse petitioner for:

"(a) State-mandated costs in the amount of \$ 24,164,593.00, incurred as a result of its compliance with the requirements of Title 5, California Administrative Code, Sections 90-101 during fiscal years 1977-78 through 1982-1983, plus interest at the legal rate from September 28, 1985; and

"(b) State-mandated costs in the amount of \$ 3,850,276.00, incurred as a result of Petitioner's compliance with the requirements of Title 5, California [***60] Administrative Code, Sections 90-101 during fiscal years 1983-84 and 1984-85, plus interest at the legal rate from September 28, 1985.

"7. Said peremptory writ shall command Respondent Gray Davis, State Controller, or his successor-in-interest, to pay the claims of Petitioner, plus interest at the legal rate from [*189] September 28, 1985 from the appropriations in the State Budget Acts for the 1984-85, 1985-86, 1986-87 and 1987-88 fiscal years, and the subsequently enacted State Budget Acts, which include, or will include appropriations for:

"(a) the support of the Department of Education, including, but not limited to the Department's General Fund;

"(b) the Commission on State Mandates, including, but not limited to the State Mandates Claim Fund; and

"(c) the 'Reserve for Contingencies or Emergencies', Special Fund for Economic [**471] Uncertainties' or similarly designated accounts, which are 'reasonably available' to be encumbered and expended for the reimbursement of State-mandated costs incurred by Petitioner and further shall compel Elizabeth Whitney, Acting State Treasurer, or her successor-in-interest, to make payments on the warrants drawn by Respondent Gray Davis, State Controller [***61] upon their presentation for payment by Petitioner without offset or attempt to offset against other monies due and owing Petitioner until Petitioner is reimbursed for all such costs.

"8. Said Peremptory Writ of Mandate also shall command Respondent Jesse R. Huff, Director of the State Department of Finance, to perform such actions as may be necessary to effect reimbursement required by other portions of this Judgment, including but not limited to, those actions specified in Chapter 135, Statutes of 1987, Section 2.00, pp. 549-553, or with respect to the Special Fund for Economic Uncertainties.

"9. Pending the final disposition of this proceeding, State Respondents and Respondent DOE, and each of them, their successors in office, agents, servants and employees and all persons acting in concert or participation with them, are hereby enjoined or restrained from directly or indirectly expending from the appropriations described in Paragraph No. 7 hereinabove any sums greater than that which would leave in said appropriations at the conclusion of the respective fiscal years an amount less than the reimbursement amounts claimed by Petitioner together with interest at the legal rate through [***62] payment of said reimbursement amount. Said

amounts are hereinafter referred to collectively as the 'reimbursement award sum'.

"10. Pending the final disposition of this proceeding State Respondents and Respondent DOE, and each of them, their successors in office, agents, servants and employees, and all persons acting in concert or participation with them, are hereby enjoined and restrained from directly or indirectly causing to revert the reimbursement award sum from the appropriations described in Paragraph No. 7 hereinabove to the general funds of the State of California and from otherwise dissipating the reimbursement award sum in a manner that would make it unavailable to satisfy this Court's judgment.

"11. The State Respondents and Respondent Doe have a continuing obligation to reimburse Petitioner for costs incurred in compliance with the requirements contained in Title 5, California Administrative Code, Section 90-101 in the fiscal years subsequent to it's [*sic*] claims for expenditures in fiscal years 1977-78 through 1984-85 as set forth in the First Amended Petition, as amended,

and the accompanying Motion For the Issuance Of A Writ Of Mandate.

"12. The deletion of funding [***63] for reimbursement of State-mandated costs incurred in compliance with Title 5, California Administrative Code, Sections 90-101 from Chapter 1175, Statutes of 1985 was invalid and unconstitutional.

"13. Respondent Gray Davis, State Controller, shall retain the right to audit the claims and records of the Petitioner pursuant to Government Code Section 17561(d) to verify the actual dollar amount of the reimbursement award sum.

"14. The Court reserves and retains jurisdiction to effect any appropriate remedy at law or equity which may be necessary to enforce its judgment or order.

[*190] "15. Petitioner shall recover from State Respondents and Respondent DOE costs in this proceeding in the amount of 1,863.54.

REDEVELOPMENT AGENCY OF THE CITY OF SAN MARCOS, Plaintiff and Appellant, v. CALIFORNIA COMMISSION ON STATE MANDATES, Defendant and Respondent; CALIFORNIA DEPARTMENT OF FINANCE, Intervener and Respondent.

No. D026195.

COURT OF APPEAL OF CALIFORNIA, FOURTH APPELLATE DISTRICT,
DIVISION ONE

55 Cal. App. 4th 976; 64 Cal. Rptr. 2d 270; 1997 Cal. App. LEXIS 474; 97 Cal. Daily Op. Service 4510; 97 Daily Journal DAR 7464

May 30, 1997, Decided

SUBSEQUENT HISTORY: [***1] The Publication Status of this Document has been Changed by the Court from Unpublished to Published June 12, 1997. Review Denied September 3, 1997, Reported at: 1997 Cal. LEXIS 5622.

PRIOR HISTORY: Superior Court of San Diego County, Super. Ct. No. 686818. Sheridan Reed and Herbert Hoffman, Judges.

DISPOSITION: The judgment is affirmed.

CASE SUMMARY:

PROCEDURAL POSTURE: Appellant redevelopment agency sought review of a judgment by the Superior Court of San Diego County (California), which denied appellant's petition for writ of administrative mandamus as to a decision of respondent commission on state mandates. Appellant claimed that the state should have reimbursed appellant for tax increment financing under Cal. Const. art. XIII B, § 6.

OVERVIEW: Appellant redevelopment agency challenged the decision of respondent commission on state mandates. Respondent denied appellant's test claim, which sought reimbursement of tax increment financing through a petition for writ of administrative mandamus. The trial court denied the petition. On appeal, appellant

contended that reimbursement for tax increment financing was required under Cal. Const. art. XIII B, § 6. The court rejected this contention, finding that the 20 percent housing fund set-aside requirement of appellant's tax increment financing did not qualify under Cal. Const. art. XIII, § 6 as a "cost" of a program because tax increment financing was not within the scope of this portion of the state constitution. The court reasoned that the same policies that supported exempting tax increment revenues from Cal. Const. art. XIII B appropriations limits also supported denying reimbursement under Cal. Const. art. XIII B, § 6 for this particular allocation of revenues. Accordingly, the court affirmed the judgment denying the petition for writ of administrative mandamus.

OUTCOME: The court affirmed the trial court's judgment denying appellant redevelopment agency's petition for writ of administrative mandamus as to the decision of respondent commission on state mandates that denied appellant's reimbursement of tax increment financing. The court found that appellant's tax increment financing did not qualify as a cost of a program under the state constitution and therefore was not reimbursable.

CORE TERMS: tax increment financing, subvention, redevelopment agency, proceeds of taxes, housing, appropriation, redevelopment, entity, reimbursement, local government, local agency, tax revenues, spending, italics, level of service, financing, expend, state mandates, state subvention, tax revenues, increment, taxation, fis-

cal, subvention of funds, new program, state-mandated, levied, user, Community Redevelopment Law, constitutional provision

Administrative Law > Judicial Review > Remedies > Mandamus

Administrative Law > Judicial Review > Standards of Review > Substantial Evidence

Civil Procedure > Appeals > Standards of Review > Substantial Evidence > General Overview

[HN1]Under Cal. Gov't Code § 17559, review by administrative mandamus is the exclusive method of challenging the California Commission on State Mandates' decision denying a subvention claim. On appellate review, the reviewing court applies these standards: if Cal. Gov't Code § 17559 governs the proceeding below, then the trial court must review the decision of the commission under the substantial evidence standard. Where the substantial evidence test is applied by the trial court, the reviewing court is generally confined to inquiring whether substantial evidence supports the court's findings and judgment. However, the reviewing court independently reviews the superior court's legal conclusions about the meaning and effect of constitutional and statutory provisions.

Governments > Local Governments > Finance

Governments > State & Territorial Governments > Finance

[HN2]Cal. Const. art. XIII A imposes a limit on the power of state and local governments to adopt and levy taxes. Cal. Const. art. XIII B imposes a complementary limit on the rate of growth in governmental spending. These two constitutional articles work in tandem, together restricting the state governments' power both to levy and to spend for public purposes.

Governments > Local Governments > Finance

Governments > State & Territorial Governments > Finance

[HN3]Cal. Const. art. XIII B, § 6 requires that whenever the California Legislature or any state agency mandates a "new program or higher level of service" on any local government, the state shall provide a subvention of funds to reimburse such local government for the costs of such program or increased level of service.

Governments > State & Territorial Governments > Finance

[HN4]The funds a redevelopment agency receives from tax increment financing do not constitute "proceeds of taxes" subject to Cal. Const. art. XIII B, § 6 appropriations limits.

Governments > State & Territorial Governments > Finance

[HN5]See Cal. Const. art. XIII B, § 8(c).

Constitutional Law > State Constitutional Operation

[HN6]The rules of constitutional interpretation require a strict construction of Cal. Const. art. XIII, § 6, because constitutional limitations and restrictions on legislative powers are not to be extended to include matters not covered by the language used.

Governments > Local Governments > Finance

Governments > State & Territorial Governments > Finance

[HN7]Cal. Const. art. XIII B does not limit the ability to expend government funds collected from all sources. Rather, the appropriations limit is based on "appropriations subject to limitation," which consists primarily of the authorization to expend during a fiscal year the "proceeds of taxes." Cal. Const. art. XIII B, § 8(a).

Governments > State & Territorial Governments > Finance

[HN8]See Cal. Const. art. XIII B, § 8(P)(b).

SUMMARY:

CALIFORNIA OFFICIAL REPORTS SUMMARY

The trial court denied a petition for a writ of administrative mandate brought by a city's redevelopment agency that challenged the California Commission on State Mandates' denial of the agency's test claim under Gov. Code, § 17550 et seq. (reimbursement of costs mandated by the state). In its claim, the agency sought a determination that the State of California should reimburse the agency for moneys transferred into its low- and moderate-income housing fund pursuant to Health & Saf. Code, §§ 33334.2 and 33334.3, of the Community Redevelopment Law. Those statutes require a 20 percent deposit of the particular form of financing received by the agency (tax increment financing generated from its project areas) for purposes of improving the supply of affordable housing. The agency claimed that this tax increment financing should not be subject to state control

of the allocations made to various funds and that such control constituted a statemandated new program or higher level of service for which reimbursement or subvention was required under Cal. Const., art. XIII B, § 6. The trial court found that the source of funds used by the agency was exempt, under Health & Saf. Code, § 33678, from the scope of Cal. Const., art. XIII B, § 6. (Superior Court of San Diego County, No. 686818, Sheridan E. Reed and Herbert B. Hoffman, Judges.)

The Court of Appeal affirmed. It held that under Health & Saf. Code, § 33678, which provides that tax increment financing is not deemed to be the "proceeds of taxes," the source of funds used by the agency was exempt from the scope of Cal. Const., art. XIII B, § 6. Although Cal. Const., art. XIII B, § 6, does not expressly discuss the source of funds used by an agency to fund a program, the historical and contextual context of this provision demonstrates that it applies only to costs recovered solely from tax revenues. Because of the nature of the financing they receive (i.e., tax increment financing), redevelopment agencies are not subject to appropriations limitations or spending caps, they do not expend any proceeds of taxes, and they do not raise general revenues for the local entity. Also, the state is not transferring any program for which it was formerly responsible. Therefore, the purposes of state subvention laws are not furthered by requiring reimbursement when redevelopment agencies are required to allocate their tax increment financing in a particular manner, as in the operation of Health & Saf. Code, §§ 33334.2 and 33334.3. (Opinion by Huffman, J., with Work, Acting P. J., and McIntyre, J., concurring.)

HEADNOTES

CALIFORNIA OFFICIAL REPORTS HEADNOTES

Classified to California Digest of Official Reports

(1) **State of California § 11--Fiscal Matters--Subvention: Words, Phrases, and Maxims--Subvention.** --"Subvention" generally means a grant of financial aid or assistance, or a subsidy.

(2) **State of California § 11--Fiscal Matters--Subvention--Judicial Rules.** --Under Gov. Code, § 17559, review by administrative mandamus is the exclusive method of challenging a decision of the California Commission on State Mandates to deny a subvention claim. The determination whether the statutes at issue established a mandate under Cal. Const., art. XIII B, § 6, is a question of law. On appellate review, the following standards apply: Gov. Code, § 17559, governs the proceeding below and requires that the trial court review the decision of the commission under the substantial evi-

dence standard. Where the substantial evidence test is applied by the trial court, the appellate court is generally confined to inquiring whether substantial evidence supports the trial court's findings and judgment. However, the appellate court independently reviews the trial court's legal conclusions about the meaning and effect of constitutional and statutory provisions.

(3a) (3b) **State of California § 11--Fiscal Matters--Subvention--Statemandated Costs--Statutory Set-aside Requirement for Local Redevelopment Agency's Tax Increment Financing.** --The California Commission on State Mandates properly denied a test claim brought by a city's redevelopment agency seeking a determination that the state should reimburse the agency for moneys transferred into its low- and moderate-income housing fund pursuant to Health & Saf. Code, §§ 33334.2 and 33334.3, which require a 20 percent deposit of the particular form of financing received by the agency, i.e., tax increment financing generated from its project areas. Under Health & Saf. Code, § 33678, which provides that tax increment financing is not deemed to be the "proceeds of taxes," the source of funds used by the agency was exempt from the scope of Cal. Const., art. XIII B, § 6 (subvention). Although Cal. Const., art. XIII B, § 6, does not expressly discuss the source of funds used by an agency to fund a program, the historical and contextual context of this provision demonstrates that it applies only to costs recovered solely from tax revenues. Because of the nature of the financing they receive (i.e., tax increment financing), redevelopment agencies are not subject to appropriations limitations or spending caps, they do not expend any proceeds of taxes, and they do not raise general revenues for the local entity. Also, the state is not transferring any program for which it was formerly responsible. Therefore, the purposes of state subvention laws are not furthered by requiring reimbursement when redevelopment agencies are required to allocate their tax increment financing in a particular manner, as in the operation of Health & Saf. Code, §§ 33334.2 and 33334.3.

[See 9 Witkin, Summary of Cal. Law (9th ed. 1989) Taxation, § 123.]

(4) **Constitutional Law § 10--Construction of Constitutional Provisions--Limitations on Legislative Powers.** --The rules of constitutional interpretation require a strict construction of a constitutional provision that contains limitations and restrictions on legislative powers, because such limitations and restrictions are not to be extended to include matters not covered by the language used.

(5) **State of California § 11--Fiscal Matters--Subvention--Purpose of Constitutional Provi-**

sions. --The goal of Cal. Const., arts. XIII A and XIII B, is to protect California residents from excessive taxation and government spending. A central purpose of Cal. Const., art. XIII B, § 6 (reimbursement to local government of state-mandated costs), is to prevent the state's transfer of the cost of government from itself to the local level.

OPINION BY: HUFFMAN

OPINION

[*979] [**271] **HUFFMAN, J.**

The California Commission on State Mandates (the Commission) denied a test claim by the Redevelopment Agency of the City of San Marcos (the Agency) (Gov. Code, § 17550 et seq.), which sought a determination that the State of California should reimburse the Agency for moneys transferred into its Low and Moderate Income Housing Fund (the Housing Fund) pursuant to Health and Safety Code ¹ sections 33334.2 and 33334.3. Those sections [***2] require a 20 percent deposit of the particular form of financing received by the Agency, tax increment financing generated from its project areas, for purposes of improving the supply of affordable housing. (1) (See fn. 2.) The Agency claimed that this tax increment financing should not be subject to state control of the allocations made to various funds and that such control constituted a state-mandated new program or higher level of service for which reimbursement or subvention was required under article XIII B of the California Constitution, section 6 (hereafter section 6; all further references to articles are to the California Constitution). ² (Cal. Const., art. XVI, § 16; § 33670.)

1 All further statutory references are to the Health and Safety Code unless otherwise noted.

2 " 'Subvention' generally means a grant of financial aid or assistance, or a subsidy. [Citation.]" (Haves v. Commission on State Mandates (1992) 11 Cal. App. 4th 1564, 1577 [15 Cal. Rptr. 2d 547].)

The Agency brought a petition [***3] for writ of administrative mandamus to challenge the decision of the Commission. (Code Civ. Proc., § 1094.5; Gov. Code, § 17559.) The superior court denied the petition, ruling that the source of funds used by the Agency for redevelopment, tax increment financing, was exempt pursuant to section 33678 from the scope of section 6, as not constituting "proceeds of taxes" which are governed by that section. The superior court did not rule upon the alternative grounds of decision stated by the Commission, i.e., the 20 percent set-aside requirement for low and moderate-income housing did not impose a new program or higher level of service in an existing program within the meaning of section 6, and, further, there were no costs subject to reimbursement related to the Housing Fund because there was no net increase in the aggregate program responsibilities of the Agency.

[**272] The Agency appeals the judgment denying its petition for writ of mandate. For the reasons set forth below, we affirm.

[*980] I.

PROCEDURAL CONTEXT

This test claim was litigated before the Commission pursuant to statutory procedures for determining whether a statute imposes state-mandated costs upon a local agency [***4] which must be reimbursed, through a subvention of funds, under section 6. (Gov. Code, § 17500 et seq.) ³ The Commission hearing consisted of oral argument on the points and authorities presented.

3 In our prior opinion issued in this case, we determined the trial court erred when it denied the California Department of Finance (DOF) leave to intervene as an indispensable party and a real party in interest in the mandamus proceeding. (Redevelopment Agency v. Commission on State Mandates (1996) 43 Cal. App. 4th 1188, 1194-1199 [51 Cal. Rptr. 2d 100].) Thus, DOF is now a respondent on this appeal, as is the Commission (sometimes collectively referred to as respondents). However, our decision in that case was a collateral matter and does not assist us on the merits of this proceeding.

(2) [HN1] Under Government Code section 17559, review by administrative mandamus is the exclusive method of challenging a Commission decision denying a subvention claim. "The determination whether the statutes here at issue established [***5] a mandate under section 6 is a question of law. [Citation.]" (County of San Diego v. State of California (1997) 15 Cal. 4th 68, 109 [61 Cal. Rptr. 2d 134, 931 P.2d 312].) On appellate review, we apply these standards: "Government Code

section 17559 governs the proceeding below and requires that the trial court review the decision of the Commission under the substantial evidence standard. Where the substantial evidence test is applied by the trial court, we are generally confined to inquiring whether substantial evidence supports the court's findings and judgment. [Citation.] However, we independently review the superior court's legal conclusions about the meaning and effect of constitutional and statutory provisions. [Citation.]" (*City of San Jose v. State of California* (1996) 45 Cal. App. 4th 1802, 1810 [53 Cal. Rptr. 2d 521].)

II.

STATUTORY SCHEMES

Before we outline the statutory provisions setting up tax increment financing for redevelopment agencies, we first set forth the Supreme Court's recent summary of the history and substance of the law applicable to state mandates, such as the Agency claims exist here: "Through adoption of Proposition 13 in 1978, [***6] the voters added [HN2]article XIII A to the California Constitution, which 'imposes a limit on the power of state and local governments to [*981] adopt and levy taxes. [Citation.]' [Citation.] The next year, the voters added article XIII B to the Constitution, which 'impose[s] a complementary limit on the rate of growth in governmental spending.' [Citation.] These two constitutional articles 'work in tandem, together restricting California governments' power both to levy and to spend for public purposes.' [Citation.] Their goals are 'to protect residents from excessive taxation and government spending. [Citation.]' [Citation.]" (*County of San Diego v. State of California, supra*, 15 Cal. 4th at pp. 80-81.)

[HN3]Section 6, part of article XIII B and the provision here at issue, requires that whenever the Legislature or any state agency mandates a "new program or higher level of service" on any local government, "the state shall provide a subvention of funds to reimburse such local government for *the costs of such program or increased level of service . . .*" (*County of San Diego v. State of California, supra*, 15 Cal. 4th at p. 81, italics added.) Certain [***7] exceptions are then stated, none of which is relevant here. ⁴

4 Section 6 lists the following exclusions to the requirement for subvention of funds: "(a) Legislative mandates requested by the local agency affected; [P] (b) Legislation defining a new crime or changing an existing definition of a crime; or [P] (c) Legislative mandates enacted prior to January 1, 1975, or executive orders or regulations initially implementing legislation enacted prior to January 1, 1975." In *City of Sacramento v. State of California* (1990) 50 Cal. 3d 51, 69

[266 Cal. Rptr. 139, 785 P.2d 522], the Supreme Court identified these items as exclusions of otherwise reimbursable programs from the scope of section 6. (See also Gov. Code, § 17514, definition of "costs mandated by the state," using the same "new program or higher level of service" language of section 6.)

[**273] In *County of San Diego v. State of California, supra*, 15 Cal. 4th at page 81, the Supreme Court explained that section 6 represents a recognition [***8] that together articles XIII A and XIII B severely restrict the taxing and spending powers of local agencies. The purpose of the section is to preclude the state from shifting financial responsibility for governmental functions to local agencies, which are ill equipped to undertake increased financial responsibilities because they are subject to taxing and spending limitations under articles XIII A and XIII B. (*County of San Diego v. State of California, supra*, at p. 81.)

To evaluate the Agency's argument that the provisions of sections 33334.2 and 33334.3, requiring a deposit into the housing fund of 20 percent of the tax increment financing received by the Agency, impose this type of reimbursable governmental program or a higher level of service under an existing program, we first review the provisions establishing financing for redevelopment agencies. Such agencies have no independent powers of taxation (*Huntington Park Redevelopment Agency v. Martin* (1985) 38 Cal. 3d [*982] 100, 106 [211 Cal. Rptr. 133, 695 P.2d 220]), but receive a portion of tax revenues collected by other local agencies from property within a redevelopment project area, which may result from [***9] the following scheme: "Redevelopment agencies finance real property improvements in blighted areas. Pursuant to article XVI, section 16 of the Constitution, these agencies are authorized to use tax increment revenues for redevelopment projects. The constitutional mandate has been implemented through the Community Redevelopment Law (Health & Saf. Code, § 33000 et seq.). [P] The Community Redevelopment Law authorizes several methods of financing; one is the issuance of tax allocation bonds. Tax increment revenue, the increase in annual property taxes attributable to redevelopment improvements, provides the security for tax allocation bonds. Tax increment revenues are computed as follows: The real property within a redevelopment project area is assessed in the year the redevelopment plan is adopted. Typically, after redevelopment, property values in the project area increase. The taxing agencies (e.g., city, county, school or special district) keep the tax revenues attributable to the original assessed value and pass the portion of the assessed property value which exceeds the original assessment on to the redevelopment agency. (Health & Saf. Code, § 33640, 33641, 33670, 33675). In

[***10] short, tax increment financing permits a redevelopment agency to take advantage of increased property tax revenues in the project areas without an increase in the tax rate. This scheme for redevelopment financing has been a part of the California Constitution since 1952. (Cal. Const., art. XVI, § 16.)" (*Brown v. Community Redevelopment Agency* (1985) 168 Cal. App. 3d 1014, 1016-1017 [214 Cal. Rptr. 626].)⁵

5 Section 33071 in the Community Redevelopment Law provides that a fundamental purpose of redevelopment is to expand the supply of low and moderate-income housing, as well as expanding employment opportunities and improving the social environment.

In *Brown v. Community Redevelopment Agency, supra*, 168 Cal. App. 3d at pages 1016-1018, the court determined that by enacting section 33678, the Legislature interpreted article XIII B of the Constitution as not broad enough in reach to cover the raising or spending of tax increment revenues by redevelopment agencies. Specifically, the court decided [***11] [HN4] the funds a redevelopment agency receives from tax increment financing do not constitute "proceeds of taxes" subject to article XIII B appropriations limits. (*Brown v. Community Redevelopment Agency, supra*, at p. 1019).⁶ [**274] This ruling was based on section 33678, providing in pertinent part: "This section implements and fulfills the intent . . . of Article XIII B and Section 16 of Article [**983] XVI of the California Constitution. *The allocation and payment to an agency of the portion of taxes specified in subdivision (b) of Section 33670 for the purpose of paying principal of, or interest on . . . indebtedness incurred for redevelopment activity . . . shall not be deemed the receipt by an agency of proceeds of taxes levied by or on behalf of the agency within the meaning of or for the purposes of Article XIII B . . . nor shall such portion of taxes be deemed receipt of proceeds of taxes by, or an appropriation subject to limitation of, any other public body within the meaning or for purposes of Article XIII B . . . or any statutory provision enacted in implementation of Article XIII B. The allocation and payment to an agency of this portion of taxes [***12] shall not be deemed the appropriation by a redevelopment agency of proceeds of taxes levied by or on behalf of a redevelopment agency within the meaning or for purposes of Article XIII B of the California Constitution.*" (Italics added.)

6 The term of art, "proceeds of taxes," is defined in [HN5] article XIII B, section 8, as follows: (c) " 'Proceeds of taxes' shall include, but not be restricted to, all tax revenues and the proceeds to an entity of government, from (1) regulatory licenses, user charges, and user fees to

the extent that those proceeds exceed the costs reasonably borne by that entity in providing the regulation, product, or service, and (2) the investment of tax revenues. With respect to any local government, 'proceeds of taxes' shall include subventions received from the state, other than pursuant to Section 6, and, with respect to the state, proceeds of taxes shall exclude such subventions." (Italics added.)

In *County of Placer v. Corin* (1980) 113 Cal. App. 3d 443, 451 [170 Cal. Rptr. [***13] 232], the court defined "proceeds of taxes" IN THIS WAY: "Under article XIII B, with the exception of state subventions, the items that make up the scope of 'proceeds of taxes' concern charges levied to raise *general revenues* for the local entity. 'Proceeds of taxes,' in addition to 'all tax revenues' includes 'proceeds . . . from . . . regulatory licenses, user charges, and user fees [only] to the extent that such proceeds exceed the costs reasonably borne by such entity in providing the regulation, product or service. . . .' (§ 8, subd. (c).) (Italics added.) Such 'excess' regulatory or user fees are but *taxes* for the raising of general revenue for the entity. [Citations.] Moreover, to the extent that an assessment results in revenue above the cost of the improvement or is of general public benefit, it is no longer a special assessment but a tax. [Citation.] *We conclude 'proceeds of taxes' generally contemplates only those impositions which raise general tax revenues for the entity.*" (Italics added.)⁷

7 The issues before the court in *County of Placer v. Corin, supra*, 113 Cal. App. 3d 443 were whether special assessments and federal grants should be considered proceeds of taxes; the court held they should not. Section 6 is not discussed; the court's analysis of other concepts found in article XIII B is nevertheless instructive.

[***14] (3a) In light of these interrelated sections and concepts, our task is to determine whether the 20 percent Housing Fund set-aside requirement of a redevelopment agency's tax increment financing qualifies under section 6 as a "cost" of a program. As will be explained, we agree with the trial court that the resolution of this issue is sufficient to dispose of the entire matter, and [**984] accordingly we need not discuss the alternate grounds of decision stated by the Commission.⁸

8 The alternate grounds of the Commission's decision were that there were no costs subject to reimbursement related to the Housing Fund because there was no net increase in the aggregate program responsibilities of the Agency, and that the set-aside requirement did not constitute a

mandated "new program or higher level of service" under this section.

III.

HOUSING FUND ALLOCATIONS: REIMBURSABLE COSTS?

1. Arguments

The Agency takes the position that the language of section 33678 is simply inapplicable [**275] to its claim for [***15] subvention of funds required to be deposited into the Housing Fund. It points out that section 6 expressly lists three exceptions to the requirement for subvention of funds to cover the costs of state-mandated programs: (a) Legislative mandates requested by the local agency affected; (b) legislation defining or changing a definition of a crime; or (c) pre-1975 legislative mandates or implementing regulations or orders. (See fn. 4, *ante.*) None of these exceptions refers to the source of the funding originally used by the agency to pay the costs incurred for which reimbursement is now being sought. Thus, the agency argues it is immaterial that under section 33678, for purposes of appropriations limitations, tax increment financing is not deemed to be the "proceeds of taxes." (*Brown v. Community Redevelopment Agency, supra*, 168 Cal. App. 3d at pp. 1017-1020.) The Agency would apply a "plain meaning" rule to section 6 (see, e.g., *Davis v. City of Berkeley* (1990) 51 Cal. 3d 227, 234 [272 Cal. Rptr. 139, 794 P.2d 897]) and conclude that the source of the funds used to pay the program costs up front, before any subvention, is not stated in the section and thus is not [***16] relevant.

As an illustration of its argument that the source of its funds is irrelevant under section 6, the Agency cites to Government Code section 17556. That section is a legislative interpretation of section 6, creating several classes of state-mandated programs for which no state reimbursement of local agencies for costs incurred is required. In *County of Fresno v. State of California* (1991) 53 Cal. 3d 482, 487 [280 Cal. Rptr. 92, 808 P.2d 235], the Supreme Court upheld the facial constitutionality of Government Code section 17556, subdivision (d), which disallows state subvention of funds where the local government is authorized to collect service charges or fees in connection with a mandated program. The court explained that section 6 "was designed to protect the tax revenues of local governments from state mandates that [*985] would require expenditure of such revenues." (*County of Fresno v. State of California, supra*, at p. 487.) Based on the language and history of the measure, the court stated, "Article XIII B of the Constitution, however, was not intended to reach beyond taxation." (*Ibid.*) The court therefore concluded that in view of its textual

[***17] and historical context, section 6 "requires subvention only when the costs in question can be recovered solely from tax revenues." (*Ibid.*, original italics.) Interpreting section 6, the court stated: "Considered within its context, the section effectively construes the term 'costs' in the constitutional provision as excluding expenses that are recoverable from sources other than taxes." (*Ibid.*) No subvention was required where the local authority could recover its expenses through fees or assessments, not taxes.

2. Interpretation of Section 6

Here, the Agency contends the authority of *County of Fresno v. State of California, supra*, 53 Cal. 3d 482, should be narrowly read to cover only self-financing programs, and the Supreme Court's broad statements defining "costs" in this context read as mere dicta. It also continues to argue for a "plain meaning" reading of section 6, which it reiterates does not expressly discuss the source of funds used by an agency to pay the costs of a program before any reimbursement is sought. We disagree with both of these arguments. The correct approach is to read section 6 in light of its historical and textual context. (4) [HN6]The [***18] rules of constitutional interpretation require a strict construction of section 6, because constitutional limitations and restrictions on legislative powers are not to be extended to include matters not covered by the language used. (*City of San Jose v. State of California, supra*, 45 Cal. App. 4th at pp. 1816-1817.)

(5) The goals of articles XIII A and XIII B are to protect California residents from excessive taxation and government spending. (*County of Los Angeles v. State of California, supra*, 15 Cal. 4th at p. 81.) A central purpose of section 6 is to prevent the state's transfer of the cost of government from itself to the local level. (*City of Sacramento v. State of California, supra*, 50 Cal. 3d at p. 68.) (3b) The related goals of these enactments require us to [**276] read the term "costs" in section 6 in light of the enactment as a whole. The "costs" for which the Agency is seeking reimbursement are its deposits of tax increment financing proceeds into the Housing Fund. Those tax increment financing proceeds are normally received pursuant to the Community Redevelopment Law (§ 33000 et seq.) when, after redevelopment, the taxing agencies collect and keep the tax revenues [***19] attributable to the original assessed value and pass on to the redevelopment agency the portion of the [*986] assessed property value which exceeds the original assessment. (*Brown v. Community Redevelopment Agency, supra*, 168 Cal. App. 3d at pp. 1016-1017.) Is this the type of expenditure of tax revenues of local governments, upon state mandates which require use of such revenues, against which section 6 was designed to pro-

ject? (*County of Fresno v. State of California*, *supra*, 53 Cal. 3d at p. 487.)

3. Relationship of Appropriations Limitations and Subvention

We may find assistance in answering this question by looking to the type of appropriations limitations imposed by article XIII B. In *County of Placer v. Corin*, *supra*, 113 Cal. App. 3d at page 447, the court described the discipline imposed by article XIII B in this way: [HN7]"[A]rticle XIII B does not limit the ability to expend government funds collected from all sources. Rather, the appropriations limit is based on 'appropriations subject to limitation,' which consists primarily of the authorization to expend during a fiscal year the 'proceeds of taxes.' (§ 8, subd. (a).) As to local governments, [***20] limits are placed only on the authorization to expend the proceeds of taxes levied by that entity, in addition to proceeds of state subventions (§ 8, subd. (c)); no limitation is placed on the expenditure of those revenues that do not constitute 'proceeds of taxes.' " "

9 The term of art, "appropriations subject to limitation," is defined in [HN8]article XIII B, section 8, as follows: [P] (b) " 'Appropriations subject to limitation' of an entity of local government means any authorization to expend during a fiscal year *the proceeds of taxes levied by or for that entity* and the proceeds of state subventions to that entity (other than subventions made pursuant to Section 6) exclusive of refunds of taxes." (Italics added.)

Because of the nature of the financing they receive, tax increment financing, redevelopment agencies are not subject to this type of appropriations limitations or spending caps; they do not expend any "proceeds of taxes." Nor do they raise, through tax increment financing, "general [***21] revenues for the local entity." (*County of Placer v. Corin*, *supra*, 113 Cal. App. 3d at p. 451, original italics.) The purpose for which state subvention of funds was created, to protect local agencies from having the state transfer its cost of government from itself to the local level, is therefore not brought into play when redevelopment agencies are required to allocate their tax increment financing in a particular manner, as in the operation of sections 33334.2 and 33334.3. (See *City of Sacramento v. State of California*, *supra*, 50 Cal. 3d at p. 68.) The state is not transferring to the Agency the operation and administration of a program for which it was formerly legally and financially [*987] respon-

sible. (*County of Los Angeles v. Commission on State Mandates* (1995) 32 Cal. App. 4th 805, 817 [38 Cal. Rptr. 2d 304].) ¹⁰

10 We disagree with respondents that the legislative history of sections 33334.2 and 33334.3 is of assistance here, specifically, that section 23 of the bill creating these sections provided that no appropriations were made by the act, nor was any obligation for reimbursements of local agencies created for any costs incurred in carrying out the programs created by the act. (Stats. 1976, ch. 1337, § 23, pp. 6070-6071.) As stated in *City of San Jose v. State of California*, *supra*, 45 Cal. App. 4th at pages 1817-1818, legislative findings regarding mandate are irrelevant to the issue to be decided by the Commission, whether a state mandate exists.

[***22] For all these reasons, we conclude the same policies which support exempting tax increment revenues from article XIII B appropriations limits also support denying reimbursement under section 6 for this particular allocation of those revenues to the Housing Fund. Tax increment financing is not within the scope of article XIII B. (*Brown v. Community Redevelopment Agency*, [**277] *supra*, 168 Cal. App. 3d at pp. 1016-1020.) Section 6 "requires subvention only when the costs in question can be recovered *solely from tax revenues*." (*County of Fresno v. State of California*, *supra*, 53 Cal. 3d at p. 487, original italics.) No state duty of subvention is triggered where the local agency is not required to expend its proceeds of taxes. Here, these costs of depositing tax increment revenues in the Housing Fund are attributable not directly to tax revenues, but to the benefit received by the Agency from the tax increment financing scheme, which is one step removed from other local agencies' collection of tax revenues. (§ 33000 et seq.) Therefore, in light of the above authorities, this use of tax increment financing is not a reimbursable "cost" under section 6. We therefore need not [***23] interpret any remaining portions of section 6.

DISPOSITION

The judgment is affirmed.

Work, Acting P. J., and McIntyre, J., concurred.

Appellant's petition for review by the Supreme Court was denied September 3, 1997.

SAN DIEGO UNIFIED SCHOOL DISTRICT, Plaintiff and Respondent, v. COMMISSION ON STATE MANDATES, Defendant and Appellant; CALIFORNIA DEPARTMENT OF FINANCE, Real Party in Interest and Appellant.

S109125

SUPREME COURT OF CALIFORNIA

33 Cal. 4th 859; 94 P.3d 589; 16 Cal. Rptr. 3d 466; 2004 Cal. LEXIS 7079; 2004 Daily Journal DAR 9404

August 2, 2004, Filed

PRIOR HISTORY: Superior Court of San Diego County, No. GIC737638, Linda B. Quinn, Judge. Court of Appeal, Fourth Dist., Div. One, No. D038027.

San Diego Unified School Dist. v. Commission on State Mandates, 99 Cal. App. 4th 1270, 122 Cal. Rptr. 2d 614, 2002 Cal. App. LEXIS 4369 (Cal. App. 4th Dist., 2002)

DISPOSITION: Judgment of the Court of Appeal affirmed in part and reversed in part.

CASE SUMMARY:

PROCEDURAL POSTURE: The Court of Appeal of California, Fourth Appellate District, Division One, affirmed a judgment providing that plaintiff San Diego Unified School District was entitled to full reimbursement of costs related to hearings triggered by mandatory expulsion recommendations and hearings resulting from discretionary expulsion recommendations. Defendant Commission on State Mandates and real party in interest California Department of Finance appealed.

OVERVIEW: The court granted review to consider whether the hearing costs incurred as a result of the mandatory actions related to expulsions that were compelled by Cal. Educ. Code § 48915 were fully reimbursable. The court also considered whether any hearing costs incurred in carrying out expulsions that were discretionary under § 48915 were reimbursable. The court concluded that § 48915, insofar as it compelled suspension and mandated a recommendation of expulsion for

certain offenses, constituted a "higher level of service" under Cal. Const. art. XIII B, § 6, and imposed a reimbursable state mandate for all resulting hearing costs, even those costs attributable to procedures required by federal law. The court also concluded that no hearing costs incurred in carrying out expulsions that were discretionary under § 48915 were reimbursable. To the extent that § 48915 made expulsions discretionary, it did not reflect a new program or a higher level of service. Moreover, Cal. Educ. Code § 48918 did not trigger any right to reimbursement because the hearing provisions that assertedly exceeded federal requirements were merely incidental to fundamental federal due process requirements.

OUTCOME: The court affirmed the judgment insofar as it provided for full reimbursement of all costs related to hearings triggered by the mandatory expulsion recommendations. The court reversed the judgment insofar as it provided for reimbursement of any costs related to hearings triggered by the discretionary expulsion recommendations.

CORE TERMS: expulsion, pupil, mandatory, school districts, reimbursement, reimbursable, level of service, state mandate, discretionary, firearm, suspension, federal law, recommendation, mandated, new program, local agencies, triggered, local governments, federal mandate, nonreimbursable, notice, incur, governing board, executive order, expelled, expel, hearing procedures, existing program, time relevant, fiscal

Education Law > Students > Disciplinary Proceedings > Notice
Education Law > Students > Disciplinary Proceedings > Right to Counsel
Education Law > Students > Discipline Methods > Expulsions
[HN2]Public school districts in California are governed by statutes that regulate the expulsion of students. Cal. Educ. Code § 48900 et seq. Whenever an expulsion recommendation is made (and before a student may be expelled), the district is required by Cal. Educ. Code § 48918 to afford the student a hearing with various procedural protections -- including notice of the hearing and the right to representation by counsel, preparation of findings of fact, notices related to any expulsion and the right of appeal, and preparation of a hearing record. Providing these procedural protections requires the district to expend funds, for which the district asserts a right to reimbursement from the state pursuant to Cal. Const. art. XIII B, § 6, and implementing legislation, Cal. Gov't Code § 17500 et seq.

Education Law > Students > Discipline Methods > Expulsions

[HN4]No hearing costs incurred in carrying out those expulsions that are discretionary under Cal. Educ. Code § 48915 -- including costs related to hearing procedures

claimed to exceed the requirements of federal law -- are reimbursable. To the extent that statute makes expulsions discretionary, it does not reflect a new program or a higher level of service related to an existing program.

Education Law > Students > Disciplinary Proceedings > Due Process
Education Law > Students > Discipline Methods > Expulsions
Governments > Local Governments > Finance
[HN5]Cal. Educ. Code § 48918 does not trigger any right to reimbursement, because the hearing provisions that assertedly exceed federal requirements are merely incidental to fundamental federal due process requirements and the added costs of such procedures are de minimis. Such hearing provisions should be treated, for purposes of ruling upon a request for reimbursement, as part of the nonreimbursable underlying federal mandate and not as a state mandate.

Education Law > Students > Discipline Methods > Expulsions
[HN6]Cal. Educ. Code § 48918 specifies the right of a student to an expulsion hearing and sets forth procedures that a school district must follow when conducting such a hearing.

Education Law > Students > Disciplinary Proceedings > Time Limitations
Education Law > Students > Discipline Methods > Expulsions
[HN7]In identifying the right to a hearing, Cal. Educ. Code § 48918(a) declares that a student is "entitled" to an expulsion hearing within 30 days after the school principal determines that the student has committed an act warranting expulsion. In practical effect, this means that whenever a school principal makes such a determination and recommends to the school board that a student be expelled, an expulsion hearing is mandated.

Education Law > Students > Disciplinary Proceedings > Time Limitations

Education Law > Students > Disciplinary Proceedings > General Overview
Education Law > Students > Discipline Methods > Expulsions

Education Law > Students > Discipline Methods > Suspensions

[HN9]Former Cal. Educ. Code § 48915(b) compelled a school principal to immediately suspend any student found to be in possession of a firearm at school or at a school activity off school grounds and mandated a recommendation to the school district governing board that the student be expelled. The provision further required the governing board, upon confirmation of the student's knowing possession of a firearm, either to expel the student or "refer" him or her to an alternative education program housed at a separate school site.

Administrative Law > Judicial Review > General Overview

Civil Procedure > Remedies > Writs > Common Law Writs > Mandamus

Governments > Local Governments > Claims By & Against

[HN16]Procedures governing the constitutional requirement of reimbursement under Cal. Const. art. XIII B, § 6, are set forth in Cal. Gov't Code § 17500 et seq. The Commission on State Mandates (Commission), Cal. Gov't Code § 17525, is charged with the responsibility of hearing and deciding, subject to judicial review by an administrative writ of mandate, claims for reimbursement made by local governments or school districts. Cal. Gov't Code § 17551. Cal. Gov't Code § 17561(a) provides that the state shall reimburse each school district for all costs mandated by the state, as defined in Cal. Gov't Code § 17514. Section 17514, in turn, defines "costs mandated by the state" to mean, in part, any increased costs which a school district is required to incur as a result of any statute which mandates a new program or higher level of service of an existing program within the meaning of Cal. Const. art. XIII B, § 6. Finally, Cal. Gov't Code § 17556 sets forth circumstances in which there shall be no reimbursement, including, under § 17556(c), circumstances in which the statute or executive order implemented a federal law or regulation and resulted in costs mandated by the federal government, unless the statute or executive order mandates costs which exceed the mandate in that federal law or regulation.

Governments > Local Governments > Elections
Governments > Local Governments > Finance

Governments > State & Territorial Governments > Finance

[HN17]The intent underlying Cal. Const. art. XIII B, § 6, was to require reimbursement to local agencies for the costs involved in carrying out functions peculiar to government, not for expenses incurred by local agencies as an incidental impact of laws that apply generally to all state residents and entities.

*Governments > Local Governments > Finance
Governments > Public Improvements > General Overview*

Governments > State & Territorial Governments > Finance

[HN18]Simply because a state law or order may increase the costs borne by local government in providing services, this does not necessarily establish that the law or order constitutes an increased or higher level of the resulting "service to the public" under Cal. Const. art. XIII B, § 6, and Cal. Gov't Code § 17514.

*Governments > Local Governments > Finance
Governments > State & Territorial Governments > Finance*

[HN19]California Courts of Appeal have found a reimbursable "higher level of service" concerning an existing "program" when a state law or executive order mandates not merely some change that increases the cost of providing services, but an increase in the actual level or quality of governmental services provided.

*Governments > Local Governments > Finance
Governments > State & Territorial Governments > Finance*

[HN20]See Cal. Gov't Code § 17556.

*Education Law > Funding > Allocation
Education Law > Students > Discipline Methods > Expulsions*

[HN21]See 20 U.S.C.S. § 7151.

*Governments > Local Governments > Finance
Governments > State & Territorial Governments > Finance*

[HN22]For purposes of ruling upon a request for reimbursement, challenged state rules or procedures that are intended to implement an applicable federal law -- and whose costs are, in context, de minimis -- should be treated as part and parcel of the underlying federal mandate.

Education Law > Students > Discipline Methods > Expulsions

*Governments > Local Governments > Finance
Governments > State & Territorial Governments > Finance*

[HN23]All hearing costs incurred under Cal. Educ. Code § 48918, triggered by a school district's exercise of discretion to seek expulsion, should be treated as having been incurred pursuant to a mandate of federal law, and hence all such costs are nonreimbursable under Cal. Gov't Code § 17556(c).

SUMMARY:

CALIFORNIA OFFICIAL REPORTS SUMMARY

A school district filed a test claim with the Commission on State Mandates, asserting entitlement to reimbursement for the costs of hearings triggered by mandatory expulsion recommendations, and those hearings resulting from discretionary expulsion recommendations. After holding hearings on the district's claim, the commission determined that Ed. Code, § 48915's requirement of suspension and a mandatory recommendation of expulsion for firearm possession constituted a new program or higher level of service, and found that because costs related to some of the resulting hearing provisions set forth in Ed. Code, § 48918 (primarily various notice, right of inspection, and recording provisions) exceeded the requirements of federal due process, those additional hearing costs constituted reimbursable state-mandated costs. As to the vast majority of the remaining hearing procedures triggered by Ed. Code, § 48915's requirement of suspension and a mandatory recommendation of expulsion for firearm possession--for example, procedures governing such matters as the hearing itself and the board's decision; a statement of facts and charges; notice of the right to representation by counsel; written findings; recording of the hearing; and the making of a record of the expulsion--the commission found that those procedures were enacted to comply with federal due process requirements, and hence fell within the exception set forth in Gov. Code, § 17556, subd. (c), and did not impose a reimbursable state mandate. The commission further found that with respect to Ed. Code, § 48915's discretionary expulsions, there was no right to reimbursement for costs incurred in holding expulsion hearings, because such expulsions do not constitute a new program or higher level of service, and in any event such expulsions are not mandated by the state, but instead represent a choice by the principal and the school board. The district then brought a proceeding for an administrative writ of mandate, challenging the commission's decision. The trial court issued a writ commanding the com-

mission to render a new decision finding (i) all costs associated with hearings triggered by compulsory suspensions and mandatory expulsion recommendations are reimbursable, and (ii) hearing costs associated with discretionary expulsions are reimbursable to [*860] the limited extent that required hearing procedures exceed federal due process mandates. (Superior Court of San Diego County, No. GIC737638, Linda B. Quinn, Judge.) The Court of Appeal, Fourth Dist., Div. One, No. D038027, affirmed the judgment rendered by the trial court.

The Supreme Court affirmed the judgment of the Court of Appeal insofar as it provided for full reimbursement of all costs related to hearings triggered by the mandatory expulsion provision of Ed. Code, § 48915, but reversed the judgment insofar as it provided for reimbursement of any costs related to hearings triggered by the discretionary provision of § 48915. The court held that to the extent that § 48915 compels suspension and mandates a recommendation of expulsion for certain offenses, it constitutes a higher level of service under Cal. Const., art. XIII B, § 6, and imposes a reimbursable state mandate for all resulting hearing costs--even those costs attributable to procedures required by federal law. The immediate suspension and mandatory expulsion of a student who possesses a firearm on school property provides a higher level of service to the public in that it enhances the safety of those who attend public schools. The court held, however, that to the extent Ed. Code, § 48915, makes expulsions discretionary, it does not constitute a higher level of service related to an existing program, because provisions recognizing discretion to suspend or expel students were set forth in statutes predating 1975, when § 48915 was first enacted. Even if any of the hearing procedures set forth in Ed. Code, § 48918, and applicable to mandatory and discretionary and mandatory expulsions under Ed. Code, § 48915, constitute a higher level of service, the statute does not trigger any right to reimbursement. The hearing procedures of Ed. Code, § 48918, should be considered to have been adopted to implement a federal due process mandate and hence are nonreimbursable under Cal. Const., art. XIII B, § 6, and Gov. Code, § 17556, subd. (c). (Opinion by George, C. J., expressing the unanimous view of the court.)

HEADNOTES

CALIFORNIA OFFICIAL REPORTS HEADNOTES
Classified to California Digest of Official Reports

(1) **State of California § 11--Fiscal Matters--Reimbursable State Mandate--Higher Level of Service--Mandatory Suspension or Expulsion of Student.--**Ed. Code, § 48915, insofar as it compels suspen-

sion and mandates a recommendation of expulsion for certain offenses, constitutes a higher level of service under Cal. Const., art. XIII B, § 6, and imposes a reimbursable state mandate for all resulting hearing costs--even those costs attributable to procedures required by federal law. [*861]

(2) **State of California § 11--Fiscal Matters--Nonreimbursable State Mandate--No Higher Level of Service--Discretionary Suspension or Expulsion of Student--Hearing Procedures Excepted From Reimbursement as Federal Mandate.--**No hearing costs incurred in carrying out expulsions that are discretionary under Ed. Code, § 48915--including costs related to hearing procedures claimed to exceed the requirements of federal law--are reimbursable. To the extent that statute makes expulsions discretionary, it does not reflect a new program or a higher level of service related to an existing program. Moreover, even if the hearing procedures set forth in Ed. Code, § 48918, constitute a new program or higher level of service, the statute does not trigger any right to reimbursement, because the hearing provisions that assertedly exceed federal requirements are merely incidental to fundamental federal due process requirements and the added costs of such procedures are de minimis. Such hearing provisions should be treated, for purposes of ruling upon a request for reimbursement, as part of the nonreimbursable underlying federal mandate and not as a state mandate.

[7 Witkin, Summary of Cal. Law (9th ed. 1988) Constitutional Law, § 549; 9 Witkin, Summary of Cal. Law (9th ed. 1989) Taxation, § 123A.]

(3) **Schools § 61--Students--Suspension or Expulsion--Expulsion Hearing Mandated.--**In identifying the right to a hearing, Ed. Code, § 48918, subd. (a), declares that a student is entitled to an expulsion hearing within 30 days after the school principal determines that the student has committed an act warranting expulsion. In practical effect, this means that whenever a school principal makes such a determination and recommends to the school board that a student be expelled, an expulsion hearing is mandated.

(4) **Schools § 61--Parents and Students--Suspension or Expulsion--Mandatory and Discretionary Expulsion.--**Discrete subdivisions of Ed. Code, § 48915, address circumstances in which a principal must recommend to the school board that a student be expelled, and circumstances in which a principal may recommend that a student be expelled.

(5) **State of California § 11--Fiscal Matters--Reimbursable State Mandate.--**Procedures governing the constitutional requirement of reimbursement

under Cal. Const., art. XIII B, § 6, are set forth in Gov. Code, § 17500 et seq. The Commission on State Mandates (Gov. Code, § 17525) is charged with the responsibility of hearing and deciding, subject to judicial review by an administrative writ of mandate, claims for reimbursement made by local governments or school districts. (Gov. [*862] Code, § 17551.) Gov. Code, § 17561, subd. (a), provides that the state shall reimburse each school district for all costs mandated by the state, as defined in Gov. Code, § 17514. Section 17514, in turn, defines costs mandated by the state to mean, in relevant part, any increased costs which a school district is required to incur as a result of any statute which mandates a new program or higher level of service of an existing program within the meaning of Cal. Const., art. XIII B, § 6. Finally, Gov. Code, § 17556, sets forth circumstances in which there shall be no reimbursement, including, under Gov. Code, § 17556, subd. (c), circumstances in which the statute or executive order implemented a federal law or regulation and resulted in costs mandated by the federal government, unless the statute or executive order mandates costs which exceed the mandate in that federal law or regulation.

(6) State of California § 11--Fiscal Matters--Reimbursable State Mandate--New Program or Higher Level of Service--Alternative Tests.--The requirement for increased or higher level of service under Cal. Const., art. XIII B, § 6, is directed to state mandated increases in the services provided by local agencies in existing programs. The Constitution's phrase "new program or higher level of service" refers to either of two alternatives--(1) programs that carry out the governmental function of providing services to the public, or (2) laws which, to implement a state policy, impose unique requirements on local governments and do not apply generally to all residents and entities in the state.

(7) State of California § 11--Fiscal Matters--Reimbursable State Mandate--Increase in Costs.--Simply because a state law or order may increase the costs borne by local government in providing services does not necessarily establish that the law or order constitutes an increased or higher level of the resulting service to the public under Cal. Const., art. XIII B, § 6, and Gov. Code, § 17514.

(8) State of California § 11--Fiscal Matters--Reimbursable State Mandate--Increase in Level or Quality of Governmental Services Provided.--A reimbursable higher level of service concerning an existing program exists when a state law or executive order mandates not merely some change that increases the cost of providing services, but an increase in the actual level or quality of governmental services provided.

(9) State of California § 11--Fiscal Matters--Reimbursable State Mandate--Higher Level of Service--Mandatory Suspension and Expulsion for Student Firearm Possession.--The statutory requirements of Ed. Code, § 48915--immediate suspension and mandatory recommendation of expulsion for students who possess a firearm, and the limitation [*863] upon the ensuing options of the school board (expulsion or referral)--provide a "higher level of service" to the public under the commonly understood sense of that term: (i) the requirements are new in comparison with the preexisting scheme; and (ii) the requirements were intended to provide an enhanced service to the public--safer schools for the vast majority of students.

(10) State of California § 11--Fiscal Matters--Reimbursable State Mandate--Higher Level of Service--Mandatory Suspension and Expulsion for Student Firearm Possession.--Providing public schooling clearly constitutes a governmental function, and enhancing the safety of those who attend such schools constitutes a service to the public. The mandatory suspension and expulsion recommendation requirements of Ed. Code, § 48915, together with restrictions placed upon a district's resolution of such a case, constitute an increased or higher level of service to the public under Cal. Const., art. XIII B, § 6, and the implementing statutes.

(11) State of California § 11--Fiscal Matters--Reimbursable State Mandate--Higher Level of Service--Mandatory Suspension and Expulsion of Student--State Requires School District to Incur Costs of an Expulsion Hearing.--In the absence of the operation of Ed. Code, § 48915's mandatory provision (specifically, compulsory immediate suspension and a mandatory expulsion recommendation), a school district would not automatically incur the due process hearing costs that are mandated by federal law and codified in Ed. Code, § 48918. Instead, a district would incur such hearing costs only if a school principal first were to exercise discretion to recommend expulsion. Accordingly, in its mandatory aspect, Ed. Code, § 48915, appears to constitute a state mandate in that it establishes conditions under which the state, rather than local officials, has made the decision requiring a school district to incur the costs of an expulsion hearing.

(12) Schools § 61--Parents and Students--Suspension or Expulsion--Expulsion Hearings--Not Federal Mandate.--Ed. Code, § 48918, sets out requirements for expulsion hearings that must be held when a district seeks to expel a student--but neither § 48918 nor federal law requires that any such expulsion recommendation be made in the first place. Section 48918 does not imple-

ment any federal mandate that school districts hold such hearings and incur such costs whenever a student is found in possession of a firearm. Accordingly, the so-called exception to reimbursement described in Gov. Code, § 17556, subd. (c), is inapplicable in this context of a mandatory hearing. [*864]

(13) State of California § 11--Fiscal Matters--Reimbursable State Mandate--Higher Level of Service--Mandatory Suspension and Expulsion of Student--Hearing Costs Triggered by Mandatory Expulsion.--When it is state law (Ed. Code, § 48915's mandatory expulsion provision), and not federal due process law, that requires a school district to take steps that in turn require it to incur hearing costs, the hearing costs incurred by a school district, triggered by the mandatory provision of Ed. Code, § 48915, do not constitute a nonreimbursable federal mandate. Under the statutes in effect through mid-1994, all such hearing costs--those designed to satisfy the minimum requirements of federal due process, and those that may exceed those requirements--were, with respect to the mandatory expulsion provision of § 48915, state mandated costs, fully reimbursable by the state.

(14) State of California § 11--Fiscal Matters--Reimbursable State Mandate--Higher Level of Service--Mandatory Suspension or Expulsion of Student.--All hearing costs triggered by Ed. Code, § 48915's mandatory expulsion provision constitute reimbursable state mandated expenses under the statutes in effect through mid-1994. 20 U.S.C. § 7151, or its predecessor, 20 U.S.C. § 8921, may lead to a different conclusion when applied to versions of Ed. Code, § 48915, effective in years 1995 and thereafter.

(15) State of California § 11--Fiscal Matters--Reimbursable State Mandate--New Program or Higher Level of Service--Discretionary Suspension or Expulsion of Student: Schools § 61--Parents and Students--Discretionary Suspension or Expulsion--Cost of Proceedings Not Reimbursable.--The discretionary expulsion provision of Ed. Code, § 48915, does not constitute a new program or higher level of service related to an existing program, under Cal. Const., art. XIII B, § 6, because provisions recognizing discretion to suspend or expel students were set forth in statutes predating 1975, when the provision was first enacted.

(16) Schools § 61--Parents and Students--Suspension or Expulsion--Hearing Procedures--Federal Due Process Mandate--Nonreimbursable State Mandate.--All hearing procedures set forth in Ed. Code, § 48918, properly should be considered to have been adopted to implement a federal due process mandate, and

hence all such hearing costs are nonreimbursable under Cal. Const., art. XIII B, § 6, and Government Code § 17557, subd. (c).

(17) State of California § 11--Fiscal Matters--Reimbursable State Mandate--Implementation of Federal Law--Discretionary Suspension or [*865] Expulsion of a Student: Schools § 61--Parents and Students--Discretionary Suspension or Expulsion--Federal Mandate to Provide a Hearing.--An initial discretionary decision to seek expulsion of a student in turn triggers a federal constitutional mandate to provide an expulsion hearing. The Legislature, in adopting specific statutory procedures under Ed. Code, § 48918, to comply with the general federal mandate, reasonably articulated various incidental procedural protections. These protections are designed to make the underlying federal right enforceable and to set forth procedural details that were not expressly articulated in the case law establishing the respective rights; viewed singly or cumulatively, they did not significantly increase the cost of compliance with the federal mandate. For purposes of ruling upon a claim for reimbursement, such incidental procedural requirements, producing at most de minimis added cost, should be viewed as part and parcel of the underlying federal mandate, and hence nonreimbursable under Gov. Code, § 17556, subd. (c).

(18) Schools § 61--Parents and Students--Discretionary Suspension or Expulsion--Federal Due Process Requirements--Not Reimbursable As State Mandate.--All hearing costs incurred under Ed. Code, § 48918, triggered by a school district's exercise of discretion to seek expulsion, should be treated as having been incurred pursuant to a mandate of federal law, and hence all such costs are nonreimbursable under Gov. Code, § 17556, subd. (c).

COUNSEL: Paul M. Starkey, Camille Shelton and Katherine A. Tokarski for Defendant and Appellant.

Bill Lockyer, Attorney General, Manuel M. Medeiros, State Solicitor General, Pamela Smith-Steward, Chief Assistant Attorney General, Andrea Lynn Hoch, Assistant Attorney General, Louis R. Mauro and Susan R. Oie, Deputy Attorneys General, for Real Party in Interest and Appellant.

JUDGES: George, C. J., expressing the unanimous view of the court.

OPINION BY: GEORGE [***467]

OPINION

[**591] **GEORGE, C. J.**--Article XIII B, section 6, of the California Constitution provides: [HN1]"Whenever the Legislature or any state agency mandates a new program or higher level of service on any local government, the State shall provide a subvention of funds to reimburse such local government for the costs of such program or increased level of service" (Hereafter article XIII B, section 6.)

1 The provision continues: "except that the Legislature may, but need not, provide such subvention of funds for the following mandates: [¶] (a) Legislative mandates requested by the local agency affected; [¶] (b) Legislation defining a new crime or changing an existing definition of a crime; or [¶] (c) Legislative mandates enacted prior to January 1, 1975, or executive orders or regulations initially implementing legislation enacted prior to January 1, 1975." (Cal. Const., art. XIII B, § 6.)

Plaintiff San Diego Unified School District (District), like all other [HN2]public school districts in the state, is, and was at the time relevant in this proceeding, governed by statutes that regulate the expulsion of students. (Ed. Code, § 48900 et seq.) Whenever an expulsion recommendation is made (and before a student may be expelled), the District is required by Education Code section 48918 to afford the student a hearing with various procedural protections--including notice of the hearing and the right to representation by [***468] counsel, preparation of findings of fact, notices related to any expulsion and the right of appeal, and preparation of a hearing record. Providing these procedural protections requires the District to expend funds, for which the District asserts a right to reimbursement from the state pursuant to article XIII B, section 6, and implementing legislation, Government Code section 17500 et seq.

We granted review to consider two questions: (1) Are the hearing costs incurred as a result of the *mandatory* actions related to expulsions that are compelled by Education Code section 48915 fully reimbursable--or are

those hearing costs reimbursable only to the extent such costs are attributable to hearing procedures that exceed the procedures required by federal law? (2) Are any hearing costs incurred in carrying out expulsions that are *discretionary* under Education Code section 48915 reimbursable? After we granted review and filed our decision in Department of Finance v. Commission on State Mandates (Kern High School Dist.) (2003) 30 Cal.4th 727 [134 Cal. Rptr. 2d 237, 68 P.3d 1203] (Kern High School Dist.), we added the following preliminary question to be addressed: Do the Education Code [*867] statutes cited above establish a "new program" or "higher level of service" under article XIII B, section 6? Finally, we also asked the parties to brief the effect of the decision in Kern High School Dist., supra, 30 Cal.4th 727, on the present case.

(1) We conclude that Education Code section 48915, [HN3]insofar as it compels suspension and mandates a recommendation of expulsion for certain offenses, constitutes a "higher level of service" under article XIII B, section 6, and imposes a reimbursable state mandate for *all* resulting hearing costs--even those costs attributable to procedures required by federal law. In this respect, we shall affirm the judgment of the Court of Appeal.

(2) We also conclude that [HN4]no hearing costs incurred in carrying out those expulsions that are *discretionary* under Education Code section 48915--including costs related to hearing procedures claimed to exceed the requirements of federal law--are reimbursable. As we shall explain, to the extent that statute makes expulsions discretionary, it does not reflect a new program or a higher level of service related to an existing program. Moreover, even if the hearing *procedures* set forth in Education Code section 48918 constitute a new program or higher level of service, we conclude that [HN5]this statute does not trigger any right to reimbursement, because the hearing provisions that assertedly exceed federal requirements are merely incidental to fundamental federal due process requirements and the added costs of such procedures are de minimis. For these reasons, we conclude such hearing provisions should be treated, for purposes of ruling upon a request for reimbursement, as part of the nonreimbursable underlying *federal* mandate and not as a state mandate. Accordingly, we shall reverse the judgment of the Court of Appeal insofar as it compels reimbursement [**592] of any costs incurred pursuant to discretionary expulsions.

I

A. Education Code sections 48918 and 48915

We first describe the relevant provisions of two statutes--Education Code sections 48918 and

48915--pertaining to the expulsion of students from public schools.

Education Code section 48918 [HN6] specifies the right of a student to an expulsion hearing and sets forth procedures that a school district must [*868] follow when conducting [***469] such a hearing. (Stats. 1990, ch. 1231, § 2, pp. 5136-5139.)²

2 For purposes of our present inquiry, Education Code, section 48918, at the time relevant here (mid-1993 through mid-1994) read essentially as it had for the prior decade, and as it has in the ensuing decade. That provision first was enacted in 1975 (see Stats. 1975, ch. 1253, § 4, pp. 3277-3278) as Education Code, former section 10608. (This enactment apparently was a response to the United States Supreme Court's decision in Goss v. Lopez (1975) 419 U.S. 565, 581 [42 L. Ed. 2d 725, 95 S. Ct. 729] (*Goss*) [recognizing due process requirements applicable to public school students who are suspended for more than 10 days].) The statute was renumbered as Education Code, former section 48914 in 1976 (Stats. 1976, ch. 1010, § 2, pp. 3589-3590) and was substantially augmented in 1977 (Stats. 1977, ch. 965, § 24, pp. 2924-2926). After relatively minor amendments in 1978 and 1982, the section in 1983 was substantially restated, further augmented, and renumbered as Education Code section 48918 (Stats. 1983, ch. 498, § 91, p. 2118). Amendments adopted in 1984 and 1988 made relatively minor changes, and further similar modifications were made in 1990, reflecting the version of the statute here at issue. Subsequent amendments in 1995, 1996, 1998, and 1999 made further changes that are irrelevant to the issue presented in the case now before us.

[HN7](3) In identifying the right to a hearing, subdivision (a) of Education Code, section 48918, declares that a student is "entitled" to an expulsion hearing within 30 days after the school principal determines that the student has committed an act warranting expulsion.³ *In practical effect, this means that whenever a school principal makes such a determination and recommends to the school board that a student be expelled, an expulsion hearing is mandated.*⁴

3 The provision reads: [HN8]"The pupil shall be entitled to a hearing to determine whether the pupil should be expelled. An expulsion hearing shall be held within 30 schooldays after the date the principal or the superintendent of schools determines that the pupil has committed any of the acts enumerated in Section 48900 ..." (Ed. Code,

§ 48918, subd. (a).) (Subdivision (b) of section 48900 presently includes--as it did at the time relevant here--the offense of possession of a firearm.)

4 Of course, if a student does not invoke his or her entitlement to such a hearing, and instead waives the right to such a hearing, the hearing need not be held.

In specifying the substantive and procedural requirements for such an expulsion hearing, Education Code section 48918 sets forth rules and procedures, some of which, the parties agree, codify requirements of federal due process and some of which may exceed those requirements.⁵ These rules and procedures govern, among other things, notice of a hearing and the right to representation by counsel, preparation of findings of fact, notices related to the expulsion and the right of appeal, and preparation of a hearing record. (See § 48918, subs. (a) through former subd. (j), currently subd. (k).)

5 See Goss, supra, 419 U.S. 565, 581; Gonzales v. McEuen (C.D. Cal. 1977) 435 F. Supp. 460, 466-467 (concluding that former Education Code section 10608 [current § 48918] met federal due process requirements pertaining to expulsions from public schools); 7 Witkin, Summary of California Law (9th ed. 1988), Constitutional Law, section 549, page 754 (noting that Education Code section 48918 and related legislation were enacted in response to the decision in *Goss*).

[*869] (4) The second statute at issue in this matter is Education Code section 48915. Discrete subdivisions of this statute address circumstances in which a principal *must* recommend to the school board that a student be expelled, and circumstances in which a principal *may* recommend that a student be expelled.

First, there is what the parties characterize as the "mandatory expulsion provision," Education Code section 48915, former subdivision (b). As it read during the time relevant in this proceeding (mid-1993 [***470] through mid-1994), [HN9]this subdivision (1) compelled a school principal to *immediately suspend* any [**593] student found to be in possession of a firearm at school or at a school activity off school grounds, and (2) mandated a *recommendation* to the school district governing board that the student be *expelled*. The provision further required the governing board, upon confirmation of the student's knowing possession of a firearm, either to expel the student or "refer" him or her to an alternative education program housed at a separate school site.⁶ (Compare this former provision with current Ed. Code, § 48915, subs. (c), (d).)⁷

6 An earlier and similar, albeit broader, version of the provision--extending not only to possession of firearms but also to possession of explosives and certain knives--existed briefly and was effective for approximately two and one-half months in late 1993. That initial statute, former section 48915, subdivision (b) (as amended Stats. 1993, ch. 1255, § 2, pp. 7284-7285), which was effective only from October 11, 1993 through December 31, 1993, provided: "The principal or the superintendent of schools shall immediately suspend pursuant to Section 48911, and shall recommend to the governing board the expulsion of, any pupil found to be in possession of a firearm, knife of no reasonable use to the pupil, or explosive at school or at a school activity off school grounds. The governing board shall expel that pupil or, as an alternative, refer that pupil to an alternative education program, whenever the principal or the superintendent of schools and the governing board confirm that: [¶] (1) The pupil was in knowing possession of the firearm, knife, or explosive. [¶] (2) Possession of the firearm, knife of no reasonable use to the pupil, or explosive was verified by an employee of the school district. [¶] (3) There was no reasonable cause for the pupil to be in possession of the firearm, knife, or explosive."

As subsequently amended by Statutes 1993, chapter 1256, section 2, pages 7286-7287, effective January 1, 1994, Education Code section 48915, former subdivision (b), read: "The principal or the superintendent of schools shall immediately suspend, pursuant to Section 48911, any pupil found to be in possession of a firearm at school or at a school activity off school grounds and shall recommend expulsion of that pupil to the governing board. The governing board shall expel that pupil or refer that pupil to a program of study that is appropriately prepared to accommodate students who exhibit discipline problems and is not provided at a comprehensive middle, junior, or senior high school or housed at the schoolsite attended by the pupil at the time the expulsion was recommended to the school board, whenever the principal or superintendent of schools and the governing board confirm the following: [¶] (1) The pupil was in knowing possession of the firearm. [¶] (2) An employee of the school district verifies the pupil's possession of the firearm."

7 The current subdivisions of Education Code section 48915 set forth a list of mandatory expulsion conduct broader than that set forth in former subdivision (b), and require a school board both

to *expel and refer* to other institutions all students found to have committed such conduct. The present subdivisions read: "(c) The principal or superintendent of schools shall immediately suspend, pursuant to Section 48911, and shall recommend expulsion of a pupil that he or she determines has committed any of the following acts at school or at a school activity off school grounds: [¶] (1) Possessing, selling, or otherwise furnishing a firearm. This subdivision does not apply to an act of possessing a firearm if the pupil had obtained prior written permission to possess the firearm from a certificated school employee, which is concurred in by the principal or the designee of the principal. This subdivision applies to an act of possessing a firearm only if the possession is verified by an employee of a school district. [¶] (2) Brandishing a knife at another person. [¶] (3) Unlawfully selling a controlled substance listed in Chapter 2 (commencing with Section 11053) of Division 10 of the Health and Safety Code. [¶] (4) Committing or attempting to commit a sexual assault as defined in subdivision (n) of Section 48900 or committing a sexual battery as defined in subdivision (n) of Section 48900. [¶] (5) Possession of an explosive. [¶] (d) The governing board shall order a pupil expelled upon finding that the pupil committed an act listed in subdivision (c), and shall refer that pupil to a program of study that meets all of the following conditions: [¶] (1) Is appropriately prepared to accommodate pupils who exhibit discipline problems. [¶] (2) Is not provided at a comprehensive middle, junior, or senior high school, or at any elementary school. [¶] (3) Is not housed at the schoolsite attended by the pupil at the time of suspension." (Stats. 2001, ch. 116 § 1.)

[*870] [***471] This provision, as it read at the time relevant here, did not mandate expulsion per se^s--but it *did* require immediate suspension followed by a mandatory expulsion recommendation (and it provided that a student found by the governing board to have possessed [**594] a firearm would be removed from the school site by limiting disposition to either expulsion or "referral" to an alternative school). Moreover, as noted above, whenever expulsion is recommended a student has a right to an expulsion hearing. Accordingly, it is appropriate to characterize the former provision as *mandating* immediate suspension, a recommendation of expulsion, and hence, *an expulsion hearing*. For convenience, we accept the parties' description of this aspect of Education Code section 48915 as constituting a "mandatory expulsion provision."

8 As the Department of Finance observed in an August 22, 1994, communication to the Commission on State Mandates in this matter, "nothing in [Education Code section 48915] ... requires a district governing board or a county board of education to expel a pupil," and even "unauthorized and knowing possession of a firearm, does not result in mandated expulsion. Section 48915 subdivision (b) provides for the choice of the governing board to either expel the pupil in possession of a firearm, or refer the pupil to an alternative program of study. ..."

The second aspect of Education Code section 48915 relevant here consists of what we shall call the "discretionary expulsion provision." (*Id.*, former subd. (c), subsequently subd. (d), currently subd. (e).) During the period relevant in this proceeding (as well as currently), [HN10]this subdivision of Education Code section 48915 recognized that a principal possesses *discretion* to recommend that a student be expelled for specified conduct other than firearm possession (conduct such as damaging or stealing school property or private property, using or selling illicit drugs, receiving stolen property, possessing tobacco or drug paraphernalia, or engaging in disruptive behavior). The former provision (like the current provision) further specified that the school district governing board "may" order a student expelled upon finding that the [*871] student, while at school or at a school activity off school grounds, engaged in such conduct. ⁹

9 Education Code, section 48915, former subdivision (c) (as amended Stats. 1992, ch. 909, § 3, p. 4226; amended and redesignated as former subd. (d) by Stats. 1993, ch. 1255, § 2, pp. 7284-7285; further amended Stats. 1993, ch. 1256, § 2, p. 7287, and Stats. 1994, ch. 1198, § 7, p. 7271) provided, at the time relevant here: [HN11]"Upon recommendation by the principal, superintendent of schools, or by a hearing officer or administrative panel appointed pursuant to subdivision (d) of Section 48918, the governing board *may* order a pupil expelled upon finding that the pupil violated subdivision (f), (g), (h), (i), (j), (k), or (l) of Section 48900, or Section 48900.2 or 48900.3, and either of the following: [¶] (1) That other means of correction are not feasible or have repeatedly failed to bring about proper conduct. [¶] (2) That due to the nature of the violation, the presence of the pupil causes a continuing danger to the physical safety of the pupil or others." (Italics added.)

At the time relevant here, subdivisions (f) through (l) of Education Code section 48900 (as

amended Stats. 1992, ch. 909, § 1, pp. 4224-4225; Stats. 1994, ch. 1198, § 5, pp. 7269-7270) provided: [HN12]"A pupil shall *not* be suspended from school or recommended for expulsion *unless* the superintendent or the principal of the school in which the pupil is enrolled determines that the pupil has: [¶] ... [¶] (f) Caused or attempted to cause damage to school property or private property. [¶] (g) Stolen or attempted to steal school property or private property. [¶] (h) Possessed or used tobacco, or any products containing tobacco or nicotine products However, this section does not prohibit use or possession by a pupil of his or her own prescription products. [¶] (i) Committed an obscene act or engaged in habitual profanity or vulgarity. [¶] (j) Had unlawful possession of, or unlawfully offered, arranged, or negotiated to sell any drug paraphernalia, as defined in Section 11014.5 of the Health and Safety Code. [¶] (k) Disrupted school activities or otherwise willfully defied the valid authority of supervisors, teachers, administrators, school officials, or other school personnel engaged in the performance of their duties. [¶] (l) Knowingly received stolen school property or private property." (Italics added.)

At the time relevant here, Education Code, section 48900.2 (Stats. 1992, ch. 909, § 2, p. 4225) provided: [HN13]"In addition to the reasons specified in Section 48900, a pupil may be suspended from school or recommended for expulsion if the superintendent or the principal of the school in which the pupil is enrolled determines that the pupil has committed sexual harassment as defined in Section 212.5. [¶] For the purposes of this chapter, the conduct described in Section 212.5 must be considered by a reasonable person of the same gender as the victim to be sufficiently severe or pervasive to have a negative impact upon the individual's academic performance or to create an intimidating, hostile, or offensive educational environment. This section shall not apply to pupils enrolled in kindergarten and grades 1 to 3, inclusive."

Education Code, section 48900.3 (Stats. 1994, ch. 1198, § 6, p. 7270), at the time relevant here, provided: [HN14]"In addition to the reasons specified in Sections 48900 and 48900.2, a pupil in any of grades 4 to 12, inclusive, may be suspended from school or recommended for expulsion if the superintendent or the principal of the school in which the pupil is enrolled determines that the pupil has caused, attempted to cause, threatened to cause, or participated in an act of,

hate violence, as defined in subdivision (e) of [former] Section 33032.5 [current section 233]."

In addition, Education Code, section 48900.4 (Stats. 1994, ch. 1017, § 1, p. 6196) provided, at the time relevant here: [HN15]"In addition to the grounds specified in Sections 48900 and 48900.2, a pupil enrolled in any of grades 4 to 12, inclusive, may be suspended from school or recommended for expulsion if the superintendent or the principal of the school in which the pupil is enrolled determines that the pupil has intentionally engaged in harassment, threats, or intimidation, directed against a pupil or group of pupils, that is sufficiently severe or pervasive to have the actual and reasonably expected effect of materially disrupting classwork, creating substantial disorder, and invading the rights of that pupil or group of pupils by creating an intimidating or hostile educational environment."

(All of these current provisions--sections 48915, subdivision (e), 48900, 48900.2, 48900.3, and 48900.4--read today substantially the same as they did at the time relevant in the present case.)

[*872] [**595]

[***472] B. Proceedings Under Government Code section 17500 et seq.

[HN16](5) Procedures governing the constitutional requirement of reimbursement under article XIII B, section 6, are set forth in Government Code section 17500 et seq. The Commission on State Mandates (Commission) (Gov. Code, § 17525) is charged with the responsibility of hearing and deciding, subject to judicial review by an administrative writ of mandate, claims for reimbursement made by local governments or school districts. (Gov. Code, § 17551.) Government Code section 17561, subdivision (a), provides that the "state shall reimburse each ... school district for all 'costs mandated by the state,' as defined in section 17514." Government Code section 17514, in turn, defines "costs mandated by the state" to mean, in relevant part, "any increased costs which a ... school district is required to incur ... as a result of any statute ... which mandates a new program or higher level of service of an existing program within the meaning of Section 6 of Article XIII B of the California Constitution." Finally, Government Code section 17556 sets forth circumstances in which there shall be no reimbursement, including, under subdivision (c), circumstances in which "[t]he statute or executive order implemented a federal law or regulation and resulted in costs mandated by the federal government, unless the statute or [***473] executive order mandates costs which exceed the mandate in that federal law or regulation."

In March 1994, the District filed a "test claim" with the Commission, asserting entitlement to reimbursement for the costs of hearings provided with respect to both categories of cases described above--that is, those hearings triggered by mandatory expulsion recommendations, and those hearings resulting from discretionary expulsion recommendations. (See Gov. Code, § 17521; Kinlaw v. State of California (1991) 54 Cal.3d 326, 331-333 [285 Cal. Rptr. 66, 814 P.2d 1308].)¹⁰ The District sought reimbursement for costs incurred between July 1, 1993, and June 30, 1994, under statutes effective through the latter date.

10 As observed by amicus curiae California School Boards Association, a "test claim is like a class action--the Commission's decision applies to all school districts in the state. If the district is successful, the Commission goes to the Legislature to fund the statewide costs of the mandate for that year and annually thereafter as long as the statute is in effect."

In August 1998, after holding hearings on the District's claim (as amended in April 1995, to reflect legislation that became effective in 1994), the Commission issued a "Corrected Statement of Decision" in which it determined that Education Code section 48915's requirement of suspension and a [*873] mandatory recommendation of expulsion for firearm possession constituted a "new program or higher level of service," and found that because costs related to some of the resulting hearing provisions set forth in Education Code section 48918 (primarily various notice, right of inspection, and recording provisions) exceeded the requirements of federal due process, those additional hearing costs constituted reimbursable state-mandated costs. ¹¹ As to the vast majority of the remaining [**596] hearing procedures triggered by Education Code section 48915's requirement of suspension and a mandatory recommendation of expulsion for firearm possession--for example, procedures governing such matters as the hearing itself and the board's decision; a statement of facts and charges; notice of the right to representation by counsel; written findings; recording of the hearing; and the making of a record of the expulsion--the Commission found that those procedures were enacted to comply with federal due process requirements, and hence fell within the exception set forth in Government Code section 17556, subdivision (c), and [***474] did not impose a reimbursable state mandate. The Commission further found that with respect to Education Code section 48915's discretionary expulsions, there was no right to reimbursement for costs incurred in holding expulsion hearings, because such expulsions do not constitute a new program or higher level of service, and in any event such expulsions are not *mandated* by the state, but in-

stead represent a choice by the principal and the school board.

11 The Commission concluded that the costs incurred in providing the following state-mandated procedures under Education Code section 48918 exceeded federal due process requirements, and were reimbursable: (i) adoption of rules and regulations pertaining to pupil expulsions (§ 48918, first par. & *passim*); (ii) inclusion in the notice of hearing of (a) a copy of the disciplinary rules of the District, (b) a notice of the parents' obligation to notify a new school district, upon enrollment, of the pupil's expulsion, and (c) a notice of the opportunity to inspect and obtain copies of all documents to be used at the hearing (§ 48918, subd. (b)); (iii) allowing, upon request, the pupil or parent to inspect and obtain copies of the documents to be used at the hearing (§ 48918, subd. (b)); (iv) sending of written notice concerning (a) any decision to expel or suspend the enforcement of an expulsion order during a period of probation, (b) the right to appeal the expulsion to the county board of education, and (c) the obligation of the parent to notify a new school district, upon enrollment, of the pupil's expulsion (§ 48918, former subd. (i), currently subd. (j)); (v) maintenance of a record of each expulsion, including the cause thereof (§ 48918, former subd. (j), currently subd. (k)); and (vi) the recording of expulsion orders and the causes thereof in the pupil's mandatory interim record (and, upon request, the forwarding of this record to any school in which the pupil subsequently enrolls) (§ 48918, former subd. (j), currently subd. (k)).

In October 1999, the District brought this proceeding for an administrative writ of mandate challenging the Commission's decision. The trial court issued a writ commanding the Commission to render a new decision finding (i) all costs associated with hearings triggered by compulsory suspensions and mandatory expulsion recommendations are reimbursable, and (ii) hearing costs associated with discretionary expulsions are reimbursable to the limited [*874] extent that required hearing procedures exceed federal due process mandates. The Commission (defendant) and the Department of Finance (real party in interest, hereafter Department) appealed, and the Court of Appeal affirmed the judgment rendered by the trial court.

II

A. *Costs associated with hearings triggered by compulsory suspensions and mandatory expulsion recommendations*

1. "New program or higher level of service"?

We address first the issue that we asked the parties to brief: Does Education Code section 48915, former subdivision (b) (current subds. (c) & (d)), which mandated suspension and an expulsion recommendation for those students who possess a firearm at school or at a school activity off school grounds, and which also required a school board, if it found the charge proved, either to expel or to "refer" such a student to an alternative educational program housed at a separate school site, constitute a "new program or higher level of service" under article XIII B, section 6 of the state Constitution, and under Government Code section 17514?

We addressed the meaning of the Constitution's phrase "new program or higher level of service" in County of Los Angeles v. State of California (1987) 43 Cal.3d 46 [233 Cal. Rptr. 38, 729 P.2d 202] (County of Los Angeles). That case concerned whether local governments are entitled to reimbursement for costs incurred in complying with legislation that required local agencies to provide the same increased level of workers' compensation benefits for their employees as private individuals or organizations were required to provide for their employees. We stated:

(6) "Looking at the language of [article XIII B, section 6] then, it seems clear that by itself the term 'higher level of service' is meaningless. It must be read in conjunction with the predecessor phrase 'new program' to give it meaning. Thus read, it is apparent that the subvention requirement for increased or higher level of service is directed to state mandated increases in the services provided by local agencies in existing 'programs.' But the term 'program' itself is not defined in article XIII B. What programs [**597] then did the electorate have in mind when section 6 was adopted? We conclude that the drafters and the electorate had in mind the commonly understood meanings of the term--[(1)] programs that carry out the governmental function of providing services to the public, or [(2)] laws which, to implement a state policy, impose unique requirements on local governments and do not apply generally to all residents [***475] and entities in the state." (County of Los Angeles, supra, 43 Cal.3d 46, 56.)

[*875] We continued in County of Los Angeles: "The concern which prompted the inclusion of section 6 in article XIII B was the perceived attempt by the state to enact legislation or adopt administrative orders creating programs to be administered by local agencies, thereby transferring to those agencies the fiscal responsibility for providing services which the state believed should be extended to the public. In their ballot arguments, the proponents of article XIII B explained section 6 to the

voters: 'Additionally, this measure: (1) Will not allow the state government to *force programs* on local governments without the state paying for them.' (Ballot Pamp., Proposed Amend. to Cal. Const. with arguments to voters, Spec. Statewide Elec. (Nov. 6, 1979) p. 18. Italics added.) In this context the phrase 'to force programs on local governments' confirms that [HN17] *the intent underlying section 6 was to require reimbursement to local agencies for the costs involved in carrying out functions peculiar to government, not for expenses incurred by local agencies as an incidental impact of laws that apply generally to all state residents and entities.*" (*County of Los Angeles, supra*, 43 Cal.3d 46, 56-57, italics added.)

It was clear in *County of Los Angeles, supra*, 43 Cal.3d 46, that the law at issue did not meet the second test for a "program or higher level of service"--it did not implement a state policy by imposing unique requirements upon local governments, but instead applied workers' compensation contribution rules generally to all employers in the state. Nor, we held, did the law requiring local agencies to shoulder a general increase in workers' compensation benefits amount to a reimbursable "program or higher level of service" under the first test described above. (*Id.*, at pp. 57-58.) The law increased the cost of employing public servants, but it did not in any tangible manner increase the level of service provided by those employees to the public.

We reaffirmed and applied the test set out in *County of Los Angeles, supra*, 43 Cal.3d 46, in *Lucia Mar Unified School District v. Honig* (1988) 44 Cal.3d 830 [244 Cal. Rptr. 677, 750 P.2d 318] (*Lucia Mar*). The state law at issue in *Lucia Mar* required local school districts to pay a portion of the cost of educating pupils in state schools for the severely handicapped--costs that the state previously had paid in full.

We determined that the contributions called for under the law were used to fund a "program" within both definitions of that term set forth in *County of Los Angeles, supra*. (*Lucia Mar, supra*, 44 Cal.3d 830, 835.) We stated: "[T]he education of handicapped children is clearly a governmental function providing a service to the public, and the [state law] imposes requirements on school districts not imposed on all the state's residents. Nor can there be any doubt that although the schools for the handicapped have been operated by the state for many years, the program was new insofar as plaintiffs are [*876] concerned, since at the time [the state law] became effective they were not required to contribute to the education of students from their districts at such schools. [¶] ... To hold, under the circumstances of this case, that a shift in funding of an existing program from the state to a local entity is not a new program as to the local agency would, we think, violate the intent underlying section 6 of article XIII B. ... Section 6 was intended

to preclude the state from shifting to local agencies the [***476] financial responsibility for providing public services in view of ... restrictions on the taxing and spending power of the local entities." (*Lucia Mar, supra*, 44 Cal.3d 830, 835-836; see also *County of San Diego v. State of California* (1997) 15 Cal.4th 68, 98 [61 Cal. Rptr. 2d [**598] 134, 931 P.2d 312] [legislation excluding indigents from Medi-Cal coverage transferred obligation for such costs from state to counties, and constituted a reimbursable "new program or higher level of service"].)

We again applied the alternative tests set forth in *County of Los Angeles, supra*, 43 Cal.3d 46, in *City of Sacramento v. State of California* (1990) 50 Cal.3d 51 [266 Cal. Rptr. 139, 785 P.2d 522] (*City of Sacramento*). In that case we considered whether a state law implementing federal "incentives" that encouraged states to extend unemployment insurance coverage to all public employees constituted a program or higher level of service under article XIII B, section 6. We concluded that it did not because, as in *County of Los Angeles*, (1) providing unemployment compensation protection to a city's own employees was not a service to the public; and (2) the statute did not apply uniquely to local governments--indeed, the same requirements previously had been applied to most employers, and extension of the requirement (by eliminating a prior exemption for local governments) merely placed local government employers on the same footing as most private employers. (*City of Sacramento, supra*, 50 Cal.3d at pp. 67-68.)

Subsequently, the Court of Appeal in *City of Richmond v. Commission on State Mandates* (1998) 64 Cal.App.4th 1190 [75 Cal. Rptr. 2d 754] (*City of Richmond*), following *County of Los Angeles, supra*, 43 Cal.3d 46, and *City of Sacramento, supra*, 50 Cal.3d 51, concluded that requiring local governments to provide death benefits to local safety officers, under both the Public Employees' Retirement System (PERS) and the workers' compensation system, did not constitute a higher level of service to the public. The Court of Appeal arrived at that determination even though--as might also have been argued in *County of Los Angeles* and *City of Sacramento*--such benefits may "generate a higher quality of local safety officers" and thereby, in a general and indirect sense, provide the public with a "higher level of service" by its employees. (*City of Richmond, supra*, 64 Cal.App.4th 1190, 1195.)

(7) Viewed together, these cases (*County of Los Angeles, supra*, 43 Cal.3d 46, *City of Sacramento, supra*, 50 Cal.3d 51, and *City of Richmond, supra*, 64 Cal.App.4th 1190) illustrate the circumstance that [HN18] simply because a state law or order may *increase the costs* borne by local government in providing services, this does not necessarily establish that the law

or order constitutes an *increased or higher level* of the resulting "service to the public" under article XIII B, section 6, and Government Code section 17514.¹²

12 Indeed, as the court in City of Richmond, supra, 64 Cal.App.4th 1190, observed: "Increasing the cost of providing services cannot be equated with requiring an increased level of service under [article XIII B.] section 6 A higher cost to the local government for compensating its employees is not the same as a higher cost of providing [an increased level of] services to the public." (*Id.*, at p. 1196; accord, City of Anaheim v. State of California (1987) 189 Cal. App. 3d 1478, 1484 [235 Cal. Rptr. 101] [temporary increase in PERS benefit to retired employees, resulting in higher contribution rate by local government, does not constitute a higher level of service to the public].)

[***477] (8) By contrast, [HN19]Courts of Appeal have found a reimbursable "higher level of service" concerning an existing "program" when a state law or executive order mandates not merely some change that increases the cost of providing services, but an increase in the actual level or quality of governmental services provided. In Carmel Valley Fire Protection Dist. v. State of California (1987) 190 Cal. App. 3d 521, 537-538 [234 Cal. Rptr. 795] (*Carmel Valley*), for example, an executive order required that county firefighters be provided with protective clothing and safety equipment. Because this increased safety equipment apparently was designed to result in more effective fire protection, the mandate evidently was intended to produce a higher level of service to the public, thereby satisfying the first alternative test set out in County of Los Angeles, supra, 43 Cal.3d 46, 56. Similarly, in Long Beach Unified School District v. State of California (1990) 225 Cal. App. 3d 155, 173 [***599] [275 Cal. Rptr. 449] (*Long Beach*), an executive order required school districts to take specific steps to measure and address racial segregation in local public schools. The appellate court held that this constituted a "higher level of service" to the extent the order's requirements exceeded federal constitutional and case law requirements by mandating school districts to undertake defined remedial actions and measures that were merely advisory under prior governing law.

The District and the Commission assert that the "mandatory" aspect of Education Code section 48915, insofar as it compels suspension and mandates an expulsion recommendation for firearm possession (and thereafter restricts the board's options to expulsion or referral to an off-site alternative school), carries out a governmental function of providing services to the public

and hence constitutes an increased or higher level of service concerning an existing program under the first alternative test of County of Los Angeles, supra, 43 Cal.3d 46, 56. They argue, in essence, that the present matter is more analogous to the latter cases (Carmel Valley, supra, 190 [***878] Cal. App. 3d 521, and Long Beach, supra, 225 Cal. App. 3d 155)--both of which involved measures designed to increase the level of governmental service provided to the public--than to the former cases (County of Los Angeles, supra, 43 Cal.3d 46, City of Sacramento, supra, 50 Cal.3d 51, and City of Richmond, supra, 64 Cal.App.4th 1190)--in which the cost of employment was increased but the resulting governmental services themselves were not directly enhanced or increased. As we shall explain, we agree with the District and the Commission.

(9) The statutory requirements here at issue--immediate suspension and mandatory recommendation of expulsion for students who possess a firearm, and the limitation upon the ensuing options of the school board (expulsion or referral)--reasonably are viewed as providing a "higher level of service" to the public under the commonly understood sense of that term: (i) the requirements are new in comparison with the preexisting scheme in view of the circumstance that they did not exist prior to the enactment of Statutes of 1993, chapters 1255 (Assem. Bill No. 342 (1993-1994 Reg. Sess.) (Assembly Bill No. 342)) and 1256 (Senate Bill [***478] No. 1198 (1993-1994 Reg. Sess.) (Senate Bill No. 1198)); and (ii) the requirements were intended to provide an enhanced service to the public--*safer schools for the vast majority of students* (that is, those who are not expelled or referred to other school sites). In other words, the legislation was premised upon the idea that by removing potentially violent students from the general school population, the safety of those students who remain thereby is increased. (See, e.g., Stats. 1993, ch. 1255, § 4, pp. 7285-7286 ["In order to ensure public safety on school campuses ... it is necessary that this act take effect immediately"]; Sen. Com. on Education (Apr. 28, 1993), Analysis of Assem. Bill No. 342, p. 2 [noting legislative purpose to enhance public safety]; see also Assem. Com. on Education (July 14, 1993), Analysis of Sen. Bill No. 1198, p. 1 [noting legislative purpose to remove those who possess firearms from the general school population by increasing the frequency of expulsion for such conduct].)

In challenging this conclusion, the Department relies upon County of Los Angeles v. Department of Industrial Relations (1989) 214 Cal. App. 3d 1538 [263 Cal. Rptr. 351] (*Department of Industrial Relations*). In that case, the state enacted enhanced statewide safety regulations that governed all public and private elevators, and thereafter the County of Los Angeles sought reimbursement

for the costs of complying with the new regulations. The Court of Appeal found that the regulations constituted neither a new program nor a higher level of service concerning an existing program under either of the two alternative tests set out in County of Los Angeles, supra, 43 Cal.3d 46, 56. The court concluded that the elevator regulations did not meet the first alternative test, because the regulations did not carry out a governmental function of providing services to the public; the court found instead that [*879] "[p]roviding elevators equipped with fire and earthquake [**600] safety features simply is not a 'government function of providing services to the public.'" (Department of Industrial Relations, supra, 214 Cal. App. 3d at p. 1546.) Moreover, the court found, the second ("uniqueness") test was not met--the regulation applied to all elevators, not only those owned or operated by local governments.

(10) The Department asserts that Department of Industrial Relations, supra, 214 Cal. App. 3d 1538, is analogous, and argues that the "service" afforded by mandatory suspensions followed by a required expulsion recommendation, etc., is "not qualitatively different from the safety regulations at issue in [Department of Industrial Relations]. School districts carrying out such expulsions are not providing a service to the public" We disagree. Providing public schooling clearly constitutes a governmental function, and enhancing the safety of those who attend such schools constitutes a service to the public. Moreover, here, unlike the situation in Department of Industrial Relations, the law implementing this state policy applies uniquely to local public schools. We conclude that Department of Industrial Relations does not conflict with the conclusion that the mandatory suspension and expulsion recommendation requirements, together with restrictions placed upon a district's resolution of such a case, constitute an increased or higher level of service to the public under the constitutional provision and the implementing statutes.

Of course, even if, as we have concluded above, a statute effectuates an increased or higher level of governmental service to the public concerning an existing program, this "does not necessarily lead to the conclusion that the program is a state mandate [***479] under California Constitution, article XIII B, section 6." (County of Los Angeles v. Commission on State Mandates (1995) 32 Cal.App.4th 805, 818 [38 Cal. Rptr. 2d 304], italics added (County of Los Angeles II)). We turn to the question whether the hearing costs at issue, flowing from compulsory suspensions and mandatory expulsion recommendations, are mandated by the state.

2. Are the hearing costs state mandated?

As noted above, a compulsory suspension and a mandatory recommendation of expulsion under Educa-

tion Code section 48915 in turn trigger a mandatory expulsion hearing. All parties agree that any such resulting expulsion hearing must comply with basic federal due process requirements, such as notice of charges, a right to representation by counsel, an explanation of the evidence supporting the charges, and an opportunity to call and cross-examine witnesses and to present evidence. (See *ante*, fn. 5.) But as also noted above, article XIII B, section 6, and the implementing statutes [*880] (Gov. Code, § 17500 et seq.), by their terms, provide for reimbursement only of state-mandated costs, not *federally* mandated costs. The Commission and the Department assert that this circumstance raises the question: Do all or some of a district's costs in complying with the mandatory expulsion provision of Education Code section 48915 constitute a nonreimbursable *federal* mandate?

(11) In the absence of the operation of Education Code section 48915's mandatory provision (specifically, compulsory immediate suspension and a mandatory expulsion recommendation), a school district would not automatically incur the due process hearing costs that are mandated by federal law pursuant to Goss, supra, 419 U.S. 565, and related cases, and codified in Education Code section 48918. Instead, a district would incur such hearing costs only if a school principal first were to exercise discretion to recommend expulsion. Accordingly, in its mandatory aspect, Education Code section 48915 appears to constitute a state mandate, in that it establishes conditions under which the state, rather than local officials, has made the decision requiring a school district to incur the costs of an expulsion hearing.

The Department and the Commission agree to a point, but argue that a district's costs incurred in complying with this state mandate are reimbursable only if, and to the extent that, hearing procedures set forth in Education Code section 48918 exceed the requirements of federal due process. In support, they rely upon Government Code section 17556, [**601] which--in setting forth circumstances in which the Commission shall *not* find costs to be mandated by the state--provides that [HN20]"[t]he commission shall not find costs mandated by the state, as defined in Section 17514, in any claim submitted by a local agency or school district, if, after a hearing, the commission finds that: [¶] ... [¶] (c) The statute or executive order implemented a federal law or regulation and resulted in costs mandated by the federal government, unless the statute or executive order mandates costs which exceed the mandate in that federal law or regulation." ¹³

13 Government Code section 17556 reads in full: "The commission shall not find costs mandated by the state, as defined in Section 17514, in

any claim submitted by a local agency or school district, if, after a hearing, the commission finds that: [¶] (a) The claim is submitted by a local agency or school district which requested legislative authority for that local agency or school district to implement the program specified in the statute, and that statute imposes costs upon that local agency or school district requesting the legislative authority. A resolution from the governing body or a letter from a delegated representative of the governing body of a local agency or school district which requests authorization for that local agency or school district to implement a given program shall constitute a request within the meaning of this paragraph. [¶] (b) The statute or executive order affirmed for the state that which had been declared existing law or regulation by action of the courts. [¶] (c) The statute or executive order implemented a federal law or regulation and resulted in costs mandated by the federal government, unless the statute or executive order mandates costs which exceed the mandate in that federal law or regulation. [¶] (d) The local agency or school district has the authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service. [¶] (e) The statute or executive order provides for offsetting savings to local agencies or school districts which result in no net costs to the local agencies or school districts, or includes additional revenue that was specifically intended to fund the costs of the state mandate in an amount sufficient to fund the cost of the state mandate. [¶] (f) The statute or executive order imposed duties which were expressly included in a ballot measure approved by the voters in a statewide election. [¶] (g) The statute created a new crime or infraction, eliminated a crime or infraction, or changed the penalty for a crime or infraction, but only for that portion of the statute relating directly to the enforcement of the crime or infraction."

[*881] [***480] (12) We agree with the District and the Court of Appeal below that, as applied to the present case, it cannot be said that Education Code section 48915's mandatory expulsion provision "*implemented a federal law or regulation.*" (Italics added.) Education Code section 48915, at the time relevant here, did not implement any federal law; as explained below, federal law did not *then* mandate an expulsion recommendation--or expulsion--for firearm possession.¹⁴ Moreover, although the Department argues that in this context Government Code section 17556, subdivision (c)'s phrase "the statute" should be viewed as referring not to Education Code section 48915's mandatory expul-

sion recommendation requirement, but instead to the mandatory due process hearing under Education Code section 48918 that is triggered by such an expulsion recommendation, it still cannot be said that section 48918 itself required the District to incur any costs. As noted above, Education Code section 48918 sets out requirements for expulsion hearings that must be held when a district seeks to expel a student--but neither section 48918 nor federal law requires that any such expulsion recommendation be made in the first place, and hence section 48918 does not implement any federal mandate that school districts hold such hearings and incur such costs whenever a student is found in possession of a firearm. Accordingly, we conclude that the so-called exception to reimbursement described in Government Code section 17556, subdivision (c), is inapplicable in this context.

14 Subsequent amendments to federal law may alter this conclusion with regard to future test claims concerning Education Code section 48915's mandatory expulsion provision--see *post*, pages 882-883.

(13) Because it is state law (Education Code section 48915's mandatory expulsion provision), and not federal due process law, that requires the District to take steps that in turn require it to incur hearing costs, it follows, contrary to the view of the Commission and the Department, that we cannot characterize *any* of the hearing costs incurred by the District, triggered by the mandatory provision of Education Code section 48915, as constituting a federal mandate (and hence being nonreimbursable). We conclude [**602] that under the statutes existing at the time of the test claim in this case (state legislation in effect through [***481] mid-1994), *all* such hearing costs--those designed to satisfy the minimum requirements of federal due process, and those that may exceed [*882] those requirements--are, with respect to the mandatory expulsion provision of section 48915, state-mandated costs, fully reimbursable by the state.¹⁵

15 In exhibit No. 1 to its claim, the District presented the declaration of a District official, estimating that in order to process "350 proposed expulsions" during the period spanning July 1, 1993, to June 30, 1994, the District would incur approximately \$ 94,200 "in staffing and other costs"--yielding an average estimated cost of approximately \$ 270 per hearing during the relevant period. It is unclear from the record how many of these 350 hearings would be triggered by Education Code section 48915's mandatory expulsion provision (and constitute state-mandated costs subject to reimbursement under article XIII B, section 6), and how many of these 350 hearings

would be triggered by Education Code section 48915's discretionary provision (and, as explained *post*, in part II.B., constitute a nonreimbursable *federal* mandate).

We note that in the proceedings below, the Commission did not confine reimbursement only to those matters as to which the District on its own initiative would not have sought expulsion in the absence of the statutory requirement that it seek expulsion--and the Department has not raised that point in the trial court or on appeal.

Against this conclusion, the Department, in its supplemental briefing, offers a wholly new theory, not advanced in any of the proceedings below, in support of its belated claim that *all* hearing costs triggered by Education Code section 48915's mandatory expulsion provision are in fact nonreimbursable *federal* mandates, and not, as we have concluded above, reimbursable state mandates. As we shall explain, we reject the Department's contention, as applied to the test case here at issue (involving state statutes in effect through mid-1994).

The Department cites 20 United States Code section 7151, part of the federal No Child Left Behind Act of 2001, which provides, as relevant here: [HN21]"Each State receiving Federal funds under any [subchapter of this chapter] shall have in effect a State law requiring local educational agencies to expel from school for a period of not less than 1 year a student who is determined to have brought a firearm to a school, or to have possessed a firearm at a school, under the jurisdiction of local educational agencies in that State, except that such State law shall allow the chief administering officer of a local educational agency to modify such expulsion requirement for a student on a case-by-case basis if such modification is in writing." ¹⁶

16 "Firearm," as defined in 18 United States Code section 921, includes guns and explosives.

The Department further asserts that more than \$ 2.8 billion in federal funds under the No Child Left Behind Act are included "for local use" in the 2003-2004 state budget. (Cal. State Budget, 2003-2004, Budget Highlights, p. 4.) The Department argues that in light of the requirements set forth in 20 United States Code section 7151, and the amount of federal program funds at issue under the No Child Left Behind Act, the financial consequences to the state and to the school districts of failing to comply with 20 United States Code section 7151 are such that as a practical matter, Education Code section [*883] 48915's mandatory expulsion provision in reality constitutes an implementation of federal law, and hence resulting costs are nonreimbursable except to the extent they exceed the requirements of federal law. (See

Gov. Code, § 17556, subd. (c); see also Kern High School Dist., *supra*, 30 Cal.4th 727, 749-751; City of Sacramento, *supra*, 50 Cal.3d 51, 70-76.) Moreover, the Department asserts, to the extent school districts are [***482] compelled by federal law, through Education Code section 48915's mandatory expulsion provision, to hold hearings pursuant to section 48918 in cases of firearm possession on school grounds, under 20 United States Code section 7164 (defining prohibited uses of program funds), *all* costs of such hearings properly may be paid out of federal program funds, and hence we should "view the ... provision of program funding as satisfying, in advance, any reimbursement requirement." (Kern High School Dist., *supra*, 30 Cal.4th 727, 747.)

[**603] Although the Department asserts that this federal law and program existed at the time relevant in this matter (that is, through mid-1994), our review of the statutes and relevant history suggests otherwise. Title 20 of the United States Code, section 7151, and the remainder of the No Child Left Behind Act, became effective on January 8, 2002. The predecessor legislation cited by the Department--the Gun-Free Schools Act of 1994 (former 20 U.S.C. § 8921(a)), although containing a substantially identical mandatory expulsion provision (*id.*, § 8921(b)(1)) ¹⁷--was not effective until July 1, 1995 (108 Stat. 3518, § 3). In turn, the predecessor legislation to *that* act cited by the Department, the Elementary and Secondary Education Act of 1965 (former 20 U.S.C. § 6301 et seq.) as it existed at the time relevant here (July 1, 1993, through June 30, 1994)--contained no such mandatory expulsion provision. Accordingly, it appears that despite the Department's late discovery of 20 United States Code section 7151, at the time relevant here (regarding legislation in effect through mid-1994), neither 20 United States Code section 7151, nor either of its predecessors, compelled states to enact a law such as Education Code section 48915's mandatory expulsion provision. Therefore, we reject the Department's assertion that, during the time period at issue in this case, Education Code section 48915's mandatory expulsion provision constituted an implementation of a federal, rather than a state, mandate.

17 The prior law stated: "Except as provided in paragraph (3), each State receiving Federal funds under this chapter shall have in effect a State law requiring local educational agencies to expel from school for a period of not less than one year a student who is determined to have brought a weapon to a school under the jurisdiction of local educational agencies in that State, except that such State law shall allow the chief administering officer of such local educational agency to modify such expulsion requirement for a student on a case-by-case basis." (Pub.L. No.

103-382, § 14601(b)(1) (Oct. 20, 1994) 108 Stat. 3518.)

(14) Although we conclude that all hearing costs triggered by Education Code section 48915's mandatory expulsion provision constitute reimbursable state-mandated expenses under the statutes as they existed during the period [*884] covered by the District's present test claim, we do not foreclose the possibility that 20 United States Code section 7151 or its predecessor, 20 United States Code section 8921, may lead to a different conclusion when applied to versions of Education Code section 48915 effective in years 1995 and thereafter. Indeed, we note that at least one subsequent test claim that has been filed with the Commission may raise the federal statutory issue advanced by the Department.¹⁸

18 See Pupil Expulsions II (4th Amendment), CSM No. 01-TC-18 (filed June 3, 2002). This claim, filed by the San Juan Unified School District, asserts reimbursable state mandates with respect to, among numerous other statutes, Education Code section 48915, as amended effective in 2002.

B. Costs associated with hearings triggered by discretionary expulsion recommendations

We next consider whether reimbursement is required for the costs associated [***483] with hearings triggered under discretionary expulsion provisions. Again, we address first the issue that we asked the parties to brief: Does the discretionary expulsion provision of Education Code section 48915 (former subd. (c), thereafter subd. (d), currently subd. (e)), which, as noted above, recognized that a principal possesses *discretion* to recommend that a student be expelled for specified conduct other than firearm possession (conduct such as damaging or stealing property, using or selling illicit drugs, possessing tobacco or drug paraphernalia, etc.), and further specified that the school district governing board "may" order a student expelled upon finding that the student, while at school or at a school activity off school grounds, engaged in such conduct, constitute a "new program or higher level of service" under article XIII B, section 6 of the state Constitution, and under Government Code section 17514?

(15) We answer this question in the negative. The discretionary expulsion provision of Education Code section 48915 does not constitute a "new" program or higher level of service, because provisions recognizing discretion to suspend or expel were set forth in statutes predating 1975. (See Educ. Code, former § 10601, Stats. 1959, ch. 2, § 3, p. 860 [***604] [providing that a student may be suspended for good cause]; *id.*, former § 10602, Stats. 1970, ch. 102, § 102, p. 159 [defining

"good cause"]; *id.*, former section 10601.6, Stats. 1972, ch. 164, § 2, p. 384 [further defining "good cause"].)¹⁹ Accordingly, the discretionary expulsion provision of Education Code section 48915 is not a "new" program under article XIII B, section 6, and the implementing statutes, [*885] nor does it reflect a higher level of service related to an existing program. (County of Los Angeles, supra, 43 Cal.3d 46, 56.)

19 As the Commission observed in its Corrected Statement of Decision in this matter: "The authorization for governing boards to expel pupils from school for inappropriate behaviors has been in existence since before 1975. The behaviors defined as inappropriate under current law, subdivisions (a) through (l) of section 48900, 48900.2, and 48900.3, meet prior laws' definitions of 'good cause' and 'misconduct' as reasons for expulsion." (Italics deleted.)

The District maintains, nevertheless, that once it elects to pursue expulsion, it is obligated to abide by the procedural hearing requirements of Education Code section 48918 and accordingly is mandated by that section to incur costs associated with such compliance. The District asserts that in this respect, section 48918 constitutes a "new program or higher level of service" related to an existing program under article XIII B, section 6 and under Government Code section 17514. We shall assume for analysis that this is so.²⁰

20 The requirements of Education Code section 48918 would appear to be "new" for purposes of the reimbursement provisions, in that they did not exist prior to 1975 and were enacted in that year and subsequently. (See *ante*, fn. 2.) The requirements also would appear to meet both alternative tests set forth in County of Los Angeles, supra, 43 Cal.3d 46, 56--that is, by implementing procedures that direct and guide the process of expulsion from public school, the statute appears to carry out a governmental function of providing services to public school students who face expulsion; or, it would seem, section 48918 constitutes a law that, to implement state policy, imposes unique requirements on local governments.

The District recognizes, of course, that under Government Code, section 17556, subdivision (c), it is not entitled to reimbursement to the extent Education Code section 48918 merely implements federal due process law, but the District argues that it has a right to reimbursement for its costs of complying with section 48918 to [***484] *the extent* those costs are attributable to hearing procedures that *exceed* federal due process re-

quirements. (See Gov. Code, § 17556, subd. (c).) The District asserts that its costs in complying with various notice, right of inspection, and recording requirements (see *ante*, fn. 11) fall into this category and are reimbursable.

The Department and the Commission argue in response that any right to reimbursement for hearing costs triggered by discretionary expulsions--even costs limited to those procedures that assertedly exceed federal due process hearing requirements--is foreclosed by virtue of the circumstance that when a school pursues a discretionary expulsion, it is not acting under compulsion of any law but instead is exercising a choice. In support, the Department and the Commission rely upon *Kern High School Dist.*, *supra*, 30 Cal.4th 727, and *City of Merced v. State of California* (1984) 153 Cal. App. 3d 777 [200 Cal. Rptr. 642] (*City of Merced*).

In *Kern High School Dist.*, *supra*, 30 Cal.4th 727, school districts asserted that costs incurred in complying with statutory notice and agenda requirements for committee meetings concerning various state and federally funded educational programs constituted a reimbursable state mandate, because once [*886] school districts elected to participate in the underlying state and federal programs, the districts had no option but to hold program-related committee meetings and abide by the challenged notice and agenda requirements. (*Id.*, at p. 742.) We rejected the school districts' position, reasoning in part that because the districts' participation in the underlying programs was voluntary, the notice and agenda costs incurred as a result of that voluntary participation were not the product of legal compulsion and did not constitute a reimbursable state mandate on that basis. (*Id.*, [*605] at p. 745.)²¹

21 We also proceeded to hold that in any event, because the school districts were free to use program funds to pay for the challenged increased costs, the districts had, in practical effect, already been given funds by the Legislature to cover the challenged costs. (*Kern High School Dist.*, *supra*, 30 Cal.4th at pp. 748-754.)

In reaching that conclusion in *Kern High School Dist.*, *supra*, 30 Cal.4th 727, we discussed *City of Merced*, *supra*, 153 Cal. App. 3d 777. In that case, the city wished either to purchase or to condemn, pursuant to its eminent domain authority, certain privately owned real property. The city elected to proceed by eminent domain, under which it was required by then recent legislation (Code Civ. Proc., § 1263.510) to compensate the property owner for loss of "business goodwill." The city so compensated the property owner and then sought reimbursement from the state, arguing that the new statutory requirement that it compensate for business good-

will amounted to a reimbursable state mandate. (*City of Merced*, *supra*, 153 Cal. App. 3d at p. 780.) The Court of Appeal concluded that the city's increased costs flowing from its election to condemn the property did not constitute a reimbursable state mandate. (*Id.*, at pp. 781-783.) The court reasoned: "[W]hether a city or county decides to exercise eminent domain is, essentially, an option of the city or county, rather than a mandate of the state. *The fundamental concept is that the city or county is not required to exercise eminent domain. If, however, the power of eminent domain is [***485] exercised, then the city will be required to pay for loss of goodwill. Thus, payment for loss of goodwill is not a state-mandated cost.*" (*Id.*, at p. 783, italics added.)

Summarizing this aspect of *City of Merced*, *supra*, 153 Cal. App. 3d 777, in *Kern High School Dist.*, *supra*, 30 Cal.4th 727, we stated: "[T]he core point articulated by the court in *City of Merced* is that activities undertaken at the option or discretion of a local government entity (that is, actions undertaken without any legal compulsion or threat of penalty for nonparticipation) do not trigger a state mandate and hence do not require reimbursement of funds--even if the local entity is obliged to incur costs as a result of its discretionary decision to participate in a particular program or practice." (*Kern High School Dist.*, at p. 742, italics added.)

The Department and the Commission argue that in the present case the District, like the claimants in *Kern High School Dist.*, errs by focusing upon [*887] the final result--a school district's legal obligation to comply with statutory hearing procedures--rather than focusing upon whether the school district has been compelled to put itself in the position in which such a hearing (with resulting costs) is required.

The District and amici curiae on its behalf (consistently with the opinion of the Court of Appeal below) argue that the holding of *City of Merced*, *supra*, 153 Cal. App. 3d 777, should not be extended to apply to situations beyond the context presented in that case and in *Kern High School Dist.*, *supra*, 30 Cal.4th 727. The District and amici curiae note that although any particular expulsion recommendation may be discretionary, as a practical matter it is inevitable that some school expulsions will occur in the administration of any public school program.²²

22 Indeed, the Court of Appeal below suggested that the present case is distinguishable from *City of Merced*, *supra*, 153 Cal. App. 3d 777, in light of article I, section 28, subdivision (c), of the state Constitution. That constitutional subdivision, part of Proposition 8 (known as the Victims' Bill of Rights initiative, adopted by the voters at the Primary Election in June 1982),

states: "All students and staff of public primary, elementary, junior high and senior high schools have the inalienable right to attend campuses which are safe, secure and peaceful." The Court of Appeal below concluded: "In light of a school district's constitutional obligation to provide a safe educational environment ... , the incurring of [hearing] costs [under Education Code section 48918] cannot properly be viewed as a nonreimbursable 'downstream' consequence of a decision to [seek to] expel a student under [Education Code section 48915's discretionary provision] for damaging or stealing school or private property, using or selling illicit drugs, receiving stolen property, engaging in sexual harassment or hate violence, or committing other specified acts of misconduct ... that warrant such expulsion."

Building upon this theme, amicus curiae on behalf of the District, California School Boards Association, argues that based upon article I, section 28, subdivision (c), of the state Constitution, together with Education Code section 48200 et seq. and article IX, section 5 of the state Constitution (establishing and implementing a right of public education), *no* expulsion recommendation is "truly discretionary." Indeed, amicus curiae argues, school districts may not, "either as a matter of law or policy, realistically choose to [forgo] expelling [a] student [who commits one of the acts, other than firearm possession, referenced in Education Code section 48915's discretionary provision], because doing so would fail to meet that school district's legal obligations to provide a safe, secure and peaceful learning environment for the other students."

[**606] Upon reflection, we agree with the District and amici curiae that there is reason to question an extension of the holding of *City of Merced* so as to preclude reimbursement [***486] under article XIII B, section 6 of the state Constitution and Government Code section 17514, whenever an entity makes an initial discretionary decision that in turn triggers mandated costs. Indeed, it would appear that under a strict application of the language in *City of Merced*, public entities would be denied reimbursement for state-mandated costs in apparent contravention of the intent underlying article XIII B, section 6 of the state Constitution and Government Code section 17514 ²³ and contrary to past decisions in which it has been established that reimbursement was in fact proper. For example, as explained above, in *Carmel Valley, supra*, 190 Cal. App. 3d 521, an executive order requiring that county firefighters be provided with protective clothing and safety equipment was found to create a reimbursable state mandate for the

added costs of such clothing and equipment. (*Id.*, at pp. 537-538.) The court in *Carmel Valley* apparently did not contemplate that reimbursement would be foreclosed in that setting merely because a local agency possessed discretion concerning how many firefighters it would employ--and hence, in that sense, could control or perhaps even avoid the extra costs to which it would be subjected. Yet, under a strict application of the rule gleaned from *City of Merced, supra*, 153 Cal. App. 3d 777, such costs would not be reimbursable for the simple reason that the local agency's decision to employ firefighters involves an exercise of discretion concerning, for example, how many firefighters are needed to be employed, etc. We find it doubtful that the voters who enacted article XIII B, section 6, or the Legislature that adopted Government Code section 17514, intended that result, and hence we are reluctant to endorse, in this case, an application of the rule of *City of Merced* that might lead to such a result.

23 As we observed in *Kern High School Dist., supra*, 30 Cal.4th 727, 751-752, "article XIII B, section 6's 'purpose is to preclude the state from shifting financial responsibility for carrying out governmental functions to local agencies, which are "ill equipped" to assume increased financial responsibilities.' "

(16) In any event, we have determined that we need not address in this case the problems posed by such an application of the rule articulated in *City of Merced*, because this aspect of the present case can be resolved on an alternative basis. As we shall explain, we conclude, regarding the reimbursement claim that we face presently, that *all* hearing procedures set forth in Education Code section 48918 properly should be considered to have been adopted to implement a federal due process mandate, and hence that all such hearing costs are non-reimbursable under article XIII B, section 6, and Government Code section 17557, subdivision (c).

In this regard, we find the decision in *County of Los Angeles II, supra*, 32 Cal.App.4th 805, to be instructive. That case concerned Penal Code section 987.9, which requires counties to provide indigent criminal defendants with defense funds for ancillary investigation services related to capital trials and certain other trials, and further provides related procedural protections--namely, the confidentiality of a request for funds, the right to have the request ruled upon by a judge other than the trial judge, and the right to an in camera hearing on the request. The county in that case asserted that funds expended under the statute constituted reimbursable [**607] state mandates. The Court of Appeal disagreed, finding instead that the Penal Code section merely implements the requirements of federal constitu-

tional law, and that "even in the [*889] absence of [Penal Code] section 987.9, ... [***487] counties would be responsible for providing ancillary services under the constitutional guarantees of due process ... and [under] the Sixth Amendment" (32 Cal.App.4th at p. 815.) Moreover, the Court of Appeal concluded, the procedural protections that the Legislature had built into the statute--requirements of confidentiality of a request for funds, the right to have the request ruled upon by a judge other than the trial judge, and the right to an in camera hearing on the request--were merely incidental to the federal rights codified by the statute, and their "financial impact" was de minimis. (*Id.*, at p. 817, fn. 7.) Accordingly, the Court of Appeal concluded, the Penal Code section, in its entirety--that is, *even those incidental aspects of the statute that articulated specific procedures, not expressly set forth in federal law, for the filing and resolution of requests for funds*--constituted an implementation of federal law, and hence those costs were nonreimbursable under article XIII B, section 6.

(17) We conclude that the same reasoning applies in the present setting, concerning the District's request for reimbursement for procedural hearing costs triggered by its discretionary decision to seek expulsion. As in County of Los Angeles II, supra, 32 Cal.App.4th 805, the initial discretionary decision (in the former case, to file charges and prosecute a crime; in the present case, to seek expulsion) in turn triggers a federal constitutional mandate (in the former case, to provide ancillary defense services; in the present case, to provide an expulsion hearing). In both circumstances, the Legislature, in adopting specific statutory procedures to comply with the general federal mandate, reasonably articulated various incidental procedural protections. These protections are designed to make the underlying federal right enforceable and to set forth procedural details that were not expressly articulated in the case law establishing the respective rights; viewed singly or cumulatively, they did not significantly increase the cost of compliance with the federal mandate. The Court of Appeal in County of Los Angeles II concluded that, for purposes of ruling upon a claim for reimbursement, such incidental procedural requirements, producing at most de minimis added cost, should be viewed as part and parcel of the underlying federal mandate, and hence nonreimbursable under Government Code, section 17556, subdivision (c). We reach the same conclusion here.

Indeed, to proceed otherwise in the context of a reimbursement claim would produce impractical and detrimental consequences. The present case demonstrates the point. The record reveals that in the extended proceedings before the Commission, the parties spent numerous hours producing voluminous pages of analysis directed toward determining whether various provisions

of Education Code section 48918 exceeded federal due process requirements. That task below was complicated by the circumstance that this area of federal due process law is not well developed. The Commission, which is not a judicial body, did as best it could and concluded that in certain [*890] respects the various provisions (as observed *ante*, footnote 11, predominantly concerning notice, right of inspection, and recording requirements) "exceeded" the requirements of federal due process.

Even for an appellate court, it would be difficult and problematic in this setting to categorize the various notice, right of inspection, and recording requirements here at issue as falling either within or without the general federal due process mandate. The difficulty results not only from the circumstance that, as noted, the case law [***488] in the area of due process procedures concerning expulsion matters is relatively undeveloped, but also from the circumstance that when such an issue is raised in an action for reimbursement, as opposed to its being raised in litigation challenging an actual expulsion on the ground of allegedly inadequate hearing procedures, the issue inevitably is presented in the abstract, without any factual context that might help frame the legal issue. In such circumstances, courts are--and should be-- [***608] wary of venturing pronouncements (especially concerning matters of constitutional law).

In light of these considerations, we agree with the conclusion reached by the Court of Appeal in County of Los Angeles II, supra, 32 Cal.App.4th 805: [HN22]for purposes of ruling upon a request for reimbursement, challenged state rules or procedures that are intended to implement an applicable federal law--and whose costs are, in context, de minimis--should be treated as part and parcel of the underlying federal mandate.

(18) Applying that approach to the case now before us, we conclude there can be no doubt that the assertedly "excessive due process" aspects of Education Code section 48918 for which the District seeks reimbursement in connection with hearings triggered by discretionary expulsions (see *ante*, footnote 11--primarily, as noted, various notice, right of inspection, and recording rules) fall within the category of matters that are merely incidental to the underlying federal mandate, and that produce at most a de minimis cost. Accordingly, for purposes of the District's reimbursement claim, [HN23]all hearing costs incurred under Education Code section 48918, triggered by the District's exercise of discretion to seek expulsion, should be treated as having been incurred pursuant to a mandate of federal law, and hence all such costs are nonreimbursable under Government Code section 17556, subdivision (c).²⁴

24 We do not foreclose the possibility that a local government might, under appropriate facts,

demonstrate that a state law, though codifying federal requirements in part, also imposes more than "incidental" or "de minimis" expenses in excess of those demanded by federal law, and thus gives rise to a reimbursable state mandate to that extent.

[*891] III

The judgment of the Court of Appeal is affirmed insofar as it provides for full reimbursement of all costs

related to hearings triggered by the mandatory expulsion provision of Education Code section 48915. The judgment of the Court of Appeal is reversed insofar as it provides for reimbursement of any costs related to hearings triggered by the discretionary provision of section 48915. All parties shall bear their own costs on appeal.

Kennard, J., Baxter, J., Werdegar, J., Chin, J., Brown, J., and Moreno, J., concurred.

COURT OF APPEALS OF OREGON

235 Ore. App. 132; 2010 Ore. App. LEXIS 465

May 11, 2009, Argued and Submitted
April 28, 2010, Filed

PRIOR HISTORY: [**1]

Multnomah County Circuit Court 060100752. Christopher J. Marshall, Judge.

DISPOSITION: Affirmed.

COUNSEL: Christopher Winter argued the cause for appellants. With him on the joint briefs were Crag Law Center and Brent Foster.

Erin C. Lagesen, Assistant Attorney General, argued the cause for respondents. With her on the brief were Hardy Myers, Attorney General, and Mary H. Williams, Solicitor General.

Jay T. Waldron argued the cause for intervenors-respondents. With him on the joint brief were Laura Maffei, Andrew J. Lee and Schwabe, Williamson & Wyatt, P.C.; G. Kevin Kiely, James Kincaid, Carla Scott, and Cable Huston Benedict Haagensen & Lloyd LLP; David Doughman and Beery Elsner & Hammond LLP; and David Ris and Gresham City Attorney's Office.

James J. Nicita filed the brief *amicus curiae* for Northwest Environmental Defense Center, Northwest Environmental Advocates, Native Fish Society, Friends of the Clackamas River, and Barbara Kemper.

JUDGES: Before Wollheim, Presiding Judge, and Brewer, Chief Judge, and Sercombe, Judge.

* Brewer, C. J., *vice* Edmonds, P. J.

OPINION BY: SERCOMBE**OPINION**

[*135] SERCOMBE, J.

Petitioners sought judicial review of several municipal storm water permits issued by respondent¹ pursuant to *ORS 468B.050* and the federal [**2] Clean Water Act, *see 33 USC § 1342*.² They appeal following the trial court's grant of summary judgment in favor of respondent, contending that, in issuing the permits, respondent acted inconsistently with the requirements of *ORS*

468B.025(1)(b) and OAR 340-045-0015(5)(c), as well as ORS 468B.050 and OAR 340-042-0080. We affirm.

1 For ease of reference, we refer to Oregon Department of Environmental Quality (DEQ) and Oregon Environmental Quality Commission (EQC), collectively, as "respondent."

2 The Federal Water Pollution Control Act, 33 USC §§ 1251 - 1376, is generally referred to as the Clean Water Act. National Pollutant Discharge Elimination System permits are issued pursuant to the Clean Water Act. They are specifically provided for in 33 USC section 1342.

The storm water permits at issue are all National Pollutant Discharge Elimination System (NPDES) permits, issued by respondent as part of the state's implementation of the Clean Water Act. See ORS 468B.035 (EQC "may perform or cause to be performed any acts necessary to be performed by the state to implement" the provisions of the Clean Water Act). Although municipal storm water was not initially regulated pursuant to the NPDES program, [**3] ³ eventually, the Clean Water Act was amended to explicitly require regulation of certain storm water discharges. See *American Min. Congress v. U.S.E.P.A.*, 965 F.2d 759, 763 (9th Cir 1992) (discussing amendments to Clean Water Act requiring that regulation). After those amendments but prior to 1994, most discharges composed entirely of storm water did not require an NPDES permit. 33 USC § 1342(p)(1). However, discharges from municipal separate storm sewer systems ⁴ serving populations of more than 100,000 people were subject to a permit [*136] requirement. 33 USC § 1342(p)(2)(C) - (D). The permit requirement now applies to an even larger range of municipal storm water dischargers: OAR 340-045-015(2) provides that, "[w]ithout first obtaining an NPDES permit, a person may not discharge into navigable waters * * * storm water subject to permit requirements in 40 CFR § 122.26 or § 122.33, including storm water from large, medium, and regulated small municipal separate storm sewer systems[.]"

3 For example, 40 CFR section 125.4(f) (1975) provided that, generally, no NPDES permit was required for "uncontrolled discharges composed entirely of storm runoff when these discharges are uncontaminated by [**4] any industrial or commercial activity[.]"

4 A municipal separate storm sewer is

"a conveyance or system of conveyances including roads with drainage systems, municipal streets, catch basins, curbs, gutter[s], ditches, manmade channels,

or storm drains that is owned or operated by a state, city, county, district, association, or other public body; is designed or used for collecting or conveying storm water; and is not a combined sewer or part of a Publicly Owned Treatment Works as defined in 40 CFR § 122.2."

OAR 340-045-0010(10); see also OAR 340-045-0010(11) ("Municipal Separate Storm Sewer System or MS4" means all municipal separate storm sewers that are defined as 'large,' 'medium,' or 'small' municipal separate storm sewers systems in 40 CFR § 122.26(b).").

The NPDES permits at issue in this case were issued by respondent and authorize the municipal permittees, who are intervenors in this judicial review proceeding, to

"implement a storm water management program to reduce the contribution of pollutants in storm water to the maximum extent practicable (MEP), to address where applicable TMDL [total maximum daily load] wasteload allocations, and to discharge storm water to waters of the [**5] State, in conformance with all the requirements and conditions set forth in the attached schedules * * *." ⁵

5 The permit issued to Clean Water Services contains slightly different language.

The permits mandate that the permittees "implement all applicable provisions in the Storm Water Management Plan (SWMP) as the associated Monitoring Program" and incorporate the SWMP by reference.

"The SWMP and associated Monitoring Program include best management practices (BMPs), monitoring triggers, narrative conditions, adaptive management and other elements designed to reduce the introduction of pollutants into the waters of the State from [municipal separate storm sewer systems] to the maximum extent practicable (MEP). The SWMP also includes evaluation and reporting requirements designed to measure

the effectiveness of BMPs and other programs."

[*137] Pursuant to those permits, the municipal permittees discharge storm water into a number of rivers and streams, including the Columbia, Willamette, and Tualatin Rivers.

Although the permits are extensive, it is undisputed that they do not contain conditions stating that the storm water discharges must comply with state water quality standards. In addition, [*6] the permits do not specify wasteload allocations⁶ in the form of numeric effluent limits; they instead incorporate benchmarks. They also require compliance with the SWMP, which, in turn, incorporates best management practices. It is the permits' lack of numeric limits and conditions requiring compliance with state water quality standards that gave rise to this case.

6 "Wasteload Allocation" refers to the portion of receiving water's loading capacity that is allocated to a particular source of pollution. *See OAR 340-042-0040(4)(g)* (a wasteload allocation "determines the portions of the receiving water's loading capacity that are allocated to existing point sources of pollution, including all point source discharges regulated under the Federal Water Pollution Control Act Section 402 (33 USC Section 1342)" (emphasis omitted)); *OAR 340-041-0002(67)* (defining wasteload allocation).

On summary judgment, the trial court concluded that "the agency did not erroneously interpret a provision of law in issuing the final orders before the Court, that the agency's exercise of discretion was not inconsistent with an agency rule, and the agency's discretion was not outside the range of discretion delegated [*7] to the agency by law[.]" Accordingly, it entered a general judgment affirming the permits and dismissing the judicial review proceeding with prejudice. Petitioners seek review of that dismissal.

ORS 183.484(5) provides the criteria for judicial review of orders in other than contested cases:⁷

"(a) The court may affirm, reverse or remand the order. If the court finds that the agency has erroneously interpreted a provision of law and that a correct interpretation compels a particular action, it shall:

"(A) Set aside or modify the order; or

"(B) Remand the case to the agency for further action under a correct interpretation of the provision of law.

[*138] "(b) The court shall remand the order to the agency if it finds the agency's exercise of discretion to be:

"(A) Outside the range of discretion delegated to the agency by law;

"(B) Inconsistent with an agency rule, an officially stated agency position, or a prior agency practice, if the inconsistency is not explained by the agency; or

"(C) Otherwise in violation of a constitutional or statutory provision.

"(c) The court shall set aside or remand the order if it finds that the order is not supported by substantial evidence in the record. Substantial [*8] evidence exists to support a finding of fact when the record, viewed as a whole, would permit a reasonable person to make that finding."

7 The storm water permits at issue are orders in other than a contested case. *See Wilbur Residents v. DEQ, 176 Ore. App. 353, 354, 30 P3d 1228, rev den, 333 Ore. 73, 36 P.3d 974 (2001).*

We review the trial court's judgment to determine whether it correctly assessed respondent's actions under the standards set forth in *ORS 183.484(5)*. *See G.A.S.P. v. Environmental Quality Commission, 198 Ore. App. 182, 187, 108 P.3d 95, rev den, 339 Ore. 230, 119 P.3d 790 (2005)* (we review to determine compliance with the standards set forth in *ORS 183.484(5)*). The issues presented in this case are purely legal in nature. Thus, we review to determine whether, in issuing the permits, respondent "erroneously interpreted a provision of law" and whether respondent exercised its discretion "outside the range of discretion delegated" by law, or acted "inconsistent[ly] with an agency rule" or "otherwise in violation of * * * a statutory provision." *ORS 183.484(5)*. Specifically, we examine the requirements of the statutory and regulatory provisions that petitioners contend respondent violated in issuing [*9] the permits.

In their first assignment of error, petitioners assert that, because the permits "do not ensure that the [allowed] discharges will comply with and protect Water Quality Standards," respondent's issuance of those permits violated the requirements of *ORS 468B.025(1)(b)*

and *OAR 340-045-0015(5)(c)*.⁸ In essence, petitioners contend that, in light of [*139] *ORS 468B.025*, respondent was required to impose stricter permit requirements on municipal storm water discharges than are required pursuant to the federal scheme. We look first at the statute, which we construe by examining its text, context, and any legislative history submitted by the parties, giving the legislative history the weight, if any, that we conclude it merits. *State v. Gaines*, 346 Ore. 160, 171-72, 206 P3d 1042 (2009).

8 Petitioners do not contend that the municipal storm water permits violate the requirements of federal law. In *Defenders of Wildlife v. Browner*, 191 F3d 1159, 1163 (9th Cir 1999), the court explained the background of the regulation of municipal storm water and explained the requirements of federal law with respect to such storm water and state water quality standards. The court held that permits providing [**10] for discharges of municipal storm water need not require strict compliance with state water quality standards under the federal law. Although the Environmental Protection Agency (EPA) has discretion to require such compliance as it determines appropriate, the federal statutory scheme requires only that municipal storm water dischargers "reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and systems, design and engineering methods, and other such provisions as the Administrator * * * determines appropriate for the control of such pollutants." *Id.* at 1165 (quoting 33 USC § 1342(p)(3)(B)(iii) (omission in original)).

ORS 468B.025 provides:

"(1) Except as provided in *ORS 468B.050* or *468B.053*, no person shall:

"(a) Cause pollution of any waters of the state or place or cause to be placed any wastes in a location where such wastes are likely to escape or be carried into the waters of the state by any means.

"(b) Discharge any wastes into the waters of the state if the discharge reduces the quality of such waters below the water quality standards established by rule for such waters by the Environmental Quality Commission.

"(2) [**11] No person shall violate the conditions of any waste discharge permit issued under *ORS 468B.050*.

"(3) Violation of subsection (1) or (2) of this section is a public nuisance."

ORS 468B.050, in turn, authorizes DEQ to issue permits and sets out circumstances in which a permit is required. See also *EQC v. City of Coos Bay*, 171 Ore. App. 106, 110, 14 P3d 649 (2000) ("*ORS 468B.050(1)(a)* specifies when it is necessary to obtain a permit[.]").

On its face, *ORS 468B.025* does not set forth standards for the issuance of permits or describe what conditions a permit must contain. Instead, it lists several activities that [*140] "no person shall" engage in. Those are (1) violating the conditions of a permit issued pursuant to *ORS 468B.050*; (2) except as provided in *ORS 468B.050* or *ORS 468B.053*, causing pollution of the waters of the state, or causing waste to be placed in a location where it is likely to enter the waters of the state; and (3) except as provided in *ORS 468B.050* or *ORS 468B.053*, discharging waste into the waters of the state if the discharge reduces the quality of those waters below state water quality standards. None of those provisions directly governs DEQ's issuance of permits.

Furthermore, [**12] pursuant to the plain text of the statute at issue, in context, the prohibition on discharges that reduce the receiving water below state water quality standards is not absolute. On the contrary, as noted, *ORS 468B.025(1)(b)* specifically refers to the permit section of the statute, providing that, "[e]xcept as provided in *ORS 468B.050* or *468B.053*," persons may not discharge waste into the water if those discharges reduce the water quality below applicable state water quality standards. (Emphasis added.) Under *ORS 468B.050*, DEQ is authorized to issue a permit allowing the discharge of wastes into the waters of the state. Alternatively, under *ORS 468B.053*, EQC may exempt *de minimis* discharges (and other specified discharges not relevant here) from the permits "required under *ORS 468B.025* or *468B.050*["]."⁹ Read together, the statutes prohibit any person from discharging wastes into the waters of the state if those discharges would reduce the quality of that water below the state's water quality standards *unless* the person has a permit from DEQ specifically authorizing the discharge at issue. Neither statute requires that permits issued must contain provisions mandating compliance with [**13] water quality standards.¹⁰ Instead of placing that type of limitation on respondent's ability to determine and impose [*141] appropriate permit conditions, the statutes generally give respondent discretion in those areas. Indeed, the only express requirement included in *ORS 468B.050* as to the issuance of permits thereunder is that such permits "shall specify applicable effluent limitations."

9 Specifically, pursuant to *ORS 468B.053(2)*, EQC may exempt "from permit requirements subsurface injection of fluids that are authorized under the underground injection control program of" DEQ. Also, *ORS 468B.050* references *ORS 468B.215*, pursuant to which, "[e]xcept for an animal feeding operation subject to regulation under *33 USC 1342*, a fee shall not be assessed to nor permit required under *ORS 468B.050(1)(d)* of confined animal feeding operations of four months or less duration or that do not have waste water control facilities."

10 Federal law generally requires that discharges pursuant to NPDES permits must strictly comply with state water quality standards. *33 USC § 1311(b)(1)(C)*; see *Defenders of Wildlife, 191 F3d at 1163*. However, under *33 USC section 1342(p)(3)(B)*, dischargers of municipal storm [**14] water are not subject to that requirement. See *Defenders of Wildlife, 191 F3d at 1165-66*. Instead, federal law requires that NPDES permits relating to municipal storm water discharges require reduction of "the discharge of pollutants to the maximum extent practicable." *33 USC § 1342(p)(3)(B)(iii)*; see *Defenders of Wildlife, 191 F3d at 1165* ("§ 1342(p)(3)(B)(iii) creates a lesser standard than § 1311").

Petitioners, citing *ORS 468B.030*, suggest that an effluent limitation, by definition, must mandate compliance with state water quality standards. That is not the case. *ORS 468B.030* provides, in relevant part:

"In relation to waters of the state, the [EQC] by rule may establish effluent limitations, as defined in [the Clean Water Act], and other minimum requirements for disposal of wastes, minimum requirements for operation and maintenance of disposal systems, and all other matters pertaining to standards of quality for the waters of the state."

The Clean Water Act, in turn, defines "effluent limitation" as "any restriction established by a State or the Administrator on quantities, rates, and concentrations of chemical, physical, biological, and other constituents which are discharged from [**15] point sources into navigable waters, the waters of the contiguous zone, or the ocean, including schedules of compliance." *33 USC § 1362(11)* (emphasis added). "Thus, although a permit must include restrictions on discharges of pollutants into the water, the applicable statute does not specify what form they must take. "Best management practices," such as those incorporated in the permits at issue in this case,

are a type of effluent limitation. See *40 CFR § 122.44(k)(2) - (3)* (best management practices are to be used in NPDES permits where authorized pursuant to *33 USC § 1342(p)* for the control of storm water discharges or where numeric effluent limits are infeasible); see also *Interim Permitting Approach for Water Quality-Based Effluent Limitations in Storm Water* [*142] *Permits, 61 Fed Reg 43,761-01 (Aug 26, 1996)* (EPA considers the use of best management practices appropriate in permitting of municipal storm water based on typical lack of information on which to base numeric water quality-based effluent limitations). In short, petitioners incorrectly equate effluent limitations with state water quality standards. A statutory requirement that storm water permits include effluent limitations [**16] is not the same as a requirement that the permits mandate compliance with state water quality standards.

11 Effluent limitations can be water-quality based, see, e.g., *OAR 340-041-0002(67)* (a WLA is a water-quality-based effluent limitation) or technology based, see, e.g., *40 CFR § 125.3* (discussing technology-based effluent limitations).

Petitioners urge that the context of the statute supports their assertion that *ORS 468B.025(1)(b)* should be read to require the inclusion of specific terms mandating compliance with state water quality standards in any permit issued by respondent.¹² We disagree. In fact, our review of the statutory context confirms our determination that, rather than imposing that specific limitation on respondent's authority to issue the type of permits at issue, the legislature delegated broad discretion to the agency. *ORS 468B.015* sets forth the policies of the state to (1) conserve the waters of the state, (2) protect and improve water quality, (3) provide for treatment or other corrective action before waste is discharged into the water, (4) prevent and control pollution, and (5) cooperate with other agencies, states, and the federal government.¹³ In order to [**17] carry out that policy, the legislature granted broad authority to respondent:

"(2) In order to carry out the public policy set forth in *ORS 468B.015*, [DEQ] shall take such action as is necessary for the prevention of new pollution and the abatement of existing pollution by:

[*143] "(a) Fostering and encouraging the cooperation of the people, industry, cities and counties, in order to prevent, control and reduce pollution of waters of the state; and

"(b) Requiring the use of *all available and reasonable methods necessary* to

achieve the purposes of *ORS 468B.015* and to conform to the standards of water quality and purity established under *ORS 468B.048*."

ORS 468B.020 (emphasis added); see also *Springfield Education Assn. v. Springfield School Dist.*, 290 Ore. 217, 228, 621 P.2d 547 (1980) (Terms such as "unreasonable" or "public convenience and necessity" are delegative in nature and give an agency "authority, responsibility and discretion for refining and executing generally expressed legislative policy."); *ORS 468B.048* (authorizing the agency to "establish standards of quality and purity for waters of this state"); *ORS 468.065(1)* (providing that all permits shall be "in a form prescribed by" the agency and shall [**18] "specify its duration, and the conditions for compliance with the rules and standards, if any, adopted by the [EQC] pursuant to * * * *ORS* chapters 468 * * * and 468B"). Those statutes, taken together, make clear that, instead of including many specific requirements regarding the issuance of permits, the legislature intended to delegate the responsibility for appropriately implementing its policies to the agency. That context, in turn, supports our conclusion that the plain text of *ORS 468B.025(1)(b)* does not require respondent to include in its storm water permits specific conditions mandating compliance with state water quality standards.¹⁴ In light of the foregoing, we conclude that respondent's issuance of the permits in this case did not violate *ORS 468B.025(1)(b)*.¹⁵

12 Petitioners also point to our decision in *EQC v. City of Coos Bay*, 171 Ore. App. 106, 14 P3d 649 (2000), in support of their first assignment of error. However, that case does not inform our decision here. There, we considered whether *ORS 468B.025* and *ORS 468B.050* authorized EQC to impose penalties on a permittee that violated the terms of its permit and concluded that only *ORS 468B.025* prohibited violations of [**19] permit conditions. We did not address the question whether *ORS 468B.025* required particular conditions mandating compliance with water quality standards to be included in NPDES permits issued by DEQ.

13 *ORS 468B.015* was amended in 2009. Or Laws 2009, ch 248, § 1. That amendment does not significantly modify the statute's language and, in any event, is not relevant to this case.

14 We note that we have considered the legislative history submitted by petitioners but did not find it helpful in resolving the issue presented.

15 We further note, parenthetically, that petitioners' argument, if extended to *ORS*

468B.025(1)(a), would lead to an absurd result. That section of the statute prohibits any person from, among other things, causing "pollution of any waters of the state" except as provided by *ORS 468B.050* or *ORS 468B.053*. As noted, *ORS 468B.050*, in turn, provides for the issuance of permits. Under petitioners' reasoning, however, the issuance of permits that would allow for pollution of waters of the state would be impermissible. As a result, NPDES permits, which allow for pollution by their terms, could never be issued.

Petitioners next assert that the permits are inconsistent with the requirements [**20] of *OAR 340-045-0015(5)(c)*. [**144] According to petitioners, that rule creates "a distinct and specific regulatory requirement that permits for municipal stormwater discharges comply with Water Quality Standards." We are not persuaded.

"Administrative rules are interpreted under the same analytical framework we apply when construing statutes." *Birmingham v. Department of Forestry*, 209 Ore. App. 736, 743-44, 149 P3d 600 (2006), rev den, 342 Ore. 644, 158 P.3d 507 (2007). We defer to an agency's interpretation of its own rule if that interpretation is plausible and not inconsistent with the text of the rule, its context, or some other source of law. *Don't Waste Or. Comm. v. Energy Facility Siting Council*, 320 Ore. 132, 142, 881 P.2d 119 (1994).

Pursuant to *OAR 340-045-0015(5)*:

"Each person required by sections (1) and (2) of this rule to obtain a permit must:

"(a) Promptly apply to the Department for the permit;

"(b) Fulfill all terms and conditions of the permit issued;

"(c) Comply with applicable federal and state requirements, effluent standards, and limitations including but not limited to those contained in or promulgated pursuant to Sections 204, 301, 302, 304, 306, 307, 402, and 403 of the [Clean Water Act] and [**21] applicable federal and state water quality standards[.]"

The permittees in this case are required to obtain permits pursuant to *OAR 340-045-0015(2)*, which provides:

"Without first obtaining an NPDES permit, a person may not discharge into navigable waters pollutants from a point

source or storm water subject to permit requirements in 40 CFR § 122.26 or § 122.33, including storm water from large, medium, and regulated small municipal separate storm sewer systems and storm water associated with industrial or construction activity."

Like *ORS 468B.025*, the text of *OAR 340-045-0015(5)*, does not, by its terms, regulate the issuance of permits by the agency. Instead, it requires persons who must obtain permits pursuant to sections (1) and (2) of the rule to do certain things. Namely, those persons must apply for the [*145] required permit promptly, fulfill the terms and conditions of the permit, and comply with applicable federal and state requirements and standards. On its face, the rule says nothing about what must be included in a permit, nor does it impose particular conditions on the issuance of permits. In contrast, other rules do impose requirements on respondent with respect to the issuance [**22] of permits. See, e.g., *OAR 340-045-0027* (public notice and participation requirements for permitting actions); *OAR 340-045-0033* (requirements for general permits). Indeed, *OAR 340-045-0035*, which governs the issuance of the type of permit at issue in this case, imposes specific requirements on respondent.

Furthermore, *OAR 340-045-0015(5)* does not itself make state water quality standards applicable to storm water dischargers. Instead, it simply requires compliance with "applicable" federal and state water quality standards. The text of the provision, thus, only requires that permittees comply with legal standards that some other source makes applicable to them. As we have observed, pursuant to federal and state statutes, permits for the discharge of municipal storm water, unlike other NPDES permits, need not incorporate provisions requiring compliance with state water quality standards. In the context of storm water, permittees must implement best management practices to reduce the discharge of pollutants in storm water to the maximum extent practicable. *OAR 340-045-0015(5)* does not impose a stricter requirement. Instead, it simply requires that, to the extent that state water quality [**23] standards otherwise apply, a permittee must comply with them. Because those standards are not otherwise strictly applicable to storm water, the rule does not, itself, make them applicable. In sum, we are not persuaded by petitioners' assertion that, because they do not contain specific conditions requiring compliance with in-stream state water quality standards, the permits violate the requirements of *OAR 340-045-0015(5)*.

In their second assignment of error, petitioners argue that respondent acted inconsistently with *ORS 468B.050*

and *OAR 340-042-0080* when it issued the permits "because the [p]ermits do not incorporate wasteload allocations as enforceable effluent limitations." Petitioners' argument suggests that wasteload allocations should be set forth [*146] as numeric limits within the permits and that the benchmarks incorporated into the permits are impermissible.

In their argument regarding the statute, petitioners suggest that the permits are inconsistent with the requirements of *ORS 468B.050* and point to that statute's general requirement that permits "shall specify applicable effluent limitations." As discussed above, that statute does not mandate that such effluent limitations take [**24] a particular form. A best management practices requirement is a type of effluent limitation. In this case, the permits included such a limitation (set forth in detail in the incorporated storm water management plans). We reject petitioners' assertion that the permits violate *ORS 468B.050*.

We turn to petitioners' assertion that the permits violate *OAR 340-042-0080*. That rule is part of a set of rules adopted by respondent relating to "total maximum daily loads (TMDLs)." A TMDL is

"a written quantitative plan and analysis for attaining and maintaining water quality standards and includes the elements described in *OAR 340-042-0040*. These elements include a calculation of the maximum amount of a pollutant that a waterbody can receive and still meet state water quality standards, allocations of portions of that amount to the pollutant sources or sectors, and a Water Quality Management Plan to achieve water quality standards."

OAR 340-042-0030(15). TMDLs are established for pollutants in waters of the state that are identified, pursuant to 33 USC section 1313(d), as being water quality impaired. *OAR 340-042-0040(1)*; see 33 USC § 1313(d). Among other things TMDLs must include loading capacities [**25] (the amount of a pollutant that a waterbody can receive and still meet water quality standards), wasteload allocations (the portions of the receiving water's loading capacity allocated to particular point sources), and a water quality management plan (a framework of management strategies to attain and maintain water quality standards, including proposed strategies to meet wasteload allocations in the TMDL). *OAR 340-042-0040(4)*.

As part of the implementation of TMDLs, "[f]or sources subject to permit requirements in *ORS 468B.050*,

[*147] wasteload allocations and other management strategies will be incorporated into permit requirements." *OAR 340-042-0080(4)*. In relation to TMDLs, the term "wasteload allocation" is defined, by rule, to mean "the portion of [the] receiving water's loading capacity that is allocated to one of its existing or future point sources of pollution. [Wasteload allocations] constitute a type of water quality-based effluent limitation." *OAR 340-041-0002(67)*. However, the rule does not specifically provide the manner in which those wasteload allocations must be implemented. Petitioners' argument raises the question whether wasteload allocations have been incorporated into [*26] the permits in a meaningful way. We conclude that they have.

The applicable TMDLs in this case set forth specific wasteload allocations for municipal storm water. The permits at issue, in turn, indicate the bodies of water for which TMDLs and wasteload allocations have been established and reference the specific TMDL for those bodies of water. The permits provide in the "adaptive management" section that, "[w]here TMDL wasteload allocations have been established for pollutant parameters associated with the permittee's [municipal separate storm sewer system] discharges, the permittee must use the estimated pollutant load reductions (benchmarks) established in the [storm water management plan] to guide the adaptive management process." Furthermore, they include a section that specifically addresses the TMDL wasteload allocations. The section is intended to "ensure pollutant discharges for those parameters listed in the TMDL are reduced to the [maximum extent practicable]. Adequate progress toward achieving assigned wasteload allocations * * * will be demonstrated through the implementation of best management practices that are targeted at TMDL-related pollutants." Pursuant to that section, [*27] permittees must evaluate progress toward reducing pollutant loads "through the use of performance measures and pollutant load reduction benchmarks developed and listed in the [storm water management plan]." ¹⁶ The storm water management [*148] plan describes a program, including best management practices, designed to achieve reductions in TMDL pollutants. Failure to meet an approved benchmark is not, itself, a violation of permit conditions. However, such a failure gives rise to an obligation on the part of the permittee to follow the adaptive management process to improve the storm water management plan. Failure to engage in that process would be a violation of the permits.

16 A benchmark is defined in the permit as

"a total pollutant load reduction estimate for each parameter or surrogate, where applicable, for

which a [wasteload allocation] is established at the time of permit issuance. A benchmark is used to measure the overall effectiveness of the storm water management plan in making progress toward the wasteload allocation * * * and is intended to be a tool for guiding the adaptive management activities."

In our view, the provisions of the permits are sufficient to meet the requirement [*28] of *OAR 340-042-0080(4)* that wasteload allocations be incorporated into permit requirements. The agency has interpreted what it means to "incorporate" wasteload allocations through its implementation of that rule in the issuance of permits, and that interpretation is a reasonable one. Although the permits do not themselves include numeric wasteload allocations like those set forth in the TMDLs, the TMDL wasteload allocations are clearly referenced in the permits, and the permits require implementation of best management practices, set forth in the storm water management plans, to make progress toward meeting those wasteload allocations. Again, best management practices are a type of effluent limitation that is used in municipal storm water permits. See *40 CFR § 122.44(k)(2) - (3)*. Furthermore, the permits incorporate benchmarks, through incorporation of the storm water management plan, which are specific pollutant load reduction goals for the permittees. Those measures are "permit requirements" that properly incorporate the TMDL wasteload allocations.

As well, contrary to petitioners' assertion, the permits incorporate wasteload allocations in a way that is enforceable. Although the [*29] failure to reduce pollutants to the extent set forth in a particular benchmark is not itself a violation of the permit, it gives rise to specific obligations on the part of the permittee. Furthermore, the requirement that permittees implement best management practices that are set out in their approved storm water management plan is an enforceable requirement. Looking at the permits in light of [*149] the requirements of the regulatory scheme, we conclude that their provisions are sufficient to meet the requirement of *OAR 340-042-0080* that "wasteload allocations * * * be incorporated into permit requirements."

In light of the foregoing discussion, we conclude that the permits do not violate *ORS 468B.025*, *ORS 468B.050*, *OAR 340-045-0015*, or *OAR 340-042-0080*. Accordingly, the trial court did not err in granting summary judgment in favor of respondent.

U.S.C. Sections

33 USCS § 1251

§ 1251. Congressional declaration of goals and policy

(a) Restoration and maintenance of chemical, physical and biological integrity of Nation's waters; national goals for achievement of objective. The objective of this Act [33 USCS §§ 1251 et seq.] is to restore and maintain the chemical, physical, and biological integrity of the Nation's waters. In order to achieve this objective it is hereby declared that, consistent with the provisions of this Act [33 USCS §§ 1251 et seq.]--

(1) it is the national goal that the discharge of pollutants into the navigable waters be eliminated by 1985;

(2) it is the national goal that wherever attainable, an interim goal of water quality which provides for the protection and propagation of fish, shellfish, and wildlife and provides for recreation in and on the water be achieved by July 1, 1983;

(3) it is the national policy that the discharge of toxic pollutants in toxic amounts be prohibited;

(4) it is the national policy that Federal financial assistance be provided to construct publicly owned waste treatment works;

(5) it is the national policy that areawide waste treatment management planning processes be developed and implemented to assure adequate control of sources of pollutants in each State;

(6) it is the national policy that a major research and demonstration effort be made to develop technology necessary to eliminate the discharge of pollutants into the navigable waters, waters of the contiguous zone, and the oceans; and

(7) it is the national policy that programs for the control of nonpoint sources of pollution be developed and implemented in an expeditious manner so as to enable the goals of this Act [33 USCS §§ 1251 et seq.] to be met through the control of both point and nonpoint sources of pollution.

(b) Congressional recognition, preservation, and protection of primary responsibilities and rights of States. It is the policy of the Congress to recognize, preserve, and protect the primary responsibilities and rights of States to prevent, reduce, and eliminate pollution, to plan the development and use (including restoration, preservation, and enhancement) of land and water resources, and to consult with the Administrator in the exercise of his authority under this Act [33 USCS §§ 1251 et seq.]. It is the policy of Congress that the States manage the construction grant program under this Act [33 USCS §§ 1251 et seq.] and implement the permit programs under sections 402 and 404 of this Act [33 USCS §§ 1342, 1344]. It is further the policy of the Congress to support and aid research relating to the prevention, reduction, and elimination of pollution, and to provide Federal technical services and financial aid to State and interstate agencies and municipalities in connection with the prevention, reduction, and elimination of pollution.

(c) Congressional policy toward Presidential activities with foreign countries. It is further the policy of Congress that the President, acting through the Secretary of State and such national and international organizations as he determines appropriate, shall take such action as may be necessary to insure that to the fullest extent possible all foreign countries shall take meaningful action for the prevention, reduction, and elimination of pollution in their waters and in international waters and

for the achievement of goals regarding the elimination of discharge of pollutants and the improvement of water quality to at least the same extent as the United States does under its laws.

(d) Administrator of Environmental Protection Agency to administer 33 USCS §§ 1251 et seq. Except as otherwise expressly provided in this Act [33 USCS §§ 1251 et seq.], the Administrator of the Environmental Protection Agency (hereinafter in this Act called "Administrator") shall administer this Act [33 USCS §§ 1251 et seq.].

(e) Public participation in development, revision, and enforcement of any regulation, etc. Public participation in the development, revision, and enforcement of any regulation, standard, effluent limitation, plan, or program established by the Administrator or any State under this Act [33 USCS §§ 1251 et seq.] shall be provided for, encouraged, and assisted by the Administrator and the States. The Administrator, in cooperation with the States, shall develop and publish regulations specifying minimum guidelines for public participation in such processes.

(f) Procedures utilized for implementing 33 USCS §§ 1251 et seq. It is the national policy that to the maximum extent possible the procedures utilized for implementing this Act [33 USCS §§ 1251 et seq.] shall encourage the drastic minimization of paperwork and interagency decision procedures, and the best use of available manpower and funds, so as to prevent needless duplication and unnecessary delays at all levels of government.

(g) Authority of States over water. It is the policy of Congress that the authority of each State to allocate quantities of water within its jurisdiction shall not be superseded, abrogated or otherwise impaired by this Act [33 USCS §§ 1251 et seq.]. It is the further policy of Congress that nothing in this Act [33 USCS §§ 1251 et seq.] shall be construed to supersede or abrogate rights to quantities of water which have been established by any State. Federal agencies shall co-operate with State and local agencies to develop comprehensive solutions to prevent, reduce and eliminate pollution in concert with programs for managing water resources.

33 USCS § 1251

TAB "22"

33 USCS § 1311
§ 1311. Effluent limitations

(a) Illegality of pollutant discharges except in compliance with law. Except as in compliance with this section and sections 302, 306, 307, 318, 402, and 404 of this Act [33 USCS §§ 1312, 1316, 1317, 1328, 1342, 1344], the discharge of any pollutant by any person shall be unlawful.

(b) Timetable for achievement of objectives. In order to carry out the objective of this Act there shall be achieved--

(1) (A) not later than July 1, 1977, effluent limitations for point sources, other than publicly owned treatment works, (i) which shall require the application of the best practicable control technology currently available as defined by the Administrator pursuant to section 304(b) of this Act [33 USCS § 1314(b)], or (ii) in the case of a discharge into a publicly owned treatment works which meets the requirements of subparagraph (B) of this paragraph, which shall require compliance with any applicable pretreatment requirements and any requirements under section 307 of this Act [33 USCS § 1317]; and

(B) for publicly owned treatment works in existence on July 1, 1977, or approved pursuant to section 203 of this Act [33 USCS § 1283] prior to June 30, 1974 (for which construction must be completed within four years of approval), effluent limitations based upon secondary treatment as defined by the Administrator pursuant to section 304(d)(1) of this Act [33 USCS § 1314(d)(1)]; or,

(C) not later than July 1, 1977, any more stringent limitation, including those necessary to meet water quality standards, treatment standards, or schedules of compliance, established pursuant to any State law or regulations (under authority preserved by section 510 [33 USCS § 1370]) or any other Federal law or regulation, or required to implement any applicable water quality standard established pursuant to this Act.

(2) (A) for pollutants identified in subparagraphs (C), (D), and (F) of this paragraph, effluent limitations for categories and classes of point sources, other than publicly owned treatment works, which (i) shall require application of the best available technology economically achievable for such category or class, which will result in reasonable further progress toward the national goal of eliminating the discharge of all pollutants, as determined in accordance with regulations issued by the Administrator pursuant to section 304(b)(2) of this Act [33 USCS § 1314(b)(2)], which such effluent limitations shall require the elimination of discharges of all pollutants if the Administrator finds, on the basis of information available to him (including information developed pursuant to section 315 [33 USCS § 1325]), that such elimination is technologically and economically achievable for a category or class of point sources as determined in accordance with regulations issued by the Administrator pursuant to section 304(b)(2) of this Act [33 USCS § 1314(b)(2)], or (ii) in the case of the introduction of a pollutant into a publicly owned treatment works which meets the requirements of subparagraph (B) of this paragraph, shall require compliance with any applicable pretreatment requirements and any other requirement under section 307 of this Act [33 USCS § 1317];

(B) [Repealed]

(C) with respect to all toxic pollutants referred to in table 1 of Committee Print Numbered 95-30 of the Committee on Public Works and Transportation of the House of Representatives compliance with effluent limitations in accordance with subparagraph (A) of this paragraph as expeditiously as practicable but in no case

later than three years after the date such limitations are promulgated under section 304(b) [33 USCS § 1314(b)], and in no case later than March 31, 1989;

(D) for all toxic pollutants listed under paragraph (1) of subsection (a) of section 307 of this Act [33 USCS § 1317] which are not referred to in subparagraph (C) of this paragraph compliance with effluent limitations in accordance with subparagraph (A) of this paragraph as expeditiously as practicable, but in no case later than three years after the date such limitations are promulgated under section 304(b) [33 USCS § 1314(b)], and in no case later than March 31, 1989;

(E) as expeditiously as practicable but in no case later than three years after the date such limitations are promulgated under section 304(b) [33 USCS § 1314(b)], and in no case later than March 31, 1989, compliance with effluent limitations for categories and classes of point sources, other than publicly owned treatment works, which in the case of pollutants identified pursuant to section 304(a)(4) of this Act [33 USCS § 1314(a)(4)] shall require application of the best conventional pollutant control technology as determined in accordance with regulations issued by the Administrator pursuant to section 304(b)(4) of this Act [33 USCS § 1314(b)(4)]; and

(F) for all pollutants (other than those subject to subparagraphs (C), (D), or (E) of this paragraph) compliance with effluent limitations in accordance with subparagraph (A) of this paragraph as expeditiously as practicable but in no case later than 3 years after the date such limitations are established, and in no case later than March 31, 1989.

(3) (A) for effluent limitations under paragraph (1)(A)(i) of this subsection promulgated after January 1, 1982, and requiring a level of control substantially greater or based on fundamentally different control technology than under permits for an industrial category issued before such date, compliance as expeditiously as practicable but in no case later than three years after the date such limitations are promulgated under section 304(b) [33 USCS § 1314(b)], and in no case later than March 31, 1989; and

(B) for any effluent limitation in accordance with paragraph (1)(A)(i), (2)(A)(i), or (2)(E) of this subsection established only on the basis of section 402(a)(1) [33 USCS § 1342(a)(1)] in a permit issued after enactment of the Water Quality Act of 1987 [enacted Feb. 4, 1987], compliance as expeditiously as practicable but in no case later than three years after the date such limitations are established, and in no case later than March 31, 1989.

(c) Modification of timetable. The Administrator may modify the requirements of subsection (b)(2)(A) of this section with respect to any point source for which a permit application is filed after July 1, 1977, upon a showing by the owner or operator of such point source satisfactory to the Administrator that such modified requirements (1) will represent the maximum use of technology within the economic capability of the owner or operator; and (2) will result in reasonable further progress toward the elimination of the discharge of pollutants.

(d) Review and revision of effluent limitations. Any effluent limitation required by paragraph (2) of subsection (b) of this section shall be reviewed at least every five years and, if appropriate, revised pursuant to the procedure established under such paragraph.

(e) All point discharge source application of effluent limitations. Effluent limitations established pursuant to this section or section 302 of this Act [33 USCS § 1312] shall be applied to all point sources of discharge of pollutants in accordance with the provisions of this Act [33 USCS §§ 1251 et seq.].

(f) Illegality of discharge of radiological, chemical, or biological warfare agents, high-level radioactive waste or medical waste. Notwithstanding any other provisions of this Act [33 USCS §§ 1251 et seq.] it shall be unlawful to discharge any radiological, chemical, or biological warfare agent, any high-level radioactive waste, or any medical waste, into the navigable waters.

(g) Modifications for certain nonconventional pollutants.

(1) General authority. The Administrator, with the concurrence of the State, may modify the requirements of subsection (b)(2)(A) of this section with respect to the discharge from any point source of ammonia, chlorine, color, iron, and total phenols (4AAP) (when determined by the Administrator to be a pollutant covered by subsection (b)(2)(F)) and any other pollutant which the Administrator lists under paragraph (4) of this subsection.

(2) Requirements for granting modifications. A modification under this subsection shall be granted only upon a showing by the owner or operator of a point source satisfactory to the Administrator that--

(A) such modified requirements will result at a minimum in compliance with the requirements of subsection (b)(1)(A) or (C) of this section, whichever is applicable;

(B) such modified requirements will not result in any additional requirements on any other point or nonpoint source; and

(C) such modification will not interfere with the attainment or maintenance of that water quality which shall assure protection of public water supplies, and the protection and propagation of a balanced population of shellfish, fish, and wildlife, and allow recreational activities, in and on the water and such modification will not result in the discharge of pollutants in quantities which may reasonably be anticipated to pose an unacceptable risk to human health or the environment because of bioaccumulation, persistency in the environment, acute toxicity, chronic toxicity (including carcinogenicity, mutagenicity or teratogenicity), or synergistic propensities.

(3) Limitation on authority to apply for subsection (c) modification. If an owner or operator of a point source applies for a modification under this subsection with respect to the discharge of any pollutant, such owner or operator shall be eligible to apply for modification under subsection (c) of this section with respect to such pollutant only during the same time period as he is eligible to apply for a modification under this subsection.

(4) Procedures for listing additional pollutants.

(A) General authority. Up on petition of any person, the Administrator may add any pollutant to the list of pollutants for which modification under this section is authorized (except for pollutants identified pursuant to section 304(a)(4) of this Act [33 USCS § 1314(a)(4)], toxic pollutants subject to section 307(a) of this Act [33 USCS § 1317(a)], and the thermal component of discharges) in accordance with the provisions of this paragraph.

(B) Requirements for listing.

(i) Sufficient information. The person petitioning for listing of an additional pollutant under this subsection shall submit to the Administrator sufficient information to make the determinations required by this subparagraph.

(ii) Toxic criteria determination. The Administrator shall determine whether or not the pollutant meets the criteria for listing as a toxic pollutant under section 307(a) of this Act [33 USCS § 1317(a)].

(iii) Listing as toxic pollutant. If the Administrator determines that the pollutant meets the criteria for listing as a toxic pollutant under section 307(a) [33 USCS § 1317(a)], the Administrator shall list the pollutant as a toxic pollutant under section 307(a) [33 USCS § 1317(a)].

(iv) Nonconventional criteria determination. If the Administrator determines that the pollutant does not meet the criteria for listing as a toxic pollutant under such section and determines that adequate test methods and sufficient data are available to make the determinations required by paragraph (2) of this subsection with respect to the pollutant, the Administrator shall add the pollutant to the list of pollutants specified in paragraph (1) of this subsection for which modifications are authorized under this subsection.

(C) Requirements for filing of petitions. A petition for listing of a pollutant under this paragraph--

(i) must be filed not later than 270 days after the date of promulgation of an applicable effluent guideline under section 304 [33 USCS § 1314];

(ii) may be filed before promulgation of such guideline; and

(iii) may be filed with an application for a modification under paragraph (1) with respect to the discharge of such pollutant.

(D) Deadline for approval of petition. A decision to add a pollutant to the list of pollutants for which modifications under this subsection are authorized must be made within 270 days after the date of promulgation of an applicable effluent guideline under section 304 [33 USCS § 1314].

(E) Burden of proof. The burden of proof for making the determinations under subparagraph (B) shall be on the petitioner.

(5) Removal of pollutants. The Administrator may remove any pollutant from the list of pollutants for which modifications are authorized under this subsection if the Administrator determines that adequate test methods and sufficient data are no longer available for determining whether or not modifications may be granted with respect to such pollutant under paragraph (2) of this subsection.

(h) Modification of secondary treatment requirements. The Administrator, with the concurrence of the State, may issue a permit under section 402 [33 USCS § 1342] which modifies the requirements of subsection (b)(1)(B) of this section with respect to the discharge of any pollutant from a publicly owned treatment works into marine waters, if the applicant demonstrates to the satisfaction of the Administrator that--

(1) there is an applicable water quality standard specific to the pollutant for which the modification is requested, which has been identified under section 304(a)(6) of this Act [33 USCS § 1314(a)(6)];

(2) the discharge of pollutants in accordance with such modified requirements will not interfere, alone or in combination with pollutants from other sources, with the attainment or maintenance of that water quality which assures protection of public water supplies and the protection and propagation of a balanced, indigenous population of shellfish, fish and wildlife, and allows recreational activities, in and on the water;

(3) the applicant has established a system for monitoring the impact of such discharge on a representative sample of aquatic biota, to the extent practicable, and the scope of such monitoring is limited to include only those scientific investigations which are necessary to study the effects of the proposed discharge;

(4) such modified requirements will not result in any additional requirements on any other point or nonpoint source;

(5) all applicable pretreatment requirements for sources introducing waste into such treatment works will be enforced;

(6) in the case of any treatment works serving a population of 50,000 or more, with respect to any toxic pollutant introduced into such works by an industrial discharger for which pollutant there is no applicable pretreatment requirement in effect, sources introducing waste into such works are in compliance with all applicable pretreatment requirements, the applicant will enforce such requirements,

and the applicant has in effect a pretreatment program which, in combination with the treatment of discharges from such works, removes the same amount of such pollutant as would be removed if such works were to apply secondary treatment to discharges and if such works had no pretreatment program with respect to such pollutant;

(7) to the extent practicable, the applicant has established a schedule of activities designed to eliminate the entrance of toxic pollutants from nonindustrial sources into such treatment works;

(8) there will be no new or substantially increased discharges from the point source of the pollutant to which the modification applies above that volume of discharge specified in the permit;

(9) the applicant at the time such modification becomes effective will be discharging effluent which has received at least primary or equivalent treatment and which meets the criteria established under section 304(a)(1) of this Act [33 USCS § 1314(a)(1)] after initial mixing in the waters surrounding or adjacent to the point at which such effluent is discharged.

For the purposes of this subsection the phrase "the discharge of any pollutant into marine waters" refers to a discharge into deep waters of the territorial sea or the waters of the contiguous zone, or into saline estuarine waters where there is strong tidal movement and other hydrological and geological characteristics which the Administrator determines necessary to allow compliance with paragraph (2) of this subsection, and section 101(a)(2) of this Act [33 USCS § 1251(a)(2)]. For the purposes of paragraph (9), "primary or equivalent treatment" means treatment by screening, sedimentation, and skimming adequate to remove at least 30 percent of the biological oxygen demanding material and of the suspended solids in the treatment works influent, and disinfection, where appropriate. A municipality which applies secondary treatment shall be eligible to receive a permit pursuant to this subsection which modifies the requirements of subsection (b)(1)(B) of this section with respect to the discharge of any pollutant from any treatment works owned by such municipality into marine waters. No permit issued under this subsection shall authorize the discharge of sewage sludge into marine waters. In order for a permit to be issued under this subsection for the discharge of a pollutant into marine waters, such marine waters must exhibit characteristics assuring that water providing dilution does not contain significant amounts of previously discharged effluent from such treatment works. No permit issued under this subsection shall authorize the discharge of any pollutant into saline estuarine waters which at the time of application do not support a balanced indigenous population of shellfish, fish and wildlife, or allow recreation in and on the waters or which exhibit ambient water quality below applicable water quality standards adopted for the protection of public water supplies, shellfish, fish and wildlife or recreational activities or such other standards necessary to assure support and protection of such uses. The prohibition contained in the preceding sentence shall apply without regard to the presence or absence of a causal relationship between such characteristics and the applicant's current or proposed discharge. Notwithstanding any other provisions of this subsection, no permit may be issued under this subsection for discharge of a pollutant into the New York Bight Apex consisting of the ocean waters of the Atlantic Ocean westward of 73 degrees 30 minutes west longitude and northward of 40 degrees 10 minutes north latitude.

(i) Municipal time extensions.

(1) Where construction is required in order for a planned or existing publicly owned treatment works to achieve limitations under subsection (b)(1)(B) or (b)(1)(C) of

this section, but (A) construction cannot be completed within the time required in such subsection, or (B) the United States has failed to make financial assistance under this Act [33 USCS §§ 1251 et seq.] available in time to achieve such limitations by the time specified in such subsection, the owner or operator of such treatment works may request the Administrator (or if appropriate the State) to issue a permit pursuant to section 402 of this Act [33 USCS § 1342] or to modify a permit issued pursuant to that section to extend such time for compliance. Any such request shall be filed with the Administrator (or if appropriate the State) within 180 days after the date of enactment of the Water Quality Act of 1987 [enacted Feb. 7, 1987]. The Administrator (or if appropriate the State) may grant such request and issue or modify such a permit, which shall contain a schedule of compliance for the publicly owned treatment works based on the earliest date by which such financial assistance will be available from the United States and construction can be completed, but in no event later than July 1, 1988, and shall contain such other terms and conditions, including those necessary to carry out subsections (b) through (g) of section 201 of this Act [33 USCS § 1281(b)-(g)], section 307 of this Act [33 USCS § 1317], and such interim effluent limitations applicable to that treatment works as the Administrator determines are necessary to carry out the provisions of this Act [33 USCS §§ 1251 et seq.].

(2) (A) Where a point source (other than a publicly owned treatment works) will not achieve the requirements of subsections (b)(1)(A) and (b)(1)(C) of this section and--

(i) if a permit issued prior to July 1, 1977, to such point source is based upon a discharge into a publicly owned treatment works; or

(ii) if such point source (other than a publicly owned treatment works) had before July 1, 1977, a contract (enforceable against such point source) to discharge into a publicly owned treatment works; or

(iii) if either an application made before July 1, 1977, for a construction grant under this Act [33 USCS §§ 1251 et seq.] for a publicly owned treatment works, or engineering or architectural plans or working drawings made before July 1, 1977, for a publicly owned treatment works, show that such point source was to discharge into such publicly owned treatment works,

and such publicly owned treatment works is presently unable to accept such discharge without construction, and in the case of a discharge to an existing publicly owned treatment works, such treatment works has an extension pursuant to paragraph (1) of this subsection, the owner or operator of such point source may request the Administrator (or if appropriate the State) to issue or modify such a permit pursuant to such section 402 [33 USCS § 1342] to extend such time for compliance. Any such request shall be filed with the Administrator (or if appropriate the State) within 180 days after the date of enactment of this subsection [enacted Dec. 27, 1977] or the filing of a request by the appropriate publicly owned treatment works under paragraph (1) of this subsection, whichever is later. If the Administrator (or if appropriate the State) finds that the owner or operator of such point source has acted in good faith, he may grant such request and issue or modify such a permit, which shall contain a schedule of compliance for the point source to achieve the requirements of subsections (b)(1)(A) and (C) of this section and shall contain such other terms and conditions, including pretreatment and interim effluent limitations and water conservation requirements applicable to that point source, as the Administrator determines are necessary to carry out the provisions of this Act [33 USCS §§ 1251 et seq.].

(B) No time modification granted by the Administrator (or if appropriate the State) pursuant to paragraph (2)(A) of this subsection shall extend beyond the earliest date practicable for compliance or beyond the date of any extension granted

to the appropriate publicly owned treatment works pursuant to paragraph (1) of this subsection, but in no event shall it extend beyond July 1, 1988; and no such time modification shall be granted unless (i) the publicly owned treatment works will be in operation and available to the point source before July 1, 1988, and will meet the requirements of subsections (b)(1)(B) and (C) of this section after receiving the discharge from that point source; and (ii) the point source and the publicly owned treatment works have entered into an enforceable contract requiring the point source to discharge into the publicly owned treatment works, the owner or operator of such point source to pay the costs required under section 204 of this Act [33 USCS § 1284], and the publicly owned treatment works to accept the discharge from the point source; and (iii) the permit for such point source requires that point source to meet all requirements under section 307(a) and (b) [33 USCS § 1317(a), (b)] during the period of such time modification.

(j) Modification procedures.

(1) Any application filed under this section for a modification of the provisions of--

(A) subsection (b)(1)(B) under subsection (h) of this section shall be filed not later than [than] the 365th day which begins after the date of enactment of the Municipal Wastewater Treatment Construction Grant Amendments of 1981 [enacted Dec. 29, 1981], except that a publicly owned treatment works which prior to December 31, 1982, had a contractual arrangement to use a portion of the capacity of an ocean outfall operated by another publicly owned treatment works which has applied for or received modification under subsection (h), may apply for a modification of subsection (h) in its own right not later than 30 days after the date of the enactment of the Water Quality Act of 1987 [enacted Feb. 7, 1987], and except as provided in paragraph (5);

(B) subsection (b)(2)(A) as it applies to pollutants identified in subsection (b)(2)(F) shall be filed not later than 270 days after the date of promulgation of an applicable effluent guideline under section 304 [33 USCS § 1314] or not later than 270 days after the date of enactment of the Clean Water Act of 1977 [enacted Dec. 27, 1977], whichever is later.

(2) Subject to paragraph (3) of this section, any application for a modification filed under subsection (g) of this section shall not operate to stay any requirement under this Act [33 USCS §§ 1251 et seq.], unless in the judgment of the Administrator such a stay or the modification sought will not result in the discharge of pollutants in quantities which may reasonably be anticipated to pose an unacceptable risk to human health or the environment because of bioaccumulation, persistency in the environment, acute toxicity, chronic toxicity (including carcinogenicity, mutagenicity, or teratogenicity), or synergistic propensities, and that there is a substantial likelihood that the applicant will succeed on the merits of such application. In the case of an application filed under subsection (g) of this section, the Administrator may condition any stay granted under this paragraph on requiring the filing of a bond or other appropriate security to assure timely compliance with the requirements from which a modification is sought.

(3) Compliance requirements under subsection (g).

(A) Effect of filing. An application for a modification under subsection (g) and a petition for listing of a pollutant as a pollutant for which modifications are authorized under such subsection shall not stay the requirement that the person seeking such modification or listing comply with effluent limitations under this Act [33 USCS §§ 1251 et seq.] for all pollutants not the subject of such application or petition.

(B) Effect of disapproval. Disapproval of an application for a modification under subsection (g) shall not stay the requirement that the person seeking such modification comply with all applicable effluent limitations under this Act [33 USCS

§§ 1251 et seq.].

(4) Deadline for subsection (g) decision. An application for a modification with respect to a pollutant filed under subsection (g) must be approved or disapproved not later than 365 days after the date of such filing; except that in any case in which a petition for listing such pollutant as a pollutant for which modifications are authorized under such subsection is approved, such application must be approved or disapproved not later than 365 days after the date of approval of such petition.

(5) Extension of application deadline.

(A) In general. In the 180-day period beginning on the date of the enactment of this paragraph [enacted Oct. 31, 1994], the city of San Diego, California, may apply for a modification pursuant to subsection (h) of the requirements of subsection (b)(1)(B) with respect to biological oxygen demand and total suspended solids in the effluent discharged into marine waters.

(B) Application. An application under this paragraph shall include a commitment by the applicant to implement a waste water reclamation program that, at a minimum, will--

(i) achieve a system capacity of 45,000,000 gallons of reclaimed waste water per day by January 1, 2010; and

(ii) result in a reduction in the quantity of suspended solids discharged by the applicant into the marine environment during the period of the modification.

(C) Additional conditions. The Administrator may not grant a modification pursuant to an application submitted under this paragraph unless the Administrator determines that such modification will result in removal of not less than 58 percent of the biological oxygen demand (on an annual average) and not less than 80 percent of total suspended solids (on a monthly average) in the discharge to which the application applies. A

(D) Preliminary decision deadline. The Administrator shall announce a preliminary decision on an application submitted under this paragraph not later than 1 year after the date the application is submitted.

(k) Innovative technology. In the case of any facility subject to a permit under section 402 [33 USCS § 1342] which proposes to comply with the requirements of subsection (b)(2)(A) or (b)(2)(E) of this section by replacing existing production capacity with an innovative production process which will result in an effluent reduction significantly greater than that required by the limitation otherwise applicable to such facility and moves toward the national goal of eliminating the discharge of all pollutants, or with the installation of an innovative control technique that has a substantial likelihood for enabling the facility to comply with the applicable effluent limitation by achieving a significantly greater effluent reduction than that required by the applicable effluent limitation and moves toward the national goal of eliminating the discharge of all pollutants, or by achieving the required reduction with an innovative system that has the potential for significantly lower costs than the systems which have been determined by the Administrator to be economically achievable, the Administrator (or the State with an approved program under section 402 [33 USCS § 1342], in consultation with the Administrator) may establish a date for compliance under subsection (b)(2)(A) or (b)(2)(E) of this section no later than two years after the date for compliance with such effluent limitation which would otherwise be applicable under such subsection, if it is also determined that such innovative system has the potential for industry-wide application.

(l) Toxic pollutants. Other than as provided in subsection (n) of this section, the Administrator may not modify any requirement of this section as it applies to any specific pollutant which is on the toxic pollutant list under section 307(a)(1) of this

Act [33 USCS § 1317(a)(1)].

(m) Modification of effluent limitation requirements for point sources.

(1) The Administrator, with the concurrence of the State, may issue a permit under section 402 [33 USCS § 1342] which modifies the requirements of subsections (b)(1)(A) and (b)(2)(E) of this section, and of section 403 [33 USCS § 1343], with respect to effluent limitations to the extent such limitations relate to biochemical oxygen demand and pH from discharges by an industrial discharger in such State into deep waters of the territorial seas, if the applicant demonstrates and the Administrator finds that--

(A) the facility for which modification is sought is covered at the time of the enactment of this subsection [enacted Jan. 8, 1983] by National Pollutant Discharge Elimination System permit number CA0005894 or CA0005282;

(B) the energy and environmental costs of meeting such requirements of subsections (b)(1)(A) and (b)(2)(E) and section 403 [33 USCS § 1343] exceed by an unreasonable amount the benefits to be obtained, including the objectives of this Act [33 USCS §§ 1251 et seq.];

(C) the applicant has established a system for monitoring the impact of such discharges on a representative sample of aquatic biota;

(D) such modified requirements will not result in any additional requirements on any other point or nonpoint source;

(E) there will be no new or substantially increased discharges from the point source of the pollutant to which the modification applies above that volume of discharge specified in the permit;

(F) the discharge is into waters where there is strong tidal movement and other hydrological and geological characteristics which are necessary to allow compliance with this subsection and section 101(a)(2) of this Act [33 USCS § 1251(a)(2)];

(G) the applicant accepts as a condition to the permit a contractual [contractual] obligation to use funds in the amount required (but not less than \$ 250,000 per year for ten years) for research and development of water pollution control technology, including but not limited to closed cycle technology;

(H) the facts and circumstances present a unique situation which, if relief is granted, will not establish a precedent or the relaxation of the requirements of this Act [33 USCS §§ 1251 et seq.] applicable to similarly situated discharges; and

(I) no owner or operator of a facility comparable to that of the applicant situated in the United States has demonstrated that it would be put at a competitive disadvantage to the applicant (or the parent company or any subsidiary thereof) as a result of the issuance of a permit under this subsection.

(2) The effluent limitations established under a permit issued under paragraph (1) shall be sufficient to implement the applicable State water quality standards, to assure the protection of public water supplies and protection and propagation of a balanced, indigenous population of shellfish, fish, fauna, wildlife, and other aquatic organisms, and to allow recreational activities in and on the water. In setting such limitations, the Administrator shall take into account any seasonal variations and the need for an adequate margin of safety, considering the lack of essential knowledge concerning the relationship between effluent limitations and water quality and the lack of essential knowledge of the effects of discharges on beneficial uses of the receiving waters.

(3) A permit under this subsection may be issued for a period not to exceed five years, and such a permit may be renewed for one additional period not to exceed five years upon a demonstration by the applicant and a finding by the Administrator at the time of application for any such renewal that the provisions of this subsection are met.

(4) The Administrator may terminate a permit issued under this subsection if the Administrator determines that there has been a decline in ambient water quality of the receiving waters during the period of the permit even if a direct cause and effect relationship cannot be shown: Provided, That if the effluent from a source with a permit issued under this subsection is contributing to a decline in ambient water quality of the receiving waters, the Administrator shall terminate such permit.

(n) Fundamentally different factors.

(1) General rule. The Administrator, with the concurrence of the State, may establish an alternative requirement under subsection (b)(2) or section 307(b) [33 USCS § 1317(b)] for a facility that modifies the requirements of national effluent limitation guidelines or categorical pretreatment standards that would otherwise be applicable to such facility, if the owner or operator of such facility demonstrates to the satisfaction of the Administrator that--

(A) the facility is fundamentally different with respect to the factors (other than cost) specified in section 304(b) or 304(g) and considered by the Administrator in establishing such national effluent limitation guidelines or categorical pretreatment standards;

(B) the application--

(i) is based solely on information and supporting data submitted to the Administrator during the rule-making for establishment of the applicable national effluent limitation guidelines or categorical pretreatment standard specifically raising the factors that are fundamentally different for such facility; or

(ii) is based on information and supporting data referred to in clause (i) and information and supporting data the applicant did not have a reasonable opportunity to submit during such rulemaking;

(C) the alternative requirement is no less stringent than justified by the fundamental difference; and

(D) the alternative requirement will not result in a nonwater quality environmental impact which is markedly more adverse than the impact considered by the Administrator in establishing such national effluent limitation guideline or categorical pretreatment standard.

(2) Time limit for applications. An application for an alternative requirement which modifies the requirements of an effluent limitation or pretreatment standard under this subsection must be submitted to the Administrator within 180 days after the date on which such limitation or standard is established or revised, as the case may be.

(3) Time limit for decision. The Administrator shall approve or deny by final agency action an application submitted under this subsection within 180 days after the date such application is filed with the Administrator.

(4) Submission of information. The Administrator may allow an applicant under this subsection to submit information and supporting data until the earlier of the date the application is approved or denied or the last day that the Administrator has to approve or deny such application.

(5) Treatment of pending applications. For the purposes of this subsection, an application for an alternative requirement based on fundamentally different factors which is pending on the date of the enactment of this subsection [enacted Feb. 7, 1987] shall be treated as having been submitted to the Administrator on the 180th day following such date of enactment [enacted Feb. 7, 1987]. The applicant may amend the application to take into account the provisions of this subsection.

(6) Effect of submission of application. An application for an alternative requirement under this subsection shall not stay the applicant's obligation to comply with the effluent limitation guideline or categorical pretreatment standard which is

the subject of the application.

(7) Effect of denial. If an application for an alternative requirement which modifies the requirements of an effluent limitation or pretreatment standard under this subsection is denied by the Administrator, the applicant must comply with such limitation or standard as established or revised, as the case may be.

(8) Reports. By January 1, 1997, and January 1 of every odd-numbered year thereafter, the Administrator shall submit to the Committee on Environment and Public Works of the Senate and the Committee on Transportation and Infrastructure of the House of Representatives a report on the status of applications for alternative requirements which modify the requirements of effluent limitations under section 301 or 304 of this Act [33 USCS § 1311 or 1314] or any national categorical pretreatment standard under section 307(b) of this Act [33 USCS § 1317(b)] filed before, on, or after such date of enactment [enacted Feb. 7, 1987].

(o) Application fees. The Administrator shall prescribe and collect from each applicant fees reflecting the reasonable administrative costs incurred in reviewing and processing applications for modifications submitted to the Administrator pursuant to subsections (c), (g), (i), (k), (m), and (n) of section 301, section 304(d)(4), and section 316(a) of this Act [33 USCS §§ 1311(c), (g), (i), (k), (m), (n), 1314(d)(4), 1316(a)]. All amounts collected by the Administrator under this subsection shall be deposited into a special fund of the Treasury entitled "Water Permits and Related Services" which shall thereafter be available for appropriation to carry out activities of the Environmental Protection Agency for which such fees were collected.

(p) Modified permit for coal remining operations.

(1) In general. Subject to paragraphs (2) through (4) of this subsection, the Administrator, or the State in any case which the State has an approved permit program under section 402(b) [33 USCS § 1342(b)], may issue a permit under section 402 [33 USCS § 1342] which modifies the requirements of subsection (b)(2)(A) of this section with respect to the pH level of any pre-existing discharge, and with respect to pre-existing discharges of iron and manganese from the remined area of any coal remining operation or with respect to the pH level or level of iron or manganese in any pre-existing discharge affected by the remaining operation. Such modified requirements shall apply the best available technology economically achievable on a case-by-case basis, using best professional judgment, to set specific numerical effluent limitations in each permit.

(2) Limitations. The Administrator or the State may only issue a permit pursuant to paragraph (1) if the applicant demonstrates to the satisfaction of the Administrator or the State, as the case may be, that the coal remining operation will result in the potential for improved water quality from the remining operation but in no event shall such a permit allow the pH level of any discharge, and in no event shall such a permit allow the discharges of iron and manganese, to exceed the levels being discharged from the remined area before the coal remining operation begins. No discharge from, or affected by, the remining operation shall exceed State water quality standards established under section 303 of this Act [33 USCS § 1313].

(3) Definitions. For purposes of this subsection--

(A) Coal remining operation. The term "coal remining operation" means a coal mining operation which begins after the date of the enactment of this subsection [enacted Feb. 4, 1987] at a site on which coal mining was conducted before the effective date of the Surface Mining Control and Reclamation Act of 1977.

(B) Remined area. The term "remined area" means only that area of any coal remining operation on which coal mining was conducted before the effective date of

the Surface Mining Control and Reclamation Act of 1977.

(C) Pre-existing discharge. The term "pre-existing discharge" means any discharge at the time of permit application under this subsection.

(4) Applicability of strip mining laws. Nothing in this subsection shall affect the application of the Surface Mining Control and Reclamation Act of 1977 to any coal remining operation, including the application of such Act to suspended solids.

33 USCS § 1311

TAB "23"

33 U.C.S. § 1313. Water quality standards and implementation plans

(a) Existing water quality standards.

(1) In order to carry out the purpose of this Act [33 USCS §§ 1251 et seq.], any water quality standard applicable to interstate waters which was adopted by any State and submitted to, and approved by, or is awaiting approval by, the Administrator pursuant to this Act as in effect immediately prior to the date of enactment of the Federal Water Pollution Control Act Amendments of 1972 [enacted Oct. 18, 1972], shall remain in effect unless the Administrator determined that such standard is not consistent with the applicable requirements of this Act as in effect immediately prior to the date of enactment of the Federal Water Pollution Control Act Amendments of 1972 [enacted Oct. 18, 1972]. If the Administrator makes such a determination he shall, within three months after the date of enactment of the Federal Water Pollution Control Act Amendments of 1972 [enacted Oct. 18, 1972], notify the State and specify the changes needed to meet such requirements. If such changes are not adopted by the State within ninety days after the date of such notification, the Administrator shall promulgate such changes in accordance with subsection (b) of this section.

(2) Any State which, before the date of enactment of the Federal Water Pollution Control Act Amendments of 1972 [enacted Oct. 18, 1972], has adopted, pursuant to its own law, water quality standards applicable to intrastate waters shall submit such standards to the Administrator within thirty days after the date of enactment of the Federal Water Pollution Control Act Amendments of 1972 [enacted Oct. 18, 1972]. Each such standard shall remain in effect, in the same manner and to the same extent as any other water quality standard established under this Act [33 USCS §§ 1251 et seq.] unless the Administrator determines that such standard is inconsistent with the applicable requirements of this Act as in effect immediately prior to the date of enactment of the Federal Water Pollution Control Act Amendments of 1972 [enacted Oct. 18, 1972]. If the Administrator makes such a determination he shall not later than the one hundred and twentieth day after the date of submission of such standards, notify the State and specify the changes needed to meet such requirements. If such changes are not adopted by the State within ninety days after such notification, the Administrator shall promulgate such changes in accordance with subsection (b) of this section.

(3) (A) Any State which prior to the date of enactment of the Federal Water Pollution Control Act Amendments of 1972 [enacted Oct. 18, 1972] has not adopted pursuant to its own laws water quality standards applicable to intrastate waters shall, not later than one hundred and eighty days after the date of enactment of the Federal Water Pollution Control Act Amendments of 1972 [enacted Oct. 18, 1972], adopt and submit such standards to the Administrator.

(B) If the Administrator determines that any such standards are consistent with the applicable requirements of this Act as in effect immediately prior to the date of enactment of the Federal Water Pollution Control Act Amendments of 1972 [enacted Oct. 18, 1972], he shall approve such standards.

(C) If the Administrator determines that any such standards are not consistent with the applicable requirements of this Act as in effect immediately prior to the date of enactment of the Federal Water Pollution Control Act Amendments of 1972 [enacted Oct. 18, 1972], he shall, not later than the ninetieth day after the date of submission of such standards, notify the State and specify the changes to meet such requirements. If such changes are not adopted by the State within ninety days after the date of notification, the Administrator shall promulgate such standards pursuant

to subsection (b) of this section.

(b) Proposed regulations.

(1) The Administrator shall promptly prepare and publish proposed regulations setting forth water quality standards for a State in accordance with the applicable requirements of this Act as in effect immediately prior to the date of enactment of the Federal Water Pollution Control Act Amendments of 1972 [enacted Oct. 18, 1972], if--

(A) the State fails to submit water quality standards within the times prescribed in subsection (a) of this section.

(B) a water quality standard submitted by such State under subsection (a) of this section is determined by the Administrator not to be consistent with the applicable requirements of subsection (a) of this section.

(2) The Administrator shall promulgate any water quality standard published in a proposed regulation not later than one hundred and ninety days after the date he publishes any such proposed standard, unless prior to such promulgation, such State has adopted a water quality standard which the Administrator determines to be in accordance with subsection (a) of this section.

(c) Review; revised standards; publication.

(1) The Governor of a State or the State water pollution control agency of such State shall from time to time (but at least once each three year period beginning with the date of enactment of the Federal Water Pollution Control Act Amendments of 1972 [enacted Oct. 18, 1972]) hold public hearings for the purpose of reviewing applicable water quality standards and, as appropriate, modifying and adopting standards. Results of such review shall be made available to the Administrator.

(2) (A) Whenever the State revises or adopts a new standard, such revised or new standard shall be submitted to the Administrator. Such revised or new water quality standard shall consist of the designated uses of the navigable waters involved and the water quality criteria for such waters based upon such uses. Such standards shall be such as to protect the public health or welfare, enhance the quality of water and serve the purposes of this Act [33 USCS §§ 1251 et seq.]. Such standards shall be established taking into consideration their use and value for public water supplies, propagation of fish and wildlife, recreational purposes, and agricultural, industrial, and other purposes, and also taking into consideration their use and value for navigation.

(B) Whenever a State reviews water quality standards pursuant to paragraph (1) of this subsection, or revises or adopts new standards pursuant to this paragraph, such State shall adopt criteria for all toxic pollutants listed pursuant to section 307(a)(1) of this Act [33 USCS § 1317(a)(1)] for which criteria have been published under section 304(a) [33 USCS § 1314(a)], the discharge or presence of which in the affected waters could reasonably be expected to interfere with those designated uses adopted by the State, as necessary to support such designated uses. Such criteria shall be specific numerical criteria for such toxic pollutants. Where such numerical criteria are not available, whenever a State reviews water quality standards pursuant to paragraph (1), or revises or adopts new standards pursuant to this paragraph, such State shall adopt criteria based on biological monitoring or assessment methods consistent with information published pursuant to section 304(a)(8) [33 USCS § 1314(a)(8)]. Nothing in this section shall be construed to limit or delay the use of effluent limitations or other permit conditions based on or involving biological monitoring or assessment methods or previously adopted numerical criteria.

(3) If the Administrator, within sixty days after the date of submission of the revised or new standard, determines that such standard meets the requirements of

this Act [33 USCS §§ 1251 et seq.], such standard shall thereafter be the water quality standard for the applicable waters of that State. If the Administrator determines that any such revised or new standard is not consistent with the applicable requirements of this Act [33 USCS §§ 1251 et seq.], he shall not later than the ninetieth day after the date of submission of such standard notify the State and specify the changes to meet such requirements. If such changes are not adopted by the State within ninety days after the date of notification, the Administrator shall promulgate such standard pursuant to paragraph (4) of this subsection.

(4) The Administrator shall promptly prepare and publish proposed regulations setting forth a revised or new water quality standard for the navigable waters involved--

(A) if a revised or new water quality standard submitted by such State under paragraph (3) of this subsection for such waters is determined by the Administrator not to be consistent with the applicable requirements of this Act [33 USCS §§ 1251 et seq.], or

(B) in any case where the Administrator determines that a revised or new standard is necessary to meet the requirements of this Act [33 USCS §§ 1251 et seq.].

The Administrator shall promulgate any revised or new standard under this paragraph not later than ninety days after he publishes such proposed standards, unless prior to such promulgation, such State has adopted a revised or new water quality standard which the Administrator determines to be in accordance with this Act [33 USCS §§ 1251 et seq.].

(d) Identification of areas with insufficient controls; maximum daily load; certain effluent limitations revision.

(1) (A) Each State shall identify those waters within its boundaries for which the effluent limitations required by section 301(b)(1)(A) and section 301(b)(1)(B) [33 USCS § 1311(b)(1)(A), (B)] are not stringent enough to implement any water quality standard applicable to such waters. The State shall establish a priority ranking for such waters, taking into account the severity of the pollution and the uses to be made of such waters.

(B) Each State shall identify those waters or parts thereof within its boundaries for which controls on thermal discharges under section 301 [33 USCS § 1311] are not stringent enough to assure protection and propagation of a balanced indigenous population of shellfish, fish, and wildlife.

(C) Each State shall establish for the waters identified in paragraph (1)(A) of this subsection, and in accordance with the priority ranking, the total maximum daily load, for those pollutants which the Administrator identifies under section 304(a)(2) [33 USCS § 1314(a)(2)] as suitable for such calculation. Such load shall be established at a level necessary to implement the applicable water quality standards with seasonal variations and a margin of safety which takes into account any lack of knowledge concerning the relationship between effluent limitations and water quality.

(D) Each State shall estimate for the waters identified in paragraph (1)(B) of this subsection the total maximum daily thermal load required to assure protection and propagation of a balanced, indigenous population of shellfish, fish and wildlife. Such estimates shall take into account the normal water temperatures, flow rates, seasonal variations, existing sources of heat input, and the dissipative capacity of the identified waters or parts thereof. Such estimates shall include a calculation of the maximum heat input that can be made into each such part and shall include a margin of safety which takes into account any lack of knowledge concerning the development of thermal water quality criteria for such protection and propagation in

the identified waters or parts thereof.

(2) Each State shall submit to the Administrator from time to time, with the first such submission not later than one hundred and eighty days after the date of publication of the first identification of pollutants under section 304(a)(2)(D) [33 USCS § 1314(a)(2)(D)], for his approval the waters identified and the loads established under paragraphs (1)(A), (1)(B), (1)(C), and (1)(D) of this subsection. The Administrator shall either approve or disapprove such identification and load not later than thirty days after the date of submission. If the Administrator approves such identification and load, such State shall incorporate them into its current plan under subsection (e) of this section. If the Administrator disapproves such identification and load, he shall not later than thirty days after the date of such disapproval identify such waters in such State and establish such loads for such waters as he determines necessary to implement the water quality standards applicable to such waters and upon such identification and establishment the State shall incorporate them into its current plan under subsection (e) of this section.

(3) For the specific purpose of developing information, each State shall identify all waters within its boundaries which it has not identified under paragraph (1)(A) and (1)(B) of this subsection and estimate for such waters the total maximum daily load with seasonal variations and margins of safety, for those pollutants which the Administrator identifies under section 304(a)(2) [33 USCS § 1314(a)(2)] as suitable for such calculation and for thermal discharges, at a level that would assure protection and propagation of a balanced indigenous population of fish, shellfish and wildlife.

(4) Limitations on revision of certain effluent limitations.

(A) Standard not attained. For waters identified under paragraph (1)(A) where the applicable water quality standard has not yet been attained, any effluent limitation based on a total maximum daily load or other waste load allocation established under this section may be revised only if (i) the cumulative effect of all such revised effluent limitations based on such total maximum daily load or waste load allocation will assure the attainment of such water quality standard, or (ii) the designated use which is not being attained is removed in accordance with regulations established under this section.

(B) Standard attained. For waters identified under paragraph (1)(A) where the quality of such waters equals or exceeds levels necessary to protect the designated use for such waters or otherwise required by applicable water quality standards, any effluent limitation based on a total maximum daily load or other waste load allocation established under this section, or any water quality standard established under this section, or any other permitting standard may be revised only if such revision is subject to and consistent with the antidegradation policy established under this section.

(e) Continuing planning process.

(1) Each State shall have a continuing planning process approved under paragraph (2) of this subsection which is consistent with this Act [33 USCS §§ 1251 et seq.].

(2) Each State shall submit not later than 120 days after the date of the enactment of the Water Pollution Control Amendments of 1972 [enacted Oct. 18, 1972] to the Administrator for his approval a proposed continuing planning process which is consistent with this Act [33 USCS §§ 1251 et seq.]. Not later than thirty days after the date of submission of such a process the Administrator shall either approve or disapprove such process. The Administrator shall from time to time review each State's approved planning process for the purpose of insuring that such planning process is at all times consistent with this Act [33 USCS §§ 1251 et seq.]. The Administrator shall not approve any State permit program under title IV of this

Act [33 USCS §§ 1341 et seq.] for any State which does not have an approved continuing planning process under this section.

(3) The Administrator shall approve any continuing planning process submitted to him under this section which will result in plans for all navigable waters within such State, which include, but are not limited to, the following:

(A) effluent limitations and schedules of compliance at least as stringent as those required by section 301(b)(1), section 301(b)(2), section 306, and section 307 [33 USCS §§ 1311(b)(1), (2), 1316, 1317], and at least as stringent as any requirements contained in any applicable water quality standard in effect under authority of this section;

(B) the incorporation of all elements of any applicable area-wide waste management plans under section 208 [33 USCS § 1288], and applicable basin plans under section 209 of this Act [33 USCS § 1289];

(C) total maximum daily load for pollutants in accordance with subsection (d) of this section;

(D) procedures for revision;

(E) adequate authority for intergovernmental cooperation;

(F) adequate implementation, including schedules of compliance, for revised or new water quality standards, under subsection (c) of this section;

(G) controls over the disposition of all residual waste from any water treatment processing;

(H) an inventory and ranking, in order of priority, of needs for construction of waste treatment works required to meet the applicable requirements of sections 301 and 302 [33 USCS §§ 1311, 1312].

(f) Earlier compliance. Nothing in this section shall be construed to affect any effluent limitation, or schedule of compliance required by any State to be implemented prior to the dates set forth in sections 301(b)(1) and 301(b)(2) [33 USCS § 1311(b)(1), (2)] nor to preclude any State from requiring compliance with any effluent limitation or schedule of compliance at dates earlier than such dates.

(g) Heat standards. Water quality standards relating to heat shall be consistent with the requirements of section 316 of this Act [33 USCS § 1326].

(h) Thermal water quality standards. For the purposes of this Act [33 USCS §§ 1251 et seq.] the term "water quality standards" includes thermal water quality standards.

(i) Coastal recreation water quality criteria.

(1) Adoption by States.

(A) Initial criteria and standards. Not later than 42 months after the date of the enactment of this subsection [enacted Oct. 10, 2000], each State having coastal recreation waters shall adopt and submit to the Administrator water quality criteria and standards for the coastal recreation waters of the State for those pathogens and pathogen indicators for which the Administrator has published criteria under section 304(a) [33 USCS § 1314(a)].

(B) New or revised criteria and standards. Not later than 36 months after the date of publication by the Administrator of new or revised water quality criteria under section 304(a)(9) [33 USCS § 1314(a)(9)], each State having coastal recreation waters shall adopt and submit to the Administrator new or revised water quality standards for the coastal recreation waters of the State for all pathogens and pathogen indicators to which the new or revised water quality criteria are applicable.

(2) Failure of States to adopt.

(A) In general. If a State fails to adopt water quality criteria and standards in

accordance with paragraph (1)(A) that are as protective of human health as the criteria for pathogens and pathogen indicators for coastal recreation waters published by the Administrator, the Administrator shall promptly propose regulations for the State setting forth revised or new water quality standards for pathogens and pathogen indicators described in paragraph (1)(A) for coastal recreation waters of the State.

(B) Exception. If the Administrator proposes regulations for a State described in subparagraph (A) under subsection (c)(4)(B), the Administrator shall publish any revised or new standard under this subsection not later than 42 months after the date of the enactment of this subsection [enacted Oct. 10, 2000].

(3) Applicability. Except as expressly provided by this subsection, the requirements and procedures of subsection (c) apply to this subsection, including the requirement in subsection (c)(2)(A) that the criteria protect public health and welfare.

33 USCS § 1313

TAB "24"

33 U.S.C. § 1342. National pollutant discharge elimination system

(a) Permits for discharge of pollutants.

(1) Except as provided in sections 318 and 404 of this Act [33 USCS §§ 1328, 1344], the Administrator may, after opportunity for public hearing, issue a permit for the discharge of any pollutant, or combination of pollutants, notwithstanding section 301(a) [33 USCS § 1311(a)], upon condition that such discharge will meet either (A) all applicable requirements under sections 301, 302, 306, 307, 308, and 403 of this Act [33 USCS §§ 1311, 1312, 1316, 1317, 1318, 1343], (B) or prior to the taking of necessary implementing actions relating to all such requirements, such conditions as the Administrator determines are necessary to carry out the provisions of this Act [33 USCS §§ 1251 et seq.].

(2) The Administrator shall prescribe conditions for such permits to assure compliance with the requirements of paragraph (1) of this subsection, including conditions on data and information collection, reporting, and such other requirements as he deems appropriate.

(3) The permit program of the Administrator under paragraph (1) of this subsection, and permits issued thereunder, shall be subject to the same terms, conditions, and requirements as apply to a State permit program and permits issued thereunder under subsection (b) of this section.

(4) All permits for discharges into the navigable waters issued pursuant to section 13 of the Act of March 3, 1899 [33 USCS § 407], shall be deemed to be permits issued under this title [33 USCS §§ 1341 et seq.], and permits issued under this title [33 USCS §§ 1341 et seq.] shall be deemed to be permits issued under section 13 of the Act of March 3, 1899 [33 USCS § 407], and shall continue in force and effect for their term unless revoked, modified, or suspended in accordance with the provisions of this Act [33 USCS §§ 1251 et seq.].

(5) No permit for a discharge into the navigable waters shall be issued under section 13 of the Act of March 3, 1899 [33 USCS § 407], after the date of enactment of this title [enacted Oct. 18, 1972]. Each application for a permit under section 13 of the Act of March 3, 1899 [33 USCS § 407], pending on the date of enactment of this Act [enacted Oct. 18, 1972], shall be deemed to be an application for a permit under this section. The Administrator shall authorize a State, which he determines has the capability of administering a permit program which will carry out the objective of this Act [33 USCS §§ 1251 et seq.], to issue permits for discharges into the navigable waters within the jurisdiction of such State. The Administrator may exercise the authority granted him by the preceding sentence only during the period which begins on the date of enactment of this Act [enacted Oct. 18, 1972] and ends either on the ninetieth day after the date of the first promulgation of guidelines required by section 304(h)(2) [304(i)(2)] of this Act [33 USCS § 1314(i)(2)], or the date of approval by the Administrator of a permit program for such State under subsection (b) of this section whichever date first occurs, and no such authorization to a State shall extend beyond the last day of such period. Each such permit shall be subject to such conditions as the Administrator determines are necessary to carry out the provisions of this Act [33 USCS §§ 1251 et seq.]. No such permit shall issue if the Administrator objects to such issuance.

(b) State permit programs. At any time after the promulgation of the guidelines required by subsection (h)(2) of section 304 [304(i)(2)] of this Act [33 USCS § 1314(i)(2)], the Governor of each State desiring to administer its own permit

program for discharges into navigable waters within its jurisdiction may submit to the Administrator a full and complete description of the program it proposes to establish and administer under State law or under an interstate compact. In addition, such State shall submit a statement from the attorney general (or the attorney for those State water pollution control agencies which have independent legal counsel), or from the chief legal officer in the case of an interstate agency, that the laws of such State, or the interstate compact, as the case may be, provide adequate authority to carry out the described program. The Administrator shall approve each such submitted program unless he determines that adequate authority does not exist:

- (1) To issue permits which--
 - (A) apply, and insure compliance with, any applicable requirements of sections 301, 302, 306, 307, and 403 [33 USCS §§ 1311, 1312, 1316, 1317, 1343];
 - (B) are for fixed terms not exceeding five years; and
 - (C) can be terminated or modified for cause including, but not limited to, the following:
 - (i) violation of any condition of the permit;
 - (ii) obtaining a permit by misrepresentation, or failure to disclose fully all relevant facts;
 - (iii) change in any condition that requires either a temporary or permanent reduction or elimination of the permitted discharge;
 - (D) control the disposal of pollutants into wells;
- (2) (A) To issue permits which apply, and insure compliance with, all applicable requirements of section 308 of this Act [33 USCS § 1318] or
- (B) To inspect, monitor, enter, and require reports to at least the same extent as required in section 308 of this Act [33 USCS § 1318];
- (3) To insure that the public, and any other State the waters of which may be affected, receive notice of each application for a permit and to provide an opportunity for public hearing before a ruling on each such application;
- (4) To insure that the Administrator receives notice of each application (including a copy thereof) for a permit;
- (5) To insure that any State (other than the permitting State), whose waters may be affected by the issuance of a permit may submit written recommendations to the permitting State (and the Administrator) with respect to any permit application and, if any part of such written recommendations are not accepted by the permitting State, that the permitting State will notify such affected State (and the Administrator) in writing of its failure to so accept such recommendations together with its reasons for so doing;
- (6) To insure that no permit will be issued if, in the judgment of the Secretary of the Army acting through the Chief of Engineers, after consultation with the Secretary of the department in which the Coast Guard is operating, anchorage and navigation of any of the navigable waters would be substantially impaired thereby;
- (7) To abate violations of the permit or the permit program, including civil and criminal penalties and other ways and means of enforcement;
- (8) To insure that any permit for a discharge from a publicly owned treatment works includes conditions to require the identification in terms of character and volume of pollutants of any significant source introducing pollutants subject to pretreatment standards under section 307(b) of this Act [33 USCS § 1317(b)] into such works and a program to assure compliance with such pretreatment standards by each such source, in addition to adequate notice to the permitting agency of (A) new introductions into such works of pollutants from any source which would be a new source as defined in section 306 [33 USCS § 1316] if such source were discharging pollutants, (B) new introductions of pollutants into such works from a

source which would be subject to section 301 [33 USCS § 1311] if it were discharging such pollutants, or (C) a substantial change in volume or character of pollutants being introduced into such works by a source introducing pollutants into such works at the time of issuance of the permit. Such notice shall include information on the quality and quantity of effluent to be introduced into such treatment works and any anticipated impact of such change in the quantity or quality of effluent to be discharged from such publicly owned treatment works; and

(9) To insure that any industrial user of any publicly owned treatment works will comply with sections 204(b), 307, and 308 [33 USCS §§ 1284(b), 1317, 1318].

(c) Suspension of Federal program upon submission of State program; withdrawal of approval of State program; return of State program to Administrator.

(1) Not later than ninety days after the date on which a State has submitted a program (or revision thereof) pursuant to subsection (b) of this section, the Administrator shall suspend the issuance of permits under subsection (a) of this section as to those discharges subject to such program unless he determines that the State permit program does not meet the requirements of subsection (b) of this section or does not conform to the guidelines issued under section 304(h)(2) [304(i)(2)] of this Act [33 USCS § 1314(i)(2)]. If the Administrator so determines, he shall notify the State of any revisions or modifications necessary to conform to such requirements or guidelines.

(2) Any State permit program under this section shall at all times be in accordance with this section and guidelines promulgated pursuant to section 304(h)(2) [304(i)(2)] of this Act [33 USCS § 1314(i)(2)].

(3) Whenever the Administrator determines after public hearing that a State is not administering a program approved under this section in accordance with requirements of this section, he shall so notify the State and, if appropriate corrective action is not taken within a reasonable time, not to exceed ninety days, the Administrator shall withdraw approval of such program. The Administrator shall not withdraw approval of any such program unless he shall first have notified the State, and made public, in writing, the reasons for such withdrawal.

(4) Limitations on partial permit program returns and withdrawals. A State may return to the Administrator administration, and the Administrator may withdraw under paragraph (3) of this subsection approval, of--

(A) a State partial permit program approved under subsection (n)(3) only if the entire permit program being administered by the State department or agency at the time is returned or withdrawn; and

(B) a State partial permit program approved under subsection (n)(4) only if an entire phased component of the permit program being administered by the State at the time is returned or withdrawn.

(d) Notification of Administrator.

(1) Each State shall transmit to the Administrator a copy of each permit application received by such State and provide notice to the Administrator of every action related to the consideration of such permit application, including each permit proposed to be issued by such State.

(2) No permit shall issue (A) if the Administrator within ninety days of the date of his notification under subsection (b)(5) of this section objects in writing to the issuance of such permit, or (B) if the Administrator within ninety days of the date of transmittal of the proposed permit by the State objects in writing to the issuance of such permit as being outside the guidelines and requirements of this Act [33 USCS §§ 1251 et seq.]. Whenever the Administrator objects to the issuance of a permit under this paragraph such written objection shall contain a statement of the reasons

for such objection and the effluent limitations and conditions which such permit would include if it were issued by the Administrator.

(3) The Administrator may, as to any permit application, waive paragraph (2) of this subsection.

(4) In any case where, after the date of enactment of this paragraph [enacted Dec. 27, 1977], the Administrator, pursuant to paragraph (2) of this subsection, objects to the issuance of a permit, on request of the State, a public hearing shall be held by the Administrator on such objection. If the State does not resubmit such permit revised to meet such objection within 30 days after completion of the hearing, or, if no hearing is requested within 90 days after the date of such objection, the Administrator may issue the permit pursuant to subsection (a) of this section for such source in accordance with the guidelines and requirements of this Act [33 USCS §§ 1251 et seq.].

(e) Waiver of notification requirement. In accordance with guidelines promulgated pursuant to subsection (h)(2) of section 304 [304(i)(2)] of this Act [33 USCS § 1314(i)(2)], the Administrator is authorized to waive the requirements of subsection (d) of this section at the time he approves a program pursuant to subsection (b) of this section for any category (including any class, type, or size within such category) of point sources within the State submitting such program.

(f) Point source categories. The Administrator shall promulgate regulations establishing categories of point sources which he determines shall not be subject to the requirements of subsection (d) of this section in any State with a program approved pursuant to subsection (b) of this section. The Administrator may distinguish among classes, types, and sizes within any category of point sources.

(g) Other regulations for safe transportation, handling, carriage, storage, and stowage of pollutants. Any permit issued under this section for the discharge of pollutants into the navigable waters from a vessel or other floating craft shall be subject to any applicable regulations promulgated by the Secretary of the department in which the Coast Guard is operating, establishing specifications for safe transportation, handling, carriage, storage, and stowage of pollutants.

(h) Violation of permit conditions; restriction or prohibition upon introduction of pollutant by source not previously utilizing treatment works. In the event any condition of a permit for discharges from a treatment works (as defined in section 212 of this Act [33 USCS § 1292]) which is publicly owned is violated, a State with a program approved under subsection (b) of this section or the Administrator, where no State program is approved or where the Administrator determines pursuant to section 309(a) of this Act [33 USCS § 1319(a)] that a State with an approved program has not commenced appropriate enforcement action with respect to such permit, may proceed in a court of competent jurisdiction to restrict or prohibit the introduction of any pollutant into such treatment works by a source not utilizing such treatment works prior to the finding that such condition was violated.

(i) Federal enforcement not limited. Nothing in this section shall be construed to limit the authority of the Administrator to take action pursuant to section 309 of this Act [33 USCS § 1319].

(j) Public information. A copy of each permit application and each permit issued under this section shall be available to the public. Such permit application or permit, or portion thereof, shall further be available on request for the purpose of

reproduction.

(k) Compliance with permits. Compliance with a permit issued pursuant to this section shall be deemed compliance, for purposes of sections 309 and 505 [33 USCS §§ 1319, 1365], with sections 301, 302, 306, 307, and 403 [33 USCS §§ 1311, 1312, 1316, 1317, 1343], except any standard imposed under section 307 [33 USCS § 1317] for a toxic pollutant injurious to human health. Until December 31, 1974, in any case where a permit for discharge has been applied for pursuant to this section, but final administrative disposition of such application has not been made, such discharge shall not be a violation of (1) section 301, 306, or 402 of this Act [33 USCS § 1311, 1316, or 1342], or (2) section 13 of the Act of March 3, 1899 [33 USCS § 407], unless the Administrator or other plaintiff proves that final administrative disposition of such application has not been made because of the failure of the applicant to furnish information reasonably required or requested in order to process the application. For the 180-day period beginning on the date of enactment of the Federal Water Pollution Control Act Amendments of 1972 [enacted Oct. 18, 1972], in the case of any point source discharging any pollutant or combination of pollutants immediately prior to such date of enactment which source is not subject to section 13 of the Act of March 3, 1899 [33 USCS § 407], the discharge by such source shall not be a violation of this Act [33 USCS §§ 1251 et seq.] if such a source applies for a permit for discharge pursuant to this section within such 180-day period.

(l) Limitation on permit requirement.

(1) Agricultural return flows. The Administrator shall not require a permit under this section for discharges composed entirely of return flows from irrigated agriculture, nor shall the Administrator directly or indirectly, require any State to require such a permit.

(2) Stormwater runoff from oil, gas, and mining operations. The Administrator shall not require a permit under this section, nor shall the Administrator directly or indirectly require any State to require a permit, for discharges of stormwater runoff from mining operations or oil and gas exploration, production, processing, or treatment operations or transmission facilities, composed entirely of flows which are from conveyances or systems of conveyances (including but not limited to pipes, conduits, ditches, and channels) used for collecting and conveying precipitation runoff and which are not contaminated by contact with, or do not come into contact with, any overburden, raw material, intermediate products, finished product, byproduct, or waste products located on the site of such operations.

(m) Additional pretreatment of conventional pollutants not required. To the extent a treatment works (as defined in section 212 of this Act [33 USCS § 1292]) which is publicly owned is not meeting the requirements of a permit issued under this section for such treatment works as a result of inadequate design or operation of such treatment works, the Administrator, in issuing a permit under this section, shall not require pretreatment by a person introducing conventional pollutants identified pursuant to section 304(a)(4) of this Act [33 USCS § 1314(a)(4)] into such treatment works other than pretreatment required to assure compliance with pretreatment standards under subsection (b)(8) of this section and section 307(b)(1) of this Act [33 USCS § 1317(b)(1)]. Nothing in this subsection shall affect the Administrator's authority under sections 307 and 309 of this Act [33 USCS §§ 1317, 1319], affect State and local authority under sections 307(b)(4) and 510 of this Act [33 USCS §§ 1317(b)(4), 1370], relieve such treatment works of its obligations to meet requirements established under this Act [33 USCS §§ 1251 et seq.], or

otherwise preclude such works from pursuing whatever feasible options are available to meet its responsibility to comply with its permit under this section.

(n) Partial permit program.

(1) State submission. The Governor of a State may submit under subsection (b) of this section a permit program for a portion of the discharges into the navigable waters in such State.

(2) Minimum coverage. A partial permit program under this subsection shall cover, at a minimum, administration of a major category of the discharges into the navigable waters of the State or a major component of the permit program required by subsection (b).

(3) Approval or major category partial permit programs. The Administrator may approve a partial permit program covering administration of a major category of discharges under this subsection if--

(A) such program represents a complete permit program and covers all of the discharges under the jurisdiction of a department or agency of the State; and

(B) the Administrator determines that the partial program represents a significant and identifiable part of the State program required by subsection (b).

(4) Approval of major component partial permit programs. The Administrator may approve under this subsection a partial and phased permit program covering administration of a major component (including discharge categories) of a State permit program required by subsection (b) if--

(A) the Administrator determines that the partial program represents a significant and identifiable part of the State program required by subsection (b); and

(B) the State submits, and the Administrator approves, a plan for the State to assume administration by phases of the remainder of the State program required by subsection (b) by a specified date not more than 5 years after submission of the partial program under this subsection and agrees to make all reasonable efforts to assume such administration by such date.

(o) Anti-backsliding.

(1) General prohibition. In the case of effluent limitations established on the basis of subsection (a)(1)(B) of this section, a permit may not be renewed, reissued, or modified on the basis of effluent guidelines promulgated under section 304(b) [33 USCS § 1314(b)] subsequent to the original issuance of such permit, to contain effluent limitations which are less stringent than the comparable effluent limitations in the previous permit. In the case of effluent limitations established on the basis of section 301(b)(1)(C) or section 303 (d) or (e) [33 USCS § 1311(b)(1)(C) or 1313(d) or (e)], a permit may not be renewed, reissued, or modified to contain effluent limitations which are less stringent than the comparable effluent limitations in the previous permit except in compliance with section 303(d)(4) [33 USCS § 1313(d)(4)].

(2) Exceptions. A permit with respect to which paragraph (1) applies may be renewed, reissued, or modified to contain a less stringent effluent limitation applicable to a pollutant if--

(A) material and substantial alterations or additions to the permitted facility occurred after permit issuance which justify the application of a less stringent effluent limitation;

(B) (i) information is available which was not available at the time of permit issuance (other than revised regulations, guidance, or test methods) and which would have justified the application of a less stringent effluent limitation at the time of permit issuance; or

(ii) the Administrator determines that technical mistakes or mistaken

interpretations of law were made in issuing the permit under subsection (a)(1)(B);

(C) a less stringent effluent limitation is necessary because of events over which the permittee has no control and for which there is no reasonably available remedy;

(D) the permittee has received a permit modification under section 301(c), 301(g), 301(h), 301(i), 301(k), 301(n), or 316(a) [33 USCS § 1311(c), (g), (h), (i), (k), (n), or 1326(a)]; or

(E) the permittee has installed the treatment facilities required to meet the effluent limitations in the previous permit and has properly operated and maintained the facilities but has nevertheless been unable to achieve the previous effluent limitations, in which case the limitations in the reviewed, reissued, or modified permit may reflect the level of pollutant control actually achieved (but shall not be less stringent than required by effluent guidelines in effect at the time of permit renewal, reissuance, or modification). Subparagraph (B) shall not apply to any revised waste load allocations or any alternative grounds for translating water quality standards into effluent limitations, except where the cumulative effect of such revised allocations results in a decrease in the amount of pollutants discharged into the concerned waters, and such revised allocations are not the result of a discharger eliminating or substantially reducing its discharge of pollutants due to complying with the requirements of this Act [33 USCS §§ 1251 et seq.] or for reasons otherwise unrelated to water quality.

(3) Limitations. In no event may a permit with respect to which paragraph (1) applies be renewed, reissued, or modified to contain an effluent limitation which is less stringent than required by effluent guidelines in effect at the time the permit is renewed, reissued, or modified. In no event may such a permit to discharge into waters be renewed, reissued, or modified to contain a less stringent effluent limitation if the implementation of such limitation would result in a violation of a water quality standard under section 303 [33 USCS § 1313] applicable to such waters.

(p) Municipal and industrial stormwater discharges.

(1) General rule. Prior to October 1, 1994, the Administrator or the State (in the case of a permit program approved under section 402 of this Act [this section]) shall not require a permit under this section for discharges composed entirely of stormwater.

(2) Exceptions. Paragraph (1) shall not apply with respect to the following stormwater discharges:

(A) A discharge with respect to which a permit has been issued under this section before the date of the enactment of this subsection [enacted Feb. 4, 1987].

(B) A discharge associated with industrial activity.

(C) A discharge from a municipal separate storm sewer system serving a population of 250,000 or more.

(D) A discharge from a municipal separate storm sewer system serving a population of 100,000 or more but less than 250,000.

(E) A discharge for which the Administrator or the State, as the case may be, determines that the stormwater discharge contributes to a violation of a water quality standard or is a significant contributor of pollutants to waters of the United States.

(3) Permit requirements.

(A) Industrial discharges. Permits for discharges associated with industrial activity shall meet all applicable provisions of this section and section 301 [33 USCS § 1311].

(B) Municipal discharge. Permits for discharges from municipal storm sewers--

(i) may be issued on a system- or jurisdiction-wide basis;

(ii) shall include a requirement to effectively prohibit non-stormwater discharges into the storm sewers; and

(iii) shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants.

(4) Permit application requirements.

(A) Industrial and large municipal discharges. Not later than 2 years after the date of the enactment of this subsection [enacted Feb. 4, 1987], the Administrator shall establish regulations setting forth the permit application requirements for stormwater discharges described in paragraphs (2)(B) and (2)(C). Applications for permits for such discharges shall be filed no later than 3 years after such date of enactment [enacted Feb. 4, 1987]. Not later than 4 years after such date of enactment [enacted Feb. 4, 1987], the Administrator or the State, as the case may be, shall issue or deny each such permit. Any such permit shall provide for compliance as expeditiously as practicable, but in no event later than 3 years after the date of issuance of such permit.

(B) Other municipal discharges. Not later than 4 years after the date of the enactment of this subsection [enacted Feb. 4, 1987], the Administrator shall establish regulations setting forth the permit application requirements for stormwater discharges described in paragraph (2)(D). Applications for permits for such discharges shall be filed no later than 5 years after such date of enactment [enacted Feb. 4, 1987]. Not later than 6 years after such date of enactment [enacted Feb. 4, 1987], the Administrator or the State, as the case may be, shall issue or deny each such permit. Any such permit shall provide for compliance as expeditiously as practicable, but in no event later than 3 years after the date of issuance of such permit.

(5) Studies. The Administrator, in consultation with the States, shall conduct a study for the purposes of--

(A) identifying those stormwater discharges or classes of stormwater discharges for which permits are not required pursuant to paragraphs (1) and (2) of this subsection;

(B) determining, to the maximum extent practicable, the nature and extent of pollutants in such discharges; and

(C) establishing procedures and methods to control stormwater discharges to the extent necessary to mitigate impacts on water quality.

Not later than October 1, 1988, the Administrator shall submit to Congress a report on the results of the study described in subparagraphs (A) and (B). Not later than October 1, 1989, the Administrator shall submit to Congress a report on the results of the study described in subparagraph (C).

(6) Regulations. Not later than October 1, 1993, the Administrator, in consultation with State and local officials, shall issue regulations (based on the results of the studies conducted under paragraph (5)) which designate stormwater discharges, other than those discharges described in paragraph (2), to be regulated to protect water quality and shall establish a comprehensive program to regulate such designated sources. The program shall, at a minimum, (A) establish priorities, (B) establish requirements for State stormwater management programs, and (C) establish expeditious deadlines. The program may include performance standards, guidelines, guidance, and management practices and treatment requirements, as appropriate.

(q) Combined sewer overflows.

(1) Requirement for permits, orders, and decrees. Each permit, order, or decree

issued pursuant to this Act [33 USCS §§ 1251 et seq.] after the date of enactment of this subsection [enacted Dec. 21, 2000] for a discharge from a municipal combined storm and sanitary sewer shall conform to the Combined Sewer Overflow Control Policy signed by the Administrator on April 11, 1994 (in this subsection referred to as the "CSO control policy").

(2) Water quality and designated use review guidance. Not later than July 31, 2001, and after providing notice and opportunity for public comment, the Administrator shall issue guidance to facilitate the conduct of water quality and designated use reviews for municipal combined sewer overflow receiving waters.

(3) Report. Not later than September 1, 2001, the Administrator shall transmit to Congress a report on the progress made by the Environmental Protection Agency, States, and municipalities in implementing and enforcing the CSO control policy.

(r) Discharges incidental to the normal operation of recreational vessels. No permit shall be required under this Act [33 USCS §§ 1251 et seq.] by the Administrator (or a State, in the case of a permit program approved under subsection (b)) for the discharge of any graywater, bilge water, cooling water, weather deck runoff, oil water separator effluent, or effluent from properly functioning marine engines, or any other discharge that is incidental to the normal operation of a vessel, if the discharge is from a recreational vessel.

33 USCS § 1370

§ 1370. State authority

Except as expressly provided in this Act [33 USCS §§ 1251 et seq.], nothing in this Act [33 USCS §§ 1251 et seq.] shall (1) preclude or deny the right of any State or political subdivision thereof or interstate agency to adopt or enforce (A) any standard or limitation respecting discharges of pollutants, or (B) any requirement respecting control or abatement of pollution; except that if an effluent limitation, or other limitation, effluent standard, prohibition, pretreatment standard, or standard of performance is in effect under this Act [33 USCS §§ 1251 et seq.], such State or political subdivision or interstate agency may not adopt or enforce any effluent limitation, or other limitation, effluent standard, prohibition, pretreatment standard, or standard of performance which is less stringent than the effluent limitation, or other limitation, effluent standard, prohibition, pretreatment standard, or standard of performance under this Act [33 USCS §§ 1251 et seq.]; or (2) be construed as impairing or in any manner affecting any right or jurisdiction of the States with respect to the waters (including boundary waters) of such States.

HISTORY:

(June 30, 1948, ch. 758, Title V, § 510, as added, Oct. 18, 1972, P.L. 92-500, § 2, 86 Stat. 893.)

TITLE 40 -- PROTECTION OF ENVIRONMENT
CHAPTER I -- ENVIRONMENTAL PROTECTION AGENCY
SUBCHAPTER D -- WATER PROGRAMS
PART 122 -- EPA ADMINISTERED PERMIT PROGRAMS: THE NATIONAL POLLUTANT DISCHARGE
ELIMINATION SYSTEM
SUBPART A -- DEFINITIONS AND GENERAL PROGRAM REQUIREMENTS

Go to the CFR Archive Directory

40 CFR 122.2

§ 122.2 Definitions.

The following definitions apply to parts 122, 123, and 124. Terms not defined in this section have the meaning given by CWA. When a defined term appears in a definition, the defined term is sometimes placed in quotation marks as an aid to readers.

Administrator means the Administrator of the United States Environmental Protection Agency, or an authorized representative.

Animal feeding operation is defined at § 122.23.

Applicable standards and limitations means all State, interstate, and federal standards and limitations to which a "discharge," a "sewage sludge use or disposal practice," or a related activity is subject under the CWA, including "effluent limitations," water quality standards, standards of performance, toxic effluent standards or prohibitions, "best management practices," pretreatment standards, and "standards for sewage sludge use or disposal" under sections 301, 302, 303, 304, 306, 307, 308, 403 and 405 of CWA.

Application means the EPA standard national forms for applying for a permit, including any additions, revisions or modifications to the forms; or forms approved by EPA for use in "approved States," including any approved modifications or revisions.

Approved program or approved State means a State or interstate program which has been approved or authorized by EPA under part 123.

Aquaculture project is defined at § 122.25.

Average monthly discharge limitation means the highest allowable average of "daily discharges" over a calendar month, calculated as the sum of all "daily discharges" measured during a calendar month divided by the number of "daily discharges" measured during that month.

40 CFR 122.2

Average weekly discharge limitation means the highest allowable average of "daily discharges" over a calendar week, calculated as the sum of all "daily discharges" measured during a calendar week divided by the number of "daily discharges" measured during that week.

Best management practices ("BMPs") means schedules of activities, prohibitions of practices, maintenance procedures, and other management practices to prevent or reduce the pollution of "waters of the United States." BMPs also include treatment requirements, operating procedures, and practices to control plant site runoff, spillage or leaks, sludge or waste disposal, or drainage from raw material storage.

BMPs means "best management practices."

Bypass is defined at § 122.41(m).

Class I sludge management facility means any POTW identified under 40 CFR 403.8(a) as being required to have an approved pretreatment program (including such POTWs located in a State that has elected to assume local program responsibilities pursuant to 40 CFR 403.10(e)) and any other treatment works treating domestic sewage classified as a Class I sludge management facility by the Regional Administrator, or, in the case of approved State programs, the Regional Administrator in conjunction with the State Director, because of the potential for its sludge use or disposal practices to adversely affect public health and the environment.

Concentrated animal feeding operation is defined at § 122.23.

Concentrated aquatic animal feeding operation is defined at § 122.24.

Contiguous zone means the entire zone established by the United States under Article 24 of the Convention on the Territorial Sea and the Contiguous Zone.

Continuous discharge means a "discharge" which occurs without interruption throughout the operating hours of the facility, except for infrequent shutdowns for maintenance, process changes, or other similar activities.

CWA means the Clean Water Act (formerly referred to as the Federal Water Pollution Control Act or Federal Water Pollution Control Act Amendments of 1972) Public Law 92-500, as amended by Public Law 95-217, Public Law 95-576, Public Law 96-483 and Public Law 97-117, 33 U.S.C. 1251 et seq.

CWA and regulations means the Clean Water Act (CWA) and applicable regulations promulgated thereunder. In the case of an approved State program, it includes State program requirements.

Daily discharge means the "discharge of a pollutant" measured during a calendar day or any 24-hour period that reasonably represents the calendar day for purposes of sampling. For pollutants with limitations expressed in units of mass, the "daily discharge" is calculated as the total mass of the pollutant discharged over the day. For pollutants with limitations expressed in other units of measurement, the "daily discharge" is calculated as the average measurement of the pollutant over the day.

Direct discharge means the "discharge of a pollutant."

Director means the Regional Administrator or the State Director, as the context requires, or an authorized representative. When there is no "approved State program," and there is an EPA administered program, "Director" means the Regional Administrator. When there is an approved State program, "Director" normally means the State Director. In some circumstances, however, EPA retains the authority to take certain actions even when there is an approved State program. (For example, when EPA has issued an NPDES permit prior to the approval of a State program, EPA may retain jurisdiction over that permit after program approval, see § 123.1.) In such cases, the term "Director" means the Regional Administrator and not the State Director.

Discharge when used without qualification means the "discharge of a pollutant."

Discharge of a pollutant means:

(a) Any addition of any "pollutant" or combination of pollutants to "waters of the United States" from any "point source," or

(b) Any addition of any pollutant or combination of pollutants to the waters of the "contiguous zone" or the ocean from any point source other than a vessel or other floating craft which is being used as a means of transportation.

This definition includes additions of pollutants into waters of the United States from: surface runoff which is collected or channelled by man; discharges through pipes, sewers, or other conveyances owned by a State, municipality, or other person which do not lead to a treatment works; and discharges through pipes, sewers, or other conveyances, leading into privately owned treatment works. This term does not include an addition of pollutants by any "indirect discharger."

Discharge Monitoring Report ("DMR") means the EPA uniform national form, including any subsequent additions, revisions, or modifications for the reporting of self-monitoring results by permittees. DMRs must be used by "approved States" as well as by EPA. EPA will supply DMRs to any approved State upon request. The EPA national forms may be modified to substitute the State Agency name, address, logo, and other similar information, as appropriate, in place of EPA's.

DMR means "Discharge Monitoring Report."

Draft permit means a document prepared under § 124.6 indicating the Director's tentative decision to issue or deny, modify, revoke and reissue, terminate, or reissue a "permit." A notice of intent to terminate a permit, and a notice of intent to deny a permit, as discussed in § 124.5, are types of "draft permits." A denial of a request for modification, revocation and reissuance, or termination, as discussed in § 124.5, is not a "draft permit." A "proposed permit" is not a "draft permit."

Effluent limitation means any restriction imposed by the Director on quantities, discharge rates, and concentrations of "pollutants" which are "discharged" from "point sources" into "waters of the United States," the waters of the "contiguous zone," or the ocean.

Effluent limitations guidelines means a regulation published by the Administrator under section 304(b) of CWA to adopt or revise "effluent limitations."

Environmental Protection Agency ("EPA") means the United States Environmental Protection Agency.

EPA means the United States "Environmental Protection Agency."

Facility or activity means any NPDES "point source" or any other facility or activity (including land or appurtenances thereto) that is subject to regulation under the NPDES program.

Federal Indian reservation means all land within the limits of any Indian *67981 reservation under the jurisdiction of the United States Government, notwithstanding the issuance of any patent, and including rights-of-way running through the reservation.

General permit means an NPDES "permit" issued under § 122.28 authorizing a category of discharges under the CWA within a geographical area.

Hazardous substance means any substance designated under 40 CFR part 116 pursuant to section 311 of CWA.

Indian country means:

(1) All land within the limits of any Indian reservation under the jurisdiction of the United States Government, notwithstanding the issuance of any patent, and, including rights-of-way running through the reservation;

(2) All dependent Indian communities with the borders of the United States whether within the originally or subsequently acquired territory thereof, and whether within or without the limits of a state; and

(3) All Indian allotments, the Indian titles to which have not been extinguished, including rights-of-way running through the same.

Indian Tribe means any Indian Tribe, band, group, or community recognized by the Secretary of the Interior and exercising governmental authority over a Federal Indian reservation.

Indirect discharger means a nondomestic discharger introducing "pollutants" to a "publicly owned treatment works."

Individual control strategy is defined at 40 CFR 123.46(c).

Interstate agency means an agency of two or more States established by or under an agreement or compact approved by the Congress, or any other agency of two or more States having substantial powers or duties pertaining to the control of pollution as determined and approved by the Administrator under the CWA and regulations.

Major facility means any NPDES "facility or activity" classified as such by the Regional Administrator, or, in the case of "approved State programs," the Regional Administrator in conjunction with the State Director.

Maximum daily discharge limitation means the highest allowable "daily discharge."

Municipal separate storm sewer system is defined at § 122.26 (b)(4) and (b)(7).

Municipality means a city, town, borough, county, parish, district, association, or other public body created by or under State law and having jurisdiction over disposal of sewage, industrial wastes, or other wastes, or an Indian tribe or an authorized Indian tribal organization, or a designated and approved management agency under section 208 of CWA.

National Pollutant Discharge Elimination System (NPDES) means the national program for issuing, modifying, revoking and reissuing, terminating, monitoring and enforcing permits, and imposing and enforcing pretreatment requirements, under sections 307, 402, 318, and 405 of CWA. The term includes an "approved program."

New discharger means any building, structure, facility, or installation:

- (a) From which there is or may be a "discharge of pollutants;"
- (b) That did not commence the "discharge of pollutants" at a particular "site" prior to August 13, 1979;
- (c) Which is not a "new source;" and
- (d) Which has never received a finally effective NPDES permit for discharges at that "site."

This definition includes an "indirect discharger" which commences discharging into "waters of the United States" after August 13, 1979. It also includes any existing mobile point source (other than an offshore or coastal oil and gas exploratory drilling rig or a coastal oil and gas developmental drilling rig) such as a seafood processing rig, seafood processing vessel, or aggregate plant, that begins discharging at a "site" for which it does not have a permit; and any offshore or coastal mobile oil and gas exploratory drilling rig or coastal mobile oil and gas developmental drilling rig that commences the discharge of pollutants after August 13, 1979, at a "site" under EPA's permitting jurisdiction for which it is not covered by an individual or general permit and which is located in an area determined by the Regional Administrator in the issuance of a final permit to be an area of biological concern. In determining whether an area is an area of biological concern, the Regional Administrator shall consider the factors specified in 40 CFR 125.122(a) (1) through (10).

An offshore or coastal mobile exploratory drilling rig or coastal mobile developmental drilling rig will be considered a "new discharger" only for the duration of its discharge in an area of biological concern.

New source means any building, structure, facility, or installation from which there is or may be a "discharge of pollutants," the construction of which commenced:

- (a) After promulgation of standards of performance under section 306 of CWA which are applicable to such source, or
- (b) After proposal of standards of performance in accordance with section 306 of CWA which are applicable to such source, but only if the standards are promulgated in accordance with section 306 within 120 days of their proposal.

NPDES means "National Pollutant Discharge Elimination System."

Owner or operator means the owner or operator of any "facility or activity" subject to regulation under the NPDES program.

Permit means an authorization, license, or equivalent control document issued by EPA or an "approved State" to implement the requirements of this part and parts 123 and 124. "Permit" includes an NPDES "general permit" (§ 122.28). Permit does not include any permit which has not yet been the subject of final agency action, such as a "draft permit" or a "proposed permit."

Person means an individual, association, partnership, corporation, municipality, State or Federal agency, or an agent or employee thereof.

Point source means any discernible, confined, and discrete conveyance, including but not limited to, any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, landfill leachate collection system, vessel or other floating craft from which pollutants are or may be discharged. This term does not include return flows from irrigated agriculture or agricultural storm water runoff. (See § 122.3).

Pollutant means dredged spoil, solid waste, incinerator residue, filter backwash, sewage, garbage, sewage sludge, munitions, chemical wastes, biological materials, radioactive materials (except those regulated under the Atomic Energy Act of 1954, as amended (*42 U.S.C. 2011 et seq.*)), heat, wrecked or discarded equipment, rock, sand, cellar dirt and industrial, municipal, and agricultural waste discharged into water. It does not mean:

(a) Sewage from vessels; or

(b) Water, gas, or other material which is injected into a well to facilitate production of oil or gas, or water derived in association with oil and gas production and disposed of in a well, if the well used either to facilitate production or for disposal purposes is approved by authority of the State in which the well is located, and if the State determines that the injection or disposal will not result in the degradation of ground or surface water resources.

NOTE: Radioactive materials covered by the Atomic Energy Act are those encompassed in its definition of source, byproduct, or special nuclear materials. Examples of materials not covered include radium and accelerator-produced isotopes. See *Train v. Colorado Public Interest Research Group, Inc.*, 426 U.S. 1 (1976).

POTW is defined at § 403.3 of this chapter.

Primary industry category means any industry category listed in the NRDC settlement agreement (*Natural Resources Defense Council et al. v. Train*, 8 E.R.C. 2120 (D.D.C. 1976), modified 12 E.R.C. 1833 (D.D.C. 1979)); also listed in appendix A of part 122.

Privately owned treatment works means any device or system which is (a) used to treat wastes from any facility whose operator is not the operator of the treatment works and (b) not a "POTW."

Process wastewater means any water which, during manufacturing or processing, comes into direct contact with or results from the production or use of any raw material, intermediate product, finished product, byproduct, or waste product.

Proposed permit means a State NPDES "permit" prepared after the close of the public comment period (and, when applicable, any public hearing and administrative appeals) which is sent to EPA for review before final issuance by the State. A "proposed permit" is not a "draft permit."

Publicly owned treatment works is defined at 40 CFR 403.3.

Recommencing discharger means a source which recommences discharge after terminating operations.

Regional Administrator means the Regional Administrator of the appropriate Regional Office of the Environmental Protection Agency or the authorized representative of the Regional Administrator.

Schedule of compliance means a schedule of remedial measures included in a "permit", including an enforceable sequence of interim requirements (for example, actions, operations, or milestone events) leading to compliance with the CWA and regulations.

Secondary industry category means any industry category which is not a "primary industry category."

Secretary means the Secretary of the Army, acting through the Chief of Engineers.

Septage means the liquid and solid material pumped from a septic tank, cesspool, or similar domestic sewage treatment system, or a holding tank when the system is cleaned or maintained.

Sewage from vessels means human body wastes and the wastes from toilets and other receptacles intended to receive or retain body wastes that are discharged from vessels and regulated under section 312 of CWA, except that with respect to commercial vessels on the Great Lakes this term includes graywater. For the purposes of this definition, "graywater" means galley, bath, and shower water.

Sewage Sludge means any solid, semi-solid, or liquid residue removed during the treatment of municipal waste water or domestic sewage. Sewage sludge includes, but is not limited to, solids removed during primary, secondary, or advanced waste water treatment, scum, septage, portable toilet pumpings, type III marine sanitation device pumpings

(33 CFR part 159), and sewage sludge products. Sewage sludge does not include grit or screenings, or ash generated during the incineration of sewage sludge.

Sewage sludge use or disposal practice means the collection, storage, treatment, transportation, processing, monitoring, use, or disposal of sewage sludge.

Silvicultural point source is defined at § 122.27.

Site means the land or water area where any "facility or activity" is physically located or conducted, including adjacent land used in connection with the facility or activity.

Sludge-only facility means any "treatment works treating domestic sewage" whose methods of sewage sludge use or disposal are subject to regulations promulgated pursuant to section 405(d) of the CWA and is required to obtain a permit under § 122.1(b)(2).

Standards for sewage sludge use or disposal means the regulations promulgated pursuant to section 405(d) of the CWA which govern minimum requirements for sludge quality, management practices, and monitoring and reporting applicable to sewage sludge or the use or disposal of sewage sludge by any person.

State means any of the 50 States, the District of Columbia, Guam, the Commonwealth of Puerto Rico, the Virgin Islands, American Samoa, the Commonwealth of the Northern Mariana Islands, the Trust Territory of the Pacific Islands, or an Indian Tribe as defined in these regulations which meets the requirements of § 123.31 of this chapter.

State Director means the chief administrative officer of any State or interstate agency operating an "approved program," or the delegated representative of the State Director. If responsibility is divided among two or more State or interstate agencies, "State Director" means the chief administrative officer of the State or interstate agency authorized to perform the particular procedure or function to which reference is made.

State/EPA Agreement means an agreement between the Regional Administrator and the State which coordinates EPA and State activities, responsibilities and programs including those under the CWA programs.

Storm water is defined at § 122.26(b)(13).

Storm water discharge associated with industrial activity is defined at § 122.26(b)(14).

Total dissolved solids means the total dissolved (filterable) solids as determined by use of the method specified in 40 CFR part 136.

Toxic pollutant means any pollutant listed as toxic under section 307(a)(1) or, in the case of "sludge use or disposal practices," any pollutant identified in regulations implementing section 405(d) of the CWA.

Treatment works treating domestic sewage means a POTW or any other sewage sludge or waste water treatment devices or systems, regardless of ownership (including federal facilities), used in the storage, treatment, recycling, and reclamation of municipal or domestic sewage, including land dedicated for the disposal of sewage sludge. This definition does not include septic tanks or similar devices. For purposes of this definition, "domestic sewage" includes waste and waste water from humans or household operations that are discharged to or otherwise enter a treatment works. In States where there is no approved State sludge management program under section 405(f) of the CWA, the Regional Administrator may designate any person subject to the standards for sewage sludge use and disposal in 40 CFR part 503 as a "treatment works treating domestic sewage," where he or she finds that there is a potential for adverse effects on public health and the environment from poor sludge quality or poor sludge handling, use or disposal practices, or where he or she finds that such designation is necessary to ensure that such person is in compliance with 40 CFR part 503.

TWTDS means "treatment works treating domestic sewage."

Upset is defined at § 122.41(n).

Variance means any mechanism or provision under section 301 or 316 of CWA or under 40 CFR part 125, or in the applicable "effluent limitations guidelines" which allows modification to or waiver of the generally applicable effluent limitation requirements or time deadlines of CWA. This includes provisions which allow the establishment of alternative limitations based on fundamentally different factors or on sections 301(c), 301(g), 301(h), 301(i), or 316(a) of CWA.

Waters of the United States or waters of the U.S. means:

40 CFR 122.2

- (a) All waters which are currently used, were used in the past, or may be susceptible to use in interstate or foreign commerce, including all waters which are subject to the ebb and flow of the tide;
- (b) All interstate waters, including interstate "wetlands;"
- (c) All other waters such as intrastate lakes, rivers, streams (including intermittent streams), mudflats, sandflats, "wetlands," sloughs, prairie potholes, wet meadows, playa lakes, or natural ponds the use, degradation, or destruction of which would affect or could affect interstate or foreign commerce including any such waters:
- (1) Which are or could be used by interstate or foreign travelers for recreational or other purposes;
 - (2) From which fish or shellfish are or could be taken and sold in interstate or foreign commerce; or
 - (3) Which are used or could be used for industrial purposes by industries in interstate commerce;
- (d) All impoundments of waters otherwise defined as waters of the United States under this definition;
- (e) Tributaries of waters identified in paragraphs (a) through (d) of this definition;
- (f) The territorial sea; and
- (g) "Wetlands" adjacent to waters (other than waters that are themselves wetlands) identified in paragraphs (a) through (f) of this definition.

Waste treatment systems, including treatment ponds or lagoons designed to meet the requirements of CWA (other than cooling ponds as defined in 40 CFR 423.11(m) which also meet the criteria of this definition) are not waters of the United States. This exclusion applies only to manmade bodies of water which neither were originally created in waters of the United States (such as disposal area in wetlands) nor resulted from the impoundment of waters of the United States. [See Note 1 of this section.] Waters of the United States do not include prior converted cropland. Notwithstanding the determination of an area's status as prior converted cropland by any other federal agency, for the purposes of the Clean Water Act, the final authority regarding Clean Water Act jurisdiction remains with EPA.

Wetlands means those areas that are inundated or saturated by surface or groundwater at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include swamps, marshes, bogs, and similar areas.

Whole effluent toxicity means the aggregate toxic effect of an effluent measured directly by a toxicity test.

NOTE: At 45 FR 48620, July 21, 1980, the Environmental Protection Agency suspended until further notice in § 122.2, the last sentence, beginning "This exclusion applies . . ." in the definition of "Waters of the United States." This revision continues that suspension. n1

n1 EDITORIAL NOTE: The words "This revision" refer to the document published at 48 FR 14153, Apr. 1, 1983.

HISTORY: [48 FR 14153, Apr. 1, 1983, as amended at 48 FR 39619, Sept. 1, 1983; 50 FR 6940, 6941, Feb. 19, 1985; 54 FR 254, Jan. 4, 1989; 54 FR 18781, May 2, 1989; 54 FR 23895, June 2, 1989; 58 FR 45037, Aug. 25, 1993 as corrected at 58 FR 48424, Sept. 15, 1993; 58 FR 67980, Dec. 22, 1993; 64 FR 41434, 42462, Aug. 4, 1999, as corrected at 64 FR 43426, Aug. 10, 1999; 65 FR 30886, 30905, May 15, 2000]

CHAPTER I -- ENVIRONMENTAL PROTECTION AGENCY
SUBCHAPTER D -- WATER PROGRAMS
PART 122 -- EPA ADMINISTERED PERMIT PROGRAMS: THE NATIONAL POLLUTANT DISCHARGE
ELIMINATION SYSTEM
SUBPART B -- PERMIT APPLICATION AND SPECIAL NPDES PROGRAM REQUIREMENTS

Go to the CFR Archive Directory

40 CFR 122.26

§ 122.26 Storm water discharges (applicable to State NPDES programs, see § 123.25).

(a) Permit requirement. (1) Prior to October 1, 1994, discharges composed entirely of storm water shall not be required to obtain a NPDES permit except:

- (i) A discharge with respect to which a permit has been issued prior to February 4, 1987;
- (ii) A discharge associated with industrial activity (see § 122.26(a)(4));
- (iii) A discharge from a large municipal separate storm sewer system;
- (iv) A discharge from a medium municipal separate storm sewer system;

(v) A discharge which the Director, or in States with approved NPDES programs, either the Director or the EPA Regional Administrator, determines to contribute to a violation of a water quality standard or is a significant contributor of pollutants to waters of the United States. This designation may include a discharge from any conveyance or system of conveyances used for collecting and conveying storm water runoff or a system of discharges from municipal separate storm sewers, except for those discharges from conveyances which do not require a permit under paragraph (a)(2) of this section or agricultural storm water runoff which is exempted from the definition of point source at § 122.2.

The Director may designate discharges from municipal separate storm sewers on a system-wide or jurisdiction-wide basis. In making this determination the Director may consider the following factors:

- (A) The location of the discharge with respect to waters of the United States as defined at 40 CFR 122.2.
- (B) The size of the discharge;
- (C) The quantity and nature of the pollutants discharged to waters of the United States; and
- (D) Other relevant factors.

(2) The Director may not require a permit for discharges of storm water runoff from the following:

(i) Mining operations composed entirely of flows which are from conveyances or systems of conveyances (including but not limited to pipes, conduits, ditches, and channels) used for collecting and conveying precipitation runoff and which are not contaminated by contact with or that have not come into contact with, any overburden, raw material, intermediate products, finished product, byproduct, or waste products located on the site of such operations, except in accordance with paragraph (c)(1)(iv) of this section.

(ii) All field activities or operations associated with oil and gas exploration, production, processing, or treatment operations or transmission facilities, including activities necessary to prepare a site for drilling and for the movement and placement of drilling equipment, whether or not such field activities or operations may be considered to be construction activities, except in accordance with paragraph (c)(1)(iii) of this section. Discharges of sediment from construction activities associated with oil and gas exploration, production, processing, or treatment operations or transmission facilities are not subject to the provisions of paragraph (c)(1)(iii)(C) of this section.

Note to paragraph (a)(2)(ii): EPA encourages operators of oil and gas field activities or operations to implement and maintain Best Management Practices (BMPs) to minimize discharges of pollutants, including sediment, in storm water both during and after construction activities to help ensure protection of surface water quality during storm events. Appropriate controls would be those suitable to the site conditions and consistent with generally accepted engineering design criteria and manufacturer specifications. Selection of BMPs could also be affected by seasonal or climate conditions.

(3) Large and medium municipal separate storm sewer systems. (i) Permits must be obtained for all discharges from large and medium municipal separate storm sewer systems.

(ii) The Director may either issue one system-wide permit covering all discharges from municipal separate storm sewers within a large or medium municipal storm sewer system or issue distinct permits for appropriate categories of discharges within a large or medium municipal separate storm sewer system including, but not limited to: all discharges owned or operated by the same municipality; located within the same jurisdiction; all discharges within a system that discharge to the same watershed; discharges within a system that are similar in nature; or for individual discharges from municipal separate storm sewers within the system.

(iii) The operator of a discharge from a municipal separate storm sewer which is part of a large or medium municipal separate storm sewer system must either:

(A) Participate in a permit application (to be a permittee or a co-permittee) with one or more other operators of discharges from the large or medium municipal storm sewer system which covers all, or a portion of all, discharges from the municipal separate storm sewer system;

(B) Submit a distinct permit application which only covers discharges from the municipal separate storm sewers for which the operator is responsible; or

(C) A regional authority may be responsible for submitting a permit application under the following guidelines:

(1) The regional authority together with co-applicants shall have authority over a storm water management program that is in existence, or shall be in existence at the time part 1 of the application is due;

(2) The permit applicant or co-applicants shall establish their ability to make a timely submission of part 1 and part 2 of the municipal application;

(3) Each of the operators of municipal separate storm sewers within the systems described in paragraphs (b)(4) (i), (ii), and (iii) or (b)(7) (i), (ii), and (iii) of this section, that are under the purview of the designated regional authority, shall comply with the application requirements of paragraph (d) of this section.

(iv) One permit application may be submitted for all or a portion of all municipal separate storm sewers within adjacent or interconnected large or medium municipal separate storm sewer systems. The Director may issue one system-wide permit covering all, or a portion of all municipal separate storm sewers in adjacent or interconnected large or medium municipal separate storm sewer systems.

(v) Permits for all or a portion of all discharges from large or medium municipal separate storm sewer systems that are issued on a system-wide, jurisdiction-wide, watershed or other basis may specify different conditions relating to different discharges covered by the permit, including different management programs for different drainage areas which contribute storm water to the system.

(vi) Co-permittees need only comply with permit conditions relating to discharges from the municipal separate storm sewers for which they are operators.

(4) Discharges through large and medium municipal separate storm sewer systems. In addition to meeting the requirements of paragraph (c) of this section, an operator of a storm water discharge associated with industrial activity which discharges through a large or medium municipal separate storm sewer system shall submit, to the operator of the municipal separate storm sewer system receiving the discharge no later than May 15, 1991, or 180 days prior to commencing such discharge: the name of the facility; a contact person and phone number; the location of the discharge; a description, including Standard Industrial Classification, which best reflects the principal products or services provided by each facility; and any existing NPDES permit number.

(5) Other municipal separate storm sewers. The Director may issue permits for municipal separate storm sewers that are designated under paragraph (a)(1)(v) of this section on a system-wide basis, jurisdiction-wide basis, watershed basis or other appropriate basis, or may issue permits for individual discharges.

(6) Non-municipal separate storm sewers. For storm water discharges associated with industrial activity from point sources which discharge through a non-municipal or non-publicly owned separate storm sewer system, the Director, in his discretion, may issue: a single NPDES permit, with each discharger a co-permittee to a permit issued to the operator of the portion of the system that discharges into waters of the United States; or, individual permits to each discharger of storm water associated with industrial activity through the non-municipal conveyance system.

(i) All storm water discharges associated with industrial activity that discharge through a storm water discharge system that is not a municipal separate storm sewer must be covered by an individual permit, or a permit issued to the operator of the portion of the system that discharges to waters of the United States, with each discharger to the non-municipal conveyance a co-permittee to that permit.

(ii) Where there is more than one operator of a single system of such conveyances, all operators of storm water discharges associated with industrial activity must submit applications.

(iii) Any permit covering more than one operator shall identify the effluent limitations, or other permit conditions, if any, that apply to each operator.

(7) Combined sewer systems. Conveyances that discharge storm water runoff combined with municipal sewage are point sources that must obtain NPDES permits in accordance with the procedures of § 122.21 and are not subject to the provisions of this section.

(8) Whether a discharge from a municipal separate storm sewer is or is not subject to regulation under this section shall have no bearing on whether the owner or operator of the discharge is eligible for funding under title II, title III or title VI of the Clean Water Act. See 40 CFR part 35, subpart I, appendix A(b)H.2.j.

(9)(i) On and after October 1, 1994, for discharges composed entirely of storm water, that are not required by paragraph (a)(1) of this section to obtain a permit, operators shall be required to obtain a NPDES permit only if:

(A) The discharge is from a small MS4 required to be regulated pursuant to § 122.32;

(B) The discharge is a storm water discharge associated with small construction activity pursuant to paragraph (b)(15) of this section;

(C) The Director, or in States with approved NPDES programs either the Director or the EPA Regional Administrator, determines that storm water controls are needed for the discharge based on wasteload allocations that are part of "total maximum daily loads" (TMDLs) that address the pollutant(s) of concern; or

(D) The Director, or in States with approved NPDES programs either the Director or the EPA Regional Administrator, determines that the discharge, or category of discharges within a geographic area, contributes to a violation of a water quality standard or is a significant contributor of pollutants to waters of the United States.

(ii) Operators of small MS4s designated pursuant to paragraphs (a)(9)(i)(A), (a)(9)(i)(C), and (a)(9)(i)(D) of this section shall seek coverage under an NPDES permit in accordance with §§ 122.33 through 122.35. Operators of non-municipal sources designated pursuant to paragraphs (a)(9)(i)(B), (a)(9)(i)(C), and (a)(9)(i)(D) of this section shall seek coverage under an NPDES permit in accordance with paragraph (c)(1) of this section.

(iii) Operators of storm water discharges designated pursuant to paragraphs (a)(9)(i)(C) and (a)(9)(i)(D) of this section shall apply to the Director for a permit within 180 days of receipt of notice, unless permission for a later date is granted by the Director (see § 124.52(c) of this chapter).

(b) Definitions. (1) Co-permittee means a permittee to a NPDES permit that is only responsible for permit conditions relating to the discharge for which it is operator.

(2) Illicit discharge means any discharge to a municipal separate storm sewer that is not composed entirely of storm water except discharges pursuant to a NPDES permit (other than the NPDES permit for discharges from the municipal separate storm sewer) and discharges resulting from fire fighting activities.

(3) Incorporated place means the District of Columbia, or a city, town, township, or village that is incorporated under the laws of the State in which it is located.

(4) Large municipal separate storm sewer system means all municipal separate storm sewers that are either:

(i) Located in an incorporated place with a population of 250,000 or more as determined by the 1990 Decennial Census by the Bureau of the Census (Appendix F of this part); or

(ii) Located in the counties listed in appendix H, except municipal separate storm sewers that are located in the incorporated places, townships or towns within such counties; or

(iii) Owned or operated by a municipality other than those described in paragraph (b)(4)(i) or (ii) of this section and that are designated by the Director as part of the large or medium municipal separate storm sewer system due to the interrelationship between the discharges of the designated storm sewer and the discharges from municipal separate storm sewers described under paragraph (b)(4)(i) or (ii) of this section. In making this determination the Director may consider the following factors:

(A) Physical interconnections between the municipal separate storm sewers;

(B) The location of discharges from the designated municipal separate storm sewer relative to discharges from municipal separate storm sewers described in paragraph (b)(4)(i) of this section;

(C) The quantity and nature of pollutants discharged to waters of the United States;

(D) The nature of the receiving waters; and

(E) Other relevant factors; or

(iv) The Director may, upon petition, designate as a large municipal separate storm sewer system, municipal separate storm sewers located within the boundaries of a region defined by a storm water management regional authority based on a jurisdictional, watershed, or other appropriate basis that includes one or more of the systems described in paragraph (b)(4)(i), (ii), (iii) of this section.

(5) Major municipal separate storm sewer outfall (or "major outfall") means a municipal separate storm sewer outfall that discharges from a single pipe with an inside diameter of 36 inches or more or its equivalent (discharge from a single conveyance other than circular pipe which is associated with a drainage area of more than 50 acres); or for municipal separate storm sewers that receive storm water from lands zoned for industrial activity (based on comprehensive zoning plans or the equivalent), an outfall that discharges from a single pipe with an inside diameter of 12 inches or more or from its equivalent (discharge from other than a circular pipe associated with a drainage area of 2 acres or more).

(6) Major outfall means a major municipal separate storm sewer outfall.

(7) Medium municipal separate storm sewer system means all municipal separate storm sewers that are either:

(i) Located in an incorporated place with a population of 100,000 or more but less than 250,000, as determined by the 1990 Decennial Census by the Bureau of the Census (Appendix G of this part); or

(ii) Located in the counties listed in appendix I, except municipal separate storm sewers that are located in the incorporated places, townships or towns within such counties; or

(iii) Owned or operated by a municipality other than those described in paragraph (b)(7)(i) or (ii) of this section and that are designated by the Director as part of the large or medium municipal separate storm sewer system due to the

interrelationship between the discharges of the designated storm sewer and the discharges from municipal separate storm sewers described under paragraph (b)(7)(i) or (ii) of this section. In making this determination the Director may consider the following factors:

(A) Physical interconnections between the municipal separate storm sewers;

(B) The location of discharges from the designated municipal separate storm sewer relative to discharges from municipal separate storm sewers described in paragraph (b)(7)(i) of this section;

(C) The quantity and nature of pollutants discharged to waters of the United States;

(D) The nature of the receiving waters; or

(E) Other relevant factors; or

(iv) The Director may, upon petition, designate as a medium municipal separate storm sewer system, municipal separate storm sewers located within the boundaries of a region defined by a storm water management regional authority based on a jurisdictional, watershed, or other appropriate basis that includes one or more of the systems described in paragraphs (b)(7)(i), (ii), (iii) of this section.

(8) Municipal separate storm sewer means a conveyance or system of conveyances (including roads with drainage systems, municipal streets, catch basins, curbs, gutters, ditches, man-made channels, or storm drains):

(i) Owned or operated by a State, city, town, borough, county, parish, district, association, or other public body (created by or pursuant to State law) having jurisdiction over disposal of sewage, industrial wastes, storm water, or other wastes, including special districts under State law such as a sewer district, flood control district or drainage district, or similar entity, or an Indian tribe or an authorized Indian tribal organization, or a designated and approved management agency under section 208 of the CWA that discharges to waters of the United States;

(ii) Designed or used for collecting or conveying storm water;

(iii) Which is not a combined sewer; and

(iv) Which is not part of a Publicly Owned Treatment Works (POTW) as defined at 40 CFR 122.2.

(9) Outfall means a point source as defined by 40 CFR 122.2 at the point where a municipal separate storm sewer discharges to waters of the United States and does not include open conveyances connecting two municipal separate storm sewers, or pipes, tunnels or other conveyances which connect segments of the same stream or other waters of the United States and are used to convey waters of the United States.

(10) Overburden means any material of any nature, consolidated or unconsolidated, that overlies a mineral deposit, excluding topsoil or similar naturally-occurring surface materials that are not disturbed by mining operations.

(11) Runoff coefficient means the fraction of total rainfall that will appear at a conveyance as runoff.

(12) Significant materials includes, but is not limited to: raw materials; fuels; materials such as solvents, detergents, and plastic pellets; finished materials such as metallic products; raw materials used in food processing or production; hazardous substances designated under section 101(14) of CERCLA; any chemical the facility is required to report pursuant to section 313 of title III of SARA; fertilizers; pesticides; and waste products such as ashes, slag and sludge that have the potential to be released with storm water discharges.

(13) Storm water means storm water runoff, snow melt runoff, and surface runoff and drainage.

(14) Storm water discharge associated with industrial activity means the discharge from any conveyance that is used for collecting and conveying storm water and that is directly related to manufacturing, processing or raw materials storage areas at an industrial plant. The term does not include discharges from facilities or activities excluded from the NPDES program under this part 122. For the categories of industries identified in this section, the term includes, but is not limited to, storm water discharges from industrial plant yards; immediate access roads and rail lines used or traveled by carriers of raw materials, manufactured products, waste material, or by-products used or created by the facility; material handling sites; refuse sites; sites used for the application or disposal of process waste waters (as defined at part 401 of this chapter); sites used for the storage and maintenance of material handling equipment; sites used for residual treatment, storage, or disposal; shipping and receiving areas; manufacturing buildings; storage areas (including tank farms) for raw materials, and intermediate and final products; and areas where industrial activity has taken place in the

past and significant materials remain and are exposed to storm water. For the purposes of this paragraph, material handling activities include storage, loading and unloading, transportation, or conveyance of any raw material, intermediate product, final product, by-product or waste product. The term excludes areas located on plant lands separate from the plant's industrial activities, such as office buildings and accompanying parking lots as long as the drainage from the excluded areas is not mixed with storm water drained from the above described areas. Industrial facilities (including industrial facilities that are federally, State, or municipally owned or operated that meet the description of the facilities listed in paragraphs (b)(14)(i) through (xi) of this section) include those facilities designated under the provisions of paragraph (a)(1)(v) of this section. The following categories of facilities are considered to be engaging in "industrial activity" for purposes of paragraph (b)(14):

(i) Facilities subject to storm water effluent limitations guidelines, new source performance standards, or toxic pollutant effluent standards under 40 CFR subchapter N (except facilities with toxic pollutant effluent standards which are exempted under category (xi) in paragraph (b)(14) of this section);

(ii) Facilities classified as Standard Industrial Classifications 24 (except 2434), 26 (except 265 and 267), 28 (except 283), 29, 311, 32 (except 323), 33, 3441, 373;

(iii) Facilities classified as Standard Industrial Classifications 10 through 14 (mineral industry) including active or inactive mining operations (except for areas of coal mining operations no longer meeting the definition of a reclamation area under 40 CFR 434.11(1) because the performance bond issued to the facility by the appropriate SMCRA authority has been released, or except for areas of non-coal mining operations which have been released from applicable State or Federal reclamation requirements after December 17, 1990) and oil and gas exploration, production, processing, or treatment operations, or transmission facilities that discharge storm water contaminated by contact with or that has come into contact with, any overburden, raw material, intermediate products, finished products, byproducts or waste products located on the site of such operations; (inactive mining operations are mining sites that are not being actively mined, but which have an identifiable owner/operator; inactive mining sites do not include sites where mining claims are being maintained prior to disturbances associated with the extraction, beneficiation, or processing of mined materials, nor sites where minimal activities are undertaken for the sole purpose of maintaining a mining claim);

(iv) Hazardous waste treatment, storage, or disposal facilities, including those that are operating under interim status or a permit under subtitle C of RCRA;

(v) Landfills, land application sites, and open dumps that receive or have received any industrial wastes (waste that is received from any of the facilities described under this subsection) including those that are subject to regulation under subtitle D of RCRA;

(vi) Facilities involved in the recycling of materials, including metal scrapyards, battery reclaimers, salvage yards, and automobile junkyards, including but limited to those classified as Standard Industrial Classification 5015 and 5093;

(vii) Steam electric power generating facilities, including coal handling sites;

(viii) Transportation facilities classified as Standard Industrial Classifications 40, 41, 42 (except 4221-25), 43, 44, 45, and 5171 which have vehicle maintenance shops, equipment cleaning operations, or airport deicing operations. Only those portions of the facility that are either involved in vehicle maintenance (including vehicle rehabilitation, mechanical repairs, painting, fueling, and lubrication), equipment cleaning operations, airport deicing operations, or which are otherwise identified under paragraphs (b)(14) (i)-(vii) or (ix)-(xi) of this section are associated with industrial activity;

(ix) Treatment works treating domestic sewage or any other sewage sludge or wastewater treatment device or system, used in the storage treatment, recycling, and reclamation of municipal or domestic sewage, including land dedicated to the disposal of sewage sludge that are located within the confines of the facility, with a design flow of 1.0 mgd or more, or required to have an approved pretreatment program under 40 CFR part 403. Not included are farm lands, domestic gardens or lands used for sludge management where sludge is beneficially reused and which are not physically located in the confines of the facility, or areas that are in compliance with section 405 of the CWA;

(x) Construction activity including clearing, grading and excavation, except operations that result in the disturbance of less than five acres of total land area. Construction activity also includes the disturbance of less than five acres of total land area that is a part of a larger common plan of development or sale if the larger common plan will ultimately disturb five acres or more;

(xi) Facilities under Standard Industrial Classifications 20, 21, 22, 23, 2434, 25, 265, 267, 27, 283, 285, 30, 31 (except 311), 323, 34 (except 3441), 35, 36, 37 (except 373), 38, 39, and 4221-25;

(15) Storm water discharge associated with small construction activity means the discharge of storm water from:

(i) Construction activities including clearing, grading, and excavating that result in land disturbance of equal to or greater than one acre and less than five acres. Small construction activity also includes the disturbance of less than one acre of total land area that is part of a larger common plan of development or sale if the larger common plan will ultimately disturb equal to or greater than one and less than five acres. Small construction activity does not include routine maintenance that is performed to maintain the original line and grade, hydraulic capacity, or original purpose of the facility. The Director may waive the otherwise applicable requirements in a general permit for a storm water discharge from construction activities that disturb less than five acres where:

(A) The value of the rainfall erosivity factor ("R" in the Revised Universal Soil Loss Equation) is less than five during the period of construction activity. The rainfall erosivity factor is determined in accordance with Chapter 2 of Agriculture Handbook Number 703, Predicting Soil Erosion by Water: A Guide to Conservation Planning With the Revised Universal Soil Loss Equation (RUSLE), pages 21-64, dated January 1997. The Director of the Federal Register approves this incorporation by reference in accordance with 5 U.S.C 552(a) and 1 CFR part 51. Copies may be obtained from EPA's Water Resource Center, Mail Code RC4100, 1200 Pennsylvania Ave., NW., Washington, DC 20460. A copy is also available for inspection at the U.S. EPA Water Docket, 1200 Pennsylvania Ave., NW., Washington, DC 20460, or the Office of the Federal Register, 800 N. Capitol Street N.W. Suite 700, Washington, DC. An operator must certify to the Director that the construction activity will take place during a period when the value of the rainfall erosivity factor is less than five; or

(B) Storm water controls are not needed based on a "total maximum daily load" (TMDL) approved or established by EPA that addresses the pollutant(s) of concern or, for non-impaired waters that do not require TMDLs, an equivalent analysis that determines allocations for small construction sites for the pollutant(s) of concern or that determines that such allocations are not needed to protect water quality based on consideration of existing in-stream concentrations, expected growth in pollutant contributions from all sources, and a margin of safety. For the purpose of this paragraph, the pollutant(s) of concern include sediment or a parameter that addresses sediment (such as total suspended solids, turbidity or siltation) and any other pollutant that has been identified as a cause of impairment of any water body that will receive a discharge from the construction activity. The operator must certify to the Director that the construction activity will take place, and storm water discharges will occur, within the drainage area addressed by the TMDL or equivalent analysis.

(ii) Any other construction activity designated by the Director, or in States with approved NPDES programs either the Director or the EPA Regional Administrator, based on the potential for contribution to a violation of a water quality standard or for significant contribution of pollutants to waters of the United States.

EXHIBIT 1 TO § 122.26(b)(15).--SUMMARY OF COVERAGE
OF "STORM WATER DISCHARGES ASSOCIATED WITH SMALL
CONSTRUCTION ACTIVITY" UNDER THE NPDES STORM WATER PROGRAM

Automatic Designation: Required Nationwide Coverage	. Construction activities that result in a land disturbance of equal to or greater than one acre and less than five acres. . Construction activities disturbing less than one acre if part of a larger common plan of development or sale with a planned disturbance of equal to or greater than one acre and less than five acres. (see § 122.26(b)(15)(i).)
Potential Designation: Optional Evaluation and Designation by the NPDES Permitting Authority or EPA Regional Administrator.	. Construction activities that result in a land disturbance of less than one acre based on the potential for contribution to a violation of a water quality standard or for significant contribution of pollutants. (see § 122.26(b)(15)(ii).)

EXHIBIT 1 TO § 122.26(b)(15).--SUMMARY OF COVERAGE
OF "STORM WATER DISCHARGES ASSOCIATED WITH SMALL
CONSTRUCTION ACTIVITY" UNDER THE NPDES STORM WATER PROGRAM

Potential Waiver:	Any automatically designated construction
Waiver from	activity where the operator certifies: (1)
Requirements as	A rainfall erosivity factor of less than
Determined by the NPDES	five, or (2) That the activity will occur
Permitting Authority.	within an area where controls are not needed based on a TMDL or, for non-impaired waters that do not require a TMDL, an equivalent analysis for the pollutant(s) of concern. (see § 122.26(b)(15)(i).)

(16) Small municipal separate storm sewer system means all separate storm sewers that are:

(i) Owned or operated by the United States, a State, city, town, borough, county, parish, district, association, or other public body (created by or pursuant to State law) having jurisdiction over disposal of sewage, industrial wastes, storm water, or other wastes, including special districts under State law such as a sewer district, flood control district or drainage district, or similar entity, or an Indian tribe or an authorized Indian tribal organization, or a designated and approved management agency under section 208 of the CWA that discharges to waters of the United States.

(ii) Not defined as "large" or "medium" municipal separate storm sewer systems pursuant to paragraphs (b)(4) and (b)(7) of this section, or designated under paragraph (a)(1)(v) of this section.

(iii) This term includes systems similar to separate storm sewer systems in municipalities, such as systems at military bases, large hospital or prison complexes, and highways and other thoroughfares. The term does not include separate storm sewers in very discrete areas, such as individual buildings.

(17) Small MS4 means a small municipal separate storm sewer system.

(18) Municipal separate storm sewer system means all separate storm sewers that are defined as "large" or "medium" or "small" municipal separate storm sewer systems pursuant to paragraphs (b)(4), (b)(7), and (b)(16) of this section, or designated under paragraph (a)(1)(v) of this section.

(19) MS4 means a municipal separate storm sewer system.

(20) Uncontrolled sanitary landfill means a landfill or open dump, whether in operation or closed, that does not meet the requirements for runoff or runoff controls established pursuant to subtitle D of the Solid Waste Disposal Act.

(c) Application requirements for storm water discharges associated with industrial activity and storm water discharges associated with small construction activity -- (1) Individual application. Dischargers of storm water associated with industrial activity and with small construction activity are required to apply for an individual permit or seek coverage under a promulgated storm water general permit. Facilities that are required to obtain an individual permit, or any discharge of storm water which the Director is evaluating for designation (see 124.52(c) of this chapter) under paragraph (a)(1)(v) of this section and is not a municipal storm sewer, shall submit an NPDES application in accordance with the requirements of § 122.21 as modified and supplemented by the provisions of this paragraph.

(i) Except as provided in § 122.26(c)(1)(ii)-(iv), the operator of a storm water discharge associated with industrial activity subject to this section shall provide:

(A) A site map showing topography (or indicating the outline of drainage areas served by the outfall(s) covered in the application if a topographic map is unavailable) of the facility including: each of its drainage and discharge structures; the drainage area of each storm water outfall; paved areas and buildings within the drainage area of each storm water outfall, each past or present area used for outdoor storage or disposal of significant materials, each existing structural control measure to reduce pollutants in storm water runoff, materials loading and access areas, areas where pesticides, herbicides, soil conditioners and fertilizers are applied, each of its hazardous waste treatment, storage or disposal facilities (including each area not required to have a RCRA permit which is used for accumulating hazardous waste under 40 CFR 262.34); each well where fluids from the facility are injected underground; springs, and other surface water bodies which receive storm water discharges from the facility;

(B) An estimate of the area of impervious surfaces (including paved areas and building roofs) and the total area drained by each outfall (within a mile radius of the facility) and a narrative description of the following: Significant materials that in the three years prior to the submittal of this application have been treated, stored or disposed in a manner to allow exposure to storm water; method of treatment, storage or disposal of such materials; materials management practices employed, in the three years prior to the submittal of this application, to minimize contact by these materials with storm water runoff; materials loading and access areas; the location, manner and frequency in which pesticides, herbicides, soil conditioners and fertilizers are applied; the location and a description of existing structural and non-structural control measures to reduce pollutants in storm water runoff; and a description of the treatment the storm water receives, including the ultimate disposal of any solid or fluid wastes other than by discharge;

(C) A certification that all outfalls that should contain storm water discharges associated with industrial activity have been tested or evaluated for the presence of non-storm water discharges which are not covered by a NPDES permit; tests for such non-storm water discharges may include smoke tests, fluorometric dye tests, analysis of accurate schematics, as well as other appropriate tests. The certification shall include a description of the method used, the date of any testing, and the on-site drainage points that were directly observed during a test;

(D) Existing information regarding significant leaks or spills of toxic or hazardous pollutants at the facility that have taken place within the three years prior to the submittal of this application;

(E) Quantitative data based on samples collected during storm events and collected in accordance with § 122.21 of this part from all outfalls containing a storm water discharge associated with industrial activity for the following parameters:

(1) Any pollutant limited in an effluent guideline to which the facility is subject;

(2) Any pollutant listed in the facility's NPDES permit for its process wastewater (if the facility is operating under an existing NPDES permit);

(3) Oil and grease, pH, BOD5, COD, TSS, total phosphorus, total Kjeldahl nitrogen, and nitrate plus nitrite nitrogen;

(4) Any information on the discharge required under § 122.21(g)(7) (vi) and (vii);

(5) Flow measurements or estimates of the flow rate, and the total amount of discharge for the storm event(s) sampled, and the method of flow measurement or estimation; and

(6) The date and duration (in hours) of the storm event(s) sampled, rainfall measurements or estimates of the storm event (in inches) which generated the sampled runoff and the duration between the storm event sampled and the end of the previous measurable (greater than 0.1 inch rainfall) storm event (in hours);

(F) Operators of a discharge which is composed entirely of storm water are exempt from the requirements of § 122.21 (g)(2), (g)(3), (g)(4), (g)(5), (g)(7)(iii), (g)(7)(iv), (g)(7)(v), and (g)(7)(viii); and

(G) Operators of new sources or new discharges (as defined in § 122.2 of this part) which are composed in part or entirely of storm water must include estimates for the pollutants or parameters listed in paragraph (c)(1)(i)(E) of this section instead of actual sampling data, along with the source of each estimate. Operators of new sources or new discharges composed in part or entirely of storm water must provide quantitative data for the parameters listed in paragraph (c)(1)(i)(E) of this section within two years after commencement of discharge, unless such data has already been reported under the monitoring requirements of the NPDES permit for the discharge. Operators of a new source or new discharge which is composed entirely of storm water are exempt from the requirements of § 122.21 (k)(3)(ii), (k)(3)(iii), and (k)(5).

(ii) An operator of an existing or new storm water discharge that is associated with industrial activity solely under paragraph (b)(14)(x) of this section or is associated with small construction activity solely under paragraph (b)(15) of this section, is exempt from the requirements of § 122.21(g) and paragraph (c)(1)(i) of this section. Such operator shall provide a narrative description of:

(A) The location (including a map) and the nature of the construction activity;

(B) The total area of the site and the area of the site that is expected to undergo excavation during the life of the permit;

40 CFR 122.26

(C) Proposed measures, including best management practices, to control pollutants in storm water discharges during construction, including a brief description of applicable State and local erosion and sediment control requirements;

(D) Proposed measures to control pollutants in storm water discharges that will occur after construction operations have been completed, including a brief description of applicable State or local erosion and sediment control requirements;

(E) An estimate of the runoff coefficient of the site and the increase in impervious area after the construction addressed in the permit application is completed, the nature of fill material and existing data describing the soil or the quality of the discharge; and

(F) The name of the receiving water.

(iii) The operator of an existing or new discharge composed entirely of storm water from an oil or gas exploration, production, processing, or treatment operation, or transmission facility is not required to submit a permit application in accordance with paragraph (c)(1)(i) of this section, unless the facility:

(A) Has had a discharge of storm water resulting in the discharge of a reportable quantity for which notification is or was required pursuant to 40 CFR 117.21 or 40 CFR 302.6 at anytime since November 16, 1987; or

(B) Has had a discharge of storm water resulting in the discharge of a reportable quantity for which notification is or was required pursuant to 40 CFR 110.6 at any time since November 16, 1987; or

(C) Contributes to a violation of a water quality standard.

(iv) The operator of an existing or new discharge composed entirely of storm water from a mining operation is not required to submit a permit application unless the discharge has come into contact with, any overburden, raw material, intermediate products, finished product, byproduct or waste products located on the site of such operations.

(v) Applicants shall provide such other information the Director may reasonably require under § 122.21(g)(13) of this part to determine whether to issue a permit and may require any facility subject to paragraph (c)(1)(ii) of this section to comply with paragraph (c)(1)(i) of this section.

(2) [Reserved]

(d) Application requirements for large and medium municipal separate storm sewer discharges. The operator of a discharge from a large or medium municipal separate storm sewer or a municipal separate storm sewer that is designated by the Director under paragraph (a)(1)(v) of this section, may submit a jurisdiction-wide or system-wide permit application. Where more than one public entity owns or operates a municipal separate storm sewer within a geographic area (including adjacent or interconnected municipal separate storm sewer systems), such operators may be a coapplicant to the same application. Permit applications for discharges from large and medium municipal storm sewers or municipal storm sewers designated under paragraph (a)(1)(v) of this section shall include;

(1) Part 1. Part 1 of the application shall consist of;

(i) General information. The applicants' name, address, telephone number of contact person, ownership status and status as a State or local government entity.

(ii) Legal authority. A description of existing legal authority to control discharges to the municipal separate storm sewer system. When existing legal authority is not sufficient to meet the criteria provided in paragraph (d)(2)(i) of this section, the description shall list additional authorities as will be necessary to meet the criteria and shall include a schedule and commitment to seek such additional authority that will be needed to meet the criteria.

(iii) Source identification. (A) A description of the historic use of ordinances, guidance or other controls which limited the discharge of non-storm water discharges to any Publicly Owned Treatment Works serving the same area as the municipal separate storm sewer system.

(B) A USGS 7.5 minute topographic map (or equivalent topographic map with a scale between 1:10,000 and 1:24,000 if cost effective) extending one mile beyond the service boundaries of the municipal storm sewer system covered by the permit application. The following information shall be provided:

(1) The location of known municipal storm sewer system outfalls discharging to waters of the United States;

(2) A description of the land use activities (e.g. divisions indicating undeveloped, residential, commercial, agricultural and industrial uses) accompanied with estimates of population densities and projected growth for a ten year period within the drainage area served by the separate storm sewer. For each land use type, an estimate of an average runoff coefficient shall be provided;

(3) The location and a description of the activities of the facility of each currently operating or closed municipal landfill or other treatment, storage or disposal facility for municipal waste;

(4) The location and the permit number of any known discharge to the municipal storm sewer that has been issued a NPDES permit;

(5) The location of major structural controls for storm water discharge (retention basins, detention basins, major infiltration devices, etc.); and

(6) The identification of publicly owned parks, recreational areas, and other open lands.

(iv) Discharge characterization. (A) Monthly mean rain and snow fall estimates (or summary of weather bureau data) and the monthly average number of storm events.

(B) Existing quantitative data describing the volume and quality of discharges from the municipal storm sewer, including a description of the outfalls sampled, sampling procedures and analytical methods used.

(C) A list of water bodies that receive discharges from the municipal separate storm sewer system, including downstream segments, lakes and estuaries, where pollutants from the system discharges may accumulate and cause water degradation and a brief description of known water quality impacts. At a minimum, the description of impacts shall include a description of whether the water bodies receiving such discharges have been:

(1) Assessed and reported in section 305(b) reports submitted by the State, the basis for the assessment (evaluated or monitored), a summary of designated use support and attainment of Clean Water Act (CWA) goals (fishable and swimmable waters), and causes of nonsupport of designated uses;

(2) Listed under section 304(l)(1)(A)(i), section 304(l)(1)(A)(ii), or section 304(l)(1)(B) of the CWA that is not expected to meet water quality standards or water quality goals;

(3) Listed in State Nonpoint Source Assessments required by section 319(a) of the CWA that, without additional action to control nonpoint sources of pollution, cannot reasonably be expected to attain or maintain water quality standards due to storm sewers, construction, highway maintenance and runoff from municipal landfills and municipal sludge adding significant pollution (or contributing to a violation of water quality standards);

(4) Identified and classified according to eutrophic condition of publicly owned lakes listed in State reports required under section 314(a) of the CWA (include the following: A description of those publicly owned lakes for which uses are known to be impaired; a description of procedures, processes and methods to control the discharge of pollutants from municipal separate storm sewers into such lakes; and a description of methods and procedures to restore the quality of such lakes);

(5) Areas of concern of the Great Lakes identified by the International Joint Commission;

(6) Designated estuaries under the National Estuary Program under section 320 of the CWA;

(7) Recognized by the applicant as highly valued or sensitive waters;

(8) Defined by the State or U.S. Fish and Wildlife Services's National Wetlands Inventory as wetlands; and

(9) Found to have pollutants in bottom sediments, fish tissue or biosurvey data.

(D) Field screening. Results of a field screening analysis for illicit connections and illegal dumping for either selected field screening points or major outfalls covered in the permit application. At a minimum, a screening analysis shall include a narrative description, for either each field screening point or major outfall, of visual observations made during dry weather periods. If any flow is observed, two grab samples shall be collected during a 24 hour period with a minimum period of four hours between samples. For all such samples, a narrative description of the color, odor, turbidity, the presence of an oil sheen or surface scum as well as any other relevant observations regarding the potential presence of non-storm water discharges or illegal dumping shall be provided. In addition, a narrative description of the results of a field analysis using suitable methods to estimate pH, total chlorine, total copper, total phenol, and detergents

(or surfactants) shall be provided along with a description of the flow rate. Where the field analysis does not involve analytical methods approved under 40 CFR part 136, the applicant shall provide a description of the method used including the name of the manufacturer of the test method along with the range and accuracy of the test. Field screening points shall be either major outfalls or other outfall points (or any other point of access such as manholes) randomly located throughout the storm sewer system by placing a grid over a drainage system map and identifying those cells of the grid which contain a segment of the storm sewer system or major outfall. The field screening points shall be established using the following guidelines and criteria:

(1) A grid system consisting of perpendicular north-south and east-west lines spaced 1/4 mile apart shall be overlaid on a map of the municipal storm sewer system, creating a series of cells;

(2) All cells that contain a segment of the storm sewer system shall be identified; one field screening point shall be selected in each cell; major outfalls may be used as field screening points;

(3) Field screening points should be located downstream of any sources of suspected illegal or illicit activity;

(4) Field screening points shall be located to the degree practicable at the farthest manhole or other accessible location downstream in the system, within each cell; however, safety of personnel and accessibility of the location should be considered in making this determination;

(5) Hydrological conditions; total drainage area of the site; population density of the site; traffic density; age of the structures or buildings in the area; history of the area; and land use types;

(6) For medium municipal separate storm sewer systems, no more than 250 cells need to have identified field screening points; in large municipal separate storm sewer systems, no more than 500 cells need to have identified field screening points; cells established by the grid that contain no storm sewer segments will be eliminated from consideration; if fewer than 250 cells in medium municipal sewers are created, and fewer than 500 in large systems are created by the overlay on the municipal sewer map, then all those cells which contain a segment of the sewer system shall be subject to field screening (unless access to the separate storm sewer system is impossible); and

(7) Large or medium municipal separate storm sewer systems which are unable to utilize the procedures described in paragraphs (d)(1)(iv)(D) (1) through (6) of this section, because a sufficiently detailed map of the separate storm sewer systems is unavailable, shall field screen no more than 500 or 250 major outfalls respectively (or all major outfalls in the system, if less); in such circumstances, the applicant shall establish a grid system consisting of north-south and east-west lines spaced 1/4 mile apart as an overlay to the boundaries of the municipal storm sewer system, thereby creating a series of cells; the applicant will then select major outfalls in as many cells as possible until at least 500 major outfalls (large municipalities) or 250 major outfalls (medium municipalities) are selected; a field screening analysis shall be undertaken at these major outfalls.

(E) Characterization plan. Information and a proposed program to meet the requirements of paragraph (d)(2)(iii) of this section. Such description shall include: the location of outfalls or field screening points appropriate for representative data collection under paragraph (d)(2)(iii)(A) of this section, a description of why the outfall or field screening point is representative, the seasons during which sampling is intended, a description of the sampling equipment. The proposed location of outfalls or field screening points for such sampling should reflect water quality concerns (see paragraph (d)(1)(iv)(C) of this section) to the extent practicable.

(v) Management programs. (A) A description of the existing management programs to control pollutants from the municipal separate storm sewer system. The description shall provide information on existing structural and source controls, including operation and maintenance measures for structural controls, that are currently being implemented. Such controls may include, but are not limited to: Procedures to control pollution resulting from construction activities; floodplain management controls; wetland protection measures; best management practices for new subdivisions; and emergency spill response programs. The description may address controls established under State law as well as local requirements.

(B) A description of the existing program to identify illicit connections to the municipal storm sewer system. The description should include inspection procedures and methods for detecting and preventing illicit discharges, and describe areas where this program has been implemented.

(vi) Fiscal resources. (A) A description of the financial resources currently available to the municipality to complete part 2 of the permit application. A description of the municipality's budget for existing storm water programs, in-

cluding an overview of the municipality's financial resources and budget, including overall indebtedness and assets, and sources of funds for storm water programs.

(2) Part 2. Part 2 of the application shall consist of:

(i) Adequate legal authority. A demonstration that the applicant can operate pursuant to legal authority established by statute, ordinance or series of contracts which authorizes or enables the applicant at a minimum to:

(A) Control through ordinance, permit, contract, order or similar means, the contribution of pollutants to the municipal storm sewer by storm water discharges associated with industrial activity and the quality of storm water discharged from sites of industrial activity;

(B) Prohibit through ordinance, order or similar means, illicit discharges to the municipal separate storm sewer;

(C) Control through ordinance, order or similar means the discharge to a municipal separate storm sewer of spills, dumping or disposal of materials other than storm water;

(D) Control through interagency agreements among coapplicants the contribution of pollutants from one portion of the municipal system to another portion of the municipal system;

(E) Require compliance with conditions in ordinances, permits, contracts or orders; and

(F) Carry out all inspection, surveillance and monitoring procedures necessary to determine compliance and non-compliance with permit conditions including the prohibition on illicit discharges to the municipal separate storm sewer.

(ii) Source identification. The location of any major outfall that discharges to waters of the United States that was not reported under paragraph (d)(1)(iii)(B)(1) of this section. Provide an inventory, organized by watershed of the name and address, and a description (such as SIC codes) which best reflects the principal products or services provided by each facility which may discharge, to the municipal separate storm sewer, storm water associated with industrial activity;

(iii) Characterization data. When "quantitative data" for a pollutant are required under paragraph (d)(2)(iii)(A)(3) of this section, the applicant must collect a sample of effluent in accordance with § 122.21(g)(7) and analyze it for the pollutant in accordance with analytical methods approved under part 136 of this chapter. When no analytical method is approved the applicant may use any suitable method but must provide a description of the method. The applicant must provide information characterizing the quality and quantity of discharges covered in the permit application, including:

(A) Quantitative data from representative outfalls designated by the Director (based on information received in part 1 of the application, the Director shall designate between five and ten outfalls or field screening points as representative of the commercial, residential and industrial land use activities of the drainage area contributing to the system or, where there are less than five outfalls covered in the application, the Director shall designate all outfalls) developed as follows:

(1) For each outfall or field screening point designated under this subparagraph, samples shall be collected of stormwater discharges from three storm events occurring at least one month apart in accordance with the requirements at § 122.21(g)(7) (the Director may allow exemptions to sampling three storm events when climatic conditions create good cause for such exemptions);

(2) A narrative description shall be provided of the date and duration of the storm event(s) sampled, rainfall estimates of the storm event which generated the sampled discharge and the duration between the storm event sampled and the end of the previous measurable (greater than 0.1 inch rainfall) storm event;

(3) For samples collected and described under paragraphs (d)(2)(iii) (A)(1) and (A)(2) of this section, quantitative data shall be provided for: the organic pollutants listed in Table II; the pollutants listed in Table III (toxic metals, cyanide, and total phenols) of appendix D of 40 CFR part 122, and for the following pollutants:

Total suspended solids (TSS)

Total dissolved solids (TDS)

COD

BOD[5]

Oil and grease
 Fecal coliform
 Fecal streptococcus
 pH
 Total Kjeldahl nitrogen
 Nitrate plus nitrite
 Dissolved phosphorus
 Total ammonia plus organic nitrogen
 Total phosphorus

(4) Additional limited quantitative data required by the Director for determining permit conditions (the Director may require that quantitative data shall be provided for additional parameters, and may establish sampling conditions such as the location, season of sample collection, form of precipitation (snow melt, rainfall) and other parameters necessary to insure representativeness);

(B) Estimates of the annual pollutant load of the cumulative discharges to waters of the United States from all identified municipal outfalls and the event mean concentration of the cumulative discharges to waters of the United States from all identified municipal outfalls during a storm event (as described under § 122.21(c)(7)) for BOD₅, COD, TSS, dissolved solids, total nitrogen, total ammonia plus organic nitrogen, total phosphorus, dissolved phosphorus, cadmium, copper, lead, and zinc. Estimates shall be accompanied by a description of the procedures for estimating constituent loads and concentrations, including any modelling, data analysis, and calculation methods;

(C) A proposed schedule to provide estimates for each major outfall identified in either paragraph (d)(2)(ii) or (d)(1)(iii)(B)(1) of this section of the seasonal pollutant load and of the event mean concentration of a representative storm for any constituent detected in any sample required under paragraph (d)(2)(iii)(A) of this section; and

(D) A proposed monitoring program for representative data collection for the term of the permit that describes the location of outfalls or field screening points to be sampled (or the location of instream stations), why the location is representative, the frequency of sampling, parameters to be sampled, and a description of sampling equipment.

(iv) Proposed management program. A proposed management program covers the duration of the permit. It shall include a comprehensive planning process which involves public participation and where necessary intergovernmental coordination, to reduce the discharge of pollutants to the maximum extent practicable using management practices, control techniques and system, design and engineering methods, and such other provisions which are appropriate. The program shall also include a description of staff and equipment available to implement the program. Separate proposed programs may be submitted by each coapplicant. Proposed programs may impose controls on a systemwide basis, a watershed basis, a jurisdiction basis, or on individual outfalls. Proposed programs will be considered by the Director when developing permit conditions to reduce pollutants in discharges to the maximum extent practicable. Proposed management programs shall describe priorities for implementing controls. Such programs shall be based on:

(A) A description of structural and source control measures to reduce pollutants from runoff from commercial and residential areas that are discharged from the municipal storm sewer system that are to be implemented during the life of the permit, accompanied with an estimate of the expected reduction of pollutant loads and a proposed schedule for implementing such controls. At a minimum, the description shall include:

(1) A description of maintenance activities and a maintenance schedule for structural controls to reduce pollutants (including floatables) in discharges from municipal separate storm sewers;

(2) A description of planning procedures including a comprehensive master plan to develop, implement and enforce controls to reduce the discharge of pollutants from municipal separate storm sewers which receive discharges from areas of new development and significant redevelopment. Such plan shall address controls to reduce pollutants in discharges from municipal separate storm sewers after construction is completed. (Controls to reduce pollutants in discharges from municipal separate storm sewers containing construction site runoff are addressed in paragraph (d)(2)(iv)(D) of this section;

(3) A description of practices for operating and maintaining public streets, roads and highways and procedures for reducing the impact on receiving waters of discharges from municipal storm sewer systems, including pollutants discharged as a result of deicing activities;

(4) A description of procedures to assure that flood management projects assess the impacts on the water quality of receiving water bodies and that existing structural flood control devices have been evaluated to determine if retrofitting the device to provide additional pollutant removal from storm water is feasible;

(5) A description of a program to monitor pollutants in runoff from operating or closed municipal landfills or other treatment, storage or disposal facilities for municipal waste, which shall identify priorities and procedures for inspections and establishing and implementing control measures for such discharges (this program can be coordinated with the program developed under paragraph (d)(2)(iv)(C) of this section); and

(6) A description of a program to reduce to the maximum extent practicable, pollutants in discharges from municipal separate storm sewers associated with the application of pesticides, herbicides and fertilizer which will include, as appropriate, controls such as educational activities, permits, certifications and other measures for commercial applicators and distributors, and controls for application in public right-of-ways and at municipal facilities.

(B) A description of a program, including a schedule, to detect and remove (or require the discharger to the municipal separate storm sewer to obtain a separate NPDES permit for) illicit discharges and improper disposal into the storm sewer. The proposed program shall include:

(1) A description of a program, including inspections, to implement and enforce an ordinance, orders or similar means to prevent illicit discharges to the municipal separate storm sewer system; this program description shall address all types of illicit discharges, however the following category of non-storm water discharges or flows shall be addressed where such discharges are identified by the municipality as sources of pollutants to waters of the United States: water line flushing, landscape irrigation, diverted stream flows, rising ground waters, uncontaminated ground water infiltration (as defined at 40 CFR 35.2005(20)) to separate storm sewers, uncontaminated pumped ground water, discharges from potable water sources, foundation drains, air conditioning condensation, irrigation water, springs, water from crawl space pumps, footing drains, lawn watering, individual residential car washing, flows from riparian habitats and wetlands, dechlorinated swimming pool discharges, and street wash water (program descriptions shall address discharges or flows from fire fighting only where such discharges or flows are identified as significant sources of pollutants to waters of the United States);

(2) A description of procedures to conduct on-going field screening activities during the life of the permit, including areas or locations that will be evaluated by such field screens;

(3) A description of procedures to be followed to investigate portions of the separate storm sewer system that, based on the results of the field screen, or other appropriate information, indicate a reasonable potential of containing illicit discharges or other sources of non-storm water (such procedures may include: sampling procedures for constituents such as fecal coliform, fecal streptococcus, surfactants (MBAS), residual chlorine, fluorides and potassium; testing with fluorometric dyes; or conducting in storm sewer inspections where safety and other considerations allow. Such description shall include the location of storm sewers that have been identified for such evaluation);

(4) A description of procedures to prevent, contain, and respond to spills that may discharge into the municipal separate storm sewer;

(5) A description of a program to promote, publicize, and facilitate public reporting of the presence of illicit discharges or water quality impacts associated with discharges from municipal separate storm sewers;

(6) A description of educational activities, public information activities, and other appropriate activities to facilitate the proper management and disposal of used oil and toxic materials; and

(7) A description of controls to limit infiltration of seepage from municipal sanitary sewers to municipal separate storm sewer systems where necessary;

(C) A description of a program to monitor and control pollutants in storm water discharges to municipal systems from municipal landfills, hazardous waste treatment, disposal and recovery facilities, industrial facilities that are subject to section 313 of title III of the Superfund Amendments and Reauthorization Act of 1986 (SARA), and industrial facilities that the municipal permit applicant determines are contributing a substantial pollutant loading to the municipal storm sewer system. The program shall:

(1) Identify priorities and procedures for inspections and establishing and implementing control measures for such discharges;

(2) Describe a monitoring program for storm water discharges associated with the industrial facilities identified in paragraph (d)(2)(iv)(C) of this section, to be implemented during the term of the permit, including the submission of quantitative data on the following constituents: Any pollutants limited in effluent guidelines subcategories, where applicable; any pollutant listed in an existing NPDES permit for a facility; oil and grease, COD, pH, BOD5, TSS, total phosphorus, total Kjeldahl nitrogen, nitrate plus nitrite nitrogen, and any information on discharges required under § 122.21(g)(7) (vi) and (vii).

(D) A description of a program to implement and maintain structural and non-structural best management practices to reduce pollutants in storm water runoff from construction sites to the municipal storm sewer system, which shall include:

(1) A description of procedures for site planning which incorporate consideration of potential water quality impacts;

(2) A description of requirements for nonstructural and structural best management practices;

(3) A description of procedures for identifying priorities for inspecting sites and enforcing control measures which consider the nature of the construction activity, topography, and the characteristics of soils and receiving water quality; and

(4) A description of appropriate educational and training measures for construction site operators.

(v) Assessment of controls. Estimated reductions in loadings of pollutants from discharges of municipal storm sewer constituents from municipal storm sewer systems expected as the result of the municipal storm water quality management program. The assessment shall also identify known impacts of storm water controls on ground water.

(vi) Fiscal analysis. For each fiscal year to be covered by the permit, a fiscal analysis of the necessary capital and operation and maintenance expenditures necessary to accomplish the activities of the programs under paragraphs (d)(2)(iii) and (iv) of this section. Such analysis shall include a description of the source of funds that are proposed to meet the necessary expenditures, including legal restrictions on the use of such funds.

(vii) Where more than one legal entity submits an application, the application shall contain a description of the roles and responsibilities of each legal entity and procedures to ensure effective coordination.

(viii) Where requirements under paragraph (d)(1)(iv)(E), (d)(2)(ii), (d)(2)(iii)(B) and (d)(2)(iv) of this section are not practicable or are not applicable, the Director may exclude any operator of a discharge from a municipal separate storm sewer which is designated under paragraph (a)(1)(v), (b)(4)(ii) or (b)(7)(ii) of this section from such requirements. The Director shall not exclude the operator of a discharge from a municipal separate storm sewer identified in appendix F, G, H or I of part 122, from any of the permit application requirements under this paragraph except where authorized under this section.

(e) Application deadlines. Any operator of a point source required to obtain a permit under this section that does not have an effective NPDES permit authorizing discharges from its storm water outfalls shall submit an application in accordance with the following deadlines:

(1) Storm water discharges associated with industrial activity. (i) Except as provided in paragraph (e)(1)(ii) of this section, for any storm water discharge associated with industrial activity identified in paragraphs (b)(14)(i) through (xi) of this section, that is not part of a group application as described in paragraph (c)(2) of this section or that is not authorized by a storm water general permit, a permit application made pursuant to paragraph (c) of this section must be submitted to the Director by October 1, 1992;

(ii) For any storm water discharge associated with industrial activity from a facility that is owned or operated by a municipality with a population of less than 100,000 that is not authorized by a general or individual permit, other than an airport, powerplant, or uncontrolled sanitary landfill, the permit application must be submitted to the Director by March 10, 2003.

(2) For any group application submitted in accordance with paragraph (c)(2) of this section:

40 CFR 122.26

(i) Part 1. (A) Except as provided in paragraph (e)(2)(i)(B) of this section, part 1 of the application shall be submitted to the Director, Office of Wastewater Enforcement and Compliance by September 30, 1991;

(B) Any municipality with a population of less than 250,000 shall not be required to submit a part 1 application before May 18, 1992.

(C) For any storm water discharge associated with industrial activity from a facility that is owned or operated by a municipality with a population of less than 100,000 other than an airport, powerplant, or uncontrolled sanitary landfill, permit applications requirements are reserved.

(ii) Based on information in the part 1 application, the Director will approve or deny the members in the group application within 60 days after receiving part 1 of the group application.

(iii) Part 2. (A) Except as provided in paragraph (e)(2)(iii)(B) of this section, part 2 of the application shall be submitted to the Director, Office of Wastewater Enforcement and Compliance by October 1, 1992;

(B) Any municipality with a population of less than 250,000 shall not be required to submit a part 1 application before May 17, 1993.

(C) For any storm water discharge associated with industrial activity from a facility that is owned or operated by a municipality with a population of less than 100,000 other than an airport, powerplant, or uncontrolled sanitary landfill, permit applications requirements are reserved.

(iv) Rejected facilities. (A) Except as provided in paragraph (e)(2)(iv)(B) of this section, facilities that are rejected as members of the group shall submit an individual application (or obtain coverage under an applicable general permit) no later than 12 months after the date of receipt of the notice of rejection or October 1, 1992, whichever comes first.

(B) Facilities that are owned or operated by a municipality and that are rejected as members of part 1 group application shall submit an individual application no later than 180 days after the date of receipt of the notice of rejection or October 1, 1992, whichever is later.

(v) A facility listed under paragraph (b)(14) (i)-(xi) of this section may add on to a group application submitted in accordance with paragraph (e)(2)(i) of this section at the discretion of the Office of Water Enforcement and Permits, and only upon a showing of good cause by the facility and the group applicant; the request for the addition of the facility shall be made no later than February 18, 1992; the addition of the facility shall not cause the percentage of the facilities that are required to submit quantitative data to be less than 10%, unless there are over 100 facilities in the group that are submitting quantitative data; approval to become part of group application must be obtained from the group or the trade association representing the individual facilities.

(3) For any discharge from a large municipal separate storm sewer system;

(i) Part 1 of the application shall be submitted to the Director by November 18, 1991;

(ii) Based on information received in the part 1 application the Director will approve or deny a sampling plan under paragraph (d)(1)(iv)(E) of this section within 90 days after receiving the part 1 application;

(iii) Part 2 of the application shall be submitted to the Director by November 16, 1992.

(4) For any discharge from a medium municipal separate storm sewer system;

(i) Part 1 of the application shall be submitted to the Director by May 18, 1992.

(ii) Based on information received in the part 1 application the Director will approve or deny a sampling plan under paragraph (d)(1)(iv)(E) of this section within 90 days after receiving the part 1 application.

(iii) Part 2 of the application shall be submitted to the Director by May 17, 1993.

(5) A permit application shall be submitted to the Director within 180 days of notice, unless permission for a later date is granted by the Director (see § 124.52(c) of this chapter), for:

(i) A storm water discharge that the Director, or in States with approved NPDES programs, either the Director or the EPA Regional Administrator, determines that the discharge contributes to a violation of a water quality standard or is a significant contributor of pollutants to waters of the United States (see paragraphs (a)(1)(v) and (b)(15)(ii) of this section);

40 CFR 122.26

(ii) A storm water discharge subject to paragraph (c)(1)(v) of this section.

(6) Facilities with existing NPDES permits for storm water discharges associated with industrial activity shall maintain existing permits. Facilities with permits for storm water discharges associated with industrial activity which expire on or after May 18, 1992 shall submit a new application in accordance with the requirements of 40 CFR 122.21 and 40 CFR 122.26(c) (Form 1, Form 2F, and other applicable Forms) 180 days before the expiration of such permits.

(7) The Director shall issue or deny permits for discharges composed entirely of storm water under this section in accordance with the following schedule:

(i)(A) Except as provided in paragraph (e)(7)(i)(B) of this section, the Director shall issue or deny permits for storm water discharges associated with industrial activity no later than October 1, 1993, or, for new sources or existing sources which fail to submit a complete permit application by October 1, 1992, one year after receipt of a complete permit application;

(B) For any municipality with a population of less than 250,000 which submits a timely Part I group application under paragraph (e)(2)(i)(B) of this section, the Director shall issue or deny permits for storm water discharges associated with industrial activity no later than May 17, 1994, or, for any such municipality which fails to submit a complete Part II group permit application by May 17, 1993, one year after receipt of a complete permit application;

(ii) The Director shall issue or deny permits for large municipal separate storm sewer systems no later than November 16, 1993, or, for new sources or existing sources which fail to submit a complete permit application by November 16, 1992, one year after receipt of a complete permit application;

(iii) The Director shall issue or deny permits for medium municipal separate storm sewer systems no later than May 17, 1994, or, for new sources or existing sources which fail to submit a complete permit application by May 17, 1993, one year after receipt of a complete permit application.

(8) For any storm water discharge associated with small construction activities identified in paragraph (b)(15)(i) of this section, see § 122.21(c)(1). Discharges from these sources require permit authorization by March 10, 2003, unless designated for coverage before then.

(9) For any discharge from a regulated small MS4, the permit application made under § 122.33 must be submitted to the Director by:

(i) March 10, 2003 if designated under § 122.32(a)(1) unless your MS4 serves a jurisdiction with a population under 10,000 and the NPDES permitting authority has established a phasing schedule under § 123.35(d)(3) (see § 122.33(c)(1)); or

(ii) Within 180 days of notice, unless the NPDES permitting authority grants a later date, if designated under § 122.32(a)(2) (see § 122.33(c)(2)).

(f) Petitions. (1) Any operator of a municipal separate storm sewer system may petition the Director to require a separate NPDES permit (or a permit issued under an approved NPDES State program) for any discharge into the municipal separate storm sewer system.

(2) Any person may petition the Director to require a NPDES permit for a discharge which is composed entirely of storm water which contributes to a violation of a water quality standard or is a significant contributor of pollutants to waters of the United States.

(3) The owner or operator of a municipal separate storm sewer system may petition the Director to reduce the Census estimates of the population served by such separate system to account for storm water discharged to combined sewers as defined by 40 CFR 35.2005(b)(11) that is treated in a publicly owned treatment works. In municipalities in which combined sewers are operated, the Census estimates of population may be reduced proportional to the fraction, based on estimated lengths, of the length of combined sewers over the sum of the length of combined sewers and municipal separate storm sewers where an applicant has submitted the NPDES permit number associated with each discharge point and a map indicating areas served by combined sewers and the location of any combined sewer overflow discharge point.

(4) Any person may petition the Director for the designation of a large, medium, or small municipal separate storm sewer system as defined by paragraph (b)(4)(iv), (b)(7)(iv), or (b)(16) of this section.

(5) The Director shall make a final determination on any petition received under this section within 90 days after receiving the petition with the exception of petitions to designate a small MS4 in which case the Director shall make a final determination on the petition within 180 days after its receipt.

(g) Conditional exclusion for "no exposure" of industrial activities and materials to storm water. Discharges composed entirely of storm water are not storm water discharges associated with industrial activity if there is "no exposure" of industrial materials and activities to rain, snow, snowmelt and/or runoff, and the discharger satisfies the conditions in paragraphs (g)(1) through (g)(4) of this section. "No exposure" means that all industrial materials and activities are protected by a storm resistant shelter to prevent exposure to rain, snow, snowmelt, and/or runoff. Industrial materials or activities include, but are not limited to, material handling equipment or activities, industrial machinery, raw materials, intermediate products, by-products, final products, or waste products. Material handling activities include the storage, loading and unloading, transportation, or conveyance of any raw material, intermediate product, final product or waste product.

(1) Qualification. To qualify for this exclusion, the operator of the discharge must:

(i) Provide a storm resistant shelter to protect industrial materials and activities from exposure to rain, snow, snow melt, and runoff;

(ii) Complete and sign (according to § 122.22) a certification that there are no discharges of storm water contaminated by exposure to industrial materials and activities from the entire facility, except as provided in paragraph (g)(2) of this section;

(iii) Submit the signed certification to the NPDES permitting authority once every five years;

(iv) Allow the Director to inspect the facility to determine compliance with the "no exposure" conditions;

(v) Allow the Director to make any "no exposure" inspection reports available to the public upon request; and

(vi) For facilities that discharge through an MS4, upon request, submit a copy of the certification of "no exposure" to the MS4 operator, as well as allow inspection and public reporting by the MS4 operator.

(2) Industrial materials and activities not requiring storm resistant shelter. To qualify for this exclusion, storm resistant shelter is not required for:

(i) Drums, barrels, tanks, and similar containers that are tightly sealed, provided those containers are not deteriorated and do not leak ("Sealed" means banded or otherwise secured and without operational taps or valves);

(ii) Adequately maintained vehicles used in material handling; and

(iii) Final products, other than products that would be mobilized in storm water discharge (e.g., rock salt).

(3) Limitations. (i) Storm water discharges from construction activities identified in paragraphs (b)(14)(x) and (b)(15) are not eligible for this conditional exclusion.

(ii) This conditional exclusion from the requirement for an NPDES permit is available on a facility-wide basis only, not for individual outfalls. If a facility has some discharges of storm water that would otherwise be "no exposure" discharges, individual permit requirements should be adjusted accordingly.

(iii) If circumstances change and industrial materials or activities become exposed to rain, snow, snow melt, and/or runoff, the conditions for this exclusion no longer apply. In such cases, the discharge becomes subject to enforcement for un-permitted discharge. Any conditionally exempt discharger who anticipates changes in circumstances should apply for and obtain permit authorization prior to the change of circumstances.

(iv) Notwithstanding the provisions of this paragraph, the NPDES permitting authority retains the authority to require permit authorization (and deny this exclusion) upon making a determination that the discharge causes, has a reasonable potential to cause, or contributes to an instream excursion above an applicable water quality standard, including designated uses.

(4) Certification. The no exposure certification must require the submission of the following information, at a minimum, to aid the NPDES permitting authority in determining if the facility qualifies for the no exposure exclusion:

(i) The legal name, address and phone number of the discharger (see § 122.21(b));

(ii) The facility name and address, the county name and the latitude and longitude where the facility is located;

(iii) The certification must indicate that none of the following materials or activities are, or will be in the foreseeable future, exposed to precipitation:

(A) Using, storing or cleaning industrial machinery or equipment, and areas where residuals from using, storing or cleaning industrial machinery or equipment remain and are exposed to storm water;

(B) Materials or residuals on the ground or in storm water inlets from spills/leaks;

(C) Materials or products from past industrial activity;

(D) Material handling equipment (except adequately maintained vehicles);

(E) Materials or products during loading/unloading or transporting activities;

(F) Materials or products stored outdoors (except final products intended for outside use, e.g., new cars, where exposure to storm water does not result in the discharge of pollutants);

(G) Materials contained in open, deteriorated or leaking storage drums, barrels, tanks, and similar containers;

(H) Materials or products handled/stored on roads or railways owned or maintained by the discharger;

(I) Waste material (except waste in covered, non-leaking containers, e.g., dumpsters);

(J) Application or disposal of process wastewater (unless otherwise permitted); and

(K) Particulate matter or visible deposits of residuals from roof stacks/vents not otherwise regulated, i.e., under an air quality control permit, and evident in the storm water outflow;

(iv) All "no exposure" certifications must include the following certification statement, and be signed in accordance with the signatory requirements of § 122.22: "I certify under penalty of law that I have read and understand the eligibility requirements for claiming a condition of "no exposure" and obtaining an exclusion from NPDES storm water permitting; and that there are no discharges of storm water contaminated by exposure to industrial activities or materials from the industrial facility identified in this document (except as allowed under paragraph (g)(2)) of this section. I understand that I am obligated to submit a no exposure certification form once every five years to the NPDES permitting authority and, if requested, to the operator of the local MS4 into which this facility discharges (where applicable). I understand that I must allow the NPDES permitting authority, or MS4 operator where the discharge is into the local MS4, to perform inspections to confirm the condition of no exposure and to make such inspection reports publicly available upon request. I understand that I must obtain coverage under an NPDES permit prior to any point source discharge of storm water from the facility. I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based upon my inquiry of the person or persons who manage the system, or those persons directly involved in gathering the information, the information submitted is to the best of my knowledge and belief true, accurate and complete. I am aware there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

40 CFR 122.44

§ 122.44 Establishing limitations, standards, and other permit conditions (applicable to State NPDES programs, see § 123.25).

In addition to the conditions established under § 122.43(a), each NPDES permit shall include conditions meeting the following requirements when applicable.

(a)(1) Technology-based effluent limitations and standards based on: effluent limitations and standards promulgated under section 301 of the CWA, or new source performance standards promulgated under section 306 of CWA, on case-by-case effluent limitations determined under section 402(a)(1) of CWA, or a combination of the three, in accordance with § 125.3 of this chapter. For new sources or new dischargers, these technology based limitations and standards are subject to the provisions of § 122.29(d) (protection period).

(2) Monitoring waivers for certain guideline-listed pollutants.

(i) The Director may authorize a discharger subject to technology-based effluent limitations guidelines and standards in an NPDES permit to forego sampling of a pollutant found at 40 CFR Subchapter N of this chapter if the discharger has demonstrated through sampling and other technical factors that the pollutant is not present in the discharge or is present only at background levels from intake water and without any increase in the pollutant due to activities of the discharger.

(ii) This waiver is good only for the term of the permit and is not available during the term of the first permit issued to a discharger.

(iii) Any request for this waiver must be submitted when applying for a reissued permit or modification of a reissued permit. The request must demonstrate through sampling or other technical information, including information generated during an earlier permit term that the pollutant is not present in the discharge or is present only at background levels from intake water and without any increase in the pollutant due to activities of the discharger.

(iv) Any grant of the monitoring waiver must be included in the permit as an express permit condition and the reasons supporting the grant must be documented in the permit's fact sheet or statement of basis.

(v) This provision does not supersede certification processes and requirements already established in existing effluent limitations guidelines and standards.

(b)(1) Other effluent limitations and standards under sections 301, 302, 303, 307, 318 and 405 of CWA. If any applicable toxic effluent standard or prohibition (including any schedule of compliance specified in such effluent standard or prohibition) is promulgated under section 307(a) of CWA for a toxic pollutant and that standard or prohibition is more stringent than any limitation on the pollutant in the permit, the Director shall institute proceedings under these regulations to modify or revoke and reissue the permit to conform to the toxic effluent standard or prohibition. See also § 122.41(a).

(2) Standards for sewage sludge use or disposal under section 405(d) of the CWA unless those standards have been included in a permit issued under the appropriate provisions of subtitle C of the Solid Waste Disposal Act, Part C of Safe Drinking Water Act, the Marine Protection, Research, and Sanctuaries Act of 1972, or the Clean Air Act, or under State permit programs approved by the Administrator. When there are no applicable standards for sewage sludge use or disposal, the permit may include requirements developed on a case-by-case basis to protect public health and the environment from any adverse effects which may occur from toxic pollutants in sewage sludge. If any applicable standard for sewage sludge use or disposal is promulgated under section 405(d) of the CWA and that standard is more stringent than any limitation on the pollutant or practice in the permit, the Director may initiate proceedings under these regulations to modify or revoke and reissue the permit to conform to the standard for sewage sludge use or disposal.

(3) Requirements applicable to cooling water intake structures under section 316(b) of the CWA, in accordance with part 125, subparts I, J, and N of this chapter.

(c) Reopener clause: For any permit issued to a treatment works treating domestic sewage (including "sludge-only facilities"), the Director shall include a reopener clause to incorporate any applicable standard for sewage sludge use or disposal promulgated under section 405(d) of the CWA. The Director may promptly modify or revoke and reissue any permit containing the reopener clause required by this paragraph if the standard for sewage sludge use or disposal is more stringent than any requirements for sludge use or disposal in the permit, or controls a pollutant or practice not limited in the permit.

(d) Water quality standards and State requirements: any requirements in addition to or more stringent than promulgated effluent limitations guidelines or standards under sections 301, 304, 306, 307, 318 and 405 of CWA necessary to:

(1) Achieve water quality standards established under section 303 of the CWA, including State narrative criteria for water quality.

(i) Limitations must control all pollutants or pollutant parameters (either conventional, nonconventional, or toxic pollutants) which the Director determines are or may be discharged at a level which will cause, have the reasonable potential to cause, or contribute to an excursion above any State water quality standard, including State narrative criteria for water quality.

(ii) When determining whether a discharge causes, has the reasonable potential to cause, or contributes to an in-stream excursion above a narrative or numeric criteria within a State water quality standard, the permitting authority shall use procedures which account for existing controls on point and nonpoint sources of pollution, the variability of the pollutant or pollutant parameter in the effluent, the sensitivity of the species to toxicity testing (when evaluating whole effluent toxicity), and where appropriate, the dilution of the effluent in the receiving water.

(iii) When the permitting authority determines, using the procedures in paragraph (d)(1)(ii) of this section, that a discharge causes, has the reasonable potential to cause, or contributes to an in-stream excursion above the allowable ambient concentration of a State numeric criteria within a State water quality standard for an individual pollutant, the permit must contain effluent limits for that pollutant.

(iv) When the permitting authority determines, using the procedures in paragraph (d)(1)(ii) of this section, that a discharge causes, has the reasonable potential to cause, or contributes to an in-stream excursion above the numeric criterion for whole effluent toxicity, the permit must contain effluent limits for whole effluent toxicity.

(v) Except as provided in this subparagraph, when the permitting authority determines, using the procedures in paragraph (d)(1)(ii) of this section, toxicity testing data, or other information, that a discharge causes, has the reasonable potential to cause, or contributes to an in-stream excursion above a narrative criterion within an applicable State water quality standard, the permit must contain effluent limits for whole effluent toxicity. Limits on whole effluent toxicity are not necessary where the permitting authority demonstrates in the fact sheet or statement of basis of the NPDES permit, using the procedures in paragraph (d)(1)(ii) of this section, that chemical-specific limits for the effluent are sufficient to attain and maintain applicable numeric and narrative State water quality standards.

(vi) Where a State has not established a water quality criterion for a specific chemical pollutant that is present in an effluent at a concentration that causes, has the reasonable potential to cause, or contributes to an excursion above a narrative criterion within an applicable State water quality standard, the permitting authority must establish effluent limits using one or more of the following options:

(A) Establish effluent limits using a calculated numeric water quality criterion for the pollutant which the permitting authority demonstrates will attain and maintain applicable narrative water quality criteria and will fully protect the designated use. Such a criterion may be derived using a proposed State criterion, or an explicit State policy or regulation interpreting its narrative water quality criterion, supplemented with other relevant information which may include: EPA's Water Quality Standards Handbook, October 1983, risk assessment data, exposure data, information about the pollutant from the Food and Drug Administration, and current EPA criteria documents; or

(B) Establish effluent limits on a case-by-case basis, using EPA's water quality criteria, published under section 304(a) of the CWA, supplemented where necessary by other relevant information; or

(C) Establish effluent limitations on an indicator parameter for the pollutant of concern, provided:

(1) The permit identifies which pollutants are intended to be controlled by the use of the effluent limitation;

(2) The fact sheet required by § 124.56 sets forth the basis for the limit, including a finding that compliance with the effluent limit on the indicator parameter will result in controls on the pollutant of concern which are sufficient to attain and maintain applicable water quality standards;

(3) The permit requires all effluent and ambient monitoring necessary to show that during the term of the permit the limit on the indicator parameter continues to attain and maintain applicable water quality standards; and

(4) The permit contains a reopener clause allowing the permitting authority to modify or revoke and reissue the permit if the limits on the indicator parameter no

longer attain and maintain applicable water quality standards.

(vii) When developing water quality-based effluent limits under this paragraph the permitting authority shall ensure that:

(A) The level of water quality to be achieved by limits on point sources established under this paragraph is derived from, and complies with all applicable water quality standards; and

(B) Effluent limits developed to protect a narrative water quality criterion, a numeric water quality criterion, or both, are consistent with the assumptions and requirements of any available wasteload allocation for the discharge prepared by the State and approved by EPA pursuant to 40 CFR 130.7.

(2) Attain or maintain a specified water quality through water quality related effluent limits established under section 302 of CWA;

(3) Conform to the conditions to a State certification under section 401 of the CWA that meets the requirements of § 124.53 when EPA is the permitting authority. If a State certification is stayed by a court of competent jurisdiction or an appropriate State board or agency, EPA shall notify the State that the Agency will deem certification waived unless a finally effective State certification is received within sixty days from the date of the notice. If the State does not forward a finally effective certification within the sixty day period, EPA shall include conditions in the permit that may be necessary to meet EPA's obligation under section 301(b)(1)(C) of the CWA;

(4) Conform to applicable water quality requirements under section 401(a)(2) of CWA when the discharge affects a State other than the certifying State;

(5) Incorporate any more stringent limitations, treatment standards, or schedule of compliance requirements established under Federal or State law or regulations in accordance with section 301(b)(1)(C) of CWA;

(6) Ensure consistency with the requirements of a Water Quality Management plan approved by EPA under section 208(b) of CWA;

(7) Incorporate section 403(c) criteria under part 125, subpart M, for ocean discharges;

(8) Incorporate alternative effluent limitations or standards where warranted by "fundamentally different factors," under 40 CFR part 125, subpart D;

(9) Incorporate any other appropriate requirements, conditions, or limitations (other than effluent limitations) into a new source permit to the extent allowed by the National Environmental Policy Act, 42 U.S.C. 4321 et seq. and section 511 of the CWA, when EPA is the permit issuing authority. (See § 122.29(c)).

(e) Technology-based controls for toxic pollutants. Limitations established under paragraphs (a), (b), or (d) of this section, to control pollutants meeting the criteria listed in paragraph (e)(1) of this section. Limitations will be established in accordance with paragraph (e)(2) of this section. An explanation of the development of these limitations shall be included in the fact sheet under § 124.56(b)(1)(i).

(1) Limitations must control all toxic pollutants which the Director determines (based on information reported in a permit application under § 122.21(g)(7) or in a notification under § 122.42(a)(1) or on other information) are or may be discharged at a level greater than the level which can be achieved by the technology-based treatment requirements appropriate to the permittee under § 125.3(c) of this chapter; or

(2) The requirement that the limitations control the pollutants meeting the criteria of paragraph (e)(1) of this section will be satisfied by:

(i) Limitations on those pollutants; or

(ii) Limitations on other pollutants which, in the judgment of the Director, will provide treatment of the pollutants under paragraph (e)(1) of this section to the levels required by § 125.3(c).

(f) Notification level. A "notification level" which exceeds the notification level of § 122.42(a)(1)(i), (ii) or (iii), upon a petition from the permittee or on the Director's initiative. This new notification level may not exceed the level which can be achieved by the technology-based treatment requirements appropriate to the permittee under § 125.3(c)

(g) Twenty-four hour reporting. Pollutants for which the permittee must report violations of maximum daily discharge limitations under § 122.41(1)(6)(ii)(C) (24-hour reporting) shall be listed in the permit. This list shall include any toxic pollutant or hazardous substance, or any pollutant specifically identified as the method to control a toxic pollutant or hazardous substance.

(h) Durations for permits, as set forth in § 122.46.

(i) Monitoring requirements. In addition to § 122.48, the following monitoring requirements:

(1) To assure compliance with permit limitations, requirements to monitor:

(i) The mass (or other measurement specified in the permit) for each pollutant limited in the permit;

(ii) The volume of effluent discharged from each outfall;

(iii) Other measurements as appropriate including pollutants in internal waste streams under § 122.45(i); pollutants in intake water for net limitations under § 122.45(f); frequency, rate of discharge, etc., for noncontinuous discharges under § 122.45(e); pollutants subject to notification requirements under § 122.42(a); and pollutants in sewage sludge or other monitoring as specified in 40 CFR part 503; or as determined to be necessary on a case-by-case basis pursuant to section 405(d)(4) of the CWA.

(iv) According to test procedures approved under 40 CFR Part 136 for the analyses of pollutants or another method is required under 40 CFR subchapters N or O. In the case of pollutants for which there are no approved methods under 40 CFR Part 136 or otherwise required under 40 CFR subchapters N or O, monitoring must be

conducted according to a test procedure specified in the permit for such pollutants.

(2) Except as provided in paragraphs (i)(4) and (i)(5) of this section, requirements to report monitoring results shall be established on a case-by-case basis with a frequency dependent on the nature and effect of the discharge, but in no case less than once a year. For sewage sludge use or disposal practices, requirements to monitor and report results shall be established on a case-by-case basis with a frequency dependent on the nature and effect of the sewage sludge use or disposal practice; minimally this shall be as specified in 40 CFR part 503 (where applicable), but in no case less than once a year.

(3) Requirements to report monitoring results for storm water discharges associated with industrial activity which are subject to an effluent limitation guideline shall be established on a case-by-case basis with a frequency dependent on the nature and effect of the discharge, but in no case less than once a year.

(4) Requirements to report monitoring results for storm water discharges associated with industrial activity (other than those addressed in paragraph (i)(3) of this section) shall be established on a case-by-case basis with a frequency dependent on the nature and effect of the discharge. At a minimum, a permit for such a discharge must require:

(i) The discharger to conduct an annual inspection of the facility site to identify areas contributing to a storm water discharge associated with industrial activity and evaluate whether measures to reduce pollutant loadings identified in a storm water pollution prevention plan are adequate and properly implemented in accordance with the terms of the permit or whether additional control measures are needed;

(ii) The discharger to maintain for a period of three years a record summarizing the results of the inspection and a certification that the facility is in compliance with the plan and the permit, and identifying any incidents of non-compliance;

(iii) Such report and certification be signed in accordance with § 122.22; and

(iv) Permits for storm water discharges associated with industrial activity from inactive mining operations may, where annual inspections are impracticable, require certification once every three years by a Registered Professional Engineer that the facility is in compliance with the permit, or alternative requirements.

(5) Permits which do not require the submittal of monitoring result reports at least annually shall require that the permittee report all instances of noncompliance not reported under § 122.41(l) (1), (4), (5), and (6) at least annually.

(j) Pretreatment program for POTWs. Requirements for POTWs to:

(1) Identify, in terms of character and volume of pollutants, any Significant Industrial Users discharging into the POTW subject to Pretreatment Standards under section 307(b) of CWA and 40 CFR part 403.

(2)(i) Submit a local program when required by and in accordance with 40 CFR part 403 to assure compliance with pretreatment standards to the extent applicable under section 307(b). The local program shall be incorporated into the permit as described in 40 CFR part 403. The program must require all indirect dischargers to the POTW

to comply with the reporting requirements of 40 CFR part 403.

(ii) Provide a written technical evaluation of the need to revise local limits under 40 CFR 403.5(c)(1), following permit issuance or reissuance.

(3) For POTWs which are "sludge-only facilities," a requirement to develop a pretreatment program under 40 CFR part 403 when the Director determines that a pretreatment program is necessary to assure compliance with Section 405(d) of the CWA.

(k) Best management practices (BMPs) to control or abate the discharge of pollutants when:

(1) Authorized under section 304(e) of the CWA for the control of toxic pollutants and hazardous substances from ancillary industrial activities;

(2) Authorized under section 402(p) of the CWA for the control of storm water discharges;

(3) Numeric effluent limitations are infeasible; or

(4) The practices are reasonably necessary to achieve effluent limitations and standards or to carry out the purposes and intent of the CWA.

NOTE TO PARAGRAPH (k)(4): Additional technical information on BMPs and the elements of BMPs is contained in the following documents: Guidance Manual for Developing Best Management Practices (BMPs), October 1993, EPA No. 833/B-93-004, NTIS No. PB 94-178324, ERIC No. W498); Storm Water Management for Construction Activities: Developing Pollution Prevention Plans and Best Management Practices, September 1992, EPA No. 832/R-92-005, NTIS No. PB 92-235951, ERIC No. N482); Storm Water Management for Construction Activities, Developing Pollution Prevention Plans and Best Management Practices: Summary Guidance, EPA No. 833/R-92-001, NTIS No. PB 93-223550; ERIC No. W139; Storm Water Management for Industrial Activities, Developing Pollution Prevention Plans and Best Management Practices, September 1992; EPA 832/R-92-006, NTIS No. PB 92-235969, ERIC No. N477; Storm Water Management for Industrial Activities, Developing Pollution Prevention Plans and Best Management Practices: Summary Guidance, EPA 833/R-92-002, NTIS No. PB 94-133782; ERIC No. W492. Copies of those documents (or directions on how to obtain them) can be obtained by contacting either the Office of Water Resource Center (using the EPA document number as a reference) at (202) 260-7786; or the Educational Resources Information Center (ERIC) (using the ERIC number as a reference) at (800) 276-0462. Updates of these documents or additional BMP documents may also be available. A list of EPA BMP guidance documents is available on the OWM Home Page at <http://www.epa.gov/owm>. In addition, States may have BMP guidance documents.

These EPA guidance documents are listed here only for informational purposes; they are not binding and EPA does not intend that these guidance documents have any mandatory, regulatory effect by virtue of their listing in this note.

(l) Reissued permits. (1) Except as provided in paragraph (l)(2) of this section when a permit is renewed or reissued, interim effluent limitations, standards or conditions

must be at least as stringent as the final effluent limitations, standards, or conditions in the previous permit (unless the circumstances on which the previous permit was based have materially and substantially changed since the time the permit was issued and would constitute cause for permit modification or revocation and reissuance under § 122.62.)

(2) In the case of effluent limitations established on the basis of Section 402(a)(1)(B) of the CWA, a permit may not be renewed, reissued, or modified on the basis of effluent guidelines promulgated under section 304(b) subsequent to the original issuance of such permit, to contain effluent limitations which are less stringent than the comparable effluent limitations in the previous permit.

(i) Exceptions -- A permit with respect to which paragraph (1)(2) of this section applies may be renewed, reissued, or modified to contain a less stringent effluent limitation applicable to a pollutant, if --

(A) Material and substantial alterations or additions to the permitted facility occurred after permit issuance which justify the application of a less stringent effluent limitation;

(B)(1) Information is available which was not available at the time of permit issuance (other than revised regulations, guidance, or test methods) and which would have justified the application of a less stringent effluent limitation at the time of permit issuance; or

(2) The Administrator determines that technical mistakes or mistaken interpretations of law were made in issuing the permit under section 402(a)(1)(b);

(C) A less stringent effluent limitation is necessary because of events over which the permittee has no control and for which there is no reasonably available remedy;

(D) The permittee has received a permit modification under section 301(c), 301(g), 301(h), 301(i), 301(k), 301(n), or 316(a); or

(E) The permittee has installed the treatment facilities required to meet the effluent limitations in the previous permit and has properly operated and maintained the facilities but has nevertheless been unable to achieve the previous effluent limitations, in which case the limitations in the reviewed, reissued, or modified permit may reflect the level of pollutant control actually achieved (but shall not be less stringent than required by effluent guidelines in effect at the time of permit renewal, reissuance, or modification).

(ii) Limitations. In no event may a permit with respect to which paragraph (1)(2) of this section applies be renewed, reissued, or modified to contain an effluent limitation which is less stringent than required by effluent guidelines in effect at the time the permit is renewed, reissued, or modified. In no event may such a permit to discharge into waters be renewed, issued, or modified to contain a less stringent effluent limitation if the implementation of such limitation would result in a violation of a water quality standard under section 303 applicable to such waters.

(m) Privately owned treatment works. For a privately owned treatment works, any conditions expressly applicable to any user, as a limited co-permittee, that may be necessary in the permit issued to the treatment works to ensure compliance with

applicable requirements under this part. Alternatively, the Director may issue separate permits to the treatment works and to its users, or may require a separate permit application from any user. The Director's decision to issue a permit with no conditions applicable to any user, to impose conditions on one or more users, to issue separate permits, or to require separate applications, and the basis for that decision, shall be stated in the fact sheet for the draft permit for the treatment works.

(n) Grants. Any conditions imposed in grants made by the Administrator to POTWs under sections 201 and 204 of CWA which are reasonably necessary for the achievement of effluent limitations under section 301 of CWA.

(o) Sewage sludge. Requirements under section 405 of CWA governing the disposal of sewage sludge from publicly owned treatment works or any other treatment works treating domestic sewage for any use for which regulations have been established, in accordance with any applicable regulations.

(p) Coast Guard. When a permit is issued to a facility that may operate at certain times as a means of transportation over water, a condition that the discharge shall comply with any applicable regulations promulgated by the Secretary of the department in which the Coast Guard is operating, that establish specifications for safe transportation, handling, carriage, and storage of pollutants.

(q) Navigation. Any conditions that the Secretary of the Army considers necessary to ensure that navigation and anchorage will not be substantially impaired, in accordance with § 124.59 of this chapter.

(r) Great Lakes. When a permit is issued to a facility that discharges into the Great Lakes System (as defined in 40 CFR 132.2), conditions promulgated by the State, Tribe, or EPA pursuant to 40 CFR part 132.

(s) Qualifying State, Tribal, or local programs. (1) For storm water discharges associated with small construction activity identified in § 122.26(b)(15), the Director may include permit conditions that incorporate qualifying State, Tribal, or local erosion and sediment control program requirements by reference. Where a qualifying State, Tribal, or local program does not include one or more of the elements in this paragraph (s)(1), then the Director must include those elements as conditions in the permit. A qualifying State, Tribal, or local erosion and sediment control program is one that includes:

(i) Requirements for construction site operators to implement appropriate erosion and sediment control best management practices;

(ii) Requirements for construction site operators to control waste such as discarded building materials, concrete truck washout, chemicals, litter, and sanitary waste at the construction site that may cause adverse impacts to water quality;

(iii) Requirements for construction site operators to develop and implement a storm water pollution prevention plan. (A storm water pollution prevention plan includes site descriptions, descriptions of appropriate control measures, copies of approved State, Tribal or local requirements, maintenance procedures, inspection procedures, and identification of non-storm water discharges); and

(iv) Requirements to submit a site plan for review that incorporates consideration of potential water quality impacts.

(2) For storm water discharges from construction activity identified in § 122.26(b)(14)(x), the Director may include permit conditions that incorporate qualifying State, Tribal, or local erosion and sediment control program requirements by reference. A qualifying State, Tribal or local erosion and sediment control program is one that includes the elements listed in paragraph (s)(1) of this section and any additional requirements necessary to achieve the applicable technology-based standards of "best available technology" and "best conventional technology" based on the best professional judgment of the permit writer.

40 CFR 130.2

§ 130.2 Definitions.

(a) The Act. The Clean Water Act, as amended, *33 U.S.C. 1251* et seq.

(b) Indian Tribe. Any Indian Tribe, band, group, or community recognized by the Secretary of the Interior and exercising governmental authority over a Federal Indian reservation.

(c) Pollution. The man-made or man-induced alteration of the chemical, physical, biological, and radiological integrity of water.

(d) Water quality standards (WQS). Provisions of State or Federal law which consist of a designated use or uses for the waters of the United States and water quality criteria for such waters based upon such uses. Water quality standards are to protect the public health or welfare, enhance the quality of water and serve the purposes of the Act.

(e) Load or loading. An amount of matter or thermal energy that is introduced into a receiving water; to introduce matter or thermal energy into a receiving water. Loading may be either man-caused (pollutant loading) or natural (natural background loading).

(f) Loading capacity. The greatest amount of loading that a water can receive without violating water quality standards.

(g) Load allocation (LA). The portion of a receiving water's loading capacity that is attributed either to one of its existing or future nonpoint sources of pollution or to natural background sources. Load allocations are best estimates of the loading, which may range from reasonably accurate estimates to gross allotments, depending on the availability of data and appropriate techniques for predicting the loading. Wherever possible, natural and nonpoint source loads should be distinguished.

(h) Wasteload allocation (WLA). The portion of a receiving water's loading capacity that is allocated to one of its existing or future point sources of pollution. WLAs constitute a type of water quality-based effluent limitation.

(i) Total maximum daily load (TMDL). The sum of the individual WLAs for point sources and LAs for nonpoint sources and natural background. If a receiving water has only one point source discharger, the TMDL is the sum of that point source WLA plus the LAs for any nonpoint sources of pollution and natural background sources, tributaries, or

40 CFR 130.2

adjacent segments. TMDLs can be expressed in terms of either mass per time, toxicity, or other appropriate measure. If Best Management Practices (BMPs) or other nonpoint source pollution controls make more stringent load allocations practicable, then wasteload allocations can be made less stringent. Thus, the TMDL process provides for nonpoint source control tradeoffs.

(j) Water quality limited segment. Any segment where it is known that water quality does not meet applicable water quality standards, and/or is not expected to meet applicable water quality standards, even after the application of the technology-based effluent limitations required by sections 301(b) and 306 of the Act.

(k) Water quality management (WQM) plan. A State or areawide waste treatment management plan developed and updated in accordance with the provisions of sections 205(j), 208 and 303 of the Act and this regulation.

(l) Areawide agency. An agency designated under section 208 of the Act, which has responsibilities for WQM planning within a specified area of a State.

(m) Best Management Practice (BMP). Methods, measures or practices selected by an agency to meet its nonpoint source control needs. BMPs include but are not limited to structural and nonstructural controls and operation and maintenance procedures. BMPs can be applied before, during and after pollution-producing activities to reduce or eliminate the introduction of pollutants into receiving waters.

(n) Designated management agency (DMA). An agency identified by a WQM plan and designated by the Governor to implement specific control recommendations.

40 CFR 130.3

§ 130.3 Water quality standards.

A water quality standard (WQS) defines the water quality goals of a water body, or portion thereof, by designating the use or uses to be made of the water and by setting criteria necessary to protect the uses. States and EPA adopt WQS to protect public health or welfare, enhance the quality of water and serve the purposes of the Clean Water Act (CWA). Serve the purposes of Act (as defined in sections 101(a)(2) and 303(c) of the Act) means that WQS should, wherever attainable, provide water quality for the protection and propagation of fish, shellfish and wildlife and for recreation in and on the water and take into consideration their use and value for public water supplies, propagation of fish, shellfish, wildlife, recreation in and on the water, and agricultural, industrial and other purposes including navigation.

Such standards serve the dual purposes of establishing the water quality goals for a specific water body and serving as the regulatory basis for establishment of water quality-based treatment controls and strategies beyond the technology-based level of treatment required by sections 301(b) and 306 of the Act. States shall review and revise WQS in accordance with applicable regulations and, as appropriate, update their Water Quality Management (WQM) plans to reflect such revisions. Specific WQS requirements are found in 40 CFR part 131.

40 CFR 130.3

TAB "31"

40 CFR 130.7

§ 130.7 Total maximum daily loads (TMDL) and individual water quality-based effluent limitations.

(a) General. The process for identifying water quality limited segments still requiring wasteload allocations, load allocations and total maximum daily loads (WLAS/LAs and TMDLs), setting priorities for developing these loads; establishing these loads for segments identified, including water quality monitoring, modeling, data analysis, calculation methods, and list of pollutants to be regulated; submitting the State's list of segments identified, priority ranking, and loads established (WLAS/LAs/TMDLs) to EPA for approval; incorporating the approved loads into the State's WQM plans and NPDES permits; and involving the public, affected dischargers, designated areawide agencies, and local governments in this process shall be clearly described in the State Continuing Planning Process (CPP).

(b) Identification and priority setting for water quality-limited segments still requiring TMDLs.

(1) Each State shall identify those water quality-limited segments still requiring TMDLs within its boundaries for which:

(i) Technology-based effluent limitations required by sections 301(b), 306, 307, or other sections of the Act;

(ii) More stringent effluent limitations (including prohibitions) required by either State or local authority preserved by section 510 of the Act, or Federal authority (law, regulation, or treaty); and

(iii) Other pollution control requirements (e.g., best management practices) required by local, State, or Federal authority are not stringent enough to implement any water quality standards (WQS) applicable to such waters.

(2) Each State shall also identify on the same list developed under paragraph (b)(1) of this section those water quality-limited segments still requiring TMDLs or parts thereof within its boundaries for which controls on thermal discharges under section 301 or State or local requirements are not stringent enough to assure protection and propagation of a balanced indigenous population of shellfish, fish and wildlife.

(3) For the purposes of listing waters under § 130.7(b), the term "water quality standard applicable to such waters" and "applicable water quality standards" refer to those water quality standards established under section 303 of the Act, including numeric criteria, narrative criteria, waterbody uses, and antidegradation requirements.

(4) The list required under §§ 130.7(b)(1) and 130.7(b)(2) of this section shall include a priority ranking for all listed water quality-limited segments still requiring TMDLs, taking into account the severity of the pollution and the uses to be made of such waters and shall identify the pollutants causing or expected to cause violations of the applicable water quality standards. The priority ranking shall specifically include the identification of waters targeted for TMDL development in the next two years.

(5) Each State shall assemble and evaluate all existing and readily available water quality-related data and information to develop the list required by §§ 1A130.7(b)(1) and 130.7(b)(2). At a minimum "all existing and readily available water quality-related data and information" includes but is not limited to all of the existing and readily available data and information about the following categories of waters:

(i) Waters identified by the State in its most recent section 305(b) report as "partially meeting" or "not meeting" designated uses or as "threatened";

(ii) Waters for which dilution calculations or predictive models indicate nonattainment of applicable water quality standards;

(iii) Waters for which water quality problems have been reported by local, state, or federal agencies; members of the public; or academic institutions. These organizations and groups should be actively solicited for research they may be conducting or reporting. For example, university researchers, the United States Department of Agriculture, the National Oceanic and Atmospheric Administration, the United States Geological Survey, and the United States Fish and Wildlife Service are good sources of field data; and

(iv) Waters identified by the State as impaired or threatened in a nonpoint assessment submitted to EPA under section 319 of the CWA or in any updates of the assessment.

(6) Each State shall provide documentation to the Regional Administrator to support the State's determination to list or not to list its waters as required by §§ 130.7(b)(1) and 130.7(b)(2). This documentation shall be submitted to the Regional Administrator together with the list required by §§ 130.7(b)(1) and 130.7(b)(2) and shall include at a minimum:

(i) A description of the methodology used to develop the list; and

(ii) A description of the data and information used to identify waters, including a description of the data and information used by the State as required by § 130.7(b)(5); and

(iii) A rationale for any decision to not use any existing and readily available data and information for any one of the categories of waters as described in § 130.7(b)(5); and

(iv) Any other reasonable information requested by the Regional Administrator. Upon request by the Regional Administrator, each State must demonstrate good cause for not including a water or waters on the list. Good cause includes, but is not limited to, more recent or accurate data; more sophisticated water quality modeling; flaws in the original analysis that led to the water being listed in the categories in § 130.7(b)(5); or changes in conditions, e.g., new control equipment, or elimination of discharges.

(c) Development of TMDLs and individual water quality based effluent limitations.

(1) Each State shall establish TMDLs for the water quality limited segments identified in paragraph (b)(1) of this section, and in accordance with the priority ranking. For

pollutants other than heat, TMDLs shall be established at levels necessary to attain and maintain the applicable narrative and numerical WQS with seasonal variations and a margin of safety which takes into account any lack of knowledge concerning the relationship between effluent limitations and water quality. Determinations of TMDLs shall take into account critical conditions for stream flow, loading, and water quality parameters.

(i) TMDLs may be established using a pollutant-by-pollutant or biomonitoring approach. In many cases both techniques may be needed. Site-specific information should be used wherever possible.

(ii) TMDLs shall be established for all pollutants preventing or expected to prevent attainment of water quality standards as identified pursuant to paragraph (b)(1) of this section. Calculations to establish TMDLs shall be subject to public review as defined in the State CPP.

(2) Each State shall estimate for the water quality limited segments still requiring TMDLs identified in paragraph (b)(2) of this section, the total maximum daily thermal load which cannot be exceeded in order to assure protection and propagation of a balanced, indigenous population of shellfish, fish and wildlife. Such estimates shall take into account the normal water temperatures, flow rates, seasonal variations, existing sources of heat input, and the dissipative capacity of the identified waters or parts thereof. Such estimates shall include a calculation of the maximum heat input that can be made into each such part and shall include a margin of safety which takes into account any lack of knowledge concerning the development of thermal water quality criteria for protection and propagation of a balanced, indigenous population of shellfish, fish and wildlife in the identified waters or parts thereof.

(d) Submission and EPA approval. (1) Each State shall submit biennially to the Regional Administrator beginning in 1992 the list of waters, pollutants causing impairment, and the priority ranking including waters targeted for TMDL development within the next two years as required under paragraph (b) of this section. For the 1992 biennial submission, these lists are due no later than October 22, 1992. Thereafter, each State shall submit to EPA lists required under paragraph (b) of this section on April 1 of every even-numbered year. For the year 2000 submission, a State must submit a list required under paragraph (b) of this section only if a court order or consent decree, or commitment in a settlement agreement dated prior to January 1, 2000, expressly requires EPA to take action related to that State's year 2000 list. For the year 2002 submission, a State must submit a list required under paragraph (b) of this section by October 1, 2002, unless a court order, consent decree or commitment in a settlement agreement expressly requires EPA to take an action related to that State's 2002 list prior to October 1, 2002, in which case, the State must submit a list by April 1, 2002. The list of waters may be submitted as part of the State's biennial water quality report required by § 130.8 of this part and section 305(b) of the CWA or submitted under separate cover. All TMDLs established under paragraph (c) for water quality limited segments shall continue to be submitted to EPA for review and approval. Schedules for submission of TMDLs shall be determined by the Regional Administrator and the State.

(2) The Regional Administrator shall either approve or disapprove such listing and loadings not later than 30 days after the date of submission. The Regional Administrator shall approve a list developed under § 130.7(b) that is submitted after the effective date of this rule only if it meets the requirements of § 130.7(b). If the

Regional Administrator approves such listing and loadings, the State shall incorporate them into its current WQM plan. If the Regional Administrator disapproves such listing and loadings, he shall, not later than 30 days after the date of such disapproval, identify such waters in such State and establish such loads for such waters as determined necessary to implement applicable WQS. The Regional Administrator shall promptly issue a public notice seeking comment on such listing and loadings. After considering public comment and making any revisions he deems appropriate, the Regional Administrator shall transmit the listing and loads to the State, which shall incorporate them into its current WQM plan.

(e) For the specific purpose of developing information and as resources allow, each State shall identify all segments within its boundaries which it has not identified under paragraph (b) of this section and estimate for such waters the TMDLs with seasonal variations and margins of safety, for those pollutants which the Regional Administrator identifies under section 304(a)(2) as suitable for such calculation and for thermal discharges, at a level that would assure protection and propagation of a balanced indigenous population of fish, shellfish and wildlife. However, there is no requirement for such loads to be submitted to EPA for approval, and establishing TMDLs for those waters identified in paragraph (b) of this section shall be given higher priority.

40 CFR 130.7

TAB "32"

40 CFR 131.3
§ 131.3 Definitions.

(a) The Act means the Clean Water Act (Pub. L. 92-500, as amended, (33 U.S.C. 1251 et seq.)).

(b) Criteria are elements of State water quality standards, expressed as constituent concentrations, levels, or narrative statements, representing a quality of water that supports a particular use. When criteria are met, water quality will generally protect the designated use.

(c) Section 304(a) criteria are developed by EPA under authority of section 304(a) of the Act based on the latest scientific information on the relationship that the effect of a constituent concentration has on particular aquatic species and/or human health. This information is issued periodically to the States as guidance for use in developing criteria.

(d) Toxic pollutants are those pollutants listed by the Administrator under section 307(a) of the Act.

(e) Existing uses are those uses actually attained in the water body on or after November 28, 1975, whether or not they are included in the water quality standards.

(f) Designated uses are those uses specified in water quality standards for each water body or segment whether or not they are being attained.

(g) Use attainability analysis is a structured scientific assessment of the factors affecting the attainment of the use which may include physical, chemical, biological, and economic factors as described in § 131.10(g).

(h) Water quality limited segment means any segment where it is known that water quality does not meet applicable water quality standards, and/or is not expected to meet applicable water quality standards, even after the application of the technology-based effluent limitations required by sections 301(b) and 306 of the Act.

(i) Water quality standards are provisions of State or Federal law which consist of a designated use or uses for the waters of the United States and water quality criteria for such waters based upon such uses. Water quality standards are to protect the public health or welfare, enhance the quality of water and serve the purposes of the Act.

(j) States include: The 50 States, the District of Columbia, Guam, the Commonwealth of Puerto Rico, Virgin Islands, American Samoa, the Trust Territory of the Pacific Islands, the Commonwealth of the Northern Mariana Islands, and Indian Tribes that EPA determines to be eligible for purposes of a water quality standards program.

(k) Federal Indian Reservation, Indian Reservation, or Reservation means all land within the limits of any Indian reservation under the jurisdiction of the United States Government, notwithstanding the issuance of any patent, and including rights-of-way running through the reservation."

(I) Indian Tribe or Tribe means any Indian Tribe, band, group, or community recognized by the Secretary of the Interior and exercising governmental authority over a Federal Indian reservation.

Part III

Environmental Protection Agency

40 CFR Part 131

Water Quality Standards; Establishment of
Numeric Criteria for Priority Toxic
Pollutants for the State of California; Rule

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 131

[FRL-6587-9]

RIN 2040-AC44

Water Quality Standards; Establishment of Numeric Criteria for Priority Toxic Pollutants for the State of California

AGENCY: Environmental Protection Agency.

ACTION: Final rule.

SUMMARY: This final rule promulgates: numeric aquatic life criteria for 23 priority toxic pollutants; numeric human health criteria for 57 priority toxic pollutants; and a compliance schedule provision which authorizes the State to issue schedules of compliance for new or revised National Pollutant Discharge Elimination System permit limits based on the federal criteria when certain conditions are met.

EPA is promulgating this rule based on the Administrator's determination that numeric criteria are necessary in the State of California to protect human health and the environment. The Clean Water Act requires States to adopt numeric water quality criteria for priority toxic pollutants for which EPA has issued criteria guidance, the presence or discharge of which could reasonably be expected to interfere with maintaining designated uses.

EPA is promulgating this rule to fill a gap in California water quality standards that was created in 1994 when a State court overturned the State's water quality control plans which contained water quality criteria for priority toxic pollutants. Thus, the State of California has been without numeric water quality criteria for many priority toxic pollutants as required by the Clean Water Act, necessitating this action by EPA. These Federal criteria are legally applicable in the State of California for inland surface waters,

enclosed bays and estuaries for all purposes and programs under the Clean Water Act.

EFFECTIVE DATE: This rule shall be effective May 18, 2000.

ADDRESSES: The administrative record for today's final rule is available for public inspection at the U.S. Environmental Protection Agency, Region 9, Water Division, 75 Hawthorne Street, San Francisco, California 94105, between the hours of 8:00 a.m. and 4:30 p.m. For access to the administrative record, call Diane E. Fleck, P.E., Esq. at 415 744-1984 for an appointment. A reasonable fee will be charged for photocopies.

FOR FURTHER INFORMATION CONTACT: Diane E. Fleck, P.E., Esq. or Philip Woods, U.S. Environmental Protection Agency, Region 9, Water Division, 75 Hawthorne Street, San Francisco, California 94105, 415-744-1984 or 415-744-1997, respectively.

SUPPLEMENTARY INFORMATION: This preamble is organized according to the following outline:

- A. Potentially Affected Entities
- B. Introduction and Overview
 - 1. Introduction
 - 2. Overview
 - 3. Statutory and Regulatory Background
 - 4. California Water Quality Standards Actions
 - 1. California Regional Water Quality Control Board Basin Plans, and the Inland Surface Waters Plan (ISWP) and the Enclosed Bays and Estuaries Plan (EBEP) of April 1991
 - 2. EPA's Review of California Water Quality Standards for Priority Toxic Pollutants in the ISWP and EBEP, and the National Toxics Rule
 - 3. Status of Implementation of CWA Section 303(c)(2)(B)
 - 4. State-Adopted, Site-Specific Criteria for Priority Toxic Pollutants
 - a. State-Adopted Site-Specific Criteria Under EPA Review
 - b. State-Adopted Site-Specific Criteria With EPA Approval
 - E. Rationale and Approach For Developing the Final Rule
 - 1. Legal Basis

A. Potentially Affected Entities

Citizens concerned with water quality in California may be interested in this rulemaking. Entities discharging pollutants to waters of the United States in California could be affected by this rulemaking since water quality criteria are used by the State in developing National Pollutant Discharge Elimination System (NPDES) permit limits. Categories and entities that ultimately may be affected include:

Category	Examples of potentially affected entities
Industry	Industries discharging pollutants to surface waters in California or to publicly-owned treatment works.
Municipalities	Publicly-owned treatment works discharging pollutants to surface waters in California

This table is not intended to be exhaustive, but rather provides a guide for readers regarding entities likely to be affected by this action. This table lists the types of entities that EPA is now aware could potentially be affected by this action. Other types of entities not

listed in the table could also be affected. To determine whether your facility might be affected by this action, you should carefully examine the applicability criteria in § 131.38(c). If you have questions regarding the applicability of this action to a

particular entity, consult the persons listed in the preceding FOR FURTHER INFORMATION CONTACT section.

B. Introduction and Overview

1. Introduction

This section introduces the topics which are addressed in the preamble and provides a brief overview of EPA's basis and rationale for promulgating Federal criteria for the State of California. Section C briefly describes the evolution of the efforts to control toxic pollutants; these efforts include the changes enacted in the 1987 CWA Amendments, which are the basis for this rule. Section D summarizes California's efforts since 1987 to implement the requirements of CWA section 303(c)(2)(B) and describes EPA's procedure and actions for determining whether California has fully implemented CWA section 303(c)(2)(B). Section E provides the rationale and approach for developing this final rule, including a discussion of EPA's legal basis for this final rule. Section F describes the development of the criteria included in this rule. Section G summarizes the provisions of the final rule and discusses implementation issues. Sections H, I, J, K, L, M, N, O, P, and Q briefly address the requirements of Executive Order 12866, the Unfunded Mandates Reform Act of 1995, the Regulatory Flexibility Act, the Paperwork Reduction Act, the Endangered Species Act, the Congressional Review Act, Executive Order 13084, Consultation and Coordination with Indian Tribal Governments, the National Technology Transfer and Advancement Act, and Executive Order 13132, Federalism, respectively.

The proposal for this rulemaking was published in the Federal Register on August 5, 1997. Changes from the proposal are generally addressed in the body of this preamble and specifically addressed in the response to comments document included in the administrative record for this rulemaking. EPA responded to all comments on the proposed rule, including comments received after the September 26, 1997, deadline. Although EPA is under no legal obligation to respond to late comments, EPA made a policy decision to respond to all comments.

Since detailed information concerning many of the topics in this preamble was published previously in the Federal Register in preambles for this and other rulemakings, references are frequently made to those preambles. Those rulemakings include: Water Quality Standards; Establishment of Numeric Criteria for Priority Toxic Pollutants for the State of California; Proposed Rule, 62 FR 42159, August 5, 1997 (referred

to as the "proposed CTR"); Water Quality Standards; Establishment of Numeric Criteria for Priority Toxic Pollutants, 57 FR 60848, December 22, 1992 (referred to as the "National Toxics Rule" or "NTR"); and the NTR as amended by Administrative Stay of Federal Water Quality Criteria for Metals and Interim Final Rule, Water Quality Standards; Establishment of Numeric Criteria for Priority Toxic Pollutants; States' Compliance—Revision of Metals Criteria, 60 FR 22228, May 4, 1995 (referred to as the "National Toxics Rule [NTR], as amended"). The NTR, as amended, is codified at 40 CFR 131.36. A copy of the proposed CTR and its preamble, and the NTR, as amended, and its preambles are contained in the administrative record for this rulemaking.

EPA is making this final rule effective upon publication. Under the Administrative Procedure Act, 5 U.S.C. 553(d)(3), agencies must generally publish a rule no more than 30 days prior to the effective date of the rule except as otherwise provided for by the Agency for good cause. The purpose of the 30-day waiting period is to give affected parties a reasonable time to adjust their behavior before the final rule takes effect. See *Omnipoint Corp. v. F.C.C.*, 78 F.3d 620, 630-631 (D.C. Cir. 1996); *Riverbend Farms, Inc. v. Madigan*, 958 F.2d 1479, 1485 (9th Cir. 1992).

In this instance, EPA finds good cause to make the final rule effective upon publication. In order to find good cause, an Agency needs to find that the 30-day period would be: (1) Impracticable, (2) unnecessary, or (3) contrary to the public interest. Here EPA is relying on the second reason to support its finding of good cause. EPA also notes that the State has requested EPA to make the rule immediately effective.

EPA finds that in this instance, waiting 30 days to make the rule effective is unnecessary. As explained in further detail elsewhere in this preamble, this rule is not self implementing; rather it establishes ambient conditions that the State of California will implement in future permit proceedings. These permit proceedings will, by regulation, take longer than 30 days to complete. This means that although the rule is immediately effective, no discharger's conduct would be altered under the rule in less than 30 days, and therefore the 30-day period is unnecessary.

2. Overview

This final rule establishes ambient water quality criteria for priority toxic pollutants in the State of California. The

criteria in this final rule will supplement the water quality criteria promulgated for California in the NTR, as amended. In 1991, EPA approved a number of water quality criteria (discussed in section D), for the State of California. Since EPA had approved these criteria, it was not necessary to include them in the 1992 NTR for these criteria. However, the EPA-approved criteria were subsequently invalidated in State litigation. Thus, this final rule contains criteria to fill the gap created by the State litigation.

This final rule does not change or supersede any criteria previously promulgated for the State of California in the NTR, as amended. Criteria which EPA promulgated for California in the NTR, as amended, are footnoted in the final table at 131.38(b)(1), so that readers may see the criteria promulgated in the NTR, as amended, for California and the criteria promulgated through this rulemaking for California in the same table. This final rule is not intended to apply to waters within Indian Country. EPA recognizes that there are possibly waters located wholly or partly in Indian Country that are included in the State's basin plans. EPA will work with the State and Tribes to identify any such waters and determine whether further action to protect water quality in Indian Country is necessary.

This rule is important for several environmental, programmatic and legal reasons. Control of toxic pollutants in surface waters is necessary to achieve the CWA's goals and objectives. Many of California's monitored river miles, lake acres, and estuarine waters have elevated levels of toxic pollutants. Recent studies on California water bodies indicate that elevated levels of toxic pollutants exist in fish tissue which result in fishing advisories or bans. These toxic pollutants can be attributed to, among other sources, industrial and municipal discharges.

Water quality standards for toxic pollutants are important to State and EPA efforts to address water quality problems. Clearly established water quality goals enhance the effectiveness of many of the State's and EPA's water programs including permitting, coastal water quality improvement, fish tissue quality protection, nonpoint source controls, drinking water quality protection, and ecological protection. Numeric criteria for toxic pollutants allow the State and EPA to evaluate the adequacy of existing and potential control measures to protect aquatic ecosystems and human health. Numeric criteria also provide a more precise basis for deriving water quality-based effluent limitations (WQBELs) in

National Pollutant Discharge Elimination System (NPDES) permits and wasteload allocations for total maximum daily loads (TMDLs) to control toxic pollutant discharges. Congress recognized these issues when it enacted section 303(c)(2)(B) to the CWA.

While California recognizes the need for applicable water quality standards for toxic pollutants, its adoption efforts have been stymied by a variety of factors. The Administrator has decided to exercise her CWA authorities to move forward the toxic control program, consistent with the CWA and with the State of California's water quality standards program.

Today's action will also help restore equity among the States. The CWA is designed to ensure all waters are sufficiently clean to protect public health and/or the environment. The CWA allows some flexibility and differences among States in their adopted and approved water quality standards, but it should be implemented in a manner that ensures a level playing field among States. Although California has made important progress toward satisfying CWA requirements, it has not satisfied CWA section 303(c)(2)(B) by adopting numeric water quality criteria for toxic pollutants. This section was added to the CWA by Congress in 1987. Prior to today, the State of California had been the only State in the Nation for which CWA section 303(c)(2)(B) had remained substantially unimplemented after EPA's promulgation of the NTR in December of 1992. Section 303(c)(4) of the CWA authorizes the EPA Administrator to promulgate standards where necessary to meet the requirements of the Act. The Administrator determined that this rule was a necessary and important component for the implementation of CWA section 303(c)(2)(B) in California.

EPA acknowledges that the State of California is working to satisfy CWA section 303(c)(2)(B). When the State formally adopts, and EPA approves, criteria consistent with statutory requirements, as envisioned by Congress in the CWA, EPA intends to stay this rule. If within the applicable time frame for judicial review, the States' standards are challenged, EPA will withdraw this rule after such judicial review is complete and the State standards are sustained.

C. Statutory and Regulatory Background

The preamble to the August 5, 1997, proposed rule provided a general discussion of EPA's statutory and regulatory authority to promulgate water

quality criteria for the State of California. See 62 FR 42160-42163. EPA is including that discussion in the record for the final rule. Commenters questioned EPA's authority to promulgate certain aspects of the proposal. EPA is responding to those comments in the appropriate sections of this preamble, and in the response to comments document included in the administrative record for this rulemaking. Where appropriate, EPA's responses expand upon the discussion of statutory and regulatory authority found in the proposal.

D. California Water Quality Standards Actions

1. California Regional Water Quality Control Board Basin Plans, and the Inland Surface Waters Plan (ISWP) and the Enclosed Bays and Estuaries Plan (EBEP) of April 1991

The State of California regulates water quality through its State Water Resources Control Board (SWRCB) and through nine Regional Water Quality Control Boards (RWQCBs). Each of the nine RWQCBs represents a different geographic area; area boundaries are generally along watershed boundaries. Each RWQCB maintains a Basin Plan which contains the designated uses of the water bodies within its respective geographic area within California. These designated uses (or "beneficial uses" under State law) together with legally-adopted criteria (or "objectives" under State law), comprise water quality standards for the water bodies within each of the Basin areas. Each of the nine RWQCBs undergoes a triennial basin planning review process, in compliance with CWA section 303. The SWRCB provides assistance to the RWQCBs.

Most of the Basin Plans contain conventional pollutant objectives such as dissolved oxygen. None of the Basin Plans contains a comprehensive list of priority toxic pollutant criteria to satisfy CWA section 303(c)(2)(B). The nine RWQCBs and the SWRCB had intended that the priority toxic pollutant criteria contained in the three SWRCB statewide plans, the Inland Surface Waters Plan (ISWP), the Enclosed Bays and Estuaries Plan (EBEP), and the Ocean Plan, apply to all basins and satisfy CWA section 303(c)(2)(B).

On April 11, 1991, the SWRCB adopted two statewide water quality control plans, the ISWP and the EBEP. These statewide plans contained narrative and numeric water quality criteria for toxic pollutants, in part to satisfy CWA section 303(c)(2)(B). The water quality criteria contained in the SWRCB statewide plans, together with

the designated uses in each of the Basin Plans, created a set of water quality standards for waters within the State of California.

Specifically, the two plans established water quality criteria or objectives for all fresh waters, bays and estuaries in the State. The plans contained water quality criteria for some priority toxic pollutants, provisions relating to whole effluent toxicity, implementation procedures for point and nonpoint sources, and authorizing compliance schedule provisions. The plans also included special provisions affecting waters dominated by reclaimed water (labeled as Category (a) waters), and waters dominated by agricultural drainage and constructed agricultural drains (labeled as Category (b) and (c) waters, respectively).

2. EPA's Review of California Water Quality Standards for Priority Toxic Pollutants in the ISWP and EBEP, and the National Toxics Rule

The EPA Administrator has delegated the responsibility and authority for review and approval or disapproval of all new or revised State water quality standards to the EPA Regional Administrators (see 40 CFR 131.21). Thus, State actions under CWA section 303(c)(2)(B) are submitted to the appropriate EPA Regional Administrator for review and approval.

In mid-April 1991, the SWRCB submitted to EPA for review and approval the two statewide water quality control plans, the ISWP and the EBEP. On November 6, 1991, EPA Region 9 formally concluded its review of the SWRCB's plans. EPA approved the narrative water quality criterion and the toxicity criterion in each of the plans. EPA also approved the numeric water quality criteria contained in both plans, finding them to be consistent with the requirements of section 303(c)(2)(B) of the CWA and with EPA's national criteria guidance published pursuant to section 304(a) of the CWA.

EPA noted the lack of criteria for some pollutants, and found that, because of the omissions, the plans did not fully satisfy CWA section 303(c)(2)(B). The plans did not contain criteria for all listed pollutants for which EPA had published national criteria guidance. The ISWP contained human health criteria for only 65 pollutants, and the EBEP contained human health criteria for only 61 pollutants for which EPA had issued section 304(a) guidance criteria. Both the ISWP and EBEP contained aquatic life criteria for all pollutants except cyanide and chromium III (freshwater only) for which EPA has CWA section

304(a) criteria guidance. The SWRCB's administrative record stated that all priority pollutants with EPA criteria guidance were likely to be present in California waters. However, the SWRCB's record contained insufficient information to support a finding that the excluded pollutants were not reasonably expected to interfere with designated uses of the waters of the State.

Although EPA approved the statewide selenium objective in the ISWP and EBEP, EPA disapproved the objective for the San Francisco Bay and Delta, because there was clear evidence that the objective would not protect the designated fish and wildlife uses (the California Department of Health Services had issued waterfowl consumption advisories due to selenium concentrations, and scientific studies had documented selenium toxicity to fish and wildlife). EPA restated its commitment to object to National Pollutant Discharge Elimination System (NPDES) permits issued for San Francisco Bay that contained effluent limits based on an objective greater than 5 parts per billion (ppb) (four day average) and 20 ppb (1 hour average), the freshwater criteria. EPA reaffirmed its disapproval of California's site-specific selenium objective for portions of the San Joaquin River, Salt Slough, and Mud Slough. EPA also disapproved of the categorical deferrals and exemptions. These disapprovals included the disapproval of the State's deferral of water quality objectives to effluent dominated streams (Category a) and to streams dominated by agricultural drainage (Category b), and the disapproval of the exemption of water quality objectives to constructed agricultural drains (Category c). EPA found the definitions of the categories imprecise and overly broad which could have led to an incorrect interpretation.

Since EPA had disapproved portions of each of the California statewide plans which were necessary to satisfy CWA section 303(c)(2)(B), certain disapproved aspects of California's water quality standards were included in EPA's promulgation of the National Toxics Rule (NTR) (40 CFR 131.36, 57 FR 60848). EPA promulgated specific criteria for certain water bodies in California.

The NTR was amended, effective April 14, 1995, to stay certain metals criteria which had been promulgated as total recoverable. Effective April 15, 1995, EPA promulgated interim final metals criteria as dissolved concentrations for those metals which had been stayed (Administrative Stay of Federal Water Quality Criteria for Metals and Interim Final Rule, Water

Quality Standards; Establishment of Numeric Criteria for Priority Toxic Pollutants; States' Compliance—Revision of Metals Criteria; 60 FR 22228, 22229, May 4, 1995 (the NTR, as amended)). The stay was in response to a lawsuit against EPA challenging, among other issues, metals criteria expressed as total recoverable concentrations. A partial Settlement Agreement required EPA to stay specific metals criteria in the NTR. EPA then promulgated certain metals criteria in the dissolved form through the use of conversion factors. These factors are listed in the NTR, as amended. A scientific discussion of these criteria is found in a subsequent section of this preamble.

Since certain criteria have already been promulgated for specific water bodies in the State of California in the NTR, as amended, they are not within the scope of today's final rule. However, for clarity in reading a comprehensive rule for the State of California, these criteria are incorporated into 40 CFR 131.38(d)(2). Footnotes to the Table in 40 CFR 131.38(b)(1) and 40 CFR 131.38(d)(3) clarify which criteria (and for which specific water bodies) were promulgated by the NTR, as amended, and are therefore excluded from this final rule. The appropriate (freshwater or saltwater) aquatic life criteria which were promulgated in the NTR, as amended, for all inland surface waters and enclosed bays and estuaries include: chromium III and cyanide. The appropriate (water and organism or organism only) human health criteria which were promulgated in the NTR, as amended, for all inland surface waters and enclosed bays and estuaries include:

antimony
thallium
asbestos
acrolein
acrylonitrile
carbon tetrachloride
chlorobenzene
1,2-dichloroethane
1,1-dichloroethylene
1,3-dichloropropylene
ethylbenzene
1,1,2,2-tetrachloroethane
tetrachloroethylene
1,1,2-trichloroethane
trichloroethylene
vinyl chloride
2,4-dichlorophenol
2-methyl-4,6-dinitrophenol
2,4-dinitrophenol
benzidine
bis(2-chloroethyl)ether
bis(2-ethylhexyl)phthalate
3,3-dichlorobenzidine
diethyl phthalate
dimethyl phthalate
di-n-butyl phthalate

2,4-dinitrotoluene
1,2-diphenylhydrazine
hexachlorobutadiene
hexachlorocyclopentadiene
hexachloroethane
isophorone
nitrobenzene
n-nitrosodimethylamine
n-nitrosodiphenylamine

Other pollutant criteria were promulgated in the NTR, as amended, for specific water bodies, but not all inland surface waters and enclosed bays and estuaries.

3. Status of Implementation of CWA Section 303(c)(2)(B)

Shortly after the SWRCB adopted the ISWP and EBEP, several dischargers filed suit against the State alleging that it had not adopted the two plans in compliance with State law. The plaintiffs in a consolidated case included: the County of Sacramento, Sacramento County Water Agency; Sacramento Regional County Sanitation District; the City of Sacramento; the City of Sunnyvale; the City of San Jose; the City of Stockton; and Simpson Paper Company.

The dischargers alleged that the State had not adopted the ISWP and EBEP in compliance with the California Administrative Procedures Act (Gov Code, Section 11340, *et seq.*), the California Environmental Quality Act (Pub. Re Code, Section 21000, *et seq.*), and the Porter-Cologne Act (Wat. Code, Section 13200, *et seq.*). The allegation that the State did not sufficiently consider economics when adopting water quality objectives, as allegedly required by Section 13241 of the Porter-Cologne Act, was an important issue in the litigation.

In October of 1993, the Superior Court of California, County of Sacramento, issued a tentative decision in favor of the dischargers. In March of 1994, the Court issued a substantively similar final decision in favor of the dischargers. Final judgments from the Court in July of 1994 ordered the SWRCB to rescind the ISWP and EBEP. On September 22, 1994, the SWRCB formally rescinded the two statewide water quality control plans. The State is currently in the process of readopting water quality control plans for inland surface waters, enclosed bays and estuaries.

CWA section 303(c)(2)(B) was fully implemented in the State of California from December of 1992, when the NTR was promulgated, until September of 1994, when the SWRCB was required to rescind the ISWP and EBEP. The provisions for California in EPA's NTR together with the approved portions of

California's ISWP and EBEP implemented the requirements of CWA section 303(c)(2)(B). However, since September of 1994, when the SWRCB rescinded the ISWP and EBEP, the requirements of section 303(c)(2)(B) have not been fully implemented in California.

The scope of today's rule is to re-establish criteria for the remaining priority toxic pollutants to meet the requirements of section 303(c)(2)(B) of the CWA. Pursuant to section 303(c)(4), the Administrator has determined that it is necessary to include in today's action criteria for priority toxic pollutants, which are not covered by the NTR, as amended, or by the State through EPA-approved site-specific criteria, for waters of the United States in the State of California.

4. State-Adopted, Site-Specific Criteria for Priority Toxic Pollutants

The State has the discretion to develop site-specific criteria when appropriate e.g., when statewide criteria appear over- or under-protective of designated uses. Periodically, the State through its RWQCBs will adopt site-specific criteria for priority toxic pollutants within respective Basin Plans. These criteria are intended to be effective throughout the Basin or throughout a designated water body. Under California law, these criteria must be publicly reviewed and approved by the RWQCB, the SWRCB, and the State's Office of Administrative Law (OAL). Once this adoption process is complete, the criteria become State law.

These criteria must be submitted to the EPA Regional Administrator for review and approval under CWA section 303. These criteria are usually submitted to EPA as part of a RWQCB Basin Plan Amendment, after the Amendment has been adopted under the State's process and has become State law.

a. State-Adopted Site-Specific Criteria Under EPA Review

The State of California has recently reviewed and updated all of its RWQCB Basin Plans. All of the Basin Plans have completed the State review and adoption process and have been submitted to EPA for review and approval. Some of the Basin Plans contain site-specific criteria. In these cases, the State-adopted site-specific criteria are used for water quality programs.

EPA has not yet concluded consultation under the Endangered Species Act with the U.S. Department of Interior, Fish and Wildlife Service, and

the U.S. Department of Commerce, National Marine Fisheries Service, on EPA's tentative approval/disapproval actions on the RWQCB Basin Plans. In this situation, the more stringent of the two criteria (the State-adopted site-specific criteria in the RWQCB Basin Plans, or the Federal criteria in this final rule), would be used for water quality programs including the calculation of water quality-based effluent criteria in National Pollutant Discharge Elimination System (NPDES) permits.

b. State-Adopted Site-Specific Criteria With EPA Approval

In several cases, the EPA Regional Administrator has already reviewed and approved State-adopted site-specific criteria within the State of California. Several of these cases are discussed in this section. All of the EPA approval letters referenced in today's preamble are contained in the administrative record for today's rule.

Sacramento River: EPA has approved site-specific acute criteria for copper, cadmium and zinc in the Sacramento River, upstream of Hamilton City, in the Central Valley Region (RWQCB for the Central Valley Region) of the State of California. EPA approved these site-specific criteria by letter dated August 7, 1985. Specifically, EPA approved for the Sacramento River (and tributaries) above Hamilton City, a copper criterion of 5.6 µg/l (maximum), a zinc criterion of 16 µg/l (maximum) and a cadmium criterion of 0.22 µg/l (maximum), all in the dissolved form using a hardness of 40 mg/l as CaCO₃. (These criteria were actually adopted by the State and approved by EPA as equations which vary with hardness.) These "maximum" criteria correspond to acute criteria in today's final rule. Therefore, Federal acute criteria for copper, cadmium, and zinc for the Sacramento River (and tributaries) above Hamilton City are not necessary to protect the designated uses and are not included in the final rule. However, the EPA Administrator is making a finding that it is necessary to include chronic criteria for copper, cadmium and zinc for the Sacramento River (and tributaries) above Hamilton City, as part of the statewide criteria promulgated in today's final rule.

San Joaquin River: The selenium criteria in this rule are not applicable to portions of the San Joaquin River, in the Central Valley Region, because selenium criteria have been either previously approved by EPA or previously promulgated by EPA as part of the NTR. EPA approved and disapproved State-adopted site-specific selenium criteria in portions of the San Joaquin River, in the Central Valley Region of the State of

California (RWQCB for the Central Valley Region). EPA's determination on these site-specific criteria is contained in a letter dated April 13, 1990.

Specifically, EPA approved for the San Joaquin River, mouth of Merced River to Vernalis, an aquatic life selenium criterion of 12 µg/l (maximum with the understanding that the instantaneous maximum concentration may not exceed the objective more than once every three years). Today's final rule does not affect this Federally-approved, State-adopted site-specific acute criterion, and it remains in effect for the San Joaquin River, mouth of Merced River to Vernalis. Therefore, an acute criterion for selenium in the San Joaquin River, mouth of Merced River to Vernalis is not necessary to protect the designated use and thus is not included in this final rule.

By letter dated April 13, 1990, EPA also approved for the San Joaquin River, mouth of Merced River to Vernalis, a State-adopted site-specific aquatic life selenium criterion of 5 µg/l (monthly mean); however, EPA disapproved a State-adopted site-specific selenium criterion of 8 µg/l (monthly mean—critical year only) for these waters. Subsequently, EPA promulgated a chronic selenium criterion of 5 µg/l (4 day average) for waters of the San Joaquin River from the mouth of the Merced River to Vernalis in the NTR. This chronic criterion applies to all water quality programs concerning the San Joaquin River, mouth of Merced River to Vernalis. Today's final rule does not affect the Federally-promulgated chronic selenium criterion of 5 µg/l (4 day average) set forth in the NTR. This previously Federally-promulgated criterion remains in effect for the San Joaquin River, mouth of Merced River to Vernalis.

Grassland Water District, San Luis National Wildlife Refuge, and Los Banos State Wildlife Refuge: EPA approved for the Grassland Water District, San Luis National Wildlife Refuge, and Los Banos State Wildlife Refuge, a State-adopted site-specific aquatic life selenium criterion of 2 µg/l (monthly mean) by letter dated April 13, 1990. This Federally-approved, State-adopted site-specific chronic criterion remains in effect for the Grassland Water District, San Luis National Wildlife Refuge and Los Banos State Wildlife Refuge. Therefore it is not necessary to include in today's final rule, a chronic criterion for selenium for the Grassland Water District, San Luis National Wildlife Refuge and Los Banos State Wildlife Refuge, and thus, it is not included in this final rule.

San Francisco Regional Board Basin Plan of 1986: EPA approved several priority toxic pollutant objectives (CWA criteria) that were contained in the 1986 San Francisco Regional Board Basin Plan, as amended by SWRCB Resolution Numbers 87-49, 87-82 and 87-92, by letters dated September 2, 1987 and December 24, 1987. This Basin Plan, the SWRCB Resolutions, and the EPA approval letters are contained in the administrative record for this rulemaking. It is not necessary to include these criteria for priority toxic pollutants that are contained in the San Francisco Regional Board's 1986 Basin Plan as amended, and approved by EPA. Priority pollutants in this situation are footnoted in the matrix at 131.38(b)(1) with footnote "b." Where gaps exist in the State adoption and EPA approval of priority toxic pollutant objectives, the criteria in today's rule apply.

EPA is assigning "human health, water and organism consumption" criteria to waters with the States' municipal or "MUN" beneficial use designation in the Basin Plan. Also, some pollutants regulated through the Basin Plan have different averaging periods, e.g., one hour as compared with the rule's "short-term." However, where classes of chemicals, such as polynuclear aromatic hydrocarbons, or PAHs, and phenols, are regulated through the Basin Plan, but not specific chemicals within the category, specific chemicals within the category are regulated by today's rule.

E. Rationale and Approach for Developing the Final Rule

This section explains EPA's legal basis for today's final rule, and discusses EPA's general approach for developing the specific requirements for the State of California.

1. Legal Basis

CWA section 303(c) specifies that adoption of water quality standards is primarily the responsibility of the States. However, CWA section 303(c) also describes a role for the Federal government to oversee State actions to ensure compliance with CWA requirements. If EPA's review of the States' standards finds flaws or omissions, then the CWA authorizes EPA to correct the deficiencies (see CWA section 303(c)(4)). This water quality standards promulgation authority has been used by EPA to issue final rules on several separate occasions, including the NTR, as amended, which promulgated criteria similar to those included here for a number of States. These actions have addressed both insufficiently protective State criteria

and/or designated uses and failure to adopt needed criteria. Thus, today's action is not unique.

The CWA in section 303(c)(4) provides two bases for promulgation of Federal water quality standards. The first basis, in paragraph (A), applies when a State submits new or revised standards that EPA determines are not consistent with the applicable requirements of the CWA. If, after EPA's disapproval, the State does not amend its rules so as to be consistent with the CWA, EPA is to promptly propose appropriate Federal water quality standards for that State. The second basis for an EPA action is in paragraph (B), which provides that EPA shall promptly initiate promulgation " * * * in any case where the Administrator determines that a revised or new standard is necessary to meet the requirements of this Act." EPA is using section 303(c)(4)(B) as the legal basis for today's final rule.

As discussed in the preamble to the NTR, the Administrator's determination under CWA section 303(c)(4) that criteria are necessary to meet the requirements of the Act could be supported in several ways. Consistent with EPA's approach in the NTR, EPA interprets section 303(c)(2)(B) of the CWA to allow EPA to act where the State has not succeeded in establishing numeric water quality standards for toxic pollutants. This inaction can be the basis for the Administrator's determination under section 303(c)(4) that new or revised criteria are necessary to ensure designated uses are protected.

EPA does not believe that it is necessary to support the criteria in today's rule on a pollutant-specific, water body-by-water-body basis. For EPA to undertake an effort to conduct research and studies of each stream segment or water body across the State of California to demonstrate that for each toxic pollutant for which EPA has issued CWA section 304(a) criteria guidance there is a "discharge or presence" of that pollutant which could reasonably "be expected to interfere with" the designated use would impose an enormous administrative burden and would be contrary to the statutory directive for swift action manifested by the 1987 addition of section 303(c)(2)(B) to the CWA. Moreover, because these criteria are ambient criteria that define attainment of the designated uses, their application to all water bodies will result in additional controls on dischargers only where necessary to protect the designated uses.

EPA's interpretation of section 303(c)(2)(B) is supported by the

language of the provision, the statutory framework and purpose of section 303, and the legislative history. In adding section 303(c)(2)(B) to the CWA, Congress understood the existing requirements in section 303(c)(1) for States to conduct triennial reviews of their water quality standards and submit the results of those reviews to EPA and in section 303(c)(4)(B) for promulgation. CWA section 303(c) includes numerous deadlines and section 303(c)(4) directs the Administrator to act "promptly" where the Administrator determines that a revised or new standard is necessary to meet the requirements of the Act. Congress, by linking section 303(c)(2)(B) to the section 303(c)(1) three-year review period, gave States a last chance to correct this deficiency on their own. The legislative history of the provision demonstrates that chief Senate sponsors, including Senators Stafford, Chaffee and others wanted the provision to eliminate State and EPA delays and force quick action. Thus, to interpret CWA section 303(c)(2)(B) and (c)(4) to require such a cumbersome pollutant specific effort on each stream segment would essentially render section 303(c)(2)(B) meaningless. The provision and its legislative background indicate that the Administrator's determination to invoke section 303(c)(4)(B) authority can be met by the Administrator making a generic finding of inaction by the State without the need to develop pollutant specific data for individual stream segments. Finally, the reference in section 303(c)(2)(B) to section 304(a) criteria suggests that section 304(a) criteria serve as default criteria; that once EPA has issued them, States were to adopt numeric criteria for those pollutants based on the 304(a) criteria, unless they had other scientifically defensible criteria. EPA also notes that this rule follows the approach EPA took nationally in promulgating the NTR for States that failed to comply with CWA section 303(c)(2)(B). 57 FR 60848, December 22, 1992. EPA incorporates the discussion in the NTR preamble as part of this rulemaking record.

This determination is supported by information in the rulemaking record showing the discharge or presence of priority toxic pollutants throughout the State. While this data is not necessarily complete, it constitutes a strong record supporting the need for numeric criteria for priority toxic pollutants with section 304(a) criteria guidance where the State does not have numeric criteria.

Today's final rule would not impose any undue or inappropriate burden on the State of California or its dischargers. It merely puts in place numeric criteria

for toxic pollutants that are already used in other States in implementing CWA programs. Under this rulemaking, the State of California retains the ability to adopt alternative water quality criteria simply by completing its criteria adoption process. Upon EPA approval of those criteria, EPA will initiate action to stay the Federally-promulgated criteria and subsequently withdraw them.

2. Approach for Developing This Rule

In summary, EPA developed the criteria promulgated in today's final rule as follows. Where EPA promulgated criteria for California in the NTR, EPA has not acted to amend the criteria in the NTR. Where criteria for California were not included in the NTR, EPA used section 304(a) National criteria guidance documents as a starting point for the criteria promulgated in this rule. EPA then determined whether new information since the development of the national criteria guidance documents warranted any changes. New information came primarily from two sources. For human health criteria, new or revised risk reference doses and cancer potency factors on EPA's Integrated Risk Information System (IRIS) as of October 1996 form the basis for criteria values (see also 63 FR 68354). For aquatic life criteria, updated data sets resulting in revised criteria maximum concentrations (CMCs) and criteria continuous concentrations (CCCs) formed the basis for differences from the national criteria guidance documents. Both of these types of changes are discussed in more detail in the following sections. This revised information was used to develop the water quality criteria promulgated here for the State of California.

F. Derivation of Criteria

1. Section 304(a) Criteria Guidance Process

Under CWA section 304(a), EPA has developed methodologies and specific criteria guidance to protect aquatic life and human health. These methodologies are intended to provide protection for all surface waters on a national basis. The methodologies have been subject to public review, as have the individual criteria guidance documents. Additionally, the methodologies have been reviewed by EPA's Science Advisory Board (SAB) of external experts.

EPA has included in the record of this rule the aquatic life methodology as described in "Appendix B—Guidelines for Deriving Water Quality Criteria for the Protection of Aquatic Life and Its

Uses" to the "Water Quality Criteria Documents; Availability" (45 FR 79341, November 28, 1980) as amended by the "Summary of Revisions to Guidelines for Deriving Numerical National Water Quality Criteria for the Protection of Aquatic Organisms and Their Uses" (50 FR 30792, July 29, 1985). (Note: Throughout the remainder of this preamble, this reference is described as the 1985 Guidelines. Any page number references are to the actual guidance document, not the notice of availability in the Federal Register. A copy of the 1985 Guidelines is available through the National Technical Information Service (PB85-227049), is in the administrative record for this rule, and is abstracted in Appendix A of *Quality Criteria for Water*, 1986.) EPA has also included in the administrative record of this rule the human health methodology as described in "Appendix C—Guidelines and Methodology Used in the Preparation of Health Effects Assessment Chapters of the Consent Decree Water Criteria Documents" (45 FR 79347, November 28, 1980). (Note: Throughout the remainder of this preamble, this reference is described as the Human Health Guidelines or the 1980 Guidelines.) EPA also recommends that the following be reviewed: "Appendix D—Response to Comments on Guidelines for Deriving Water Quality Criteria for the Protection of Aquatic Life and Its Uses," (45 FR 79357, November 28, 1980); "Appendix E—Responses to Public Comments on the Human Health Effects Methodology for Deriving Ambient Water Quality Criteria" (45 FR 79368, November 28, 1980); and "Appendix B—Response to Comments on Guidelines for Deriving Numerical National Water Quality Criteria for the Protection of Aquatic Organisms and Their Uses" (50 FR 30793, July 29, 1985). EPA placed into the administrative record for this rulemaking the most current individual criteria guidance for the priority toxic pollutants included in today's rule. (Note: All references to appendices are to the associated Federal Register publication.)

EPA received many comments related to the issue of what criteria should apply in the CTR if the CWA section 304(a) criteria guidance is undergoing re-evaluation, or if new data are developed that may affect a recommended criterion. As science is always evolving, EPA is faced with the challenge of promulgating criteria that reflect the best science and sound science. EPA addressed this challenge in some detail in its Federal Register notice that contained the Agency's

current section 304(a) criteria guidance (63 FR 68335, December 10, 1998). There, EPA articulated its policy, reiterated here, that the existing criteria guidance represent the Agency's best assessment until such time as EPA's re-evaluation of a criteria guidance value for a particular chemical is complete. The reason for this is that both EPA's human health criteria guidance and aquatic life criteria guidance are developed taking into account numerous variables. For example, for human health criteria guidance, EPA evaluates many diverse toxicity studies, whose results feed into a reference dose or cancer potency estimate that, along with a number of exposure factors and determination of risk level, results in a guidance criterion. For aquatic life, EPA evaluates many diverse aquatic toxicity studies to determine chronic and acute toxicity taking into account how other factors (such as pH, temperature or hardness) affect toxicity. EPA also, to the extent possible, addresses bioaccumulation or bioconcentration. EPA then uses this toxicity information along with exposure information to determine the guidance criterion. Importantly, EPA subjects such evaluation to peer review and/or public comment.

For these reasons, EPA generally does not make a change to the 304(a) criteria guidance based on a partial picture of the evolving science. This makes sense, because to address one piece of new data without looking at all relevant data is less efficient and results in regulatory impacts that may go back and forth, when in the end, the criteria guidance value does not change that much. Certain new changes, however, do warrant change in criteria guidance, such as a change in a value in EPA's Integrated Risk Information System (IRIS) because it represents the Agency consensus about human health impacts. These changes are sufficiently examined across the Agency such that EPA believes they can be incorporated into EPA's water quality criteria guidance. EPA has followed this approach in the CTR. Included in the administrative record for today's rule is a document entitled "Status of Clean Water Act Section 304(a) Criteria" which further explains EPA's policy on managing change to criteria guidance.

2. Aquatic Life Criteria

Aquatic life criteria may be expressed in numeric or narrative form. EPA's 1985 Guidelines describe an objective, internally consistent and appropriate way of deriving chemical-specific, numeric water quality criteria for the protection of the presence of, as well as

the uses of, both fresh and salt water aquatic organisms.

An aquatic life criterion derived using EPA's CWA section 304(a) method "might be thought of as an estimate of the highest concentration of a substance in water which does not present a significant risk to the aquatic organisms in the water and their uses." (45 FR 79341.) EPA's guidelines are designed to derive criteria that protect aquatic communities. EPA's 1985 Guidelines attempt to provide a reasonable and adequate amount of protection with only a small possibility of substantial overprotection or underprotection. As discussed in detail below, there are several individual factors which may make the criteria somewhat overprotective or underprotective. The approach EPA is using is believed to be as well balanced as possible, given the state of the science.

Numerical aquatic life criteria derived using EPA's 1985 Guidelines are expressed as short-term and long-term averages, rather than one number, in order that the criterion more accurately reflect toxicological and practical realities. The combination of a criterion maximum concentration (CMC), a short-term concentration limit, and a criterion continuous concentration (CCC), a four-day average concentration limit, are designed to provide protection of aquatic life and its uses from acute and chronic toxicity to animals and plants, without being as restrictive as a one-number criterion would have to be (1985 Guidelines, pages 4 & 5). The terms CMC and CCC are the formal names for the two (acute and chronic) values of a criterion for a pollutant; however, this document will also use the informal synonyms acute criterion and chronic criterion.

The two-number criteria are intended to identify average pollutant concentrations which will produce water quality generally suited to maintenance of aquatic life and designated uses while restricting the duration of excursions over the average so that total exposures will not cause unacceptable adverse effects. Merely specifying an average value over a time period may be insufficient unless the time period is short, because excursions higher than the average may kill or cause substantial damage in short periods.

A minimum data set of eight specified families is recommended for criteria development (details are given in the 1985 Guidelines, page 22). The eight specific families are intended to be representative of a wide spectrum of aquatic life. For this reason it is not necessary that the specific organisms

tested be actually present in the water body. EPA's application of its guidelines to develop the criteria matrix in this rule is judged by the Agency to be appropriate for all waters of the United States (U.S.), and to all ecosystems (1985 Guidelines, page 4) including those waters of the U.S. and ecosystems in the State of California.

Fresh water and salt water (including both estuarine and marine waters) have different chemical compositions, and freshwater and saltwater species often do not inhabit the same water. To provide additional accuracy, criteria are developed for fresh water and for salt water.

For this rule, EPA updated freshwater aquatic life criteria contained in CWA section 304(a) criteria guidance first published in the early 1980's and later modified in the NTR, as amended, for the following ten pollutants: arsenic, cadmium, chromium (VI), copper, dieldrin, endrin, lindane (gamma BHC), nickel, pentachlorophenol, and zinc. The updates used as the basis for this rule are explained in a technical support document entitled, *1995 Updates: Water Quality Criteria Documents for the Protection of Aquatic Life in Ambient Water* (U.S. EPA-820-B-96-001, September 1996), available in the administrative record to this rulemaking; this document presents the derivation of each of the final CMCs and CCCs and the toxicity studies from which the updated freshwater criteria for the ten pollutants were derived.

The polychlorinated biphenyls (PCB) criteria in the criteria matrix for this rule differs from that in the NTR, as amended; for this rule, the criteria are expressed as the sum of seven aroclors, while for the NTR, as amended, the criteria are expressed for each of seven aroclors. The aquatic life criteria for PCBs in the CTR are based on the criteria contained in the 1980 criteria guidance document for PCBs which is included in the administrative record for this rule. This criteria document explains the derivation of aquatic life criteria based on total PCBs. For more information see the Response to Comments document for this rule. Today's chronic aquatic life criteria for PCBs are based on a final residue value (FRV). In EPA's guidelines for deriving aquatic life criteria, an FRV-based criterion is intended to prevent concentrations of pollutants in commercially or recreationally important aquatic species from affecting the marketability of those species or affecting the wildlife that consume aquatic life.

The proposed CTR included an updated freshwater and saltwater

aquatic life criteria for mercury. In today's final rule, EPA has reserved the mercury criteria for freshwater and saltwater aquatic life, but is promulgating human health criteria for mercury for all surface waters in California. In some instances, the human health mercury criteria included in today's final rule may not protect some aquatic species or threatened or endangered species. In such instances, more stringent mercury limits may be determined and implemented through use of the State's narrative criterion. The reasons for reserving the mercury aquatic life numbers are explained in further detail in Section L, Endangered Species Act.

a. Freshwater Acute Selenium Criterion

EPA proposed a different freshwater acute aquatic life criterion for selenium for this rule than was promulgated in the NTR, as amended. EPA's proposed action was consistent with EPA's proposed selenium criterion maximum concentration for the Water Quality Guidance for the Great Lakes System (61 FR 58444, November 14, 1996). This proposal took into account data showing that selenium's two most prevalent oxidation states, selenite and selenate, present differing potentials for aquatic toxicity, as well as new data which indicated that various forms of selenium are additive. Additivity increases the toxicity of mixtures of different forms of the pollutant. The proposed approach produces a different selenium acute criterion concentration, or CMC, depending upon the relative proportions of selenite, selenate, and other forms of selenium that are present.

The preamble to the August 5, 1997, proposed rule provided a lengthy discussion of this proposed criterion for the State of California. See 62 FR 42160-42208. EPA incorporates that discussion here as part of this rulemaking record. In 1996, a similar discussion was included in the proposed rule for the Great Lakes System. Commenters questioned several aspects of the Great Lakes proposal. EPA is continuing to respond to those comments, and to follow up with additional literature review and toxicity testing. In addition, the U.S. FWS and U.S. NMFS (collectively, the Services) are concerned that EPA's proposed criterion may not be sufficiently protective of certain threatened and endangered species in California. Because the Services believe there is a lack of data to show for certain that the proposed criterion would not affect threatened and endangered species, the Services prefer that EPA further investigate the protectiveness of the

criterion before finalizing the proposed criterion. Therefore, EPA is not promulgating a final acute freshwater selenium criterion at this time.

b. Dissolved Metals Criteria

In December of 1992, in the NTR, EPA promulgated water quality criteria for several States that had failed to meet the requirements of CWA section 303(c)(2)(B). Included among the water quality criteria promulgated were numeric criteria for the protection of aquatic life for 11 metals: arsenic, cadmium, chromium (III), chromium (VI), copper, lead, mercury, nickel, selenium, silver and zinc. Criteria for two metals applied to the State of California: chromium III and selenium.

The Agency received extensive public comment during the development of the NTR regarding the most appropriate approach for expressing the aquatic life metals criteria. The principal issue was the correlation between metals that are measured and metals that are bioavailable and toxic to aquatic life. It is now the Agency's policy that the use of dissolved metal to set and measure compliance with aquatic life water quality standards is the recommended approach, because dissolved metal more closely approximates the bioavailable fraction of the metal in the water column than does total recoverable metal.

Since EPA's previous aquatic life criteria guidance had been expressed as total recoverable metal, to express the criteria as dissolved, conversion factors were developed to account for the possible presence of particulate metal in the laboratory toxicity tests used to develop the total recoverable criteria. EPA included a set of recommended freshwater conversion factors with its Metals Policy (see Office of Water Policy and Technical Guidance on Interpretation and Implementation of Aquatic Life Metals Criteria, Martha G. Prothro, Acting Assistant Administrator for Water, October 1, 1993). Based on additional laboratory evaluations that simulated the original toxicity tests, EPA refined the procedures used to develop freshwater conversion factors for aquatic life criteria. These new conversion factors were made available for public review and comment in the amendments to the NTR on May 4, 1995, at 60 FR 22229. They are also contained in today's rule at 40 CFR 131.38(b)(2).

The preamble to the August 5, 1997, proposed rule provided a more detailed discussion of EPA's metals policy concerning the aquatic life water quality criteria for the State of California. See 62 FR 42160-42208. EPA incorporates that

discussion here as part of this rulemaking record. Many commenters strongly supported the Agency's policy on dissolved metals aquatic life criteria. A few commenters expressed an opinion that the metals policy may not provide criteria that are adequately protective of aquatic or other species. Responses to those comments are contained in a memo to the CTR record entitled "Discussion of the Use of Dissolved Metals in the CTR" (February 1, 2000, Jeanette Wiltse) and EPA's response to comments document which are both contained in the administrative record for the final rule.

Calculation of Aquatic Life Dissolved Metals Criteria: Metals criteria values for aquatic life in today's rule in the matrix at 131.38(b)(1) are shown as dissolved metal. These criteria have been calculated in one of two ways. For freshwater metals criteria that are hardness-dependent, the metals criteria value is calculated separately for each hardness using the table at 40 CFR 131.38(b)(2). (The hardness-dependent freshwater values presented in the matrix at 40 CFR 131.38(b)(1) have been calculated using a hardness of 100 mg/l as CaCO₃ for illustrative purposes only.) The hardness-dependent criteria are then multiplied by the appropriate conversion factors in the table at 40 CFR 131.38(b)(2). Saltwater and freshwater metals criteria that are not hardness-dependent are calculated by taking the total recoverable criteria values (from EPA's national section 304(a) criteria guidance, as updated and described in section F.2.a.) before rounding, and multiplying them by the appropriate conversion factors. The final dissolved metals criteria values, as they appear in the matrix at 40 CFR 131.38(b)(1), are rounded to two significant figures.

Translators for Dissolved to Total Recoverable Metals Limits: EPA's National Pollutant Discharge Elimination System (NPDES) regulations require that limits for metals in permits be stated as total recoverable in most cases (see 40 CFR 122.45(c)) except when an effluent guideline specifies the limitation in another form of the metal, the approved analytical methods measure only dissolved metal, or the permit writer expresses a metal's limit in another form (e.g., dissolved, specific valence, or total) when required to carry out provisions of the CWA. This is because the chemical conditions in ambient waters frequently differ substantially from those in the effluent and these differences result in changes in the partitioning between dissolved and absorbed forms of the metal. This means that if effluent limits were expressed in the dissolved form,

additional particulate metal could dissolve in the receiving water causing the criteria to be exceeded. Expressing criteria as dissolved metal requires translation between different metal forms in the calculation of the permit limit so that a total recoverable permit limit can be established that will achieve water quality standards. Thus, it is important that permitting authorities and other authorities have the ability to translate between dissolved metal in ambient waters and total recoverable metal in effluent.

EPA has completed guidance on the use of translators to convert from dissolved metals criteria to total recoverable permit limits. The document, *The Metals Translator: Guidance for Calculating a Total Recoverable Permit Limit From a Dissolved Criterion* (EPA 823-B-96-007, June 1996), is included in the administrative record for today's rule. This technical guidance examines how to develop a metals translator which is defined as the fraction of total recoverable metal in the downstream water that is dissolved, i.e., the dissolved metal concentration divided by the total recoverable metal concentration. A translator may take one of three forms: (1) It may be assumed to be equivalent to the criteria guidance conversion factors; (2) it may be developed directly as the ratio of dissolved to total recoverable metal; and (3) it may be developed through the use of a partition coefficient that is functionally related to the number of metal binding sites on the adsorbent in the water column (e.g., concentrations of total suspended solids or TSS). This guidance document discusses these three forms of translators, as well as field study designs, data generation and analysis, and site-specific study plans to generate site-specific translators.

California Regional Water Quality Control Boards may use any of these methods in developing water quality-based permit limits to meet water quality standards based on dissolved metals criteria. EPA encourages the State to adopt a statewide policy on the use of translators so that the most appropriate method or methods are used consistently within California.

c. Application of Metals Criteria

In selecting an approach for implementing the metals criteria, the principal issue is the correlation between metals that are measured and metals that are biologically available and toxic. In order to assure that the metals criteria are appropriate for the chemical conditions under which they are applied, EPA is providing for the

adjustment of the criteria through application of the "water-effect ratio" procedure. EPA notes that performing the testing to use a site-specific water-effect ratio is optional on the part of the State.

In the NTR, as amended, EPA identified the water-effect ratio (WER) procedure as a method for optional site-specific criteria development for certain metals. The WER approach compares bioavailability and toxicity of a specific pollutant in receiving waters and in laboratory waters. A WER is an appropriate measure of the toxicity of a material obtained in a site water divided by the same measure of the toxicity of the same material obtained simultaneously in a laboratory dilution water.

On February 22, 1994, EPA issued *Interim Guidance on the Determination and Use of the Water-Effect Ratios for Metals* (EPA 823-B-94-001) now incorporated into the updated Second Edition of the Water Quality Standards Handbook, Appendix L. A copy of the Handbook is contained in the administrative record for today's rule. In accordance with the WER guidance and where application of the WER is deemed appropriate, EPA strongly encourages the application of the WER on a watershed or water body basis as part of a water quality criteria in California as opposed to the application on a discharger-by-discharger basis through individual NPDES permits. This approach is technically sound and an efficient use of resources. However, discharger specific WERs for individual NPDES permit limits are possible and potentially efficient where the NPDES discharger is the only point source discharger to a specific water body.

The rule requires a default WER value of 1.0 which will be assumed, if no site-specific WER is determined. To use a WER other than the default of 1.0, the rule requires that the WER must be determined as set forth in EPA's WER guidance or by another scientifically defensible method that has been adopted by the State as part of its water quality standards program and approved by EPA.

The WER is a more comprehensive mechanism for addressing bioavailability issues than simply expressing the criteria in terms of dissolved metal. Consequently, expressing the criteria in terms of dissolved metal, as done in today's rule for California, does not completely eliminate the utility of the WER. This is particularly true for copper, a metal that forms reduced-toxicity complexes with dissolved organic matter.

The *Interim Guidance on Determination and Use of Water-Effect Ratios for Metals* explains the relationship between WERs for dissolved criteria and WERs for total recoverable criteria. Dissolved measurements are to be used in the site-specific toxicity testing underlying the WERs for dissolved criteria. Because WERs for dissolved criteria generally are little affected by elevated particulate concentrations, EPA expects those WERs to be somewhat less than WERs for total recoverable criteria in such situations. Nevertheless, after the site-specific ratio of dissolved to total metal has been taken into account, EPA expects a permit limit derived using a WER for a dissolved criterion to be similar to the permit limit that would be derived from the WER for the corresponding total recoverable criterion.

d. Saltwater Copper Criteria

The saltwater copper criteria for aquatic life in today's rule are 4.8 µg/l (CMC) and 3.1 µg/l (CCC) in the dissolved form. These criteria reflect new data including data collected from studies for the New York/New Jersey Harbor and the San Francisco Bay indicating a need to revise the former copper 304(a) criteria guidance document to reflect a change in the saltwater CMC and CCC aquatic life values. These data also reflect a comprehensive literature search resulting in added toxicity test data for seven new species to the database for the saltwater copper criteria. EPA believes these new data have national implications and the national criteria guidance now contains a CMC of 4.8 µg/l dissolved and a CCC of 3.1 µg/l dissolved. In the amendments to the NTR, EPA noticed the availability of data to support these changes to the NTR, and solicited comments. The data can be found in the draft document entitled, *Ambient Water Quality Criteria—Copper, Addendum 1995*. This document is available from the Office of Water Resource Center and is available for review in the administrative record for today's rule.

e. Chronic Averaging Period

In establishing water quality criteria, EPA generally recommends an "averaging period" which reflects the duration of exposure required to elicit effects in individual organisms (TSD, Appendix D-2). The criteria continuous concentration, or CCC, is intended to be the highest concentration that could be maintained indefinitely in a water body without causing an unacceptable effect on the aquatic community or its uses

(TSD, Appendix D-1). As aquatic organisms do not generally experience steady exposure, but rather fluctuating exposures to pollutants, and because aquatic organisms can generally tolerate higher concentrations of pollutants over a shorter periods of time, EPA expects that the concentration of a pollutant can exceed the CCC without causing an unacceptable effect if (a) the magnitude and duration of exceedences are appropriately limited and (b) there are compensating periods of time during which the concentration is below the CCC. This is done by specifying a duration of an "averaging period" over which the average concentration should not exceed the CCC more often than specified by the frequency (TSD, Appendix D-1).

EPA is promulgating a 4-day averaging period for chronic criteria, which means that measured or predicted ambient pollutant concentrations should be averaged over a 4-day period to determine attainment of chronic criteria. The State may apply to EPA for approval of an alternative averaging period. To do so, the State must submit to EPA the basis for such alternative averaging period.

The most important consideration for setting an appropriate averaging period is the length of time that sensitive organisms can tolerate exposure to a pollutant at levels exceeding a criterion without showing adverse effects on survival, growth, or reproduction. EPA believes that the chronic averaging period must be shorter than the duration of the chronic tests on which the CCC is based, since, in some cases, effects are elicited before exposure of the entire duration. Most of the toxicity tests used to establish the chronic criteria are conducted using steady exposure to toxicants for a least 28 days (TSD, page 35). Some chronic tests, however, are much shorter than this (TSD, Appendix D-2). EPA selected the 4-day averaging period based on the shortest duration in which chronic test effects are sometimes observed for certain species and toxicants. In addition, EPA believes that the results of some chronic tests are due to an acute effect on a sensitive life stage that occurs some time during the test, rather than being caused by long-term stress or long-term accumulation of the test material in the organisms.

Additional discussion of the rationale for the 4-day averaging period is contained in Appendix D of the TSD. Balancing all of the above factors and data, EPA believes that the 4-day averaging period falls within the scientifically reasonable range of values for choice of the averaging period, and is an appropriate length of time of

pollutant exposure to ensure protection of sensitive organisms.

EPA established a 4-day averaging period in the NTR. In settlement of litigation on the NTR, EPA stated that it was "in the midst of conducting, sponsoring, or planning research related to the basis for and application of" water quality criteria and mentioned the issue of averaging period. See Partial Settlement Agreement in *American Forest and Paper Ass'n, Inc. et al. v. U.S. EPA* (Consolidated Case No. 93-0694 (RMU), D.D.C.). EPA is re-evaluating issues raised about averaging periods and will, if appropriate, revise the 1985 Guidelines.

EPA received public comment relevant to the averaging period during the comment period for the 1995 Amendments to the NTR (60 FR 22228, May 4, 1995), although these public comments did not address the chronic averaging period separately from the allowable excursion frequency and the design flow. Comments recommended that EPA use the 30Q5 design flow for chronic criteria.

While EPA is undertaking analysis of the chronic design conditions as part of the revisions to the 1985 Guidelines, EPA has not yet completed this work. Until this work is complete, for the reasons set forth in the TSD, EPA continues to believe that the 4-day chronic averaging period represents a reasonable, defensible value for this parameter.

EPA added language to the final rule which will enable the State to adopt alternative averaging periods and frequencies and associated design flows where appropriate. The State may apply to EPA for approval of alternative averaging periods and frequencies and related design flows; the State must submit the bases for any changes. Before approving any change, EPA will publish for public comment, a notice proposing the changes.

f. Hardness

Freshwater aquatic life criteria for certain metals are expressed as a function of hardness because hardness and/or water quality characteristics that are usually correlated with hardness can reduce or increase the toxicities of some metals. Hardness is used as a surrogate for a number of water quality characteristics which affect the toxicity of metals in a variety of ways. Increasing hardness has the effect of decreasing the toxicity of metals. Water quality criteria to protect aquatic life may be calculated at different concentrations of hardnesses measured in milligrams per liter (mg/l) as calcium carbonate (CaCO_3).

Section 131.38(b)(2) of the final rule presents the hardness-dependent equations for freshwater metals criteria. For example, using the equation for zinc, the total recoverable CMCs at a hardness of 10, 50, 100 or 200 mg/l as CaCO_3 are 17, 67, 120 and 220 micrograms per liter ($\mu\text{g/l}$), respectively. Thus, the specific value in the table in the regulatory text is for illustrative purposes only. Most of the data used to develop these hardness equations for deriving aquatic life criteria for metals were in the range of 25 mg/l to 400 mg/l as CaCO_3 , and the formulas are therefore most accurate in this range. The majority of surface waters nationwide and in California have a hardness of less than 400 mg/l as CaCO_3 .

In the past, EPA generally recommended that 25 mg/l as CaCO_3 be used as a default hardness value in deriving freshwater aquatic life criteria for metals when the ambient (or actual) hardness value is below 25 mg/l as CaCO_3 . However, use of the approach results in criteria that may not be fully protective. Therefore, for waters with a hardness of less than 25 mg/l as CaCO_3 , criteria should be calculated using the actual ambient hardness of the surface water.

In the past, EPA generally recommended that if the hardness was over 400 mg/l, two options were available: (1) Calculate the criterion using a default WER of 1.0 and using a hardness of 400 mg/l in the hardness equation; or (2) calculate the criterion using a WER and the actual ambient hardness of the surface water in the equation. Use of the second option is expected to result in the level of protection intended in the 1985 Guidelines whereas use of the first option is thought to result in an even more protective aquatic life criterion. At high hardness there is an indication that hardness and related inorganic water quality characteristics do not have as much of an effect on toxicity of metals as they do at lower hardnesses. Related water quality characteristics do not correlate as well at higher hardnesses as they do at lower hardnesses. Therefore, if hardness is over 400 mg/l as CaCO_3 , a hardness of 400 mg/l as CaCO_3 should be used with a default WER of 1.0; alternatively, the WER and actual hardness of the surface water may be used.

EPA requested comments in the NTR amendments on the use of actual ambient hardness for calculating criteria when the hardness is below 25 mg/l as CaCO_3 , and when hardness is greater than 400 mg/l as CaCO_3 . Most of the comments received were in favor of

using the actual hardness with the use of the water-effect ratio (1.0 unless otherwise specified by the permitting authority) when the hardness is greater than 400 mg/l as CaCO_3 . A few commenters did not want the water-effect ratio to be mandatory in calculating hardness, and other commenters had concerns about being responsible for deriving an appropriate water-effect ratio. Overall, the commenters were in favor of using the actual hardness when calculating hardness-dependent freshwater metals criteria for hardness between 0-400 mg/l as CaCO_3 . EPA took those comments into account in promulgating today's rule.

A hardness equation is most accurate when the relationships between hardness and the other important inorganic constituents, notably alkalinity and pH, are nearly identical in all of the dilution waters used in the toxicity tests and in the surface waters to which the equation is to be applied. If an effluent raises hardness but not alkalinity and/or pH, using the hardness of the downstream water might provide a lower level of protection than intended by the 1985 guidelines. If it appears that an effluent causes hardness to be inconsistent with alkalinity and/or pH, the intended level of protection will usually be maintained or exceeded if either (1) data are available to demonstrate that alkalinity and/or pH do not affect the toxicity of the metal, or (2) the hardness used in the hardness equation is the hardness of upstream water that does not contain the effluent. The level of protection intended by the 1985 guidelines can also be provided by using the WER procedure.

In some cases, capping hardness at 400 mg/l might result in a level of protection that is higher than that intended by the 1985 guidelines, but any such increase in the level of protection can be overcome by use of the WER procedure. For metals whose criteria are expressed as hardness equations, use of the WER procedure will generally be intended to account for effects of such water quality characteristics as total organic carbon on the toxicities of metals. The WER procedure is equally useful for accounting for any deviation from a hardness equation in a site water.

3. Human Health Criteria

EPA's CWA section 304(a) human health criteria guidance provides criteria recommendations to minimize adverse human effects due to substances in ambient water. EPA's CWA section 304(a) criteria guidance for human health are based on two types of

toxicological endpoints: (1) carcinogenicity and (2) systemic toxicity (i.e., all other adverse effects other than cancer). Thus, there are two procedures for assessing these health effects: one for carcinogens and one for non-carcinogens.

If there are no data on how a chemical agent causes cancer, EPA's existing human health guidelines assume that carcinogenicity is a "non-threshold phenomenon," that is, there are no "safe" or "no-effect levels" because even extremely small doses are assumed to cause a finite increase in the incidence of the effect (i.e., cancer). Therefore, EPA's water quality criteria guidance for carcinogens are presented as pollutant concentrations corresponding to increases in the risk of developing cancer. See Human Health Guidelines at 45 FR 79347.

With existing criteria, pollutants that do not manifest any apparent carcinogenic effect in animal studies (i.e., systemic toxicants), EPA assumes that the pollutant has a threshold below which no effect will be observed. This assumption is based on the premise that a physiological mechanism exists within living organisms to avoid or overcome the adverse effect of the pollutant below the threshold concentration.

Note: Recent changes in the Agency's cancer guidelines addressing these assumptions are described in the Draft Water Quality Criteria Methodology: Human Health, 63 FR 43756, August 14, 1998.

The human health risks of a substance cannot be determined with any degree of confidence unless dose-response relationships are quantified. Therefore, a dose-response assessment is required before a criterion can be calculated. The dose-response assessment determines the quantitative relationships between the amount of exposure to a substance and the onset of toxic injury or disease. Data for determining dose-response relationships are typically derived from animal studies, or less frequently, from epidemiological studies in exposed populations.

The dose-response information needed for carcinogens is an estimate of the carcinogenic potency of the compound. Carcinogenic potency is defined here as a general term for a chemical's human cancer-causing potential. This term is often used loosely to refer to the more specific carcinogenic or cancer slope factor which is defined as an estimate of carcinogenic potency derived from animal studies or epidemiological data of human exposure. It is based on extrapolation from test exposures of high doses over relatively short periods

of time to more realistic low doses over a lifetime exposure period by use of linear extrapolation models. The cancer slope factor, $q1^*$, is EPA's estimate of carcinogenic potency and is intended to be a conservative upper bound estimate (e.g. 95% upper bound confidence limit).

For non-carcinogens, EPA uses the reference dose (RfD) as the dose-response parameter in calculating the criteria. For non-carcinogens, oral RfD assessments (hereinafter simply "RfDs") are developed based on pollutant concentrations that cause threshold effects. The RfD is an estimate (with uncertainty spanning perhaps an order of magnitude) of a daily exposure to the human population (including sensitive subgroups) that is likely to be without appreciable risk of deleterious effects during a lifetime. See Human Health Guidelines. The RfD was formerly referred to as an "Acceptable Daily Intake" or ADI. The RfD is useful as a reference point for gauging the potential effect of other doses. Doses that are less than the RfD are not likely to be associated with any health risks, and are therefore less likely to be of regulatory concern. As the frequency of exposures exceeding the RfD increases and as the size of the excess increases, the probability increases that adverse effect may be observed in a human population. Nonetheless, a clear conclusion cannot be categorically drawn that all doses below the RfD are "acceptable" and that all doses in excess of the RfD are "unacceptable." In extrapolating non-carcinogen animal test data to humans to derive an RfD, EPA divides either a No Observed-Adverse Effect Level (NOAEL), Lowest Observed Adverse Effect Level (LOAEL), or other benchmark dose observed in animal studies by an "uncertainty factor" which is based on professional judgment of toxicologists and typically ranges from 10 to 10,000.

For CWA section 304(a) human health criteria development, EPA typically considers only exposures to a pollutant that occur through the ingestion of water and contaminated fish and shellfish. Thus, the criteria are based on an assessment of risks related to the surface water exposure route only where designated uses are drinking water and fish and shellfish consumption.

The assumed exposure pathways in calculating the criteria are the consumption of 2 liters per day of water at the criteria concentration and the consumption of 6.5 grams per day of fish and shellfish contaminated at a level equal to the criteria concentration but multiplied by a "bioconcentration factor." The use of fish and shellfish

consumption as an exposure factor requires the quantification of pollutant residues in the edible portions of the ingested species.

Bioconcentration factors (BCFs) are used to relate pollutant residues in aquatic organisms to the pollutant concentration in ambient waters. BCFs are quantified by various procedures depending on the lipid solubility of the pollutant. For lipid soluble pollutants, the average BCF is calculated from the weighted average percent lipids in the edible portions of fish and shellfish, which is about 3%; or it is calculated from theoretical considerations using the octanol/water partition coefficient. For non-lipid soluble compounds, the BCF is determined empirically. The assumed water consumption is taken from the National Academy of Sciences publication *Drinking Water and Health* (1977). (Referenced in the Human Health Guidelines.) This value is appropriate as it includes a margin of safety so that the general population is protected. See also EPA's discussion of the 2.0 liters/day assumption at 61 FR 65183 (Dec. 11, 1996). The 6.5 grams per day contaminated fish and shellfish consumption value was equivalent to the average per-capita consumption rate of all (contaminated and non-contaminated) freshwater and estuarine fish and shellfish for the U.S. population. See Human Health Guidelines.

EPA assumes in calculating water quality criteria that the exposed individual is an average adult with body weight of 70 kilograms. EPA assumes 6.5 grams per day of contaminated fish and shellfish consumption and 2.0 liters per day of contaminated drinking water consumption for a 70 kilogram person in calculating the criteria. Regarding issues concerning criteria development and differences in dose per kilogram of body weight, RfDs are always derived based on the most sensitive health effect endpoint. Therefore, when that basis is due to a chronic or lifetime health effect, the exposure parameters assume the exposed individual to be the average adult, as indicated above.

In the absence of this final rule, there may be particular risks to children. EPA believes that children are protected by the human health criteria contained in this final rule. Children are protected against other less sensitive adverse health endpoints due to the conservative way that the RfDs are derived. An RfD is a public health protective endpoint. It is an amount of a chemical that can be consumed on a daily basis for a lifetime without expecting an adverse effect. RfDs are based on sensitive health endpoints and

are calculated to be protective for sensitive human sub-populations including children. If the basis of the RfD was due to an acute or shorter-term developmental effect, EPA uses exposure parameters other than those indicated above. Specifically, EPA uses parameters most representative of the population of concern (e.g., the health criteria for nitrates based on infant exposure parameters). For carcinogens, the risk assessments are upper bound one in a million (10^{-6}) lifetime risk numbers. The risk to children is not likely to exceed these upper bounds estimates and may be zero at low doses. The exposure assumptions for drinking water and fish protect children because they are conservative for infants and children. EPA assumes 2 liters of untreated surface water and 6.5 grams of freshwater and estuarine fish are consumed each day. EPA believes the adult fish consumption assumption is conservative for children because children generally consume marine fish not freshwater and estuarine.

EPA has a process to develop a scientific consensus on oral reference dose assessments and carcinogenicity assessments (hereinafter simply cancer slope factors or slope factors or $q1^*$ s). Through this process, EPA develops a consensus of Agency opinion which is then used throughout EPA in risk management decision-making. EPA maintains an electronic data base which contains the official Agency consensus for oral RfD assessments and carcinogenicity assessments which is known as the Integrated Risk Information System (IRIS). It is available for use by the public on the National Institutes of Health's National Library of Medicine's TOXNET system, and through diskettes from the National Technical Information Service (NTIS). (NTIS access number is PB 90-591330.)

Section 304(a)(1) of the CWA requires EPA to periodically revise its criteria guidance to reflect the latest scientific knowledge: "(A) On the kind and extent of all identifiable effects on health and welfare * * *; (B) on the concentration and dispersal of pollutants, or their byproducts, through biological, physical, and chemical processes; and (C) on the effects of pollutants on the biological community diversity, productivity, and stability, including information on the factors affecting eutrophication rates of organic and inorganic sedimentation for varying types of receiving waters." In developing up-to-date water quality criteria for the protection of human health, EPA uses the most recent IRIS values (RfDs and $q1^*$ s) as the toxicological basis in the criterion

calculation. IRIS reflects EPA's most current consensus on the toxicological assessment for a chemical. In developing the criteria in today's rule, the IRIS values as of October 1996 were used together with currently accepted exposure parameters for bioconcentration, fish and shellfish and water consumption, and body weight. The IRIS cover sheet for each pollutant criteria included in today's rule is contained in the administrative record.

For the human health criteria included in today's rule, EPA used the Human Health Guidelines on which criteria recommendations from the appropriate CWA section 304(a) criteria guidance document were based. (These documents are also placed in the administrative record for today's rule.) Where EPA has changed any parameters in IRIS used in criteria derivation since issuance of the criteria guidance document, EPA recalculated the criteria recommendation with the latest IRIS information. Thus, there are differences between the original 1980 criteria guidance document recommendations, and those in this rule, but this rule presents EPA's most current CWA section 304(a) criteria recommendation. The basis ($q1^*$ or RfD) and BCF for each pollutant criterion in today's rule is contained in the rule's Administrative Record Matrix which is included in the administrative record for the rule. In addition, all recalculated human health numbers are denoted by an "a" in the criteria matrix in 40 CFR 131.38(b)(1) of the rule. The pollutants for which a revised human health criterion has been calculated since the December 1992 NTR include:

mercury
dichlorobromomethane
1,2-dichloropropane
1,2-trans-dichloroethylene
2,4-dimethylphenol
acenaphthene
benzo(a)anthracene
benzo(a)pyrene
benzo(b)fluoranthene
benzo(k)fluoranthene
2-chloronaphthalene
chrysene
dibenzo(a,h)anthracene
indeno(1,2,3-cd)pyrene
N-nitrosodi-n-propylamine
alpha-endosulfan
beta-endosulfan
endosulfan sulfate
2-chlorophenol
butylbenzyl phthalate
polychlorinated biphenyls.

In November of 1991, the proposed NTR presented criteria for several pollutants in parentheses. These were pollutants for which, in 1980, insufficient information existed to develop human health water quality

criteria, but for which, in 1991, sufficient information existed. Since these criteria did not undergo the public review and comment in a manner similar to the other water quality criteria presented in the NTR (for which sufficient information was available in 1980 to develop a criterion, as presented in the 1980 criteria guidance documents), they were not proposed for adoption into the water quality criteria, but were presented to serve as notice for inclusion in future State triennial reviews. Today's rule promulgates criteria for these nine pollutants:

copper
1, 2-dichloropropane
1,2-trans-dichloroethylene
2,4-dimethylphenol
acenaphthene
2-chloronaphthalene
N-nitrosodi-n-propylamine
2-chlorophenol
butylbenzene phthalate

All the criteria are based on IRIS values—either an RfD or $q1^*$ —which were listed on IRIS as of November 1991, the date of the proposed NTR. These values have not changed since the final NTR was published in December of 1992. The rule's Administrative Record Matrix in the administrative record of today's rule contains the specific RfDs, $q1^*$ s, and BCFs used in calculating these criteria.

Proposed Changes to the Human Health Criteria Methodology: EPA recently proposed revisions to the 1980 ambient water quality criteria derivation guidelines (the Human Health Guidelines). See *Draft Water Quality Criteria Methodology: Human Health*, 63 FR 43756, August 14, 1998; see also *Draft Water Quality Criteria Methodology: Human Health*, U.S. EPA Office of Water, EPA 822-Z-98-001. The EPA revisions consist of five documents: *Draft Water Quality Criteria Methodology: Human Health*, EPA 822-Z-98-001; *Ambient Water Quality Criteria Derivation Methodology Human Health, Technical Support Document, Final Draft*, EPA-822-B-98-005; and three Ambient Water Quality Criteria for the Protection of Human Health, Drafts—one each for Acrylonitrile, 1,3-Dichloropropene (1,3-DCP), and Hexachlorobutadiene (HCBDD), respectively, EPA-822-R-98-006, -005, and -004. All five documents are contained in the administrative record for today's rule.

The proposed methodology revisions reflect significant scientific advances that have occurred during the past nineteen years in such key areas as cancer and noncancer risk assessments, exposure assessments and bioaccumulation. For specific details on

these proposed changes and others, please refer to the Federal Register notice or the EPA document.

It should be noted that some of the proposed changes may result in significant numeric changes in the ambient water quality criteria. However, EPA will continue to rely on existing criteria as the basis for regulatory and non-regulatory decisions, until EPA revises and reissues a 304(a) criteria guidance using the revised final human health criteria methodology. The existing criteria are still viewed as scientifically acceptable by EPA. The intention of the proposed methodology revisions is to present the latest scientific advancements in the areas of risk and exposure assessment in order to incrementally improve the already sound toxicological and exposure bases for these criteria. As EPA's current human health criteria are the product of many years worth of development and peer review, it is reasonable to assume that revisiting all existing criteria, and incorporating peer review into such review, could require comparable amounts of time and resources. Given these circumstances, EPA proposed a process for revisiting these criteria as part of the overall revisions to the methodology for deriving human health criteria. This process is discussed in the Implementation Section of the Notice of Draft Revisions to the Methodology for Deriving Ambient Water Quality Criteria for the Protection of Human Health (see 63 FR 43771-43776, August 14, 1998).

The State of California in its Ocean Plan, adopted in 1990 and approved by EPA in 1991, established numeric water quality criteria using an average fish and shellfish consumption rate of 23 grams per day. This value is based on an earlier California Department of Health Services estimate. The State is currently in the process of readopting its water quality control plans for inland surface waters, enclosed bays, and estuaries. The State intends to consider information on fish and shellfish consumption rates evaluated and summarized in a report prepared by the State's Pesticide and Environmental Toxicology Section of the Office of Environmental Health Hazard Assessment of the California Environmental Protection Agency. The report, entitled, *Chemicals in Fish Report No. 1: Consumption of Fish and Shellfish in California and the United States*, was published in final draft form in July of 1997, and released to the public on September 16, 1997. The report is currently undergoing final evaluation, and is expected to be published in final form in the near future. This final draft report is contained in the

administrative record for today's rule. Although EPA has not used this fish consumption value here because this information has not yet been finalized, the State may use any appropriate higher state-specific fish and shellfish consumption rates in its re-adoption of criteria in its statewide plans.

a. 2,3,7,8-TCDD (Dioxin) Criteria

In today's action, EPA is promulgating human health water quality criteria for 2,3,7,8-tetrachlorodibenzo-p-dioxin ("dioxin") at the same levels as promulgated in the NTR, as amended. These criteria are derived from EPA's 1984 CWA section 304(a) criteria guidance document for dioxin.

For National Pollutant Discharge Elimination System (NPDES) purposes, EPA supports the regulation of other dioxin and dioxin-like compounds through the use of toxicity equivalencies or TEQs in NPDES permits (see discussion below). For California waters, if the discharge of dioxin or dioxin-like compounds has reasonable potential to cause or contribute to a violation of a narrative criterion, numeric water quality-based effluent limits for dioxin or dioxin-like compounds should be included in NPDES permits and should be expressed using a TEQ scheme.

EPA has been evaluating the health threat posed by dioxin nearly continuously for over two decades. Following issuance of the 1984 criteria guidance document, evaluating the health effects of dioxin and recommending human health criteria for dioxin, EPA prepared draft reassessments reviewing new scientific information relating to dioxin in 1985 and 1988. EPA's Science Advisory Board (SAB), reviewing the 1988 draft reassessment, concluded that while the risk assessment approach used in 1984 criteria guidance document had inadequacies, a better alternative was unavailable (see SAB's *Dioxin Panel Review of Documents from the Office of Research and Development relating to the Risk and Exposure Assessment of 2,3,7,8-TCDD* (EPA-SAB-EC-90-003, November 28, 1989) included in the administrative record for today's rule). Between 1988 and 1990, EPA issued numerous reports and guidances relating to the control of dioxin discharges from pulp and paper mills. See e.g., EPA Memorandum, "Strategy for the Regulation of Discharges of PHDDs & PHDFs from Pulp and Paper Mills to the Waters of the United States," from Assistant Administrator for Water to Regional Water Management Division Directors and NPDES State Directors, dated May 21,

1990 (AR NL-16); EPA Memorandum, "State Policies, Water Quality Standards, and Permit Limitations Related to 2,3,7,8-TCDD in Surface Water," from the Assistant Administrator for Water to Regional Water Management Division Directors, dated January 5, 1990 (AR VA-66). These documents are available in the administrative record for today's rule.

In 1991, EPA's Administrator announced another scientific reassessment of the risks of exposure to dioxin (see Memorandum from Administrator William K. Reilly to Erich W. Bretthauer, Assistant Administrator for Research and Development and E. Donald Elliott, General Counsel, entitled *Dioxin: Follow-Up to Briefing on Scientific Developments*, April 8, 1991, included in the administrative record for today's rule). At that time, the Administrator made clear that while the reassessment was underway, EPA would continue to regulate dioxin in accordance with existing Agency policy. Thereafter, the Agency proceeded to regulate dioxin in a number of environmental programs, including standards under the Safe Drinking Water Act and the CWA.

The Administrator's promulgation of the dioxin human health criteria in the 1992 NTR affirmed the Agency's decision that the ongoing reassessment should not defer or delay regulating this potent contaminant, and further, that the risk assessment in the 1984 criteria guidance document for dioxin continued to be scientifically defensible. Until the reassessment process was completed, the Agency could not "say with any certainty what the degree or directions of any changes in the risk estimates might be" (57 FR 60863-64).

The basis for the dioxin criteria as well as the decision to include the dioxin criteria in the 1992 NTR pending the results of the reassessment were challenged. See *American Forest and Paper Ass'n, Inc. et al. v. U.S. EPA* (Consolidated Case No. 93-0694 (RMU) D.D.C.). By order dated September 4, 1996, the Court upheld EPA's decision. EPA's brief and the Court's decision are included in the administrative record for today's rule.

EPA has undertaken significant effort toward completion of the dioxin reassessment. On September 13, 1994, EPA released for public review and comment a draft reassessment of toxicity and exposure to dioxin. See *Health Assessment Document for 2,3,7,8-Tetrachlorobenzo-p-Dioxin (TCDD) and Related Compounds*, U.S. EPA, 1994. EPA is currently addressing comments made by the public and the SAB and anticipates that the final

revised reassessment will go to the SAB in the near future. With today's rule, the Agency reaffirms that, notwithstanding the on-going risk reassessment, EPA intends to continue to regulate dioxin to avoid further harm to public health, and the basis for the dioxin criteria, both in terms of the cancer potency and the exposure estimates, remains scientifically defensible. The fact that EPA is reassessing the risk of dioxin, virtually a continuous process to evaluate new scientific information, does not mean that the current risk assessment is "wrong". It continues to be EPA's position that until the risk assessment for dioxin is revised, EPA supports and will continue to use the existing risk assessment for the regulation of dioxin in the environment. Accordingly, EPA today promulgates dioxin criteria based on the 1984 criteria guidance document for dioxin and promulgated in the NTR in 1992.

Toxicity Equivalency: The State of California, in its 1991 water quality control plans, adopted human health criteria for dioxin and dioxin-like compounds based on the concept of toxicity equivalency (TEQ) using toxicity equivalency factors (TEFs). EPA Region 9 reviewed and approved the State's use of the TEQ concept and TEFs in setting the State's human health water quality criteria for dioxin and dioxin-like compounds.

In 1987, EPA formally embraced the TEQ concept as an interim procedure to estimate the risks associated with exposures to 210 chlorinated dibenzo-p-dioxin and chlorinated dibenzofuran (CDD/CDF) congeners, including 2,3,7,8-TCDD. This procedure uses a set of derived TEFs to convert the concentration of any CDD/CDF congener into an equivalent concentration of 2,3,7,8-TCDD. In 1989, EPA updated its TEFs based on an examination of relevant scientific evidence and a recognition of the value of international consistency. This updated information can be found in EPA's 1989 *Update to the Interim Procedures for Estimating Risks Associated with Exposures to Mixtures of Chlorinated Dibenzo-p-dioxins and -dibenzofurans (CDDs and CDFs)* (EPA/625/3-89/016, March 1989). EPA had been active in an international effort aimed at adopting a common set of TEFs (International TEFs/89 or I-TEFs/89), to facilitate information exchange on environmental contamination of CDD/CDF. This document reflects EPA's support of an internationally consistent set of TEFs, the I-TEFs/89. EPA uses I-TEFs/89 in many of its regulatory programs.

In 1994, the World Health Organization (WHO) revised the TEF

scheme for dioxins and furans to include toxicity from dioxin-like compounds (Ahlborg et al., 1994). However, no changes were made to the TEFs for dioxins and furans. In 1998, the WHO re-evaluated and revised the previously established TEFs for dioxins (Ds), furans (Fs) and dioxin-like compounds (Vanden Bers, 1998). The nomenclature for this TEF scheme is TEQDFP-WHO98, where TEQ represents the 2,3,7,8-TCDD Toxic Equivalence of the mixture, and the subscript DFP indicates that dioxins (Ds) furans (Fs) and dioxin-like compounds (P) are included in the TEF scheme. The subscript 98 following WHO displays the year changes were made to the TEF scheme.

EPA intends to use the 1998 WHO TEF scheme in the near future. At this point however, EPA will support the use of either the 1989 interim procedures or the 1998 WHO TEF scheme but encourages the use of the 1998 WHO TEF scheme in State programs. EPA expects California to use a TEF scheme in implementing the 2,3,7,8-TCDD water quality criteria contained in today's rule. The TEQ and TEF approach provide a methodology for setting NPDES water quality-based permit limits that are protective of human health for dioxin and dioxin-like compounds.

Several commenters requested EPA to promulgate criteria for other forms of dioxin, in addition to 2,3,7,8-TCDD. EPA's draft reassessment for dioxin examines toxicity based on the TEQ concept and I-TEFs/89. When EPA completes the dioxin reassessment, the Agency intends to adopt revised 304(a) water quality criteria guidance based on the reassessment for dioxin. If necessary, EPA will then act to amend the NTR and CTR to reflect the revised 304(a) water quality criteria guidance.

b. Arsenic Criteria

EPA is not promulgating human health criteria for arsenic in today's rule. EPA recognizes that it promulgated human health water quality criteria for arsenic for a number of States in 1992, in the NTR, based on EPA's 1980 section 304(a) criteria guidance for arsenic established, in part, from IRIS values current at that time. However, a number of issues and uncertainties existed at the time of the CTR proposal concerning the health effects of arsenic. These issues and uncertainties were summarized in "Issues Related to Health Risk of Arsenic" which is contained in the administrative record for today's rule. During the period of this rulemaking action, EPA commissioned a study of arsenic health

effects by the National Research Council (NRC) arm of the National Academy of Sciences. EPA received the NRC report in March of 1999. EPA scientists reviewed the report, which recommended that EPA lower the Safe Drinking Water Act arsenic maximum contaminant level (MCL) as soon as possible (The arsenic MCL is currently 50 µg/l.) The bladder cancer analysis in the NRC report will provide part of the basis for the risk assessment of a proposed revised arsenic MCL in the near future. After promulgating a revised MCL for drinking water, the Agency plans to revise the CWA 304(a) human health criteria for arsenic in order to harmonize the two standards. Today's rule defers promulgating arsenic criteria based on the Agency's previous risk assessment of skin cancer. In the meantime, permitting authorities in California should rely on existing narrative water quality criteria to establish effluent limitations as necessary for arsenic. California has previously expressed its science and policy position by establishing a criterion level of 5 µg/l for arsenic. Permitting authorities may, among other considerations, consider that value when evaluating and interpreting narrative water quality criteria.

c. Mercury Criteria

The human health criteria promulgated here use the latest RfD in EPA's Integrated Risk Information System (IRIS) and the weighted average practical bioconcentration factor (PBCF) from the 1980 section 304(a) criteria guidance document for mercury. EPA considered the approach used in the Great Lakes Water Quality Guidance ("Guidance") incorporating Bioaccumulation Factors (BAFs), but rejected this approach for reasons outlined below. The equation used here to derive an ambient water quality criterion for mercury from exposure to organisms and water is:

$$\text{HHC} = \frac{\text{RfD} \times \text{BW}}{\text{WC} + (\text{FC} \times \text{PBCF})}$$

Where:

RfD = Reference Dose

BW = Body Weight

WC = Water Consumption

FC = Total Fish and Shellfish

Consumption per Day

PBCF = Practical Bioconcentration Factor (weighted average)

For mercury, the most current RfD from IRIS is 1×10^{-4} mg/kg/day. The RfD used a benchmark dose as an estimate of a No Observed Adverse Effect Level (NOAEL). The benchmark dose was calculated by applying a Weibel model

for extra risk to all neurological effects observed in 81 Iraqi children exposed in utero as reported in Marsh, et. al. (1987). Maternal hair mercury was the measure of exposure. Extra risk refers to an adjustment for background incidence of a given health effect. Specifically, the extra risk is the added incidence of observing an effect above the background rate relative to the proportion of the population of interest that is not expected to exhibit such as effect. The resulting estimate was the lower 95% statistical bound on the 10% extra risk; this was 11 ppm mercury in maternal hair. This dose in hair was converted to an equivalent ingested amount by applying a model based on data from human studies; the resulting benchmark dose was 1×10^{-3} mg/kg body weight /day. The RfD was calculated by dividing the benchmark dose by a composite uncertainty factor of 10. The uncertainty factor was used to account for variability in the human

population, in particular the wide variation in biological half-life of methylmercury and the variation that is observed in the ration of hair mercury to mercury in the blood. In addition the uncertainty factor accounts for lack of a two-generation reproductive study and the lack of data on long term effects of childhood mercury exposures. The RfD thus calculated is 1×10^{-4} mg/kg body weight/day or 0.1 μ g/kg/day. The body weight used in the equation for the mercury criteria, as discussed in the Human Health Guidelines, is a mean adult human body weight of 70 kg. The drinking water consumption rate, as discussed in the Human Health Guidelines, is 2.0 liters per day.

The bioconcentration factor or BCF is defined as the ratio of chemical concentration in the organism to that in surrounding water. Bioconcentration occurs through uptake and retention of a substance from water only, through gill membranes or other external body

surfaces. In the context of setting exposure criteria it is generally understood that the terms "BCF" and "steady-state BCF" are synonymous. A steady-state condition occurs when the organism is exposed for a sufficient length of time that the ratio does not change substantially.

The BCFs that were used herein are the "Practical Bioconcentration Factors (PBCFs)" that were derived in 1980: 5500 for fresh water, 3765 for estuarine coastal waters, and 9000 for open oceans. See pages C-100-1 of Ambient Water Quality Criteria for Mercury (EPA 440/5-80-058) for a complete discussion on the PBCF. Because of the way they were derived, these PBCFs take into account uptake from food as well as uptake from water. A weighted average PBCF was calculated to take into account the average consumption from the three waters using the following equation:

$$\text{Weighted Average Practical BCF} = \frac{\sum(\text{FC} \times \text{PBCF})}{\sum(\text{FC})} = \frac{(0.00172)(5500) + (0.00478)(3765) + (0.0122)(9000)}{0.00172 + 0.00478 + 0.0122} = \frac{137.3}{0.0187} = 7342.6$$

Given the large value for the weighted average PBCF, the contribution of drinking water to total daily intake is negligible so that assumptions concerning the chemical form of mercury in drinking water become less important. The human health mercury criteria promulgated for this rule are based on the latest RfD as listed in IRIS and a weighted PBCF from the 1980 § 304(a) criteria guidance document for mercury.

On March 23, 1995 (60 FR 15366), EPA promulgated the Great Lakes Water Quality Guidance ("Guidance"). The Guidance incorporated bioaccumulation factors (BAFs) in the derivation of criteria to protect human health because it is believed that BAFs are a better predictor than BCFs of the concentration of a chemical within fish tissue since BAFs include consideration of the uptake of contaminants from all routes of exposure. A bioaccumulation factor is defined as the ratio (in L/kg) of a substance's concentration in tissue to the concentration in the ambient water, in situations where both the organism and its food are exposed and the ratio does not change substantially over time. The final Great Lakes Guidance establishes a hierarchy of four methods for deriving BAFs for non-polar organic chemicals: (1) Field-measured BAFs; (2) predicted BAFs derived using a field-measured biota-sediment accumulation factor; (3) predicted BAFs derived by

multiplying a laboratory-measured BCF by a food chain multiplier; and (4) predicted BAFs derived by multiplying a BCF calculated from the log Kow by a food-chain multiplier. The final Great Lakes Guidance developed BAFs for trophic levels three and four fish of the Great Lakes Basin. Respectively, the BAFs for mercury for trophic level 3 and 4 fish were: 27,900 and 140,000.

The BAF promulgated in the GLI was developed specifically for the Great Lakes System. It is uncertain whether the BAFs of 27,900 and 140,000 are appropriate for use in California at this time; therefore, today's final rule does not use the GLI BAF in establishing human health criteria for mercury in California. The magnitude of the BAF for mercury in a given system depends on how much of the total mercury is present in the methylated form. Methylation rates vary widely from one water body to another for reasons that are not fully understood. Lacking the data, it is difficult to determine if the BAF used in the GLI represents the true potential for mercury to bioaccumulate in California surface waters. The true, average BAF for California could be higher or lower. For more information see EPA's Response to Comments document in the administrative record for this rule (specifically comments CTR-002-007(b) and CTR-016-007).

EPA is developing a national BAF for mercury as part of revisions to its 304(a)

criteria for human health; however, the BAF methodology that will be used is currently under evaluation as part of EPA's revisions to its National Human Health Methodology (see section F.3 above). EPA applied a similar methodology in its Mercury Study Report to Congress (MSRC) to derive a BAF for methylmercury. The MSRC is available through NTIS (EPA-452/R-97-003). Although a BAF was derived in the MSRC, EPA does not intend to use this BAF for National application. EPA is engaged in a separate effort to incorporate additional mercury bioaccumulation data that was not considered in the MSRC, and to assess uncertainties with using a National BAF approach for mercury. Once the proposed revised human health methodology, including the BAF component, is finalized, EPA will revise its 304(a) criteria for mercury to reflect changes in the underlying methodology, recommendations contained in the MSRC, and recommendations in a National Academy of Science report on human health assessment of methylmercury. When EPA changes its 304(a) criteria recommendation for mercury, States and Tribes will be expected to review their water quality standards for mercury and make any revisions necessary to ensure their standards are scientifically defensible.

New information may become available regarding the bioaccumulation

of mercury in certain water bodies in California. EPA supports the use of this information to develop site-specific criteria for mercury. Further, if a California water body is impaired due to mercury fish tissue or sediment contamination, loadings of mercury could contribute to or exacerbate the impairment. Therefore, one option regulatory authorities should consider is to include water quality-based effluent limits (WQBELs) in permits based on mass for discharges to the impaired water body. Such WQBELs must be derived from and comply with applicable State water quality standards (including both numeric and narrative criteria) and assure that the discharge does not cause or contribute to a violation of water quality standards.

d. Polychlorinated Biphenyls (PCBs) Criteria

The NTR, as amended, calculated human health criteria for PCBs using a cancer potency factor of 7.7 per mg/kg-day from the Agency's IRIS. This cancer potency factor was derived from the Norback and Weltman (1985) study which looked at rats that were fed Aroclor 1260. The study used the linearized multistage model with a default cross-species scaling factor (body weight ratio to the $\frac{2}{3}$ power). Although it is known that PCB mixtures vary greatly as to their potency in producing biological effects, for purposes of its carcinogenicity assessment, EPA considered Aroclor 1260 to be representative of all PCB mixtures. The Agency did not pool data from all available congener studies or generate a geometric mean from these studies, since the Norback and Weltman study was judged by EPA as acceptable, and not of marginal quality, in design or conduct as compared with other studies. Thereafter, the Institute for Evaluating Health Risks (IEHR, 1991) reviewed the pathological slides from the Norback and Weltman study, and concluded that some of the malignant liver tumors should have been interpreted as nonmalignant lesions, and that the cancer potency factor should be 5.1 per mg/kg-day as compared with EPA's 7.7 per mg/kg-day.

The Agency's peer-reviewed reassessment of the cancer potency of PCBs published in a final report, *PCBs: Cancer Dose-Response Assessment and Applications to Environmental Mixtures* (EPA/600/P-96/001F), adopts a different approach that distinguishes among PCB mixtures by using information on environmental processes. (The report is included in the administrative record of today's rule.) The report considers all cancer studies (which used commercial

mixtures only) to develop a range of cancer potency factors, then uses information on environmental processes to provide guidance on choosing an appropriate potency factor for representative classes of environmental mixtures and different pathways. The reassessment provides that, depending on the specific application, either central estimates or upper bounds can be appropriate. Central estimates describe a typical individual's risk, while upper bounds provide assurance (*i.e.*, 95% confidence) that this risk is not likely to be underestimated if the underlying model is correct. Central estimates are used for comparing or ranking environmental hazards, while upper bounds provide information about the precision of the comparison or ranking. In the reassessment, the use of the upper bound values were found to increase cancer potency estimates by two or three-fold over those using central tendency. Upper bounds are useful for estimating risks or setting exposure-related standards to protect public health, and are used by EPA in quantitative cancer risk assessment. Thus, the cancer potency of PCB mixtures is determined using a tiered approach based on environmental exposure routes with upper-bound potency factors (using a body weight ratio to the $\frac{2}{3}$ power) ranging from 0.07 (lowest risk and persistence) to 2 (high risk and persistence) per mg/kg-day for average lifetime exposures to PCBs. It is noteworthy that bioaccumulated PCBs appear to be more toxic than commercial PCBs and appear to be more persistent in the body. For exposure through the food chain, risks can be higher than other exposures.

EPA issued the final reassessment report on September 27, 1996, and updated IRIS to include the reassessment on October 1, 1996. EPA updated the human health criteria for PCBs in the National Toxics Rule on September 27, 1999. For today's rule, EPA derived the human health criteria for PCBs using a cancer potency factor of 2 per mg/kg-day, an upper bound potency factor reflecting high risk and persistence. This decision is based on recent multimedia studies indicating that the major pathway of exposure to persistent toxic substances such as PCBs is via dietary exposure (*i.e.*, contaminated fish and shellfish consumption).

Following is the calculation of the human health criterion (HHC) for organism and water consumption:

$$\text{HHC} = \frac{\text{RF} \times \text{BW} \times (1,000 \mu\text{g}/\text{mg})}{q1^* \times [\text{WC} + (\text{FC} \times \text{BCF})]}$$

Where:

RF = Risk Factor = 1×10^{-6}

BW = Body Weight = 70 kg

$q1^*$ = Cancer slope factor = 2 per mg/kg-day

WC = Water Consumption = 2 l/day

FC = Fish and Shellfish Consumption = 0.0065 kg/day

BCF = Bioconcentration Factor = 31,200
the HHC ($\mu\text{g}/\text{l}$) = 0.00017 $\mu\text{g}/\text{l}$ (rounded to two significant digits).

Following is the calculation of the human health criterion for organism only consumption:

$$\text{HHC} = \frac{\text{RF} \times \text{BW} \times (1,000 \mu\text{g}/\text{mg})}{q1^* \times \text{FC} \times \text{BCF}}$$

Where:

RF = Risk Factor = 1×10^{-6}

BW = Body Weight = 70 kg

$q1^*$ = Cancer slope factor = 2 per mg/kg-day

FC = Total Fish and Shellfish

Consumption per Day = 0.0065 kg/day

BCF = Bioconcentration Factor = 31,200
the HHC ($\mu\text{g}/\text{l}$) = 0.00017 $\mu\text{g}/\text{l}$ (rounded to two significant digits).

The criteria are both equal to 0.00017 $\mu\text{g}/\text{l}$ and apply to total PCBs. See *PCBs: Cancer Dose Response Assessment and Application to Environmental Mixtures* (EPA/600/9-96-001F). For a discussion of the body weight, water consumption, and fish and shellfish consumption factors, see the Human Health Guidelines. For a discussion of the BCF, see the 304(a) criteria guidance document for PCBs (included in the administrative record for today's rule).

e. Excluded Section 304(a) Human Health Criteria

As is the case in the NTR, as amended, today's rule does not promulgate criteria for certain priority pollutants for which CWA section 304(a) criteria guidance exists because those criteria were not based on toxicity to humans or aquatic organisms. The basis for those particular criteria is organoleptic effects (*e.g.*, taste and odor) which would make water and edible aquatic life unpalatable but not toxic. Because the basis for this rule is to protect the public health and aquatic life from toxicity consistent with the language and intent in CWA section 303(c)(2)(B), EPA is promulgating criteria only for those priority toxic pollutants whose criteria recommendations are based on toxicity. The CWA section 304(a) human health criteria based on organoleptic effects for zinc and 3-methyl-4-chlorophenol are excluded for this reason. See the 1992 NTR discussion at 57 FR 60864.

f. Cancer Risk Level

EPA's CWA section 304(a) criteria guidance documents for priority toxic pollutants that are based on carcinogenicity present concentrations for upper bound risk levels of 1 excess cancer case per 100,000 people (10^{-5}), per 1,000,000 people (10^{-6}), and per 10,000,000 people (10^{-7}). However, the criteria documents do not recommend a particular risk level as EPA policy.

As part of the proposed rule, EPA requested and received comment on the adoption of a 10^{-5} risk level for carcinogenic pollutants. The effect of a 10^{-5} risk level would have been to increase (*i.e.*, make less stringent) carcinogenic pollutant criteria values (noted in the matrix by footnote c) that are not already promulgated in the NTR, by one order of magnitude. For example, the organism-only criterion for gamma BHC (pollutant number 105 in the matrix) is 0.013 $\mu\text{g}/\text{l}$; the criterion based on a 10^{-5} risk level would have been 0.13 $\mu\text{g}/\text{l}$. EPA received several comments that indicated a preference for a higher (10^{-4} and 10^{-5}) risk level for effluent dependent waters or other types of special circumstances.

In today's rule, EPA is promulgating criteria that protect the general population at an incremental cancer risk level of one in a million (10^{-6}) for all priority toxic pollutants regulated as carcinogens, consistent with the criteria promulgated in the NTR for the State of California. Standards adopted by the State contained in the Enclosed Bays and Estuaries Plan (EBEP), and the Inland Surface Waters Plan (ISWP), partially approved by EPA on November 6, 1991, and the Ocean Plan approved by EPA on June 28, 1990, contained a risk level of 10^{-6} for most carcinogens. The State has historically protected at a 10^{-6} risk level for carcinogenic pollutants.

EPA, in its recent human health methodology revisions, proposed acceptable lifetime cancer risk for the general population in the range of 10^{-5} to 10^{-6} . EPA also proposed that States and Tribes ensure the most highly exposed populations do not exceed a 10^{-4} risk level. However, EPA's draft methodology revisions also stated that it will derive 304(a) criteria at a 10^{-6} risk level, which the Agency believes reflects the appropriate risk for the general population and which applies a risk management policy which ensures protection for all exposed population groups. (Draft Water Quality Criteria Methodology: Human Health, EPA 822-Z-98-001, August 1998, Appendix II, page 72).

Subpopulations within a State may exist, such as recreational and subsistence anglers, who as a result of greater exposure to a contaminant are at greater risk than the standard 70 kilogram person eating 6.5 grams per day of fish and shellfish and drinking 2.0 liters per day of drinking water with pollutant levels meeting the water quality criteria. EPA acknowledges that at any given risk level for the general population, those segments of the population that are more highly exposed face a higher relative risk. For example, if fish are contaminated at a level permitted by criteria derived on the basis of a risk level of 10^{-6} , individuals consuming up to 10 times the assumed fish consumption rate would still be protected at a 10^{-5} risk level. Similarly, individuals consuming 100 times the general population rate would be protected at a 10^{-4} risk level. EPA, therefore, believes that derivation of criteria at the 10^{-6} risk level is a reasonable risk management decision protective of designated uses under the CWA. While outside the scope of this rule, EPA notes that States and Tribes, however, have the discretion to adopt water quality criteria that result in a higher risk level (*e.g.*, 10^{-5}). EPA expects to approve such criteria if the State or Tribe has identified the most highly exposed subpopulation within the State or Tribe, demonstrates the chosen risk level is adequately protective of the most highly exposed subpopulation, and has completed all necessary public participation.

This demonstration has not happened in California. Further, the information that is available on highly exposed subpopulations in California supports the need to protect the general population at the 10^{-6} level. California has cited the Santa Monica Bay Seafood Consumption Study as providing the best available data set for estimating consumption of sport fish and shellfish in California for both marine or freshwater sources (Chemicals in Fish Report No. 1: Consumption of Fish and Shellfish in California and the United States, Final Draft Report, July 1997). Consumption rates of sport fish and shellfish of 21g/day, 50 g/day, 107 g/day, and 161 g/day for the median, mean, 90th, and 95th percentile rates, respectively, were determined from this study. Additional consumption of commercial species in the range of approximately 8 to 42 g/day would further increase these values. Clearly the consumption rates for the most highly exposed subpopulation within the State exceeds 10 times the 6.5 g/day rates used in the CTR. Therefore, use of a risk

level of 10^{-5} for the general population would not be sufficient to protect the most highly exposed population in California at a 10^{-4} risk level. On the other hand, even the most highly exposed subpopulations cited in the California study do not have consumption rates approaching 100 times the 6.5 g/day rates used in the CTR. The use of the 10^{-6} risk level to protect average level consumers does not subject these subpopulations to risk levels as high as 10^{-4} .

EPA believes its decision to establish a 10^{-6} risk level for the CTR is also consistent with EPA's policy in the NTR to select the risk level that reflect the policies or preferences of CWA programs in the affected States. California adopted standards for priority toxic pollutants for its ocean waters in 1990 using a 10^{-6} risk level to protect human health (California Ocean Plan, 1990). In April 1991, and again in November 1992, California adopted standards for its inland surface waters and enclosed bays and estuaries in its Inland Surface Waters Plan (ISWP) and its Enclosed Bays and Estuaries Plan (EBEP) using a 10^{-6} risk level. To be consistent with the State's water quality standards, EPA used a 10^{-6} risk level for California in the NTR at 57 FR 60867. The State has continued using a 10^{-6} risk level to protect human health for its standards that were not withdrawn with the ISWP and EBEP. The most recent expression of risk level preference is contained in the Draft Functional Equivalent Document, Amendment of the Water Quality Control Plan for Ocean Waters of California, October 1998, where the State recommended maintaining a consistent risk level of 10^{-6} for the human health standards that it was proposing to revise.

EPA received several comments requesting a 10^{-5} risk level based on the risk level chosen for the Great Lakes Water Quality Guidance (the Guidance). There are several differences between the guidelines for the derivation of human health criteria contained in the Guidance and the California Toxics Rule (CTR) that make a 10^{-5} risk factor appropriate for the Guidance, but not for the CTR. These differences result in criteria developed using the 10^{-5} risk factor in the Guidance being at least as stringent as criteria derived under the CTR using a 10^{-6} risk factor. The relevant aspects of the Guidance include:

- Use of fish consumption rates that are considerably higher than fish consumption rates for the CTR.
- Use of bioaccumulation factors rather than bioconcentration factors in

estimating exposure, considerably increasing the dose of carcinogens to sensitive subgroups.

- Consideration of additivity of effects of mixtures for both carcinogenic and noncarcinogenic pollutants.

This combination of factors increase the calculated carcinogenic risk substantially under the Guidance (the combination would generally be more than one order of magnitude), making a lower overall risk factor acceptable. The Guidance risk factor provides, in fact, criteria with at least the same level of protection against carcinogens as criteria derived with a higher risk factor using the CTR. A lower risk factor for the CTR would not be appropriate absent concomitant changes in the derivation procedures that provide equivalent risk protection.

G. Description of Final Rule

1. Scope

Paragraph (a) in 40 CFR 131.38, entitled "Scope," states that this rule is a promulgation of criteria for priority toxic pollutants in the State of California for inland surface waters, enclosed bays, and estuaries. Paragraph (a) in 40 CFR 131.38 also states that this rule contains an authorizing compliance schedule provision.

2. EPA Criteria for Priority Toxic Pollutants

EPA's criteria for California are presented in tabular form at 40 CFR 131.38. For ease of presentation, the table that appears combines water quality criteria promulgated in the NTR, as amended, that are outside the scope of this rulemaking, with the criteria that are within the scope of today's rule. This is intended to help readers determine applicable water quality criteria for the State of California. The table contains footnotes for clarification.

Paragraph (b) in 40 CFR 131.38 presents a matrix of the applicable EPA aquatic life and/or human health criteria for priority toxic pollutants in California. Section 303(c)(2)(B) of the CWA addresses only pollutants listed as "toxic" pursuant to section 307(a) of the CWA for which EPA has developed section 304(a) criteria guidance. As discussed earlier in this preamble, the section 307(a) list of toxics contains 65 compounds and families of compounds, which potentially include thousands of specific compounds. Of these, the Agency identified a list of 126 "priority toxic pollutants" to implement the CWA (see 40 CFR 131.36(b)). Reference in this rule to priority toxic pollutants, toxic pollutants, or toxics refers to the 126 priority toxic pollutants.

EPA has not developed both aquatic life and human health CWA section 304(a) criterion guidance for all of the priority toxic pollutants. The matrix in 40 CFR 131.38(b) contains human health criteria in Column D for 92 priority toxic pollutants which are divided into Column 1: criteria for water consumption (i.e., 2.0 liters per day) and aquatic organism consumption (i.e., 6.5 grams per day of aquatic organisms); and Column 2: criteria for aquatic organism consumption only. The term aquatic organism includes fish and shellfish such as shrimp, clams, oysters and mussels. One reason the total number of priority toxic pollutants with criteria today differs from the total number of priority toxic pollutants contained in earlier published CWA section 304(a) criteria guidance is because EPA has developed and is promulgating chromium criteria for two valence states with respect to aquatic life criteria. Thus, although chromium is a single priority toxic pollutant, there are two criteria for chromium for aquatic life protection. See pollutant 5 in today's rule at 40 CFR 131.38(b). Another reason is that EPA is promulgating human health criteria for nine priority pollutants for which health-based national criteria have been calculated based on information obtained from EPA's IRIS database (EPA provided notice of these nine criteria in the NTR for inclusion in future State triennial reviews. See 57 FR 60848, 60890).

The matrix contains aquatic life criteria for 23 priority pollutants. These are divided into freshwater criteria (Column B) and saltwater criteria (Column C). These columns are further divided into acute and chronic criteria. The aquatic life criteria are considered by EPA to be protective when applied under the conditions described in the section 304(a) criteria documents and in the TSD. For example, water body uses should be protected if the criteria are not exceeded, on average, once every three year period. It should be noted that the criteria maximum concentrations (the acute criteria) are short-term concentrations and that the criteria continuous concentrations (the chronic criteria) are four-day averages. It should also be noted that for certain metals, the actual criteria are equations which are included as footnotes to the matrix. The toxicity of these metals is water hardness dependent and may be adjusted. The values shown in the table are illustrative only, based on a hardness expressed as calcium carbonate of 100 mg/l. Finally, the criterion for pentachlorophenol is pH

dependent. The equation is the actual criterion and is included as a footnote. The value shown in the matrix is for a pH of 7.8. Several of the freshwater aquatic life criteria are incorporated into the matrix in the format used in the 1980 criteria methodology which uses a final acute value instead of a continuous maximum concentration. This distinction is noted in footnote g of the table.

The final rule at 40 CFR 131.38(c) establishes the applicability of the criteria to the State of California. 40 CFR 131.38(d) is described later in Section F, of this preamble. EPA has included in this rule provisions necessary to implement numeric criteria in a way that maintains the level of protection intended. These provisions are included in 40 CFR 131.38(c) of today's rule. For example, in order to do steady state waste load allocation analyses, most States have low flow values for streams and rivers which establish flow rates for various purposes. These low flow values become design flows for sizing treatment plants and developing water quality-based effluent limits and/or TMDLs. Historically, these design flows were selected for the purposes of waste load allocation analyses which focused on instream dissolved oxygen concentrations and protection of aquatic life. With the publication of the 1985 TSD, EPA introduced hydrologically and biologically based analyses for the protection of aquatic life and human health. (These concepts have been expanded subsequently in EPA's *Technical Guidance Manual for Performing Wasteload Allocations, Book 6, Design Conditions*, U.S. EPA, 1986. These analyses are included in Appendix D of the revised TSD. The discussion here is greatly simplified and is provided to support EPA's decision to promulgate design flows for instream flows and thereby maintain the adequacy of the criteria for priority toxic pollutants.) EPA recommended either of two methods for calculating acceptable low flows, the traditional hydrologic method developed by the U.S. Geological Survey or a biological based method developed by EPA. Other methods for evaluating the instream flow record may be available; use of these methods may result in TMDLs and/or water quality-based effluent limitations which adequately protect human health and/or aquatic life. The results of either of these two methods, or an equally protective alternative method, may be used.

The State of California may adopt specific design flows for streams and rivers to protect designated uses against the effects of toxics. EPA believes it is

important to specify design flows in today's rule so that, in the absence of state design flows, the criteria promulgated today would be implemented appropriately. The TSD also recommends the use of three dynamic models to perform wasteload allocations. Dynamic wasteload models do not generally use specific steady state design flows but accomplish the same effect by factoring in the probability of occurrence of stream flows based on the historical flow record.

The low flows specified in the rule explicitly contain duration and frequency of occurrence which represent certain probabilities of occurrence. Likewise, the criteria for priority toxic pollutants are defined with duration and frequency components. Dynamic modeling techniques explicitly predict the effects of variability in receiving water, effluent flow, and pollution variation. Dynamic modeling techniques, as described in the TSD, allow for calculating wasteload allocations that meet the criteria for priority toxic pollutants without using a single, worst-case concentration based on a critical condition. Either dynamic modeling or steady state modeling can be used to implement the criteria promulgated today. For simplicity, only steady state conditions are discussed here. Clearly, if the criteria were implemented using design flows that are too high, the resulting toxic controls would not be adequate, because the resulting ambient concentrations would exceed EPA's criteria.

In the case of aquatic life, assuming exceedences occur more frequently than once in three years on the average, exceedences would result in diminished vitality of stream ecosystems characterized by the loss of desired species. Numeric water quality criteria should apply at all flows that are equal to or greater than flows specified below. The low flow values are:

Type of criteria	Design flow
Acute Aquatic Life (CMC).	1 Q 10 or 1 B 3
Chronic Aquatic Life (CCC).	7 Q 10 or 4 B 3
Human Health	harmonic mean flow

Where:

- 1 Q 10 is the lowest one day flow with an average recurrence frequency of once in 10 years determined hydrologically;
- 1 B 3 is biologically based and indicates an allowable exceedence of once every 3 years. It is determined by

EPA's computerized method (DFLOW model);

7 Q 10 is the lowest average 7 consecutive day low flow with an average recurrence frequency of once in 10 years determined hydrologically;

4 B 3 is biologically based and indicates an allowable exceedences for 4 consecutive days once every 3 years. It is determined by EPA's computerized method (DFLOW model);

EPA is requiring that the harmonic mean flow be applied with human health criteria. The harmonic mean is a standard calculated statistical value. EPA's model for human health effects assumes that such effects occur because of a long-term exposure to low concentration of a toxic pollutant, for example, two liters of water per day for seventy years. To estimate the concentrations of the toxic pollutant in those two liters per day by withdrawal from streams with a high daily variation in flow, EPA believes the harmonic mean flow is the correct statistic to use in computing such design flows rather than other averaging techniques. (For a description of harmonic means see "Design Stream Flows Based on Harmonic Means," Lewis A. Rossman, Jr. of Hydraulics Engineering, Vol. 116, No. 7, July, 1990.)

All waters (including lakes, estuaries, and marine waters), whether or not suitable for such hydrologic calculations, are subject to the criteria promulgated today. Such criteria will need to be attained at the end of the discharge pipe, unless the State authorizes a mixing zone. Where the State plans to authorize a mixing zone, the criteria would apply at the locations allowed by the mixing zone. For example, the chronic criteria (CCC) would apply at the defined boundary of the chronic mixing zone. Discussion of and guidance on these factors are included in the revised TSD in Chapter 4.

EPA is aware that the criteria promulgated today for some of the priority toxic pollutants are at concentrations less than EPA's current analytical detection limits. Analytical detection limits have never been an acceptable basis for setting water quality criteria since they are not related to actual environmental impacts. The environmental impact of a pollutant is based on a scientific determination, not a measuring technique which is subject to change. Setting the criteria at levels that reflect adequate protection tends to be a forcing mechanism to improve analytical detection methods. See 1985

Guidelines, page 21. As the methods improve, limits based on the actual criteria necessary to protect aquatic life and human health become measurable. The Agency does not believe it is appropriate to promulgate criteria that are not sufficiently protective. EPA discusses this issue further in its Response to Comment Document for today's final rule.

EPA does believe, however, that the use of analytical detection limits are appropriate for assessing compliance with National Pollutant Discharge Elimination System (NPDES) permit limits. This view of the role of detection limits was first articulated in guidance for translating dioxin criteria into NPDES permit limits. See "Strategy for the Regulation of Discharges of PHDDs and PHDFs from Pulp and Paper Mills to Waters of the U.S." Memorandum from the Assistant Administrator for Water to the Regional Water Management Division Directors, May 21, 1990. This guidance presented a model for addressing toxic pollutants which have criteria less than current detection limits. EPA, in more recent guidance, recommends the use of the "minimum level" or ML for reporting sample results to assess compliance with WQBELs (TSD page 111). The ML, also called the "quantification level," is the level at which the entire analytical system gives recognizable mass spectra and acceptable calibration points, i.e., the point at which the method can reliably quantify the amount of pollutant in the sample. States can use their own procedures to average and otherwise account for monitoring data, e.g., quantifying results below the ML. These results can then be used to assess compliance with WQBELs. (See 40 CFR part 132, Appendix F, Procedure 8.B.) This approach is applicable to priority toxic pollutants with criteria less than current detection limits. EPA's guidance explains that standard analytical methods may be used for purposes of assessing compliance with permit limits, but not for purposes of establishing water quality criteria or permit limits. Under the CWA, analytical methods are appropriately used in connection with NPDES permit limit compliance assessments. Because of the function of water quality criteria, EPA has not considered the sensitivity of analytical methods in deriving the criteria promulgated today.

EPA has promulgated 40 CFR 131.38(c)(3) to determine when freshwater or saltwater aquatic life criteria apply. This provision incorporates a time parameter to better define the critical condition. The structure of the paragraph is to establish

applicable rules and to allow for site-specific exceptions where the rules are not consistent with actual field conditions. Because a distinct separation generally does not exist between freshwater and saltwater aquatic communities, EPA is establishing the following: (1) The freshwater criteria apply at salinities of 1 part per thousand and below at locations where this occurs 95% or more of the time; (2) saltwater criteria apply at salinities of 10 parts per thousand and above at locations where this occurs 95% more of the time; and (3) at salinities between 1 and 10 parts per thousand the more stringent of the two apply unless EPA approves the application of the freshwater or saltwater criteria based on an appropriate biological assessment. The percentiles included here were selected to minimize the chance of overlap, that is, one site meeting both criteria. Determination of these percentiles can be done by any reasonable means such as interpolation between points with measured data or by the application of calibrated and verified mathematical models (or hydraulic models). It is not EPA's intent to require actual data collection at particular locations.

In the brackish water transition zones of estuaries with varying salinities, there generally will be a mix of freshwater and saltwater species. Generally, therefore, it is reasonable for the more stringent of the freshwater or saltwater criteria to apply. In evaluating appropriate data supporting the alternative set of criteria, EPA will focus on the species composition as its preferred method. This assignment of criteria for fresh, brackish and salt waters was developed in consultation with EPA's research laboratories at Duluth, Minnesota and Narragansett, Rhode Island. The Agency believes such an approach is consistent with field experience.

Paragraph (d) in 40 CFR 131.38 lists the designated water and use classifications for which the criteria apply. The criteria are applied to the beneficial use designations adopted by the State of California; EPA has not promulgated any new use classifications in this rule.

Exceedences Frequency: In a water quality criterion for aquatic life, EPA recommends an allowable frequency for excursions of the criteria. See 1985 Guidelines, pages 11-13. This allowable frequency provides an appropriate period of time during which the aquatic community can recover from the effect of an excursion and then function normally for a period of time before the next excursion. An excursion is defined

as an occurrence of when the average concentration over the duration of the averaging period is above the CCC or the CMC. As ecological communities are naturally subjected to a series of stresses, the allowable frequency of pollutant stress may be set at a value that does not significantly increase the frequency or severity of all stresses combined. See also TSD, Appendix D. In addition, providing an allowable frequency for exceeding the criterion recognizes that it is not generally possible to assure that criteria are never exceeded. (TSD, page 36.)

Based on the available data, today's rule requires that the acute criterion for a pollutant be exceeded no more than once in three years on the average. EPA is also requiring that the chronic criterion for a pollutant be exceeded no more than once in three years on the average. EPA acknowledges that States may develop allowable frequencies that differ from these allowable frequencies, so long as they are scientifically supportable, but believes that these allowable frequencies are protective of the designated uses where EPA is promulgating criteria.

The use of aquatic life criteria for developing water quality-based effluent limits in permits requires the permitting official to use an appropriate wasteload allocation model. (TSD, Appendix D-6.) As discussed above, there are generally two methods for determining design flows, the hydrologically-based method and the biologically-based method.

The biologically-based method directly uses the averaging periods and frequencies specified in the aquatic life criteria for determining design flows. (TSD, Appendix, D-8.) Because the biologically-based method calculates the design flow directly from the duration and allowable frequency, it most accurately provides the allowed number of excursions. The hydrologically based method applies the CMC at a design flow equal to or equivalent to the 1Q10 design flow (i.e., the lowest one-day flow with an average recurrence frequency of once in ten years), and applies the CCC at the 7Q10 design flow (i.e., the lowest average seven consecutive day flow with a recurrence frequency of once in ten years).

EPA established a three year allowable frequency in the NTR. In settlement of the litigation on the NTR, EPA stated that it was in the midst of conducting, sponsoring, or planning research aimed at addressing scientific issues related to the basis for and application of water quality criteria and mentioned the issue of allowable frequency. See Partial Settlement Agreement in *American Forest and*

Paper Ass'n, Inc. et al. v. U.S. EPA (Consolidated Case No. 93-0694 (RMU) D.D.C. To that end, EPA is reevaluating issues raised about allowable frequency as part of its work in revising the 1985 Guidelines.

EPA recognizes that additional data concerning (a) the probable frequency of lethal events for an assemblage of taxa covering a range of sensitivities to pollutants, (b) the probable frequency of sublethal effects for such taxa, (c) the differing effects of lethal and sublethal events in reducing populations of such taxa, and (d) the time needed to replace organisms lost as a result of toxicity, may lead to further refinement of the allowable frequency value. EPA has not yet completed this work. Until this work is complete, EPA believes that where EPA promulgates criteria, the three year allowable frequency represents a value in the reasonable range for this parameter.

3. Implementation

Once the applicable designated uses and water quality criteria for a water body are determined, under the National Pollutant Discharge Elimination System (NPDES) program discharges to the water body must be characterized and the permitting authority must determine the need for permit limits. If a discharge causes, has the reasonable potential to cause, or contributes to an excursion of a numeric or narrative water quality criteria, the permitting authority must develop permit limits as necessary to meet water quality standards. These permit limits are water quality-based effluent limitations or WQBELs. The terms "cause," "reasonable potential to cause," and "contribute to" are the terms in the NPDES regulations for conditions under which water quality-based permit limits are required. See 40 CFR 122.44(d)(1).

Since the publication of the proposed CTR, the State of California adopted procedures which detail how water quality criteria will be implemented through NPDES permits, waste discharge requirements, and other regulatory approaches. These procedures entitled, *Policy for Implementation of Toxics Standards for Inland Surface Waters, Enclosed Bays, and Estuaries of California* were adopted on March 2, 2000. Once these procedures are submitted for review under CWA section 303(c), EPA will review them as they relate to water quality standards, and approve or disapprove them.

Several commenters understood the language in the preamble to the proposed rule regarding implementation

to mean that site-specific criteria, variances, and other actions would be prohibited or severely limited by the CTR. Site-specific criteria, variances and other actions modifying criteria are neither prohibited nor limited by the CTR. The State, if it so chooses, still can make these changes to its water quality standards, subject to EPA approval. However, with this Federal rule in effect, the State cannot implement any modifications that are less stringent than the CTR without an amendment to the CTR to reflect these modifications. EPA will make every effort to expeditiously accommodate Federal rulemaking of appropriate modifications to California's water quality standards. In the preamble to the proposed CTR, and here today, EPA is emphasizing that these efforts to amend the CTR on a case-by-case basis will generally increase the time before a modification can be implemented.

4. Wet Weather Flows

EPA has for a longtime maintained that CWA section 301(b)(1)(C) applies to NPDES permits for discharges from municipal separate storm sewer systems. Recently, the U.S. Court of Appeals for the Ninth Circuit upheld NPDES permits issued by EPA for five Arizona municipal separate storm sewer systems and addressed this issue specifically. *Defenders of Wildlife, et al. v. Browner*, No. 98-71080 (9th Cir., October 1999). The Court held that the CWA does not require "strict compliance" with State water quality standards for municipal storm sewer permits under section 301(b)(1)(C), but that at the same time, the CWA does give EPA discretion to incorporate appropriate water quality-based effluent limitations under another provision, CWA section 402(p)(3)(B)(iii).

The Court based its decision on the structure of section 402(p)(3), which contains distinct language for discharges of industrial storm water and municipal storm water. In section 402(p)(3)(A), Congress requires that "dischargers associated with industrial activity shall meet all applicable provisions of [section 402] and section [301]." 33 U.S.C. section 1342(p)(3)(A). The Court noted, therefore, that by incorporation, industrial storm water discharges need to achieve "any more stringent limitation, including those necessary to meet water quality standards * * *". The Court explained that industrial storm water discharges "must comply strictly with State water quality standards" but that Congress chose not to include a similar provision for municipal storm sewer discharges, including instead a requirement for

controls to reduce pollutants to the maximum extent practicable or MEP standard in section 402(p)(3)(B). Reading the two related sections together, the Court concluded that section 402(p)(3)(B)(iii) does not require "strict compliance" by municipal storm sewer discharges according to section 301(b)(1)(C). At the same time, however, the Court found that the language in CWA section 402(p)(3)(B)(iii) which states that permits for discharges from municipal storm sewers shall require "such other provisions as the Administrator of the state determines appropriate for the control of such pollutants" provides EPA with discretion to incorporate provisions lending to ultimate compliance with water quality standards.

EPA believes that compliance with water quality standards through the use of Best Management Practices (BMPs) is appropriate. EPA articulated its position on the use of BMPs in storm water permits in the policy memorandum entitled, "Interim Permitting Approach for Water Quality-Based Effluent Limitations In Storm Water Permits" which was signed by the Assistant Administrator for Water, Robert Perciasepe on August 1, 1996 (61 FR 43761, August 9, 1996). A copy of this memorandum is contained in the administrative record for today's rule. The policy affirms the use of BMPs as a means to attain water quality standards in municipal storm water permits, and embraces BMPs as an interim permitting approach.

The interim permitting approach uses BMPs in first-round storm water permits, and expanded or better-tailored BMPs in subsequent permits, where necessary, to provide for the attainment of water quality standards. In cases where adequate information exists to develop more specific conditions or limitations to meet water quality standards, these conditions or limitations are to be incorporated into storm water permits, as necessary and appropriate.

This interim permitting approach, however, only applies to EPA. EPA encourages the State to adopt a similar policy for municipal storm water permits. This interim permitting approach provides time, where necessary, to more fully assess the range of issues and possible options for the control of storm water discharges for the protection of water quality. More information on this issue is included in the response to comment document in response to specific storm water issues raised by commenters.

5. Schedules of Compliance

A compliance schedule refers to an enforceable sequence of interim requirements in a permit leading to ultimate compliance with water quality-based effluent limitations or WQBELs in accordance with the CWA. The authorizing compliance schedule provision authorizes, but does not require, the permit issuing authority in the State of California to include such compliance schedules in permits under appropriate circumstances. The State of California is authorized to administer the National Pollutant Discharge Elimination System (NPDES) program and may exercise its discretion when deciding if a compliance schedule is justified because of the technical or financial (or other) infeasibility of immediate compliance. An authorizing compliance schedule provision is included in today's rule because of the potential for existing dischargers to have new or more stringent effluent limitations for which immediate compliance would not be possible or practicable.

New and Existing Dischargers: The provision allows compliance schedules only for an "existing discharger" which is defined as any discharger which is not a "new California discharger." A "new California discharger" includes "any building, structure, facility, or installation from which there is, or may be, a 'discharge of pollutants', the construction of which commences after the effective date of this regulation." These definitions are modeled after the existing 40 CFR 122.2 definitions for parallel terms, but with a cut-off date modified to reflect this rule. Only "new California dischargers" are required to comply immediately upon commencement of discharge with effluent limitations derived from the criteria in this rule. For "existing dischargers" whose permits are reissued or modified to contain new or more stringent limitations based upon certain water quality requirements, the permit could allow up to five years, or up to the length of a permit, to comply with such limitations. The provision applies to new or more stringent effluent limitations based on the criteria in this EPA rule.

EPA has included "increasing dischargers" within the category of "existing dischargers" since "increasing dischargers" are existing facilities with a change—an increase—in their discharge. Such facilities may include those with seasonal variations. "Increasing dischargers" will already have treatment systems in place for their current discharge, thus, they have less

opportunity than a new discharger does to design and build a new treatment system which will meet new water quality-based requirements for their changed discharge. Allowing existing facilities with an increasing discharge a compliance schedule will avoid placing the discharger at a competitive disadvantage vis-a-vis other existing dischargers who are eligible for compliance schedules.

Today's rule does not prohibit the use of a short-term "shake down period" for new California dischargers as is provided for new sources or new dischargers in 40 CFR 122.29(d)(4). These regulations require that the owner or operator of (1) a new source; (2) a new discharger (as defined in 40 CFR 122.2) which commenced discharge after August 13, 1979; or (3) a recommencing discharger shall install and implement all pollution control equipment to meet the conditions of the permit before discharging. The facility must also meet all permit conditions in the shortest feasible time (not to exceed 90 days). This shake-down period is not a compliance schedule. This approach may be used to address violations which may occur during a new facility's start-up, especially where permit limits are water quality-based and biological treatment is involved.

The burden of proof to show the necessity of a compliance schedule is on the discharger, and the discharger must request approval from the permit issuing authority for a schedule of compliance. The discharger should submit a description of the minimum required actions or evaluations that must be undertaken in order to comply with the new or more restrictive discharge limits. Dates of completion for the required actions or evaluations should be included, and the proposed schedule should reflect the shortest practicable time to complete all minimum required actions.

Duration of Compliance Schedules: Today's rule provides that compliance schedules may provide for up to five years to meet new or more stringent effluent limitations in those limited circumstances where the permittee can demonstrate to the permit authority that an extended schedule is warranted. EPA's regulations at 122.47 require compliance with standards as soon as possible. This means that permit authorities should not allow compliance schedules where the permittee fails to demonstrate their necessity. This provision should not be considered a default compliance schedule duration for existing facilities.

In instances where dischargers wish to conduct toxicological studies, analyze

results, and adopt and implement new or revised water quality-based effluent limitations, EPA believes that five years is sufficient time within which to complete this process. See the preamble to the proposed rule.

Under this rule, where a schedule of compliance exceeds one year, interim requirements are to be specified and interim progress reports are to be submitted at least annually to the permit issuing authority, in at least one-year time intervals.

The rule allows all compliance schedules to extend up to a maximum duration of five years, which is the maximum term of any NPDES permit. See 40 CFR 122.46. The discharger's opportunity to obtain a compliance schedule occurs when the existing permit for that discharge is issued, reissued or modified to contain more stringent limits based on the water quality criteria in today's rule. Such compliance schedules, however, cannot be extended to any indefinite point of time in the future because the compliance schedule provision in this rule will sunset on May 18, 2005. The sunset applies to the authorizing provision in today's rule (40 CFR 131.38(e)), not to individual schedules of compliance included in specific NPDES permits. Delays in reissuing expired permits (including those which continue in effect under applicable NPDES regulations) cannot indefinitely extend the period of time during which a compliance schedule is in effect. This would occur where the permit authority includes the single maximum five-year compliance schedule in a permit that is reissued just before the compliance schedule provision sunsets (having been previously issued without WQBELS using the rule's criteria on the eve of the effective date of this rule). Instead, the effect of the sunset provision is to limit the longest time period for compliance to ten years after the effective date of this rule.

EPA recognizes that where a permit is modified during the permit term, and the permittee needs the full five years to comply, the five-year schedule may extend beyond the term of the modified permit. In such cases, the rule allows for the modified permit to contain a compliance schedule with an interim limit by the end of the permit term. When the permit is reissued, the permit authority may extend the compliance schedule in the next permit, provided that, taking into account the amount of time allowed under the previous permit, the entire compliance schedule contained in the permit shall not exceed five years. Final permit limits and compliance dates will be included in

the record for the permit. Final compliance dates must occur within five years from the date of permit issuance, reissuance, or modification, unless additional or less time is provided for by law.

EPA would prefer that the State adopt an authorizing compliance schedule provision but recognizes that the State may not be able to complete this action for some time after promulgation of the CTR. Thus, EPA has chosen to promulgate the rule with a sunset provision which states that the authorizing compliance schedule provision will cease or sunset on May 18, 2005. However, if the State Board adopts, and EPA approves, a statewide authorizing compliance schedule provision significantly prior to May 18, 2005, EPA will act to stay the authorizing compliance schedule provision in today's rule. Additionally, if a Regional Board adopts, and the State Board adopts and EPA approves, a Regional Board authorizing compliance schedule provision, EPA will act to stay today's provision for the appropriate or corresponding geographic region in California. At that time, the State Board's or Regional Board's authorizing compliance schedule provision will govern the ability of the State regulatory entity to allow a discharger to include a compliance schedule in a discharger's NPDES permit.

Antibacksliding: EPA wishes to address the potential concern over antibacksliding where revised permit limits based on new information are the result of the completion of additional studies. The Agency's interpretation of the CWA is that the antibacksliding requirements of section 402(o) of the CWA do not apply to revisions to effluent limitations made before the scheduled date of compliance for those limitations.

State Compliance Schedule Provisions: EPA supports the State in adopting a statewide provision independent of or as part of the effort to readopt statewide water quality control plans, or in adopting individual basin-wide compliance schedule provisions through its nine Regional Water Quality Control Boards (RWQCBs). The State and RWQCBs have broad discretion to adopt a provision, including discretion on reasonable lengths of time for final compliance with WQBELS. EPA recognizes that practical time frames within which to set interim goals may be necessary to achieve meaningful, long-term improvements in water quality in California.

At this time, two RWQCBs have adopted an authorizing compliance schedule provision as an amendment to

their respective Basin Plans during the Boards' last triennial review process. The Basin Plans have been adopted by the State and have come to EPA for approval. Thus, the Basin Plans' provisions are effective for the respective Basins. If and when EPA approves of either Regional Basin Plan, EPA will expeditiously act to amend the CTR, staying its compliance schedule provision, for the appropriate geographic region.

6. Changes From Proposed Rule

A few changes were made in the final rule from the proposal both as a result of the Agency's consideration of issues raised in public comments and Endangered Species Act consultation with the U.S. Fish and Wildlife Service (FWS) and U.S. National Marine Fisheries Service (NMFS). The important changes include: reserving the mercury aquatic life criteria; reserving the selenium freshwater acute aquatic life criterion; reserving the chloroform human health criteria; and adding a sunset provision to the authorizing compliance schedule provision. EPA also clarified that the CTR will not replace priority toxic pollutant criteria which were adopted by the San Francisco Regional Water Quality Control Board in its 1986 Basin Plan, adopted by the State Board, and approved by EPA; specifying the harmonic mean for human health criteria for non-carcinogens and adding a provision which explicitly allows the State to adopt and implement an alternative averaging period, frequency, and design flow for a criterion after opportunity for public comment.

The first two changes, the reservation of mercury criteria and selenium criterion, are discussed in more detail below in Section L., The Endangered Species Act (ESA). The selenium criterion is also discussed in more detail above in Section E., Derivation of Criteria, in subsection 2.b., Freshwater Acute Selenium Criterion. EPA has also decided to reserve a decision on numeric criteria for chloroform and therefore not promulgate chloroform criteria in the final rule. As part of a large-scale regulation promulgated in December 1998 under the Safe Drinking Water Act, EPA published a health-based goal for chloroform (the maximum contaminant level goal or MCLG) of zero, see 63 FR 69390, Dec. 16, 1998. EPA provided new data and analyses concerning chloroform for public review and comment, including a different, mode of action approach for estimating the cancer risk, 63 FR 15674, March 31, 1998, but did not reach a conclusion on how to use that new

information in establishing the final MCLG, pending further review by the Science Advisory Board. EPA has now concluded that any further actions on water quality criteria should take into account the new data and analysis as reviewed by the SAB. This decision is consistent with a recent federal court decision vacating the MCLG for chloroform (*Chlorine Chemistry Council v. EPA*, No. 98-1627 (DC Cir., Mar. 31, 2000)). EPA intends to reassess the human health 304(a) criteria recommendation for chloroform. For these reasons, EPA has decided to reserve a decision on numeric criteria for chloroform in the CTR and not promulgate water quality criteria as proposed. Permitting authorities in California should continue to rely on existing narrative criteria to establish effluent limitations as necessary for chloroform.

The sunset provision for the authorizing compliance schedule provision has been added to ease the transition from a Federal provision to the State's provision that was adopted in March 2000 as part of its' new statewide implementation plan. The sunset provision is discussed in more detail in Section G.5 of today's preamble. The CTR matrix at 40 CFR 131.38(b)(1) makes it explicit that the rule does not supplant priority toxic pollutant criteria which were adopted by the San Francisco Regional Water Quality Control Board in its 1986 Basin Plan, adopted by the State Board, and approved by EPA. This change is discussed more fully in Section D.4. of today's preamble. EPA modified the design flow for implementing human health criteria for non-carcinogens from a 30Q5 to a harmonic mean. Human health criteria for non-carcinogens are based on an RfD, which is an acceptable daily exposure over a lifetime. EPA matched the criteria for protection over a human lifetime with the longest stream flow averaging period, i.e., the harmonic mean. Lastly, the CTR now contains language which is intended to make it easier for the State to adopt and implement an alternative averaging period, frequency and related design flow, for situations where the default parameters are inappropriate. This language is found at 40 CFR 131.38(c)(2)(iv).

H. Economic Analysis

This final rule establishes ambient water quality criteria which, by themselves, do not directly impose economic impacts (see section K). These criteria combined with the State-adopted designated uses for inland surface waters, enclosed bays and

estuaries, and implementation policies, will establish water quality standards. Until the State implements these water quality standards, there will be no effect of this rule on any entity. The State will implement these criteria by ensuring that NPDES permits result in discharges that will meet these criteria. In so doing, the State will have considerable discretion.

EPA has analyzed the indirect potential costs and benefits of this rule. In order to estimate the indirect costs and benefits of the rule, an appropriate baseline must be established. The baseline is the starting point for measuring incremental costs and benefits of a regulation. The baseline is established by assessing what would occur in the absence of the regulation. At present, State Basin Plans contain a narrative water quality criterion stating that all waters shall be maintained free of toxic substances in concentrations that produce detrimental physiological responses in human, plant, animal, or aquatic life. EPA's regulation at 40 CFR 122.44(d)(1)(vi) requires that where a discharge causes or has the reasonable potential to cause an excursion above a narrative criterion within a State water quality standard, the permitting authority must establish effluent limits but may determine limits using a number of options. These options include establishing "effluent limits on a case-by-case basis, using EPA's water quality criteria published under section 304(a) of the CWA, supplemented where necessary by other relevant information" (40 CFR 122.44(d)(1)(vi)(B)). Thus, to the extent that the State is implementing its narrative criteria by applying the CWA section 304(a) criteria, this rule does not impose any incremental costs because the criteria in this rule are identical to the CWA section 304(a) criteria. Alternatively, to the extent that the State is implementing its narrative criteria on a "case-by-case basis" using "other relevant information" in its permits this rule may impose incremental indirect costs because the criteria in these permits may not be based on CWA 304(a) criteria. Both of these approaches to establishing effluent limits are in full compliance with the CWA.

Because a specific basis for effluent limits in all existing permits in California is not known, it is not possible to determine a precise estimate of the indirect costs of this rule. The incremental costs of the rule may be as low as zero, or as high as \$61 million. The high estimate of costs is based on the possibility that most of the effluent limits now in effect are not based on 304(a) criteria. EPA evaluated these

indirect costs using two different approaches. The first approach uses existing discharge data and makes assumptions about future State NPDES permit limits. Actual discharge levels are usually lower than the level set by current NPDES permit limits. This approach, representing the low-end scenario, also assumes that some of the discretionary mechanisms that would enhance flexibility (e.g., site specific criteria, mixing zones) would be granted by the State. The second approach uses a sample of existing permit limits and assumes that dischargers are actually discharging at the levels contained in their permits and makes assumptions about limits statewide that would be required under the rule. This approach, representing the high-end scenario, also assumes that none of the discretionary mechanisms that would enhance flexibility (e.g., site specific criteria, mixing zones) would be granted by the State. These two approaches recognize that the State has significant flexibility and discretion in how it chooses to implement standards within the NPDES permit program, the EA by necessity includes many assumptions about how the State will implement the water quality standards. These assumptions are based on a combination of EPA guidance and current permit conditions for the facilities examined in this analysis. To account for the uncertainty of EPA's implementation assumptions, this analysis estimates a wide range of costs and benefits. By completing the EA, EPA intends to inform the public about how entities might be potentially affected by State implementation of water quality standards in the NPDES permit program. The costs and benefits sections that follow summarize the methodology and results of the analysis.

1. Costs

EPA assessed the potential compliance costs that facilities may incur to meet permit limits based on the criteria in today's rule. The analysis focused on direct compliance costs such as capital costs and operation and maintenance costs (O&M) for end-of-pipe pollution control, indirect source controls, pollution prevention, monitoring, and costs of pursuing alternative methods of compliance.

The population of facilities with NPDES permits that discharge into California's enclosed bays, estuaries and inland surface waters includes 184 major dischargers and 1,057 minor dischargers. Of the 184 major facilities, 128 are publicly owned treatment works (POTWs) and 56 are industrial facilities. Approximately 2,144 indirect dischargers designated as significant

industrial users discharge wastewater to those POTWs. In the EA for the proposed CTR, EPA used a three-phased process to select a sample of facilities to represent California dischargers potentially affected by the State's implementation of permit limits based on the criteria contained in this rule.

The first phase consisted of choosing three case study areas for which data was thought to exist. The three case studies with a total of 5 facilities included: the South San Francisco Bay (the San Jose/Santa Clara Water Pollution Control Plant and Sunnyvale Water Pollution Control Plant); the Sacramento River (the Sacramento Regional Wastewater Treatment Plant); and the Santa Ana River (the City of Riverside Water Quality Control Plant and the City of Colton Municipal Wastewater Treatment Facility). The second phase consisted of selecting five additional major industrial dischargers to complement the case-study POTWs.

The third phase involved selecting 10 additional facilities to improve the basis for extrapolating the costs of the selected sample facilities to the entire population of potentially affected dischargers. The additional 10 facilities were selected such that the group examined: (1) Was divided between major POTWs and major industrial discharger categories in proportion to the numbers of facilities in the State; (2) gave greater proportionate representation to major facilities than minor facilities based on a presumption that the majority of compliance costs would be incurred by major facilities; (3) gave a proportionate representation to each of four principal conventional treatment processes typically used by facilities in specified industries in California; and (4) was representative of the proportionate facilities located within the different California Regional Water Quality Control Boards. Within these constraints, facilities were selected at random to complete the sample.

In the EA for today's final rule, EPA primarily used the same sample as the EA for the proposed rule with some modifications. EPA increased the number of minor POTWs and minor industrial facilities in the sample. EPA randomly selected four new minor POTW facilities and five new minor industrial facilities to add to the sample. The number of sample facilities selected in each area under the jurisdiction of a Regional Water Quality Control Board was roughly proportional to the universe of facilities in each area.

For those facilities that were projected to exceed permit limits based on the criteria, EPA estimated the incremental

costs of compliance. Using a decision matrix or flow chart, costs were developed for two different scenarios—a "low-end" cost scenario and a "high-end" cost scenario—to account for a range of regulatory flexibility available to the State when implementing permit limits based on the water quality criteria. The assumptions for baseline loadings also vary over the two scenarios. The low-end scenario generally assumed that facilities were discharging at the maximum effluent concentrations taken from actual monitoring data, while the high-end scenario generally assumed that facilities were discharging at their current effluent limits. The decision matrix specified assumptions used for selection of control options, such as optimization of existing treatment processes and operations, in-plant pollutant minimization and prevention, and end-of-pipe treatment.

The annualized potential costs that direct and indirect dischargers may incur as a result of State implementation of permit limits based on water quality standards using today's criteria are estimated to be between \$33.5 million and \$61 million. EPA believes that the costs incurred as a result of State implementation of these permit limits will approach the low-end of the cost range. Costs are unlikely to reach the high-end of the range because State authorities are likely to choose implementation options that provide some degree of flexibility or relief to point source dischargers. Furthermore, cost estimates for both scenarios, but especially for the high-end scenario, may be overstated because the analysis tended to use conservative assumptions in calculating these permit limits and in establishing baseline loadings. The baseline loadings for the high-end were based on current effluent limits rather than actual pollutant discharge data. Most facilities discharge pollutants in concentrations well below current effluent limits. In addition, both the high-end and low-end cost estimates in the EA may be slightly overstated since potential costs incurred to reduce chloroform discharges were included in these estimates. EPA made a decision to reserve the chloroform human health criteria after the EA was completed.

Under the low-end cost scenario, major industrial facilities and POTWs would incur about 27 percent of the potential costs, indirect dischargers would incur about 70 percent of the potential costs, while minor dischargers would incur about 3 percent. Of the major direct dischargers, POTWs would incur the largest share of projected costs (87 percent). However, distributed

among 128 major POTWs in the State, the average cost per plant would be \$61,000 per year. Chemical and petroleum industries would incur the highest cost of the industrial categories (5.6 percent of the annual costs, with an annual average of \$25,200 per plant). About 57 percent of the low-end costs would be associated with pollution prevention activities, while nearly 38 percent would be associated with pursuing alternative methods of compliance under the regulations.

Under the high-end cost scenario, major industrial facilities and POTWs would incur about 94 percent of the potential costs, indirect dischargers would incur about 17 percent of the potential costs, while minor dischargers would incur about 5 percent. Among the major, direct dischargers, two categories would incur the majority of potential costs—major POTWs (82 percent), Chemical/Petroleum Products (9 percent). The average annual per plant cost for different industry categories would range from zero to \$324,000. The two highest average cost categories would be major POTWs (\$324,000 per year) and Chemical/Petroleum Products (\$221,264 per year). The shift in proportion of potential costs between direct and indirect dischargers is due to the assumption that more direct dischargers would use end-of-pipe treatment under the high-end scenario. Thus, a smaller proportion of indirect dischargers would be impacted under the high-end scenario, since some municipalities are projected to add end-of-pipe treatment which would reduce the need for controls from indirect dischargers. Over 91 percent of the annual costs are for waste minimization and treatment optimization costs. Waste minimization would represent nearly 84% of the total annual costs. Capital and operation and maintenance costs would make up less than 9 percent of annual costs.

Cost-Effectiveness: Cost-effectiveness is estimated in terms of the cost of reducing the loadings of toxic pollutants from point sources. The cost-effectiveness is derived by dividing the projected annual costs of implementing permit limits based on water quality standards using today's criteria by the toxicity-weighted pounds (pound-equivalents) of pollutants removed. Pound-equivalents are calculated by multiplying pounds of each pollutant removed by the toxic weight (based on the toxicity of copper) for that pollutant.

Based on this analysis, State implementation of permit limits based on today's criteria would be responsible for the reduction of about 1.1 million to 2.7 million toxic pound-equivalents per

year, or 15 to 50 percent of the toxic-weighted baseline loadings for the high- and low-end scenarios, respectively. The cost-effectiveness of the scenarios would range from \$22 (high-end scenario) to \$31 (low-end scenario) per pound-equivalent.

2. Benefits

The benefits analysis is intended to provide insight into both the types and potential magnitude of the economic benefits expected as a result of implementation of water quality standards based on today's criteria. To the extent feasible, empirical estimates of the potential magnitude of the benefits were developed and then compared to the estimated costs of implementing water quality standards based on today's criteria.

To perform a benefits analysis, the types or categories of benefits that apply need to be defined. EPA relied on a set of benefits categories that typically apply to changes in the water resource environment. Benefits were categorized as either use benefits or passive (nonuse) benefits depending on whether or not they involve direct use of, or contact with, the resource. The most prominent use benefit categories are those related to recreational fishing, boating, and swimming. Another use benefit category of significance is human health risk reduction. Human health risk reductions can be realized through actions that reduce human exposure to contaminants such as exposure through the consumption of fish containing elevated levels of pollutants. Passive use benefits are those improvements in environmental quality that are valued by individuals apart from any use of the resource in question.

Benefits estimates were derived in this study using an approach in which benefits of discrete large-scale changes in water quality beyond present day conditions were estimated wherever feasible. A share of those benefits was then apportioned to implementation of water quality standards based on today's criteria. The apportionment estimate was based on a three-stage process:

First, EPA assessed current total loadings from all sources that are contributing to the toxics-related water quality problems observed in the State. This defines the overall magnitude of loadings. Second, the share of total loadings that are attributable to sources that would be controlled through implementation of water quality standards based on today's criteria was estimated. Since this analysis was designed to focus only on those controls imposed on point sources, this stage of

the process entailed estimating the portion of total loadings originating from point sources. Third, the percentage reduction in loadings expected due to implementation of today's criteria was estimated and then multiplied by the share of point source loadings to calculate the portion of benefits that could be attributed to implementation of water quality standards based on today's criteria.

Total monetized annual benefits were estimated in the range of \$6.9 to \$74.7 million. By category, annual benefits would be \$1.3 to \$4.6 million for avoided cancer risk, \$2.2 to \$15.2 million for recreational angling, and \$3.4 to \$54.9 million for passive use benefits.

There are numerous categories of potential or likely benefits that have been omitted from the quantified and monetized benefit estimates. In terms of potential magnitudes of benefit, the following are likely to be significant contributors to the underestimation of the monetized values presented above:

- Improvements in water-related (in-stream and near stream) recreation apart from fishing. The omission of potential motorized and nonmotorized boating, swimming, picnicking, and related in-stream and stream-side recreational activities from the benefits estimates could contribute to an appreciable underestimation of total benefits. Such recreational activities have been shown in empirical research to be highly valued, and even modest changes in participation and/or user values could lead to sizable benefits statewide. Some of these activities can be closely associated with water quality attributes (notably, swimming). Other recreational activities may be less directly related to the water quality improvements, but might nonetheless increase due to their association with fishing, swimming, or other activities in which the participants might engage.

- Improvements in consumptive and nonconsumptive land-based recreation, such as hunting and wildlife observation. Improvements in aquatic habitats may lead (via food chain and related ecologic benefit mechanisms) to healthier, larger, and more diverse populations of avian and terrestrial species, such as waterfowl, eagles, and otters. Improvements in the populations for these species could manifest as improved hunting and wildlife viewing opportunities, which might in turn increase participation and user day values for such activities. Although the scope of the benefits analysis has not allowed a quantitative assessment of these values at either pre- or post-rule

conditions, it is conceivable that these benefits could be appreciable.

- Improvements in human health resulting from reduction of non-cancer risk. EPA estimated that implementation of water quality standards based on the criteria would result in a reduction of mercury concentrations in fish tissue and, thus, a reduction in the hazard from consumption of mercury contaminated fish. However, EPA was unable to monetize benefits due to reduced non-cancer health effects.

- Human health benefits for saltwater anglers outside of San Francisco Bay were not estimated. The number of saltwater anglers outside of San Francisco Bay is estimated to be 673,000 (based on Huppert, 1989, and U.S. FWS, 1993). The omission of other saltwater anglers may cause human health benefits to be underestimated. In addition, benefit estimates in the EA may be slightly overstated since potential benefits from reductions in chloroform discharges were included in these estimates. EPA made a decision to reserve the chloroform human health criteria after the EA was completed.

EPA received a number of comments which requested the Agency use the cost-benefit analysis in the EA as a factor in setting water quality criteria. EPA does not use the EA as a basis in determining protective water quality criteria. EPA's current regulations at 40 CFR 131.11 state that the criteria must be based on sound scientific rationale and must protect the designated use. From the outset of the water quality standards program, EPA has explained that while economic factors may be considered in designating uses, they may not be used to justify criteria that are not protective of those uses. 44 FR 25223-226, April 30, 1979. See e.g. *Mississippi Commission on Natural Resources v. Costle*, 625 F. 2d 1269, 1277 (5th Cir. 1980). EPA reiterated this interpretation of the CWA and its implementing regulations in discussing section 304(a) recommended criteria guidance stating that "they are based solely on data and scientific judgments on the relationship between pollutant concentrations and environmental and human health effects and do not reflect consideration of economic impacts or the technological feasibility of meeting the chemical concentrations in ambient water." 63 FR 36742 and 36762, July 7, 1998.

I. Executive Order 12866, Regulatory Planning and Review

Under Executive Order 12866 (58 FR 51735, October 4, 1993), the Agency must determine whether the regulatory action is "significant" and therefore

subject to Office of Management and Budget (OMB) review and the requirements of the Executive Order. The Order defines "significant regulatory action" as one that is likely to result in a rule that may:

- (1) Have an annual effect on the economy of \$100 million or more or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, or tribal governments or communities;

- (2) Create a serious inconsistency or otherwise interfere with an action taken or planned by another Agency;

- (3) Materially alter the budgetary impact of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients thereof; or

- (4) Raise novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles set forth in the Executive Order.

It has been determined that this rule is not a "significant regulatory action" under the terms of Executive Order 12866 and is therefore not subject to OMB review.

J. Unfunded Mandates Reform Act of 1995

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA), Public Law 104-4, establishes requirements for Federal agencies to assess the effects of their regulatory actions on State, local, and tribal governments and the private sector. Under section 202 of the UMRA, EPA generally must prepare a written statement, including a cost-benefit analysis, for proposed and final rules with "Federal mandates" that may result in expenditures to State, local, and tribal governments, in the aggregate, or to the private sector, of \$100 million or more in any one year. Before promulgating any regulation for which a written statement is needed, section 205 of the UMRA generally requires EPA to identify and consider a reasonable number of regulatory alternatives and adopt the least costly, most cost-effective or least burdensome alternative that achieves the objectives of the rule. The provisions of section 205 do not apply when they are inconsistent with applicable law. Moreover, section 205 allows an Agency to adopt an alternative other than the least costly, most cost-effective or least burdensome alternative if the Administrator publishes with the final rule an explanation why that alternative was not adopted. Before EPA establishes any regulatory requirements that may significantly or uniquely affect small governments, including tribal

governments, it must have developed under section 203 of the UMRA a small government Agency plan. The plan must provide for notifying potentially affected small governments, enabling officials of the affected small governments to have meaningful and timely input in the development of regulatory proposals with significant Federal intergovernmental mandates, and EPA informing, educating, and advising small governments on compliance with the regulatory requirements.

Today's rule contains no Federal mandates (under the regulatory provisions of Title II of the Unfunded Mandates Reform Act (UMRA)) for State, local, or tribal governments or the private sector. Today's rule imposes no enforceable duty on any State, local or Tribal governments or the private sector; rather, the CTR promulgates ambient water quality criteria which, when combined with State-adopted uses, will create water quality standards for those water bodies with adopted uses. The State will then use these resulting water quality standards in implementing its existing water quality control programs. Thus, today's rule is not subject to the requirements of sections 202 and 205 of the UMRA.

EPA has determined that this rule contains no regulatory requirements that might significantly or uniquely affect small governments. This rule establishes ambient water quality criteria which, by themselves do not directly impact any entity. The State will implement these criteria by ensuring that NPDES permits result in discharges that will meet these criteria. In so doing, the State will have considerable discretion. Until the State implements these water quality standards, there will be no effect of this rule on any entity. Thus, today's rule is not subject to the requirements of section 203 of UMRA.

K. Regulatory Flexibility Act

The Regulatory Flexibility Act generally requires Federal agencies to prepare a regulatory flexibility analysis of any rule subject to notice and comment rulemaking requirements under the Administrative Procedure Act or any other statute unless the Agency certifies that the rule will not have a significant economic impact of a substantial number of small entities. Small entities include small businesses, small organizations, and small governmental jurisdictions. For purposes of assessing the impacts of today's rule on small entities, small entity is defined as: (1) A small business according to RFA default definitions for small businesses (based on SBA size

standards); (2) a small governmental jurisdiction that is a government of a city, county, town, school district or special district with a population of less than 50,000; and (3) a small organization that is any not-for-profit enterprise which is independently owned and operated and is not dominant in its field.

After considering the economic impacts of today's final rule on small entities, I certify that this action will not have a significant economic impact on a substantial number of small entities. This final rule will not impose any requirements on small entities.

Under the CWA water quality standards program, States must adopt water quality standards for their waters that must be submitted to EPA for approval. If the Agency disapproves a State standard and the State does not adopt appropriate revisions to address EPA's disapproval, EPA must promulgate standards consistent with the statutory requirements. EPA has authority to promulgate criteria or standards in any case where the Administrator determines that a revised or new standard is necessary to meet the requirements of the Act. These State standards (or EPA-promulgated standards) are implemented through various water quality control programs including the National Pollutant Discharge Elimination System (NPDES) program that limits discharges to navigable waters except in compliance with an EPA permit or permit issued under an approved State NPDES program. The CWA requires that all NPDES permits must include any limits on discharges that are necessary to meet State water quality standards.

Thus, under the CWA, EPA's promulgation of water quality criteria or standards establishes standards that the State, in turn, implements through the NPDES permit process. The State has considerable discretion in deciding how to meet the water quality standards and in developing discharge limits as needed to meet the standards. In circumstances where there is more than one discharger to a water body that is subject to water quality standards or criteria, a State also has discretion in deciding on the appropriate limits for the different dischargers. While the State's implementation of federally-promulgated water quality criteria or standards may result indirectly in new or revised discharge limits for small entities, the criteria or standards themselves do not apply to any discharger, including small entities.

Today's rule, as explained above, does not itself establish any requirements that are applicable to small entities. As

a result of EPA's action here, the State of California will need to ensure that permits it issues include limits as necessary to meet the water quality standards established by the criteria in today's rule. In so doing, the State will have a number of discretionary choices associated with permit writing. While California's implementation of today's rule may ultimately result in some new or revised permit conditions for some dischargers, including small entities, EPA's action today does not impose any of these as yet unknown requirements on small entities.

The RFA requires analysis of the economic impact of a rule only on the small entities subject to the rule's requirements. Courts have consistently held that the RFA imposes no obligation on an Agency to prepare a small entity analysis of the effect of a rule on entities not regulated by the rule. *Motor & Equip. Mfrs. Ass'n v. Nichols*, 142 F.3d 449, 467 & n.18 (D.C. Cir. 1998)(quoting *United States Distribution Companies v. FERC*, 88 F.3d 1105, 1170 (D.C. Cir. 1996); see also *American Trucking Association, Inc. v. EPA*, 175 F.3d 1027 (D.C. Cir. 1999). This final rule will have a direct effect only on the State of California which is not a small entity under the RFA. Thus, individual dischargers, including small entities, are not directly subject to the requirements of the rule. Moreover, because of California's discretion in implementing these standards, EPA cannot assess the extent to which the promulgation of this rule may subsequently affect any dischargers, including small entities. Consequently, certification under section 605(b) is appropriate. *State of Michigan, et al. v. U.S. Environmental Protection Agency*, No. 98-1497 (D.C. Cir. Mar. 3, 2000), slip op. at 41-42.

L. Paperwork Reduction Act

This action requires no new or additional information collection, reporting, or record keeping subject to the Paperwork Reduction Act, 44 U.S.C. 3501 *et seq.*

M. Endangered Species Act

Pursuant to section 7(a) of the Endangered Species Act (ESA), EPA has consulted with the U.S. Fish and Wildlife Service and the U.S. National Marine Fisheries Service (collectively, the Services) concerning EPA's rulemaking action for the State of California. EPA initiated informal consultation in early 1994, and completed formal consultation in April 2000. As a result of the consultation, EPA modified some of the provisions in the final rule.

As part of the consultation process, EPA submitted to the Services a Biological Evaluation for their review in October of 1997. This evaluation found that the proposed CTR was not likely to jeopardize the continued existence of any Federally listed species or result in the destruction or adverse modification of designated critical habitat. In April of 1998, the Services sent EPA a draft Biological Opinion which tentatively found that EPA's proposed rule would jeopardize the continued existence of several Federally listed species and result in the destruction or have adverse effect on designated critical habitat. After lengthy discussions with the Services, EPA agreed to several changes in the final rule and the Services in turn issued a final Biological Opinion finding that EPA's action would not likely jeopardize the continued existence of any Federally listed species or result in the destruction or adverse modification of designated critical habitat. EPA's Biological Evaluation and the Services' final Biological Opinion are contained in the administrative record for today's rule.

In order to ensure the continued protection of Federally listed threatened and endangered species and to protect their critical habitat, EPA agreed to reserve the aquatic life criteria for mercury and the acute freshwater aquatic life criterion for selenium. The Services believe that EPA's proposed criteria are not sufficiently protective of Federally listed species and should not be promulgated. EPA agreed that it would reevaluate these criteria in light of the Services concerns before promulgating them for the State of California. Other commitments made by EPA are described in a letter to the Services dated December 16, 1999; this letter is contained in the administrative record for today's rule.

N. Congressional Review Act

The Congressional Review Act, 5 U.S.C. 801 *et seq.*, as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the Agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. EPA will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the Federal Register. A major rule cannot take effect until 60 days after it is published in the Federal Register. This rule is not a major rule as defined

by 5 U.S.C. 804(2). This rule will be effective May 18, 2000.

O. Executive Order 13084, Consultation and Coordination With Indian Tribal Governments

Under Executive Order 13084, EPA may not issue a regulation that is not required by statute, that significantly or uniquely affects the communities of Indian tribal governments, and that imposes substantial direct compliance costs on those communities, unless the Federal government provides the funds necessary to pay the direct compliance costs incurred by the tribal governments, or EPA consults with those governments. If EPA complies by consulting, Executive Order 13084 requires EPA to provide to the Office of Management and Budget, in a separately identified section of the preamble to the rule, a description of the extent of EPA's prior consultation with representatives of affected tribal governments, a summary of the nature of their concerns, and a statement supporting the need to issue the regulation. In addition, Executive Order 13084 requires EPA to develop an effective process permitting elected officials and other representatives of Indian tribal governments "to provide meaningful and timely input in the development of regulatory policies on matters that significantly or uniquely affect their communities."

Today's rule does not significantly or uniquely affect the communities of Indian tribal governments nor does it impose substantial direct compliance costs on them. Today's rule will only address priority toxic pollutant water quality criteria for the State of California and does not apply to waters in Indian country. Accordingly, the requirements of section 3(b) of Executive Order 13084 do not apply to this rule.

P. National Technology Transfer and Advancement Act

Section 12(d) of the National Technology Transfer and Advancement Act of 1995 ("NTTAA"), Public Law No. 104-113, section 12(d) (15 U.S.C. 272 note) directs EPA to use voluntary consensus standards in its regulatory activities unless to do so would be inconsistent with applicable law or otherwise impractical. Voluntary consensus standards are technical standards (e.g., materials specifications, test methods, sampling procedures, and business practices) that are developed or adopted by voluntary consensus standards bodies. The NTTAA directs EPA to provide Congress, through OMB, explanations when the Agency decides

not to use available and applicable voluntary consensus standards.

This final rule does not involve technical standards. Therefore, EPA did not consider the use of any voluntary consensus standards.

Q. Executive Order 13132 on Federalism

Executive Order 13132, entitled "Federalism" (64 FR 43255, August 10, 1999), requires EPA to develop an accountable process to ensure "meaningful and timely input by State and local officials in the development of regulatory policies that have federalism implications." "Policies that have federalism implications" is defined in the Executive Order to include regulations that have "substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government."

Under section 6 of Executive Order 13132, EPA may not issue a regulation that has federalism implications, that imposes substantial direct compliance costs, and that is not required by statute, unless the Federal government provides the funds necessary to pay the direct compliance costs incurred by State and local governments, or EPA consults with State and local officials early in the process of developing the proposed regulation. EPA also may not issue a regulation that has federalism implications and that preempts State law, unless the Agency consults with State and local officials early in the process of developing the proposed regulation.

This final rule does not have federalism implications. It will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government, as specified in Executive Order 13132. The rule does not affect the nature of the relationship between EPA and States generally, for the rule only applies to water bodies in California. Further, the rule will not substantially affect the relationship of EPA and the State of California, or the distribution of power or responsibilities between EPA and the State. The rule does not alter the State's authority to issue NPDES permits or the State's considerable discretion in implementing these criteria. The rule simply implements Clean Water Act section 303(c)(2)(B) requiring numeric ambient water quality criteria for which EPA has issued section 304(a) recommended criteria in a manner that is consistent

with previous regulatory guidance that the Agency has issued to implement CWA section 303(c)(2)(B). Further, this rule does not preclude the State from adopting water quality standards that meet the requirements of the CWA. Thus, the requirements of section 6 of the Executive Order do not apply to this rule.

Although section 6 of Executive Order 13132 does not apply to this rule, EPA did consult with State and local government representatives in developing this rule. EPA and the State reached an agreement that to best utilize its respective resources, EPA would promulgate water quality criteria and the State would concurrently work on a plan to implement the criteria. Since the proposal of this rule, EPA has kept State officials fully informed of changes to the proposal. EPA has continued to invite comment from the State on these changes. EPA believes that the final CTR incorporates comment from State officials and staff.

R. Executive Order 13045 on Protection of Children From Environmental Health Risks and Safety Risks

Executive Order 13045: "Protection of Children from Environmental Health Risks and Safety Risks" (62 FR 19885, April 23, 1997) applies to any rule that: (1) Is determined to be "economically significant" as defined under Executive Order 12866, and (2) concerns an environmental health or safety risk that EPA has reason to believe may have a disproportionate effect on children. If the regulatory action meets both criteria, the Agency must evaluate the environmental health or safety effects of the planned rule on children, and explain why the planned regulation is preferable to other potentially effective and reasonably feasible alternatives considered by the Agency.

While this final rule is not subject to the Executive Order because it is not economically significant as defined in Executive Order 12866, we nonetheless have reason to believe that the environmental health or safety risk addressed by this action may have a disproportionate effect on children. As a matter of EPA policy, we therefore have assessed the environmental health or safety effects of ambient water quality criteria on children. The results of this assessment are contained in section F.3., Human Health Criteria.

List of Subjects in 40 CFR Part 131

Environmental protection, Indians—lands, Intergovernmental relations, Reporting and recordkeeping requirements, Water pollution control.

Dated: April 27, 2000.
Carol Browner,
Administrator.

For the reasons set out in the preamble, part 131 of chapter I of title 40 of the Code of Federal Regulations is amended as follows:

PART 131—WATER QUALITY STANDARDS

1. The authority citation for part 131 continues to read as follows:

Authority: 33 U.S.C. 1251 *et seq.*

Subpart D—[Amended]

2. Section 131.38 is added to subpart D to read as follows:

§ 131.38 Establishment of Numeric Criteria for Priority Toxic Pollutants for the State of California.

(a) *Scope.* This section promulgates criteria for priority toxic pollutants in the State of California for inland surface

waters and enclosed bays and estuaries. This section also contains a compliance schedule provision.

(b)(1) Criteria for Priority Toxic Pollutants in the State of California as described in the following table:

BILLING CODE 6560-50-P

Total Number of Criteria ^h		22	21	22	20	92	90

Footnotes to Table in Paragraph (b)(1):

a. Criteria revised to reflect the Agency q_1^* or RfD , as contained in the Integrated Risk Information System (IRIS) as of October 1, 1996. The fish tissue bioconcentration factor (BCF) from the 1980 documents was retained in each case.

b. Criteria apply to California waters except for those waters subject to objectives in Tables III-2A and III-2B of the San Francisco Regional Water Quality Control Board's (SFRWQCB) 1986 Basin Plan, that were adopted by the SFRWQCB and the State Water Resources Control Board, approved by EPA, and which continue to apply.

c. Criteria are based on carcinogenicity of 10 (-6) risk.

d. Criteria Maximum Concentration (CMC) equals the highest concentration of a pollutant to which aquatic life can be exposed for a short period of time without deleterious effects. Criteria Continuous Concentration (CCC) equals the highest concentration of a pollutant to which aquatic life can be exposed for an extended period of time (4 days) without deleterious effects. $\mu\text{g/L}$ equals micrograms per liter.

e. Freshwater aquatic life criteria for metals are expressed as a function of total hardness (mg/L) in the water body. The equations are provided in matrix at paragraph (b)(2) of this section. Values displayed above in the matrix correspond to a total hardness of 100 mg/l.

f. Freshwater aquatic life criteria for pentachlorophenol are expressed as a function of pH, and are calculated as follows: Values displayed above in the matrix correspond to a pH of 7.8. $\text{CMC} = \exp(1.005(\text{pH}) - 4.869)$. $\text{CCC} = \exp(1.005(\text{pH}) - 5.134)$.

g. This criterion is based on 304(a) aquatic life criterion issued in 1980, and was issued in one of the following documents: Aldrin/Dieldrin (EPA 440/5-80-019), Chlordane (EPA 440/5-80-027), DDT (EPA 440/5-80-038), Endosulfan (EPA 440/5-80-046), Endrin (EPA 440/5-80-047), Heptachlor (440/5-80-052), Hexachlorocyclohexane (EPA 440/5-80-054), Silver (EPA 440/5-80-071). The Minimum Data Requirements and derivation procedures were different in the 1980 Guidelines than in the 1985 Guidelines. For example, a "CMC" derived using the 1980 Guidelines was derived to be used as an instantaneous maximum. If assessment is to be done using an averaging period, the values given should be divided by 2 to obtain a value that is more comparable to a CMC derived using the 1985 Guidelines.

h. These totals simply sum the criteria in each column. For aquatic life, there are 23 priority toxic pollutants with some type of freshwater or saltwater, acute or chronic criteria. For human health, there are 92 priority toxic pollutants with either "water + organism" or "organism only" criteria. Note that these totals count chromium as one pollutant even though EPA has developed criteria based on two valence states. In the matrix, EPA has assigned numbers 5a and 5b to the criteria for chromium to reflect the fact that the list of 126 priority pollutants includes only a single listing for chromium.

i. Criteria for these metals are expressed as a function of the water-effect ratio, WER, as defined in paragraph (c) of this section. CMC

= column B1 or C1 value \times WER; $\text{CCC} = \text{column B2 or C2 value} \times \text{WER}$.

j. No criterion for protection of human health from consumption of aquatic organisms (excluding water) was presented in the 1980 criteria document or in the 1986 Quality Criteria for Water. Nevertheless, sufficient information was presented in the 1980 document to allow a calculation of a criterion, even though the results of such a calculation were not shown in the document.

k. The CWA 304(a) criterion for asbestos is the MCL.

l. [Reserved]

m. These freshwater and saltwater criteria for metals are expressed in terms of the dissolved fraction of the metal in the water column. Criterion values were calculated by using EPA's Clean Water Act 304(a) guidance values (described in the total recoverable fraction) and then applying the conversion factors in § 131.36(b)(1) and (2).

n. EPA is not promulgating human health criteria for these contaminants. However, permit authorities should address these contaminants in NPDES permit actions using the State's existing narrative criteria for toxics.

o. These criteria were promulgated for specific waters in California in the National Toxics Rule ("NTR"), at § 131.36. The specific waters to which the NTR criteria apply include: Waters of the State defined as bays or estuaries and waters of the State defined as inland, i.e., all surface waters of the State not ocean waters. These waters specifically include the San Francisco Bay upstream to and including Suisun Bay and the Sacramento-San Joaquin Delta. This section does not apply instead of the NTR for this criterion.

p. A criterion of 20 $\mu\text{g/l}$ was promulgated for specific waters in California in the NTR and was promulgated in the total recoverable form. The specific waters to which the NTR criterion applies include: Waters of the San Francisco Bay upstream to and including Suisun Bay and the Sacramento-San Joaquin Delta; and waters of Salt Slough, Mud Slough (north) and the San Joaquin River, Sack Dam to the mouth of the Merced River. This section does not apply instead of the NTR for this criterion. The State of California adopted and EPA approved a site specific criterion for the San Joaquin River, mouth of Merced to Vernalis; therefore, this section does not apply to these waters.

q. This criterion is expressed in the total recoverable form. This criterion was promulgated for specific waters in California in the NTR and was promulgated in the total recoverable form. The specific waters to which the NTR criterion applies include: Waters of the San Francisco Bay upstream to and including Suisun Bay and the Sacramento-San Joaquin Delta; and waters of Salt Slough, Mud Slough (north) and the San Joaquin River, Sack Dam to Vernalis. This criterion does not apply instead of the NTR for these waters. This criterion applies to additional waters of the United States in the State of California pursuant to 40 CFR 131.38(c). The State of California adopted and EPA approved a site-specific criterion for the Grassland Water District, San Luis National Wildlife Refuge, and the Los Banos

State Wildlife Refuge; therefore, this criterion does not apply to these waters.

r. These criteria were promulgated for specific waters in California in the NTR. The specific waters to which the NTR criteria apply include: Waters of the State defined as bays or estuaries including the San Francisco Bay upstream to and including Suisun Bay and the Sacramento-San Joaquin Delta. This section does not apply instead of the NTR for these criteria.

s. These criteria were promulgated for specific waters in California in the NTR. The specific waters to which the NTR criteria apply include: Waters of the Sacramento-San Joaquin Delta and waters of the State defined as inland (i.e., all surface waters of the State not bays or estuaries or ocean) that include a MUN use designation. This section does not apply instead of the NTR for these criteria.

t. These criteria were promulgated for specific waters in California in the NTR. The specific waters to which the NTR criteria apply include: Waters of the State defined as bays and estuaries including San Francisco Bay upstream to and including Suisun Bay and the Sacramento-San Joaquin Delta; and waters of the State defined as inland (i.e., all surface waters of the State not bays or estuaries or ocean) without a MUN use designation. This section does not apply instead of the NTR for these criteria.

u. PCBs are a class of chemicals which include aroclors 1242, 1254, 1221, 1232, 1248, 1260, and 1016, CAS numbers 53469219, 11097691, 11104282, 11141165, 12672296, 11096825, and 12674112, respectively. The aquatic life criteria apply to the sum of this set of seven aroclors.

v. This criterion applies to total PCBs, e.g., the sum of all congener or isomer or homolog or aroclor analyses.

w. This criterion has been recalculated pursuant to the 1995 Updates: Water Quality Criteria Documents for the Protection of Aquatic Life in Ambient Water, Office of Water, EPA-820-B-96-001, September 1996. See also Great Lakes Water Quality Initiative Criteria Documents for the Protection of Aquatic Life in Ambient Water, Office of Water, EPA-80-B-95-004, March 1995.

x. The State of California has adopted and EPA has approved site specific criteria for the Sacramento River (and tributaries) above Hamilton-City; therefore, these criteria do not apply to these waters.

General Notes to Table in Paragraph (b)(1)

1. The table in this paragraph (b)(1) lists all of EPA's priority toxic pollutants whether or not criteria guidance are available. Blank spaces indicate the absence of national section 304(a) criteria guidance. Because of variations in chemical nomenclature systems, this listing of toxic pollutants does not duplicate the listing in Appendix A to 40 CFR Part 423-126 Priority Pollutants. EPA has added the Chemical Abstracts Service (CAS) registry numbers, which provide a unique identification for each chemical.

2. The following chemicals have organoleptic-based criteria recommendations that are not included on this chart: zinc, 3-methyl-4-chlorophenol.

3. Freshwater and saltwater aquatic life criteria apply as specified in paragraph (c)(3) of this section.

(2) Factors for Calculating Metals Criteria. Final CMC and CCC values

should be rounded to two significant figures.

(i) $CMC = WER \times (Acute\ Conversion\ Factor) \times (\exp\{m_A[1n(hardness)] + b_A\})$

(ii) $CCC = WER \times (Acute\ Conversion\ Factor) \times (\exp\{m_C[1n(hardness)] + b_C\})$

(iii) Table 1 to paragraph (b)(2) of this section:

Metal	m_A	b_A	m_C	b_C
Cadmium	1.128	-3.6867	0.7852	-2.715
Copper	0.9422	-1.700	0.8545	-1.702
Chromium (III)	0.8190	3.688	0.8190	1.561
Lead	1.273	-1.460	1.273	-4.705
Nickel	0.8460	2.255	0.8460	0.0584
Silver	1.72	-6.52		
Zinc	0.8473	0.884	0.8473	0.884

Note to Table 1: The term "exp" represents the base e exponential function.

(iv) Table 2 to paragraph (b)(2) of this section:

Metal	Conversion factor (CF) for freshwater acute criteria	CF for freshwater chronic criteria	CF for saltwater acute criteria	CF ^a for saltwater chronic criteria
Antimony	(^d)	(^d)	(^d)	(^d)
Arsenic	1.000	1.000	1.000	1.000
Beryllium	(^d)	(^d)	(^d)	(^d)
Cadmium	^b 0.944	^b 0.909	0.994	0.994
Chromium (III)	0.316	0.860	(^d)	(^d)
Chromium (VI)	0.982	0.962	0.993	0.993
Copper	0.960	0.960	0.83	0.83
Lead	^b 0.791	^b 0.791	0.951	0.951
Mercury				
Nickel	0.998	0.997	0.990	0.990
Selenium		(^c)	0.998	0.998
Silver	0.85	(^d)	0.85	(^d)
Thallium	(^d)	(^d)	(^d)	(^d)
Zinc	0.978	0.986	0.946	0.946

Footnotes to Table 2 of Paragraph (b)(2):

^a Conversion Factors for chronic marine criteria are not currently available. Conversion Factors for acute marine criteria have been used for both acute and chronic marine criteria.

^b Conversion Factors for these pollutants in freshwater are hardness dependent. CFs are based on a hardness of 100 mg/l as calcium carbonate (CaCO₃). Other hardness can be used; CFs should be recalculated using the equations in table 3 to paragraph (b)(2) of this section.

^c Bioaccumulative compound and inappropriate to adjust to percent dissolved.

^d EPA has not published an aquatic life criterion value.

Note to Table 2 of Paragraph (b)(2): The term "Conversion Factor" represents the recommended conversion factor for converting a metal criterion expressed as the total recoverable fraction in the water column to a criterion expressed as the dissolved

fraction in the water column. See "Office of Water Policy and Technical Guidance on Interpretation and Implementation of Aquatic Life Metals Criteria", October 1, 1993, by Martha G. Prothro, Acting Assistant Administrator for Water available from Water

Resource Center, USEPA, Mailcode RC4100, M Street SW, Washington, DC, 20460 and the note to § 131.36(b)(1).

(v) Table 3 to paragraph (b)(2) of this section:

	Acute	Chronic
Cadmium	$CF = 1.136672 - [(\ln\{hardness\}) (0.041838)]$	$CF = 1.101672 - [(\ln\{hardness\}) (0.041838)]$
Lead	$CF = 1.46203 - [(\ln\{hardness\}) (0.145712)]$	$CF = 1.46203 - [(\ln\{hardness\}) (0.145712)]$

(c) *Applicability.* (1) The criteria in paragraph (b) of this section apply to the State's designated uses cited in paragraph (d) of this section and apply concurrently with any criteria adopted by the State, except when State regulations contain criteria which are more stringent for a particular parameter and use, or except as provided in footnotes p, q, and x to the table in paragraph (b)(1) of this section.

(2) The criteria established in this section are subject to the State's general

rules of applicability in the same way and to the same extent as are other Federally-adopted and State-adopted numeric toxics criteria when applied to the same use classifications including mixing zones, and low flow values below which numeric standards can be exceeded in flowing fresh waters.

(i) For all waters with mixing zone regulations or implementation procedures, the criteria apply at the appropriate locations within or at the boundary of the mixing zones;

otherwise the criteria apply throughout the water body including at the point of discharge into the water body.

(ii) The State shall not use a low flow value below which numeric standards can be exceeded that is less stringent than the flows in Table 4 to paragraph (c)(2) of this section for streams and rivers.

(iii) Table 4 to paragraph (c)(2) of this section:

Criteria	Design flow
Aquatic Life Acute Criteria (CMC).	1 Q 10 or 1 B 3
Aquatic Life Chronic Criteria (CCC).	7 Q 10 or 4 B 3
Human Health Criteria.	Harmonic Mean Flow

Note to Table 4 of Paragraph (c)(2): 1. CMC (Criteria Maximum Concentration) is the water quality criteria to protect against acute effects in aquatic life and is the highest instream concentration of a priority toxic pollutant consisting of a short-term average not to be exceeded more than once every three years on the average.

2. CCC (Continuous Criteria Concentration) is the water quality criteria to protect against chronic effects in aquatic life and is the highest in stream concentration of a priority toxic pollutant consisting of a 4-day average not to be exceeded more than once every three years on the average.

3. 1 Q 10 is the lowest one day flow with an average recurrence frequency of once in 10 years determined hydrologically.

4. 1 B 3 is biologically based and indicates an allowable exceedence of once every 3 years. It is determined by EPA's computerized method (DFLOW model).

5. 7 Q 10 is the lowest average 7 consecutive day low flow with an average recurrence frequency of once in 10 years determined hydrologically.

6. 4 B 3 is biologically based and indicates an allowable exceedence for 4 consecutive days once every 3 years. It is determined by EPA's computerized method (DFLOW model).

(iv) If the State does not have such a low flow value below which numeric standards do not apply, then the criteria included in paragraph (d) of this section apply at all flows.

(v) If the CMC short-term averaging period, the CCC four-day averaging period, or once in three-year frequency is inappropriate for a criterion or the site to which a criterion applies, the State may apply to EPA for approval of an alternative averaging period, frequency, and related design flow. The State must submit to EPA the bases for any alternative averaging period, frequency, and related design flow. Before approving any change, EPA will publish for public comment, a document proposing the change.

(3) The freshwater and saltwater aquatic life criteria in the matrix in paragraph (b)(1) of this section apply as follows:

(i) For waters in which the salinity is equal to or less than 1 part per thousand 95% or more of the time, the applicable criteria are the freshwater criteria in Column B;

(ii) For waters in which the salinity is equal to or greater than 10 parts per thousand 95% or more of the time, the applicable criteria are the saltwater criteria in Column C except for selenium in the San Francisco Bay estuary where the applicable criteria are the freshwater criteria in Column B (refer to footnotes p and q to the table in paragraph (b)(1) of this section); and

(iii) For waters in which the salinity is between 1 and 10 parts per thousand as defined in paragraphs (c)(3)(i) and (ii) of this section, the applicable criteria are the more stringent of the freshwater or saltwater criteria. However, the Regional Administrator may approve the use of the alternative freshwater or saltwater criteria if scientifically defensible information and data demonstrate that on a site-specific basis the biology of the water body is dominated by freshwater aquatic life and that freshwater criteria are more appropriate; or conversely, the biology of the water body is dominated by saltwater aquatic life and that saltwater criteria are more appropriate. Before approving any change, EPA will publish for public comment a document proposing the change.

(4) *Application of metals criteria.* (i) For purposes of calculating freshwater aquatic life criteria for metals from the equations in paragraph (b)(2) of this section, for waters with a hardness of 400 mg/l or less as calcium carbonate, the actual ambient hardness of the surface water shall be used in those equations. For waters with a hardness of over 400 mg/l as calcium carbonate, a hardness of 400 mg/l as calcium carbonate shall be used with a default Water-Effect Ratio (WER) of 1, or the actual hardness of the ambient surface water shall be used with a WER. The same provisions apply for calculating the metals criteria for the comparisons provided for in paragraph (c)(3)(iii) of this section.

(ii) The hardness values used shall be consistent with the design discharge conditions established in paragraph (c)(2) of this section for design flows and mixing zones.

(iii) The criteria for metals (compounds #1—#13 in the table in paragraph (b)(1) of this section) are expressed as dissolved except where otherwise noted. For purposes of calculating aquatic life criteria for metals from the equations in footnote i to the table in paragraph (b)(1) of this section and the equations in paragraph (b)(2) of this section, the water effect

ratio is generally computed as a specific pollutant's acute or chronic toxicity value measured in water from the site covered by the standard, divided by the respective acute or chronic toxicity value in laboratory dilution water. To use a water effect ratio other than the default of 1, the WER must be determined as set forth in Interim Guidance on Determination and Use of Water Effect Ratios, U.S. EPA Office of Water, EPA-823-B-94-001, February 1994, or alternatively, other scientifically defensible methods adopted by the State as part of its water quality standards program and approved by EPA. For calculation of criteria using site-specific values for both the hardness and the water effect ratio, the hardness used in the equations in paragraph (b)(2) of this section must be determined as required in paragraph (c)(4)(ii) of this section. Water hardness must be calculated from the measured calcium and magnesium ions present, and the ratio of calcium to magnesium should be approximately the same in standard laboratory toxicity testing water as in the site water.

(d)(1) Except as specified in paragraph (d)(3) of this section, all waters assigned any aquatic life or human health use classifications in the Water Quality Control Plans for the various Basins of the State ("Basin Plans") adopted by the California State Water Resources Control Board ("SWRCB"), except for ocean waters covered by the Water Quality Control Plan for Ocean Waters of California ("Ocean Plan") adopted by the SWRCB with resolution Number 90-27 on March 22, 1990, are subject to the criteria in paragraph (d)(2) of this section, without exception. These criteria apply to waters identified in the Basin Plans. More particularly, these criteria apply to waters identified in the Basin Plan chapters designating beneficial uses for waters within the region. Although the State has adopted several use designations for each of these waters, for purposes of this action, the specific standards to be applied in paragraph (d)(2) of this section are based on the presence in all waters of some aquatic life designation and the presence or absence of the MUN use designation (municipal and domestic supply). (See Basin Plans for more detailed use definitions.)

(2) The criteria from the table in paragraph (b)(1) of this section apply to the water and use classifications defined in paragraph (d)(1) of this section as follows:

Water and use classification	Applicable criteria
(i) All inland waters of the United States or enclosed bays and estuaries that are waters of the United States that include a MUN use designation.	(A) Columns B1 and B2—all pollutants (B) Columns C1 and C2—all pollutants (C) Column D1—all pollutants
(ii) All inland waters of the United States or enclosed bays and estuaries that are waters of the United States that do not include a MUN use designation.	(A) Columns B1 and B2—all pollutants (B) Columns C1 and C2—all pollutants (C) Column D2—all pollutants

(3) Nothing in this section is intended to apply instead of specific criteria, including specific criteria for the San Francisco Bay estuary, promulgated for California in the National Toxics Rule at § 131.36.

(4) The human health criteria shall be applied at the State-adopted 10 (-6) risk level.

(5) Nothing in this section applies to waters located in Indian Country.

(e) *Schedules of compliance.* (1) It is presumed that new and existing point source dischargers will promptly comply with any new or more restrictive water quality-based effluent limitations ("WQBELs") based on the water quality criteria set forth in this section.

(2) When a permit issued on or after May 18, 2000 to a new discharger contains a WQBEL based on water quality criteria set forth in paragraph (b) of this section, the permittee shall comply with such WQBEL upon the commencement of the discharge. A new discharger is defined as any building, structure, facility, or installation from which there is or may be a "discharge of pollutants" (as defined in 40 CFR 122.2) to the State of California's inland surface waters or enclosed bays and estuaries, the construction of which commences after May 18, 2000.

(3) Where an existing discharger reasonably believes that it will be infeasible to promptly comply with a new or more restrictive WQBEL based on the water quality criteria set forth in this section, the discharger may request approval from the permit issuing authority for a schedule of compliance.

(4) A compliance schedule shall require compliance with WQBELs based on water quality criteria set forth in paragraph (b) of this section as soon as possible, taking into account the dischargers' technical ability to achieve compliance with such WQBEL.

(5) If the schedule of compliance exceeds one year from the date of permit issuance, reissuance or modification, the schedule shall set forth interim requirements and dates for their achievement. The dates of completion between each requirement may not exceed one year. If the time necessary for completion of any requirement is more than one year and is not readily divisible into stages for completion, the permit shall require, at a minimum, specified dates for annual submission of progress reports on the status of interim requirements.

(6) In no event shall the permit issuing authority approve a schedule of compliance for a point source discharge

which exceeds five years from the date of permit issuance, reissuance, or modification, whichever is sooner. Where shorter schedules of compliance are prescribed or schedules of compliance are prohibited by law, those provisions shall govern.

(7) If a schedule of compliance exceeds the term of a permit, interim permit limits effective during the permit shall be included in the permit and addressed in the permit's fact sheet or statement of basis. The administrative record for the permit shall reflect final permit limits and final compliance dates. Final compliance dates for final permit limits, which do not occur during the term of the permit, must occur within five years from the date of issuance, reissuance or modification of the permit which initiates the compliance schedule. Where shorter schedules of compliance are prescribed or schedules of compliance are prohibited by law, those provisions shall govern.

(8) The provisions in this paragraph (e), Schedules of compliance, shall expire on May 18, 2005.

CONSTITUTION OF THE STATE OF CALIFORNIA
Article XIII B. GOVERNMENT SPENDING LIMITATION

GO TO CALIFORNIA CODES ARCHIVE DIRECTORY

Cal Const, Art. XIII B § 6 (2009)

§ 6. Reimbursement for new programs and services

(a) Whenever the Legislature or any state agency mandates a new program or higher level of service on any local government, the State shall provide a subvention of funds to reimburse that local government for the costs of the program or increased level of service, except that the Legislature may, but need not, provide a subvention of funds for the following mandates:

- (1) Legislative mandates requested by the local agency affected.
- (2) Legislation defining a new crime or changing an existing definition of a crime.
- (3) Legislative mandates enacted prior to January 1, 1975, or executive orders or regulations initially implementing legislation enacted prior to January 1, 1975. (b)

(1) Except as provided in paragraph (2), for the 2005-06 fiscal year and every subsequent fiscal year, for a mandate for which the costs of a local government claimant have been determined in a preceding fiscal year to be payable by the State pursuant to law, the Legislature shall either appropriate, in the annual Budget Act, the full payable amount that has not been previously paid, or suspend the operation of the mandate for the fiscal year for which the annual Budget Act is applicable in a manner prescribed by law.

(2) Payable claims for costs incurred prior to the 2004-05 fiscal year that have not been paid prior to the 2005-06 fiscal year may be paid over a term of years, as prescribed by law.

(3) Ad valorem property tax revenues shall not be used to reimburse a local government for the costs of a new program or higher level of service.

(4) This subdivision applies to a mandate only as it affects a city, county, city and county, or special district.

(5) This subdivision shall not apply to a requirement to provide or recognize any procedural or substantive protection, right, benefit, or employment status of any local government employee or retiree, or of any local government employee organization, that arises from, affects, or directly relates to future, current, or past local government employment and that constitutes a mandate subject to this section. (c) A mandated new program or higher level of service includes a transfer by the Legislature from the State to cities, counties, cities and counties, or special districts of complete or partial financial responsibility for a required program for which the State previously had complete or partial financial responsibility.

HISTORY:

Adopted November 6, 1979. Amendment approved by voters, Prop. 1A, effective November 3, 2004.

NOTES:**Amendments:****2004 Amendment:**

(1) Designated the former section to be subd (a); (2) generally eliminated "such" in the introductory clause of subd (a); (3) redesignated former subds (a)-(c) to be subds (a)(1)-(a)(3); (4) substituted the period for the semicolon at the end of subd (a)(1); (5) substituted the period for "; or" at the end of subd (a)(2); and (6) added subds (b) and (c).

Note

Stats 2004 ch 216 provides:

SEC. 34. Notwithstanding any other law, the Commission on State Mandates shall, on or before December 31, 2005, reconsider its decision in 97-TC-23, relating to the Standardized Testing and Reporting (STAR) program mandate, and its parameters and guidelines for calculating the state reimbursement for that mandate pursuant to *Section 6 of Article XIII B of the California Constitution* for each of the following statutes in light of federal statutes enacted and state court decisions rendered since these statutes were enacted:

- (a) Chapter 975 of the Statutes of 1995.
- (b) Chapter 828 of the Statutes of 1997.
- (c) Chapter 576 of the Statutes of 2000.
- (d) Chapter 722 of the Statutes of 2001.

Stats 2004 ch 316 provides:

SEC. 2. The Legislature hereby finds and declares that, notwithstanding a prior determination by the Board of Control, acting as the predecessor agency for the Commission on State Mandates, and pursuant to subdivision (d) of *Section 17556 of the Government Code*, the state-mandated local program imposed by Chapter 1131 of the Statutes of 1975 no longer constitutes a reimbursable mandate under *Section 6 of Article XIII B of the California Constitution* because subdivision (e) of *Section 2207 of the Public Resources Code*, as added by Chapter 1097 of the Statutes of 1990, confers on local agencies subject to that mandate authority to levy fees sufficient to pay for the mandated program.

SEC. 3. Notwithstanding any other provision of law, by January 1, 2006, the Commission on State Mandates shall reconsider whether each of the following statutes constitutes a reimbursable mandate under *Section 6 of Article XIII B of the California Constitution* in light of federal statutes enacted and federal and state court decisions rendered since these statutes were enacted:

- (a) Sex offenders: disclosure by law enforcement officers (97-TC-15; and Chapters 908 and 909 of the Statutes of 1996, Chapters 17, 80, 817, 818, 819, 820, 821, and 822 of the Statutes of 1997, and Chapters 485, 550, 927, 928, 929, and 930 of the Statutes of 1998).
- (b) Extended commitment, Youth Authority (98-TC-13; and Chapter 267 of the Statutes of 1998).
- (c) Brown Act Reforms (CSM-4469; and Chapters 1136, 1137, and 1138 of the Statutes of 1993, and Chapter 32 of the Statutes of 1994).
- (d) Photographic Record of Evidence (No. 98-TC-07; and Chapter 875 of the Statutes of 1985, Chapter 734 of the Statutes of 1986, and Chapter 382 of the Statutes of 1990).

Cal Const, Art. XIII B § 6

SEC. 4. The Legislature hereby finds and declares that the following statutes no longer constitute a reimbursable mandate under *Section 6 of Article XIII B of the California Constitution* because provisions containing the reimbursable mandate have been repealed:

(a) Democratic Party presidential delegates (CSM-4131; and Chapter 1603 of the Statutes of 1982 and Chapter 8 of the Statutes of 1988, which enacted statutes that were repealed by Chapter 920 of the Statutes of 1994).

(b) Short-Doyle case management, Short-Doyle audits, and residential care services (CSM-4238; and Chapter 815 of the Statutes of 1979, Chapter 1327 of the Statutes of 1984, and Chapter 1352 of the Statutes of 1985, which enacted statutes that were repealed by Chapter 89 of the Statutes of 1991).

Educational financing mandates in California: reallocating the cost of educating immigrants between state and local governmental entities. *35 Santa Clara LR 367*.

Attorney General's Opinions:

Judicial arbitration is mandated by the Legislature for municipal courts within the meaning of *Cal Const., art. XIII B, § 6* as to arbitration based upon stipulation or plaintiff election. It is also mandated within the meaning of Article XIII B, § 6 as to "court ordered" arbitration resulting from a local court rule adopted after July 1, 1980, the effective date of Article XIII B. *Cal. Const., Art. XIII B, § 6* contemplates that the state should provide a subvention of funds to reimburse counties for the costs of the judicial arbitration in municipal courts. Reimbursement, however, is still subject to appropriation of funds by the Legislature. *64 Ops. Cal. Atty. Gen. 261*.

Commission on State Mandates does have authority to reconsider prior final decision relating to existence or non-existence of state mandated costs, where prior decision was contrary to law. *72 Ops. Cal. Atty. Gen. 173*.

NOTES OF DECISIONS 1. In General 2. Purpose 3. Definitions 4. Jurisdictional Issues 5. New Program Mandated 6. New Program Not Mandated 7. Other Issues

1. In General

An enactment may have an "operative" date different from its "effective" date, and does not operate retroactively merely because some of the facts or conditions upon which its application depends came into existence prior to its enactment. It should not be given a retroactive application unless it is clear that the Legislature so intended. Thus, the construction of *Cal. Const., art. XIII B, § 6*, as requiring that local governments be reimbursed for costs incurred as a result of mandates enacted between January 1, 1975 and July 1, 1980, but that reimbursement did have to begin until the latter date, which was the effective date of the statute, did not constitute an impermissible retroactive operation. The provision would operate prospectively after its effective date, albeit with respect to mandates both after that date and those in effect between January 1, 1975, and that date. *City of Sacramento v. State of California (1984, Cal App 3d Dist) 156 Cal App 3d 182, 203 Cal Rptr 258, 1984 Cal App LEXIS 2079*, overruled *County of Los Angeles v. State of California (1987) 43 Cal 3d 46, 233 Cal Rptr 38, 729 P2d 202, 1987 Cal LEXIS 273*.

Generally, principles of construction applicable to statutes are also applicable to constitutional provisions. Thus, in construing *Cal. Const., art. XIII B, § 6*, which was effective on July 1, 1980, and provided that reimbursement of local governments was required for any "new program or higher level of service" mandated by the state, but also provided that reimbursement was permissive for legislative mandates enacted prior to January 1, 1975, the proper construction was that, for legislative mandates enacted between January 1, 1975, and July 1, 1980, the "window period" of the statute, reimbursement was required but did not have to begin until the statute's effective date. This construction accorded with the rule of *expressio unius est exclusio alterius*--where the electorate had specified an exception to the general rule of mandatory reimbursement (prior to January 1, 1975), other exceptions were not to be implied or presumed. A construction that reimbursement was permissive for the window period would have rendered the exception for pre-1975 mandates meaningless. *City of Sacramento v. State of California (1984, Cal App 3d Dist) 156 Cal App 3d 182, 203 Cal Rptr 258, 1984 Cal App LEXIS 2079*, overruled *County of Los Angeles v. State of California (1987) 43 Cal 3d 46, 233 Cal Rptr 38, 729 P2d 202, 1987 Cal LEXIS 273*.

Cal. Const., art. XIII B, § 6, requiring the Legislature to reimburse local governments for expenses incurred as a result of state law, does not authorize courts to act if the Legislature fails to appropriate funds for this purpose. Although such a legislative failure might frustrate the constitutional intent, the question of whether to appropriate funds is still exclusively a matter of legislative discretion, unless the electorate directly appropriates such funds by its own vote. *City of Sacramento v. California State Legislature (1986, Cal App 3d Dist) 187 Cal App 3d 393, 231 Cal Rptr 686, 1986 Cal App LEXIS 2261*.

The subvention provisions of *Cal. Const., art. XIII B, § 6*, operate so as to require the state to reimburse counties for state-mandated costs incurred between January 1, 1975, and June 30, 1980. The amendment, which became effective on July 1, 1980, provided that the Legislature "may, but need not," provide reimbursement for mandates enacted before January 1, 1975. Nevertheless, the Legislature must reimburse mandates passed after that date, even though the state did not have to begin reimbursement until the effective date of the amendment. *Carmel Valley Fire Protection Dist. v. State of California (1987, Cal App 2d Dist) 190 Cal App 3d 521, 234 Cal Rptr 795, 1987 Cal App LEXIS 1266*.

The concepts of reimbursable state-mandated costs in *Cal. Const., art. XIII B*, requiring that the state reimburse local governments for the costs of state-mandated new programs or higher levels of service, and former *Rev. & Tax. Code, §§ 2207, 2231*, are identical. *City of Sacramento v. State of California (1990) 50 Cal 3d 51, 266 Cal Rptr 139, 785 P2d 522, 1990 Cal LEXIS 148*.

State reimbursement statute, *Gov C § 17556(d)* was facially constitutional because it did not create a new exception to reimbursement as required by *Cal Const Art XIII B § 6*. *County of Fresno v. State (1991) 53 Cal 3d 482, 280 Cal Rptr 92, 808 P2d 235, 1991 Cal LEXIS 1363*.

Gov C § 17500-17630 was enacted to implement *Cal Const Art XIII B § 6*. *County of Fresno v. State (1991) 53 Cal 3d 482, 280 Cal Rptr 92, 808 P2d 235, 1991 Cal LEXIS 1363*.

As a matter of law, no provision mandates the reimbursement of costs incurred under California Occupational Safety and Health Administration (Cal/OSHA), and thus a school district, seeking reimbursement for its expenditures complying with Cal/OSHA, had no right to reimbursement. Cal/OSHA was enacted in 1973. By its terms, *Cal. Const., art. XIII B, § 6* (reimbursement to local governments for new programs and services), enacted in 1975, allows but does not require reimbursements for funds expended complying with prior legislation. Also, the Legislature enacted reimbursement provisions in 1980 (*Gov. Code, § 17500 et seq.*), and later repealed *Rev. & Tax. Code, §§ 2207.5, 2231*, also dealing with reimbursement. These legislative acts effectively preclude reimbursement for compliance with legislation enacted before 1975. *Los Angeles Unified School Dist. v. State of California (1991, Cal App 2d Dist) 229 Cal App 3d 552, 280 Cal Rptr 237, 1991 Cal App LEXIS 372*.

Since Cal. Const., art. XIII B, requiring subvention for state mandates enacted after Jan. 1, 1975, had an effective date of July 1, 1980, a local agency may seek subvention for costs imposed by legislation after Jan. 1, 1975, but reimbursement is limited to costs incurred after July 1, 1980. Reimbursement for costs incurred before July 1, 1980, must be obtained, if at all, under controlling statutory law. *Hayes v. Commission on State Mandates* (1992, Cal App 3d Dist) 11 Cal App 4th 1564, 15 Cal Rptr 2d 547, 1992 Cal App LEXIS 1498.

Since the statutory scheme (*Gov. Code, § 17500 et seq.*) for resolution of state mandate claims arising under *Cal. Const., art. XIII B, § 6*, contemplates that the Legislature will appropriate funds in a claims bill to reimburse an affected entity for state-mandated expenditures made prior to its enactment, the date the Legislature deletes such funds is also the point at which a nonstatutory cause of action logically accrues for the reimbursement of expenditures that are not recoverable under the statutory procedure. *Berkeley Unified School Dist. v. State of California* (1995, Cal App 3d Dist) 33 Cal App 4th 350, 39 Cal Rptr 2d 326, 1995 Cal App LEXIS 264, review denied (1995, Cal) 1995 Cal LEXIS 4298.

In enacting *Gov. Code, § 17500 et seq.*, the Legislature established the Commission on State Mandates as a quasi-judicial body to carry out a comprehensive administrative procedure for resolving claims for reimbursement of state-mandated local costs arising out of *Cal. Const., art. XIII B, § 6*. The Legislature did so because the absence of a uniform procedure had resulted in inconsistent rulings on the existence of state mandates, unnecessary litigation, reimbursement delays, and, apparently, resultant uncertainties in accommodating reimbursement requirements in the budgetary process. It is apparent from the comprehensive nature of this legislative scheme, and from the Legislature's expressed intent, that the exclusive remedy for a claimed violation of *Cal. Const., art. XIII B, § 6*, lies in these procedures. The statutes create an administrative forum for resolution of state mandate claims, and establish procedures that exist for the express purpose of avoiding multiple proceedings, judicial and administrative, addressing the same claim that a reimbursable state mandate has been created. In short, the Legislature has created what is clearly intended to be a comprehensive and exclusive procedure by which to implement and enforce *Cal. Const., art. XIII B, § 6*. Thus, the statutory scheme contemplates that the commission, as a quasi-judicial body, has the sole and exclusive authority to adjudicate whether a state mandate exists. *Redevelopment Agency v. California Comm'n on State Mandates* (1996, Cal App 4th Dist) 43 Cal App 4th 1188, 51 Cal Rptr 2d 100, 1996 Cal App LEXIS 267.

Rules of constitutional interpretation require that constitutional limitations and restrictions on legislative power are to be construed strictly and are not to be extended to include matters not covered by the language used. Policymaking authority is vested in the Legislature, and neither arguments as to the wisdom of an enactment nor questions as to the motivation of the Legislature can serve to invalidate particular legislation. Under these principles, there is no basis for applying *Cal. Const., art. XIII B, § 6*, which imposes limits on the state's authority to mandate new programs or increased services on local governmental entities, as an equitable remedy to cure the perceived unfairness resulting from political decisions on funding priorities. *City of San Jose v. State of California* (1996, Cal App 6th Dist) 45 Cal App 4th 1802, 53 Cal Rptr 2d 521, 1996 Cal App LEXIS 520, review denied (1996, Cal) 1996 Cal LEXIS 5314.

A claimant that elects to discontinue participation in a state optional funded program does not face certain and severe penalties such as double taxation or other "draconian" consequences, but simply must adjust to the withdrawal of grant money along with the lifting of program obligations, and such circumstances do not constitute a reimbursable state mandate for purposes of *Cal. Const. art. XIII B, § 6*. *Department of Finance v. Commission on State Mandates* (2003) 30 Cal 4th 727, 134 Cal Rptr 2d 237, 68 P3d 1203, 2003 Cal LEXIS 3353.

Simply because a state law or order may increase the costs borne by local government in providing services, this does not necessarily establish that the law or order constitutes an increased or higher level of the resulting "service to the public" under *Cal Const Art XIII B, § 6* and *Gov C § 17514*. *San Diego Unified School Dist. v. Commission on State Mandates* (2004) 33 Cal 4th 859, 16 Cal Rptr 3d 466, 94 P3d 589, 2004 Cal LEXIS 7079.

2. Purpose

When the voters adopted *Cal. Const., art. XIII B, § 6* (reimbursement to local agencies for new programs and services), their intent was not to require the state to provide subvention whenever a newly enacted statute resulted incidentally in some cost to local agencies. Rather, the drafters and the electorate had in mind subvention for the expense or increased cost of programs administered locally, and for expenses occasioned by laws that impose unique requirements on local governments and do not apply generally to all state residents or entities. *County of Los Angeles v. State of California* (1987) 43 Cal 3d 46, 233 Cal Rptr 38, 729 P2d 202, 1987 Cal LEXIS 273.

The goals of *Cal. Const., art. XIII B, § 6* (reimbursement to local agencies for new programs and services), were to protect residents from excessive taxation and government spending, and to preclude a shift of financial responsibility for

governmental functions from the state to local agencies. Since these goals can be achieved in the absence of state subvention for the expense of increases in workers' compensation benefit levels for local agency employees, the adoption of art. XIII B, § 6, did not effect a pro tanto repeal of *Cal. Const., art. XIV, § 4*, which gives the Legislature plenary power over workers' compensation. *County of Los Angeles v. State of California* (1987) 43 Cal 3d 46, 233 Cal Rptr 38, 729 P2d 202, 1987 Cal LEXIS 273.

The intent of *Cal. Const., art. XIII B, § 6*, was to preclude the state from shifting to local agencies the financial responsibility for providing public services, in view of restrictions imposed on the taxing and spending power of local entities by *Cal. Const., arts. XIII A, XIII B. Lucia Mar Unified School Dist. v. Honig* (1988) 44 Cal 3d 830, 244 Cal Rptr 677, 750 P2d 318, 1988 Cal LEXIS 55.

In *Cal. Const., art. XIII B, § 6* (reimbursement of local governments for state-mandated costs or increased levels of service), "mandates" means "orders" or "commands," concepts broad enough to include executive orders as well as statutes. The concern that prompted the inclusion of § 6 in art. XIII B was the perceived attempt by the state to enact legislation or adopt administrative orders creating programs to be administered by local agencies, thereby transferring to those agencies the fiscal responsibility for providing services that the state believed should be extended to the public. It is clear that the primary concern of the voters was the increased financial burdens being shifted to local government, not the form in which those burdens appeared. *Long Beach Unified Sch. Dist. v. State of California* (1990, Cal App 2d Dist) 225 Cal App 3d 155, 275 Cal Rptr 449, 1990 Cal App LEXIS 1198, review denied (1991, Cal) 1991 Cal LEXIS 832.

Cal. Const., art. XIII A, and art. XIII B, work in tandem, together restricting California governments' power both to levy and to spend for public purposes. Their goals are to protect residents from excessive taxation and government spending. The purpose of *Cal. Const., art. XIII B, § 6* (reimbursement to local government for state-mandated new program or higher level of service), is to preclude the state from shifting financial responsibility for carrying out governmental functions to local agencies, which are ill equipped to assume increased financial responsibilities because of the taxing and spending limitations that Cal. Const., arts. XIII A and XIII B, impose. With certain exceptions, *Cal. Const., art. XIII B, § 6*, essentially requires the state to pay for any new governmental programs, or for higher levels of service under existing programs, that it imposes upon local governmental agencies. *County of San Diego v. State of California* (1997) 15 Cal 4th 68, 61 Cal Rptr 2d 134, 931 P2d 312, 1997 Cal LEXIS 630.

The goal of Cal. Const., arts. XIII A and XIII B, is to protect California residents from excessive taxation and government spending. A central purpose of *Cal. Const., art. XIII B, § 6* (reimbursement to local government of state-mandated costs), is to prevent the state's transfer of the cost of government from itself to the local level. *Redevelopment Agency v. Commission on State Mandates* (1997, Cal App 4th Dist) 55 Cal App 4th 976, 64 Cal Rptr 2d 270, 1997 Cal App LEXIS 474, review denied (1997, Cal) 1997 Cal LEXIS 5622.

The intent underlying Const Art XIII B § 6 was to require reimbursement to local agencies for the costs involved in carrying out functions peculiar to government, not for expenses incurred by local agencies as an incidental impact of laws that apply generally to all state residents and entities. Although a law is addressed only to local governments and imposes new costs on them, it may still not be a reimbursable state-mandate. Local entities are not entitled to reimbursement for all increased costs mandated by state law, but only those costs resulting from a new program or an increased level of service imposed upon them by the state. *City of Richmond v. Commission on State Mandates* (1998, Cal App 3d Dist) 64 Cal App 4th 1190, 75 Cal Rptr 2d 754, 1998 Cal App LEXIS 546, review denied (1998, Cal) 1998 Cal LEXIS 5509.

Intent underlying *Cal Const Art XIII B § 6*, was to require reimbursement to local agencies for the costs involved in carrying out functions peculiar to government, not for expenses incurred by local agencies as an incidental impact of laws that apply generally to all state residents and entities. *San Diego Unified School Dist. v. Commission on State Mandates* (2004) 33 Cal 4th 859, 16 Cal Rptr 3d 466, 94 P3d 589, 2004 Cal LEXIS 7079.

3. Definitions

When a word or phrase has been given a particular meaning in one part of a law, it is to be given the same meaning in other parts of the law. Thus, in the government spending limitation provisions of Cal. Const., art. XIII B, the definition of "mandate" in § 9, subd. (b), as being an enactment that directs compliance without discretion, governed with respect to § 6, which required state reimbursement of local governments for costs of state mandated programs. *City of Sacramento v. State of California* (1984, Cal App 3d Dist) 156 Cal App 3d 182, 203 Cal Rptr 258, 1984 Cal App LEXIS 2079, overruled *County of Los Angeles v. State of California* (1987) 43 Cal 3d 46, 233 Cal Rptr 38, 729 P2d 202, 1987 Cal LEXIS 273.

The word "program," as used in *Cal. Const., art. XIII B, § 6* (reimbursement to local agencies for new programs and services), refers to programs that carry out the governmental function of providing services to the public, or laws which, to implement a state policy, impose unique requirements on local governments and do not apply generally to all residents and entities in the state. *County of Los Angeles v. State of California* (1987) 43 Cal 3d 46, 233 Cal Rptr 38, 729 P2d 202, 1987 Cal LEXIS 273.

A "new program," for purposes of determining whether the program is subject to the constitutional imperative of subvention under *Cal. Const., art. XIII B, § 6*, is one which carries out the governmental function of providing services to the public, or laws which, to implement a state policy, impose unique requirements on local governments and do not apply generally to all residents and entities in the state. *Carmel Valley Fire Protection Dist. v. State of California* (1987, Cal App 2d Dist) 190 Cal App 3d 521, 234 Cal Rptr 795, 1987 Cal App LEXIS 1266.

In *Cal. Const., art. XIII B, § 6* (reimbursement of local governments for state-mandated costs or increased levels of service), "mandates" means "orders" or "commands," concepts broad enough to include executive orders as well as statutes. The concern that prompted the inclusion of § 6 in art. XIII B was the perceived attempt by the state to enact legislation or adopt administrative orders creating programs to be administered by local agencies, thereby transferring to those agencies the fiscal responsibility for providing services that the state believed should be extended to the public. It is clear that the primary concern of the voters was the increased financial burdens being shifted to local government, not the form in which those burdens appeared. *Long Beach Unified Sch. Dist. v. State of California* (1990, Cal App 2d Dist) 225 Cal App 3d 155, 275 Cal Rptr 449, 1990 Cal App LEXIS 1198, review denied (1991, Cal) 1991 Cal LEXIS 832.

A "new program" within the meaning of *Cal. Const., art. XIII B, § 6* (reimbursement of local governments for new programs mandated by state), is a program that carries out the governmental function of providing services to the public, or a law that, to implement state policy, imposes unique requirements on local governments and does not apply generally to all residents and entities in the state. But no state mandate exists if the requirements or provisions of a state statute are, nevertheless, required by federal law. When the federal government imposes costs on local agencies, those costs are not mandated by the state and thus do not require a state subvention. Instead, such costs are exempt from local agencies' taxing and spending limitations. This is true even though the state has adopted an implementing statute or regulation pursuant to the federal mandate, so long as the state had no true choice in the manner of implementation of the federal mandate. *County of Los Angeles v. Commission on State Mandates* (1995, Cal App 2d Dist) 32 Cal App 4th 805, 38 Cal Rptr 2d 304, 1995 Cal App LEXIS 161, review denied (1995, Cal) 1995 Cal LEXIS 3339.

The state was not obligated to reimburse local governments by virtue of its reduction of property taxes previously allocated to local governments and its simultaneous placement of an equal amount of property tax revenues into Educational Revenue Augmentation Funds (ERAF) (former Rev & Tax C § 97.03) for distribution to school districts, since the reallocation of revenue did not result in reimbursable "costs" and the ERAF legislation did not amount to the imposition of a "new program or higher level of service" within the meaning of *Cal Const art XIII B § 6*. Section 6 subvention was intended for increases in actual costs, not lost revenue, and the state had not imposed responsibility for any program that local governments had not always had a substantial share in supporting. Nor did Proposition 98 (*Cal Const art XVI § 8*), providing a minimum level of funding for schools, confer a right of subvention on counties. Proposition 98 merely provides the formulas for determining the minimum to be appropriated every budget year. *County of Sonoma v. Commission on State Mandates* (2000, Cal App 1st Dist) 84 Cal App 4th 1264, 101 Cal Rptr 2d 784, 2000 Cal App LEXIS 889, review denied (2001, Cal) 2001 Cal LEXIS 1445.

4. Jurisdictional Issues

The trial court had jurisdiction to adjudicate a county's mandate claim asserting the Legislature's transfer to counties of the responsibility for providing health care for medically indigent adults constituted a new program or higher level of service that required state funding under *Cal. Const., art. XIII B, § 6* (reimbursement to local government for costs of new state-mandated program), notwithstanding that a test claim was pending in an action by a different county. The trial court should not have proceeded while the other action was pending, since one purpose of the test claim procedure is to avoid multiple proceedings addressing the same claim. However, the error was not jurisdictional; the governing statutes simply vest primary jurisdiction in the court hearing the test claim. The trial court's failure to defer to the primary jurisdiction of the other court did not prejudice the state. The trial court did not usurp the Commission on State Mandates' authority, since the commission had exercised its authority in the pending action. Since the pending action was settled, no multiple decisions resulted. Nor did lack of an administrative record prejudice the state, since determining whether a statute imposes a state mandate is an issue of law. Also, attempts to seek relief from the commission would have been futile, thus triggering the futility exception to the exhaustion requirement, given that the commis-

sion rejected the other county's claim. *County of San Diego v. State of California* (1997) 15 Cal 4th 68, 61 Cal Rptr 2d 134, 931 P2d 312, 1997 Cal LEXIS 630.

5. New Program Mandated

In an action brought by a county for a writ of mandate to compel reimbursement by the state for funds expended in complying with state executive orders to provide protective clothing and equipment to county fire fighters, the trial court properly determined that the executive orders constituted the type of "new program" that was subject to the constitutional imperative of subvention under *Cal. Const., art. XIII B, § 6*. Fire protection is a peculiarly governmental function. Also, the executive orders manifest a state policy to provide updated equipment to all fire fighters, impose unique requirements on local governments, and do not apply generally to all residents and entities in the state, but only to those involved in fire fighting. *Carmel Valley Fire Protection Dist. v. State of California* (1987, Cal App 2d Dist) 190 Cal App 3d 521, 234 Cal Rptr 795, 1987 Cal App LEXIS 1266.

Ed. Code, § 59300 (requiring school districts to contribute part of the cost of educating pupils from the district at state schools for the severely handicapped), imposes on school districts a "new program or higher level of service" within the meaning of *Cal. Const., art. XIII B, § 6* (providing reimbursement to local agencies for state-mandated new programs or higher levels of service). Thus, in a test case brought by school districts, the Commission on State Mandates erred in finding to the contrary; however, remand to the commission was necessary to determine whether § 59300 was a state mandate. *Lucia Mar Unified School Dist. v. Honig* (1988) 44 Cal 3d 830, 244 Cal Rptr 677, 750 P2d 318, 1988 Cal LEXIS 55.

Stats. 1978, ch. 2, extending mandatory coverage under the state's unemployment insurance law to include state and local governments and nonprofit corporations, implemented a federal "mandate" within the meaning of *Cal. Const., art. XIII B*, and prior statutes restricting local taxation, and thus, subject to superseding constitutional ceilings on taxation by state and local governments, an agency governed by Stats. 1978, ch. 2, may tax and spend as necessary to meet the expenses required to comply with that legislation. In enacting Stats. 1978, ch. 2, the state simply did what was necessary to avoid certain and severe federal penalties upon its resident businesses; the alternatives were so far beyond the realm of practical reality that they left the state "without discretion" to depart from federal standards. (Disapproving, insofar as it is inconsistent with this analysis, the decision in *City of Sacramento v. State of California* (1984) 156 Cal.App.3d 182, 203 Cal.Rptr. 258, 1984 Cal App LEXIS 2079.) *City of Sacramento v. State of California* (1990) 50 Cal 3d 51, 266 Cal Rptr 139, 785 P2d 522, 1990 Cal LEXIS 148.

A school district was entitled to reimbursement pursuant to *Cal. Const., art. XIII B, § 6* (reimbursement of local governments for state-mandated costs or increased levels of service), for expenditures related to its efforts to alleviate racial and ethnic segregation in its schools, since an executive order (in the form of regulations issued by the state Department of Education) required a higher level of service and constituted a state mandate. The requirements of the order went beyond constitutional and case law requirements in that they required specific actions to alleviate segregation. Although under *Cal. Const., art. XIII B, § 6*, subd. (c), the state has discretion whether to reimburse pre-1975 mandates that are either statutes or executive orders implementing statutes, it cannot be inferred from this exception that reimbursability is otherwise dependent on the form of the mandate. Further, the district's claim was not defeated by *Gov. Code, § 17561, 17514*, limiting reimbursement to certain costs incurred after July 1, 1980, the effective date of *Cal. Const., art. XIII B, § 6*, subd. (c). *Long Beach Unified Sch. Dist. v. State of California* (1990, Cal App 2d Dist) 225 Cal App 3d 155, 275 Cal Rptr 449, 1990 Cal App LEXIS 1198, review denied (1991, Cal) 1991 Cal LEXIS 832.

The 1975 amendments to the federal Education of the Handicapped Act (20 USCS § 1401 et seq.) constituted a federal mandate with respect to the state. However, even though the state had no real choice in deciding whether to comply with the act, the act did not necessarily require the state to impose all of the costs of implementation upon local school districts. To the extent the state implemented the act by freely choosing to impose new programs or higher levels of service upon local school districts, the costs of such programs or higher levels of service are state-mandated and subject to subvention under *Cal. Const., art. XIII B, § 6*. Thus, on remand of a proceeding by school districts to the Commission on State Mandates for consideration of whether special education programs constituted new programs or higher levels of service mandated by the state entitling the districts to reimbursement, the commission was required to focus on the costs incurred by local school districts and whether those costs were imposed by federal mandate or by the state's voluntary choice in its implementation of the federal program. *Hayes v. Commission on State Mandates* (1992, Cal App 3d Dist) 11 Cal App 4th 1564, 15 Cal Rptr 2d 547, 1992 Cal App LEXIS 1498.

In a county's action against the state to determine the county's rights under *Cal. Const., art. XIII B, § 6* (reimbursement to local government for state-mandated new program or higher level of service), the Legislature's 1982 transfer to counties of responsibility for providing health care for medically indigent adults mandated a reimbursable new program. The state asserted the source of the county's obligation to provide such care was *Welf. & Inst. Code, § 17000*, enacted in 1965, rather than the 1982 legislation, and since *Cal. Const., art. XIII B, § 6*, did not apply to "mandates enacted prior to January 1, 1975," there was no reimbursable mandate. However, *Welf. & Inst. Code, § 17000*, requires a county to support indigent persons only in the event they are not assisted by other sources. To the extent care was provided prior to the 1982 legislation, the county's obligation had been reduced. Also, the state's assumption of full funding responsibility prior to the 1982 legislation was not intended to be temporary. The 1978 legislation that assumed funding responsibility was limited to one year, but similar legislation in 1979 contained no such limiting language. Although the state asserted the health care program was never operated by the state, the Legislature, in adopting Medi-Cal, shifted responsibility for indigent medical care from counties to the state. Medi-Cal permitted county boards of supervisors to prescribe rules (*Welf. & Inst. Code, § 14000.2*), and Medi-Cal was administered by state departments and agencies. *County of San Diego v. State of California (1997) 15 Cal 4th 68, 61 Cal Rptr 2d 134, 931 P2d 312, 1997 Cal LEXIS 630*.

In a county's action against the state to determine the county's rights under *Cal. Const., art. XIII B, § 6* (reimbursement to local government for state-mandated new program or higher level of service), the Legislature's 1982 transfer to counties of responsibility for providing health care for medically indigent adults mandated a reimbursable new program, despite the state's assertion that the county had discretion to refuse to provide such care. While *Welf. & Inst. Code, § 17001*, confers discretion on counties to provide general assistance, there are limits to this discretion. The standards must meet the objectives of *Welf. & Inst. Code, § 17000* (counties shall relieve and support "indigent persons"), or be struck down as void by the courts. As to eligibility standards, counties must provide care to all adult medically indigent persons (MIP's). Although *Welf. & Inst. Code, § 17000*, does not define "indigent persons," the 1982 legislation made clear that adult MIP's were within this category. The coverage history of Medi-Cal demonstrates the Legislature has always viewed all adult MIP's as "indigent persons" under *Welf. & Inst. Code, § 17000*. The Attorney General also opined that the 1971 inclusion of MIP's in Medi-Cal did not alter the duty of counties to provide care to indigents not eligible for Medi-Cal, and this opinion was entitled to considerable weight. Absent controlling authority, the opinion was persuasive since it was presumed the Legislature was cognizant of the Attorney General's construction and would have taken corrective action if it disagreed. *County of San Diego v. State of California (1997) 15 Cal 4th 68, 61 Cal Rptr 2d 134, 931 P2d 312, 1997 Cal LEXIS 630*.

In a county's action against the state to determine the county's rights under *Cal. Const., art. XIII B, § 6* (reimbursement to local government for state-mandated new program or higher level of service), the Legislature's 1982 transfer to counties of responsibility for providing health care for medically indigent adults mandated a reimbursable new program, despite the state's assertion that the county had discretion to refuse to provide such care by setting its own service standards. *Welf. & Inst. Code, § 17000*, mandates that medical care be provided to indigents, and *Welf. & Inst. Code, § 10000*, requires that such care be provided promptly and humanely. There is no discretion concerning whether to provide such care. Courts construing *Welf. & Inst. Code, § 17000*, have held it imposes a mandatory duty upon counties to provide medically necessary care, not just emergency care, and it has been interpreted to impose a minimum standard of care. Until its repeal in 1992, *Health & Saf. Code, § 1442.5*, former subd. (c), also spoke to the level of services that counties had to provide under *Welf. & Inst. Code, § 17000*, requiring that the availability and quality of services provided to indigents directly by the county or alternatively be the same as that available to nonindigents in private facilities in that county. *County of San Diego v. State of California (1997) 15 Cal 4th 68, 61 Cal Rptr 2d 134, 931 P2d 312, 1997 Cal LEXIS 630*.

Ed C § 48915, insofar as it compels suspension and mandates a recommendation of expulsion for certain offenses, constitutes a "higher level of service" under *Cal Const Art XIII B, § 6*, and imposes a reimbursable state mandate for all resulting hearing costs, even those costs attributable to procedures required by federal law. *San Diego Unified School Dist. v. Commission on State Mandates (2004) 33 Cal 4th 859, 16 Cal Rptr 3d 466, 94 P3d 589, 2004 Cal LEXIS 7079*.

6. New Program Not Mandated

The provisions of *Cal. Const., art. XIII B, § 6* (reimbursement to local agencies for new programs and services), have no application to, and the state need not provide subvention for, the costs incurred by local agencies in providing to their employees the same increase in workers' compensation benefits that employees of private individuals or organizations receive. Although the state requires that employers provide workers' compensation for nonexempt categories of employees, increases in the cost of providing this employee benefit are not subject to reimbursement as state-mandated

programs or higher levels of service within the meaning of art. XIII B, § 6. Accordingly, the State Board of Control properly denied reimbursement to local governmental entities for costs incurred in providing state-mandated increases in workers' compensation benefits. (*Disapproving City of Sacramento v. State of California* (1984) 156 Cal.App.3d 182, 203 Cal.Rptr. 258, 1984 Cal App LEXIS 2079, to the extent it reached a different conclusion with respect to expenses incurred by local entities as the result of a newly enacted law requiring that all public employees be covered by unemployment insurance.) *County of Los Angeles v. State of California* (1987) 43 Cal 3d 46, 233 Cal Rptr 38, 729 P2d 202, 1987 Cal LEXIS 273.

In an administrative mandamus proceeding brought by a city to compel the State Board of Control to grant the city's claim to reimbursement for increased employer contribution rates to the Public Employees' Retirement System (PERS), attributable to transfers of reserve funds to a special temporary benefits fund pursuant to an act of the Legislature, the trial court properly denied the writ on the ground that such an increase was not reimbursable under *Cal. Const., art. XIII B, § 6*, as a state-mandated local expense. Bearing the costs of employment is not a "service" that the city is required by state law to provide in its governmental function, and where such costs as pension contributions, workers' compensation insurance, and other expenses of public employment increase incidentally to legislatively imposed changes in the operation of a state agency like PERS, reimbursement of local government employers is not compelled by the legislative purposes of § 6 (control of excessive taxation and spending, prevention of shift of financial burdens of programs from state to local governments). *City of Anaheim v. State of California* (1987, Cal App 2d Dist) 189 Cal App 3d 1478, 235 Cal Rptr 101, 1987 Cal App LEXIS 1462.

In a class action by a city on behalf of all local governments in the state against the state, in which it was alleged that Stats. 1978, ch. 2, extending mandatory coverage under the state's unemployment insurance law to include state and local governments and nonprofit corporations, mandated a new program or higher level of service on local agencies for which reimbursement by the state was required under Cal. Const., art. XIII B, the trial court did not err in granting summary judgment for the state on the ground that the local costs of providing such coverage were not subject to subvention under Cal. Const., art. XIII B, or parallel statutes (former Rev. & Tax. Code, §§ 2207, 2231, subd. (a); *Gov. Code, §§ 17514, 17561*, subd. (a)). The state had not compelled provision of new or increased "service to the public" at the local level, nor had it imposed a state policy "uniquely" on local governments. The phrase, "To force programs on local governments," in the voters' pamphlet relating to *Cal. Const., art. XIII B, § 6*, confirmed that the intent underlying that section was to require reimbursement to local agencies for the cost involved in carrying out functions peculiar to government, not for expenses incurred by local agencies as an incidental impact of laws that applied generally to all state residents and entities. *City of Sacramento v. State of California* (1990) 50 Cal 3d 51, 266 Cal Rptr 139, 785 P2d 522, 1990 Cal LEXIS 148.

The constitutional subvention provision (*Cal. Const., art. XIII B, § 6*) and the statutory provisions which preceded it do not expressly say that the state is not required to provide a subvention for costs imposed by a federal mandate. Rather, that conclusion follows from the plain language of the subvention provisions themselves. The constitutional provision requires state subvention when "the Legislature or any State agency mandates a new program or higher level of service" on local agencies. Likewise, the earlier statutory provisions required subvention for new programs or higher levels of service mandated by legislative act or executive regulation. When the federal government imposes costs on local agencies, those costs are not mandated by the state and thus would not require a state subvention. Instead, such costs are exempt from local agencies' taxing and spending limitations. This should be true even though the state has adopted an implementing statute or regulation pursuant to the federal mandate, so long as the state had no "true choice" in the manner of implementation of the federal mandate. *Hayes v. Commission on State Mandates* (1992, Cal App 3d Dist) 11 Cal App 4th 1564, 15 Cal Rptr 2d 547, 1992 Cal App LEXIS 1498.

The trial court properly denied a writ of mandate sought by a county to compel the Commission on State Mandates to vacate its determination that *Pen. Code, § 987.9* (funding by court for preparation of defense for indigent defendants in capital cases), did not constitute a state mandate, for which the state was obligated to reimburse the county pursuant to *Cal. Const., art. XIII B, § 6*. The requirements of *Pen. Code, § 987.9*, are not state mandated. Pursuant to the federal Constitution's guaranty of the right to counsel and its due process clause (U.S. Const., 6th and 14th Amends.), the right to counsel of an indigent defendant includes the right to the use of experts to assist counsel in preparing a defense. Thus, even in the absence of *Pen. Code, § 987.9*, counties would be responsible for providing ancillary services under those federal constitutional guaranties. And, even assuming that the provisions of the statute constitute a new program, it does not necessarily mean that the program is a state mandate under *Cal. Const., art. XIII B, § 6*. If a local entity has alternatives under the statute other than the mandated contribution, that contribution does not constitute a state mandate. In fact, the requirements under *Pen. Code, § 987.9*, are not mandated by the state, but rather by principles of constitutional

law and a superior court's finding of reasonableness and necessity under the statute. *County of Los Angeles v. Commission on State Mandates* (1995, Cal App 2d Dist) 32 Cal App 4th 805, 38 Cal Rptr 2d 304, 1995 Cal App LEXIS 161, review denied (1995, Cal) 1995 Cal LEXIS 3339.

Gov. Code, § 29550, which authorizes counties to charge cities and other local entities for the costs of booking into county jails persons who had been arrested by employees of the cities and other entities, does not establish a new program or higher level of service under *Cal. Const., art. XIII B, § 6*, which imposes limits on the state's authority to mandate new programs or increased services on local governmental entities, since the shift in funding is not from the State to the local entity but from county to city. At the time *Gov. Code, § 29550*, was enacted, and long before, the financial and administrative responsibility associated with the operation of county jails and detention of prisoners was borne entirely by the county (*Gov. Code, § 29602*). In this respect, counties are not considered agents of the state. Moreover, *Cal. Const., art. XIII B*, treats cities and counties alike as "local government." Thus, for purposes of subvention analysis, it is clear that counties and cities were intended to be treated alike as part of "local government"; both are considered local agencies or political subdivisions of the state. Nothing in *Cal. Const., art. XIII B* prohibits the shifting of costs between local governmental entities. *City of San Jose v. State of California* (1996, Cal App 6th Dist) 45 Cal App 4th 1802, 53 Cal Rptr 2d 521, 1996 Cal App LEXIS 520, review denied (1996, Cal) 1996 Cal LEXIS 5314.

Gov. Code, § 29550, which authorizes counties to charge cities and other local entities for the costs of booking into county jails persons who had been arrested by employees of the cities and other entities, does not shift costs so as to constitute a state "mandate" within the meaning of *Cal. Const., art. XIII B, § 6*, which imposes limits on the State's authority to mandate new programs or increased services on local governmental entities. The pertinent words of the statute state that "a county may impose a fee on a city." Thus, it does not require that counties impose fees on other local entities, but only authorizes them to do so. Although as a practical result of the authorization under *Gov. Code, § 29550*, a city is required to bear costs it did not formerly bear, a mandate cannot be read into language that is plainly discretionary. *Cal. Const., art. XIII B, § 6*, was not intended to entitle local entities to reimbursement for all increased costs resulting from legislative enactments, but only those costs mandated by a new program or an increased level of service imposed upon them by the State. *City of San Jose v. State of California* (1996, Cal App 6th Dist) 45 Cal App 4th 1802, 53 Cal Rptr 2d 521, 1996 Cal App LEXIS 520, review denied (1996, Cal) 1996 Cal LEXIS 5314.

The California Commission on State Mandates properly denied a test claim brought by a city's redevelopment agency seeking a determination that the state should reimburse the agency for moneys transferred into its low- and moderate-income housing fund pursuant to *Health & Saf. Code, §§ 33334.2 and 33334.3*, which require a 20 percent deposit of the particular form of financing received by the agency, i.e., tax increment financing generated from its project areas. Under *Health & Saf. Code, § 33678*, which provides that tax increment financing is not deemed to be the "proceeds of taxes," the source of funds used by the agency was exempt from the scope of *Cal. Const., art. XIII B, § 6* (subvention). Although *Cal. Const., art. XIII B, § 6*, does not expressly discuss the source of funds used by an agency to fund a program, the historical and contextual context of this provision demonstrates that it applies only to costs recovered solely from tax revenues. Because of the nature of the financing they receive (i.e., tax increment financing), redevelopment agencies are not subject to appropriations limitations or spending caps, they do not expend any proceeds of taxes, and they do not raise general revenues for the local entity. Also, the state is not transferring any program for which it was formerly responsible. Therefore, the purposes of state subvention laws are not furthered by requiring reimbursement when redevelopment agencies are required to allocate their tax increment financing in a particular manner, as in the operation of *Health & Saf. Code, §§ 33334.2 and 33334.3*. *Redevelopment Agency v. Commission on State Mandates* (1997, Cal App 4th Dist) 55 Cal App 4th 976, 64 Cal Rptr 2d 270, 1997 Cal App LEXIS 474, review denied (1997, Cal) 1997 Cal LEXIS 5622.

An amendment to *Lab C § 4707*, which eliminated local safety members of the Public Employees' Retirement System (PERS) from the coordination provisions for death benefits payable under workers' compensation and under PERS, so that the survivors of a local safety member of PERS who is killed in the line of duty receives both a death benefit under workers' compensation and a special death benefit under PERS, instead of only the latter, did not mandate a new program or higher level of service on local governments, requiring a subvention of funds to reimburse the local government under *Const Art XIII B § 6*. The amendment addressed death benefits, not the equipment used by local safety members. Increasing the cost of providing services could not be equated with requiring an increased level of service under *Const Art XIII B § 6*. A higher cost to the local government for compensating its employees is not the same as a higher cost of providing services to the public. Further, the amendment simply put local government employers on the same footing as all other nonexempt employers, requiring that they provide the workers' compensation death benefit. That the amendment affected only local government did not compel the conclusion that it imposed a unique requirement

on local government. *City of Richmond v. Commission on State Mandates* (1998, Cal App 3d Dist) 64 Cal App 4th 1190, 75 Cal Rptr 2d 754, 1998 Cal App LEXIS 546, review denied (1998, Cal) 1998 Cal LEXIS 5509.

Legislation requiring local redevelopment agencies to contribute to a local Educational Revenue Augmentation Fund (ERAF) did not constitute a reimbursable state mandate under *Cal Const art XIII B § 6*. The ERAF legislation was, in part, an exercise of the Legislature's authority to apportion property tax revenues; the shift of a portion of redevelopment agency funds to local schools was merely the most recent adjustment in the historical fluidity of the fiscal relationship between local governments and schools. In addition, subvention is required only when the costs in question can be recovered solely from tax revenues and here the Legislature provided that a redevelopment agency's obligations for the local ERAF fund could be paid from any legally available source. *City of El Monte v. Commission on State Mandates* (2000, Cal App 3d Dist) 83 Cal App 4th 266, 99 Cal Rptr 2d 333, 2000 Cal App LEXIS 672, review denied (2000, Cal) 2000 Cal LEXIS 8639.

The state was not obligated to reimburse local governments by virtue of its reduction of property taxes previously allocated to local governments and its simultaneous placement of an equal amount of property tax revenues into Educational Revenue Augmentation Funds (ERAF) (former Rev & Tax C § 97.03) for distribution to school districts, since the reallocation of revenue did not result in reimbursable "costs" and the ERAF legislation did not amount to the imposition of a "new program or higher level of service" within the meaning of *Cal Const art XIII B § 6*. Section 6 subvention was intended for increases in actual costs, not lost revenue, and the state had not imposed responsibility for any program that local governments had not always had a substantial share in supporting. Nor did Proposition 98 (*Cal Const art XVI § 8*), providing a minimum level of funding for schools, confer a right of subvention on counties. Proposition 98 merely provides the formulas for determining the minimum to be appropriated every budget year. *County of Sonoma v. Commission on State Mandates* (2000, Cal App 1st Dist) 84 Cal App 4th 1264, 101 Cal Rptr 2d 784, 2000 Cal App LEXIS 889, review denied (2001, Cal) 2001 Cal LEXIS 1445.

Domestic violence training requirement for local police officers, pursuant to *Cal. Penal Code § 13519(e)*, was not an unfunded mandate entitling a county to reimbursement from the state; police officers already had continuing education requirements, so any new costs were minimal. *County of Los Angeles v. Commission on State Mandates* (2003, Cal App 2d Dist) 110 Cal App 4th 1176, 2 Cal Rptr 3d 419, 2003 Cal App LEXIS 1137.

No hearing costs incurred in carrying out those expulsions that are discretionary under *Ed C § 48915*, including costs related to hearing procedures claimed to exceed the requirements of federal law, are reimbursable; to the extent § 48915 makes expulsions discretionary, it does not reflect a new program or a higher level of service related to an existing program. *San Diego Unified School Dist. v. Commission on State Mandates* (2004) 33 Cal 4th 859, 16 Cal Rptr 3d 466, 94 P3d 589, 2004 Cal LEXIS 7079.

Even if the hearing procedures set forth in *Ed C § 48918* constitute a new program or higher level of service, this statute does not trigger any right to reimbursement because the hearing provisions that assertedly exceed federal requirements are merely incidental to fundamental federal due process requirements and the added costs of such procedures are de minimis; all hearing procedures set forth in § 48918 properly should be considered to have been adopted to implement a federal due process mandate, and hence all such hearing costs are nonreimbursable under *Cal Const Art XIII B § 6*, and *Gov C § 17557(c)*. *San Diego Unified School Dist. v. Commission on State Mandates* (2004) 33 Cal 4th 859, 16 Cal Rptr 3d 466, 94 P3d 589, 2004 Cal LEXIS 7079.

California Public Safety Officers Procedural Bill of Rights Act, *Gov C § 3300 et seq.*, is not a reimbursable mandate as to school districts and special districts that are permitted by statute, but not required, to employ peace officers who supplement the general law enforcement units of cities and counties. *Department of Finance v. Commission on State Mandates* (2009, 3d Dist) 2009 Cal App LEXIS 152.

Trial court erred in upholding the California Commission on State Mandates' determination that, as to school districts not compelled by statute to employ peace officers, the California Public Safety Officers Procedural Bill of Rights Act, *Gov C § 3300 et seq.*, requirements were a reimbursable state mandate where its judgment rested on the insupportable legal conclusion that the districts, identified in *Gov C § 3301*, were as a practical matter compelled to exercise their authority to hire peace officers; districts in issue were authorized, but not required, to provide their own peace officers and did not have provision of police protection as an essential and basic function. *Department of Finance v. Commission on State Mandates* (2009, 3d Dist) 2009 Cal App LEXIS 152.

To the extent that *Gov. Code, § 17556*, subd. (f), as amended, provides that the state need not reimburse local governments for imposing duties that are expressly included in or necessary to implement a ballot measure, the statute is

consistent with *Cal. Const., art. XIII B, § 6*. However, any duty not expressly included in or necessary to implement the ballot measure gives rise to a reimbursable state mandate, even if the duty is reasonably within the scope of the ballot measure. *California School Boards Assn. v. State of California (2009, 3d Dist) 2009 Cal App LEXIS 302*.

"Necessary to implement" language of *Gov. Code, § 17556*, subd. (f), is consistent with *Cal. Const., art. XIII B, § 6*, because it denies reimbursement only to the extent that costs imposed by a statute are necessary to implement a ballot measure; therefore, the "necessary to implement" language of the statute does not violate *Cal. Const., art. XIII B, § 6*. *California School Boards Assn. v. State of California (2009, 3d Dist) 2009 Cal App LEXIS 302*.

To the extent that *Gov. Code, § 17556*, subd. (f), as amended, allows the legislature to impose on local governments nonreimbursable costs resulting from duties that are necessary to implement or expressly included in a ballot measure, it does not violate *Cal. Const., art. XIII B, § 6*; however, additional language declaring that no reimbursement is necessary for duties that are reasonably within the scope of a ballot measure is impermissibly broad because it allows for denial of reimbursement when reimbursement is required by *Cal. Const., art. XIII B, § 6*. *California School Boards Assn. v. State of California (2009, 3d Dist) 2009 Cal App LEXIS 302*.

7. Other Issues

Because *Gov C § 17516(c)* was unconstitutional to the extent that it exempted regional water quality control boards from the constitutional state mandate subvention requirement, a trial court properly issued a writ of mandate directing the California Commission on State Mandates to resolve, on the merits and without reference to § 17516(c), test claims presented by a county and several cities seeking reimbursement for carrying out obligations required by a National Pollutant Discharge Elimination System Permit for municipal stormwater and urban runoff discharges that was issued by a regional water quality control board. *County of Los Angeles v. Commission on State Mandates (2007, Cal App 2d Dist) 150 Cal App 4th 898, 58 Cal Rptr 3d 762, 2007 Cal App LEXIS 711*.

Gov C § 17516c is unconstitutional to the extent that it purports to exempt orders issued by regional water quality control boards from the definition of "executive orders" for which subvention of funds to local governments for carrying out state mandates is required pursuant to *Cal Const Art XIII B, § 6* because the exemption contravenes the clear, unequivocal intent of *Cal Const Art XIII B, § 6* that subvention of funds was required whenever any state agency mandated a new program or higher level of service on any local government, and whether one or both of the subject two obligations constitutes a state mandate necessitating subvention of funds under *Cal Const Art XIII B, § 6* is an issue that must in the first instance be resolved by the California Commission on State Mandates. Moreover, a contrary conclusion is not compelled by virtue of the fact that *Gov C § 17516c* essentially mirrors the language of *Rev & Tax C § 2209(c)* because a statute cannot trump the constitution. *County of Los Angeles v. Commission on State Mandates (2007, Cal App 2d Dist) 150 Cal App 4th 898, 58 Cal Rptr 3d 762, 2007 Cal App LEXIS 711*.

Under *Rev. & Tax. Code, § 2231*, subd. (a), requiring the state to reimburse local agencies for all costs mandated by the state, as defined in *Rev. & Tax. Code, § 2207*, subd. (a), defining such costs as any increased costs a local agency is required to incur as a result of any law enacted after January 1, 1973, the Legislature had a statutory duty to reimburse two counties for all state-mandated costs incurred after the 1974-75 fiscal year pursuant to *Stats. 1974, ch. 1392 (Gov. Code, § 23300 et seq.)* in connection with the defeat of four proposed new counties. Although *Cal. Const., art. XIII B, § 6*, subd. (c), approved in 1980, provided the Legislature may, but need not, reimburse local governments for costs of legislative mandates enacted prior to January 1, 1975, the Legislature in 1980 amended *Rev. & Tax. Code, § 2207*, thereby reaffirming its statutory obligation to reimburse local agencies for the costs defined in § 2207, subd. (a), which constituted the exercise of legislative discretion authorized by *Cal. Const., art. XIII B, § 6*, subd. (c). The mandatory provisions of *Rev. & Tax. Code, § 2231*, do not restrict legislative power, and the Legislature is free to amend or repeal it as it applies to pre-1975 legislative mandates. *County of Los Angeles v. State of California (1984, Cal App 2d Dist) 153 Cal App 3d 568, 200 Cal Rptr 394, 1984 Cal App LEXIS 1807*.

The Legislature's initial appropriation to reimburse counties for the costs of *Pen. Code, § 987.9* (funding by court for preparation of defense for indigent defendants in capital cases), was not a final and unchallengeable determination that the statute constitutes a state mandate, nor did the Commission on State Mandates err in finding that the statute is not a state mandate, despite the Legislature's finding to the contrary in a later appropriations bill. The commission was not bound by the Legislature's determination, and it had discretion to determine whether a state mandate existed. The comprehensive administrative procedures for resolution of claims arising out of *Cal. Const., art. XIII B, § 6 (Gov. Code, § 17500 et seq.)*, are the exclusive procedures by which to implement and enforce the constitutional provision. Thus, the commission, as a quasi-judicial body, has the sole and exclusive authority to adjudicate whether a state mandate exists.

Any legislative findings are irrelevant to the issue of whether a state mandate exists, and the commission properly determined that no such mandate existed. In any event, the Legislature itself ceased to regard the provisions of *Pen. Code*, § 987.9, as a state mandate in 1983. *County of Los Angeles v. Commission on State Mandates* (1995, Cal App 2d Dist) 32 Cal App 4th 805, 38 Cal Rptr 2d 304, 1995 Cal App LEXIS 161, review denied (1995, Cal) 1995 Cal LEXIS 3339.

School districts, which sought reimbursement pursuant to *Cal. Const.*, art. XIII B, § 6, for the costs of a state mandated desegregation program, waived their nonstatutory remedy for such costs incurred after the Legislature deleted funds in a claims bill to pay for the costs, since their statutory cause of action under *Gov. Code*, § 17612, accrued on that date and they could have avoided the imposition of state mandated costs at any time after that cause of action accrued by timely use of the statutory remedy. *Gov. Code*, § 17612, provides, as to future state mandated expenditures, an efficacious procedure for the implementation of local agency rights under *Cal. Const.*, art. XIII B, § 6. Thus, as to such expenditures, the exercise of the constitutional right to avoid involuntary expenditures is not unduly restricted. There is no statutory remedy of reimbursement of state mandated expenditures that could have been prevented after funding has been deleted from the local government claims bill. The courts accordingly must limit the remedy for future expenditures to the procedures established by the Legislature in *Gov. Code*, § 17612. It follows that any claim to reimbursement of subsequent costs is waived by the failure to seek the relief provided by that statute. *Berkeley Unified School Dist. v. State of California* (1995, Cal App 3d Dist) 33 Cal App 4th 350, 39 Cal Rptr 2d 326, 1995 Cal App LEXIS 264, review denied (1995, Cal) 1995 Cal LEXIS 4298.

The judicially created remedy to enforce the right of local entities arising under *Cal. Const.*, art. XIII B, § 6, to reimbursement for the costs of state-mandated programs is subject to the four-year limitations period provided in *Code Civ. Proc.*, § 343 (action for relief for which no period of limitations previously provided). *Berkeley Unified School Dist. v. State of California* (1995, Cal App 3d Dist) 33 Cal App 4th 350, 39 Cal Rptr 2d 326, 1995 Cal App LEXIS 264, review denied (1995, Cal) 1995 Cal LEXIS 4298.

A cause of action by school districts for reimbursement pursuant to *Cal. Const.*, art. XIII B, § 6, for the costs of a state-mandated desegregation program accrued, pursuant to *Gov. Code*, § 17612, on the date the Legislature deleted funds in a claims bill to pay for the costs, and accrual was not postponed until the statute of limitations had run on the state's right to judicial review of an administrative determination in a test claim that there was a state mandate or until final judgment in any litigation brought by the test claimant or the state. Although the administrative decision in the test claim was not yet free of direct attack, under the doctrine of exhaustion of administrative remedies, judicial interference is withheld only until the administrative process has run its course, and that had occurred when, in the test claim case, the administrative agency had approved the claim that the desegregation regulations imposed a state mandate and issued guidelines for reimbursement for the claimed expenditures from the Legislature. *Gov. Code*, § 17612, implies that judicial interference must be withheld until the narrowly prescribed legislative process has also run its course. It does not imply that the judicial forum is unavailable thereafter. *Berkeley Unified School Dist. v. State of California* (1995, Cal App 3d Dist) 33 Cal App 4th 350, 39 Cal Rptr 2d 326, 1995 Cal App LEXIS 264, review denied (1995, Cal) 1995 Cal LEXIS 4298.

In administrative mandamus proceedings by a city's redevelopment agency against the Commission on State Mandates to challenge the commission's ruling that the agency was not entitled to reimbursement for housing costs the agency incurred (*Cal. Const.*, art. XIII B, § 6; *Gov. Code*, § 17550 et seq.; *Health & Saf. Code*, §§ 33334.2, 33334.3), the trial court erred in denying the Department of Finance's motion to intervene. The department and the commission are not merely two agents of the state representing the same interests. Separate statutory schemes create and govern the department and the commission, and since the department is authorized to sue the commission (*Gov. Code*, §§ 13070, 17559), it is more like an adversary party than it is an equivalent to the commission itself. Moreover, the commission is a quasi-judicial body that hears both sides of the dispute. In light of the department's right to notice and participation in the administrative hearings before the commission, and in light of its duty to supervise the financial policies of the state (*Gov. Code*, § 13070), the relief requested by the agency, subvention of state funds, would have affected the interests of the department. Thus, the department was a real party in interest, and should have been named in the agency's writ petition. It was an indispensable party under *Code Civ. Proc.*, § 389, subd. (a), and it had an interest against the success of the agency on its subvention claim (*Code Civ. Proc.*, § 387, subd. (a)). Also, a ruling in the department's absence could have impaired its ability to protect its interests in the subject matter of the action (*Code Civ. Proc.*, § 387, subd. (b)). *Redevelopment Agency v. California Comm'n on State Mandates* (1996, Cal App 4th Dist) 43 Cal App 4th 1188, 51 Cal Rptr 2d 100, 1996 Cal App LEXIS 267.

The Legislative Counsel's determination that *Gov. Code*, § 29550, which authorizes counties to charge cities and other local entities for the costs of booking into county jails persons who had been arrested by employees of the cities

and other entities, imposed a state mandated local program was not determinative of the ultimate issue whether the enactment constituted a state mandate under *Cal. Const., art. XIII B, § 6*. The legislative scheme contained in *Gov. Code, § 17500 et seq.*, makes clear that this issue is to be decided by the State Commission on Mandates. The statutory scheme contemplates that the commission, as a quasi-judicial body, has the sole and exclusive authority to adjudicate whether a state mandate exists. Thus, any legislative findings are irrelevant to the issue of whether a state mandate exists. *City of San Jose v. State of California (1996, Cal App 6th Dist) 45 Cal App 4th 1802, 53 Cal Rptr 2d 521, 1996 Cal App LEXIS 520*, review denied (1996, Cal) *1996 Cal LEXIS 5314*.

In a county's action against the state to determine the county's rights under *Cal. Const., art. XIII B, § 6* (reimbursement to local government for state-mandated new program or higher level of service), after the Commission on State Mandates indicated the Legislature's 1982 transfer to counties of the responsibility for providing health care for medically indigent adults did not mandate a reimbursable new program, a mandamus proceeding under *Code Civ. Proc., § 1085*, was not an improper vehicle for challenging the commission's position. Mandamus under *Code Civ. Proc., § 1094.5*, commonly denominated "administrative" mandamus, is mandamus still. The full panoply of rules applicable to ordinary mandamus applies to administrative mandamus proceedings, except where they are modified by statute. Where entitlement to mandamus relief is adequately alleged, a trial court may treat a proceeding under *Code Civ. Proc., § 1085*, as one brought under *Code Civ. Proc., § 1094.5*, and should overrule a demurrer asserting that the wrong mandamus statute has been invoked. In any event, the determination whether the statutes at issue established a mandate under *Cal. Const., art. XIII B, § 6*, was a question of law. Where a purely legal question is at issue, courts exercise independent judgment, no matter whether the issue arises by traditional or administrative mandate. *County of San Diego v. State of California (1997) 15 Cal 4th 68, 61 Cal Rptr 2d 134, 931 P2d 312, 1997 Cal LEXIS 630*.

TAB "35"

Cal Gov Code § 17500 (2010)
§ 17500. Legislative findings and declarations

The Legislature finds and declares that the existing system for reimbursing local agencies and school districts for the costs of state-mandated local programs has not provided for the effective determination of the state's responsibilities under Section 6 of Article XIII B of the California Constitution. The Legislature finds and declares that the failure of the existing process to adequately and consistently resolve the complex legal questions involved in the determination of state-mandated costs has led to an increasing reliance by local agencies and school districts on the judiciary and, therefore, in order to relieve unnecessary congestion of the judicial system, it is necessary to create a mechanism which is capable of rendering sound quasi-judicial decisions and providing an effective means of resolving disputes over the existence of state-mandated local programs.

It is the intent of the Legislature in enacting this part to provide for the implementation of Section 6 of Article XIII B of the California Constitution. Further, the Legislature intends that the Commission on State Mandates, as a quasi-judicial body, will act in a deliberative manner in accordance with the requirements of Section 6 of Article XIII B of the California Constitution.

Cal Gov Code § 17500

TAB "36"

Cal Gov Code § 17514 (2010)
§ 17514. "Costs mandated by the state"

"Costs mandated by the state" means any increased costs which a local agency or school district is required to incur after July 1, 1980, as a result of any statute enacted on or after January 1, 1975, or any executive order implementing any statute enacted on or after January 1, 1975, which mandates a new program or higher level of service of an existing program within the meaning of Section 6 of Article XIII B of the California Constitution.

Cal Gov Code § 17514

TAB "37"

Cal Gov Code § 17556 (2010)

§ 17556. Criteria for not finding costs mandated by state

The commission shall not find costs mandated by the state, as defined in Section 17514, in any claim submitted by a local agency or school district, if, after a hearing, the commission finds any one of the following:

(a) The claim is submitted by a local agency or school district that requested legislative authority for that local agency or school district to implement the program specified in the statute, and that statute imposes costs upon that local agency or school district requesting the legislative authority. A resolution from the governing body or a letter from a delegated representative of the governing body of a local agency or school district that requests authorization for that local agency or school district to implement a given program shall constitute a request within the meaning of this subdivision.

(b) The statute or executive order affirmed for the state a mandate that had been declared existing law or regulation by action of the courts.

(c) The statute or executive order imposes a requirement that is mandated by a federal law or regulation and results in costs mandated by the federal government, unless the statute or executive order mandates costs that exceed the mandate in that federal law or regulation. This subdivision applies regardless of whether the federal law or regulation was enacted or adopted prior to or after the date on which the state statute or executive order was enacted or issued.

(d) The local agency or school district has the authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service.

(e) The statute, executive order, or an appropriation in a Budget Act or other bill provides for offsetting savings to local agencies or school districts that result in no net costs to the local agencies or school districts, or includes additional revenue that was specifically intended to fund the costs of the state mandate in an amount sufficient to fund the cost of the state mandate.

(f) The statute or executive order imposes duties that are necessary to implement, reasonably within the scope of, or expressly included in, a ballot measure approved by the voters in a statewide or local election. This subdivision applies regardless of whether the statute or executive order was enacted or adopted before or after the date on which the ballot measure was approved by the voters.

(g) The statute created a new crime or infraction, eliminated a crime or infraction, or changed the penalty for a crime or infraction, but only for that portion of the statute relating directly to the enforcement of the crime or infraction.

Cal Wat Code § 13000 (2010)

§ 13000. Legislative findings and declarations

The Legislature finds and declares that the people of the state have a primary interest in the conservation, control, and utilization of the water resources of the state, and that the quality of all the waters of the state shall be protected for use and enjoyment by the people of the state.

The Legislature further finds and declares that activities and factors which may affect the quality of the waters of the state shall be regulated to attain the highest water quality which is reasonable, considering all demands being made and to be made on those waters and the total values involved, beneficial and detrimental, economic and social, tangible and intangible.

The Legislature further finds and declares that the health, safety and welfare of the people of the state requires that there be a statewide program for the control of the quality of all the waters of the state; that the state must be prepared to exercise its full power and jurisdiction to protect the quality of waters in the state from degradation originating inside or outside the boundaries of the state; that the waters of the state are increasingly influenced by interbasin water development projects and other statewide considerations; that factors of precipitation, topography, population, recreation, agriculture, industry and economic development vary from region to region within the state; and that the statewide program for water quality control can be most effectively administered regionally, within a framework of statewide coordination and policy.

WATER CODE
Division 7. Water Quality
Chapter 2. Definitions

GO TO CALIFORNIA CODES ARCHIVE DIRECTORY

Cal Wat Code § 13050 (2010)

§ 13050. Terms used in this division

As used in this division:

- (a) "State board" means the State Water Resources Control Board.
- (b) "Regional board" means any California regional water quality control board for a region as specified in Section 13200.
- (c) "Person" includes any city, county, district, the state, and the United States, to the extent authorized by federal law.
- (d) "Waste" includes sewage and any and all other waste substances, liquid, solid, gaseous, or radioactive, associated with human habitation, or of human or animal origin, or from any producing, manufacturing, or processing operation, including waste placed within containers of whatever nature prior to, and for purposes of, disposal.
- (e) "Waters of the state" means any surface water or groundwater, including saline waters, within the boundaries of the state.
- (f) "Beneficial uses" of the waters of the state that may be protected against quality degradation include, but are not limited to, domestic, municipal, agricultural and industrial supply; power generation; recreation; aesthetic enjoyment; navigation; and preservation and enhancement of fish, wildlife, and other aquatic resources or preserves.
- (g) "Quality of the water" refers to chemical, physical, biological, bacteriological, radiological, and other properties and characteristics of water which affect its use.
- (h) "Water quality objectives" means the limits or levels of water quality constituents or characteristics which are established for the reasonable protection of beneficial uses of water or the prevention of nuisance within a specific area.
- (i) "Water quality control" means the regulation of any activity or factor which may affect the quality of the waters of the state and includes the prevention and correction of water pollution and nuisance.
- (j) "Water quality control plan" consists of a designation or establishment for the waters within a specified area of all of the following:
 - (1) Beneficial uses to be protected.
 - (2) Water quality objectives.
 - (3) A program of implementation needed for achieving water quality objectives.

(k) "Contamination" means an impairment of the quality of the waters of the state by waste to a degree which creates a hazard to the public health through poisoning or through the spread of disease. "Contamination" includes any equivalent effect resulting from the disposal of waste, whether or not waters of the state are affected.

(l)

(1) "Pollution" means an alteration of the quality of the waters of the state by waste to a degree which unreasonably affects either of the following:

- (A) The waters for beneficial uses.
- (B) Facilities which serve these beneficial uses.

(2) "Pollution" may include "contamination."

(m) "Nuisance" means anything which meets all of the following requirements:

(1) Is injurious to health, or is indecent or offensive to the senses, or an obstruction to the free use of property, so as to interfere with the comfortable enjoyment of life or property.

(2) Affects at the same time an entire community or neighborhood, or any considerable number of persons, although the extent of the annoyance or damage inflicted upon individuals may be unequal.

(3) Occurs during, or as a result of, the treatment or disposal of wastes.

(n) "Recycled water" means water which, as a result of treatment of waste, is suitable for a direct beneficial use or a controlled use that would not otherwise occur and is therefor considered a valuable resource.

(o) "Citizen or domiciliary" of the state includes a foreign corporation having substantial business contacts in the state or which is subject to service of process in this state.

(p)

(1) "Hazardous substance" means either of the following:

(A) For discharge to surface waters, any substance determined to be a hazardous substance pursuant to Section 311(b)(2) of the Federal Water Pollution Control Act (33 U.S.C. Sec. 1251 et seq.).

(B) For discharge to groundwater, any substance listed as a hazardous waste or hazardous material pursuant to Section 25140 of the Health and Safety Code, without regard to whether the substance is intended to be used, reused, or discarded, except that "hazardous substance" does not include any substance excluded from Section 311(b)(2) of the Federal Water Pollution Control Act because it is within the scope of Section 311(a)(1) of that act.

(2) "Hazardous substance" does not include any of the following:

(A) Nontoxic, nonflammable, and noncorrosive stormwater runoff drained from underground vaults, chambers, or manholes into gutters or storm sewers.

(B) Any pesticide which is applied for agricultural purposes or is applied in accordance with a cooperative agreement authorized by Section 116180 of the Health and Safety Code, and is not discharged accidentally or for purposes of disposal, the application of which is in compliance with all applicable state and federal laws and regulations.

(C) Any discharge to surface water of a quantity less than a reportable quantity as determined by regulations issued pursuant to Section 311(b)(4) of the Federal Water Pollution Control Act.

(D) Any discharge to land which results, or probably will result, in a discharge to groundwater if the amount of the discharge to land is less than a reportable quantity, as determined by regulations adopted pursuant to Section 13271, for substances listed as hazardous pursuant to Section 25140 of the Health and Safety Code. No discharge shall be deemed a discharge of a reportable quantity until regulations set a reportable quantity for the substance discharged.

(q)

(1) "Mining waste" means all solid, semisolid, and liquid waste materials from the extraction, beneficiation, and processing of ores and minerals. Mining waste includes, but is not limited to, soil, waste rock, and overburden, as defined in Section 2732 of the Public Resources Code, and tailings, slag, and other processed waste materials, including cementitious materials that are managed at the cement manufacturing facility where the materials were generated.

Cal Wat Code § 13050

(2) For the purposes of this subdivision, "cementitious material" means cement, cement kiln dust, clinker, and clinker dust.

(r) "Master recycling permit" means a permit issued to a supplier or a distributor, or both, of recycled water, that includes waste discharge requirements prescribed pursuant to Section 13263 and water recycling requirements prescribed pursuant to Section 13523.1.

§ 13240. Formulation, adoption, and revision of plans

Each regional board shall formulate and adopt water quality control plans for all areas within the region. Such plans shall conform to the policies set forth in Chapter 1 (commencing with Section 13000) of this division and any state policy for water quality control. During the process of formulating such plans the regional boards shall consult with and consider the recommendations of affected state and local agencies. Such plans shall be periodically reviewed and may be revised.

HISTORY:

Added Stats 1969 ch 482 § 18, operative January 1, 1970.

TAB "43"

Cal Wat Code § 13263 (2009)

§ 13263. Requirements prescribed by board; Review, revision, and notice; Absence of vested right to discharge waste

(a) The regional board, after any necessary hearing, shall prescribe requirements as to the nature of any proposed discharge, existing discharge, or material change in an existing discharge, except discharges into a community sewer system, with relation to the conditions existing in the disposal area or receiving waters upon, or into which, the discharge is made or proposed. The requirements shall implement any relevant water quality control plans that have been adopted, and shall take into consideration the beneficial uses to be protected, the water quality objectives reasonably required for that purpose, other waste discharges, the need to prevent nuisance, and the provisions of Section 13241.

(b) A regional board, in prescribing requirements, need not authorize the utilization of the full waste assimilation capacities of the receiving waters.

(c) The requirements may contain a time schedule, subject to revision in the discretion of the board.

(d) The regional board may prescribe requirements although no discharge report has been filed.

(e) Upon application by any affected person, or on its own motion, the regional board may review and revise requirements. All requirements shall be reviewed periodically.

(f) The regional board shall notify in writing the person making or proposing the discharge or the change therein of the discharge requirements to be met. After receipt of the notice, the person so notified shall provide adequate means to meet the requirements.

(g) No discharge of waste into the waters of the state, whether or not the discharge is made pursuant to waste discharge requirements, shall create a vested right to continue the discharge. All discharges of waste into waters of the state are privileges, not rights.

(h) The regional board may incorporate the requirements prescribed pursuant to this section into a master recycling permit for either a supplier or distributor, or both, of recycled water.

(i) The state board or a regional board may prescribe general waste discharge requirements for a category of discharges if the state board or that regional board finds or determines that all of the following criteria apply to the discharges in that category:

- (1) The discharges are produced by the same or similar operations.
- (2) The discharges involve the same or similar types of waste.
- (3) The discharges require the same or similar treatment standards.

(4) The discharges are more appropriately regulated under general discharge requirements than individual discharge requirements.

(j) The state board, after any necessary hearing, may prescribe waste discharge requirements in accordance with this section.

Cal Wat Code § 13263

TAB "44"

Cal Wat Code § 13370 (2009)
§ 13370. Public interest in state implementation of provisions of federal act, etc.

The Legislature finds and declares as follows:

(a) The Federal Water Pollution Control Act (33 U.S.C. Sec. 1251 et seq.), as amended, provides for permit systems to regulate the discharge of pollutants and dredged or fill material to the navigable waters of the United States and to regulate the use and disposal of sewage sludge.

(b) The Federal Water Pollution Control Act, as amended, provides that permits may be issued by states which are authorized to implement the provisions of that act.

(c) It is in the interest of the people of the state, in order to avoid direct regulation by the federal government of persons already subject to regulation under state law pursuant to this division, to enact this chapter in order to authorize the state to implement the provisions of the Federal Water Pollution Control Act and acts amendatory thereof or supplementary thereto, and federal regulations and guidelines issued pursuant thereto, provided, that the state board shall request federal funding under the Federal Water Pollution Control Act for the purpose of carrying out its responsibilities under this program.

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

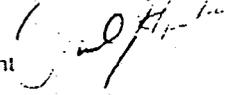

NOV 22 2002

OFFICE OF
WATER

MEMORANDUM

SUBJECT: Establishing Total Maximum Daily Load (TMDL) Wasteload Allocations (WLAs) for Storm Water Sources and NPDES Permit Requirements Based on Those WLAs

FROM: Robert H. Wayland, III, Director 
Office of Wetlands, Oceans and Watersheds

James A. Hanlon, Director 
Office of Wastewater Management

TO: Water Division Directors
Regions 1 - 10

This memorandum clarifies existing EPA regulatory requirements for, and provides guidance on, establishing wasteload allocations (WLAs) for storm water discharges in total maximum daily loads (TMDLs) approved or established by EPA. It also addresses the establishment of water quality-based effluent limits (WQBELs) and conditions in National Pollutant Discharge Elimination System (NPDES) permits based on the WLAs for storm water discharges in TMDLs. The key points presented in this memorandum are as follows:

NPDES-regulated storm water discharges must be addressed by the wasteload allocation component of a TMDL. See 40 C.F.R. § 130.2(h).

NPDES-regulated storm water discharges may not be addressed by the load allocation (LA) component of a TMDL. See 40 C.F.R. § 130.2 (g) & (h).

Storm water discharges from sources that are not currently subject to NPDES regulation may be addressed by the load allocation component of a TMDL. See 40 C.F.R. § 130.2(g).

It may be reasonable to express allocations for NPDES-regulated storm water discharges from multiple point sources as a single categorical wasteload allocation when data and information are insufficient to assign each source or outfall individual WLAs. See 40 C.F.R. § 130.2(i). In cases where wasteload allocations

Internet Address (URL) • <http://www.epa.gov>

Recycled/Recyclable • Printed with Vegetable Oil Based Inks on Recycled Paper (Minimum 30% Postconsumer)

are developed for categories of discharges, these categories should be defined as narrowly as available information allows.

The WLAs and LAs are to be expressed in numeric form in the TMDL. See 40 C.F.R. § 130.2(h) & (i). EPA expects TMDL authorities to make separate allocations to NPDES-regulated storm water discharges (in the form of WLAs) and unregulated storm water (in the form of LAs). EPA recognizes that these allocations might be fairly rudimentary because of data limitations and variability in the system.

NPDES permit conditions must be consistent with the assumptions and requirements of available WLAs. See 40 C.F.R. § 122.44(d)(1)(vii)(B).

WQBELs for NPDES-regulated storm water discharges that implement WLAs in TMDLs may be expressed in the form of best management practices (BMPs) under specified circumstances. See 33 U.S.C. § 1342(p)(3)(B)(iii); 40 C.F.R. § 122.44(k)(2)&(3). If BMPs alone adequately implement the WLAs, then additional controls are not necessary.

EPA expects that most WQBELs for NPDES-regulated municipal and small construction storm water discharges will be in the form of BMPs, and that numeric limits will be used only in rare instances.

When a non-numeric water quality-based effluent limit is imposed, the permit's administrative record, including the fact sheet when one is required, needs to support that the BMPs are expected to be sufficient to implement the WLA in the TMDL. See 40 C.F.R. §§ 124.8, 124.9 & 124.18.

The NPDES permit must also specify the monitoring necessary to determine compliance with effluent limitations. See 40 C.F.R. § 122.44(i). Where effluent limits are specified as BMPs, the permit should also specify the monitoring necessary to assess if the expected load reductions attributed to BMP implementation are achieved (e.g., BMP performance data).

The permit should also provide a mechanism to make adjustments to the required BMPs as necessary to ensure their adequate performance.

This memorandum is organized as follows:

- (I). Regulatory basis for including NPDES-regulated storm water discharges in WLAs in TMDLs;
- (II). Options for addressing storm water in TMDLs; and

- (III). Determining effluent limits in NPDES permits for storm water discharges consistent with the WLA

(I). Regulatory Basis for Including NPDES-regulated Storm Water Discharges in WLAs in TMDLs

As part of the 1987 amendments to the CWA, Congress added Section 402(p) to the Act to cover discharges composed entirely of storm water. Section 402(p)(2) of the Act requires permit coverage for discharges associated with industrial activity and discharges from large and medium municipal separate storm sewer systems (MS4), *i.e.*, systems serving a population over 250,000 or systems serving a population between 100,000 and 250,000, respectively. These discharges are referred to as Phase I MS4 discharges.

In addition, the Administrator was directed to study and issue regulations that designate additional storm water discharges, other than those regulated under Phase I, to be regulated in order to protect water quality. EPA issued regulations on December 8, 1999 (64 FR 68722), expanding the NPDES storm water program to include discharges from smaller MS4s (including all systems within "urbanized areas" and other systems serving populations less than 100,000) and storm water discharges from construction sites that disturb one to five acres, with opportunities for area-specific exclusions. This program expansion is referred to as Phase II.

Section 402(p) also specifies the levels of control to be incorporated into NPDES storm water permits depending on the source (industrial versus municipal storm water). Permits for storm water discharges associated with industrial activity are to require compliance with all applicable provisions of Sections 301 and 402 of the CWA, *i.e.*, all technology-based and water quality-based requirements. *See* 33 U.S.C. §1342(p)(3)(A). Permits for discharges from MS4s, however, "shall require controls to reduce the discharge of pollutants to the maximum extent practicable ... and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants." *See* 33 U.S.C. §1342(p)(3)(B)(iii).

Storm water discharges that are regulated under Phase I or Phase II of the NPDES storm water program are point sources that must be included in the WLA portion of a TMDL. *See* 40 C.F.R. § 130.2(h). Storm water discharges that are not currently subject to Phase I or Phase II of the NPDES storm water program are not required to obtain NPDES permits. 33 U.S.C. §1342(p)(1) & (p)(6). Therefore, for regulatory purposes, they are analogous to nonpoint sources and may be included in the LA portion of a TMDL. *See* 40 C.F.R. § 130.2(g).

(II). Options for Addressing Storm Water in TMDLs

Decisions about allocations of pollutant loads within a TMDL are driven by the quantity and quality of existing and readily available water quality data. The amount of storm water data available for a TMDL varies from location to location. Nevertheless, EPA expects TMDL authorities will make separate aggregate allocations to NPDES-regulated storm water discharges

(in the form of WLAs) and unregulated storm water (in the form of LAs). It may be reasonable to quantify the allocations through estimates or extrapolations, based either on knowledge of land use patterns and associated literature values for pollutant loadings or on actual, albeit limited, loading information. EPA recognizes that these allocations might be fairly rudimentary because of data limitations.

EPA also recognizes that the available data and information usually are not detailed enough to determine waste load allocations for NPDES-regulated storm water discharges on an outfall-specific basis. In this situation, EPA recommends expressing the wasteload allocation in the TMDL as either a single number for all NPDES-regulated storm water discharges, or when information allows, as different WLAs for different identifiable categories, e.g., municipal storm water as distinguished from storm water discharges from construction sites or municipal storm water discharges from City A as distinguished from City B. These categories should be defined as narrowly as available information allows (e.g., for municipalities, separate WLAs for each municipality and for industrial sources, separate WLAs for different types of industrial storm water sources or dischargers).

(III). Determining Effluent Limits in NPDES Permits for Storm Water Discharges Consistent with the WLA

Where a TMDL has been approved, NPDES permits must contain effluent limits and conditions consistent with the requirements and assumptions of the wasteload allocations in the TMDL. See 40 CFR § 122.44(d)(1)(vii)(B). Effluent limitations to control the discharge of pollutants generally are expressed in numerical form. However, in light of 33 U.S.C. § 1342(p)(3)(B)(iii), EPA recommends that for NPDES-regulated municipal and small construction storm water discharges effluent limits should be expressed as best management practices (BMPs) or other similar requirements, rather than as numeric effluent limits. See *Interim Permitting Approach for Water Quality-Based Effluent Limitations in Storm Water Permits*, 61 FR 43761 (Aug. 26, 1996). The Interim Permitting Approach Policy recognizes the need for an iterative approach to control pollutants in storm water discharges. Specifically, the policy anticipates that a suite of BMPs will be used in the initial rounds of permits and that these BMPs will be tailored in subsequent rounds.

EPA's policy recognizes that because storm water discharges are due to storm events that are highly variable in frequency and duration and are not easily characterized, only in rare cases will it be feasible or appropriate to establish numeric limits for municipal and small construction storm water discharges. The variability in the system and minimal data generally available make it difficult to determine with precision or certainty actual and projected loadings for individual dischargers or groups of dischargers. Therefore, EPA believes that in these situations, permit limits typically can be expressed as BMPs, and that numeric limits will be used only in rare instances.

Under certain circumstances, BMPs are an appropriate form of effluent limits to control pollutants in storm water. See 40 CFR § 122.44(k)(2) & (3). If it is determined that a BMP approach (including an iterative BMP approach) is appropriate to meet the storm water component of the TMDL, EPA recommends that the TMDL reflect this.

EPA expects that the NPDES permitting authority will review the information provided by the TMDL, see 40 C.F.R. § 122.44(d)(1)(vii)(B), and determine whether the effluent limit is appropriately expressed using a BMP approach (including an iterative BMP approach) or a numeric limit. Where BMPs are used, EPA recommends that the permit provide a mechanism to require use of expanded or better-tailored BMPs when monitoring demonstrates they are necessary to implement the WLA and protect water quality.

Where the NPDES permitting authority allows for a choice of BMPs, a discussion of the BMP selection and assumptions needs to be included in the permit's administrative record, including the fact sheet when one is required. 40 C.F.R. §§ 124.8, 124.9 & 124.18. For general permits, this may be included in the storm water pollution prevention plan required by the permit. See 40 C.F.R. § 122.28. Permitting authorities may require the permittee to provide supporting information, such as how the permittee designed its management plan to address the WLA(s). See 40 C.F.R. § 122.28. The NPDES permit must require the monitoring necessary to assure compliance with permit limitations, although the permitting authority has the discretion under EPA's regulations to decide the frequency of such monitoring. See 40 CFR § 122.44(i). EPA recommends that such permits require collecting data on the actual performance of the BMPs. These additional data may provide a basis for revised management measures. The monitoring data are likely to have other uses as well. For example, the monitoring data might indicate if it is necessary to adjust the BMPs. Any monitoring for storm water required as part of the permit should be consistent with the state's overall assessment and monitoring strategy.

The policy outlined in this memorandum affirms the appropriateness of an iterative, adaptive management BMP approach, whereby permits include effluent limits (e.g., a combination of structural and non-structural BMPs) that address storm water discharges, implement mechanisms to evaluate the performance of such controls, and make adjustments (i.e., more stringent controls or specific BMPs) as necessary to protect water quality. This approach is further supported by the recent report from the National Research Council (NRC), *Assessing the TMDL Approach to Water Quality Management* (National Academy Press, 2001). The NRC report recommends an approach that includes "adaptive implementation," i.e., "a cyclical process in which TMDL plans are periodically assessed for their achievement of water quality standards" . . . and adjustments made as necessary. *NRC Report* at ES-5.

This memorandum discusses existing requirements of the Clean Water Act (CWA) and codified in the TMDL and NPDES implementing regulations. Those CWA provisions and regulations contain legally binding requirements. This document describes these requirements; it does not substitute for those provisions or regulations. The recommendations in this memorandum are not binding; indeed, there may be other approaches that would be appropriate

in particular situations. When EPA makes a TMDL or permitting decision, it will make each decision on a case-by-case basis and will be guided by the applicable requirements of the CWA and implementing regulations, taking into account comments and information presented at that time by interested persons regarding the appropriateness of applying these recommendations to the particular situation. EPA may change this guidance in the future.

If you have any questions please feel free to contact us or Linda Boornazian, Director of the Water Permits Division or Charles Sutfin, Director of the Assessment and Watershed Protection Division.

OFFICE OF
WATER

Dear Mayor Doyle:

Thank you for your letter of March 28, 2003, following up on our March 11, 2003 meeting. Your letter requests the Environmental Protection Agency's (EPA) assistance with several aspects of both the Los Angeles Region Basin Plan Review and the Los Angeles County MS4 NPDES permit.

I want to apologize for not responding sooner to your letter. You have raised many important issues for us to look at in more detail. You have asked EPA to support an accelerated review of the Los Angeles Basin Plan as well as participating and helping build consensus in completing the review. EPA staff are working closely with Regional Board staff to develop basin plan amendments and are actively working with stakeholder groups seeking solutions to ongoing water quality problems in the Los Angeles Region.

In addition, you have expressed concern about the need to complete numerous use attainability analyses (UAAs) in order to designate proper water quality standards for small, minor water bodies. You have asked for information on how various EPA Regions have interpreted the Tributary Rule and request guidance from EPA Headquarters to Region 9 and California on this issue. EPA supports the state's effort to identify and adopt appropriate designated uses for the water bodies of concern. However, EPA and state regulations require any change in designated uses to go through the state's water quality standards revision process, including the public participation process. In addition, any change to a designated use that results in a use that is not specified in Clean Water Act section 101(a), must be accompanied by a UAA. This does not automatically mean that detailed case-by-case analyses would be required for each water body. EPA believes that there are several approaches that may be appropriate for conducting analyses to modify designated uses, such as conducting a batch analysis for multiple waters with similar characteristics or conducting simplified analyses, depending on the water body's characteristics and the type and/or source of pollutants. EPA Region 9 is committed to working with the Los Angeles Regional Water Quality Board on any efforts it may undertake to revise water bodies' designated uses.

California and EPA Region 9 are not unique in how they interpret the Tributary Rule. Several other states have similar provisions contained in their water quality standards. Individual states and EPA have generally interpreted these provisions as a mechanism to apply water quality standards where an individual water body's standards, including designated uses, are not explicitly identified.

Your letter also raises issues related to the Los Angeles County MS4 permit. You have requested that EPA clarify to the Regional Board the intent of the receiving waters limitations. The Los Angeles Regional Water Quality Control Board developed a Frequently Asked Questions (FAQ) document to help clarify this and other questions that have been raised about this permit. It is available at www.swrcb.ca.gov/rwqcb4. EPA believes this document clarifies the intent of the receiving waters limitations language.

You also ask EPA to provide guidance on the definition of Maximum Extent Practicable (MEP) and to provide examples of its practical application. Congress established MEP but did not provide language defining this standard. EPA envisions MEP as an iterative process that considers such factors as conditions and beneficial uses of receiving waters, MS4 size, climate, implementation schedules, current ability to finance the program, hydrology, geology, and capacity to perform operation and maintenance. EPA understands the importance of providing assistance to help communities implement MEP. We are looking at the information gathered from evaluating many MS4 permits and programs. We hope to use this to provide examples of good storm water programs.

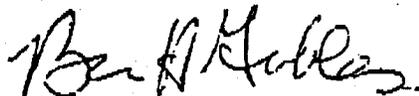

You have raised concerns about implementation of TMDLs through NPDES permits and have asked EPA to provide samples of alternative implementation methods. EPA believes that permits are a critical component of TMDL implementation. In this situation, the LA permit contains a compliance framework that provides flexibility and time for communities to develop cost-effective controls. EPA will continue to work with the Regional Board to make sure that they consider different implementation methods for TMDLs.

Your letter states that the Regional Board is not following EPA's November 2002 memo on establishing TMDL Waste Load Allocations and Stormwater NPDES Permit Requirements. You ask EPA to provide guidance to the Regional Board that supports this memo. EPA worked closely with all ten Regions on this memo and expects that it will be followed by the states. I've asked my staff to follow up with the State and would be happy to discuss this with you further if the Regional Board is not following the memo.

Finally, you request approval of your FY 2003 program funding from this year's appropriation and request additional funding for demonstration projects along the Lower Los Angeles and San Gabriel Rivers. EPA supports the types of demonstration projects that you are proposing, but as you know, we always have requests to fund far more worthy projects than we have funds for. I would be glad to talk with you further about your proposal for additional funding.

Thank you for sharing your concerns on these issues. Please contact me if you wish to discuss any of this further, or have your staff call James A. Hanlon, Director, Office of Wastewater Management, at (202) 564-0748.

Sincerely,

Benjamin H. Grumbles
Deputy Assistant Administrator

OFFICE OF WATER

November 17, 2008

Dear Colleague:

Today we are making available the draft technical document *TMDLs to Stormwater Permits Handbook* for your review and comment. Stormwater runoff is a significant contributor to water quality impairments across the country, particularly runoff from developing and urbanized areas. Currently there are thousands of Clean Water Act section 303(d) waters listed as impaired for stormwater-source pollutants such as pathogens, nutrients, sediments and metals. To effectively address these impairments it is important to strengthen connections between two key federal programs under the Clean Water Act – the TMDL program and the NPDES stormwater permitting program.

This Handbook provides a reference for TMDL practitioners and permit writers on current methods being used to develop more detailed stormwater-source TMDL allocations, TMDL implementation plans including best management practices, and methods for translating TMDL allocations into NPDES stormwater permit requirements. The Handbook assumes that the reader has a working knowledge of both TMDLs and NPDES stormwater permits, and provides background information on the components of these programs. Please note that last month the National Research Council released a lengthy report, *Urban Stormwater Management in the United States* (NRC, the National Academies Press, October 15, 2008). We intend to review the publication for consideration in producing the final version of the Handbook.

Please provide us feedback on the methods and approaches presented in this Draft Handbook, as well as additional TMDL-stormwater case studies, implementation plans, other valuable resources, or permits and/or permit language that would be useful to include. Comments on the document should be sent to Christine Ruf (ruf.christine@epa.gov), Dean Maraldo (maraldo.dean@epa.gov) and Jack Faulk (faulk.jack@epa.gov) by February 27, 2009.

Thanks again for your interest.

DISCLAIMER

This document provides technical information to TMDL and NPDES practitioners who are familiar with the relevant technical approaches and legal requirements pertaining to developing TMDLs and NPDES stormwater permits, and refers to statutory and regulatory provisions that contain legally binding requirements. This document does not substitute for those provisions or regulations, nor is it a regulation itself. Thus, it does not impose legally binding requirements on EPA or States, who retain the discretion to adopt approaches on a case-by-case basis that differ from this information. Interested parties are free to raise questions about the appropriateness of the application of this information to a particular situation, and EPA will consider whether or not the technical approaches are appropriate in that situation.

PREFACE

Thousands of impaired waterbodies require total maximum daily loads (TMDLs) for pollutants, such as pathogens, nutrients, sediments, and metals – pollutants commonly associated with urban stormwater discharges. As a result, it is important for the TMDL program and the National Pollutant Discharge Elimination System (NPDES) Stormwater program to identify opportunities and approaches for promoting TMDL implementation through stormwater permits. The U.S. Environmental Protection Agency (EPA) developed this *TMDLs to Stormwater Permits Handbook* (Handbook) to address challenges that are unique to TMDL development and implementation involving permitted stormwater discharges from municipal separate storm sewer systems (MS4s), industrial facilities, and construction activities.

The Handbook is intended for federal and state TMDL writers and NPDES stormwater permit writers responsible for addressing waterbodies impaired by discharges from stormwater sources. The Handbook assumes that the reader has a working knowledge of both the TMDL and the NPDES stormwater programs and provides limited background information on the basic regulatory and programmatic aspects of these programs.

The Handbook contains information to give TMDL and stormwater permit writers a better understanding of (1) cross-program regulatory requirements and programmatic processes; (2) current efforts to establish better cross-program connections; and (3) opportunities to further improve how the TMDL and NPDES Stormwater programs interact to address stormwater-related water quality impairments. Real-world examples are the predominant mechanism to illustrate concepts and approaches for promoting improved implementation of TMDLs through stormwater permits. The information contained in this Handbook represents an initial step in identifying and comprehensively addressing these issues. The issues and challenges surrounding TMDL implementation through stormwater permits will continue to evolve as EPA and state TMDL practitioners and stormwater permit writers consider and test new approaches and strategies.

INTRODUCTION

Across the country, stormwater runoff is a significant contributor to water quality impairments, particularly in developing and urbanized areas. There are thousands of impaired waterbodies requiring total maximum daily loads (TMDLs) for pollutants associated with stormwater sources, such as pathogens, nutrients, sediments, and metals. Developing TMDLs that include stormwater sources can present unique challenges because of the variety and number of sources, the variability of the pollutants discharged by these sources, the limited availability of monitoring data, and the complexity of the mechanisms by which pollutants in stormwater discharges affect ambient water quality criteria. Implementing TMDLs via National Pollutant Discharge Elimination System (NPDES) stormwater permits can also present challenges because of difficulties in translating the numeric, water quality-based TMDL wasteload allocations (WLAs) into permit requirements.

The purpose of this Handbook is to provide information to TMDL practitioners and NPDES stormwater permit writers (referred to as *TMDL writers and permit writers* throughout this Handbook) on the following:

- Current methods and other potential options for developing more precise WLAs for stormwater sources (referred to simply as *sources* throughout this Handbook)
- TMDL implementation plans including best management practice (BMP) and other stormwater management strategy recommendations
- Approaches for translating TMDL WLAs and implementation recommendations into NPDES stormwater permit requirements and implementation strategies

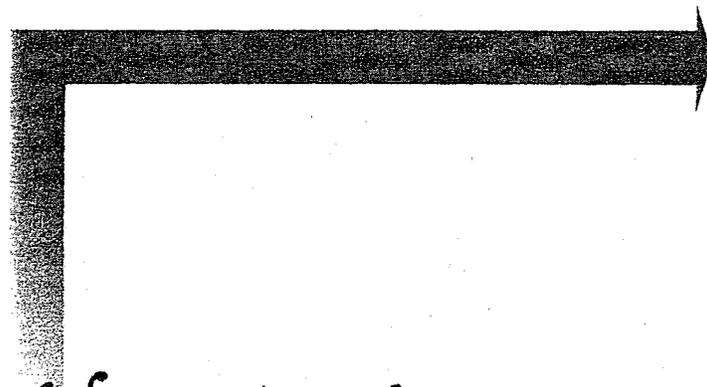

Information contained in this Handbook specifically addresses the following:

- TMDL WLAs for stormwater sources that clearly express and assign the targeted loading reductions necessary to attain and maintain water quality standards
- TMDL implementation plans that connect WLAs and stormwater permits by either (1) including specific recommendations (e.g., performance standards, management measures) for implementing WLAs, or (2) providing technical information for permit writers and permittees on how to analyze, select, and implement provisions to implement the WLAs
- Stormwater permits that are consistent with the WLAs by identifying specific elements, including management measures, that implement the WLA and, if available, TMDL implementation plan recommendations or specifying approaches for demonstrating that specific provisions will implement WLAs

In addition, the goal is to provide TMDL and permit writers a better cross-program understanding of regulatory requirements and programmatic processes and a better understanding of opportunities to further improve how the TMDL and NPDES Stormwater programs should interact to address stormwater-related water quality impairments. The real-world examples provided in this Handbook are intended to provide a range of options for TMDL and permit writers to consider. Where real-world examples do not exist to illustrate a concept, the Handbook provides a hypothetical example for TMDL and permit writers to consider, and the writers hope that it provides insight into future directions to improve this linkage.

This Handbook is organized as follows:

- **Chapter One: Understanding the connections between TMDLs and stormwater permits.** Provides overviews of TMDL and NPDES Stormwater programs and summarizes the challenges of developing TMDLs and implementing WLAs through stormwater permits.
- **Chapter Two: Identifying opportunities to coordinate TMDLs and stormwater permits.** Identifies ideas and opportunities for TMDL and permit writers to coordinate at various points throughout the TMDL and stormwater permitting processes.
- **Chapter Three: Characterizing impairments and stormwater sources.** Provides a detailed discussion of the type of information that TMDL and permit writers can use to generate a detailed stormwater source characterization, including data on water quality and watershed conditions, as well as data generated by stormwater permittees and where to obtain this information.
- **Chapter Four: Developing TMDLs with Stormwater Sources.** Addresses key stormwater-specific issues that TMDL writers can consider when developing TMDLs using a specific technical approach. It also discusses options for categorizing stormwater WLAs to facilitate their implementation in permits.
- **Chapter Five: Promoting effective stormwater management.** Presents an adaptive management framework for selecting, implementing, assessing, and modifying stormwater management strategies using information and tools that predict potential BMP performance
- **Chapter Six: Coordinating TMDLs and stormwater permit requirements.** Provides a variety of options for effectively tying together TMDLs and associated permit requirements through the development of TMDL reports, stormwater permit language, and fact sheets, as well as TMDL implementation planning documents.
- **Appendix.** Provides excerpts of TMDLs, implementation plans, and stormwater permit requirements to illustrate how states connect permitted stormwater source requirements among programmatic documents.
- **Bibliography.** Provides a comprehensive list of documents, Web sites, and databases that are included in the Resources section of each chapter or cited in the Handbook.
- **Glossary.** Defines key terms introduced throughout the Handbook.

1 Understanding the Connections Between TMDLs and Stormwater Permits

- 2 Identifying Opportunities to Coordinate TMDLs and Stormwater Permits
- 3 Characterizing Impairments and Stormwater Sources
- 4 Developing TMDLs with Stormwater Sources
- 5 Promoting Effective Stormwater Management
- 6 Coordinating TMDLs and Stormwater Permits

Chapter One

Understanding the Connections Between TMDLs and Stormwater Permits

What's included in this chapter

- ✓ Overview of the TMDL and stormwater programs.
- ✓ Discussion of the challenges associated with connecting TMDLs and stormwater permit requirements.

What you should know after reading this chapter

- ✓ Basic components of a TMDL and why stormwater sources receive WLAs.
- ✓ The three categories of permitted stormwater sources, the two types of stormwater permits, and a general understanding of stormwater permit requirements.
- ✓ Why development of this Handbook was necessary to help connect TMDLs and stormwater permits.

Potential roles and responsibilities under this activity

If you are a TMDL writer

1. Develop a basic understanding of who the stormwater program covers, the types of permits and requirements to which stormwater sources are subject, and factors affecting the role of the stormwater permit writer.
2. Understand how TMDL development relates for permit writers.

If you are a stormwater permit writer

1. Develop a basic understanding of when TMDLs are necessary, the TMDL development process, and factors affecting the role of TMDL writers.
2. Understand how stormwater permitting relates to developing and implementing TMDLs.

1. UNDERSTANDING THE CONNECTIONS BETWEEN TMDLS AND STORMWATER PERMITS

Understanding the regulatory, programmatic, and technical issues associated with the TMDL and NPDES Stormwater programs can help TMDL and permit writers improve cross-program connections, leading to better TMDLs and stormwater permits. This chapter briefly summarizes the key statutory and regulatory elements of these two programs.

1.1. What Every Permit Writer Should Know about the TMDL Program

A TMDL reflects the total pollutant loading a waterbody can receive and still meet water quality standards. TMDLs are one of the many tools Congress authorized in the Clean Water Act (CWA) to “restore and maintain the chemical, physical, and biological integrity of the Nation’s waters.” (CWA section 101(a)). Section 303(d) of the CWA requires

Resources: For more information on the TMDL program, refer to the Resources list at the end of this chapter in Section 1.4.1, including EPA’s TMDL Web site at www.epa.gov/owow/tmdl/.

states, territories, and authorized tribes to identify and establish a priority ranking for waters for which technology-based effluent limitations required by section 301 are not stringent enough to implement applicable water quality standards, establish TMDLs for the pollutants causing impairment in those waters, and submit to the U.S. Environmental Protection Agency (EPA), from time to time, the list of waters in which water quality standards are not attained or maintained and for which TMDLs are required, as well as their associated TMDLs. EPA must review and approve or disapprove lists and TMDLs within 30 days. If EPA disapproves a list or a TMDL submitted by states, territories, and authorized tribes, EPA must establish the list or TMDL. In addition, some courts have interpreted the statute as requiring EPA to establish lists and TMDLs when a state fails to do so. EPA’s TMDL regulations can be found at Title 40 of the *Code of Federal Regulations* (CFR) sections 130.7 and 130.2.

Listing impaired waters and establishing TMDLs for waters impaired by pollutants from point and nonpoint sources does not, by itself, create any new or additional implementation authorities to control point or nonpoint sources. Permitting authorities implement WLAs included in a TMDL through enforceable water quality-based discharge limits in NPDES permits authorized under section 402 of the CWA (see next section, “What every TMDL Writer Should Know about the NPDES Stormwater Program”). Mechanisms for implementing nonpoint source load allocations (LAs) within TMDLs include state section 319 nonpoint source management programs, coupled with a wide variety of other state, local, tribal, and federal programs—which may be regulatory, nonregulatory, or incentive-based, depending on the program—as well as voluntary action by committed citizens. To date, no tribe has sought or received CWA authority to establish TMDLs.

A brief summary of the key aspects of the TMDL program is provided below.

- **Section 303(d) Lists of Impaired Waterbodies.** Each state is required to identify “water quality limited segments,” or impaired waterbodies, for which federal technology-based controls, state, tribal, or local effluent limitations or other pollution control requirements (e.g., BMPs) required by local, state, tribal, or federal authority are not stringent enough to achieve water quality standards, including waters not meeting standards due to thermal discharges (40 CFR 130.7 (b)). The list that

identifies these water quality limited segments is known as the Section 303(d) list. States are required to submit Section 303(d) list updates every 2 years. The information that the Section 303(d) list must contain (40 CFR 130.7) is as follows:

- ✓ The pollutant(s) causing (or expected to cause) the violation of water quality standards for each listed water
 - ✓ A priority ranking of all listed waters and waters targeted for TMDL development within the next 2-year listing cycle
 - ✓ Documentation to support listing decisions, including a description of the methodology used, data evaluated, rationale for not using any readily available data, and any other reasonable information requested by EPA to evaluate the listing decisions
- **Components of a TMDL.** EPA's regulations at 40 CFR 130.2(i) define a TMDL as the sum of WLAs plus load LAs plus a margin of safety (MOS) to account for uncertainty between pollutant sources and resulting water quality. Allocations to pollutant sources vary on the basis of the type of pollutant sources—WLAs are loads allotted to existing and future point sources, and LAs are loads attributed to existing and future nonpoint sources, plus loads from natural background. Future growth allowances in TMDLs account for increased pollutant loadings and can be included as an allocation of pollutant loads from new sources expected in the future. For instance, in areas where land use changes are anticipated, TMDLs can include a reserve for future growth, which can be a separate component of the TMDL or included in WLAs or LAs.
 - **TMDL implementation plans.** Although not required by federal law or regulation, many states include (and some state regulations do require) TMDL implementation plans, which are typically developed in coordination with relevant stakeholders. A TMDL implementation plan typically identifies recommended management practices that major sources in the watershed are expected to implement, along with a general time frame and strategy for funding and monitoring. Factors such as waterbody ranking, data availability, court-ordered schedules, and anticipated management activities can affect the timing of TMDL development and implementation.

New Location for 303(d) Lists

States are now integrating Section 303(d) lists of impaired waters and Section 305(b) water quality assessment reports to produce Integrated Reports. The Integrated Report groups a state's waters into five categories, depending on a determination of whether a waterbody is impaired or is in attainment of water quality standards. Category 5 of the Integrated Report contains the list of waterbodies that do not meet water quality standards and require a TMDL. Therefore, Category 5 represents the Section 303(d) list of impaired waters. For more information on Integrated Reports, visit EPA's Web site: www.epa.gov/owow/tmdl/2008_ir_memorandum.html

Characteristics of a TMDL

- Addresses a variety of pollutants
- Contains quantified targets
- Considers all significant sources
- Expresses pollutant loads in relationship to water quality standards
- Provides allocations for known sources
- Considers a MOS and future growth
- Focuses on temporal nature of allocations to achieve standards
- Requires sound data
- Involves stakeholders

As illustrated in Figure 1, the process for developing a TMDL typically includes the following steps:

- Stakeholder involvement and public participation to engage affected parties and solicit input, feedback and buy-in for a successful TMDL. This process can occur throughout the TMDL development (and implementation) process.
- Watershed characterization to identify the waterbody, watershed, and impairment conditions; TMDL targets; and potential sources.

- Linkage analysis to calculate the loading capacity.
- Allocation analysis to evaluate and assign WLAs to point sources and LAs to nonpoint sources.
- Developing the TMDL report and administrative record for submittal to EPA.
- TMDL implementation to identify management activities to implement WLAs and LAs.

Figure 1 also illustrates where to find a discussion of each activity in the Handbook. At the beginning of each chapter, you will find a modified version of Figure 1 that highlights the TMDL activities discussed in that chapter.

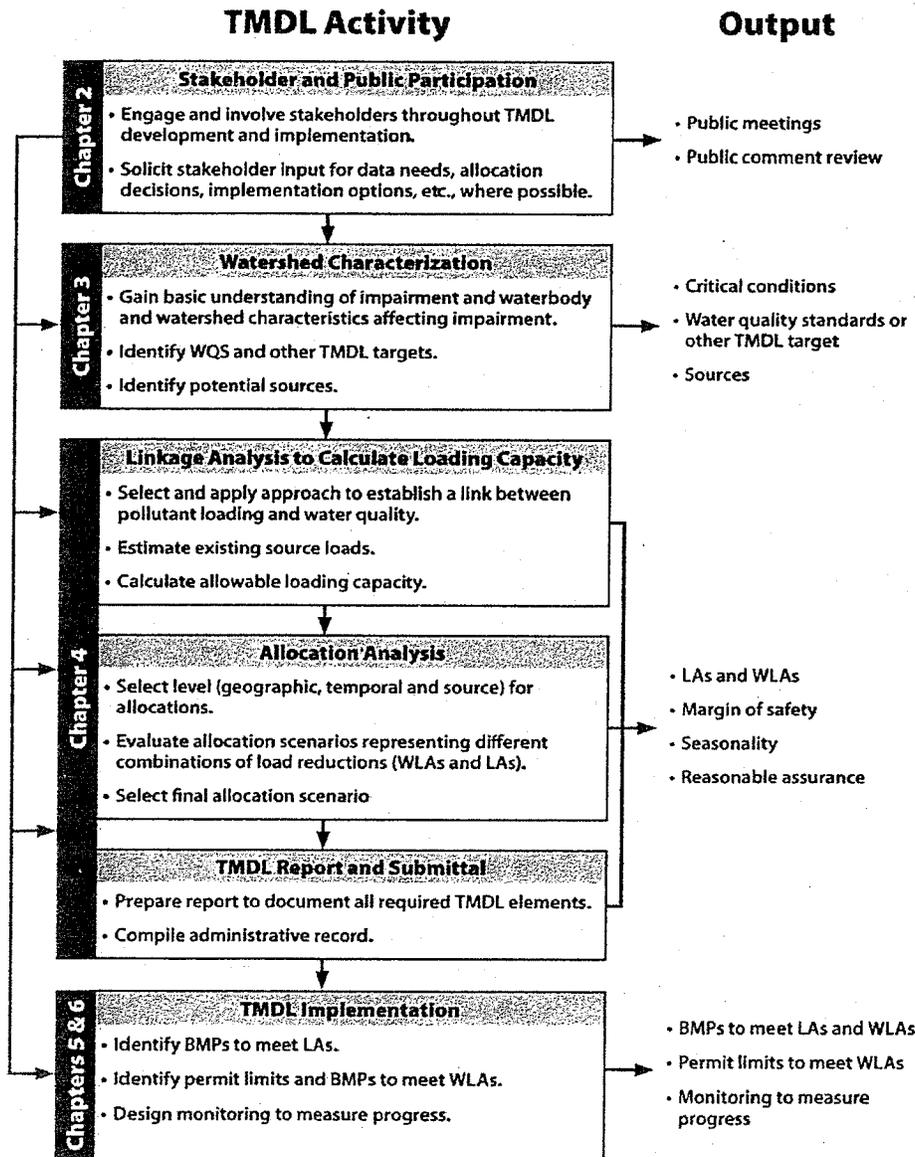

Figure 1. Typical steps in the TMDL development process.

1.2. What Every TMDL Writer Should Know about the NPDES Stormwater Program

To understand the NPDES Stormwater program, it is important to have an understanding of the NPDES program framework. This section provides a brief overview of the NPDES program to introduce basic permitting concepts and then provides details about the NPDES Stormwater program.

1.2.1. NPDES Program Framework

The CWA enacted in 1972 established the NPDES program and provides that either EPA or the state can administer (i.e., issue permits, assess compliance, take enforcement) the program. EPA, however, must first authorize a state to do so. Authorization requires that a state demonstrate to EPA's satisfaction that it has the necessary legal authority, technical skills, and resources to administer the program. Once authorized, a state becomes the *permitting authority*, taking on the responsibility of administering the NPDES program, including issuance of NPDES stormwater permits. As of 2008, 45 states (excluding Alaska, Idaho, Massachusetts, New Hampshire, and New Mexico) and one territory (U.S. Virgin Islands) are authorized to administer the NPDES program.¹ Where a state is not authorized to administer the NPDES program, the EPA Regional office is the permitting authority. For the purpose of this Handbook, the term *permit writer* is intended to convey a state or EPA staff person responsible for acting on behalf of the state agency or EPA regional office serving as the NPDES permitting authority in that area.

The NPDES regulations provide for two basic types of permits: individual and general. Dischargers requesting to be covered under an individual permit are required to submit an individual permit application, which the permit writer uses as the basis for developing site-specific permit requirements. The individual permit is then issued to that discharger for a period not to exceed 5 years, with a requirement to reapply before the expiration date. An individual permit is tailored specifically for an individual facility.

Five Basic Components of General and Individual NPDES Permits

- Cover page
- Effluent limits (numeric or narrative; technology-based or water quality-based)
- Monitoring and reporting requirements
- Standard conditions
- Special conditions

When the permitting authority expects that many dischargers with similar types of activities will require coverage under an NPDES permit, the permitting authority may choose to issue a general permit in lieu of issuing individual permits to each of these dischargers. After a general permit is issued, dischargers wishing to be covered under the general permit submit a Notice of Intent (NOI) to the permitting authority. These dischargers, consistent with procedures specified in the general permit, are then authorized to discharge under the terms of that general permit. The CWA requires that NPDES permits, both individual and general, be made available to the public for at least 30 days for review and comment before final issuance.

NPDES permits, with the exception of municipal separate storm sewer system (MS4) permits, must include technology-based effluent limitations based on best available technology economically achievable (BAT), or New Source Performance Standards (NSPS) for new sources, and any other more

¹ EPA Regions retain permitting authority for most Indian lands, federal facilities in four states (Colorado, Delaware, Vermont, and Washington) certain oil and gas activities (Texas and Oklahoma) and agricultural activities (Oklahoma).

stringent limitations as necessary to ensure that the discharge does not cause or contribute to in-stream exceedances of water quality standards. MS4s defined by the regulations as needing NPDES permit coverage are required to implement stormwater management programs (SWMPs) designed to control pollutants to the maximum extent practicable (MEP) to protect water quality rather than meeting a BAT requirement as for other NPDES permittees. NPDES-authorized states and territories may impose more stringent permit requirements than those set forth in federal regulations.

1.2.2. NPDES Stormwater Program

In 1987 Congress amended the CWA to require EPA to regulate certain stormwater discharges through the NPDES program. After promulgating stormwater rules in 1990 and 1999 (known as the Phase I and Phase II stormwater rules, respectively), NPDES permitting authorities now issue permits to control stormwater discharges from (1) MS4s, (2) industrial activities, and (3) construction activities as follows:

Resources: For more information on the NPDES Stormwater program, refer to the Resources list at the end of this chapter in Section 1.4.3, including EPA's NPDES Web site at www.epa.gov/npdes/stormwater.

(1) Medium, large, and regulated small MS4s: MS4s, generally, are public storm sewer systems (including roads with drainage systems and municipal streets) that are owned or operated by a public body and not part of a combined sewer (i.e., storm and sanitary sewers combined). Incorporated places and counties meeting EPA's definitions of medium and large MS4s are identified in the NPDES regulations in 40 CFR Part 122, Appendices F through I. In general, these are separate storm sewer systems that serve populations over 100,000 people. Regulated small MS4s are identified according to the U.S. Census Bureau definition of urbanized area as established every 10 years in its decennial census. Populations served by these regulated small MS4s range from several hundred to tens of thousands of people, but in most instances these systems serve fewer than about 30,000–50,000 people.

Types of MS4 Infrastructure and Permittees

The NPDES Stormwater program uses the term MS4 to describe the type of stormwater conveyance infrastructure, as well as the permittee required to obtain stormwater permit coverage. As a type of infrastructure, MS4s are not merely a system of pipes. As defined by regulations, an MS4 can also include drainage systems for roadways, gutters, and ditches.

An MS4 permittee does not just include municipally owned storm sewer systems. The term MS4 can also apply to a variety of entities that own and operate MS4 infrastructure, such as departments of transportation, military bases, universities, hospitals, and prisons.

(2) Industrial facilities that fall under 11 categories of industrial activities that discharge to an MS4 or to waters of the United States (construction activity disturbing 5 acres or more is one of these 11 categories, but because of the nature of its operations, it is addressed separately from the other 10 categories.). Industrial facilities (except construction) may certify to a condition of *no exposure* in lieu of obtaining NPDES permit coverage if their industrial materials and operations are not exposed to stormwater.

11 Categories of Industrial Activity

- Category One (i): Facilities subject to national effluent limitations
- Category Two (ii): Heavy Manufacturing
- Category Three (iii): Mining and Oil and Gas
- Category Four (iv): Hazardous Waste Storage, Treatment, or Disposal Facilities
- Category Five (v): Landfills
- Category Six (vi): Recycling Facilities
- Category Seven (vii): Steam Electric Plants
- Category Eight (viii): Transportation Facilities
- Category Nine (ix): Wastewater Treatment Works
- Category Ten (x): Construction Activity disturbing 5 acres or more
- Category Eleven (xi): Light Industrial Activity

- (3) Construction activity that disturbs one or more acre of land and less than one acre if the activity is part of a larger common plan of development or sale (USEPA 2004). The Phase I stormwater rule regulates construction activities 5 acres and above. The Phase II stormwater rule added sites between one and 5 acres.

Figure 2 illustrates how the regulation of these stormwater sources affected the universe of regulated NPDES dischargers over time. From the beginning of the NPDES program, permit writers across the country developed and issued permits for approximately 60,000 facilities with wastewater discharges. The NPDES Phase I Stormwater program required stormwater discharges from large and medium MS4s, large construction activities, and industrial facilities to obtain NPDES permit coverage; bringing approximately 300,000 stormwater sources into the NPDES program. The NPDES Phase II Final Rule covering regulated small MS4s and construction sites between one and 5 acres added approximately 200,000 additional stormwater sources to the NPDES program universe.

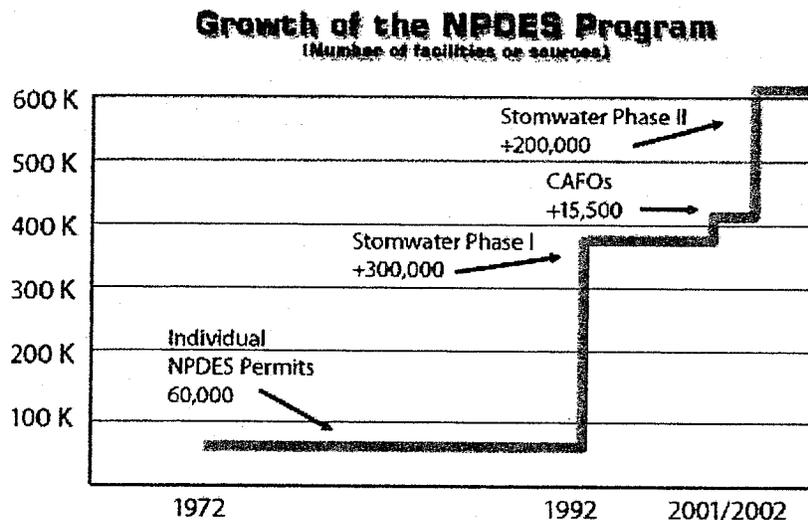

Figure 2. Number of facilities or sources permitted under various programs of the NPDES program over time.

A brief summary of key aspects of the NPDES Stormwater program is provided below.

1.2.2.1. Types of NPDES Stormwater Permits

To regulate the approximately 500,000 stormwater sources, the NPDES Stormwater program uses both individual and general permits.

- **Individual permits**, issued to most medium and large MS4s and small MS4s in a few states, require the initial submission of a comprehensive permit application. However, because most MS4s have already been permitted, the content of future applications is expected to contain less information than the original submission. Applications will contain available data or a summary of that data and the permittee's plans for future activities and controls to address any identified concerns. NPDES permitting authorities use the detailed permit application information to develop site-specific requirements.

- **General permits**, issued for most stormwater discharges associated with industrial and construction activities and small MS4s in most states, contain more widely applicable requirements. Stormwater dischargers submit an NOI to the permitting authority to obtain coverage under a general permit. The information necessary to complete an NOI for coverage under a general permit is usually (depending on state requirements) less burdensome than the information required for an individual permit. Coverage under a general permit is often relatively automatic when the discharger meets the eligibility requirements for coverage. Stormwater permittees that are unable to meet eligibility conditions for general permits must obtain coverage under an individual permit. Table 1 highlights the estimated number of stormwater permittees across the country by type of stormwater discharge and the number of general and individual permits issued to these permittees.

Table 1. Estimated number of stormwater permittees and permits by type of stormwater discharge

Type of stormwater discharge	Permittees	General permits	Individual permits
MS4	7,000	50	500
Industrial	100,000	120	Unknown*
Construction	250,000	60	Unknown*

* These permits are not tracked separately under the stormwater program. EPA estimates that several hundred entities are permitted with individual permits each year.

1.2.2.2. Standards and Limits in Stormwater Permits

The CWA requires, with the exception of MS4s, that NPDES permits contain technology-based effluent limits and water quality-based effluent limits (WQBELs) when the technology-based limits alone do not adequately protect water quality. The CWA standard for MS4s is that the permit must require controls to reduce the discharge of pollutants to the MEP to protect water quality. Stormwater permits use a variety of approaches to incorporate these concepts into NPDES permit conditions. Generally, stormwater permits require implementation of BMPs, identified as narrative effluent limits, deemed by the permitting authority to be appropriate to meet the intent of the CWA. These narrative effluent limits include practices such as source control and pollution prevention BMPs. Stormwater permits typically stipulate general categories of controls, and charge the permittee to articulate the details in a stormwater plan. Occasionally, stormwater permits will establish numeric effluent limits that must be met at the discharge point.

MEP Pollutant Reduction Standard for MS4s

Operators of regulated MS4s must develop and implement SWMPs that reduce the discharge of pollutants to the MEP to protect water quality. While MEP is a pollutant reduction standard that applies to all permitted MS4s, the practical aspects of MEP varies from location to location depending on factors such as pollutant sources and local receiving water conditions and concerns. EPA's *Measurable Goals Guidance for Phase II MS4s* (<http://cfpub.epa.gov/npdes/stormwater/measurablegoals/part1.cfm>) states the following:

The definition of "MEP" should adapt continually to both current conditions and BMP effectiveness, but ultimately, successive iterations of the mix of BMPs and measurable goals should be made to achieve the objective of meeting water quality standards. If, after implementing the minimum control measures, there is still water quality impairment associated with discharges from the MS4, you will need to expand or better tailor your BMPs (USEPA 2001).

Stormwater permitting authorities must review MS4 SWMPs to determine if implementation of the plan is likely to reduce the discharge of pollutants to the MEP. Where the permitting authority identifies deficiencies, the MS4 must modify its SWMP.

1.2.2.3. Basic Stormwater Management Program and Pollution Prevention Plan Requirements

The primary requirement of NPDES stormwater permits is the development and implementation of a plan that describes how the permittee will control the discharge of pollutants in stormwater to meet permit requirements. Operators of regulated MS4s develop and implement SWMPs that cover a variety of activities discharging to the MS4, while operators of industrial facilities and construction activities must develop and implement facility-specific stormwater pollution prevention plans (SWPPPs). A brief overview of the type of management activities required in MS4 (Phase I and Phase II), industrial, and construction permits is provided below.

- **Phase I MS4 Permits.** Phase I MS4s, all of which were identified by incorporated place or county names in the 1990 Phase I Rule, were required to apply for permit coverage in the early 1990s with the application including the MS4s proposed SWMP to address programmatic, structural, and source control measures for stormwater discharges from commercial and residential areas, including discharges from areas of new development or redevelopment; illicit discharges; priority industrial facilities; and construction sites. Individual permits issued to Phase I MS4s specified the required SWMP activities and included other provisions to ensure effective implementation, such as monitoring and annual reporting.
- **Phase II MS4 Permits.** Regulated, small MS4s are required to obtain individual or general permit coverage and implement an SWMP that addresses the six minimum control measures: (1) public education and outreach; (2) public participation and involvement; (3) illicit discharge detection and elimination (IDDE); (4) construction site stormwater runoff control; (5) post-construction stormwater management in new and redevelopment; (6) pollution prevention/good housekeeping for municipal operations. In addition, Phase II MS4s must also develop and specify measurable goals for each of the six minimum control measures in the SWMP. The Phase II Final Rule does not require monitoring data as part of the application or as a requirement of the permit, although permitting authorities may decide otherwise. Regulated small MS4s are required to submit periodic reports to the permitting authority ranging from annually to twice every 5-year permit cycle.
- **Construction Stormwater Permits.** NPDES permits for stormwater discharges associated with construction activities require control measures (i.e., BMPs) to address pollutants in stormwater discharges. These requirements, almost always addressed through the issuance of statewide general permits, include erosion and sediment control BMPs to prevent the discharge of sediment and measures to prevent the discharge of non-sediment materials such as construction debris, vehicle fluids, concrete washout, and trash. In addition, some permitting authorities require post-construction stormwater management measures to minimize pollutant discharges after construction is complete. SWPPPs prepared by site operators describe activities to be performed and how the operator intends to comply with permit requirements (e.g., a description of controls to minimize

Tip: Read SWMPs and SWPPPs—not just stormwater permits—to get implementation details.

TMDL writers often go to NPDES stormwater permits looking for information on stormwater discharges that will assist in the TMDL development process. Reviewing stormwater permits will provide an understanding of what permittees must include in the required SWMPs and SWPPPs, but the permits rarely provide complete details on this information. TMDL writers might need to obtain and review SWMPs and SWPPPs to gather information to support TMDL activities, such as pollutant source characterization and pollutant load allocation. Chapter 3 of this Handbook provides an in-depth discussion of what information is available through SWMPs and SWPPPs and how TMDL writers can use this information to characterize stormwater sources.

exposure of the materials to stormwater and spill prevention and response practices). NPDES construction permits also typically require the site operator to document in an SWPPP any interim and permanent stabilization practices for the site, including a schedule of when the practices will be implemented.

- **Industrial Stormwater Permits.** Industrial stormwater permits typically focus on the implementation of BMPs to reduce stormwater pollutants. NPDES stormwater permits for industrial facilities typically require SWPPPs to document the facility's pollution prevention team, describe the site, identify the receiving waters, and describe the BMPs that will be implemented to meet permit requirements. An SWPPP should also contain a summary of potential pollutant sources, including spills and leaks, and a summary of existing stormwater discharge sampling data. The focus of the SWPPP is the description of the existing and planned BMPs to reduce stormwater pollutants. BMPs may be procedural such as good housekeeping activities, spill prevention and response planning, preventative maintenance, routine facility inspections, and employee training or structural systems, such as containment systems or sediment basins.

1.3. Key Challenges Associated with Connecting the TMDL and NPDES Stormwater Programs

Improving the ways in which water quality programs work together and relate to one another often presents challenges because of programmatic, regulatory, and technical differences. Improving connections between the TMDL and NPDES Stormwater programs highlights challenges such as conflicting program priorities, and unsynchronized development schedules, lack of sufficient data, inadequate cross-program communication, and lack of adequate staff and resources. EPA and state TMDL and permit writers working to improve connections between the TMDL and NPDES Stormwater programs have identified some key challenges facing each program. EPA's *Total Maximum Daily Loads and National Pollutant Discharge Elimination System Storm Water Permits for Impaired Water Bodies: A Summary of State Practices* (USEPA 2007) provides a detailed discussion of these key challenges and possible solutions. These key challenges are briefly summarized below and discussed in greater detail in subsequent chapters.

Resources: For more information on research and policy related to TMDLs and stormwater, refer to the Resources list at the end of this chapter in Section 1.4.2.

1.3.1. Challenge 1: Addressing Differences in Organizational Structure

Strengthening the connections between TMDLs and stormwater permits begins with communication and coordination among internal programmatic staff. Often this is challenging for a variety of reasons. In most instances, TMDL and NPDES permitting staff function not only in different programs, but in different organizational groups. In some states, the separation between programs is more drastic, with TMDL and NPDES staff functioning under different agencies. These organizational differences can create real and perceived obstacles for effective staff coordination. In addition, agency staff can face programmatic pressures (e.g., court ordered deadlines, permit reissuance schedules) that limit timely coordination.

1.3.2. Challenge 2: Developing Consistent Stormwater Allocations in TMDLs

Approaches for developing and expressing TMDLs that include stormwater sources can vary within and among states. For example, some TMDLs assign aggregated stormwater WLAs to all permitted stormwater sources within a watershed or to each type of permitted stormwater source. Collecting additional data or information on the permitted stormwater sources within a watershed might allow TMDL writers to generate more detailed WLAs that could facilitate the development of permit requirements.

1.3.3. Challenge 3: Translating Numeric TMDL WLAs into Implementation Strategies and Permit Requirements

One way for TMDL and permit writers to facilitate the implementation of TMDLs is to provide permittees with information on specific types of management strategies that could be used to implement the WLAs. In most cases, this means facilitating efforts so that the WLA, the TMDL implementation plan (if applicable), and the stormwater permit requirements are developed to coordinate with each other in a meaningful way, particularly when stormwater sources are covered exclusively by general permits.

1.3.4. Challenge 4: Reconciling Spatial Boundaries of TMDLs with Boundaries of NPDES Stormwater Permits

The TMDL program often provides information on impaired waters by waterbody or watershed. The majority of actions under the NPDES Stormwater program focus on site-specific activities (e.g., construction sites and industrial facilities) and large stormwater conveyance systems (e.g., MS4s). The different spatial scales at which regulatory agencies provide information to, and require information from, permittees can create challenges as permittees attempt to identify applicable requirements and determine the appropriate locations to implement the requirements.

1.3.5. Challenge 5: Incorporating Monitoring, Tracking, and Adaptive Management Elements into TMDL WLAs and Stormwater Permits

Monitoring and evaluation are key components to determining if stormwater management efforts are producing the necessary pollutant load reductions identified in the TMDLs, thereby making progress toward attainment of water quality standards. Because it is not required, most TMDLs do not address monitoring or, if the need is mentioned, the type and frequency of monitoring necessary to demonstrate progress towards attaining and maintaining water quality standards. Stormwater permits require all stormwater permittees to evaluate the efficacy of their SWMP or SWPPP. However, the evaluation process does not usually involve end-of-pipe or in-stream analytical monitoring to directly evaluate stormwater discharge or ambient water quality. To more effectively connect TMDLs and stormwater permits, the TMDL could include recommendations regarding monitoring, tracking, and adaptive management activities, and the relevant stormwater permits could either reference the recommended activities or adopt these recommendations. Permit writers can consider permittees to identify milestones on the basis of criteria (water quality- or technology-based) that use the monitoring and tracking information to drive adaptive management efforts.

1.4. Resources

1.4.1. TMDL Program

1. EPA's TMDL Web site: www.epa.gov/owow/tmdl/
2. USEPA (U.S. Environmental Protection Agency). 2005. *Guidance for 2006 Assessment, Listing, and Reporting Requirements Pursuant to Sections 303(d), 305(b), and 314 of the Clean Water Act [2006 Integrated Report Guidance (IRG)]*. U.S. Environmental Protection Agency, Office of Water, Office of Wetland, Oceans and Watersheds, Washington, DC.
www.epa.gov/owow/tmdl/2006IRG/#documents

This document provides a recommended reporting format and suggested content to be used in developing a single document that integrates the reporting requirements of the CWA sections 303(d), 305(b), and Part 314. The report also provides a comprehensive compilation of EPA's previous guidance related to integrated reporting.

3. USEPA (U.S. Environmental Protection Agency). 2006. *Information Concerning 2008 Clean Water Act Sections 303(d), 305(b), and 314 Integrated Listing and Reporting Decisions*. Memorandum from Diane Regas, Director, Office of Wetlands, Oceans and Watersheds to Regions 1-10 Water Division Directors. www.epa.gov/owow/tmdl/2008_ir_memorandum.html

This EPA memorandum dated October 12, 2006, provides information to assist in the preparation and review of 2008 integrated water quality reports to supplement the information provided in the 2006 Integrated Report Guidance.

4. USEPA (U.S. Environmental Protection Agency). 1991. *Guidance for Water-Quality-based Decisions: The TMDL Process*. EPA 440/4-91-001. U.S. Environmental Protection Agency, Office of Water, Washington, DC. www.epa.gov/OWOW/tmdl/decisions/

This guidance document explains the programmatic elements and requirements of the TMDL process as established by CWA section 303(d) and by EPA's Water Quality Planning and Management Regulations (40 CFR Part 130). It discusses the process for developing a TMDL, roles of EPA and the states in the process, and supporting or related water programs.

5. Best-Wong, B. 2006. *Clarification Regarding "Phased" Total Maximum Daily Loads*. Memorandum from Benita Best-Wong, Director, Assessment and Watershed Protection Division, to Water Division Directors, Regions 1-10, August 2, 2006.
www.epa.gov/owow/tmdl/tmdl_clarification_letter.html

This memorandum clarifies the *Guidance for Water Quality-Based Decisions: The TMDL Process*, issued in 1991, by explaining EPA's interpretation of the term *phased TMDL* as used in EPA guidance and explaining the distinction between *phased TMDLs*, *staged implementation*, and *adaptive implementation*.

6. EPA's *Guidelines for Reviewing TMDLs Under Existing Regulations Issued in 1992*:
www.epa.gov/owow/tmdl/guidance/final52002.html

This Web document provides guidance on the required elements of a TMDL report for use in reviewing and approving TMDLs.

1.4.2. TMDLs and Stormwater

1. EPA's TMDL and Stormwater Resources Web site: www.epa.gov/owow/tmdl/stormwater
2. USEPA (U.S. Environmental Protection Agency). 2007. *Total Maximum Daily Loads with Stormwater Sources: A Summary of 17 TMDLs*. EPA 841-R-07-002. U.S. Environmental Protection Agency, Office of Wetlands, Oceans and Watersheds, Washington, DC. www.epa.gov/owow/tmdl/17_TMDLs_Stormwater_Sources.pdf

This document summarizes 17 TMDLs that have been developed for stormwater-source pollutants in 16 states, representing a range of pollutants, models used, and different allocation and implementation methods.

3. USEPA (U.S. Environmental Protection Agency). 2007. *Total Maximum Daily Loads and National Pollutant Discharge Elimination System Storm Water Permits for Impaired Water Bodies: A Summary of State Practices*. U.S. Environmental Protection Agency, Region 5, Chicago, IL. www.epa.gov/region5/water/wshednps/pdf/state_practices_report_final_09_07.pdf

This report summarizes information on TMDL-stormwater practices in 10 states, provides specific TMDL and permit language, and identifies some specific technical and programmatic challenges.

4. Wayland, R.H., and J.A. Hanlon. 2002. *Establishing Total Maximum Daily Load (TMDL) Wasteload Allocations (WLAs) for Storm Water Sources and NPDES Permit Requirements Based on Those WLAs*. Memorandum from Robert H. Wayland, III, Director, Office of Wetlands, Oceans and Watersheds, and James A. Hanlon, Director, Office of Wastewater Management, U.S. Environmental Protection Agency, Washington, DC. www.epa.gov/npdes/pubs/final-wwtmdl.pdf

This memo clarifies existing EPA regulatory requirements for, and provides guidance on, establishing WLAs for stormwater discharges in TMDLs approved or established by EPA.

5. NRC (National Research Council). 2008. *Urban Stormwater Management in the United States*. Committee on Reducing Stormwater Discharge Contributions to Water Pollution, Water Science and Technology Board, Division on Earth and Life Studies, National Research Council of the National Academies. National Academies Press, Washington, D.C.

The report provides a description of the history of stormwater management in the United States; an overview of stormwater regulations and the federal regulatory program; and information on a number of relevant scientific and technological issues such as hydrology, geomorphology, biology, monitoring and modeling. The report also provides a number of significant findings and recommendations on how stormwater management in the United States should be improved to achieve better environmental outcomes

1.4.3. NPDES Stormwater Program

1. EPA's NPDES Stormwater program Web site: http://cfpub.epa.gov/npdes/home.cfm?program_id=6

2. EPA's NPDES Stormwater Program Authorization Status:
<http://cfpub.epa.gov/npdes/stormwater/authorizationstatus.cfm>
3. NRC (National Research Council). 2008. *Urban Stormwater Management in the United States*. Committee on Reducing Stormwater Discharge Contributions to Water Pollution, Water Science and Technology Board, Division on Earth and Life Studies, National Research Council of the National Academies. National Academies Press, Washington, D.C.

The report provides a description of the history of stormwater management in the United States; an overview of stormwater regulations and the federal regulatory program; and information on a number of relevant scientific and technological issues such as hydrology, geomorphology, biology, monitoring and modeling. The report also provides a number of significant findings and recommendations on how stormwater management in the United States should be improved to achieve better environmental outcomes.

1.4.3.1. MS4s

1. EPA's NPDES Stormwater Discharges from Municipal Separate Storm Sewer Systems Web site:
<http://cfpub.epa.gov/npdes/stormwater/munic.cfm>
2. USEPA (U.S. Environmental Protection Agency). 2007. *Municipal Separate Storm Sewer System (MS4) Program Evaluation Guidance*. EPA-833-R-07-003. U.S. Environmental Protection Agency, Office of Wastewater Management, Water Permits Division, Washington, DC.
www.epa.gov/npdes/pubs/ms4guide_withappendixa.pdf and
www.epa.gov/npdes/pubs/ms4guide_appendicesb-d.pdf

This guide is primarily for use by NPDES authorities to evaluate the quality of Phase I and Phase II MS4 programs for permit compliance, technical assistance, and other purposes. It can be used for comprehensive program evaluations or for certain components. MS4 program managers can also use it to evaluate their own programs.

3. USEPA (U.S. Environmental Protection Agency). 2005. *Stormwater Phase II Final Rule Fact Sheet: Small MS4 Stormwater Program Overview*. EPA 833-F-00-002. U.S. Environmental Protection Agency, Office of Water. www.epa.gov/npdes/pubs/fact2-0.pdf

This three-page fact sheet provides the definition of regulated small MS4s and associated permit requirements for regulated small MS4s.

1.4.3.2. Industrial Activities

1. EPA's NPDES Stormwater Discharges from Industrial Facilities Web site:
<http://cfpub.epa.gov/npdes/stormwater/indust.cfm>
2. List of sectors of industrial activity that require permit coverage:
<http://cfpub.epa.gov/npdes/stormwater/swcats.cfm>
3. USEPA (U.S. Environmental Protection Agency). 1992. *Stormwater Management for Industrial Activities: Summary Guidance on Developing Pollution Prevention Plans and Best Management*

Practices. EPA 833-R-92-002. U.S. Environmental Protection Agency, Office of Water, Washington, DC. www.epa.gov/npdes/pubs/owm0236a.pdf

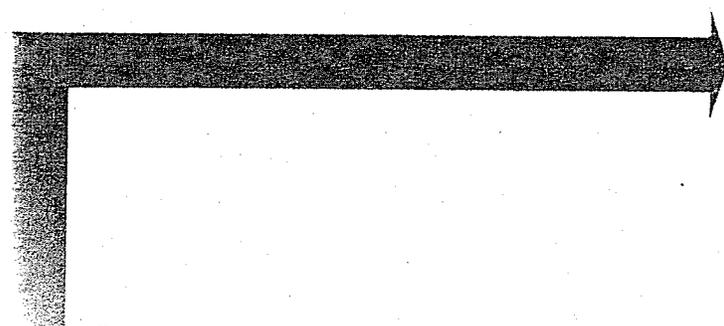

This document provides guidance on the SWPPP requirements and includes a set of worksheets, a checklist, and a sample SWPPP.

1.4.3.3. Construction Activities

1. EPA's NPDES Stormwater Discharges from Construction Activities Web site: <http://cfpub.epa.gov/npdes/stormwater/const.cfm>
2. USEPA (U.S. Environmental Protection Agency). 2007. *Developing Your Stormwater Pollution Prevention Plan: A Guide for Construction Sites*. EPA 833-R-060-04. U.S. Environmental Protection Agency, Washington, DC. <http://cfpub.epa.gov/npdes/stormwater/swppp.cfm>

This guidance document is a reference for construction site operators who must comply with an NPDES stormwater permit. Through its description of the SWPPP development process, this guidance addresses the type of information required in an SWPPP and could help TMDL writers determine if SWPPPs will provide information and data useful to the TMDL development process.

Chapter Two Identifying Opportunities to Coordinate TMDLs and Stormwater Permits

- 1 Understanding the Connections Between TMDLs and Stormwater Permits
- 2 **Identifying Opportunities to Coordinate TMDLs and Stormwater Permits**
- 3 Characterizing Impairments and Stormwater Sources
- 4 Developing TMDLs with Stormwater Sources
- 5 Promoting Effective Stormwater Management
- 6 Coordinating TMDLs and Stormwater Permits

What's included in this chapter

- ✓ Overview of activities used by various state agencies to promote better coordination and communication among TMDL and permit writers.
- ✓ Discussion of opportunities to promote better coordination between TMDLs and stormwater permits at different stages of the development process.

What you should know after reading this chapter

- ✓ Internal reorganization efforts can help to promote better coordination between TMDL and stormwater permitting programs.
- ✓ Options exist for coordinating TMDLs and stormwater permits, even if development schedules are not synchronized.
- ✓ Communication between program staff, as well as affected stakeholders, is key to improving connections between TMDLs and stormwater permits.

Potential roles and responsibilities under this activity

If you are a TMDL writer

1. Find out the names of stormwater permit staff and talk to them about the state's stormwater permitting program.
2. Identify TMDLs on the 303(d) list that might have a stormwater component and share the list of watersheds and municipalities with stormwater permitting staff, along with the associated TMDL development schedule.

If you are a stormwater permit writer

1. Find out the names of TMDL program staff and talk to them about the state's TMDL program.
2. Submit list of permits to be issued or reissued, categorized by watershed to TMDL staff to determine status on the 303(d) list and TMDL development schedule.

2. IDENTIFYING OPPORTUNITIES TO COORDINATE TMDLS AND STORMWATER PERMITS

Improving the connection between TMDLs and stormwater permits can start with TMDL and permit writers taking steps to improve communication through efforts such as (1) coordinating programmatic schedules and activities and (2) developing institutional and organizational communication mechanisms. Improved communication at the programmatic level can lead to improved coordination of technical activities, such as assessment and monitoring. Improving internal coordination and communication among TMDL and permit writers can foster good communication and information sharing with key stakeholders, including stormwater sources. As shown in Figure 3, stakeholder and public involvement is an important element of the overall TMDL process. Engaging and involving stakeholders is required under both the TMDL and NPDES Stormwater programs and provides stakeholders with the opportunity to share stormwater related data and information to strengthen and focus the overall TMDL analysis and related implementation efforts. This chapter addresses opportunities to improve coordination and communication both internally and with key stakeholders that affect stormwater management decisions and activities.

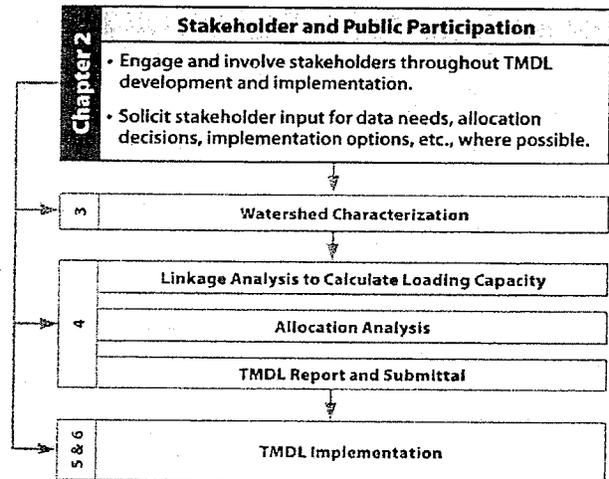

Figure 3. Illustration of the steps in the TMDL process, including the step of stakeholder involvement and public participation.

2.1. Improving Internal Communication and Coordination

Schedules and priorities for the TMDL program are driven by factors such as court-ordered deadlines, waterbody rankings under the section 303(d) list, rotating watershed basin planning approaches, as well as available staff and resources. Factors such as regulatory requirements, permit expiration dates, rotating watershed basin planning and assessment approaches, as well as available staff and resources, affect NPDES stormwater permit development schedules. Regardless of how internal program schedules and priorities are set, it could prove beneficial for TMDL and permit writers to participate in some type of internal planning to determine short-term and long-term schedules for TMDLs and stormwater permit development. Examining internal program schedules is a good starting point for identifying opportunities for coordination and collaboration between the programs.

Resources: For more information on approaches states and EPA Regions use to improve coordination between the TMDL and Stormwater programs, refer to the Resources list at the end of this chapter in Section 2.3.

TMDL and permit writers should collectively examine each program's schedule to determine the timing for (1) waterbodies and watersheds with *ongoing* TMDL development activities for impairments with known or suspected stormwater sources; (2) waterbodies and watersheds with *planned* TMDL

development activities for impairments with known or suspected stormwater sources; and (3) general and individual stormwater permits nearing expiration, expired, or administratively continued discharging to impaired waterbodies or within impaired watersheds that have ongoing or planned TMDL development activities. Ultimately, the goal is to identify stormwater source TMDLs and stormwater permits that fall into the following categories: impending, in progress, and developed.

As illustrated in Table 2, there are a variety of ways that TMDL and permit writers can promote better connections between TMDLs and stormwater permits regardless of the development status. Significant opportunities for coordination include activities such as data collection and sharing, stakeholder involvement, permit and TMDL language development, and process administration. It is important to note that coordination opportunities might vary depending on the type of permit used to implement the TMDL. Table 2 highlights where differences in opportunities exist according to permit type.

Planning and scheduling is only one factor affecting internal TMDL and NPDES Stormwater program coordination and collaboration. Organizational structures that affect how easily staff from the two programs can work together also influence TMDL and permit writer coordination and collaboration. Several EPA Regions and state agencies have reorganized to bring the TMDL and NPDES Stormwater programs under a common management unit (e.g., branch, division, group). Some have gone beyond bringing the programs together and have taken steps to ensure further integration either by developing TMDL-stormwater teams or specific positions tasked with promoting stormwater-source TMDL implementation.

Table 2. Potential opportunities for coordination based on status of TMDL and stormwater permit development

Status of TMDL	Status of stormwater permit	Potential opportunities for coordination	
		Individual permit	General permit
Impending	Impending (New or Anticipated Reissuance)	<ul style="list-style-type: none"> ▪ Identify available data, data gaps, and develop integrated approach for collecting additional data ▪ Attempt to synchronize schedules for coordinated development ▪ Develop coordinated TMDL and permit stakeholder involvement process ▪ Conduct collaborative kick-off meeting among TMDL and permit writers and permittee(s) that integrates discussion of TMDL development issues and implementation considerations ▪ Determine how the permit can address future TMDLs 	<ul style="list-style-type: none"> ▪ Conduct internal collaborative kick-off meeting among TMDL and permit writers ▪ Determine if TMDL will recommend specific stormwater BMPs recommended to implement the WLA ▪ Coordinate development of TMDL and permit language to ensure consistency ▪ Determine how the permit can address future TMDLs
	In Progress	<ul style="list-style-type: none"> ▪ Consider adjusting permit development schedule to track with TMDL development ▪ Share data and information collected through permit application process with TMDL writers to inform TMDL development ▪ Discuss potential TMDL data needs and incorporate permit requirements that focus on monitoring and other types of data collection that will inform TMDL development 	<ul style="list-style-type: none"> ▪ Tailor permit language to acknowledge the need for permittees to review and modify SWMP/SWPPP to achieve consistency with WLAs upon approval of the TMDL

Status of TMDL	Status of stormwater permit	Potential opportunities for coordination	
		Individual permit	General permit
	Developed	<ul style="list-style-type: none"> ▪ Discuss options for modifying the permit to be consistent with TMDL WLA assumptions. ▪ Share data and information collected through permit application process with TMDL writers to inform TMDL development 	<ul style="list-style-type: none"> ▪ Determine if the permit will be consistent with TMDLs approved at the time of permit issuance or at the time of NOI submission ▪ Evaluate existing permit language regarding consistency with approved WLAs to determine if it is adequate or requires revision during permit reissuance process ▪ Consider developing a technical appendix/amendment to update existing stormwater permit, without triggering permit modification requirements, to compile and present TMDL requirements upon completion
In-Progress	Impending (New or Anticipated Reissuance)	<ul style="list-style-type: none"> ▪ Discuss TMDL development process and options for WLA categorization to enable sources to implement them through planned permit requirements ▪ Develop specific requirements that directly relate to implementation of the proposed WLAs, such as monitoring and SWMP/SWPPP assessment and modification 	<ul style="list-style-type: none"> ▪ Consider including any implementation planning information from the TMDL into the permit either directly or by reference ▪ Identify data gaps discovered through the TMDL development process and determine what type of permit requirements are appropriate to include to facilitate filling data gaps for potential future revision of the TMDL or to support adaptive management activities
	In Progress	<ul style="list-style-type: none"> ▪ Compare information collected to date under each program to ensure that each process is working with the same data and information and to determine if one program can fill any data gaps identified by the other program ▪ Attempt to streamline interaction with stakeholders by conducting joint meetings or consolidating data requests ▪ Identify activities under each process to determine if there is any overlap and any opportunity for integrating remaining activities ▪ Ensure that any language used in both the TMDL and the permit are consistent; provide updates on changes to language as necessary 	<ul style="list-style-type: none"> ▪ Identify activities under each process to determine if there is any overlap and any opportunity for integrating remaining activities ▪ Ensure that any language used in both the TMDL and the permit are consistent; provide updates on changes to language as necessary
	Developed	<ul style="list-style-type: none"> ▪ Review existing permit requirements and required permit documents (e.g., SWMPs and SWPPPs) to determine if existing permittee-generated data and information can facilitate remaining TMDL development activities ▪ Discuss options for modifying the permit to be consistent with TMDL WLA assumptions and requirements 	<ul style="list-style-type: none"> ▪ Determine if the permit will be consistent with TMDLs approved at the time of permit issuance or at the time of NOI submission ▪ Evaluate existing permit language regarding compliance with proposed WLAs to determine if it is adequate or requires revision during permit reissuance process ▪ Consider developing a technical appendix/amendment to update existing stormwater permit, without triggering permit modification requirements, to compile and present TMDL requirements upon completion

Status of TMDL	Status of stormwater permit	Potential opportunities for coordination	
		Individual permit	General permit
Developed	Impending (New or Anticipated Reissuance)	<ul style="list-style-type: none"> ▪ Review the approved WLA to determine how best to reflect the input factors and pollutant loads established in the WLA for implementation into new or reissued permit requirements ▪ Identify any TMDL implementation planning activities or information that the permit could incorporate or reference to help permitted stormwater sources implement the approved WLA 	<ul style="list-style-type: none"> ▪ Determine most feasible and appropriate requirements to include in the permit to demonstrate SWMP or SWPPP progress toward implementing the WLA ▪ Consider developing a technical appendix/amendment to compile and present TMDL information
	In Progress	<ul style="list-style-type: none"> ▪ Review draft permit conditions to ensure consistency with the approved WLA and any TMDL implementation plan recommendations ▪ Develop and incorporate tailored monitoring requirements to assess progress toward implementing the WLA 	<ul style="list-style-type: none"> ▪ Review draft permit conditions to ensure requirements related to impaired waterbodies with approved TMDLs reflect WLAs and , if applicable TMDL implementation plan recommendations ▪ Ensure that draft permit conditions include meaningful monitoring and assessment requirements that will support adaptive management activities
	Developed	<ul style="list-style-type: none"> ▪ Assess if current permit conditions are consistent with approved WLA ▪ Determine if mechanisms exist to assess progress toward implementing WLAs ▪ Plan potential changes to future versions of the permit 	<ul style="list-style-type: none"> ▪ Assess if current permit conditions are consistent with approved WLA ▪ Determine if mechanisms exist to assess progress toward implementing WLAs ▪ Plan potential changes to future versions of permit conditions

In Practice: Efforts to Promote Improved Coordination Between TMDL and Permit Activities

States and EPA are making strides to promote improved coordination between TMDL and permit writers. A few examples of internal efforts are provided below.

Consolidating stormwater-source TMDL development with one group. The Vermont Department of Environmental Conservation has a Stormwater Management Section that focuses on administering the state's stormwater program—both the federal NPDES Stormwater program and the state-authorized SWMP. Although staff in this section address stormwater permitting issues, they also tackle TMDL development if the impairment involves stormwater. TMDL staff hand off stormwater-related TMDL development and implementation to staff in the Stormwater Management Section that have expertise both in permitting issuance and stormwater BMP implementation.

Assigning staff to coordinate and promote implementation. In Minnesota and Tennessee, the state agencies have recently created new positions intended to promote successful stormwater management implementation and connection to the TMDL program, as well as other related requirements. Oregon assigns one person to coordinate TMDL development and permitting within one watershed, although that one person might not necessarily be responsible for actually developing the TMDLs or crafting permit language.

Bringing staff physically and organizationally together. Promoting more effective communication and data sharing often requires reorganizing staff to share physical space or space on an organizational chart. EPA Region 2 reorganized TMDL and permit staff to bring them together under one branch. EPA Region 10 physically moved TMDL and permit staff to share a common area. EPA Region 4 is reorganizing to include TMDL development, permits, and nonpoint sources together in one branch.

Facilitating regular communication. EPA headquarters works with EPA Regional Offices to host monthly TMDL and Stormwater Workgroup conference calls. These internal calls provide EPA TMDL and permit staff from every region with the opportunity to exchange information and ideas related to TMDL development and implementation through stormwater permits. The group participates in developing technical resources and

shares information on TMDL and stormwater projects. EPA Region 4 conducts bimonthly conference calls with state TMDL and stormwater permit staff to exchange information and ideas on issues affecting coordination between the two programs.

2.2. Improving Stakeholder Communication and Coordination

Another reason to promote coordination between TMDL and permit writers is to enable key stakeholders, including stormwater sources, to participate in the TMDL development process. Permit writers can help to encourage stormwater sources to participate in the TMDL development process and facilitate information sharing. Although TMDL writers are likely to work with permit writers to obtain permit-related information from stormwater sources, there might be instances when TMDL writers have to go directly to stormwater sources to obtain information and data. Stormwater sources might have an additional level of comfort and willingness to share information knowing their permit writer is involved in the process.

Stakeholder involvement is an essential component of both the TMDL development and NPDES permitting process. Both the TMDL and the NPDES programs contain regulatory requirements for public participation that involve activities such as public review, public notice, public hearings, and public comment

Resources: For more ideas and strategies to involve stakeholders, refer to the Resources list at the end of this chapter in Section 2.3.2.

periods. Ideally, TMDL and permit writers should identify and involve stakeholders early in both the TMDL development and NPDES permitting processes. The primary stakeholders in the TMDL and NPDES processes are parties directly affected by the TMDL allocations or the permit requirements. In the case of stormwater source TMDLs, the primary stakeholders are permitted stormwater sources that will receive a WLA under the TMDL and must implement the WLA through stormwater permits. In addition to permitted stormwater sources, other stakeholders include those affected by the TMDL and permitting decisions or have information to contribute to the process, such as local environmental organizations, homeowner associations, universities, local developers, and city planners.

Providing data and information is one of the most significant contributions that stakeholders can make to the stormwater source TMDL development process. TMDL and permit writers can consider opportunities and approaches to facilitate information exchanges and technical participation in the TMDL development process. These opportunities could include face-to-face information exchange meetings, facility visits, focus group meetings for feedback on technical issues pertaining to stormwater source WLA development and associated permit requirements, or regular group conference calls to discuss ideas and progress. As mentioned in the previous section, permit writers might have access to much of the data and information generated by stakeholders through compliance with existing stormwater permit requirements. (Chapter 3 of this Handbook provides a discussion of the types of information sources generate through stormwater permit requirements and how TMDL writers can use this information in the stormwater source TMDL development process.)

In Practice: Using Stakeholder Data and Information to Identify High-Priority Stormwater Sources

The 2007 Charles River watershed (Massachusetts) pathogen TMDL relies on data from the Charles River Hot Spot monitoring effort to identify and prioritize bacterial sources of pollution. This monitoring effort, crucial to the TMDL development process, is the result of a single watershed stakeholder dedicated to voluntarily kayaking the Lower Charles River shoreline to conduct sampling after rain events. From 2002 through 2005, this dedicated watershed stakeholder followed sampling procedures detailed in the approved Charles River Watershed Association Quality Assurance Project Plan (QAPP) for fecal coliform. He was able to collect samples from several hundred storm drain outfalls during this period. Data from this stakeholder-based monitoring effort allowed the Massachusetts Department of Environmental Protection to identify and prioritize 31 stormwater outfalls along the Lower Charles River as high-priority bacterial sources in the TMDL analysis. Ultimately, the data collected by this dedicated watershed stakeholder will help the Massachusetts Department of Environmental Protection and other key stakeholders target future bacterial source tracking efforts and implementation activities.

In Practice: Locally Led TMDL Implementation

The DuPage River Salt Creek Workgroup (DRSCW) is a collaborative stakeholder effort by sanitary districts, municipalities, counties, forest preserve districts, state and federal agencies, and private environmental organizations to address the water quality impairments identified in chloride and dissolved oxygen TMDLs for branches of the DuPage River and Salt Creek (Illinois). Although Illinois EPA held public meetings during the development of the TMDL reports, a watershed-based stakeholder group did not exist in the area when the TMDL reports were written. Stakeholders affected by the TMDL allocations wanted an opportunity to *substantiate* implementation strategies and determine whether there were other cost-effective options for achieving water quality standards (DRSCW 2004). Representatives from municipalities affected by the TMDL reports discussed forming the workgroup to collect data and carry out other technical activities to move forward with implementing the TMDLs. It was also envisioned that the DRSCW could help stakeholders establish a solid foundation for future TMDLs, contribute to developing nutrient criteria, and address other water quality or regulatory issues in the watersheds. A core group of municipalities generated support for the workgroup concept by emphasizing the importance of locally led decisions on where and how to spend local money to address water quality issues.

 - ❻ Coordinating TMDLs and Stormwater Permits

Chapter Three

Characterizing Impairments and Stormwater Sources

What's included in this chapter

- ✓ General description of the types of impairments resulting from stormwater.
- ✓ Description of the commonly used types of data analyses to understand the impairment being addressed in a TMDL.
- ✓ Discussion of setting TMDL targets for TMDLs with stormwater sources.
- ✓ Discussion of identifying potential sources to include in the TMDL analysis.
- ✓ Description of the types of data generated by stormwater dischargers that TMDL writers can use to better understand the relative contribution of stormwater sources to a waterbody impairment.

What you should know after reading this chapter

- ✓ What data and information can help to characterize the impairment to support identification of TMDL targets and potential sources.
- ✓ What information is available to accurately and comprehensively include stormwater sources in the watershed characterization for TMDL development.
- ✓ How TMDL writers can work with permit writers to determine the availability and the value of the stormwater discharger information before investing time and energy into data collection.

Potential roles and responsibilities under this activity

If you are a TMDL writer

1. Analyze waterbody and watershed data to characterize the impairment related to the stormwater impacts.
2. Identify whether stormwater sources are contributing to the impairment addressed in your TMDL.
3. Coordinate with stormwater permit staff to obtain existing data and information from stormwater permittees.
4. Use available data to characterize stormwater sources and their potential contribution to water quality impairments.

If you are a stormwater permit writer

1. Share existing stormwater discharger generated data available in-house with TMDL writers.
2. Serve as a liaison between TMDL writers and stormwater permittees to streamline the data sharing process.

3. CHARACTERIZING IMPAIRMENTS AND STORMWATER SOURCES

The general process for developing a TMDL including stormwater sources is much the same as that for developing any TMDL, including the following typical steps:

- Watershed characterization to identify the watershed, waterbody, and impairment conditions; TMDL targets; and potential sources
- Linkage analysis to calculate the loading capacity
- Allocation analysis to evaluate and assign WLAs to point sources and LAs to nonpoint sources
- Development of the TMDL report and administrative record for submittal to EPA

While these steps are common to all TMDL development projects, there are a number of considerations for each step when developing TMDLs that address stormwater sources. As shown in Figure 4, this chapter discusses the step of watershed characterization, and the remaining steps to calculate the loading capacity, establish allocations and document the TMDL report are discussed in Chapter 4.

The TMDL process requires a thorough understanding of the waterbody and watershed characteristics, available data, causes of impairment, sources, water quality standards, and potential targets. Some of this information will be available through a state's 303(d) list and waterbody assessment documentation, but much of the information will be gathered and summarized while completing the TMDL. Collectively, this is referred to here as the *watershed characterization* step of the TMDL.

Watershed characterization serves as the foundation of the TMDL analysis, providing a basic understanding of the impairments of concern, the desired levels for restoration (e.g., water quality standards and TMDL targets) and the likely sources contributing to the impairment. Characterizing the waterbody and the associated impairments as well as the sources and other watershed characteristics provides the necessary background information to support decisions regarding the approach used for calculating the TMDL, the level of detail or focus of the analysis, and ultimately TMDL implementation. The following sections describe the major elements of the watershed characterization:

- Understanding the impairment
- Identifying TMDL targets
- Identifying and assessing potential sources

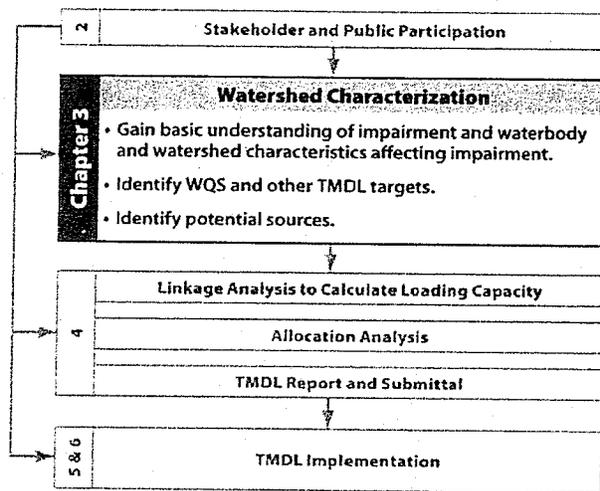

Figure 4. Illustration of the steps in the TMDL process, including the step of watershed characterization discussed in this chapter.

At the end of the watershed characterization step for a TMDL addressing stormwater sources, the TMDL writer should understand how stormwater is affecting the impaired waterbody, what stormwater sources exist in the watershed, and what data and information are available to characterize the sources.

3.1. Understanding the Impairment

Understanding the impairment(s) being addressed by a TMDL is critical to establishing appropriate TMDL targets, identifying potential sources and eventually selecting a technical approach for calculating the loading capacity. The main objective of this step is to identify the nature of the impairment(s) being addressed by the TMDL, including location, timing, and magnitude of impairment. A state or tribe's 303(d) list identifies the basic information regarding the impaired waterbody and the observed impairment, usually including the waterbody characteristics (e.g., name, location, size), the water quality standard that was violated, the pollutant of concern (if known), and the suspected causes and sources contributing to the impairment. It is usually necessary to analyze available monitoring data to further characterize and understand the impairments. This section first introduces the commonly observed impairments associated with stormwater and discusses how stormwater can affect waterbody conditions. The section then describes the types of data analyses that are typically used to support characterization of impairments for TMDL development, highlighting the issues unique to developing stormwater TMDLs.

It is important to note that flow is a key component in characterizing, developing and implementing TMDLs for stormwater sources and is discussed throughout this Handbook. Quantity of flow and variation in flow regimes are important factors in transporting stormwater pollutants such as metals, pathogens or sediments that violate water quality standards. Flow is taken into account when developing loading analyses, and flow is specifically considered when calculating seasonal variation and critical conditions in a TMDL. The TMDL regulations specify that TMDLs can be expressed in terms of either mass per time, toxicity or other appropriate measure, and flow has been used as a surrogate for stormwater pollutants, as discussed in Section 3.2. Flow is also a critical component to consider when TMDLs are being implemented. Additional information on this is presented in Chapter 5 and Chapter 6.

Resources: Several EPA documents include discussion of flow in developing TMDLs and are included in the Resource section at the end of this chapter in Section 3.4.2. In addition, Resource sections at the end of other chapters include TMDL documents available for further information.

3.1.1. Stormwater Effects on Receiving Waterbodies

The purpose of this section is to briefly summarize the effects that stormwater has on streams and lakes and other receiving waterbodies. Stormwater can affect waterbodies in a number of ways depending on the type of stormwater source and the waterbody characteristics. While stormwater sources can include illicit discharges and dry-weather flows, most stormwater sources represent precipitation-driven runoff from impervious and pervious surfaces. The effects of stormwater runoff have been well documented in multiple journal articles, books and other publications. Most recently, the National Research Council has issued a report, *Urban Stormwater Management in the United States* (NRC 2008), that describes in detail the hydrologic, geomorphic, and biological effects of urbanization on watersheds. The conclusions derived from these reports are that increased imperviousness and stormwater discharges can lead to the following effects:

- Altered stream hydrology, including higher peak flows, higher peak flow duration, lower base flows, and decreased groundwater recharge
- Increased pollutant loadings associated with higher runoff volumes (from increased imperviousness)

These two processes—flow alterations and increased pollutant loading—are the primary causes of stormwater effects on receiving waters. These effects on both water quantity and water quality can in turn cause impairment to a number of designated uses, as shown in Table 3. For example, flow alterations can cause impairments, especially to aquatic life, by altering habitat, increasing channel instability, causing stream incision, increasing bank erosion, causing riparian degradation, and altering sediment supply and transport (Burton and Pitt 2001). Increases in pollutant loading from stormwater sources can create conditions that are harmful to human health, fish, and other aquatic life. Pollutants that are typically associated with stormwater runoff include pathogens, metals, sediment, nutrients, chlorides, pesticides, oil and grease, toxic organics, and polychlorinated biphenyls (PCBs) (Burton and Pitt 2001). The type of pollutant varies for each area depending on the specific sources within a watershed. In addition, permitted stormwater includes unique sources that are not necessarily precipitation-driven such as illicit discharges and dry-weather flows (e.g., from lawn watering or car washing). These types of stormwater sources are typically associated with effects due to water quality rather than water quantity.

Resources: For more information on stormwater impacts to receiving waters, refer to the Resources list at the end of this chapter in Section 3.4.1.

Table 3. Examples of the effect of stormwater runoff on common designated uses

Designated use	Water quantity effects	Water quality effects
Aquatic Life	Change in stream hydrology resulting in habitat modification and degradation (e.g., change in riffle/pool ratio, streambed alteration, stream incision and streambank erosion, change in sediment transport)	<ul style="list-style-type: none"> ▪ Degradation of receiving water quality that can be detrimental to aquatic life (e.g., increased turbidity, increased temperature, eutrophic effects from increased nutrients)
Recreation	Alteration of stream channel or lake bathymetry impairing swimming or boating uses	<ul style="list-style-type: none"> ▪ Increased pollutant levels that pose a risk to human health (e.g., bacteria, metals) ▪ Increased pollutants that degrade aesthetics (e.g., nutrients resulting in algal growth, oil and grease and litter causing odors or floatables)
Drinking Water	Less opportunities for infiltration to recharge groundwater supplies that serve as public drinking water	<ul style="list-style-type: none"> ▪ Increased pollutant levels that pose a risk to human health (e.g., bacteria, metals) ▪ Increased pollutants that impede function of drinking water intakes (e.g., nutrients resulting in algal growth, blocked intakes from litter or increased sediment)

3.1.2. Data Analysis to Characterize Impairment

The analysis of waterbody monitoring data (e.g., flow, water quality, biological) supports an understanding of impairments by determining when, where, and under what conditions the problems are evident. These answers help to define many of the

Resources: For more information on where to obtain water quality and flow data, refer to the Resources list at the end of this chapter in Section 3.4.3.

technical aspects of the TMDL, including what targets are appropriate, what sources are quantified, what approaches can be used, how allocations are determined, and on what time and spatial scale the analysis is conducted. Important aspects of the data analysis to understand the impairments for a TMDL include the following:

- Data analysis to identify pollutant of concern or expected causes of impairment in cases of a listing based on general or biological impairment
- Spatial analysis to identify spatial variations in waterbody and watershed conditions to identify environmental conditions or sources that affect impairment
- Temporal analysis to evaluate the timing of impairment and potential source loading or other conditions contributing to impairment
- Analysis of the relationships among multiple parameters or waterbody measures (e.g., pollutant concentration and flow) to understand impairment conditions and identify potential sources
- Review of results of data analyses to identify critical conditions to support identification of TMDL targets and select appropriate TMDL development approach

Tip: Using data analysis to support source identification

Data analysis to understand the impairment is typically conducted in tandem with source identification activities (as discussed in Section 3.3). Analysis of waterbody data along with review of watershed land uses, source locations, and other source information helps to determine what sources exist and whether they are affecting impairment.

The following sections provide more detail on these common types of data analyses to support the characterization of impairments. These analyses also help to identify potential sources and evaluate their effect on impairment. Section 3.3 will discuss other activities and information that can help to identify sources and can be evaluated concurrently with the waterbody data to assess sources.

3.1.2.1. Identifying Pollutants or Other Causes of Impairment

Impaired waterbodies affected by stormwater sources are often listed as impaired due to such things as *biological impairment* or *habitat alteration* rather than for specific pollutants (e.g., metals, sediment). These listings are typically based on biological assessments or violations of biocriteria. Biological communities can show a response from multiple stressors or from a series of combined stressors such as water column pollutants, flow alterations, channel alterations, and other habitat alterations. Therefore, it might be difficult to identify the pollutant or suite of pollutants affecting the biological community.

EPA developed the *Stressor Identification Guidance Document* (USEPA 2000c) to help practitioners determine which pollutants might be affecting biological communities. The stressor identification (SI) document covers the organization and analysis of available evidence to determine the cause of biological impairment. The general SI process entails critically reviewing available information, forming possible stressor scenarios that might explain the impairment, analyzing those scenarios, and producing conclusions about which stressor(s) are causing the impairment. The SI process is iterative, usually beginning with a retrospective analysis of available data, and the accuracy of the identification depends on the quality of data and other information used in the process. If the SI process identifies specific pollutant parameters (e.g., sediment, nutrients, temperature) that are causing the biological impairment, TMDL writers can establish targets for the pollutant(s) and use additional waterbody

Resources: For more information on conducting biomonitoring, bioassessment, biocriteria or where to obtain biological data, refer to the Resources list at the end of this chapter in Section 3.4.4.

and watershed information (e.g., analysis of ambient in-stream data, field reconnaissance) to identify potential sources.

However, because biological impairments often represent the cumulative effects of a number of stressors, it might not be possible to isolate a pollutant or even multiple pollutants as the primary cause of impairment. The impairment might be the result of hydrological and physical changes from the change in flow patterns often associated with impervious areas as well as the increase in pollutant loading. In these instances, the TMDL might be developed for a surrogate target that represents the combined effects from stormwater. Identifying TMDL targets, including the use of surrogates, is discussed in Section 3.2.

3.1.2.2. Identifying Spatial Patterns

Analyzing waterbody data to identify spatial variations in waterbody conditions and impairment can help to identify sources or waterbody or environmental conditions that are contributing to impairment. For instance, evaluating the data to identify spatial variations in water quality can identify *hot spots* where sources are affecting a greater impact on water quality. A hot spot downstream of an urban area might indicate that stormwater is a potentially significant source. Spatial evaluation can also be useful in evaluating the effects of different land uses or stormwater source types. For example, comparing monitoring data from sites representative of heavily developed commercial or industrial areas to data representative of residential or undeveloped areas can help to evaluate the relative significance of the different land use types discharging to an MS4.

Tip: Use data analysis to support approach selection

The conclusions drawn during data analyses will help to define the technical needs of the TMDL development approach. Chapter 4 discusses selecting a TMDL approach.

Although the data might not always be available to support it, evaluation of conditions upstream and downstream of a suspected source can help to determine whether it has an effect on water quality. Figure 5 presents paired (i.e., collected at the same time) total suspended solids (TSS) readings from stations upstream and downstream of a landfill that discharges runoff into a small stream. It was expected that the landfill might be a source of nutrients and sediment to the stream. Data were plotted together to evaluate the corresponding conditions upstream and downstream. Also plotted in Figure 6 is a line representing a 1:1 linear relationship, where the values upstream would be equal to those downstream. As shown in the figure, the downstream measurements are typically higher than those upstream of the landfill, suggesting that the landfill could be a significant source of TSS to the stream.

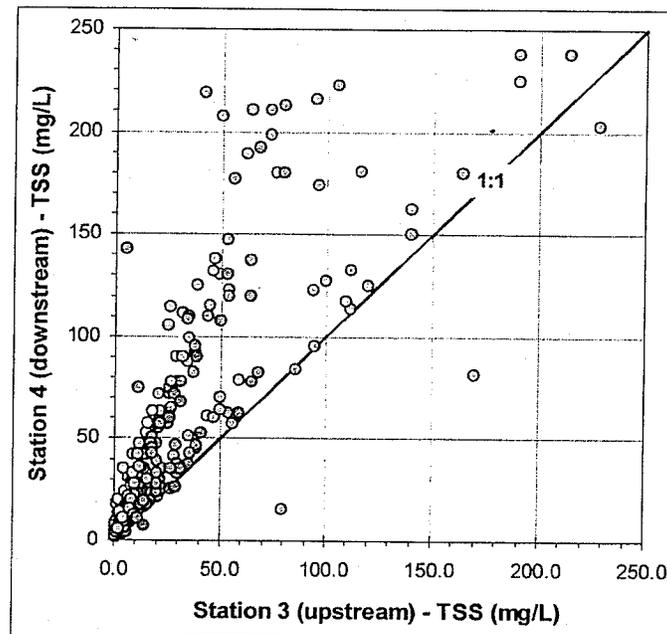

Figure 5. Analysis of upstream and downstream data to evaluate potential impact of an expected source.

3.1.2.3. Identifying Temporal Trends

TMDL writers can also assess data for temporal trends to better understand the impairment and identify potential sources. Temporal variations in water quality, whether from month to month or year to year, can be the result of trends in environmental conditions, such as weather and resulting runoff and flows, or from variations in loading because of schedules or variations in source activities. For example, open areas or parks that drain to MS4s can experience increased wildlife activity or dog walking during summer months, potentially increasing pathogen loads. Similarly, increased loads of sediment or chlorides can occur during winter months from use of sand and deicers on roadways during winter weather.

Longer-term, temporal variations such as trends over a decade rather than across seasons can also provide clues about watershed sources. Figure 6 illustrates a data analysis that evaluates both spatial and temporal variations using data from two stations on the same stream and collected over a 4-year period. The graph of time-series turbidity data shows that a significant increase in turbidity occurred in 2001 at the downstream station; since then, the levels have been consistently higher than upstream. Because upstream levels were measured at comparable levels before and after 2001, the data at the downstream station might suggest the introduction of a new source discharging between the two stations and contributing to the turbidity levels in the stream.

While source activity can affect temporal variations in water quality, they are more often related to environmental conditions such as flow. Evaluating the relationship among water quality, flow, and seasonality can be done using a variety of techniques including simple visual comparison of graphed time-series data, regression analyses, or the use of flow duration curves. Figure 7 includes examples of

each of these types of data representation using the same data set. As shown in the figure, all the figures can be used to show the relationship between bacteria and flow. While the regression plot does not show a strong correlation between flow and bacteria, the chronological and flow duration graphs show that they do tend to follow similar patterns, with elevated bacteria typically occurring during higher flows.

Because discharges from certain types of stormwater sources are typically observed during particular flow conditions, evaluations of flow and corresponding water quality can be a helpful tool in identifying potential sources of impairment. Many stormwater sources are related to increased runoff that can carry pollutants from impervious surfaces, such as parking lots and rooftops, and also lead to streambank or surface erosion, especially in areas of land-disturbing activities such as construction. Therefore, a waterbody influenced by stormwater would likely have observed water quality problems occurring at higher flows. However, waterbodies exhibiting the inverse relationship, with higher pollutant concentrations at lower flows, can also indicate MS4 sources such as illicit discharges to the storm sewer. Figure 8 depicts an example of pollutant loadings observed during low-flow conditions, possibly indicating illicit discharges entering the MS4 through either direct connections (e.g., sanitary sewer piping connected to storm drains, failing septic drain fields connected to ditches that are part of an MS4 conveyance system) or indirect connections (e.g., infiltration into the MS4 pipes from cracked sanitary systems).

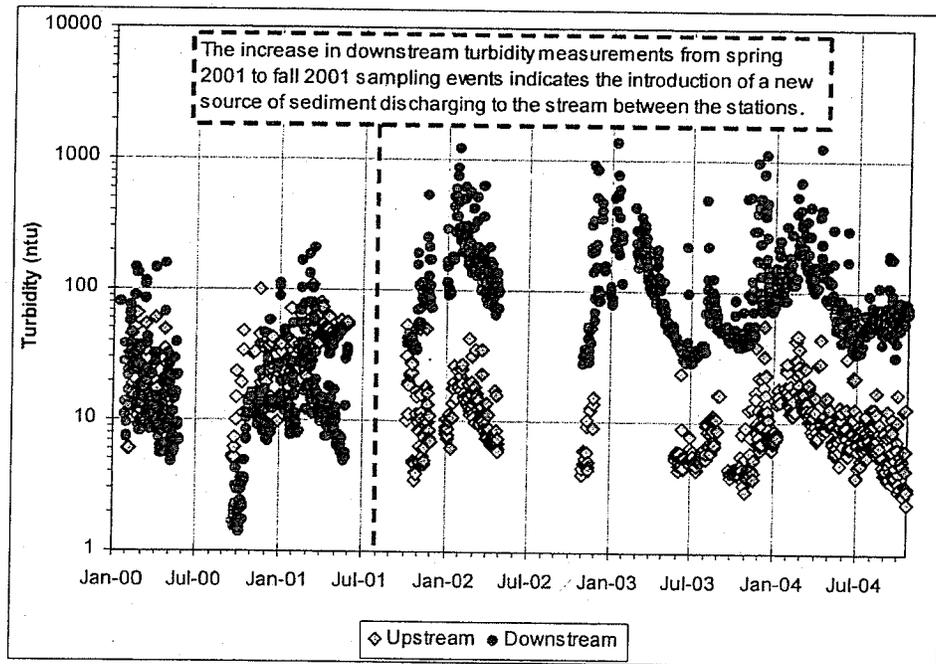

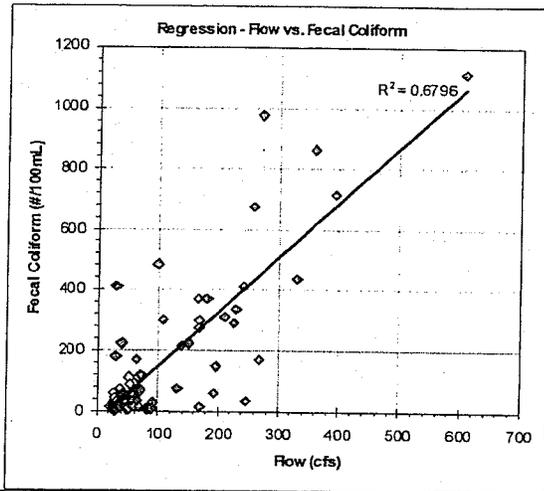

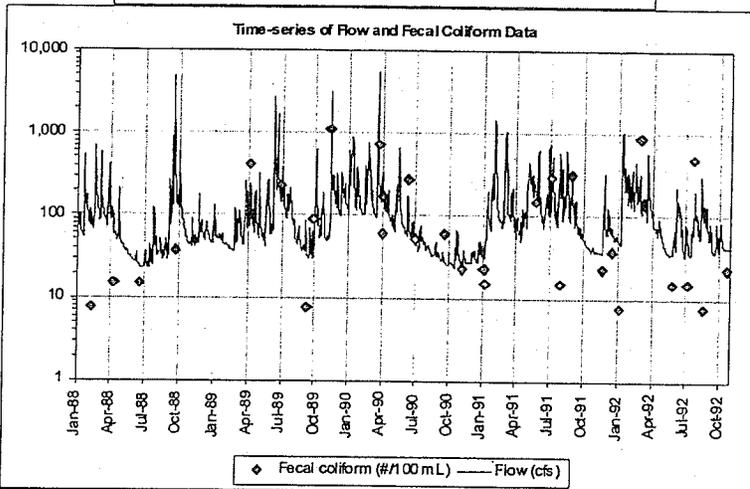

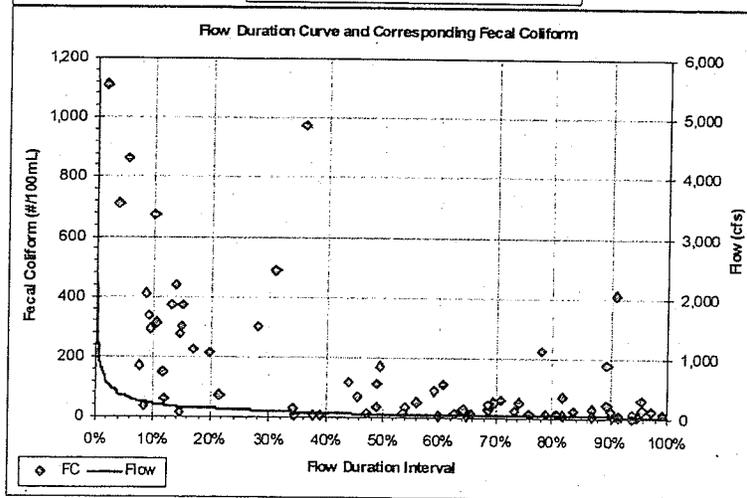

Figure 6. Evaluation of spatial variations in turbidity data to identify locations of potential sources.

Regression of matching measurements of fecal coliform and flow. R^2 of 0.7 might not indicate a strong correlation, but plot does show that the highest fecal coliform measurements occurred during high flows.

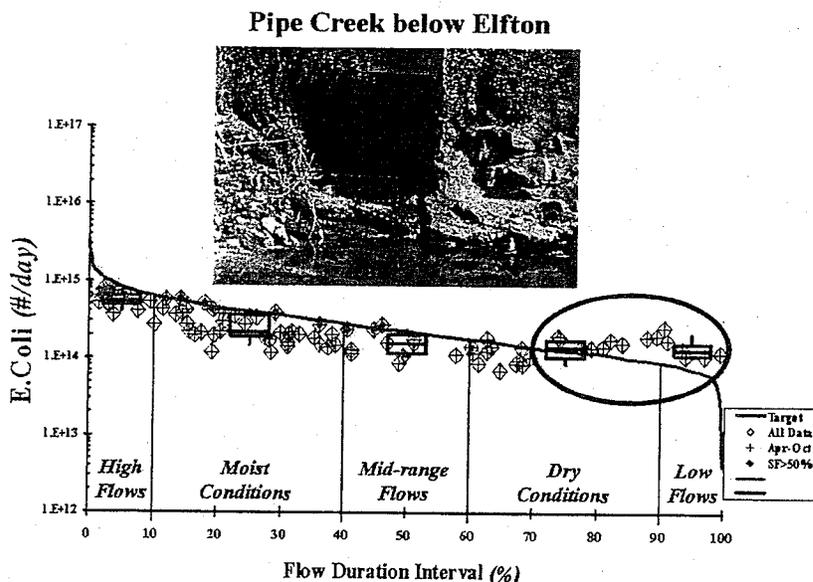

Chronological graph showing continuous flow data and instantaneous fecal coliform measurements. Plot indicates that higher measurements of fecal coliform generally correspond to times of higher flows.

Flow duration curve for continuous flow dataset shown above. Instantaneous fecal coliform measurements are plotted based on the corresponding flow duration interval of the flow measured on the sample date. Plot indicates that higher measurements of fecal coliform generally correspond to higher flows.

Figure 7. Examples of different data representations to evaluate the relationship between flow and fecal coliform.

Stormwater Source: *Illicit Discharges*

Figure 8. Duration curve analysis indicating illicit discharges as stormwater source. Circled data points represent those exceeding the target for *Escherichia coli*.

3.1.2.4. Evaluating Relationships among Parameters

Evaluating the relationship among pollutants can also help TMDL writers to understand observed impairments and identify the types of sources in the watershed. Many pollutants causing impairments can originate from common watershed sources. If a waterbody is impaired by multiple pollutants, evaluating trends or patterns in all pollutants can investigate the potential of common sources among pollutants. For example, sediment, chlorides, and litter are often associated with road maintenance for snow and ice removal. Observed impairments by these parameters in the same waterbody segment might indicate snow removal activities as a source. Similarly, pathogens and nutrients often share common sources that could be contributing to stormwater loads, such as landfills, sanitary sewer breaks, and wildlife or domestic pet waste.

In addition, some pollutants might be associated with other pollutants. For example, some pollutants (e.g., nutrients, metals) can be delivered to receiving waters adsorbed to sediment particles. Fertilizer or pesticide application in residential, commercial, or industrial areas can experience an accumulation of contaminants (e.g., nutrients, pesticides) that have adsorbed to sediment. Soil erosion and washoff in these areas can result in the delivery of loads of sediment and associated contaminants. Identifying a relationship between increased sediment concentrations and other pollutants can help to identify these situations to understand the nature of the impairment and identify potential sources.

3.1.2.5. Identifying Critical Conditions

EPA regulations require that the TMDL writer consider critical conditions while developing a TMDL. Evaluating the critical conditions builds on the previous analyses of spatial and temporal trends and

relationships among pollutants and processes and identifies the combination of environmental conditions (physical, chemical, and biological) under which impairment occurs. When addressing stormwater sources, understanding the critical conditions can be crucial when identifying a TMDL target. Especially without an applicable numeric water quality criterion or when dealing with a biological impairment, evaluation of the critical conditions will help determine the causes and conditions associated with the impairment, such as times of elevated pollutant concentrations or high flows. As with all the other analyses discussed, understanding critical conditions can provide clues about the location, timing, and type of sources affecting impairment and guides selection of an appropriate TMDL development approach (as discussed in Section 4.2.3).

3.2. Identifying TMDL Targets

Impaired waterbodies requiring TMDLs are included on state 303(d) lists because of violations of water quality standards. Water quality standards include the designated use of a waterbody, the water quality criteria established to protect that use, and an antidegradation policy. Water quality criteria can be expressed as numeric or narrative criteria, affecting both the nature of the listing and developing the resulting TMDL. All TMDLs must have a numeric target for which to calculate a loading capacity. Figure 9 illustrates the potential steps or options for developing targets for TMDLs that include stormwater sources. When developing a TMDL for a waterbody listed for a specific pollutant that has an associated numeric criterion, the criterion serves as the target for the TMDL. However, many impaired waterbodies affected by stormwater sources are listed as impaired by pollutants with narrative criteria (e.g., sediment, nutrients) or due to biological impairments (e.g., biological assessments indicate poor benthic communities, increase in *tolerant* species, or decrease in fish populations). In such cases, it is necessary for the TMDL writer to identify a numeric TMDL target that can be used for calculating the loading capacity. When waters are listed for biological impairments, sometimes a TMDL writer will use data analysis and SI to identify a specific pollutant(s) (e.g., sediment) contributing to the impairment (as discussed in Section 3.1). If a specific pollutant is identified relating to a biological impairment, the TMDL writer can identify a numeric target based on data analysis (e.g., reference conditions, historical conditions) or appropriate site-specific or regional literature values. Similarly, a numeric target can be identified for a pollutant that does not have associated numeric criteria.

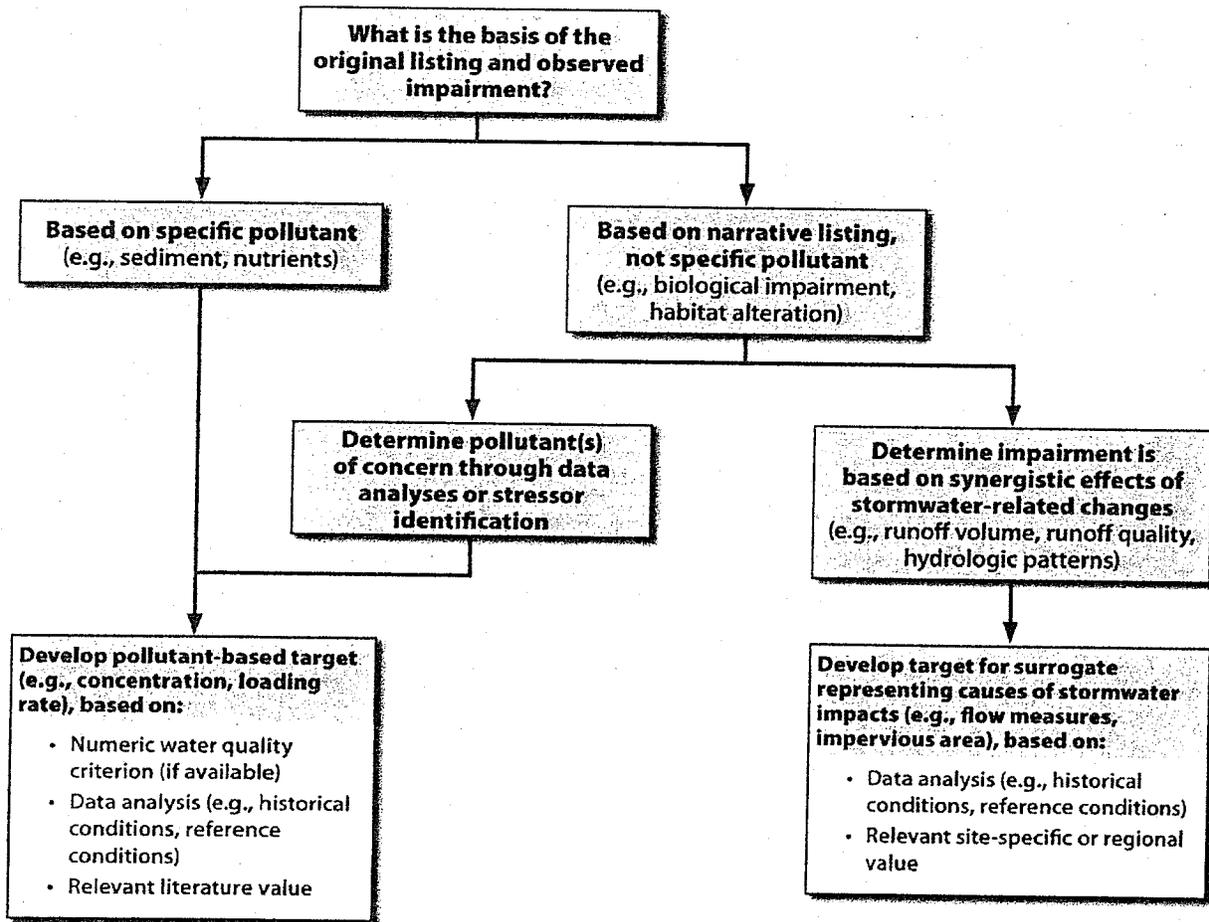

Figure 9. Options for identifying targets for TMDLs that include stormwater sources.

However, when dealing with stormwater effects on an impaired waterbody, it might be difficult to identify all the specific pollutants that are related to the impairment. The underlying problem might be due to hydrologic changes such as quantity of flow and variation in flow regimes that are important factors in transporting pollutants (e.g., metals, pathogens, sediment) that can violate water quality standards. For instance, the impairment might be the result of pollutant loads from flow-related in-stream scouring and also increased pollutant loads being transported from specific activities within the stormwater source's drainage area (e.g., road sanding, pesticide treatments to lawns) or more generally because of the increased runoff from impervious surfaces. Therefore, when developing a stormwater TMDL, a TMDL writer might use a surrogate measure (e.g., flow) to represent the impairment and establish a numeric target for the surrogate to represent attainment of water quality standards. (The TMDL regulations specify that TMDLs can be expressed in terms of mass per time, toxicity or other appropriate measure). Rather than representing a specific pollutant, the surrogate would represent the suite of pollutants contributing to the impairment. Examples of surrogates for use in stormwater TMDLs based on biological listings include the percent of impervious cover (IC) in the watershed of the impaired water and the flow volume in the impaired stream. The TMDL developed for Eagleville Brook, Connecticut, provides an example of a TMDL using IC as a surrogate and provides

information on how the target represents the impairment and how an appropriate target was established. The TMDL developed for Potash Brook, Vermont, illustrates the use of flow volume as a surrogate for stormwater-related impairments. The TMDL establishes a target for high flow in the brook on the basis of hydrologic conditions of two reference streams where aquatic life criteria are met.

In Practice: Using Impervious Cover as a Surrogate for Water Quality Standards in Eagleville Brook, Connecticut

Eagleville Brook does not meet water quality criteria and designated uses for aquatic life. The relevant criteria are based on distribution and abundance metrics for benthic invertebrates that inhabit lotic waters and are described in the state's narrative water quality standards. An SI analysis concluded that the biological impairments are most likely due to a combination of pollutants related to stormwater runoff from developed areas and other related stressors (such as the physical impacts of stormwater flows). Because the major source of stormwater is runoff from the impervious surfaces in the watershed, the Connecticut Department of Environmental Protection selected iIC as a surrogate to represent attainment of aquatic life criteria and to establish the loading capacity. The IC target is set at 12 percent IC. This threshold is based on Rapid Bioassessment Protocol data from 125 small (< 50 square mile) watersheds indicating that no stream monitoring location with more than 12 percent IC in its watershed met criteria for full support of aquatic life use.

The TMDL loading capacity of 12 percent was reduced 1 percent to provide for an MOS, yielding an overall allocation target of 11 percent. The TMDL applies the 11 percent IC target to all stormwater drainage areas and affects all sources subject to LAs and WLAs in the watershed. The percent IC TMDL and WLA/LA targets apply at all times (instantaneously, daily, monthly, seasonal, and annual). The final TMDL (2007) is at: www.ct.gov/dep/lib/dep/water/tmdl/tmdl_final/eaglevillefinal.pdf.

3.3. Identifying and Assessing Potential Sources

The step of identifying sources for TMDL development should be an extension of the data analyses conducted to understand the impairment and serves to further characterize the important sources and better define their location, behavior, magnitude, and influence. The source assessment should result in an understanding of what major sources are contributing to impairment and how (e.g., pollutants, delivery pathways). This can affect what approach is selected and how it is applied for TMDL development and helps to focus the allocation analysis as well as future implementation.

While the pollutant loads originating with each source are typically quantified during the linkage analysis (Chapter 4), the information necessary to understand their location and discharge behavior and characteristics is compiled and reviewed during this step. In general, the methods that are used to complete a source assessment do not differ between a TMDL addressing stormwater sources and any other TMDLs, and they involve identification and characterization of point sources (e.g., stormwater, wastewater treatment plants, industrial facilities) and nonpoint sources (e.g., grazing, timber harvest, septic systems). The methods for completing a source assessment vary with the type of watershed, pollutants, and sources but typically rely on information from state or national databases, literature reviews, and local knowledge from state or local contacts. It is important to correlate the assessment of both point and nonpoint sources with the data analysis to characterize source impacts and behavior. For example, land use, locations of stormwater outfalls or facility discharges, and other source information should be evaluated along with water quality data analyses (e.g., spatial analysis) to understand potential effects from the various sources or explore unknown sources. The following are examples of information typically reviewed to identify sources for TMDL development:

- Query EPA’s NPDES databases to identify permitted facilities or sources discharging to the impaired water or its tributaries
- Coordinating with state permitting staff to identify the number, type, and location of NPDES permitted point sources in a watershed (including stormwater sources)
- Review geographic information system (GIS) coverages (e.g., land use, soils), satellite images, and aerial photos to identify potential nonpoint sources (e.g., agriculture, silviculture)
- Conduct field or *windshield* surveys of the watershed to identify potential nonpoint sources (e.g., livestock operations, illegal dumping, failing septic systems)
- Review previous watershed, local, or regional studies or reports to identify potential nonpoint sources

Identifying and understanding the effect of stormwater sources might require additional investigation or information to support TMDL development. This section discusses the information available to support the following activities to further define and characterize stormwater sources:

- Identify type and general location of stormwater sources
- Delineate drainage area for stormwater sources
- Characterize discharge from stormwater sources

Tip: Maximize resources when characterizing stormwater sources

A thorough characterization of stormwater sources can require a significant amount of time and resources. Therefore, it is important for TMDL and permit writers to work together to determine the significance of stormwater sources to the TMDL and, if it is determined that further characterization of stormwater sources is necessary, what type and amount of data are necessary to complete the characterization.

3.3.1. Identifying the Type and Location of Stormwater Sources

Stormwater sources will fall within one of three categories—MS4, construction or industrial—but there can be a number of sources or activities within those permitted areas that might contribute to an impairment. Common stormwater-related pollutants of concern that cause water quality impairment include pathogens, metals (other than mercury), sediment, nutrients, and chlorides. Table 4 illustrates the range of permitted stormwater sources and related activities typically associated with certain pollutants or impairments.

Table 4. Examples of sources within regulated stormwater areas associated with common pollutants and impairments

Pollutant/stressor of concern	Potential source(s) within permitted area		
	MS4	Construction	Industrial
Pathogens	<ul style="list-style-type: none"> ▪ Sanitary sewer breaks and cross-connections ▪ Restaurant trash areas and mat washing ▪ Landfills and transfer stations ▪ Pet and wildlife waste 		<ul style="list-style-type: none"> ▪ Sanitary sewer breaks and cross-connections ▪ Food trash areas ▪ Landfills and transfer stations ▪ Improper disposal of sanitary waste (e.g., dumping from boats at marinas) ▪ Wildlife waste (sea gulls)

* The federal Multi-Sector General Permit for Industrial Activities (MSGP 2000) covers 30 industrial sectors that fall into one or more of the 10 categories of stormwater discharges associated with industrial activity (and construction activities) described in 40 CFR 122.26(b)(14)(i)-(xi). The 30 sectors are defined by either the facility's Standard Industrial Classification (SIC) code or a general description of the facility's industrial activities. MSGP 2000 expired at midnight on October 30, 2005. A new permit has not been issued.

Compiling a list of all stormwater sources in the watershed of an impaired water should be, in theory, relatively easy because stormwater sources are covered under NPDES general and individual stormwater permits, and coverage under these permits is tracked by state and EPA NPDES permitting authorities.

Each state has a stormwater permit program coordinator or multiple coordinators that TMDL writers can contact for information. NPDES-authorized states issue NPDES permits for MS4s and stormwater discharges associated with construction and industrial activities. The amount of information available online varies from state to state, but generally, it is a good idea to speak with the permitting authority directly to assess the adequacy of online resources.

TMDL writers should be aware that in many states stormwater permittees are tracked in different data systems than other NPDES permittees. For example, EPA's Permit Compliance System (PCS) and Integrated Compliance Information System (ICIS) data systems include permit information for a very small percentage of stormwater permittees regulated under the NPDES program.

Resources: For links to online resources for identifying permitted stormwater sources in your watershed, refer to the Resources list at the end of this chapter in Section 3.4.5. Resources include links to state and regional stormwater contacts and EPA's PCS/ICIS and eNOI systems.

In nonauthorized states, TMDL writers should contact the individual EPA Regional office for information about dischargers within a watershed boundary and use the Electronic Notice of Intent (eNOI) system EPA has developed to track construction sites and industrial facilities that need to apply for coverage under EPA's Construction General Permit (CGP) or Multi-Sector General Permit (MSGP). This system can be used to search, sort, and view NOIs and can be searched by city, county, or ZIP Code. The NOIs include location and receiving water name and for construction sites, the size of the disturbed area.

It is important to work with the permitting authority to identify stormwater sources in the watershed of an impaired water. Regulatory definitions of permitted stormwater sources can result in challenges in identifying the boundaries of regulated (i.e., permitted) stormwater sources versus and unregulated stormwater sources. This is particularly true for MS4s. Figure 10 illustrates the complexities of identifying regulated versus unregulated MS4s within a watershed boundary. As Figure 10 shows, it is possible to have both regulated and unregulated MS4s within the watershed boundary of an impaired waterbody. Phase I MS4s are defined as large and medium MS4s on the basis of population served, while Phase II regulated small MS4s are defined as small MS4s (i.e., any MS4 not regulated under Phase I) within an urbanized area. Any portion of a small MS4 within the urbanized area is considered a Phase II regulated small MS4 and is subject to Phase II MS4 permit requirements. Small MS4s outside the urbanized area are not subject to Phase II MS4 permit requirements; however, TMDL writers should take into account pollutant contributions from these stormwater discharges in a manner similar to regulated, small MS4s.

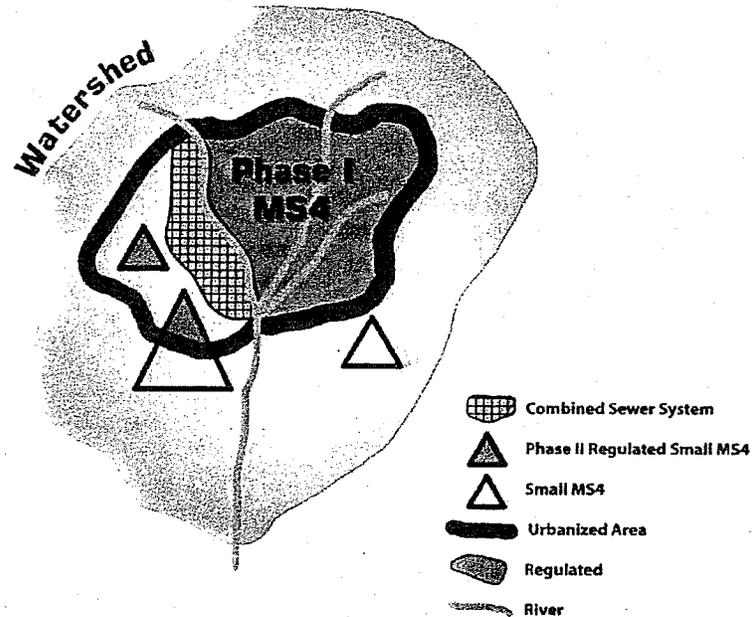

Figure 10. Potential spatial complexities of regulated and unregulated stormwater sources.

While land use is often an indicator for the existence of MS4s within the watershed of an impaired waterbody, it is important to remember that not all MS4s are municipal entities (e.g., cities, counties, or towns). Other entities such as departments of transportation, irrigation districts, sanitary districts, universities, hospitals, federal facilities and other entities that own and operate separate storm sewer systems can also fall into the category of regulated MS4s. These *nontraditional* MS4s have the potential to add another layer of MS4 boundaries for TMDL writers to consider. In addition, TMDL writers might focus on MS4s as the primary stormwater sources, but it is important to remember that regulated construction activities and industrial facilities both inside and outside the boundaries of regulated MS4s can also contribute stormwater discharges. Permit information on all types of regulated stormwater sources should be readily available in PCS. Identifying unregulated stormwater sources, such as other small MS4s, will require an understanding of local land uses and communication with the entities that own and operate these systems.

Field reconnaissance can also be used to identify any potential unknown stormwater sources as well as nonpoint sources. Field reconnaissance involves visiting the watershed and can range from a *windshield* survey while driving to a more comprehensive survey such as *walking the stream* to identify and geo-locate potential sources or identify potential monitoring sites to fill information gaps. Field reconnaissance is also useful to ground-truth available information used in characterizing the waterbody and its surrounding watershed, including areas within an MS4 boundary. For example, land use and land cover data are sometimes out of date and might include open space areas that have since been converted to residential, commercial, or industrial uses. Field reconnaissance is also helpful in identifying or better characterizing certain types of sources that might not be identifiable in the typical watershed coverages or information; for example,

Resources: For more information on obtaining land use and coverage information and conducting field reconnaissance and visual surveys, refer to the Resources list at the end of this chapter in Sections 3.4.6 and 3.4.7.

field investigations are an essential tool for MS4 communities to detect illicit discharges and connections, which can be significant sources of contaminants. Field reconnaissance can also help identify areas where stormwater volumes and velocities are affecting stream morphology and contributing to impairment by noting streambank, channel and habitat conditions (e.g., embeddedness, number of pools and riffles).

3.3.2. Delineating the Drainage Areas of Stormwater Sources

To include a stormwater source in the TMDL analysis, it is necessary to identify its regulated area and if possible isolate the specific area drained by its sewer system and discharged to the receiving waterbody. Differences in spatial scale between the geographic focus of a TMDL (e.g., waterbody or watershed) and stormwater sources (e.g., regulated MS4s, construction sites, and industrial facilities) can create unexpected challenges for TMDL writers at this stage of TMDL development. To identify stormwater source areas, it is important that the TMDL writers fully understand the types of sources and how they are regulated. For example, it might be assumed that identifying jurisdictional boundaries is a straightforward way to identify regulated MS4s. However, the jurisdictional boundary is not necessarily the same as the regulated MS4 boundary. For example, combined sewer system portions of storm sewer infrastructure are not regulated by the NPDES MS4 program. As another example, regulated small MS4s typically are only the portion of the MS4 system that is actually within the urbanized area boundary (Figure 10). These distinctions can affect how the stormwater sources are included in the analysis and how their respective WLAs are subsequently developed and assigned.

It is also important to understand the stormwater conveyance methods for each stormwater source in a watershed to determine whether the source is discharging to or affecting the impaired waterbody and to delineate the boundary and drainage area. Stormwater can be conveyed to a waterbody through direct surface flow or through a pipe, ditch, or other conveyance. In addition, stormwater might be recharged to groundwater, which might or might not affect a stream. The type and location of these conveyance methods will help a TMDL writer to assess the potential effects that a stormwater source is having on a stream. For example, a concrete-lined channel that discharges stormwater directly to a receiving stream will likely have a greater effect than a discharge from a well-maintained wet pond designed to capture and treat 80 percent of the received water quality volume. Because of these issues, the outfall location and conveyance method for each stormwater source should be documented and summarized before completing a TMDL. This could be as simple as plotting the outfall locations in a GIS and comparing those locations to observed in-stream impacts, or it might require a more comprehensive analysis.

TMDL writers should work with the permitting authority to identify the information available to delineate the areas and drainage boundaries for stormwater sources. Individual NPDES permit application requirements for Phase I MS4s [40 CFR 122.26(d)(1)(iii)(B)] include the submittal of a map showing the service boundaries of the MS4 covered by the application as well as the location of all outfalls that discharge into a water of the United States. Phase II MS4s applying for individual permit coverage are required to submit the same information. Phase II MS4s regulated under general permits submit NOIs that might have a map, a description of the regulated MS4 boundary, or both and should be available from the permitting authority. However, those MS4s are required to develop such maps as part as permit implementation, not at the time of application. Industrial and construction SWPPPs should include site descriptions or maps to identify the facility or site location and locations of outfalls or surface water discharges.

If this information is not readily available or not sufficient to determine the area draining a stormwater source, a TMDL writer should work with the permitting authority to determine if additional information is necessary to locate and delineate all the stormwater sources in the watershed of the impaired waterbody. City and county planning departments often have information on the location and extent of stormwater infrastructure and controls, and in some cases, detailed sewer and boundary maps or stormwater facility plans might be available. This information should be obtained, where available, because it is often the most detailed and accurate information about stormwater sources. Similarly, industrial facilities and construction sites will have, and might submit to the city, county, or permitting authority, plans that document stormwater sources and management practices. Stormwater facilities are often required to submit a facility plan that documents the characteristics of the facility. However, additional investigations might still be needed to locate all potential stormwater sources.

3.3.3. Characterizing Discharges from Stormwater Sources

To better understand the quality and quantity of discharge being delivered to an impaired waterbody from a stormwater source, it is useful to evaluate data and information generated by the source to satisfy permit requirements. Table 5 outlines the types of data and information generated by the three types of stormwater sources—MS4s, industrial facilities, and construction activities—and the following sections briefly describe the information.

Table 5. Data and information generated by stormwater sources through the permitting process

Stormwater permit document or activity	Specific type of data generated by permittee
MS4 discharger generated data	
Phase I MS4 permit application	<ul style="list-style-type: none"> ▪ Description of land use and 10-year growth projections ▪ Outfall characterization sampling data ▪ Receiving waters
Phase II MS4 general permit NOI	<ul style="list-style-type: none"> ▪ MS4 location and boundaries ▪ Receiving waters
Industrial facility inventory and inspections (Phase I MS4s)	<ul style="list-style-type: none"> ▪ Location of industrial facility to determine the watershed ▪ Activities, materials, and physical features of the industrial facility that might be sources of pollutants of concern during dry or wet weather ▪ Prioritization based on location, pollutants of concern, etc. ▪ Compliance history of industrial facility ▪ Location and pollutants of concern from nonregulated industrial (and perhaps commercial) facilities
Construction activities inventory and inspections	<ul style="list-style-type: none"> ▪ Location of construction activity ▪ Size of disturbed area ▪ Receiving water/watershed ▪ Prioritization based on size, location, compliance history, etc. ▪ Compliance history of project ▪ Number and location of nonregulated (less than one acre) construction projects

Post-construction BMP implementation and tracking	<ul style="list-style-type: none"> ▪ Types of BMPs required ▪ Locations of BMPs ▪ Operation and maintenance (O&M) records/agreements ▪ Inspection results

Stormwater permit document or activity	Specific type of data generated by permittee
Outfall and ambient water quality monitoring data	<ul style="list-style-type: none"> ▪ Characterization of discharges from particular land use types, subwatersheds, etc. ▪ Ambient data could provide baseline information before installing BMPs ▪ Habitat assessments might be part of monitoring program
Annual reports	<ul style="list-style-type: none"> ▪ Location and type of identified illicit discharges ▪ Location of approved erosion and sediment control plans ▪ Compiled post-construction BMP inspection results ▪ Compiled monitoring results ▪ Planned SWMP changes
Industrial discharger generated data	
Industrial individual permit application	<ul style="list-style-type: none"> ▪ Location of outfalls ▪ Site drainage map ▪ Impervious area calculation ▪ Description of proposed activities, spills and leaks, on-site materials ▪ Sampling data (if available)
Industrial general permit NOI	<ul style="list-style-type: none"> ▪ Location of facility ▪ Receiving water/MS4 ▪ Applicable industrial sector
Industrial SWPPP	<ul style="list-style-type: none"> ▪ Location of industrial facility to determine the receiving water(s) and if the facility is within an MS4 boundary ▪ Activities, materials, and physical features of the industrial facility that might be sources of pollutants of concern during dry or wet weather ▪ Map that shows outfalls into receiving waters
Monitoring data	<ul style="list-style-type: none"> ▪ Loading from facility for benchmark discharge monitoring parameters
Industrial compliance evaluations and inspections	<ul style="list-style-type: none"> ▪ Assess any compliance or BMP implementation issues on-site which may contribute to loading
Industrial sampling data	<ul style="list-style-type: none"> ▪ Loading from particular facilities ▪ Assess general loading from types of industrial facilities ▪ Assess industrial loading from an MS4
Construction project generated data	
Construction individual permit application	<ul style="list-style-type: none"> ▪ Location of construction activity ▪ Total area and total disturbed area ▪ Proposed BMPs ▪ Runoff coefficient ▪ Imperviousness created ▪ Receiving water
CGP NOI	<ul style="list-style-type: none"> ▪ Location of construction activity ▪ Start/end dates ▪ Total disturbed area ▪ Receiving water
Construction activity SWPPP	<ul style="list-style-type: none"> ▪ Location and size of disturbance as well as a location with associated surface water discharges. ▪ A description of any discharge associated with industrial activity other than construction and the location of that activity on the construction site. ▪ Type and location of any post-construction BMPs to be implemented on-site
Monitoring data	<ul style="list-style-type: none"> ▪ Loading from project

The list of data types in Table 5 is based on the minimum federal permit requirements and assumed implementation strategies. Permitting authorities can choose to develop more stringent permit requirements; therefore, TMDL writers might want to take some time to carefully review individual and general permits issued by state permitting authorities to identify state or regional specific data and

information requirements. If a TMDL writer identifies potentially useful data generated by stormwater sources, the TMDL writer can work through the permitting authority to obtain this information. The permitting authority will have some information readily available on file (e.g., applications, NOIs, annual reports) or can make official requests to permittees for other types of information that the permitting authority might not have on file. It is important for TMDL writers to coordinate with permitting authorities to obtain this information, rather than directly contacting stormwater sources without the permitting authority's knowledge. This will ensure efficient use of time and resources and maintain clear communication with stormwater sources.

3.3.3.1. MS4-Generated Data

Both individual and general MS4 permits require Phase I and Phase II MS4s to develop specific types of documents that contain information and data potentially useful to the TMDL development process. Figure 11 illustrates the type of documents that MS4s must develop to comply with either individual permit requirements or general permit requirements. Under individual permits, Phase I MS4s must complete a two-part application, develop an SWPPP, conduct monitoring, and generate an annual report that compiles information and data on from SWPPP implementation from the previous year. As shown in Figure

11, Phase II MS4s have the option of obtaining permit coverage under either an individual permit or a general permit, depending on which type of permit the permitting authority makes available. Under an individual permit, a Phase II MS4 would likely have the same requirements to generate an SWPPP and prepare annual reports as a Phase I MS4. Although Phase II MS4s covered under a general permit must prepare the same type of documents, the information required in each document might vary. For example, the permit application for a general permit, the NOI, does not have the same extensive information requirements as the two-part application for an individual permit. In addition, not all general permits require monitoring. The Phase II MS4 general permit does require development of an SWPPP and annual reports, although the content might vary from those developed under an individual permit.

Tip: Understanding the potential types of data not required by permits

Municipal MS4s might have data valuable to the TMDL development process that is not required by NPDES permits. For example, comprehensive planning or zoning documents could provide information regarding land use distribution. In addition, municipalities might coordinate or support volunteering monitoring or *watch* groups that could provide valuable input (e.g., stream monitoring, cleanups).

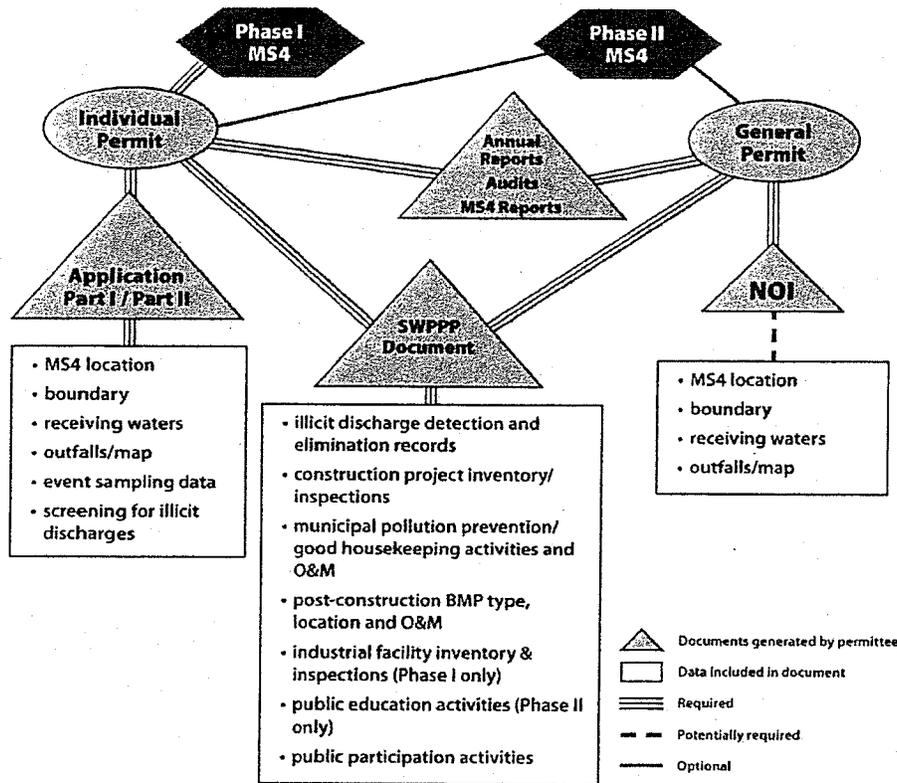

Figure 11. Required MS4 permit documents and associated information and data.

3.3.3.2. Industrial Discharger Generated Data

Most stormwater discharges associated with industrial activity have permit coverage under an NPDES general permit rather than an individual permit. However, significant industrial dischargers might have stormwater discharges covered under the facility's overall NPDES permit, which covers process wastewater, non-process wastewater, and stormwater. Figure 12 shows the type of documents required under both individual and general permits for industrial facilities.

Where an EPA Region is the permitting authority, rather than the state, regulated industrial facilities obtain permit coverage under EPA's MSGP. State permitting authorities often use EPA's MSGP as a template for developing and issuing their state-specific industrial stormwater general permit, with modifications necessary to address state-specific issues. All industrial stormwater general permits require industrial facilities to submit NOIs, and most require these permittees to develop and implement SWPPPs and conduct comprehensive site compliance evaluations and periodic inspections. Also, most of these industrial stormwater general permits require at least some sectors to conduct analytical monitoring of stormwater runoff. Figure 12 illustrates the types of data and information generated by an industrial discharger as a result of complying with permit requirements. This information can assist TMDL writers in characterizing stormwater discharges from industrial stormwater sources during the TMDL development process.

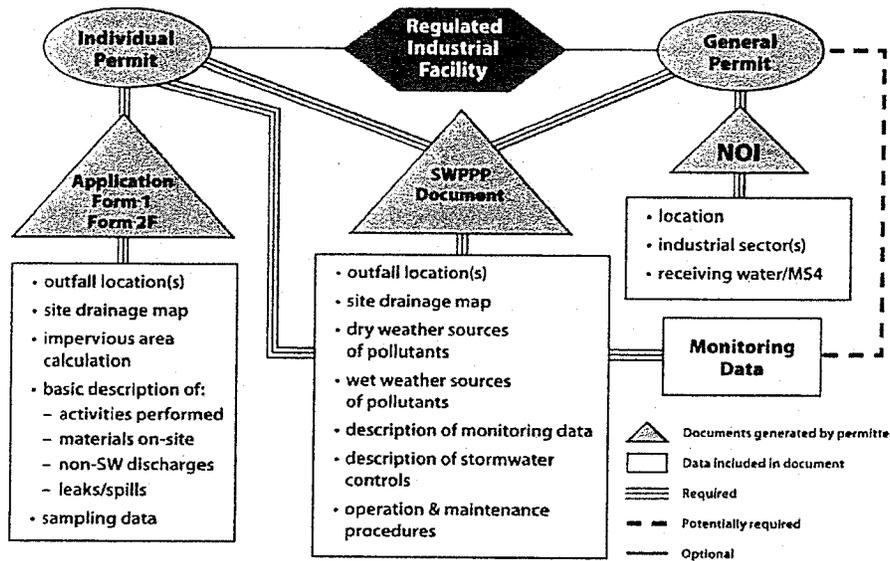

Figure 12. Required industrial stormwater permit documents and associated information and data.

3.3.3.3. Construction Project Generated Data

Construction projects disturbing one acre or more are required to obtain NPDES permit coverage for stormwater discharges. Figure 13 illustrates the data generated by construction stormwater sources as a result of complying with individual and general construction permit requirements. Construction stormwater discharges are most often permitted under an NPDES CGP, issued either by the state permitting authority or by an EPA Regional office. To obtain general permit coverage, the construction site operator must complete the required NOI and provide information such as project location and receiving waters. Construction stormwater general permits require operators of construction projects to develop and implement SWPPPs and conduct routine self-inspections. SWPPPs contain the majority of site-specific documentation of stormwater management activities performed. In limited instances, the state or EPA permitting authority may require certain construction projects (e.g., due to impaired receiving waters or to protect high-quality streams) to obtain coverage under an individual permit. When required, individual permits for construction activity typically contain requirements similar to those found in general permits; however, it is likely that the permittee will have specific monitoring requirements. Some construction stormwater permits (i.e., both individual and general) include effluent limits or *action levels* and associated effluent or receiving stream monitoring.

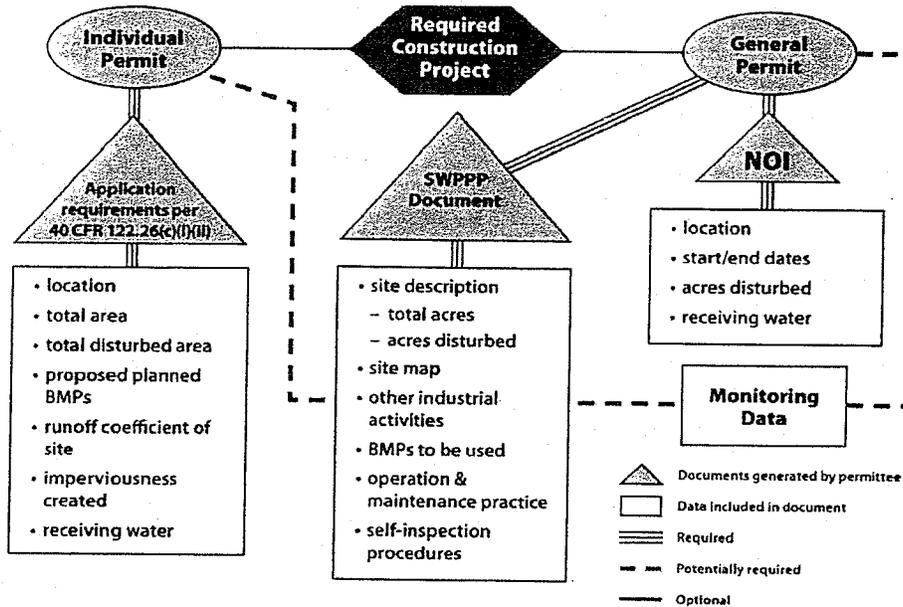

Figure 13. Required construction stormwater permit documents and associated information and data.

3.4. Resources

3.4.1. Stormwater Effects on Receiving Waters

1. USEPA (U.S. Environmental Protection Agency). 1983. *Results of the Nationwide Urban Runoff Program – Volume I Final Report*. U.S. Environmental Protection Agency, Water Planning Division, Washington, DC. www.epa.gov/npdes/pubs/sw_nurp_vol_1_finalreport.pdf

The 5-year Nationwide Urban Runoff Program (NURP) was designed to examine the quality of urban runoff at different urban locations; whether urban runoff is a significant contributor to water quality problems in the United States; and the performance, effectiveness, and utility of management practices for controlling pollutant loads from urban runoff. This report presents the findings of the program.

2. USEPA. Undated. *Urbanization and Streams: Studies of Hydrologic Impacts*. U.S. Environmental Protection Agency, Office of Wetlands, Oceans and Watersheds, Washington, DC. <http://epa.gov/owow/nps/urbanize/report.html>. Accessed July 2008.

This Web-based report summarizes the findings of a literature search to document physical impacts and indications of water quality problems associated with stormwater runoff. The report summarizes the review documents, articles and reports, and provides citations for further information.

3. Burton, Allen, and Robert Pitt. 2001. *Stormwater Effects Handbook: A Toolbox for Watershed Managers, Scientists, and Engineers*. Lewis Publishers, Boca Raton, Florida.
www.epa.gov/ednrmrl/publications/books/handbook/index.htm

This handbook is intended to be a working document that assists scientists, engineers, consultants, regulators, citizen groups, and environmental managers in determining if stormwater runoff is causing adverse effects and beneficial use impairments in local receiving waters. The handbook provides an extensive discussion of the effects of stormwater (based on information documented in a number of other studies and documents) and focuses on providing information to support the design of a sampling program to assess stormwater impacts.

4. Center for Watershed Protection. 2003. *Impacts of Impervious Cover on Aquatic Systems*. Center for Watershed Protection, Ellicott City, MD. www.cwp.org/Store/guidance.htm

This report examines more than 225 multidisciplinary studies documenting the hydrological, physical, water quality, and biological effects of urbanization and its accompanying IC.

5. Center for Watershed Protection's Stormwater Manager's Resource Center Web site:
www.stormwatercenter.net/

3.4.2. Understanding Flow in TMDL Development

1. USEPA (U.S. Environmental Protection Agency). 2007. *An Approach for Using Load Duration Curves in the Development of TMDLs*. EPA 841-B-07-006. U.S. Environmental Protection Agency, Office of Water, Office of Wetlands, Oceans, and Watersheds, Washington, DC.
www.epa.gov/OWOW/tmdl/duration_curve_guide_aug2007.pdf

This document provides an overview on the use of duration curves for TMDLs, describing the basic steps needed to develop duration curves and subsequently identify loading capacities, LAs, WLAs, MOS, and seasonal variations. The guide also discusses some considerations and limitations in using the approach and includes several case examples.

2. USEPA (U.S. Environmental Protection Agency). 1999. *Protocol for Developing Sediment TMDLs*. EPA 841-B-99-004. U.S. Environmental Protection Agency, Office of Water, Washington, DC.
www.epa.gov/owow/tmdl/sediment/pdf/sediment.pdf

This technical guidance document provides information to support TMDL writers in developing TMDLs for sediment. The document includes information on how to complete each step of the TMDL process, including problem identification, source assessment, linkage of water quality targets and sources, allocation analysis, and monitoring.

3. USEPA. 2005. *TMDL Model Evaluation and Research Needs*. EPA/600/R-05/149. U.S. Environmental Protection Agency, Office of Research and Development, National Risk Management Research Laboratory, Cincinnati, OH.
www.epa.gov/nrmrl/pubs/600r05149/600r05149.htm

This report documents the review of more than 60 available watershed and receiving water models for their applicability to TMDL development and implementation. It discusses model selection on the basis of model capabilities and provides a series of tables rating the capabilities

or applicability the models using the categories of TMDL endpoints, general land and water features, special land processes, special water processes, and application considerations. The document also provides individual fact sheets for each reviewed model.

4. USEPA (U.S. Environmental Protection Agency). 2008. *Incorporating Green Infrastructure Concepts into Total Maximum Daily Loads*. U.S. Environmental Protection Agency, Washington, DC. www.epa.gov/owow/tmdl/stormwater/

This 11 page fact sheet provides recommendations for incorporating GI and LID concepts into various elements of a TMDL and provides two TMDL case studies.

3.4.3. Chemical, Physical and Biological Data

1. EPA's Storage and Retrieval Database (STORET): www.epa.gov/storet/
2. USGS's National Water Information System Web site (NWISWeb): <http://waterdata.usgs.gov/nwis>
3. EPA's Environmental Monitoring and Assessment Program (EMAP) database: www.epa.gov/emap/index.html
4. USGS's National Water-Quality Assessment (NAWQA) Program: <http://water.usgs.gov/nawqa/>
5. USDA's PACFISH/INFISH Biological Opinion Program: <http://fsgeodata.fs.fed.us/pibo/>

3.4.4. Biological Assessment and Guidance

1. EPA's Biocriteria Web site: www.epa.gov/waterscience/biocriteria/
2. USEPA (U.S. Environmental Protection Agency). 2000. *Stressor Identification Guidance Document*. EPA 822-B-00-025. U.S. Environmental Protection Agency, Office of Water and Office of Research and Development, Washington, DC. www.epa.gov/waterscience/biocriteria/stressors/

This document describes EPA's process for identifying any type of stressor or combination of stressors that cause biological impairment. The SI Guidance is intended to lead water resource managers through a formal and rigorous process that identifies stressors causing biological impairment in aquatic ecosystems and provides a structure for organizing the scientific evidence supporting the conclusions.

3. EPA's CADDIS Web site: <http://cfpub.epa.gov/caddis/>

The Causal Analysis/Diagnosis Decision Information System (CADDIS) is an online application based on the process developed in EPA's SI Guidance Document. It uses a step-by-step guide, worksheets, and examples to help scientists and engineers find, access, organize, share, and use environmental information to evaluate causes of biological effects observed in aquatic systems such as streams, lakes, and estuaries.

4. EPA's list of bioassessment publications from EPA and other federal agencies (e.g., U.S. Geological Survey [USGS], U.S. Department of Agriculture [USDA]): www.epa.gov/bioindicators/html/publications.html

3.4.5. Permitted Stormwater Sources in a Watershed

1. EPA's list of state stormwater contacts:
http://cfpub.epa.gov/npdes/contacts.cfm?program_id=6&type=STATE
2. EPA's list of Regional stormwater contacts:
http://cfpub.epa.gov/npdes/contacts.cfm?program_id=6&type=REGION
3. EPA's PCS: www.epa.gov/enviro/html/pcs/index.html
4. EPA's eNOI system: <http://cfpub.epa.gov/npdes/stormwater/enoi.cfm>
5. Authorization Status for EPA's Stormwater Construction and Industrial Programs by State:
<http://cfpub.epa.gov/npdes/stormwater/authorizationstatus.cfm>
6. USEPA (U.S. Environmental Protection Agency). 2007. *MS4 Program Evaluation Guidance*. EPA-833-R-07-003. U.S. Environmental Protection Agency, Office of Wastewater Management, Water Permits Division, Washington, DC.
http://cfpub.epa.gov/npdes/docs.cfm?program_id=6&view=allprog&sort=name#ms4_guidance

The MS4 Evaluation Guide is primarily for use by NPDES authorities to evaluate the quality of Phase I and Phase II MS4 programs, for permit compliance, technical assistance, and other purposes. It can be used for comprehensive program evaluations or for certain components. MS4 program managers can also use it to evaluate their own programs.

3.4.6. Land Use and Impervious Surface Coverages

1. Multi-Resolution Land Characteristics (MRLC) Consortium's National Land Cover Database (NLCD): www.epa.gov/mrlc/
2. National Agriculture Imagery Program (NAIP) Aerial Photos: <http://165.221.201.14/NAIP.html>
3. USGS's Earth Explorer: <http://edcns17.cr.usgs.gov/EarthExplorer/>
4. USGS's Land Cover Institute: <http://landcover.usgs.gov/>
5. Google Earth: <http://earth.google.com/>

3.4.7. Field Reconnaissance and Illicit Discharge Detection

1. Kitchell, A., and T. Schueler. 2005. *Unified Stream Assessment: A User's Manual*. Version 2.0. Center for Watershed Protection, Ellicott City, MD. www.cwp.org/Store/usrm.htm#10

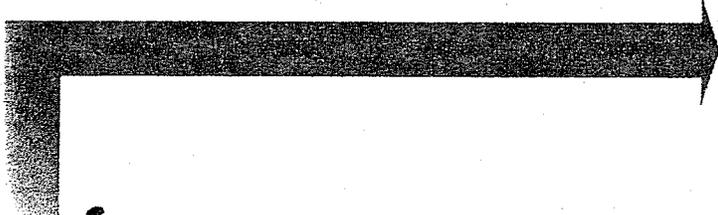

This document outlines how to perform a Unified Stream Assessment, a rapid technique to locate and evaluate problems and restoration opportunities within the urban stream corridor. It also describes how to interpret the data collected to determine the stream corridor restoration potential.

2. Wright, T., C. Swann, K. Cappiella, and T. Schueler. 2005. *Unified Subwatershed and Site Reconnaissance: A User's Manual*. Version 2.0. Ellicott City, MD.
www.cwp.org/Store/usrm.htm#11

The manual provides detailed guidance on how to perform each of its four components: the Neighborhood Source Assessment, Hotspot Site Investigation, Pervious Area Assessment, and the analysis of Streets and Storm Drains. Together, these rapid surveys help identify upland restoration projects and source control to consider when devising subwatershed restoration plans.

3. Brown, E., D. Caraco, and R. Pitt. 2004. *Illicit Discharge Detection and Elimination: A Guidance Manual for Program Development and Technical Assessments*. Prepared for the U.S. Environmental Protection Agency, Office of Water and Wastewater, Water Permits Division, Washington, DC, by Center for Watershed Protection and the University of Alabama.
www.epa.gov/npdes/pubs/idde_manualwithappendices.pdf

Chapter 7 of this document describes the use of watershed reconnaissance to search for illicit discharge problems in the field, with the process consisting of rapid screening of priority outfalls in priority subwatersheds followed by indicator monitoring at suspect outfalls to characterize flow types and trace sources.

Developing TMDLs with Stormwater Sources

What's included in this chapter

- ✓ Discussion of considerations for selecting an approach for developing TMDLs with stormwater sources.
- ✓ Description of common analytical approaches that can be used for developing stormwater source TMDLs.
- ✓ Identification of factors that affect how stormwater sources are addressed in the TMDL analysis.
- ✓ Discussion of and examples illustrating options for calculating and expressing stormwater WLAs.

What you should know after reading this chapter

- ✓ The unique considerations for incorporating stormwater sources and calculating associated WLAs in a variety of commonly used TMDL development approaches.
- ✓ The advantages and disadvantages of different methods for developing stormwater-source TMDLs.
- ✓ Options for developing stormwater WLAs.

Potential roles and responsibilities under this activity

If you are a TMDL writer

1. Evaluate the potential approaches for developing your stormwater-source TMDL based on your technical and programmatic needs.
2. Select an approach for developing your stormwater-source TMDL.
3. Decide how to represent and include stormwater sources in your TMDL analysis.
4. Calculate WLAs for stormwater sources that will facilitate effective permit development.

If you are a stormwater permit writer

1. Coordinate with TMDL writer to support accurate and appropriate representation of stormwater sources in the TMDL analysis.
2. Provide input on WLA analysis to support development of equitable and feasible WLAs.

4. DEVELOPING TMDLS WITH STORMWATER SOURCES

The TMDL analysis establishes a quantitative link between pollutant sources and receiving water response to identify the loading capacity of an impaired waterbody that will result in meeting water quality standards. There are a number of approaches to support this analysis and selecting which to use for any given TMDL is often guided by a number of technical and practical factors. Developing stormwater-source TMDLs can present some unique technical considerations that affect what approaches can be used and how they are applied. As shown in Figure 4, this chapter discusses the activities related to calculating the TMDL and its associated allocations. To address these activities as related to stormwater-source TMDLs, the chapter first introduces a number of approaches for developing stormwater-source TMDLs and then discusses the following:

- Selecting an approach for developing the stormwater-source TMDL
- Applying that approach to develop the TMDL
- Expressing stormwater WLAs

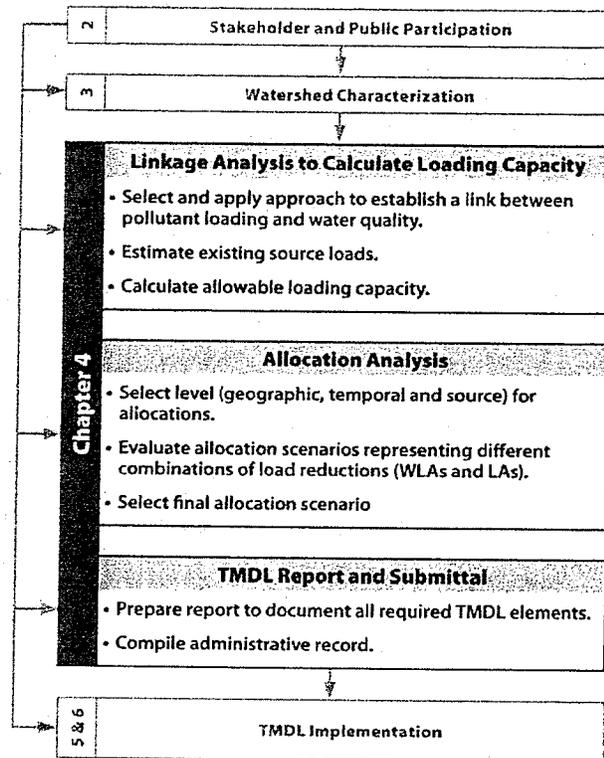

Figure 14. Illustration of the steps in the TMDL process, including activities related to calculation and documentation of the TMDL and its allocations.

4.1. Overview of Approaches for Developing TMDLs

There are a handful of approaches that are commonly used for developing TMDLs. This section briefly introduces these approaches, and Sections 4.2 and 4.3 describe the considerations for their selection and application when dealing with stormwater sources.

The types of TMDL approaches discussed fall into two major categories—modeling approaches and non-modeling approaches. The term *model* describes the set of equations or algorithms that are used to simulate a physical system. In this report, model refers to the available software tools that automate the calculation of equations or groups of equations representing the system. These can include watershed models that simulate the processes related to surface runoff and receiving water models that simulate a range of waterbody conditions and processes. *Non-modeling* approaches include those approaches that are not based on a standardized, automated software that simulates watershed or waterbody processes. They

Resources: For more information the general approach for calculating TMDLs, refer to the Resources list at the end of this chapter in Section 4.5.1.

include those approaches that are based on monitoring data, empirical equations or other statistical or site-specific calculations. Examples include load duration curves developed using observed flow and water quality data and simple mass-balance calculations.

Within those categories, there are various types of approaches, all of which can be further characterized according to the type of simulation or calculation they perform. The approaches either calculate land-based loads or the resulting waterbody loads. Table 6 presents the types of approaches discussed in this section and their respective categories of modeling vs. non-modeling and land-based vs. waterbody-based. The *land-based* approaches calculate loading from land-based runoff processes assuming some measure of precipitation and characteristics representative of the watershed (e.g., soils, imperviousness). The *waterbody-based* approaches calculate the *delivered* load in the waterbody on the basis of in-stream conditions, either using observed monitoring data (i.e., concentration and flow) or assuming some user-defined load inputs and outputs. Many of these approaches are applied in combination to represent both source loading and waterbody response to establish a loading capacity and associated WLAs and LAs to meet water quality standards.

Table 6. Commonly used TMDL approaches

Calculation process	Type of TMDL approach	
	Modeling	Non-modeling
Land-based	<ul style="list-style-type: none"> ▪ Watershed models (simple to complex) 	<ul style="list-style-type: none"> ▪ Export coefficients ▪ IC method ▪ Simple Method
Waterbody-based	<ul style="list-style-type: none"> ▪ Receiving water models (simple to complex, hydrodynamic and water quality) 	<ul style="list-style-type: none"> ▪ Load duration method ▪ Percent reduction method ▪ Mass balance or steady-state analysis

The following discussion provides a brief description of these common TMDL approaches. More detail on their application in stormwater-source TMDLs is then provided, with examples, in Section 4.3.

4.1.1. Land-based Approaches

The following are brief descriptions of several land-based approaches used for TMDL development:

- **Watershed Model.** Many TMDLs use watershed models to evaluate existing and allowable pollutant loads to identify allocations, load reductions, and management scenarios. This group of models emphasizes description of watershed hydrology and water quality, including runoff, erosion, and washoff of sediment and pollutants. Some models simulate only the land-based processes, while some can also include linked river segments and simulate in-stream transport and water quality processes. Watershed models vary in the level of detail, including what processes they simulate and the simulation timestep (e.g., daily vs. monthly). The complexity of watershed models can range from the use of loading functions—empirically based estimates of load based on generalized meteorologic factors (e.g., precipitation, temperature)—to physically based simulations—scientifically based equations to represent the physical, chemical, and biological processes associated with runoff, pollutant accumulation and washoff, and sediment detachment and transport. An example of a loading function model is Generalized Watershed Loading Functions (GWLF), which simulates basic watershed processes related to weather, erosion, and runoff and pollutant washoff and does not include waterbody response or in-stream fate and transport. GWLF provides watershed load and flow estimates on a monthly basis. Alternatively, Hydrologic Simulation

Program – Fortran (HSPF) combines watershed processes with in-stream fate and transport to simulate watershed hydrology, land and soil contaminant runoff, and sediment-chemical interactions. HSPF can generate time series results of any of the simulated processes on a daily or even sub-daily timestep.

- **Export Coefficients/Pollutant Budgets.** This category encompasses a number of approaches built on empirical relationships among watershed processes and pollutant loading as well as the use of literature values of typical watershed loading rates. Examples include using monthly load rates from various land uses to calculate allowable loading from an impaired watershed. Another example is using an empirical relationship that allows a user to calculate an allowable load depending on desirable conditions (e.g., target runoff/waterbody concentration or indicator levels). This approach would typically be used to calculate existing loads and would often be combined with a supplementary approach that calculates an allowable load on the basis of in-stream targets (e.g., percent reduction). Another approach that could fall within this category is a Vollenweider type approach where an empirical equation relating reservoir trophic status to allowable phosphorus loading is used to identify an allowable load corresponding to the desired reservoir condition.
- **IC Method.** This emerging method calculates a target of percent IC in a watershed to represent attainment of water quality standards. Available data are used to relate the percent IC with the resulting runoff, pollutant loading, and waterbody response to calculate the loading capacity.
- **Simple Method.** The Simple Method is an empirical equation used to calculate pollutant loading on the basis of drainage area, pollutant concentrations, a runoff coefficient, and precipitation. In the Simple Method, the amount of rainfall runoff is assumed to be a function of the imperviousness of the contributing drainage area. When using the Simple Method, the TMDL loading capacity would typically be calculated using a combination approach with a waterbody-based approach such as the percent reduction method.

4.1.2. Waterbody-based Approaches

The following are brief descriptions of several waterbody-based approaches used for TMDL development:

- **Receiving Water Model.** Receiving water models simulate conditions within a receiving waterbody (e.g., lake, stream, estuary) on the basis of a representation of physical, chemical and biological processes. Inputs to the waterbody are often defined as user-defined boundary conditions or using linked dynamic output from a watershed model. Receiving water models are typically either steady-state or dynamic models. Steady-state models operate under a single, nonvariable flow condition with constant inputs, typically used to evaluate conditions for a design or critical flow. Dynamic models allow for variations in both flow and meteorologic conditions on a small timestep, typically shorter than daily. Level of complexity in receiving water models is also determined by spatial detail described as one, two, or three dimensions.
- **Load Duration.** The load duration methodology relies on using observed flows and water quality criteria to establish a curve of loading capacities for various flow conditions. This builds on using flow duration curves, which use hydrologic data from stream gages to evaluate the cumulative frequency of historic flow data over a specified period. A water quality criterion or other target concentration can then be multiplied by the observed flows to create a curve representing the distribution of allowable loads as a function of daily flow, representing the loading capacity of the stream. The entire curve can be used to represent flow-variable loading capacities, or allowable loads

can be identified for specified flow intervals, which can be used as a general indicator of hydrologic condition (e.g., wet versus dry).

- **Percent Reduction.** This method assumes a 1:1 relationship between surface water concentrations and pollutant loading. The existing pollutant concentrations are compared to applicable water quality criteria to calculate a necessary reduction. This reduction is then applied to an estimate of *existing* loading to calculate the loading capacity to meet water quality standards. Existing loads are often calculated using ambient monitoring data (e.g., concentration and flow) or some estimation of land-based loading (e.g., export coefficients).
- **Mass Balance or Steady-State.** These approaches rely on the assumption of conservation of mass into a waterbody. The analysis might calculate loads entering a waterbody using export coefficients or observed data and calculate the resulting waterbody concentrations on the basis of estimated losses (e.g., settling, decay) and inputs. The approach relies on identifying the necessary loads entering a waterbody that will meet the desired waterbody target after considering all inputs and losses. These approaches can be applied for a steady-state critical condition or longer time periods, such as average monthly loading rates.

4.2. Selecting an Approach for Developing Stormwater-Source TMDLs

TMDL writers often consider a number of factors when deciding which approach to use to calculate the loading capacity and associated LAs and WLAs for TMDLs. As shown in Figure 15, these can include user needs or requirements, programmatic considerations, and technical needs. While user needs and programmatic considerations often guide the general type of approach (e.g., simple vs. complex, modeling vs. non-modeling), the technical considerations often guide the selection of a specific approach or methodology. The technical considerations define the following needs for the TMDL analysis:

- Spatial scale/resolution
- Temporal resolution/time scale
- Processes or features that need to be included (e.g., pollutant type, surface runoff, in-stream transport)

The watershed characterization step of TMDL development (Chapter 3) should generate the necessary information to define these needs by providing an understanding of the impaired waterbodies, the surrounding watershed and the associated impairments. Specifically, the major considerations or questions that were addressed during the watershed characterization that can support selection of an appropriate approach for TMDL development include the following:

- What are the applicable water quality criteria?
- What are the sources?

Tip: Evaluating Stormwater Issues when Selecting a TMDL Approach

Stormwater-source TMDLs can present unique considerations affecting selection and application of a TMDL approach. TMDL writers should evaluate stormwater-specific considerations within the context of *all* the issues and characteristics of the TMDL, waterbody, and associated watershed. If stormwater is a significant source affecting water quality, these considerations might carry more weight in the decision-making process; however, they should be evaluated with all watershed-specific issues when selecting the most appropriate approach.

- What are the impairments and associated critical conditions?

Table 7 summarizes the considerations related to each of the three technical needs for these defining topics of water quality standards, impairment, and sources. The answers to the questions outlined in Figure 15 and more specifically in Table 7 will guide approach selection for TMDL development. While these questions and considerations will not be much different for a stormwater-source TMDL than for any other TMDL, there might be some unique issues related to stormwater that will affect the selection of an appropriate approach for TMDL development. The following section discusses these stormwater-specific issues to be considered when selecting an approach for TMDL development.

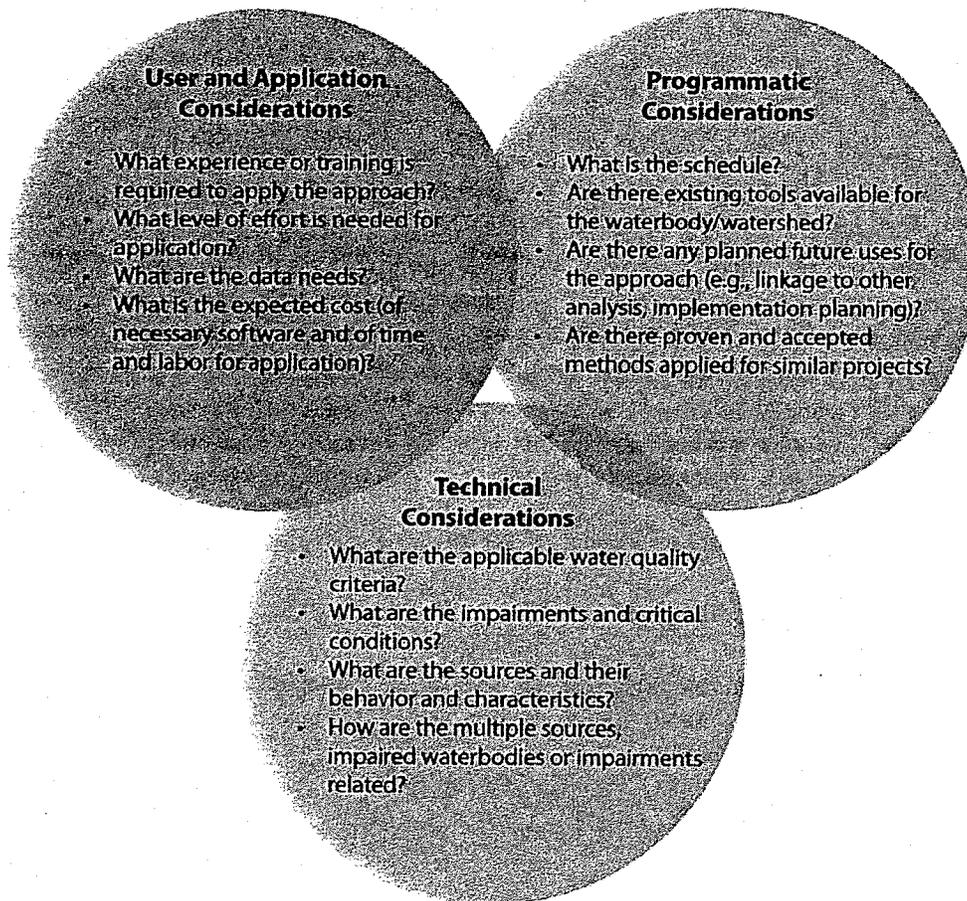

Figure 15. Considerations for selecting a TMDL development approach.

Table 7. Summary of technical considerations for selecting a TMDL development approach

Technical needs of approach	Technical considerations for approach selection		
	Water quality criteria and TMDL targets	Impairments and critical conditions	Sources
Spatial Needs	<ul style="list-style-type: none"> Are different criteria or TMDL targets applicable in different locations within the watershed? 	<ul style="list-style-type: none"> How many impaired segments are being addressed? What are the location and distribution of impaired segments? 	<ul style="list-style-type: none"> What type of sources/land uses exist in the watershed? What are the location and distribution of sources? At what level do the sources need to be isolated (e.g., gross loading vs. land use specific loading)?
Time-scale Needs	<ul style="list-style-type: none"> What are the duration and frequency of applicable criteria or targets? 	<ul style="list-style-type: none"> What is the timing associated with impairment (e.g., instantaneous vs. chronic or cumulative effects)? Are there any temporal trends to capture (e.g., seasonality in waterbody conditions)? 	<ul style="list-style-type: none"> Are the effects due to cumulative or acute loading conditions? Are there temporal variations in source loading (e.g., due to weather patterns, seasonal activities)? At what temporal scale do the sources need to be estimated?
Processes to Include	<ul style="list-style-type: none"> Is criterion based on pollutant level (e.g., concentration) or a measure of response or condition (e.g., flow, habitat quality, eutrophication)? What are the pollutants? 	<ul style="list-style-type: none"> Is impairment based on a specific pollutant (e.g., sediment, metals) or based on cumulative effects of stressors (e.g., flow, habitat quality, pollutants)? Is meeting the target dependent on or affected by multiple waterbody measures (e.g., nutrient levels, temperature, pH)? What are the waterbody critical conditions for loading response (e.g., dynamic, flow variable vs. steady-state)? If dealing with multiple pollutants, how are they related? 	<ul style="list-style-type: none"> What is the source loading behavior (e.g., precipitation-driven, direct discharge)? Do sources impact multiple impaired segments (i.e., need for in-stream routing and transport)? Does the analysis need to evaluate individual and/or cumulative impact of sources?

4.2.1. How Are Water Quality Criteria or TMDL Targets Expressed?

The ultimate goal for any TMDL is to restore the impaired waterbody to meet water quality standards. As discussed in Section 3.2, identifying a TMDL target is typically based on using a numeric water quality criterion or interpreting narrative criteria. The expression of the resulting TMDL target can influence what types of TMDL development approaches are appropriate and how a TMDL analysis considers and represents water quality standards attainment. In many respects, considering the TMDL target for selecting an approach for a stormwater-source TMDL is no different than for any other TMDL. For example, numeric water quality criteria (or a numeric target representing narrative criteria) have an associated magnitude, duration, and frequency. The applicability of an approach can be affected by its ability to simulate at a time-scale necessary for comparison to the water quality target's magnitude, duration and frequency. Targets designed to address acute (short-term) impairments are typically based on instantaneous maximums or daily averages while chronic (long-term) problems (e.g., eutrophication, sediment loading and deposition) can be represented by targets with longer durations (e.g., monthly average concentration, annual loading).

As discussed in Section 3.2, an issue unique to stormwater-source TMDLs is the use of surrogate targets (e.g., flow volume, percent IC) to represent the combined effects of stormwater quantity and quality on maintenance of water quality standards. In these situations, the use of a surrogate target will have a direct bearing on the choice of the technical approach. For example, if using an IC target, the approach chosen must be able to calculate flows from varying levels of imperviousness. Similarly, an analysis that uses peak flow as a target and identification of TMDL

allocations and subsequent controls will depend on controlling flow volumes and peak flows, it will be necessary to use an approach that can either simulate the hydrology and hydraulics of a system in response to watershed characteristics or one that can otherwise relate in-stream flow conditions to watershed characteristics (e.g., imperviousness).

Tip: Select an approach consistent with water quality standards

Regardless of the significant pollutant sources, the TMDL writer should select a technical approach that is suitable for the pollutant of concern. For example, some models do not simulate certain pollutants and, therefore, are not appropriate for certain types of TMDLs. The approach should also provide the necessary output to allow for a direct comparison to the temporal duration specified in water quality criteria.

In Practice: Integrating Stormwater Runoff Volume as a Surrogate for Water Quality Standards into a TMDL Approach in Potash Brook, Vermont

Vermont's water quality standards provide for the use of numeric biological indices to determine the condition of fish and aquatic life based on reference conditions for different waterbody types. Potash Brook, near Burlington, is on Vermont's section 303(d) list as a result of biological impairments, including loss of sensitive taxa, and a compositional shift toward more tolerant species in macroinvertebrate communities. Data suggests that degraded habitat and increased sedimentation are the highest concerns, most likely caused by changes in water flow and increases in sediment erosion and deposition. To effectively address biological impairments in Potash Brook, the Vermont Department of Environmental Conservation selected stormwater runoff volume as a surrogate TMDL measure to represent issues associated with the following:

- Sediment delivered through erosion processes
- Physical effects on the stream channel such as sediment release from channel erosion and scour from increased flows
- Diminished base flow (e.g., decreased groundwater recharge)
- Amount of other potential pollutants (e.g., nutrients, toxics) delivered to Potash Brook is a function of the amount of storm water runoff generated within the watershed.

A high-flow reduction target was established on the basis of the hydrologic conditions of two reference watersheds where aquatic life criteria are attained. Flow duration curves were used to evaluate existing and target conditions for the stream and establish the TMDL. Flow duration curves were developed for both Potash Brook and the reference watersheds, and the difference between the 0.3 percent duration point on the curves was used to derive the reduction target. The 0.3-percentile flow represents the flow that is exceeded by only 0.3 percent of the measured flows and was selected because it approximately equals the one-year flow and the channel forming flow for this stream. The vast majority of reductions are assigned to the WLA, which applies to runoff from urban and developed portions of the watershed, and includes an allocation for future growth. The LA applies to the limited agricultural and open space portions of the watershed.

More information on the Potash Brook TMDL (2006), as well as other hydrology-based TMDLs approved in Vermont, is available at www.anr.state.vt.us/dec/waterq/stormwater/htm/sw_impairedwaters.htm. Other examples of hydrology-based TMDLs include Maine's Barberry Creek (2007) available at www.maine.gov/dep/blwq/docmonitoring/impairedwaters/TMDL/2007/barberry_ck_rep.pdf and Connecticut's Eagleville Brook (2007) available at www.ct.gov/dep/lib/dep/water/tmdl/tmdl_final/eaglevillefinal.pdf.

4.2.2. What Are the Stormwater Sources Affecting Impairment?

Analysis during the previous activity of characterizing the impairment and pollutant sources (Chapter 3) identified the regulated stormwater sources in the watershed that contribute to the impairment of concern. The TMDL writer should also have a general understanding of the relative importance of each source, which can guide decisions regarding technical approaches for TMDL development. It is important that a TMDL approach be able to represent important sources in a way that captures the sources' effect on water quality to calculate appropriate allocations. This is

no different for stormwater sources than for other types of point or nonpoint sources. Therefore, when stormwater is a major source affecting impairment, it is important to consider its characteristics when selecting an approach. As discussed in the following sections, which type of approach is selected for stormwater-source TMDLs will be influenced by the type of sources, size of the source area, and how the source generates and delivers pollutants of concern.

Characteristics of Stormwater Sources that Can Affect Approach Selection

- Type and distribution of sources
 - Pollutant generating activities
 - Spatial coverage
- Pollutant Delivery
 - Timing of loading
 - Delivery mechanism

4.2.2.1. Type and Distribution of Sources

If regulated stormwater sources are within the watershed of the impaired waterbody and discharge the pollutant of concern, they will be included in the TMDL analysis. However, there are varying levels of detail at which the sources can be characterized and quantified in the analysis, affecting both the selection and application of a TMDL approach. Decisions regarding the level of detail for including stormwater sources can include not only the spatial resolution at which sources are represented within the analysis, but also the types of spatial units (e.g., subwatershed, land use types) that can be included and how they are spatially related and represented in the analysis. These decisions will depend primarily on the significance of each source in their effect on the impairment of concern. For example, perhaps an MS4 in an impaired watershed is expected to be a minimal source of the pollutant of concern, whether because it covers a small portion of the watershed, it has already installed a number of effective controls minimizing its effect, or other active sources in the watershed (e.g., agriculture, mining, forestry) contribute significantly more pollutant load. In such a case, it might be appropriate to choose an approach that does not specifically include or calculate loads originating with individual stormwater sources but rather evaluates a cumulative load from all sources (e.g., load duration) and then distributes the total load among sources. Alternatively, if there are multiple regulated stormwater sources in the watershed, including MS4, construction, and industrial, that all represent major contributions of pollutant loading to the system, it will likely be necessary to choose an approach (e.g., watershed model) that can evaluate the watershed at a finer scale, both temporally and spatially, to isolate the source-specific loadings and evaluate their effect on water quality.

One of the first considerations regarding sources is how well they are understood. The analysis of impairment conditions and sources discussed in Chapter 3 helps the TMDL writer understand what and how sources are affecting impairment. This can help to identify the type of information that the technical approach will need to include and also produce, thereby narrowing the range of approach options. If sources and their impacts are well understood based on available data and local knowledge, it might not be necessary to use an approach that evaluates individual sources or provides the ability to predict effects from existing and future source inputs. Some approaches, such as receiving water modeling, can

potentially provide a great deal of information on how known sources will affect receiving water quality but will not provide much information on unknown sources. Land-based watershed modeling, on the other hand, can help to quantify the relative significance of various sources such as urban runoff compared to point source discharges. Data-driven approaches, such as load duration curves, that rely on evaluation of in-stream loads based on monitoring data are very useful when significant observed data are available and the impairments predominantly occur during certain flow conditions. However, they do not typically support direct calculation of loads originating from individual sources and require a supplementary analysis to do so.

Also affecting approach selection is the decision of the spatial resolution for representing the individual stormwater sources in the approach. Stormwater sources can have a variety of activities within their boundaries that contribute to pollutant loads. For example, within an MS4 different land uses (e.g., residential vs. commercial) and areas can contribute varying magnitudes of loads. It might be important to capture those variations in pollutant loading and evaluate subareas within the MS4 boundary, such as areas that drain to certain outfalls or different land uses, to more effectively target BMP implementation. Therefore, it would be appropriate to use an approach that can isolate and calculate pollutant loading from specified *sub-sources*. For example, using a watershed model allows for the inclusion of multiple types of land areas that are represented by characteristics (e.g., soils, pollutant accumulation, imperviousness) that can vary by land use or type, allowing a TMDL writer to not only isolate loads generated within a stormwater source boundary but also by other characteristics such as land use. However, approaches that do not specifically calculate loads from individual sub-sources can still accommodate and capture these variations depending on how they are applied. For example, while a load duration approach calculates a total allowable in-stream load without direct calculation of source-based loads, it can be applied at multiple strategic locations to capture the variability in loading from different sources.

Alternatively, an area within a source's boundary might be small or fairly homogenous, without much variation in pollutant generation. For example, regulated construction sites are relatively small in area and would not likely require further division within their boundaries. As another example, depending on the overlap of an MS4 and the watershed of an impaired water, the portion of the MS4 within the watershed might represent similar land uses and activities (e.g., all residential areas). In these cases, it is likely appropriate to use an approach that evaluates loading on a coarser level, possibly evaluating the cumulative load to an impaired waterbody rather than area-specific inputs.

If regulated construction stormwater sources are important in your watershed, they might present a different set of considerations and challenges for the TMDL analysis than MS4s or industrial sites. Again, there is the question of spatial coverage but also one of temporal effects. MS4s and industrial are static with a definable boundary, while regulated construction sites represent a *moving target* in that they have definable boundaries, but their existence and effects are more intermittent. The temporal aspect of the locations, magnitudes, and activities related to stormwater from construction sites makes it difficult to include in a TMDL analysis. Through the stormwater source characterization and the impairment analysis, the TMDL writer should determine whether construction is an important potential source given the characteristics of the watershed and the impairment. For example, if the watershed is experiencing rapid growth and expansion, construction could be a significant current or future source and might require specific representation in the TMDL analysis. Or perhaps the watershed had a number of construction sites that were active during the time the waterbody was identified as impaired, but the sites are no longer active or contributing to the impairment. In such cases, it might be necessary to select an

approach that can evaluate the temporal variations in waterbody conditions on the basis of time-variable source inputs and other watershed factors (e.g., weather). This type of evaluation is most directly accomplished using a time-variable watershed model. However, other non-modeling approaches can be applied to represent different time frames and source inputs to more generally evaluate the variable effects over time. This can allow the TMDL writer to evaluate past, current, and future conditions related to construction impacts.

Another level of detail in spatial resolution when representing stormwater sources is the potential for including loadings from individual outfalls. While the location of outfalls should be known, it is not always feasible to include or analyze loadings from individual outfalls in a TMDL analysis. To evaluate outfall-specific loads and effects, it is necessary to have data to characterize the outfall discharge (e.g., flow, pollutant concentrations) for at least the critical conditions (e.g., high flows) but preferably under a range of conditions. Data to support this level of detail are often not available. However, if sufficient data are available, it is important to consider the added benefit as well as the added effort in conducting the analysis. The TMDL writer along with the permit writer should identify the benefits of evaluating loading at the outfall level and whether those same benefits could be achieved by conducting the analysis at a broader scale (e.g., subwatershed level) and likely with less expended effort and resources.

4.2.2.2. Pollutant Delivery

How and when a pollutant is delivered to a receiving waterbody is an important consideration in selecting an appropriate TMDL approach. For stormwater-related sources, the typical pathway for pollutants is accumulation and washoff, where overland runoff transports pollutants deposited on land surfaces to stormwater conveyances and eventually receiving waterbodies. However, depending on the type of pollutant, the timing of delivery or mode of transport can present unique needs for a TMDL development approach. For example, many pollutants are delivered in dissolved form in stormwater runoff, while others can be transported adsorbed to sediment particles. Waterbodies that are impaired by sediment-associated pollutants such as phosphorus or organics can therefore require an approach that simulates the processes of sediment erosion and transport to fully evaluate the pollutant loading and impacts.

In addition to the delivery pathway, the timing of pollutant loading is another consideration for the evaluation of stormwater. Stormwater is typically driven by precipitation events and subsequent runoff and discharge. However, dry-weather flows delivered through MS4 infrastructure caused by such things as automobile washing and lawn watering also might be a source of loading to a waterbody, especially in arid regions. This situation might require a TMDL approach that can evaluate both precipitation-driven sources during wet weather and also direct inputs occurring during dry weather. For example, load duration curves and watershed models can be applied to evaluate loads for different flow conditions.

Regardless of the conditions of delivery, stormwater source activity can also occur during different times of year. For example, pollutants associated with deicing and winter road maintenance are more likely to be deposited and delivered during winter months while pollutant runoff from residential car washing might be more frequent during warmer summer months. These situations might warrant a TMDL approach that can evaluate and capture the variations in pollutant loading across months and seasons. For example, many watershed models can produce either daily continuous loads or monthly loads that would capture the variations in loading during different seasons.

4.2.3. What Are the Critical Conditions?

As discussed in Chapter 3, the critical conditions for a TMDL represents the combination of environmental conditions (physical, chemical and biological) under which impairment occurs. This can include such things as the environmental processes that affect impairment (e.g., nutrient dynamics affecting dissolved oxygen levels, flow modification due to increased development affecting in-stream habitat) and the timing of impairment (e.g., certain months or times of day). From the characterization step discussed in Chapter 3, the TMDL writer should understand the impairment and the effect of stormwater sources on receiving water quality and can now evaluate how to capture that in the selected approach.

For example, some stormwater-related impairments are not associated with specific pollutants and therefore require the analysis of a variety of pollutants and processes to capture the impairment conditions. Evaluating the effects of stormwater and identifying necessary allocations might require the evaluation of such things as sediment delivery and deposition, peak flows, and nutrient loading and resulting eutrophication dynamics. Another example is critical conditions related to low dissolved oxygen that can be affected by the timing and availability of nutrient loads and also on seasonal factors such as temperature, resulting algal growth, and flow. The TMDL writer should evaluate the processes that need to be included to sufficiently represent the critical conditions when selecting an approach for developing the TMDL.

In Practice: Selecting a TMDL Approach to Capture Critical Conditions in Ballona Creek, California (2005)

Segments of Ballona Creek and Sepulveda Canyon Channel were included on 1996, 1998, and 2002 303(d) lists for cadmium, copper, lead, selenium, silver, zinc and toxicity. Data analysis indicates differences in waterbody conditions (e.g., water quality, flow) and sources between dry and wet weather. To capture the varying critical conditions and source loading, two distinct approaches were used to develop the TMDL.

Because the metals criteria are based on hardness, separate wet- and dry-weather targets were developed to reflect the different hardness values and flow conditions in the creek and its tributaries. For the purpose of this TMDL, wet weather is defined in terms of flow rather than rainfall. Wet weather is defined as any day in which the maximum daily flow is equal to or greater than 40 cubic feet per second (cfs) based on the 90th percentile of flows measured over a 10-year period.

The dry-weather loading capacity for each metal was derived by multiplying the hardness-adjusted, dry-weather numeric targets by the critical flow assigned to these two waterbodies. The wet-weather TMDL calculation was based on the simulation of the hydrologic processes and watershed metals loading using a watershed model (HSPF). Using simulated flows and metals concentrations, a load duration curve approach was used to establish the wet-weather loading capacity. Loading capacities were calculated by multiplying the daily storm volume by the appropriate numeric water quality target.

A grouped mass-based WLA was developed for stormwater permittees (Los Angeles County MS4, Caltrans, General Industrial and General Construction) for both dry weather and wet weather. Because there are no identified areas in the watershed that discharge directly to Ballona Creek or a tributary rather than through the storm drain system, the WLA was equal to the calculated loading capacity minus the estimated loads from atmospheric deposition. The grouped stormwater WLA was partitioned among the MS4 permittees (77,546 acres) and Caltrans (1,080 acres) using an estimate of the percentage of land area covered under each permit.

The Ballona Creek metals TMDL report is at www.waterboards.ca.gov/losangeles/board_decisions/basin_plan_amendments/technical_documents/2005-007/05_0831/StaffReport.pdf.

4.3. Applying Approaches for Stormwater-Source TMDLs

Once an approach is selected for TMDL development, the TMDL writer will apply the approach to calculate the loading capacity and associated allocation for sources. While all sources present challenges in deciding how to accurately represent their inputs and effects, stormwater sources can require some unique considerations when applying a TMDL approach. The two key issues to address when developing TMDLs with stormwater sources are

1. How to represent stormwater source characteristics (e.g., discharge flows and concentrations)
2. How to isolate and estimate the loads transported and discharged through the stormwater system

Several commonly used TMDL approaches were introduced previously in Section 4.1. This section discusses the considerations for developing TMDLs with stormwater sources using these different methods and is organized according to whether the approach is land-based or waterbody-based, as identified in Table 6. Table 8 summarizes the advantages and disadvantages of each method, and the following sections provide more detail on their application for stormwater-source TMDLs.

Table 8. Summary of commonly used TMDL development approaches

Approach	Can be combined with...	Advantages	Disadvantages
Land-based Approaches			
Watershed Models	<ul style="list-style-type: none"> ▪ Receiving Water Model ▪ Load Duration Curves 	<ul style="list-style-type: none"> ▪ Can directly simulate regulated stormwater sources as distinct hydrologic units to facilitate better representation of source inputs. ▪ Enables source-level allocations ▪ Provides flexibility in expression of allocations, from gross to detailed, site-level (if detailed model is used). ▪ Provides time-variable simulation and results to better represent varying conditions for regulated stormwater source inputs and impacts (if dynamic model is used). ▪ Flexibility in how model is set up to represent land units allows for simulation of subareas or land uses within regulated stormwater source boundaries to define spatial inputs and impacts for targeting implementation. ▪ Allows users to simulate potential changes in water quality conditions that might result from implementation activities. 	<ul style="list-style-type: none"> ▪ Requires significant data and analysis if outlet-level allocation is necessary. ▪ Direct simulation of stormwater sources is dependent on accurate information on drainage areas and runoff. ▪ Moderate or general watershed models (e.g., those with monthly time-steps) have limited capabilities for temporal evaluation or highly variable stormwater sources. ▪ Model accuracy dependent on having sufficient water quality data for calibration. ▪ Requires trained or experienced staff to run the model and understand model assumptions and limitations.
IC Method	<ul style="list-style-type: none"> ▪ Watershed Models ▪ Load Duration Curves 	<ul style="list-style-type: none"> ▪ Because area of impervious surfaces is easily explained and tangible, can be more understandable to the public. ▪ Is translated more easily into management actions. 	<ul style="list-style-type: none"> ▪ Requires supplemental analysis and data to support linkage to a load. ▪ Requires sufficient data to support the link between IC and water quality standards. ▪ Is not appropriate for waterbodies affected by a mix of sources other than urban runoff.

Approach	Can be combined with...	Advantages	Disadvantages
Export Coefficients	<ul style="list-style-type: none"> ▪ Percent Reduction ▪ Load Duration Curves 	<ul style="list-style-type: none"> ▪ Is simple to apply. 	<ul style="list-style-type: none"> ▪ Is usually based on regional or national literature values that might not be representative of local conditions. ▪ Does not provide a direct link to waterbody conditions and use support.
Simple Method	<ul style="list-style-type: none"> ▪ Percent Reduction ▪ Load Duration Curves 	<ul style="list-style-type: none"> ▪ Is useful in watersheds lacking flow data. ▪ Is specifically designed to evaluate stormwater pollutant loads from impervious areas. 	<ul style="list-style-type: none"> ▪ Assumes all loading originates on impervious surface during storm events, not accounting for runoff from impervious areas or subsurface inputs and baseflow loading. ▪ Because it uses a static runoff concentration, does not account for variability in loading or in-stream levels. ▪ Not appropriate for large watersheds (>1 mi²) or non-urban areas.
Waterbody-based Approaches			
Receiving Water Models	<ul style="list-style-type: none"> ▪ Watershed Model ▪ Mass Balance 	<ul style="list-style-type: none"> ▪ Represents a high level of spatial variability within a waterbody, allowing for detailed outfall-based allocations ▪ Provides time-variable simulation and results to better represent varying conditions for regulated stormwater source inputs and impacts (if dynamic model is used). 	<ul style="list-style-type: none"> ▪ When applied independently, is limited to allocations set for specific input points; requires combination with a watershed model for land-based allocation analysis. ▪ Provides limited allocation opportunities when source is not discharging directly to the receiving water (e.g., for construction sites in upland locations). ▪ Provides limited allocation options when applied as a steady-state (non-dynamic) modeling application.
Load Duration	<ul style="list-style-type: none"> ▪ Watershed Models ▪ Simple Method 	<ul style="list-style-type: none"> ▪ Is based on observed monitoring data, providing a data-based representation of existing conditions. ▪ Identifies the allowable and existing loads for all flow conditions, providing insight into the critical conditions and accounting for the natural variations in loading and in-stream conditions. ▪ Because it is based on observed in-stream conditions, can capture the effects of unknown sources (e.g., failing septic systems, illicit connections). 	<ul style="list-style-type: none"> ▪ Provides limited information regarding the relative magnitude of source loads. ▪ Requires supplemental analysis to distribute loading capacity into source-based allocations. ▪ Requires robust and consistent records of flow and in-stream water quality data. ▪ Is applicable only to non-tidal streams or rivers.
Percent Reduction Method	<ul style="list-style-type: none"> ▪ Simple Method ▪ Export Coefficients 	<ul style="list-style-type: none"> ▪ Is simply and quickly applied. ▪ Easy for the public to understand. 	<ul style="list-style-type: none"> ▪ Assumes a 1:1 relationship between reductions in pollutant loading and resulting reductions in concentration. ▪ Does not calculate source-based loads, requiring supplementary analysis to identify stormwater WLAs.

Approach	Can be combined with...	Advantages	Disadvantages
Mass Balance or Steady-state Analysis	<ul style="list-style-type: none"> ▪ Receiving Water Models 	<ul style="list-style-type: none"> ▪ Relatively simple to apply. ▪ Is based on observed monitoring data, providing a data-based representation of existing conditions. 	<ul style="list-style-type: none"> ▪ Typically focuses on a single critical condition (e.g., critical flow) or long-term average conditions (e.g., monthly loading and concentration), not allowing for evaluation of variability in pollutant loading or waterbody conditions. ▪ Simple representative of pollutant fate and transport.

4.3.1. Land-based Approaches

This section discusses the modeling and non-modeling TMDL approaches that evaluate land-based loading or conditions and issues related to their use in stormwater TMDLs.

4.3.1.1. Watershed Models

Watershed models are commonly applied to provide a quantitative linkage between source contributions and waterbody response for TMDL development. This category of models loosely refers to numerical frameworks that address a combination of land-based rainfall/runoff and contaminant loading processes and conveyance of flow and contaminants within a stream, impoundment, or some other type of receiving waterbody. Commonly available data used to drive watershed models and accurately simulate conditions within receiving waters include land cover, soil type, meteorological characteristics, and stream/impoundment dimensions. The level of complexity associated with each of these models varies widely from annual flow and contaminant load delivered from a watershed to sub-hourly prediction of detailed hydrologic processes at the land use or site level.

While structure and simulated processes vary from one model to the next, watershed models provide a useful basis for allocation to watershed sources contributing to waterbody impairment, including permitted stormwater sources. Most watershed models perform calculations on a land unit basis. That is, the modeler divides a drainage area into smaller land units to enhance representation of heterogeneities. These land units can represent variable soil characteristics, political boundaries, or more commonly, land use or cover. Many models take this land cover breakdown one step further and represent impervious and pervious land cover types using different mathematical formulations. Impervious land, for example, is not subject to infiltration and associated subsurface processes. Figure 16 illustrates how a typical watershed model categorizes each area of land by land use type (e.g., residential, forest, agriculture) and then routes flow and loads delivered from those within each watershed to the receiving waterbody. Watershed models typically have the capability to separate the watershed into a number of smaller subwatersheds. Some then have the added capability to route the flow and load contributed from each subwatershed to the corresponding stream reach to the downstream reach, creating a system of connected waterbody segments. Dividing a watershed into land cover-based units typically provides a logical basis for developing source-based allocations in a TMDL. For example, specific allocations (in terms of time-variable flow and contaminant loads) can be made to each land cover category represented in a watershed model. A watershed model might, for example, represent the following five land cover categories: forest, pasture, crop, residential-pervious, residential-impervious. In this situation each

category might receive independent allocations, which collectively result in the receiving water for the drainage area to attain and maintain water quality criteria.

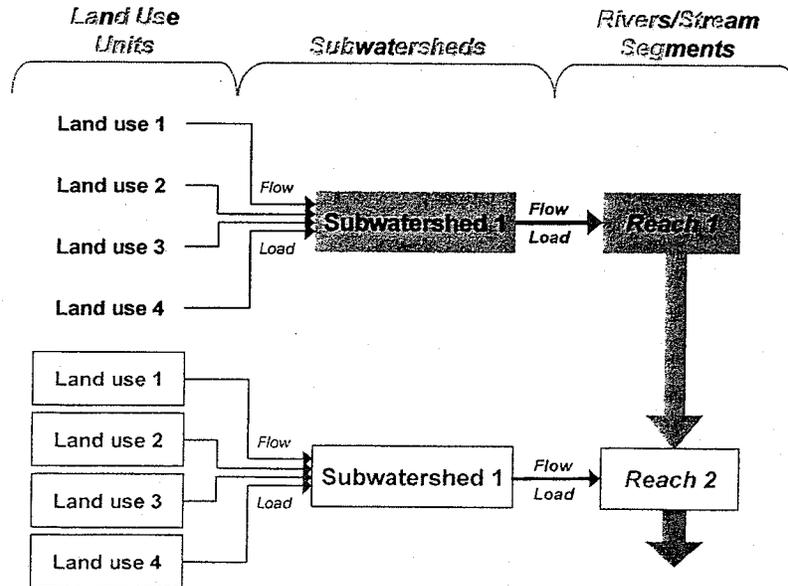

Figure 16. Typical watershed model elements for simulating runoff and pollutant loading from watershed land uses to receiving waterbodies.

Of the approaches presented in this section, watershed models can have the greatest variation in the type and method of application of the approach. Watershed models can vary widely in their capabilities, influencing their applicability for a particular TMDL application. The applicability of a model for simulating stormwater sources in a TMDL analysis can be affected by the model's capabilities, including the following:

- Timestep (temporal resolution)
- Ability to represent spatial variations (spatial resolution)
- Processes that are simulated

The temporal resolution can affect the model's ability to capture the variations in stormwater loading and the waterbody response. Its spatial scale can determine how watersheds are divided and represented, including how stormwater sources are isolated. The processes simulated by a model will often be a primary determining factor in model selection for TMDL development. A model's ability to simulate certain land-based processes (e.g., pollutant accumulation, runoff, erosion), waterbody processes (e.g., in-stream transport, nutrient dynamics, die-off), and management processes (e.g., stormwater detention) can determine whether it is appropriate for use in a certain TMDL project and also how the model will be applied. Table 9 identifies several model capabilities that can affect how it can be used to evaluate and estimate stormwater source loads. For each capability, the table rates a number of watershed models used for TMDL development, including:

Resources: For more information on selecting watershed models based on needs for a given TMDL, refer to the Resources list at the end of this chapter in Section 4.5.2.

Other modeling references (USEPA 1997, 2005c) include summaries of model applicability for more general considerations, such as land uses simulated, pollutants simulated, and waterbody types simulated as well as for considerations related to their application. For example, *TMDL Model Evaluation and Research Needs* (USEPA 2005c) provides a series of tables rating the capabilities or applicability of more than 60 available watershed and receiving water models in the following categories:

- **TMDL Endpoints.** Considers the model’s ability to simulate typical TMDL target pollutants (e.g., nutrients, toxics, bacteria) and expressions (e.g., load vs. concentration). Characterizes the models depending on the timestep of the simulation for the target (e.g., steady state, annual, daily, hourly).
- **General Land and Water Features.** Rates models according to their ability to simulate general land uses (e.g., urban, agricultural) and waterbody types (e.g., river, lake, estuary).
- **Special Land Processes.** Rates models on their ability to simulate more than 15 special land processes such as wetlands, hydrologic modification, urban BMPs (e.g., street sweeping, detention ponds), and rural BMPs (e.g., nutrient control practices, irrigation practices).

- **Special Water Processes.** Rates models on their ability to simulate special processes occurring in receiving waterbodies such as air deposition, stream bank erosion, algae, and fish.
- **Application Considerations.** Rates models on the following practical considerations affecting their application—experience required, time needed for application, data needs, support available, software tools, and cost.

Regardless of what type of watershed model is used, TMDL writers can calculate WLAs for permitted stormwater sources (e.g., MS4s, industrial facilities, and construction sites) in a number of ways using watershed models. The primary issues with modeling approaches that include stormwater sources are similar to those for other approaches, i.e., how to most accurately represent the sources and how to isolate and calculate their pollutant load contributions. Because models typically provide continuous simulation of multiple land- and waterbody-based processes, they can provide more flexibility than non-modeling approaches in representing stormwater sources.

An essential part of defining the contributions from permitted stormwater sources depends on isolating the *regulated boundary* of the source, or the drainage area that delivers stormwater runoff to the source's system. (See Chapter 3 about delineating the regulated area of a stormwater source.) Stormwater permits require all permittees to have documentation of the system configuration, its outfalls and boundaries. The level of detail of this information, however, will vary by permittee. Some might have detailed GIS-based coverages of storm sewer outlets and the areas they drain. Others might have coarse, hand-drawn maps roughly identifying their outlet locations and property boundaries. Once the TMDL writer delineates source areas, the issue becomes how to account for the delineated source area in the modeling analysis. The selection of an approach to include permitted stormwater sources in a modeling analysis for load calculation and allocation primarily depends on the available data and the importance or magnitude of the types of permitted stormwater sources. The two primary approaches include the following:

1. Including the permitted stormwater sources as discrete land units within the model—units that produce flows and loads separate from other watershed land areas and are hydrologically connected to the stream system
2. Calculating the load from the regulated stormwater source in a supplementary analysis using the model results of loads generated by watershed land uses

Which approach is used might depend on the significance of permitted stormwater sources to the impairment and the level of detail needed to characterize each source (e.g., evaluate as a whole vs. evaluate subareas within the regulated boundary). The first approach is most suitable for watersheds where stormwater sources are considered significant sources of impairment and sufficient data exist to define and isolate their regulated boundary, as well as discharge quality and quantity. The second approach can be used when regulated boundaries are not easily defined or because it is more important to evaluate the land use-specific effects on water quality rather than the effect of the cumulative contributions from a stormwater source (e.g., a regulated MS4) as a whole. For example, the regulated boundary of an MS4 might cover the majority of the watershed of the impaired waterbody. In such a case, it might be more efficient to set up the watershed model to evaluate the entire watershed area and the specific land uses or activities and then estimate and subtract the small portion that is delivered to the waterbody through nonpoint source runoff rather than the MS4. Both approaches are discussed in greater detail in the following sections.

4.3.1.1.1 Including Stormwater Sources as a Modeled Land Unit

The most direct approach for calculating stormwater source allocations is to develop a watershed model including the regulated boundary. This means that the TMDL writer can isolate and represent the regulated area in the watershed model as a separate land unit—representing the area that produces stormwater runoff that is delivered to the receiving waterbody through the permittee's stormwater conveyance system. Using this approach, the model would internally calculate flow and pollutant loading separately for each stormwater source's area. For example, the TMDL writer could separate land covering each permitted industrial facility into individual land units to independently determine flow and contaminant contributions from each permitted industrial facility. The TMDL writer can use the same approach for construction sites (or areas expected to undergo construction) and areas covered by an MS4 permit.

Tip: Modeling surface runoff vs. baseflow loads in MS4s

The use of watershed models allows a TMDL writer to estimate both surface runoff and baseflow loads from all sources, including MS4s. A strict reading of the MS4 definition would suggest that only groundwater that enters the stream by reemerging or infiltrating into the conveyance system should be covered by the MS4 permit, while groundwater that discharged directly to the stream would not be covered. However, in some situations groundwater discharge can be included within the WLAs because the entire watershed is within the MS4 boundary and much of the groundwater load (e.g., for bacteria) was assumed to derive from leaky sewer systems which are also covered by NPDES permit. In the case of fecal coliform and a watershed entirely within MS4 boundaries it is probably safe (and easier) to include all the load within the WLAs. For other parameters, however, it might not be so clear. For example, for TDS the natural geologic background in groundwater would be inappropriate to lump into the MS4 WLA.

Figure 17 illustrates this process for calculating the WLA for an MS4. The example assumes that the overlay of the storm sewer system is available, along with the corresponding areas that drain to that system for delivery to watershed streams (i.e., the regulated boundary), as shown in the *Subwatershed Characteristics* panel of the figure. Therefore, the TMDL writer can isolate areas drained by the system and include these areas in the model as discrete units. As shown in the *Model Setup* panel, the model then simulates flow and loads contributed by the discrete MS4 units within each subwatershed to the respective stream segment. Because of this setup, the TMDL writer can directly calculate WLAs within the model, similar to the approach for other simulated land units (e.g., urban, agriculture), as shown in the *Allocations based on Model Output* panel.

If the individual stormwater resources are represented in the model by their regulated boundaries, it will be necessary to characterize their land areas for simulation of runoff and loading. For example, when a watershed model is set up, the individual land use or other source areas are characterized by things such as soil type and characteristics (e.g., erodibility), perviousness, and measures of pollutant accumulation and generation. If available, monitoring data from the stormwater source should be used to characterize the source area and their associated runoff. If such data are not available, the areas included within the stormwater boundaries can be characterized in the same manner as other land uses. This is typically done by using GIS coverages such as land use, soil type, and topography to characterize the physical conditions of the land areas and site-specific calculations or default values to represent pollutant accumulation for certain land use types.

The extent to which TMDL writers can use this approach of including stormwater sources as modeled land units depends primarily on the level of detail available geographically for each stormwater source, the data available to characterize pollutant generation and washoff from the source area and, in some cases, the capabilities of the watershed model.

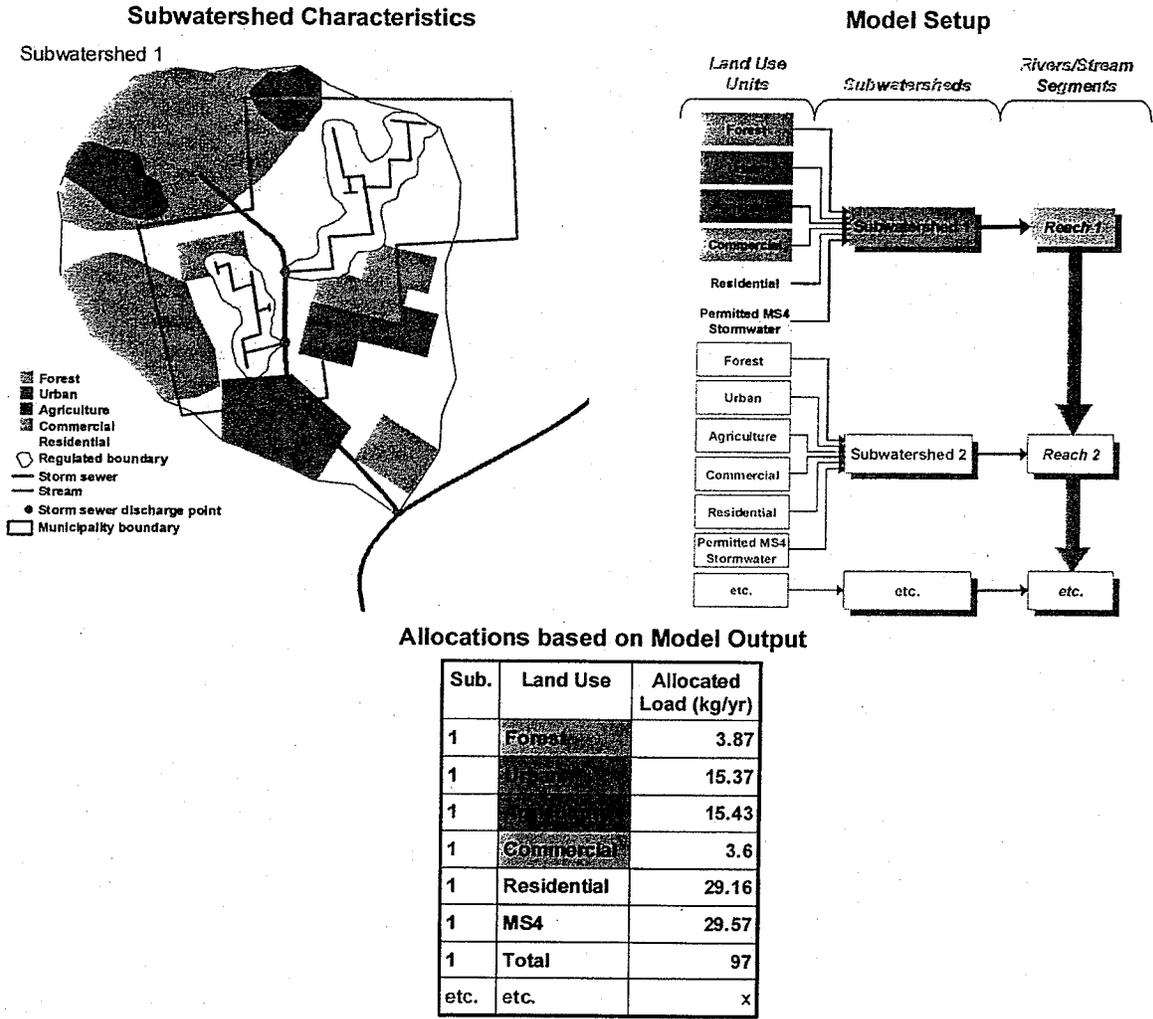

Figure 17. Process for calculating MS4 allocation when the MS4 drainage area is included in the model as a discrete land unit.

In Practice: Modeling Sediment Loads from Permitted Construction in the Potomac Direct Drains, West Virginia, TMDL (2008)

West Virginia's 2006 section 303(d) list includes 29 impaired streams in the 927-square-mile Potomac Direct Drains watershed in Berkeley and Jefferson counties. Many of the listed waters are biologically impaired on the basis of a narrative water quality criterion that prohibits the presence of wastes in state waters that cause or contribute to significant adverse effects on the chemical, physical, hydrologic, and biological components of aquatic ecosystems. SI analyses indicated sedimentation as a causative stressor in many of the streams, and sediment TMDLs were developed.

In recent years, the eastern panhandle of West Virginia has undergone significant development, with agricultural land and open space being converted to roads and housing subdivisions. The increased

construction activity is a potential source of sediment to the impaired waterbodies. At the time the TMDLs were developed, 297 construction sites encompassing 8,470 acres were registered, or had registrations pending, under the general permit.

The Mining Data Analysis System (MDAS) was used to represent the source-response linkage for sediment. Sediment TMDLs were developed using a reference watershed approach where MDAS was used to model sediment loading from a reference watershed. The reference loading rate was normalized for the Potomac Direct Drains watershed to establish the numeric TMDL target for sediment.

Sites subject to the Construction Stormwater General Permit were represented in the model using precipitation and runoff from the registered disturbed area and an assumption that proper installation and maintenance of required management practices would achieve an approximate 60 percent reduction of the sediment loading contributed by barren land. All registered sites and sites with registrations pending as of October 2006 were incorporated. All active registered sites and pending site registrations as of October 2006 were provided individual WLAs in the TMDL.

The Potomac Direct Drains TMDL reports are at www.wvdep.org/alt.cfm?asid=140.

4.3.1.1.2 Calculating Stormwater Source Loads Outside of the Model

More commonly, the TMDL writer develops the watershed model based on typical land cover categories, without specifically including the regulated boundaries of stormwater sources. This is typically done because the boundaries of the area draining to the source's MS4 are not yet available or it is decided to focus on the land-use specific effects in more detail. In such situations, the TMDL writer will develop, calibrate, and apply the watershed model to TMDL development first, and then subsequently make allocations to permitted stormwater sources on the basis of their respective boundaries, whether represented by the regulated boundary or some alternative boundary (e.g., jurisdictional area) in the absence of the regulated boundary. The TMDL writer makes this allocation by overlaying the land cover represented in the model with applicable stormwater source area boundaries, such as the areas of an industrial facility exposed to stormwater runoff or the regulated MS4 boundary. The TMDL writer then determines the flow and pollutant load contribution associated with the various land cover categories that fall within the permitted stormwater source area boundary. This is often done by determining the unit area flow and pollutant loading for each land cover category on the basis of model results. The TMDL writer can then multiply the unit area rates by the corresponding area of the stormwater source that falls within that land cover category to calculate the portion of the land-use load that originates within the stormwater source boundary. To find the total load for the permitted stormwater source, the TMDL writer can then sum the land use-specific loads.

Figure 18 illustrates this type of process for calculating the WLA for an MS4 when the regulated boundary for the stormwater source is not included as a discrete area in the model. Unlike the example in Figure 17, the exact coverage of the storm system and the regulated boundary draining to the system has not yet been delineated by the permittee. Therefore, the model is set up to include only watershed land uses (see *Model Setup* panel in the figure), regardless of the MS4's boundary. The land-use loads are then used as the basis for calculating the load allocated to the MS4. This is done using an alternate boundary representing

Tip: Regulated Boundary vs. Jurisdictional Boundary

The most accurate way to represent a stormwater source's runoff and pollutant load contributions in a watershed model is to use the *regulated boundary*—the area actually generating and delivering runoff to the storm sewer system. However, many TMDLs represent the regulated stormwater source simply using the jurisdictional boundary (e.g., the municipal boundary for a small MS4) rather than the regulated boundary. As discussed in Chapter 3, the TMDL writer should work with the permitting authority to identify and obtain the regulated boundary to include in the modeling analysis or identify an appropriate alternative boundary if it does not exist.

the MS4 (e.g., jurisdictional boundary) rather than the actual area draining to the system. As shown in the *Allocations based on Model Output* panel of the figure, the areas of each land use that fall within the regulated MS4 boundary is calculated and multiplied by the loading rate for that land use. These loads are then totaled to calculate the total load attributed to the MS4.

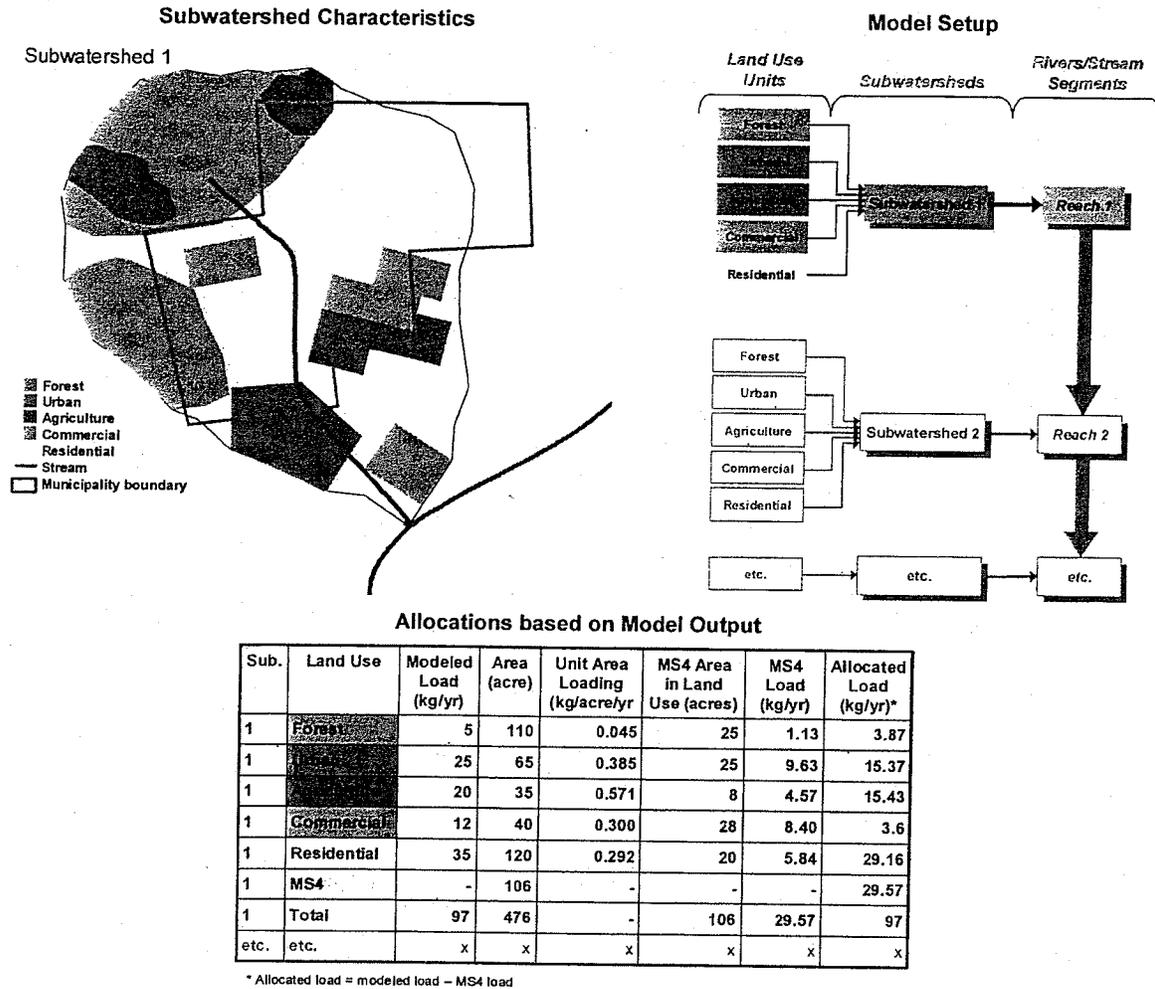

Figure 18. Process for calculating MS4 allocation when the specific stormwater drainage boundary is not included in the model and MS4 load is calculated based on percent of area within each modeled land use.

In Practice: Using watershed model-based approach for MS4 WLAs in the Christina River Basin

The Christina River Basin High-Flow Nutrient TMDL (www.epa.gov/reg3wapd/tmdl/pa_tmdl/ChristinaMeetingTMDL/index.htm), established by EPA in conjunction with Pennsylvania, Delaware, and Maryland, demonstrates the approach of calculating MS4 WLAs on the basis of watershed model output and jurisdictional boundary. TMDLs were determined for the Christina River and its tributaries using a watershed model (HSPF) combined with a receiving water model (Environmental Fluid Dynamics Code [EFDC]). The HSPF model represented contributions from 10 land cover categories: residential-septic, residential-sewer, agricultural-livestock, agricultural-rowcrop, agricultural-mushroom, open land, forested, wetlands/water, undesignated, and urban.

After determining the allowable nutrient load contributions from each land cover category for each subwatershed, the allowable loading was summarized for each township/municipality covered under the MS4 permit. To do this, the municipality boundary GIS layer was overlaid with the land use coverage. Nutrient loadings were then estimated for each land cover category within each municipality boundary within each of the modeled subwatersheds.

Because data were not readily available to determine stormwater outfall locations or to distinguish between areas within the municipalities that collected/conveyed stormwater and those that are truly nonpoint sources, the WLAs were based on jurisdictional boundaries. It was assumed that as part of the Phase II process more detailed stormwater information would be collected. This would enable the LA portion (i.e., that representing the truly nonpoint sources not delivered to receiving waters through stormwater collection/conveyance) to be extracted from the initial MS4 WLA allocations.

4.3.1.1.3 Modeling Specific Stormwater Conveyances and Discharges

Detailed stormwater conveyance models might be available in urbanized areas to support identification of allocations to regulated stormwater sources, particularly MS4 infrastructure. Stormwater models, often developed using the SWMM modeling framework, are implemented to support engineering design. They are generally capable of representing the effects of different storm events on flow throughout surface and subsurface components of a stormwater network. Thus, they are able to predict flow at individual stormwater discharge points to a receiving water.

It is possible to modify these models so that they also represent long-term conditions and contaminant loading. Employing this approach would provide the greatest level of detail for stormwater allocation in TMDLs (particularly for regulated MS4s and permitted industrial facilities and construction sites within regulated MS4 boundaries); however, it can be cost-prohibitive for TMDL development because of the time and effort needed to set up and calibrate a model at that level of detail. The number of outfalls to include could require the model be set up at a spatial level that is not supported by available data. For example, to include inputs from individual outfalls, it is necessary to have monitoring data to characterize the discharge from each outfall.

4.3.1.2. Impervious Cover Method

The IC method for stormwater TMDL development involves setting a target of percent IC for the watershed of the impaired waterbody to represent attainment of water quality standards. As discussed in Chapter 3, many areas affected by stormwater sources experience impairments due to the increase in the frequency and volume of surface runoff from impervious surfaces as well as the degraded quality of surface runoff. Therefore, the use of a target based on IC relates the amount of impervious surface to the resulting runoff volume and pollutant loading. This approach has been used in areas where waters are listed on the basis of biological impairment, and stormwater runoff has been determined to be the

primary cause of impairment. The approach should focus on effective imperviousness (i.e., a calculation of imperviousness that reflects the extent to which water falling on impervious areas is infiltrated, evapotranspired or reused) rather than total imperviousness. The target can represent the cumulative effects of both flow quantity and flow quality or the runoff and loading of a particular pollutant (e.g., metals, sediment, nutrients). The target should be used with available data to establish a link between IC, associated pollutant loading, and resulting waterbody conditions to calculate the loading capacity for the TMDL. Because the approach relies on a linkage between IC and the resulting runoff and waterbody effects, the approach is not appropriate in areas where multiple sources other than urban runoff (e.g., wastewater treatment plant discharging nutrients) are affecting biological impairment.

In Practice: Using the Impervious Cover Method to Develop TMDLs in the State of Connecticut

To support TMDL development for waters impaired by stormwater, the state of Connecticut evaluated the relationship among IC and stream biological health to establish a statewide target using the surrogate measure of IC to represent attainment of water quality standards and support for aquatic life uses. The evaluation of statewide GIS-derived estimates of IC and macroinvertebrate data to identify a relationship among the parameters showed that measures of biological community (e.g., taxa richness) decreased with increasing IC. Using this analysis Connecticut Department of Environmental Protection established a target of 12 percent IC as representing maintenance of the state's aquatic life criteria.

4.3.1.3. Export Coefficients

Export coefficients are measures of typical loading rates from certain land uses or sources. In TMDLs they would typically be used to calculate existing loads on the basis of the land use distribution in a watershed and would often be combined with a supplementary approach that calculates an allowable load on the basis of in-stream targets (e.g., percent reduction). Export coefficients can be obtained from literature values from regional or national studies (e.g., EPA's NURP study [USEPA 1983]) or based on site-specific sampling of stormwater from individual land uses. The TMDL writer should evaluate the applicability of the coefficients to the watershed of the impaired waterbody and decide whether they are representative and appropriate. In addition, it is important to use the export coefficients in conjunction with some type of analysis of in-stream conditions to support calculation of a loading capacity.

4.3.1.4. Simple Method

The Simple Method calculates pollutant loading on the basis of stormwater runoff and typically is used in combination with another waterbody-based approach to support TMDL calculations to meet a waterbody target. For example, the Simple Method can be used to calculate the existing loading and then the percent reduction method would be applied to calculate the corresponding loading capacity. In other instances, the Simple Method equation can be applied to represent conditions assumed to meet water quality standards, such as using the applicable criteria as the allowable runoff pollutant concentration or using impervious targets to calculate the runoff and resulting loads. Regardless of how it is applied, the Simple Method will likely result in a gross pollutant load for the drainage area of an impaired waterbody. It would be necessary to distribute that load among the sources to set WLAs and LAs using such characteristics as land use areas

Resources: For more information on the Simple Method, refer to the Resources list at the end of this chapter in Section 4.5.3.

or jurisdictional areas. Alternatively, the Simple Method can be applied for delineated source areas to calculate loads from the different sources in the watershed.

In Practice: Using the Simple Method to Support Development of the Swamp Creek Fecal Coliform TMDL (2006)

Washington's Swamp Creek, north of Seattle, does not meet state water quality criteria for primary contact recreation due to high levels of fecal coliform bacteria. Data analysis using ambient monitoring and source inventories identified urban stormwater and nonpoint sources as the primary problem. The Washington State Department of Ecology developed a TMDL for Swamp Creek, including separate loading capacities for the wet season (October–April) and the dry season (May–September) to capture significant variations in in-stream concentrations and expected source loading. Daily dry-season and wet-season loading capacities were calculated at three points in the watershed by multiplying the average seasonal flows by the water quality criteria of 100 cfu/100 mL, representing the allowable 90th percentile concentration. To compare with the loading capacities and identify necessary load reductions, existing loads were estimated by multiplying the same season average flows by the observed 90th percentile bacteria concentration based on data collected at the respective station. The Simple Method was used to estimate the relative stormwater loading from each MS4 to assign WLAs to the multiple MS4s in the watershed. WLAs were then assigned on the basis of the total loading capacity and each MS4's proportional loading contribution at that station. Washington's Swamp Creek TMDL is at www.ecy.wa.gov/biblio/0610021.html.

4.3.2. Waterbody-based Approaches

Waterbody-based approaches rely on calculating an overall in-stream load, sometimes reflecting drainage areas with multiple sources. Therefore, it is necessary to use some supplementary analysis to distribute the calculated loading capacity among the identified sources, including permitted stormwater sources. To divide a cumulative load among watershed sources, it is necessary to gain a general understanding of the relative magnitude of the sources. The source characterization discussed in Chapter 3 should provide a TMDL writer with enough information to identify the sources of concern and at least generally delineate their location. The TMDL writer should be able to list the sources requiring LAs and WLAs and should know what data or information is available to characterize that source. For example, are there outfall or stormwater monitoring data for any of the stormwater sources? If so, such data (e.g., flow and concentration) can be evaluated and used to calculate a representative load attributed to the source. Or can the approach (e.g., load duration) be applied at a location that represents a drainage area from only one source? If so, the calculations at this point can be allocated to that individual source.

With any of the waterbody-based approaches, if stormwater source monitoring data are available, the TMDL writer should try to incorporate the data to most accurately represent the source inputs and calculate existing loads and subsequently distribute allowable loads. For example, storm event sampling can be used to estimate source loads, either through collecting data at major stormwater outfalls or through ambient monitoring at key locations representative of certain land use categories. However, monitoring data are not always available to characterize the discharge characteristics of individual sources. In such cases, common methods used to divide the total load into WLAs for stormwater include consideration of a stormwater source regulated area, jurisdictional area, land use, or IC:

- *Stormwater regulated boundary*: loading capacity is allocated to permitted stormwater sources (and other land-based sources) based on the proportion of the total drainage area they represent. For

example, if the loading capacity is 100 lbs/day and an MS4 conveyance system drains and transports runoff from 20 percent of the area draining to the assessment location, the MS4 WLA is specified as 20 lbs/day. To use this approach, it is necessary to be able to delineate the area draining to the source's stormwater conveyance system. Otherwise, an alternate estimate of the stormwater source's *drainage* area can be used, such as jurisdictional area. (For information on delineating the area of a stormwater source, see Chapter 3.)

- **Jurisdictional area:** loading capacity is allocated to permitted stormwater sources (and other land-based sources) on the basis of the portion of the drainage area included within their physical boundary. Without knowing the specific area draining to a stormwater conveyance system, the stormwater source area can be represented by the jurisdictional or operational area of the source (e.g., urbanized area for an MS4). For example, if the loading capacity is 100 lbs/day and the *urbanized area* of an MS4 represents 30 percent of the area draining to the assessment location, the MS4 WLA is specified as 30 lbs/day.
- **Land use:** loading capacity is allocated to permitted stormwater sources on the basis of expected land use unit area loads derived from literature values. For example, if the loading capacity is 100 lbs/day and an MS4 is estimated to contribute 25 percent of the load on the basis of the land uses within its boundary, the MS4 WLA is specified as 25 lbs/day.
- **IC:** loading capacity is allocated to permitted stormwater sources on the basis of the proportion of the drainage area they represent modified to reflect the amount of IC.

Resources: For more information on obtaining land use and coverage information, refer to the Resources list at the end of Chapter 3 in Sections 3.4.6 and 3.4.7.

While the issue of how to distribute the cumulative loading capacity among sources is relevant to all the waterbody-based approaches, the following discussion identifies some issues and considerations specific to each approach.

4.3.2.1. Receiving Water Models

In some situations, the TMDL writer might use receiving water models alone to support TMDL development. Receiving water models differ from watershed models in that they only represent conditions within a receiving water, such as a stream or reservoir.

Land-based contributions are typically addressed through designation of boundary conditions (which are often based on monitoring data) or through development of a separate watershed model. While these models provide many benefits for water column analysis, they pose limitations for stormwater allocation when applied independently from a land-based loading or watershed model. The inherent limitation is that they do not explicitly represent land-based sources (i.e., land units). This limitation is most pronounced when only limited geographical data are available for regulated MS4s, industrial facilities, and construction sites.

Resources: For more information on selecting receiving water models based on needs for a given TMDL, refer to the Resources list at the end of this chapter in Section 4.5.4.

In situations where detailed geographic data are available, they can potentially provide a level of stormwater allocation commensurate with that of a watershed model application. Receiving water models are robust in their ability to provide a high level of detail laterally, vertically, and longitudinally. They can represent a stream, lake, or estuary using numerous analytical elements—in some cases tens of thousands. Thus, model predictions can be very accurate at many locations along the length of a receiving water. With this capability, receiving water models can be used to most accurately determine

the specific amount of a pollutant that can enter a receiving water at different locations while still attaining and maintaining water quality criteria throughout. Thus, allocations can potentially be made at the very detailed stormwater discharge level. This assumes that very detailed stormwater discharge location (i.e., outfall) and contribution (flow and contaminant levels) are available to support the receiving water analysis. Without this level of detail, a receiving water model is limited.

In practice, TMDLs employing receiving water models often also employ a watershed model to support source-based allocations, including those to regulated stormwater sources.

4.3.2.2. Load Duration Approach

TMDLs developed using the load duration approach most often identify the portion of the loading capacity for the stormwater WLA(s) on the basis of jurisdictional area. However, because the duration curve framework establishes a series of individual flow-variable loading capacities, the portion of each loading capacity attributed to individual sources typically will also vary by flow.

Resources: For more information on the load duration approach, refer to the Resources list at the end of this chapter in Section 4.5.5.

Figure 19 illustrates a TMDL that was developed using a duration curve framework. WLAs are specified for municipal treatment plants that reflect NPDES permit limits. In the case of Figure 19, these WLAs are based on technology-based effluent limits at facility design flows. The treatment plant WLAs are constant across all flow conditions and ensure that water quality standards will be attained. WLAs are also identified for MS4s, which reflect increased loads under higher flow conditions. In the Figure 19 example, stormwater WLAs for MS4 communities are based on the percent jurisdictional area approach. In this case, 3 percent of the watershed falls within the jurisdiction of MS4 communities. Thus, the MS4 WLA is 3 percent of the available allocation for each flow zone. The remaining 97 percent is designated for nonpoint sources and natural background as the LA for each zone.

Because a load duration curve establishes a flow-variable loading capacity, the framework allows for source-specific allocations to be adjusted by flow zone. To target loading controls and put the load duration results in a more *digestible* format, the load duration curve is usually divided into different flow zones representing different conditions (e.g., low flow, high flow). Representative existing loads and allowable loads can then be identified for each of those intervals. Because some sources tend to produce pollutant loads and affect the stream under certain flow conditions, this can help to distribute the allowable load among expected sources specific to a flow zone. This can account for different source areas and delivery mechanisms that might dominate under different flow conditions. For example, some TMDLs developed using the load duration approach allocate WLAs to stormwater sources for only certain flow zones (e.g., a WLA of zero is specified for the low-flow zone under the assumption that no load is generated from this source during those periods; see Table 10 for example). During the characterization activity discussed in Chapter 3, the TMDL writer should have an understanding of the types of stormwater sources and under what conditions they are affecting the stream. Within the load duration framework, allocations within the TMDL can be set in a way that reflects dominant concerns associated with appropriate hydrologic conditions.

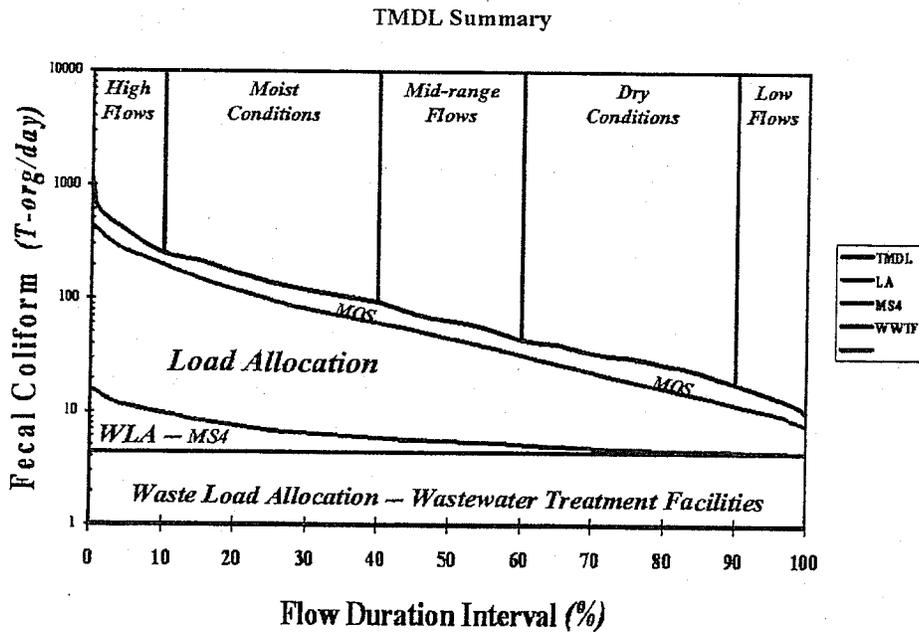

Figure 19. Example TMDL using duration curve framework

Table 10. Example summary of allocations calculated for a TMDL using the load duration framework

Name	TMDL Component	Duration Curve Zone (Phosphorus expressed as pounds/day)				
		High	Moist	Mid	Dry	Low
Redrock River—Phosphorus						
	TMDL	19.93	10.84	8.53	6.53	3.44
	MOS	5.63	1.47	0.72	0.57	0.43
	LA	11.79	7.62	6.28	4.72	2.59
Douglton (WWTP)	WLA	0.38	0.38	0.38	0.38	0.38
Guilaine (Industrial)	WLA	0.04	0.04	0.04	0.04	0.04
Douglton (MS4 / Phase 1)	WLA	1.39	0.89	0.74	0.55	0.00
Westerbridge (MS4 / Phase 2)	WLA	0.49	0.31	0.26	0.19	0.00
Thompath (MS4 / Phase 2)	WLA	0.21	0.13	0.11	0.08	0.00
Stormwater Source Areas of Concern		CSOs				
		Riparian Areas				
		Impervious Surfaces				
		Illicit Discharges				

4.3.2.3. Percent Reduction Method

The Percent Reduction method typically involves comparing ambient water quality data to applicable water quality criteria to identify a necessary percent reduction in observed concentrations to meet WQS. That percent reduction is then applied to an *existing* load to calculate the loading capacity. Depending on how the existing loads were calculated, that analysis can help to support distributing the loading capacity among the sources and identifying any stormwater WLAs. For example, if the existing load is based on export coefficients or literature values for watershed land uses or sources, the TMDL writer will already

have calculated the source-specific existing loads and can target percent reductions to individual sources to meet the overall loading capacity goal. If the existing load did not include specific calculation for stormwater sources, it will be necessary to use one of the approaches discussed previously to distribute the loading capacity (e.g., source drainage area, jurisdictional area) into LAs and WLAs.

4.3.2.4. Mass Balance or Steady-State Analysis

Like the Percent Reduction method, applying a mass balance or steady-state analysis to calculate a loading capacity relies on some calculation of the incoming existing pollutant load. This might be done by *back-calculating* an existing load on the basis of observed concentrations and stream flow (or volume for lakes and reservoirs) and accounting for any expected losses (e.g., die-off, settling). If this is the case, the existing load represents a cumulative load from all the sources contributing to the pollutant of concern. If there are no data available to directly calculate loads from individual sources, the most likely approach for distributing the loading capacity and identifying stormwater WLAs will be to use some measure of source area (e.g., jurisdiction, drainage area) as discussed previously. Another option for calculating the existing load for a mass-balance analysis is the use of export coefficients. Similar to the Percent Reduction method, this would produce source-specific existing loads that could be multiplied by an estimated load reduction to calculate LAs and WLAs that meet the overall loading capacity.

4.4. Categorizing WLAs for Stormwater Sources

This section provides a description of the various ways that TMDL writers can categorize and assign WLAs to permitted stormwater sources. The manner in which TMDL writers choose to calculate the WLAs for permitted stormwater sources can vary depending on data availability and quality, stormwater source characteristics, and permit implementation considerations. Four basic options for categorizing stormwater source WLAs include the following:

1. Aggregated for all stormwater sources (i.e., one overall WLA that represents total allocation to all MS4s, construction activities, and industrial facilities)
2. Aggregated by each type of stormwater source (i.e., one WLA for all permitted MS4s; one WLA for all permitted construction activities; one WLA for all permitted industrial facilities)
3. Individual by each stormwater source
4. Individual by each outfall

It is important to note that the four categories listed above are just basic options for presenting allocations within the TMDL. They do not represent all possibilities. TMDL writers can consider using one or more of these options in concert within a TMDL for various types of stormwater sources. In addition, TMDL writers can further refine these basic options using spatial and temporal considerations to make the allocations more meaningful to stormwater sources. For example, a TMDL writer could present individual or aggregated WLAs for sources by subwatershed or by land cover category. If the WLA has temporal variations, a TMDL writer could further refine the WLAs by flow conditions (i.e., wet versus dry), months, or seasons.

Tip: Refining allocations using spatial and temporal considerations

TMDL writers can consider further refining any of the four basic categories of stormwater source WLAs using spatial and temporal considerations. Spatial considerations can include jurisdictional boundary, subwatershed boundary, or land cover. Temporal considerations can include wet seasons versus dry condition (based on flow), seasonally, or monthly.

WLAs that reflect the way that stormwater sources implement their respective SWMPs and SWPPPs are likely to be more *user-friendly* than WLAs that do not closely align with how stormwater sources manage their programs and plans. The more detailed and refined the allocation, the easier it will be for permit writers to translate through the permit and for stormwater sources to implement through by complying with permit requirements. The goal is to ultimately develop WLAs that are accurate, equitable, and implementable.

The details of each basic categorization option are discussed below. Table 11 summarizes advantages and disadvantages associated with the four basic options for categorizing and assigning WLAs to stormwater sources. Where available, examples illustrate how states and EPA have used each categorization approach. The Appendix of this Handbook contains additional examples of categorization approaches for WLAs.

Table 11. Options for assigning WLAs to stormwater sources

Option	Advantages	Disadvantages
<p>Single Aggregated WLA for All Permitted Stormwater Sources</p> <p><i>Example: Lake Champlain (Vermont) Phosphorus TMDL (2002)</i></p>	<ul style="list-style-type: none"> ▪ Requires fewer permitted stormwater source characterization data to calculate ▪ Requires fewer resources to calculate ▪ Allows use of less complex WLA development approaches ▪ Allows permitted stormwater sources to determine at the local level how to further subdivide the overall allocation without specific commitments that could translate into permit requirements 	<ul style="list-style-type: none"> ▪ More difficult to implement in permits ▪ Requires permit writers or sources to conduct further analyses to disaggregate the overall WLA to individual sources ▪ Potentially overlooks pollutant load contributions from all types of permitted stormwater sources throughout the watershed ▪ Does not promote individual permitted stormwater source accountability for pollutant load reductions to implement the WLA ▪ More potential to capture unpermitted stormwater sources (i.e., urban nonpoint source runoff) in the aggregated WLA
<p>Separate Aggregated WLA for Types of Permitted Stormwater Sources</p> <p><i>Examples:</i></p> <ul style="list-style-type: none"> ▪ Potomac Direct Drain (West Virginia) Sediment TMDL ▪ Charles River (Massachusetts) Pathogen TMDL ▪ Shingle Creek (Minnesota) Chloride TMDL ▪ Columbia Slough (Oregon) TMDLs 	<ul style="list-style-type: none"> ▪ Requires less permitted stormwater source characterization data to calculate but allows for specificity within each category of permitted stormwater sources ▪ Requires fewer resources to calculate ▪ Allows use of less complex WLA development approaches ▪ Allows permitted stormwater sources within a specific category to determine at the local level how to further subdivide the overall allocation without specific commitments that could translate into stormwater permit requirements 	<ul style="list-style-type: none"> ▪ Does not result in equitable and easy-to-understand (i.e., implementable) WLAs for permit writers or stormwater sources ▪ Requires permit writers or stormwater sources to conduct further analyses to identify sources that will implement the WLA ▪ Does not promote individual permitted stormwater source accountability for pollutant load reductions to implement the overall WLA ▪ Potential for double-counting pollutant load reductions where categories of stormwater sources might overlap (e.g., MS4s with permitted construction activities that a TMDL writer could assign under the aggregated MS4 WLA or under the aggregated construction WLA)

Option	Advantages	Disadvantages
<p>WLA to Each Individual Stormwater Source</p> <p><i>Examples:</i></p> <ul style="list-style-type: none"> ▪ Columbia Slough (Oregon) Lead TMDLs ▪ Wissahickon Creek (Pennsylvania) Siltation TMDL ▪ Swamp Creek (Washington) Pathogen TMDL ▪ Potomac Direct Drain (West Virginia) Sediment TMDL 	<ul style="list-style-type: none"> ▪ Promotes transparency and accountability in TMDL implementation ▪ Provides permit writers enough information to include reasonable provisions in relevant permit(s) ▪ Allows permitted stormwater source to understand specific pollutant load reduction responsibility and take steps to analyze overall SWMP or SWPPP to achieve reduction ▪ Promotes following regulatory boundaries (e.g., regulated MS4 boundary) that are familiar to permitted stormwater sources and used to develop and implement SWMPs and SWPPPs 	<ul style="list-style-type: none"> ▪ Has the potential to add time to the overall TMDL development process if each permitted stormwater source has concerns related to the separate WLA assigned to its respective regulated MS4, industrial facility, or construction site ▪ Requires data and information specific to each permitted stormwater source, depending on the WLA development approach selected by TMDL writers (e.g., specific regulatory boundaries for each permitted stormwater source)
<p>Individual WLAs on an Outfall Basis</p> <p><i>Example: Middle Rio Grande (New Mexico) Fecal Coliform TMDL (2002)</i></p>	<ul style="list-style-type: none"> ▪ Provides permit writers with detailed information to develop tailored permit provisions, particularly for individual permits ▪ Allows stormwater sources to target implementation efforts to address a specific area represented by a stormwater discharge from a specific outfall 	<ul style="list-style-type: none"> ▪ Requires data and information pertinent to each outfall addressed by the TMDL analysis ▪ Requires comprehensive spatial understanding of a permitted stormwater source area, including a detailed system map with location of all outfalls, and surrounding land uses ▪ Might not be feasible in watersheds with a large number of permitted stormwater sources, particularly permitted MS4s that might have a large number of outfalls draining the system ▪ Does not align with how many permitted stormwater sources approach SWMP and SWPPP implementation (i.e., focus on systemwide approach as opposed to an outfall-by-outfall approach)

4.4.1. Single Aggregated WLA for All Stormwater Sources

When data and resources to develop a refined characterization of sources are extremely limited, the ability of TMDL writers to analyze and identify the pollutant load contributions from each type of source is also limited. As a result, the TMDL writer might opt to group all stormwater sources into one category and assign one all allocation to all stormwater sources in this generalized category.

Although this approach alleviates some technical complexities for TMDL writers, the lack of specificity associated with this approach can result in a lack of transparency and accountability that can create implementation challenges for permit writers and sources. TMDL writers can mitigate some of the challenges by considering and addressing them at the outset of WLA development. To ensure that the single aggregated WLA promotes transparency and accountability, it is essential to generate a comprehensive inventory of all permitted stormwater sources represented under the single WLA as a means to help (1) stakeholders and EPA reviewers ensure that the WLA considers all relevant stormwater sources in the watershed boundary (2) permit writers to incorporate reasonable and clear provisions into the relevant permit(s), and (3) stormwater sources understand who has a responsibility to help conduct implementation activities to implement the WLA. As discussed in Chapter 3, Characterizing Impairments and Stormwater Sources, it is important that the TMDL writer has a comprehensive understanding of the type, number, and location of stormwater sources within the watershed boundary. The TMDL document should clearly identify all stormwater sources addressed by

the single aggregated WLA. As with all WLAs, the TMDL writer should also document other assumptions used to generate the single aggregated WLA. Assumptions might include the following:

- The analysis used municipal jurisdictional boundary versus the actual MS4 boundary that defines the permitted area
- The analysis assumes that all construction sites within the boundary selected to represent the MS4 (i.e., jurisdictional boundary or actual MS4 boundary) are the responsibility of regulated MS4s and fall under the MS4 allocation, not a separate construction allocation

Under this approach, permit writers or stormwater sources captured in the single aggregated WLA likely will need to conduct further analyses to make sub-allocations to each source; therefore, it is important that the TMDL document clearly

identifies which stormwater sources are included in the single aggregated WLA. While it is possible to use single aggregated WLAs for stormwater sources in TMDLs, this approach is not preferred because of the associated implementation challenges. To avoid using this approach, TMDL writers can work with permit writers and stormwater sources to collect the additional data necessary to disaggregate allocations and assign to specific types of stormwater sources or, ideally, individual sources.

Tips for Using a Single Aggregated WLA for All Permitted Stormwater Sources

- Create a comprehensive inventory of all permitted stormwater sources within the watershed boundary and document this inventory in the WLA assumptions
- Indicate which permitted stormwater sources are part of the single aggregated WLA and provide rationale
- Consider providing guidance to permitted stormwater sources on ways to further sub-allocate the single aggregated WLA to promote equity and accountability in implementation strategies and approaches
- Provide rationale for using this approach versus other approaches that assign WLAs to more narrowly defined categories (e.g., limited available data, limited TMDL development resources, desire to promote flexibility)
- Highlight any plans to revisit and revise the single aggregated WLA based on future data availability

4.4.2. Separate Aggregated WLA for Each Type of Permitted Stormwater Source

This approach is an option for the TMDL writer to consider when the data are available to identify and separate the general pollutant load contributions from each type of permitted stormwater source, but source-specific information is not available to support accurate individual source allocations. For example, the TMDL writer might have a complete inventory of industrial facilities within the watershed boundary compiled from data obtained from a Phase I MS4 required to maintain an inventory of regulated industrial facilities (for permitted industrial facilities within the regulated MS4 boundary) and from a state or EPA Regional Office database of industrial facilities covered by individual or general industrial stormwater permits (for permitted industrial facilities outside the regulated MS4 boundary but within the watershed boundary). Although the TMDL writer has compiled a comprehensive inventory of the location and number of permitted industrial facilities, more information would be necessary on facility-specific processes and practices to estimate the pollutant load contribution from each facility. In such a case, the TMDL writer can use a general set of assumptions about the inventory of industrial facilities, such as the aggregate land area occupied by all industrial facilities and the location of these facilities within the watershed boundary (to determine soil type, perviousness, proximity to receiving waterbody) to calculate an aggregated.

Tips for Using Separate Aggregated WLA for Each Type of Permitted Stormwater Source

- Create a comprehensive inventory of all permitted stormwater sources within the watershed boundary under each category of stormwater sources and document this inventory by category in the WLA assumptions
- Indicate which permitted stormwater sources are included under each permitted stormwater source category of the separate aggregated WLA for each category and provide decision criteria to ensure consistency and clarity (e.g., all separately permitted construction sites in and outside regulated MS4 boundaries should be represented in the aggregated construction WLA; all separately permitted industrial facilities in and outside of regulated MS4 boundaries should be represented in the aggregated industrial WLA; only stormwater discharges from within the regulated MS4 boundary should be represented in the aggregated MS4 WLA)
- Provide guidance to permitted stormwater sources on ways to further sub-allocate the separate aggregated WLA for each stormwater source category to promote equity and accountability in implementation strategies and approaches
- Provide rationale for using this approach versus other approaches that assign WLAs to more narrowly defined categories (e.g., limited available data, limited TMDL development resources, desire to promote flexibility for purposes of implementation)
- Highlight any plans to revisit and revise the separate aggregated WLAs for each stormwater source category and under what circumstances (e.g., availability of better data or additional resources)

In Practice: Approaches and Rationale for Developing and Assigning Separate Aggregated WLAs for Specific Types of Stormwater Sources in West Virginia, Massachusetts, Minnesota, and Oregon

TMDL writers might decide to develop and assign separate aggregated WLAs for specific categories of stormwater sources based on a variety of factors, such as data availability, links to other TMDLs, or implementation considerations. Three TMDLs that assign separate aggregated WLAs for categories of stormwater sources include the Potomac Direct Drain (West Virginia) Sediment TMDL, the Charles River (Massachusetts) Pathogen TMDL, and Shingle Creek (Minnesota) Chloride TMDL. A brief description of the approach and rationale for developing and assigning stormwater source WLAs under each TMDL is provided below.

Potomac Direct Drain (West Virginia) Sediment TMDL (www.wvdep.org/alt.cfm?asid=140)

This TMDL addresses construction activities in tributaries of the Potomac River in Berkeley and Jefferson counties, West Virginia. The TMDL provides allocations for 297 active and pending construction sites registered under the West Virginia CGP. The main TMDL report provides an aggregated WLA for construction activities by subwatershed. In addition, the TMDL's appendices provide individual WLAs for each impending and active construction site.

Charles River (Massachusetts) Pathogen TMDL (www.mass.gov/dep/water/resources/tmdls.htm#charles)

According to the final TMDL, all 35 communities in the Charles River watershed have stormwater permit coverage under the Phase I and Phase II MS4 Stormwater program (34 are covered under Phase II, and one is covered under Phase I). The TMDL addresses stormwater runoff from Phase I and Phase II as a pathogen source and assigns two WLAs to all MS4s—one for each type of surface water classification—as daily concentration targets. In addition, the TMDL expresses WLAs for stormwater as a daily load (i.e., colonies/day) using flow data from the fraction of the watershed that has IC; areas with pervious cover are considered nonpoint source runoff and accounted for under the LA. WLAs expressed as daily loads for stormwater runoff from Phase I and Phase II also includes contributions from combined sewer overflows and are presented on a segment-by-segment basis.

Shingle Creek (Minnesota) Chloride TMDL (www.pca.state.mn.us/water/tmdl/project-shinglecreek-chloride.html)

The Shingle Creek Chloride TMDL addresses chloride contributions from road deicing activities by nine municipalities, one county, and the Minnesota Department of Transportation that have road maintenance

responsibilities within the Shingle Creek watershed. All these entities are MS4s. Under this TMDL, the MS4s received one aggregated WLA in the form of a percent reduction. (It is important to note that the WLA also addressed road salt storage facilities, private application, and residential chloride sources.) These permitted stormwater sources worked together through the Shingle Creek Watershed Commission to develop an implementation plan to meet the overall percent reduction target. The approach of assigning a single aggregated WLA for permitted stormwater sources in the regulated MS4 category allowed for a more flexible approach to implementation. Per the Shingle Creek Chloride Implementation Plan, working collectively to achieve the overall percent chloride load reduction allowed the entities with permitted MS4s to allocate load reductions to meet the percent reduction target on the basis of unique factors such as financial constraints, feasibility limitations, and public concerns and perceptions.

Columbia Slough (Oregon) TMDLs

www.deq.state.or.us/wq/TMDLs/docs/willamettebasin/columbiaslough/tmdl.pdf

The TMDLs developed for the Columbia Slough include WLAs for industrial facilities and MS4s to address numerous parameters including dissolved oxygen, phosphorus, bacteria, and lead. To address the pollutant load reductions needed from stormwater sources, the TMDLs for 5-day biochemical oxygen demand (BOD₅) and lead group together the two MS4s in the Columbia Slough basin into an MS4 category and the industrial facilities with permitted stormwater discharges into an industrial category.

4.4.3. Individual WLAs for Each Permitted Stormwater Source

TMDL writers can develop and assign WLAs for each stormwater source within the impaired waterbody's watershed boundary. Although this approach might require additional data, it can facilitate the implementation of permits and is ideal for permitted stormwater sources that want to know their specific pollutant load reduction responsibility without the need for negotiating with other permitted stormwater sources to further allocate pollutant load reductions. In some instances, depending on data availability, TMDL writers might have the ability to assign individual WLAs to specific permitted stormwater sources under a category of permitted stormwater sources (e.g., each MS4, each industrial facility), but might find that data limitations require the use of aggregated WLAs for other permitted stormwater sources (e.g., all active construction sites). This approach has the potential to allow each permitted stormwater source, and other interested stakeholders, to more closely review and analyze the technical approach for WLA development, including the specific assumptions used to generate the individual WLA. It also provides more of a direct nexus between the WLA and stormwater permit requirements that must contain conditions consistent with the requirements and assumptions of the WLA, thus promoting more accountability and a more clearly defined expectation with regards to implementation. Individual WLAs also provide a foundation for transparent and accountable watershed-based trading because each permittee has its own WLA (which is enforceable through a permit), and the WLAs are available to all potential trading partners to review.

Tips for Using WLAs Assigned to Each Permitted Stormwater Source

- Provide clear description of assumptions and information used to calculate the WLA for each permitted stormwater source
- Ensure that permitted stormwater sources listed in the TMDL source characterization links to the list of permitted stormwater sources assigned a WLA to ensure transparency and equity
- Provide information on estimated baseline pollutant load contributions from each permitted stormwater source to help sources understand the required pollutant load reduction
- Consider additional methods for presenting the WLA that will support implementation based on understanding of existing SWMP and SWPPP approaches (e.g., breaking down total WLA for each permitted stormwater source on a subwatershed basis)

In Practice: Approaches and Rationale for Developing and Assigning Separate WLAs for Individual Stormwater Sources in Oregon, Pennsylvania, Washington, and West Virginia

Columbia Slough (Oregon) TMDLs

(www.deq.state.or.us/wq/TMDLs/docs/willamettebasin/columbiaslough/tmdl.pdf)

The lead TMDL developed for the Columbia Slough includes an aggregated WLA for the industrial permitted area and provides an approach for these industrial facilities to calculate their individual allocation. The approach involves calculating individual industrial facility allocations on a unit-area basis for each flow condition. While the TMDL does not contain specific individual WLAs for each industrial facility, the TMDL provides the equation necessary for each facility to calculate the load specific to its site.

Wissahickon Creek (Pennsylvania) Siltation TMDL

(www.epa.gov/reg3wapd/tmdl/pa_tmdl/wissahickon/index.htm)

This TMDL calculated WLAs for 16 permitted MS4s (defined by municipal boundaries, as opposed to regulated MS4 boundaries, for purposes of this TMDL) using land-use-specific, unit-area loads determined in modeling analysis for specific regions of the Wissahickon Creek basin, as well as the streambank erosion within each municipality. TMDL writers divided the Wissahickon Creek watershed into five main subwatersheds to match the impaired watershed with the smaller reference watershed used in the analysis. Sediment loads were estimated for each of the five subwatersheds and then distributed among municipalities as MS4 stormwater WLAs for each individual 303(d)-listed watershed. The WLA assigned to each of the 16 permitted MS4s accounted for both overland flow and streambank erosion. The final TMDL report presented a summary table that presented the existing load, the WLA, and the associated percent reduction to implement the WLA for both overland flow and streambank erosion, as well as the total WLA, for each permitted MS4. Appendix G of the final TMDL report also presents this information for each permitted MS4 on a subwatershed basis, allowing permitted MS4s to see and understand WLA information in both formats.

Swamp Creek (Washington) Pathogen TMDL (www.ecy.wa.gov/biblio/0610021.html)

This TMDL estimated the relative bacteria loading from each MS4 permit holder (i.e., the permit holder's jurisdictional boundary, not necessarily the loading from the actual MS4 boundary) using the Simple Method and assigned WLAs to MS4s at each water quality monitoring station on the basis of their proportional contribution at that station and the bacteria criterion needing the greatest reduction. Each MS4 is required to achieve a percent reduction of the loading capacity at each TMDL compliance point according to the estimated contribution from the MS4 permit holder.

Potomac Direct Drain (West Virginia) Sediment TMDL (www.wvdep.org/alt.cfm?asid=140)

Although the main body of the TMDL report provides an aggregated WLA for construction sites, the TMDL's appendices provide individual WLAs for each impending and active construction site. The individual WLAs are provided on a subwatershed basis. This TMDL covers approximately 297 active and pending construction sites registered under the West Virginia CGP in tributaries of the Potomac River within Berkeley and Jefferson counties, West Virginia.

4.4.4. Individual WLAs on an Outfall Basis

Stormwater permits require permitted stormwater sources to develop maps of regulated MS4s, industrial facilities, and construction sites that include locations of stormwater outfalls. Permitted stormwater sources are required to map the location of stormwater outfalls, and with increasing frequency, this information is available. It is still possible that some stormwater sources might not have the information necessary to develop and assign WLAs on an outfall-by-outfall basis. However, for those stormwater sources that do have adequate data, TMDL writers can consider the feasibility and benefits of assigning individual WLAs to specific outfalls. For example, if a TMDL addresses

pathogens during dry-weather flow from a high-priority area within the boundary of a regulated MS4 (i.e., the system boundary), an individual WLA for specific outfalls within the high-priority area could be more useful in terms of supporting implementation than a WLA assigned to the entire MS4.

Tips for Using Individual WLAs on an Outfall Basis

- Use where information about the permitted stormwater source and watershed conditions indicate that an outfall approach is not only feasible, but would be supported through SWMP and SWPPP implementation (e.g., few known outfalls that allow permitted stormwater sources to isolate and track implementation activities associated with changes in discharge pollutant loads at each outfall)
- Ensure that permitted stormwater source has up-to-date information about outfall locations
- Ensure that an outfall-by-outfall approach is feasible for the TMDL development process
- Ensure that effectiveness monitoring is required in relevant permits, as appropriate, on an outfall-by-outfall basis

In Practice: Developing and Assigning WLAs to Individual Outfalls Under the Middle Rio Grande, New Mexico, Fecal Coliform TMDL (2002)

The Middle Rio Grande fecal coliform TMDL established that stormwater conveyances are the primary sources of fecal coliform loading to the Middle Rio Grande. Specifically, the TMDL report identifies four discrete concrete transports of stormwater contributing to fecal coliform loads and assigns a WLA to these four conveyances. The city of Albuquerque is responsible for implementing the WLAs assigned to these four stormwater conveyances through its MS4 SWMP. The TMDL is at www.nmenv.state.nm.us/SWQB/Middle_Rio_Grande-Fecal_Coliform_TMDL-May2002.pdf

In Practice: Using Multiple Approaches to Categorize Stormwater Source WLAs in the Los Angeles River Metals TMDL (2007)

The Los Angeles River Metals TMDL categorizes stormwater source WLAs using a variety of options to help permitted stormwater sources meet both dry-weather and wet-weather targets for cadmium, copper, lead, zinc, and selenium in impaired reaches of and tributaries to the Los Angeles River.

For dry weather, the TMDL provides single aggregated WLAs for all permitted stormwater sources on a subwatershed basis for three pollutants—copper, lead, and zinc. The permitted stormwater sources included in the single aggregated dry-weather WLAs include Los Angeles County MS4, Long Beach MS4, Caltrans, industrial facilities subject to the general industrial stormwater permit, and construction activities subject to the CGP. However, per the TMDL, industrial facilities and construction activities received a WLA of zero for dry weather, so only those entities subject to MS4 permit requirements share the single aggregated dry-weather WLAs for copper, lead, and zinc in the six reaches of the Los Angeles River and the seven tributaries.

For wet weather, the TMDL presents single aggregated WLAs for cadmium, copper, lead, and zinc that apply to all reaches and tributaries. In addition to providing single aggregated WLAs for each of these pollutants, the TMDL breaks down the overall WLAs into different stormwater source categories "by their percent area of the portion of the watershed served by storm drains." Under this approach, the TMDL assigns separate aggregated WLAs to MS4s (i.e., Los Angeles County and Long Beach MS4s), Caltrans, industrial facilities covered by the industrial general permit, and construction sites covered by the CGP. In addition to separate aggregated WLAs, the TMDL states that each permitted industrial facility and construction site will receive individual WLAs per acre on the basis of the total acres of their facility.

The TMDL is available at www.swrcb.ca.gov/rwqcb4/water_issues/programs/tmdl/tmdl_list.shtml.

4.4.5. Other Elements in a TMDL

Regulation and guidance require that all TMDLs include minimum elements. In addition to the elements already discussed in previous chapters (water quality standards, loading capacity, WLAs, LAs), a TMDL must also include a MOS, seasonal variation, and daily loads. In addition EPA recommends that TMDLs include allocations for future growth and reasonable assurance. The process or decisions related to including these elements in a TMDL might not vary when stormwater sources are involved. However, TMDL writers should consider how these other minimum elements might change when addressing stormwater sources in the analysis. Summarized below is each additional minimum element and, where appropriate, the stormwater-specific considerations related to the minimum element.

Resources: For more information on the required elements of a TMDL, refer to the Resources list at the end of this chapter in Section 4.5.7.

- **MOS.** MOS must be included in a TMDL to account for any lack of knowledge concerning the relationship between allocations and water quality. The MOS may be implicit, incorporated into the TMDL through conservative assumptions in the analysis, or explicit, expressed in the TMDL as loadings set aside for the MOS.
- **Seasonal Variation.** TMDLs must be developed with a consideration of seasonal variation in the analysis. As discussed in Section 4.3, TMDLs addressing stormwater sources are likely to have seasonal variations related to wet and dry seasons included in the analysis.
- **Reasonable Assurance.** For TMDLs developed for waters affected by a mix of point sources and nonpoint sources, the TMDL should include reasonable assurance that nonpoint source control measures can achieve expected load reductions. TMDLs addressing stormwater sources often use this element to describe the NPDES permit requirements that apply to MS4s, industrial facilities, and construction activities included in the analysis.
- **Future Growth.** TMDLs can also include allocations for future nonpoint and point sources, acting as a reserve for future sources. This minimum element is particularly important to stormwater sources that are intermittent. For example, construction activities might obtain permit coverage and commence after developing a TMDL or an industrial facility might no longer certify to a condition of no exposure and require permit coverage. These types of stormwater sources would need to implement WLAs from the future growth allocation.
- **Daily Load.** TMDLs should include allocations expressed in terms of daily time increments. In addition, TMDL submissions can include alternative, non-daily pollutant load expressions (e.g., monthly, annual) to facilitate implementation of the applicable water quality standards.

TMDL writers should consider how to include these minimum elements early in the TMDL development process and evaluate them in context of the major sources, critical conditions, and the chosen TMDL development approach.

4.5. Resources

4.5.1. General TMDL Development

1. USEPA (U.S. Environmental Protection Agency). 1991. *Guidance for Water-Quality-based Decisions: The TMDL Process*. EPA 440/4-91-001. U.S. Environmental Protection Agency, Office of Water, Washington, DC. www.epa.gov/OWOW/tmdl/decisions/

This guidance document explains the programmatic elements and requirements of the TMDL process as established by CWA section 303(d) and by EPA's Water Quality Planning and Management Regulations (40 CFR Part 130). It discusses the process for developing a TMDL, roles of EPA and the states in the process, and supporting or related water programs.

2. USEPA (U.S. Environmental Protection Agency). 1999. *Protocol for Developing Sediment TMDLs*. EPA 841-B-99-004. U.S. Environmental Protection Agency, Office of Water, Washington, DC. www.epa.gov/owow/tmdl/sediment/pdf/sediment.pdf

This technical guidance document provides information to support TMDL writers in developing TMDLs for sediment. The document includes information on how to complete each step of the TMDL process, including problem identification, source assessment, linkage of water quality targets and sources, allocation analysis, and monitoring.

3. USEPA (U.S. Environmental Protection Agency). 2000. *Protocol for Developing Pathogen TMDLs*. EPA 841-R-00-002. U.S. Environmental Protection Agency, Office of Water, Washington, DC. www.epa.gov/owow/tmdl/pathogen_all.pdf

This technical guidance document provides information to support TMDL writers in developing TMDLs for pathogens. The document includes information on how to complete each step of the TMDL process, including problem identification, source assessment, linkage of water quality targets and sources, allocation analysis, and monitoring.

4. USEPA (U.S. Environmental Protection Agency). 2000. *Protocol for Developing Nutrient TMDLs*. EPA 841-B-99-007. U.S. Environmental Protection Agency, Office of Water, Washington, DC. www.epa.gov/owow/tmdl/nutrient/pdf/nutrient.pdf

This technical guidance document provides information to support TMDL writers in developing TMDLs for nutrients. The document includes information on how to complete each step of the TMDL process, including problem identification, source assessment, linkage of water quality targets and sources, allocation analysis, and monitoring.

4.5.2. Watershed Models

1. USEPA. 2005. *TMDL Model Evaluation and Research Needs*. EPA/600/R-05/149. U.S. Environmental Protection Agency, Office of Research and Development, National Risk

Management Research Laboratory, Cincinnati, OH.
www.epa.gov/nrmrl/pubs/600r05149/600r05149.htm

This report documents the review of more than 60 available watershed and receiving water models for their applicability to TMDL development and implementation. It discusses model selection on the basis of model capabilities and provides a series of tables rating the capabilities or applicability the models using the categories of TMDL endpoints, general land and water features, special land processes, special water processes, and application considerations. The document also provides individual fact sheets for each reviewed model.

2. USEPA. 1997. *Compendium of Tools for Watershed Assessment and TMDL Development*. EPA 841-B-97-006. U.S. Environmental Protection Agency, Office of Water, Office of Wetlands, Oceans, and Watersheds, Washington, DC. www.epa.gov/owow/tmdl/comptool.html

This document reviews more than 50 watershed, receiving water and ecological assessment models. The document provides factsheets for each model that describes model components, methods, applications, pollutants addressed, limitations, input data requirements, and type of output. The document also contains information on model selection for specific applications, model calibration, and model verification.

4.5.3. Simple Method

1. Center for Watershed Protection's Web site on the Simple Method: www.stormwatercenter.net. Click "By Category." Information on the Simple Method is included in the *Impacts of Urbanization* category.

4.5.4. Receiving Water Models

1. USEPA. 2005. *TMDL Model Evaluation and Research Needs*. EPA/600/R-05/149. U.S. Environmental Protection Agency, Office of Research and Development, National Risk Management Research Laboratory, Cincinnati, OH.
www.epa.gov/nrmrl/pubs/600r05149/600r05149.htm

This report documents the review of more than 60 available watershed and receiving water models for their applicability to TMDL development and implementation. It discusses model selection on the basis of model capabilities and provides a series of tables rating the capabilities or applicability the models using the categories of TMDL endpoints, general land and water features, special land processes, special water processes, and application considerations. The document also provides individual fact sheets for each reviewed model.

2. USEPA. 1997. *Compendium of Tools for Watershed Assessment and TMDL Development*. EPA 841-B-97-006. U.S. Environmental Protection Agency, Office of Water, Office of Wetlands, Oceans, and Watersheds, Washington, DC. www.epa.gov/owow/tmdl/comptool.html

This document reviews more than 50 watershed, receiving water and ecological assessment models. The document provides factsheets for each model that describes model components, methods, applications, pollutants addressed, limitations, input data requirements, and type of

output. The document also contains information on model selection for specific applications, model calibration, and model verification.

4.5.5. Load Duration Curves

1. USEPA (U.S. Environmental Protection Agency). 2007. *An Approach for Using Load Duration Curves in the Development of TMDLs*. EPA 841-B-07-006. U.S. Environmental Protection Agency, Office of Water, Office of Wetlands, Oceans, and Watersheds, Washington, DC. www.epa.gov/OWOW/tmdl/duration_curve_guide_aug2007.pdf

This document provides an overview on the use of duration curves for TMDLs, describing the basic steps needed to develop duration curves and subsequently identify loading capacities, LAs, WLAs, MOS, and seasonal variations. The guide also discusses some considerations and limitations in using the approach and includes several case examples.

4.5.6. WLA Expression Options

1. Wayland, R.H., and J.A. Hanlon. 2002. *Establishing Total Maximum Daily Load (TMDL) Wasteload Allocations (WLAs) for Storm Water Sources and NPDES Permit Requirements Based on Those WLAs*. Memorandum from Robert H. Wayland, III, Director, Office of Wetlands, Oceans and Watersheds, and James A. Hanlon, Director, Office of Wastewater Management, U.S. Environmental Protection Agency, Washington, DC. www.epa.gov/npdes/pubs/final-wwtmdl.pdf

This memo clarifies existing EPA regulatory requirements for, and provides guidance on, establishing WLAs for stormwater discharges in TMDLs approved or established by EPA.

4.5.7. Required Elements of a TMDL

1. USEPA (U.S. Environmental Protection Agency). 1991. *Guidance for Water-Quality-based Decisions: The TMDL Process*. EPA 440/4-91-001. U.S. Environmental Protection Agency, Office of Water, Washington, DC. www.epa.gov/OWOW/tmdl/decisions/

This guidance document explains the programmatic elements and requirements of the TMDL process as established by CWA section 303(d) and by EPA's Water Quality Planning and Management Regulations (40 CFR Part 130).

2. Grumbles, B.H. 2006. *Establishing TMDL "Daily" Loads in Light of the Decision by the U.S. Court of Appeals for the D.C. Circuit in Friends of the Earth, Inc. v. EPA, et al., No. 05-5015, (April 25, 2006) and Implications for NPDES Permits*. Memorandum from Benjamin H. Grumbles, Assistant Administrator. U.S. Environmental Protection Agency, Office of Water, Washington, D.C. www.epa.gov/owow/tmdl/dailyloadsguidance.html

This memo clarifies EPA's expectations concerning the appropriate time increment used to express TMDLs in light of the recent decision by the U.S. Court of Appeals for the D.C. Circuit in *Friends of the Earth, Inc. v. EPA, et al., No. 05-5015 (D.C. Cir. 2006)*, which held that two TMDLs for the Anacostia River did not comply with the CWA because they were not expressed as *daily* loads.

3. USEPA (U.S. Environmental Protection Agency). 2007. *Options for Expressing Daily Loads in TMDLs (Draft)*. U.S. Environmental Protection Agency, Office of Wetlands, Oceans and Watersheds, Washington, D.C. www.epa.gov/owow/tmdl/draft_daily_loads_tech.pdf

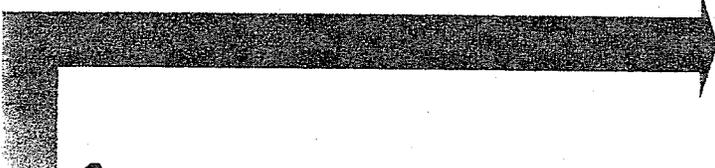

This document provides technically sound options for developing daily load expressions for TMDLs calculated using allocation time frames greater than daily (e.g., annual, monthly, seasonal).

4. Perciasepe, R. 1997. *New Policies for Establishing and Implementing Total Maximum Daily Loads (TMDLs)*. Memorandum from Robert Perciasepe, Assistant Administrator, to Regional Administrators Regional Water Division Directors. U.S. Environmental Protection Agency, Office of Water, Washington, D.C.

The memo supplements existing regulations and guidance by documenting two policies to establish a nationally consistent approach for establishing and implementing TMDLs. These policies, and will remain in effect unless they are specifically changed by the Office of Water.

Chapter Five Promoting Effective Stormwater Management

What's included in this chapter

- ✓ Description of possible stormwater management strategies and techniques for evaluating and selecting appropriate strategies for implementing WLAs.

What you should know after reading this chapter

- ✓ Potential criteria for evaluating and selecting stormwater BMPs most suitable for implementing WLAs.
- ✓ Types of resources, tools, and models available to assist in the selection of appropriate BMPs.

Potential roles and responsibilities under this activity

If you are a TMDL writer

1. Determine if the TMDL can include BMP recommendations for implementing stormwater WLAs.
2. Work with stormwater permit staff and others involved with implementation activities to identify BMPs and associated pollutant load reduction estimates to recommend through the TMDL.
3. Provide technical assistance to stormwater staff in reviewing stormwater management plans and pollution prevention plans that contain BMPs selected to implement WLAs.

If you are a stormwater permit writer

1. Determine if the stormwater permit will include prescriptive BMP implementation requirements in permit(s) based on recommendations in TMDL and work with TMDL staff to develop those BMP recommendations.
2. Determine if the stormwater permit will require stormwater dischargers to identify and implement BMPs necessary to achieve WLAs but will provide assistance by recommending BMPs to consider or a process for quantifying potential pollutant load reductions.
3. Review stormwater management plans and pollution prevention programs to ensure selected BMPs and associated rationale are technically appropriate for achieving pollutant load reductions.

5. PROMOTING EFFECTIVE STORMWATER MANAGEMENT

TMDLs identify and quantify the loading reductions needed to meet water quality standards and, to the extent possible, facilitate implementation of management measures to implement targeted loading reductions. For stormwater discharges, permittees will reduce loadings in most cases by implementing a suite of structural and nonstructural stormwater BMPs over a certain period of time. Permittees then need to evaluate the effectiveness of BMPs implemented to implement loading reductions, make adjustments where performance was less than expected, and incorporate lessons learned in future BMP implementation activities. In many cases TMDL writers can anticipate an iterative process for making progress toward implementing WLAs and reflect this type of process in the TMDL report. This type of iterative, information-based approach to continuous improvement is often referred to as adaptive management. Through TMDL recommendations and permit requirements, TMDL and permit writers can direct permittees to create SWMPs and SWPPPs that achieve progress toward implementing WLAs over time and demonstrating such progress.

As shown in Figure 20, the step of TMDL implementation involves identifying management options to implement LAs and WLAs. This chapter discusses the activities related to TMDL implementation for stormwater sources. The goal of this chapter is to provide TMDL and permit writers with an understanding of (1) their potential role in developing implementation and adaptive management recommendations and requirements; (2) technical considerations for analyzing and selecting structural and nonstructural BMPs that are suitable for making progress toward implementing a WLA; and (3) technical considerations for monitoring and assessing implementation strategies to implement the WLA.

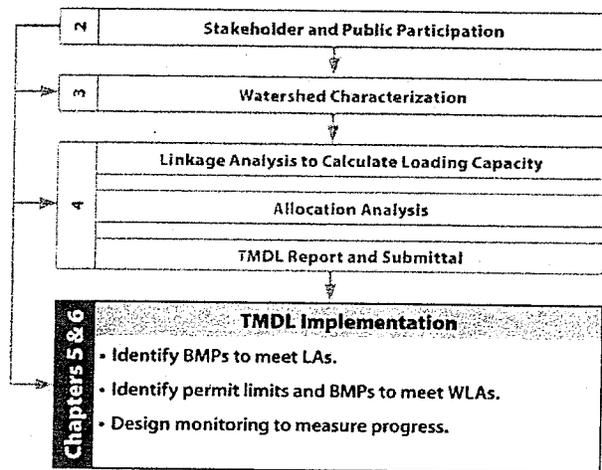

Figure 20. Illustration of the steps in the TMDL process, including activities related to TMDL implementation.

5.1. Implementation Roles and Responsibilities

Implementing TMDLs through stormwater permits will involve planning and coordination. Implementation planning activities might involve TMDL and permit writers or draw on the skills of other agency staff dedicated to implementation related activities. In some instances, implementation planning activities might only involve permittees. As a result, this chapter refers to those engaged in implementation planning activities as *stormwater planners*.

The role of stormwater planners in implementation planning will vary. Potential roles and activities for stormwater planners can include the following:

- **Evaluating and interpreting the WLAs assigned to stormwater sources.** As discussed in Chapter 4, TMDL writers can use a variety of approaches for categorizing and calculating stormwater WLAs in TMDLs. Individual WLAs assigned to each stormwater source or a specific source's stormwater outfall(s) are the most straightforward type of WLAs to interpret and implement. Permit writers can

most directly use individual WLAs and translate them into permit requirements. Stormwater planners should have the ability to conduct implementation planning activities using these refined WLAs. Where TMDL writers use aggregated approaches to categorize WLAs, stormwater sources might need to implement disaggregated WLAs for the purpose of SWMP or SWPPP implementation. Who disaggregates an aggregated WLA might vary—in some instances, it could be the TMDL writer, the permit writer, or even the actual stormwater sources. Stormwater planners can play a role in conducting the activities necessary to refine aggregated WLAs.

- **Developing a recommended list of structural and nonstructural BMPs to include in TMDLs or permits.** If the approach entails providing sources with a narrow suite of BMPs to promote implementation, TMDL and permit writers can play the role of stormwater planners and have the responsibility for analyzing and identifying a suite of BMPs that is most appropriate for addressing the impairment(s) for use by one or more types of sources. Under this option, TMDL and permit writers acting as stormwater planners can coordinate to determine where to list the suite of BMPs—either in the TMDL as recommended BMPs or in the permit as part of the permit requirements. Chapter 6 of this Handbook provides a detailed discussion on options for language to connect BMP implementation recommendations and requirements through TMDLs and permits.
- **Identifying specific structural and nonstructural BMPs when no BMP recommendations or requirements are provided in the TMDL or permits.** If the approach requires sources to analyze and select BMPs on their own, permittees can then act as the primary stormwater planners. Under this option, TMDL and permit writers might focus on providing permittees with technical assistance to assist in BMP selection. As mentioned throughout this Handbook, federal law does not require the development of TMDL implementation plans. Where state regulations require the development of TMDL implementation plans, or states voluntarily attempt to develop these plans as part of the TMDL development process, TMDL writers might consider providing technical assistance type information in the implementation plan. TMDL writers can also consider incorporating recommendations on BMPs to implement the load reductions as part of the TMDL report. Permit writers can consider providing TMDL implementation technical assistance to permittees through the permit fact sheet or compliance assistance documents.
- **Developing BMP performance standards to include in the TMDL or permit.** In some instances, the TMDL or permit might focus on BMP performance standards, rather than actual BMP recommendations or requirements. TMDL and permit writers in the role of stormwater planners can develop BMP performance standards to implement WLAs. Performance standards provide sources with the flexibility to select structural and nonstructural BMPs that are locally suitable while achieving the required or recommended performance standard. For example, New Jersey's Stormwater Management Rules (N.J.A.C. 7:8) requires *major development* projects that create at least 0.25 acres of new or additional impervious surface to include stormwater management measures that reduce the average annual TSS load in the development site's post-construction runoff by 80 percent. This type of performance standard allows sources in the role of stormwater planners to identify, select, and implement the most effective structural and nonstructural BMPs for a site or facility.

Regardless of who plays the role of stormwater planner and to what degree, it is important for TMDL and permit writers to understand the range of potential BMPs, technical information related to BMP performance, processes for BMP selection, and adaptive management techniques to ensure that implementation recommendations and requirements translate into effective, on-the-ground implementation actions by sources. It is also important that permit writers and other agency staff

involved in permitting activities (e.g., enforcement and compliance staff) have an understanding of BMP implementation and adaptive management for purposes of reviewing and approving (where applicable) permit information and documentation (e.g., SWMPs, annual reports, monitoring data).

The focus of this chapter is on the technical considerations necessary for selecting appropriate BMPs, evaluating BMP effectiveness over time, and making modifications to BMP implementation to ensure continuous water quality improvements. The goal of this chapter is to present these technical considerations to help stormwater planners as they develop implementation recommendations and requirements for use in TMDLs and permits to form the basis for demonstrating that TMDLs are adequately addressed in permits and associated SWPPPs and SWMPs. Although the focus of this chapter is on TMDL and permit writers serving as stormwater planners, the information presented in this chapter might also benefit permittees playing the role of stormwater planners.

5.2. Key Questions for Promoting Effective BMP Implementation

Stormwater planners can ask a series of six key questions to promote effective BMP implementation through an adaptive management framework. The adaptive management framework consists of planning, implementing, evaluating and learning, and adjusting. The six key questions are as follows:

1. What is the current pollutant loading from the stormwater source's discharge to the impaired waterbody accounting for existing BMPs?
2. What additional loading reduction is necessary to implement the WLA?
3. What additional BMPs might provide the remaining pollutant load reductions necessary to implement the assigned WLA on the basis of the expected performance of these BMPs?
4. How should permittees measure BMP performance as implementation proceeds?
5. Are measured pollutant load reductions adequate to make progress toward the assigned WLA over time?
6. What modifications to the overall implementation strategy are necessary to make further progress toward implementing the WLA?

Stormwater planners can use these key questions to guide implementation and adaptive management activities to achieve progress toward implementing WLAs. Although the discussion of the key questions highlights potential roles for TMDL and permit writers, sources might find these key questions helpful in conducting their implementation planning activities to comply with permit requirements.

5.2.1. Establishing the Baseline Load and Accounting for Existing Load Reductions (Key Questions 1 and 2)

The planning phase of adaptive management focuses on selecting BMPs to achieve the WLA and associated performance indicators to aid in tracking progress. Because the goal is to make iterative progress toward implementing a WLA, it is first necessary to quantify the starting point from which a source should measure progress. This is often referred to as the baseline. The baseline for a source might vary, depending on the context of the TMDL analysis. Sometimes the baseline pollutant loads for a

source's discharge might take into account existing BMPs, and sometimes it might not. Stormwater planners involved in implementation planning should address the issue of a source's baseline by asking the first two key questions as follows:

1. What is the current pollutant loading from the stormwater source's discharge to the impaired waterbody accounting for existing BMPs?
2. What additional load reduction is necessary to implement the WLA?

5.2.1.1. Answering Key Question 1: Determining Current Pollutant Loading from Stormwater Source Discharge

Stormwater planners can first review the TMDL to determine how the analysis defined a source's pollutant baseline load. During the development of the TMDL, the TMDL writer characterizes the pollutant loads from existing stormwater discharges. It is important for stormwater planners to review the TMDL analysis to determine the approach used to characterize pollutant loads from stormwater discharges. For example, the TMDL report should indicate if the TMDL writer made this determination on the basis of modeling using literature values for land use types and other generalized assumptions related to the stormwater source or if the analysis included real-world data and information, such as monitoring data to calibrate the model to actual conditions.

After identifying the stormwater discharge pollutant loading used in the TMDL analysis, stormwater planners can then determine if the analysis accounted for any existing BMPs and, if so, the assumed or measured pollutant load reductions from those BMPs. If the TMDL analysis does account for existing BMPs, stormwater planners can use the pollutant loading information contained in the TMDL analysis as the starting point for gauging progress toward the WLA. Stormwater planners should attempt to verify that the existing BMPs used in the TMDL analysis represent a comprehensive and accurate listing.

It is important for TMDL writers to remember that the information provided in the TMDL, as well as the assumptions used in the analysis, can influence the BMP selection process. The information contained in the TMDL serves as the basis for identifying the pollutants of concern and their source, which broadly indicates the type(s) and locations of BMPs needed to implement the pollutant load reductions from the sources with assigned WLAs. Greater specificity in the characterization of existing stormwater loads can likely promote more effective implementation.

If the TMDL analysis does not provide comprehensive information on existing BMPs, answering key question 1 requires conducting two activities: (a) accounting for existing BMPs and (b) quantifying the associated pollutant load reductions. The first activity involves developing an inventory of existing BMPs that would affect loads of the pollutant of concern. The second activity involves measuring or estimating the pollutant load reductions from the BMPs identified in the inventory.

5.2.1.1.1 Key Question 1, Activity A: Inventorying Existing BMPs

A BMP inventory is a comprehensive listing or database of existing structural and, if applicable, nonstructural BMPs that directly or indirectly address the impairment(s). For structural BMPs, the inventory should include information on the type of BMP, location, date of installation, area treated by the BMP, and design and maintenance issues. For nonstructural BMPs, the inventory should include information on type of activity, implementation schedule, area addressed, and performance related data.

Stormwater planners involved in implementation activities for sources covered by individual stormwater permits might feasibly engage in developing BMP inventories by working with sources. For sources covered by general permits, it is unlikely that stormwater planners will conduct this activity. Instead, permit writers might opt to include in general permits a requirement for developing a BMP inventory. Through this option, stormwater planners could provide criteria to assist sources in the development of a BMP inventory, such as defining the type or location of BMPs that are most appropriate to address the impairment(s). The TMDL writer could include these BMP inventory criteria in the TMDL or the permit writer could include the criteria in the permit with the BMP inventory requirement.

Sources can also develop an accurate and comprehensive BMP inventory without the aid of criteria in the TMDL or permit. Permit writers can include BMP inventory requirements in permits that instruct sources to review existing SWPPPs or SWMPs—depending on the type of permittee—and identify BMPs that are likely to address the impairment(s). Sources would develop BMP inventories in compliance with this requirement through inspections or *desktop auditing*, depending on the type and number of BMPs in place.

Technical issues related to compiling a BMP inventory can vary depending on the type of stormwater source—industrial facility, construction site, or MS4. Therefore, stormwater planners—particularly permit writers—should keep these technical issues in mind when developing permit requirements related to compiling BMP inventories. For industrial facilities and construction sites, compiling a BMP inventory might involve a review of SWPPPs or a thorough facility inspection or monitoring of influent and effluent of BMP structures. This approach would obviously be very complex within some MS4s, however, because of the sheer numbers of BMPs and the difficulty in locating and characterizing them. The level of detail, therefore, for the BMP audit at an MS4 might be less, and many assumptions might need to be made. For example, an MS4 responsible for conducting a BMP inventory as part of the implementation process to implement a TSS WLA might determine that it is necessary to include all erosion and sediment control BMPs on active construction projects. Because of the large number and dynamic nature of construction projects, however, the MS4 might determine that it is not feasible to do an actual count of the numbers of various types of BMPs. Therefore, the MS4 uses the assumption that all active construction sites implement certain standard BMPs (i.e., silt fence, construction entrances, sediment traps) due to local ordinance and state permit requirements. The MS4 could then assume a certain *noncompliance factor* after reviewing enforcement actions against existing sites to attempt to correct for improper implementation of BMPs in the field when modeling actual contribution. Using municipal planning tools, municipalities with permitted MS4s can also project the number and location of future construction sites on the basis of growth projections, comprehensive planning, and land use zoning.

Resources: For more information on compiling a BMP inventory, refer to the Resources list at the end of this chapter in Section 5.3.1.

In Practice: Promoting the Development of an Existing BMP Inventory in Washington

The draft Phase II MS4 General Permit for Western Washington (Appendix 2) contains the list of all TMDLs in western Washington that include specific implementation activities that go beyond the general permit requirements. The general permit requires permittees with WLAs under these TMDLs to implement the activities specified in Appendix 2. Some of these additional requirements include developing an inventory of existing BMPs. For example, the Snohomish River Tributaries fecal coliform TMDL (2001) in Washington requires (via the permit) permittees to implement *baseline* source control BMPs for (1) commercial animal handling areas and (2) commercial composting facilities. The TMDL requires (via the permit) that the permittees compile a list of the existing facilities and conduct inspections of them to ensure implementation of

source control BMPs. After meeting these baseline conditions, permittees must develop and implement a Bacterial Pollution Control Plan.

In addition to the type of stormwater source, the effort of compiling a BMP inventory can have an additional set of technical issues if the inventory is to include nonstructural BMPs. Nonstructural BMPs are typically programmatic in nature, such as good housekeeping practices at a transportation facility. While it might prove easy to account for these activities, it is not always easy to determine the pollutant load reduction associated with these activities. In the case of programmatic BMPs, stormwater planners should consider the need to make assumptions about defining what it means to implement nonstructural BMPs according to plan and justifying associated assumptions.

5.2.1.1.2 Key Question 1, Activity B: Quantifying Load Reductions from Existing BMPs

After the BMP inventory is complete, stormwater planners can either undertake the second activity of key question 2 or develop recommendations or requirements for sources related to this activity. The second component of key question 2 focuses on measuring or estimating the pollutant load reductions associated with the existing BMPs. Quantifying existing pollutant load reductions can help to determine if sources have made any progress toward implementing the WLA if the TMDL had assumed no BMP implementation.

It is important that planners consider how best to evaluate and quantify the effectiveness of BMPs and provide guidance to sources either through the TMDL or the permitting process. Evaluation techniques might vary by the type of BMP, pollutant type, and other factors. It is particularly important to provide this type of guidance in instances where multiple sources addressed under the same TMDL will participate in BMP evaluations to determine progress toward the same or related WLAs. Ensuring that sources are using similar evaluation techniques for similar BMPs can not only provide a more defensible pool of BMP performance data, but also provide a level of equity among sources as they determine progress toward implementing WLAs.

Quantifying pollutant load reductions associated with existing BMPs can vary in complexity for sources, depending on the size of the source's permitted boundary, the number and types of BMPs, and whether they are structural versus nonstructural. For example, it might be relatively easy to determine the effectiveness of BMPs at an industrial facility with a single defined outfall and four oil/water separators which treat the runoff from the processing facility and parking lots than it would be to quantify the effects of multiple, individual BMPs or an entire MS4 SWMP.

For a source with many BMPs, such as a large MS4 or a large construction site, the most viable option might be a suite of evaluation techniques that include monitoring, researching applicable literature values, and modeling using justifiable assumptions. For example, a large construction site with several types of erosion and sediment control BMPs could choose to either monitor representative BMPs or use existing literature to determine optimum sediment removal efficiency. Using the values for representative pollutant removal, the source could then estimate erosion and sediment control BMPs throughout the entire construction site.

The complexities only increase when trying to quantify the effects of more programmatic BMPs, including employee training on good housekeeping techniques, public outreach, and inspections of industrial/commercial facilities. Many of these activities focus on source reduction and pollution prevention or behavioral changes that are difficult to translate into pollutant load reductions.

BMPs are likely to vary among the types of sources; therefore, appropriate evaluation techniques and approaches are likely to also vary. Evaluation techniques might also vary depending on the specific pollutant of concern or impairment that a source is trying to address through BMP implementation.

The evaluation of stormwater management BMPs and plans can be very complex because many of these BMPs and plans focus on nonstructural, source reduction activities that prevent pollutants from entering the storm sewer system to begin with. As a result, there might not be any easy means to quantify the associated pollutant load reductions. Stormwater planners attempting to quantify pollutant load reductions from BMPs can likely have to generate estimates using a wide range of information sources ranging from state and local studies, national BMP performance data, monitoring data, modeling, and assumptions based on best professional judgment. It is critical that TMDL and permit writers keep these challenges in mind when developing WLAs and recommendations or requirements for assessing progress toward WLAs. The TMDL itself needs to account for the complexities of quantifying the effects of BMPs on stormwater runoff and the permit writer needs to allow for flexibility in the development of assessment strategies.

Regardless of the difficulty level, it is in the source's best interest that stormwater planners conduct the inventory of existing BMPs thoroughly and justifiably. If the source is the primary stormwater planner and is conducting the BMP inventory, the permit writer might want to review the BMP inventory procedure before initiation to confirm that the pollutant load reductions attributed to existing BMPs are appropriate. If a review of the BMP inventory procedure is a permit requirement, the permit writer should consider explicitly stating what the source must submit for review and approval. Information in the final inventory can assist sources with future implementation efforts, including scheduling and tracking maintenance activities and compiling records and reports.

In Practice: Conducting a BMP Effectiveness Evaluation in Portland, Oregon

Portland conducted an evaluation to determine the effectiveness of existing stormwater BMPs. According to the summary document, *Effectiveness Evaluation of Best Management Practices for Stormwater Management in Portland, Oregon* (www.portlandonline.com/shared/cfm/image.cfm?id=133994), the purpose of the effectiveness evaluation was to "develop and document the effectiveness ranges and preferred values for all BMPs either currently in use or anticipated for use in the management of stormwater quality and quantity in the City of Portland." The evaluation methodology focused on analyzing a list of BMPs that met specific criteria, including BMPs required to implement TMDLs. The methodology also focused on surrogate pollutants selected to represent whole classes of pollutants. Surrogates included TSS, dissolved zinc, *E. coli*, and total phosphorus. In addition to water quality parameters, the evaluation addressed flow rates and volume, temperature, and habitat issues. Through the evaluation, Portland derived values for BMP performance using a wide variety of information sources as well as best professional judgment. The evaluation provides a range of effectiveness values for each BMP to account for uncertainty and location-specific or application-specific conditions that result in various points in the range of values. The evaluation serves as the necessary documentation of methods and assumptions to facilitate future review of BMP effectiveness and to evaluate the applicability of a particular value to a specific BMP.

5.2.1.2. Answering Key Question 2: Determining Additional Load Reductions Necessary to Implement the WLA

After quantifying the measured or estimated pollutant load reductions associated with existing BMPs, stormwater planners can calculate the remaining pollutant load reductions necessary to implement the WLA. This value can serve as the driver for addressing key question 3: selection of additional BMPs.

By comparing the information generated to answer key question with the overall pollutant load reduction necessary to implement the WLA, stormwater planners can estimate the magnitude of the pollutant load not addressed by BMPs. The difference between the source's actual contribution (defined as the baseline pollutant load minus the pollutant load reductions addressed through existing BMPs) and the assigned WLA is the additional amount of pollutant removal that the source can implement through additional BMPs.

5.2.2. Selection of Additional BMPs to Implement WLAs (Key Question 3)

The information generated under key question 2 can serve as a starting point for stormwater planners to answer key question 3:

What additional BMPs might provide the remaining pollutant load reductions necessary to implement the assigned WLA on the basis of the expected performance of these BMPs?

Answering key question 3 also entails two activities: (a) identifying the list of possible BMPs to address the pollutant of concern or impairment and (b) quantifying the expected performance of each BMP under consideration.

The role of stormwater planners in the BMP identification and selection process can vary depending on the approaches discussed at the beginning of this chapter. In addition, factors such as the type of source and the type of permit under which the source has coverage can also affect the role of stormwater planners at this phase of implementation planning. For example, TMDL and permit writers playing the role of stormwater planners can work closely with sources covered under an individual permit (e.g., large and medium MS4s) to conduct an analysis of possible BMPs and select a final suite of prescribed BMPs to include in the permit. Where general permits are available to sources, TMDL and permit writers playing the role of stormwater planners might rely on the use of performance standards in TMDLs and permits, while providing broad technical assistance through guidance documents. For example, TMDL and permit writers could research a range of possible BMPs and provide some of the information (e.g., expected performance information, cost, maintenance requirements) that sources would need to evaluate and identify the most suitable additional BMPs to address the remaining pollutant load reductions necessary to implement the WLA. Stormwater planners should keep in mind the range of other factors that can ultimately influence a source's decision to implement a BMP, such as location, cost, and maintenance.

The topics of identifying possible management strategies and selecting final management strategies to implement pollutant load reduction targets are discussed extensively in Chapters 10 and 11 of EPA's *Handbook for Developing Watershed Plans to Restore and Protect Our Waters* (USEPA 2008a). While

Tip: Ensure proper O&M to maximize BMP performance and resource investment

State planners can remind sources that O&M are extremely important factors in maximizing BMP effectiveness. Sources might maximize pollutant load reductions by improving the O&M of existing BMPs rather than investing in additional BMPs. TMDL and permit writers can develop recommendations and requirements that ensure sources focus on proper O&M of BMPs intended to achieve progress toward WLAs.

the information provided in this extensive EPA resource is geared toward sources with implementation responsibilities, the process for screening and selecting BMPs described in these chapters have applicability to planners involved in TMDL implementation planning activities considering developing a suite of recommended or required BMPs to include in the TMDL or the permit. This section provides an overview of BMP identification and selection information that would benefit stormwater planners playing a more active role in this step of the process.

5.2.2.1. Key Question 3, Activity A: Identifying List of Possible BMPs

Identifying and selecting BMPs to implement the remaining pollutant load reductions involves compiling a list of candidate BMPs appropriate for the pollutant of concern or the impairment and determining a BMP performance rating (i.e., expected pollutant load removal or flow rate and volume reduction). It is possible that much of this work might already be done by addressing key question 1 focused on inventorying and estimating the pollutant load reductions from existing BMPs. However, the suite of BMPs available to implement a WLA might encompass BMPs beyond those already implemented by a source. Therefore, the list of candidate BMPs is likely to include both existing and new practices for consideration.

Stormwater planners should consider providing a suite of BMPs that encompasses every possible category of controls: source controls, treatment controls, structural controls, and nonstructural controls. Source controls are BMPs that seek to reduce the presence, use, or exposure of pollutants to the weather; volume controls promote infiltration, evapotranspiration and reuse of water, detention, or retention of stormwater and its constituents. Treatment controls are BMPs that attempt to remove or inactivate pollutants through physical, chemical, or biological processes. Structural controls are built structures or facilities that capture runoff, treat it through chemical, physical, or biological means, and discharge the treated effluent to the soil, the stormwater conveyance system, or directly to surface waters. Nonstructural controls usually involve management practices that focus on changes in activities or behaviors, as well as focus on controlling pollutants at their source. Examples include developing and implementing erosion and sediment control plans, organizing public education campaigns, and practicing good housekeeping at municipal, commercial, and industrial facilities. Regulatory and policy tools, such as ordinances, operating procedures, and maintenance schedules, are also examples of nonstructural controls.

It is important to note that for certain types of impairments in certain areas nonstructural controls and source reduction practices might be less expensive and more effective than structural controls. For example, implementing new policies for sweeping streets and addressing illicit discharges is often less costly and more protective of water quality than constructing ponds or other stormwater treatment facilities at down-gradient locations. For example, stormwater planners addressing areas with seasonal chloride impairments associated with deicing activities can consider nonstructural practices

Resources: For more information on BMP selection, refer to the Resources list at the end of this chapter in Section 5.3.2.

Tip: Addressing peak flows to reduce channel impacts

To prevent downstream degradation and maintain stream channel stability, planners should promote maintenance of predevelopment runoff volumes and rates for new development and redevelopment. Recent research shows that simply requiring site designs not to exceed pre-development runoff rates for a specified storm size (e.g., a detention basin designed to limit release rates) will not adequately protect the hydrology and habitat of the receiving water. Management practices that slow, detain or infiltrate the runoff and release it slowly via baseflow to the receiving stream systems can replicate predevelopment site conditions and ensure both adequate aquifer recharge and stream base flow.

such as alternatives to salt or salt reduction management activities (e.g., calibrating salt trucks) rather than structural BMPs.

Many BMPs do and should target volume reductions (i.e., flow) to reduce total pollutant load. In addition to pollutant load reductions, BMPs that provide volume-reductions also reduce channel erosion, alleviating impacts related to increased runoff. Streambank erosion, channel deformation and down-cutting, and loss of natural habitat are among the more common effects of increased runoff from impervious surfaces. Stormwater planners can promote BMPs that reduce volumes through infiltration and evapotranspiration to ensure that BMPs are most effective in protecting or restoring impaired waterbodies. Volume reduction can also play a significant role in overall pollutant load reduction, which might not be immediately apparent if a BMP's ability to reduce incoming effluent concentrations is the primary metric by which it is measured. When a BMP, such as a rain garden or bioretention practice, captures a portion of incoming runoff and infiltrates it into the soil, the pollutants in that portion are prevented from entering a nearby river, lake, wetland, or coastal water. Simply comparing the concentration in and the concentration out of a BMP does not account for this pollutant load reduction due to infiltration.

Because flow is a critical factor to consider during BMP selection and implementation, stormwater planners can promote that sources first consider source controls and volume reduction controls before considering more traditional treatment controls. One option for doing so is to include only these types of BMPs on a list of prescribed BMPs (e.g., sources must implement all BMPs on the list) or on a required menu of options (e.g., sources must select one or more BMPs from the list). Another option could involve stormwater planners developing recommendations or requirements that indicate that sources must first examine source and volume reduction controls to implement remaining pollutant load reductions and provide associated assumptions that indicate treatment controls are more appropriate or effective at reducing remaining loads.

Resources: For more information on volume control, refer to the Resources list at the end of this chapter in Section 5.3.3.

In Practice: Promoting Maintenance of Predevelopment Runoff Volumes and Rate in New Jersey

New Jersey's Stormwater Management Rules (N.J.A.C. 7:8) recognize that predevelopment site hydrology is essential to maintain to protect downstream hydrology. The New Jersey Model Stormwater Control Ordinance for Municipalities, included in the *New Jersey Stormwater Best Management Practices Manual* (www.state.nj.us/dep/stormwater/tier_A/bmp_manual.htm) as Appendix D, contains requirements pertaining to controlling stormwater runoff quantity impacts. The ordinance requires developers to select and comply with one of the requirements. Two requirements focus on conducting a hydrologic and hydraulic analysis that compares pre-construction runoff volume and rates with post-construction conditions. A third requirement focuses on performance standards for stormwater management measure design to control post-construction peak runoff rates.

In Practice: Promoting Consideration of Nonstructural Controls First in New Jersey

The New Jersey Model Stormwater Control Ordinance for Municipalities (referenced above) encourages MS4s to require developers to first consider nonstructural controls into new development designs. The model ordinance provides a list of nonstructural controls that includes protecting natural vegetation and drainage; protecting areas susceptible to erosion; minimizing impervious surfaces and breaking up or disconnecting flow over impervious surfaces; providing low maintenance landscaping; and incorporating source controls to minimize use and exposure of pollutants into site designs. The ordinance language states that if the developer contends it is not feasible to include these nonstructural controls into a project, the developer must provide the engineering, environmental, or safety reasons that render use of the nonstructural controls unfeasible.

In many cases, functions of the various BMPs can overlap and can reduce a pollutant in more than one way. For example, green infrastructure (GI) and low impact development (LID) practices control the volume of stormwater being delivered downstream, which can help reduce streambank erosion and sediment loading, while also retaining sediment. GI and LID are stormwater management approaches and practices intended to eliminate or reduce urban runoff and pollutant loadings by managing the runoff as close to its sources as possible. As a collection of small-scale practices, linked together on a site, GI/LID have the potential to reduce the effects of development and redevelopment activities on water resources by maintaining or replicating the predevelopment hydrology of the site. Through practices such as rain gardens, vegetated swales, pervious pavements, and green roofs, GI/LID promote on-site infiltration, evapotranspiration, or reuse of rainwater.

Resources: For more information on GI and LID, refer to the Resources list at the end of this chapter in Section 5.3.4.

The final mix of structural and nonstructural management practices selected can, most importantly, be determined by which pollutants each BMP can effectively address and, more importantly, what specific level of performance each can provide. This can depend upon several highly variable factors, including the concentration and total load of the pollutant in the runoff, the volume and various rates of the runoff, antecedent rainfall and runoff conditions, and even the season or time of year. The variability of both applicable pollutants and levels of treatment can be seen by reviewing the sampling results of actual structural facilities taken over a number of storm events. Depending on the pollutant, the reduction in pollutant load or mean concentration achieved by selected structural facilities can vary considerably from event to event, with even negative reductions achieved at times, particularly for nutrients. Such variability makes it extremely difficult to determine a structural facility's exact pollutant removal rate and illustrates why pollutant removal criteria are typically based on average annual conditions.

Tip: Calculating the savings associated with GI

The Green Values® Stormwater Calculator (<http://greenvalues.cnt.org/calculator>), developed by the Center for Neighborhood Technology, helps users see how GI can help save money and increase hydrologic benefits. It can be used to estimate the benefits of LID and conservation practices and allows users to input site development characteristics and green practices and returns financial and hydrologic outcomes for different scenarios.

5.2.2.2. Key Question 3, Activity B: Determining Expected BMP Performance

Evaluating the potential performance of a BMP is a potentially challenging activity, but the information generated through this activity is essential to selecting BMPs with the most potential for making progress toward WLAs and attainment of water quality standards. Although this activity is discussed as

a separate activity after compiling the list of possible BMPs, planners can make assumptions and determinations about BMP performance *while* generating the list.

There are three important factors to consider when evaluating the potential performance of BMPs: concentration, volume, and total load. Estimating the total pollutant load reduction associated with a BMP is probably the best way to evaluate overall BMP performance. To calculate the total load, multiply the volume of water discharged by the BMP over a given period by the mean or average concentration of the pollutant. EPA's Urban BMP Performance Tool Web site, at <http://cfpub.epa.gov/npdes/stormwater/urbanbmp/bmptopic.cfm>, provides an in-depth discussion of these factors and other considerations for evaluating potential BMP performance.

Stormwater planners can estimate load reductions from BMPs in a number of ways. The most desirable method would be to monitor a BMP for every rain event over the course of several years to determine the volume of water coming into and leaving the BMP and the associated changes in pollutant concentrations. Rarely, however, is this level of monitoring possible because of resource constraints or because the type of BMP does not lend itself to this kind of *water in—water out* type of monitoring. This is important for planners to keep in mind when considering options related to monitoring and assessing implementation progress as part of the overall adaptive management framework.

Other options for evaluating potential BMP performance include using existing information from past BMP studies and evaluations or computer-based predictive tools. Stormwater planners can consider the strengths and challenges associated with each option for evaluating potential BMP performance to determine which approach to use for supporting internal implementation planning activities, or to promote through recommendations and requirements for sources. Planners should consider several factors when examining each potential approach, including water quality parameters, source types, local conditions, available data, and user experience. Approaches range from simple to complex. Simple approaches include the use of published literature values for typical BMP performance or simple, spreadsheet-based models that calculate loads delivered to and removed by management measures. Complexity increases with the use of watershed models, which require substantial data inputs on multiple management techniques and can evaluate the optimum placement of BMPs as well as their performance. Simpler models are often sufficient to meet the needs of an analysis and are advantageous when time and budget resources are limited. Considerations for the use of literature values versus computer-based predictive tools are provided below.

Tip: Understanding "Percent Removal"

Percent removal is a common metric for gauging BMP effectiveness. The pollutant concentration of stormwater flowing into a BMP is compared to the pollutant concentration of stormwater discharged after treatment by the BMP. Stormwater planners should understand the advantages and challenges associated with using percent removal as a way to determine BMP performance. One advantage of using percent removal is that it is a relatively available estimation of BMP performance. The challenge, however, is that percent removal can be a misleading statistic. For example, percent removal depends primarily on the influent quality. A BMP treating very *dirty* runoff will have a higher percent removal than the same BMP treating *cleaner* runoff. Also does not take into account volume reductions achieved through the BMP. For more detail describing why percent removal is a poor measure of BMP performance, see the fact sheet developed for the international stormwater BMP database at www.bmpdatabase.org/Docs/FAQPercentRemoval.pdf.

5.2.2.2.1 BMP Literature Values

One method used for predicting load reductions from BMPs is to use literature values of performance typically associated with type

Resources: For more information on BMP performance literature values, refer to the Resources list at the end of this chapter in Section 5.3.5.

of management practice and pollutant (e.g., detention pond, sediment). The percent reductions commonly documented in the literature are normally estimated from one or more monitoring studies where performance of BMPs was measured using flow and chemical monitoring. For example, the effectiveness of management practice systems could be calculated using the relative effectiveness of individual practices. Stormwater planners using this approach should verify that the study carefully estimated inflow pollutant concentrations and should also take volume reductions into consideration. This approach can help with initial BMP scoping and screening. However, planners using this approach to estimate pollutant load removals should be aware that this approach might oversimplify and overestimate cumulative removal rates for BMP treatment trains.

5.2.2.2 Modeling Tools

Stormwater planners can select or refine a list of potential BMPs using computer-based predictive tools, or modeling. Modeling stormwater pollutant load reductions from BMPs commonly involves three primary measures—pollutant concentrations in the stormwater at some point in time, the total pollutant load conveyed over a time period, and the event mean concentration. Stormwater planners can refer to the TMDL analysis to determine what modeling approach the TMDL writer used and if it is possible to use the same model to narrow the range of BMP options and aid in siting and sizing them. Performance standards for management practices often include controls on the stormwater peak discharge rate, the total runoff volume, and the total pollution load, which often is the focus of the WLA. Load reductions for individual and multiple BMPs—functioning as groups of practices or consecutive facilities arranged in a treatment train—can be modeled in some cases by using BMP calculators built into watershed models. For example, planners can use SWMM to evaluate urban area management practices and has the capabilities to emulate the major management practice processes (i.e., storage, infiltration, first-order decay, and sediment settling). The recently added overland flow rerouting (land-to-land routing) options block can be used to mimic the parcel (individual lot) level sites.

Resources: For more information on model applicability, refer to the Resources list at the end of this chapter in Section 5.3.6.

A variety of more BMP-specific modeling options exist to simulate specific BMPs or unique situations. In some cases, specialized watershed models and management practice models are used to perform small-scale analysis of BMPs. Table 12 provides a brief description of several specialized models that can aid planners in selecting and siting BMPs to implement progress toward WLAs.

Those selecting BMPs can take into account the unique set of conditions associated with each stormwater source. In addition to performance, sources will undoubtedly need to consider other selection factors that have little to do with water quality improvement. If the planning is being conducted by someone other than the permittee, consultations with industrial, construction site, and MS4 permittees during this process can help to create a bridge for discussions regarding BMPs selected, sites, designs, size, and cost.

Tip: Determining if models used in TMDL development are appropriate for implementation planning.

If the TMDL development process involved watershed modeling, planners might have an opportunity to use this type of model for selecting and siting BMPs. Planners can work with TMDL writers to determine if the watershed model contains the necessary data for BMP implementation analysis. TMDL writers can also keep in mind the potential a watershed model might have for implementation planning purposes early in the TMDL development process.

Table 12. Description of modeling tools available for BMP selection, sizing, and siting decision making

Model/tool	Description
The Site Evaluation Tool (SET)	The model was developed to assess the effects of development, including sediment and nutrient loading, on a site scale. The tool allows definition of pre- and post-treated land use, allowing for multiple drainage areas and various combinations of practices. Structural and nonstructural practices can be represented, giving the user a suite of options for evaluation. www.unrba.org/set/index.shtml
Prince George's County BMP-Decision Support System (PG BMP-DSS)	The PG BMP-DSS evaluates the effect of management practices or combinations of management practices on flow and pollutant loading. This module uses simplified process-based algorithms to simulate management practice control of modeled flow and water-quality time series generated from runoff models such as HSPF. These simple algorithms include weir and orifice control structures; storm swale characteristics; flow and pollutant transport; flow routing and networking; infiltration and saturation; and a general loss/decay representation for a pollutant. The module offers the user the flexibility to design retention-style or open-channel management practices; define flow routing through a management practice or management practice network; simulate Integrated Management Practices such as reduced or discontinued imperviousness through flow networking; and compare management practice controls against a defined benchmark such as a simulated predevelopment condition.
Model for Urban Stormwater Improvement Conceptualization (MUSIC)	MUSIC was developed to evaluate small and large-scale (100 square kilometer) urban stormwater systems using modeling time steps that range from 6 minutes to 24 hours. MUSIC provides an interface to help set up complex stormwater management scenarios. The stormwater control devices evaluated by MUSIC include ponds, bioretention, infiltration buffer strips, sedimentation basins, pollutant traps, wetlands, and swales. Major techniques used to evaluate management practices including settling in ponds and decay of pollutants. www.toolkit.net.au/cgi-bin/WebObjects/toolkit.woa/wa/productDetails?productID=1000000
Integrated Design and Evaluation Assessment of Loadings (IDEAL)	IDEAL provides a spreadsheet-based technique for assessing the benefits of urban management practices on flow, sediment, nutrients and bacteria. The model predicts watershed runoff, concentrations, and loads, using the user's selection of vegetative filter strips, dry detention ponds, and wet detention ponds. Urban areas are defined as pervious, impervious connected, and impervious unconnected areas. Flow and loads can be directed to a pond that can be either dry (no permanent pool) or wet (permanent pool). The model then calculates the pollutant removal efficiencies of the practices using empirical equations. The model predicts single storm values and converts them to average annual storm values using a statistical process. The IDEAL model is designed to help managers estimate long-term management practice pollutant removal efficiencies and is not designed for looking at individual storms. www.greenvillemccounty.org/land_development/Planning.asp
Soil and Water Assessment Tool (SWAT)	SWAT is a river basin-scale model developed to quantify the effect of land management practices in large, complex (primarily agricultural) watersheds. SWAT was developed to predict the effect of land management practices on water, sediment, and agricultural chemical yields in watersheds with varying soils, land use, and management conditions over long periods of time. www.brc.tamus.edu/swat/
Storm Water Management Model (SWMM)	SWMM is a dynamic rainfall-runoff simulation model applied primarily to urban areas and for single-event or long-term (continuous) simulation using various time steps. It was developed for analyzing surface runoff and flow routing through complex urban sewer systems. In SWMM, flow routing is performed for surface and subsurface conveyance and groundwater systems, including the options of nonlinear reservoir channel routing and fully dynamic hydraulic flow routing. SWMM has a variety of options for quality simulation, including traditional buildup and washoff formulation as well as rating curves and regression techniques. SWMM can simulate storage, treatment, and other BMPs. www.epa.gov/ednrmrl/models/swmm/index.htm
Vegetative Filter Strip Model (VFSMOD)	VFSMOD provides specialized modeling of field-scale processes associated with filter strips or buffers. This model provides routing of storms runoff from an adjacent field through a vegetative filter strip and calculates outflow, infiltration, and sediment trapping efficiency. The model is sensitive to characteristics of the filter including: vegetation roughness or density, slope, infiltration characteristics, and the incoming runoff volume and sediment particle sizes. http://carpena.ifas.ufl.edu/vfsmod/

Model/tool	Description
Wetland water balance and nutrient dynamics model (WETLAND)	WETLAND is a dynamic compartmental model to simulate hydrologic, water quality and biological processes and to assist the design and evaluation of wetlands. The model can simulate both free-water surface and subsurface flow wetlands. WETLAND is modular and includes hydrologic, nitrogen, carbon, dissolved oxygen, bacteria, sediment, vegetation, and phosphorous submodels.
Virginia Field Scale Wetland Model (VAFSWM)	VAFSWM is a field-scale model for quantifying the pollutant removal in a wetland system. It includes a hydrologic subroutine to route flow through the treatment system; precipitation, evapotranspiration, and exchange with subsurface groundwater.
Delaware Urban Runoff Management Model (DURMM)	The Delaware Department of Natural Resources (DNREC) created DURMM to provide a more rigorous hydrological design tool for Green Technology BMPs. Green Technology BMPs are designed to "intercept runoff from rooftops, parking lots and roads as close as possible to its source, and direct it into vegetative recharge/filtration facilities incorporated into the overall site design and runoff conveyance system." They include conservation site design, impervious area disconnection, conveyance of runoff through swales and biofiltration swales, filtration through filter strips, terraces, bioretention facilities, and recharge through infiltration facilities. www.swc.dnrec.delaware.gov/Pages/SedimentStormwater.aspx
Basin Sizer	The Basin Sizer program allows users to find information useful for sizing stormwater basins in California. It is built from the STORM model and performs continuous simulation. Elements sized include infiltration basins, detention basins, and flow-based BMPs. http://stormwater.water-programs.com/BasinSizer/Basinsizer.htm
City of Emeryville Stormwater Sizing Worksheet	This spreadsheet allows the user to size metered detention, bioretention, planter strip, flow-through planter box, and biofiltration BMPs. www.ci.emeryville.ca.us/planning/stormwater.html

In Practice: Predicting BMP performance using a BMP Decision Support System in Vermont

The Vermont Department of Environmental Conservation has developed a BMP Decision Support System (BMP-DSS) to facilitate stormwater permit issuance and compliance under the state's stormwater regulation. The BMP-DSS is an innovative decision-making tool for evaluating placement and selection of BMPs and LID techniques at strategic locations in urban watersheds. It uses GIS technology, integrates BMP process simulation models, and applies system optimization techniques for BMP placement and selection to address the cost/benefit issues associated with stormwater management. The model provides the continuous simulation of hydrographs and pollutant loads and concentrations so that the effectiveness of LID approaches can be simulated within large-scale watersheds models such as HSPF and SWMM. It offers the user the flexibility to design stormwater structural practices such as bioretention cells, rain barrels, roof gardens, vegetated swales, infiltration chambers, wetlands and off-line regional stormwater retention and detention ponds. It also includes the simulation of site design characteristics such as storm drains, building density, road and sidewalk dimensions, disconnection of impervious surfaces, and compares BMP controls against some defined benchmark such as a simulated predevelopment condition.

In Practice: Predicting BMP performance using a Site Evaluation Tool in the Upper Neuse River Basin, North Carolina

The Upper Neuse River Basin Association (UNRBA), made up of 13 city and county governments in the Triangle region of North Carolina, works to protect water resources within the 770-square-mile watershed above Falls Lake dam. Critical issues in the watershed are risk of nutrient enrichment in water supply reservoirs and effects on stream aquatic life from sediment loading and stream channel erosion. The Upper Neuse Site Evaluation Tool (SET) was developed under the guidance of many of the participating governments that were interested in a tool that could be used for both UNRBA goals and for local stormwater programs. This version of the SET included the ability to predict storm event peak flows and hydrographs, with scoping-level assessment of BMP influence on the storm event hydrographs. Model output was also tailored to assess site performance against variable nutrient loading rate goals on the basis of the user's selection of whether the site was residential or nonresidential and whether it was in a predefined urban versus rural zone.

5.2.2.3 Additional Screening Criteria

After researching candidate BMPs with regard to the effect on the pollutant of concern, planners should have enough information to analyze each management opportunity using appropriate and locally applicable screening criteria (see example in Table 13). Screening criteria are typically based on pollutant type, source area(s), performance/effectiveness, capital and O&M costs, and so on.

Table 13. Example of screening criteria for stormwater management practices

Screening criteria	Description
Volume reduction/source controls	Consider the role volume plays in contributing to elevated pollutant loads. Determine the extent to which rate and volume of flow can be retained or reduced on-site.
Location of the management practice within the critical area/watershed landscape	Check to see if the candidate management practice can help implement the load reductions that were identified in one of the critical areas of the watershed.
Estimated load reductions	Using the information you collected during desktop and field scoping, document whether the anticipated load reduction is low, medium, or high.
Legal and regulatory requirements	Identify legal or regulatory requirements for projects, and determine whether any pose significant constraints.
Property ownership	Determine the numbers of property owners that need to agree to installation or implementation of the management practice(s). It is often easier to obtain easements on lands in public ownership.
Site access	Consider whether you will be able to physically access the site and identify a contact to obtain permission if private property must be traversed to access the site. Consider whether maintenance equipment (e.g., front-end loaders, vacuum trucks) will be able to reach the site safely. Designs and cost estimates might require adjustment if a structural control requires hand-cleaning because of maintenance access constraints.
Added benefits	In addition to their intended design, management practices can also provide secondary benefits by controlling other pollutants, depending on how the pollutants are generated or transported. For example, practices that reduce erosion and sediment delivery often reduce phosphorus losses because phosphorus is strongly adsorbed to silt and clay particles.
Unintended effects	In some cases, management practices that are used to control one pollutant could inadvertently increase the generation, transport, or delivery of another pollutant.

Screening criteria	Description
Physical factors	There are many physical factors that can determine whether you will be able to install management practices. Look for constraints such as steep slopes, wetlands, high water tables, and poorly drained areas. Also look for opportunities such as open space, existing management practices that can be upgraded, outfalls where management practices could be added, and well-drained areas.
Infrastructure	Look for sites that have few utilities, road crossings, buried cables, pipelines, parking areas, or other significant physical constraints that could preclude installation or cause safety hazards.
Costs	The appropriateness of a management practice for a site can be affected by economic feasibility considerations that encompass short- and long-term costs. Short-term costs include installation costs, while long-term costs include continued O&M.
Social acceptance	Consider how nearby landowners will perceive the management practice. Will it cause nuisances such as localized ponding of water or vector control problems? Can these issues be addressed in the siting and design of the practice? How can nearby residents be involved in selecting and designing the practice to address their concerns? The optimal method for evaluating site feasibility for both riparian and upland management practices is through a site visit.

5.2.2.2.4 BMP Site Selection

In most instances, it is likely that sources acting as stormwater planners, rather than TMDL and permit writers or other entities at the state or EPA Regional level, will focus on identifying the most appropriate geographic location for siting and installing structural BMPs or conducting nonstructural BMPs. Factors affecting BMP siting decisions might include local conditions such as slopes, soils, and critical areas; historical, current, and future land uses; property ownership; cost; site access; infrastructure considerations; and social acceptance. Therefore, state or EPA Regional stormwater planners should either work closely with sources if the strategy includes making siting recommendations or consider leaving siting decisions to sources altogether.

Stormwater planners can use, recommend, or require desktop and field reconnaissance to scope the possible additional BMPs appropriate for addressing the pollutants of concern and the potential geographic locations for implementing these additional BMPs. This information can be gathered during the initial phase of determining the location of existing BMPs. The reconnaissance usually involves locating and mapping the likely source areas for the TMDL listed pollutants, identifying candidate BMPs that might be used to address them, and screening possible BMP installation sites—or, in the case of nonstructural BMPs (e.g., erosion control, pavement sweeping, IDDE, materials management)—scoping potential policy practices to address the problems identified.

After identifying pollutant sources cited in the TMDL, stormwater planners might consider recommending areas where appropriate management measures can likely implement the greatest pollutant load reductions, or requiring sources to identify these areas. These so-called *critical areas* are at or near pollutant source areas, and could include places with severe upland or channel erosion, sites generating oil and grease or other toxics, extensively paved subwatersheds or small catchments requiring runoff volume controls, areas with a high density of illicit connections, parks that generate significant bacteria loads from pets, industrial facilities generating high pollutant loads, and similar locations.

Stormwater treatment via multiple, consecutive BMPs can significantly improve the quality of water discharged to urban rivers, lakes, streams, wetlands, and coastal waters. In general, stormwater treatment

trains should seek to address source controls and infiltration, evapotranspiration and reuse first, then large particles, and, finally, small particles. The specific pollutant removal role of the second or third facility in a treatment train often assumes that significant settling or removal of solids has already occurred. For example, phosphorus removal using a two-facility treatment sequence relies on the second facility (e.g., sand filter) to remove a finer fraction of solids than those removed by the first facility. Oil control facilities must be upstream of treatment facilities and as close to the source of oil-generating activities as possible. They should also be upstream of detention facilities, if possible.

5.2.3. Monitoring and Assessing Implementation Progress (Key Questions 4-5)

After identifying the suite of BMPs appropriate for addressing the remaining pollutant load reduction to implement the WLA, stormwater planners will need to rely on the sources to undertake the necessary steps to implement the final set of BMPs. At this point, stormwater planners can provide recommendations and requirements that focus on assessing BMP performance to determine if the additional controls are producing the expected pollutant load reductions. To accomplish this, stormwater planners should consider what recommendations and requirements can promote iterative improvements using an adaptive management framework. The key questions that planners should help sources answer include the following:

4. How should permittees measure BMP performance as implementation proceeds?
5. Are measured pollutant load reductions adequate to make progress toward the assigned WLA?

5.2.3.1. Answering Key Question 4: Monitoring and Assessing Implementation of Additional BMPs

This set of questions summarizes the basic activities related to conducting an adaptive management approach. It is important to remember that the ultimate goal of stormwater management driven by implementing a WLA is to meet the water quality criteria associated with the designated use(s) of the relevant waterbody. The iterative approach of stormwater management implementation allows for sources to make progress toward that goal over time. Therefore, it is imperative that stormwater planners provide sources with recommendations and requirements related to assessing the performance of BMPs and overall SWMPs and SWPPPs and how to use assessment information to make meaningful changes to management strategies that can ensure further progress.

Stormwater planners can generate monitoring and assessment recommendations and requirements that can encourage sources to periodically evaluate BMP implementation and review monitoring and assessment information to track progress toward implementing WLAs. To comprehensively evaluate implementation activities, stormwater planners need to consider a combination of both process and

Tip: Consider best placement of treatment trains

There is some uncertainty regarding whether treatment facilities should be placed upstream or downstream of detention facilities that are needed for flow control purposes. In general, all treatment facilities can be installed upstream of detention facilities, although presettling basins are needed for sand filters and infiltration basins. However, not all treatment facilities can function effectively if located downstream of detention facilities. Those facilities that treat unconcentrated sheet flows, such as filter strips and narrow biofilters, are usually not practical downstream of detention facilities because of a variety of factors, including the sheer volume that must be treated.

summative analyses. A process analysis is one that tracks progress, assesses the quality of data relative to measurement quality objectives (i.e., whether the data are of sufficient quality to answer the monitoring question), and provides early feedback on trends, changes, and problems in the watershed. The summative analysis is more intensive and determines the status, changes, trends, or other issues that measure the environmental response to BMP implementation, as well as overall SWMP and SWPPP implementation.

The California Stormwater Quality Association (CASQA) developed the *Municipal Stormwater Program Effectiveness Assessment Guidance* (CASQA 2007) to assist municipal stormwater program managers in designing and conducting program effectiveness assessments using a range of assessment methods. The document also describes how to use these methods on the basis of program-specific desired outcomes and goals. Figure 21 (labeled Figure 2 in the CASQA guidance document) shows the outcome levels described with associated effectiveness assessments. Levels 1 to 4 are evaluated through *Implementation Assessments* and Levels 5 to 6 are evaluated through *Water Quality Assessments*. An MS4 would typically use Levels 1-4 to determine if programmatic targets or goals are being met.

Evaluations like the ones described in the CASQA document or those typically conducted by permitting authorities to determine an MS4's compliance with permit requirements and SWMP obligations typically do not *quantify* the level of effectiveness. They typically assess whether the MS4 is meeting the goals of the permit to the MEP. (For a discussion of MEP, see Chapter 2) This quantification or characterization in a manner that can be compared to the goals in a TMDL is the greatest challenge when trying to determine if an MS4 program is making progress toward a WLA. The best, most appropriate method to accomplish this can vary greatly among MS4s according to the types of BMPs and pollutant being limited by the TMDL.

Resources: For more information on stormwater program evaluation, refer to the Resources list at the end of this chapter in Section 5.3.7.

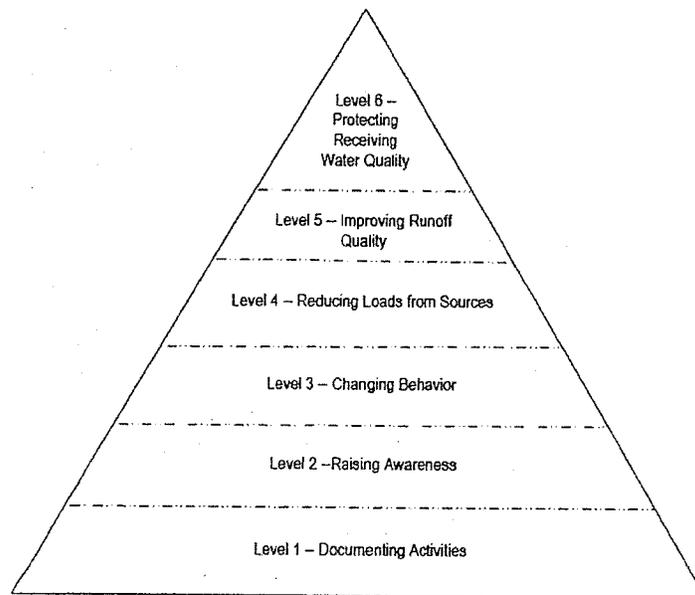

Figure 21. Approaches to evaluating storm water program effectiveness. (Source: CASQA 2007)

In Practice: Developing a Monitoring Program to Assess BMP Effectiveness in Addressing Pathogens in the Middle Rio Grande, New Mexico (2002)

Middle Rio Grande TMDL for fecal coliform recommends that MS4s, "[d]evelop and implement a monitoring program to assess BMP effectiveness and to compare loadings to the targets." The Albuquerque MS4 permit, based on this recommendation in the TMDL, requires the city to develop a monitoring program to track trends in fecal coliform and BMP effectiveness to track compliance with the TMDL WLA; to use an adaptive management approach by implementing revisions to the required programs if deemed necessary on the basis of monitoring data; and to develop and submit BMP evaluations and assessments, as well as an Annual TMDL Progress Report that summarizes monitoring results and includes computations of annual percent reduction achieved from the baseline loads and comparisons with the target loads.

In Practice: Working with Stakeholders on Adaptive Management for Swamp Creek, Washington

The Swamp Creek TMDL (2006) includes language that requires the Washington Department of Ecology to annually meet with municipal stakeholders to, "share information on the state of water quality in the watershed and status of implementation activities. Water quality data, trends (where applicable), regulatory changes, new and innovative concepts, and funding sources will be discussed to evaluate the overall status of the TMDL. Ecology will solicit input from the workgroup at this time to help direct the adaptive management of this TMDL. Ecology will track implementation no less than annually using the tracking table in Appendix E and through municipal stormwater permit program audits."

In Practice: Permit Requirements for Establishing Pollutant Load Reduction Benchmarks for Columbia Slough, Oregon

The Columbia Slough TMDL (1998) states that monitoring and implementation of BMPs will be done by MS4s to comply with the BOD₅ WLA. The Phase I MS4 permit for the city of Gresham, city of Fairview, and Multnomah County specifies BMP requirements to implement the WLA to the MEP. The Oregon Department of Environmental Quality created an MS4 permit benchmarking approach that applies to all TMDL parameters for which stormwater WLAs were established. Benchmarks are estimates of future pollutant load reductions. The permit requires that the benchmarks and necessary BMPs be included in the MS4 SMWP. The permit defines a benchmark as follows:

A benchmark is a total pollutant load reduction estimate for each parameter or surrogate, where applicable, for which a WLA is established at the time of permit issuance. A benchmark is used to measure the overall effectiveness of the stormwater management plan in making progress toward the WLA (this estimate will be related to the statistical variability of the underlying data and may be stated as a range), and is intended to be a tool for guiding adaptive management activities. A benchmark is not a numeric effluent limit; rather it is a goal that is subject to the maximum extent practicable standard. The co-permittee must provide the rationale for the proposed benchmark, which includes an explanation of the relationship between the benchmarks and the TMDL wasteload allocations. Any limiting factors related to the development of a benchmark, such as data availability and data quality, must also be included in this rationale.

The Phase I permit requires that a monitoring plan be designed to track the long-term progress of the SWMP toward achieving improvements in receiving water quality, including progress toward implementing pollutant load reduction benchmarks associated with TMDL constituents. This requirement is addressed with the ambient and outfall monitoring that is conducted, and assessed as part of the data evaluation and reporting components of the program that occur during each permit renewal application. The permit also requires that results of the monitoring be used to support the adaptive management process and lead to refinements of the SWMP.

To ensure a successful adaptive management process, both water quality and BMP performance monitoring data should be assessed fairly frequently (e.g., as part of the SWPPP/SWMP evaluation process). Progress reports and regular team meetings are two effective ways to accomplish this. Even though frequent evaluations of BMP performance and water quality data might seem demanding, early indications of trends or problems can prevent major future problems.

The best use of monitoring data can depend on a variety of factors, including the type of permittee, geographic size of the permittee and the impairment(s). However, there are three basic types of monitoring that could be used—BMP monitoring, outfall monitoring, and receiving water monitoring.

- **BMP Monitoring.** There are several options for assessing BMP performance, including BMP monitoring. The University of Minnesota's *Assessment of Stormwater Best Management Practices* provides a process for developing and implementing a BMP assessment program that includes four levels of assessment: (1) visual inspections, (2) capacity testing, (3) synthetic runoff testing, and (4) monitoring. Monitoring is considered the most accurate method for assessing BMP volume reduction, peak flow reduction, and pollutant removal efficiency. Procedures for each level of BMP assessment can vary by the type of BMP. As previously stated, certain types of structural BMPs lend themselves well to direct monitoring (e.g., discharge from a stormwater pond). Data from these types of BMPs should be collected to the extent possible and used to determine if the BMPs are performing as expected and if this is adequate. If there is a large number of BMPs, it will likely be more appropriate to sample a representative number and extrapolate the results to the rest.

Resources: For more information on BMP monitoring, refer to the Resources list at the end of this chapter in Section 5.3.8.

- **Outfall Monitoring.** Permittees of small geographic size (i.e., construction project or industrial facility) with few outfalls might be able to monitor the effluent and directly measure whether the facilities' contribution has been reduced adequately to implement the applicable WLA. Monitoring outfalls of large permittees (i.e., MS4s) might not provide any useful data for adaptive management of specific BMPs but could help to determine geographic areas or isolated land use types that might need further attention if the monitoring reveals inadequate progress toward TMDL goals. Data from outfall monitoring can also serve as an indicator to determine if more structural or nonstructural BMPs are needed in the area contributing flow to the outfall (e.g., data from one outfall demonstrates inferior BMP performance versus other outfalls).

Resources: For more information on stormwater outfall monitoring, refer to the Resources list at the end of this chapter in Section 5.3.9.

- **Receiving Water Monitoring.** Because the ultimate purpose of the TMDL and subsequent implementation efforts is to improve receiving water quality, it might be in the best interests of permittees to conduct their own ambient monitoring. For example, larger permittees with adequate resources could regularly monitor receiving water to evaluate trends, confirm significant sources, and potentially update and improve existing models. As previously described, the *CASQA Municipal Stormwater Program Effectiveness Assessment Guidance* provides information on water quality assessments to help determine what effect BMPs are having on receiving water quality. A list of other monitoring-related resources is also provided at the end of this section.

Resources: For more information on receiving water monitoring, refer to the Resources list at the end of this chapter in Section 5.3.10.

In Practice: Using Receiving Water Monitoring to Demonstrate Progress in the Los Angeles River, California

Receiving water monitoring is required to demonstrate a permittee is implementing the WLAs in the Los Angeles River and Tributaries Metals TMDL. This TMDL includes an implementation plan which states the following:

Each municipality and permittee will be required to meet the storm water waste load allocations shared by the two MS4s and Caltrans permittees at the designated TMDL effectiveness monitoring points. [...] The MS4 and Caltrans stormwater NPDES permittees will be found to be effectively meeting dry-weather waste load allocations if the in-stream pollutant concentration or load at the first downstream monitoring location is equal to or less than the corresponding concentration- or load-based waste load allocation. Alternatively, effectiveness of the TMDL may be assessed at the storm drain outlet based on the waste load allocation for the receiving water. For storm drains that discharge to other storm drains, the waste load allocation will be based on the waste load allocation for the ultimate receiving water for that storm drain system. The MS4 and Caltrans stormwater NPDES permittees will be found to be effectively meeting wet-weather waste load allocations if the loading at the downstream monitoring location is equal to or less than the wet-weather waste load allocation.

5.2.3.2. Answering Key Question 5: Determining Whether Implementation Progress is Adequate

After quantifying the pollutant load reduction gains made through implementing existing and additional BMPs, stormwater planners should assist sources in determining if the current SWMP and SWPPP are adequate to implement the WLA over time. To answer this question, however, both stormwater planners and sources need guidance or criteria for judging progress, information that ideally should be first presented in the TMDL and permit. Therefore, TMDL and permit writers should consider how to define progress, which is likely to vary by pollutant, permittee type, and other potential factors such as compliance determination methods by the permitting authority.

Options for defining progress toward implementing the WLA are as follows:

- Demonstrating pollutant load reductions by an agreed on date
- Demonstrating pollutant concentration reductions by a particular date
- Implementing a set of prescribed BMPs with specific performance standards by a particular date
- Complying with the permit SWMP or SWPPP requirements during the permit term

Stormwater planners should be aware that current TMDLs and permits use a variety of these approaches to define progress, while still other TMDLs and permits remain silent on the issue of progress. If the TMDL and the permit do not provide a definition of how to determine progress, stormwater planners can consider developing recommendations and requirements to help sources create and justify their own progress milestones or benchmarks. Stormwater planners can specify the nature of the benchmarks (e.g., quantifiable) and determine supporting information sources should submit to justify and verify the validity and accuracy of the selected benchmarks. Most importantly, TMDL and permit writers need to remember the iterative, dynamic nature of SWMP and SWPPP implementation when crafting TMDL and permit requirements. Where possible, defining a framework approach, including goals, for assessing progress and allowing the sources to determine the details (with adequate evaluation through the SWMP and SWPPP) is going to be more useful than trying to identify a detailed approach at the state level.

(Chapter 6 provides a brief discussion on compliance schedules—an important factor to consider when evaluating overall progress.)

In Practice: Including Specific Criteria for Assessing Progress in the Los Angeles MS4 Permit

The Santa Monica Bay Beaches dry weather bacteria TMDL is expressed in terms that are directly applicable to MS4s and the associated WLA is included in the Los Angeles MS4 permit. This provides the permittees a clear understanding of what must be accomplished to implement the WLA. The permit language (Provision 29 of Order 01-182) is as follows:

The Waste Load Allocations (WLAs) in the Dry Weather Bacteria TMDL are expressed as the number of allowable days that the Santa Monica Bay beaches may exceed the Basin Plan water quality objectives for protection of Water Contact Recreation (REC-1) in marine waters, specifically the water quality objectives for bacteria... Tables 7-4.1, 7-4.2a, and 7-4.3 of the [Los Angeles River] Basin Plan set forth the pertinent provisions of the Dry Weather Bacteria TMDL. They require that during Summer Dry Weather there shall be no exceedances in the Wave Wash of the single sample or the geometric mean bacteria objectives set to protect the Water Contact Recreation (REC-1) beneficial use in marine waters. Accordingly, a prohibition is included in this Order barring discharges from a MS4 to Santa Monica Bay that result in exceedance of these objectives. Since the TMDL and the WLAs contained therein are expressed as receiving water conditions, Receiving Water Limitations have been included in this Order that are consistent with and implement the zero exceedance day WLAs.

[Provision 32] These Receiving Water Limitations apply at the compliance monitoring sites identified in the Santa Monica Bay Beaches Bacterial TMDLs Coordinated Shoreline Monitoring Plan dated April 7, 2004.1 Compliance with the Receiving Water Limitations shall be determined using shoreline monitoring data obtained in conformance with the Santa Monica Bay Beaches Bacterial TMDLs Coordinated Shoreline Monitoring Plan dated April 7, 2004.

In Practice: Allowing Sources to Establish Benchmark Values for Pollutants in the City of Gresham, Oregon

The MS4 permit for the City of Gresham requires that the permittees develop benchmark values for applicable TMDLs. The permit language is as follows:

Schedule D.2.(d)

i) Progress toward reducing TMDL pollutant loads must be evaluated by the co-permittee through the use of performance measures and pollutant load reduction benchmarks developed and listed in the SWMP.

(1) ...

(2) A benchmark is a total pollutant load reduction estimate for each parameter or surrogate, where applicable, for which a [Waste Load Allocation] WLA is established at the time of permit issuance. A benchmark is used to measure the overall effectiveness of the storm water management plan in making progress toward the wasteload allocation (this estimate will be related to the statistical variability of the underlying data and may be stated as a range), and is intended to be a tool for guiding adaptive management activities. A benchmark is not a numeric effluent limit; rather it is a goal that is subject to the maximum extent practicable standard. The co-permittee must provide the rationale for the proposed benchmark, which includes an explanation of the relationship between the benchmarks and the TMDL wasteload allocations. Any limiting factors related to the development of a benchmark, such as data availability and data quality, must also be included in this rationale. The Interim Evaluation Report City of Gresham & Co-permittees (May 1, 2006, 4.0 Benchmark.Evaluation for Gresham) summarizes the benchmarking process developed by the City of Gresham for TMDLs within the Columbia Slough.

In Practice: Specifying Pollutant Concentrations and BMPs Necessary to Make Adequate Progress in Oregon

The state of Oregon includes two options in the general permit for construction activities (www.deq.state.or.us/wq/stormwater/constappl.htm) that must be implemented to meet the goals of any turbidity or sediment TMDL—either meeting a benchmark concentration in the runoff established by the permitting authority or implementing a set of BMPs specific to the pollutant of concern. The exact permit language follows:

2. Water Quality Requirements for TMDL and 303(d) Listed Waterbodies

In addition to other applicable requirements of this permit, if sediment or turbid water from a permit registrant's construction project has the potential to discharge into waterbodies that are listed for turbidity or sedimentation on the most recently EPA-approved Oregon 303(d) list or that have an established Total Maximum Daily Load (TMDL) for sedimentation or turbidity, the permit registrant must implement one of the two following sets of actions, in accordance with Schedule C.

a. Option #1: Collect and analyze samples for turbidity in stormwater runoff from the construction site as required by Condition B.2. (p. 12) and compare the results to the benchmark value of 160 Nephelometric Turbidity Units (NTUs). The benchmark is used to determine if best management practices are effective; it is not an effluent limit. If any stormwater sample exceeds the benchmark, then the permit registrant must evaluate the best management practices (BMPs) and the adequacy of the ESCP and take corrective actions. If after such actions have been implemented and sample results still exceed the 160 NTU benchmark, the requirements of Option #2 below must be followed, and the permit registrant must submit an Action Plan to the department identifying the selected BMP(s) that will be implemented and the rationale for choosing the selected BMP(s).

b. Option #2: In addition to the applicable BMPs required by Condition A.7., implement one or more of the following BMPs to control and treat sediment and turbidity:

- i. Compost berms, compost blankets, or compost socks;
- ii. Erosion control mats (rolled or blown);
- iii. Tackifiers used in combination with perimeter sediment control BMPs;
- iv. Established vegetated buffers sized at 50 feet plus 25 feet per 5 degrees of slope;
- v. Water treatment by electro-coagulation, chemical flocculation, or filtration; or
- vi. Other substantially equivalent sediment or turbidity BMP approved by the department.

The selected BMP(s) must be specifically identified in the ESCP [erosion and sediment control plan] as addressing this condition of the permit, and the rationale for choosing the selected BMP(s) must also be provided.

In this example, the permittee has two choices for demonstrating that the construction project is implementing the goals of the TMDL. The permittee would either need to apply Option A and monitor the effluent per the requirements of the permit to show that the benchmark turbidity value is being met at the construction project. Or the permittee would need to demonstrate through inspection reports, that the BMPs required in a basic SWPPP as well as the additional BMPs defined by Option B are implemented and operating as designed on the site.

5.2.4. Adjusting Implementation for Continuous Improvements (Key Question 6)

Adaptive management focuses on learning from the information gathered through monitoring and assessment and making changes to implementation strategies on the basis of the information collected. Sources can continue to implement BMPs, as well as overall SWMPs and SWPPPs, if the information gathered through the process and summative analyses show the necessary progress toward implementing the WLA. If progress is not adequate, planners should develop recommendations and requirements that will allow sources to answer key question 6:

5.2.4.1. Answer Key Question 6: Identifying Modifications to Implementation Strategy

Because the adaptive management approach is not linear but iterative, TMDL and permit writers can develop recommendations and requirements for sources that focus on taking the information from key questions 4 and 5 to adjust the current implementation strategy. This could entail conducting an efficiency audit of existing BMPs to determine if they are properly installed, operated, and maintained, or recommend that sources identify the most effective BMPs after a set number of years of operation (so that these most effective BMPs are used in the future). In addition, modifications could involve revisiting key question 3 to determine if additional BMPs are necessary to make continuous improvements. Adaptive management actions might include retrofitting or adjusting previously installed BMPs that are not performing as expected or compiling lessons learned from implementation activities to help in future implementation planning.

It is important to note that permit writers include requirements that can facilitate adaptive management activities in existing individual and general stormwater permits, such as recording keeping and reporting requirements associated with inspections and, where applicable, monitoring activities. For example, construction stormwater permits might include requirements to conduct weekly stormwater monitoring and visual BMP inspections; where information from these activities show BMPs are not performing adequately, stormwater sources must modify the SWPPP accordingly. MS4 stormwater permits contain requirements for developing annual SWMP reports that assess the performance of BMPs and include detailed information on planned modifications. While these permit requirements might not have an explicit link to WLAs, sources should already have experience in collecting and analyzing performance information and applying that information to improve the effectiveness of SWPPPs and SWMPs.

5.3. Resources

5.3.1. BMP Inventory

1. USEPA (U.S. Environmental Protection Agency). 2007. *Municipal Separate Storm Sewer System (MS4) Program Evaluation Guidance*. U.S. Environmental Protection Agency, Office of Wastewater Management. EPA-833-R-07-003 (field test version)
www.epa.gov/npdes/pubs/ms4guide_withappendixa.pdf and
www.epa.gov/npdes/pubs/ms4guide_appendicesb-d.pdf

This document is available to assist in assessing the compliance and effectiveness of Phase I and Phase II MS4 stormwater programs, including compiling a comprehensive BMP inventory. Sources can also use this document to conduct self-audits of SWMPs.

5.3.2. BMP Selection

1. ASCE (American Society of Civil Engineers). 2001. *Guide for Best Management Practice Selection in Urban Developed Areas*. American Society of Civil Engineers, Reston, VA.
www.asce.org/bookstore/book.cfm?book=4058

This guide examines permanent structural techniques which can be used for retrofitting the stormwater management systems in existing developed areas.

2. Washington Department of Ecology. 2005. *Stormwater Management Manual for Western Washington*. Washington Department of Ecology, Olympia, WA.
www.ecy.wa.gov/programs/wq/stormwater/manual.html

This manual focuses on the applicability, technical design, construction, and maintenance of a range of stormwater management practices for use in western Washington to achieve water quantity and water quality control.

3. Maryland Department of the Environment. 2000. *Maryland Stormwater Design Manual*. Maryland Department of the Environment, Baltimore, MD.
www.mde.state.md.us/Programs/WaterPrograms/SedimentandStormwater/stormwater_design/index.asp

This manual focuses on the applicability, technical design, construction, and maintenance of a range of stormwater management practices for use in Maryland to achieve water quantity and water quality control.

4. New Jersey Department of Environmental Protection. 2004. *New Jersey Stormwater Best Management Practices Manual*. New Jersey Department of Environmental Protection, Trenton, NJ.
www.njstormwater.org/bmp_manual2.htm

This manual focuses on the applicability, technical design, construction, and maintenance of a range of stormwater management practices for use in New Jersey to achieve water quantity and water quality control.

5. University of Wisconsin – Extension. 2000. *Wisconsin Stormwater Manual: Technical Design Guidelines for Stormwater Management Practices*. University of Wisconsin Extension, Madison, WI. <http://learningstore.uwex.edu/Wisconsin-Storm-Water-Manual-P603C123.aspx>.

This manual focuses on the applicability, technical design, construction, and maintenance of a range of stormwater management practices for use in Wisconsin to achieve water quantity and water quality control.

6. Center for Watershed Protection. 2003-2008. Urban Subwatershed Restoration Manual Series. Center for Watershed Protection, Ellicott City, MD. www.cwp.org/Store/usrm.htm.

This 11 manual series covers the seven major practices used to restore urban watersheds: stormwater retrofits, stream repair, riparian management, discharge prevention, pollution source controls, watershed forestry and municipal operations. In addition, the series outlines new methods for desktop and field assessment and stakeholder management to develop effective small watershed restoration plans, and presents an integrated framework for urban watershed restoration.

5.3.3. Volume Control

1. Zomodi, K. 2007. *Effectiveness of Time of Concentration Elongation on Peak Flow Reduction*. 2nd National Low Impact Development Conference, March 12–14, 2007. www.bae.ncsu.edu/topic/lidconference07/A6/A6.4.Effectiveness%20of%20Time%20of%20Concentration%20Elongationon%20on%20Peak%20Flow%20Reduction.pdf

This presentation discusses the findings of a study intended to theoretically evaluate the relative impact of time of concentration elongation on peak flow reduction under typical conditions of LID use.

2. Stein, Eric D. 2005. *Effect of Increases in Peak Flows and Imperviousness on Stream Morphology of Ephemeral Streams in Southern California*. Technical Report 450. Southern California Coastal Water Research Project, Westminster, CA. www.environmental-expert.com/files/19961/articles/4562/4562.pdf.

This technical report investigates the effects of urbanization on ephemeral or intermittent streams in Southern California. The study seeks to (from the document) establish a stream channel classification system for Southern California streams, assess stream channel response to watershed change, develop deterministic/predictive relationship between changes in IC and stream channel enlargement and provide a conceptual model of stream channel behavior that may be used as the basis for a future numeric model. Eight watersheds and eleven sites were selected for study.

5.3.4. Green Infrastructure and Low Impact Development

1. Horner, R., C. May, E. Livingston, D. Blaha, M. Scoggins, and J. Tims. (n.d.). *Structural and Non-Structural BMPs for Protecting Streams*. Watershed Management Institute, Crawfordville, FL. www.chesterfield.gov/CommunityDevelopment/Engineering/LIDGrant/Studies/HornerMay2001Paper.pdf

This paper presents findings from a study of the effects of non-structural BMPs, including riparian buffers and retention of natural wetlands, on three stream ecosystems to help guide application of these practices in low-impact urban design.

2. Kloss, C, and C. Calarusse. 2006. *Rooftops to Rivers: Green Strategies for Controlling Stormwater and Combined Sewer Overflows*. Natural Resources Defense Council, New York City, NY. www.nrdc.org/water/pollution/rooftops/contents.asp

This policy guide provides decisionmakers with ideas on how to incorporate green strategies into urban landscapes to address the effects of wet weather on water quality. Includes nine case studies.

3. USEPA (U.S. Environmental Protection Agency). 2008. *Incorporating Green Infrastructure Concepts into Total Maximum Daily Loads*. U.S. Environmental Protection Agency, Washington, DC. www.epa.gov/owow/tmdl/stormwater/

This 11 page fact sheet provides recommendations for incorporating GI and LID concepts into various elements of a TMDL and provides two TMDL case studies.

5.3.5. BMP Performance Literature Values

1. American Society of Civil Engineers³ (ASCE) and EPA's International Stormwater BMP Database: www.bmpdatabase.org/

The database contains more than 300 BMP studies, performance analysis results, tools for use in BMP performance studies, monitoring guidance and other study-related publications. The overall purpose of the project is to provide scientifically sound information to improve the design, selection, and performance of BMPs. Continued population of the database and assessment of its data will ultimately lead to a better understanding of factors influencing BMP performance and help to promote improvements in BMP design, selection and implementation.

2. FHWA (Federal Highway Administration). 2002. *Stormwater Best Management Practices in an Ultra-Urban Setting: Selection and Monitoring*. Federal Highway Administration, Landover, MD. www.fhwa.dot.gov/environment/ultraurb/

The purpose of this document is to provide a planning-level review of the applicability and use of new and more traditional BMPs in ultra-urban areas. The document presents data, design criteria, and monitoring study results on BMPs implemented in ultra-urban areas

3. Pitt, R.E., A. Maestre, and R. Morquecho. 2004. The National Stormwater Quality Database (NSQD, version 1.1). University of Alabama, Tuscaloosa, AL. <http://unix.eng.ua.edu/~rpitt/Research/ms4/mainms4.shtml> and <http://unix.eng.ua.edu/~rpitt/Research/ms4/Paper/recentpaper.htm>

These stormwater quality data and site descriptions are to describe the characteristics of national stormwater quality, provide guidance for future sampling needs, and enhance local stormwater management activities in areas having limited data. The monitoring data was collected over nearly a 10-year period from more than 200 municipalities throughout the country. This project is creating a national database of stormwater monitoring data collected as part of the existing stormwater permit program, providing a scientific analysis of the data, and providing recommendations for improving the quality and management value of future NPDES monitoring efforts.

4. University of Massachusetts Amherst's Massachusetts Stormwater Technology Evaluation Project (MASTEP), Stormwater Technologies Clearinghouse: www.mastep.net/

This searchable database contains validated performance data and technical information on innovative stormwater treatment technologies. The Technology Acceptance and Reciprocity

Partnership (TARP) protocol is the basis for evaluating treatment efficiencies for various pollutants and the Web site is designed to help stakeholders interpret information such as site and environmental considerations as well as whether performance studies meet the minimum TARP requirements. It also serves as a repository for test reports and performance data from a variety of sources.

5. Fraley-McNeal, F., T. Schueler, and R. Winer. 2008. National Pollutant Removal Performance Database Technical Brief (Version 3.0). Center for Watershed Protection, Ellicott City, MD. www.cwp.org/Resource_Library/Center_Docs/SW/bmpwriteup_092007_v3.pdf

The updated database was statistically analyzed to derive the median and quartile removal values for each major group of stormwater BMPs. The data are presented as box and whisker plots for the various pollutants found in stormwater runoff.

6. EPA's Urban BMP Performance Tool:
<http://cfpub.epa.gov/npdes/stormwater/urbanbmp/bmpeffectiveness.cfm>

Based largely on data from the International Stormwater BMP Database, this tool allows users to search BMP study summaries based on the pollutants measured, BMPs examined, or total volume of stormwater runoff reduced. Search results are displayed in a tabular format sorted by effluent concentration, and additional details on each study can be accessed by clicking on the study title. The Urban BMP Performance Tool also includes background information about BMP performance, including basic information on understanding how BMP affect concentration, volume and total load.

7. University of New Hampshire Stormwater Center, Nonpoint Education for Municipal Officials (NEMO), Innovative Stormwater Management Inventory Database:
www.erg.unh.edu/stormwater/index.asp

This searchable and amendable database highlights innovative stormwater management techniques such as low impact design, used in New England. The database contains information on bioretention areas, green roofs, rain gardens, detention pond retrofits, tree filters, and constructed wetlands.

5.3.6. Model Applicability

1. USEPA. 2005. *TMDL Model Evaluation and Research Needs*. EPA/600/R-05/149. U.S. Environmental Protection Agency, Office of Research and Development, National Risk Management Research Laboratory, Cincinnati, OH.
www.epa.gov/nrmrl/pubs/600r05149/600r05149.htm

This report documents the review of more than 60 available watershed and receiving water models for their applicability to TMDL development and implementation. It discusses model selection on the basis of model capabilities and provides a series of tables rating the capabilities or applicability the models using the categories of TMDL endpoints, general land and water features, special land processes, special water processes, and application considerations. The document also provides individual fact sheets for each reviewed model.

2. USEPA. 1997. *Compendium of Tools for Watershed Assessment and TMDL Development*. EPA 841-

B-97-006. U.S. Environmental Protection Agency, Office of Water, Office of Wetlands, Oceans, and Watersheds, Washington, DC. www.epa.gov/owow/tmdl/comptool.html

This document reviews more than 50 watershed, receiving water and ecological assessment models. The document provides factsheets for each model that describes model components, methods, applications, pollutants addressed, limitations, input data requirements, and type of output. The document also contains information on model selection for specific applications, model calibration, and model verification.

3. USEPA (U.S. Environmental Protection Agency). 2008. *Handbook for Developing Watershed Plans to Restore and Protect Our Waters*. U.S. Environmental Protection Agency, Washington, DC. www.epa.gov/nps/watershed_handbook/

Chapter 8 of this document focuses on methods for estimating pollutant loads, including the use of watershed models. This chapter provides assistance in selecting and applying watershed models to estimate pollutant loads from existing conditions.

5.3.7. Stormwater Program Evaluation

1. CASQA (California Stormwater Quality Association). 2007. *Municipal Stormwater Program Effectiveness Assessment Guidance*. California Stormwater Quality Association, Menlo Park, CA. www.casqa.org

This document provides stormwater managers with a variety of stormwater program assessment strategies and methods appropriate for different stormwater program elements and outcome levels.

2. USEPA (U.S. Environmental Protection Agency). 2007. *Municipal Separate Storm Sewer System (MS4) Program Evaluation Guidance*. U.S. Environmental Protection Agency, Office of Wastewater Management. EPA-833-R-07-003 (field test version) www.epa.gov/npdes/pubs/ms4guide_withappendixa.pdf and www.epa.gov/npdes/pubs/ms4guide_appendicesb-d.pdf

This document is available to assist in assessing the compliance and effectiveness of Phase I and Phase II MS4 stormwater programs, including compiling a comprehensive BMP inventory. Sources can also use this document to conduct self-audits of SWMPs.

5.3.8. BMP Monitoring

1. Washington Department of Ecology. 2008. *Guidance for Evaluating Emerging Stormwater Treatment Technologies, Technology Assessment Protocol* (revised). Publication # 02-10-037. Washington Department of Ecology, Olympia, WA. www.ecy.wa.gov/biblio/0210037.html

This document's primary purpose is to establish a testing protocol and process for evaluating and reporting on the performance and appropriate uses of emerging stormwater treatment technologies. This document is also intended for use in evaluating public domain practices possibly resulting in changes to the design standards for these practices in the state's *Stormwater Management Manual*.

2. University of Minnesota. 2008. *Assessment of Stormwater Best Management Practices*. University of Minnesota, St. Paul, MN.
<http://wrc.umn.edu/outreach/stormwater/bmpassessment/assessmentmanual/>

This manual provides information on four levels of a BMP assessment program and provides assessment procedures for source reduction BMPs, filtration practices, infiltration practices, sedimentation practices, and biologically enhanced practices.

3. TARP (Technology Acceptance and Reciprocity Partnership). 2003. *TARP Protocol for Stormwater Best Management Practice Demonstrations*. Final August 2001. Updated July 2003.
www.dep.state.pa.us/dep/deputate/pollprev/techservices/tarp/pdf/Tier2protocol.pdf

This protocol describes a set of uniform criteria on evaluating stormwater BMP performance that is acceptable to the endorsing states (California, Massachusetts, Maryland, New Jersey, Pennsylvania, Virginia). The protocol primarily deals with the demonstration of BMPs that are designed for one or more of the following: (1) directing and distributing flows; (2) reducing erosive velocities; and (3) removing contaminants such as suspended or dissolved pollutants from collected stormwater through physical and chemical processes such as settling, media-filtering, ion-exchange, carbon adsorption, and precipitation.

4. Stricker, E., and M. Quigley (URS Greiner Woodward Clyde), ASCE (American Society of Civil Engineers), and USEPA (U.S. Environmental Protection Agency). 1999. *Determining Urban Stormwater Best Management Practice (BMP) Removal Efficiencies*. American Society of Civil Engineers, Urban Water Resources Research Council, City, ST, and U.S. Environmental Protection Agency, Office of Water, Washington, DC. www.bmpdatabase.org/docs/task3_1.pdf

This technical memorandum provides an overview of methods for evaluating the efficiency, performance, and effectiveness of BMPs through analysis of water quality, flow, and precipitation data for monitored storm events as well as BMP design attributes collected and stored in the National Stormwater Best Management Practices Database.

5.3.9. Outfall Monitoring

1. USEPA (U.S. Environmental Protection Agency). 1992. *NPDES Stormwater Sampling Guidance Document*. EPA 833-B-92-001. U.S. Environmental Protection Agency, Washington, DC.
www.epa.gov/npdes/pubs/owm0093.pdf

5.3.10. Receiving Water Monitoring

1. Stormwater Monitoring Coalition's Model Monitoring Technical Committee. 2004. *Model Monitoring Program for Municipal Separate Storm Sewer Systems in Southern California. August 2004*. Technical Report #419. ftp://ftp.sccwrp.org/pub/download/PDFs/419_smc_mm.pdf

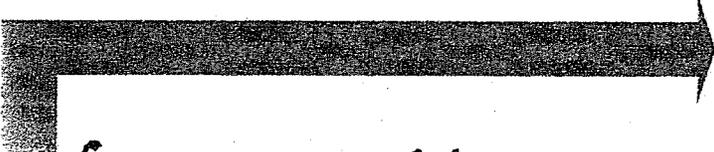

This report describes a model monitoring program for receiving waters affected by urban runoff in both wet and dry weather.

2. USGS (U.S. Geological Survey). Variously dated. *National Field Manual for the Collection of Water-Quality Data*. U.S. Geological Survey Techniques of Water-Resources Investigations, book 9, chaps. A1-A9. U.S. Geological Survey, Reston, VA. <http://pubs.water.usgs.gov/twri9A>

This manual includes information and detailed descriptions of water quality sampling methods.

Chapter Six Coordinating TMDLs and Stormwater Permits

What's included in this chapter

- ✓ Discussion of the type of permit requirements (e.g., water quality controls and effluent limitations, monitoring and adaptive management, reporting) that permit writers can develop with input from TMDL writers.
- ✓ Options for connecting TMDLs and stormwater permit language.

What you should know after reading this chapter

- ✓ Possible approaches for conveying TMDL-specific recommendations through a general permit without reopening the permit.
- ✓ Options for incorporating TMDL recommendations by reference into stormwater permits to create enforceable permit requirements.

Potential roles and responsibilities under this activity

If you are a TMDL writer

1. Work with permit writers to determine if stormwater permits will reference recommendations in TMDL reports and, where applicable, implementation plans.
2. Develop recommendations and other language for TMDL reports and, where applicable, implementation plans that stormwater permits can incorporate by reference.

If you are a stormwater permit writer

1. Work with TMDL writers to determine what recommendations TMDL reports and, where applicable, implementation plans will contain that stormwater permits can incorporate by reference.
2. Develop appropriate stormwater permit language that implements approved WLAs and are consistent with WLA assumptions.

6. COORDINATING TMDLS AND STORMWATER PERMITS

Improving the communication between TMDLs and permit writers can result in more effective implementation of TMDLs into stormwater permits. Considerations for developing a connection between the TMDL and the stormwater permit can include the following:

- What type of permit requirements (e.g., water quality controls and effluent limitations, monitoring, reporting) can permit writers consider to facilitate implementation of stormwater WLAs?
- How can permit writers, with information provided by TMDL writers, describe these elements?
- What can each programmatic document (e.g., TMDL reports or stormwater permits) say in relation to the other to facilitate TMDL implementation?

As discussed in Chapter 1 of this Handbook, TMDLs include technical analyses that are not self-implementing. For point sources, permit limits that are consistent with the WLA are enforceable through NPDES permits. It is the permit writer's responsibility to interpret and incorporate information from the TMDL into permits, thereby turning them into enforceable requirements. Stormwater permit writers therefore can incorporate data and information provided in the TMDL directly into the permit, or can include information indirectly (e.g., reference sections of the TMDL). As a result, TMDLs and permits can work in tandem to identify effective implementation methods and make progress toward restoring impaired waters.

As shown in Figure 22, the step of TMDL implementation involves identifying and implementing management options to implement the LAs and WLAs. This chapter discusses ways to coordinate development of permit language with the information and data provided in the TMDL report to promote effective implementation of TMDLs through permits.

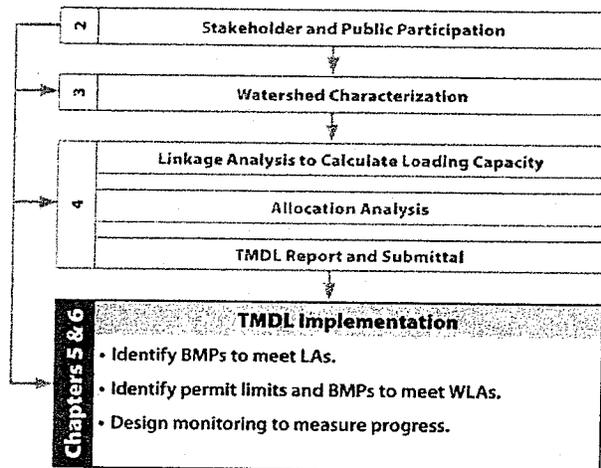

Figure 22. Illustration of the steps in the TMDL process, including activities related to TMDL implementation.

6.1. Options for Implementing TMDLs in Permits

Stormwater permit writers often consider TMDL-related information as they develop permit requirements such as applicability, implementing water quality controls through SWMPs and SWPPPs, developing a monitoring plan, reporting, and assessing progress. Under each of these permit elements, permit writers can consider a variety of options for expressing requirements related to TMDL implementation. The two primary types of stormwater permits—individual and general permits—can affect options and approaches for coordinating TMDL language with the permit.

Regulatory Requirements and EPA Guidance on Establishing Stormwater Permit Requirements to Implement WLAs

In the 2002 memorandum, *Establishing TMDL WLAs for Stormwater Sources and NPDES Permit Requirements Based on Those WLAs*, EPA provides regulatory requirements and guidance on how stormwater permit requirements should link to stormwater source WLAs under approved TMDLs. With regard to stormwater permit requirements, such as effluent limitations and monitoring, the 2002 memorandum states the following:

- NPDES permit conditions must be consistent with the assumptions and requirements of available WLAs. See 40 CFR 122.44(d)(1)(vii)(B).
- WQBELs for NPDES-regulated storm water discharges that implement WLAs in TMDLs may be expressed in the form of BMPs under specified circumstances. See 33 U.S.C. 1342(p)(3)(B)(iii); 40 CFR 122.44(k)(2)&(3). If BMPs alone adequately implement the WLAs, then additional controls are not necessary.
- EPA expects that most WQBELs for NPDES-regulated municipal and small construction storm water discharges will be in the form of BMPs, and that numeric limits will be used only in rare instances.
- When a non-numeric WQBEL is imposed, the permit's administrative record, including the fact sheet when one is required, needs to support that the BMPs are expected to be sufficient to implement the WLA in the TMDL. See 40 CFR 124.8, 124.9, and 124.18.
- The NPDES permit must also specify the monitoring necessary to determine compliance with effluent limitations. See 40 CFR 122.44(i). Where effluent limits are specified as BMPs, the permit should also specify the monitoring necessary to assess if the expected load reductions attributed to BMP implementation are achieved (e.g., BMP performance data).
- The permit should also provide a mechanism to make adjustments to the required BMPs as necessary to ensure their adequate performance.

Individual permits provide the permit writer with an opportunity to develop specific permit requirements because the permit focuses on one source, or a primary source and its co-permittees. As a result, permit writers can feasibly work with the TMDL writer in developing a permit that directly reflect elements of the TMDL analyses and, where available, implementation plans. This could include incorporating information provided in the TMDL directly into the permit. General permits apply to a broad category of sources in a geographic area. In most cases, general permits are statewide, but in some cases, permit writers can develop and issue general permits on a watershed-scale. While general permits provide permit writers with a degree of permitting efficiency, this type of permit may not provide the same opportunities for tailoring requirements and adding a level of specificity. To implement TMDLs through statewide general stormwater permits, permit writers can use broad requirements that direct sources to identify applicable TMDLs and modify their SWMPs or SWPPPs accordingly. Implementing TMDLs through watershed-scale general permits can provide permit writers with more flexibility to incorporate specific elements, such as BMP performance standards, that broadly apply to a group of sources. Permit writers could also add specificity into general permits to promote TMDL implementation, such as developing technical appendices that include TMDL-specific elements applicable to stormwater sources.

Categories of permits elements discussed in this section include determining applicability, water quality controls, and monitoring. These categories apply to both individual and general permits, although the approaches used in each category will vary depending on the type of permit. Each category contains a description of options based on real-world examples, and are available in the Appendix.

6.1.1. Requirements Related to Determining Applicability

Stormwater permits often require permittees to first determine if an existing TMDL is applicable to its discharge. The key questions for making this determination are:

1. Is there a discharge to an impaired waterbody with an approved TMDL?
2. Does the discharge include the pollutant of concern addressed in the approved TMDL?

One option for determining applicability requirements could be for a state that the source should make a determination on the basis of the knowledge of their location and discharges, and provide information on how to determine if a discharge goes to an impaired waterbody, such as a link to a Web site that provides lists of impaired waterbodies. Another option could be to provide more detailed information to sources to help them determine if they contribute to one or more impairments, where to go for more information on a specific TMDL, or to even include the applicable TMDL data and information in an appendix to the permit.

Applicability can go beyond whether the source is discharging to an impaired waterbody to determine if the discharge contributes to the impairment(s). A source might have a discharge to an impaired waterbody, but if the discharge does not contribute to the impairment(s) (e.g., does not contain the pollutant of concern) the additional controls related to the impaired waterbody might not apply. If permit writers want to use pollutant-specific considerations as a factor in determining applicability, there are various options to consider. One option could be for permit writers to limit permit coverage for sources that discharge to impaired waterbodies with impairments caused by pollutants commonly associated with that source. For example, permit writers could state that industrial facilities are not eligible for coverage under an industrial general permit if the facility discharges to an impaired waterbody with an approved TMDL for metals. Another option for permit writers could be to require sources to conduct discharge monitoring for a pollutant of concern or flow monitoring (or both) over a specified period of time to determine applicability. If the source can demonstrate that the discharge does not contribute to the impairment(s), the permit could then exempt the source from some or all additional TMDL implementation requirements.

In Practice: Requiring Sources to Determine Applicability in Tennessee

Tennessee's Phase II MS4 General Permit simply states that a permitted stormwater source must determine if any discharges go to an impaired waterbody. The permit states the following:

Determine whether stormwater discharge from any part of the MS4 significantly contributes directly or indirectly to a 303(d) listed (i.e., impaired) waterbody. Water quality impaired waters means any segment of surface waters that has been identified by the division as failing to support classified uses.... If you have 303(d) discharges described above, you must also determine whether a Total Maximum Daily Load (TMDL) has been developed by the division and approved by EPA for the listed waterbody.

In Practice: Providing Applicable TMDL Requirements as a Permit Appendix in Washington

The state of Washington's final Phase II MS4 general permits for regulated small MS4s in eastern and western portions of the state compile the information permitted stormwater sources need to determine TMDL requirement applicability. Each permit contains a separate appendix that lists all the applicable TMDLs, the specific requirements, and a list of the potential permittees to which each of the TMDLs applies.

In Practice: Using Geographic Location to Determine Applicability for Georgia's Industrial General Permit

Georgia's Industrial General Permit contains applicability requirements that are based on a permitted stormwater source's geographic location, relative to an impaired stream segment. Permit language follows:

Any operator who intends to obtain coverage under this permit for storm water discharges associated with industrial activity into an Impaired Stream Segment, or within one (1) linear mile upstream of and within the same watershed as, any portion of an Impaired Stream Segment, identified as partially supporting or not supporting designated uses on Georgia's most current 303(d) list, must satisfy the requirements of Part III.C of this permit if the pollutant(s) of concern for which the Impaired Stream Segment has been listed may be exposed to storm water as a result of current or previous industrial activity at the facility. Those discharges that are within one (1) linear mile of an Impaired Stream Segment, but are not within the watershed of any portion of that stream segment are excluded from this requirement.

Georgia's 303(d) list is at www.gaepd.org.

In Practice: Identifying Pollutants of Concern in Permit Eligibility Requirements

Minnesota's CGP lays out what are the pollutants of concern for construction sites that discharge to impaired waterbodies. Construction site operators that want coverage under Minnesota's CGP must implement the applicable BMPs listed in the permit and any other specific implementation measures specified in the approved TMDL to which they are subject. The draft Minnesota CGP states the following:

Discharges to waters identified as impaired pursuant to section 303 (d) of the federal Clean Water Act (33 U.S.C. § 303(d)) where the identified pollutant(s) or stressor(s) are phosphorus (nutrient eutrophication biological indicators), turbidity, dissolved oxygen, or biotic impairment (fish bioassessment, aquatic plant bioassessment and aquatic macroinvertebrate bioassessment), and with or without a U.S. Environmental Protection Agency (USEPA) approved Total Maximum Daily Load (TMDL) for any of these identified pollutant(s) or stressor(s)" must meet the applicable requirements of Part III.A.9, which include specific BMPs to limit these stressors.

6.1.2. Requirements Related to Identifying and Implementing Water Quality Controls

After EPA has approved a TMDL, permit writers must develop effluent limitations and permit conditions that are consistent with the assumptions and requirements of the approved WLA. In the context of stormwater permits, effluent limitations are most often expressed as BMPs, but permit writers can also use numeric limits (e.g., loads, concentrations, or performance standards). Effective TMDL implementation often relies on selecting the right mix of control measures to achieve progress toward addressing the WLA. Chapter 5 of this Handbook focuses on the technical resources and approaches for evaluating and selecting BMPs to implement the WLA.

Permit writers, in conjunction with information provided by TMDL writers, can consider a variety of approaches that involve either recommending BMPs or relying on sources to do the evaluation and selection on their own. Approaches for permit writers to consider are described below.

- **Requiring implementation of specific BMPs in the permit.** Under this option, permit writers could develop a proposed list of BMPs that a source could implement to reduce pollutant loadings to

implement the WLA. Permit writers could consider this approach when stormwater planners have conducted an internal analysis of possible BMPs. Given the resource-intensive nature of this option, this approach might be suitable for geographic areas that need certain types of BMPs (e.g., developing areas versus built-out areas of an MS4), or discreet sources (e.g., the only MS4 or construction site discharging to the impaired waterbody).

- **Providing a recommended menu of potential BMPs in the TMDL, implementation plan, or the permit for sources to evaluate and select.** This option is similar to the option described above in that TMDL and permit writers could develop a recommended list of BMPs. The difference between these options, however, is that this BMP list serves more as a menu of potential BMPs. Under this option, permit writers could provide some technical information related to each BMP to help sources evaluate and select appropriate BMPs. Sources would need to conduct a thorough analysis to select the appropriate suite of BMPs from the list to achieve progress toward implementing the WLA.
- **Referencing BMP performance standards in the TMDL, implementation plan, or the permit.** Under this option, TMDL and permit writers could recommend or reference performance standards for specific pollutants and allow sources to determine which BMPs will best meet the performance standard. One example might be a construction site must achieve a specific percent reduction in TSS, giving the source flexibility in the types of BMPs used to meet the standard. The TMDL and permit writer could provide recommendations on how sources could demonstrate that the selected BMPs can meet the required performance standards (e.g., using a combination of modeling and monitoring).
- **Recommending the selection of BMPs and developing benchmark values or performance measures.** This option has similarities to the option described above in that it focuses on the use of performance standards. However, under this option, permit writers could develop permit requirements that give sources the responsibility for developing the performance standards, often referred to in this context as benchmark values or performance measures. Permit requirements can focus on selecting BMPs to achieve progress toward implementing the WLA and developing performance measures that indicate the expected level of BMP performance. Beyond BMP performance, requirements can focus on developing quantifiable benchmarks that track the overall success of SWMPs and SWPPPs in reducing pollutant loads. If permit writers choose this option, it is important to note that sources might have concerns about compliance implications associated with benchmark values and performance measures. As a result, permit writers might want to consider developing permit language that specifies the intended use of performance measures and benchmark values—not as numeric effluent limits but as guideline values to facilitate adaptive management.
- **Requiring the review of existing BMPs and selecting additional BMPs to achieve progress toward addressing the WLA.** Under this option, permit writers could require sources to conduct an analysis of existing BMPs to determine the need for additional pollutant load reductions through improved BMP implementation or additional BMPs. Sources receive little technical guidance through the requirements, allowing them flexibility in conducting the analysis and justifying the selection of specific BMPs. Permit writers could consider including in the requirements a list of supporting documentation (e.g., calculations, assumptions, studies) that would provide the rationale for the proposed strategy to achieve progress toward addressing the WLA. This option is particularly effective when the the TMDL writer develops a WLA that permit writers can use as the basis for developing a performance standard. This approach provides permittees with flexibility in finding the optimal combination of existing and new BMPs to implement the WLA.

- **Consider numeric effluent limitations.** Permit writers might determine that BMPs are not an appropriate way to express effluent limitations and might choose to develop numeric effluent limitations as a feasible and appropriate way to incorporate the TMDL provisions into the permit.

There are no guidelines for determining which approach is most appropriate to use. It is likely that a variety of factors, including type of source, type of permit, and availability of resources, will influence which approach makes the most sense.

In Practice: Options for Water Quality Control Requirements

Existing stormwater permits use different types of requirements to ensure SWMPs and SWPPPs integrate effective BMPs for addressing stormwater source WLAs under approved TMDLs and, in some cases, impaired waterbodies without approved TMDLs. Provided below are examples of differing SWMP and SWPPP requirements for developing and implementing BMPs to address WLAs under various types of stormwater permits.

Broad Requirements for Permitted Stormwater Sources to Develop SWMPs and SWPPPs to Address Impairments and Stormwater Source WLAs

Tennessee Phase II MS4 General Permit

The general permit developed for use by regulated small MS4s in Tennessee contains a broad set of requirements for developing and implementing SWMPs. The requirements focus on evaluating whether the implementation of existing stormwater control measures is meeting the TMDL provisions, or if additional control measures are necessary. Permittees must document all control measures being implemented or planned to be implemented and provide a schedule of implementation for all planned controls. To demonstrate that control measures will meet TMDL requirements and assumptions, permittees must also provide associated calculations, assessments, reports, and other evidence that provided the rationale for selecting specific control measures.

Wisconsin Phase II MS4 General Permit

Under Wisconsin's Phase II MS4 general permit, permittees that discharge to an impaired waterbody must take steps to develop and implement an SWMP to reduce—and potentially eliminate—the pollutant of concern contributing to a waterbody impairment. Because the permit is a general permit and the requirements could apply to a wide range of pollutants, the permit uses broadly defined requirements to ensure permittees discharging to impaired waterbodies develop and implement SWMPs that will reduce the pollutant of concern. Specifically, the general permit language requires permittees to, "include a written section in its storm water management program that discusses the management practices and control measures it will implement as part of its program to reduce, with the goal of eliminating, the discharge of pollutant(s) of concern that contribute to the impairment of the waterbody. This section of the permittee's program shall specifically identify control measures and practices that will collectively be used to try to eliminate the MS4's discharge of pollutant(s) of concern that contribute to the impairment of the waterbody and explain why these control measures and practices were chosen as opposed to other alternatives."

Watershed-specific BMP and Performance Standard Requirements

Big Darby Creek Watershed (Ohio) Construction General Permit

To implement the Big Darby Creek Watershed TMDL, Ohio EPA developed and issued the Big Darby Creek Watershed CGP. The overall permit is intended to implement the pollutant load reduction targets established under the TMDL; therefore, the permit states that the "general permit requires control measures/BMPs for construction sites that reflect recommendations set forth in the U.S. EPA approved Big Darby Creek TMDL." The water quality control measures specified under the SWPPP requirements include a combination of management practices, effluent targets, and infiltration requirements necessary to support stream base flows and stream setbacks necessary to protect the stream channel. The permit also states that "the erosion, sediment, and stormwater management practices used to satisfy the conditions of this permit, should meet the standards and specifications in the most current edition of Ohio's Rainwater and Land Development manual or other standards acceptable to Ohio EPA unless otherwise specified as a condition of this permit."

Specific BMP Requirements for SWMPs and SWPPPs to Address Impaired Waterbodies and Implement Stormwater Source WLAs

Oregon Construction General Permit (1200-C)

If a permitted construction site has the potential to discharge sediment or turbid water to a waterbody with an approved TMDL for sedimentation or turbidity, or is listed on the state's 303(d) for impairment due to sedimentation or turbidity, Oregon's CGP requires the permittee to implement one of two sets of options. Under Option 2, the CGP requires permittees to implement one or more of six BMPs identified to control and treat sedimentation and turbidity, in addition to implementing the standard set of BMPs required of all erosion and sediment control plans (ESCP). The BMPs identified in the permit are as follows:

- Compost berms, compost blankets, or compost socks;
- Erosion control mats (rolled or blown);
- Tackifiers used in combination with perimeter sediment control BMPs;
- Established vegetated buffers sized at 50 feet plus 25 feet per 5 degrees of slope;
- Water treatment by electro-coagulation, chemical flocculation, or filtration; or
- Other substantially equivalent sediment or turbidity BMP approved by the department.

Permittees selecting Option 2 must indicate in the ESCP which of the six supplemental BMPs have been selected to address discharges to waterbodies impaired for sedimentation and turbidity.

Georgia Industrial Stormwater Permit (GAR000000)

Georgia's industrial stormwater permit contains requirements related to discharges into, or within 1 linear mile upstream of and within the same watershed as, any portion of an Impaired Stream Segment impaired for fecal coliform, as well as substances other than fecal coliform. Under the requirements for facilities discharging fecal coliform, the permit references an appendix that contains a list of BMPs specifically for animal processing plants that might be potential sources of fecal coliform. Permittees that do not meet the TSS benchmark value (used as a surrogate indicator for fecal coliform under this permit) in the first 12-month sampling period have one year to select, design, and implement supplemental BMPs from the list of BMPs provided in the appendix, or other appropriate BMPs.

Quantifiable Performance Targets to Determine the Need for Additional BMPs

City of Portland, Multnomah County, and Port of Portland (Oregon) Phase I MS4 Individual Permit No. 101314
Portland and its co-permittees are subject to an individual Phase I MS4 permit that contains a variety of requirements for developing and implementing an effective SWMP to address approved WLAs for the permitted MS4s. Permit conditions do not include recommended or required BMPs; instead, the permit requires co-permittees to select BMPs to implement the approved WLAs and develop quantifiable performance measures for assessing BMP effectiveness. Performance measures are pollutant load reduction estimates to facilitate an adaptive management approach to SWMP implementation—the quantifiable performance measures for BMPs are not numeric effluent limitations.

Washington Construction General Permit

The Washington Department of Ecology issued a CGP that contains requirements for three categories of permitted construction sites: (1) less than 1 acre; (2) between 1 and 5 acres; and (3) greater than 5 acres. Under this permit, permittees that discharge turbidity, fine sediment, high pH, or phosphorus to impaired waterbodies listed for one of these parameters is required to conduct regular sampling. If discharge sampling indicates that the permittee's discharge exceeds the water quality standard for turbidity, all future discharges are subject to a numeric effluent limitation equal to the water quality standard for turbidity. Exceedances of the numeric effluent limitation then triggers requirements for evaluating and modifying the SWPPP to include BMPs that will allow the permittee to meet the numeric effluent limitation for turbidity.

Numeric Effluent Limitations

Draft Ventura County Phase I MS4 Individual Permit No. CAS004002

The draft version (dated 08/28/07) of the Ventura County Phase I MS4 Individual permit addresses requirements under multiple TMDLs for multiple watersheds for a variety of pollutants of concern, including nitrogen compounds, bacteria, sediments, and toxicity. Rather than express effluent limitations in the form of BMPs, this version of the Ventura County Phase I MS4 individual permit addresses the TMDL WLAs as numeric WQBELs for dry weather and wet weather.

6.1.3. Monitoring Requirements

As discussed in Chapter 5, monitoring and assessment are essential to help sources to make progress toward implementing WLAs. Information generated through monitoring and assessment activities are also key to promoting adaptive management and continuous improvement in implementation activities. In addition, monitoring and assessment activities are key to quantifying pollutant load reductions achieved through SWMP and SWPPP implementation—first to establish a baseline of pollutant load reductions expected or achieved through BMPs implemented under existing SWMPs and SWPPPs and then to determine pollutant load reductions from any additional BMPs deemed necessary to address WLAs. Requirements related to quantifying pollutant load reductions focus on developing and implementing monitoring plans.

Many SWMP and SWPPP requirements related to meeting stormwater source WLAs include some type of monitoring requirements to gauge BMP effectiveness, overall SWMP and SWPPP effectiveness, and to facilitate adaptive management activities. Options for monitoring requirements include BMP performance monitoring, stormwater discharge outfall monitoring, and ambient in-stream water quality monitoring. Per EPA's 2002 memorandum, where stormwater permits contain effluent limitations expressed as BMPs, these permits should specify the monitoring necessary to determine if BMPs are achieving the expected pollutant load reductions. Therefore, stormwater permits that implement TMDLs often contain monitoring requirements that focus on BMP performance, such as benchmark monitoring to determine progress toward a pollutant reduction goal, and support adaptive management activities related to modifying SWMPs and SWPPPs to improve overall effectiveness. Where stormwater permits do contain numeric effluent limitations, monitoring requirements are likely to focus on determining compliance with applicable numeric effluent limitations.

It is important to note that many existing permits do not specifically require monitoring; however, monitoring might be warranted for these permits to assess TMDL implementation. Chapter 5 of this Handbook discusses monitoring and assessment issues and provides resources that can aid in the development of monitoring and assessment requirements.

In Practice: Options for Monitoring Requirements

General Monitoring Plan Development

Tennessee Phase II MS4 General Permit

Under the general permit, regulated small MS4s must describe a method for evaluating whether stormwater controls are adequate for meeting the requirements of the TMDL.

Performance and Benchmark Monitoring

City of Portland, Multnomah County, and Port of Portland (Oregon) Phase I MS4 Individual Permit No. 101314

To gauge the effectiveness of the SWMP in reducing TMDL pollutant loads to the MEP, the Portland and its co-permittees must include a specific strategy for implementing monitoring in the SWMP. Under this permit, co-permittees measure effectiveness according to the quantifiable performance measures and benchmarks that the permit requires them to establish to support SWMP adaptive management. According to the permit, performance measures are estimates of the effectiveness of BMPs expressed as pollutant load reduction estimates and benchmarks are total pollutant load reduction estimates for each parameter or surrogate, where applicable, for which a WLA is established at the time of permit issuance. Neither performance measures nor benchmarks are numeric effluent limits, but rather tools for guiding adaptive management activities.

Oregon Construction General Permit (1200-C)

If a permitted construction site has the potential to discharge sediment or turbid water to a waterbody with an approved TMDL for sedimentation or turbidity, or is listed on the state's 303(d) for impairment due to sedimentation or turbidity, Oregon's CGP requires the permittee to implement one of two sets of options. Under Option 1, the permittee must conduct stormwater monitoring to determine if discharges meet or exceed a benchmark value for turbidity (i.e., 160 NTUs) that indicates the effectiveness of BMPs. If any samples exceed the benchmark value, the permittee must evaluate existing BMPs and take corrective action. If stormwater discharge samples continue to exceed the benchmark value, the permittee must implement Option 2 (see description of Option 2 under the In Practice discussion related to water quality controls above) and submit an Action Plan that identifies additional BMPs to be implemented and the rationale for selecting the identified BMPs.

Washington Construction General Permit

Permittees covered under Washington's CGP must conduct turbidity sampling to determine compliance with the water quality standard for turbidity. The permit requires permittees to measure background turbidity in the 303(d)-listed receiving water immediately upstream (upgradient) or outside the area of influence of the discharge. For monitoring discharge turbidity, the permit requires permittees to measure at the point of discharge into the 303(d) listed receiving waterbody, inside the area of influence of the discharge or at the point where the discharge leaves the construction site, rather than in the receiving waterbody. Although the permit states that monitoring is used to determine compliance with the turbidity water quality standard, it appears that it functions more as a performance benchmark. If discharge turbidity exceeds the water quality standard for turbidity, all future discharges must comply with a numeric effluent limitation (equal to the water quality standard for turbidity). Future discharges exceeding the numeric effluent limitation triggers SWPPP modification requirements.

Compliance Monitoring

Draft Ventura County Phase I MS4 Individual Permit No. CAS004002

Compliance with the dry-weather and wet-weather numeric WQBELs under the draft version of the Ventura County Phase I MS4 Individual permit is determined through end-of-pipe monitoring at major outfalls. The draft version of the permit requires co-permittees to develop a wet-weather and dry-weather monitoring workplan for review and approval by the Regional Water Board.

6.1.4. Compliance Considerations

[This section still under internal review – do not quote or cite]

When developing permit requirements, permit writers will likely face issues and questions related to determining compliance. One key issue relates to establishing an appropriate compliance schedule for sources to implement a WLA (e.g., within a 5-year permit term or beyond). Permit writers can consider using interim limits or a phased implementation approach. Interim limits are a way for permit writers to schedule incremental progress toward implementing the WLA over time. One option is for the TMDL to reference, or for the permit to specify, the interim limits by providing a schedule with the required interim numeric targets in a specific timeframe. Another option to consider relates to the benchmarking approach (discussed earlier in this chapter) in which a source determines how much progress is feasible, over a specified time frame, to implement the WLA. The source could then submit the proposed benchmarks and associated schedule to the permit writer for review and approval.

Resources: The Appendix of this Handbook contains the actual stormwater permit language referenced in this section, as well as relevant requirements from other stormwater permits, for TMDL and permit writers to review and consider when discussing and developing requirements to implement TMDLs.

In Practice: Incorporating Interim TMDL Numeric Targets into Permits in San Diego, California

The San Diego Phase I MS4 permit (Order No. R9-2007-0001/NPDES No. CAS0108758) contains requirements to implement the Chollas Creek Diazinon TMDL. The permit includes a table that presents the WLA, interim TMDL numeric target, and percent reduction required over the permit duration. Permit language reads as follows:

- a. The Copermittees in the Chollas Creek watershed shall implement BMPs capable of achieving the interim and final diazinon Waste Load Allocation (WLA) concentration in the storm water discharge in Chollas Creek listed in Table 5.
- b. The Copermittees in the Chollas Creek watershed shall not cause or contribute to the violation of the Interim TMDL Numeric Targets in Chollas Creek as listed in Table 5. If the Interim TMDL Numeric Target is violated in Chollas Creek in more than one sample in any three consecutive years, the Copermittees shall submit a report that either 1) documents compliance with the WLA through additional sampling of the urban runoff discharge or 2) demonstrates, using modeling or other technical or scientific basis, the effectiveness of additional BMPs that will be implemented to achieve the WLA. The report may be incorporated into the Watershed Urban Runoff Management Program Annual Report unless the Regional Board directs an earlier submittal. The report shall include an implementation schedule.

6.2. Options for Connecting Programmatic Documents

TMDL and permit writers can not only work together to consider the appropriate types of conditions that could be developed to implement stormwater source TMDLs, but also can collaborate to decide how the associated programmatic documents, such as the TMDL report and the stormwater permit, can help articulate this information. The goal is to help ensure that no matter what document a permitted stormwater source refers to—the TMDL or the stormwater permit—each document has a clear and consistent connection to the information contained in the other. This section discusses options for TMDL and permit writers to consider when deciding how to develop a connection between the TMDL report and stormwater permits, as well as other related programmatic documents including implementation plans.

Within the TMDL report and stormwater permit, TMDL and permit writers have several possible options for developing a connection between the information contained in the document. In the TMDL report, the TMDL writer might develop a connection to the permit through the WLA or the implementation plan (if included as part of the TMDL report) or other components that could be included in the TMDL report or implementation plan (e.g. optional monitoring section). In stormwater permits, the connection to TMDLs can also vary. Permit requirements might appear as a comprehensive set of detailed special conditions related to stormwater discharges to impaired waterbodies with approved TMDLs (or listed waterbodies without an approved TMDL), or the requirements could appear throughout the permit under existing permit conditions related to SWMP and SWPPPs, monitoring, reporting, and other categories of requirements.

TMDL and permit writers can work together to develop the most appropriate section of each programmatic document to place stormwater-source-TMDL-related information. From there, TMDL and permit writers can decide the best approach for developing the connection, such as referencing elements contained in one programmatic document or directly including and referencing them in each. A brief discussion these approaches related to each type of programmatic document and its associated components is provided below.

6.2.1. Using the WLA to Connect to Permits

Per EPA's 2002 memorandum, regulations state that when a TMDL has been approved, NPDES permits should contain effluent limits and conditions consistent with the requirements and the assumptions of the WLA. One option is to describe and reference all relevant permit requirements for implementing the WLA within the the TMDL report. Under this approach, stormwater permits could state that sources should comply with the numeric WLA and the associated elements included in the TMDL document. This approach basically incorporates the WLA and associated implementation information into the permit by reference. It is important to note, that although this type of approach could facilitate connections between WLAs and general permits, it may result in permits that are more challenging to tailor with specific permit requirements.

Another option is to have stormwater permits directly incorporate the TMDL WLA information so that each programmatic document contains the same element using identical language, as opposed to just referencing the other document as is suggested above. While this more specific approach could be easier to apply when using individual or watershed-based stormwater permits, permit writers could also use this type of approach with general permits in conjunction with a regularly updated TMDL appendix that contains specific information for permittees.

In Practice: Referencing and Integrating TMDL Provisions in Permits in Washington

The Western Washington Phase II MS4 General Permit contains broad language to convey the requirements related to MS4s addressed by an approved TMDL. The body of the permit requires MS4s to comply with the specific actions described in applicable TMDLs. To aid permittees, the Washington Department of Ecology compiled all relevant, existing implementation actions from applicable TMDLs into a comprehensive appendix to the permit. By referencing the appendix in the permit, permit writers were able to ensure that the compilation of TMDL-specific activities would become enforceable permit requirements. The general permit language states the following:

The following requirements apply if an applicable Total Maximum Daily Load (TMDL) is approved for stormwater discharges from MS4s owned or operated by the Permittee. Applicable TMDLs are TMDLs which have been approved by EPA on or before the date permit coverage is granted. All Permittees shall be in compliance with the requirements of applicable TMDLs.

A. For applicable TMDLs listed in Appendix 2, affected permittees shall comply with the specific requirements identified in Appendix 2. Each Permittee shall keep records of all actions required by this Permit that are relevant to applicable TMDLs within their jurisdiction. The status of the TMDL implementation shall be included as part of the annual report submitted to Ecology.

Where monitoring is required in Appendix 2, the Permittee shall conduct the monitoring according to a Quality Assurance Project Plan (QAPP) approved by Ecology.

B. For applicable TMDLs not listed in Appendix 2, compliance with this Permit shall constitute compliance with those TMDLs.

C. For TMDLs that are approved by EPA after this Permit is issued, Ecology may establish TMDL related permit requirements through future permit modification if Ecology determines implementation of actions, monitoring or reporting necessary to demonstrate reasonable further progress toward achieving TMDL waste load allocations, and other targets, are not occurring and shall be implemented during the term of this Permit or when this Permit is reissued. Permittees are encouraged to participate in development of TMDLs within their jurisdiction and to begin implementation.

6.2.2. Using Implementation Plans to Connect to WLAs and Permits

While implementation plans are not a required component of a TMDL, many states do develop and include some form of an implementation plan in their TMDL document either to satisfy state regulatory requirements or to facilitate TMDL implementation. If TMDL and permit writers intend to engage in implementation planning activities and develop an implementation plan for stormwater source TMDLs, there are a few ways to consider developing a stronger connection between WLAs and permits through the use of implementation plans. One option for using implementation plans to connect stormwater source WLAs with stormwater permits is to have the implementation plan serve as the primary vehicle for referencing and conveying information relating to implementation of the stormwater source WLAs (e.g., supplemental BMPs, SWMP and SWPPP assessment and modification, monitoring plan development and implementation, adaptive management measures). The TMDL could include these elements by reference and the associated stormwater permits could then incorporate the implementation plan information by reference.

In Practice: Using Implementation Plans to Connect WLAs and Stormwater Permits

Implementation plans with recommendations to guide stormwater permit requirements:

Swamp Creek Fecal Coliform Bacteria TMDL (Washington) Water Quality Improvement Report and Implementation Plan

The Water Quality Improvement Report and Implementation Plan includes recommendations for each MS4 as well as "anticipated actions" or requirements that the permitting authority intends to include in associated NPDES permits (Appendix D). The recommendations are those measures and practices that are intended to reduce bacterial pollution to Swamp Creek.

Big Darby Creek (Ohio) Watershed TMDLs

The implementation portion of the TMDL develops a tiered approach to monitoring progress and validating the TMDL:

1. Confirmation of completion of implementation plan activities
2. Evaluation of attainment of chemical water quality criteria
3. Evaluation of biological attainment.

A TMDL revision will be triggered if any one of the validation steps is not being completed or if the water quality standards are not being attained after an appropriate time interval. Once the majority of or the major implementation plan items have been carried out or the water quality monitoring shows consistent and stable improvements then a watershed assessment would be completed to evaluate attainment of the use designations. If water quality monitoring does not show improvement or waterbodies are still not attaining water quality standards after the implementation plan has been carried out, a TMDL revision would be initiated.

Implementation plans with specific BMPs using adaptive management and phased implementation:

Chloride TMDL Report: Shingle Creek, Minnesota

The implementation portion of the TMDL report calls for the use of adaptive management principles. According to the report, adaptive management is appropriate because it is difficult to predict the chloride reduction that will occur from implementing strategies with limited amount of data available to predict expected reductions. The report requires continued monitoring and *course corrections* based on monitoring results.

Another possible option is for the stormwater permit, not the implementation plan, to include all additional requirements developed to implement the stormwater source WLAs. Under this approach, the implementation plan serves as a mechanism to link the TMDL and the stormwater permit without providing a significant amount of detail in the TMDL. This approach could be ideal for situations in which TMDL writers do not have the time or resources to engage in detailed implementation planning.

Resources: The Appendix of this Handbook contains excerpts of TMDLs, implementation plans, and stormwater permit requirements from the real-world examples provided in this section, as well as other TMDLs and stormwater permits that illustrate how states connect permitted stormwater source requirements among programmatic documents.

6.3. Other Information to Consider

Permit writers, watershed organizations, or municipalities could encounter situations where previously developed TMDLs and implementation plans are more difficult to implement in permits, including the following situations.

6.3.1. No separate WLA for NPDES Stormwater source

Permit writers might be working with older TMDLs that were approved prior to EPA's guidance, *Establishing Total Maximum Daily Load (TMDL) Wasteload Allocations (WLAs) for Storm Water Sources and NPDES Permit Requirements Based on Those WLAs* (Wayland, R.H., and J.A. Hanlon, 2002), or that include allocations for stormwater discharges that were considered to be nonpoint sources at the time the TMDL was approved, but that currently are subject to NPDES permitting. For example, an older TMDL could group both urban nonpoint source and point source runoff into one overall category under an aggregated load allocation, or the older TMDL could include runoff from MS4's under the load allocation that are now covered under the Phase II NPDES requirements. Because permit effluent limits have to meet water quality standards under 122.44(d)(1)(vii)(A), the permit writer will need to account for the current regulated stormwater discharges identified in the TMDL regardless of how they were labeled in the older TMDL document, and should explain how they are being accounted for in the permit. The permit writer might be able to get additional information from TMDL writers to help implement these wasteload allocations into permits.

6.3.2. Impaired Waterbody with No Approved TMDL

Another scenario that TMDL and permit writers might encounter is an impaired waterbody that does not yet have an approved TMDL. Clearly, it is important to ensure that stormwater discharges do not further cause or contribute to exceedances of water quality standards. However, without a specific WLA, TMDL and permit writers might have questions about the appropriate implementation activities to recommend or, in the case of a permit, require until a TMDL is developed and approved. To provide some level of control on pollutants of concern associated with the impairment, TMDL and permit writers could work together to identify interim early action BMPs or performance standards that sources could implement until an approved TMDL becomes available. In such cases, it might be valuable to identify monitoring programs to evaluate contributions from stormwater sources to the impairment for use in future TMDL development.

In Practice: Addressing Impaired Waterbodies with No Approved TMDL in Permits in Wisconsin

The Wisconsin Phase II MS4 General Permit contains requirements that address MS4 discharges to impaired waterbodies with no approved TMDL. The permit requires permittees to address the pollutant of concern contributing to the impairment in the SWMP and limits permittees' ability to have a new or increased discharge of a pollutant of concern unless there is an approved TMDL. The general permit language states the following:

1.5.2 If the permittee's MS4 discharges to an impaired waterbody, the permittee shall include a written section in its storm water management program that discusses the management practices and control measures it will implement as part of its program to reduce, with the goal of eliminating, the discharge of pollutant(s) of concern that contribute to the impairment of the water body. This section of the permittee's program shall specifically identify control measures and practices that will collectively be used to try to eliminate the MS4's discharge of pollutant(s) of concern that contribute to the impairment of the waterbody and explain why these control measures and practices were chosen as opposed to other alternatives. Pollutant(s) of concern means a pollutant that is causing impairment of a waterbody.

1.5.3 After the permittee's start date of coverage under this permit, the permittee may not establish a new MS4 discharge of a pollutant of concern to an impaired waterbody or increase the discharge of a pollutant of concern to an impaired waterbody unless the new or increased discharge causes the receiving water to meet applicable water quality standards, or the Department has approved a total maximum daily load (TMDL) for the impaired waterbody.

APPENDIX: TMDL AND NPDES STORMWATER PERMIT LANGUAGE EXCERPTS

California

Los Angeles County MS4 NPDES Permit

10. On May 18, 2000, the USEPA established numeric criteria for priority toxic pollutants for the State of California (California Toxics Rule (CTR)) 65 Fed. Reg. 31682 (40 CFR 131.38), for the protection of human health and aquatic life. These apply as ambient water quality criteria for inland surface waters, enclosed bays, and estuaries. The State Board adopted the Policy for Implementation of Toxics Standards for Inland Surface Waters, Enclosed Bays, and Estuaries of California (SIP) – 2000, on March 2, 2000, for implementation of the CTR (State Board Resolution No. 2000-15 as amended by Board Resolution No. 2000-030). This policy requires that discharges comply with TMDL-derived load allocations as soon as possible but no later than 20 years from the effective date of the policy.
28. The Regional Board adopted the Santa Monica Bay Beaches Dry Weather TMDL for Bacteria (hereinafter "Dry Weather Bacteria TMDL") on January 24, 2002. The TMDL was subsequently approved by the State Board, the Office of Administrative Law (OAL), and the USEPA and became effective on July 15, 2003.
29. The Waste Load Allocations (WLAs) in the Dry Weather Bacteria TMDL are expressed as the number of allowable days that the Santa Monica Bay beaches may exceed the Basin Plan water quality objectives for protection of Water Contact Recreation (REC-1) in marine waters, specifically the water quality objectives for bacteria. Appropriate modifications to this order are therefore included in Parts 1 (Discharge Prohibitions) and 2 (Receiving Water Limitations), pursuant to 40 CFR 122.41(f) and 122.62, and Part 6.I.1 of this Order. Additionally, 40 CFR 122.44(d)(1)(vii)(B) requires that NPDES permits be consistent with the assumptions and requirements of any available waste load allocation. Tables 7-4.1, 7-4.2a, and 7-4.3 of the Basin Plan set forth the pertinent provisions of the Dry Weather Bacteria TMDL. They require that during Summer Dry Weather there shall be no exceedances in the Wave Wash of the single sample or the geometric mean bacteria objectives set to protect the Water Contact Recreation (REC-1) beneficial use in marine waters. Accordingly, a prohibition is included in this Order barring discharges from a MS4 to Santa Monica Bay that result in exceedance of these objectives. Since the TMDL and the WLAs contained therein are expressed as receiving water conditions, Receiving Water Limitations have been included in this Order that are consistent with and implement the zero exceedance day WLAs.
30. Pursuant to federal regulations at 40 CFR 124.8, and 125.56, a Fact Sheet was prepared to provide the basis for incorporating the Dry Weather Bacteria TMDL into this Order. The Fact Sheet is hereby incorporated by reference into these findings.
31. The iterative approach to regulating municipal stormwater is not an appropriate means of implementing the Santa Monica Bay beaches Summer Dry Weather WLAs for any and all of the following reasons: (a) The WLAs do not regulate the discharge of stormwater; (b) The harm to

the public from violating the WLAs is dramatic both in terms of health impacts to exposed beachgoers, and the economic cost to the region associated with related illnesses; (c) Despite the fact that more than a decade and a half has passed since MS4 permittees were required to eliminate illicit connections/discharges (IC/ID) into their MS4s, their programs have not eliminated standards violations at the beaches; and (d) Few permittees have ever documented revisions to their SQMP to address chronic exceedances of water quality standards.

Georgia

Phase II MS4 General Permit

D. Stormwater Management Modifications

- 1. The SWMP may be modified by the permittee at any time. Written notification of substantial SWMP modifications must be submitted 30 days prior to implementation of the SWMP modification.*
- 2. EPD may require the permittee to modify the SWMP as needed to:*
 - a. Include more stringent requirements as necessary to comply with new State or Federal statutory or regulatory requirements;*
 - b. Include other conditions deemed necessary by the Director to comply with the goals and requirements of the CWA and the State Act. The Director's request for modifications shall be made in writing and set forth a time schedule for the permittee to develop the modification(s), and offer the permittee the opportunity to propose alternative SWMP modifications to meet the objective of the requested modification.*

General Permit for Stormwater Discharges Associated with Industrial Activity

C. Discharges Into, Or Within One Mile Upstream Of And Within The Same Watershed As, Any Portion Of An Impaired Stream Segment.

An operator is not eligible for coverage under this permit for discharges of stormwater associated with industrial activity to waters of the State for which a Total Maximum Daily Load (TMDL) is approved prior to or during the term of this permit, unless the facility develops, implements, and maintains a SWP3 that is consistent with the TMDL. The SWP3 must specifically address any conditions or requirements included in the TMDL that are applicable to the operator's discharge within the timeframe specified in the TMDL. If the TMDL establishes a specific numeric wasteload allocation that applies to an operator's discharge, or to stormwater discharges associated with industrial activity in general, then the operator must incorporate that allocation into the facility's SWP3 and implement all necessary measures to meet that allocation.

Any operator who intends to obtain coverage under this permit for stormwater discharges associated with industrial activity into an Impaired Stream Segment, or within one (1) linear mile upstream of and within the same watershed as, any portion of an Impaired Stream Segment, identified as "partially supporting" or "not supporting" designated uses on Georgia's most current 303(d) list, must satisfy the requirements of Part III.C of this permit if the pollutant(s) of concern for which the Impaired Stream Segment has been listed may be exposed to stormwater

as a result of current or previous industrial activity at the facility. Those discharges that are within one (1) linear mile of an Impaired Stream Segment, but are not located within the watershed of any portion of that stream segment are excluded from this requirement. Georgia's 303(d) list can be viewed on EPD's website at www.gaepd.org.

1. Discharges into, or within one (1) linear mile upstream of and within the same watershed as, any portion of an Impaired Stream Segment Impaired by substances other than fecal coliform.

a. Sampling schedule.

Regulated industrial facilities that are subject to the requirements in Part III.C.1. of this permit must conduct stormwater discharge sampling for the pollutant(s) of concern two times per quarter for a period of twelve (12) months. The pollutant(s) of concern for each impaired stream segment are identified on Georgia's 303(d) list. The sampling will only be required for those outfalls at the facility that have the potential to discharge the pollutant(s) of concern. The sampling must be conducted in accordance with Parts VI.A.3, 4, and 5 of this permit, except that composite samples may be collected in lieu of grab samples at the permittee's discretion. The Director may require composite or grab sampling where deemed appropriate in order to ensure that representative samples are collected.

Except as provided below, the sampling must begin no later than ninety (90) days after the later of the effective date of the permit or the date the facility becomes subject to the sampling requirements in Part III.C. However, if a facility with an existing stormwater discharge associated with industrial activity determines that additional time is needed to design and implement new or improved BMPs specifically for the pollutant(s) of concern, then that facility may delay commencement of the sampling program under this section of the permit for no more than twelve (12) months after the effective date of the permit in order to design and implement those BMPs. Facilities choosing this option must, no later than the date on which the Part III.C sampling would otherwise begin, provide a written notification, signed in accordance with Part VII.G of this permit, to EPD that they have elected to delay sampling and provide a schedule for BMP implementation. The Part III.C sampling program must begin immediately after the BMPs are required to have been implemented according to the schedule provided to EPD.

A summary of the sampling results must be submitted to EPD's Watershed Protection Branch with the Annual Report (see Appendix B of this permit). The report must also identify the applicable benchmark value(s) and state whether the facility has passed or failed the benchmark requirement for the twelve (12) month sampling period.

If a facility is unable to conduct one or both of the Part III.C sampling event(s) during a certain quarter due to adverse climatic conditions (i.e. no qualifying rainfall event occurs), then the facility shall include a written explanation for the absence of the sampling event in the next Annual Report submitted to EPD.

b. Applicable Benchmark Values.

The applicable benchmark values for discharges into, or within one (1) linear mile upstream of and within the same watershed as, any portion of an Impaired Stream Segment shall be the same numeric value as the Instream Water Quality Criterion for the pollutant(s) of concern as specified in Georgia's Rules and Regulations for Water Quality Control (Georgia Rule 39136).

03) unless otherwise established in Part III.C of this permit. The benchmark values are designed to assist permittees in determining if the BMPs established in a facility's SWP3 are effective in minimizing the concentration of the pollutant(s) of concern in stormwater discharge(s) from their facility. These benchmark values are intended to be guideline concentrations rather than numeric effluent limitations or permit conditions. The exceedance of a benchmark value established in Part III.C of this permit is not a permit violation and does not of itself indicate a violation of instream water quality standards. However, an exceedance of a benchmark value may be used in conjunction with other information to demonstrate a violation of this permit or a violation of water quality standards.

(1). Specific requirements for discharges into, or within one (1) linear mile upstream of and within the same watershed as, any portion of an Impaired Stream Segment impaired for DO (Dissolved Oxygen).

Facilities discharging into, or within one (1) linear mile upstream of and within the same watershed as, any portion of an Impaired Stream Segment for which the listing criterion is identified as DO (Dissolved Oxygen) will only be required to conduct sampling under Part III.C if industrial materials that may contribute Five Day Carbonaceous Biochemical Oxygen Demand (CBOD5) or ammonia (NH3) may be exposed to stormwater as a result of current or previous industrial activity at the facility. These facilities must sample for Five Day Carbonaceous Biochemical Oxygen Demand (CBOD5) and NH3. The applicable benchmark value for these discharges shall be an Ultimate Oxygen Demand (UOD) of 125 mg/l. The UOD shall be calculated as $[(CBOD5 \times 1.5) + (NH3 \times 4.57)]$.

(2). Specific requirements for discharges into, or within one (1) linear mile upstream of and within the same watershed as, any portion of an Impaired Stream Segment impaired by nonpollutant specific criteria.

(i). Facilities discharging into, or within one (1) linear mile upstream of and within the same watershed as, any portion of an Impaired Stream Segment for which the listing criterion is identified as "Biota or Sediment" are required to conduct sampling for Total Suspended Solids (TSS) unless a TMDL has identified a different pollutant from nonpoint sources as causing the impairment, in which case sampling should be conducted for the pollutant(s) identified in the TMDL. The applicable TSS benchmark value for these discharges shall be 100 mg/l.

(ii). Facilities discharging into, or within one (1) linear mile upstream of and within the same watershed as, any portion of an Impaired Stream Segment for which the listing criterion is toxicity, FCG (fish consumption guidelines), SB (shellfishing ban), CFB (commercial fishing ban) or TWR (trophic weighted residue value of mercury in fish tissue) will only be required to conduct sampling under Part III.C if a TMDL identifying a specific water quality parameter has been approved for the stream segment.

c. Evaluation of Part III.C sampling data

The Part III.C stormwater discharge sampling is intended to measure the effectiveness of the Best Management Practices (BMPs) implemented at those facilities. If benchmark values are exceeded using the pass/fail determination provided below, then improved or additional BMPs are required at the facility.

The sampling data for the twelve (12) month period must be evaluated using one of the following criteria. This shall constitute the pass/fail determination for evaluating BMP effectiveness:

- (1). At least seventy-five (75) percent of the samples collected during the twelve (12) month period do not exceed the applicable benchmark value(s); or*
- (2). The average of the samples collected during the twelve (12) month period does not exceed the applicable benchmark value(s).*

If a facility meets at least one of the above criteria then that facility has passed the benchmark requirement and may discontinue the Part III.C sampling but must thereafter properly maintain all of the BMPs that enabled the facility to meet the benchmark requirement.

If a facility does not meet at least one of the above criteria, then that facility has failed the benchmark requirement. Those facilities that do not pass the benchmark requirement for the first twelve (12) month sampling period may take up to one year to budget, select, design and construct/implement additional supplemental BMPs at the facility. Once the supplemental BMPs have been implemented, an additional twelve (12) month (two samples per quarter) period of sampling must be conducted as described in Part III.C.1.a above. Those facilities that pass the benchmark requirement, using the above pass/fail determination, after implementing supplemental BMPs may discontinue the Part III.C sampling but must thereafter properly maintain all of the BMPs that enabled the facility to meet the benchmark requirement.

Facilities that are not able to pass the benchmark requirement, using the above pass/fail determination, after implementing supplemental BMPs must continue the process of implementing additional supplemental BMPs at the facility and conducting a subsequent twelve month (two samples per quarter) period of sampling until the facility meets the benchmark requirement using the pass/fail determination provided above. If a facility is unable to pass the benchmark requirement after the twelve (12) month sampling period following a second round of implementing supplemental BMPs, then EPD will determine what further action is required, which may include, but is not limited to, applying for an individual NPDES permit.

d. Written justification to cease Part III.C sampling.

If a facility provides a written justification after the first twelve (12) month period of sampling (or after any subsequent twelve (12) month period of sampling) and EPD concurs that the facility's stormwater discharges associated with industrial activity do not have a reasonable potential to cause or contribute to a violation of an instream water quality standard, then EPD may conclude that additional sampling under Part III.C is not required. Facilities that have passed the benchmark requirement are not required to submit a written justification in order to cease Part III.C sampling.

2. Discharges into, or within one (1) linear mile upstream of and within the same watershed as, any portion of an Impaired Stream Segment impaired for fecal coliform.

Facilities discharging into, or within one (1) linear mile upstream of and within the same watershed as, any portion of an Impaired Stream Segment for which the listing criterion is identified as fecal coliform must adhere to the following conditions if industrial materials or

activities that are potential sources of fecal coliform (as defined in Part IV.D.9 of this permit) are, or may be, exposed to stormwater at the facility during the term of this permit.

a. List of BMPs for animal processing plants that may be potential sources of fecal coliform.

A list of BMPs designed to reduce fecal coliform levels in stormwater runoff has been developed for animal processing plants that may be potential sources of fecal coliform. Other facilities may find this list to be useful as well. The list is provided in Appendix C of this permit.

b. Sampling schedule.

Regulated industrial facilities that are subject to the requirements in Part III.C.2 of this permit must conduct stormwater discharge sampling for TSS two times per quarter for a period of twelve (12) months. Two of the sampling events must include simultaneous testing of TSS and fecal coliform. The sampling will only be required for those outfalls at the facility that have the potential to discharge stormwater associated with industrial activity where industrial materials or activities that are potential sources of fecal coliform (as defined in Part IV.D.9 of this permit) are, or may be, exposed to stormwater at the facility during the term of this permit. The sampling must be conducted in accordance with Parts VI.A.3, 4, and 5 of this permit.

Except as provided below, the sampling must begin no later than ninety (90) days after the later of the effective date of the permit or the date the facility becomes subject to the sampling requirements in Part III.C. However, if a facility with an existing stormwater discharge associated with industrial activity determines that additional time is needed to design and implement new or improved BMPs specifically for the pollutant(s) of concern, then that facility may delay commencement of the sampling program under this section of the permit for no more than twelve (12) months after the effective date of the permit in order to design and implement those BMPs. Facilities choosing this option must, no later than the date on which the Part III.C sampling would otherwise begin, provide a written notification, signed in accordance with Part VII.G of this permit, to EPD that they have elected to delay sampling and provide a schedule for BMP implementation. The Part III.C sampling program must begin immediately after the BMPs are required to have been implemented according to the schedule provided to EPD.

A summary of the sampling results for TSS and fecal coliform must be submitted to EPD's Watershed Protection Branch with the Annual Report (see Appendix B of this permit). The report must also identify the applicable benchmark value(s) and state whether the facility has passed or failed the benchmark requirement for the twelve (12) month sampling period.

If a facility is unable to conduct one or both of the Part III.C sampling event(s) during a certain quarter due to adverse climatic conditions (i.e. no qualifying rainfall event occurs), then the facility shall include a written explanation for the absence of the sampling event in the next Annual Report submitted to EPD.

c. Applicable Benchmark Value

A Total Suspended Solids (TSS) benchmark value of 100 mg/l will be used as a surrogate for evaluating fecal coliform levels in stormwater discharges associated with industrial activity. Fecal coliform sampling data collected simultaneously with TSS sampling data (as required in

Part III.C.2.b) is not subject to the pass/fail determination for benchmark sampling as established in Part III.C.2.d below.

The TSS benchmark value is designed to assist permittees in determining if the implementation of the BMPs (as established in a facility's SWP3) is minimizing the concentration of the pollutant(s) of concern in stormwater discharge(s) from their facility. These benchmark values are intended to be guideline concentrations rather than numeric effluent limitations or permit conditions. The exceedance of a benchmark value established in Part III.C of this permit is not a permit violation and does not of itself indicate a violation of instream water quality standards. However, an exceedance of a benchmark value may be used in conjunction with other information to demonstrate a violation of this permit or a violation of water quality standards.

d. Evaluation of Part III.C sampling data.

The Part III.C stormwater discharge sampling is intended to measure the effectiveness of the Best Management Practices (BMPs) implemented at those facilities. If benchmark values are exceeded using the pass/fail determination provided below, then improved or additional BMPs are required at the facility.

The TSS sampling data for the twelve (12) month period must be evaluated using one of the following criteria. This shall constitute the pass/fail determination for evaluating BMP effectiveness.

- (1). At least seventy-five (75) percent of the samples collected during the twelve (12) month period do not exceed the TSS benchmark value; or*
- (2). The average of the samples collected during the twelve (12) month period does not exceed the TSS benchmark value.*

If a facility meets at least one of the above criteria then that facility has passed the TSS benchmark requirement and may discontinue the Part III.C sampling but must thereafter properly maintain all of the BMPs that enabled the facility to pass the TSS benchmark requirement.

If a facility does not meet at least one of the above criteria, then that facility has failed the TSS benchmark requirement. If a facility does not pass the TSS benchmark requirement for the first twelve (12) month sampling period then the facility may take up to one year to budget, select, design and construct/implement additional supplemental BMPs from the list provided in Appendix C, or other appropriate BMPs. Once the supplemental BMPs have been implemented at the facility, an additional twelve (12) month (two samples per quarter) period of sampling must be conducted as described in Part III.C.2.b above. Those facilities that pass the benchmark requirement, using the above pass/fail determination, after implementing supplemental BMPs may discontinue the Part III.C sampling but must thereafter properly maintain all of the BMPs that enabled the facility to pass the TSS benchmark requirement.

Facilities that are not able to pass the TSS benchmark requirement after implementing supplemental BMPs must continue the process of implementing additional supplemental BMPs from the Appendix C list, or other appropriate BMPs, (within twelve (12) months after the end of the previous twelve (12) month sampling period) and conducting a subsequent twelve month (two

samples per quarter) period of sampling until the facility passes the benchmark requirement using the pass/fail criteria provided above.

e. Written justification to cease Part III.C monitoring.

If a facility provides a written justification, after the first twelve (12) month period of sampling (or after any subsequent twelve (12) month period of sampling), and EPD concurs that the facility's stormwater discharges associated with industrial activity do not have a reasonable potential to cause or contribute to a violation of an instream water quality standard, then EPD may conclude that additional sampling under Part III.C is not required. Facilities that have passed the benchmark requirement are not required to submit a written justification in order to cease Part III.C sampling.

f. Demonstration of appropriate BMPs.

If a facility with a stormwater discharge associated with industrial activity that may be a potential source of fecal coliform has implemented all technologically and economically feasible BMPs in the Appendix C list (for animal processing facilities), or other appropriate BMPs (for other facilities), and is still unable to pass the TSS benchmark requirement, the owner or operator of that facility may submit a demonstration to EPD that the facility has properly designed, installed and maintained all of the BMPs that are technologically and economically feasible for the facility and still cannot meet the benchmark. If, after reviewing the demonstration and conducting a site inspection, EPD concurs with the facility's determination, then the facility will not be required to implement additional supplemental BMPs in order to comply with the permit. However, if new BMPs become technologically and economically feasible for the facility at a later date, then EPD may require the implementation of such BMPs at that time. EPD may also require an individual NPDES permit for a facility if that facility does not properly design, install and maintain technologically and economically feasible BMPs in a timely manner.

New Mexico

Phase I MS4 Permit for the City of Albuquerque

B. Area-specific Stormwater Management Program Requirements. Permittees are required to develop and implement measures necessary to bring the discharge into compliance with the Middle Rio Grande Total Maximum Daily Load (TMDL) for Fecal Coliform. Specific permit requirements to implement the TMDL are included in Part III, Table III.B. [Note: Table III.B. includes the implementation activities required, the co-permittees responsible and the schedule of compliance. The implementation activities in the table have been incorporated as text as follows:]

1.0 Source Categories. Develop and submit a list of potential categories of fecal coliform sources by watershed and watershed density (undeveloped, low, moderate, high), covering the entire permit area.

1.1 Legal Authority Evaluate adequacy of existing legal authority to implement the conditions included in this Table. Where existing ordinances are lacking, provide a schedule for obtaining the necessary legal authority. Ordinances shall be in place prior to the implementation of the programs.

2.0 Dry Weather Investigation. Develop and submit a dry weather field investigation program, by watershed, to identify and isolate fecal coliform sources that occur during dry weather so that they can be reduced/eliminated. The program shall address the sources identified in item 1.0 above. The program shall address the suitability of each of the following measures and shall include detailed description of activities and frequencies.

2.1 Low Density Watersheds:

- 2.1.1 Conduct dry weather channel survey*
- 2.1.2 Conduct survey of septic systems (e.g. aerial, ground, etc.)*
- 2.1.3 Conduct visual or tracer tests on suspected failing systems*
- 2.1.4 Investigate recreational and seasonal sewage dischargers*
- 2.1.5 Conduct ARA and study to determine whether fecal coliform s are of human or nonhuman origin*
- 2.1.6 Test ditch or channel sediments to see if they are a bacteria source or reservoir*

2.2 Moderate/High Density Watersheds:

- 2.2.1 Conduct dry weather channel survey*
- 2.2.2 Test for Illicit connections*
- 2.2.3 Check integrity of major trunk lines for cracks and leaks*
- 2.2.4 Check for historic and unconnected septic systems*
- 2.2.5 Conduct ARA and study to determine whether fecal coliform s are of human or nonhuman origin*
- 2.2.6 Check ponds, lakes and impoundments for waterfowl concentrations*

3.0 Wet Weather Investigation Develop and submit a wet weather field investigation program, by watershed, to identify and isolate fecal coliform sources that occur during wet weather so that they can be reduced/eliminated. The program shall address the sources identified in item 1.0 above. The program shall address the suitability of each of the following measures and shall include detailed description of activities and frequencies.

3.1 Low Density Watersheds

- 3.1.1 Inspect septic systems for wet-weather failure*
- 3.1.2 Conduct comprehensive wet weather monitoring to isolate subwatershed hot spots*
- 3.1.3 Submit results of the Antibiotic Resistance Analysis and the study to determine whether fecal coliforms are of human or nonhuman origin*
- 3.1.4 Sample runoff from suspected source areas (e.g. hobby farms and livestock areas)*
- 3.1.5 Test storm drain or channel sediments to see if they are a bacteria sink or source*

3.2 Moderate/High Density Watersheds:

- 3.2.1 Check for chronic sanitary sewer overflows at specific manholes and /or pumping stations*
- 3.2.2 Submit results of the Antibiotic Resistance Analysis and the study to determine whether fecal coliforms are of human or nonhuman origin*
- 3.2.3 Conduct comprehensive wet weather monitoring to identify key source areas or subwatersheds*

4.0 Submit certification of the full implementation of the dry and wet weather field investigation programs.

5.0 *Fecal Coliform Reduction and Treatment* Develop and submit a program for reducing or treating existing fecal coliform sources, by watershed and watershed density. The program shall address the sources identified in items 3.0 and 4.0 above. The program shall address the suitability of each of the following measures and shall include detailed description of activities and frequencies. Where activities are to be performed by entities other than the permittee, describe enforcement mechanism to be used to ensure compliance.

5.1 *Low Density Watersheds*

- 5.1.2 *Rehabilitate failing septic systems*
- 5.1.3 *Connect failing septic systems to sewer*
- 5.1.4 *Increase septic system clean outs*
- 5.1.5 *Retrofit stormwater ponds*
- 5.1.6 *Retrofit ditches as dry swales*
- 5.1.7 *Waterfowl management*
- 5.1.8 *Install recreational vehicle sewage pumpouts*
- 5.1.9 *Implement conservation plans at hobby farms*

5.2 *Moderate/High Density Watersheds:*

- 5.2.2 *Eliminate illicit connections to storm sewer*
- 5.2.2 *Rehabilitate existing sewer system to eliminate sanitary sewer overflows*
- 5.2.3 *Relocate storm outfalls*
- 5.2.4 *Disinfect at the end of pipe*
- 5.2.5 *Retrofit stormwater ponds*
- 5.2.6 *Retrofit ditches as dry swales*
- 5.2.7 *Waterfowl harassment*
- 5.2.8 *Enforce pet waste disposal*
- 5.2.9 *Implement conservation plans at hobby farms*

6.0 *Submit certification of the full implementation of fecal coliform reduction and treatment program.*

7.0. *Prevention of Future Fecal Discharges* Develop and submit a program for preventing future fecal coliform discharges, by watershed. The program shall address at a minimum, the measures included below, with detailed description of activities and frequencies. Where activities are to be performed by entities other than the permittee, describe enforcement mechanism to be used to ensure compliance.

7.1 *Low Density Watersheds*

- 7.1.1 *Land use management*
- 7.1.2 *Stringent septic system requirements:*
 - 7.1.2.1 *Feasibility criteria*
 - 7.1.2.2 *Setbacks*
 - 7.1.2.3 *Reserve field requirements*
 - 7.1.2.4 *Minimum lot size*
 - 7.1.2.5 *Technology criteria*
 - 7.1.2.6 *Inspections*
 - 7.1.2.7 *Maintenance requirements*
- 7.1.3 *Stream/ ditches buffers and access restrictions*
- 7.1.4 *Livestock fencing*
- 7.1.5 *Wildlife control*
- 7.1.6 *Land application criteria for biosolids*

- 7.1.7 Stormwater treatment for new development
- 7.1.8 Public education
- 7.1.9 Recreational vehicle and park sewage pump-out facilities
- 7.2 Moderate/High Density Watersheds:
 - 7.2.1 New Sewer Testing
 - 7.2.2 Inspection of new sewer hookups
 - 7.2.3 SSO monitoring and prevention
 - 7.2.4 Stormwater treatment for new development
 - 7.2.5 Optimal stormwater outfall location
 - 7.2.6 Engineered stream buffers
 - 7.2.7 Pet Exclusion
 - 7.2.8 Waterfowl control /management
 - 7.2.9 Public education on pet waste
 - 7.2.10 Transient sewage disposal
 - 7.2.11 Septic system rehabilitation

8.0 Submit certification of the implementation of the program to prevent future fecal coliform sources.

9.0 Monitoring Program Develop a monitoring program, in consultation with the State of New Mexico, to assess BMP effectiveness and compliance with Fecal Coliform TMDL at North Diversion Floodway Channel, San Jose Drain, South Diversion Channel and Tijeras Arroyo. Target values and equation for comparison of loadings are included in Table III.B.2 below. While developing this monitoring program, the permittees should take into account the frequency of storm events, and the variation in Fecal Coliform levels, within individual storm event. Collection and analysis of samples shall be conducted in accordance with Part V requirements. Results shall be submitted in Discharge Monitoring Report (DMR) forms.

10.0 Submit certification of the full implementation of the monitoring program to assess BMP effectiveness.

11.0 BMP Assessment Submit BMP evaluations and assessment, and revisions to the programs above if deemed necessary, based on monitoring data obtained.

12.0 Annual TMDL Progress Reports The permittees shall submit annual reports describing progress on the activities required in Table III.B. to comply with the Fecal Coliform TMDL. The reports shall follow the requirements included in Part V.C, items 1, 4, 6 and 7, but shall be submitted separately from the Annual Report covering all other items of the permit. Results of the monitoring program shall be summarized in the Annual TMDL Progress Report and shall include graphic representation of fecal coliform trends. The Annual TMDL Progress Report shall also include computations of annual percent reduction achieved from the baseline loads and comparisons with the target loads.

Ohio

Big Darby Creek Watershed Construction General Permit

F. Total Maximum Daily Load (TMDL) allocations

This general permit requires control measures/BMPs for construction sites that reflect recommendations set forth in the U.S. EPA approved Big Darby Creek TMDL.

G. SWP3 Requirements

G2. Controls.

2b. Riparian Setback Requirements. *The SWP3 shall clearly delineate the boundary of required stream setback distances. No construction activity shall occur within the delineated setback boundary except activities associated with restoration or recovery of natural floodplain and channel form characteristics as described in Attachment B and storm water conveyances from permanent treatment practices. Such conveyances must be designed to minimize the width of disturbance. If intrusion within the delineated setback boundary is necessary to accomplish the purposes of a project then mitigation shall be required in accordance with Part III.G.2.c of this permit. Streams requiring protection under this section are defined as perennial, ephemeral or intermittent streams with a defined bed, bank or channel. National Resources Conservation Service (NRCS) soil survey maps should be used as one reference and the presence of a stream requiring protection should also be confirmed in the field. Any required setback distances shall be clearly displayed in the field prior to any construction related activity.*

Riparian setbacks shall be delineated based upon one of the following three methods:

i. The setback distance from the centerline of the stream shall be sized as the greater of the following:

- 1. The regulatory 100 year floodplain based on FEMA mapping;*
- 2. A minimum of 100 feet on each side; or*
- 3. Distance calculated using the following equation:*

$$W = 133DA^{0.43}$$

where:

DA = drainage area (mi²)

W = total width of riparian setback (ft)

W should be divided by two (2) in order to calculate the setback for one side of the stream. If the DA remains relatively constant throughout the stretch of interest, then the DA of the downstream edge of the stretch should be used. Where there is a significant increase in the DA from the upstream edge to the downstream edge of the area of interest, the setback width shall increase accordingly.

ii. Site Specific Riparian Setback Delineation. The total setback width shall be the streamway width centered over the meander pattern of the stream plus an additional 100 feet from the edge of the streamway per side.

The streamway width shall be calculated as described in Part III.G.2.b.i.3 or as ten times the bankfull width determined from sufficient site specific information adequate to characterize the channel through the site by a professional experienced in stream morphology. The average site specific bankfull width may be used if the bankfull width does not vary significantly throughout the reach of interest. Otherwise the streamway width should vary with bankfull width. Centering about the meander pattern can be thought of as determining where a line representing the streamway width would evenly intersect equal elevation lines on either side of the stream.

iii. Stream Restoration with 100 feet (each side) Riparian Setback. Each stream segment within the proposed site boundaries can be assessed in accordance with Attachment B. In the event the stream segment is classified as a "Previously Modified Low Gradient Headwater Stream", the permittee has the option to restore the stream segment in accordance with Attachment B and include a 100 feet water quality setback distance from the centerline of the stream on each side. In the event the stream segment exceeds the minimum criteria in Attachment B to be classified as a "Previously Modified Low Gradient Headwater Stream", Part III.G.2.b.iii may be considered on a case-by-case basis. No structural sediment controls (e.g., the installation of silt fence or a sediment settling pond) or structural post-construction controls shall be used in a stream or the delineated setback.

2i. Post-Construction Storm Water Management Requirements. *So that receiving stream's physical, chemical, and biological characteristics are protected and stream functions are maintained, post-construction storm water practices shall provide perpetual management of runoff quality and quantity. To meet the post-construction requirements of this permit, the SWP3 must contain a description of the post-construction BMPs that will be installed during construction for the site and the rationale for their selection. The rationale must address the anticipated impacts on the channel and floodplain morphology, hydrology, and water quality.*

Detail drawings and maintenance plans shall be provided for all postconstruction BMPs. Maintenance plans shall be provided by the permittee to the post-construction operator of the site (including homeowner associations) upon completion of construction activities (prior to termination of permit coverage). A description of maintenance operations must be included in the maintenance agreement to ensure all Post Construction BMP's will be maintained in perpetuity. For sites located within a community with a regulated municipal separate storm sewer system (MS4), the permittee, land owner, or other entity with legal control of the property may be required to develop and implement a maintenance plan to comply with the requirements of the MS4. Maintenance plans must ensure that pollutants collected within structural post-construction practices, be disposed of in accordance with local, state, and federal regulations. Permittees, except for those regulated under the small MS4 program, are not responsible under this permit for operation and maintenance of post-construction practices once coverage under this permit is terminated.

This permit does not preclude the use of innovation or experimental postconstruction storm water management technologies. However, the director may require discharges from such structures to be monitored to ensure compliance with Part III.G.2.i of this permit. The installation of structural controls in certain scenarios may also require a separate permit under section 404 of the CWA. Permittees are only responsible for the installation and maintenance of storm water management measures prior to final stabilization of the site and are not responsible for maintenance after storm water discharges associated with construction activity have been

eliminated from the site. However, post-construction storm water BMPs that discharge pollutants from point sources once construction is completed, may in themselves, need authorization under a separate NPDES permit.

Linear construction projects, (e.g., pipeline or utility line installation), which do not result in the installation of impervious surface, are not required to comply with the conditions of Part III.G.2.i of this permit. However, linear construction projects must be designed to minimize the number of stream crossings and the width of disturbance.

Large Construction Activities. For all large construction activities (involving the disturbance of five or more acres of land or will disturb less than five acres, but is a part of a larger common plan of development or sale which will disturb five or more acres of land), the post construction BMP(s) chosen must be able to detain storm water runoff for protection of the stream channels, stream erosion control, and improved water quality. Structural (designed) post-construction storm water treatment practices shall be incorporated into the permanent drainage system for the site. The BMP(s) chosen must be sized to treat the water quality volume (WQ_v) and ensure compliance with Ohio's Water Quality Standards in OAC Chapter 3745-1. The WQ_v shall be equivalent to the volume of runoff from a 0.75-inch rainfall and shall be determined according to one of the two following methods:

i. Through a site hydrologic study approved by the local municipal permitting authority that uses continuous hydrologic simulation and local long-term hourly precipitation records or ii. Using the following equation:

$$WQ_v = C * P * A / 12$$

where:

WQ_v = water quality volume in acre-feet

C = runoff coefficient appropriate for storms less than 1 inch (see Table 5)

P = 0.75 inch precipitation depth

A = area draining into the BMP in acres

An additional volume equal to 20 percent of the WQ_v shall be incorporated into the BMP for sediment storage and/or reduced infiltration capacity. Ohio EPA recommends that BMPs be designed according to the methodology included in the most current edition of the Rainwater and Land Development manual or in another design manual acceptable for use by Ohio EPA.

BMPs shall be designed such that the drain time is long enough to provide treatment, but short enough to provide storage available for successive rainfall events as described in Table 6 below.

The permittee may request approval from Ohio EPA to use alternative structural post-construction BMPs if the permittee can demonstrate that the alternative BMPs are equivalent in effectiveness to those listed in Table 6 above. Construction activities shall be exempt from this condition if it can be demonstrated that the WQ_v is provided within an existing structural post-construction BMP that is part of a larger common plan of development or if structural post-construction BMPs are addressed in a regional or local storm water management plan.

For redevelopment projects (i.e., developments on previously developed property), post-construction practices shall either ensure a 20 percent net reduction of the site impervious area, provide for treatment of at least 20 percent of the WQ_v , or a combination of the two.

***Small Construction Activities.** For all small land disturbance activities (which disturb one or more, but less than five acres of land and is not a part of a larger common plan of development or sale which will disturb five or more acres of land), a description of measures that will be installed during the construction process to control pollutants in storm water discharges that will occur after construction operations have been completed must be included in the SWP3. Structural measures should be placed on upland soils to the degree attainable.*

i. Such practices may include, but are not limited to: storm water detention structures (including wet basins); storm water retention structures; flow attenuation by use of open vegetated swales and natural depressions; infiltration of runoff onsite; and sequential systems (which combine several practices). The SWP3 shall include an explanation of the technical basis used to select the practices to control pollution where flows exceed pre-development levels.

ii. Velocity dissipation devices shall be placed at discharge locations and along the length of any outfall channel to provide non-erosive flow velocity from the structure to a water course so that the natural physical and biological characteristics and functions are maintained and protected (e.g., no significant changes in the hydrological regime of the receiving water).

Big Darby Creek Watershed TMDL

5.0 Implementation of the Big Darby Creek TMDL

A key objective for preserving or restoring the high quality aquatic communities in the Big Darby Creek watershed is to determine ways for human activities to proceed without disrupting the existing natural system. Human intervention usually happens on a local scale. A small swale or ditch is often viewed locally as a conduit for exporting water so that the products of human pursuits can be maximized. But the system as a whole has a finite capacity. The cumulative impact of local interventions in the system has grown to the point that the system can no longer assimilate the changes, particularly in the upper Big Darby Creek watershed, Treacle Creek, Robinson Run and Hellbranch Run. These local interventions are happening from all aspects of our society, as such, solutions will need to come from all aspects of our society. This chapter of the TMDL report outlines the ways to implement the guidelines and loading reductions provided in Chapter 4. Achievement of these are necessary to maintain the Big Darby Creek watershed as a high quality aquatic system.

5.1 Implementation Mechanisms

Stream integrity concepts are discussed in Chapters 3 and 4, as well as the establishment of allowable loads for pollutants, and effluent limitations for point source dischargers. A variety of mechanisms will be evaluated and used to achieve these loading reductions. These mechanisms are discussed in more detail below.

5.1.1 Storm Water Control

Storm water control is largely achieved through the issuance of general permits under the NPDES program. These permits are issued for construction activities, and for industrial activities, and are issued to control storm water that is discharged from a discrete conveyance, such as pipes or confined conduits. NPDES individual and general permits are issued to

individuals, private entities, and local government entities. These permits function together to form a web of state and local authority under which storm water is controlled.

General Permits For Construction Storm Water

Ohio EPA has issued a draft general permit for runoff associated with construction activity that is specific to the Big Darby Creek watershed. Ohio EPA has used existing permit terms and conditions and has included new types of permit terms and conditions to ensure, to the extent authorized by law, that loading targets developed in Chapters 3 and 4 are achieved for storm water. These permit terms and conditions include management practices, effluent targets, infiltration requirements necessary to support stream base flows and stream setbacks necessary to protect the stream channel. The goal is to issue a permit that is protective of the aquatic life uses in the Big Darby Creek watershed.

As is the case with the existing construction storm water general permit, construction companies will be expected to be co-permittees along with developers. This condition of the permit will be an area of emphasis by Ohio EPA in evaluating compliance with the general permit for storm water from construction activity.

Phase I and Phase II MS4 Permits For Local Jurisdictions

Federal storm water regulations call for the issuance of Phase I NPDES storm water permits to large municipalities, and the issuance of Phase II NPDES storm water permits to smaller municipalities. As with the general permits for construction storm water, Ohio EPA intends to revise the MS4 permits, to the extent authorized by law, so as to achieve the loading limitations established in Chapter 4 of this TMDL for storm water. Ohio EPA expects to exercise its authority to designate additional Phase II communities within the Big Darby Creek watershed and to ensure that the permits issued to those jurisdictions are protective of the aquatic life uses.

Oregon

Columbia Slough TMDL

The DMAs will conduct monitoring of stormwater BOD5 loads and the instream response to those loads. Previous monitoring under the MS4 permits has measured BOD5 levels from urban runoff that do not correlate with the few instream BOD5 samples taken during storm events. The discrepancy between loads and instream concentration is likely due to processes such as deposition and decay during the transport to the receiving water. The monitoring data will be used to calibrate a dynamic water quality model to simulate the Slough's response to stormwater and deicing fluid. The DMA WLA will not be included as an effluent limit. Achievement of the WLA will be through implementation of BMPs. Municipal discharges will be required to implement BMPs and demonstrate that the BMPs achieve the WLAs established. The DMAs will be required, through MOAs, to:

- 1. Provide DEQ with a description of the program designed to reduce BOD5 loads to the Slough.*
- 2. Implement a program of BMPs that will reduce overall BOD5 load to achieve the DMA WLAs.*

3. *Implement coordinated monitoring to define stormwater loads to the Slough and the influence of stormwater BOD5 on receiving water quality.*
4. *Implement monitoring to demonstrate compliance with BOD5 WLA targets. Instream monitoring will include grab samples of BOD5 and DO and continuous hydrolab monitoring.*
5. *Implement water quality management plans as developed as part of the Lower Willamette Subbasin plan (projected completion spring 1999).*

Phase I MS4 Permit for City of Gresham, City of Fairview, and Multnomah County

The requirements of this section [p. 17] apply to co-permittee's MS4 discharges to receiving waters with established TMDLs and associated allocations as noted on page 1 of this permit. It is the intent of this section to ensure that pollutant discharges for those parameters listed in the TMDL are reduced to the maximum extent practicable. Adequate progress toward achieving assigned wasteload allocations (WLAs) will be demonstrated through the implementation of best management practices that are targeted at TMDL related pollutants.

i) Progress towards reducing TMDL pollutant loads must be evaluated by the co-permittee through the use of performance measures and pollutant load reduction benchmarks developed and listed in the SWMP.

(1) Performance measures are estimates of the effectiveness of various best management practices (BMPs) implemented by the co-permittees as per the SWMP; and they are not numeric effluent limits. Performance measures must, where appropriate, be pollutant reduction estimates. The performance measures for the BMPs addressing TMDL pollutants may be based on the same metrics developed in accordance with the program effectiveness monitoring requirements in Schedule B(1)(c)(i).

(2) A benchmark is a total pollutant load reduction estimate for each parameter or surrogate, where applicable, for which a WLA is established at the time of permit issuance. A benchmark is used to measure the overall effectiveness of the stormwater management plan in making progress toward the wasteload allocation (this estimate will be related to the statistical variability of the underlying data and may be stated as a range), and is intended to be a tool for guiding adaptive management activities. A benchmark is not a numeric effluent limit; rather it is a goal that is subject to the maximum extent practicable standard. The co-permittee must provide the rationale for the proposed benchmark, which includes an explanation of the relationship between the benchmarks and the TMDL wasteload allocations. Any limiting factors related to the development of a benchmark, such as data availability and data quality, must also be included in this rationale.

ii) The SWMP must describe a program that includes BMPs, monitoring triggers, narrative conditions, or other elements, designed to achieve reductions in the TMDL pollutants. The SWMP must include a specific strategy for implementing monitoring designed to enable the co-permittee to gauge the effectiveness of the SWMP in reducing TMDL pollutant loads to the maximum extent practicable.

iii) When the co-permittee applies for permit renewal, the co-permittee must include an evaluation of the effectiveness of the stormwater management plan with respect to all pollutant

parameters addressed in an applicable TMDL. This evaluation must assess progress towards meeting the pollutant load reductions (benchmarks) using the reporting and monitoring programs and other methods described in Schedules B(1), B(2) and D(2)(d)(v) of this permit. If the co-permittee has failed to meet the estimated pollutant load reductions during the permit term, they must use the adaptive management process described in Schedule D(2)(a) of this permit to reassess the SWMP and determine what additional or alternative BMPs are practicable. The co-permittee must update the SWMP to include these BMPs. The co-permittee must submit the evaluation and any SWMP revisions to the Department as specified in Schedule D(2)(d)(v).

iv) If within three (3) years following permit issuance a TMDL is approved by the Environmental Protection Agency (EPA) and the TMDL has wasteload allocations assigned to stormwater within the geographic area covered by this permit, the co-permittee must, at the time of the next permit renewal application, complete a review and strategy development, and propose changes, if appropriate, to the SWMP to address the urban stormwater discharges.

v) If, at the time of permit issuance, TMDL wasteload allocations have been established for pollutant parameters associated with the MS4's discharges, each co-permittee must, as appropriate, review their SWMP to determine its adequacy in reducing TMDL pollutant discharges to the maximum extent practicable and develop pollutant load reduction benchmark(s) and performance measures in the SWMP as defined in Schedule D(2)(d)(i)(1) and (2). As part of the SWMP review and benchmark and performance measure development process, the co-permittee must document, and subsequently report in accordance with Schedule B(2)(b), the following information:

(1) A description of the methodology and rationale used to develop and select pollutant reduction benchmarks and performance measures. The methodology must address current estimated discharge loadings and TMDL wasteload allocations.

(2) Any proposed modifications to the SWMP resulting from the adaptive management process [Schedule D(2)(a)] necessary to give reasonable assurance that the SWMP is designed to reduce TMDL pollutants to the maximum extent practicable. This must include selection of BMPs and any assumptions related to the proposed BMPs.

(3) Any proposed modifications to the monitoring component of the SWMP that are necessary to ensure adequate data and information are collected to assess SWMP implementation, BMP effectiveness, progress towards the pollutant load reduction (4) A description of the public participation process, including a summary of material public comments and the responses to those comments.

The requirements of this section apply to receiving waters without established TMDL wasteload allocations. The co-permittee must qualitatively review the pollutants that are on the 2002 303(d) list that are relevant to the co-permittee's MS4 discharges. This review and corresponding summary of proposed actions must be incorporated into the interim evaluation report. The review and summary must accomplish the following:

i) Determine whether there is a reasonable likelihood for stormwater from the MS4 to cause or contribute to water quality degradation of receiving waters through the discharge of pollutants

on the 2002 303(d) list. Provide the rationale for the conclusion, including the results of an evaluation.

ii) If the discharges from the MS4 is a contributor to specific listed pollutants, determine and describe the relationship between the 303(d) listed pollutant and the MS4 discharges.

iii) Determine whether the BMPs in the existing SWMP are effective to address the 303(d) pollutants. If not, describe how the plan could be adapted to more appropriately address these pollutants. A summary of the rationale for this determination must also be included in the report. If sufficient information is not available to make the determinations required above, the co-permittee must compile pertinent information necessary to adequately complete these determinations.

The Interim Evaluation Report is to include: i) An evaluation of, and proposed revisions to, the SWMP that addresses the requirements of Schedules D(2)(b) and B(1)(b), including the rationale supporting the proposed revisions. ii) A description of the current source identification components of the SWMP and the rationale regarding the adequacy of these components. iii) For each of the listed non-stormwater discharges [Schedule A(3)] expected to occur in a copermittee's area, the co-permittee must identify the appropriate control measures and the rationale for the selection of these BMPs (or the rationale for why BMPs are deemed not necessary). iv) The required information regarding TMDL pollutants as described in Schedule D(2)(d)(v) and the corresponding proposed revisions to the SWMP, and/or the required information regarding 303(d) listed pollutants as described in Schedule D(2)(e) and the corresponding proposed revisions to the SWMP. v) An executive summary of the SWMP, no more than 15 pages in length, that describes the main elements of the SWMP. vi) Maps providing updated information as described in 40 CFR §122.26(d)(1)(iii)(B), where applicable.

Draft Phase II MS4 Permit

The requirements of this section apply to MS4 discharges to receiving waters with established TMDLs and associated wasteload allocations as noted on page 1 of this permit or if the permittee becomes subject to an approved TMDL, and following notice of such by the Department. If the permittee reduces applicable pollutant discharges for the parameters listed in the TMDL to the maximum extent practicable, this reduction is deemed to be adequate progress toward achieving assigned TMDL wasteload allocations (WLAs).

a) Progress towards reducing TMDL pollutant loads will be evaluated, in subsequent permit terms, by the permittee through the use of performance measures and pollutant load reduction benchmarks developed and listed in the SWMP.

(1) Performance measures are estimates of the effectiveness of various best management practices (BMPs) implemented by the permittee as per the SWMP; and are not numeric effluent limits. Performance measures must, where appropriate, be pollutant reduction estimates. If appropriate, the performance measures for the BMPs addressing TMDL pollutants may be based on the same metrics developed to determine progress towards measurable goals, as described in the SWMP.

(2) A pollutant load reduction benchmark is an estimate for each parameter or surrogate, where applicable, for which a WLA is established. A benchmark is used to measure the overall

effectiveness of the stormwater management program in making progress toward the WLA (this estimate will be related to the statistical variability of the underlying data and may be stated as a range), and is intended to be a tool for guiding adaptive management activities. A benchmark is not a numeric effluent limit; rather it is a goal. The permittee must provide the rationale for the proposed benchmark, which includes an explanation of the relationship between the benchmarks and the TMDL wasteload allocations. Any limiting factors related to the development of a benchmark, such as data availability and data quality, must also be included in this rationale.

b) The permittee must use adaptive management, as described in Schedule A(3), to focus and refine SWMP elements to address TMDL wasteload allocation(s) over the course of this permit cycle.

c) If, at the time of permit issuance or within three (3) years of permit issuance, a TMDL establishes municipal stormwater wasteload allocations for pollutant parameters associated with the MS4's discharges, the permittee must develop and propose to the Department specific performance measures and pollutant load reduction benchmarks, as described in Schedule D(2)(a). Performance measures and pollutant load reduction benchmarks must be submitted to the Department as part of the permit renewal package described in Schedule B(3).

Pennsylvania

Wissahickon Creek TMDL

The reference watershed approach is based on determining the current loading rates for the pollutants of interest from a selected unimpaired watershed that has similar physical characteristics (i.e., landuse, soils, size, geology) to those of the impaired watershed. The objective of this process is to reduce the loading rate of sediment (or other pollutant) in the impaired stream segment to a level equivalent to or slightly lower than the loading rate in the unimpaired reference stream segment.

Tennessee

Harpeth River E. coii TMDL

SWMPs must include a section describing how discharges of pollutants of concern will be controlled to ensure that they do not cause or contribute to instream exceedances of water quality standards. Specific measures and BMPs to control pollutants of concern must also be identified. In addition, MS4s must implement the WLA provisions of an applicable TMDL and describe methods to evaluate whether stormwater controls are adequate to meet the WLA. In order to evaluate SWMP effectiveness and demonstrate compliance with specified WLAs, MS4s must develop and implement appropriate monitoring programs. Instream monitoring, at locations selected to best represent the effectiveness of BMPs, must include analytical monitoring of pollutants of concern. A detailed plan describing the monitoring program must be submitted to the Division of Water Pollution Control Nashville Field Office within 12 months of the approval date of this TMDL. Implementation of the monitoring program must commence within 6 months of plan approval by the Field Office. The monitoring program shall comply with

the monitoring, recordkeeping, and reporting requirements of NPDES General Permit for Discharges from Small Municipal Separate Storm Sewer Systems.

Phase II MS4 General Permit

1. *Determine whether stormwater discharge from any part of the MS4 significantly contributes directly or indirectly to a 303(d) listed (i.e., impaired) waterbody. Water quality impaired waters means any segment of surface waters that has been identified by the division as failing to support classified uses. If you have discharges meeting these criteria, you must comply with Part 3.1.1.2 and 3.1.2; if you do not, the remainder of this Part 3.1 does not apply to you.*
2. *If you have "303(d)" discharges described above, you must also determine whether a Total Maximum Daily Load (TMDL) has been developed by the division and approved by EPA for the listed waterbody. If there is a TMDL, you must comply with both Parts 3.1.2 and 3.1.3; if no TMDL has been approved, Part 3.1.3 does not apply until a TMDL has been approved.*
3. *Water Quality Controls for Discharges to Impaired Waterbodies. The stormwater management program review submitted to the division must include a section describing how your program will control the discharge of the pollutants of concern. This section must identify the measures and BMPs that will collectively control the discharge of the pollutants of concern. The measures should be presented in order of priority with respect to controlling the pollutants of concern.*
4. *Consistency with Total Maximum Daily Load (TMDL). If a TMDL has been approved for any waterbody into which you discharge, you must follow the procedure below and report on these activities in annual reports to the division:*
5. *Determine whether the approved TMDL is for a pollutant likely to be found in stormwater discharges from your MS4.*
6. *Determine whether the TMDL includes a pollutant wasteload allocation (WLA), implementation recommendations, or other performance requirements specifically for stormwater discharges from your MS4.*
7. *Determine whether the TMDL addresses a flow regime likely to occur during periods of stormwater discharge.*
8. *After the determinations above have been made and if it is found that your MS4 must implement specific provisions of the TMDL, evaluate whether the implementation of existing stormwater control measures is meeting the TMDL provisions, or if additional control measures are necessary.*
9. *Document all control measures currently being implemented or planned to be implemented. Include a schedule of implementation for all planned controls. Provide your rationale (e.g., calculations, assessments, reports and/or other evidence) that shows that you will comply with the TMDL provisions. For control measures that are expected to be implemented and evaluated beyond the term of this permit, you should also include longer schedule of implementation as necessary to describe the control measure.*

10. Describe a method to evaluate whether the stormwater controls are adequate to meet the requirements of the TMDL.
11. If the evaluation shows that additional or modified controls are necessary, describe the type and schedule for the control additions/revisions.

Vermont

Phase II General MS4 Permit

Your SWMP, including your operation and maintenance program for preventing or reducing pollutant runoff from municipal operations prepared pursuant to section 4.2.6, must include a section describing how your program will control to the maximum extent practicable the discharge of the pollutants of concern. This discussion must specifically identify measures and BMPs that will collectively control the discharge of the pollutants of concern. Pollutant(s) of concern refer to the pollutant identified as causing the impairment.

As set forth in 1.3.7 in implementing the six minimum control measures set forth in 4.2 you must be consistent with recommendations applicable to your MS4 in the implementation section of the Lake Champlain TMDL and any future TMDLs for impaired waters affected by your MS4 established or approved by EPA pursuant to section 303(d) of the federal Clean Water Act. The Lake Champlain Phosphorus TMDL recommendations for municipalities include: adoption of erosion controls (page 65), improved construction and maintenance practices for gravel backroads (page 69), promotion of riparian buffers and setbacks (page 76) and impervious surface minimization (page 76). 3.1.4. Determination of Consistency. The assessment of whether your Stormwater Management Program is consistent with TMDL recommendations will be based on your implementation and maintenance of best management practices not on estimates or measurements of pollutant loading does not authorize a direct discharge that is inconsistent with any EPA approved TMDL waste load allocation and any implementation plan for the waterbody to which the direct discharge drains. This general permit does not authorize a discharge to an impaired waterbody for which the Department has issued a watershed-specific general permit.

Washington

Draft Phase II MS4 General Permit (Western Washington)

An example of TMDL specific requirements is as follows:

Name of TMDL: Snohomish River Tributaries

Location of Original 303 (d) Listings – WA-07-1012, WA-07-015, WA-07-1052, WA-07-1163 WA-07-1163, WA-07-1030 and WA-07-040

Area where TMDL Requirements Apply:

For each waterbody listed, TMDL coverage includes areas draining to the WASWIS segment number, and all the upstream tributaries contributing to it: Allen Creek, YT94RF: Quilceda Creek, TH58TS: French Creek, XZ24XU: Woods Creek, FZ74HO:

Pilchuck River, NF79WA: Marshland Watershed, XW79FQ
TMDL coverage includes the areas indicated in the Lower Snohomish River Tributaries Fecal Coliform Bacteria TMDL Detailed Implementation Plan dated June 2003, Figure 3, page 7. This TMDL can be found at http://www.ecy.wa.gov/programs/wq/tmdl/watershed/tmdl_info-nwro.html

Parameter – Fecal Coliform

Approval Date – 9 – Aug. 2001

Potential MS4 Permittees – Phase I permit: Snohomish County

Phase II permit: Granite Falls, Lake Stevens, Monroe, Snohomish, Marysville, Arlington, Everett

WSDOT permit: WSDOT.

Action Required –

Baseline Requirements: Within 12 months after the effective date of this permit, all municipal stormwater permittees must adopt and enforce an ordinance or ordinances requiring the application of source control BMPs for the following existing land uses if they occur within their jurisdiction: 1) commercial animal handling areas, and 2) commercial composting facilities.

Where these activities are not occurring, no action is required. BMPs shall be equivalent to those found in Volume IV of the 2001 Ecology Stormwater Management Manual for Western Washington. Ordinances shall also address illicit connections to storm drains.

Where potential sources of bacterial pollution exist, operational source control BMPs shall be required for all pollutant generating sources. Only in those cases where a facility is demonstrated to be causing a violation of surface or ground water standards, or is discharging illegally, shall structural source control BMPs shall be required as related to this TMDL. The provision for structural source control BMPs is not intended to apply to individual municipal stormwater outfalls.

No later than 12 months after the effective date of this permit, affected municipal permittees shall compile a list of the existing composting and animal waste handling facilities. This list shall be updated no later than 180 days prior to the expiration of the permit and submitted with the permit renewal application. Starting no later than 24 months after the effective date of this permit, conduct an inspection program for all the listed sites, with adequate enforcement capability to ensure implementation of source control BMPs. All facilities must be inspected within 40 months of the effective date of this permit.

Monitoring and Implementation Requirements: Permittees shall choose one or both of the following monitoring strategies. Strategy A is the default implementation strategy unless the permittee chooses to implement Strategy B in all or part of the area subject to the TMDL:

Strategy A, Targeted Implementation Approach

- Within 90 days of permit issuance, prepare and submit to Ecology for review, a Quality Assurance Project Plan (QAPP) for the sampling of streams and/or discharges from stormwater conveyances within the jurisdictions boundaries in order to determine areas with highest bacteria concentrations (high priority areas). Provisions for additional monitoring in high priority areas shall be included in order to locate pollution sources were they are not obvious.

- *The QAPP shall be prepared following Ecology's "Guidelines for Preparing Quality Assurance Project Plans for Environmental Studies, Feb. 2001, Ecology Publication No. 01-03-003. Ecology will review and provide comments within 30 days the plan is received. The sampling plan shall include an adequate number of sampling points and adequate sampling frequency to reasonably characterize the receiving water or waste stream. Monitoring shall begin no later than 270 days after permit issuance.*
- *No later than 365 days prior to permit renewal application, a Bacterial Pollution Control Plan shall be developed. The Bacterial Pollution Control Plan shall, at a minimum, consider the use of the following approaches:*
 - 1) *pet waste ordinance, 2) evaluation of water pollution control enforcement capabilities, 3) evaluation of CAO in relation to TMDL goals, 4) educational program directed at reducing bacterial pollution, 5) investigation and implementation of methods that prevent additional stormwater bacterial pollution through stormwater treatment, reducing stormwater volumes, and preventing additional sources of stormwater in association with new development, 6) implementation of activities in the Quilceda/Allen or French Creek Watershed Management Plans (as applicable), 7) ambient water quality and stormwater quality sampling to specifically identify bacterial pollution sources, and 8) livestock ordinance and compost ordinance (Phase I Permittees only.)*
- *No later than 270 days prior to permit renewal application, conduct public review of the Bacterial Pollution Control Plan.*
- *Submit the final Bacterial Pollution Control Plan to Ecology at the time of permit renewal application.*

Strategy B: Early Action Approach.

- *Prepare Early Action BMP plan within 180 days of permit effective date. The Early Action Plan shall contain those BMPs that the permittee believes will be effective in reducing bacteria levels within the MS4 (or otherwise in local waters). The Early Action Plan must include implementation of the required baseline requirement for all municipal stormwater permittees including adoption and enforcement of ordinance(s) requiring the application of source control BMPs related to bacterial pollutants (equivalent to Volume IV of the 2001 Ecology Stormwater Management Manual for Western Washington).*
- *The Early Action BMP Plan shall, at a minimum, consider the use of the following approaches: 1) pet waste ordinance, 2) evaluation of water pollution control enforcement capabilities, 3) evaluation of CAO in relation to TMDL goals, 4) educational program directed at reducing bacterial pollution, 5) investigation and implementation of methods that prevent additional stormwater bacterial pollution through stormwater treatment, reducing stormwater volumes, and preventing additional sources of stormwater in association with new development, 6) implementation of activities in Quilceda/Allen or French Creek Watershed Management Plans (as applicable) Watershed Management Plan, 7) ambient water quality and stormwater quality sampling to specifically identify bacterial pollution sources, and 8) livestock and compost ordinances (Phase I permittees only)*
- *Conduct and complete public review of the Early Action BMP plan within 270 days of permit effective date.*

- *Begin implementation of Early Action BMPs as specified in the plan within 360 days of permit issuance. BMPs shall be placed within 36 months of permit issuance unless otherwise approved by Ecology.*
- *Within 30 months of permit issuance, prepare and submit to Ecology for review, a Quality Assurance Project Plan (QAPP) for the sampling of streams and/or discharges from stormwater conveyances within the jurisdiction's boundaries in order to assess whether or not affected water bodies and/or stormwater discharges, are meeting state water quality standards.*
- *The QAPP shall be prepared following Ecology's "Guidelines for Preparing Quality Assurance Project Plans for Environmental Studies, Feb. 2001, Ecology Publication No. 01-03-003. Ecology will review and provide comments within 30 days the plan is received. The sampling plan shall include an adequate number of sampling points and adequate sampling frequency to reasonably characterize the receiving water or waste stream. Monitoring shall begin no later than 36 months after permit issuance.*
- *No later than 270 days prior to permit renewal, a Bacterial Pollution Control Plan shall be developed. The Plan shall consider all available monitoring data and the approaches noted for the Early Action BMP Plan above.*
- *No later than 270 days prior to permit renewal application, conduct public review of the Bacterial Pollution Control Plan.*
- *Submit the Bacterial Pollution Control Plan to Ecology at the time of permit renewal application for review.*

Construction General Permit (state-wide)

S8. DISCHARGES TO 303(D) OR TMDL WATERBODIES

A. Sampling and Numeric Effluent Limitations For Discharges to 303(d)-listed Waterbodies

1. Permittees that discharge to water bodies listed as impaired by the State of Washington under Section 303(d) of the Clean Water Act for turbidity, fine sediment, high pH, or phosphorus, shall conduct water quality sampling according to the requirements of this section.

2. All references and requirements associated with Section 303(d) of the Clean Water Act mean the most current listing by Ecology of impaired waters that exists on November 16, 2005, or the date when the operator's complete permit application is received by Ecology, whichever is later.

B. Discharges to 303(d)-Listed Waterbodies (Turbidity, Fine Sediment, or Phosphorus)

1. Permittees which discharge to waterbodies on the 303(d) list for turbidity, fine sediment, or phosphorus shall conduct turbidity sampling at the following locations to evaluate compliance with the water quality standard for turbidity: a. Background turbidity shall be measured in the 303(d)-listed receiving water immediately upstream (upgradient) or outside the area of influence of the discharge; and b. Discharge turbidity shall be measured at the point of discharge into the 303(d) listed receiving waterbody, inside the area of influence of the discharge; or Alternatively, discharge turbidity may be measured at the point where the discharge leaves the construction site, rather than in the receiving waterbody.

2. Based on sampling, if the discharge turbidity exceeds the water quality standard for turbidity (more than 5 NTU over background turbidity when the background turbidity is 50 NTU or less, or more than a 10% increase in turbidity when the background turbidity is more than 50 NTU), all future discharges shall comply with a numeric effluent limit which is equal to the water quality standard for turbidity.

3. If a future discharge exceeds the water quality standard for turbidity, the Permittee shall:

- a. Review the SWPPP for compliance with Condition S9 and make appropriate revisions within 7 days of the discharge that exceeded the standard;
- b. Fully implement and maintain appropriate source control and/or treatment BMPs as soon as possible, but within 10 days of the discharge that exceeded the standard;
- c. Document BMP implementation and maintenance in the site log book; d. Notify the appropriate Ecology Regional Office by phone within 24 hours of analysis;
- e. Continue to sample daily until discharge turbidity meets the water quality standard for turbidity.

C. Discharges to waterbodies on the 303(d) list for High pH

1. Permittees which discharge to waterbodies on the 303(d) list for high pH shall conduct sampling at one of the following locations to evaluate compliance with the water quality standard for pH (in the range of 6.5 – 8.5): a. pH shall be measured at the point of discharge into the 303(d) listed waterbody, inside the area of influence of the discharge; or b. Alternatively, pH may be measured at the point where the discharge leaves the construction site, rather than in the receiving water.

2. Based on the sampling set forth above, if the pH exceeds the water quality standard for pH (in the range of 6.5 – 8.5), all future discharges shall comply with a numeric effluent limit which is equal to the water quality standard for pH.

3. If a future discharge exceeds the water quality standard for pH, the Permittee shall:

- a. Review the SWPPP for compliance with Condition S9 and make appropriate revisions within 7 days of the discharge that exceeded the water quality standard;
- b. Fully implement and maintain appropriate source control and/or treatment BMPs as soon as possible, but within 10 days of the discharge that exceeded the standards;
- c. Document BMP implementation and maintenance in the site log book; d. Notify the appropriate Ecology Regional Office by phone within 24 hours of analysis; and
- e. Continue to sample daily until discharge meets the water quality standard for pH (in the range of 6.5 – 8.5) or the discharge stops or is eliminated.

Parameter identified in 303(d) listing	Parameter/Units		Analytical Method	Sampling Frequency
Turbidity Fine Sediment	Phosphorus	Turbidity/NTU	SM2130 or EPA180.1	Weekly, if discharging If background is 50 NTU or less: 5 NTU over background; or If background is more than 50 NTU: 10% over background
High pH	pH/Standard Units		pH meter	Weekly, if discharging

D. Sampling and Limitations For Sites Discharging to Applicable TMDLs

1. Discharges to a waterbodies subject to an applicable Total Maximum Daily Load (TMDL) for turbidity, fine sediment, high pH, or phosphorus, shall be consistent with the assumptions and requirements of the TMDL.

a. Where an applicable TMDL sets specific waste load allocations or requirements for discharges covered by this permit, discharges shall be consistent with any specific waste load allocations or requirements established by the applicable TMDL. ii. The Permittee shall sample discharges weekly, or as otherwise specified by the TMDL, to evaluate compliance with the specific waste load allocations or requirements. iii. Analytical methods used to meet the monitoring requirements shall conform to the latest revision of the Guidelines Establishing Test Procedures for the Analysis of Pollutants contained in 40 CFR Part 136. Turbidity and pH methods need not be accredited or registered unless conducted at a laboratory which must otherwise be accredited or registered.

b. Where an applicable TMDL has established a general waste load allocation for construction stormwater discharges, but no specific requirements have been identified, compliance with Conditions S4 (Monitoring) and S9 (SWPPPs) will be assumed to be consistent with the approved TMDL.

c. Where an applicable TMDL has not specified a waste load allocation for construction stormwater discharges, but has not excluded these discharges, compliance with Conditions S4 (Monitoring) and S9 (SWPPPs) will be assumed to be consistent with the approved TMDL.

d. Where an applicable TMDL specifically precludes or prohibits discharges from construction activity, the operator is not eligible for coverage under this permit.

2. Applicable TMDL means a TMDL for turbidity, fine sediment, high pH, or phosphorus, which has been completed and approved by EPA prior to November 16, 2005, or prior to the date the operator's complete permit application is received by Ecology, whichever is later. TMDLs completed after the operator's complete permit application is received by Ecology become applicable to the Permittee only if they are imposed through an administrative order by Ecology, or through a modification of permit coverage.

Industrial General Permit (state-wide)

Facilities that discharge to a waterbody with a control plan unless this general permit is adequate to provide the level of protection required by the control plan. Excluded facilities need to obtain coverage under another NPDES permit for stormwater discharges associated with industrial activity. Control plans may be total maximum daily load (TMDL) determinations, restrictions for the protection of endangered species, ground water management plans, or other limitations that regulate or set limits on discharges to a specific waterbody or groundwater recharge area.

E. Stormwater Discharges to Impaired Waterbodies Except 303(d) Listings for Sediment and Tissue

The Permittee's discharge must not cause or contribute to an excursion of the State's water quality standards, including the State's narrative criteria for water quality. For 303(d) listings based on numeric water quality criteria, Permittees must comply with the State's water quality standard for each pollutant named as a pollutant causing a violation of water quality standards at the location named on the State's 303(d) list except for temperature which is not required and fecal coliform which is only required if there is a potential source from the industrial activity. Ecology will not require monitoring for fecal coliform if the Permittee can document that there is no potential source of fecal coliform from any of their industrial activities. A permittee's requirements to comply with this condition will be listed on the cover sheet. Ecology will maintain an electronic list of permittees subject to this permit condition. This list, titled Appendix 4, is available on Ecology's web site.

For waterbody segments listed as impaired by the State under Section 303(d) of the Clean Water Act, the applicable 303(d) list is the list which is in effect August 21, 2002, or the 303(d) list which is in effect at the date the first application for coverage is received by Ecology, whichever is later.

Permittees must be in compliance with applicable Total Maximum Daily Load (TMDL) determinations. Applicable TMDLs or TMDL determinations are TMDLs which have been completed by the issuance date of this permit, or which have been completed prior to the date that the permittees application is received by Ecology, which ever is later. A permittee's requirements to comply with this condition will be listed on their cover sheet. Ecology will maintain an electronic list of permittees subject to this permit condition. This list, titled Appendix 5, is available on Ecology's web site. Unless the first application for coverage is received after any updated 303(d) list is effective, changes associated with revised 303(d) lists completed after September 20, 2002 will only become effective if they are imposed through an administrative order issued by Ecology.

Unless the first application for coverage is received after the TMDL is completed TMDL requirements associated with TMDLs completed after the issuance date of this permit will only become effective if they are imposed through an administrative order issued by Ecology.

1. New Facilities and Significant Process Change New facilities that discharge either directly or indirectly via a stormwater conveyance system to waterbody segments listed as impaired by the State under Section 303(d) of the Clean Water Act must comply with the State's water quality standards for the named pollutant(s) at the point of discharge. Facilities with coverage under

this permit, that implement a significant process change (see S1.D.1.) must either comply with the State's water quality standards for the named pollutant(s) at the point of discharge or demonstrate no increase in loading from the entire facility as a result of the process change. All new discharges including new discharges associated with significant process changes must be in compliance with any applicable TMDL determination.

PARAMETER	EFFLUENT LIMITATIONS: NEW FACILITIES TO IMPAIRED WATERS OR WATERS COVERED BY A TMDL
<i>Parameter(s) as identified for the 303(d) listed segment or if applicable, TMDL determination</i>	<i>As listed on the coversheet, based on Chapter 173-201A or as identified in the TMDL or listing documentation</i>

2. Existing Facilities discharging to water bodies for which an applicable TMDL has been completed:

PARAMETER	EFFLUENT LIMITATIONS: EXISTING FACILITIES TO WATERS COVERED BY A TMDL
<i>Parameter(s) as identified in the applicable TMDL</i>	<i>As listed on the cover sheet to comply with the applicable TMDL</i>

Note: A current listing of permittees subject to this permit condition and the specific effluent limitations and monitoring requirements, Appendix 5, is available on Ecology's web site.

3. Existing facilities which discharge either directly or indirectly via a stormwater conveyance system to waterbody segments listed as impaired by the State under Section 303(d) of the Clean Water Act are subject to the general compliance with standards provisions in S7. Additional monitoring and benchmarks apply as described in S.4.G Note: A current listing of permittees subject to this permit condition, and the associated benchmarks and monitoring requirements, Appendix 4, is available on Ecology's web site.

G. Monitoring Requirements for Facilities Discharging to 303(d) Listed Waters or Subject to TMDL Determination Except 303(d) Listings for Sediment and Tissue

In addition to the requirements in S4.C. above, beginning January, 2005, all facilities that discharge to waterbody segments listed as impaired by the State under Section 303(d) of the Clean Water Act must conduct quarterly monitoring of authorized discharges of stormwater to surface water. Samples must be analyzed for the parameters named on the 303(d) as causing impairment of the listed waters except for temperature which is not required and fecal coliform which is only required if there is a potential source from the industrial activity. Note: A current Appendix 4 with a list of permittees subject to the monitoring requirements of this condition is available on Ecology's web site.

Discharges to a waterbody for which a TMDL has been completed must be consistent with the TMDL determination. Where the TMDL determination sets load allocations for new discharges or limits pollutant concentrations in the discharge, the Permittee must conduct quarterly monitoring for the named pollutant(s) and the monitoring must be consistent with TMDL

requirements, if any. Reporting as required by this permit begins with the first quarter of the year 2005. Note: A current Appendix 5 with a list of permittees subject to the monitoring requirements of this condition is available on Ecology's web site.

1. Permittees may suspend monitoring for a listed parameter if:

a. Eight consecutive samples fail to detect the presence of the listed parameter. Fail to detect does not apply to pH. For pH it is eight consecutive samples where the values are not outside of the water quality-based range of 6.5 to 8.5 (freshwater) or 7.0 to 8.5 (marine).

b. The Permittee can demonstrate to Ecology's satisfaction after eight or more consecutive quarterly samples that there is no reasonable potential to violate water quality standards. For the purposes of suspending monitoring required under S4.G only, no reasonable potential to violate water quality is defined as a single sample exceeding eighty percent of the benchmark, and the average of the last eight consecutive quarterly samples is less than sixty percent of the benchmark.

2. For existing permittees discharging to water bodies for which an applicable TMDL has been completed:

Parameter	Units	Analytical Method	Minimum Sampling Frequency
Parameter(s) as identified in the applicable TMDL. (See cover sheet)	As Applicable (see cover sheet)	Appropriate EPA or Equivalent Method	Quarterly (See cover sheet for specifics)

Note: A current Appendix 5 with a list of permittees subject to the monitoring requirements of this condition is available on Ecology's web site.

3. Existing permittees discharging to water bodies that discharge to waterbody segments listed as impaired by the State under Section 303(d) of the Clean Water Act:

Parameter	Units	Analytical Method	303(d) Benchmark Value	Minimum Sampling Frequency
Parameter(s) as identified for the 303(d) listed segment (See cover sheet)	As Applicable (See cover sheet)	Appropriate EPA or Equivalent Method	Based on Chapter 173-201A (See cover sheet)	Quarterly (See cover sheet for specifics)

Note: A current Appendix 4 with a list of permittees subject to the monitoring requirements of this condition is available on Ecology's web site.

H. Monitoring Requirements for Facilities Discharging to 303(d) Waterbody segments listed for Sediment

All facilities that discharge to waterbody segments listed for sediment must notify Ecology of any sediment data they may have collected. Upon request from Ecology they will submit the data.

In addition to the requirements in S4.A. above, beginning with the first quarter of the year 2005, all facilities that discharge to waterbody segments listed by the State for violations of sediment standards under Section 303(d) of the Clean Water Act must conduct quarterly monitoring of authorized discharges of stormwater to surface water for total suspended solids (TSS). Discharges that demonstrate TSS levels consistent with secondary treatment standards (30 mg/L monthly average not to exceed 45 mg/L) are considered unlikely to violate sediment quality standards. Permittees that can demonstrate consistent attainment TSS levels of secondary treatment standards may suspend monitoring for the duration of the permit term. Consistent attainment is defined as 8 consecutive quarterly samples (omitting any quarter where there is no discharge) with an average TSS of 30 mg/L and no sample exceeding 45 mg/L.

Wisconsin

Phase II MS4 general permit

1.5 Impaired Water Bodies and Total Maximum Daily Load Requirements

1.5.1 The permittee shall determine whether any part of its MS4 discharges to an impaired water body listed in accordance with section 303(d)(1) of the federal Clean Water Act, 33 USC §1313(d)(1)(C), and the implementing regulation of the US Environmental Protection Agency, 40 CFR §130.7(c)(1). Impaired waters are those that are not meeting applicable water quality standards. A list of Wisconsin impaired water bodies may be found on the Department's Internet site at: <http://dnr.wi.gov/org/water/wm/wqs/303d/303d.html>.

1.5.2 If the permittee's MS4 discharges to an impaired water body, the permittee shall include a written section in its storm water management program that discusses the management practices and control measures it will implement as part of its program to reduce, with the goal of eliminating, the discharge of pollutant(s) of concern that contribute to the impairment of the water body. This section of the permittee's program shall specifically identify control measures and practices that will collectively be used to try to eliminate the MS4's discharge of pollutant(s) of concern that contribute to the impairment of the water body and explain why these control measures and practices were chosen as opposed to other alternatives. Pollutant(s) of concern means a pollutant that is causing impairment of a water body.

1.5.3 After the permittee's start date of coverage under this permit, the permittee may not establish a new MS4 discharge of a pollutant of concern to an impaired water body or increase the discharge of a pollutant of concern to an impaired water body unless the new or increased discharge causes the receiving water to meet applicable water quality standards, or the Department has approved a total maximum daily load (TMDL) for the impaired water body.

1.5.4 The permittee shall determine whether its MS4 discharges to an impaired water body for which the Department has approved a TMDL. If so, the permittee shall assess whether the TMDL wasteload allocation for the MS4 is being met through the existing storm water management controls or whether additional control measures are necessary. The permittee's assessment of whether the TMDL wasteload allocation is being met shall focus on the adequacy of the permittee's storm water controls (implementation and maintenance). Approved TMDLs

are listed on the Department Internet site at:
<http://dnr.wi.gov/org/water/wm/wqs/303d/index.html>.

1.5.5 The storm water management program developed under section 2 of this permit shall be revised as necessary to achieve and maintain compliance with any Department approved-TMDL wasteload allocation for an impaired water to which the MS4 discharges. The redesigned storm water management programs shall be implemented as soon as possible.

Federal Construction General Permit

Part 1.3.C.: Eligibility, Limitations on Coverage

5. Discharging into Receiving Waters With an Approved Total Maximum Daily Load Analysis

a. You are not eligible for coverage under this permit for discharges of pollutants of concern to waters for which there is a total maximum daily load (TMDL) established or approved by EPA unless you incorporate into your SWPPP measures or controls that are consistent with the assumptions and requirements of such TMDL. To be eligible for coverage under this general permit, you must incorporate into your SWPPP any conditions applicable to your discharges necessary for consistency with the assumptions and requirements of such TMDL. If a specific wasteload allocation has been established that would apply to your discharge, you must incorporate that allocation into your SWPPP and implement necessary steps to meet that allocation.

b. In a situation where an EPA-approved or established TMDL has specified a general wasteload allocation applicable to construction storm water discharges, but no specific requirements for construction sites have been identified in the TMDL, you should consult with the State or Federal TMDL authority to confirm that adherence to a SWPPP that meets the requirements of the CGP will be consistent with the approved TMDL. Where an EPA-approved or established TMDL has not specified a wasteload allocation applicable to construction storm water discharges, but has not specifically excluded these discharges, adherence to a SWPPP that meets the requirements of the CGP will generally be assumed to be consistent with the approved TMDL. If the EPA-approved or established TMDL specifically precludes such discharges, the operator is not eligible for coverage under the CGP.

3.14 Documentation of Permit Eligibility Related to Total Maximum Daily Loads

The SWPPP must include documentation supporting a determination of permit eligibility with regard to waters that have an EPA-established or approved TMDL, including:

A. Identification of whether your discharge is identified, either specifically or generally, in an EPA-established or approved TMDL and any associated allocations, requirements, and assumptions identified for your discharge;

B. Summaries of consultation with State or Federal TMDL authorities on consistency of SWPPP conditions with the approved TMDL, and

C. Measures taken by you to ensure that your discharge of pollutants from the site is consistent with the assumptions and requirements of the EPA-established or approved TMDL, including any specific wasteload allocation that has been established that would apply to your discharge.

See section 1.3.C.5 for further information on determining permit eligibility related to TMDLs.

Federal Multi-Sector General Permit for Stormwater Discharges Associated with Industrial Activity

Impaired waters include both those with established TMDLs, and those for which TMDL development has been identified as necessary, but for which one has not yet been established. For a more detailed definition see Appendix A.

1.4.4.1 Discharge to an Impaired Water with an Established TMDL. If a wasteload allocation (WLA) has been established that applies to your discharge, you must develop the SWPPP accordingly (Part 2.1.3.2), and implement all necessary controls to meet that allocation. You must verify that your discharge complies with the WLA through the appropriate discharge monitoring (Part 3.2.4.2). Failure to comply with a relevant WLA is a violation of this permit.

If you have properly complied with the requirements of Part 2.1.3.2 and find that the applicable TMDL does not specify a wasteload allocation or other requirements either individually or categorically for your discharge (including disallowing such discharge), compliance with this permit will be deemed adequate to meet the requirements of the TMDL.

1.4.4.2 Discharge to an Impaired Water without an Established TMDL. If a TMDL has not been established that applies to your discharge you must comply with the requirements of this permit and any additional conditions stipulated by the Secretary (Part 2.1.3.2). If you have properly complied with all such requirements then compliance with this permit will be deemed adequate to meet the requirements for discharging to an impaired water. You are also subject to the monitoring requirement of Part 3.2.4.1. Failure to comply with applicable conditions is a violation of this permit.

3.2.4.1 Discharges to impaired waters with no applicable wasteload allocation. For discharges that are conveyed directly or indirectly to impaired waters, monitoring for the pollutant of concern must be conducted at a minimum of once each permit year throughout the term of the permit unless this permit already assigns your discharge an effluent limitation or a benchmark for the pollutant of concern. Your monitoring year begins on the day that your discharge is authorized.

This monitoring requirement is waived after one year if the pollutant of concern is not detected in an amount expected to cause and contribute to a violation of Vermont Water Quality Standards in your stormwater discharge, and you document in your SWPPP that there is no exposure of the pollutant of concern to stormwater at your site.

3.2.4.2 Discharges to impaired waters with an applicable wasteload allocation. For discharges that are conveyed directly or indirectly to waters for which a TMDL has been established with a wasteload allocation applicable to your discharge (either specifically or categorically), monitoring for the wasteload allocation pollutant of concern must be conducted, consistent with

any instructions in TMDL documentation. If the TMDL documentation does not specify specific monitoring requirements, monitoring for the pollutant of concern must be conducted at a minimum of once each permit year throughout the term of the permit, unless this permit already assigns your discharge an effluent limitation or a benchmark for the pollutant of concern, in which case you must follow the effluent limitation or benchmark monitoring schedule. Your monitoring year begins on the day your discharge is authorized. This monitoring must be conducted in addition to all other monitoring requirements prescribed in this permit. Monitoring of a pollutant of concern for which your discharge has been assigned a wasteload allocation cannot be waived unless the WLA is specified only in terms of BMPs, in which case the monitoring requirement is waived after one year if the pollutant of concern is not detected in your stormwater discharge and you document in your SWPPP that you have adopted the required BMPs.

If at any time your monitoring data exceed a relevant waste load allocation you are subject to the Corrective Action requirements of Part 3.3 and the Follow-up Monitoring and Reporting requirements of Part 3.4.

GLOSSARY

Benchmark monitoring: The results of MSGP 2000 benchmark monitoring are primarily for the permittee's use to determine the overall effectiveness of an SWPPP in controlling the discharge of pollutants to receiving waters. Benchmark values are not viewed as effluent limitations. An exceedance of a benchmark value does not, in and of itself, constitute a violation of the MSGP. According to EPA, while exceedance of a benchmark value does not automatically indicate that violation of a water quality standard has occurred, it does signal that modifications to the SWPPP may be necessary. In addition, permitting authorities may use the exceedance of benchmark values to identify facilities that would be more appropriately covered under an individual, or alternative general permit where more specific pollution prevention controls could be required.

Best management practice (BMP): Policies or practices that prevent, reduce, or mitigate the effects of stormwater runoff. These methods can be structural (e.g., devices, ponds) or nonstructural (e.g., policies to reduce imperviousness). BMPs classified as *nonstructural* are those that rely predominantly on behavioral changes rather than construction to be effective. *Structural* BMPs are engineered or constructed to prevent or manage stormwater. BMPs are often further classified into (1) source-control BMPs to prevent pollution, (2) water quality BMPs to reduce or prevent pollutants in runoff, (3) flow-control BMPs to reduce the volume of stormwater and (4) infiltration BMPs to increase infiltration.

Combined sewer system: Combined sewer systems are sewers that are designed to collect rainwater runoff, domestic sewage, and industrial wastewater in the same pipe. Most of the time, combined sewer systems transport all their wastewater to a sewage treatment plant, where it is treated and then discharged to a waterbody. During periods of heavy rainfall or snowmelt, however, the wastewater volume in a combined sewer system can exceed the capacity of the sewer system or treatment plant. For this reason, combined sewer systems are designed to overflow occasionally and discharge excess wastewater directly to nearby streams, rivers, or other waterbodies.

Effluent limitation: Any restriction imposed on quantities, discharge rates, and concentrations of pollutants that are discharged from point sources into waters of the United States, the waters of the contiguous zone, or the ocean (40 CFR 122.2).

Flow duration curves: Calculations of limits that analyze the cumulative frequency of historic flow data over a specified period. Flow duration curve development typically uses daily average discharge rates, which are sorted from the highest value to the lowest. Using this convention, flow duration intervals are expressed as a percentage, with zero corresponding to the highest stream discharge in the record (i.e., flood conditions) and 100 to the lowest (i.e., drought conditions). Duration curve analysis identifies intervals that can be used as a general indicator of hydrologic condition (i.e., wet versus dry and to what degree). Flow duration curve intervals can be grouped into several broad categories or zones. For example, many duration curves categorize the flow intervals into the following five zones: high flows, moist conditions, mid-range flows, dry conditions, and low flows. When water quality concentrations or loads are plotted on the basis of these flow zones, the resulting graphs can provide additional insight about conditions, patterns associated with the impairment, and potential sources contributing to the problem. Duration curves add value to the TMDL process by characterizing water quality concerns in terms of flow conditions, linking these concerns to key watershed processes, prioritizing source assessment efforts, and identifying potential solutions.

General permit: An NPDES permit issued under 40 CFR 122.28 that authorizes a category of discharges under the CWA within a geographical area. A general permit is not specifically tailored for an individual discharger.

Illicit discharge: Any discharge to a municipal separate storm sewer that is not composed entirely of stormwater, except discharges pursuant to an NPDES permit and discharges resulting from fire fighting activities.

Individual permit: An NPDES permit specifically tailored for an individual discharger.

Integrated Design and Evaluation Assessment of Loadings (IDEAL; Barfield 2002) provides a spreadsheet-based technique for assessing the benefits of urban management practices on flow, sediment, nutrients, and bacteria. The model predicts watershed runoff, concentrations, and loads on the basis of the user's selection of vegetative filter strips, dry-detention ponds and wet-detention ponds. Urban areas are defined as pervious, impervious connected, and impervious unconnected areas. Flow and loads can be directed to a pond that can be either dry (no permanent pool) or wet (permanent pool). The model then calculates the pollutant removal efficiencies of the practices using empirical equations. The model predicts single storm values and converts them to average annual storm values using a statistical process. The IDEAL model is designed to help managers estimate long-term management practice pollutant removal efficiencies, and is not designed for looking at individual storms.

Load allocation (LA): The portion of a receiving water's loading capacity that is attributed either to one of its existing or future nonpoint sources of pollution or to natural background sources. LAs are best estimates of the loading, which can range from reasonably accurate estimates to gross allotments, depending on the availability of data and appropriate techniques for predicting the loading. Wherever possible, natural and nonpoint source loads should be distinguished [40 CFR 130.2(g)].

Loading capacity: The greatest amount of loading that a waterbody can receive without violating water quality standards. Loading capacity is equal to the TMDL. Loading capacities calculated using data-driven approaches are typically based on *in-stream* or *delivered loads* (i.e., in-stream flow multiplied by target and conversion factor at a location in the waterbody). Loading capacities developed using land-based modeling approaches can also be based on *source loads* (i.e., land-based loads before they are delivered to the stream).

Margin of safety (MOS): The component of a TMDL that accounts for any lack of knowledge concerning the relationship between LAs, WLAs, and water quality [CWA section 303(d)(1)(C), 40 CFR 130.7(c)(1)]. EPA's *Guidance for Water Quality-based Decisions: The TMDL Process* (1991) explains that the MOS may be implicit (i.e., incorporated into the TMDL through conservative assumptions in the analysis) or explicit (i.e., expressed in the TMDL as loadings set aside for the MOS). If the MOS is implicit, the conservative assumptions in the analysis that account for the MOS must be described. If the MOS is explicit, the loading set aside for the MOS must be identified.

Maximum extent practicable (MEP): The pollutant reduction standard applied to stormwater management programs developed to address stormwater discharges from regulated MS4s.

Measurable goals: Quantifiable objectives for assessing program and best management practice effectiveness that regulated small municipal separate storm sewer systems must develop for the six minimum control measures to comply with Phase II MS4 permit requirements.

Model for Urban Stormwater Improvement Conceptualization (MUSIC; Wong et al. 2001): Software developed by the Cooperative Research Center (CRC) for Catchment Hydrology in Australia to evaluate small- and large-scale (100-square-mile) urban stormwater systems using modeling time steps that range from 6 minutes to 24 hours. MUSIC provides an interface to help set up complex stormwater management scenarios. It allows users to view results using a range of graphical and tabular formats. The stormwater control devices evaluated by MUSIC include ponds, bioretention, infiltration buffer strips, sedimentation basins, pollutant traps, wetlands, and swales. Major techniques used to evaluate management practices including settling in ponds and decay of pollutants (first order; see www.toolkit.net.au/music).

Multi-Sector General Permit (MSGP): Authorizes the discharge of stormwater from industrial facilities, consistent with the terms of the permit, in areas of the United States where EPA manages the NPDES permit program.

Municipal separate storm sewer system (MS4): A conveyance or system of conveyances (including roads with drainage systems, municipal streets, catch basins, curbs, gutters, ditches, man-made channels, or storm drains): (i) Owned or operated by a state, city, town, borough, county, parish, district, association, or other public body (created by or pursuant to state law)...including special districts under State law such as a sewer district, flood control district or drainage district, or similar entity, or an Indian tribe or an authorized Indian tribal organization, or a designated and approved management agency under section 208 of the CWA that discharges into waters of the United States. (ii) Designed or used for collecting or conveying stormwater; (iii) Which is not a combined sewer; and (iv) Which is not part of a publicly owned treatment works (POTW) as defined at 40 CFR 122.2.

Notice of Intent (NOI): Submitting a completed NOI constitutes notice that the entity intends to be authorized to discharge pollutants to waters of the United States from the facility or site identified in the form under a state or EPA general permit such as the Phase II MS4 General Permit, the Multi-Sector General Permit (MSGP) for industrial stormwater, or the Construction General Permit (CGP).

Permitting authority: The U.S. Environmental Protection Agency (EPA), a Regional Administrator of EPA, or an authorized representative.

PGBMP-DSS: Evaluates the effect of management practices or combinations of management practices on flow and pollutant loading. This module uses simplified, process-based algorithms to simulate management practice control of modeled flow and water-quality time series generated from runoff models such as HSPF. These simple algorithms include weir and orifice control structures; storm swale characteristics; flow and pollutant transport; flow routing and networking; infiltration and saturation; and a general loss/decay representation for a pollutant. Users have the flexibility to design retention-style or open-channel management practices; can define flow routing through a management practice or management practice network; can simulate Integrated Management Practices (IMPs) such as reduced or discontinued imperviousness through flow networking; and can compare management practice controls against a defined benchmark such as a simulated predevelopment condition. Because the underlying algorithms are based on physical processes, management practice effectiveness can be evaluated and estimated over a wide range of storm conditions, management practice designs, and flow routing configurations.

Six minimum control measures: Categories of best management practices that regulated small MS4s must address under Phase II MS4 stormwater management programs.

Storm sewershed: Land area in which all stormwater flows are conveyed to a single point, or outlet.

Stormwater management program (SWMP): The program developed and implemented by EPA to minimize the discharge of pollutants from regulated MS4s to the maximum extent practicable using BMPs.

Stormwater pollution prevention plan (SWPPP): A plan developed to minimize the discharge of pollutants from an industrial site (including construction activities) using BMPs.

Subwatershed: Smaller division of a watershed, defined by the area draining to a tributary of the main waterbody.

The Site Evaluation Tool (SET): Software developed to assess the effects of development, including sediment and nutrient loading, on a site scale. The SET provides a more robust environment for testing multiple management practices and site configurations than do simple export calculations. The tool allows definition of pre- and post-treated land use/land cover, allowing for multiple drainage areas and various combinations of practices. An important benefit of the SET is testing management practices in combination with each other, in the context of a site or small catchment. Structural and nonstructural practices can be represented, giving the user a suite of options for evaluation.

Total Maximum Daily Load (TMDL): A calculation of the maximum amount of a pollutant that a waterbody can receive and still meet water quality standards. A TMDL is the sum of individual wasteload allocations for point sources (WLA), load allocations for nonpoint sources and natural background (LA), and must consider seasonal variation and include a margin of safety. The TMDL comes in the form of a technical document or plan. (40 CFR 130.2 and 130.7)

Urbanized area (UA): A land area comprising one or more places—central place(s)—and the adjacent densely settled surrounding area—urban fringe—that together have a residential population of at least 50,000 and an overall population density of at least 1,000 people per square mile used to identify regulated small MS4s under the Phase II MS4 Stormwater program.

Vegetative Filter Strip Model (VFSSMOD; Muñoz-Carpena et al. 2003): A model that provides specialized modeling of field-scale processes associated with filter trips or buffers. It provides routing of storm runoff from an adjacent field through a vegetative filter strip and calculates outflow, infiltration, and sediment trapping efficiency. It is sensitive to characteristics of the filter including vegetation roughness or density, slope, infiltration characteristics, and the incoming runoff volume and sediment particle sizes. VFSSMOD includes a series of modules Green-Ampt infiltration, kinematic wave overland flow, and sediment filtration. The model can also be used to describe transport at the edge of the field when flow and transport are mainly in the form of sheet flow and the path represents average conditions across the vegetative filter strip. VFSSMOD uses a variable time step that helps to more accurately solve the overland water flow equation. The model inputs are specified on a storm basis, and the model summarizes all the information after each event to generate storm outputs.

Virginia Field Scale Wetland Model (VAFSSWM; Yu, et al. 1998): A field-scale model for quantifying the pollutant removal in a wetland system. It includes a hydrologic subroutine to route flow through the treatment system; precipitation, evapotranspiration, and exchange with subsurface groundwater. The model adopted a Continuous Stirred Tank Reactor (CSTR) in series schema. VAFSSWM models mechanisms of settling, diffusion, adsorption to plants and substrate, and vegetative uptake for a pollutant in dissolved and particulate forms in a two-segment (water column and substrate), two-state

(completely mixed and quiescent) reactor system by employing first-order kinetics. The governing equations for quiescent condition are identical to that of turbulent condition; however, far lower settling velocities are assumed to account for the greater percentage of finer particles during the quiescent state. VAFSWM is a relatively simple model that includes the most dominant processes in the wetland system. However, the users need to provide and calibrate the requisite kinetics parameters.

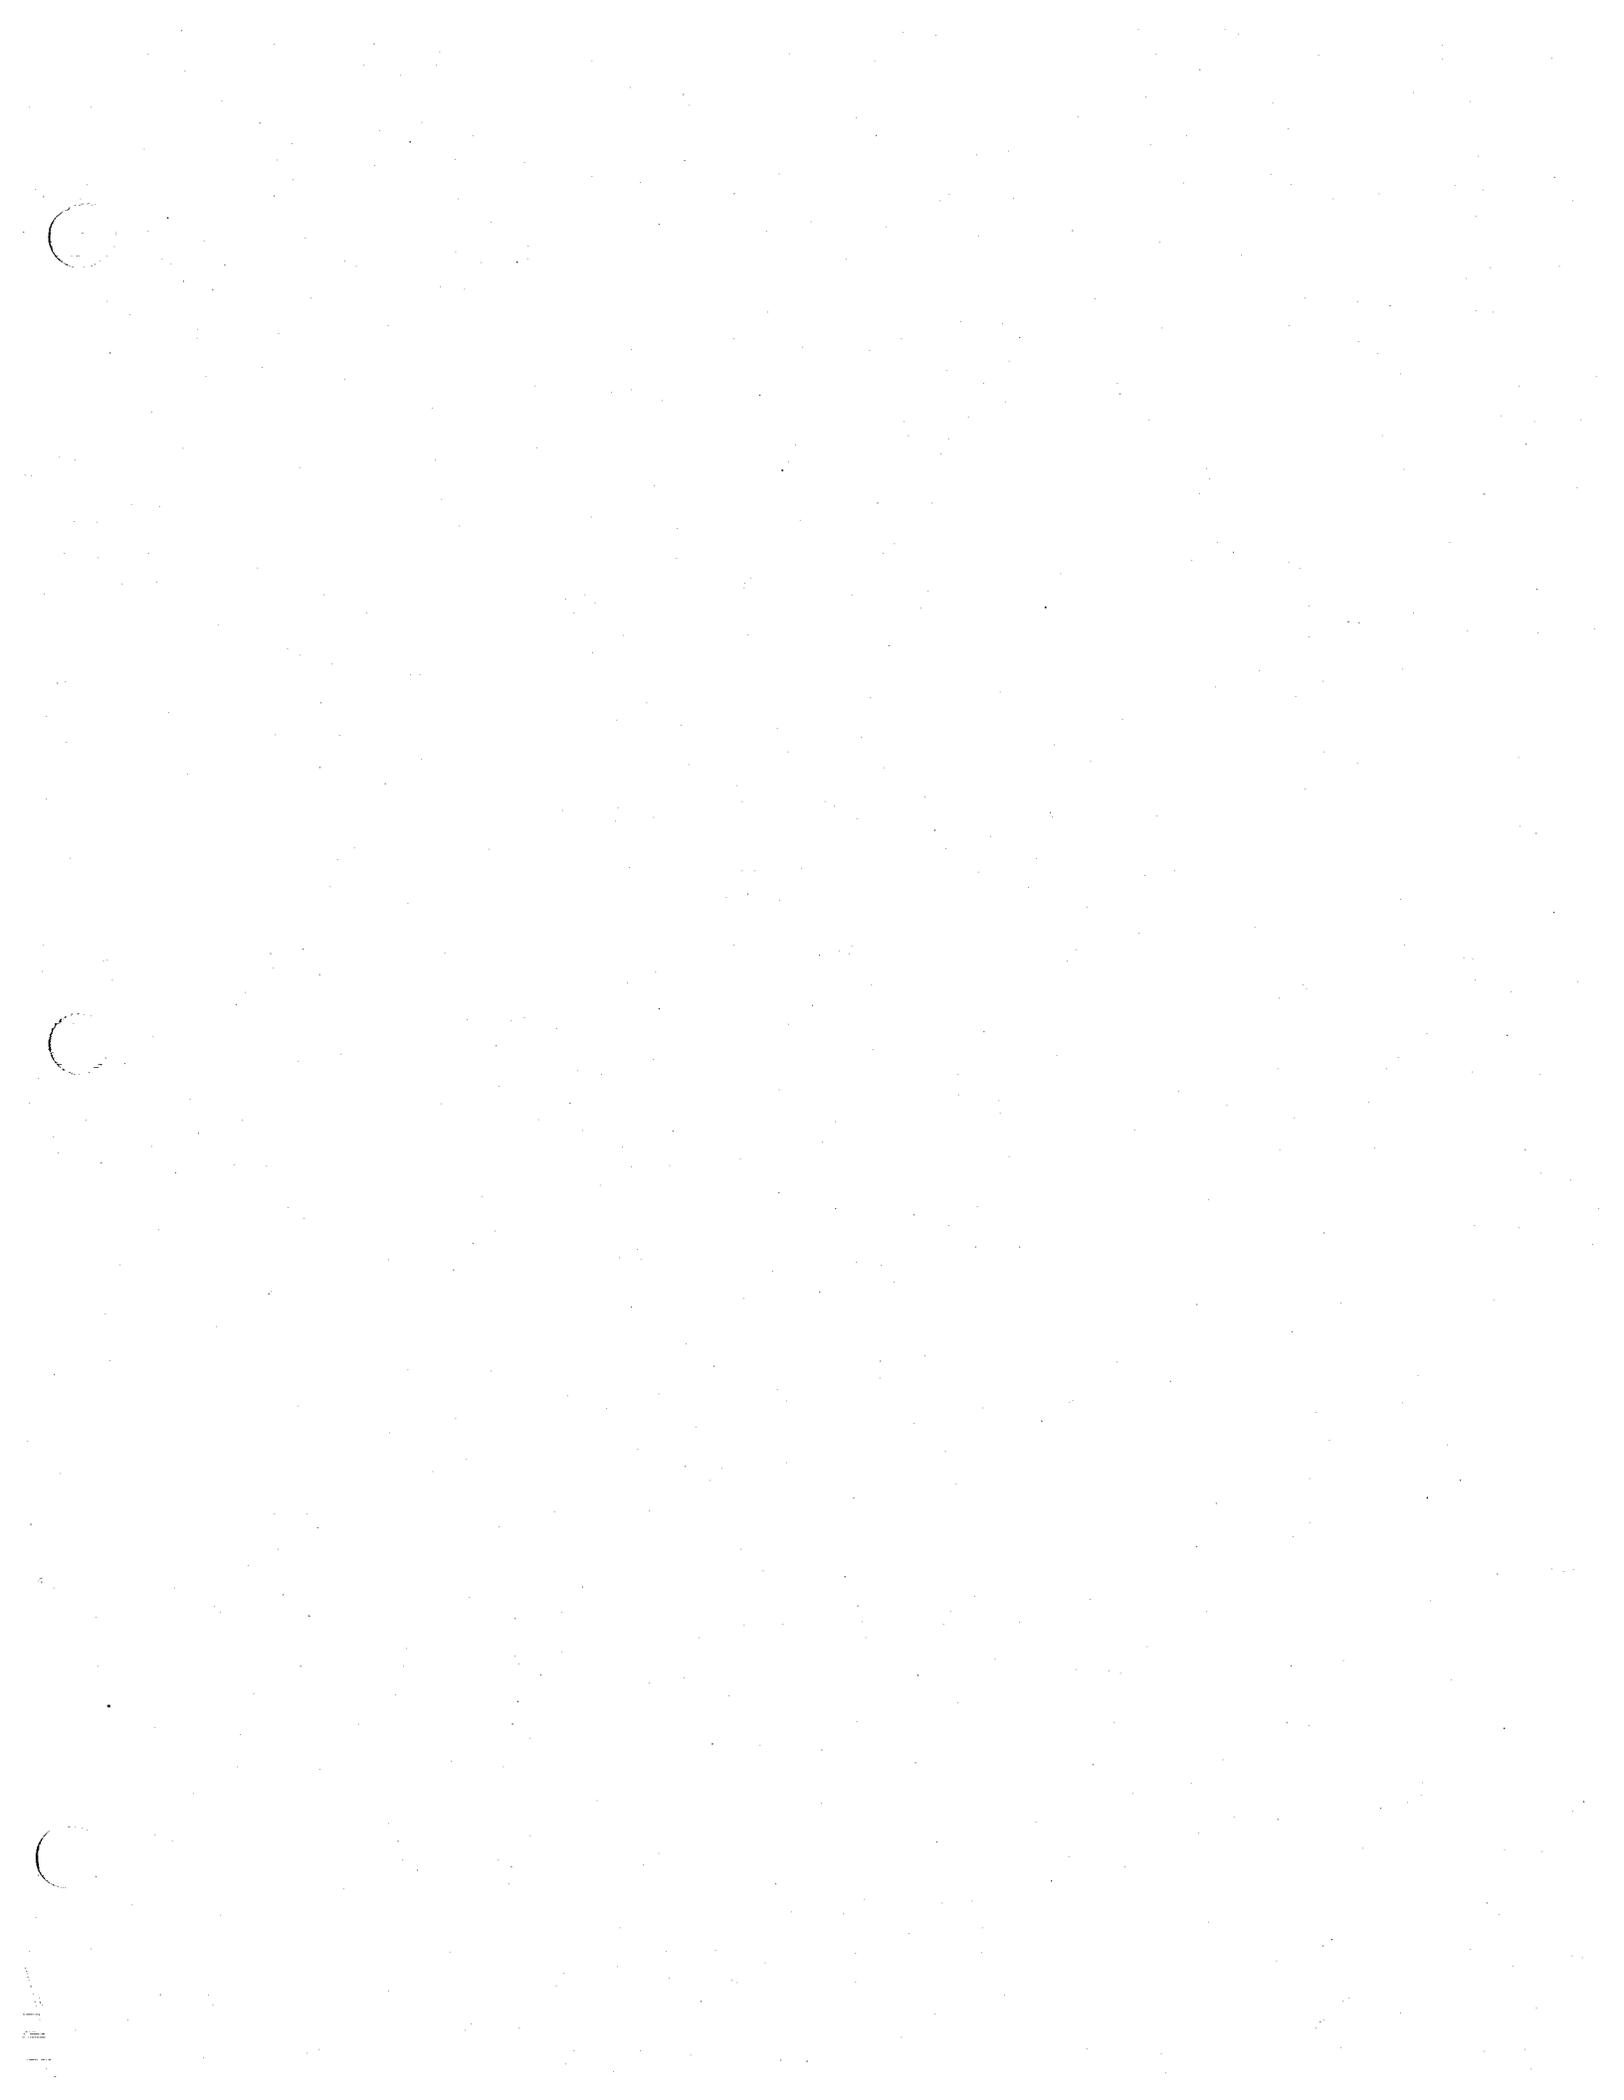

Wasteload allocation (WLA): The portion of a receiving water's loading capacity that is allocated to one of its existing or future point sources of pollution. WLAs constitute a type of water quality-based effluent limitation (40 CFR 130.2(h)).

Water Quality Based-Effluent Limitation (WQBEL): An effluent limitation determined by selecting the most stringent of the effluent limits calculated using all applicable water quality criteria (e.g., aquatic life, human health, wildlife, translation of narrative criteria) for a specific point source to a specific receiving water for a given pollutant or on the basis of the facility's WLA from a TMDL.

Watershed: A land area that drains to a common waterway, such as a stream, lake, estuary, wetland or ultimately the ocean.

WETLAND (Lee 1999; 2002): A dynamic, compartmental model to simulate hydrologic, water quality, and biological processes and help design and evaluate wetlands. WETLAND uses the continuously stirred tank reactor prototype, and it is assumed that all incoming nutrients are completely mixed throughout the entire volume. The model can simulate both free-water surface and subsurface flow wetlands. WETLAND is modular and includes hydrologic, nitrogen, carbon, dissolved oxygen, bacteria, sediment, vegetation, and phosphorous submodels. The strength of WETLAND lies on the linked kinetics for the water quality variables and considers seasonal variation (variable user-defined parameter by season/time period). The weaknesses of this model include the completely mixed assumption, which overlooks the effect of the system shape, and the needs for extensive kinetic parameters.

Advisers to the Nation on Science, Engineering, and Medicine

National Academy of Sciences
National Academy of Engineering
Institute of Medicine
National Research Council

The National Academy of Sciences is a private, nonprofit, self-perpetuating society of distinguished scholars engaged in scientific and engineering research, dedicated to the furtherance of science and technology and to their use for the general welfare. Upon the authority of the charter granted to it by the Congress in 1863, the Academy has a mandate that requires it to advise the federal government on scientific and technical matters. Dr. Bruce M. Alberts is president of the National Academy of Sciences.

The National Academy of Engineering was established in 1964, under the charter of the National Academy of Sciences, as a parallel organization of outstanding engineers. It is autonomous in its administration and in the selection of its members, sharing with the National Academy of Sciences the responsibility for advising the federal government. The National Academy of Engineering also sponsors engineering programs aimed at meeting national needs, encourages education and research, and recognizes the superior achievement of engineers. Dr. William A. Wulf is president of the National Academy of Engineering.

The Institute of Medicine was established in 1970 by the National Academy of Sciences to secure the services of eminent members of appropriate professions in the examination of policy matters pertaining to the health of the public. The Institute acts under the responsibility given to the National Academy of Sciences by its congressional charter to be an adviser to the federal government and, upon its own initiative, to identify issues of medical care, research, and education. Dr. Kenneth I. Shine is president of the Institute of Medicine.

The National Research Council was organized by the National Academy of Sciences in 1916 to associate the broad community of science and technology with the Academy's purposes of furthering knowledge and advising the federal government. Functioning in accordance with general policies determined by the Academy, the Council has become the principal operating agency of both the National Academy of Sciences and the National Academy of Engineering in providing services to the government, the public, and the scientific and engineering communities. The Council is administered jointly by both Academies and the Institute of Medicine. Dr. Bruce M. Alberts and Dr. William A. Wulf are chair and vice chair, respectively, of the National Research Council.

Preface

The Total Maximum Daily Load (TMDL) program, initiated in the 1972 Clean Water Act, recently emerged as a foundation for the nation's efforts to meet state water quality standards. A "TMDL" refers to the "total maximum daily load" of a pollutant that achieves compliance with a water quality standard; the "TMDL process" refers to the plan to develop and implement the TMDL. Failure to meet water quality standards is a major concern nationwide; it is estimated that about 21,000 river segments, lakes, and estuaries have been identified by states as being in violation of one or more standards. To address this problem, the U. S. Environmental Protection Agency (EPA) proposed an ambitious timetable for states to develop TMDL plans that will result in attainment of water quality standards. Given the reduction in pollutant loading from point sources such as sewage treatment plants over the last 30 years, the successful implementation of most TMDLs will require controlling non-point source pollution.

These two features, the ambitious timetable and nonpoint source controls, are probably the two most controversial of many issues that have been raised by those who have questioned the TMDL program. Behind and intertwined with these basic policy issues are important questions concerning the adequacy of the science in support of TMDLs.

In the last year, the TMDL program has become one of the most discussed and debated environmental programs in the nation, primarily because of the drafting of final rules for the program. These rules follow several years of intense activity, including the formation of a Federal Advisory Committee devoted to this topic. In October 2000, Congress suspended EPA's implementation of these rules until further information could be gathered on several aspects of the program. In particular, Congress requested that the National Research Council (NRC) examine the

scientific basis of the TMDL program. In recognition of the urgent need to address water quality standard violations, Congress established an aggressive schedule for completion of the study that allowed only four months from start to finish—unprecedented for most NRC studies. The eight-member committee, constituted in January 2001, immediately conducted its first meeting. This three-day meeting included two days devoted to public comments and a third day focused on internal committee discussions. The ensuing three months was a period of intense activity filled with correspondence, writing, and two additional committee meetings.

The difficult challenges facing EPA and the states in the implementation of the TMDL program were immediately apparent to the committee. Because the committee faced a congressionally mandated deadline, a number of issues important to some stakeholders were not addressed comprehensively. These include bed sediment issues, atmospheric deposition, translating narrative standards into numeric criteria, and a full review of existing water quality models. Nonetheless, the committee found that substantial improvements can be made in a number of areas to strengthen the scientific basis of the TMDL program. Also of importance, the committee identified several policy issues that are restricting the use of the best science in the TMDL program. We urge Congress, EPA, and the states to give thoughtful attention to the recommendations made throughout this report so that resources can be more efficiently used to improve water quality.

We greatly appreciate the assistance of Don Brady and Françoise Brasier of the EPA Office of Water for their assistance in initiating the study and organizing the first committee meeting. We are also grateful to those who spoke with and educated our committee, including congressional staff, EPA scientists, state representatives, and the many individuals and organizations that submitted comments to the committee.

The committee recognizes the vital role of Water Science and Technology Board (WSTB) director Stephen Parker in making this study possible. The extremely short time period for this study created an enormous challenge for NRC study director Laura Ehlers, who was able to juggle her many responsibilities to keep us focused and provide invaluable assistance in crafting the text. Finally, it is fair to say that this study owes most thanks to Leonard Shabman (Virginia Polytechnic Institute and State University) who was working in the WSTB office as a visiting scholar during the study. Dr. Shabman's insight was invaluable; he added immensely to committee discussion and correspondence, and he

played a key role in drafting the text and developing the recommendations.

More formally, the report has been reviewed by individuals chosen for their diverse perspectives and technical expertise, in accordance with procedures approved by the NRC's Report Review Committee. The purpose of this independent review is to provide candid and critical comments that will assist the authors and the NRC in making the published report as sound as possible and to ensure that the report meets institutional standards for objectivity, evidence, and responsiveness to the study charge. The reviews and draft manuscripts remain confidential to protect the integrity of the deliberative process. We thank the following individuals for their participation in the review of this report: Richard Conway, consultant; Paul L. Freedman, Linno-Tech, Inc.; Donald R. F. Harleman, Massachusetts Institute of Technology (retired); Robert M. Hirsch, U.S. Geological Survey; Judith L. Meyer, University of Georgia; Larry A. Roesner, Colorado State University; Robert V. Thomann, Manhattan University (retired); and Robert C. Ward, Colorado State University.

Although the reviewers listed above have provided many constructive comments and suggestions, they were not asked to endorse the conclusions or recommendations, nor did they see the final draft of the report before its release. The review of this report was overseen by Frank H. Stillinger, Princeton University, and D. Peter Loucks, Cornell University. Appointed by the NRC, they were responsible for making certain that an independent examination of this report was carried out in accordance with institutional procedures and that all review comments were carefully considered. Responsibility for the final content of this report rests entirely with the authoring committee and the NRC.

Executive Summary

Over the last 30 years, water quality management in the United States has been driven by the control of point sources of pollution and the use of effluent-based water quality standards. Under this paradigm, the quality of the nation's lakes, rivers, reservoirs, groundwater, and coastal waters has generally improved as wastewater treatment plants and industrial dischargers (point sources) have responded to regulations promulgated under authority of the 1972 Clean Water Act. These regulations have required dischargers to comply with effluent-based standards for criteria pollutants, as specified in National Pollutant Discharge Elimination System (NPDES) permits issued by the states and approved by the U.S. Environmental Protection Agency (EPA). Although successful, the NPDES program has not achieved the nation's water quality goals of "fishable and swimmable" waters largely because discharges from other unregulated nonpoint sources of pollution have not been as successfully controlled. Today, pollutants such as nutrients and sediment, which are often associated with nonpoint sources and were not considered criteria pollutants in the Clean Water Act, are jeopardizing water quality, as are habitat destruction, changes in flow regimes, and introduction of exotic species. This array of challenges has shifted the focus of water quality management from effluent-based to ambient-based water quality standards.

This is the context in which EPA is obligated to implement the Total Maximum Daily Load (TMDL) program, the objective of which is attainment of ambient water quality standards through the control of both point and nonpoint sources of pollution. Although the TMDL program originated from Section 303d of the Clean Water Act, it was largely overlooked during the 1970s and 1980s as states focused on bringing point sources of pollution into compliance with NPDES permits. Citizen lawsuits during the 1980s forced EPA to develop guidance for the TMDL program, which is now considered to be pivotal in securing the

nation's water quality goals. Under TMDL regulations promulgated in 1992, EPA requires states to list waters that are not meeting water quality criteria set for specific designated uses. For each impaired water, the state must identify the amount by which point and nonpoint sources of pollution must be reduced in order for the waterbody to meet its stated water quality standards. Meeting these requirements, many of which have been imposed by court order or consent decree, has become the most pressing and significant regulatory water quality challenge for the states since passage of the Clean Water Act.

Given the most recent lists of impaired waters submitted to EPA, there are about 21,000 polluted river segments, lakes, and estuaries making up over 300,000 river and shore miles and 5 million lake acres. The number of TMDLs required for these impaired waters is greater than 40,000. Under the 1992 EPA guidance or the terms of lawsuit settlements, most states are required to meet an 8- to 13-year deadline for completion of TMDLs. Budget requirements for the program are staggering as well, with most states claiming that they do not have the personnel and financial resources necessary to assess the condition of their waters, to list waters on 303d, and to develop TMDLs. A March 2000 report of the General Accounting Office (GAO) highlighted the pervasive lack of data at the state level available to set water quality standards, to determine what waters are impaired, and to develop TMDLs.

Subsequent to the GAO report and following issuance by EPA of updated TMDL regulations, Congress requested that the National Research Council (NRC) assess the *scientific basis* of the TMDL program, including:

- the information required to identify sources of pollutant loadings and their respective contributions to water quality impairment,
- the information required to allocate reductions in pollutant loadings among sources,
- whether such information is available for use by the states and whether such information, if available, is reliable, and
- if such information is not available or is not reliable, what methodologies should be used to obtain such information.

Of concern to the nation's lawmakers was the paucity of data and information available to the states to comply with program requirements and meet water quality standards. Indeed, as the TMDL program proceeds, the best available science, especially with regard to nonpoint sources of

pollution, will be needed for regulatory and nonregulatory actions to be equitable and effective. Report recommendations are targeted (1) at those issues where science can and should make a significant contribution and (2) at barriers (regulatory and otherwise) to the use of science in the TMDL program. Chapters 2, 3, and 4 discuss the information required to set water quality standards, to list waters as impaired, and to develop TMDLs (including the identification of pollution sources), while Chapter 5 discusses the role of science in allocating pollutant loading among sources. Chapters 3 and 4 go into considerable detail about the monitoring, modeling, and statistical analysis methods needed to collect data and convert it to information, and to assess and reduce uncertainty.

This report represents the consensus opinion of the eight-member NRC committee assembled to complete this task. The committee met three times during a three-month period and heard the testimony of over 40 interested organizations and stakeholder groups. The NRC committee feels that the data and science have progressed sufficiently over the past 35 years to support the nation's return to ambient-based water quality management. Given reasonable expectations for data availability and the inevitable limits on our conceptual understanding of complex systems, statements about the science behind water quality management must be made with acknowledgment of uncertainties. The committee has concluded that there are creative ways to accommodate this uncertainty while moving forward in addressing the nation's water quality challenges. These broad conclusions are elaborated upon below.

TMDL PROGRAM GOALS

The TMDL program should focus first and foremost on improving the condition of waterbodies as measured by attainment of designated uses. Work on meeting the strict time demands within the budget constraints cited by most states has focused on administrative outcomes as measures of success for the TMDL program. However, the success of the nation's premier water quality program should not be measured by the number of TMDL plans completed and approved, nor by the number of NPDES permits issued or cost share dollars spent. Success is achieved when the condition of a waterbody supports its designated use. Adequate monitoring and assessment must be used to improve the listing of impaired waterbodies and to characterize the effectiveness of the actions taken to meet the designated use.

The program should encompass all stressors, both pollutants and pollution, that determine the condition of the waterbody¹. Proposed regulations may limit the applicability of the program to only those water quality problems caused by chemical and physical pollutants. Given their demonstrated effectiveness, activities that can overcome the effects of "pollution" and bring about waterbody restoration—such as habitat restoration and channel modification—should not be excluded from consideration during TMDL plan implementation.

Scientific uncertainty is a reality within all water quality programs, including the TMDL program, that cannot be entirely eliminated. The states and EPA should move forward with decision-making and implementation of the TMDL program in the face of this uncertainty while making substantial efforts to reduce uncertainty. Securing designated uses is limited not only by a focus on administrative rather than water quality outcomes in the TMDL process, but also by unreasonable expectations for predictive certainty among regulators, affected sources, and stakeholders.

CHANGES TO THE TMDL PROCESS

This report focuses on how scientific data and information should be used within the TMDL program. Science plays a crucial role in the standards-setting process, in the decision to add waters to the 303d list, in the development of the TMDL plan, and in the allocation of pollutant loads among various sources (although its importance relative to the role of policy decisions varies). The committee finds that although the state of the science is sufficient to develop TMDLs to meet ambient water quality goals in many situations, programmatic issues substantially hinder the use of the best available science. Thus, the following changes in the TMDL process are recommended, with an understanding that without such changes, the TMDL program will be unable to incorporate and improve upon the best available scientific information.

States should develop appropriate use designations for waterbodies in advance of assessment and refine these use designations prior to TMDL development. Clean Water Act goals of fishable and swimmable waters are too broad to be operational as statements of designated uses. Thus, there should be greater stratification of designated

¹ This refers to the legal definitions of "pollutant" and "pollution," which are given in Box 1-1 of Chapter 1.

uses at the state level (such as primary and secondary contact recreation). The appropriate designated use may not be the use that would be realized in the water's predisturbance condition. Sufficient science and examples exist for all states to inject this level of detail into their water quality standards. To ensure that designated uses are appropriate, use attainability analysis should be considered for all waterbodies before a TMDL is developed.

EPA should approve the use of both a preliminary list and an action list instead of one 303d list. Many waters now on state 303d lists were placed there without the benefit of adequate water quality standards, data, or waterbody assessment. These potentially erroneous listings contribute to a very large backlog of TMDL segments and foster the perception of a problem that is larger than it may actually be. States should be allowed to move those waters for which there is a lack of adequate water quality standards or data and analysis from the 303d list back to a preliminary list, as shown in Figure ES-1. This would provide the assurance that listed waters are indeed legitimate and merit the resources required to complete a TMDL. If no legal mechanism exists to bring this about, one should be created by Congress. The data requirements and other criteria that should be used to differentiate the preliminary list from the action list are discussed in the report. No waterbody should remain on the preliminary list for more than one rotating basin cycle.

TMDL plans should employ adaptive implementation. As shown in Figure ES-2, adaptive implementation is a cyclical process in which TMDL plans are periodically assessed for their achievement of water quality standards including designated uses. If the implementation of the TMDL plan is not achieving attainment of the designated use, scientific data and information should be used to revise the plan. Adaptive implementation is needed to ensure that the TMDL program is not halted because of a lack of data and information, but rather progresses while better data are collected and analyzed with the intent of improving upon initial TMDL plans. Congress and EPA need to address the policy barriers that inhibit adoption of an adaptive implementation approach to the TMDL program, including the issues of future growth, the equitable distribution of cost and responsibility among sources of pollution, and EPA oversight.

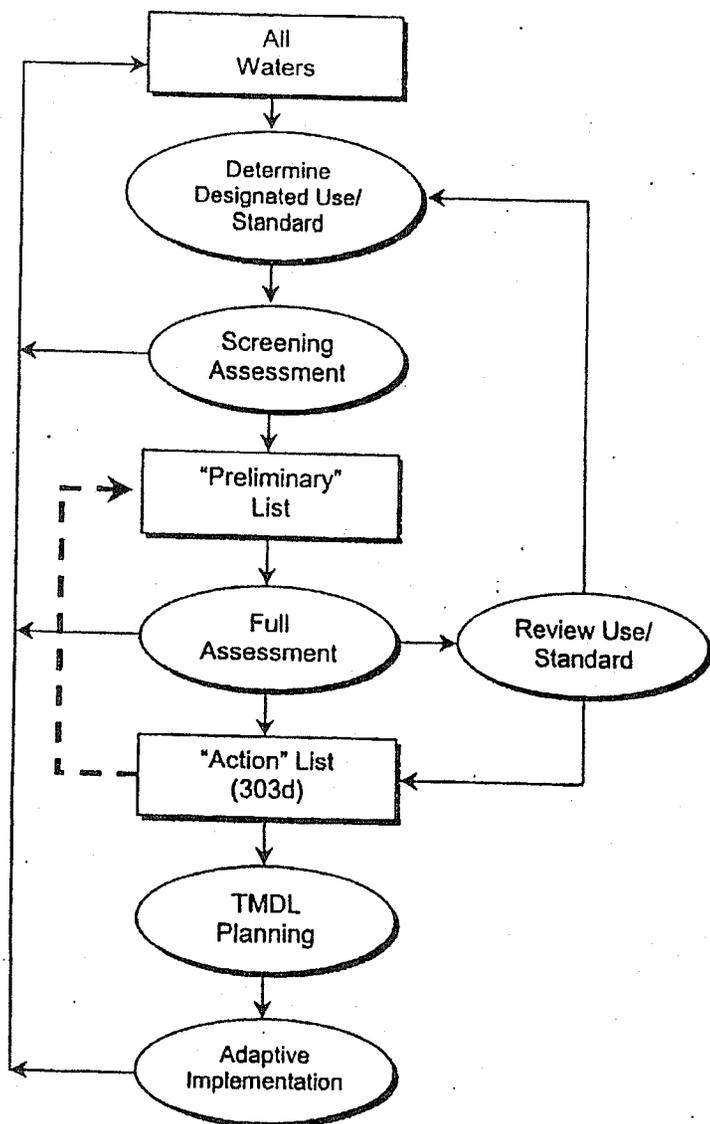

FIGURE ES-1 Framework for water quality management.

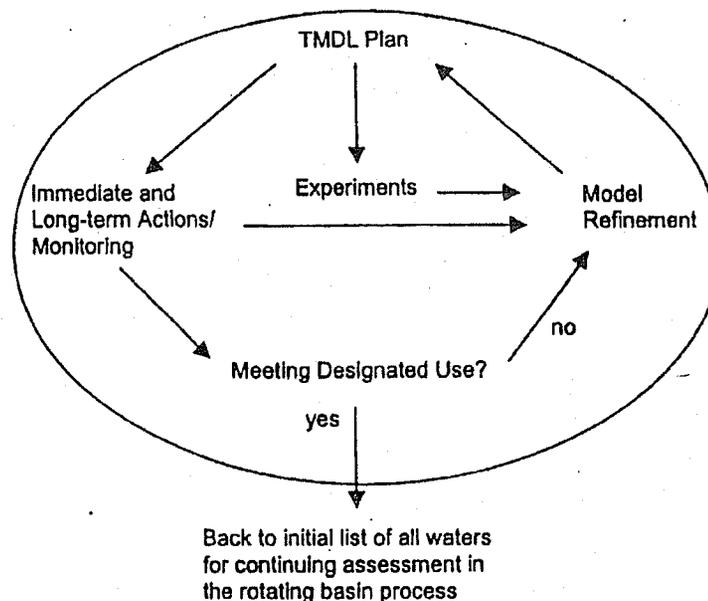

FIGURE ES-2 Adaptive implementation flowchart.

USE OF SCIENCE IN THE TMDL PROGRAM

This report suggests changes in the data used and analytical method employed that will support the revisions to the TMDL process recommended above. The following sections highlight the use of science in the TMDL program steps as illustrated in Figure ES-1. Additional recommendations about the scientific basis of the program not included in this executive summary are found throughout the report.

Water Quality Standards

The TMDL process is primarily a measurement process and as such is significantly impacted by the setting of water quality standards. Water quality standards consist of two parts: a specific desired use appropriate

to the waterbody, termed a *designated use*, and a *criterion* that can be measured to establish whether the designated use is being achieved.

The criterion used to measure whether the condition of a waterbody supports its designated use can be positioned at different points along the causal chain connecting stressors (such as land use activities) to biological responses in a waterbody. Positioning the criterion involves a trade-off between forecast error for the stressor-criterion relationship and the adequacy of the criterion as a measure (surrogate) for the designated use. Model results that forecast the impact of the stressor on the criterion are likely to be more uncertain as the criterion is positioned farther from the stressor and closer to the designated use. On the other hand, positioning the criterion closer to the stressor and farther from the designated use is likely to mean that the criterion is a poorer measure or surrogate for the designated use.

Biological criteria should be used in conjunction with physical and chemical criteria to determine whether a waterbody is meeting its designated use. In general, biological criteria are more closely related to the designated uses of waterbodies than are physical or chemical measurements. However, guiding management actions to achieve water quality goals based on biological criteria also depends on appropriate modeling efforts.

All chemical criteria and some biological criteria should be defined in terms of magnitude, frequency, and duration. The frequency component should be expressed in terms of a number of allowed excursions in a specified period. Establishing these three dimensions of the criterion is crucial for successfully developing water quality standards and subsequently TMDLs.

Water quality standards must be measurable by reasonably obtainable monitoring data. In many states, there is a fundamental discrepancy between the criteria that have been chosen to determine whether a waterbody is achieving its designated use and the frequency with which water quality data are collected. This report gives examples of this phenomenon and makes suggestions for improvement.

Waterbody Assessment and Listing

Ambient monitoring and assessment programs should form the basis for determining whether waters are placed on the preliminary list or the action list.

EPA needs to develop a uniform, consistent approach to ambient monitoring and data collection across the states. The rotating basin approach used by several states is an excellent example of a framework that can be used to conduct waterbody assessments of varying levels of complexity, for example to support 305b reports, to place impaired waters on a preliminary list or action list, and to develop TMDLs. In that regard, EPA should set the TMDL calendar in concert with each state's rotating basin program.

Evidence suggests that limited budgets are preventing the states from monitoring for a full suite of indicators to assess the condition of their waters and from embracing a rotating basin approach to water quality management. Currently, EPA is assessing the sufficiency of state resources to develop and implement TMDLs. Depending on the results of that assessment, Congress might consider aiding the states, for example through matching grants to improve data collection and analysis.

Evaluated data and evidence of violation of narrative standards should not be exclusively used for placement of a waterbody on the action list, but is useful for placement on the preliminary list. EPA should develop guidance to help states translate narrative standards to numeric criteria for the purposes of 303d listing and TMDL calculation and implementation.

EPA should endorse statistical approaches to defining all waters, proper monitoring design, data analysis, and impairment assessment. For chemical parameters, these statistical approaches might include the binomial hypothesis test or other methods that can be more effective than the raw score approach in making use of the data collected to determine water quality impairment. For biological parameters, the might focus on improvement of sampling designs, more careful identification of the components of biology used as indicators, and analytical procedures that explore biological data as well as integrate biological information with other relevant data.

TMDL Development

The scientific basis of the latter half of the TMDL process revolves around a wide variety of models of varying complexity that are used to relate waterbody conditions to different land uses and other factors. Models are a required element of developing TMDLs because water quality standards are probabilistic in nature. However, although models

can aid in the decision-making process, they do not eliminate the need for informed decision-making.

Uncertainty must be explicitly acknowledged both in the models selected to develop TMDLs and in the results generated by those models. Prediction uncertainty must be estimated in a rigorous way, models must be selected and rejected on the basis of a prediction error criterion, and guidance/software needs to be developed to support uncertainty analysis.

The TMDL program currently accounts for the uncertainty embedded in the modeling exercise by applying a margin of safety (MOS); EPA should end the practice of arbitrary selection of the MOS and instead require uncertainty analysis as the basis for MOS determination. Because reduction of the MOS can potentially lead to a significant reduction in TMDL implementation cost, EPA should place a high priority on selecting and developing TMDL models with minimal forecast error.

EPA should selectively target some postimplementation TMDL compliance monitoring for verification data collection so that model prediction error can be assessed. TMDL model choice is currently hampered by the fact that relatively few models have undergone thorough uncertainty analysis. Postimplementation monitoring at selected sites can yield valuable data sets to assess the ability of models to reliably forecast response.

EPA should promote the development of models that can more effectively link environmental stressors (and control actions) to biological responses. A first step will be the development of conceptual models that account for known system dynamics. Eventually, these should be strengthened with both mechanistic and empirical models, although empirical models are more likely to fill short-term needs. Such models are needed to promote the wider use of biocriteria.

Monitoring and data collection programs need to be coordinated with anticipated water quality and TMDL modeling requirements. For many parameters, there are insufficient data to have confidence in the results generated by some of the complex models used in practice today. Thus, EPA should not advocate detailed mechanistic models for TMDL development in data-poor situations. Either simpler, possibly judgmental, models should be used or, preferably, data needs should be anticipated so that these situations are avoided.

In order to carry out adaptive implementation, EPA needs to foster the use of strategies that combine monitoring and modeling and expedite TMDL development. This should involve the use of Bayesian

techniques that can combine different types of information. Although the modeling framework proposed in this report calls for improvements in models, there are existing models that can be applied rapidly and effectively within an adaptive implementation framework.

FINAL THOUGHTS

Through the adoption and use of the preliminary list/action list approach, adequate monitoring and assessment approaches, sound selection of appropriate models, and adaptive implementation described in this report, the TMDL program will be capable of utilizing the best available scientific information. It is worth noting that the success of these approaches is directly related to the provision of adequate personnel and financial resources for data collection, management, and interpretation and for the development of sufficiently detailed and stratified water quality standards.

1
Introduction

THE RETURN TO AMBIENT-BASED WATER
QUALITY MANAGEMENT

The Federal Water Pollution Control Act Amendments of 1972 (PL 92-500), as supplemented by the Clean Water Act (CWA) of 1977 and the Water Quality Act of 1987, are the foundation for protecting the nation's water resources. Precursors to the Water Quality Act go back to the Rivers and Harbors Appropriations Act of 1899, often referred to as the Refuse Act, and the Water Pollution Control Acts of 1948 and 1965 (Rodgers, 1994). An important impetus for earlier water quality legislation was protection of public health. Over time, this purpose was supplemented by aesthetic and recreational purposes (fishable and swimmable) and then by the goal of restoring and maintaining the "chemical, physical, and biological integrity of the Nation's waters" (Section 101a of PL 92-500).

In practice, each of these general purposes must be restated in operational and measurable terms as *ambient* water quality standards, which are established by the states and are subject to federal approval. Section 303d of the CWA makes it a responsibility of the states to assess whether ambient standards are being achieved for individual waterbodies. If ambient standards are not being met, a water quality management program to achieve those standards is anticipated.

The data and analytical requirements for determining both the causes of a failure to meet ambient standards and the solutions to such problems have challenged water quality analysts for over half a century. Prior to the 1972 Water Pollution Control Act Amendments, states were expected to identify pollutant sources that were resulting in violations of ambient water quality standards. Once the sources of the problem were carefully identified, controls on polluting activities would be put in place. How-

ever, in even modestly complex watersheds, multiple sources of pollutants made it difficult to unambiguously determine which sources were responsible for the standard violation. One source might insist that the cause of the problem was the discharge from others, or at least that its own contribution to the problem was not as significant as the contributions of others. Neither the available monitoring data nor the analytical methods available at the time allowed the states to defensibly mandate differential load reduction requirements (Houck, 1999).

The 1972 amendments recognized this analytical dilemma and shifted the focus of water quality management away from ambient standards. Instead, all dischargers of certain pollutants were expected to limit their discharges by meeting nationally established *effluent standards*. Effluent standards are specified in National Pollution Discharge Elimination System (NPDES) permits, issued by the states to certain pollutant sources and approved by the U.S. Environmental Protection Agency (EPA). Effluent standards were set at a national level based on available technologies for wastewater treatment appropriate to different industry groups (although in certain waterbodies effluent standards more stringent than the technology-based requirement have been required to meet local water quality goals). The shift to effluent standards eliminated the need to link required reductions at particular sources with the ambient condition of a waterbody. Instead, each regulated source was simply required to meet the effluent standard in its wastewater. In the intervening period since passage of PL 92-500, pollutants discharged by industry and municipal treatment plants have declined, and the ambient quality of many of the nation's lakes, rivers, reservoirs, groundwater, and coastal waters has improved.

There were consequences that followed the embracing of effluent based standards instead of ambient-based standards. First, efforts to measure and communicate water quality accomplishments were often described in terms of compliance with wastewater permit conditions rather than the condition of the waters. Second, effluent standards could only apply to so-called point sources rather than to all sources of a pollutant or other forms of pollution (Box 1-1). Pollutants from nonpoint sources (derived from diffuse and hard-to-monitor origins such as land-disturbing agricultural, silvicultural, and construction activities) largely escaped oversight. Third, attention to chemical pollutants measured in discharge water came to dominate water quality policy, and the physical and biological determinants of the ambient condition of a waterbody were less frequently considered. A *pollutant* is defined as a substance added by humans or human activities. In many cases, the condition of a

The 303d focus on ambient water quality standards has returned the nation to a water quality program that was not considered implementable 35 years ago when there was a paucity of data and analytical tools for determining causes of impairment and assigning responsibility to various sources. Determining the pollutant load from a regulated point source is a relatively straightforward task, although isolating its effect in a complex waterbody remains a technical challenge. Such technical uncertainties in relating stresses on the waterbody to impairment are compounded when nonpoint sources of pollutants and other forms of pollution are considered. Having returned the focus to ambient water quality conditions, are we better positioned today than we were years ago? Do we have more and better data and analytical methods? Do we have a better understanding of watershed events and processes responsible for water quality violations? These are the science questions facing the nation as we implement Section 303d of the Clean Water Act.

NATIONAL RESEARCH COUNCIL STUDY

Despite recent progress, the demands of the TMDL program weigh heavily on the limited resources of EPA and the states. The TMDL process requires high-quality data and sophisticated tools to analyze those data. States have reported having insufficient funds, inadequate monitoring programs, and limited staff to collect and analyze such data (GAO, 2000). According to the General Accounting Office (GAO), only six states have enough data to fully assess the condition of their waterbodies, while only 18 have enough data to place their waterbodies on the list of impaired waters (303d list). Forty states had sufficient high-quality data to determine TMDLs for waterbodies impaired primarily by point sources such as municipal sewage treatment plants, and 29 had sufficient high-quality data to implement these TMDLs. When states were asked about waterbodies impaired primarily by nonpoint sources, however, only three claimed to have sufficient data.

The GAO report outlined several critical issues for consideration by the states and EPA. Beyond questions of additional funding for data collection and staff, the states need assistance using watershed models; many reported being unclear where to go for such assistance. There appears to be no formalized process to capitalize on lessons learned, to transfer technology, and to share knowledge. Aside from the reported lack of data to comply with the TMDL regulations, when data are available, they are often not the type needed for source identification and

TMDL analyses.

Subsequent to the GAO report, Congress requested that the National Research Council (NRC) analyze on a broad scale *the scientific basis of the TMDL program*. The NRC was asked to evaluate:

- the information required to identify sources of pollutant loadings and their respective contributions to water quality impairment,
- the information required to allocate reductions in pollutant loadings among sources,
- whether such information is available for use by the states and whether such information, if available, is reliable, and
- if such information is not available or is not reliable, what methodologies should be used to obtain such information.

While the GAO report was about data, the NRC was charged to focus on *reliable information* for making decisions. In presentations made to the NRC committee, the terms "data" and "information" often were used as synonyms, but data are not the same as information. Unanalyzed data do not constitute information. Data must be interpreted for their meaning through the filter of analytical techniques, and the result of such data analysis is information that can support decision-making. Knowing what data are needed and turning those data into information constitutes, in large part, the science behind a water quality management program. The techniques for transforming data into information include statistical inference methods, simulation modeling of complex systems, and, at times, simply the application of the best professional judgment of the analyst. In all these processes there will always be some uncertainty (and thus some "unreliability") about whether the resulting information accurately characterizes the water quality problem and the effectiveness of the solutions. Because uncertainty cannot be eliminated, determining whether the information generated from data analysis is reliable is a value judgment. Individuals and groups will have different opinions about whether and how to proceed with water quality management given a certain level of uncertainty.

To organize its deliberations, the committee considered the role of science at each step of the TMDL process, from the initial defining of all waters to the implementation of actions to control pollution; the report is structured around this organization. Report recommendations are targeted (1) at those issues where science can and should make a significant contribution and (2) at barriers (regulatory and otherwise) to the use of

science in the TMDL program. Because of this broad scope, the content of the report extends beyond the confines of the charge in the bulleted items above. Chapters 2, 3, and 4 discuss the information (as defined above) required to set water quality standards, to list waters as impaired, and to develop TMDLs (including the identification of pollution sources); Chapter 5 comments on the role of science in allocating pollutant loading among sources. Because GAO (2000) already documents a widespread lack of data and information at the state level and because availability of information varies significantly from state to state, the committee did not devote substantial time to determining availability. As mentioned above, whether the information is reliable depends on the degree of uncertainty decision-makers are willing to accept when making regulatory or spending choices—a decidedly nonscientific matter. Chapters 3 and 4 describe in detail the monitoring, modeling, and statistical analysis methods needed to collect data and convert it to information, and to assess and reduce uncertainty. Chapter 5 describes an approach for making decisions in the face of uncertainty.

This report represents the culmination of three meetings over three months, including a two-day public session in which 30 presentations from a wide variety of stakeholders were made (see Appendix B). Given the information gathered during the study period and the collective experience of its members, the committee feels that the data and science have progressed sufficiently over the past 35 years to support the nation's return to ambient-based water quality management. In addition, the need for this approach is made apparent by the inability of a large percentage of the nation's water to meet water quality standards using point source controls alone. Given reasonable expectations for data availability and inevitable limits on our conceptual understanding of complex systems, statements about the science behind water quality management must be made with acknowledgment of uncertainties. Finally, the committee has concluded that there are creative ways to accommodate this uncertainty while moving forward in addressing the nation's water quality challenges. These broad conclusions are elaborated upon throughout this report.

CURRENT TMDL PROCESS AND REPORT ORGANIZATION

Section 303d requires that states identify waters that are not attaining ambient water quality standards (i.e., are impaired). (Although new rules are pending, at the request of Congress, this report focuses on the 1992

regulations that govern the current program.) States must then establish a priority ranking for such waters, taking into account the severity of the impairment and the uses to be made of such waters. For impaired waters, the states must establish TMDLs for pollutants necessary to secure applicable water quality standards. The CWA further requires that once water quality standards are attained they must be maintained.

Figure 1-1 depicts the basic steps in the TMDL process. These steps are described briefly below and are considered in greater detail throughout the report. At the beginning of the process are all waterbodies for the state and the development of water quality standards for each waterbody. Water quality standards are established outside the TMDL process and include designated uses for a waterbody and measurable water quality

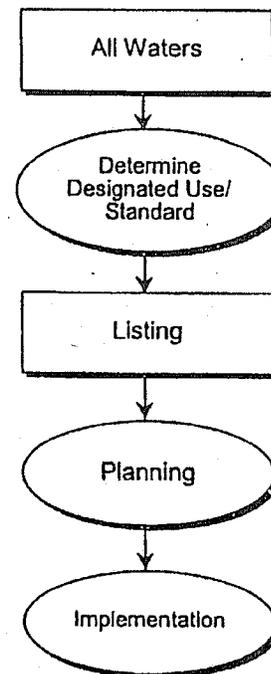

FIGURE 1-1 Conceptualized steps of the TMDL process.

criteria designed to assure that each designated use is being achieved. Because water quality standards are the foundation on which the entire TMDL program rests, more detailed discussion of standard setting is provided in Chapters 2 and 3.

The next step in the process is the listing of *impaired* waterbodies if evaluation of available data suggests that certain waterbodies are not meeting standards. According to Section 303d, all impaired waterbodies must be listed by the states or responsible agencies and submitted to EPA every two years. In addition, the states should provide priority ranking for the waterbodies on the 303d list. Following its submission, EPA must either approve or disapprove the list. Listing of a waterbody initiates a costly planning process and may lead to added costs to implement pollutant controls by point and nonpoint sources. The NRC committee heard testimony that many waterbodies have been listed based on limited or completely absent data and poorly conceived analytical techniques for data evaluation. Chapter 3 reviews the listing process and makes recommendations that will improve the reliability of the listing decision.

Once an impaired waterbody is listed, a planning step ensues. Section 303d specifies that those waters impaired by pollutants should undergo calculation of a TMDL. The term TMDL has essentially two meanings (EPA, 1991):

- The TMDL process is used for implementing state water quality standards—that is, it is a planning process that will lead to the goal of meeting the water quality standards.
- The TMDL is a numerical quantity determining the present and near future maximum load of pollutants from point and nonpoint sources as well as from background sources, to receiving waterbodies that will not violate the state water quality standards with an adequate margin of safety. The permissible load is then allocated by the state agency among point and nonpoint sources.

The calculation described above requires data collection and various forms of modeling in order to identify sources of pollution and background conditions, calculate the maximum load that will meet water quality standards with a margin of safety, and make allocations of responsibility for load reduction to point and nonpoint sources. Chapter 4 reviews modeling capability, data needs for model implementation, and the appropriate role of modeling in the TMDL planning process.

The last step in the process is implementation of the TMDL and the delisting of the waterbody. Implementation is the process of putting the

actions envisioned in the TMDL plan in place. Such actions could include limitations on point sources beyond technology-based effluent standards. Also, using best management practices for nonpoint sources, as well as addressing pollution problems, might be part of implementation, although these actions are not required by Section 303d.¹ The results of implementation actions need to be assessed before a waterbody can be removed from the list. Monitoring in this phase is necessary to measure the success (or failure) of the plan. Chapter 5 discusses postimplementation monitoring and a strategy for assuring that the best available science is used in the TMDL implementation phase. When the monitoring proves that the implementation is successful (i.e., the water quality standards are met), the waterbody can be delisted.

¹ Whether nonpoint source controls are required as part of the TMDL program is the source of much of the debate, especially with regard to the 2000 regulations that are now on hold. Under the current (1992) regulations, 303d is a planning exercise only. Implementation must be by some other provisions of the CWA or other programs. Also, states differ in their ability to enforce use of certain best management practices.

Conceptual Foundations for Water Quality Management

This chapter describes the analytical and related policy challenges of implementing an ambient-focused water quality management program, of which the Total Maximum Daily Load (TMDL) program is an example¹. The goal of an ambient water quality management program is to measure the condition of a waterbody and then determine whether that waterbody is meeting water quality standards. By definition, this process is dependent on the setting of appropriate water quality standards. Although realistic standard setting must account for watershed (hydrologic, ecological, and land use) conditions, the corresponding need to make policy decisions in setting standards must also be recognized. In addition, ambient-based water quality management requires decision-making under uncertainty because the possibility for making assessment errors is always present. Properly executed statistical procedures can identify the magnitude and direction of the possible errors so that knowledge can be incorporated into the decisions made. In addition to uncertainties inherent in measuring the attainment of water quality standards, there are uncertainties in results from models used to determine sources of pollution, to allocate pollutant loads, and to predict the effectiveness of implementation actions on attainment of a standard. As part of the information needed in the TMDL program, this uncertainty must be understood and addressed as implementation decisions are made.

AMBIENT WATER QUALITY STANDARDS

Unlike an effluent standard, an ambient water quality standard ap-

¹ Although this discussion refers to the TMDL program, it is not meant to be a description of that program.

plies to a specific spatial area—a defined waterbody—and is expected to be met over all areas of that waterbody. Thus, identifying the waterbody of interest, whether a lake, a stream segment, or areas of an estuary, is a first step in setting water quality standards. Waterbodies vary greatly in size—for example, from a small area such as a mixing zone below a point source discharge on a river to an estuary formed by a major river discharge.

Water quality standards themselves consist of two parts: a specific desired use appropriate to the waterbody, termed a *designated use*, and a *criterion* that can be measured to establish whether the designated use is being achieved. Barriers to achieving the designated use are the presence of pollutants and hydrologic and geomorphic alterations to the waterbody or watershed.

Appropriate Designated Uses

A designated use describes the goal of the water quality standard. For example, a designated use of human contact recreation should protect humans from exposure to microbial pathogens while swimming, wading, or boating. Other uses include those designed to protect humans and wildlife from consuming harmful substances in water, fish, and shellfish. Aquatic life uses are intended to promote the protection and propagation of fish, shellfish, and wildlife resources.

A designated use is stated in a written, qualitative form, but the description should be as specific as possible. Thus, more detail than "recreational support" or "aquatic life support" is needed. The general "fishable" and "swimmable" goals of the Clean Water Act constitute the beginning, rather than the end, of appropriate use designation. For example, a sufficiently detailed designated use might distinguish between beach use, primary water contact recreation, and secondary water contact recreation². Similarly, rather than stating that the waterbody needs to be "fishable," the designated use would ideally describe whether the water-

² These uses are defined differently from state to state. In Ohio, primary contact recreation includes full body immersion activities such as swimming, canoeing, and boating. Such streams or rivers must have a depth of at least 1 meter. Secondary contact recreation includes activities such as wading, but where full body immersion is not practical because of depth limitations. The fecal bacteria criteria are less stringent for secondary contact recreation than for primary contact recreation.

body is expected to support a desired fish population (e.g., salmon, trout, or bass) and the relative invertebrate or other biological communities necessary to support that population. Although small headwater streams may have aesthetic values, they may not have the ability to support extensive recreational uses themselves (i. e., be "fishable" or "swimmable"). However, their condition may have an influence on the ability of a downstream area to achieve a particular designated use. In this case, the designated use for the smaller waterbody may be defined in terms of the achievement of the designated use of the larger downstream waterbody (as illustrated in the discussion of criteria below).

In many areas of the United States, human activities have radically altered the landscape and aquatic ecosystems, such that an appropriate designated use may not necessarily be the aquatic life condition that was present in a watershed's predisturbance condition, which may be unattainable. For example, a reproducing trout fishery in downtown Washington, D.C., may be desired, but may not be attainable because of the development history of the area or the altered hydrologic regime of the waterbody. Similarly, designating an area near the outfall of a sewage treatment plant for shellfish harvesting may be desired, but health considerations would designate it as a restricted shellfish harvest water. Furthermore, there may be a conscious decision to establish a designated use that would *not* have existed in the predisturbance condition. For example, construction of a lake for a warm water fishery is a use possible only as a result of human intervention.

Appropriate use designation for a state's waterbodies is a policy decision that can be informed by technical analysis. However, a final selection will reflect a social consensus made in consideration of the current condition of the watershed, its predisturbance condition, the advantages derived from a certain designated use, and the costs of achieving the designated use. Ideally, a statewide water quality management program should establish a detailed gradient of use designations for waterbodies. Box 2-1 describes the multiple tiers of designated uses developed for waters in Ohio.

Defining a Criterion

A water quality standard includes a criterion representing the condition of the waterbody that supports the designated use. Thus, the designated use is a description of a desired endpoint for the waterbody, and the criterion is a measurable indicator that is a surrogate for use attainment.

BOX 2-1 Appropriate Designated Uses: The Ohio Example

An approach to setting appropriately stratified or tiered designated uses for a state's waterbodies has been developed in Ohio. The state recognized early on that a stratified set of use designations for aquatic life, recreation, and water supply was needed to accurately reflect the potential quality for various waterbodies and to guide cost-effective expenditures for pollution controls and other restoration activities. In lieu of general use, more detailed designated uses were developed that reflect the potential of the aquatic ecosystem and account for the historical influence of broad-scale socioeconomic activities. Individual waterbodies are assigned the appropriate designated use based on a use attainability analysis (UAA) process that relies heavily on site-specific information about the waterbody. The information used in this process results from the systematic monitoring of waters via a rotating basin approach in which biological, chemical, and physical data are collected and analyzed. Aquatic life uses are based primarily on the biological criteria and physical habitat assessments that are calibrated with regard to the important regional and watershed-specific variables that determine the potentially sustainable aquatic assemblage. Recreational uses are designated based on the size of the waterbody, reflecting the ability of humans to use the water for swimming, boating, fishing, or wading.

The system of tiered aquatic life and recreational uses in the Ohio water quality standards was established in 1978, well before biological criteria were adopted for use (May 1990). Two newly proposed uses are now under study: one for urban streams, which would require a site-specific UAA, and one for primary headwater streams (<1 sq. mi. drainage area) which are outside of the practical resolution of the present biological criteria. (A readily accessible and detailed example of such designated uses for Ohio can be found at <http://www.epa.state.oh.us/dsw/rules/3745.html>.)

The criterion may be positioned at *any* point in the causal chain of squares shown in Figure 2-1. Criteria in squares 2 and 3 are possible measures of ambient water quality condition. Square 2 includes measures of a water quality parameter such as dissolved oxygen (DO), pH, nitrogen concentration, suspended sediment, or temperature. Criteria closer to the designated use (e.g., square 3) include measures such as the condition of the algal community (chlorophyll *a*), a comprehensive index

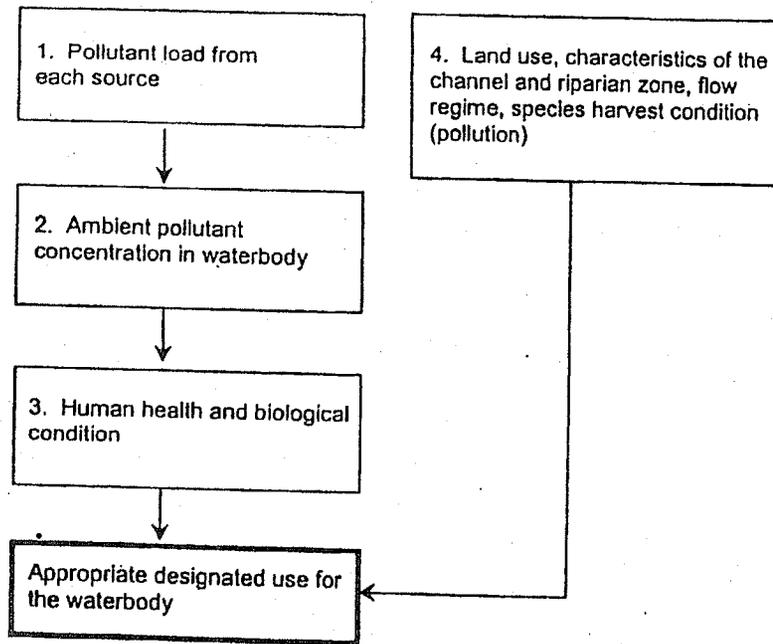

FIGURE 2-1 Types of water quality criteria and their position relative to designated uses.

measure of the biological community as a whole, or a measure of contaminant concentration in fish tissue. In square 1, where the criterion is farther from the designated use, are measures of the pollutant discharge from a treatment plant (e.g., biological oxygen demand, NH_3 , pathogens, suspended sediments) or the amount of a pollutant entering the edge of a stream from runoff. A criterion at this position is referred to as an effluent standard. Finally, square 4 represents criteria that are associated with sources of pollution other than pollutants. These criteria might include measures such as flow timing and pattern (a hydrologic criterion), abundance of nonindigenous taxa, some quantification of channel modification (e.g., decrease in sinuosity), etc.

Because the designated use is stated in written and qualitative terms, the challenge is to logically relate the criterion to the designated use. Establishing this relationship is easier as the criterion moves closer to the designated use (Figure 2-1). In addition, the more precise the statement of the designated use, the more accurate the criterion will be as an indicator of that use. For example, the criterion of fecal coliform count may be used for determining if the use of water contact recreation is achieved, and the fecal count criterion may differ among waterbodies that have primary versus secondary water contact as their designated use.

Surrogate variables often are selected for use as criteria because they are easy to measure. Although the surrogate may have this appealing attribute, its usefulness can be limited if it cannot be logically related to the designated use. For example, chlorophyll *a* has been chosen as a biocriterion in some states because it is a surrogate for aesthetic conditions or the status of the larger aquatic ecosystem. In North Carolina, the ambient water quality standard of $40 \mu\text{g/l}$ for chlorophyll *a* was proposed for lakes, reservoirs, sounds, estuaries, and other slow-moving waters not designated as trout waters. However, a discussion of the appropriate designated uses for the waters of the state and how this criterion is logically related to those uses did not accompany the adoption of this criterion.

As with setting designated uses, the relationship among waterbodies and segments must be considered when determining criteria. For example, where a segment of a waterbody is designated as a mixing zone for a discharge, the criterion adopted should assure that the mixing zone use will not affect the attainment of the uses designated for the surrounding waterbody. In a similar vein, the desired condition of a small headwater stream may need to be chosen as it relates to other waterbodies in the watershed. Thus, an ambient nutrient criterion may be set in a small headwater stream to secure a designated use in a downstream estuary, even if there are no localized effects of the nutrients in the small headwater stream. Conversely, a higher fecal coliform criterion that supports only secondary contact recreation may be warranted for a waterbody with little likelihood of being a recreational resource—if the fecal load dissipates before the flow reaches an area designated for primary contact recreation.

DECISION UNCERTAINTY

Ambient-focused water quality management requires one to ask whether the designated use is being attained and, if not, the reasons for nonattainment and how the situation can be remedied. Neither of these questions, which make reference to the chosen criteria, can be answered with complete certainty. Determining use attainment requires making criterion measurements at different locations in the waterbody and at different times and comparing the measurements to the standard. Individual measurements of a single criterion constitute a sample, and statistical inference procedures use the sample data to test hypotheses about whether the actual condition in the water meets the criterion. Errors of inference are always possible in statistically valid hypothesis testing. It is possible to falsely conclude that a criterion is not being met when it is. It is also possible to conclude that a criterion is being met when in fact it is being violated. Chapter 3 includes recommendations for controlling and managing such uncertainty.
