Re: Joint Unfunded Mandate Test Claim by the County of Orange and various cities in Orange County concerning California Water Quality Control Board Santa Ana Region Order No. R8-2009-0030

Enclosed you will find test claims asserting that certain provisions of the Order R8-2009-0030 issued by the California Water Quality Control Board Santa Ana Region (Santa Ana RWQCB) on May 22, 2009 (2009 Permit) are unfunded State mandates (Test Claims). The 2009 Permit regulates discharges from the municipal separate storm sewer system (MS4) in north Orange County. The County of Orange, Orange County Flood Control District (OCFCD) and the incorporated cities of Orange County within Santa Ana RWQCB's jurisdiction are permittees under the 2009 Permit (Permittees). These Test Claims are being filed jointly by a number of the Permittees, namely the County of Orange, OCFCD and the cities of Anaheim, Brea, Buena Park, Costa Mesa, Cypress, Fountain Valley, Fullerton, Huntington Beach, Irvine, Lake Forest, Newport Beach, Placentia, Seal Beach and Villa Park. (Test Claimants)

Enclosed you will find the separate Test Claims of each of the Test Claimants. Because most provisions of the 2009 Permit apply to all of the Permittees and the issues raised in these Test Claims are largely common to all of the Test Claimants, a single Narrative Statement in support of the Test Claims has been prepared and enclosed. Enclosed also are the required declarations of each of the Test Claimants which are intended to be in support of the respective Test Claims.

You will also find enclosed copies of the documentation required to be submitted along with Test Claims, including copies of the 2009 Permit, along with its supporting fact sheet, the previous 2002 Permit, which was renewed and superseded by the 2009 Permit and the statutes, regulations, cases and other authorities cited in the Narrative Statement.

One hard copy of all of the enclosed documents is being provided as well as a scanned CD of the entire package.

Re: Santa Ana Region Water Permit, 09-TC-03
California Regional Water Quality Control Board, Santa Ana
Region, Order No. R8-2009-0030
Response of Joint Test Claimants to Notice of Incomplete Joint
Test Claim Filing

Dear Ms. Halsey:

I have been designated as Claimant Representative by all test claimants in the above-referenced Joint Test Claim and am therefore responding on behalf of Joint Test Claimants County of Orange ("County") and the Cities of Anaheim, Brea, Buena Park, Costa Mesa, Cypress, Fountain Valley, Fullerton, Huntington Beach, Irvine, Lake Forest, Newport Beach, Placentia, Seal Beach and Villa Park (the "Joint Test Claimants") to the Notice of Incomplete Joint Test Claim Filing of November 18, 2016 ("Notice Letter"), which stated that the original joint test claim filing was incomplete on several grounds.

The Joint Test Claimants were originally informed that their test claim was deemed complete as of July 9, 2010. The Notice Letter, issued more than six years later, forced the Joint Test Claimants to expend significant efforts, including locating old financial records and preparing new declarations, test claim forms and revisions to the Narrative Statement. The Joint Test Claimants were thus forced to incur significant, unforeseeable costs to address the issue raised in the Notice Letter or risk having the joint test claim either denied as untimely or rejected for other reasons stated in the Notice Letter. As previously raised in our letter of November 23, the Joint Test Claimants

Ms. Heather Halsey

Page 2

December 19, 2016

respectfully dispute the basis for the Notice Letter, on grounds of law and equity, and therefore reserve their right to contest the Notice Letter before the Commission.¹

Notwithstanding such reservation, and subject to it, the Joint Test Claimants submit with this letter the following new or revised documents:

- (a) New Test Claim Forms;
- (b) A revised Section 5 Narrative Statement; and
- (c) New Section 6 Declarations.

As requested in the Notice Letter, the Joint Test Claimants are not re-attaching any of the supporting documentation, including exhibits. We note, however, that Exhibit A to the original test claim is being withdrawn.

The Notice Letter indicated that to cure the alleged deficiencies in the original test claim, the Joint Tet Claimants were to provide:

1. "Evidence of the date and amount of costs *first* incurred as a result of the alleged new activities required under the Order."
2. "A revised test claim form from each co-claimant."
3. "Revised written narratives and declarations that provide a detailed description of the costs that are modified by the alleged mandate including the *actual* increased costs incurred by each co-claimant during the fiscal year for which the joint test claim was filed as well as the actual or estimated annual costs that will be incurred by

¹More specifically, Joint Test Claimants assert for the record that the Commission cannot make a determination that the test claim is now incomplete when Commission staff notified Joint Test Claimants on July 9, 2010 that the filing was complete pursuant to 2 CCR § 1183(g). Pursuant to that regulation, within 10 days after the filing of the test claim on June 30, 2010, the Commission was required to notify "the claimant if the test claim was complete or incomplete and send a copy of these regulations unless a correct copy was previously provided." The specific items for which a test claim may be deemed incomplete are the same items the Commission noted in its November 18 letter. The Joint Test Claimants submit that by failing to notify the claimants of the specific bases formulating the Commission's November 18 incompleteness determination within the regulatory 10 day period, coupled with the Commission's prior determination that the filing was complete, the Commission has waived its authority to challenge the completeness of the filing. The Joint Test Claimants further submit that the doctrine of estoppel would also bar the Commission from requiring Joint Test Claimants to substantively supplement the Joint Test Claim with new evidence and documentation concerning events occurring some 6 to 7 years ago when the claimants were in a superior position to correct any alleged deficiencies in the filing. Moreover, to the extent that the Commission is relying on regulations adopted after the date the Test Claim was filed (June 30, 2010) and the Commission issued its Notice of Complete Test Claim Filing (July 9, 2010), the Joint Test Claimants respectfully object.

Ms. Heather Halsey

Page 3

December 19, 2016

each co-claimant to implement the alleged mandate during the fiscal year immediately following the fiscal year for which the joint test claim was filed. In addition, please provide the statewide cost estimate (in this case the “statewide cost” is the cost for all of the local agency co-permittees, whether named or not, for the alleged new program or higher level of service imposed by the permit at issue) for increased costs to implement the alleged mandate during the fiscal year immediately following the fiscal year for which the joint test claim was filed.”

Notice Letter, pages 6-7 (emphasis in original).

In response to item 1, the Joint Test Claimants have included evidence of the date of costs first incurred in the Declarations (see paragraphs 6 and 7) and also in relevant sections of the Section 5 Narrative Statement. This information establishes that costs were first incurred for the Joint Test Claimants in FY 2008-09 or FY 2009-10, and thus, the timeliness of the Joint Test Claim. *See* Cal. Code Regs., tit. 2, 1183.1(c). Additionally, information is provided in each Declaration as to the amount of the costs incurred in response to the mandates in the Permit.

In response to item 2, the Joint Test Claimants are herewith filing new test claim forms signed, in the case of the County, by the Auditor-Controller and in the case of the cities by their respective City Managers (or individuals having different titles but functioning as City Managers in the case of the Cities of Costa Mesa and Placentia). The names, addresses and contact information for these individuals are also set forth in Section 2 of the forms. Additionally, as noted above, I am designated as the Claimant Representative for all Joint Test Claimants in Section 3 of the forms.

In response to item 3, as already noted, both the Declarations and the Section 5 Narrative Statement (in revised sections following the description of each mandated activity) state the actual costs incurred in the relevant fiscal years covered by the Joint Test Claim. Also, costs representing the Joint Test Claimants’ best estimate of total statewide costs associated with the Joint Test Claim are set forth in the Section 5 Narrative Statement and are further supported by the Declarations. We also note that while the decision of the Supreme Court in *Department of Finance v. Commission on State Mandates* (2016) 1 Cal.5th 749 is relevant to the discussion of the Los Angeles County test claim in the Narrative Statement, the decision is not discussed therein. Instead, the Joint Test Claimants refer the Commission to their supplemental brief filed on October 21, 2016 and to the supplemental brief filed October 28, 2016 by the City of Irvine.

Please note that while this additional information is being provided to the Commission by the December 19 deadline set in the Notice Letter, the Joint Test Claimants respectfully submit that this deadline is not jurisdictional, both because the regulatory authority cited in the Notice Letter applies only to the initial determination of

BURHENN & GEST LLP

Ms. Heather Halsey

test claim completeness and because the Executive Director has discretion to extend the 30-day time period within which to cure a returned test claim and still allow the test claimant to preserve the original claim filing date. Nevertheless, we believe that the information and evidence submitted herewith fully addresses the issues identified in the Notice Letter. If there are any further concerns or issues regarding these matters, we request a prompt response from your staff concerning them.

Thank you for your consideration of these matters.

Very truly yours,

A handwritten signature in black ink, appearing to read 'D. Burhenn', with a long horizontal flourish extending to the right.

4. TEST CLAIM STATUTES OR EXECUTIVE ORDERS CITED

Please identify all code sections (include statutes, chapters, and bill numbers) (e.g., Penal Code Section 2045, Statutes 2004, Chapter 54 [AB 290]), regulations (include register number and effective date), and executive orders (include effective date) that impose the alleged mandate .

California Regional Water Quality Control Board, Santa Ana Region, Order No. R8-2009-0030

Copies of all statutes and executive orders cited are attached.

Sections 5, 6, and 7 are attached as follows:

5. Written Narrative: pages ____ to ____.

6. Declarations: pages ____ to ____.

7. Documentation: pages ____ to ____.

Sections 5, 6, and 7 should be answered on separate sheets of plain 8-1/2 x 11 paper. Each sheet should include the test claim name, the claimant, the section number, and heading at the top of each page.

5. WRITTEN NARRATIVE

Under the heading "5. Written Narrative," please identify the specific sections of statutes or executive orders alleged to contain a mandate.

Include a statement that actual and/or estimated costs resulting from the alleged mandate exceeds one thousand dollars (\$1,000), and include all of the following elements for each statute or executive order alleged:

- (A) A detailed description of the new activities and costs that arise from the mandate.
- (B) A detailed description of existing activities and costs that are modified by the mandate.
- (C) The actual increased costs incurred by the claimant during the fiscal year for which the claim was filed to implement the alleged mandate.
- (D) The actual or estimated annual costs that will be incurred by the claimant to implement the alleged mandate during the fiscal year immediately following the fiscal year for which the claim was filed.
- (E) A statewide cost estimate of increased costs that all local agencies or school districts will incur to implement the alleged mandate during the fiscal year immediately following the fiscal year for which the claim was filed.
- (F) Identification of all of the following funding sources available for this program:
 - (i) Dedicated state funds
 - (ii) Dedicated federal funds
 - (iii) Other nonlocal agency funds
 - (iv) The local agency's general purpose funds
 - (v) Fee authority to offset costs
- (G) Identification of prior mandate determinations made by the Board of Control or the Commission on State Mandates that may be related to the alleged mandate.
- (H) Identification of a legislatively determined mandate pursuant to Government Code section 17573 that is on the same statute or executive order.

6. DECLARATIONS

Under the heading "6. Declarations," support the written narrative with declarations that:

- (A) declare actual or estimated increased costs that will be incurred by the claimant to implement the alleged mandate;
- (B) identify all local, state, or federal funds, and fee authority that may be used to offset the increased costs that will be incurred by the claimant to implement the alleged mandate, including direct and indirect costs;
- (C) describe new activities performed to implement specified provisions of the new statute or executive order alleged to impose a reimbursable state-mandated program (specific references shall be made to chapters, articles, sections, or page numbers alleged to impose a reimbursable state-mandated program);
- (D) If applicable, describe the period of reimbursement and payments received for full reimbursement of costs for a legislatively determined mandate pursuant to Section 17573, and the authority to file a test claim pursuant to paragraph (1) of Section 17574(c).
- (E) are signed under penalty of perjury, based on the declarant's personal knowledge, information or belief, by persons who are authorized and competent to do so.

7. DOCUMENTATION

Under the heading "7. Documentation," support the written narrative with copies of all of the following:

- (A) the test claim statute that includes the bill number alleged to impose or impact a mandate; and/or
- (B) the executive order, identified by its effective date, alleged to impose or impact a mandate; and
- (C) relevant portions of state constitutional provisions, federal statutes, and executive orders that may impact the alleged mandate; and
- (D) administrative decisions and court decisions cited in the narrative. Published court decisions arising from a state mandate determination by the Board of Control or the Commission are exempt from this requirement; and
- (E) statutes, chapters of original legislatively determined mandate and any amendments.

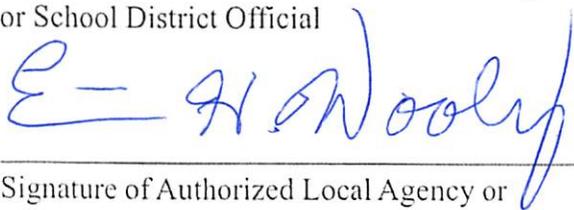

8. CLAIM CERTIFICATION

*Read, sign, and date this section and insert at the end of the test claim submission.**

This test claim alleges the existence of a reimbursable state-mandated program within the meaning of article XIII B, section 6 of the California Constitution and Government Code section 17514. I hereby declare, under penalty of perjury under the laws of the State of California, that the information in this test claim submission is true and complete to the best of my own knowledge or information or belief.

- (B) A detailed description of existing activities and costs that are modified by the mandate.
- (C) The actual increased costs incurred by the claimant during the fiscal year for which the claim was filed to implement the alleged mandate.
- (D) The actual or estimated annual costs that will be incurred by the claimant to implement the alleged mandate during the fiscal year immediately following the fiscal year for which the claim was filed.
- (E) A statewide cost estimate of increased costs that all local agencies or school districts will incur to implement the alleged mandate during the fiscal year immediately following the fiscal year for which the claim was filed.
- (F) Identification of all of the following funding sources available for this program:
 - (i) Dedicated state funds
 - (ii) Dedicated federal funds
 - (iii) Other nonlocal agency funds
 - (iv) The local agency's general purpose funds
 - (v) Fee authority to offset costs
- (G) Identification of prior mandate determinations made by the Board of Control or the Commission on State Mandates that may be related to the alleged mandate.
- (H) Identification of a legislatively determined mandate pursuant to Government Code section 17573 that is on the same statute or executive order.

6. DECLARATIONS

Under the heading "6. Declarations," support the written narrative with declarations that:

- (A) declare actual or estimated increased costs that will be incurred by the claimant to implement the alleged mandate;
- (B) identify all local, state, or federal funds, and fee authority that may be used to offset the increased costs that will be incurred by the claimant to implement the alleged mandate, including direct and indirect costs;
- (C) describe new activities performed to implement specified provisions of the new statute or executive order alleged to impose a reimbursable state-mandated program (specific references shall be made to chapters, articles, sections, or page numbers alleged to impose a reimbursable state-mandated program);
- (D) If applicable, describe the period of reimbursement and payments received for full reimbursement of costs for a legislatively determined mandate pursuant to Section 17573, and the authority to file a test claim pursuant to paragraph (1) of Section 17574(c).
- (E) are signed under penalty of perjury, based on the declarant's personal knowledge, information or belief, by persons who are authorized and competent to do so.

7. DOCUMENTATION

Under the heading "7. Documentation," support the written narrative with copies of all of the following:

- (A) the test claim statute that includes the bill number alleged to impose or impact a mandate; and/or
- (B) the executive order, identified by its effective date, alleged to impose or impact a mandate; and
- (C) relevant portions of state constitutional provisions, federal statutes, and executive orders that may impact the alleged mandate; and
- (D) administrative decisions and court decisions cited in the narrative. Published court decisions arising from a state mandate determination by the Board of Control or the Commission are exempt from this requirement; and
- (E) statutes, chapters of original legislatively determined mandate and any amendments.

8. CLAIM CERTIFICATION

*Read, sign, and date this section and insert at the end of the test claim submission.**

This test claim alleges the existence of a reimbursable state-mandated program within the meaning of article XIII B, section 6 of the California Constitution and Government Code section 17514. I hereby declare, under penalty of perjury under the laws of the State of California, that the information in this test claim submission is true and complete to the best of my own knowledge or information or belief.

4. TEST CLAIM STATUTES OR EXECUTIVE ORDERS CITED

Please identify all code sections (include statutes, chapters, and bill numbers) (e.g., Penal Code Section 2045, Statutes 2004, Chapter 54 [AB 290]), regulations (include register number and effective date), and executive orders (include effective date) that impose the alleged mandate.

California Regional Water Quality Control Board, Santa Ana Region, Order No. R8-2009-0030 (NPDES No. CAS618030)

Copies of all statutes and executive orders cited are attached.

Sections 5, 6, and 7 are attached as follows:

- 5. Written Narrative: pages ____ to ____.
- 6. Declarations: pages ____ to ____.
- 7. Documentation: pages ____ to ____.

Sections 5, 6, and 7 should be answered on separate sheets of plain 8-1/2 x 11 paper. Each sheet should include the test claim name, the claimant, the section number, and heading at the top of each page.

5. WRITTEN NARRATIVE

Under the heading "5. Written Narrative," please identify the specific sections of statutes or executive orders alleged to contain a mandate.

Include a statement that actual and/or estimated costs resulting from the alleged mandate exceeds one thousand dollars (\$1,000), and include all of the following elements for each statute or executive order alleged:

- (A) A detailed description of the new activities and costs that arise from the mandate.
- (B) A detailed description of existing activities and costs that are modified by the mandate.
- (C) The actual increased costs incurred by the claimant during the fiscal year for which the claim was filed to implement the alleged mandate.
- (D) The actual or estimated annual costs that will be incurred by the claimant to implement the alleged mandate during the fiscal year immediately following the fiscal year for which the claim was filed.
- (E) A statewide cost estimate of increased costs that all local agencies or school districts will incur to implement the alleged mandate during the fiscal year immediately following the fiscal year for which the claim was filed.
- (F) Identification of all of the following funding sources available for this program:
 - (i) Dedicated state funds
 - (ii) Dedicated federal funds
 - (iii) Other nonlocal agency funds
 - (iv) The local agency's general purpose funds
 - (v) Fee authority to offset costs
- (G) Identification of prior mandate determinations made by the Board of Control or the Commission on State Mandates that may be related to the alleged mandate.
- (H) Identification of a legislatively determined mandate pursuant to Government Code section 17573 that is on the same statute or executive order.

6. DECLARATIONS

Under the heading "6. Declarations," support the written narrative with declarations that:

- (A) declare actual or estimated increased costs that will be incurred by the claimant to implement the alleged mandate;
- (B) identify all local, state, or federal funds, and fee authority that may be used to offset the increased costs that will be incurred by the claimant to implement the alleged mandate, including direct and indirect costs;
- (C) describe new activities performed to implement specified provisions of the new statute or executive order alleged to impose a reimbursable state-mandated program (specific references shall be made to chapters, articles, sections, or page numbers alleged to impose a reimbursable state-mandated program);
- (D) If applicable, describe the period of reimbursement and payments received for full reimbursement of costs for a legislatively determined mandate pursuant to Section 17573, and the authority to file a test claim pursuant to paragraph (1) of Section 17574(c).
- (E) are signed under penalty of perjury, based on the declarant's personal knowledge, information or belief, by persons who are authorized and competent to do so.

7. DOCUMENTATION

Under the heading "7. Documentation," support the written narrative with copies of all of the following:

- (A) the test claim statute that includes the bill number alleged to impose or impact a mandate; and/or
- (B) the executive order, identified by its effective date, alleged to impose or impact a mandate; and
- (C) relevant portions of state constitutional provisions, federal statutes, and executive orders that may impact the alleged mandate; and
- (D) administrative decisions and court decisions cited in the narrative. Published court decisions arising from a state mandate determination by the Board of Control or the Commission are exempt from this requirement; and
- (E) statutes, chapters of original legislatively determined mandate and any amendments.

Please identify all code sections (include statutes, chapters, and bill numbers) (e.g., Penal Code Section 2045, Statutes 2004, Chapter 54 [AB 290]), regulations (include register number and effective date), and executive orders (include effective date) that impose the alleged mandate.

California Regional Water Quality Control Board, Santa Ana Region, Order No. R8-2009-0030

Copies of all statutes and executive orders cited are attached.

Sections 5, 6, and 7 are attached as follows:

5. Written Narrative: pages ____ to ____.

6. Declarations: pages ____ to ____.

7. Documentation: pages ____ to ____.

Sections 5, 6, and 7 should be answered on separate sheets of plain 8-1/2 x 11 paper. Each sheet should include the test claim name, the claimant, the section number, and heading at the top of each page.

5. WRITTEN NARRATIVE

Under the heading "5. Written Narrative," please identify the specific sections of statutes or executive orders alleged to contain a mandate.

Include a statement that actual and/or estimated costs resulting from the alleged mandate exceeds one thousand dollars (\$1,000), and include all of the following elements for each statute or executive order alleged:

- (A) A detailed description of the new activities and costs that arise from the mandate.
- (B) A detailed description of existing activities and costs that are modified by the mandate.
- (C) The actual increased costs incurred by the claimant during the fiscal year for which the claim was filed to implement the alleged mandate.
- (D) The actual or estimated annual costs that will be incurred by the claimant to implement the alleged mandate during the fiscal year immediately following the fiscal year for which the claim was filed.
- (E) A statewide cost estimate of increased costs that all local agencies or school districts will incur to implement the alleged mandate during the fiscal year immediately following the fiscal year for which the claim was filed.
- (F) Identification of all of the following funding sources available for this program:
 - (i) Dedicated state funds
 - (ii) Dedicated federal funds
 - (iii) Other nonlocal agency funds
 - (iv) The local agency's general purpose funds
 - (v) Fee authority to offset costs
- (G) Identification of prior mandate determinations made by the Board of Control or the Commission on State Mandates that may be related to the alleged mandate.
- (H) Identification of a legislatively determined mandate pursuant to Government Code section 17573 that is on the same statute or executive order.

6. DECLARATIONS

Under the heading "6. Declarations," support the written narrative with declarations that:

- (A) declare actual or estimated increased costs that will be incurred by the claimant to implement the alleged mandate;
- (B) identify all local, state, or federal funds, and fee authority that may be used to offset the increased costs that will be incurred by the claimant to implement the alleged mandate, including direct and indirect costs;
- (C) describe new activities performed to implement specified provisions of the new statute or executive order alleged to impose a reimbursable state-mandated program (specific references shall be made to chapters, articles, sections, or page numbers alleged to impose a reimbursable state-mandated program);
- (D) If applicable, describe the period of reimbursement and payments received for full reimbursement of costs for a legislatively determined mandate pursuant to Section 17573, and the authority to file a test claim pursuant to paragraph (1) of Section 17574(c).
- (E) are signed under penalty of perjury, based on the declarant's personal knowledge, information or belief, by persons who are authorized and competent to do so.

7. DOCUMENTATION

Under the heading "7. Documentation," support the written narrative with copies of all of the following:

- (A) the test claim statute that includes the bill number alleged to impose or impact a mandate; and/or
- (B) the executive order, identified by its effective date, alleged to impose or impact a mandate; and
- (C) relevant portions of state constitutional provisions, federal statutes, and executive orders that may impact the alleged mandate; and
- (D) administrative decisions and court decisions cited in the narrative. Published court decisions arising from a state mandate determination by the Board of Control or the Commission are exempt from this requirement; and
- (E) statutes, chapters of original legislatively determined mandate and any amendments.

8. CLAIM CERTIFICATION

4. TEST CLAIM STATUTES OR EXECUTIVE ORDERS CITED

Please identify all code sections (include statutes, chapters, and bill numbers) (e.g., Penal Code Section 2045, Statutes 2004, Chapter 54 [AB 290]), regulations (include register number and effective date), and executive orders (include effective date) that impose the alleged mandate.

California Regional Water Quality Control Board, Santa Ana Region, Order No. R8-2009-0030

Copies of all statutes and executive orders cited are attached.

Sections 5, 6, and 7 are attached as follows:

5. **Written Narrative:** pages _____ to _____.

6. **Declarations:** pages _____ to _____.

7. **Documentation:** pages _____ to _____.

Sections 5, 6, and 7 should be answered on separate sheets of plain 8-1/2 x 11 paper. Each sheet should include the test claim name, the claimant, the section number, and heading at the top of each page.

5. WRITTEN NARRATIVE

Under the heading "5. Written Narrative," please identify the specific sections of statutes or executive orders alleged to contain a mandate.

Include a statement that actual and/or estimated costs resulting from the alleged mandate exceeds one thousand dollars (\$1,000), and include all of the following elements for each statute or executive order alleged:

- (A) A detailed description of the new activities and costs that arise from the mandate.
- (B) A detailed description of existing activities and costs that are modified by the mandate.
- (C) The actual increased costs incurred by the claimant during the fiscal year for which the claim was filed to implement the alleged mandate.
- (D) The actual or estimated annual costs that will be incurred by the claimant to implement the alleged mandate during the fiscal year immediately following the fiscal year for which the claim was filed.
- (E) A statewide cost estimate of increased costs that all local agencies or school districts will incur to implement the alleged mandate during the fiscal year immediately following the fiscal year for which the claim was filed.
- (F) Identification of all of the following funding sources available for this program:
 - (i) Dedicated state funds
 - (ii) Dedicated federal funds
 - (iii) Other nonlocal agency funds
 - (iv) The local agency's general purpose funds
 - (v) Fee authority to offset costs
- (G) Identification of prior mandate determinations made by the Board of Control or the Commission on State Mandates that may be related to the alleged mandate.
- (H) Identification of a legislatively determined mandate pursuant to Government Code section 17573 that is on the same statute or executive order.

6. DECLARATIONS

Under the heading "6. Declarations," support the written narrative with declarations that:

- (A) declare actual or estimated increased costs that will be incurred by the claimant to implement the alleged mandate;
- (B) identify all local, state, or federal funds, and fee authority that may be used to offset the increased costs that will be incurred by the claimant to implement the alleged mandate, including direct and indirect costs;
- (C) describe new activities performed to implement specified provisions of the new statute or executive order alleged to impose a reimbursable state-mandated program (specific references shall be made to chapters, articles, sections, or page numbers alleged to impose a reimbursable state-mandated program);
- (D) If applicable, describe the period of reimbursement and payments received for full reimbursement of costs for a legislatively determined mandate pursuant to Section 17573, and the authority to file a test claim pursuant to paragraph (1) of Section 17574(c).
- (E) are signed under penalty of perjury, based on the declarant's personal knowledge, information or belief, by persons who are authorized and competent to do so.

7. DOCUMENTATION

Under the heading "7. Documentation," support the written narrative with copies of all of the following:

- (A) the test claim statute that includes the bill number alleged to impose or impact a mandate; and/or
- (B) the executive order, identified by its effective date, alleged to impose or impact a mandate; and
- (C) relevant portions of state constitutional provisions, federal statutes, and executive orders that may impact the alleged mandate; and
- (D) administrative decisions and court decisions cited in the narrative. Published court decisions arising from a state mandate determination by the Board of Control or the Commission are exempt from this requirement; and
- (E) statutes, chapters of original legislatively determined mandate and any amendments.

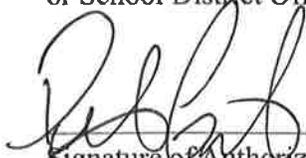

8. CLAIM CERTIFICATION

- (E) A statewide cost estimate of increased costs that all local agencies or school districts will incur to implement the alleged mandate during the fiscal year immediately following the fiscal year for which the claim was filed.
- (F) Identification of all of the following funding sources available for this program:
 - (i) Dedicated state funds
 - (ii) Dedicated federal funds
 - (iii) Other nonlocal agency funds
 - (iv) The local agency's general purpose funds
 - (v) Fee authority to offset costs
- (G) Identification of prior mandate determinations made by the Board of Control or the Commission on State Mandates that may be related to the alleged mandate.
- (H) Identification of a legislatively determined mandate pursuant to Government Code section 17573 that is on the same statute or executive order.

6. DECLARATIONS

Under the heading "6. Declarations," support the written narrative with declarations that:

- (A) declare actual or estimated increased costs that will be incurred by the claimant to implement the alleged mandate;
- (B) identify all local, state, or federal funds, and fee authority that may be used to offset the increased costs that will be incurred by the claimant to implement the alleged mandate, including direct and indirect costs;
- (C) describe new activities performed to implement specified provisions of the new statute or executive order alleged to impose a reimbursable state-mandated program (specific references shall be made to chapters, articles, sections, or page numbers alleged to impose a reimbursable state-mandated program);
- (D) If applicable, describe the period of reimbursement and payments received for full reimbursement of costs for a legislatively determined mandate pursuant to Section 17573, and the authority to file a test claim pursuant to paragraph (1) of Section 17574(c).
- (E) are signed under penalty of perjury, based on the declarant's personal knowledge, information or belief, by persons who are authorized and competent to do so.

7. DOCUMENTATION

Under the heading "7. Documentation," support the written narrative with copies of all of the following:

- (A) the test claim statute that includes the bill number alleged to impose or impact a mandate; and/or
- (B) the executive order, identified by its effective date, alleged to impose or impact a mandate; and
- (C) relevant portions of state constitutional provisions, federal statutes, and executive orders that may impact the alleged mandate; and
- (D) administrative decisions and court decisions cited in the narrative. Published court decisions arising from a state mandate determination by the Board of Control or the Commission are exempt from this requirement; and
- (E) statutes, chapters of original legislatively determined mandate and any amendments.

8. CLAIM CERTIFICATION

*Read, sign, and date this section and insert at the end of the test claim submission.**

This test claim alleges the existence of a reimbursable state-mandated program within the meaning of article XIII B, section 6 of the California Constitution and Government Code section 17514. I hereby declare, under penalty of perjury under the laws of the State of California, that the information in this test claim submission is true and complete to the best of my own knowledge or information or belief.

4. TEST CLAIM STATUTES OR EXECUTIVE ORDERS CITED

Please identify all code sections (include statutes, chapters, and bill numbers) (e.g., Penal Code Section 2045, Statutes 2004, Chapter 54 [AB 290]), regulations (include register number and effective date), and executive orders (include effective date) that impose the alleged mandate.

California Regional Water Quality Control Board, Santa Ana Region, Order No. R8-2009-0030 (NPDES No. CAS618030)

Copies of all statutes and executive orders cited are attached.

Sections 5, 6, and 7 are attached as follows:

- 5. Written Narrative: pages _____ to _____.
- 6. Declarations: pages _____ to _____.
- 7. Documentation: pages _____ to _____.

Sections 5, 6, and 7 should be answered on separate sheets of plain 8-1/2 x 11 paper. Each sheet should include the test claim name, the claimant, the section number, and heading at the top of each page.

5. WRITTEN NARRATIVE

Under the heading "5. Written Narrative," please identify the specific sections of statutes or executive orders alleged to contain a mandate.

Include a statement that actual and/or estimated costs resulting from the alleged mandate exceeds one thousand dollars (\$1,000), and include all of the following elements for each statute or executive order alleged:

- (A) A detailed description of the new activities and costs that arise from the mandate.
- (B) A detailed description of existing activities and costs that are modified by the mandate.
- (C) The actual increased costs incurred by the claimant during the fiscal year for which the claim was filed to implement the alleged mandate.
- (D) The actual or estimated annual costs that will be incurred by the claimant to implement the alleged mandate during the fiscal year immediately following the fiscal year for which the claim was filed.
- (E) A statewide cost estimate of increased costs that all local agencies or school districts will incur to implement the alleged mandate during the fiscal year immediately following the fiscal year for which the claim was filed.
- (F) Identification of all of the following funding sources available for this program:
 - (i) Dedicated state funds
 - (ii) Dedicated federal funds
 - (iii) Other nonlocal agency funds
 - (iv) The local agency's general purpose funds
 - (v) Fee authority to offset costs
- (G) Identification of prior mandate determinations made by the Board of Control or the Commission on State Mandates that may be related to the alleged mandate.
- (H) Identification of a legislatively determined mandate pursuant to Government Code section 17573 that is on the same statute or executive order.

6. DECLARATIONS

Under the heading "6. Declarations," support the written narrative with declarations that:

- (A) declare actual or estimated increased costs that will be incurred by the claimant to implement the alleged mandate;
- (B) identify all local, state, or federal funds, and fee authority that may be used to offset the increased costs that will be incurred by the claimant to implement the alleged mandate, including direct and indirect costs;
- (C) describe new activities performed to implement specified provisions of the new statute or executive order alleged to impose a reimbursable state-mandated program (specific references shall be made to chapters, articles, sections, or page numbers alleged to impose a reimbursable state-mandated program);
- (D) If applicable, describe the period of reimbursement and payments received for full reimbursement of costs for a legislatively determined mandate pursuant to Section 17573, and the authority to file a test claim pursuant to paragraph (1) of Section 17574(c).
- (E) are signed under penalty of perjury, based on the declarant's personal knowledge, information or belief, by persons who are authorized and competent to do so.

7. DOCUMENTATION

Under the heading "7. Documentation," support the written narrative with copies of all of the following:

- (A) the test claim statute that includes the bill number alleged to impose or impact a mandate; and/or
- (B) the executive order, identified by its effective date, alleged to impose or impact a mandate; and
- (C) relevant portions of state constitutional provisions, federal statutes, and executive orders that may impact the alleged mandate; and
- (D) administrative decisions and court decisions cited in the narrative. Published court decisions arising from a state mandate determination by the Board of Control or the Commission are exempt from this requirement; and
- (E) statutes, chapters of original legislatively determined mandate and any amendments.

8. CLAIM CERTIFICATION

*Read, sign, and date this section and insert at the end of the test claim submission. **

This test claim alleges the existence of a reimbursable state-mandated program within the meaning of article XIII B, section 6 of the California Constitution and Government Code section 17514. - (D) The actual or estimated annual costs that will be incurred by the claimant to implement the alleged mandate during the fiscal year immediately following the fiscal year for which the claim was filed.
- (E) A statewide cost estimate of increased costs that all local agencies or school districts will incur to implement the alleged mandate during the fiscal year immediately following the fiscal year for which the claim was filed.
- (F) Identification of all of the following funding sources available for this program:
 - (i) Dedicated state funds
 - (ii) Dedicated federal funds
 - (iii) Other nonlocal agency funds
 - (iv) The local agency's general purpose funds
 - (v) Fee authority to offset costs
- (G) Identification of prior mandate determinations made by the Board of Control or the Commission on State Mandates that may be related to the alleged mandate.
- (H) Identification of a legislatively determined mandate pursuant to Government Code section 17573 that is on the same statute or executive order.

6. DECLARATIONS

Under the heading "6. Declarations," support the written narrative with declarations that:

- (A) declare actual or estimated increased costs that will be incurred by the claimant to implement the alleged mandate;
- (B) identify all local, state, or federal funds, and fee authority that may be used to offset the increased costs that will be incurred by the claimant to implement the alleged mandate, including direct and indirect costs;
- (C) describe new activities performed to implement specified provisions of the new statute or executive order alleged to impose a reimbursable state-mandated program (specific references shall be made to chapters, articles, sections, or page numbers alleged to impose a reimbursable state-mandated program);
- (D) If applicable, describe the period of reimbursement and payments received for full reimbursement of costs for a legislatively determined mandate pursuant to Section 17573, and the authority to file a test claim pursuant to paragraph (1) of Section 17574(c).
- (E) are signed under penalty of perjury, based on the declarant's personal knowledge, information or belief, by persons who are authorized and competent to do so.

7. DOCUMENTATION

Under the heading "7. Documentation," support the written narrative with copies of all of the following:

- (A) the test claim statute that includes the bill number alleged to impose or impact a mandate; and/or
- (B) the executive order, identified by its effective date, alleged to impose or impact a mandate; and
- (C) relevant portions of state constitutional provisions, federal statutes, and executive orders that may impact the alleged mandate; and
- (D) administrative decisions and court decisions cited in the narrative. Published court decisions arising from a state mandate determination by the Board of Control or the Commission are exempt from this requirement; and
- (E) statutes, chapters of original legislatively determined mandate and any amendments.

8. CLAIM CERTIFICATION

*Read, sign, and date this section and insert at the end of the test claim submission.**

Inspections of Commercial Facilities) of the 2009 Permit.

A. STATEMENT OF INTEREST OF JOINT TEST CLAIMANTS

This test claim is being filed by the County of Orange (“County”) and the Cities of Anaheim, Brea, Buena Park, Costa Mesa, Cypress, Fountain Valley, Fullerton, Huntington Beach, Irvine, Lake Forest, Newport Beach, Placentia, Seal Beach and Villa Park (“Joint Test Claimants”). The Joint Test Claimants are filing this Test Claim jointly and, pursuant to 2 Cal. Code Reg. § 1183.1(g), attest to the following:

1. The Joint Test Claimants allege state-mandated costs resulting from the same Executive Order, i.e., the 2009 Permit;
2. The Joint Test Claimants agree on all issues of the Test Claim; and
3. The Joint Test Claimants have designated one contact person to act as a resource for information regarding the test claim in Section 3 of their Test Claim Forms.
4. All Test Claim forms have been executed by either the Auditor-Controller (on behalf of the County) or by City Managers (or equivalent personnel) of the city Joint Test Claimants.⁴

B. STATEMENT OF ACTUAL AND/OR ESTIMATED COSTS EXCEEDING \$1,000

The Joint Test Claimants further state that, as set forth below and in the attached Section 6 Declarations filed herewith in support, the actual and/or estimated costs from the state mandates set forth in this Test Claim exceed \$1,000 for each of the Joint Test Claimants. This Narrative Statement sets forth specific amounts expended by the Joint Test Claimants as determined from the perusal of pertinent records and as disclosed in the Section 6 Declarations filed herewith, including in the Declaration (Second) of Richard Boon. The Joint Test Claimants respectfully reserve the right to modify such amounts when or if additional information is received.

C. THE TEST CLAIM IS TIMELY FILED

As set forth in the Declarations attached in Section 6, Paragraphs 6(a)-(e) and 7, the Joint Test Claimants either first began incurring increased costs under the 2009 Permit in Fiscal Year (FY) 2008-09 (with respect to the County) or FY 2009-10 (with respect to the other Joint Test Claimants).

The 2009 Permit was adopted by the Santa Ana RWQCB on May 22, 2009 and became effective on June 1, 2009, within FY 2008-09. This is a fact which may be administratively noticed by the Commission, pursuant to Evidence Code §452(d) (records of executive bodies, such as the RWQCB). Thus, any costs incurred pursuant to such executive order could not have been incurred

⁴ The City of Costa Mesa’s Test Claim was executed by Tom Hatch, as Chief Executive Officer. Mr. Hatch is Costa Mesa’s City Manager. See www.costamesca.gov/index.index.aspx?page=77. The City of Placentia’s Test Claim was signed by Damien Arrula as City Administrator. Placentia does not have a City Manager, but its City Administrator serves in an identical function. See www.placentia.org/index.aspx?NID=15.

prior to that date. Nevertheless, as set forth above, the Joint Test Claimants are presenting evidence of the date of first incurrence of costs within either FY 2008-09 or FY 2009-10. The Commission's regulations provide that a test claim must be filed with the Commission "not later than 12 months following the effective date of a statute or executive order, or within 12 months of first incurring increased costs as a result of a statute or executive order, whichever is later. For purposes of claiming based on the date of first incurring costs, 'within 12 months' means by June 30 of the fiscal year following the fiscal year in which increased costs were first incurred by the test claimant."⁵ Whether the Joint Test Claimants first incurred such costs during FY 2008-09 or FY 2009-10, given that this Test Claim was filed on June 30, 2010, prior to the end of FY 2009-10, the Test Claim is, under the Commission's regulations, timely filed.

II. PROGRAM BACKGROUND

California ("State") has long been a leader in protecting the quality of all the waters of the State for the use and enjoyment of the people of the state. In fact, California adopted the Porter Cologne Water Quality Control Act ("Porter-Cologne") in 1969, three years prior to the adoption of the federal Clean Water Act (the "CWA" or "Act") and eighteen years before federal law expressly regulated MS4s. When Congress enacted the CWA, it modeled the Act in part on Porter-Cologne, but scaled back many requirements to meet the needs of a national program. As a result, the comprehensive Statewide program enacted through Porter-Cologne exceeds the more limited regulatory scope of the CWA, including the CWA's NPDES program.

One primary difference between Porter-Cologne and the CWA is the role Congress intended the CWA to play in the state regulatory scheme. When adopting the CWA, Congress preserved the states' ability to impose more stringent water quality controls, allowing the Act to be a federal baseline for water quality.⁶ California quickly elected to graft the CWA's NPDES program into its existing regulatory structure, becoming the first state in the nation authorized to issue NPDES permits. The California Legislature ("Legislature") determined that assuming the responsibility was "in the interest of the people of the State, *in order to avoid direct regulation by the federal government of persons already subject to state law* pursuant to this division. . . ."⁷ In other words, because the State had an existing, more aggressive regulatory program, it was not in the State's interest to allow direct federal regulation through a more narrowly tailored program.

III. FEDERAL LAW

The principal federal law regulating water quality is the CWA, found at 33 U.S.C. § 1251 *et seq.* The CWA, was enacted in 1972, and amended in 1987 to implement a permitting system for all discharges of pollutants from point sources to waters of the United States. In 1987, the CWA was amended to make clear that such discharges include discharges from MS4s. Following

⁵ Cal. Code Regs., tit. 2, § 1183.1, subd. (b).

⁶ Section 510 of the CWA, which is codified at Title 33 U.S.C. §1370, acknowledges the states' authority to adopt or enforce standards of limitations regarding the discharge of pollutants provided such standards are not less stringent than the "effluent limitation, or other limitation, effluent standard, prohibition pretreatment standard or standard of performance: under the CWA.

⁷ Cal Water Code § 13370(c) [emphasis added].

the 1987 amendments, NPDES permits are required for discharges from MS4s serving a population of more than 100,000 or from systems that the United States Environmental Protection Agency ("EPA") or the state determine contribute to a violation of a water quality standard or represent a significant contribution of pollutants to waters of the United States.⁸ Pursuant to the CWA, the MS4 permits:

- (i) may be issued on a system or jurisdiction-wide basis;
- (ii) shall include a requirement to effectively prohibit non-stormwater discharges into the storm sewers; and
- (iii) shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants.⁹

In 1990, the EPA issued regulations to implement Phase 1 of the NPDES program, defining which entities need to apply for permits and the information to include in the permit application. The permit application must propose management programs that the permitting authority will consider in adopting the permit including the following:

[A] comprehensive planning process which involves public participation and where necessary intergovernmental coordination, to reduce the discharge of pollutants to the maximum extent practicable using management practices, control techniques and system, design and engineering methods, and such other provisions which are appropriate.¹⁰

Under the CWA, each state is free to enforce its own water quality laws so long as its effluent limitations¹¹ are not less stringent than those set out in the CWA.¹² The California

⁸ 33 U.S.C. § 1342(p)(2) requires NPDES permits for the following discharges:

- (C) A discharge from a municipal separate storm sewer system serving a population of 250,000 or more.
- (D) A discharge from a municipal separate storm sewer system serving a population of 100,000 or more but less than 250,000.
- (E) A discharge for which the Administrator or the State, as the case may be, determines that the stormwater discharge contributes to a violation of a water quality standard or is a significant contributor of pollutants to waters of the United States.

⁹ 33 USC § 1342(p)(3)(B)

¹⁰ 40 Code of Federal Regulations (CFR) § 122.26(d)(2)(iv).

¹¹ *Effluent limitation* means any restriction imposed by the Director on quantities, discharge rates, and concentrations of "pollutants" which are "discharged" from "point sources" into "waters of the United States," the waters of the "contiguous zone," or the ocean. (40 C.F.R. § 122.2.)

¹² 33 U.S.C. § 1370.

Supreme Court described the NPDES program as follows:

- (iv) Part of the federal Clean Water Act is the National Pollutant Discharge Elimination System (NPDES), "[t]he primary means" for enforcing effluent limitations and standards under the Clean Water Act. (*Arkansas v. Oklahoma, supra*, 503 U.S. at p. 101, 112 S.Ct. 1046.) The NPDES sets out the conditions under which the federal EPA or a state with an approved water quality control program can issue permits for the discharge of pollutants in wastewater. (33 U.S.C. §1342(a) & (b).)¹³

IV. CALIFORNIA LAW

The CWA requires the EPA to issue NPDES permits to MS4 dischargers, but allows the EPA to delegate that authority to the states.¹⁴ In California, the Legislature has assigned that responsibility to the State Water Resources Control Board ("State Board"), and the individual Regional Water Quality Control Boards ("Regional Boards"). Permits issued by the State Board or the Regional Boards are subject to the same federal regulations, however, because the state of California has broader authority to regulate discharges than the EPA would under the CWA, requirements in NPDES permits issued by the State and Regional Boards frequently exceed the requirements of federal law.

In *City of Burbank v. State Water Resources Control Board* (2005) 35 Cal.4th 613, the California Supreme Court expressly recognized that NPDES permits issued by the State and Regional Boards can exceed the requirements of federal law, describing the statutory scheme as follows:

In California, the controlling law is the Porter-Cologne Water Quality Control Act (Porter-Cologne Act), which was enacted in 1969. (Wat. Code, § 13000 *et seq.*, added by Stats.1969, ch. 482,

§ 18, p. 1051.) Its goal is "to attain the highest water quality which is reasonable, considering all demands being made and to be made on those waters and the total values involved, beneficial and detrimental, economic and social, tangible and intangible."

(§ 13000.) The task of accomplishing this belongs to the State Water Resources Control Board (State Board) and the nine Regional Water Quality Control Boards; together the State Board and the regional boards comprise "the principal state agencies with primary responsibility for the coordination and control of water quality, (§

¹³ *City of Burbank v. State Water Resources Control Bd.* (2005) 35 Cal.4th 613, 621; Water Code § 13263.

¹⁴ Section 510 of the CWA, codified at Title 33 U.S.C. § 1370, acknowledges the states' authority to adopt or enforce standards or limitations regarding the discharge of pollutants provided such standards are not less stringent than the "effluent limitation, or other limitation, effluent standard, prohibition pretreatment standard or standard of performance" under the CWA.

13001.)

Whereas the State Board establishes statewide policy for water quality control (§ 13140), the regional boards "formulate and adopt water quality control plans for all areas within [a] region" (§ 13240). The regional boards' water quality plans, called "basin plans," must address the beneficial uses to be protected as well as water quality objectives, and they must establish a program of implementation. (§13050, subd. (j)).¹⁵

With regard to the baseline role that the CWA plays in California water quality law, the Court held:

The federal Clean Water Act reserves to the states significant aspects of water quality policy (33 U.S.C. § 1251(b)), and it specifically grants the states authority to "enforce any effluent limitation" that is not "*less stringent*" than the federal standard (33 U.S.C. § 1370, italics added). It does not prescribe or restrict the factors that a state may consider when exercising this reserved authority. . .¹⁶

Porter-Cologne therefore provides California with broader authority to regulate water quality than it would have if it were operating exclusively under the CWA. The State's authority under Porter-Cologne extends to non-point sources of pollution such as urban and agricultural runoff, discharges to ground water and discharges to land overlying ground water.¹⁷ It not only establishes broader regulatory authority than the CWA, but also extends that broader regulatory authority to a larger class of waters. It is under this authority that the State and Regional Boards act when issuing NPDES permits that exceed the minimum requirements set forth in federal law, namely Title 40, section 122.26 of the Code of Federal Regulations.

The courts, the State Board and the Regional Boards have repeatedly acknowledged that many aspects of NPDES permits issued in California exceed the minimum requirements of the CWA. In a decision on the merits of the 2001 NPDES permit for San Diego County, the State Board acknowledged that the since NPDES permits are adopted as waste discharge requirements in California, they can more broadly protect "waters of the State," rather than being limited to "waters of the United States."¹⁸ As the State Board has expressed it, "the inclusion of waters of the State' allows the protection of groundwater, which is generally not considered to be 'waters of

¹⁵ *City of Burbank, supra*, 35 Cal.4th at 619.

¹⁶ *Id.* at 627-28.

¹⁷ See Water Code § 13050 [defining the term "Waters of the State" more broadly than the CWA definition of discharging waste, or proposing to discharge waste, within any region that could affect the quality of the waters of the state, other than into a community sewer system"].

¹⁸ *In Re Building Industry Association of San Diego County and Western States Petroleum Association*, State Board Order WQ 2001-15, Exhibit 9 to the Miscellaneous Authorities included with Section 7 – Documentation.

the United States."¹⁹

The Regional Boards have also acknowledged in official documents that many of the requirements of MS4 permits exceed the requirements of federal law and are based, therefore, on the broader authority of Porter-Cologne. For example, in a December 13, 2000 staff report regarding the San Diego Regional Water Quality Control Board's draft 2001 permit, it was found that 40% of the draft permit requirements "exceed the federal regulations" because they are either more numerous, more specific/detailed, or more stringent than the requirements in the regulations.²⁰

Lastly, in *Burbank*, the California Supreme Court acknowledged that aspects of NPDES permits can exceed federal requirements, and held that to the extent such provisions are not required by federal law, the State and Regional Boards are required to consider state law restrictions on agency action.²¹ Implicit in the Court's decision is the requirement that orders issued by the State and Regional Boards are subject to State Constitutional restrictions, including those on funding set forth in Article XIII B section 6 of the California Constitution.

V. STATE MANDATE LAW

Article XIII B section 6 of the California Constitution requires that the Legislature provide a subvention of funds to local agencies any time the Legislature or a state agency requires the local agency to implement a new program, or provide a higher level of service under an existing program. Article XIII B section 6 states in relevant part:

Whenever the Legislature or any state agency mandates a new program or higher level of service on any local government, the state shall provide a subvention of funds to reimburse such local governments for the cost of such program or increased level of service....

The purpose of Section 6 "is to preclude the State from shifting financial responsibility for carrying out governmental functions to local agencies, which are 'ill equipped' to assume increased financial responsibilities because of the taxing and spending limitations that articles XIII A and XIII B impose."²² The section "was designed to protect the tax revenues of local governments from state mandates that would require expenditure of such revenues."²³ In order to implement Section 6, the Legislature enacted a comprehensive administrative scheme to define and pay mandate claims.²⁴ Under this scheme, the Legislature established the parameters regarding what

¹⁹ *Id.*

²⁰ See San Diego Regional Board Staff Report, p. 3, ¶14, included as Exhibit 18 under Section 7 – Documentation to these Test Claims.

²¹ *City of Burbank, supra*, 35 Cal.4th at 618.

²² *County of San Diego, supra*, 15 Cal.4th at 81; *County of Fresno, supra*, 53 Cal.3d at 487.

²³ *Id.*; *Redevelopment Agency v. Commission on State Mandates* (1997) 55 Cal.App.4th 976, 984-85.

constitutes a state mandated cost, defining "Costs mandated by the State" to include:

any increased costs which a local agency ... is required to incur after July 1, 1980, as a result of any statute enacted on or after January 1, 1975, or any executive order implementing any statute enacted on or after January 1, 1975, which mandates a new program or higher level or service of an existing program within the meaning of Section 6 of Article XIII B of the California Constitution.²⁵

Government Code section 17556 identifies seven exceptions to the rule requiring reimbursement for State mandated costs. The exceptions are as follows:

- (a) The claim is submitted by a local agency that requested legislative authority for that local agency ... to implement the program specified in the statute, and that statute imposes costs upon that local agency or school district requesting the legislative authority....
- (b) The statute or executive order affirmed for the state a mandate that had been declared existing law or regulation by action of the courts.
- (c) The statute or executive order imposes a requirement that is mandated by a federal law or regulation and results in costs mandated by the federal government, unless the statute or executive order mandates costs that exceed the mandate in that federal law or regulation. . . .
- (d) The local agency ... has the authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service.
- (e) The statute, executive order, or an appropriation in a Budget Act or other bill provides for offsetting savings to local agencies . . . that result in no net costs to the local agencies or . . . , or includes additional revenue that was specifically intended to fund the costs of the state mandate in an amount sufficient to fund the cost of the state mandate.
- (f) The statute or executive order imposes duties that are necessary to implement, reasonably within the scope of, or

²⁴ Govt. Code § 17500 *et seq.*; *Kinlaw v. State of California* (1991) 54 Cal.3d 326, 331, 333 [statute establishes "procedure by which to implement and enforce section 6"].

²⁵ Govt. Code §17514.

expressly included in, a ballot measure approved by the voters in a statewide or local election.

- (g) The statute created a new crime or infraction, eliminated a crime or infraction, or changed the penalty for a crime or infraction, but only for that portion of the statute relating directly to the enforcement of the crime or infraction.

When a new program or level of service is in part federally required, courts have held that the authority to impose a condition does not equate to a direct order or mandate to impose the condition. This principle was expressly recognized in *Hayes v. Commission on State Mandates* (1992) 11 Cal.App.4th 1564. In that case, the appellate court held "[i]f the state freely chooses to impose the costs upon the local agency as a means of implementing a federal program then the costs are the result of a reimbursable state mandate regardless whether the costs were imposed upon the state by the federal government."²⁶ As a result, when a state agency exercises discretion in choosing which requirements to impose in an executive order, those aspects that were not strictly required by the federal scheme are state mandates.²⁷

Similarly, when a state law or order mandates changes to an existing program that requires an increase in the actual level or quality of governmental services provided, that increase will represent a "higher level of service" within the meaning of Article XIII B § 6 of the California Constitution.²⁸ For example, in *Long Beach Unified School District v. State of California* (1990) 225 Cal.App.3d 155, an executive order required school districts to take specific steps to measure and address racial segregation in local public schools. The appellate court held that this constituted a "higher level of service" to the extent the order's requirements exceeded federal law by mandating school districts to undertake defined remedial actions that were merely advisory under prior governing law.²⁹

The 2009 Permit imposes new requirements on the Permittees that exceed the requirements of federal law, and that are unique to the Permittees.³⁰ For that reason, the 2009 Permit represents a state mandate for which the Permittees are entitled to reimbursement pursuant to Article XIII B section 6 of the California Constitution.

VI. STATE MANDATED ACTIVITIES

On May 22, 2009, the Santa Ana RWQCB issued the 2009 Permit to the Permittees. The 2009 Permit mandates many new programs and activities not required by either federal law or the

²⁶ *Hayes v. Commission on State Mandates* (1992) 11 Cal.App.4th 1564, 1593.

²⁷ *Id.*

²⁸ *San Diego Unified School District v. Commission on State Mandates* (2004) 33 Cal.4th 859, 877.

²⁹ *Long Beach Unified School District v. State of California* (1990) 225 Cal.App.3d 155, 173.

³⁰ Orders issued by any Regional Board pursuant to Division 7 of the Water Code (commencing at section 13000) come within the definition of "executive order". *County of Los Angeles v. Commission on State Mandates* (2007) 150 Cal.App.4th 898, 920.

2002 Permit. The program and activities that are at issue in this Test Claim are as follows:

A. 2009 PERMIT SECTION XVIII (WATERSHED ACTION PLANS AND TMDL IMPLEMENTATION) IMPOSE A SERIES OF NEW UNFUNDED STATE MANDATES ON THE PERMITTEES

1. CHALLENGED PROGRAM REQUIREMENTS

Section XVIII of the 2009 Permit imposes a number of new State mandated programs upon the Permittees that are not mandated by federal law, and without the Santa Ana RWQCB providing funding for any of such programs. Each of the new programs set forth in 2009 Permit Section XVIII concerns what are referred to as "Total Maximum Daily Loads" or "TMDLs" i.e., each involves either: (1) programs designed to implement a EPA and/or a State developed TMDL, in a manner that is not required by federal law; (2) pre-TMDL programs that are not required by federal law; or (3) programs designed to implement partially developed State TMDLs that have not yet been finally approved. The one common thread in each of these new Permit programs is that they all impose new requirements that are not mandated by federal law; nor do the Permittees have fee authority to recover their costs in complying with any of these TMDL-related State mandates. Accordingly, each of the TMDL programs discussed below is an unfunded State mandate which is constitutionally required to be reimbursed by the State.

2. TMDL REQUIREMENTS OF FEDERAL LAW

The CWA was enacted in 1972 by the United States Congress as "a 'comprehensive water quality statute designed to restore and maintain the chemical, physical, and biological integrity of the Nation's waters.'"³¹ "To achieve these ambitious goals, the Clean Water Act establishes distinct roles for the Federal and state Governments. Under the Act, [EPA] is required ... to establish and enforce technology-based limitations on individual discharges into the country's navigable waters," and each state is "to institute comprehensive water quality standards establishing water quality goals for all intrastate waters." "These state water quality standards provide 'a supplementary basis ... so that numerous point sources, despite individual compliance with effluent limitations, may be further regulated to prevent water quality from falling below acceptable levels.'"³²

The Act provides that these state-developed Water Quality Standards ("Standards") are to include (1) the designated beneficial use of the water body, and (2) the "water quality criteria" to protect such designated use.³³ The water quality criteria component of the Standards "can be expressed in narrative form or in a numeric form, e.g., specific pollutant concentrations."³⁴ "Narrative criteria are broad statements of desirable water quality goals in a water quality plan," such as "no toxic pollutants in toxic amounts."³⁵ A TMDL is to be established "at a level

³¹ *Burbank, supra*, 135 Cal.4th 613, 619, 620.

³² *PUD No. 1 of Jefferson County v. Washington Department of Ecology* (1994) 511 U.S. 700, 704.

³³ 33 U.S.C. § 1313(c)(2)(A); 40 CFR § 131.3(i).

³⁴ *Arcadia v. State Board* (2006) 135 Cal.App.4th 1392, 1403.

necessary to implement the applicable water quality standards.”³⁶

The federal regulations define a TMDL as follows:

Total Maximum Daily Load (TMDL). The sum of the individual WLAs [waste load allocations] for point sources and LAs [load allocations] for nonpoint sources and natural background. If a receiving water has only one point source discharger, the TMDL is the sum of that point source WLA plus the LAs for any nonpoint sources of pollution and natural background sources, tributaries, or adjacent segments. TMDLs can be expressed in terms of either mass per time, toxicity, or other appropriate measure. If best management practices ("BMPs") or other nonpoint source pollution controls make more stringent load allocations practicable, then wasteload allocations can be made less stringent. Thus, the TMDL process provides for nonpoint source control tradeoffs.³⁷

The federal regulations then proceed to define a "wasteload allocation" or "WLA" as: "A portion of a receiving water's loading capacity that is allocated to one of its existing or future point sources of pollution. WLAs constitute a type of water quality-based effluent limitation."³⁸ NPDES permit terms must be consistent with their assumptions and requirements of the waste load allocations within a TMDL.³⁹

In short, once adopted, "TMDLs serve as a link in an implementation chain" linking the implementation of the Standards to the NPDES Permits.⁴⁰ However, a TMDL is not self-executing and is only enforceable through NPDES permits.⁴¹ In incorporating a TMDL under the federal regulations, NPDES Permits need only be "consistent with the assumptions and requirements of any available waste load allocations for the discharge prepared by the State and approved by EPA pursuant to 40 CFR 130.7."⁴²

With these test claims, the Permittees contend that the 2009 Permit terms at issue go beyond what is required by federal law and thus impose a serious of unfunded State mandates in relation

³⁵ *Id.*

³⁶ 33 U.S.C. § 1313(d)(1)(c); *also see Arcadia, supra*, 235 Cal.App.4th at 1404 [“A TMDL must be ‘established’ at a level necessary to implement the applicable water quality standards. . . . Once a TMDL is developed, effluent limitations in NPDES permits must be consistent with the waste load allocations in the TMDL.”].

³⁷ 40 CFR § 130.2(i).

³⁸ 40 CFR § 130.3(h).

³⁹ 40 CFR § 122.44(d)(1)(vii)(B).

⁴⁰ *Arcadia v. EPA*, (N.D. Cal. 2003) 265 F.Supp.2d 1142, 1144-45.

⁴¹ *Id.*

⁴² 40 CFR § 122.44(d)(1)(vii)(B).

to TMDLs, as follows: (1) various Permit terms require compliance with numeric effluent limits derived from finally adopted TMDLs, even though federal law only requires that municipal NPDES Permits reduce the discharge of pollutants to the "maximum extent practicable" ("MEP") Standard, and do not require compliance with numeric effluent limits; (2) certain Permit terms require compliance with numeric effluent limits derived from the WLAs contained in TMDLs, even though the TMDLs have not been finally adopted or approved by EPA. Federal law does not require an NPDES Permit to require compliance, in any fashion, with a TMDL that has not been "approved by EPA pursuant to 40 CFR 130.7.;"⁴³ (3) some Permit terms require the Permittees to themselves develop the TMDLs or to otherwise conduct studies or take other action towards the development of TMDLs. Yet, federal law does not mandate that the Permittees take any action towards the development or study of a TMDL. The development of the TMDL is the responsibility of the Regional Water Quality Control Boards, a division of the State.

3. FEDERAL LAW DOES NOT MANDATE THE IMPOSITION OF NUMERIC EFFLUENT LIMITS FROM TMDLS OR OTHERWISE TO BE INCLUDED IN MUNICIPAL NPDES PERMITS.

The plain language of the CWA confirms that numeric effluent limits, either from TMDLs or otherwise, are not required to be imposed on municipal NPDES Permittees. Instead, federal law only requires controls to be included in municipal NPDES Permits, as needed "to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator *or the State determines appropriate* for the control of such pollutants," where it provides as follows:

(B) Municipal Discharge:

Permits for discharges from municipal storm sewers –

- (i) may be issued on a system – or jurisdiction wide basis;
- (ii) shall include a requirement to effectively prohibit non-stormwater discharges into the storm sewers; and
- (iii) shall require controls to reduce the discharge of pollutants to the **maximum extent practicable**, including management practices, control techniques and in system, design and engineering methods, and such other provisions as the Administrator *or the State determines appropriate* for the control of such pollutants.⁴⁴

In *Defenders of Wildlife v. Browner* (9th Cir. 1999) 191 F.3d 1159 ("Defenders"), the Ninth Circuit Court of Appeal recognized the different approach taken by Congress for Stormwater,

⁴³ *Id.*

⁴⁴ 33 U.S.C. § 1342(p)(3)(B), emphasis added.

finding that "**industrial discharges must comply strictly with state water-quality standards while Congress chose "not to include a similar provision for municipal storm- sewer discharges."**"⁴⁵ The Court found that "because 33 U.S.C. § 1342(p)(3)(B) is not merely silent regarding whether municipal discharges must comply with 33 U.S.C. § 1311," but instead Section 1342(b)(3)(B)(iii) "replaces the requirements of § 1311 with the requirement that municipal storm-sewer dischargers 'reduce the discharge of pollutants to the maximum extent practicable ..."the statute unambiguously demonstrates that **Congress did not require municipal storm-sewer discharges to comply strictly with 33 U.S.C. § 1311(b)(1)(C).**"⁴⁶

In *Building Industry Association of San Diego County v. State Water Resources Control Board* (2004) 124 Cal.App.4th 866, 874 ("BIA"), the California Court of Appeal similarly found:

[I]n 1987, Congress amended the Clean Water Act to add provisions that specifically concerned NPDES permit requirements for storm sewer discharges. [Citations.] In these amendments, enacted as part of the *Water Quality Act of 1987*, Congress distinguished between industrial and municipal storm water discharges, . . . With respect to municipal storm water discharges, Congress clarified that the EPA has the authority to fashion NPDES permit requirements to meet water quality standards **without specific numeric effluent limits and instead to impose "controls to reduce the discharge of pollutants to the maximum extent practicable."**⁴⁷

With respect to TMDLs, the fact that wasteload allocations within a TMDL are not required under the CWA to be enforced as "numeric limits" through a Stormwater Permit, was specifically confirmed by EPA itself in a November 22, 2002 EPA Guidance Memorandum on "*Establishing Total Maximum Daily Load (TMDL) Waste Load Allocations (WLAs) for Storm Water Sources and NPDES Permit Requirements Based on those WLAs*" ("EPA Guidance Memo").⁴⁸ In this EPA Guidance Memorandum, EPA explained that for NPDES Permits regulating municipal storm water discharges, any water quality based effluent limit for such discharges should be "**in the form of BMPs and that numeric limits will be used only in rare instances.**"⁴⁹ EPA further concluded that "**for NPDES-regulated municipal . . . dischargers effluent limits should be expressed as best management practices (BMPs), rather than as numeric effluent limits**"⁵⁰

⁴⁵ *Defenders of Wildlife v. Browner* (9th Cir. 1999) 191 F.3d 1159, 1165, emphasis added.

⁴⁷ *BIA, supra*, 124 Cal.App.4th at 874, emphasis in original, citing 33 U.S.C. § 1342(p)(3)(B)(iii) and *Defenders, supra*, at 1163.

⁴⁸ All Exhibit references in this Narrative Statement are contained within the Miscellaneous Authority provided within Section 7 - Documentation to the Test Claims. The EPA Guidance Memo is Exhibit 1 thereto.

⁴⁹ Exhibit 1, EPA Guidance Memo, p. 6, emphasis added.

EPA went on to expressly recognize the difficulties in regulating Stormwater discharges and explained its policy as follows:

EPA's policy recognizes that because storm water discharges are due to storm events that are highly variable in frequency and duration and are not easily characterized, only in rare cases will it be feasible or appropriate to establish numeric limits for municipal and small construction storm water discharges. The variability in the system and minimal data generally available make it difficult to determine with precision or certainty actual and projected loadings for individual dischargers or groups of dischargers. Therefore, EPA believes that in these situations, permit limits typically can be expressed as BMPs, and that numeric limits will be used only in rare instances.⁵¹

In a recent Oregon Appellate Court decision in *Tualatin Riverkeepers, et al v. Oregon Department of Environmental Quality ("Tualatin")* (April 28, 2010) 235 Ore.App. 132, the Oregon Court of Appeal addressed, among other issues, the need for waste load allocations contained within developed TMDLs to be enforced as numeric effluent limits within a municipal NPDES Permit under Oregon law. The petitioners in that case argued that the Oregon Department of Environmental Quality ("DEQ") had erred because it had issued a permit that did not *"incorporate waste load allocations as enforceable effluent limits."*⁵²

The Oregon Court initially found that the CWA does not require that municipal NPDES Permits contain "numeric" effluent limits as a means of enforcing Standards, finding that under the CWA "although a permit must include restrictions on discharges of pollutants into the water, the applicable statute does not specify what form they must take. 'Best management practices,' such as those incorporated in the permits at issue in this case, are a type of effluent limitations."⁵³

The Oregon Court also discussed the purpose of a TMDL, noting that a TMDL is required to be established for pollutants and waters of the state identified pursuant to section 1313(d) of the CWA. Further, the Oregon Court addressed the petitioners' prime contention that the TMDLs were required under Oregon law to have been incorporated into the Permit as "enforceable effluent limitations."⁵⁴ Notably, there was no suggestion that federal law required a TMDL to be incorporated into a municipal NPDES Permit as a "numeric effluent limitation." Instead, as referenced above, the Oregon Court discussed the fact that under the CWA, best management

⁵⁰ *Id.* at p. 4; also see August 22, 2003 letter from EPA Headquarters to the Honorable Bart Doyle, then Councilmember for the City of Sierra Madre, wherein EPA Headquarters made clear that EPA has **"worked closely with all ten Regions on this memo and expects that it will be followed by the states."** (Exhibit 2, EPA August 22, 2003 Letter, p.2).

⁵² *Tualatin, supra*, 235 Ore. App. 132 at 145-146.

⁵³ *Id.* at 141.

⁵⁴ *Id.* at 145-146.

practices were considered to be a "type of effluent limitation," and that such best management practices were authorized to be used pursuant to the CWA, section 33 U.S.C. § 1342(p) as a means of controlling "storm water discharges."⁵⁵

The Court in *Tualatin* went on to conclude that the DEQ need not require that TMDLs be enforced through the use of numeric effluent limits, finding as follows:

The applicable TMDLs in this case set forth specific waste load allocations for municipal storm water. The permits at issue, in turn, indicate the bodies of water for which TMDLs and wasteload allocations have been established and reference the specific TMDL for those bodies of water. The permits provide in the "adaptive management" section that, "[w]here TMDL wasteload allocations have been established for pollutant parameters associated with the permittee's [municipal separate storm sewer system] discharges, the permittee must use the estimated pollutant load reductions (benchmarks) established in the [storm water management plan] to guide the adaptive management process." .. . Adequate progress toward achieving assigned wasteload allocations will be demonstrated through the implementation of best management practices that are targeted at TMDL-related pollutants." Pursuant to that section, permittees must evaluate progress toward reducing pollutant loads "through the use of performance measures and pollutant load reduction benchmarks developed and listed in the [storm water management plan]."

Although the permits do not themselves include numeric wasteload allocations like those set forth in the TMDLs, the TMDL wasteload allocations are clearly referenced in the permits, and the permits require implementation of best management *practices*, set forth in the storm water management *plans*, to make progress towards meeting those wasteload allocations. **Again, best management practices are a type of effluent limitation that is used in municipal storm water permits.** See 40 CFR § 122.44(k)(2)-(13). Furthermore, the permits incorporate benchmarks, through incorporation of the storm water management plan, which are specific pollutant load reduction goals for the permittees. Those measures are "permit requirements" that properly incorporate the TMDL wasteload allocations.⁵⁶

The Oregon opinion confirms that numeric effluent limits are not required to be included

⁵⁵ *Id.* at 141, citing 33 U.S.C. § 1342(p) and 40 CFR § 122.44(k)(2)-(3).

⁵⁶ *Tualatin, supra*, at 148.

in municipal NPDES Permits as a means of implementing the wasteload allocations in a TMDL, or otherwise. Yet, the 2009 Permit in issue contains a series of specific numeric effluent limits based on wasteload allocations from TMDLs, but without providing appropriate funding to fund these new programs. As such, all of the new TMDL-related programs in the Permit which require compliance with numeric effluent limits are unfunded State mandates that are not required under federal law; such mandates must, therefore, be funded by the State.

In a recently EPA-issued draft technical document entitled "TMDLs Stormwater Handbook, November, 2008" (Exhibit 3, hereafter "EPA Draft Handbook"), EPA provides "information to TMDL practitioners and NPDES stormwater permit writers" on various subjects, including:

Approaches for translating TMDL WLAs and implementation recommendations into NPDES stormwater permit requirements and implementations strategies.⁵⁷

The EPA Draft Handbook is designed to assist in the development of "TMDL implementation plans that connect WLAs and stormwater permits by either (1) including specific recommendations (e.g., performance standards, management measures) for implementing WLAs, or (2) providing technical information for permit writers and permittees on how to analyze, select, and implement provisions to implement the WLAs."⁵⁸ The Draft Handbook specifically references and quotes from the EPA Guidance Memo (referenced above), and provides that: *"EPA expects that most WQBELs for NPDES-regulated municipal and small construction storm water discharges will be in the form of BMPs, and that numeric limits will be used only in rare instances."*⁵⁹

Furthermore, in a report entitled *"Assessing the TMDL Approach to Water Quality Management,"* (September, 2001), issued for Congress by the National Research Council ("NRC"), a member of the National Academies of Science, the NRC similarly concluded that adaptive BMPs should be utilized to enforce TMDLs:

Many debates in the TMDL community have centered on the use of "phased" and "iterative" TMDLs. Because these terms have particular meanings, this report uses a more general term - adaptive implementation. Adaptive implementation is, in fact, the application of the scientific method to decision-making. It is a process of taking actions of limited scope commensurate with available data and information to continuously improve our understanding of a problem and its solutions, while at the same time making progress toward

⁵⁷ EPA Draft Handbook, p.1

⁵⁸ *Id.*

⁵⁹ EPA Draft Handbook, p. 133; *emph. added.*

attaining a water quality standard.⁶⁰

In addition to all of the above authority, there is a plethora of State Board Orders and related formal documentation confirming that the long-held policy of the State of California is not to require the use of numeric limits for stormwater dischargers, but rather to apply the MEP standard through an iterative BMP process. *See, e.g., Exhibit 5.* State Board Order No. 91-04, p. 14 ["There are ***no numeric objectives or numeric effluent limits*** required at this time, either in the Basin Plan or any statewide plan that apply to storm water discharges." p. 14]; *Exhibit 6* State Board Order No. 96-13, p. 6 ["***federal laws does not require*** the [San Francisco Reg. Bd] to dictate the specific controls."]; *Exhibit 7.* State Board Order No. 98-01, p. 12 ["Stormwater permits must achieve compliance with water quality standards, but they may do so by requiring implementation of BMPs ***in lieu of numeric water quality-based effluent limitations.***"]; *Exhibit 8* State Board Order No. 2000-11, p. 3 ["***In prior Orders this Board has explained the need for the municipal storm water programs and the emphasis on BMPs in lieu of numeric effluent limitations.***"]; *Exhibit 9.* State Board Order No. 2001-15, p. 8 ["While we continue to address water quality standards in municipal storm water permits, we also continue to believe that the iterative approach, which focuses on timely improvements of BMPs, is appropriate."]; *Exhibit 10.* State Board Order No. 2006-12, p. 17 ["***Federal regulations do not require numeric effluent limitations for discharges of storm water***"] *Exhibit 11.* Stormwater Quality Panel Recommendations to the California State Water Resources Control Board - The Feasibility of Numeric Effluent Limits Applicable to Discharges of Stormwater Associated with Municipal, Industrial and Construction Activities, June 19, 2006, p. 8 ["***It is not feasible at this time to set enforceable numeric effluent criteria for municipal BMPs and in particular urban discharger***"] and an *Exhibit 12.* April 18, 2008 letter from the State Board's Chief Counsel to the Commission on State Mandates, p. 6 ["***Most NPDES Permits are largely comprised of numeric limitations for pollutants.... Stormwater permits, on the other hand, usually require dischargers to implement BMPs.***"].

In short, neither State nor federal law or policy provide for the incorporation of wasteload allocations as numeric limits into an MS4 Permit. To the contrary, both EPA and the State have long recognized that numeric limits should only be incorporated into an MS4 Permit in "rare instances," with the State Board's own Numeric Effluent Limits Panel concluding that "it is not feasible at this time to set enforceable numeric effluent criteria for municipal BMPs and in particular urban dischargers."

4. REQUIREMENTS FROM 2002 PERMIT

With the exception of the TMDL programs in the 2002 Permit involving the sediment and nutrient TMDLs for San Diego Creek and Newport Bay (not in issue in this Test Claim), and the need for further studies regarding fecal coliform in Newport Bay (also not in issue in this Test Claims), the 2002 Permit contains no TMDL-related programs and imposes no requirements on the Permittees to develop or implement any TMDL program in issue in these Test Claims; nor does the 2002 Permit contain any requirement to meet numeric effluent limitations derived from a wasteload allocation from a TMDL or otherwise (other than the requirements involving the

⁶⁰ *Exhibit 4, Assessing the TMDL Approach to Water Quality Management*, p. 90.

sediment and nutrient TMDLs that are not in issue here).

5. 2009 PERMIT MANDATED TMDL-RELATED ACTIVITIES

a. The Permit Programs Under Section XVIII.B Involving Promulgated TMDLs for Toxic Pollutants, Are All Unfunded State Mandates.

Under 2009 Permit Section XVIII.B, the Santa Ana RWQCB seeks to impose a series of new programs not contained in any prior permit, based on: *"EPA Promulgated Technical TMDLs for Toxic Pollutants in San Diego Creek and Newport Bay, including metals, organo-chlorine compounds, selenium, and organo-phosphate pesticides. EPA and the Los Angeles Regional Water Quality Control Board established technical TMDLs for metals in Coyote Creek."*⁶¹

For each of these referenced TMDLs, the 2009 Permit incorporates and requires compliance with specific numeric waste load allocations or load allocations taken from these various TMDLs. Yet, requiring compliance with each of these numeric effluent limits set forth in the tables under Section XVIII.B of the Permit (pages 68-74), constitutes new unfunded State mandates that are not required by federal law.

Each of the new TMDL-related programs is designed to implement either the EPA promulgated TMDLs for toxic pollutants, discussed above, or Regional Board promulgated TMDLs for other toxic pollutants which have not yet been "approved by EPA pursuant to 40 CFR 130.7." Further, all of the adopted or to be adopted TMDLs referenced in Subsections XVIII.B. 1 through B.4 have been based on what is known as the "California Toxics Rule" or "CTR," a rule adopted by EPA in May of 2000.⁶² Yet, a review of CTR itself, as well as EPA's Responses to Comments made in connection with CTR (Excerpts of which are included as Exhibit 15), even further confirms that TMDLs, once approved by EPA, impose no specific federal mandates on the State, but only trigger "a number of discretionary choices" for the State to make.

To start with, in the Preamble to CTR, *EPA made clear it was not intending to require municipal dischargers to strictly comply with the numeric objectives set forth in CTR.* To the contrary, EPA stated that CTR contains "no federal mandates" for State, local, or tribal government or the private sector.⁶³ Rather than imposing a federal mandate and requiring the State of California to apply the CTR limits as strict Stormwater Standards, EPA indicated the exact opposite was to occur:

EPA has determined that this rule contains no regulatory requirements that might significantly or uniquely affect small governments. This rule establishes ambient water quality criteria which, by themselves do not directly impact any entity. The State will implement these criteria by ensuring that NPDES permits result

⁶¹ Permit, p. 68, Section XVIII.B.1.

⁶² See Exhibit 13, California Toxics Rule ("CTR"), 65 Fed. Reg. 31682

⁶³ Exhibit 13, 65 Fed. Reg. 31682, 31708.

in discharges that will meet these criteria. **In so doing, the State will have considerable discretion.**

Under the CWA water quality standards program, States must adopt water quality standards for their waters that must be submitted to EPA for approval.

Thus, under the CWA, EPA's promulgation of water quality criteria or standards establishes standards that the State, in turn, implements through the NPDES permit process. **The State has considerable discretion in deciding how to meet the water quality standards and in developing discharge limits as needed to meet the standards.** In circumstances where there is more than one discharger to a water body that is subject to water quality standards or criteria, a State also has discretion in deciding on the appropriate limits for the different dischargers. While the State's implementation of federally-promulgated water quality criteria or standards may result indirectly in new or revised discharge limits for small entities, the criteria or standards themselves do not apply to any discharger, including small entities.

Today's rule, as explained above, does not itself establish any requirements that are applicable to small entities. As a result of EPA's actions here, the State of California will need to ensure that permits it issues include limits as necessary to meet the water quality standards established by the criteria in today's rule. **In so doing, the State will have a number of discretionary choices associated with permit writing.** While California's implementation of today's rule may ultimately result in some new or revised permit conditions for some dischargers, including small entities, EPA's action today does not impose any of these as yet unknown requirements on small entities.⁶⁴

Moreover, according to EPA, CTR was not to have a direct effect on Stormwater dischargers. Instead, EPA stated that with respect to Stormwater permits, “compliance with water quality standards through the use of Best Management Practice (BMPs) is appropriate.”⁶⁵ EPA also claimed it would “continue to work with the State to implement storm water permits that comply with water quality standards with an emphasis on pollution prevention and best management

⁶⁴ Exhibit 13, 65 Fed. Reg. 31682, 31708-709; emphasis added.

⁶⁵ Exhibit 13, 65 Fed. Reg. 31703.

practices *rather than costly end-of-pipe controls.*"⁶⁶

EPA further represented that the CTR language "allows the practice of applying maximum extent practicable (MEP) to MS4 permits, along with best management practices (BMPs) as effluent limits to meet water quality standards where infeasible or insufficient information exists to develop WQBELS."⁶⁷ Additional examples of EPA representations in this regard are as follows:

County of Ventura's comments at the CTR public hearing:

"We have also recently completed a four-year monitoring program and, using the information from the monitoring program, we have attainability of the data that we have collected for our program. This attainability data indicates that even if we comply - apply the BMP program to the maximum extent possible, the expenditure of radial funds, we would still not be able to meet the requirements of the proposed criteria for several of the metals and other constituents which would then - of course, our program would go into a treatment mode for stormwater discharges. We believe that this was going to be very costly for us, particularly very costly for smaller communities who don't have the base to spread the cost of such expense over their population."⁶⁸

EPA's Response-

*If you look across the country, across the U.S., there are many, many states that have standards on the books, water quality standards that are far more stringent than the numbers we're promulgating or proposing to promulgate in Southern California. If you look at their standards, you won't see any black boxes on the end of those storm water discharges. **Nobody builds treatment for storm water treatment in this country. They've been implementing standards for 15 years, California is no different.***"⁶⁹

A portion of EPA's response to comments of Los Angeles County:

*EPA did not ascribe benefits or costs of controlling storm water discharges in the proposed or final Economic Analysis. EPA believes that many storm water dischargers can avoid violation of water quality standards **through application of best management practices that are already required by the current storm water***

⁶⁶ Exhibit 14, EPA Response to Comment 001-007.

⁶⁷ Exhibit 14, EPA Response to Comment 040-004.

⁶⁸ Exhibit 14, EPA Response to CTR H-002-017.

⁶⁹ Exhibit 14, EPA Response to CTR H-002-017.

permits.

The commenter claims that even with the application of current BMPs, its storm water dischargers would still violate water quality standards due to the CTR criteria. The commenter appears to assume that storm water discharge would be subject to numeric water quality based effluent limits which would be equivalent to the criteria values and applied as effluent limits never to be exceeded, or calculated in the same manner that effluent limits are calculated for other point sources, such as POTWs. The comment then appears to assume that such WQBELs would then require the construction of very costly end-of-pipe controls.

EPA contends that neither scenario is valid with regards to developing WQBELs for storm water discharges or establishing compliance with WQBELs. . . EPA will continue to advocate the use of BMPs, as discussed in the CTR preamble. . . . EPA will continue to work with the State to implement storm water permits that comply with water quality standards with an emphasis on pollution prevention and best management practices rather than costly end-of-pipe controls.⁷⁰

A portion of EPA's Response to Comments of Sacramento County:

EPA believes the applicability of water quality standards to storm water discharges is outside the scope of the rule.⁷¹

An excerpt of EPA's written response to the Fresno County Metropolitan Flood Control District:

EPA believes that implementation of the criteria [CTR] as applied to wet-weather dischargers will not require the construction of end-of-pipe facilities.⁷²

Other EPA comments on the issue:

As further described in the response to CTR-021-008, CTR-013-003 and CTR-040-004, EPA believes that the final CTR will not significantly affect the current storm water program being implemented by the State, which includes the requirement to develop best management practices to control pollutants in storm

⁷⁰ Exhibit 14, EPA Response to CTR-001-007.

⁷¹ Exhibit 14, EPA Response to CTR-040-014b.

⁷² Exhibit 14, EPA Response to CTR 031-005b.

*water discharges. As such, EPA believes that inclusion of end-of-pipe treatment costs for storm water are inappropriate.*⁷³

EPA written comments to the California Storm Water Task Force:

*EPA disagrees with the cost estimates provided by the commenter as EPA does not believe that storage and treatment of stormwater would be required to ensure compliance with the CTR.*⁷⁴

*EPA believes that the CTR language allows for the practice of applying maximum extent practicable (MEP) to MS4 permits, along with best management practices (BMPs) as effluent limits to meet water quality standards where infeasible or insufficient information exists to develop WQBELs.*⁷⁵

EPA similarly confirmed that CTR was not creating a "federal requirement" when it issued its "Economic Analysis of the California Toxic Rule," October 1999, which was prepared for EPA by Science Applications International Corporation (hereafter, "EPA's Economic Analysis of CTR" Exhibit 15V In EPA's Economic Analysis of CTR, it concluded that "[t]he State of California has significant flexibility and discretion as to how it chooses to implement the CTR within the NPDES permit program."⁷⁶

The fact that CTR-derived TMDLs should not be strictly applied to stormwater through numeric limits has further been confirmed by the State of California in its "*Policy for Implementation of Toxics Standards for Inland Surface Waters, Enclosed Bays, and Estuaries of California* (SIP)," adopted by the State Board by Resolution 2000-015 on April 26, 2000.⁷⁷ California's SIP confirms on page 1 that the SIP was designed to establish "implementation provisions for priority pollutant criteria promulgated by . . . EPA through the . . . California Toxics Rule (CTR)," but that it "*does not apply to regulation of stormwater discharges.*"⁷⁸

As such, each of the TMDL Programs as described below that seek to require compliance with wasteload allocations through the use of "numeric effluent limitations," are unfunded State

⁷³ Exhibit 14, EPA Response to CTR-035-044c.

⁷⁴ Exhibit 14, EPA Response to CTR H-001-001b.

⁷⁵ Exhibit 14, EPA Responses to CTR-040-004.

⁷⁶ EPA Economic Analysis of CTR, p. ES-2; *also see* CTR, 65 Fed. Reg. 31703 [where EPA confirmed CTR was not to have a direct effect on NPDES sources not typically subject to numeric water quality based effluent limits or urban runoff, instead finding, "**compliance with water quality standards through the use of best management practices (BMPs) is appropriate.**"].

⁷⁷ Exhibit 16, "*State Policy for Implementation of Toxics Standards for Inland Surface Waters, Enclosed Bays, and Estuaries of California*," also known as the "State Implementation Plan" or "SIP."

⁷⁸ SIP, p. 1, n. 1, *emph. added.*

mandates subject to reimbursement.

(1) 2009 Permit Subsections XVIII.B.1 through B.4 Require Compliance with a Series of Unfunded Mandates relating to Numeric Effluent Limitations for Various EPA Promulgated Toxic Pollutant TMDLs.

For the TMDLs described in the 2009 Permit as "Toxic Pollutants in San Diego Creek and Newport Bay, California, EPA-Region 9, established June 14, 2002," the 2009 Permit sets forth a number of numeric effluent limits in Tables 1 A/B/C, Table 2 A/B/C/D, and 3.⁷⁹ Specifically, for the numeric effluent limits set forth in Tables 1, 2, and 3,⁸⁰ the 2009 Permit requires the following:

The Permittees in the Newport Watershed shall comply with the waste load allocations specified in the established TMDLs and shown in Tables I A/B/C. 2 A/B/C/D. and 3. These wasteload allocations shall remain in effect unless and until alternative wasteload allocations are established in TMDLs approved by the Regional Board, State Board, Office of Administrative Law, and EPA.⁸¹

However, as discussed at length above, it is clear from the plain language of the CWA and controlling case law, along with EPA-issued Guidance, CTR, EPA's Responses to Comments on CTR, and State-issued policies and orders, that federal law does not require NPDES Permits for municipal dischargers, such as the subject Permit, to include programs requiring compliance with numeric effluent limits. Instead, both EPA and the State Board have made clear that numeric effluent limits are not required to be complied with under federal law, and that an adaptive best management practices approach should instead be adhered to. *(See discussion, supra.)*

Accordingly, the numeric effluent limits set forth in Tables 1 A/B/C, Table 2 A/B/C/D and Table 3 and which are all derived from WLAs contained within various TMDLs, go beyond federal law and represent unfunded State mandated programs subject to reimbursement under the California Constitution.

(2) 2009 Permit Subsection XVIII.B.5 Requires Compliance with Numeric Effluent Limits for Organo-Chlorine Compounds Without Funding.

Under 2009 Permit Subsection XVIII.B.5:

Accordingly, upon approval of the Regional Board-adopted organo-chlorine compound TMDLs by the State Board and the Office of Administrative Law, the Permittee shall comply with both

⁷⁹Permit, Section XVIII.B.4, pp. 68-70

⁸⁰ Permit, Section XVIII.B.4, pp. 68-71

⁸¹ Permit, Section XVIII.B.4, p. 68-69.

the EPA and Regional Board wasteload allocations specified in Tables 2 A/B/C/D, and Table 4, respectively. In accordance with the Regional Board TMDLs, compliance with the allocations specified in Table 4 shall be achieved as soon as possible, but no later than December 31, 2015. Upon approval of the Regional Board-approved organo-chlorine compounds TMDLs by EPA, the applicable wasteload allocations shall be those specified in Table 4.

The above-referenced 2009 Permit requirement thus imposes a series of unfunded State mandates. First, said Subsection would require compliance with the numeric effluent limits based on the WLAs set forth in EPA's organo-chlorine compound TMDL, as set forth in Table 2 A/B/C. Because, as discussed above, federal law does not require the use of numeric effluent limits to enforce WLAs contained within TMDLs, such a Permit requirement is a State mandate which goes beyond what is required under federal law.

Second, 2009 Permit Subsection XVIII.B.5 requires compliance with a State adopted TMDL even though it has not yet been "*approved by EPA pursuant to 40 CFR § 130.7.*"⁸² Accordingly, any portion of a TMDL incorporated into the subject Permit where the TMDL has not yet been "approved by EPA," *i.e.*, a Regional Board organo-chlorine TMDL referenced in Subsection XVIII.B.5, constitutes a State program that is clearly not required by federal law, and thus is an unfunded State requirement.

Third, according to the requirement in Subsection XVIII.B.5, once the Regional Board's TMDL for organo-chlorine has been approved by EPA, then in accordance with the terms of the 2009 Permit, the numeric effluent limits contained in "*Table 4 shall be achieved as soon as possible but no later than December 31, 2015.*" Yet as discussed above, federal law does not require that numeric effluent limits from waste load allocations or otherwise, be incorporated into a municipal NPDES permit. This requirement of Subsection XVIII.B.5 is thus yet another TMDL-related mandate not required under federal law.

Accordingly, the requirements under XVIII.B.S involving the organo-chlorine compound TMDLs constitute a series of requirements that go beyond the Clean Water Act, and as such, are all unfunded State mandates.

- (3) **The 2009 Permit's New Programs Under Subsections XVIII.B.7 and XVIII.B.8, Requiring Permittees Within the Newport Bay Watershed to "Participate in the Development and Implementation" of TMDLs for Metals and Selenium, are Unfunded States Mandates.**

Subsection XVIII.B.7 of the 2009 Permit provides that the Regional Board's staff, in collaboration with the stakeholders, is developing TMDLs for metals and selenium that will include implementation plans and monitoring programs and that are intended to replace the EPA TMDLs. This Subsection then requires as follows:

⁸² See 40 CFR § 122.44(d)(1)(vii)(B).

*The Permittees within the Newport Bay Watershed shall continue to participate in the development and implementation of these TMDLs.*⁸³

A requirement that the Permittees "participate in the development and implementation" of TMDLs, is not a requirement mandated by federal law. Specifically, nothing under federal law requires that Permittees develop or even participate in the "development" of a TMDL, and thus the requirements set forth in such Subsection XVIII.B.7 constitutes an unfunded State mandate.

In addition, under 2009 Permit Subsection XVIII.B.8, in connection with the Regional Board's proposed selenium TMDL, the Permittees must establish a "Cooperative Watershed Program" to meet the requirements of a Selenium TMDL Implementation Plan, and must thereafter implement this program where it provides as follows:

*A proposed Cooperative Watershed Program that will fulfill applicable requirements of the Selenium TMDL Implementation Plan must be submitted by the stakeholders covered by this water within twenty-four (24) months of adoption of this order, or one month after approval of the selenium TMDLs by OAL, whichever is later. The program must be implemented upon Regional Board's approval.*⁸⁴

Again, however, there is no requirement anywhere under federal law, either in connection with the TMDL requirements within the CWA or the regulations, or otherwise, that requires the Permittees to develop such a "Cooperative Watershed Program." Moreover, there is no requirement in federal law that the Permittees "implement" such a program to meet the requirements of a TMDL, particularly as discussed above, given that such a TMDL has not yet been "approved by EPA," and that a TMDL is not "self-executing." Further, the requirement to merely implement, sight unseen, a State adopted TMDL, is not a requirement that exists under federal law. The requirements set forth in Subsection XVIII.B.8 are yet additional TMDL-related unfunded State Mandates.

- (4) **The 2009 Permit's New Programs under Subsection XVIII.B.9, Requiring Permittees to Develop and Implement a Constituent Specific Source Control Plan for Coyote Creek and San Gabriel River TMDL for Metals and Selenium are Unfunded State Mandates.**

Subsection XVIII.B.9 requires as follows:

The Permittees with discharges tributary to Coyote Creek or the San Gabriel River shall develop and implement a constituent-specific source control plan for copper, lead and zinc until a TMDL implementation plan is developed. The source control plan shall

⁸³ Permit, Subsection XVIII.B.7, p. 72.

⁸⁴ Permit, Subsection XVIII.B.8, p. 73.

include a monitoring program and shall be completed within 12 months from the date of adoption of this order. The source control plan shall be designed to ensure compliance with the following waste load allocations:

[Table 6 – Municipal Stormwater Waste Load Allocations – Coyote Creek]⁸⁵

Nothing in federal law, however, requires the subject Permittees to develop or implement a "constituent-specific source control plan," nor to implement a "monitoring program" as a part of such a constituent-specific source control plan.⁸⁶ In addition, nothing in federal law require the Permittees to develop and implement a "source control plan" to achieve compliance with specific numeric effluent limits contained within a particular TMDL, in this case for Coyote Creek. Because federal law does not require the inclusion within a Municipal NPDES Permit of a "constituent-specific source control plan," or a "monitoring program" in relationship thereto, nor compliance with particular waste load allocations contained in such a constituent-specific source control plan, all such requirements under Subsection XVIII.B.9 are plainly unfunded State mandates.

b. The 2009 Permit Program Under Subsection XVIII.C.1 Relating to Regional Board-Adopted TMDLs for Fecal Coliform/Bacteria for Newport Bay, is an Unfunded State Mandate.

2009 Permit Subsection XVIII.C.1 requires that the Permittees comply with a Regional Board-adopted TMDL for fecal coliform for bacteria in Newport Bay, where it requires as follows:

The permittees shall comply with the waste load allocations for urban runoff in Tables 8A and 8B in accordance with the deadlines in Tables 8A and 8B. Compliance determination for fecal coliform shall be based on monitoring conducted at representative sampling locations within San Diego Creek and Newport Bay. (The permittees may use the current sampling locations for compliance determination.)⁸⁷

The above-referenced requirement is an unfunded State mandate for two reasons. First, federal law only requires consistency with the assumptions and requirements of a TMDL "**approved by EPA.**"⁸⁸ Because the referenced TMDL has not yet been approved by EPA, federal

⁸⁵ Permit, Subsection XVIII.B.9, p. 73.

⁸⁶ Under the CWA and EPA's Regulations, states are to identify impaired water segments, rank the segments in order of priority, and thereafter establish TMDLs for the segments according to the ranking. The Upper Reach of Coyote Creek has not been listed as an impaired segment, nor has it been proposed for listing as impaired under Section 303(d) of the Act. Accordingly, no TMDL is even appropriate at this time for the Upper Reach of Coyote Creek, and therefore no TMDL requirement in any form in any NPDES Permit, is required under federal law.

⁸⁷ Permit, Subsection XVIII.C.1, p. 73.

⁸⁸ See 40 CFR § 122.44(d)(1)(vii)(B).

law imposes no obligations of any kind upon the Permittees to take any action regarding such a TMDL. Therefore the inclusion of any requirement to comply with the fecal coliform TMDL for Newport Bay and San Diego Creek, is an unfunded State mandate.

Second and in addition, as discussed above, federal law does not require strict compliance with any numeric effluent limitations within a municipal NPDES Permit. Thus, beyond the fact the EPA has not approved the fecal coliform bacteria TMDL in question, this New Program in Subsection XVIII.C.1 of the 2009 Permit is an unfunded mandate as it goes beyond the requirement of federal law by attempting to impose particular numeric effluent limits, i.e., the waste load allocations from the fecal coliform TMDL, upon the Permittees.

c. The 2009 Permit Programs in Subsection XVIII.D.1 Relating to TMDLs for Diazinon and Chlorpyrifos are all Unfunded State Mandates.

Subsection XVIII.D.1 of the 2009 Permit requires Permittees to meet specific numeric limits from TMDLs for Diazinon and Chlorpyrifos for San Diego Creek, and Chlorpyrifos for Newport Bay, where it provides as follows:

The permittees in the Newport Bay Watershed shall comply with the allocations in Tables 9A and B.

[Table 9A Diazinon and Chlorpyrifos allocations for San Diego Creek].

[Table 9B Chlorpyrifos allocations for Upper Newport Bay].

These new programs requiring compliance with specific numeric effluent limits are new unfunded State mandates given that, as discussed at length above, federal law does not require that wasteload allocations contained within TMDLs be incorporated into municipal NPDES Permits as numeric effluent limits. Again, instead, the development of Municipal Permit terms need only ensure consistency with the "assumptions and requirements" of wasteload allocations in TMDLs, through the use of adaptive best management practices. The new programs imposed under Subsection XVIII.D.1 of the Permit are, therefore, unfunded State mandates subject to reimbursement under the California Constitution.

6. TMDL-RELATED UNFUNDED MANDATED PROGRAMS AND ACTUAL COSTS TO THE JOINT TEST CLAIMANTS

The 2009 Permit includes a whole new series of Permit requirements not found anywhere in the 2002 Permit relating to TMDLs.

The 2009 Permit specifically:

- 1) compels compliance with numeric limits taken from wasteload allocation within TMDLs;
- 2) requires compliance with numeric limits derived from TMDLs not "approved by EPA";

- 3) requires that the Permittees actually develop certain TMDLs (which is the responsibility of the State and/or the EPA); and
- 4) requires the Permittees to conduct various studies and monitoring, and develop and implement new programs and implementation plans, all in connection with the development of TMDLs.

All such TMDL-related programs are unfunded State Mandates not required under federal law.

As set forth in the Section 6 Declarations of the County and the Cities of Costa Mesa, Irvine, Lake Forest and Newport Beach (*see* paragraph 6(e)), the new costs incurred by these Joint Test Claimants as a result of the mandates set forth in 2009 Permit Subsections XVIII.B.1-4, XVIII.B.5, XVIII.B.7, XVIII.B.8, XVIII.C.1 and XVIII.D.1 (requirements relating to TMDLs applicable to San Diego Creek and Newport Bay watersheds), were \$546,226.63 for FY 2009-10 and \$534,679.50 for FY 2010-11. In addition, as set forth in the Section 6 Declaration of the County, the County incurred costs of \$57,140.61 during FY 2008-09. As set forth in the Declarations of the County and the Cities of Anaheim, Brea, Buena Park, Cypress, Fullerton, Placentia and Seal Beach (*see* paragraph 6(e)), the new costs incurred by these Joint Test Claimants as a result of the mandates set forth in 2009 Permit Subsection XVIII.B.9 (requirements relating to TMDL applicable to San Gabriel River and Coyote Creek watersheds) were \$55,000 in FY 2009-10 and approximately \$80,400 in FY 2010-11 and \$75,853.32 in FY 2011-12. The County alone fully funded the constituent-specific source control plan required under 2009 Permit Subsection XVIII.B.9. County Declaration at Paragraph 6(e).

B. THE 2009 PERMIT PROVISIONS REQUIRING PUBLIC PROJECTS TO COMPLY WITH LOW IMPACT DEVELOPMENT AND HYDROMODIFICATION REQUIREMENTS ARE UNFUNDED STATE MANDATES.

The 2009 Permit requires the Permittees to develop and implement a program to ensure that new development and significant redevelopment projects comply with strict low impact development and hydromodification prevention requirements. The issue of whether such requirements exceed the requirements of federal law, and represent reimbursable state mandates was considered by the Commission in Test Claim 07-TC-09, *Discharge of Stormwater Runoff - Order No. R9-2007-0001* (regarding the San Diego County Municipal Stormwater Permit).⁸⁹The 2009 Permit includes low impact development and hydromodification requirements that are similar, and in many ways more stringent than those at issue in Test Claim 07-TC-09.

In its decision on Test Claim 07-TC-09, the Commission determined that the San Diego County large municipal stormwater permit's low impact development and hydromodification requirements exceed the requirements of federal law, and as such represent state mandates. The Commission determined, however, that because the County of San Diego and the other permittees retained the ability to assess fees for new development, that the requirements did not represent a

⁸⁹ A copy of the Commission's decision in Test Claim 07-TC-09, Discharge of Stormwater Runoff - Order No. R9-2007-0001, is included under Section 7 - Documentation to these Test Claims.

reimbursable state mandate.⁹⁰

With regard to municipal projects, the Commission found that the low impact development and hydromodification requirements in the San Diego County permit are not reimbursable state mandates because the permittees in that case are under no obligation to construct projects that would trigger the San Diego County permit requirements.⁹¹ In support of this determination, the Commission cited the California Supreme Court's decision in *Department of Finance v. Commission on State Mandates (Kern High School Dist.)* (2003) 30 Cal.4th 727. In *Kern High School Dist.*, the Court held that certain hearing requirements imposed upon school districts did not constitute a reimbursable state mandate because they were a requirement of voluntary program the school districts had elected to participate in. The Court held "activities undertaken at the option or discretion of a local government entity (that is, actions undertaken without any legal compulsion or threat of penalty for nonparticipation) do not trigger a state mandate and hence do not require reimbursement."⁹²

In support of its to this decision, the Court relied on a lower court decision in *City of Merced v State of California* (1984) 153 Cal.App.3d 111. In that case, the City of Merced elected to take property by eminent domain. Then recent legislation required the City to compensate the property owner for loss of "business goodwill." The City sought reimbursement from the State, arguing that the new statutory requirement was a reimbursable state mandate. The Court of Appeal concluded that the City's increased costs flowed from its optional decision to condemn the property. The court reasoned: "whether a city or county decides to exercise eminent domain is, essentially, an option of the city or county, rather than a mandate of the state ... Thus, payment for loss of goodwill is not a state-mandated cost."⁹³

The conditions that dictated the Court's decision in *Kern High School Dist.* are not present in the 2009 Permit. For one, the 2009 Permit is not a voluntary program. It nonetheless requires the Permittees to take immediate mandatory actions, including updating the Permittees' model Water Quality Management Plan ("WQMP") to incorporate low impact development and hydromodification principles,⁹⁴ and developing feasibility criteria for project evaluation to determine the feasibility of implementing low impact development BMPs. Both requirements must be complete within 12 months of the 2009 Permit's effective date,⁹⁵ and both include elements that are specific to municipal projects.⁹⁶

⁸⁸ *Test Claim 07-TC-09*, Discharge of Stormwater Runoff - Order No. R9-2007-0001, 1.

⁸⁹ *Test Claim 07-TC-09*, Discharge of Stormwater Runoff-Order No. R9-2007-0001, 46, 52.

⁹² *Department of Finance v. Commission on State Mandates (Kern High School Dist.)* (2003) 30 Cal.4th 727, 742.

⁹³ *City of Merced v. State of California* (1984) 153 Cal.App.3d 777, 783.

⁹⁴ 2009 Permit Subsection XII.C.1.

⁹⁵ 2009 Permit Subsection XII.E.1.

⁹⁶ Including the "Green Streets" requirements of Permit section XII.B.2.

The conditions that dictated the Court's decision in *Kern High School Dist.* are also absent with regard to project implementation. Again, the 2009 Permit is not a voluntary program, yet it requires the Permittees to incur costs related to low impact development and hydromodification on any municipal project.⁹⁷ This includes hospitals, laboratories, medical facilities, recreational facilities, airfields, parking lots, streets, roads, highways, and freeways. These projects are not optional. They are integral to the Permittee's function as municipal entities, and the failure to make necessary repairs, upgrades and extensions can expose the Permittees to liability.

The rationale from *City of Merced* is likewise inapplicable. In that case, the City had the ability to avoid the new program by purchasing property, rather than taking it with eminent domain. Under the 2009 Permit, the Permittees have no such option. The 2009 Permit will force the Permittees to incur new, additional costs on every municipal project. Moreover, since issuing the *Kern High School Dist.* Decision, the California Supreme Court has rejected application of *City of Merced* in circumstances beyond those strictly present in Kern High School Dist.

In *San Diego Unified School Dist. v. Commission on State Mandates* (2004) 33 Cai.4th 859, the Court considered similar regulatory requirements to those at issue in *Kern High School Dist.* The Court discussed its decision in *Kern High School Dist.*, at length, and cautioned future reliance on *City of Merced* holding:

[W]e agree with the District and amici curiae that there is reason to question an extension of the holding of *City of Merced* so as to preclude reimbursement under article XIII B, section 6 of the state Constitution and Government Code section 17514 whenever an entity makes an initial discretionary decision that in turn triggers mandated costs. Indeed, it would appear that under a strict application of the language in *City of Merced*, public entities would be denied reimbursement for state-mandated costs in apparent contravention of the intent underlying article XIII B, section 6 of the state Constitution and Government Code section 17514 and contrary to past decisions in which it has been established that reimbursement was in fact proper. For example, as explained above, in *Carmel Valley, supra*, 190 Cal.App.3d 521, an executive order requiring that county firefighters be provided with protective clothing and safety equipment was found to create a reimbursable state mandate for the added costs of such clothing and equipment. (*Id.*, at pp. 537-538.) The court in *Carmel Valley* apparently did not contemplate that reimbursement would be foreclosed in that setting merely because a local agency possessed discretion concerning how many firefighters it would employ— and hence, in that sense, could control or perhaps even avoid the extra costs to which it would be subjected. Yet, under a strict application of the rule gleaned from *City of Merced, supra*, 153 Cal.App.3d 111, such costs would not be reimbursable for the simple reason that the local agency's decision to employ firefighters

⁹⁷ 2009 Permit Subsection XII.B.7 requires the Permittees to document which low impact development BMPs are included on any project in the WQMP for the project.

involves an exercise of discretion concerning, for example, how many firefighters are needed to be employed, etc. We find it doubtful that the voters who enacted article XIII B, section 6, or the Legislature that adopted Government Code section 17514, intended that result, and hence we are reluctant to endorse, in this case, an application of the rule of *City of Merced* that might lead to such a result.⁹⁸

Thus strict reliance on the *City of Merced* rationale is only appropriate in the very limited circumstances presented in the *Kern High School District*. Those conditions are not present in the 2009 Permit, which imposes requirements on the Permittees that are either wholly unrelated to voluntary action on the part of the Permittees, or are triggered by municipal projects that the Permittees implement with little to no discretion because they are integral to the Permittees' function as municipal entities, and/or the failure to undertake them would expose the Permittees to liability. As set forth above, and in greater detail below, these requirements exceed federal law and represent reimbursable state mandates.

1. CHALLENGED PROGRAM REQUIREMENTS

The Permittees challenge Sections XII.B., through XII.E. of the 2009 Permit as they are applied to municipal projects. In sum, to comply with these sections, the Permittees will be required to invest significant resources developing a State-mandated program, and add requirements to municipal projects that will significantly increase the cost of design and construction,. This includes development of a model WQMP that incorporates low impact development and hydromodification BMPs. 2009 Permit Subsection XII.C.1 states:

Within 12 months of adoption of this order, the permittees shall update the model WQMP to incorporate LID principles (as per Section XII.C) and to address the impact of urbanization on downstream hydrology (as per Section XII.D) and a copy of the updated model WQMP shall be submitted for review and approval by the Executive Officer. As provided in Section XIII, 90 days after approval of the revised model WQMP, priority development projects shall implement LID principles described in this section, Section XII.C. To the extent that the Executive Officer has not approved the feasibility criteria within 18 months of adoption of this order as provided in Section XII.E. 1, the infeasibility of implementing LID BMPs shall be determined through project specific analyses, each of which shall be submitted to the Executive Officer, 30 days prior to permittee approval.

2009 Permit Subsection XII.B.6 additionally requires the Permittees to develop project approval streamlining guidelines for priority development projects, including municipal projects. 2009 Permit Subsection XII.B.6 states:

Within 12 months from the date of adoption of this order, the

⁹⁸ *San Diego Unified School Dist v. Commission on State Mandates* (2004) 33 Cal.4th 859, 887-88.

principal permittee shall develop recommendations for streamlining regulatory agency approval of regional treatment control BMPs. The recommendations should include information needed to be submitted to the Regional Board for consideration of regional treatment control BMPs. At a minimum, it should include: BMP location; type and effectiveness in removing pollutants of concern; projects tributary to the regional treatment system; engineering design details; funding sources for construction, operation and maintenance; and parties responsible for monitoring effectiveness, operation and maintenance.

2009 Permit Subsection XII.E.1 includes a similar requirement that the Permittees develop an "in lieu" program for projects that cannot meet the Permit's other low impact development requirements. 2009 Permit Subsection XII.E.1 states:

Within 12 months of adoption of this order, the principal permittee, in collaboration with the co-permittees, shall develop technically-based feasibility criteria for project evaluation to determine the feasibility of implementing LID BMPs (feasibility to be based in part, on the issues identified in Section XII.C). This plan shall be submitted to the Executive Officer for approval. Only those projects that have completed a vigorous feasibility analysis as per the criteria developed by the permittees and approved by the Executive Officer should be considered for alternatives and in-lieu programs. If a particular BMP is not technically feasible, other BMPs should be implemented to achieve the same level of compliance, or if the cost of BMP implementation greatly outweighs the pollution control benefits, a waiver of the BMPs may be granted. All requests for waivers, along with feasibility analysis including waiver justification documentation, must be submitted to the Executive Officer in writing, 30 days prior to permittee approval.

Once the model WQMP and the in lieu program are developed, municipal projects that qualify as "priority development projects" under the 2009 Permit will be required to implement low impact development and hydromodification BMPs. The requirements are very specific, and dictate which BMPs are required at different types of projects. For example, 2009 Permit section XII.B.2.h. requires specific requirements for road projects:

Streets, roads, highways and freeways of 5,000 square feet or more of paved surface shall incorporate USEPA guidance, "Managing Wet Weather with Green Infrastructure: Green Streets" in a manner consistent with the maximum extent practicable standard. This category includes any paved surface used for the transportation of automobiles, trucks, motorcycles and other vehicles and excludes any routine road maintenance activities where the footprint is not changed.

In general, all priority development projects must implement low impact development BMPs. Notable requirements in Sections XII.C.3 through XII.C.6. require the following:

The permittees shall require that each priority development project include site design BMPs during development of the preliminary and final WQMPs. The design goal shall be to maintain or replicate the pre-development hydrologic regime through the use of design techniques that create a functionally equivalent post- development hydrologic regime through site preservation techniques and the use of integrated and distributed micro-scale storm water infiltration, retention, detention, evapotranspiration, filtration and treatment systems as close as feasible to the source of runoff.

The selection of LID principles shall be prioritized in the following manner (from highest to the lowest priority): (1) Preventative measures (these are mostly non-structural measures, e.g., preservation of natural features to a level consistent with the maximum extent practicable standard; minimization of runoff through clustering, reducing impervious areas, etc.) and (2) Mitigation (these are structural measures, such as, infiltration, harvesting and reuse, bio-treatment, etc. The mitigation or structural site design BMPs shall also be prioritized (from highest to lowest priority): (1) Infiltration (examples include permeable pavement with infiltration beds, dry wells, infiltration trenches, surface and sub-surface infiltration basins. All infiltration activities should be coordinated with the groundwater management agencies, such as the Orange County Water District); (2) Harvesting and Re-use (e.g., cisterns and rain barrels); and (3) Bio-treatment such as bio-filtration/bio-retention.

The LID BMPs shall be designed to mimic pre-development site hydrology through technically and economically feasible preventive and mitigative site design techniques. LID combines hydrologically functional site design with pollution prevention methods to compensate for land development impact on hydrology and water quality.

Lastly, the 2009 Permit requires the Permittees to analyze and mitigate downstream impacts related to the volume of water leaving completed priority development projects. 2009 Permit sections XII.D.1. through XII.D.4. require the following:

Each priority development project shall be required to ascertain the impact of the development on the site's hydrologic regime and include the findings in the WQMP, including the following for a two-year frequency storm event impacts downstream hydrology. If a

hydrologic condition of concern exists, then the WQMP shall include an evaluation of whether the project will adversely impact downstream erosion, sedimentation or stream habitat. If the evaluation determines adverse impacts are likely to occur, the project proponent shall implement additional site design controls, on-site management controls, structural treatment controls and/or in-stream controls to mitigate the impacts. The project proponent should first consider site design controls and on-site controls prior to proposing in-stream controls; in-stream controls must not adversely impact beneficial uses or result in sustained degradation of water quality of the receiving waters.

The project proponent may also address hydrologic conditions of concern by mimicking the pre-development hydrograph with the post-development hydrograph, for a two year return frequency storm. Generally, the hydrologic conditions of concern are not significant, if the post-development hydrograph is no more than 10% greater than pre-development hydrograph. In cases where excess volume cannot be infiltrated or captured and reused, discharge from the site must be limited to a flow rate no greater than 110% of the pre-development 2-year peak flow.

2. LID AND HYDROMODIFICATION REQUIREMENTS UNDER FEDERAL LAW

No federal statute, regulation, or policy specifically requires municipal stormwater permits to include the low impact development and hydromodification requirements present in the 2009 Permit. Title 40, section 122.26(d)(2)(iv)(A) of the Code of Federal Regulations provides a general requirement that large municipal stormwater permits include programs to reduce the discharge of pollutants from the MS4 that originate in areas of new development.⁹⁹ It does not require design elements such as low impact development, or management practices to control the volume of water leaving a newly developed site.

As stated in *Hayes v. Commission on State Mandates* (1992) 11 Cal.App.4th 1564, "[i]f the state freely chooses to impose the costs upon the local agency as a means of implementing a federal program then the costs are the result of a reimbursable state mandate regardless whether the costs were imposed upon the state by the federal government."¹⁰⁰ Federal law does not require the 2009 Permit to include low impact development and hydromodification programs, yet the state has exercised its discretion to include them in the permit. For that reason, those aspects of the 2009 Permit exceed the requirements of federal law and represent a state mandated program for which the Permittees are entitled to reimbursement.

⁹⁹ 40 C.F.R. § 122.26(d)(2)(iv)(A) requires Large MS4 permits to include "a comprehensive master plan to develop, implement and enforce controls to reduce the discharge of pollutants from municipal separate storm sewers which receive discharges from areas of new development and significant redevelopment."

¹⁰⁰ *Hayes, supra*, 11 Cal.App.4th at 1593.

3. REQUIREMENTS FROM 2002 PERMIT

The 2009 Permit represents a significant increase in the permanent BMPs and other controls that the Permittees' must implement for municipal projects. The 2002 Permit's requirements were minimal in comparison.¹⁰¹ The relevant portions of the 2002 Permit are as follows:

- 2002 Permit section XII.A.2.
- 2002 Permit section XII.A.9.
- 2002 Permit section XII.B.

The requirements from the 2002 Permit were very general compared to the prescriptive requirements in the 2009 Permit. For example, 2002 Permit section XII.B. simply defined which priority development projects were subject to the requirements, and included a general requirement that the Permittees incorporate BMPs for source control, pollution prevention, and/or structural treatment BMPs into their model WQMPs.

4. MANDATED ACTIVITIES

To comply with the low impact development and hydromodification requirements in the 2009 Permit, the Permittees will need to develop and implement low impact development and hydromodification prevention design principles on municipal projects. Projects that are subject to these requirements include municipal yards, recreation centers, civic centers, and road improvements. To date, the Permittees have already incurred significant costs developing the "Green Streets" low impact development program elements that will be applied exclusively to municipal projects. The specific requirements are set forth in sections XII.B. through XII.E. of the 2009 Permit, however, in sum, the Permittees are required to add the following requirements to municipal projects that qualify as "priority development projects" under the 2009 Permit:

- Develop a program to ensure that water quality protection, including LID principles and "Green Streets" requirements, are incorporated into priority development projects, and implement the program within 18 months of adoption of this 2009 Permit.
- Incorporate EPA guidance, "Managing Wet Weather with Green Infrastructure: Green Streets" for all streets, roads, highways and freeways of 5,000 square feet or more of paved surface.
- Include BMPs for source control, pollution prevention, site design, LID implementation and structural treatment control BMPs.
- Infiltrate, harvest and re-use, evapotranspire, or bio-treat the 85th percentile storm event at completed project sites.

¹⁰¹ A copy of the 2002 Permit is included under Section 7 – Documentation to these Test Claims.

- Maintain or replicate the pre-development hydrologic regime through the use of design techniques that create a functionally equivalent post-development hydrologic regime through site preservation techniques and the use of integrated and distributed micro-scale storm water infiltration, retention, detention, evapotranspiration, filtration and treatment systems as close as feasible to the source of runoff.
- Limit disturbance of natural water bodies and drainage systems; conserve natural areas; preserve trees; minimize compaction of highly permeable soils; protect slopes and channels; and minimize impacts from storm water and urban runoff on the biological integrity of natural drainage systems and water bodies.
- Minimize changes in hydrology and pollutant loading; require incorporation of controls, including structural and non-structural BMPs, to mitigate the projected increases in pollutant loads and flows; ensure that post-development runoff durations and volumes from a site have no significant adverse impact on downstream erosion and stream habitat; minimize the quantity of storm water directed to impermeable surfaces and the MS4s; minimize paving, minimize runoff by disconnecting roof leader and other impervious areas and directing the runoff to pervious and/or landscaped areas, minimize directly connected impervious areas; design impervious areas to drain to pervious areas; consider construction of parking lots, walkways, etc., with permeable materials; minimize pipes, culverts and engineered systems for storm water conveyance thereby minimizing changes to time of concentration on site; utilize rain barrels and cisterns to collect and re-use rainwater; maximize the use of rain gardens and sidewalk storage; and maximize the percentage of permeable surfaces distributed throughout the site's landscape to allow more percolation of storm water into the ground.
- Preserve wetlands, riparian corridors, vegetated buffer zones and establish reasonable limits on the clearing of vegetation from the project site.
- Use properly designed and well maintained water quality wetlands, bio-retention areas, filter strips and bio-filtration swales; consider replacing curbs gutters and conventional storm water conveyance systems with bio-treatment systems, where such measures are likely to be effective and technically and economically feasible.
- Evaluate whether the project will adversely impact downstream erosion, sedimentation or stream habitat, and develop a hydrograph with pre- and post-development time of concentration for a 2-year frequency storm event. If the evaluation determines adverse impacts are likely to occur, implement additional site design controls, on-site management controls, structural treatment controls and/or in-stream controls to mitigate the impacts.

- If site conditions do not permit infiltration, harvesting and re-use, and/or evapotranspiration, and/or bio-treatment of the design capture volume at the project site as close to the source as possible, implement an in lieu/mitigation project, in addition to treating the storm water on site.

5. ACTUAL INCREASED COSTS OF MANDATE

To comply with 2009 Permit's low impact development and hydromodification requirements on municipal projects, the permittees, including the Joint Test Claimants, were required to expend time in FY 2009-10, and each year thereafter, to develop, administer and maintain a costly program. To date, the Permittees, including the Joint Test Claimants, have retained private consultants to develop the program, and plan to expend significant resources in future fiscal years. These efforts have included cost-shared programs among the Permittees, including the Joint Test Claimants, to develop a public agency project element within the Model WQMP and to prepare a hydromodification susceptibility analysis of north Orange County's surface water drainage systems, including the preparation and updating of maps and language in the model WQMP and Technical Guidance Document. The increase in costs to comply with these mandated activities in FY 2009-10 and FY 2010-11 are set forth in the Joint Test Claimants' Section 6 Declarations, paragraph 6(d). These costs are composed of both costs shared among the Permittees, including the Joint Test Claimants, to develop these programs and costs incurred by individual jurisdictions to implement the programs with respect to development projects within those jurisdictions. The increased costs to the Joint Test Claimants in FY 2009-10 was \$997,952.89 and the cost in FY 2010-11 was \$1,763,231. The cost of future compliance will vary depending on each municipal project that will be subject to the 2009 Permit's low impact development and hydromodification requirements.

C. SECTION XIII OF THE 2009 PERMIT MANDATES NEW PUBLIC EDUCATION REQUIREMENTS THAT GO BEYOND THE FEDERAL LAW REQUIREMENT THAT AN MS4 PERMIT INCLUDE AN EDUCATION COMPONENT WITHOUT SPECIFYING THE ELEMENTS OF THAT PROGRAM.

1. CHALLENGED PROGRAM REQUIREMENTS

The 2009 Permit increases the public education requirements imposed on the Permittees, creating at least six new program requirements. The relevant portions of the 2009 Permit require the Permittees to implement the following:

XIII. PUBLIC EDUCATION AND OUTREACH

1. The permittees shall continue to implement the public education efforts already underway and shall implement the most effective elements of the comprehensive public and business education strategy contained in the Report of Waste Discharge/DAMP. By July 1, 2012, the permittees shall complete a public awareness survey to determine the effectiveness of the current public and business education strategy and any need for changes to the current multimedia public education efforts. The findings of the survey

and any proposed changes to the current program shall be included in the annual report for 2011-2012.

2. The permittees shall sponsor or staff a storm water table or booth at community, regional, and/or countywide events to distribute public education materials to the public. Each permittee shall participate in at least one event per year.
3. The permittees shall continue to participate in the Public Education Committee to review and update existing guidance for the implementation of the public education program. The Public Education Committee shall meet at least twice per year. The Public Education Committee shall continue to make recommendations for any changes to the public and business education program including: how to make the multimedia efforts more effective; a reevaluation of audiences and key messages for targeted behaviors; and opportunities for participation in regional and statewide public education efforts. The goal of the public and business education program shall be to target 100% of the residents, including businesses, commercial and industrial establishments. Through use of local print, radio and television, the permittees must ensure that the public and business education program makes a minimum of 10 million impressions per year and that those impressions measurably increase the knowledge and measurably change the behavior of the targeted groups.
4. The permittees shall continue their outreach and other public education activities. Each permittee should try to reach the following sectors: manufacturing facilities; mobile service industry; commercial, distribution and retail sales industry; residential/commercial landscape construction and services industry; residential and commercial construction industry; and residential and community activities. Individual workshops (or regional workshops) for each of the aforementioned elements shall be administered by each permittee (or on a countywide basis) by July 1, 2010 and on an annual basis thereafter. Commercial and industrial facility inspectors shall distribute developed educational information (Fact Sheets) to these facilities during inspections. Further, for restaurant, automotive service centers and gasoline service station corporate chains, new information or that which has been previously developed shall be provided to corporate environmental managers during outreach visits that should take place twice during the permit term. Some of these outreach activities could be conducted through the chamber of commerce or other similar establishments. The outcomes from all outreach requirements contained herein shall be reported in the applicable annual reports.
5. The permittees shall further develop and maintain public education materials to encourage the public to report illegal dumping and unauthorized, non-storm water discharges from residential, industrial, construction and commercial sites into public streets, storm drains and to

surface waterbodies and their tributaries; clogged storm drains; faded or missing catch basin stencils and general storm water and BMP information. Hotline and web site information shall be included in the public and business education program and shall be listed in the governmental pages of all regional phone books and on the permittees' website.

6. Within 12 months from the date of adoption of this order, the permittees shall further develop and maintain BMP guidance for the control of those potentially polluting activities identified during the previous permit cycle, which are not otherwise regulated by any agency, including guidelines for the household use of fertilizers, pesticides, herbicides and other chemicals, and guidance for mobile vehicle maintenance, carpet cleaners, commercial landscape maintenance, and pavement cutting. These guidance documents shall be distributed to the public, trade associations, etc., through participation in community events, trade association meetings and/or by mail.
7. The principal permittee, in collaboration with the Co-permittees, shall develop and implement a mechanism for public participation in the updating and implementation of the Drainage Area Management Plans, monitoring plans, Water Quality Management Plan guidance and Fact Sheets for various activities. The public shall be informed of the availability of these documents through public notices in local newspapers, County and/or city websites, local libraries/city halls and/or courthouses.

2. REQUIREMENTS OF FEDERAL LAW

Neither the 2009 Permit, nor any of its supporting documents, specifically identify any federal regulations as specific authority for the 2009 Permit's public education requirements, and no federal statute, regulation, or policy specifically requires large municipal stormwater permits to include the public education requirements present in the 2009 Permit. Title 40, sections 122.26(d)(2)(iv)(A)(6), (B)(6), and (D)(4) of the Code of Federal Regulations provide general public education requirements for large municipal stormwater permits,¹⁰² they do not, however require anywhere near the level of specificity that the Santa Ana RWQCB has included in the 2009 Permit.

Where the state freely chooses to impose costs associated with a new program or higher level of service upon a local agency as a means of implementing a federal program, then the costs represent a reimbursable state mandate.¹⁰³ Federal law does not require the 2009 Permit to include

¹⁰² 40 C.F.R. § 122.26(d)(2)(iv)(A)(6) requires large municipal stormwater permits to include:

[A] program to reduce to the maximum extent practicable, pollutants in discharges from municipal separate storm sewers associated with the application of pesticides, herbicides and fertilizer which will include, as appropriate, controls such as educational activities, permits, certifications and other measures for commercial applicators and distributors, and controls for application in public right-of-ways and at municipal facilities.

¹⁰³ *Hayes, supra*, 11 Cal.App.4th at 1593; *Long Beach Unified School District, supra*, 225 Cal.App.3d at 173.

the highly specific public education program in the 2009 Permit, yet the state has exercised its discretion to impose that program on the Permittees. For that reason, the public education requirements in the 2009 Permit exceed federal law and represent a state mandated program.

3. REQUIREMENTS FROM 2002 PERMIT

The 2009 Permit requires the Permittees to implement several new requirements that were not included in the 2002 Permit. The relevant portions of the 2002 Permit are as follows:

- Section XIII. Public Education

The Public Education requirements in the 2002 Permit were similar to those in the 2009 Permit. The 2002 Permit established many of the programs in the 2009 Permit. The 2009 Permit, however, includes several new requirements that were either suggested in the 2002 Permit, or not included in the 2002 Permit. The new requirements are set forth in greater detail below.

4. MANDATED ACTIVITIES

The 2009 Permit imposes at least six new public education requirements on the Permittees. As these requirements exceed federal law, they represent state mandates for which the Permittees are entitled to reimbursement. The new program areas are as follows:

1. By July 1, 2012, the permittees shall complete a public awareness survey to determine the effectiveness of the current public and business education strategy and provide a future action plan any need for changes to the current multimedia public education efforts. The findings of the survey and any proposed changes to the current program shall be included in the annual report for 2011-2012. (2009 Permit section XIII.1.)
2. The Public Education Committee shall continue to make recommendations for any changes to the public and business education program, including: how to make the multimedia efforts more effective; a reevaluation of audiences and key messages for targeted behaviors; and opportunities for participation in regional and statewide public education efforts. (2009 Permit section XIII.U.)
3. The permittees shall continue their outreach and other public education activities. Each permittee should try to reach the following sectors: manufacturing facilities; mobile service industry; commercial, distribution and retail sales industry; residential/commercial landscape construction and services industry; residential and commercial construction industry; and residential and community activities. Individual workshops (or regional workshops) for each of the aforementioned elements shall be administered by each permittee (or on a countywide basis) by July 1, 2010 and on an annual basis thereafter. Commercial and industrial facility inspectors shall distribute developed educational information (Fact Sheets). (2009 Permit section XIII.4.)

4. The permittees shall further develop and maintain public education materials to encourage the public to report (including a hotline number and web site to report) illegal dumping and unauthorized, non-storm water discharges. . . (2009 Permit section XIII.5.)
5. Within 12 months from the date of adoption of this order, the permittees shall further develop and maintain BMP guidance for the control of those potentially polluting activities identified during the previous permit cycle, which are not otherwise regulated by any agency, including guidelines for the household use of fertilizers, pesticides, herbicides and other chemicals, and guidance for mobile vehicle maintenance, carpet cleaners, commercial landscape maintenance, and pavement cutting. (2009 Permit section XIII.6.)
6. The principal permittee, in collaboration with the Co-permittees, shall develop and implement a mechanism for public participation in the updating and implementation of the Drainage Area Management Plans, monitoring plans, Water Quality Management Plan guidance and Fact Sheets for various activities. The public shall be informed of the availability of these documents through public notices in local newspapers, County and/or city websites, local libraries/city halls and/or courthouses. (2009 Permit section XIII.7.)

5. ACTUAL INCREASED COSTS OF MANDATE

To comply with 2009 Permit's public education requirements, the Permittees, including the Joint Test Claimants, commenced expending time and resources in FY 2009-10 and continued in FY 2010-11 to develop, administer and maintain these requirements. The Joint Test Claimants' costs in those fiscal years primarily resulted from joint efforts funded through cost sharing to address the 2009 Permit's requirements in this area, as set forth in the Section 6 Declarations, paragraph 6(c). These costs are composed of both costs shared among the Permittees to develop these programs and costs incurred by an individual jurisdiction. The increased costs for the Joint Test Claimants in FY 2009-10 was \$35,045.44 and the cost in FY 2010-11 was \$4,062.41.

D. SECTION XI OF THE 2009 PERMIT MANDATES THAT THE PERMITTEES DEVELOP A PROGRAM TO REDUCE DISCHARGES OF POLLUTANTS FROM RESIDENTIAL FACILITIES AND MANDATES VERY SPECIFIC ELEMENTS OF THAT PROGRAM. THESE PROVISIONS GO BEYOND THE REQUIREMENTS OF FEDERAL LAW AND ARE UNFUNDED STATE MANDATES.

1. CHALLENGED PROGRAM REQUIREMENTS

The 2009 Permit requires the Permittees to develop and implement a new program to regulate discharges from residential areas. The relevant portions of the 2009 Permit require the Permittees to implement the following:

XI. RESIDENTIAL PROGRAM

1. Each permittee shall develop and implement a residential program to reduce the discharge of pollutants from residential facilities to the MS4s consistent with the maximum extent practicable standard so as to prevent discharges from the MS4s from causing or contributing to a violation of water quality standards in the receiving waters.
2. The permittees should identify residential areas and activities that are potential sources of pollutants and develop Fact Sheets/BMPs. At a minimum, this should include: residential auto washing and maintenance activities; use and disposal of pesticides, herbicides, fertilizers and household cleaners; and collection and disposal of pet wastes. The permittees shall encourage residents to implement pollution prevention measures. The permittees should work with sub-watershed groups (e.g., the Serrano Creek Conservancy) to disseminate latest research information, such as the UC Master Gardeners Program⁴⁶ and USDA's Backyard Conservation Program.
3. The permittees, collectively or individually, shall facilitate the proper collection and management of used oil, toxic and hazardous materials, and other household wastes. Such facilitation should include educational activities, public information activities, and establishment of curbside or special collection sites managed by the permittees or private entities, such as solid waste haulers.
4. Within 18 months of adoption of this order, the permittees shall develop a pilot program to control pollutant discharges from common interest areas and areas managed by homeowner associations or management companies. The permittees should evaluate the applicability of programs such as the Landscape Performance Certification Program⁴⁸ to encourage efficient water use and to minimize runoff.
5. The permittees shall enforce their Water Quality Ordinance for all residential areas and activities. The permittees should encourage new developments to use weather-based evapotranspiration (ET) irrigation controllers⁵⁰.
6. Each permittee shall include an evaluation of its Residential Program in the annual report starting with the first annual report after adoption of this order.

2. REQUIREMENTS OF FEDERAL LAW

No federal statute, regulation, or policy specifically requires large municipal stormwater permits to include a residential program as required by the 2009 Permit. Code of Federal Regulations, Title 40, sections 122.26(d)(2)(iv)(A) generally requires large municipal stormwater permits to include:

structural and source control measures to reduce pollutants from

runoff from commercial and residential areas that are discharged from the municipal storm sewer system that are to be implemented during the life of the permit, accompanied with an estimate of the expected reduction of pollutant loads and a proposed schedule for implementing such controls.

Federal regulations do not, however require anywhere near the level of specificity that the Santa Ana RWQCB has included in the 2009 Permit. As stated above, where the state freely chooses to impose costs associated with a new program or higher level of service upon a local agency as a means of implementing a federal program, then the costs represent a reimbursable state mandate.¹⁰⁴ Federal law does not require the 2009 Permit to include the highly specific residential program in the 2009 Permit, yet the state has exercised its discretion to impose that program on the Permittees. For that reason, the residential program requirements in the 2009 Permit exceed federal law and represent a state mandated program.

3. REQUIREMENTS FROM 2002 PERMIT

The 2002 Permit does not require the Permittees to develop and implement a Residential program. The closest the 2002 Permit comes to requiring the Permittees to implement such a program is to require the Permittees to include a residential reporting component in paragraph 4 of the Section XIII. Public Education.

4. MANDATED ACTIVITIES

Because the 2002 Permit did not require the Permittees to develop and implement a Residential program, the entire Residential program from the 2009 Permit represents a State mandate for which the Permittees are entitled to reimbursement. The requirements are as follows:

1. Each permittee shall develop and implement a residential program to reduce the discharge of pollutants from residential facilities to the MS4s consistent with the maximum extent practicable standard so as to prevent discharges from the MS4s from causing or contributing to a violation of water quality standards in the receiving waters.
2. The permittees should identify residential areas and activities that are potential sources of pollutants and develop Fact Sheets/BMPs. At a minimum, this should include: residential auto washing and maintenance activities; use and disposal of pesticides, herbicides, fertilizers and household cleaners; and collection and disposal of pet wastes. The permittees shall encourage residents to implement pollution prevention measures. The permittees should work with sub-watershed groups (e.g., the Serrano Creek Conservancy) to disseminate latest research information, such as the UC Master Gardeners Program⁴⁶ and USDA's Backyard Conservation Program.
3. The permittees, collectively or individually, shall facilitate the proper

¹⁰⁴ *Hayes, supra*, 11 Cal.App.4th at 1593.

collection and management of used oil, toxic and hazardous materials, and other household wastes. Such facilitation should include educational activities, public information activities, and establishment of curbside or special collection sites managed by the permittees or private entities, such as solid waste haulers.

4. Within 18 months of adoption of this order, the permittees shall develop a pilot program to control pollutant discharges from common interest areas and areas managed by homeowner associations or management companies. The permittees should evaluate the applicability of programs such as the Landscape Performance Certification Program⁴⁸ to encourage efficient water use and to minimize runoff.
5. The permittees shall enforce their Water Quality Ordinance for all residential areas and activities. The permittees should encourage new developments to use weather-based evapotranspiration (ET) irrigation controllers.
6. Each permittee shall include an evaluation of its Residential Program in the annual report starting with the first annual report after adoption of this order.

5. ACTUAL INCREASED COST OF MANDATE

To comply with 2009 Permit's residential program requirements, the Permittees have expended time and resources commencing in FY 2009-10 and thereafter, to develop, administer and maintain the program. The Joint Test Claimants' increase in costs to comply with these mandated activities in FY 2009-10 and FY 2010-11 is set forth in the Joint Test Claimants' Section 6 Declarations, paragraph 6(b). These costs are composed of costs incurred jointly by the Permittees, including the Joint Test Claimants, to develop programs required by the 2009 Permit. The increased cost to the Joint Test Claimants in FY 2009-10 was \$2,933.85 and the cost in FY 2010-11 was \$18,864.37.

E. SECTIONS IX (MUNICIPAL INSPECTIONS OF INDUSTRIAL FACILITIES) AND X (MUNICIPAL INSPECTIONS OF COMMERCIAL FACILITIES) OF THE 2009 PERMIT MANDATE THAT THE PERMITTEES DEVELOP A GEOGRAPHICAL INFORMATION SYSTEM (GIS) FOR INDUSTRIAL FACILITIES AND NEWLY SPECIFIED COMMERCIAL FACILITIES WHICH GOES BEYOND THE REQUIREMENTS OF FEDERAL LAW AND IS AN UNFUNDED STATE MANDATE.

The 2009 Permit mandates that the Permittees develop a Geographic Information System ("GIS") as part of both the inspection program for industrial facilities (Section IX) and the inspection program for commercial facilities (Section X). This requirement goes beyond the requirements of Federal Law.

MUNICIPAL INSPECTIONS OF INDUSTRIAL FACILITIES

1. CHALLENGED PROGRAM REQUIREMENT

Section IX.1 (MUNICIPAL INSPECTIONS OF INDUSTRIAL FACILITIES) of the 2009 Permit provides as follows:

"Each permittee shall continue to maintain an inventory of industrial facilities within its jurisdiction. All sites that have the potential to discharge pollutants to the MS4 should be included in this inventory regardless of whether the facility is subject to business permits, licensing, the State's General Industrial Permit or other individual NPDES permit. This database must be updated on an annual basis. This inventory must be maintained in a computer-based database system and must include relevant information on ownership, SIC code(s), General Industrial Permit WDID # (if any), size, location, etc. Inclusion of a Geographical Information System (GIS) is required, with latitude/longitude (in decimals) or NADSS/WGS84¹⁰⁵ compatible formatting is required."

Section IX.1 of page 41 of 2009 Permit (emphasis added).

2. REQUIREMENTS OF FEDERAL LAW

Neither the 2009 Permit, nor any of its supporting documents, specifically identify any federal regulations as specific authority for imposition of the GIS requirement set forth in Section IX. 1 of the 2009 Permit. Moreover, the CWA does not specifically require the use of GIS as a part of a municipal inventory of industrial facilities. 40 C.F.R. 122.26(d)(2)(ii) states that the following should be provided in the permit: "[A]n inventory, organized by watershed of the name and address, and a description (such as SIC codes) which best reflects the principal products or services provided by each facility which may discharge, to the municipal separate storm sewer, storm water associated with industrial activity."

40 CF.R. 122.26(d)(2)(ii) does not, however, expressly require or mention the use of GIS as part of municipal inspection of industrial facilities. Thus, the 2009 Permit's requirement for the inclusion of a GIS as part of a municipal inventory of industrial facilities is an unfunded state mandate.¹⁰⁶

3. REQUIREMENTS FROM 2002 PERMIT

¹⁰⁵ NAD 83/WGS84 = North American Datum of 1983 and World Geodetic System of 1984 are systems to define three-dimensional coordinates of a single physical point. See footnote 38 of page 39 of 2009 Permit.

¹⁰⁶ The test claimants further note that a slightly more recent Water Board stormwater permit issued by this same region (Santa Ana) does not include the GIS mandate for a database of municipal inspections of industrial or commercial facilities. *See, e.g.*, Exhibit 17. California Regional Water Quality Control Board (Santa Ana Region), Order No. R8-2010-0033 (Jan. 29, 2010), Sections XI.C. and XI.D (inspection requirements), and Section XI.A (General requirement of database inventory of active industrial and commercial facilities within their jurisdiction). Thus, the Santa Ana Board's decision to mandate GIS in this case clearly goes beyond not only federal law but also the Santa Ana Board's own understanding of federal law mandates based upon its January 29, 2010 stormwater permit issued to a different group of permittees.

The 2002 Permit provided that each Permittee:

- Develop an inventory of the industrial facilities within its jurisdiction and maintain such inventory in a computer-based database system.
- Include relevant information on ownership, SIC code(s), General Industrial Permit WDID # (if any), size, location, etc. in the computer-based dataset system.
- Update the inventory computer-based database on an annual basis

The 2002 Permit did not require, that Permittees include a GIS as part of its inventory of industrial facilities in a computer-based database system. The 2002 Permit merely recommended, as opposed to required, that a GIS be included. *See* Section IX. 1 of page 22 of the 2002 Permit for complete text.

4. MANDATED ACTIVITIES

Section IX.1 of the 2009 Permit requires Permittees to perform the following activities that are **not** required under either federal law or the 2002 Permit:

- In the inventory of industrial facilities, include a Geographical Information System, with latitude/longitude (in decimals) or NAD83/WGS8442 compatible formatting.

To comply with the GIS requirement set forth in Section IX.1, many of the Permittees have or will need to perform the following activities to comply with the new GIS requirement:

1. Purchase computer server and operating software compatible with GIS;
2. Hire a consultant to prepare aerial digital photographs of the Permittees' jurisdictions;
3. Hire a consultant to develop a GIS browser;
4. Purchase the Orange County Assessor database;
5. Hire a consultant to digitize all stormdrain systems and develop a storm drain system digital map; and
6. Hire a consultant to develop a GIS layer that includes all commercial, industrial and restaurant facilities that are inspected for stormwater compliance.

MUNICIPAL INSPECTIONS OF COMMERCIAL FACILITIES

1. CHALLENGED PROGRAM REQUIREMENT

Section X.1 of the 2009 Permit provides as follows:

X. MUNICIPAL INSPECTIONS OF COMMERCIAL FACILITIES

1. Each permittee shall continue to maintain and update quarterly an inventory of the types of commercial facilities/businesses listed below within its jurisdiction. As required under the third term permit, this inventory must be maintained in a computer-base database system (Commercial Database) and must include relevant information on ownership, size, location, etc. For fixed facilities, inclusion of a Geographical Information System (GIS), with latitude/longitude (in decimals) or NAD83/WGS84 compatible formatting is required. For water quality planning purposes, the permittees should consider using a parcel-level GIS that contains an inventory of the types of facilities/discharges listed below.

Commercial facilities may include, but not may be limited to:

- a) Transport, storage or transfer of pre-production plastic pellets;
- b) Automobile mechanical repair, maintenance, fueling or cleaning;
- c) Airplane maintenance, fueling or cleaning;
- d) Marinas and boat maintenance, fueling or cleaning;
- e) Equipment repair, maintenance, fueling or cleaning;
- f) Automobile impound and storage facilities;
- g) Pest control service facilities;
- h) Eating or drinking establishments, including food markets and restaurants;
- i) Automobile and other vehicle body repair or painting;
- j) Building materials retail and storage facilities;
- k) Portable sanitary service facilities;
- l) Painting and coating;
- m) Animal facilities such as petting zoos and boarding and training faculties;
- n) Nurseries and greenhouses;
- o) Landscape and hardscape installation;
- p) Pool, lake and fountain cleaning;
- q) Golf courses;

- r) Other commercial sites/sources that the permittee determines may contribute a significant pollutant load to the MS4; and
- s) Any commercial site or sources that are tributary to and within 500 feet of an area defined by the Ocean Plan as an Area of Special Biological Significance."

2. REQUIREMENTS OF FEDERAL LAW

Neither the 2009 Permit, nor any of its supporting documents specifically identify any federal regulations as specific authority for imposition of the requirements set forth in Section X.1 of the 2009 Permit. Although 40 C.F.R. § 122.26(d)(2)(iv)(A) provides that management programs describe "structural and source control measures to reduce pollutants from runoff from commercial and residential areas that are discharged from the municipal storm sewer system", it does not specifically require quarterly municipal inspection of the commercial facilities specified in the 2009 Permit. Moreover, there is no express requirement or mention of the use of GIS as part of municipal inspection of commercial facilities in the CWA or the federal regulations. As such, the 2009 Permit's requirement for the inclusion of a GIS as part of a municipal inventory of commercial facilities is an unfunded state mandate.

3. REQUIREMENTS FROM 2002 Permit

The 2002 Permit provided that each Permittee:

- Develop an inventory of the specified commercial facilities and companies within its jurisdiction and maintain such inventory in a computer-based database system.
- Include relevant information on ownership, size, location, etc. in the computer-based database system.
- Update the inventory computer-based database on an annual basis

The 2002 Permit did not, however, require, that Permittees include a GIS as part of its inventory of commercial facilities and businesses in a computer-based database system. The 2002 Permit merely recommended, as opposed to require, that a GIS be included. *See* Section X. 1 of the 2002 Permit for complete text.

Moreover, the 2002 Permit only required that the computer-based database for the inventory of commercial facilities be updated on annual basis, as opposed to a quarterly basis as set forth in the 2009 Permit.

In addition, Section X.1 of the 2009 Permit adds 11 new categories¹⁰⁷ of commercial

¹⁰⁷ These 11 new categories of commercial facilities are: (a) Transport, storage or transfer of pre-production plastic pellets; (c) Airplane maintenance, fueling or cleaning; (d) Marinas and boat maintenance, fueling or cleaning; (e) Equipment repair, maintenance, fueling or cleaning; (f) Automobile impound and storage facilities; (g) Pest control service facilities; (h) Eating or drinking establishments, including food markets and restaurants; (j) Building materials retail and storage facilities; (k) Portable sanitary service facilities; (m) Animal facilities such as petting zoos and

facilities that are subject to municipal inspections that were not in the 2002 Permit. The Regional Board provides no legal justification or authority stating that these 11 new categories pose a significant water quality threat to the MS4. There appears to be no legal authority warranting the inclusion of these 11 new categories of commercial facilities and no evidence that these 11 categories are significant non-point source polluters.

4. MANDATED ACTIVITIES

Section X.1 of the 2009 Permit requires Permittees to perform the following activities that are **not** required under either federal law or the 2002 Permit:

Include a Geographical Information System, with latitude/longitude (in decimals) or NAD83AVGS8442 compatible formatting that contains an inventory of the following types of facilities and discharges:

- Transport, storage or transfer of pre-production plastic pellets;
- Automobile mechanical repair, maintenance, fueling or cleaning;
- Airplane maintenance, fueling or cleaning;
- Marinas and boat maintenance, fueling or cleaning;
- Equipment repair, maintenance, fueling or cleaning;
- Automobile impound and storage facilities;
- Pest control service facilities;
- Eating or drinking establishments, including food markets and restaurants;
- Automobile and other vehicle body repair or painting;
- Building materials retail and storage facilities;
- Portable sanitary service facilities;
- Painting and coating;
- Animal facilities such as petting zoos and boarding and training facilities;
- Nurseries and greenhouses;
- Landscape and hardscape installation;
- Pool, lake and fountain cleaning;

boarding and training facilities; and (q) Golf courses. See Section X. 1 on page 43 of the 2009 Permit.

- Golf courses;
- Other commercial sites/sources that the permittee determines may contribute a significant pollutant load to the MS4; and
- Any commercial site or sources that are tributary to and within 500 feet of an area defined by the Ocean Plan as an Area of Special Biological Significance

Lastly, to comply with the requirements of Section IX. 1, many of the Permittees have or will need to perform the following activities to comply with the new GIS requirement:

1. Purchase computer server and operating software compatible with GIS;
2. Hire a consultant to prepare aerial digital photographs of the Permittees' jurisdictions;
3. Hire a consultant to develop a GIS browser;
4. Purchase the Orange County Assessor database;
5. Hire a consultant to digitize all stormdrain systems and develop a storm drain system digital map; and
6. Hire a consultant to develop a GIS layer that includes all commercial, industrial, and restaurant facilities that are inspected for stormwater compliance.

5. ACTUAL INCREASED COSTS OF MANDATE

To comply with the requirements of the above-described requirements in Sections IX.1 and X.1 of the 2009 Permit, the Permittees, including the Joint Test Claimants, were required to expend time commencing in FY 2009-10 and thereafter, to develop, administer and maintain a costly Geographical Information System and update facility inventories. The Joint Test Claimants' costs to comply with these mandated activities were incurred on an individual jurisdiction basis, as set forth in the Section 6 Declarations of the Joint Test Claimants, paragraph 6(a). The increased cost to the Joint Test Claimants of these requirements in FY 2009-10 was \$335,796.25 and in FY 2010-11 was \$165,936.60.

VII. STATEWIDE COST ESTIMATE

This Joint Test Claim concerns a municipal stormwater permit applicable only to local agencies located in the portion of Orange County within the jurisdiction of the Santa Ana RWQCB. Therefore, any statewide cost estimate must, by virtue of this limitation, apply only to costs incurred by such local agencies. The Joint Test Claimants estimate that, for all requirements set forth in the 2009 Permit that are the subject of this Joint Test Claim, the amount of approximately \$2,447,890.20 was expended in FY 2009-10 and the amount of approximately \$3,051,349 was expended in FY 2010-11. See Section 6 Declarations of the Joint Test Claimants and the Declaration (Second) of Richard Boon.

VIII. FUNDING SOURCES

The Joint Test Claimants are not aware of any State, federal or non-local agency funds that are or will be available to fund these new activities. The Joint Test Claimants do not have fee authority to offset these costs. The source of funds for the requirements are General Fund monies of the Joint Test Claimants. Additionally, for the City of Brea, some funding was also available through an Urban Runoff/NPDES Fund and for the City of Buena Park, some funding was available through a Water Enterprise Fund. For the County, some additional funding was available through landfill gate fees and special district funding, among other sources. *See* Section 6 Declarations, Paragraph 8.

IX. PRIOR MANDATE DETERMINATIONS

A. Los Angeles County

In 2003 and 2007, the County of Los Angeles and 14 cities within the county (the Los Angeles claimants) submitted test claims 03-TC-04, 03-TC-19, 03-TC-20, and 03-TC-21. The test claims asserted that provisions of Los Angeles Water Board Order 01 -1 82 constitute reimbursable state mandates. As is the case with the Regional Board Order that is the subject of this Test Claim, Order 01-182 was the 2001 renewal of the existing MS4 Permit, Order 01-182 is the MS4 Permit for Los Angeles County and most of its incorporated cities, and serves as an NPDES permit. The permit provisions require the Los Angeles claimants to install and maintain trash receptacles at specified transit stops and to inspect certain industrial, construction, and commercial facilities for compliance with local and/or state storm water requirements.

On September 3, 2009, the Commission issued a final decision entitled *In re Test Claim On: Los Angeles Regional Quality Control Board Order No. 01-182, Case Nos.: 03-TC-04, 03-TC-19, 03-TC-20, and 03-TC-21 ("Los Angeles Decision")*. The Los Angeles Decision partially approved the test claims. The Commission found the trash receptacle requirement to be a reimbursable state mandate.

B. San Diego County

In 2007, the County of San Diego and 21 cities within the county (the San Diego claimants) submitted test claim 07-TC-09. The test claim asserted that many provisions of San Diego Water Board Order R9-2007-0001 constitute reimbursable state mandates. Order R9-2007-0001 is the 2007 renewal of the municipal storm water permit for San Diego County and many of its incorporated cities, and serves as an NPDES permit. The challenged permit provisions require the San Diego claimants to: (1) conduct and report on street sweeping activities; (2) clean and report on storm sewer cleaning; (3) implement a regional urban runoff management program; (4) assess program effectiveness; (5) conduct public education and outreach; (6) collaborate among Permittees to implement the program; (7) implement hydromodification management plans; and (8) implement plans for low impact development.

On March 30, 2010, the Commission issued a final decision entitled *In re Test Claim on: San Diego Regional Quality Control Board Order No. R9-2007-0001, Case No. 07-TC-09 (San Diego Decision)*. The San Diego Decision partially approved the test claim. The Commission's decision took the relatively narrow Los Angeles Decision to its logical conclusion. The

Commission found the following permit requirements to be reimbursable state mandates:

1. Street Sweeping
2. Street Sweeping Reporting
3. Conveyance System Cleaning
4. Conveyance System Cleaning Reporting
5. Public Education Requirements with Specific Target Communities and Specified Topics
6. Mandatory Watershed Activities and Collaboration in Watershed Urban Management Program
7. Regional Urban Runoff Management Program
8. Program Effectiveness Assessment
9. Long-term Effectiveness Assessment
10. Permittee Collaboration

The Commission also found the hydromodification and low impact development requirements in the San Diego Permit to be state mandates, but not reimbursable mandates because the local agencies could charge fees to pay for these programs.

X. CONCLUSION

The 2009 Permit imposes many new mandated activities and programs on the Permittees, including the Joint Test Claimants. As detailed above the costs to develop and implement these new programs and activities are substantial. The Joint Test Claimants believe that the costs incurred and to be incurred satisfy all the criteria for reimbursable mandates and respectfully requests that the Commission make such findings as to each of the mandated programs and activities set forth herein.

**SANTA ANA REGION WATER
PERMIT, 09-TC-03
SECTION 6
DECLARATIONS**

DECLARATION OF RICHARD BOON ON BEHALF OF THE
COUNTY OF ORANGE IN SUPPORT OF TEST CLAIM

I, Richard Boon, declare as follows:

1. I make this declaration based upon my own personal knowledge, except for matters set forth herein on information and belief, and as to those matters I believe them to be true, and if called upon to testify, I could and would competently testify to the matters set forth herein under oath.

2. I am employed by the County of Orange (“County”) as Chief of the Orange County Stormwater Program within OC Public Works. I have knowledge of the County’s funding for the programs and activities set forth in this declaration.

3. I have held my current position for approximately 13 years. I am principally responsible for managing the Orange County Stormwater Program (the “Program”). My duties include preparing and securing approval of the Program’s annual operating budget, developing and implementing policy and programmatic guidance to ensure regulatory compliance by the County, Orange County Flood Control District and cities of Orange County with two areawide municipal stormwater permits, and managing consultant service contracts for geotechnical, regulatory and public education support to the Program.

4. I have reviewed California Regional Water Quality Control Board, Santa Ana Region (“RWQCB”) Order No. R8-2009-0030, issued by the RWQCB on May 22, 2009 (the “Permit”) and am familiar with the requirements of the Permit as it applies to the County. The County is a permittee under that Permit.

5. I have also reviewed and am familiar with the requirements of Order No. R8-2002-0010, issued by the RWQCB on January 18, 2002 (“2002 Permit”). The County was a permittee under the 2002 Permit.

6. Based on my understanding of the requirements of the 2002 Permit and the requirements of the Permit, I understand and believe and therefore state that the Permit requires the permittees, including the County, to perform the following new programs and/or enhanced levels of service that were not required by the 2002 Permit and which are unique to local governmental agencies:

(a) Municipal Inventories: Sections IX.1 and X of the Permit required each permittee, including the County, to maintain an inventory of industrial and commercial facilities/businesses within its jurisdiction, which must be maintained in a computer-based database system. Inclusion of a Geographical Information System (GIS) is required, with latitude/longitude (in decimals) or NAD83/WGS8439 compatible formatting. I am informed and believe and therefore state that during fiscal year (FY) 2009-10, the cost of this program for the County was \$2,965 and that during FY 2010-11, the cost for this program was \$1,480. I am further informed and believe and therefore state that the County first incurred costs for this mandated activity in approximately August 2010.

(b) Residential Program -- Common Interest Area (CIA)/Homeowner Association (HOA) Pilot Program: Subsection XI.4 of the Permit required the permittees, including the County, to develop a pilot program to control pollutant discharges from common interest areas and areas managed by HOAs or management companies. Program activities required to be funded include: Evaluation of applicable regional programs and studies to encourage efficient water use and to minimize runoff, such as those developed by the Municipal Water District of

Orange County and the Irvine Ranch Water District, and development of a pilot program to include design and dissemination of educational and outreach materials, determination of baseline conditions and measurable target outcomes, and assessment of performance. The permittees, including the County, retained a consultant to perform this mandated activity. Each permittee, including the County, paid a share of this cost. I am informed and believe and therefore state that the County share of the cost for this activity in FY 2009-10 was \$414.51 and in FY 2010-11 the County's share was \$2,550.84. I am further informed and believe and therefore state that the County first incurred those costs for this mandated activity in July 2009.

(c) Public Education and Outreach

(i) Public Awareness Survey: Subsection XIII.1 of the Permit required the permittees, including the County, to complete a public awareness survey to determine the effectiveness of the existing public and business education strategy and any need for changes to the existing multimedia public education efforts. The permittees, including the County, collectively retained a consultant to perform this mandated activity in FY 2009-10. I am informed and believe and therefore state that during FY 2009-10, the County share of the costs for this activity were \$5,101.68. I am further informed and believe and therefore state that the County first incurred costs for this mandated activity during the period August 17th, 2009 through November 25th, 2009.

(ii) Workshops: Subsection XIII.4 of the Permit required the permittees, including the County, to conduct sector-specific workshops, individually or on a regional basis, by July 1, 2010 and on an annual basis thereafter. The target sectors were manufacturing facilities; the mobile service industry; the commercial, distribution and retail sales industry; the residential/commercial landscape construction and services industry; the residential and

commercial construction industry; and residential and community activities. The permittees collectively retained staff from the County to assist with these mandated activities. I am informed and believe and therefore state that the County's share of such costs in FY 2009-10 was \$797.14 and that the County's share of such costs in FY 2010-11 was \$414.51. I am further informed and believe and therefore state that the County first incurred costs for this mandated activity in July, 2009.

(iii) Public Participation: Subsection XIII.7 of the Permit required the permittees, including the County, to develop and implement a mechanism for public participation in the updating and implementation of Drainage Area Management Plans, monitoring plans, Water Quality Management Plan guidance and Fact Sheets for various activities. The public was required to be notified of the availability of these documents through public notices in local newspapers, County and/or city websites, local libraries/city halls and/or courthouses. The permittees collectively retained County staff to assist with these mandated activities. I am informed and believe and therefore state that the County share of such costs in FY 2009-10 was \$159.43 and that the County's share of such costs in FY 2010-11 was \$159.43. I am further informed and believe and therefore state that the County first incurred costs for this mandated activity in September, 2009.

(d) New/Revised Development Programs and Standards

(i) Low Impact Development (LID) and Model Water Quality Management Plan (WQMP): Subsection XII.C of the Permit required the permittees, including the County, to incorporate LID principals and structural features into public agency Priority Development Projects and in other instances to incorporate U.S. Environmental Protection Agency (EPA) Guidance entitled, "*Management Wet Weather with Green Infrastructure: Green Streets.*"

These include road, drainage facility, public utility, linear and other projects. The permittees, including the County, collectively retained a consultant team to assist with developing a public agency project element within the Model WQMP. I am informed and believe and therefore state that the County share of the cost of this activity in FY 2009-10 was \$22,385.90 and that the County's share of the cost of this activity in FY 2010-11 was \$21,326.60. I am informed and believe and therefore state that the County first incurred costs for such activity in or about August 2009. In addition, I am informed and believe and therefore state that County-specific costs to develop public agency WQMPs for road, drainage facility, public utility, linear, and other projects with the mandated incorporation of LID principals were \$57,230 in FY 2010-11.

(ii) Hydrologic Conditions of Concern (HCOC): Subsection XII.D of the Permit required the permittees, including the County, to address the impact of urbanization on downstream hydrology. Subsection XII.D.1 required each permittee Priority Development Project to ascertain the impact of the project on the site's hydrologic regime based on the two-year frequency storm event, and to include the findings in the WQMP for the project. The permittees, including the County, shared the cost of a hydromodification susceptibility analysis of north Orange County's surface water drainage systems. Hydromodification susceptibility maps were prepared and language added to the model WQMP and Technical Guidance Document. The draft map data were verified using mapping and photography and updated as needed. The draft map data were verified using mapping and photography and updated as needed. I am informed and believe and therefore state that the County's share of the cost of these activities in FY 2009-10 was \$778.89 and in FY 2010-11 the County's share of the costs was \$2,647.93. I am informed and believe and therefore state that the County first incurred costs for this mandated activity in June, 2010.

(e) Total Maximum Daily Loads (TMDLs): Section XVIII of the Permit contained a new program setting forth the implementation of various TMDLs. This TMDL program was not required under the 2002 Permit and was a new program under the Permit. Its requirements continued through the term of the Permit. The County was subject to the following requirements under this new program:

TMDL Programs in Newport Bay Watershed

(i) Permit Subsections XVIII.B.1 through B.4 required various permittees, including the County, to comply with a series of new numeric effluent limits based on waste load allocations within the EPA-Promulgated Toxic Pollutant TMDLs for San Diego Creek and Newport Bay. These new program requirements all involved the imposition of numeric effluent limits from waste load allocations from these TMDLs, as set forth in Tables 1 A/B/C, Table 2 A/B/C/D/ and Table 3 on pages 68 to 71 of the Permit.

(ii) Permit Subsection XVIII.B.5 imposed new TMDL-related requirements applicable to various permittees, including the County, that would take effect upon adoption by the State Water Resources Control Board and the Office of Administration Law (“OAL”), and concerned compliance with numeric limits taken from wasteload allocations in the TMDLs for Organochlorine Compounds for Newport Bay and San Diego Creek (as set forth in Table 4 on page 71 of the Permit).

(iii) Permit Subsection XVIII.B.7 imposed new requirements on various permittees, including the County, to participate in the development and implementation of additional Metals and Selenium TMDLs for the Newport Bay Watershed being developed by the RWQCB.

(iv) Permit Subsection XVIII.B.8 required certain permittees, including the County, to prepare a Cooperative Watershed Program for the Selenium TMDL for the Newport Bay Watershed. This Program was required to be submitted within 24 months of the date of adoption of the Permit or one month after the approval of the TMDL by the OAL. In addition, this subsection required certain permittees, including the County, to implement the Program once it was approved.

(v) Permit Subsection XVIII.C.1 imposed on certain permittees, including the County, new numeric effluent limits based on wasteload allocations from a Fecal Coliform/Bacteria TMDL for Newport Bay and San Diego Creek, as set forth in Tables 8A and 8B on pages 74-75 of the Permit.

(vi) Permit Subsection XVIII.D.1 required various permittees, including the County, to comply with new numeric effluent limits from waste load allocations from a TMDL for Diazinon and Chlorpyrifos for San Diego Creek and Chlorpyrifos for Newport Bay, as set forth in Tables 9A and 9B on page 76 of the Permit.

The permittees subject to such requirements participated in a cost-sharing program administered by the County, whereunder costs associated with the above-referenced TMDL requirements in the Permit were shared among those permittees. I am informed and believe and therefore state that the County's share of the costs for the above-referenced requirements in FY 2009-10 was \$47,904 and in FY 2010-11, \$46,127. I am further informed and believe and therefore state that the County first incurred costs for these Permit requirements in June 2009. The amount of costs incurred in FY 2008-09 is estimated at \$57,140.61.

///

///

TMDL Programs in San Gabriel River/Coyote Creek Watershed

(vii) Metals TMDL for Coyote Creek and San Gabriel River: Permit

Subsection XVIII.B.9 required the development and implementation of a Constituent Specific Source Control Plan (CSSCP) and a monitoring program in connection with a Metals TMDL for Coyote Creek and the San Gabriel River. The CSSCP was required to be designed and implemented to ensure compliance with specific numeric effluent limits taken from the wasteload allocations set forth in the TMDL, as set forth in Table 6 on page 73 of the Permit. While the cost of the CSSCP was not shared by the permittees, costs of the monitoring program, which was done on a cost-sharing basis, were shared by the County. I am informed and believe and therefore state that the estimated share of the monitoring costs for the County during FY 2010-11 was \$7,488 and that the share during FY 2011-12 was \$2,352. I am informed and believe and therefore state that the County first incurred costs for these requirements in March, 2010.

7. As set forth above in this Declaration, the County first incurred costs under the Permit during FY 2008-09, which commenced on July 1, 2008.

8. I am informed and believe and therefore state that there are no dedicated state, federal or regional funds that were available to pay for any of these new programs/activities. The County, in addition to its General Fund, had sources of other County funding, including landfill gate fees and special district funding, for certain Permit obligations. To the extent such fees were employed and/or such funds appropriated for such obligations, they would not be available for other County obligations. I am informed and believe and therefore state that I am not aware of any other fee or tax which the County would have the discretion to impose under California law to cover any portion of the cost of these new programs/activities.

I declare under penalty of perjury that the foregoing is true and correct.

Executed December 19, 2016 at Orange, California.

A handwritten signature in black ink that reads "Richard Boon". The signature is written in a cursive style with a large initial "R".

Richard Boon
Chief, Orange County Stormwater Program
OC Public Works

**DECLARATION (SECOND) OF RICHARD BOON ON BEHALF OF THE
COUNTY OF ORANGE IN SUPPORT OF TEST CLAIM**

I, Richard Boon, declare as follows:

1. I make this declaration based upon my own personal knowledge, except for matters set forth herein on information and belief, and as to those matters I believe them to be true, and if called upon to testify, I could and would competently testify to the matters set forth herein under oath.

2. I am employed by the County of Orange (“County”) as Chief of the Orange County Stormwater Program within OC Public Works. I have knowledge of the County’s funding for the programs and activities set forth in this declaration.

3. I have held my current position for approximately 13 years. I am principally responsible for managing the Orange County Stormwater Program (the Program). My duties include preparing and securing approval of the Program’s annual operating budget, developing and implementing policy and programmatic guidance to ensure regulatory compliance by the County, Orange County Flood Control District and cities of Orange County with two areawide municipal stormwater permits and managing consultant service contracts for geotechnical, regulatory and public education support to the Program.

4. I am familiar with the requirements of California Regional Water Quality Control Board, Santa Ana Region (“RWQCB”) Order No. R8-2009-0030, issued by the RWQCB on May 22, 2009 (the “Permit”). The County is a permittee under that Permit.

5. I am also familiar with the matters set forth in the Test Claim filed before the Commission on State Mandates regarding the Permit and the municipalities that are Joint Test Claimants in that Test Claim.

6. The County was designated as the Principal Permittee in the Permit. In that role, the County has, among other things, responsibility for budgeting, contracting with consultants and other third parties, and the invoicing of permittees for their share of the costs of programs subject to cost-sharing among the permittees. In my role as Chief of the Orange County Stormwater Program, I am familiar with these processes and how permittees are invoiced.

7. The cost-sharing programs in which permittees under the Permit participated can be divided into three main categories: (a) compliance with Total Maximum Daily Load (“TMDL”) provisions applicable to the San Diego Creek and Newport Bay; (b) compliance with TMDL provisions applicable to the San Gabriel River and Coyote Creek; and (c) other non-TMDL compliance activities, including those activities identified in Paragraph 6(b)-d) of my Declaration on behalf of the County in this Test Claim.

8. I have reviewed financial records maintained by the County in its regular business relating to the cost-sharing programs. I have also reviewed the dates on which cost-sharing invoices were submitted to the Joint Test Claimants and the dates on which the Joint Test Claimants submitted payment for such cost-sharing amounts. Based on that review, I understand and believe and therefore state that:

a. With regard to San Diego Creek/Newport Bay TMDL requirements, the County first invoiced the Joint Test Claimants for their share of the cost of such requirements on or about February 9, 2010 and the County received payment from the Joint Test Claimants during a period commencing on or about March 8, 2010 and ending on or about May 6, 2010.

b. With regard to the San Gabriel River/Coyote Creek TMDL requirements, the County first invoiced the Joint Test Claimants for their share of the cost of such requirements on or about December 23, 2010 and the County received payment from the Joint Test Claimants

during a period commencing on or about January 10, 2011 and ending on or about February 4, 2011.

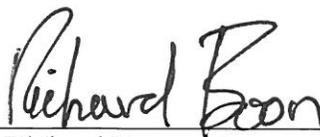

c. With regard to the non-TMDL requirements of the Permit that were subject to cost sharing, the County first invoiced the Joint Test Claimants for their share of the cost of such requirements on or about December 1, 2009 and the County received payment from the Joint Test Claimants during a period commencing on or about December 14, 2009 and ending on or about February 8, 2010.

9. From my review of the financial records of the cost-sharing programs, I determined that the total amount paid by the permittees in FY 2009-10 for the San Diego Creek/Newport Bay TMDLs was \$837,764.89 and in FY 2010-11 was \$827,185.92; the total amount paid by the permittees in FY 2009-10 for the San Gabriel River/Coyote Creek TMDL was \$55,000 and in FY 2010-11 was approximately \$84,000; and the total amount paid by the permittees in FY 2009-10 for the other cost-sharing requirements at issue in the Test Claim was \$395,088.32 and in FY 2010-11 was \$433,420.68.

10. Documents reflecting the information set forth in this Declaration, including documents that I prepared or caused to be prepared, were distributed to representatives of the Joint Test Claimants in connection with the preparation of declarations in support of the Test Claim.

I declare under penalty of perjury that the foregoing is true and correct.

Executed December 19, 2016 at Orange, California.

OC Public Works

DECLARATION OF KEITH LINKER ON BEHALF OF THE CITY OF ANAHEIM IN

SUPPORT OF TEST CLAIM

I, Keith Linker, declare as follows:

1. I make this declaration based upon my own personal knowledge, except for matters set forth herein on information and belief, and as to those matters I believe them to be true, and if called upon to testify, I could and would competently testify to the matters set forth herein under oath.

2. I am employed by the City of Anaheim ("City") as a Principal Civil Engineer. In that capacity, I have knowledge of the requirements of the stormwater permits discussed herein, as well as of the City's funding of such requirements.

3. I have held my current position for approximately fifteen (15) years. My duties include addressing the City's stormwater and related environmental programs as they affect the Public Works, capital improvements, and in to a degree the City in general.

4. I have reviewed California Regional Water Quality Control Board, Santa Ana Region ("RWQCB") Order No. R8-2009-0030, issued by the RWQCB on May 22, 2009 ("Permit") and am familiar with the requirements of the Permit as it applies to the City. The City was a permittee under that Permit.

5. I have also reviewed and am familiar with the requirements of Order No. R8-2002-0010, issued by the RWQCB on January 18, 2002 ("2002 Permit"). The City was a permittee under the 2002 Permit.

6. Based on my understanding of the requirements of the 2002 Permit and the requirements of the Permit, I understand and believe and therefore state that the Permit requires the permittees, including the City, to perform the following new programs and/or enhanced

levels of service that were not required by the 2002 Permit and which are unique to local governmental agencies:

(a) Municipal Inventories: Sections IX.1 and X of the Permit required each permittee, including the City, to maintain an inventory of industrial and commercial facilities/businesses within its jurisdiction, which must be maintained in a computer-based database system.

Inclusion of a Geographical Information System (GIS) is required, with latitude/longitude (in decimals) or NAD83/WGS8439 compatible formatting. I am informed and believe and therefore state that during fiscal year (FY) 2009-10, the cost of this program for the City was \$11,953 and that during FY 2010-11, the cost for this program was \$7,043. I am further informed and believe and therefore state that the City first incurred costs for such requirements on or about March 12, 2010.

(b) Residential Program -- Common Interest Area (CIA)/Homeowner Association (HOA) Pilot Program: Subsection XI.4 of the Permit required the permittees, including the City, to develop a pilot program to control pollutant discharges from common interest areas and areas managed by HOAs or management companies. Program activities required to be funded include: Evaluation of applicable regional programs and studies to encourage efficient water use and to minimize runoff, such as those developed by the Municipal Water District of Orange County and the Irvine Ranch Water District, and development of a pilot program to include design and dissemination of educational and outreach materials, determination of baseline conditions and measurable target outcomes, and assessment of performance. The permittees, including the City, retained a consultant to perform this mandated activity. Each permittee, including the City, paid a share of this cost. I am informed and believe and therefore state that the City's share of the cost for this activity in FY 2009-10 was \$538.12 and in FY 2010-11 \$3,311.51. I am further

informed and believe and therefore state that the City first incurred those costs when it was invoiced by the County of Orange (“County”) on or about December 1, 2009 and that the City paid such invoice on or about January 7, 2010.

(c) Public Education and Outreach

(i) Public Awareness Survey: Subsection XIII.1 of the Permit required the permittees, including the City, to complete a public awareness survey to determine the effectiveness of the existing public and business education strategy and any need for changes to the existing multimedia public education efforts. The permittees, including the City, collectively retained a consultant to perform this mandated activity in FY 2009-10. I am informed and believe and therefore state that during FY 2009-10, the City’s share of the costs for this activity were \$6,623.01. I am further informed and believe and therefore state that the City first incurred those costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about January 7, 2010.

(ii) Workshops: Subsection XIII.4 of the Permit required the permittees, including the City, to conduct sector-specific workshops, individually or on a regional basis, by July 1, 2010 and on an annual basis thereafter. The target sectors were manufacturing facilities; the mobile service industry; the commercial, distribution and retail sales industry; the residential/commercial landscape construction and services industry; the residential and commercial construction industry; and residential and community activities. The permittees, including the City, collectively retained staff from the County to assist with these mandated activities. I am informed and believe and therefore state that the City’s share of such costs in FY 2009-10 was \$1,034.85 and that the City’s share of such costs in FY 2010-11 was \$538.12. In addition, I am informed and believe and therefore state that City-specific costs to participate in

the mobile service industry workshop was \$2,500 in FY 2010-2011. I am further informed and believe and therefore state that the City first incurred those costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about January 7, 2010. I am informed and believe and therefore state that the City first incurred its City-specific costs on February 17, 2011.

(iii) Public Participation: Subsection XIII.7 of the Permit required the permittees, including the City, to develop and implement a mechanism for public participation in the updating and implementation of Drainage Area Management Plans, monitoring plans, Water Quality Management Plan guidance and Fact Sheets for various activities. The public was required to be notified of the availability of these documents through public notices in local newspapers, County and/or city websites, local libraries/city halls and/or courthouses. The permittees, including the City, collectively retained County staff to assist with these mandated activities. I am informed and believe and therefore state that the City's share of such costs in FY 2009-10 was \$206.97 and that the City's share of such costs in FY 2010-11 was 206.97. I am further informed and believe and therefore state that the City first incurred those costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about January 7, 2010.

(d) New/Revised Development Programs and Standards

(i) Low Impact Development (LID) and Model Water Quality Management Plan (WQMP): Subsection XII.C of the Permit required the permittees, including the City, to incorporate LID principals and structural features into public agency Priority Development Projects and in other instances to incorporate U.S. Environmental Protection Agency (EPA) Guidance entitled, "*Management Wet Weather with Green Infrastructure: Green Streets.*"

These include road, drainage facility, public utility, linear and other projects. The permittees, including the City, collectively retained a consultant team to assist with developing a public agency project element within the Model WQMP. I am informed and believe and therefore state that the City's share of the cost of this activity in FY 2009-10 was \$29,061.44 and that the City's share of the cost of this activity in FY 2010-11 was \$27,686.25. In addition, I am informed and believe and therefore state that City-specific costs to develop public agency WQMPs for road, drainage facility, public utility, linear, and other projects with the mandated incorporation of LID principals were \$39,992 in FY 2009-10 and \$43,191 in FY 2010-11. I am further informed and believe and therefore state that the City first incurred those costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about January 7, 2010. I am informed and believe and therefore state that the City first incurred its City-specific costs on July 1, 2009.

(ii) Hydrologic Conditions of Concern (HCOC): Subsection XII.D of the Permit required the permittees, including the City, to address the impact of urbanization on downstream hydrology. Subsection XII.D.1 required each permittee Priority Development Project to ascertain the impact of the project on the site's hydrologic regime based on the two-year frequency storm event, and to include the findings in the WQMP for the project. The permittees, including the City, shared the cost of a hydromodification susceptibility analysis of north Orange County's surface water drainage systems. Hydromodification susceptibility maps were prepared and language added to the model WQMP and Technical Guidance Document. The draft map data were verified using mapping and photography and updated as needed. I am informed and believe and therefore state that the City's share of the cost of these activities in FY 2009-10 was \$732.80 and in FY 2010-11 the City's share of the costs was \$2,491.23. I am

informed and believe and therefore state that the City first incurred these costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about January 7, 2010.

(e) Total Maximum Daily Loads (TMDLs): Section XVIII of the Permit contained a new program setting forth the implementation of various TMDLs. This TMDL program was not required under the 2002 Permit and was a new program under the Permit. Its requirements continued through the term of the Permit. The City was subject to the following requirement under this new program:

(i) Metals TMDL for Coyote Creek and San Gabriel River: Permit Subsection XVIII.B.9 required the development and implementation of a Constituent Specific Source Control Plan (CSSCP) and a monitoring program in connection with a Metals TMDL for Coyote Creek and the San Gabriel River. The CSSCP was required to be designed and implemented to ensure compliance with specific numeric effluent limits taken from the wasteload allocations set forth in the TMDL, as set forth in Table 6 on page 73 of the Permit. While the cost of the CSSCP was not shared by the permittees, including the City, costs of the monitoring program, which was done on a cost-sharing basis, were shared by the City. I am informed and believe and therefore state that the estimated cost of the monitoring efforts during FY 2010-11 was approximately \$13,271 and that the cost during FY 2011-12 was \$13,364.58. I am informed and believe and therefore state that the City was first invoiced for these requirements by the County on December 23, 2010 and that the City paid such invoice on or about February 4, 2011.

7. As set forth above in this Declaration, the City first incurred costs under the Permit during FY 2009-10, which commenced on July 1, 2009.

8. I am informed and believe and therefore state that there are no dedicated state, federal or regional funds that were available to pay for any of these new programs/activities. I am not aware of any fee or tax which the City would have the discretion to impose under California law to cover any portion of the cost of these new programs/activities. I am further informed and believe and therefore state that the only available source of funds to pay for the costs set forth in this Declaration was the City's General Fund.

I declare under penalty of perjury that the foregoing is true and correct.

Executed December 12, 2016 at Anaheim, California.

Keith Linker,
Principal Civil Engineer

**DECLARATION OF BRIAN M. INGALLINERA ON BEHALF OF THE CITY OF
BREA IN SUPPORT OF TEST CLAIM**

I, Brian M. Ingallinera, declare as follows:

1. I make this declaration based upon my own personal knowledge, except for matters set forth herein on information and belief, and as to those matters I believe them to be true, and if called upon to testify, I could and would competently testify to the matters set forth herein under oath.

2. I am employed by the City of Brea ("City") as Environmental Services Coordinator.

3. I have held my current position for five years. However, I have worked with the City for a total of ten consecutive years and being involved with the environmental regulations. My duties include managing the City's National Pollutant Discharge Elimination System (NPDES), water conservation program, and Fats, Oils and Grease (FOG) program. Prior to holding my current position as Environmental Services Coordinator, I served as an Assistant Engineer and managed the NPDES program along with Capital Improvement Projects.

4. I have reviewed California Regional Water Quality Control Board, Santa Ana Region ("RWQCB") Order No. R8-2009-0030, issued by the RWQCB on May 22, 2009 (the "Permit") and am familiar with the requirements of the Permit as it applies to the City. The City is a permittee under that Permit.

5. I have also reviewed and am familiar with the requirements of Order No. R8-2002-0010, issued by the RWQCB on January 18, 2002 ("2002 Permit"). The City was a permittee under the 2002 Permit.

6. Based on my understanding of the requirements of the 2002 Permit and the requirements of the Permit, I understand and believe and therefore state that the Permit requires the permittees, including the City, to perform the following new programs and/or enhanced levels of service that were not required by the 2002 Permit and which are unique to local governmental agencies:

(a) Municipal Inventories: Sections IX.1 and X of the Permit required each permittee, including the City, to maintain an inventory of industrial and commercial facilities/businesses within its jurisdiction, which must be maintained in a computer-based database system. Inclusion of a Geographical Information System (GIS) is required, with latitude/longitude (in decimals) or NAD83/WGS8439 compatible formatting. I am informed and believe and therefore state that during fiscal year (FY) 2009-10, the cost of this program for the City was \$8,572.50 and that during FY 2010-11, the cost for this program was \$4,905.50. I am further informed and believe and therefore state that the City first incurred costs for such requirements on or about July 1, 2009.

(b) Residential Program -- Common Interest Area (CIA)/Homeowner Association (HOA) Pilot Program: Subsection XI.4 of the Permit required the permittees, including the City, to develop a pilot program to control pollutant discharges from common interest areas and areas managed by HOAs or management companies. Program activities required to be funded include: Evaluation of applicable regional programs and studies to encourage efficient water use and to minimize runoff, such as those developed by the Municipal Water District of Orange County and the Irvine Ranch Water District, and development of a pilot program to include design and dissemination of educational and outreach materials, determination of baseline conditions and measurable target outcomes, and assessment of performance. The permittees, including the City,

retained a consultant to perform this mandated activity. Each permittee, including the City, paid a share of this cost. I am informed and believe and therefore state that the City's share of the cost for this activity in FY 2009-10 was \$88.68 and in FY 2010-11 the City's share was \$545.74. I am further informed and believe and therefore state that the City first incurred those costs when it was invoiced by the County of Orange ("County") on or about December 1, 2009 and that the City paid such invoice on or about December 14, 2009.

(c) Public Education and Outreach

(i) Public Awareness Survey: Subsection XIII.1 of the Permit required the permittees, including the City, to complete a public awareness survey to determine the effectiveness of the existing public and business education strategy and any need for changes to the existing multimedia public education efforts. The permittees, including the City, collectively retained a consultant to perform this mandated activity in FY 2009-10. I am informed and believe and therefore state that during FY 2009-10, the City's share of the costs for this activity were \$1,091.48. I am further informed and believe and therefore state that the City first incurred those costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about December 14, 2009.

(ii) Workshops: Subsection XIII.4 of the Permit required the permittees, including the City, to conduct sector-specific workshops, individually or on a regional basis, by July 1, 2010 and on an annual basis thereafter. The target sectors were manufacturing facilities; the mobile service industry; the commercial, distribution and retail sales industry; the residential/commercial landscape construction and services industry; the residential and commercial construction industry; and residential and community activities. The permittees, including the City, collectively retained staff from the County to assist with these mandated

activities. I am informed and believe and therefore state that the City's share of such costs in FY 2009-10 was \$170.54 and that the City's share of such costs in FY 2010-11 was \$88.68. I am further informed and believe and therefore state that the City first incurred those costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about December 14, 2009.

(iii) Public Participation: Subsection XIII.7 of the Permit required the permittees, including the City, to develop and implement a mechanism for public participation in the updating and implementation of Drainage Area Management Plans, monitoring plans, Water Quality Management Plan guidance and Fact Sheets for various activities. The public was required to be notified of the availability of these documents through public notices in local newspapers, County and/or city websites, local libraries/city halls and/or courthouses. The permittees, including the City, collectively retained County staff to assist with these mandated activities. I am informed and believe and therefore state that the City's share of such costs in FY 2009-10 was \$34.11 and that the City's share of such costs in FY 2010-11 was \$34.11. I am further informed and believe and therefore state that the City first incurred those costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about December 14, 2009.

(d) New/Revised Development Programs and Standards

(i) Low Impact Development (LID) and Model Water Quality Management Plan (WQMP): Subsection XII.C of the Permit required the permittees, including the City, to incorporate LID principals and structural features into public agency Priority Development Projects and in other instances to incorporate U.S. Environmental Protection Agency (EPA) Guidance entitled, "*Management Wet Weather with Green Infrastructure: Green Streets.*"

These include road, drainage facility, public utility, linear and other projects. The permittees, including the City, collectively retained a consultant team to assist with developing a public agency project element within the Model WQMP. I am informed and believe and therefore state that the City's share of the cost of this activity in FY 2009-10 was \$4,789.36 and that the City's share of the cost of this activity in FY 2010-11 was \$4,562.73. In addition, I am informed and believe and therefore state that City-specific costs to develop public agency WQMPs for road, drainage facility, public utility, linear, and other projects with the mandated incorporation of LID principals were \$1,088 in FY 2009-10 and \$1,786 in FY 2010-11. I am further informed and believe and therefore state that the City first incurred those costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about December 14, 2009.

(ii) Hydrologic Conditions of Concern (HCOC): Subsection XII.D of the Permit required the permittees, including the City, to address the impact of urbanization on downstream hydrology. Subsection XII.D.1 required each permittee Priority Development Project to ascertain the impact of the project on the site's hydrologic regime based on the two-year frequency storm event, and to include the findings in the WQMP for the project. The permittees, including the City, shared the cost of a hydromodification susceptibility analysis of north Orange County's surface water drainage systems. Hydromodification susceptibility maps were prepared and language added to the model WQMP and Technical Guidance Document. The draft map data were verified using mapping and photography and updated as needed. The draft map data were verified using mapping and photography and updated as needed. I am informed and believe and therefore state that the City's share of the cost of these activities in FY 2009-10 was \$5,463.98 and in FY 2010-11 the City's share of the costs was

\$18,575.39. I am informed and believe and therefore state that the City first incurred these costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about December 14, 2009.

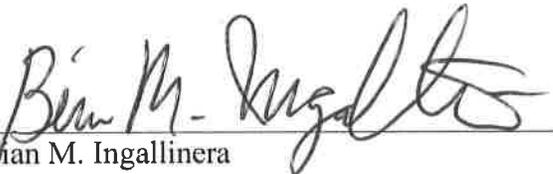

(e) Total Maximum Daily Loads (TMDLs): Section XVIII of the Permit contained a new program setting forth the implementation of various TMDLs. This TMDL program was not required under the 2002 Permit and was a new program under the Permit. Its requirements continued through the term of the Permit. The City was subject to the following requirement under this new program:

(i) Metals TMDL for Coyote Creek and San Gabriel River: Permit Subsection XVIII.B.9 required the development and implementation of a Constituent Specific Source Control Plan and a monitoring program in connection with a Metals TMDL for Coyote Creek and the San Gabriel River. The CSSCP was required to be designed and implemented to ensure compliance with specific numeric effluent limits taken from the wasteload allocations set forth in the TMDL, as set forth in Table 6 on page 73 of the Permit. While the cost of the CSSCP was not shared by the permittees, including the City, costs of the monitoring program, which was done on a cost-sharing basis, were shared by the City. I am informed and believe and therefore state that the estimated cost of the monitoring efforts during FY 2010-11 was approximately \$6,122 and that the cost during FY 2011-12 was \$6,165.92. I am informed and believe and therefore state that the City was first invoiced for these requirements by the County on December 23, 2010 and that the City paid such invoice on or about January 18, 2011.

7. As set forth above in this Declaration, the City first incurred costs under the Permit during FY 2009-10, which commenced on July 1, 2009.

8. I am informed and believe and therefore state that there are no dedicated state, federal or regional funds that were available to pay for any of these new programs/activities. I am not aware of any fee or tax which the City would have the discretion to impose under California law to cover any portion of the cost of these new programs/activities. I am further informed and believe and therefore state that the only available source of funds to pay for the costs set forth in this Declaration was the City's General Fund and Urban Runoff-NPDES Fund. I declare under penalty of perjury that the foregoing is true and correct.

Executed December 13, 2016 at Brea, California.

Brian M. Ingallinera
Environmental Services Coordinator

DECLARATION OF DAVID JACOBS ON BEHALF OF THE CITY OF BUENA PARK

IN SUPPORT OF TEST CLAIM

I, David Jacobs, declare as follows:

1. I make this declaration based upon my own personal knowledge, except for matters set forth herein on information and belief, and as to those matters I believe them to be true, and if called upon to testify, I could and would competently testify to the matters set forth herein under oath.

2. I am employed by the City of Buena Park ("City") as Director of Public Works.

3. I have held my current position for approximately ten months. My duties include managing the Public Works Department and I oversee divisional supervisors in the engineering, traffic, streets, utilities, government facilities, equipment maintenance, and environmental compliance divisions.

4. I have reviewed California Regional Water Quality Control Board, Santa Ana Region ("RWQCB") Order No. R8-2009-0030, issued by the RWQCB on May 22, 2009 (the "Permit") and am familiar with the requirements of the Permit as it applies to the City. The City is a permittee under that Permit.

5. I have also reviewed and am familiar with the requirements of Order No. R8-2002-0010, issued by the RWQCB on January 18, 2002 ("2002 Permit"). The City was a permittee under the 2002 Permit.

6. Based on my understanding of the requirements of the 2002 Permit and the requirements of the Permit, I understand and believe and therefore state that the Permit requires the permittees, including the City, to perform the following new programs and/or enhanced

levels of service that were not required by the 2002 Permit and which are unique to local governmental agencies:

(a) Municipal Inventories: Sections IX.1 and X of the Permit required each permittee, including the City, to maintain an inventory of industrial and commercial facilities/businesses within its jurisdiction, which must be maintained in a computer-based database system. Inclusion of a Geographical Information System (GIS) is required, with latitude/longitude (in decimals) or NAD83/WGS8439 compatible formatting. I am informed and believe and therefore state that during fiscal year (FY) 2009-10, the cost of this program for the City was \$196,500, and that during FY 2010-11, the cost for this program was \$45,500. I am further informed and believe and therefore state that the City first incurred costs for such requirements on or about July 1, 2009.

(b) Residential Program -- Common Interest Area (CIA)/Homeowner Association (HOA) Pilot Program: Subsection XI.4 of the Permit required the permittees, including the City, to develop a pilot program to control pollutant discharges from common interest areas and areas managed by HOAs or management companies. Program activities required to be funded include: Evaluation of applicable regional programs and studies to encourage efficient water use and to minimize runoff, such as those developed by the Municipal Water District of Orange County and the Irvine Ranch Water District, and development of a pilot program to include design and dissemination of educational and outreach materials, determination of baseline conditions and measurable target outcomes, and assessment of performance. The permittees, including the City, retained a consultant to perform this mandated activity. Each permittee, including the City, paid a share of this cost. I am informed and believe and therefore state that the City's share of the cost for this activity in FY 2009-10 was \$122.83 and in FY 2010-11 the City's share was

\$755.87. I am further informed and believe and therefore state that the City first incurred those costs when it was invoiced by the County of Orange ("County") on or about December 1, 2009 and that the City paid such invoice on or about December 24, 2009.

(c) Public Education and Outreach

(i) Public Awareness Survey: Subsection XIII.1 of the Permit required the permittees, including the City, to complete a public awareness survey to determine the effectiveness of the existing public and business education strategy and any need for changes to the existing multimedia public education efforts. The permittees, including the City, collectively retained a consultant to perform this mandated activity in FY 2009-10. I am informed and believe and therefore state that during FY 2009-10, the City's share of the costs for this activity were \$1,511.74. I am further informed and believe and therefore state that the City first incurred those costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about December 24, 2009.

(ii) Workshops: Subsection XIII.4 of the Permit required the permittees, including the City, to conduct sector-specific workshops, individually or on a regional basis, by July 1, 2010 and on an annual basis thereafter. The target sectors were manufacturing facilities; the mobile service industry; the commercial, distribution and retail sales industry; the residential/commercial landscape construction and services industry; the residential and commercial construction industry; and residential and community activities. The permittees, including the City, collectively retained staff from the County to assist with these mandated activities. I am informed and believe and therefore state that the City's share of such costs in FY 2009-10 was \$236.21 and that the City's share of such costs in FY 2010-11 was \$122.83. I am further informed and believe and therefore state that the City first incurred those costs when it

was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about December 24, 2009.

(iii) Public Participation: Subsection XIII.7 of the Permit required the permittees, including the City, to develop and implement a mechanism for public participation in the updating and implementation of Drainage Area Management Plans, monitoring plans, Water Quality Management Plan guidance and Fact Sheets for various activities. The public was required to be notified of the availability of these documents through public notices in local newspapers, County and/or city websites, local libraries/city halls and/or courthouses. The permittees, including the City, collectively retained County staff to assist with these mandated activities. I am informed and believe and therefore state that the City's share of such costs in FY 2009-10 was \$47.24 and that the City's share of such costs in FY 2010-11 was \$47.24. I am further informed and believe and therefore state that the City first incurred those costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about December 24, 2009.

(d) New/Revised Development Programs and Standards

(i) Low Impact Development (LID) and Model Water Quality Management Plan (WQMP): Subsection XII.C of the Permit required the permittees, including the City, to incorporate LID principals and structural features into public agency Priority Development Projects and in other instances to incorporate U.S. Environmental Protection Agency (EPA) Guidance entitled, "*Management Wet Weather with Green Infrastructure: Green Streets.*" These include road, drainage facility, public utility, linear and other projects. The permittees, including the City, collectively retained a consultant team to assist with developing a public agency project element within the Model WQMP. I am informed and believe and therefore state

that the City's share of the cost of this activity in FY 2009-10 was \$6,633.44 and that the City's share of the cost of this activity in FY 2010-11 was \$6,319.54. In addition, I am informed and believe and therefore state that City-specific costs to develop public agency WQMPs for road, drainage facility, public utility, linear, and other projects with the mandated incorporation of LID principals were approximately \$15,000 in FY 2009-10 and approximately \$360,000 in FY 2010-11. I am further informed and believe and therefore state that the City first incurred those costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about December 24, 2009.

(ii) Hydrologic Conditions of Concern (HCOC): Subsection XII.D of the Permit required the permittees, including the City, to address the impact of urbanization on downstream hydrology. Subsection XII.D.1 required each permittee Priority Development Project to ascertain the impact of the project on the site's hydrologic regime based on the two-year frequency storm event, and to include the findings in the WQMP for the project. The permittees, including the City, shared the cost of a hydromodification susceptibility analysis of north Orange County's surface water drainage systems. Hydromodification susceptibility maps were prepared and language added to the model WQMP and Technical Guidance Document. The draft map data were verified using mapping and photography and updated as needed. The draft map data were verified using mapping and photography and updated as needed. I am informed and believe and therefore state that the City's share of the cost of these activities in FY 2009-10 was \$900.47 and in FY 2010-11 the City's share of the costs was \$3,061.25. I am informed and believe and therefore state that the City first incurred these costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about December 24, 2009.

(e) Total Maximum Daily Loads (TMDLs): Section XVIII of the Permit contained a new program setting forth the implementation of various TMDLs. This TMDL program was not required under the 2002 Permit and was a new program under the Permit. Its requirements continued through the term of the Permit. The City was subject to the following requirement under this new program:

(i) Metals TMDL for Coyote Creek and San Gabriel River: Permit Subsection XVIII.B.9 required the development and implementation of a Constituent Specific Source Control Plan and a monitoring program in connection with a Metals TMDL for Coyote Creek and the San Gabriel River. The CSSCP was required to be designed and implemented to ensure compliance with specific numeric effluent limits taken from the wasteload allocations set forth in the TMDL, as set forth in Table 6 on page 73 of the Permit. While the cost of the CSSCP was not shared by the permittees, including the City, costs of the monitoring program, which was done on a cost-sharing basis, were shared by the City. I am informed and believe and therefore state that the estimated cost of the monitoring efforts during FY 2010-11 was approximately \$10,534 and that the cost during FY 2011-12 was \$10,610.58. I am informed and believe and therefore state that the City was first invoiced for these requirements by the County on December 23, 2010 and that the City paid such invoice on or about January 24, 2011.

7. As set forth above in this Declaration, the City first incurred costs under the Permit during FY 2009-10, which commenced on July 1, 2009.

8. I am informed and believe and therefore state that there are no dedicated state, federal or regional funds that were available to pay for any of these new programs/activities. I am not aware of any fee or tax which the City would have the discretion to impose under California law to cover any portion of the cost of these new programs/activities. I am further

informed and believe and therefore state that the only available source of funds to pay for the costs set forth in this Declaration was the City's General Fund and Water Enterprise Fund.

I declare under penalty of perjury that the foregoing is true and correct.

Executed December 14, 2016 at Buena Park, California.

David Jacobs, Director of Public Works

DECLARATION OF BALTAZAR MEJIA ON BEHALF OF THE CITY OF COSTA

MESA IN SUPPORT OF TEST CLAIM

I, Baltazar Mejia, declare as follows:

1. I make this declaration based upon my own personal knowledge, except for matters set forth herein on information and belief, and as to those matters I believe them to be true, and if called upon to testify, I could and would competently testify to the matters set forth herein under oath.

2. I am employed by the City of Costa Mesa ("City") as City Engineer.

3. I have held my current position for approximately 6 months. My duties include overseeing the City's stormwater program as it relates to capital improvement projects, new development and other activities of the Engineering Division.

4. I have reviewed California Regional Water Quality Control Board, Santa Ana Region ("RWQCB") Order No. R8-2009-0030, issued by the RWQCB on May 22, 2009 (the "Permit") and am familiar with the requirements of the Permit as it applies to the City. The City is a permittee under that Permit.

5. I have also reviewed and am familiar with the requirements of Order No. R8-2002-0010, issued by the RWQCB on January 18, 2002 ("2002 Permit"). The City was a permittee under the 2002 Permit.

6. Based on my understanding of the requirements of the 2002 Permit and the requirements of the Permit, I understand and believe and therefore state that the Permit requires the permittees, including the City, to perform the following new programs and/or enhanced levels of service that were not required by the 2002 Permit and which are unique to local governmental agencies:

(a) Municipal Inventories: Sections IX.1 and X of the Permit required each permittee, including the City, to maintain an inventory of industrial and commercial facilities/businesses within its jurisdiction, which must be maintained in a computer-based database system. Inclusion of a Geographical Information System (GIS) is required, with latitude/longitude (in decimals) or NAD83/WGS8439 compatible formatting. I am informed and believe and therefore state that during fiscal year (FY) 2009-10, the cost of this program for the City was \$16,494 and that during FY 2010-11, the cost for this program was \$17,557. I am further informed and believe and therefore state that the City first incurred costs for such requirements on or about July 1, 2009.

(b) Residential Program -- Common Interest Area (CIA)/Homeowner Association (HOA) Pilot Program: Subsection XI.4 of the Permit required the permittees, including the City, to develop a pilot program to control pollutant discharges from common interest areas and areas managed by HOAs or management companies. Program activities required to be funded include: Evaluation of applicable regional programs and studies to encourage efficient water use and to minimize runoff, such as those developed by the Municipal Water District of Orange County and the Irvine Ranch Water District, and development of a pilot program to include design and dissemination of educational and outreach materials, determination of baseline conditions and measurable target outcomes, and assessment of performance. The permittees, including the City, retained a consultant to perform this mandated activity. Each permittee, including the City, paid a share of this cost. I am informed and believe and therefore state that the City's share of the cost for this activity in FY 2009-10 was \$176.25 and in FY 2010-11 the City's share was \$1,084.63. I am further informed and believe and therefore state that the City first incurred those

costs when it was invoiced by the County of Orange ("County") on or about December 1, 2009 and that the City paid such invoice on or about December 28, 2009.

(c) Public Education and Outreach

(i) Public Awareness Survey: Subsection XIII.1 of the Permit required the permittees, including the City, to complete a public awareness survey to determine the effectiveness of the existing public and business education strategy and any need for changes to the existing multimedia public education efforts. The permittees, including the City, collectively retained a consultant to perform this mandated activity in FY 2009-10. I am informed and believe and therefore state that during FY 2009-10, the City's share of the costs for this activity were \$2,169.26. I am further informed and believe and therefore state that the City first incurred those costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about December 28, 2009.

(ii) Workshops: Subsection XIII.4 of the Permit required the permittees, including the City, to conduct sector-specific workshops, individually or on a regional basis, by July 1, 2010 and on an annual basis thereafter. The target sectors were manufacturing facilities; the mobile service industry; the commercial, distribution and retail sales industry; the residential/commercial landscape construction and services industry; the residential and commercial construction industry; and residential and community activities. The permittees, including the City, collectively retained staff from the County to assist with these mandated activities. I am informed and believe and therefore state that the City's share of such costs in FY 2009-10 was \$338.95 and that the City's share of such costs in FY 2010-11 was \$176.25. I am further informed and believe and therefore state that the City first incurred those costs when it

was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about December 28, 2009.

(iii) Public Participation: Subsection XIII.7 of the Permit required the permittees, including the City, to develop and implement a mechanism for public participation in the updating and implementation of Drainage Area Management Plans, monitoring plans, Water Quality Management Plan guidance and Fact Sheets for various activities. The public was required to be notified of the availability of these documents through public notices in local newspapers, County and/or city websites, local libraries/city halls and/or courthouses. The permittees, including the City, collectively retained County staff to assist with these mandated activities. I am informed and believe and therefore state that the City's share of such costs in FY 2009-10 was \$67.79 and that the City's share of such costs in FY 2010-11 was \$67.79. I am further informed and believe and therefore state that the City first incurred those costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about December 28, 2009.

(d) New/Revised Development Programs and Standards

(i) Low Impact Development (LID) and Model Water Quality Management Plan (WQMP): Subsection XII.C of the Permit required the permittees, including the City, to incorporate LID principals and structural features into public agency Priority Development Projects and in other instances to incorporate U.S. Environmental Protection Agency (EPA) Guidance entitled, "*Management Wet Weather with Green Infrastructure: Green Streets.*" These include road, drainage facility, public utility, linear and other projects. The permittees, including the City, collectively retained a consultant team to assist with developing a public agency project element within the Model WQMP. I am informed and believe and therefore state

that the City's share of the cost of this activity in FY 2009-10 was \$9,518.60 and that the City's share of the cost of this activity in FY 2010-11 was \$9,068.18. In addition, I am informed and believe and therefore state that City-specific costs to develop public agency WQMPs for road, drainage facility, public utility, linear, and other projects with the mandated incorporation of LID principals were \$4,229 in FY 2009-10 and \$34,755 in FY 2010-11. I am further informed and believe and therefore state that the City first incurred those costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about December 28, 2009.

(ii) Hydrologic Conditions of Concern (HCOC): Subsection XII.D of the Permit required the permittees, including the City, to address the impact of urbanization on downstream hydrology. Subsection XII.D.1 required each permittee Priority Development Project to ascertain the impact of the project on the site's hydrologic regime based on the two-year frequency storm event, and to include the findings in the WQMP for the project. The permittees, including the City, shared the cost of a hydromodification susceptibility analysis of north Orange County's surface water drainage systems. Hydromodification susceptibility maps were prepared and language added to the model WQMP and Technical Guidance Document. The draft map data were verified using mapping and photography and updated as needed. The draft map data were verified using mapping and photography and updated as needed. I am informed and believe and therefore state that the City's share of the cost of these activities in FY 2009-10 was \$1,247.17 and in FY 2010-11 the City's share of the costs was \$4,239.94. I am informed and believe and therefore state that the City first incurred these costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about December 28, 2009.

(e) Total Maximum Daily Loads (TMDLs): Section XVIII of the Permit contained a new program setting forth the implementation of various TMDLs. This TMDL program was not required under the 2002 Permit and was a new program under the Permit. Its requirements continued through the term of the Permit. The City was subject to the following requirements under this new program:

(i) Permit Subsections XVIII.B.1 through B.4 required various permittees, including the City, to comply with a series of new numeric effluent limits based on waste load allocations within the EPA-Promulgated Toxic Pollutant TMDLs for San Diego Creek and Newport Bay. These new program requirements all involved the imposition of numeric effluent limits from waste load allocations from these TMDLs, as set forth in Tables 1 A/B/C, Table 2 A/B/C/D/ and Table 3 on pages 68 to 71 of the Permit.

(ii) Permit Subsection XVIII.B.5 imposed new TMDL-related requirements applicable to various permittees, including the City, that would take effect upon adoption by the State Water Resources Control Board and the Office of Administration Law ("OAL"), and concerned compliance with numeric limits taken from wasteload allocations in the TMDLs for Organochlorine Compounds for Newport Bay and San Diego Creek (as set forth in Table 4 on page 71 of the Permit).

(iii) Permit Subsection XVIII.B.7 imposed new requirements on various permittees, including the City, to participate in the development and implementation of additional Metals and Selenium TMDLs for the Newport Bay Watershed being developed by the RWQCB.

(iv) Permit Subsection XVIII.B.8 required certain permittees, including the City, to prepare a Cooperative Watershed Program for the Selenium TMDL for the Newport Bay

Watershed. This Program was required to be submitted within 24 months of the date of adoption of the Permit or one month after the approval of the TMDL by the OAL. In addition, this subsection required certain permittees, including the City, to implement the Program once it was approved.

(v) Permit Subsection XVIII.C.1 imposed on certain permittees, including the City, new numeric effluent limits based on wasteload allocations from a Fecal Coliform/Bacteria TMDL for Newport Bay and San Diego Creek, as set forth in Tables 8A and 8B on pages 74-75 of the Permit.

(vi) Permit Subsection XVIII.D.1 required various permittees, including the City, to comply with new numeric effluent limits from waste load allocations from a TMDL for Diazinon and Chlorpyrifos for San Diego Creek and Chlorpyrifos for Newport Bay, as set forth in Tables 9A and 9B on page 76 of the Permit.

The permittees, including the City, subject to such requirements participated in a cost-sharing program administered by the County of Orange, whereunder costs associated with the above-referenced TMDL requirements were shared among those permittees. I am informed and believe and therefore state that the costs for the above-referenced requirements allocated to the City in FY 2009-10 was \$53,228.99 and in FY 2010-11, \$51,376.89. I am further informed and believe and therefore state that the City first incurred costs for these requirements when it received an invoice from the County on or about February 9, 2010 and that the City paid the invoice on or about March 8, 2010.

7. As set forth above in this Declaration, the City first incurred costs under the Permit during FY 2009-10, which commenced on July 1, 2009.

8. I am informed and believe and therefore state that there are no dedicated state, federal or regional funds that were available to pay for any of these new programs/activities. I am not aware of any fee or tax which the City would have the discretion to impose under California law to cover any portion of the cost of these new programs/activities. I am further informed and believe and therefore state that the only available source of funds to pay for the costs set forth in this Declaration was the City's General Fund.

I declare under penalty of perjury that the foregoing is true and correct.

Executed December 16, 2016 at Costa Mesa, California.

**DECLARATION OF GONZALO VAZQUEZ ON BEHALF OF THE CITY OF
CYPRESS IN SUPPORT OF TEST CLAIM**

I, Gonzalo Vazquez, declare as follows:

1. I make this declaration based upon my own personal knowledge, except for matters set forth herein on information and belief, and as to those matters I believe them to be true, and if called upon to testify, I could and would competently testify to the matters set forth herein under oath.

2. I am employed by the City of Cypress (“City”) as the Water Quality Manager.

3. I have held my current position for approximately 27 years. My duties include managing the stormwater program and overseeing staff in the Environmental Division.

4. I have reviewed California Regional Water Quality Control Board, Santa Ana Region (“RWQCB”) Order No. R8-2009-0030, issued by the RWQCB on May 22, 2009 (the “Permit”) and am familiar with the requirements of the Permit as it applies to the City. The City is a permittee under that Permit.

5. I have also reviewed and am familiar with the requirements of Order No. R8-2002-0010, issued by the RWQCB on January 18, 2002 (“2002 Permit”). The City was a permittee under the 2002 Permit.

6. Based on my understanding of the requirements of the 2002 Permit and the requirements of the Permit, I understand and believe and therefore state that the Permit requires the permittees, including the City, to perform the following new programs and/or enhanced levels of service that were not required by the 2002 Permit and which are unique to local governmental agencies:

(a) Municipal Inventories: Sections IX.1 and X of the Permit required each permittee, including the City, to maintain an inventory of industrial and commercial facilities/businesses within its jurisdiction, which must be maintained in a computer-based database system. Inclusion of a Geographical Information System (GIS) is required, with latitude/longitude (in decimals) or NAD83/WGS8439 compatible formatting. I am informed and believe and therefore state that during fiscal year (FY) 2009-10, the cost of this program for the City was \$14,024 and that during FY 2010-11, the cost for this program was \$15,527. I am further informed and believe and therefore state that the City first incurred costs for such requirements on or about July 1, 2009.

(b) Residential Program -- Common Interest Area (CIA)/Homeowner Association (HOA) Pilot Program: Subsection XI.4 of the Permit required the permittees, including the City, to develop a pilot program to control pollutant discharges from common interest areas and areas managed by HOAs or management companies. Program activities required to be funded include: Evaluation of applicable regional programs and studies to encourage efficient water use and to minimize runoff, such as those developed by the Municipal Water District of Orange County and the Irvine Ranch Water District, and development of a pilot program to include design and dissemination of educational and outreach materials, determination of baseline conditions and measurable target outcomes, and assessment of performance. The permittees, including the City, retained a consultant to perform this mandated activity. Each permittee, including the City, paid a share of this cost. I am informed and believe and therefore state that the City's share of the cost for this activity in FY 2009-10 was \$74.49 and in FY 2010-11 the City's share was \$458.43. I am further informed and believe and therefore state that the City first incurred those costs when

it was invoiced by the County of Orange (“County”) on or about December 1, 2009 and that the City paid such invoice on or about December 14, 2009.

(c) Public Education and Outreach

(i) Public Awareness Survey: Subsection XIII.1 of the Permit required the permittees, including the City, to complete a public awareness survey to determine the effectiveness of the existing public and business education strategy and any need for changes to the existing multimedia public education efforts. The permittees, including the City, collectively retained a consultant to perform this mandated activity in FY 2009-10. I am informed and believe and therefore state that during FY 2009-10, the City’s share of the costs for this activity were \$916.85. I am further informed and believe and therefore state that the City first incurred those costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about December 14, 2009.

(ii) Workshops: Subsection XIII.4 of the Permit required the permittees, including the City, to conduct sector-specific workshops, individually or on a regional basis, by July 1, 2010 and on an annual basis thereafter. The target sectors were manufacturing facilities; the mobile service industry; the commercial, distribution and retail sales industry; the residential/commercial landscape construction and services industry; the residential and commercial construction industry; and residential and community activities. The permittees, including the City, collectively retained staff from the County to assist with these mandated activities. I am informed and believe and therefore state that the City’s share of such costs in FY 2009-10 was \$143.26 and that the City’s share of such costs in FY 2010-11 was \$74.49. I am further informed and believe and therefore state that the City first incurred those costs when it

was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about December 14, 2009.

(iii) **Public Participation:** Subsection XIII.7 of the Permit required the permittees, including the City, to develop and implement a mechanism for public participation in the updating and implementation of Drainage Area Management Plans, monitoring plans, Water Quality Management Plan guidance and Fact Sheets for various activities. The public was required to be notified of the availability of these documents through public notices in local newspapers, County and/or city websites, local libraries/city halls and/or courthouses. The permittees, including the City, collectively retained County staff to assist with these mandated activities. I am informed and believe and therefore state that the City's share of such costs in FY 2009-10 was \$28.65 and that the City's share of such costs in FY 2010-11 was \$28.65. I am further informed and believe and therefore state that the City first incurred those costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about December 14, 2009.

(iv) **Additional City Costs:** In addition to the City's share of costs incurred by all permittees, the City incurred additional costs for Public Education and Outreach of \$1,421 in FY 2009-10 and \$2,991 in FY 2010-11. I am informed and believe and therefore state that the City first incurred such costs on or about July 1, 2009.

(d) **New/Revised Development Programs and Standards**

(i) **Low Impact Development (LID) and Model Water Quality Management Plan (WQMP):** Subsection XII.C of the Permit required the permittees, including the City, to incorporate LID principals and structural features into public agency Priority Development Projects and in other instances to incorporate U.S. Environmental Protection Agency (EPA)

Guidance entitled, “*Management Wet Weather with Green Infrastructure: Green Streets.*”

These include road, drainage facility, public utility, linear and other projects. The permittees, including the City, collectively retained a consultant team to assist with developing a public agency project element within the Model WQMP. I am informed and believe and therefore state that the City’s share of the cost of this activity in FY 2009-10 was \$4,023.11 and that the City’s share of the cost of this activity in FY 2010-11 was \$3,832.74. In addition, I am informed and believe and therefore state that City-specific costs to develop public agency WQMPs for road, drainage facility, public utility, linear, and other projects with the mandated incorporation of LID principals were \$12,823 in FY 2009-10 and \$21,141 in FY 2010-11. I am further informed and believe and therefore state that the City first incurred those costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about December 14, 2009. I am informed and believe and therefore state that the City first incurred such City specific costs on or about July 1, 2009.

(ii) Hydrologic Conditions of Concern (HCOC): Subsection XII.D of the Permit required the permittees, including the City, to address the impact of urbanization on downstream hydrology. Subsection XII.D.1 required each permittee Priority Development Project to ascertain the impact of the project on the site’s hydrologic regime based on the two-year frequency storm event, and to include the findings in the WQMP for the project. The permittees, including the City, shared the cost of a hydromodification susceptibility analysis of north Orange County’s surface water drainage systems. Hydromodification susceptibility maps were prepared and language added to the model WQMP and Technical Guidance Document. The draft map data were verified using mapping and photography and updated as needed. The draft map data were verified using mapping and photography and updated as

needed. I am informed and believe and therefore state that the City's share of the cost of these activities in FY 2009-10 was \$1,789.64 and in FY 2010-11 the City's share of the costs was \$6,084.07. I am informed and believe and therefore state that the City first incurred these costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about December 14, 2009.

(e) Total Maximum Daily Loads (TMDLs): Section XVIII of the Permit contained a new program setting forth the implementation of various TMDLs. This TMDL program was not required under the 2002 Permit and was a new program under the Permit. Its requirements continued through the term of the Permit. The City was subject to the following requirement under this new program:

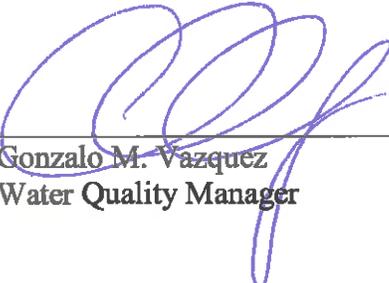

(i) Metals TMDL for Coyote Creek and San Gabriel River: Permit Subsection XVIII.B.9 required the development and implementation of a Constituent Specific Source Control Plan and a monitoring program in connection with a Metals TMDL for Coyote Creek and the San Gabriel River. The CSSCP was required to be designed and implemented to ensure compliance with specific numeric effluent limits taken from the wasteload allocations set forth in the TMDL, as set forth in Table 6 on page 73 of the Permit. While the cost of the CSSCP was not shared by the permittees, including the City, costs of the monitoring program, which was done on a cost-sharing basis, were shared by the City. I am informed and believe and therefore state that the estimated cost of the monitoring efforts during FY 2010-11 was approximately \$4,666 and that the cost during FY 2011-12 was \$4,699.57. I am informed and believe and therefore state that the City was first invoiced for these requirements by the County on December 23, 2010 and that the City paid such invoice on or about January 24, 2011.

7. As set forth above in this Declaration, the City first incurred costs under the Permit during FY 2009-10, which commenced on July 1, 2009.

8. I am informed and believe and therefore state that there are no dedicated state, federal or regional funds that were available to pay for any of these new programs/activities. I am not aware of any fee or tax which the City would have the discretion to impose under California law to cover any portion of the cost of these new programs/activities. I am further informed and believe and therefore state that the only available source of funds to pay for the costs set forth in this Declaration was the City's General Fund.

I declare under penalty of perjury that the foregoing is true and correct.

Gonzalo M. Vazquez
Water Quality Manager

**DECLARATION OF STEVEN M. HAUERWAAS ON BEHALF OF THE CITY OF
FOUNTAIN VALLEY IN SUPPORT OF TEST CLAIM**

I, Steven M. Hauerwaas, declare as follows:

1. I make this declaration based upon my own personal knowledge, except for matters set forth herein on information and belief, and as to those matters I believe them to be true, and if called upon to testify, I could and would competently testify to the matters set forth herein under oath.

2. I am employed by the City of Fountain Valley ("City") as Environmental Services Administrator.

3. I have held my current position for approximately 16 years. My duties include managing the City of Fountain Valley's Stormwater Pollution Prevention Program and other environmental compliance programs.

4. I have reviewed California Regional Water Quality Control Board, Santa Ana Region ("RWQCB") Order No. R8-2009-0030, issued by the RWQCB on May 22, 2009 (the "Permit") and am familiar with the requirements of the Permit as it applies to the City. The City is a permittee under that Permit.

5. I have also reviewed and am familiar with the requirements of Order No. R8-2002-0010, issued by the RWQCB on January 18, 2002 ("2002 Permit"). The City was a permittee under the 2002 Permit.

6. Based on my understanding of the requirements of the 2002 Permit and the requirements of the Permit, I understand and believe and therefore state that the Permit requires the permittees, including the City, to perform the following new programs and/or enhanced

levels of service that were not required by the 2002 Permit and which are unique to local governmental agencies:

(a) Municipal Inventories: Sections IX.1 and X of the Permit required each permittee, including the City, to maintain an inventory of industrial and commercial facilities/businesses within its jurisdiction, which must be maintained in a computer-based database system. Inclusion of a Geographical Information System (GIS) is required, with latitude/longitude (in decimals) or NAD83/WGS8439 compatible formatting. I am informed and believe and therefore state that during fiscal year (FY) 2009-10, the cost of this program for the City was \$2,400 and that during FY 2010-11, the cost for this program was \$2,400. I am further informed and believe and therefore state that the City first incurred costs for such requirements on or about December 1, 2009.

(b) Residential Program -- Common Interest Area (CIA)/Homeowner Association (HOA) Pilot Program: Subsection XI.4 of the Permit required the permittees, including the City, to develop a pilot program to control pollutant discharges from common interest areas and areas managed by HOAs or management companies. Program activities required to be funded include: Evaluation of applicable regional programs and studies to encourage efficient water use and to minimize runoff, such as those developed by the Municipal Water District of Orange County and the Irvine Ranch Water District, and development of a pilot program to include design and dissemination of educational and outreach materials, determination of baseline conditions and measurable target outcomes, and assessment of performance. The permittees, including the City, retained a consultant to perform this mandated activity. Each permittee, including the City, paid a share of this cost. I am informed and believe and therefore state that the City's share of the cost for this activity in FY 2009-10 was \$93.05 and in FY 2010-11 the City's share was \$572.59.

I am further informed and believe and therefore state that the City first incurred those costs when it was invoiced by the County of Orange ("County") on or about December 1, 2009 and that the City paid such invoice on or about December 23, 2009.

(c) Public Education and Outreach

(i) Public Awareness Survey: Subsection XIII.1 of the Permit required the permittees, including the City, to complete a public awareness survey to determine the effectiveness of the existing public and business education strategy and any need for changes to the existing multimedia public education efforts. The permittees, including the City, collectively retained a consultant to perform this mandated activity in FY 2009-10. I am informed and believe and therefore state that during FY 2009-10, the City's share of the costs for this activity was \$1,145.18. I am further informed and believe and therefore state that the City first incurred those costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about December 23, 2009.

(ii) Workshops: Subsection XIII.4 of the Permit required the permittees, including the City, to conduct sector-specific workshops, individually or on a regional basis, by July 1, 2010 and on an annual basis thereafter. The target sectors were manufacturing facilities; the mobile service industry; the commercial, distribution and retail sales industry; the residential/commercial landscape construction and services industry; the residential and commercial construction industry; and residential and community activities. The permittees, including the City, collectively retained staff from the County to assist with these mandated activities. I am informed and believe and therefore state that the City's share of such costs in FY 2009-10 was \$178.93 and that the City's share of such costs in FY 2010-11 was \$93.05. I am further informed and believe and therefore state that the City first incurred those costs when it

was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about December 23, 2009.

(iii) Public Participation: Subsection XIII.7 of the Permit required the permittees, including the City, to develop and implement a mechanism for public participation in the updating and implementation of Drainage Area Management Plans, monitoring plans, Water Quality Management Plan guidance and Fact Sheets for various activities. The public was required to be notified of the availability of these documents through public notices in local newspapers, County and/or city websites, local libraries/city halls and/or courthouses. The permittees, including the City, collectively retained County staff to assist with these mandated activities. I am informed and believe and therefore state that the City's share of such costs in FY 2009-10 was \$35.79 and that the City's share of such costs in FY 2010-11 was \$35.79. I am further informed and believe and therefore state that the City first incurred those costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about December 23, 2009.

(d) New/Revised Development Programs and Standards

(i) Low Impact Development (LID) and Model Water Quality Management Plan (WQMP): Subsection XII.C of the Permit required the permittees, including the City, to incorporate LID principals and structural features into public agency Priority Development Projects and in other instances to incorporate U.S. Environmental Protection Agency (EPA) Guidance entitled, "*Management Wet Weather with Green Infrastructure: Green Streets.*" These include road, drainage facility, public utility, linear and other projects. The permittees, including the City, collectively retained a consultant team to assist with developing a public agency project element within the Model WQMP. I am informed and believe and therefore state

that the City's share of the cost of this activity in FY 2009-10 was \$5,025.00 and that the City's share of the cost of this activity in FY 2010-11 was \$4,787.22. I am further informed and believe and therefore state that the City first incurred those costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about December 23, 2009.

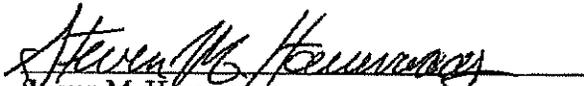

(ii) Hydrologic Conditions of Concern (HCOC): Subsection XII.D of the Permit required the permittees, including the City, to address the impact of urbanization on downstream hydrology. Subsection XII.D.1 required each permittee Priority Development Project to ascertain the impact of the project on the site's hydrologic regime based on the two-year frequency storm event, and to include the findings in the WQMP for the project. The permittees, including the City, shared the cost of a hydromodification susceptibility analysis of north Orange County's surface water drainage systems. Hydromodification susceptibility maps were prepared and language added to the model WQMP and Technical Guidance Document. The draft map data were verified using mapping and photography and updated as needed. The draft map data were verified using mapping and photography and updated as needed. I am informed and believe and therefore state that the City's share of the cost of these activities in FY 2009-10 was \$756.41 and in FY 2010-11 the City's share of the costs was \$2,571.48. I am informed and believe and therefore state that the City first incurred these costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about December 23, 2009.

7. As set forth above in this Declaration, the City first incurred costs under the Permit during FY 2009-10, which commenced on July 1, 2009.

8. I am informed and believe and therefore state that there are no dedicated state, federal or regional funds that were available to pay for any of these new programs/activities. I am not aware of any fee or tax which the City would have the discretion to impose under California law to cover any portion of the cost of these new programs/activities. I am further informed and believe and therefore state that the only available source of funds to pay for the costs set forth in this Declaration was the City's General Fund.

I declare under penalty of perjury that the foregoing is true and correct.

Environmental Services Administrator
City of Fountain Valley

**DECLARATION OF TRUNG CHANH PHAN ON BEHALF OF THE CITY OF
FULLERTON IN SUPPORT OF TEST CLAIM**

I, Trung Chanh Phan, declare as follows:

1. I make this declaration based upon my own personal knowledge, except for matters set forth herein on information and belief, and as to those matters I believe them to be true, and if called upon to testify, I could and would competently testify to the matters set forth herein under oath.

2. I am employed by the City of Fullerton ("City") as Public Works Analyst/Stormwater/Wastewater Compliance Specialist.

3. I have held my current position for approximately eight (8) years. My duties include overseeing the City's stormwater and related environmental programs as they affect the public works, private development, and capital improvements.

4. I have reviewed California Regional Water Quality Control Board, Santa Ana Region ("RWQCB") Order No. R8-2009-0030, issued by the RWQCB on May 22, 2009 (the "Permit") and am familiar with the requirements of the Permit as it applies to the City. The City is a permittee under that Permit.

5. I have also reviewed and am familiar with the requirements of Order No. R8-2002-0010, issued by the RWQCB on January 18, 2002 ("2002 Permit"). The City was a permittee under the 2002 Permit.

6. Based on my understanding of the requirements of the 2002 Permit and the requirements of the Permit, I understand and believe and therefore state that the Permit requires the permittees, including the City, to perform the following new programs and/or enhanced

levels of service that were not required by the 2002 Permit and which are unique to local governmental agencies:

(a) Municipal Inventories: Sections IX.1 and X of the Permit required each permittee, including the City, to maintain an inventory of industrial and commercial facilities/businesses within its jurisdiction, which must be maintained in a computer-based database system. Inclusion of a Geographical Information System (GIS) is required, with latitude/longitude (in decimals) or NAD83/WGS8439 compatible formatting. I am informed and believe and therefore state that during fiscal year (FY) 2009-10, the approximate cost of this program for the City was over \$40,000 and that during FY 2010-11, the cost for this program was approximately over \$40,000. I am further informed and believe and therefore state that the City first incurred costs for such requirements on or about July 1, 2009.

(b) Residential Program -- Common Interest Area (CIA)/Homeowner Association (HOA) Pilot Program: Subsection XI.4 of the Permit required the permittees, including the City, to develop a pilot program to control pollutant discharges from common interest areas and areas managed by HOAs or management companies. Program activities required to be funded include: Evaluation of applicable regional programs and studies to encourage efficient water use and to minimize runoff, such as those developed by the Municipal Water District of Orange County and the Irvine Ranch Water District, and development of a pilot program to include design and dissemination of educational and outreach materials, determination of baseline conditions and measurable target outcomes, and assessment of performance. The permittees, including the City, retained a consultant to perform this mandated activity. Each permittee, including the City, paid a share of this cost. I am informed and believe and therefore state that the City's share of the cost for this activity in FY 2009-10 was \$223.72 and in FY 2010-11 the City's share was

\$1,376.72. I am further informed and believe and therefore state that the City first incurred those costs when it was invoiced by the County of Orange (“County”) on or about December 1, 2009 and that the City paid such invoice on or about February 5, 2010.

(c) Public Education and Outreach

(i) Public Awareness Survey: Subsection XIII.1 of the Permit required the permittees, including the City, to complete a public awareness survey to determine the effectiveness of the existing public and business education strategy and any need for changes to the existing multimedia public education efforts. The permittees, including the City, collectively retained a consultant to perform this mandated activity in FY 2009-10. I am informed and believe and therefore state that during FY 2009-10, the City’s share of the costs for this activity were \$2,753.45. I am further informed and believe and therefore state that the City first incurred those costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about February 5, 2010.

(ii) Workshops: Subsection XIII.4 of the Permit required the permittees, including the City, to conduct sector-specific workshops, individually or on a regional basis, by July 1, 2010 and on an annual basis thereafter. The target sectors were manufacturing facilities; the mobile service industry; the commercial, distribution and retail sales industry; the residential/commercial landscape construction and services industry; the residential and commercial construction industry; and residential and community activities. The permittees, including the City, collectively retained staff from the County to assist with these mandated activities. I am informed and believe and therefore state that the City’s share of such costs in FY 2009-10 was \$430.23 and that the City’s share of such costs in FY 2010-11 was \$223.72. I am further informed and believe and therefore state that the City first incurred those costs when it

was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about February 5, 2010.

(iii) Public Participation: Subsection XIII.7 of the Permit required the permittees, including the City, to develop and implement a mechanism for public participation in the updating and implementation of Drainage Area Management Plans, monitoring plans, Water Quality Management Plan guidance and Fact Sheets for various activities. The public was required to be notified of the availability of these documents through public notices in local newspapers, County and/or city websites, local libraries/city halls and/or courthouses. The permittees, including the City, collectively retained County staff to assist with these mandated activities. I am informed and believe and therefore state that the City's share of such costs in FY 2009-10 was \$86.05 and that the City's share of such costs in FY 2010-11 was \$86.05. I am further informed and believe and therefore state that the City first incurred those costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about February 5, 2010.

(d) New/Revised Development Programs and Standards

(i) Low Impact Development (LID) and Model Water Quality Management Plan (WQMP): Subsection XII.C of the Permit required the permittees, including the City, to incorporate LID principals and structural features into public agency Priority Development Projects and in other instances to incorporate U.S. Environmental Protection Agency (EPA) Guidance entitled, "*Management Wet Weather with Green Infrastructure: Green Streets.*" These include road, drainage facility, public utility, linear and other projects. The permittees, including the City, collectively retained a consultant team to assist with developing a public agency project element within the Model WQMP. I am informed and believe and therefore state

that the City's share of the cost of this activity in FY 2009-10 was \$12,081.99 and that the City's share of the cost of this activity in FY 2010-11 was \$11,510.27. In addition, I am informed and believe and therefore state that City-specific costs to develop public agency WQMPs for road, drainage facility, public utility, linear, and other projects with the mandated incorporation of LID principals were \$670,000 in FY 2009-10 and \$737,000 in FY 2010-11. I am further informed and believe and therefore state that the City first incurred those costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about February 5, 2010.

(ii) Hydrologic Conditions of Concern (HCOC): Subsection XII.D of the Permit required the permittees, including the City, to address the impact of urbanization on downstream hydrology. Subsection XII.D.1 required each permittee Priority Development Project to ascertain the impact of the project on the site's hydrologic regime based on the two-year frequency storm event, and to include the findings in the WQMP for the project. The permittees, including the City, shared the cost of a hydromodification susceptibility analysis of north Orange County's surface water drainage systems. Hydromodification susceptibility maps were prepared and language added to the model WQMP and Technical Guidance Document. The draft map data were verified using mapping and photography and updated as needed. The draft map data were verified using mapping and photography and updated as needed. I am informed and believe and therefore state that the City's share of the cost of these activities in FY 2009-10 was \$630.14 and in FY 2010-11 the City's share of the costs was \$2,142.22. I am informed and believe and therefore state that the City first incurred these costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about February 5, 2010.

(e) Total Maximum Daily Loads (TMDLs): Section XVIII of the Permit contained a new program setting forth the implementation of various TMDLs. This TMDL program was not required under the 2002 Permit and was a new program under the Permit. Its requirements continued through the term of the Permit. The City was subject to the following requirement under this new program:

(i) Metals TMDL for Coyote Creek and San Gabriel River: Permit Subsection XVIII.B.9 required the development and implementation of a Constituent Specific Source Control Plan and a monitoring program in connection with a Metals TMDL for Coyote Creek and the San Gabriel River. The CSSCP was required to be designed and implemented to ensure compliance with specific numeric effluent limits taken from the wasteload allocations set forth in the TMDL, as set forth in Table 6 on page 73 of the Permit. While the cost of the CSSCP was not shared by the permittees, including the City, costs of the monitoring program, which was done on a cost-sharing basis, were shared by the City. I am informed and believe and therefore state that the estimated cost of the monitoring efforts during FY 2010-11 was approximately \$20,191 and that the cost during FY 2011-12 was \$20,332.97. I am informed and believe and therefore state that the City was first invoiced for these requirements by the County on December 23, 2010 and that the City paid such invoice on or about February 4, 2011.

7. As set forth above in this Declaration, the City first incurred costs under the Permit during FY 2009-10, which commenced on July 1, 2009.

8. I am informed and believe and therefore state that there are no dedicated state, federal or regional funds that were available to pay for any of these new programs/activities. I am not aware of any fee or tax which the City would have the discretion to impose under California law to cover any portion of the cost of these new programs/activities. I am further

informed and believe and therefore state that the only available source of funds to pay for the costs set forth in this Declaration was the City's General Fund.

I declare under penalty of perjury that the foregoing is true and correct.

Executed December 15, 2016 at Fullerton, California.

DECLARATION OF TRAVIS HOPKINS ON BEHALF OF THE
CITY OF HUNTINGTON BEACH IN SUPPORT OF TEST CLAIM

I, Travis K. Hopkins, declare as follows:

1. I make this declaration based upon my own personal knowledge, except for matters set forth herein on information and belief, and as to those matters I believe them to be true, and if called upon to testify, I could and would competently testify to the matters set forth herein under oath.

2. I am employed by the City of Huntington Beach ("City") as Director of Public Works.

3. I have held my current position for approximately nine years. My duties include managing the Public Works Department and I oversee divisional managers in Engineering, Transportation, Utilities, Facilities, Streets, Parks, Trees, and Landscape.

4. I have reviewed California Regional Water Quality Control Board, Santa Ana Region ("RWQCB") Order No. R8-2009-0030, issued by the RWQCB on May 22, 2009 (the "Permit") and am familiar with the requirements of the Permit as it applies to the City. The City is a permittee under that Permit.

5. I have also reviewed and am familiar with the requirements of Order No. R8-2002-0010, issued by the RWQCB on January 18, 2002 ("2002 Permit"). The City was a permittee under the 2002 Permit.

6. Based on my understanding of the requirements of the 2002 Permit and the requirements of the Permit, I understand and believe and therefore state that the Permit requires the permittees, including the City, to perform the following new programs and/or enhanced levels of service that were not required by the 2002 Permit and which are unique to local

governmental agencies:

(a) Residential Program -- Common Interest Area (CIA)/Homeowner Association (HOA) Pilot Program: Subsection XI.4 of the Permit required the permittees, including the City, to develop a pilot program to control pollutant discharges from common interest areas and areas managed by HOAs or management companies. Program activities required to be funded include: Evaluation of applicable regional programs and studies to encourage efficient water use and to minimize runoff, such as those developed by the Municipal Water District of Orange County and the Irvine Ranch Water District, and development of a pilot program to include design and dissemination of educational and outreach materials, determination of baseline conditions and measurable target outcomes, and assessment of performance. The permittees, including the City, retained a consultant to perform this mandated activity. Each permittee, including the City, paid a share of this cost. I am informed and believe and therefore state that the City's share of the cost for this activity in FY 2009-10 was \$303.36 and in FY 2010-11 the City's share was \$1,866.82. I am further informed and believe and therefore state that the City first incurred those costs when it was invoiced by the County of Orange ("County") on or about December 1, 2009 and that the City paid such invoice on or about December 18, 2009.

(c) Public Education and Outreach

(i) Public Awareness Survey: Subsection XIII.1 of the Permit required the permittees, including the City, to complete a public awareness survey to determine the effectiveness of the existing public and business education strategy and any need for changes to the existing multimedia public education efforts. The permittees, including the City, collectively retained a consultant to perform this mandated activity in FY 2009-10. I am informed and believe and therefore state that during FY 2009-10, the City's share of the costs for this activity

were \$3,733.64. I am further informed and believe and therefore state that the City first incurred those costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about December 18, 2009.

(ii) Workshops: Subsection XIII.4 of the Permit required the permittees, including the City, to conduct sector-specific workshops, individually or on a regional basis, by July 1, 2010 and on an annual basis thereafter. The target sectors were manufacturing facilities; the mobile service industry; the commercial, distribution and retail sales industry; the residential/commercial landscape construction and services industry; the residential and commercial construction industry; and residential and community activities. The permittees, including the City, collectively retained staff from the County to assist with these mandated activities. I am informed and believe and therefore state that the City's share of such costs in FY 2009-10 was \$583.38 and that the City's share of such costs in FY 2010-11 was \$303.36. I am further informed and believe and therefore state that the City first incurred those costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about December 18, 2009.

(iii) Public Participation: Subsection XIII.7 of the Permit required the permittees, including the City, to develop and implement a mechanism for public participation in the updating and implementation of Drainage Area Management Plans, monitoring plans, Water Quality Management Plan guidance and Fact Sheets for various activities. The public was required to be notified of the availability of these documents through public notices in local newspapers, County and/or city websites, local libraries/city halls and/or courthouses. The permittees, including the City, collectively retained County staff to assist with these mandated activities. I am informed and believe and therefore state that the City's share of such costs in FY

2009-10 was \$116.68 and that the City's share of such costs in FY 2010-11 was \$116.68. The City participated in these workshops and the cost incurred was \$4,265. I am further informed and believe and therefore state that the City first incurred those costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about December 18, 2009.

(d) New/Revised Development Programs and Standards

(i) Low Impact Development (LID) and Model Water Quality Management Plan (WQMP): Subsection XII.C of the Permit required the permittees, including the City, to incorporate LID principals and structural features into public agency Priority Development Projects and in other instances to incorporate U.S. Environmental Protection Agency (EPA) Guidance entitled, "*Management Wet Weather with Green Infrastructure: Green Streets.*" These include road, drainage facility, and public utility, linear and other projects. The permittees, including the City, collectively retained a consultant team to assist with developing a public agency project element within the Model WQMP. I am informed and believe and therefore state that the City's share of the cost of this activity in FY 2009-10 was \$16,383.02 and that the City's share of the cost of this activity in FY 2010-11 was \$15,607.20. I am further informed and believe and therefore state that the City first incurred those costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about December 18, 2009.

(ii) Hydrologic Conditions of Concern (HCOC): Subsection XII.D of the Permit required the permittees, including the City, to address the impact of urbanization on downstream hydrology. Subsection XII.D.1 required each permittee Priority Development Project to ascertain the impact of the project on the site's hydrologic regime based on the two-

year frequency storm event, and to include the findings in the WQMP for the project. The permittees, including the City, shared the cost of a hydromodification susceptibility analysis of north Orange County's surface water drainage systems. Hydromodification susceptibility maps were prepared and language added to the model WQMP and Technical Guidance Document. The draft map data were verified using mapping and photography and updated as needed. The draft map data were verified using mapping and photography and updated as needed. I am informed and believe and therefore state that the City's share of the cost of these activities in FY 2009-10 was \$2,271.59 and in FY 2010-11 the City's share of the costs was \$7,722.52. I am informed and believe and therefore state that the City first incurred these costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about December 18, 2009.

7. As set forth above in this Declaration, the City first incurred costs under the Permit during FY 2009-10, which commenced on July 1, 2009.

8. I am informed and believe and therefore state that there are no dedicated state, federal or regional funds that were available to pay for any of these new programs/activities. I am not aware of any fee or tax which the City would have the discretion to impose under California law to cover any portion of the cost of these new programs/activities. I am further informed and believe and therefore state that the only available source of funds to pay for the costs set forth in this Declaration was the City's General Fund.

I declare under penalty of perjury that the foregoing is true and correct.

Executed December 15, 2016 at Huntington Beach, California.

Travis Hopkins

DECLARATION OF THOMAS LO ON BEHALF OF THE CITY OF IRVINE IN
SUPPORT OF TEST CLAIM

I, Thomas Lo, declare as follows:

1. I make this declaration based upon my own personal knowledge, except for matters set forth herein on information and belief, and as to those matters I believe them to be true, and if called upon to testify, I could and would competently testify to the matters set forth herein under oath.

2. I am employed by the City of Irvine (“City”) as the Water Quality Administrator.

3. I have held my current position for approximately one month. My duties include overseeing the City’s National Pollutant Discharge Elimination System (NPDES) permit to ensure City compliance with state and local water quality control requirements.

4. I have reviewed California Regional Water Quality Control Board, Santa Ana Region (“RWQCB”) Order No. R8-2009-0030, issued by the RWQCB on May 22, 2009 (the “Permit”) and am familiar with the requirements of the Permit as it applies to the City. The City is a permittee under that Permit.

5. I have also reviewed and am familiar with the requirements of Order No. R8-2002-0010, issued by the RWQCB on January 18, 2002 (“2002 Permit”). The City was a permittee under the 2002 Permit.

6. Based on my understanding of the requirements of the 2002 Permit and the requirements of the Permit, I understand and believe and therefore state that the Permit requires the permittees, including the City, to perform the following new programs and/or enhanced levels of service that were not required by the 2002 Permit and which are unique to local governmental agencies:

(a) Municipal Inventories: Sections IX.1 and X of the Permit required each permittee, including the City, to maintain an inventory of industrial and commercial facilities/businesses within its jurisdiction, which must be maintained in a computer-based database system. Inclusion of a Geographical Information System (GIS) is required, with latitude/longitude (in decimals) or NAD83/WGS8439 compatible formatting. I am informed and believe and therefore state that during fiscal year (FY) 2009-10, the cost of this program for the City was \$3,955.25 and that during FY 2010-11, the cost for this program was \$3,904.10. I am further informed and believe and therefore state that the City first incurred costs for such requirements on or about July 1, 2009.

(b) Residential Program -- Common Interest Area (CIA)/Homeowner Association (HOA) Pilot Program: Subsection XI.4 of the Permit required the permittees, including the City, to develop a pilot program to control pollutant discharges from common interest areas and areas managed by HOAs or management companies. Program activities required to be funded include: Evaluation of applicable regional programs and studies to encourage efficient water use and to minimize runoff, such as those developed by the Municipal Water District of Orange County and the Irvine Ranch Water District, and development of a pilot program to include design and dissemination of educational and outreach materials, determination of baseline conditions and measurable target outcomes, and assessment of performance. The permittees, including the City, retained a consultant to perform this mandated activity. Each permittee, including the City, paid a share of this cost. I am informed and believe and therefore state that the City's share of the cost for this activity in FY 2009-10 was \$480.52 and in FY 2010-11 the City's share was \$2,957.06. I am further informed and believe and therefore state that the City first incurred

those costs when it was invoiced by the County of Orange (“County”) on or about December 1, 2009 and that the City paid such invoice on or about December 24, 2009.

(c) Public Education and Outreach

(i) Public Awareness Survey: Subsection XIII.1 of the Permit required the permittees, including the City, to complete a public awareness survey to determine the effectiveness of the existing public and business education strategy and any need for changes to the existing multimedia public education efforts. The permittees, including the City, collectively retained a consultant to perform this mandated activity in FY 2009-10. I am informed and believe and therefore state that during FY 2009-10, the City’s share of the costs for this activity were \$5,914.13. I am further informed and believe and therefore state that the City first incurred those costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about December 24, 2009.

(ii) Workshops: Subsection XIII.4 of the Permit required the permittees, including the City, to conduct sector-specific workshops, individually or on a regional basis, by July 1, 2010 and on an annual basis thereafter. The target sectors were manufacturing facilities; the mobile service industry; the commercial, distribution and retail sales industry; the residential/commercial landscape construction and services industry; the residential and commercial construction industry; and residential and community activities. The permittees, including the City, collectively retained staff from the County to assist with these mandated activities. I am informed and believe and therefore state that the City’s share of such costs in FY 2009-10 was \$924.08 and that the City’s share of such costs in FY 2010-11 was \$480.52. I am further informed and believe and therefore state that the City first incurred those costs when it

was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about December 24, 2009.

(iii) Public Participation: Subsection XIII.7 of the Permit required the permittees, including the City, to develop and implement a mechanism for public participation in the updating and implementation of Drainage Area Management Plans, monitoring plans, Water Quality Management Plan guidance and Fact Sheets for various activities. The public was required to be notified of the availability of these documents through public notices in local newspapers, County and/or city websites, local libraries/city halls and/or courthouses. The permittees, including the City, collectively retained County staff to assist with these mandated activities. I am informed and believe and therefore state that the City's share of such costs in FY 2009-10 was \$184.82 and that the City's share of such costs in FY 2010-11 was \$184.82. I am further informed and believe and therefore state that the City first incurred those costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about December 24, 2009.

(d) New/Revised Development Programs and Standards

(i) Low Impact Development (LID) and Model Water Quality Management Plan (WQMP): Subsection XII.C of the Permit required the permittees, including the City, to incorporate LID principals and structural features into public agency Priority Development Projects and in other instances to incorporate U.S. Environmental Protection Agency (EPA) Guidance entitled, "*Management Wet Weather with Green Infrastructure: Green Streets.*" These include road, drainage facility, public utility, linear and other projects. The permittees, including the City, collectively retained a consultant team to assist with developing a public agency project element within the Model WQMP. I am informed and believe and therefore state

that the City's share of the cost of this activity in FY 2009-10 was \$25,950.89 and that the City's share of the cost of this activity in FY 2010-11 was \$24,722.90. I am further informed and believe and therefore state that the City first incurred those costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about December 24, 2009. I am informed and believe and therefore state that during fiscal year (FY) 2009-10, the cost of this model WQMP program element for the City was \$4,318.24 and that during FY 2010-11, the cost for this program was \$2,026.85. I am further informed and believe and therefore state that the City first incurred costs for such requirements on or about October 22, 2009.

(ii) Hydrologic Conditions of Concern (HCOC): Subsection XII.D of the Permit required the permittees, including the City, to address the impact of urbanization on downstream hydrology. Subsection XII.D.1 required each permittee Priority Development Project to ascertain the impact of the project on the site's hydrologic regime based on the two-year frequency storm event, and to include the findings in the WQMP for the project. The permittees, including the City, shared the cost of a hydromodification susceptibility analysis of north Orange County's surface water drainage systems. Hydromodification susceptibility maps were prepared and language added to the model WQMP and Technical Guidance Document. The draft map data were verified using mapping and photography and updated as needed. The draft map data were verified using mapping and photography and updated as needed. I am informed and believe and therefore state that the City's share of the cost of these activities in FY 2009-10 was \$2,431.42 and in FY 2010-11 the City's share of the costs was \$8,265.87. I am informed and believe and therefore state that the City first incurred these costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about December 24, 2009.

(e) Total Maximum Daily Loads (TMDLs): Section XVIII of the Permit contained a new program setting forth the implementation of various TMDLs. This TMDL program was not required under the 2002 Permit and was a new program under the Permit. Its requirements continued through the term of the Permit. The City was subject to the following requirements under this new program:

(i) Permit Subsections XVIII.B.1 through B.4 required various permittees, including the City, to comply with a series of new numeric effluent limits based on waste load allocations within the EPA-Promulgated Toxic Pollutant TMDLs for San Diego Creek and Newport Bay. These new program requirements all involved the imposition of numeric effluent limits from waste load allocations from these TMDLs, as set forth in Tables 1 A/B/C, Table 2 A/B/C/D/ and Table 3 on pages 68 to 71 of the Permit.

(ii) Permit Subsection XVIII.B.5 imposed new TMDL-related requirements applicable to various permittees, including the City, that would take effect upon adoption by the State Water Resources Control Board and the Office of Administration Law (“OAL”), and concerned compliance with numeric limits taken from wasteload allocations in the TMDLs for Organochlorine Compounds for Newport Bay and San Diego Creek (as set forth in Table 4 on page 71 of the Permit).

(iii) Permit Subsection XVIII.B.7 imposed new requirements on various permittees, including the City, to participate in the development and implementation of additional Metals and Selenium TMDLs for the Newport Bay Watershed being developed by the RWQCB.

(iv) Permit Subsection XVIII.B.8 required certain permittees, including the City, to prepare a Cooperative Watershed Program for the Selenium TMDL for the Newport Bay

Watershed. This Program was required to be submitted within 24 months of the date of adoption of the Permit or one month after the approval of the TMDL by the OAL. In addition, this subsection required certain permittees, including the City, to implement the Program once it was approved.

(v) Permit Subsection XVIII.C.1 imposed on certain permittees, including the City, new numeric effluent limits based on wasteload allocations from a Fecal Coliform/Bacteria TMDL for Newport Bay and San Diego Creek, as set forth in Tables 8A and 8B on pages 74-75 of the Permit.

(vi) Permit Subsection XVIII.D.1 required various permittees, including the City, to comply with new numeric effluent limits from waste load allocations from a TMDL for Diazinon and Chlorpyrifos for San Diego Creek and Chlorpyrifos for Newport Bay, as set forth in Tables 9A and 9B on page 76 of the Permit.

The permittees, including the City, subject to such requirements participated in a cost-sharing program administered by the County of Orange, whereunder costs associated with the above-referenced TMDL requirements were shared among those permittees. I am informed and believe and therefore state that the cost shared costs for the above-referenced requirements allocated to the City in FY 2009-10 was \$303,073.49 and in FY 2010-11, \$292,528.04. I am further informed and believe and therefore state that the City first incurred costs for these requirements when it received an invoice from the County on or about February 9, 2010 and that the City paid the invoice on or about March 12, 2010. Additionally, I am informed and believe, and therefore state that during fiscal year (FY) 2009-10, the cost of the above-referenced TMDL requirements for the City was \$5,757.65 and that during FY 2010-11, the cost for this program

was \$5,404.94. I am further informed and believe, and therefore state, that the City first incurred costs for such requirements on or about July 1, 2009.

7. As set forth above in this Declaration, the City first incurred costs under the Permit during FY 2009-10, which commenced on July 1, 2009.

8. I am informed and believe and therefore state that there are no dedicated state, federal or regional funds that were available to pay for any of these new programs/activities. I am not aware of any fee or tax which the City would have the discretion to impose under California law to cover any portion of the cost of these new programs/activities. I am further informed and believe and therefore state that the only available source of funds to pay for the costs set forth in this Declaration was the City's General Fund.

I declare under penalty of perjury that the foregoing is true and correct.

Executed December 15, 2016 at Irvine, California.

Water Quality Administrator

DECLARATION OF DEVIN SLAVEN ON BEHALF OF THE CITY OF LAKE FOREST

IN SUPPORT OF TEST CLAIM

I, Devin Slaven, declare as follows:

1. I make this declaration based upon my own personal knowledge, except for matters set forth herein on information and belief, and as to those matters I believe to be true, and if called upon to testify, I could and would competently testify to the matters set forth herein under oath.

2. I am employed by the City of Lake Forest ("City") as the Environmental Manager.

3. I have held my current position for approximately twelve years. My duties include managing the Water Quality Division and directing the pollution prevention and enforcement program.

4. I have reviewed California Regional Water Quality Control Board, Santa Ana Region ("RWQCB") Order No. R8-2009-0030, issued by the RWQCB on May 22, 2009 (the "Permit") and am familiar with the requirements of the Permit as it applies to the City. The City is a permittee under that Permit.

5. I have also reviewed and am familiar with the requirements of Order No. R8-2002-0010, issued by the RWQCB on January 18, 2002 ("2002 Permit"). The City was a permittee under the 2002 Permit.

6. Based on my understanding of the requirements of the 2002 Permit and the requirements of the Permit, I understand and believe and therefore state that the Permit requires the permittees, including the City, to perform the following new programs and/or enhanced

levels of service that were not required by the 2002 Permit and which are unique to local governmental agencies:

(a) Municipal Inventories: Sections IX.1 and X of the Permit required each permittee, including the City, to maintain an inventory of industrial and commercial facilities/businesses within its jurisdiction, which must be maintained in a computer-based database system.

Inclusion of a Geographical Information System (GIS) is required, with latitude/longitude (in decimals) or NAD83/WGS8439 compatible formatting. I am informed and believe and therefore state that during fiscal year (FY) 2009-10, the cost of this program for the City was \$6,800. I am further informed and believe and therefore state that the City first incurred costs for such requirements on or about July 2, 2009.

(b) Residential Program -- Common Interest Area (CIA)/Homeowner Association (HOA) Pilot Program: Subsection XI.4 of the Permit required the permittees, including the City, to develop a pilot program to control pollutant discharges from common interest areas and areas managed by HOAs or management companies. Program activities required to be funded include: Evaluation of applicable regional programs and studies to encourage efficient water use and to minimize runoff, such as those developed by the Municipal Water District of Orange County and the Irvine Ranch Water District, and development of a pilot program to include design and dissemination of educational and outreach materials, determination of baseline conditions and measurable target outcomes, and assessment of performance. The permittees, including the City, retained a consultant to perform this mandated activity. Each permittee, including the City, paid a share of this cost. I am informed and believe and therefore state that the City's share of the cost for this activity in FY 2009-10 was \$99.42 and in FY 2010-11 the City's share was \$611.80. I am further informed and believe and therefore state that the City first incurred those costs when

it was invoiced by the County of Orange ("County") on or about December 1, 2009 and that the City paid such invoice on or about January 21, 2010.

(c) Public Education and Outreach

(i) Public Awareness Survey: Subsection XIII.1 of the Permit required the permittees, including the City, to complete a public awareness survey to determine the effectiveness of the existing public and business education strategy and any need for changes to the existing multimedia public education efforts. The permittees, including the City, collectively retained a consultant to perform this mandated activity in FY 2009-10. I am informed and believe and therefore state that during FY 2009-10, the City's share of the costs for this activity was \$1,223.59. I am further informed and believe and therefore state that the City first incurred those costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about January 21, 2010.

(ii) Workshops: Subsection XIII.4 of the Permit required the permittees, including the City, to conduct sector-specific workshops, individually or on a regional basis, by July 1, 2010 and on an annual basis thereafter. The target sectors were manufacturing facilities; the mobile service industry; the commercial, distribution and retail sales industry; the residential/commercial landscape construction and services industry; the residential and commercial construction industry; and residential and community activities. The permittees, including the City, collectively retained staff from the County to assist with these mandated activities. I am informed and believe and therefore state that the City's share of such costs in FY 2009-10 was \$191.19 and that the City's share of such costs in FY 2010-11 was \$99.42. I am further informed and believe and therefore state that the City first incurred those costs when it

was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about January 21, 2010.

(iii) **Public Participation:** Subsection XIII.7 of the Permit required the permittees, including the City, to develop and implement a mechanism for public participation in the updating and implementation of Drainage Area Management Plans, monitoring plans, Water Quality Management Plan guidance and Fact Sheets for various activities. The public was required to be notified of the availability of these documents through public notices in local newspapers, County and/or city websites, local libraries/city halls and/or courthouses. The permittees, including the City, collectively retained County staff to assist with these mandated activities. I am informed and believe and therefore state that the City's share of such costs in FY 2009-10 was \$38.24 and that the City's share of such costs in FY 2010-11 was \$38.24. I am further informed and believe and therefore state that the City first incurred those costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about January 21, 2010.

(d) **New/Revised Development Programs and Standards**

(i) **Low Impact Development (LID) and Model Water Quality Management Plan (WQMP):** Subsection XII.C of the Permit required the permittees, including the City, to incorporate LID principals and structural features into public agency Priority Development Projects and in other instances to incorporate U.S. Environmental Protection Agency (EPA) Guidance entitled, "*Managing Wet Weather with Green Infrastructure: Green Streets.*" These include road, drainage facility, public utility, linear and other projects. The permittees, including the City, collectively retained a consultant team to assist with developing a public agency project element within the Model WQMP. I am informed and believe and therefore state that the City's

share of the cost of this activity in FY 2009-10 was \$5,369.05 and that the City's share of the cost of this activity in FY 2010-11 was \$5,114.99. I am further informed and believe and therefore state that the City first incurred those costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about January 21, 2010.

(ii) Hydrologic Conditions of Concern (HCOC): Subsection XII.D of the Permit required the permittees, including the City, to address the impact of urbanization on downstream hydrology. Subsection XII.D.1 required each permittee Priority Development Project to ascertain the impact of the project on the site's hydrologic regime based on the two-year frequency storm event, and to include the findings in the WQMP for the project. The permittees, including the City, shared the cost of a hydromodification susceptibility analysis of north Orange County's surface water drainage systems. Hydromodification susceptibility maps were prepared and language added to the model WQMP and Technical Guidance Document. The draft map data were verified using mapping and photography and updated as needed. I am informed and believe and therefore state that the City's share of the cost of these activities in FY 2009-10 was \$622.03 and in FY 2010-11 the City's share of the costs was \$2,114.67. I am informed and believe and therefore state that the City first incurred these costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about January 21, 2010.

(e) Total Maximum Daily Loads (TMDLs): Section XVIII of the Permit contained a new program setting forth the implementation of various TMDLs. This TMDL program was not required under the 2002 Permit and was a new program under the Permit. Its requirements continued through the term of the Permit. The City was subject to the following requirements under this new program:

(i) Permit Subsections XVIII.B.1 through B.4 required various permittees, including the City, to comply with a series of new numeric effluent limits based on waste load allocations within the EPA-Promulgated Toxic Pollutant TMDLs for San Diego Creek and Newport Bay. These new program requirements all involved the imposition of numeric effluent limits from waste load allocations from these TMDLs, as set forth in Tables 1 A/B/C, Table 2 A/B/C/D/ and Table 3 on pages 68 to 71 of the Permit.

(ii) Permit Subsection XVIII.B.5 imposed new TMDL-related requirements applicable to various permittees, including the City, that would take effect upon adoption by the State Water Resources Control Board and the Office of Administration Law (“OAL”), and concerned compliance with numeric limits taken from wasteload allocations in the TMDLs for Organochlorine Compounds for Newport Bay and San Diego Creek (as set forth in Table 4 on page 71 of the Permit).

(iii) Permit Subsection XVIII.B.7 imposed new requirements on various permittees, including the City, to participate in the development and implementation of additional Metals and Selenium TMDLs for the Newport Bay Watershed being developed by the RWQCB.

(iv) Permit Subsection XVIII.B.8 required certain permittees, including the City, to prepare a Cooperative Watershed Program for the Selenium TMDL for the Newport Bay Watershed. This Program was required to be submitted within 24 months of the date of adoption of the Permit or one month after the approval of the TMDL by the OAL. In addition, this subsection required certain permittees, including the City, to implement the Program once it was approved.

(v) Permit Subsection XVIII.C.1 imposed on certain permittees, including the City, new numeric effluent limits based on wasteload allocations from a Fecal Coliform/Bacteria TMDL for Newport Bay and San Diego Creek, as set forth in Tables 8A and 8B on pages 74-75 of the Permit.

(vi) Permit Subsection XVIII.D.1 required various permittees, including the City, to comply with new numeric effluent limits from waste load allocations from a TMDL for Diazinon and Chlorpyrifos for San Diego Creek and Chlorpyrifos for Newport Bay, as set forth in Tables 9A and 9B on page 76 of the Permit.

The permittees, including the City, subject to such requirements participated in a cost-sharing program administered by the County of Orange, whereunder costs associated with the above-referenced TMDL requirements were shared among those permittees. I am informed and believe and therefore state that the costs for the above-referenced requirements allocated to the City in FY 2009-10 was \$63,361.25 and in FY 2010-11, \$61,156.60. I am further informed and believe and therefore state that the City first incurred costs for these requirements when it received an invoice from the County on or about February 9, 2010 and that the City paid the invoice on or about May 6, 2010.

7. As set forth above in this Declaration, the City first incurred costs under the Permit during FY 2009-10, which commenced on July 1, 2009.

8. I am informed and believe and therefore state that there are no dedicated state, federal or regional funds that were available to pay for any of these new programs/activities. I am not aware of any fee or tax which the City would have the discretion to impose under California law to cover any portion of the cost of these new programs/activities. I am further

informed and believe and therefore state that the only available source of funds to pay for the costs set forth in this Declaration was the City's General Fund.

I declare under penalty of perjury that the foregoing is true and correct.

Executed December 15, 2016 at Lake Forest, California.

A handwritten signature in black ink, appearing to read "D. J. [unclear]". The signature is written in a cursive style with a horizontal line underneath.

**DECLARATION OF JOHN L. KAPPELER ON BEHALF OF THE CITY OF NEWPORT
BEACH IN SUPPORT OF TEST CLAIM**

I, John L. Kappeler, declare as follows:

1. I make this declaration based upon my own personal knowledge, except for matters set forth herein on information and belief, and as to those matters I believe them to be true, and if called upon to testify, I could and would competently testify to the matters set forth herein under oath.

2. I am employed by the City of Newport Beach ("City") as A Senior Engineer.

3. I have held my current position for approximately 3 years. I have been employed by the City of Newport Beach for approximately 14 years. My duties include managing projects and managing the City's water quality program.

4. I have reviewed California Regional Water Quality Control Board, Santa Ana Region ("RWQCB") Order No. R8-2009-0030, issued by the RWQCB on May 22, 2009 (the "2009 Permit") and I am familiar with the requirements of the 2009 Permit as it applies to the City. The City is a permittee under the 2009 Permit.

5. I have also reviewed and am familiar with the requirements of Order No. R8-2002-0010, issued by the RWQCB on January 18, 2002 ("2002 Permit"). The City was a permittee under the 2002 Permit.

6. Based on my understanding of the requirements of the 2002 Permit and the requirements of the 2009 Permit, I understand and believe and therefore state that the 2009 Permit requires the permittees, including the City, to perform the following new programs and/or enhanced levels of service that were not required by the 2002 Permit and which are unique to local governmental agencies:

(a) Municipal Inventories: Sections IX.1 and X of the 2009 Permit required each permittee, including the City, to maintain an inventory of industrial and commercial facilities/businesses within its jurisdiction, which must be maintained in a computer-based database system. Inclusion of a Geographical Information System (GIS) is required, with latitude/longitude (in decimals) or NAD83/WGS8439 compatible formatting. I am informed and believe and therefore state that during fiscal year (FY) 2009-10, the cost of this program for the City was \$8,290.00 and, during FY 2010-11, the cost for this program was \$8,700.00. I am further informed and believe and therefore state that the City first incurred costs for such requirements on or about October 2009.

(b) Residential Program -- Common Interest Area (CIA)/Homeowner Association (HOA) Pilot Program: Subsection XI.4 of the 2009 Permit required the permittees, including the City, to develop a pilot program to control pollutant discharges from common interest areas and areas managed by HOAs or management companies. Program activities required to be funded include: Evaluation of applicable regional programs and studies to encourage efficient water use and to minimize runoff, such as those developed by the Municipal Water District of Orange County and the Irvine Ranch Water District, and development of a pilot program to include design and dissemination of educational and outreach materials, determination of baseline conditions and measurable target outcomes, and assessment of performance. The permittees, including the City, retained a consultant to perform this mandated activity. Each permittee, including the City, paid a share of this cost. I am informed and believe and therefore state that the City's share of the cost for this activity in FY 2009-10 was \$186.20 and in FY 2010-11 the City's share was \$1,145.85. I am further informed and believe and therefore state that the City

first incurred those costs when it was invoiced by the County of Orange (“County”) on or about December 1, 2009 and that the City paid such invoice on or about February 1, 2010.

(c) Public Education and Outreach

(i) Public Awareness Survey: Subsection XIII.1 of the 2009 Permit required the permittees, including the City, to complete a public awareness survey to determine the effectiveness of the existing public and business education strategy and any need for changes to the existing multimedia public education efforts. The permittees, including the City, collectively retained a consultant to perform this mandated activity in FY 2009-10. I am informed and believe and therefore state that, during FY 2009-10, the City’s share of the costs for this activity was \$2,291.69. I am further informed and believe and therefore state that the City first incurred those costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about February 1, 2010.

(ii) Workshops: Subsection XIII.4 of the 2009 Permit required the permittees, including the City, to conduct sector-specific workshops, individually or on a regional basis, by July 1, 2010 and on an annual basis thereafter. The target sectors were manufacturing facilities; the mobile service industry; the commercial, distribution and retail sales industry; the residential/commercial landscape construction and services industry; the residential and commercial construction industry; and residential and community activities. The permittees, including the City, collectively retained staff from the County to assist with these mandated activities. I am informed and believe and therefore state that the City’s share of such costs in FY 2009-10 was \$358.08 and that the City’s share of such costs in FY 2010-11 was \$186.20. I am further informed and believe and therefore state that the City first incurred those costs when it

was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about February 1, 2010.

(iii) Public Participation: Subsection XIII.7 of the 2009 Permit required the permittees, including the City, to develop and implement a mechanism for public participation in the updating and implementation of Drainage Area Management Plans, monitoring plans, Water Quality Management Plan guidance and Fact Sheets for various activities. The public was required to be notified of the availability of these documents through public notices in local newspapers, County and/or city websites, local libraries/city halls and/or courthouses. The permittees, including the City, collectively retained County staff to assist with these mandated activities. I am informed and believe and therefore state that the City's share of such costs in FY 2009-10 was \$71.62 and that the City's share of such costs in FY 2010-11 was \$71.62. I am further informed and believe and therefore state that the City first incurred those costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about February 1, 2010.

(d) New/Revised Development Programs and Standards

(i) Low Impact Development (LID) and Model Water Quality Management Plan (WQMP): Subsection XII.C of the 2009 Permit required the permittees, including the City, to incorporate LID principals and structural features into public agency Priority Development Projects and in other instances to incorporate U.S. Environmental Protection Agency (EPA) Guidance entitled, "*Management Wet Weather with Green Infrastructure: Green Streets.*" These include road, drainage facility, public utility, linear and other projects. The permittees, including the City, collectively retained a consultant team to assist with developing a public agency project element within the Model WQMP. I am informed and believe and therefore state

that the City's share of the cost of this activity in FY 2009-10 was \$10,055.83 and that the City's share of the cost of this activity in FY 2010-11 was \$9,579.99. In addition, I am informed and believe and therefore state that City-specific costs to develop public agency WQMPs for road, drainage facility, public utility, linear, and other projects with the mandated incorporation of LID principals were \$14,990 in FY 2009-10 and \$220,000 in FY 2010-11. I am further informed and believe and therefore state that the City first incurred those costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about February 1, 2010.

(ii) Hydrologic Conditions of Concern (HCOC): Subsection XII.D of the 2009 Permit required the permittees, including the City, to address the impact of urbanization on downstream hydrology. Subsection XII.D.1 required each permittee Priority Development Project to ascertain the impact of the project on the site's hydrologic regime based on the two-year frequency storm event, and to include the findings in the WQMP for the project. The permittees, including the City, shared the cost of a hydromodification susceptibility analysis of north Orange County's surface water drainage systems. Hydromodification susceptibility maps were prepared and language added to the model WQMP and Technical Guidance Document. The draft map data were verified using mapping and photography and updated as needed. The draft map data were verified using mapping and photography and updated as needed. I am informed and believe and therefore state that the City's share of the cost of these activities in FY 2009-10 was \$497.28 and in FY 2010-11 the City's share of the costs was \$1,690.55. I am informed and believe and therefore state that the City first incurred these costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about February 1, 2010.

(e) Total Maximum Daily Loads (TMDLs): Section XVIII of the 2009 Permit contained a new program setting forth the implementation of various TMDLs. This TMDL program was not required under the 2002 Permit and was a new program under the 2009 Permit. Its requirements continued through the term of the 2009 Permit. The City was subject to the following requirements under this new program:

(i) 2009 Permit Subsections XVIII.B.1 through B.4 required various permittees, including the City, to comply with a series of new numeric effluent limits based on waste load allocations within the EPA-Promulgated Toxic Pollutant TMDLs for San Diego Creek and Newport Bay. These new program requirements all involved the imposition of numeric effluent limits from waste load allocations from these TMDLs, as set forth in Tables 1 A/B/C, Table 2 A/B/C/D/ and Table 3 on pages 68 to 71 of the 2009 Permit.

(ii) 2009 Permit Subsection XVIII.B.5 imposed new TMDL-related requirements applicable to various permittees, including the City, that would take effect upon adoption by the State Water Resources Control Board and the Office of Administration Law (“OAL”), and concerned compliance with numeric limits taken from wasteload allocations in the TMDLs for Organochlorine Compounds for Newport Bay and San Diego Creek (as set forth in Table 4 on page 71 of the 2009 Permit).

(iii) 2009 Permit Subsection XVIII.B.7 imposed new requirements on various permittees, including the City, to participate in the development and implementation of additional Metals and Selenium TMDLs for the Newport Bay Watershed being developed by the RWQCB.

(iv) 2009 Permit Subsection XVIII.B.8 required certain permittees, including the City, to prepare a Cooperative Watershed Program for the Selenium TMDL for the Newport

Bay Watershed. This Program was required to be submitted within 24 months of the date of adoption of the 2009 Permit or one month after the approval of the TMDL by the OAL. In addition, this subsection required certain permittees, including the City, to implement the Program once it was approved.

(v) 2009 Permit Subsection XVIII.C.1 imposed on certain permittees, including the City, new numeric effluent limits based on wasteload allocations from a Fecal Coliform/Bacteria TMDL for Newport Bay and San Diego Creek, as set forth in Tables 8A and 8B on pages 74-75 of the Permit.

(vi) 2009 Permit Subsection XVIII.D.1 required various permittees, including the City, to comply with new numeric effluent limits from waste load allocations from a TMDL for Diazinon and Chlorpyrifos for San Diego Creek and Chlorpyrifos for Newport Bay, as set forth in Tables 9A and 9B on page 76 of the 2009 Permit.

The permittees, including the City, subject to such requirements participated in a cost-sharing program administered by the County of Orange, whereunder costs associated with the above-referenced TMDL requirements were shared among those permittees. I am informed and believe and therefore state that the costs for the above-referenced requirements allocated to the City in FY 2009-10 was \$80,900.97 and in FY 2010-11, \$78,086.03. I am further informed and believe and therefore state that the City first incurred costs for these requirements when it received an invoice from the County on or about February 9, 2010 and that the City paid the invoice on or about April 12, 2010.

7. As set forth above in this Declaration, the City first incurred costs under the 2009 Permit during FY 2009-10, which commenced on July 1, 2009.

8. I am informed and believe and therefore state that there are no dedicated state, federal or regional funds that were available to pay for any of these new programs/activities. I am not aware of any fee or tax which the City would have the discretion to impose under California law to cover any portion of the cost of these new programs/activities. I am further informed and believe and therefore state that the only available source of funds to pay for the costs set forth in this Declaration was the City's General Fund.

I declare under penalty of perjury that the foregoing is true and correct.

Executed December ^{15th}, 2016 at Newport Beach, California.

JOHN L. KAPPELER

DECLARATION OF LUIS ESTEVEZ ON BEHALF OF THE CITY OF PLACENTIA IN

SUPPORT OF TEST CLAIM

I, Luis Estevez, declare as follows:

1. I make this declaration based upon my own personal knowledge, except for matters set forth herein on information and belief, and as to those matters I believe them to be true, and if called upon to testify, I could and would competently testify to the matters set forth herein under oath.

2. I am employed by the City of Placentia ("City") as Acting Public Works Director.

3. I have held my current position for approximately a year and three months. My duties include addressing the City's stormwater and related environmental programs as they affect the Public Works Department and capital improvements in the City.

4. I have reviewed California Regional Water Quality Control Board, Santa Ana Region ("RWQCB") Order No. R8-2009-0030, issued by the RWQCB on May 22, 2009 (the "Permit") and am familiar with the requirements of the Permit as it applies to the City. The City is a permittee under that Permit.

5. I have also reviewed and am familiar with the requirements of Order No. R8-2002-0010, issued by the RWQCB on January 18, 2002 ("2002 Permit"). The City was a permittee under the 2002 Permit.

6. Based on my understanding of the requirements of the 2002 Permit and the requirements of the Permit, I understand and believe and therefore state that the Permit requires the permittees, including the City, to perform the following new programs and/or enhanced levels of service that were not required by the 2002 Permit and which are unique to local governmental agencies:

(a) Municipal Inventories: Sections IX.1 and X of the Permit required each permittee, including the City, to maintain an inventory of industrial and commercial facilities/businesses within its jurisdiction, which must be maintained in a computer-based database system. Inclusion of a Geographical Information System (GIS) is required, with latitude/longitude (in decimals) or NAD83/WGS8439 compatible formatting. I am informed and believe and therefore state that during fiscal year (FY) 2009-10, the cost of this program for the City was \$16,000 and that during FY 2010-11, the cost for this program was \$13,500. I am further informed and believe and therefore state that the City first incurred costs for such requirements on or about 2010.

(b) Residential Program -- Common Interest Area (CIA)/Homeowner Association (HOA) Pilot Program: Subsection XI.4 of the Permit required the permittees, including the City, to develop a pilot program to control pollutant discharges from common interest areas and areas managed by HOAs or management companies. Program activities required to be funded include: Evaluation of applicable regional programs and studies to encourage efficient water use and to minimize runoff, such as those developed by the Municipal Water District of Orange County and the Irvine Ranch Water District, and development of a pilot program to include design and dissemination of educational and outreach materials, determination of baseline conditions and measurable target outcomes, and assessment of performance. The permittees, including the City, retained a consultant to perform this mandated activity. Each permittee, including the City, paid a share of this cost. I am informed and believe and therefore state that the City's share of the cost for this activity in FY 2009-10 was \$76.71 and in FY 2010-11 the City's share was \$472.06. I am further informed and believe and therefore state that the City first incurred those costs when

it was invoiced by the County of Orange ("County") on or about December 1, 2009 and that the City paid such invoice on or about February 8, 2010.

(c) Public Education and Outreach

(i) Public Awareness Survey: Subsection XIII.1 of the Permit required the permittees, including the City, to complete a public awareness survey to determine the effectiveness of the existing public and business education strategy and any need for changes to the existing multimedia public education efforts. The permittees, including the City, collectively retained a consultant to perform this mandated activity in FY 2009-10. I am informed and believe and therefore state that during FY 2009-10, the City's share of the costs for this activity were \$944.11. I am further informed and believe and therefore state that the City first incurred those costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about February 8, 2010.

(ii) Workshops: Subsection XIII.4 of the Permit required the permittees, including the City, to conduct sector-specific workshops, individually or on a regional basis, by July 1, 2010 and on an annual basis thereafter. The target sectors were manufacturing facilities; the mobile service industry; the commercial, distribution and retail sales industry; the residential/commercial landscape construction and services industry; the residential and commercial construction industry; and residential and community activities. The permittees, including the City, collectively retained staff from the County to assist with these mandated activities. I am informed and believe and therefore state that the City's share of such costs in FY 2009-10 was \$147.52 and that the City's share of such costs in FY 2010-11 was \$76.71. I am further informed and believe and therefore state that the City first incurred those costs when it

was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about February 8, 2010.

(iii) Public Participation: Subsection XIII.7 of the Permit required the permittees, including the City, to develop and implement a mechanism for public participation in the updating and implementation of Drainage Area Management Plans, monitoring plans, Water Quality Management Plan guidance and Fact Sheets for various activities. The public was required to be notified of the availability of these documents through public notices in local newspapers, County and/or city websites, local libraries/city halls and/or courthouses. The permittees, including the City, collectively retained County staff to assist with these mandated activities. I am informed and believe and therefore state that the City's share of such costs in FY 2009-10 was \$29.50 and that the City's share of such costs in FY 2010-11 was \$29.50. I am further informed and believe and therefore state that the City first incurred those costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about February 8, 2010.

(d) New/Revised Development Programs and Standards

(i) Low Impact Development (LID) and Model Water Quality Management Plan (WQMP): Subsection XII.C of the Permit required the permittees, including the City, to incorporate LID principals and structural features into public agency Priority Development Projects and in other instances to incorporate U.S. Environmental Protection Agency (EPA) Guidance entitled, "*Management Wet Weather with Green Infrastructure: Green Streets.*" These include road, drainage facility, public utility, linear and other projects. The permittees, including the City, collectively retained a consultant team to assist with developing a public agency project element within the Model WQMP. I am informed and believe and therefore state

that the City's share of the cost of this activity in FY 2009-10 was \$4,142.72 and that the City's share of the cost of this activity in FY 2010-11 was \$3,946.69. In addition, I am informed and believe and therefore state that City-specific costs to develop public agency WQMPs for road, drainage facility, public utility, linear, and other projects with the mandated incorporation of LID principals were \$32,500 in FY 2009-10 and \$37,500 in FY 2010-11. I am further informed and believe and therefore state that the City first incurred those costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about February 8, 2010.

(ii) Hydrologic Conditions of Concern (HCOC): Subsection XII.D of the Permit required the permittees, including the City, to address the impact of urbanization on downstream hydrology. Subsection XII.D.1 required each permittee Priority Development Project to ascertain the impact of the project on the site's hydrologic regime based on the two-year frequency storm event, and to include the findings in the WQMP for the project. The permittees, including the City, shared the cost of a hydromodification susceptibility analysis of north Orange County's surface water drainage systems. Hydromodification susceptibility maps were prepared and language added to the model WQMP and Technical Guidance Document. The draft map data were verified using mapping and photography and updated as needed. The draft map data were verified using mapping and photography and updated as needed. I am informed and believe and therefore state that the City's share of the cost of these activities in FY 2009-10 was \$165.56 and in FY 2010-11 the City's share of the costs was \$562.83. I am informed and believe and therefore state that the City first incurred these costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about February 8, 2010.

(e) Total Maximum Daily Loads (TMDLs): Section XVIII of the Permit contained a new program setting forth the implementation of various TMDLs. This TMDL program was not required under the 2002 Permit and was a new program under the Permit. Its requirements continued through the term of the Permit. The City was subject to the following requirement under this new program:

(i) Metals TMDL for Coyote Creek and San Gabriel River: Permit Subsection XVIII.B.9 required the development and implementation of a Constituent Specific Source Control Plan and a monitoring program in connection with a Metals TMDL for Coyote Creek and the San Gabriel River. The CSSCP was required to be designed and implemented to ensure compliance with specific numeric effluent limits taken from the wasteload allocations set forth in the TMDL, as set forth in Table 6 on page 73 of the Permit. While the cost of the CSSCP was not shared by the permittees, including the City, costs of the monitoring program, which was done on a cost-sharing basis, were shared by the City. I am informed and believe and therefore state that the estimated cost of the monitoring efforts during FY 2010-11 was approximately \$3,577 and that the cost during FY 2011-12 was \$3,602.44. I am informed and believe and therefore state that the City was first invoiced for these requirements by the County on December 23, 2010 and that the City paid such invoice on or about February 4, 2011.

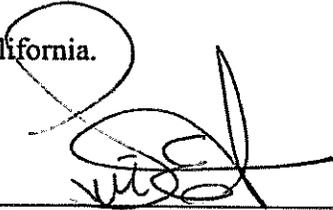

7. As set forth above in this Declaration, the City first incurred costs under the Permit during FY 2009-10, which commenced on July 1, 2009.

8. I am informed and believe and therefore state that there are no dedicated state, federal or regional funds that were available to pay for any of these new programs/activities. I am not aware of any fee or tax which the City would have the discretion to impose under California law to cover any portion of the cost of these new programs/activities. I am further

informed and believe and therefore state that the only available source of funds to pay for the costs set forth in this Declaration was the City's General Fund.

I declare under penalty of perjury that the foregoing is true and correct.

Executed December 15, 2016 at Placentia, California.

Luis Estevez
Acting Public Works Director

DECLARATION OF MICHAEL HO ON BEHALF OF THE CITY OF SEAL BEACH IN

SUPPORT OF TEST CLAIM

I, Michael Ho, P.E., declare as follows:

1. I make this declaration based upon my own personal knowledge, except for matters set forth herein on information and belief, and as to those matters I believe them to be true, and if called upon to testify, I could and would competently testify to the matters set forth herein under oath.

2. I am employed by the City of Seal Beach ("City") as Deputy Director of Public Works/City Engineer.

3. I have held my current position for approximately 9 years. My duties include managing aspects of the Public Works Department and overseeing divisional supervisors in Engineering or addressing the City's stormwater and related environmental programs as they affect the Public Works Department and capital improvements in the City.

4. I have reviewed California Regional Water Quality Control Board, Santa Ana Region ("RWQCB") Order No. R8-2009-0030, issued by the RWQCB on May 22, 2009 (the "Permit") and am familiar with the requirements of the Permit as it applies to the City. The City is a permittee under that Permit.

5. I have also reviewed and am familiar with the requirements of Order No. R8-2002-0010, issued by the RWQCB on January 18, 2002 ("2002 Permit"). The City was a permittee under the 2002 Permit.

6. Based on my understanding of the requirements of the 2002 Permit and the requirements of the Permit, I understand and believe and therefore state that the Permit requires the permittees, including the City, to perform the following new programs and/or enhanced

levels of service that were not required by the 2002 Permit and which are unique to local governmental agencies:

(a) Municipal Inventories: Sections IX.1 and X of the Permit required each permittee, including the City, to maintain an inventory of industrial and commercial facilities/businesses within its jurisdiction, which must be maintained in a computer-based database system. Inclusion of a Geographical Information System (GIS) is required, with latitude/longitude (in decimals) or NAD83/WGS8439 compatible formatting. I am informed and believe and therefore state that during fiscal year (FY) 2009-10, the cost of this program for the City was \$3,842.50 and that during FY 2010-11, the cost for this program was \$2,900. I am further informed and believe and therefore state that the City first incurred costs for such requirements on or about July 1, 2009.

(b) Residential Program -- Common Interest Area (CIA)/Homeowner Association (HOA) Pilot Program: Subsection XI.4 of the Permit required the permittees, including the City, to develop a pilot program to control pollutant discharges from common interest areas and areas managed by HOAs or management companies. Program activities required to be funded include: Evaluation of applicable regional programs and studies to encourage efficient water use and to minimize runoff, such as those developed by the Municipal Water District of Orange County and the Irvine Ranch Water District, and development of a pilot program to include design and dissemination of educational and outreach materials, determination of baseline conditions and measurable target outcomes, and assessment of performance. The permittees, including the City, retained a consultant to perform this mandated activity. Each permittee, including the City, paid a share of this cost. I am informed and believe and therefore state that the City's share of the cost for this activity in FY 2009-10 was \$41.34 and in FY 2010-11 the City's share was \$539.41.

I am further informed and believe and therefore state that the City first incurred those costs when it was invoiced by the County of Orange (“County”) on or about December 1, 2009 and that the City paid such invoice on or about December 14, 2009.

(c) Public Education and Outreach

(i) Public Awareness Survey: Subsection XIII.1 of the Permit required the permittees, including the City, to complete a public awareness survey to determine the effectiveness of the existing public and business education strategy and any need for changes to the existing multimedia public education efforts. The permittees, including the City, collectively retained a consultant to perform this mandated activity in FY 2009-10. I am informed and believe and therefore state that during FY 2009-10, the City’s share of the costs for this activity were \$508.83. I am further informed and believe and therefore state that the City first incurred those costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about December 14, 2009.

(ii) Workshops: Subsection XIII.4 of the Permit required the permittees, including the City, to conduct sector-specific workshops, individually or on a regional basis, by July 1, 2010 and on an annual basis thereafter. The target sectors were manufacturing facilities; the mobile service industry; the commercial, distribution and retail sales industry; the residential/commercial landscape construction and services industry; the residential and commercial construction industry; and residential and community activities. The permittees, including the City, collectively retained staff from the County to assist with these mandated activities. I am informed and believe and therefore state that the City’s share of such costs in FY 2009-10 was \$79.50 and that the City’s share of such costs in FY 2010-11 was \$41.34. I am further informed and believe and therefore state that the City first incurred those costs when it

was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about December 14, 2009.

(iii) Public Participation: Subsection XIII.7 of the Permit required the permittees, including the City, to develop and implement a mechanism for public participation in the updating and implementation of Drainage Area Management Plans, monitoring plans, Water Quality Management Plan guidance and Fact Sheets for various activities. The public was required to be notified of the availability of these documents through public notices in local newspapers, County and/or city websites, local libraries/city halls and/or courthouses. The permittees, including the City, collectively retained County staff to assist with these mandated activities. I am informed and believe and therefore state that the City's share of such costs in FY 2009-10 was \$15.90 and that the City's share of such costs in FY 2010-11 was \$15.90. I am further informed and believe and therefore state that the City first incurred those costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about December 14, 2009.

(d) New/Revised Development Programs and Standards

(i) Low Impact Development (LID) and Model Water Quality Management Plan (WQMP): Subsection XII.C of the Permit required the permittees, including the City, to incorporate LID principals and structural features into public agency Priority Development Projects and in other instances to incorporate U.S. Environmental Protection Agency (EPA) Guidance entitled, "*Management Wet Weather with Green Infrastructure: Green Streets.*" These include road, drainage facility, public utility, linear and other projects. The permittees, including the City, collectively retained a consultant team to assist with developing a public agency project element within the Model WQMP. I am informed and believe and therefore state

that the City's share of the cost of this activity in FY 2009-10 was \$2,232.71 and that the City's share of the cost of this activity in FY 2010-11 was \$2,127.06. In addition, I am informed and believe and therefore state that City-specific costs to develop public agency WQMPs for road, drainage facility, public utility, linear, and other projects with the mandated incorporation of LID principals were \$13,540 in FY 2009-10 and \$14,176 in FY 2010-11. I am further informed and believe and therefore state that the City first incurred those costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about December 14, 2009.

(ii) Hydrologic Conditions of Concern (HCOC): Subsection XII.D of the Permit required the permittees, including the City, to address the impact of urbanization on downstream hydrology. Subsection XII.D.1 required each permittee Priority Development Project to ascertain the impact of the project on the site's hydrologic regime based on the two-year frequency storm event, and to include the findings in the WQMP for the project. The permittees, including the City, shared the cost of a hydromodification susceptibility analysis of north Orange County's surface water drainage systems. Hydromodification susceptibility maps were prepared and language added to the model WQMP and Technical Guidance Document. The draft map data were verified using mapping and photography and updated as needed. The draft map data were verified using mapping and photography and updated as needed. I am informed and believe and therefore state that the City's share of the cost of these activities in FY 2009-10 was \$1,009.46 and in FY 2010-11 the City's share of the costs was \$3,431.77. I am informed and believe and therefore state that the City first incurred these costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about December 14, 2009.

(e) Total Maximum Daily Loads (TMDLs): Section XVIII of the Permit contained a new program setting forth the implementation of various TMDLs. This TMDL program was not required under the 2002 Permit and was a new program under the Permit. Its requirements continued through the term of the Permit. The City was subject to the following requirement under this new program:

(i) Metals TMDL for Coyote Creek and San Gabriel River: Permit Subsection XVIII.B.9 required the development and implementation of a Constituent Specific Source Control Plan and a monitoring program in connection with a Metals TMDL for Coyote Creek and the San Gabriel River. The CSSCP was required to be designed and implemented to ensure compliance with specific numeric effluent limits taken from the wasteload allocations set forth in the TMDL, as set forth in Table 6 on page 73 of the Permit. While the cost of the CSSCP was not shared by the permittees, including the City, costs of the monitoring program, which was done on a cost-sharing basis, were shared by the City. I am informed and believe and therefore state that the estimated cost of the monitoring efforts during FY 2010-11 was approximately \$3,635 and that the cost during FY 2011-12 was \$3,087.33. I am informed and believe and therefore state that the City was first invoiced for these requirements by the County on December 23, 2010 and that the City paid such invoice on or about January 10, 2011.

7. As set forth above in this Declaration, the City first incurred costs under the Permit during FY 2009-10, which commenced on July 1, 2009.

8. I am informed and believe and therefore state that there are no dedicated state, federal or regional funds that were available to pay for any of these new programs/activities. I am not aware of any fee or tax which the City would have the discretion to impose under California law to cover any portion of the cost of these new programs/activities. I am further

informed and believe and therefore state that the only available source of funds to pay for the costs set forth in this Declaration was the City's General Fund.

I declare under penalty of perjury that the foregoing is true and correct.

Executed December 15, 2016 at Seal Beach, California.

Michael Ho, P.E.
City Engineer

**DECLARATION OF JARAD HILDENBRAND ON BEHALF OF THE CITY OF VILLA
PARK IN SUPPORT OF TEST CLAIM**

I, Jarad Hildenbrand, declare as follows:

1. I make this declaration based upon my own personal knowledge, except for matters set forth herein on information and belief, and as to those matters I believe them to be true, and if called upon to testify, I could and would competently testify to the matters set forth herein under oath.

2. I am employed by the City of Villa Park ("City") as City Manager.

3. I have held my current position for approximately four years. My duties include managing the day-to-day operations of the City, which includes addressing the City's stormwater and related environmental programs as they affect the Public Works Department and capital improvements in the City.

4. I have reviewed California Regional Water Quality Control Board, Santa Ana Region ("RWQCB") Order No. R8-2009-0030, issued by the RWQCB on May 22, 2009 (the "Permit") and am familiar with the requirements of the Permit as it applies to the City. The City is a permittee under that Permit.

5. I have also reviewed and am familiar with the requirements of Order No. R8-2002-0010, issued by the RWQCB on January 18, 2002 ("2002 Permit"). The City was a permittee under the 2002 Permit.

6. Based on my understanding of the requirements of the 2002 Permit and the requirements of the Permit, I understand and believe and therefore state that the Permit requires the permittees, including the City, to perform the following new programs and/or enhanced

levels of service that were not required by the 2002 Permit and which are unique to local governmental agencies:

(a) Municipal Inventories: Sections IX.1 and X of the Permit required each permittee, including the City, to maintain an inventory of industrial and commercial facilities/businesses within its jurisdiction, which must be maintained in a computer-based database system. Inclusion of a Geographical Information System (GIS) is required, with latitude/longitude (in decimals) or NAD83/WGS8439 compatible formatting. I am informed and believe and therefore state that during fiscal year (FY) 2009-10, the cost of this program for the City was \$4,000 and that during FY 2010-11, the cost for this program was \$4,000. I am further informed and believe and therefore state that the City first incurred costs for such requirements on or December 2009.

(b) Residential Program -- Common Interest Area (CIA)/Homeowner Association (HOA) Pilot Program: Subsection XI.4 of the Permit required the permittees, including the City, to develop a pilot program to control pollutant discharges from common interest areas and areas managed by HOAs or management companies. Program activities required to be funded include: Evaluation of applicable regional programs and studies to encourage efficient water use and to minimize runoff, such as those developed by the Municipal Water District of Orange County and the Irvine Ranch Water District, and development of a pilot program to include design and dissemination of educational and outreach materials, determination of baseline conditions and measurable target outcomes, and assessment of performance. The permittees, including the City, retained a consultant to perform this mandated activity. Each permittee, including the City, paid a share of this cost. I am informed and believe and therefore state that the City's share of the cost for this activity in FY 2009-10 was \$14.75 and in FY 2010-11 the City's share was \$90.74. I am further informed and believe and therefore state that the City first incurred those costs when

it was invoiced by the County of Orange (“County”) on or about December 1, 2009 and that the City paid such invoice on or about December 14, 2009.

(c) Public Education and Outreach

(i) Public Awareness Survey: Subsection XIII.1 of the Permit required the permittees, including the City, to complete a public awareness survey to determine the effectiveness of the existing public and business education strategy and any need for changes to the existing multimedia public education efforts. The permittees, including the City, collectively retained a consultant to perform this mandated activity in FY 2009-10. I am informed and believe and therefore state that during FY 2009-10, the City’s share of the costs for this activity were \$181.48. I am further informed and believe and therefore state that the City first incurred those costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about December 14, 2009.

(ii) Workshops: Subsection XIII.4 of the Permit required the permittees, including the City, to conduct sector-specific workshops, individually or on a regional basis, by July 1, 2010 and on an annual basis thereafter. The target sectors were manufacturing facilities; the mobile service industry; the commercial, distribution and retail sales industry; the residential/commercial landscape construction and services industry; the residential and commercial construction industry; and residential and community activities. The permittees, including the City, collectively retained staff from the County to assist with these mandated activities. I am informed and believe and therefore state that the City’s share of such costs in FY 2009-10 was \$28.36 and that the City’s share of such costs in FY 2010-11 was \$14.75. I am further informed and believe and therefore state that the City first incurred those costs when it

was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about December 14, 2009.

(iii) Public Participation: Subsection XIII.7 of the Permit required the permittees, including the City, to develop and implement a mechanism for public participation in the updating and implementation of Drainage Area Management Plans, monitoring plans, Water Quality Management Plan guidance and Fact Sheets for various activities. The public was required to be notified of the availability of these documents through public notices in local newspapers, County and/or city websites, local libraries/city halls and/or courthouses. The permittees, including the City, collectively retained County staff to assist with these mandated activities. I am informed and believe and therefore state that the City's share of such costs in FY 2009-10 was \$5.67 and that the City's share of such costs in FY 2010-11 was \$5.67. I am further informed and believe and therefore state that the City first incurred those costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about December 14, 2009.

(d) New/Revised Development Programs and Standards

(i) Low Impact Development (LID) and Model Water Quality Management Plan (WQMP): Subsection XII.C of the Permit required the permittees, including the City, to incorporate LID principals and structural features into public agency Priority Development Projects and in other instances to incorporate U.S. Environmental Protection Agency (EPA) Guidance entitled, "*Management Wet Weather with Green Infrastructure: Green Streets.*" These include road, drainage facility, public utility, linear and other projects. The permittees, including the City, collectively retained a consultant team to assist with developing a public agency project element within the Model WQMP. I am informed and believe and therefore state

that the City's share of the cost of this activity in FY 2009-10 was \$796.34 and that the City's share of the cost of this activity in FY 2010-11 was \$758.66. In addition, I am informed and believe and therefore state that City-specific costs to develop public agency WQMPs for road, drainage facility, public utility, linear, and other projects with the mandated incorporation of LID principals were \$10,000 in FY 2009-10 and \$10,000 in FY 2010-11. I am further informed and believe and therefore state that the City first incurred those costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about December 14, 2009.

(ii) Hydrologic Conditions of Concern (HCOC): Subsection XII.D of the Permit required the permittees, including the City, to address the impact of urbanization on downstream hydrology. Subsection XII.D.1 required each permittee Priority Development Project to ascertain the impact of the project on the site's hydrologic regime based on the two-year frequency storm event, and to include the findings in the WQMP for the project. The permittees, including the City, shared the cost of a hydromodification susceptibility analysis of north Orange County's surface water drainage systems. Hydromodification susceptibility maps were prepared and language added to the model WQMP and Technical Guidance Document. The draft map data were verified using mapping and photography and updated as needed. The draft map data were verified using mapping and photography and updated as needed. I am informed and believe and therefore state that the City's share of the cost of these activities in FY 2009-10 was \$1,727.22 and in FY 2010-11 the City's share of the costs was \$5,871.88. I am informed and believe and therefore state that the City first incurred these costs when it was invoiced by the County on or about December 1, 2009 and that the City paid such invoice on or about December 14, 2009.

7. As set forth above in this Declaration, the City first incurred costs under the Permit during FY 2009-10, which commenced on July 1, 2009.

8. I am informed and believe and therefore state that there are no dedicated state, federal or regional funds that were available to pay for any of these new programs/activities. I am not aware of any fee or tax which the City would have the discretion to impose under California law to cover any portion of the cost of these new programs/activities. I am further informed and believe and therefore state that the only available source of funds to pay for the costs set forth in this Declaration was the City's General Fund.

I declare under penalty of perjury that the foregoing is true and correct.

Executed December 15, 2016 at Villa Park, California.

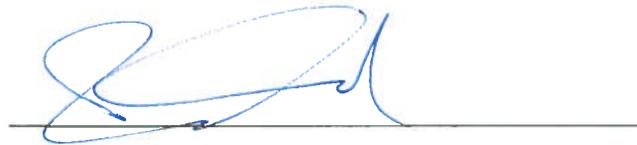

EXHIBIT B

PROGRAM IMPLEMENTATION AGREEMENT

1 AMENDMENT AND RESTATEMENT OF NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM
 2 STORMWATER PERMIT IMPLEMENTATION AGREEMENT
 3

4 This AGREEMENT, for purposes of identification numbered D02-048, entered into
 5 this 25th day of June, 2002, by the County of Orange, (herein called
 6 the COUNTY), the Orange County Flood Control District (herein called DISTRICT) and the
 7 cities of Aliso Viejo, Anaheim, Brea, Buena Park, Costa Mesa, Cypress, Dana Point,
 8 Fountain Valley, Fullerton, Garden Grove, Huntington Beach, Irvine, Laguna Beach,
 9 Laguna Hills, Laguna Niguel, Laguna Woods Lake Forest, La Habra, La Palma, Los
 10 Alamitos, Mission Viejo, Newport Beach, Orange, Placentia, Rancho Santa Margarita, San
 11 Clemente, San Juan Capistrano Santa Ana, Seal Beach, Stanton, Tustin, Villa Park,
 12 Westminster, and Yorba Linda (herein called CITIES) restates the agreement provisions
 13 made previously by the COUNTY, DISTRICT and CITIES with respect to compliance with the
 14 National Pollutant Discharge Elimination System (NPDES) municipal stormwater permits
 15 issued for Orange County and amends specified provisions to add three additional
 16 cities, revises participant share calculations and allows participant share
 17 calculations on a countywide and regional basis The COUNTY, DISTRICT and CITIES may
 18 be referred to collectively as PERMITTEES or individually as a PERMITTEE in this
 19 AGREEMENT
 20

21 RECITALS
 22

23 WHEREAS, Congress in 1987 through the Water Quality Act (herein called WQA)
 24 amended Section 402 of the Federal Clean Water Act (33 U.S.C.A 1342(p) to require
 25 the federal Environmental Protection Agency to promulgate regulations for applications
 26 for permits for stormwater discharges; and

1 WHEREAS, these permit regulations will require the control of pollutants from
 2 stormwater discharges by requiring a National Pollutant Discharge Elimination System
 3 permit which would allow the lawful discharge of stormwaters into waters of the United
 4 States; and

5 WHEREAS, these EPA regulations require NPDES permits for discharges from
 6 municipal storm sewers on a system-wide or jurisdiction-wide basis; and

7 WHEREAS, the Legislature, in enacting the Orange County Flood Control Act,
 8 created the Orange County Flood Control District to provide for the control of flood
 9 and storm waters; and

10 WHEREAS, the powers granted to the DISTRICT include carrying on technical and
 11 other investigations, examinations, or tests of all kinds, making measurements,
 12 collecting data, and making analyses, studies, and inspections pertaining to water
 13 supply, control of floods, use of water, water quality, nuisances, pollution, waste,
 14 and contamination of water, both within and without the DISTRICT; and

15 WHEREAS, the COUNTY, the DISTRICT and the CITIES desire to develop an integrated
 16 stormwater discharge management program with the objective of improving water quality
 17 in the County of Orange; and

18 WHEREAS, the California State Water Resources Control Board (CSWRCB) as designee
 19 of the EPA has delegated authority to the Regional Water Quality Control Boards-Santa
 20 Ana Region (RWQCB-SAR) and San Diego Region (RWQCB-SDR) (collectively, the RWQCBs) for
 21 administration of the NPDES stormwater permit application process within the
 22 boundaries of their Regions; and

23 WHEREAS, the COUNTY, DISTRICT and CITIES have been designated as PERMITTEES by
 24 the RWQCBs; and

25 WHEREAS, the COUNTY has been designated as the Principal PERMITTEE on the
 26 permits; and

1 WHEREAS, cooperation between the CITIES, the COUNTY and the DISTRICT to jointly
2 file applications for NPDES Stormwater permits and implement common programs to the
3 extent feasible, is in the best interests of the CITIES, the COUNTY and the District;
4 and

5 WHEREAS, the COUNTY is willing to share the expertise of its staff with the
6 CITIES so that they can join in seeking and implementing certain requirements of the
7 NPDES Stormwater permits; and

8 WHEREAS, the PERMITTEES approved a Stormwater Permit Implementation Agreement to
9 memorialize program cooperation based on the above recitals on December 18, 1990 which
10 was subsequently amended on October 26, 1993 by Amendment No 1 (the December 18 1990
Agreement as Amended by Amendment No 1 will be referred to collectively hereinafter
12 as the ORIGINAL AGREEMENT); and

13 WHEREAS Section X of the ORIGINAL AGREEMENT provided that the ORIGINAL
14 AGREEMENT may be amended by consent of a majority of the PERMITTEES which represent a
15 majority of the percentage contributions as described in Section IV of the ORIGINAL
16 AGREEMENT and

17 WHEREAS, Section VI of the ORIGINAL AGREEMENT states that any city which becomes
18 signatory to this ORIGINAL AGREEMENT after the applications for the initial NPDES
19 stormwater permits have been approved shall comply with all of the provisions of the
20 ORIGINAL AGREEMENT; and,

21 WHEREAS pursuant to Sections VI and X of the ORIGINAL AGREEMENT, the PERMITTEES
22 approved Amendment No 1 to the ORIGINAL AGREEMENT (herein called AMENDMENT NO 1) on
23 October 26 1993 to add two newly incorporated cities, provide participant share
24 calculations based on thirty-three PERMITTEES and establish a Technical Advisory
Committee; and

25 WHEREAS, the PERMITTEES now desire to restate those provisions in the ORIGINAL
26 AGREEMENT that remain unchanged and amend specified provisions to add three additional

1 cities, revise participant share calculations and allow participant share calculations |
 2 on a countywide and regional basis

3 NOW THEREFORE: The PERMITTEES hereto do mutually agree to add the cities of
 4 Aliso Viejo, Laguna Woods and Rancho Santa Margarita as PERMITTEES under this
 5 AGREEMENT, to restate those provisions in the ORIGINAL AGREEMENT that remain unchanged |
 6 and amend Sections II, III.A., III.B., III.C., IV, VIII, IX, XI and XV in their
 7 entirety as follows:

8 I. FILING STATUS

9 The COUNTY, DISTRICT and CITIES will file the applications for stormwater
 10 permits as PERMITTEES. The COUNTY, the DISTRICT and each individual City
 11 will be a PERMITTEE.

12 II. INCORPORATION OF FEDERAL GUIDELINES

13 The terms of all applicable Federal and State water quality regulations
 14 and guidelines under the Clean Water Act and Water Quality Act, as
 15 presently written or as changed during the life of this agreement are
 16 hereby incorporated by reference and made a part of this AGREEMENT and
 17 take precedence over any inconsistent terms of this AGREEMENT.

18 III. DELEGATION OF RESPONSIBILITIES

19 The responsibilities of each of the parties shall be as follows:

20 A. The COUNTY, on a cost-shared basis, shall administer system
 21 compliance by:

22 1 Preparing implementation and annual operating budgets. The
 23 budget year shall coincide with the fiscal year of the COUNTY,
 24 July 1 - June 30.

25 a. The participants shall be permitted to review and
 26 approve the annual operating budget and work plan for
 the forthcoming year. Criteria for approval shall be

1 affirmative responses from a majority of the PERMITTEES
 2 which represent a majority of the percentage
 3 contribution as described in Section IV. The COUNTY and
 4 the DISTRICT will represent one voting PERMITTEE with
 5 their percentage contribution equal to the total of the
 6 COUNTY and the DISTRICT as described in Section IV. The
 7 review period shall be from January 1 to January 31 of
 8 each year with approval of the final budget to be
 9 completed by February 15.

10 b. The annual operating budget shall not be exceeded
 11 without prior consent of the majority of the PERMITTEES
 12 which represent a majority of the percentage
 13 contribution.

14 2 Consulting with the city managers and any committees
 15 established by the city managers when preparing budgets and
 16 major program elements.

17 3 Preparing compliance reports to the Regional Board and
 18 providing copies to the PERMITTEES

19 4 Preparing a model system-wide Best Management Practices (BMP)
 20 Program report

21 5 Monitoring the implementation and ensuring the effectiveness
 22 of system-wide BMPs. This will include field reconnaissance to
 23 evaluate structural and procedural BMPs. An annual report to
 24 the RWQCBs will be prepared presenting the results of these
 25 evaluations.

26 6. The COUNTY as Principal PERMITTEE may retain the services of
 professional consultants and may fund, or contribute to

1 funding technical and/or economic studies conducted by
2 professional organizations such as the American Public Works
3 Association

4 B The DISTRICT shall to the maximum extent practicable, and on a
5 cost-shared basis except as set forth in subparagraph 4 below:

- 6 1. Perform the water quality and hydrographic monitoring for
7 permit compliance
- 8 2 Administer the water pollution control program by enforcing
9 the Orange County Water Quality Ordinance
- 10 3 Develop uniform criteria for annual inspection of drainage
11 facilities
- 12 4 Perform inspections, at no cost to the CITIES or the COUNTY,
13 on those facilities owned by the DISTRICT and on municipal
14 separate storm sewers in unincorporated County. Contracts for
15 such inspections within CITIES may be undertaken at the sole
16 expense of the requesting city.

17 C The CITIES shall, to the maximum extent practicable, and at no cost
18 to COUNTY or DISTRICT:

- 19 1 Implement a facility inspection program in accordance with the
20 uniform criteria developed by the DISTRICT, for all municipal
21 separate storm sewers as defined by the stormwater permit and
22 within the jurisdictional boundaries of that city
- 23 2. Submit to the COUNTY stormwater drain maps with periodic
24 revisions which reflect the modifications that were made to
25 the storm drain system
- 26 3 Prepare watershed characterizations, including
 - a. Zoning designations, and

b Identification of areas where hazardous materials presently are or are suspected to have been stored, manufactured, or disposed. This shall include sites at which a hazardous material spill has occurred.

4. Review, approve, and implement system-wide BMPs
5. Eliminate, or have eliminated, illegal/illicit connections to the storm drain system.
- 6 Identify the legal authority for control of discharges to the storm drain system.
7. Provide to the COUNTY annual reports (on forms provided by the COUNTY) and any other information needed to satisfy annual reporting requirements of the RWQCBs.
8. Adopt and enforce, or name DISTRICT as enforcer of a water pollution control ordinance, which prohibits non-NPDES permitted discharges to the municipal separate storm sewer system.

D The COUNTY shall, to the maximum extent practicable and at no cost to the CITIES or the DISTRICT, undertake in the unincorporated areas of the COUNTY all activities required above of the CITIES that are not responsibilities of the DISTRICT as outlined in Section III B.

E. The PERMITTEES hereby establish a Technical Advisory Committee (herein called COMMITTEE) consisting of five members chosen by the Orange County City Engineers Association, and one member representing the COUNTY. The COMMITTEE shall prepare by-laws for the Technical Advisory Committee and submit same to PERMITTEES for approval. The COMMITTEE will act in an advisory role to the

1 PERMITTEES and implement policy previously established by the
 2 PERMITTEES.

3
 4 IV. PROGRAM COSTS

5 The responsibilities for payment of all shared costs of equipment,
 6 services, contracted analytical services, and the cost of the Regional
 7 Board permits, shall be distributed among the COUNTY, DISTRICT, and CITIES
 8 as follows:

<u>Participants</u>	<u>Percentage Contribution</u>
DISTRICT	10
CITIES + COUNTY	90

9
 10
 11
 12
 13 The individual percentage contributions from each city and the COUNTY
 14 shall be functions of their respective areas and population relative to
 15 those of the entire County. Each area shall be calculated as one half of
 16 the sum of the area and population fractions, multiplied by 90%. Excluded
 17 are national forests, state parks, airports, landfills, oceans, harbors,
 18 tidal bays and military installations (Exhibit A-1). The contribution of
 19 the COUNTY shall be calculated from unincorporated areas and their
 20 respective populations.

21
 22 Share in percent for City #1 = $\{(X_1/X_{tot}) + (Y_1/Y_{tot})\}/2 \times (90)$

23 X = area

24 Y = population

25 tot = total population or area

26 90 = total percentage excluding Flood Control District contribution

2 The percentage share shall be calculated by the COUNTY Public Facilities
3 and Resources Department Environmental Resources Section from population
4 and area data. These calculations shall be completed by January 1 of each
5 year and shall be included in the annual budget proposal. The annual
6 budget proposal shall be recomputed for the thirty-six PERMITTEES based on
7 the following percentage share computation methods:

- 8 A. Countywide costs as provided in Exhibit B-1.
9 B. Regional costs specific to only one RWQCB permit as provided in
10 Exhibits B-2A and B-2B.
11 C. In the event of a regulatory directive issued to PERMITTEES, the COUNTY
12 shall provide immediate notice to the affected PERMITTEES and meet and
13 confer with them with respect to responding to the directive and
14 funding the immediate response

15 Amended calculations and computation method for fiscal year 2002-03 are
16 provided in Exhibits B-1, B-2A and B-2B, which are made a part hereof
17

18 If at any time during a given fiscal year the program costs exceed the sum
19 of the deposits, the COUNTY shall submit invoices to the CITIES to recover
20 the deficit, following the approval process described in Section
21 III.A.1.b above. The share for each city shall be prorated according to
22 the formula above. Each city shall pay the invoice within 45 days of the
23 billing date
24

25 The COUNTY shall prepare a fiscal year end accounting within 60 days of
26 the end of the fiscal year. If the fiscal year end accounting results in
costs (net of interest earnings) exceeding the sum of the deposits, the

1 COUNTY shall invoice each city for its prorated share of the excess cost
2 Each city shall pay the billing within 45 days of the date of the invoice.
3 If the fiscal year end accounting results in the sum of the deposits
4 exceeding costs (net of interest earnings), the excess deposits will carry
5 forward to reduce the billings for the following year.

6
7 The COUNTY shall invoice each city for its annual deposit at the beginning
8 (July 1 of each fiscal year. Each city shall pay the deposit within 45
9 days of the date of the invoice. Each city's deposit shall be based on
10 their prorated share of the approved annual budget, reduced for any
11 surplus identified in the prior fiscal year end accounting

12
13 Interest earned on the CITIES' deposits will not be paid to the CITIES,
14 but will be credited against the CITIES' share of the program costs.

15
16 Upon termination of the program a final accounting shall be performed by
17 the COUNTY. If costs (net of interest earnings) exceed the sum of the
18 deposits, the COUNTY shall invoice each city for its prorated share of the
19 excess. Each city shall pay the invoice within 45 days of the date of the
20 invoice. If the sum of the deposits exceeds the costs, the COUNTY shall
21 reimburse to each city its prorated share of the excess, within 45 days of
22 the final accounting. Interest earnings are used to offset the CITIES'
23 share of program costs and will not be refunded to the CITIES.

24
25 Each city and the COUNTY shall bear the financial responsibility for
26 implementing the Program, within its jurisdictional boundaries, as
outlined in Section III. C. and D.

1

2

V. LIFE OF THE AGREEMENT

3

The life of the AGREEMENT shall be indefinite or as long as the WQA

4

mandates compliance

5

VI. ADDITIONAL PARTIES

6

Any city which becomes signatory to this AGREEMENT after the applications

7

for the initial NPDES stormwater permits have been approved and any city

8

which becomes incorporated shall become a PERMITTEE on the NPDES

9

stormwater permit issued by its respective RWQCB and shall comply with all

10

of the provisions of this AGREEMENT. The date of initiation, for

11

determining participant costs for newly incorporated CITIES shall be the

12

date of incorporation, and for a city signing after NPDES stormwater

13

permit approval it shall be the date of the initial application for the

14

NPDES Stormwater permit. The costs for adding the additional parties to

15

the program, including additional permit and processing fees, shall be

16

paid by the added party. Monies to be reimbursed to the existing

17

PERMITTEES shall be credited to their respective annual program operating

18

fees for the following budget year.

19

VII. WITHDRAWAL FROM THE AGREEMENT

20

A participant may withdraw from the AGREEMENT 60 days subsequent to

21

written notice to the COUNTY. The COUNTY will notify the remaining

22

PERMITTEES within 10 business days of receipt of the withdrawal notice

23

The withdrawing participant shall agree to file for a separate permit and

24

to comply with all of the requirements established by the RWQCB(s). In

25

addition, withdrawal shall constitute forfeiture of the withdrawing

26

participant's deposit for the budget year of withdrawal. The withdrawing

participant shall be responsible for all lawfully assessed penalties as a

1 consequence of withdrawal. The cost allocations to the remaining members
2 will be recalculated in the following budget year.

3 **VIII NON-COMPLIANCE WITH PERMIT REQUIREMENTS**

4 Any PERMITTEE found in non-compliance with the conditions of the permit
5 within their jurisdictional responsibilities shall be solely liable for
6 any lawfully assessed penalties, pursuant to Section 13385 of the Water
7 Code and the Federal Clean Water Act. Common penalties shall be calculated
8 according to the formula outlined in Section IV.

9 **IX. LEGAL ACTION/ COSTS/ ATTORNEY FEES**

10 Where any legal action is necessary to enforce any provision hereof for
11 damages by reason of an alleged breach of any provisions of this
12 AGREEMENT, the prevailing party shall be entitled to receive from the
13 losing party all litigation and collection expenses, administrative costs,
14 witness fees and court costs including reasonable attorneys fees

15 **X AMENDMENTS TO THE AGREEMENT**

16 This AGREEMENT may be amended by consent of a majority of the PERMITTEES
17 which represent a majority of the percentage contributions as described in
18 Section IV. The COUNTY and the DISTRICT will represent one voting
19 PERMITTEE with a percentage contribution equal to the sum of the
20 individual contributions of the COUNTY and DISTRICT as described in
21 Section IV. No amendment to this AGREEMENT shall be effective unless it is
22 in writing and signed by the duly authorized representatives of the
23 majority of PERMITTEES

24 **XI AUTHORIZED SIGNATORIES**

25 The County Director of the Public Facilities and Resources Department and
26 the respective City Managers, shall be authorized to execute the
application(s) for NPDES municipal stormwater permit(s) and take all other

1 procedural steps necessary to file the application(s) for NPDES municipal
 2 stormwater permit(s).

3 **XII. NOTICES**

4 All notices shall be deemed duly given if delivered by hand; or three (3)
 5 days after deposit in the U.S Mail, postage prepaid

6 **XIII. GOVERNING LAW**

7 This AGREEMENT will be governed and construed in accordance with laws of
 8 the State of California. If any provision or provisions of this AGREEMENT
 9 shall be held to be invalid, illegal or unenforceable, the validity,
 10 legality and enforceability of the remaining provisions shall not any way
 11 be affected or impaired hereby.

12 **XIV. CONSENT TO BREACH NOT WAIVER**

13 No term or provision hereof shall be deemed waived and no breach excused,
 14 unless such waiver or consent shall be in writing and signed by the
 15 PERMITTEE to have waived or consented. Any consent by any PERMITTEE to, or
 16 waiver of, a breach by the other, whether express or implied, shall not
 17 constitute a consent to, waiver of or excuse for any other different or
 18 subsequent breach.

19 **XV. APPLICABILITY OF PRIOR AGREEMENTS**

20 This document restates and amends the provisions in prior agreements and
 21 constitutes the entire AGREEMENT between the PERMITTEES with respect to
 22 the subject matter; all prior agreements, representations, statements,
 23 negotiations and undertakings are superseded hereby.

24 **XVI. EXECUTION OF THE AGREEMENT**

25 This AGREEMENT may be executed in counterparts and the signed counterparts
 26 shall constitute a single instrument.

IN WITNESS WHEREOF, the parties hereto have executed this Agreement on the dates

2 opposite their respective signatures:

Waste Discharge Requirements
for
the County of Orange, Orange County Flood Control District
and
The Incorporated Cities of Orange County within the Santa Ana Region
Areawide Urban Storm Water Runoff
Orange County

FINDINGS

The California Regional Water Quality Control Board, Santa Ana Region (hereinafter Regional Board) finds that:

A. REGULATORY BASIS

1. The 1987 amendments to the Clean Water Act (CWA) added Section 402(p) (USC §1342(p)) establishing a framework for regulating municipal and industrial (including construction) storm water discharges under the National Pollutant Discharge Elimination System (NPDES) permit. Section 402(p) of the CWA requires NPDES permits for storm water discharges from municipal separate storm sewer systems¹ (storm drains or MS4s) as well as other designated storm water discharges that are considered significant contributors of pollutants to waters of the United States (waters of the US). On November 16, 1990, the United States Environmental Protection Agency (hereinafter EPA) amended its NPDES permit regulations to include permit application requirements for storm water discharges. These regulations are codified in Code of Federal Regulations, Title 40, Parts 122, 123 and 124 (40 CFR Parts 122, 123 & 124).
2. This order is based on Section 402(p) of the CWA; 40 CFR Parts 122, 123, and 124; Porter-Cologne Water Quality Control Act (Division 7 of the California Water Code or CWC, commencing with Section 13000); all applicable provisions of statewide Water Quality Control Plans and Policies adopted by the State Water Resources Control Board (State Board); the Water Quality Control Plan for the Santa Ana River Basin (Basin Plan); the California Toxics Rule (CTR); and the California Toxics Rule Implementation Plan. A revised Basin Plan was adopted by the Regional Board and became effective on January 24, 1995. The Basin Plan contains water quality objectives and beneficial uses for water bodies in the Santa Ana Region. Under the CWA, the beneficial uses and the water quality objectives to protect those beneficial uses are collectively referred to as water quality standards. The Basin Plan also incorporates by reference all State Board water quality control

¹ A municipal separate storm sewer **system** (MS4) is any conveyance or a system of conveyances designed to collect and/or transport storm water, such as, storm drains, manmade channels, ditches, roads w/drainage systems, catch basins, curbs, gutters, etc., which is not part of a Publicly Owned Treatment Works (i.e., not a combined sewer).

plans and policies, including the 1990 Water Quality Control Plan for Ocean Waters of California (Ocean Plan).

3. The requirements contained in this order are necessary to protect water quality standards of the receiving waters and to implement the plans and policies described in the above finding. These plans and policies contain numeric and narrative water quality standards for the water bodies in this Region. In accordance with Section 402(p)(2)(B)(iii) of CWA and its implementing regulations, this order requires the permittees to develop and implement programs and policies necessary to reduce the discharge of pollutants in urban storm water runoff to waters of the US to the maximum extent practicable (MEP)². The legislative history and the preamble to the federal storm water regulations (40 CFR Parts 122, 123 and 124) indicate that the Congress and the EPA were aware of the difficulties in regulating urban storm water runoff solely through traditional end-of-pipe treatment. Consistent with the CWA, it is the Regional Board's intent that this order require the implementation of best management practices (BMPs)³ to reduce to the maximum extent practicable, the discharge of pollutants in urban storm water from the MS4s in order to support attainment of water quality standards. This order, therefore, includes Receiving Water Limitations⁴ based upon water quality objectives, and requires implementation of control measures to protect the beneficial uses. It also prohibits the creation of nuisance and requires the reduction of water quality impairment in receiving waters with an ultimate goal of achieving water quality objectives of the receiving waters.
4. This order is consistent with recent court decisions and precedential orders adopted by the State Board related to municipal storm water NPDES permits. These precedential State Board orders include: Orders No. 99-05, WQ 2001-15 and WQO 2002-0014.
5. This order does not constitute an unfunded mandate subject to subvention under Article XIII.B, Section (6) of the California Constitution for several reasons, including the following:
 - a) This order implements federally mandated requirements under Clean Water Act Section 402(p)(3)(B). (33 USC § 1342(p)(3)(B)).

² MEP is not defined in the CWA; it refers to management practices, control techniques, and system, design and engineering methods for the control of pollutants taking into account considerations of synergistic, additive, and competing factors, including, but not limited to, gravity of the problem, technical feasibility, fiscal feasibility, public health risks, societal concerns, and social benefits.

³ Best Management Practices (BMPs) are programs and policies, including structural controls where appropriate, that are implemented to control the discharge of pollutants.

⁴ Receiving Water Limitations are requirements included in the orders issued by the Regional Board to assure that the regulated discharge does not violate water quality standards established in the Basin Plan at the point of discharge to waters of the US or the State.

The County of Orange, Orange County Flood Control District, and the Incorporated Cities of Orange County
Areawide Urban Storm Water Runoff

- b) The permittees' obligation under this order are similar to, and in many respects less stringent than, the obligations of non-governmental dischargers who are issued NPDES permits for storm water discharges.
- c) The permittees have the authority to levy service charges, fees, or assessments to pay for compliance with this order, where voter approval is needed, the permittees should strive to gain voter approval⁵.
- d) The permittees requested permit coverage in lieu of compliance with the complete prohibition against the discharge of pollutants contained in federal Clean Water Act Section 301, subdivision (a). (33 USC § 1311(a)).

B. REGULATED ENTITIES (PERMITTEES OR DISCHARGERS)

- 6. On July 22, 2006, the County of Orange, Orange County Flood Control District (OCFCD) and the incorporated cities of Anaheim, Brea, Buena Park, Costa Mesa, Cypress, Fountain Valley, Fullerton, Garden Grove, Huntington Beach, Irvine, Laguna Hills, Laguna Woods, La Habra, La Palma, Lake Forest, Los Alamitos, Newport Beach, Orange, Placentia, Santa Ana, Seal Beach, Stanton, Tustin, Villa Park, Westminster, and Yorba Linda (hereinafter collectively referred to as permittees or dischargers), submitted NPDES Application No. CAS618030 and a Report of Waste Discharge for reissuance of their areawide urban storm water permit. In order to more effectively carry out the requirements of this order, the permittees have agreed that the County of Orange will continue as principal permittee and the OCFCD and the incorporated cities will continue as co-permittees. Certain portions of the cities of Laguna Hills, Laguna Woods and Lake Forest are within the San Diego Regional Board's jurisdiction. As such, these cities are also regulated under urban storm water permit issued by the San Diego Regional Board.
- 7. The permittees fall into one of the following categories: (1) a medium or large municipality that services a population of greater than 100,000 or 250,000 respectively; or, (2) a small municipality that is interrelated to a medium or large municipality. Under Section 402(p) of the Clean Water Act, these dischargers (permittees) are required to obtain coverage under an NPDES permit for storm water runoff from their jurisdictions.

C. REGULATED DISCHARGES

- 8. This order is intended to regulate the discharge of pollutants in urban storm water runoff from anthropogenic (generated from human activities) sources and/or activities within the jurisdiction and control of the permittees and is not intended to address background or naturally occurring pollutants or flows.
- 9. The permittees own and operate storm drains, including flood control facilities. Some of the natural channels, streambeds and other drainage facilities that are generally considered as waters of the US have been converted to flood control

⁵ For example, the City of Santa Cruz voted to raise property taxes to fund the storm water program at the November 4, 2008 election (see: http://www.santacruzsentinel.com/localnews/ci_10904561).

**The County of Orange, Orange County Flood Control District, and the Incorporated Cities of Orange County
Areawide Urban Storm Water Runoff**

facilities. The permittees have established legal authority to control discharges into these systems that they own, operate and/or regulate. As owners and/or operators of the MS4 systems, the permittees are responsible for discharges into their systems that they do not prohibit or control (except where they lack jurisdiction; see A.10 below). The discharge of pollutants into the MS4s may cause or contribute to, or threaten to cause or contribute to, a condition of pollution in receiving waters. Federal regulations, 40 CFR 122.26(d)(2)(i), require the permittees to control the discharge of pollutants into the MS4s to the maximum extent practicable.

10. The permittees may lack legal jurisdiction over urban runoff into their systems from some state and federal facilities, utilities and special districts, Native American tribal lands, waste water management agencies and other point and non-point source discharges otherwise permitted by the Regional Board. The Regional Board recognizes that the permittees should not be held responsible for such facilities and/or discharges. Similarly, certain activities that generate pollutants present in urban runoff may be beyond the ability of the permittees to eliminate. Examples of these include operation of internal combustion engines, atmospheric deposition, brake pad wear, tire wear and leaching of naturally occurring minerals from local geography.
11. This order regulates storm water runoff and certain types of de-minimus discharges specifically authorized under Section III of this order (collectively referred to as urban runoff) from areas under the jurisdiction of the permittees. For purposes of this order, urban runoff includes storm water and authorized non-storm water (see Section III) discharges from residential, commercial, industrial and construction areas within the permitted area and excludes discharges from feedlots, dairies, and farms. Urban runoff consists of surface runoff generated from various land uses in all the hydrologic drainage areas that discharge into waters of the US. The quality of these discharges varies considerably and is affected by land use activities, basin hydrology and geology, season, the frequency and duration of storm events, and the presence of illicit discharge⁶ practices and illicit⁷ connections.
12. The permittees have the authority to approve plans for residential, commercial, and industrial developments. If not properly controlled and managed, urbanization could result in the discharge of pollutants in urban runoff⁸. "America's Clean Water-The States' Nonpoint Source Assessment, 1985" and the Biennial National Water Quality Inventory Reports to Congress cite urban runoff as a major source of

⁶ Illicit discharge means any disposal, either intentionally or unintentionally, of material or waste that can pollute urban runoff or create a nuisance.

⁷ Illicit connections are those which are not properly authorized or permitted by the municipality or the owner/operator of the conveyance system.

⁸ U.S. EPA. 1983. Results of the Nationwide Urban Runoff Program, Vol. 1, Final report. NTIS PB84-185552.

beneficial use impairment. Urban area runoff may contain⁹ elevated levels of pathogens (e.g., bacteria, protozoa, viruses), sediment, trash, fertilizers (nutrients, compounds of nitrogen and phosphorus), pesticides (e.g., DDT, Chlordane, Diazinon, Chlorpyrifos), heavy metals (e.g., cadmium, chromium, copper, lead, zinc), and petroleum products (e.g., oil, grease, petroleum hydrocarbons, polycyclic aromatic hydrocarbons). Urban runoff can carry these pollutants to rivers, streams, lakes, bays and the ocean (receiving waters¹⁰). In addition, increased flows due to urbanization may increase erosion of stream banks and channels and cause stream channel alterations and impact aquatic resources. This order regulates the discharge of pollutants to waters of the US, to protect beneficial uses of the receiving waters.

13. Urban activities also generate non-storm water discharges such as air conditioning condensate, irrigation runoff, individual residential car washing, etc., generally referred to as de minimus type of discharges. If properly managed, these types of discharges may not contain significant amount of pollutants. Some of these de minimus types of discharges are currently being regulated under separate orders issued by the Regional Board, and some of the specific types of de minimus discharges are authorized under this order (see Section III of this order). Orders No. R8-2003-0061 (NPDES No. CAG998001), R8-2004-0021 (NPDES No. CAG998002) and R8-2007-0041 (NPDES No. CAG918002) issued by the Regional Board regulate de-minimus types of discharges.

D. HISTORY OF ORANGE COUNTY MUNICIPAL STORM WATER PERMIT

14. Prior to EPA's promulgation of the storm water permit regulations, the three counties (Orange, Riverside, and San Bernardino) and the incorporated cities within the jurisdiction of the Santa Ana Regional Board requested areawide NPDES permits for urban runoff. On July 13, 1990, the Regional Board adopted Order No. 90-71 for urban storm water runoff from urban areas in Orange County within the Santa Ana Region (first term Permit). Orders No. 96-31 (second term Permit) and R8-2002-0010 (third term Permit), issued by the Regional Board on March 8, 1996 and January 18, 2002, respectively, renewed the Orange County MS4 permit.
15. Order No. R8-2002-0010 expired on January 19, 2007. On July 22, 2006, the permittees submitted a Report of Waste Discharge for renewal of the Permit. On February 20, 2007, Order No. 2002-0010, NPDES No. CAS618030, was administratively extended in accordance with Title 23, Division 3, Chapter 9, §2235.4 of the California Code of Regulations.

⁹ Makepeace, D.K., D.W. Smith, and S.J. Stanley. 1995. Urban stormwater quality: summary of contaminant data. *Critical Reviews in Environmental Science and Technology* 25(2):93-139.

¹⁰ Receiving waters are waters of the U.S. (and their tributaries) which are identified in the Basin Plan as having certain beneficial uses (see Finding 19, below, for a list of these waters).

E. PERMIT RENEWAL APPLICATION AND RELATED DOCUMENTS

16. The Report of Waste Discharge (the permit renewal application) included the following major documents/information:
- a) A summary of status of current Storm Water Management Program;
 - b) A Proposed Plan of Storm Water Quality Management Activities for 2007-20012, as outlined in the Draft 2007 Drainage Area Management Plan (DAMP). The 2007 DAMP includes all the activities the permittees propose to undertake during the next permit term, goals and objectives of such activities, and an evaluation of the need for additional source control and/or structural and non-structural BMPs and proposed pilot studies;
 - c) The permittees have developed Local Implementation Plans (LIPs); established a formal training program; and developed a program effectiveness assessment strategy and Watershed Action Plans;
 - d) A Performance Commitment that includes new and existing program elements and compliance schedules necessary to implement controls to reduce pollutants to the maximum extent practicable;
 - e) A summary of procedures implemented to detect illicit discharges and illicit connection practices;
 - f) A summary of enforcement procedures and actions taken to require storm water discharges to comply with the approved Storm Water Management Program;
 - g) A summary of public agency activities, results of monitoring program, and program effectiveness assessment; and,
 - h) A fiscal analysis.
17. The documents referenced in Finding E.16, above, are hereby incorporated as enforceable elements of this order.

F. PERMITTED AREA

18. The permitted area is shown on Attachment A. It includes the northern portions of Orange County, including the 26 incorporated cities listed under Finding 6, above. The permittees serve a population of approximately 3.1 million, occupying an area of approximately 789 square miles (including unincorporated areas and the limits of 34 cities, 26 of which are within the jurisdiction of this Regional Board; three of the cities, Laguna Hills, Laguna Woods and Lake Forest, are within both the San Diego and Santa Ana Regional Boards' jurisdictions). The permittees have jurisdiction over and/or maintenance responsibility for storm water conveyance systems within Orange County. The County Flood Control system includes an estimated 740 miles of storm drains. A major portion of the urbanized areas of Orange County drains into waterbodies within this Regional Board's jurisdiction. In certain cases, where a natural streambed is modified to convey storm water flows, the conveyance system becomes both a storm drain and a receiving water. The major storm drain systems and drainage areas in Orange County, which are within this Region, are shown on

Attachment B. A portion of the Orange County drainage area is within the jurisdiction of the San Diego Regional Board and is regulated under an order issued by that Board.

G. RECEIVING WATERS AND BENEFICIAL USES

19. Storm water runoff from the MS4s in Orange County enter, or are tributary to, various water bodies of the Region. The permitted area can be subdivided into five tributary watersheds: the San Gabriel River drainage area, the Huntington Harbour and Bolsa Bay drainage area, the Santa Ana River drainage area, the Newport Bay drainage area, and the Irvine and Newport Coast Areas of Special Biological Significance (see Attachment B). These watersheds are tributary to the Pacific Ocean. The surface water bodies in Orange County that could be impacted by urban runoff include:

Inland Surface Streams

- Santa Ana River, Reaches 1 and 2
- Aliso Creek (tributary to Santa Ana River)
- Carbon Canyon Creek (tributary to Santa Ana River)
- Santiago Creek, Reaches 1, 2, 3, and 4 (tributary to the Santa Ana River)
- Silverado Creek (tributary to Santiago Creek)
- Black Star Creek (tributary to Santiago Creek)
- Ladd Creek (tributary to Santiago Creek)
- San Diego Creek, Reaches 1 and 2 (tributary to Newport Bay)
- San Joaquin Freshwater Marsh (tributary to San Diego Creek)
- Other tributaries to San Diego Creek: Bonita Creek, Serrano Creek, Peters Canyon Wash, Hicks Canyon Wash, Bee Canyon Wash, Borrego Canyon Wash, Agua Chinon Wash, Laguna Canyon Wash, Rattlesnake Canyon Wash, and Sand Canyon Wash
- Santa Ana Delhi Channel (tributary to Newport Bay)
- Big Canyon Wash (tributary to Newport Bay)
- Buck Gully
- Los Trancos Creek
- Coyote Creek (tributary to San Gabriel River)
- Other tributaries to the above listed rivers, creeks and channels

Bays, Estuaries, and Tidal Prisms

- Anaheim Bay and Seal Beach National Wildlife Refuge
- Sunset Bay
- Bolsa Bay and Bolsa Chica Ecological Reserve
- Upper and Lower Newport Bay

Tidal Prism of Santa Ana River (to within 1000 feet of Victoria Street) and Newport Slough, Santa Ana Salt Marsh

Tidal Prism of San Gabriel River (River Mouth to Marina Drive)

Tidal Prisms of Flood Control Channels Discharging to Coastal or Bay Waters (e.g. Huntington Harbour)

Ocean Water

Nearshore Zone

San Gabriel River to Poppy Street in Corona Del Mar

Poppy Street to Southeast Regional Boundary

Offshore Zone

Waters between Nearshore Zone and limit of State Waters

Lakes and Reservoirs

Anaheim Lake

Irvine Lake (Santiago Reservoir)

Laguna, Lambert, Peters Canyon, Rattlesnake, Sand Canyon and Siphon Reservoirs

20. The beneficial uses of these water bodies include: municipal and domestic supply, agricultural supply, industrial service and process supply, groundwater recharge, navigation, hydropower generation, water contact recreation, non-contact water recreation, commercial and sport fishing, warm freshwater and limited warm freshwater habitats, cold freshwater habitat, preservation of biological habitats of special significance, wildlife habitat, preservation of rare, threatened or endangered species, marine habitat, shellfish harvesting, spawning, reproduction and development of aquatic habitats, and estuarine habitat. The ultimate goal of this storm water management program is to achieve water quality objectives in the receiving waters, thereby protecting their beneficial uses.
21. Federal regulations, 40 CFR 131.10(a), prohibits the states from designating a water body for waste transport or waste assimilation. This order prohibits the construction of treatment BMPs within waters of the US. However, if the discharges are sufficiently treated to protect the beneficial uses of the receiving waters, further polishing of the discharge within waters of the US may be considered on a case-by-case basis. Federal authorization under Section 404 and Water Quality Standards Certification under Section 401 of the Clean Water Act may be required for waste treatment or conveyance within waters of the US. Pursuant to Water Code Section 13260, Waste Discharge Requirements may be required for such facilities within waters of the State. Under certain conditions, stream flows may be diverted for treatment (see Section III for conditions on return flows from facilities that extract, treat and return flows from the waters of the US).

H. INTERRELATED WATERSHEDS AND STORM WATER PERMITS

22. The Santa Ana River Basin is the major watershed within the jurisdiction of the Regional Board. The lower Santa Ana River Basin (downstream from Prado Basin) includes the Orange County drainage areas, and the Upper Santa Ana River Basin includes the San Bernardino County and the Riverside County drainage areas. Generally, the San Bernardino County drainage areas drain to the Riverside County drainage areas, and Riverside County drainage areas discharge to Orange County.
23. Within the Region, runoff from the San Bernardino County areas is generally conveyed to the Riverside County areas through the Santa Ana River or other drainage channels tributary to the Santa Ana River. These flows are then discharged to Reach 2 of the Santa Ana River through Prado Basin (Reach 3 of the Santa Ana River). During dry weather conditions, most of the flow in Reach 2 is recharged in Orange County. During wet weather, some of the flow is discharged to the Pacific Ocean through Reach 1 of the Santa Ana River.
24. The three county areas within this Region are regulated under three areawide permits for urban storm water runoff. These areawide NPDES permits are:
 - Orange County, NPDES No. CAS618030;
 - Riverside County, NPDES No. CAS618033; and,
 - San Bernardino County, NPDES No. CAS618036.

For an effective watershed management program, cooperation and coordination among the regulators, the municipal permittees, the public, and other entities are essential.

25. Studies conducted by the USEPA, the states, flood control districts and other entities indicate the following major sources for urban storm water pollution nationwide:
 - Industrial sites where appropriate pollution control and BMPs are not implemented;
 - Construction sites where erosion and siltation controls and other BMPs are not implemented; and,
 - Urban runoff where the drainage area is not properly managed.
26. A number of permits have been adopted to address pollution from the sources identified in Finding 25, above. The State Board issued three statewide general NPDES permits: one for storm water runoff from industrial activities (NPDES No. CAS000001, General Industrial Activities Storm Water Permit), a second permit for storm water runoff from construction activities (NPDES No. CAS000002, General Construction Activity Storm Water Permit) and a third permit for Storm Water Runoff Associated with Small Linear Underground/Overhead Construction Projects (CAS000005). Industrial activities (as identified in 40 CFR 122.26(b)(14)) and construction sites of one acre or more, are required to obtain coverage under these statewide general permits. The permittees have developed project conditions of approval requiring coverage under the State's General Permits for new

developments to be implemented at the time of grading or building permit issuance for construction sites on one acre or more and at the time of local permit issuance for industrial facilities.

27. The State Board also adopted NPDES No. CAS000003 for storm water runoff from facilities (including freeways and highways) owned and/or operated by California Department of Transportation (Caltrans) and NPDES No. CAS000004, for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems. The Regional Board adopted Order No. R8-2007-0001, NPDES No. CAG018001, for concentrated animal feeding operations, including dairies. The Regional Board also issues individual storm water permits for certain industrial facilities within the Region. Currently there are two facilities located within Orange County. Additionally, for a number of facilities that discharge process wastewater and storm water, storm water discharge requirements are included with the facilities' NPDES permit for process wastewater.
28. In most cases, the industries and construction sites covered under the Statewide General Industrial and Construction Permits discharge into storm drains and/or flood control facilities owned and operated by the permittees. These industries and construction sites are also regulated under local laws and regulations. Federal regulations, 40 CFR Part 122.26(d)(2)(iv)(C), also require the permittees to develop and implement programs to control the discharge of pollutants from these sites. A coordinated effort between the permittees and Regional Board staff is critical to avoid duplicative and overlapping efforts when overseeing the compliance of dischargers covered under the Statewide General Permits. As part of this coordination, the permittees have been notifying Regional Board staff when they observe conditions that pose a threat or potential threat to water quality, or when an industrial facility or construction activity has failed to obtain required coverage under the appropriate general storm water permit.
29. Each watershed has unique receiving water issues, land uses, topography, soils and stream stability and habitat issues. The Regional Board and the permittees recognize the importance of integrated watershed management initiatives and regional planning and coordination in the development and implementation of programs and policies related to water quality protection. A number of such efforts are underway in which the permittees are active participants (e.g., Orange County Flood Control Master Plan, Irvine Ranch Water District Natural Treatment System Master Plan, Orange County Watershed Plans, Nutrient and Selenium Management Program, etc.). As recommended in the 2008 National Academy of Sciences Report on Urban Stormwater Management, this order provides an option for the permittees to develop and implement watershed master plans integrating water quality, hydromodification, water supply and habitat protection issues. The Regional Board recognizes that a watershed master plan should integrate all other related programs, including the storm water program and TMDL processes. Consistent with this approach, some of the municipal storm water monitoring programs have already been integrated into a regional monitoring program. The Regional Board also recognizes that, in certain cases, diversion of funds targeted for certain monitoring programs to regional monitoring programs may be necessary. The

Executive Officer is authorized to approve, after proper public notification and consideration of all comments received, the integrated watershed management initiatives and regional planning and coordination programs and regional monitoring programs. The permittees are required to submit all documents, where appropriate, in an electronic format. All such documents will be posted at the Regional Board's website and all interested parties will be notified. In addition, the website will include the administrative and civil procedures for appealing any decision made by the Executive Officer. Some urban runoff issues, such as monitoring, public education and training can be more effectively addressed on a regional or statewide basis, thereby increasing program consistency and efficiency. This order encourages continued participation in such programs and policies.

30. The permittees are required to conduct inspections (40 CFR Part 122.26(d)(2)(iv)(C)(2)) of construction sites, industrial facilities and commercial establishments. Inspection requirements, including criteria for prioritization of facilities for the inspection, were included in the third term permit. The construction and industrial inspection programs in the third term permit had established criteria/examples. However, the commercial inspection program only included a preliminary list of types of facilities to be inspected. Further refinements to the commercial inspection program are included in this order and these include: moving mobile businesses into their own program; including eating establishments (previously their own pilot program); and the addition of some key categories, not included on the 3rd term permit list. It should also be noted that some of these additional categories are directly related to current categories or identified in the Model Urban Runoff Program¹¹ and all of the additional categories are proposed for inclusion in other Southern California MS4 permits. To avoid duplicative efforts, the permittees need not inspect facilities that have been inspected by Regional Board staff, if the inspection was conducted during the specified time period. It is anticipated that many of the inspections required under this order can and will be carried out by inspectors currently conducting other types of inspections for the permittees (i.e., grading, building, code enforcement, etc.), during their normal duties. It is critical that these inspectors be properly trained in storm water pollution prevention and related issues.

I. POTENTIAL POLLUTANTS IN STORM WATER RUNOFF/IMPACTS ON BENEFICIAL USES

31. The permittees have conducted urban runoff and receiving water monitoring as required under the first, second and third term permits. The third term permit required monitoring using a wider array of methods to assess impacts caused by pollutants in urban runoff. In addition to monitoring the water column under wet and dry weather conditions, the permittees were required to monitor: water column toxicity, mass emission rates, estuary/wetlands including sediment and benthic monitoring, bacteriological/pathogen concentrations and bioassessment analysis. These monitoring programs indicate exceedances of Basin Plan, CTR and/or AB

¹¹ Model Urban Runoff Program, prepared by the City of Monterey, California Coastal Commission, et. al., revised February 2002 by California Coastal Commission.

411 objectives for a number of constituents. The Report of Waste Discharge identifies copper and zinc, trash and debris, pesticide toxicity and pathogens as the major pollutants of concern. Monitoring data indicate that storm water and dry weather urban runoff continue to have pollutants at levels that could cause or contribute to exceedances of water quality objectives in the receiving waters. The permittees are proposing to conduct special studies to address these pollutants of concern during the fourth term permit.

32. The annual reports submitted by the permittees indicate that urban runoff is still causing or contributing to water quality standards violations. Some of the samples collected during both dry and wet weather exceeded the water quality standards. However, the exceedances during wet weather were more widespread compared to dry weather runoff. The monitoring reports indicate that there is some reduction in the mass loading rates for some of the metals, such as copper and zinc.
33. The results from the monitoring programs did not establish a clear correlation between pollutants in dry or wet weather runoff and impacts on beneficial uses in the receiving waters. However, exceedances of water quality objectives, including exceedances of AB411 standards, were reported for a number of monitoring locations by the permittees. Shoreline monitoring data indicate that AB411 exceedances are higher during the summer months (AB411 season) compared to the winter months. For the interior channels, AB411 exceedances were higher than shoreline, but were not significantly different for summer and winter months¹². The index of biotic integrity rating is generally poor for most urban streams. The monitoring data also indicated sporadic exceedances of water quality objectives for dissolved oxygen, pH, turbidity, ammonia-nitrogen, surfactants, and some of the metals¹³.
34. During the summers of 1999 and 2000, a number of locations along the Orange County coast exhibited elevated bacterial levels. Since then a number of studies have been conducted that indicate that urban runoff, especially dry weather runoff, is a major contributing factor to the Orange County coastal bacterial contamination problems. To address this bacterial problem, the permittees currently divert dry weather low flows from some of these areas to the sanitary sewer. With the diversion of dry weather flows to the sanitary sewer, there have been significant improvements in the beach water quality. A number of studies have been conducted to determine the source of this microbial contamination and to develop permanent remedial measures. These studies have not conclusively determined the sources or solutions to this problem.
35. Monitoring results have indicated the presence of elevated concentrations of pesticides in storm water runoff from urban areas. The permittees have developed and implemented a model plan entitled, "Management Guidelines for Use of Fertilizers and Pesticides". The Report of Waste Discharge indicates that through implementation of this program, the municipalities have reduced the use of fertilizers

¹² Unified Annual Progress Report, 2005-2006, Page C-11-31.

¹³ Unified Annual Progress Report, 2005-2006, Attachment C-11-VII.

and pesticides. The permittees are required to review this plan to make any needed changes. TMDLs are being developed for some of the pesticides for the Newport Bay watershed. This order may be reopened to include any TMDL requirements.

36. Pollutants in urban runoff can impact the beneficial uses of the receiving waters and can cause or threaten to cause a condition of pollution or nuisance. Pathogens, such as bacteria, viruses, protozoa, (from sanitary sewer overflows, septic system leaks, spills and leaks from portable toilets, pets, wildlife and human activities) can impact water contact recreation, non-contact water recreation and shellfish harvesting. Microbial contamination of the beaches from urban runoff and other sources has resulted in a number of health advisories issued by the Orange County Health Officer. Oil and grease (from automobiles, industrial sites, etc.) can coat birds and aquatic organisms, adversely affecting respiration and/or thermoregulation. Other petroleum hydrocarbon components can cause toxicity to aquatic organisms and can impact human health. Suspended and settleable solids (from sediment, trash, and industrial activities) can be deleterious to benthic organisms and may cause anaerobic conditions. Sediments and other suspended particulates (from construction sites, erosion due to hydromodification, etc.) can cause turbidity, clog fish gills and interfere with respiration in aquatic fauna. These pollutants can also screen out light, hindering photosynthesis and normal aquatic plant growth and development. Toxic substances (from pesticides, herbicides, petroleum products, metals) can cause acute and/or chronic toxicity, and can bioaccumulate in organisms to levels that may be harmful to human health. Nutrients (from fertilizers, confined animal feeding operations, wildlife, pets and birds) can cause excessive algal blooms. These blooms can lead to problems with taste, odor, color and increased turbidity, and can depress the dissolved oxygen content, leading to fish kills. Stagnant water trapped in trash and debris creates breeding conditions for disease vectors (e.g., mosquitoes). Trash and debris, in particular plastics, have long been recognized as both aesthetic nuisances and as threats to freshwater and marine environments. Plastic debris, in the form of broken-down packaging and pre-production plastic pellets or 'nurdles', harms hundreds of wildlife species through ingestion, entanglement and entrapment. These plastic nurdles have the capability of absorbing pollutants, such as PCBs, and when ingested by wildlife, expose those animals to pollutant concentrations that are orders of magnitude higher than the surrounding water. Water Code Section 13367 requires the State Board and the regional boards to implement a program to control discharges of preproduction plastic from point and nonpoint sources. In collaboration with the permittees, Regional Board staff is currently trying to address this problem through the State's General Storm Water Permit for Industrial Activities and local controls.
37. Pollutants in urban runoff could adversely impact human health and the environment. Human illnesses have been linked to recreational activities in coastal waters especially near storm drain outlets¹⁴. Bioaccumulation of pollutants, present

¹⁴ The Santa Monica Bay Restoration Project, Epidemiology Study, 1996.

in urban runoff, can occur in fish and other aquatic organisms. These organisms may be consumed by birds and humans. Pollutants in urban runoff can also cause mortality, impair growth and reproduction anomalies in aquatic organisms. If not properly designed and maintained, urban storm water treatment systems could provide breeding areas for disease vectors, such as mosquitoes, which are a public health concern (e.g., West Nile Virus).

38. It is important to control litter in order to eliminate trash and other materials in storm water runoff. In addition to the municipal ordinances prohibiting litter, the permittees participate or organize a number of other programs such as "Coastal Cleanup Day", "Pride Days", "Volunteer Collection Day", etc. The permittees also organize solid waste collection programs, household hazardous waste collections, and recycling programs to reduce litter and illicit discharges. Additionally, the permittees have installed debris booms at a number of locations to capture trash and debris preventing it from depositing on beaches.
39. The pollutants from urbanized areas are also a significant threat to environmentally sensitive areas, such as waterbodies designated as supporting a RARE beneficial use (supporting rare, threatened or endangered species), areas of special biological significance (ASBSs) and Clean Water Act Section 303(d) listed impaired waterbodies. The State Board is developing Special Protections for Storm Water and Non-point Source Discharges to ASBSs. Where applicable, the permittees are expected to comply with these Special Protection requirements for the ASBSs.

J. CWA SECTION 303(d) LISTED WATERBODIES AND TMDLS

40. Water quality assessments conducted by Regional Board staff have identified a number of water quality standards impairments due, in part, to urban runoff. Section 305(b) of the CWA requires each of the regional boards to routinely monitor and assess the quality of waters of the region. If this assessment indicates that beneficial uses and/or water quality objectives are not being met, then that waterbody must be listed under Section 303(d) of the CWA as an impaired waterbody. The 2006 State water quality assessment listed a number of water bodies within the Region under Section 303(d) as impaired waterbodies. For many of these impaired waterbodies, one of the listed causes of impairment is urban runoff. In the Orange County area, these include:

San Diego Creek, Reach 1 (listed for toxaphene, selenium, fecal coliform, nutrients, pesticides, sediment/siltation);

San Diego Creek, Reach 2 (listed for metals, nutrients, sediment/siltation, unknown toxicity);

Upper Newport Bay Ecological Reserve (listed for sediment toxicity, metals, copper, chlordane, PCBs, DDT, nutrients, pathogens, pesticides, sediment/siltation);

Lower Newport Bay (listed for chlordane, copper, DDT, sediment toxicity, PCBs, nutrients, pathogens, pesticides);

Anaheim Bay (listed for nickel, dieldrin, sediment toxicity, PCBs);

Huntington Harbour (listed for copper, lead, nickel, chlordane, pathogens, PCBs, sediment toxicity);
Santiago Creek, Reach 4 (listed for salinity, TDS, chlorides);
Seal Beach (listed for enterococcus, PCBs);
Silverado Creek (listed for pathogens, salinity, TDS, chlorides);
Rhine Channel (listed for copper, lead, mercury, zinc, sediment toxicity, PCBs);
Peters Canyon Channel (listed for DDT, toxaphene);
Los Trancos Creek (Crystal Cove Creek) (listed for total and fecal coliform);
Huntington Beach State Park (listed for enterococcus, indicator bacteria, PCBs);
Bolsa Chica State Beach (listed for copper and nickel);
Buck Gully Creek (listed for total and fecal coliform); and
Balboa Beach (listed for dieldrin, DDT, PCBs).

41. Federal regulations require that a total maximum daily load (TMDL) be established for each 303(d) listed waterbody for each of the pollutants causing impairment. The TMDL is the total amount of the pollutant that can be discharged while water quality standards in the receiving water are attained, i.e., water quality objectives are met and the beneficial uses are protected. A TMDL is the sum of the individual wasteload allocations (WLA) for point source inputs, load allocations (LA) for non-point source inputs and natural background, plus a margin of safety. TMDLs are one of the bases for limitations established in waste discharge requirements.
42. For 303(d) listed waterbodies without a TMDL, the permittees are required to provide special protections through development and implementation of Watershed Action Plans or other focused control measures that would address the pollutant of concern. If a TMDL has been developed and an implementation plan is yet to be developed, the permittees are required to develop constituent specific source control measures, conduct additional monitoring and/or cooperate with the development of an implementation plan.
43. TMDLs have been established by the Regional Board for sediment, fecal coliform, diazinon, chlorpyrifos and nutrients for the Newport Bay watershed. Organochlorine compounds TMDLs were adopted by the Regional Board on September 7, 2007. In addition, toxics TMDLs were promulgated by USEPA on June 14, 2002, including TMDLs for metals and selenium, and a TMDL specific to the Rhine Channel located in Lower Newport Bay.
44. TMDLs for diazinon and chlorpyrifos in San Diego Creek, and for chlorpyrifos in Upper Newport Bay, were adopted by the Regional Board on April 4, 2003, and subsequently approved by the State Board, State Office of Administrative Law, and EPA. The diazinon and chlorpyrifos TMDLs require all MS4 permittees in the

Newport Bay Watershed to develop and implement monitoring programs for diazinon and chlorpyrifos. The TMDLs also impose limits on the discharge of these compounds. This order incorporates these requirements.

45. The fecal coliform TMDL specifies WLAs for urban runoff to protect water contact recreation and shellfish harvesting beneficial uses. The implementation plan for the fecal coliform TMDL requires that monitoring and certain investigations be conducted, including a source identification and characterization investigation of urban runoff. An updated TMDL report is to be prepared based on the data and information collected, and the TMDL is to be adjusted, as necessary, based on the updated TMDL report. This order may be reopened to incorporate additional requirements based on findings in the source identification and characterization plan that is expected to be completed in 2009. This order may be reopened to incorporate additional or revised requirements based on the updated TMDL report and/or approved changes to the TMDL.
46. As indicated above, nutrient (nitrogen and phosphorus) TMDLs have been established by the Regional Board for the Newport Bay watershed. The current and future (year 2012) targets for the nutrient TMDLs are already being met. However, Board staff is currently reevaluating the nutrient TMDLs in light of evidence that there remains impairment of these waters due to eutrophication. The EPA promulgated TMDLs for selenium but, an implementation plan is yet to be developed. The Regional Board adopted Orders No. R8-2004-021 and R8-2007-0041 as interim control measures to address nitrogen and selenium in groundwater-related discharges to the Newport Bay watershed. In response to Order No. R8-2004-0021, stakeholders established a Nitrogen Selenium Management Program (NSMP) Working Group. The Working Group is implementing an approved workplan that is expected to identify comprehensive management plans for both selenium and nitrogen in groundwater in the Newport Bay watershed. Board staff is currently developing selenium TMDLs that will update and revise those established by EPA and that will include an implementation plan. The implementation plan will rely heavily on the findings and recommendations made by the NSMP Working Group. It is expected that the implementation plan will include the opportunity for an adaptive, collaborative approach by stakeholders in the watershed to address selenium and nitrogen in comprehensive and efficient fashion. This approach may be implemented through a cooperative agreement or, alternatively, through waste discharge requirements or a conditional waiver of waste discharge requirements.
47. In support of the nutrient TMDLs implementation plan, a regional monitoring program (RMP) was developed to monitor nutrients in San Diego Creek and Newport Bay. This order requires the permittees listed under the RMP to continue their participation in the RMP program.
48. On September 7, 2007, the Regional Board adopted TMDLs for organochlorine compounds (OCs) that specify WLAs for urban runoff for DDT and toxaphene in San Diego Creek, and DDT, chlordane, and PCBs in Upper and Lower Newport Bay. The OCs TMDLs also specify informational TMDLs with informational urban

runoff WLAs for chlordane and PCBs in San Diego Creek. The OCs TMDLs require approval from the State Board, the State Office of Administrative Law, and EPA. The implementation plan for the OCs TMDLs includes monitoring and, where necessary, enhanced implementation of best management practices (BMPs) to reduce erosion and sediment transport as organochlorine compounds tend to adhere to fine sediment. In addition, the OCs TMDL implementation plan provides an opportunity for dischargers to participate in the development and implementation of a comprehensive Work Plan that would address the OCs and other sources of toxicity in the San Diego Creek and Newport Bay watersheds. Once a Work Plan is developed, it is required to be approved by the Regional Board at a public hearing. Participation by the permittees in this process will obviate the need for individual actions on the tasks in Table NB-OCs-13¹⁵ by members of the Working Group. The County of Orange and Newport Bay watershed MS4 permittees have initiated efforts to develop a Work Plan. MS4 permittees not electing to participate in the Work Plan approach will be required to implement the tasks shown in Table NB-OCs-13, as appropriate.

49. The State Board awarded a grant to the South Coast Resource Conservation and Development Council in partnership with the University of California Cooperative Extension to investigate and demonstrate strategies to reduce pesticide runoff from urban areas. A pesticide management plan for the Newport Bay watershed has been developed under this program¹⁶.
50. If the TMDL implementation plans include compliance schedules beyond the permit term, monitoring and other requirements are being included in this order to monitor progress towards achieving future compliance.
51. Certain portions of the San Gabriel River watershed are under the Los Angeles Regional Board's jurisdiction. Urban runoff from cities and county areas within the northwestern portions of Orange County discharge into the San Gabriel River and/or its tributaries. On July 13, 2006, the Los Angeles Regional Board adopted TMDLs for metals in the San Gabriel River watershed. However, because of the state's inability to meet the March 2007 deadline for an approved TMDL prescribed in a consent decree (Heal the Bay Inc., et al. v. Browner C98-4825 SBA), on March 26, 2007, the EPA promulgated TMDLs for metals and selenium for the San Gabriel River. The upper portions of Coyote Creek flow through Orange County to join the San Gabriel River above the tidal prism. Other unnamed tributaries located in northwestern Orange County also discharge into the San Gabriel River estuary. The EPA promulgated TMDLs include wet weather wasteload allocations for Coyote Creek for copper, lead and zinc and dry weather wasteload allocations for copper for Coyote Creek. The permittees are expected to implement programs and policies consistent with the metals and selenium TMDLs for the San Gabriel River watershed. This includes constituent-specific source control programs or other equally effective programs to control

¹⁵ Attachment 2 to Resolution No. R8-2007-0024.

¹⁶ Darren L. Haver and John N. Kabashima, June 30, 2008, Pesticide Runoff Management Plan, Newport Bay Watershed.

the discharge of copper, lead and zinc into Coyote Creek and other tributaries in Orange County that discharge into the San Gabriel River.

52. This order requires permittees to comply with established TMDL wasteload allocations specified for urban runoff and/or storm water by implementing the necessary BMPs. NPDES regulations at 40 CFR 122.44(d)(vii)(B) require that permits be consistent with wasteload allocations approved by U. S. EPA. This order requires the permittees to comply with the urban runoff/storm water wasteload allocations specified in (1) Regional Board-adopted and USEPA approved TMDLs (including TMDLs for nutrients, fecal coliform, diazinon and chlorpyrifos); (2) Regional Board-adopted TMDLs that are approved by the State Board and State Office of Administrative Law and that are thereby effective (approval of organochlorine compounds TMDLs by the State is pending); and, (3) USEPA-promulgated TMDLs (including toxics TMDLs for the Newport watershed). Continuation of water quality/biota monitoring and analysis of the data are essential to better understand the impacts of storm water discharges on the water quality of the receiving waters, impairment caused by urban runoff, compliance with the wasteload allocations and for assessing the effectiveness of control measures.
53. Permittees will be required to comply with established TMDLs and other water quality standards or discharge requirements that may be imposed by the EPA or the State prior to the expiration of this order. This order may be reopened to address established or revised TMDLs and/or other requirements developed and adopted by the Regional Board, EPA or the State Board.

K. DRAINAGE AREA MANAGEMENT PLAN (DAMP)

54. Urban development increases population density and pollutant sources¹⁷ such as construction activities, industrial facilities, auto emissions, wastes related to automobile maintenance activities, sanitary wastes, pesticides, pet wastes, household hazardous wastes and trash¹⁸. If appropriate BMPs are not implemented, retail gasoline outlets and automobile service stations could be significant sources of pollutants in urban runoff including petroleum hydrocarbons, oil and grease, metals and solvents¹⁹.
55. The local agencies (the permittees) are the owners and operators of the storm water conveyance systems and have established appropriate legal authority to control discharge of pollutants to the MS4s. The permittees have adopted grading and erosion control ordinances and guidelines for the implementation of best management practices (BMPs) for municipal, commercial, and industrial activities.

¹⁷ U.S. EPA (1992). *Environmental Impacts of Storm Water Discharges: A National Profile*, EPA 841-R-92-001; Office of Water, Washington, DC.

¹⁸ National Management Measures to Control Nonpoint Source Pollution from Urban Areas. USEPA Publication No. EPA 841-B-05-004, November 2005.

¹⁹ Retail Gasoline Outlet and Commercial Parking Lot Storm Water Runoff Study, Western States. Petroleum Association and American Petroleum Institute (1994) at p 13. The study concludes that pollutant concentrations in storm water discharges from properly managed RGOs are similar to concentrations from commercial parking lots and diffuse urban runoff.

The permittees must exercise a combination of these programs, policies, and legal authority to ensure that pollutant loads resulting from urbanization are properly controlled and managed.

56. One of the major tools that the permittees use for urban runoff pollution prevention is the development and implementation of an appropriate DAMP, including best management practices (BMPs). The ultimate goal of the urban storm water management program is to support attainment of water quality objectives for the receiving waters and to protect beneficial uses through the implementation of the DAMP. The permittees developed and submitted a revised draft 2007 DAMP.
57. The DAMP is a dynamic document and the permittees have implemented, or are in the process of implementing, various elements of the DAMP. This order requires the permittees to continue to implement the BMPs listed in the revised DAMP; update or modify the DAMP, when appropriate, consistent with the MEP and other applicable standards; and to effectively prohibit illicit discharges to the storm drain system.
58. The Orange County DAMP defined: (1) a management structure for the permittees' compliance effort; (2) a formal agreement to underpin cooperation; and (3) a detailed municipal effort to develop, implement, and evaluate various BMPs or control programs in the areas of public agency activities, public information, new development and construction, public works construction, industrial discharger identification, and illicit discharger/connection identification and elimination.
59. In order to meet DAMP requirements and characterize and manage pollutant sources on a local level, the permittees developed LIPs. Each jurisdiction has developed its own LIP and is implementing the LIP to properly manage, reduce and mitigate potential and actual pollution sources within the boundaries of each permittee's jurisdiction.

L. NEW DEVELOPMENT/SIGNIFICANT REDEVELOPMENT – WQMP/LIP/LID

60. A major portion of Orange County is urbanized with residential, commercial and industrial developments. Urban development increases impervious surfaces and storm water runoff volume and velocity and decreases vegetated, pervious surface areas available for infiltration and evapotranspiration of storm water. Increase in runoff volume and velocity can cause scour, erosion (sheet, rill and/or gully), aggradation (raising of a streambed from sediment deposition) and can change fluvial geomorphology, hydrology and aquatic ecosystems. This order includes requirements to address increases in imperviousness and changes in water quality and quantity, including hydrologic conditions of concern.
61. Recent studies have indicated that low impact development²⁰ (LID) BMPs are effective storm water management tools that minimize adverse impacts on storm water runoff quality and quantity resulting from urban developments. The Southern

²⁰ Low impact development is an approach to land development (or re-development) that works with nature to manage storm water as close to its source as possible by using structural and non-structural best management practices to reduce environmental impacts.

California Monitoring Coalition (SMC), including the project lead agency, the San Bernardino County Flood Control District, in collaboration with SMC member Southern California Coastal Water Research Project (SCCWRP) and the California Storm Water Quality Association (CASQA), with funding from the State Water Resources Control Board and CASQA, is developing a Low Impact Development Manual for Southern California. A preliminary draft of this manual indicates that effective implementation of site design LID BMPs should occur during the earliest stages of planning such as site assessment, environment review and site planning. This manual will be incorporated into the CASQA BMP Handbooks. The permittees are encouraged to utilize the manual as a resource to implement LID techniques. This order requires the project proponents to first consider preventative and conservation techniques (e.g., preserve and protect natural features to the maximum extent practicable) prior to considering mitigative techniques (structural treatment, such as infiltration systems). The mitigative measures should be prioritized with the highest priority for BMPs that remove storm water pollutants and reduce runoff volume, such as infiltration, then other BMPs, such as harvesting and re-use, evapotranspiration and bio-treatment should be considered. These LID BMPs must be implemented at the project site in a manner consistent with the maximum extent practicable standard. Where LID BMPs are not feasible at the project site, more traditional, but equally effective control measures should be implemented.

62. The USEPA has determined that LID/green infrastructure can be a cost-effective and environmentally preferable approach for the control of storm water pollution and will minimize downstream impacts by limiting the effective impervious area of development. LID and the reduction of impervious areas may achieve multiple environmental and economic benefits in addition to reducing downstream water quality impacts, such as enhanced water supplies, cleaner air, reduced urban temperatures, increased energy efficiency and other community benefits, such as aesthetics, recreation, and wildlife areas. USEPA has reviewed studies²¹ that have evaluated the percent EIA²² concept (also see the SCCWRP study²³). The limited study conducted by Dr. Richard Horner²⁴ concluded that a 3% EIA standard for development is feasible in Ventura County. EPA believes that EIA is a reasonable metric for incorporating LID principles into storm water permits and EPA supports

²¹ See for example the analysis prepared by Dr. Richard Horner entitled, "Investigation of the Feasibility and Benefits of Low-Impact Site Design Practices ("LID") for Ventura County" submitted to the Los Angeles Regional Board by NRDC.

²² EIA=effective impervious area. These are areas where little or no infiltration of storm water occur, such as paved areas.

²³ Studies conducted by Southern California Coastal Water Research Project (SCCWRP) and others indicate that environmental impacts from developments could be minimized by limiting the effective impervious area.

²⁴ Dr. Richard Horner, Investigation of the Feasibility and Benefits of Low-Impact Site Design Practices ("LID") for Ventura County, Development (undated).

other equally effective metrics for compliance determination. A review of the analysis of the LID metrics in storm water permitting²⁵ and its critique²⁶ indicates that there are certain shortcomings in specifying a percentage EIA as a metric. A series of stakeholder meetings²⁷ conducted after issuance of the first draft of this order concluded that other equally effective metrics could be used to quantify implementation of LID. It was generally agreed by the stakeholders that a numeric metric, such as a metric based on a specified volume capture may be an equally effective metric. A 5% EIA metric was included in the first draft of this order. The second draft replaces the 5% EIA metric with a volume capture metric based on the design volume specified in the WQMP.

63. On October 5, 2000, the State Board adopted Order No. WQ-2000-11, which is a precedential order. Order No. WQ-2000-11 required that urban runoff generated by 85th percentile storm events from specific types of development categories should be infiltrated, filtered or treated. The essential elements of this precedential order were incorporated into the Region 8 Orange County third term permit. In accordance with the requirements specified in the third term permit, the permittees developed a model Water Quality Management Plan (WQMP) by amending their Drainage Area Management Plan (DAMP). The model WQMP provides a framework to incorporate watershed protection principles into the permittees planning, construction and post-construction phases of defined new and redevelopment projects. The model WQMP includes site design, source control and treatment control elements to reduce the discharge of pollutants in urban runoff. On September 26, 2003, the Regional Board approved the model WQMP. The permittees have incorporated provisions of the model WQMP into their LIPs. The permittees are requiring new developments and significant redevelopments to develop and implement appropriate project WQMPs. This order requires continued implementation of structural and non-structural BMPs for new developments and significant redevelopments as per the approved model WQMP, and the priority project threshold for commercial/industrial developments has been changed to 10,000 square feet, making it consistent with the threshold for residential subdivisions. However, with the implementation of LID techniques, some of the structural treatment control BMPs may not be necessary. The project WQMPs are required to include a discussion on how LID principles are incorporated into the project. Section 7.II-3.2.4 of the WQMP requires identification of hydrologic conditions of concern (HCOC). An HCOC exists when a site's hydrologic regime is

²⁵ Low Impact Development Metrics in Stormwater Permitting, Prepared for the Ventura Countywide Stormwater Quality Management Program and the Orange County Stormwater Program by Geosyntec Consultants and Larry Walker Associates with Assistance from Hawks and Associates (January 2009).

²⁶ Critique of Certain Elements of "Low Impact Development Metrics in Stormwater Permitting" by Dr. Richard Horner (undated, submitted by NRDC on February 13, 2009).

²⁷ The stakeholder group included representatives from Permittees, NRDC, Orange County Coastkeeper, BIA/CICWQ, The Irvine Company, Regional Board staff, USEPA and a number of consultants and attorneys.

altered and there are significant impacts on downstream channels and aquatic habitats, alone or in conjunction with impacts of other projects. Currently, new development and significant re-development projects are required to perform this assessment and incorporate appropriate BMPs to ensure existing hydrologic conditions are maintained. Certain jurisdictions have employed HCOC mapping efforts to assist developers in identifying areas where HCOC conditions exist. Within six months of adoption of this order, the permittees are required to conduct an HCOC mapping to identify HCOC areas in the permitted area.

64. The Region 8 Orange County third term permit required the permittees to review their planning (CEQA, General Plan, etc.) and approval processes to determine the need to revise those processes to address appropriate storm water protection principles. The model WQMP provides a framework for addressing these issues. However, Regional Board staff's audit of the permittees MS4 program indicated that all the permittees had not fully implemented the program. This order requires the permittees to reevaluate and to revise the current program implementation processes. Pollution prevention techniques, appropriate planning processes and early identification of potential storm water impacts and mitigation measures can significantly reduce storm water pollution problems. The permittees shall consider these impacts and appropriate mitigation measures during the planning and approval processes.
65. The intent of the WQMP, SWPPP and other programs and policies incorporated into this order is to minimize the impact from the project on water quality and the environment. However, compliance with this order and the DAMP does not necessarily constitute mitigation that is sufficiently specific to satisfy the requirements of CEQA with regards to projects.
66. Treatment control BMPs include vortex systems, catch basin inserts, detention basins, infiltrations areas (including LID-based), retention basins, regional treatment systems, constructed wetlands, various types of storm water filters, etc. If not properly designed and managed, these systems could be sources of pollutants and could become a nuisance and/or cause the spreading of surface water pollution, and those treatment systems with a hydraulic connection to groundwater (e.g., detention basins, infiltration systems, constructed wetlands, etc.) could be sources of groundwater pollution. Restrictions placed on urban runoff infiltration in this order (Section XII.B.5.) are based on recommendations provided by the U.S. EPA Risk Reduction Laboratory. The requirements specified in this order include identification of responsible agencies for maintaining the systems and for providing funding for operation and maintenance.
67. If not properly designed and maintained, the BMPs identified in Finding 66 could create a nuisance and/or habitat for vectors²⁸ (e.g., mosquitoes and rodents). Third term permit required the permittees to closely collaborate with the Orange County

²⁸ Managing Mosquitoes in Stormwater Treatment Devices, Marco E. Metzger, University of California Davis, Division of Agriculture and Natural Resources, Publication 8125.

Vector Control District during the development and implementation of such treatment systems. The permittees should continue these collaborative efforts with the Vector Control District to ensure that treatment control systems do not become a nuisance or a potential source of pollutants. There are other site conditions that limit the applicability of infiltration, including site soils, contaminant plumes, potential mobilization of naturally occurring contaminants such as selenium, high groundwater levels, etc. Such factors should be considered in the design and implementation of storm water control measures.

M. NON-STORM WATER/DE-MINIMUS DISCHARGES

68. The MS4s generally contain non-storm water flows such as irrigation runoff, runoff from non-commercial car washes, runoff from miscellaneous washing and cleaning operations, and other nuisance flows generally referred to as de-minimus discharges. Federal regulations, 40 CFR Part 122.26(d)(2)(i)(B), prohibit the discharge of non-storm water containing pollutants into the MS4s and to waters of the U.S. unless they are regulated under a separate NPDES permit, or are exempt, as indicated in Discharge Prohibitions, Section III.3 of this order. The Regional Board adopted a number of NPDES permits²⁹ to address de-minimus type of pollutant discharges. However, the permittees need not get coverage under the de-minimus permits for the types of discharges listed under Section III.3, except for discharges to the Newport Bay watershed (where coverage under the Newport Bay watershed-specific de-minimus permit is required, see Finding 69), as long as they are in compliance with the conditions specified under Section III of this order.
69. Many areas of the San Diego Creek/Newport Bay watershed have high nitrate and/or selenium levels in the soils and/or groundwater. Dewatering operations, construction activities and agricultural and other operations could mobilize these pollutants and carry them into San Diego Creek and Newport Bay. The Regional Board has adopted a General Permit, Order No. R8-2007-0041, to regulate dewatering wastes into the San Diego Creek/Newport Bay watershed. In addition, stakeholders in the watershed are in the process of developing a comprehensive nitrogen/selenium management plan to address the nitrogen/selenium issues.

N. PERMIT REQUIREMENTS AND NUMERIC EFFLUENT LIMITS

70. The first term permit required the permittees to: (1) develop and implement the DAMP and a storm water and receiving water monitoring plan; (2) eliminate illicit discharges³⁰ to the MS4s; and (3) enact the necessary legal authority to effectively

²⁹ E.g., R8-2003-0061, as amended by R8-2004-0021.

³⁰ Illicit Discharge means any discharge to the municipal separate storm system that is prohibited under local, state, or federal statutes, ordinances, codes, or regulations. The term illicit discharge includes all discharges that contain non storm-water discharges except discharges pursuant to an NPDES permit, discharges that are identified in Section III, Discharge Limitations/Prohibitions, of this order, and discharges authorized by the Regional Board Executive Officer.

prohibit such discharges. The overall goal of these requirements was to reduce pollutant loadings to surface waters from urban runoff to the MEP. The second term permit required continued implementation of the DAMP and the monitoring plan, and required the permittees to focus on those areas that threaten beneficial uses. The third term permit required the permittees to inspect construction sites and industrial and commercial facilities. The permittees were also required to develop and implement a model WQMP to address runoff from new development and significant redevelopment projects. The principal permittee, in co-operation with the co-permittees, developed administrative strategies and implementation procedures for each program element. Each permittee incorporated these tools into its LIP. The permittees are required to continue to implement each of these program elements and to aggressively pursue implementation of LID techniques during the fourth term permit. As required under the third term permit, the principal permittee, in collaboration with the co-permittees, evaluated the effectiveness of the overall program during the permit term. The permittees, in consultation with Regional Board staff, evaluated each program element and proposed new and improved program commitments in their 2006 Report of Waste Discharge. Regional Board staff audited each of the permittee programs during the third term permit and determined that some of the permittees had significant violations with respect to implementation of certain program elements. Enforcement actions were taken to bring these permittees into compliance. The permittees were required to address problems identified during the audit. Some of the permittees were to amend their LIPs to address deficiencies noted during the audit.

71. Based on the results of the audits performed during the 3rd term permit, a number of permit requirements have been incorporated into the current permit. While the 2001 DAMP listed criteria by which co-permittees were to assess the priority ranking of commercial sites, a number of co-permittees had interpreted those criteria in such a manner as to ensure that only a very small number of sites would be ranked 'High' and in some cases, all commercial sites within a municipality were ranked 'Low,' resulting in the least number of inspections possible. To address this situation, commercial site ranking now requires that a minimum 10% of the sites with the highest potential for pollutant discharge, be ranked 'High' and next 40% of highest potential sites be ranked 'Medium,' for inspection purposes.
72. The Report of Waste Discharge proposes to enhance implementation of various program elements through the development of performance indicators and auditable systems, and by focusing on addressing problems on a watershed-specific basis. To improve program management efficiencies, the permittees are proposing to define expertise and competencies for program managers and inspectors, and to develop and implement an effective training program for them. The principal permittee in collaboration with the co-permittees is required to develop guidelines for defining the expertise and competencies for various positions and training programs and schedules for training for these positions. In the event that co-permittees want to design their own training program, it should be prepared in collaboration with the principal permittee, and at a minimum, should contain all information present in the principal permittee-prepared training program. The permittees are required to document procedures used to determine the defined

competencies for each storm water position (this may be accomplished through a test at the end of the training program or through an on-the-job testing procedure).

73. This order includes wasteload allocations for those constituents for which either the U.S. EPA has promulgated or the Regional Board has established TMDLs. Federal regulations (40 CFR 122.44(d)(vii)(B)) require that the Permits be consistent with the applicable wasteload allocations in the TMDLs. Consistent with the federal storm water laws and regulations, the order does not include numeric effluent limits for other potential pollutants. Federal Clean Water Act requires the permittees to have appropriate controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and systems, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants (33 USC 1342(p)(3)(B)). MEP is a dynamic performance standard and it evolves as our knowledge of urban runoff control measures increases.
74. On June 17, 1999, the State Board adopted Water Quality Order No. 99-05. This is a precedential order that incorporates the receiving water limitations language recommended by the USEPA. Consistent with the State Board's order, this order requires the permittees to comply with the applicable water quality standards, which is to be achieved through an iterative approach requiring the implementation of increasingly more effective BMPs. This approach is consistent with most of the municipal storm water permits issued in California that specify certain minimum control measures and incorporate an iterative process that requires increasingly more effective control measures if the water quality objectives are not met.

O. MUNICIPAL FACILITIES AND ACTIVITIES

75. The permittees own and operate MS4s and appurtenances, build and maintain roads and other transportation facilities, sanitary waste collection and conveyance systems, recreational facilities such as parks, hiking trails, etc., and other infrastructures of the urban environment. This order requires the permittees to consider water quality impacts during the planning stages of these projects, during construction and post-construction use, and during operation and maintenance of these facilities. This order includes requirements for the control of trash and debris, for street sweeping, and for drainage facilities maintenance. The permittees have already installed eleven trash and debris booms in flood control channels and harbors to recover floatable material. The permittees have promoted a number of public awareness and volunteer cleanup programs. The Orange County Integrated Waste Management Board administers the household hazardous waste collection program. Most of the permittees, in collaboration with the Orange County Health Care Agency, implement the oil recycling program.
76. The permittees own and/or operate facilities where industrial or related activities take place that may have an impact on storm water quality. Some of the permittees also enter into contracts with outside parties to carry out municipal related activities that may also have an impact on storm water quality. The permittees have developed and are implementing a Model Municipal Activities Program that

The County of Orange, Orange County Flood Control District, and the Incorporated Cities of Orange County
Areawide Urban Storm Water Runoff

established a framework for conducting a systematic program of evaluation and BMP implementation for fixed facilities, field operations and drainage facilities. Non-storm water discharges from these facilities and/or activities could also affect water quality. This order prohibits non-storm water discharges from public facilities, unless the discharges are exempt under Section III, Discharge Limitations, of this order, or are permitted by the Regional Board under an individual NPDES permit or the de-minimus permits.

77. Successful implementation of the provisions and limitations in this order will require the cooperation of public agency organizations within Orange County having programs/activities that have an impact on storm water quality. A list of these organizations is included in Attachment C. As such, these organizations should actively participate in implementing the Orange County NPDES Storm Water Program. The Regional Board has the discretion and authority to require certain non-cooperating entities to participate in this areawide permit or obtain individual storm water discharge permits, pursuant to 40 CFR 122.26(a). The permittees have developed a Storm Water Implementation Agreement among the County, the cities and the Orange County Flood Control District. The Implementation Agreement establishes the responsibilities of each party, a funding mechanism for the shared costs, and recognizes the Technical Advisory Committee (TAC).
78. The permittees have developed and implemented programs and policies to address fixed facilities, fertilizer and pesticide use, employee training, storm drain inspection and maintenance activities, and other related planning, inspection and maintenance programs. This order requires the permittees to continue these programs and propose any needed changes to these programs.
79. Some of the permittees own and operate sewage collection systems. Sanitary sewer overflows (SSOs) have been a significant source of water quality impairments and beach closures in Orange County. On May 2, 2006, the State Board adopted Water Quality Order No. 2006-0003 to provide a consistent statewide regulatory approach to address SSOs. In addition, the principal permittee, in collaboration with the Orange County Sanitation District and a number of the co-permittees, has developed the Countywide Area Spill Control Program to address SSOs in certain areas of Orange County. These two programs are expected to address issues related to SSOs.

P. PUBLIC EDUCATION/PARTICIPATION

80. Urban runoff contains pollutants from privately owned and operated facilities, such as residences, businesses, private and/or public institutions, and commercial establishments. Therefore, a successful storm water management plan should include the participation and cooperation of the public, businesses, the permittees and the regulators. The DAMP has a strong emphasis on public education. Public education includes education of the public at large, commercial establishments, industrial facilities and developers. It also includes proper training for municipal planning, inspection and maintenance activities. The permittees have developed

inter-departmental training programs and have made commitments to conduct a certain number of these training programs during the term of this permit.

81. Public education is an important part of storm water pollution prevention. The permittees have employed a variety of means to educate the public, business and commercial establishments, industrial facilities and construction sites, and in 1999 developed a long term public education strategy. In 2002, the permittees created a public and business outreach strategy and developed the "Orange County Stormwater Public Education Program Recommendations." This strategy was updated in 2004 and established a long-term cost-effective approach to educate the public and targeted businesses about the effects of storm water pollution and encourages their participation in protecting water quality. In accordance with this strategy the permittees conducted a public awareness survey and translated relevant public education materials into Spanish and Vietnamese. The permittees employed a variety of media, including newspapers, radio, television, movie theaters, advertisements on public transportation vehicles, schools and printed brochures to provide information regarding storm water pollution and the public's role in controlling it. In addition to the multi-media approach, the permittees have started to work with business establishments such as Home Depot and PetsMart, utilities such as Waste Management and Southern California Edison, organizations such as Chamber of Commerce and Welcome Express, and a number of other organizations and establishments. The permittees also established a countywide 24-hour, bilingual, hotline for reporting illegal activities that could impact water quality. This order requires implementation of LID techniques. If not properly designed and maintained, some of the LID BMPs could provide breeding areas for vectors. Public education and outreach materials should include a discussion on the association between disease vectors, urban runoff, storm water treatment control and LID BMPs.
82. The storm water regulations require public participation in the development and implementation of the storm water management program. As such, the permittees are required to solicit and consider all comments received from the public and submit copies of the comments to the Executive Officer of the Regional Board with the annual reports due on November 15 of each year. It is expected that the permittees would include comments received on any significant revisions to the Monitoring Plan, LIPs and WQMPs. In response to public comments, the permittees may modify reports, plans, or schedules prior to submittal to the Executive Officer.

Q. MONITORING AND REPORTING PROGRAM AND EFFECTIVENESS ASSESSMENT

83. In order to characterize storm water discharges, to identify problem areas, to determine the impact of urban runoff on receiving waters, and to determine the effectiveness of the various BMPs, an effective monitoring program is critical. The principal permittee administers the monitoring program for the permittees. During the previous permit term, the permittees completed the 99-04 Monitoring Plan. This plan included storm water monitoring, receiving water monitoring, dry weather

monitoring and sediment monitoring in previously identified critical aquatic resources areas, as well as, mass emissions monitoring of both wet and dry season flows. On July 1, 2003, the permittees submitted the Third Term Monitoring Plan. This plan was approved by the Executive Officer on July 15, 2005. Monitoring under this plan was expanded to cover monitoring requirements for the development and implementation of TMDLs for impaired waters in Orange County. The Monitoring Plan approved in 2005, included mass emissions monitoring, estuary/wetlands monitoring, bacteriological/pathogen monitoring, bioassessment monitoring, illicit discharge reconnaissance monitoring, and land use correlations. Three different approaches were used for these monitoring programs: core monitoring, regional monitoring, and special studies. The permittees are required to review the monitoring program on an annual basis to determine the need for any revisions. The monitoring program may have to be revised to meet TMDL and ASBS monitoring requirements and/or to make the program consistent with any statewide or regional monitoring guidance developed either by the State Board or the Stormwater Monitoring Coalition.

R. ILLICIT DISCHARGES, ILLICIT CONNECTIONS AND LEGAL AUTHORITY

84. Illicit discharges to the storm drains can contribute to storm water and surface water contamination. A reconnaissance survey of the municipal storm drain systems (open channels and underground storm drains) was completed by the permittees during the third term permit, the permittees significantly enhanced the programmatic framework for detecting and quickly controlling discharges into the MS4s. The permittees have initiated a dry weather monitoring program that is based on statistically derived benchmarks to detect illicit discharges and illicit connections. The program also facilitates public reporting of illicit discharges by providing 24-hour access to a toll free hotline. The program has a number of mechanisms in place to identify and eliminate illicit discharges to the MS4s, including: construction, commercial and industrial facility inspections, drainage facility inspections, water quality monitoring programs, and public education including a 24-hour hotline. The permittees developed a ten module training program for training municipal staff to identify and eliminate illicit discharges to the MS4s and to take appropriate enforcement actions.
85. In order to insure countywide consistency and to provide a legal underpinning to the entire Orange County storm water program, a model water quality ordinance was completed on August 15, 1994 and has been adopted by all the permittees. A countywide Enforcement Consistency Guide was established by the permittees in 1995. These documents establish legal authority for enforcing storm water ordinances and countywide uniformity in the enforcement actions. The permittees have the authority to control pollutants into the MS4s, to prohibit illicit connections and illicit discharges, to control spills, to require compliance with local water quality ordinances and to carry out inspections of the storm drain systems within their jurisdictions.

86. During the third term permit, the principal permittees in collaboration with the Orange County Sanitation District developed and implemented a coordinated sewage spill prevention and response demonstration project. This program is being evaluated for implementation throughout the Orange County Sanitation District's service area.
87. There may be discharges that are not within the permittees jurisdiction. The permittees may petition the Regional Board to issue a separate NPDES permit to any discharger of non-storm water into storm drain systems that they own or operate.

S. COMPLIANCE WITH CZARA, CEQA AND THE ANTI-DEGRADATION POLICY

88. The Coastal Zone Act Reauthorization Amendments of 1990 (CZARA), Section 6217(g), requires coastal states with approved coastal zone management programs to address non-point source pollution impacting or threatening coastal water quality. CZARA addresses five sources of non-point pollution: agriculture, silviculture, urban, marinas, and hydromodification. This order addresses the management measures required for the urban category, with the exception of septic systems. Compliance with requirements specified in this order relieves the permittees for developing a non-point source plan, for the urban category, under CZARA. The Regional Board addresses septic systems through the administration other programs.
89. In accordance with California Water Code Section 13389, the issuance of waste discharge requirements for this discharge is exempt from those provisions of the California Environmental Quality Act contained in Chapter 3 (commencing with Section 21100), Division 13 of the Public Resources Code.
90. The permitted discharge is consistent with the anti-degradation provisions of 40 CFR 131.12 and the State Board Resolution 68-16. This order requires implementation of programs (i.e., BMPs) to reduce the level of pollutants in the storm water discharges. The combination of programs and policies required to be implemented under this order for new and existing developments are designed to improve urban storm water quality.

T. PUBLIC COMMENTS AND PUBLIC HEARING

91. The Regional Board has notified the permittees and interested parties of its intent to issue waste discharge requirements for this discharge and has provided them with an opportunity to submit their written views and recommendations.
92. The Regional Board, in a public hearing, heard and considered all comments pertaining to the discharge and to the tentative requirements.

PERMIT REQUIREMENTS:

IT IS HEREBY ORDERED that the permittees, in order to meet the provisions contained in Division 7 of the California Water Code and regulations adopted thereunder, and the provisions of the Clean Water Act, as amended, and regulations and guidelines adopted thereunder, shall comply with the following:

I. RESPONSIBILITIES OF PRINCIPAL PERMITTEE

- A. The principal permittee shall be responsible for the overall program management and shall:
1. Conduct chemical and biological water quality monitoring, as required by this order and any additional monitoring as directed by the Executive Officer.
 2. Conduct inspections and maintain the storm drain systems within its jurisdiction.
 3. Review and revise, if necessary, policies/ordinances necessary to establish legal authority as required by the Federal Storm Water Regulations.
 4. Respond and/or arrange for responding to emergency situations, such as accidental spills, leaks, illicit discharges and illicit connections, etc., to prevent or reduce the discharge of pollutants to storm drain systems and waters of the US within its jurisdiction.
 5. Take appropriate enforcement actions for illicit discharges to the MS4 systems owned or controlled by the principal permittee.
 6. Prepare and submit to the Executive Officer of the Regional Board unified reports, plans, and programs as required by this order, including the annual report.
- B. The activities of the principal permittee shall include, but not be limited to, the following:
1. Coordinate and conduct Management Committee meetings on an as needed basis. The principal permittee will take the lead role in initiating and developing areawide programs and activities necessary to comply with this order.
 2. Coordinate permit activities and participate in any subcommittees formed as necessary to coordinate compliance activities with this order.
 3. Provide technical and administrative support and inform the co-permittees of the progress of other pertinent municipal programs, pilot projects, research studies, etc.
 4. Coordinate the implementation of areawide storm water quality management activities such as public education, pollution prevention, household hazardous waste collection, etc.
 5. Develop and implement mechanisms, performance standards, etc., to promote uniform and consistent implementation of BMPs among the permittees.
 6. Pursue enforcement actions as necessary within its jurisdiction to ensure compliance with storm water management programs, ordinances and implementation plans, including physical elimination of undocumented connections and illicit discharges.

7. In conjunction with the other permittees, implement the BMPs listed in the DAMP, and take such other actions as may be necessary to meet the MEP standard.
8. Monitor the implementation of the plans and programs required by this order and determine their effectiveness in protecting beneficial uses.
9. Coordinate all the activities with the Regional Board, including the submittal of all reports, plans, and programs, as required under this order.
10. Obtain public input for any proposed management and implementation plans, such as Monitoring Plans, Local Implementation Plans and significant changes to Water Quality Management Plans.
11. Cooperate in watershed management programs and regional and/or statewide monitoring programs.
12. In collaboration with the co-permittees, develop guidelines for defining expertise and competencies of storm water program managers and inspectors and develop and submit for approval a training program for various positions in accordance with these guidelines.

II. RESPONSIBILITIES OF THE CO-PERMITTEES

- A. The co-permittees shall be responsible for the management of storm drain systems within their jurisdictions and shall:
 1. Implement management programs, monitoring programs, implementation plans and all BMPs outlined in the DAMP/LIP within each respective jurisdiction, and take any other actions as may be necessary to meet the MEP standard.
 2. Coordinate among their internal departments and agencies, as appropriate, to facilitate the implementation of this order and the DAMP/LIP.
 3. Establish and maintain adequate legal authority, as required by the Federal Storm Water Regulations.
 4. Conduct storm drain system inspections and maintenance in accordance with the criteria developed by the principal permittee.
 5. Take appropriate enforcement actions for illicit discharges to the MS4 systems owned or controlled by the co-permittee.
- B. The co-permittees' activities shall include, but not be limited to, the following:
 1. Participate in the Management Committee comprised of the principal permittee and one representative of each co-permittee. The principal permittee will take the lead role in initiating and developing areawide programs and activities necessary to comply with this order. The Committee will meet on a regular basis (at least six times per year). Each permittee shall designate one official representative to the Management Committee and attend at least 75% of the meetings each calendar year.

2. Review, approve, implement, and comment on all plans, strategies, management programs, and monitoring programs, as developed by the principal permittee or any permittee subcommittee to comply with this order.
3. Pursue enforcement actions as necessary to ensure compliance with the storm water management programs, ordinances and implementation plans, including physical elimination of undocumented connections and illicit discharges to drainage systems owned or controlled by the co-permittees.
4. Conduct and coordinate with the principal permittee any surveys and characterizations needed to identify pollutant sources and drainage areas.
5. Submit storm drain system maps, including any periodic revisions, with each annual report.
6. Respond to emergency situations, such as accidental spills, leaks, illicit discharges, illicit connections, etc., to prevent or reduce the discharge of pollutants to storm drain systems and waters of the US.
7. Prepare and submit all required reports to the principal permittee in a timely manner.

III. DISCHARGE LIMITATIONS/PROHIBITIONS

1. In accordance with the requirements of 40 CFR 122.26(d)(2)(i)(B) and 40 CFR 122.26(d)(2)(i)(F), the permittees shall prohibit illicit/illegal discharges (non-storm water) from entering into the municipal separate storm sewer systems unless such discharges are either authorized by a NPDES permit, or not prohibited in accordance with Section III.3, below.
2. The discharge of storm water from the MS4s to waters of the US containing pollutants that have not been reduced to the maximum extent practicable is prohibited.
3. The permittees shall effectively prohibit the discharge of non-storm water into the MS4s, unless such discharges are authorized by a separate NPDES permit or as otherwise specified in this provision. For purposes of this order, a discharge may include storm water or other types of discharges identified below.
 - i. The discharges identified below need not be prohibited by the permittees unless such discharges are identified either by the permittees or by the Executive Officer as a significant source of pollutants. The DAMP shall include public education and outreach activities directed at reducing these discharges even if they are not substantial contributors of pollutants to the MS4s.
 - a) Discharges composed entirely of storm water;
 - b) Air conditioning condensate;
 - c) Irrigation water;
 - d) Passive foundation drains;
 - e) Passive footing drains;

- f) Water from crawl space pumps;
 - g) Non-commercial vehicle washing;
 - h) Dechlorinated swimming pool discharges (Cleaning wastewater and filter backwash shall not be discharged to the MS4).
 - i) Diverted stream flows;
 - j) Rising ground waters and natural springs;
 - k) Ground water infiltration as defined in 40 CFR 35.2005 (20) and uncontaminated pumped groundwater;
 - l) Flows from riparian habitats and wetlands;
 - m) Emergency fire fighting flows (i.e., flows necessary for the protection of life and property) do not require BMPs and need not be prohibited. However, where possible, when not interfering with health and safety issues, BMPs should be implemented (also see Section XXI, Provision 5);
 - n) Waters not otherwise containing wastes as defined in California Water Code Section 13050 (d); and
 - o) Other types of discharges identified and recommended by the permittees and approved by the Regional Board.
- ii. The permittees shall prohibit the following categories of non-storm water discharges from permittee owned and/or operated facilities and activities unless the stated conditions are met:
- a) For discharges outside the Newport Bay watershed the de minimus types of discharges listed in the Regional Board's General De Minimus Permit for Discharges to Surface Waters, Order No. R8-2009-0003, NPDES No. CAG 998001 (General De Minimus Permit), shall be in compliance with the terms and conditions of the General De Minimus Permit. Separate coverage under the General De Minimus Permit is not required. For discharges within the Newport Bay watershed, separate permit authorization for these de minimus discharges will be required when the discharges contain selenium, nitrogen or other pollutants at levels of concern.
 - b) Discharges from potable water sources, including water line flushing, superchlorinated water line flushing, fire hydrant system flushing, and pipeline hydrostatic test water: Planned discharges shall be dechlorinated to a concentration of 0.1 ppm³¹ or less, pH adjusted if necessary, and volumetrically and velocity controlled to prevent causing hydrologic conditions of concern in receiving waters.

³¹ Total residual chlorine = 0.1 mg/l or parts per million (ppm) or less; compliance determination shall be at a point before the discharge mixes with any receiving water.

- c) Discharges from lawn, greenbelt and median watering and other irrigation runoff from non-agricultural operations³²: These discharges shall be minimized through a Model Municipal Activity Maintenance Program designed to control irrigation runoff.
- d) Dechlorinated swimming pool discharges: Dechlorinated to a concentration of 0.1 ppm³³ or less, pH adjusted and reoxygenated if necessary, and volumetrically and velocity controlled to prevent causing hydrologic conditions of concern in receiving waters. Swimming pool cleaning wastewater and filter backwash shall not be discharged to the MS4s.
- e) Construction dewatering wastes: The maximum daily concentration limit for total suspended solids shall not exceed 75mg/l, sulfides 0.4mg/l, oil and grease 15mg/l, total petroleum hydrocarbons 0.1mg/l.
- f) Discharges from facilities that extract, treat and discharge water diverted from waters of the US: These discharges shall meet the following conditions:
 - (1) The discharges to waters of the US must not contain pollutants added by the treatment process or pollutants in greater concentration than the influent;
 - (2) The discharge must not cause or contribute to a condition of erosion;
 - (3) The extraction and treatment must be in compliance with Section 404 of the Clean Water Act; and
 - (4) Conduct monitoring in accordance with Monitoring and Reporting Program attached to this order.

The Regional Board may add categories of non-storm water discharges that are not significant sources of pollutants or remove categories of non-storm water discharges listed above based upon a finding that the discharges are a significant source of pollutants.

- 4. Non-storm water discharges from public agency activities into waters of the US are prohibited unless the non-storm water discharges are permitted by an NPDES permit or are included in Section III.3.
- 5. The permittees shall reduce the discharge of pollutants, including trash and debris, from the storm water conveyance systems to the maximum extent practicable (also see Section VII).
- 6. Discharges from the MS4s shall be in compliance with the applicable discharge prohibitions contained in Chapter 5 of the Basin Plan.
- 7. Discharges from the MS4s of storm water or non-storm water, as defined in Section III.3, shall not cause or contribute to a condition of pollution, contamination or nuisance, as those terms are defined in Section 13050 of the Water Code.

³² Non-agricultural irrigation using recycled water must comply with the statewide permit for Landscape Irrigation Using Recycled Water and the State Department Health guidelines.

³³ See previous footnote.

8. All discharges to Areas of Special Biological Significance shall be consistent with the Special Protections/Exceptions granted by the State Board, or waste discharges shall be prohibited in accordance with the Ocean Plan.

IV. RECEIVING WATER LIMITATIONS

1. Discharges from the MS4s shall not cause or contribute to exceedances of receiving water quality standards (designated beneficial uses and water quality objectives) for surface waters or groundwaters.
2. The DAMP and its components shall be designed to achieve compliance with receiving water limitations. It is expected that compliance with receiving water limitations will be achieved through an iterative process and the application of increasingly more effective BMPs. The permittees shall comply with Sections III.2 and IV.1 of this order through timely implementation of control measures and other actions to reduce pollutants in urban runoff in accordance with the DAMP and other requirements of this order, including any modifications thereto.
3. If exceedance of water quality standards persist, notwithstanding implementation of the DAMP and other requirements of this order, the permittees shall assure compliance with Sections III.2 and IV.1 of this order by complying with the following procedure:
 - a) Upon a determination by either the permittees or the Executive Officer that the discharges from the MS4 systems are causing or contributing to an exceedance of an applicable water quality standard, the permittees shall promptly notify and thereafter submit a report to the Executive Officer that describes BMPs that are currently being implemented and additional BMPs that will be implemented to prevent or reduce any pollutants that are causing or contributing to the exceedance of water quality standards. The report may be incorporated in the annual update to the DAMP, unless the Executive Officer directs an earlier submittal. The report shall include an implementation schedule. The Executive Officer may require modifications to the report;
 - b) Submit any modifications to the report required by the Executive Officer within 30 days of notification;
 - c) Within 30 days following approval by the Executive Officer of the report described above, the permittees shall revise the DAMP and monitoring program to incorporate the approved modified BMPs that have been and will be implemented, the implementation schedule, and any additional monitoring required; and,
 - d) Implement the revised DAMP and monitoring program in accordance with the approved schedule.

So long as the permittees have complied with the procedures set forth above and are implementing the revised DAMP, the permittees do not have to repeat the same procedure for continuing or recurring exceedances of the same receiving water

limitations unless the Executive Officer determines it is necessary to develop additional BMPs.

4. Nothing in Section IV.3 must prevent the Regional Board from enforcing any provision of this order while the permittee prepares and implements the above programs.

V. IMPLEMENTATION AGREEMENT

1. Within 6 months of adoption of this order, the existing Implementation Agreement shall be reviewed and revised, if necessary, to include any cities that were not signatories to this agreement. A copy of the signature page and any revisions to the Agreement shall be included in the annual report.
2. Within 6 months of adoption of this order and annually thereafter, the permittees shall evaluate the storm water management structure and the Implementation Agreement and determine the need for any revisions. The corresponding annual report shall include the findings of this review and a schedule for any needed revisions.

VI. LEGAL AUTHORITY/ENFORCEMENT

1. The permittees shall maintain adequate legal authority to control the discharge of pollutants to the MS4s from urban runoff and enforce those authorities. This may be accomplished through ordinance, statute, permit, contract or similar means. Such legal authority must address all illicit connections and illicit discharges into the MS4s, including those from all industrial and construction sites. The permittees may use the Enforcement Consistency Guide or develop its own enforcement program and shall incorporate the enforcement program into their Local Implementation Plan.
2. The permittees shall carry out inspections, surveillance, and monitoring necessary to determine compliance with their ordinances and permits. The Permittees' ordinance must include adequate legal authority, to the extent permitted by California and Federal Law and subject to the limitations on municipal action under the constitutions of California and the United States, to enter, inspect and gather evidence (pictures, videos, samples, documents, etc.) from industrial, construction and commercial establishments. The permittees shall progressively and decisively take enforcement actions against any violators of their Water Quality Ordinance. These enforcement actions must, at a minimum, meet the guidelines and procedures listed in the Enforcement Consistency Guide.
3. Permittees' ordinances or other local regulatory mechanisms shall include sanctions and follow up inspection milestones to ensure compliance. Sanctions shall include, but are not limited to: monetary penalties, non-monetary penalties, bonding requirements, and/or permit denials/revocations/stays for non-compliance. Follow up inspection milestones shall be consistent with applicable sections of this order. Permittees' ordinances shall have a provision for civil or criminal penalties for violations of their water quality ordinances. These penalties shall be issued in a

decisive manner within a predetermined timeframe, from the time of the violation's occurrence and/or respective follow-up inspection.

4. Within one year of the adoption of this order, each permittee shall submit a statement, signed by legal counsel, that the permittee has obtained all necessary legal authority in accordance with 40 CFR 122.26(d)(2)(i)(A-F) and to comply with this order through adoption of ordinances and/or municipal code modifications.
5. If necessary, the permittees shall revise their LIPs to include citations of appropriate local ordinances, identification of departmental jurisdictions in the implementation and enforcement of these ordinances, and key personnel. The LIP shall include procedures and timeframes for progressive enforcement actions.
6. The permittees shall continue to provide notification to Regional Board staff regarding storm water related information gathered during site inspections of industrial and construction sites regulated by the Statewide General Storm Water Permits and at sites that should be regulated under those Statewide General Permits. The notification shall be provided on a quarterly basis³⁴ and shall include any observed violations, or threat of potential violations of the General Permits (e.g., problematic housekeeping issues) prior history of violations, any enforcement actions taken by the permittee, and any other relevant information. (Also see notification requirements under Sections VIII, IX, and X of this Order.)
7. The permittees shall annually review their water quality ordinances and provide findings within the annual report each year on the effectiveness of these ordinances and associated enforcement programs, in prohibiting the following types of discharges to the MS4s (the permittees may propose appropriate control measures in lieu of prohibiting these discharges, where the permittees are responsible for ensuring that dischargers adequately maintain those control measures):
 - a) Sewage (also prohibited under the Statewide SSO order³⁵);
 - b) Wash water resulting from the hosing or cleaning of gas stations, auto repair garages, and other types of automobile service stations;
 - c) Discharges resulting from the cleaning, repair, or maintenance of any type of equipment, machinery, or facility, including motor vehicles, concrete mixing equipment, portable toilet servicing, etc.;
 - d) Wash water from mobile auto detailing and washing, steam and pressure cleaning, carpet/upholstery cleaning, pool cleaning and other such mobile commercial and industrial activities;
 - e) Water from cleaning of municipal, industrial, and commercial sites, including parking lots, streets, sidewalks, driveways, patios, plazas, work yards and outdoor eating or drinking areas, etc.;

³⁴ The reporting schedule may be revised with the approval of the Executive Officer.

³⁵ State Board WQO No. 2006-0003.

The County of Orange, Orange County Flood Control District, and the Incorporated Cities of Orange County
Areawide Urban Storm Water Runoff

- f) Runoff from material storage areas or uncovered receptacles that contain chemicals, fuels, grease, oil, or other hazardous materials³⁶;
 - g) Discharges of runoff from the washing of toxic materials³⁷ from paved or unpaved areas;
 - h) Discharges of pool or fountain water containing chlorine, biocides, or other chemicals; pool filter backwash containing debris and chlorine;
 - i) Pet waste, yard waste, litter, debris, sediment, etc.; and,
 - j) Restaurant or food processing facility wastes such as grease, floor mat and trash bin wash water, food waste, etc.
8. The permittees are encouraged to enter into interagency agreements with owners of other MS4 systems, such as Caltrans, school and college districts, universities, Department of Defense, Native American Tribes, etc., to control the contribution of pollutants from one portion of the MS4s to another portion. The Regional Board will continue to notify the owner/operator of the MS4 systems and the local municipality if the Board issues a permit for discharges into the MS4 systems.

VII. ILLICIT DISCHARGES/ILLICIT CONNECTIONS; LITTER, DEBRIS AND TRASH CONTROL

1. The permittees shall continue to prohibit all illicit connections to the MS4s through their ordinances, inspections, monitoring programs, and enforcement actions. The permittees shall conduct inspections for illicit connections and illicit discharges during routine maintenance of all MS4 facilities. If routine inspections or dry weather screening and/or monitoring indicate any illicit connections, they shall be investigated and eliminated or permitted within 120 days of discovery and identification.
2. The permittees shall control the discharge of spills, leaks, or dumping of any materials other than storm water and authorized non-storm water per Section III, above, into the MS4s. All reports of spills, leaks, and/or illegal dumping shall be promptly investigated and reported as specified under Section XVII.
3. Within six months of adoption of this order, the permittees shall evaluate the current Illicit Discharges/Illicit Connections Training Program. If necessary, the program shall be revised to meet the expected expertise and competencies of the municipal inspectors.

³⁶ Hazardous material is defined as any substance that poses a threat to human health or the environment due to its toxicity, corrosiveness, ignitability, explosive nature or chemical reactivity. These also include materials named by EPA to be reported if a designed quantity of the material is spilled into the waters of the United States or emitted into the environment.

³⁷ Toxic material is a chemical or a mixture that may present an unreasonable risk of injury to health or the environment.

4. The permittees shall continue to implement appropriate control measures to reduce and/or to eliminate the discharge of trash and debris to waters of the US. These control measures shall be reported in the annual report.
5. By July 1st of each year the permittees shall review their litter/trash control ordinances to determine the need for any revision. At least once during the permit term, the principal permittee shall characterize trash, determine its main source(s) and develop and implement appropriate BMPs to control trash in urban runoff. The findings of this review shall be included in the annual report.
6. The permittees shall determine the need for any additional debris control measures. The findings shall be included in each annual report.
7. The permittees who are regulated under State Board's Water Quality Order No. 2006-0003 shall continue to comply with that order to control sanitary system overflows. The principal permittee shall continue to evaluate the applicability of the "Countywide Area Spill Control Program (CASC)" to all areas within the Santa Ana Regional Board's jurisdiction to control and mitigate sanitary sewer overflows. This evaluation shall be included in the first annual report due after adoption of this order. Within 12 months of adoption of this order, the principal permittee in collaboration with the Orange County Sanitation District, Irvine Ranch Water District and the co-permittees shall implement essential elements of the CASC or other equally effective programs (such as the Statewide SSO order) to control and mitigate sanitary sewer overflows in Orange County areas that are within the Region.

VIII. MUNICIPAL INSPECTIONS OF CONSTRUCTION SITES

1. Each permittee shall ensure that all construction activities within its jurisdiction are consistent with the Model Construction Program developed by the permittees.
2. Each permittee shall continue to maintain and update (at least on a biannual basis, once in September and the second update in May) an inventory of all construction sites within its jurisdiction for which building or grading permits have been issued and where activities at the site include: soil movement; uncovered storage of materials or wastes, such as dirt, sand or fertilizer; or exterior mixing of cementaceous products, such as concrete, mortar or stucco. All construction sites, as described above, shall be included regardless of whether the construction site is subject to the General Construction Permit or other individual NPDES permit. This inventory shall be maintained in the 2002 Spreadsheet developed by the permittees or a similar computer-based database system and shall include relevant information on site ownership, General Construction Permit WDID number (if any), size, location (latitude/longitude [in decimals] or NAD83/WGS84³⁸ compatible formatting), inspection data, etc.
3. The permittees shall continue to prioritize construction sites within their jurisdictions as a high, medium or low threat to water quality. Evaluation of construction sites

³⁸ NAD83/WGS84=North American Datum of 1983 and World Geodetic System of 1984 are systems to define three-dimensional coordinates of a single physical point.

The County of Orange, Orange County Flood Control District, and the Incorporated Cities of Orange County
Areawide Urban Storm Water Runoff

shall be based on factors, which shall include, but not be limited to: soil erosion potential, project size, site slope, proximity to and sensitivity of receiving waters and any other relevant factors. At a minimum, high priority construction sites shall include: sites 20 acres and larger; sites over 1 acre that are tributary to Clean Water Act Section 303(d) waters listed for sediment or turbidity impairments; and sites that are tributary to and within 500 feet of an area defined by the Ocean Plan as an Area of Special Biological Significance (ASBS). At a minimum, medium priority construction sites shall include sites between 5 to 20 acres of disturbed soil.

4. Each permittee shall conduct construction site inspections, subject to limitations on municipal action under the constitutions of California and the United States, for compliance with its ordinances (grading, Water Quality Management Plans, etc.), local permits (construction, grading, etc.), the Model Construction Program and the Construction Runoff Guidance Manual, both developed by the permittees. The permittees must develop a checklist for conducting construction site inspections. Inspections of construction sites shall include, but not be limited to:
 - a) Verification of coverage under the General Construction Permit (Notice of Intent or Waste Discharge Identification Number, W DID Number) during the initial inspection;
 - b) A documented review of the Erosion and Sediment Control Plan (ESCP) to ensure that the BMPs to be implemented on-site are consistent with the appropriate phase of construction (Preliminary Stage, Mass Grading Stage, Streets and Utilities Stage, etc.);
 - c) Visual observation for non-storm water discharges and potential pollutant sources;
 - d) Determination of compliance with local ordinances, permits, Water Quality Management Plans, Construction Runoff Guidance Manual and other relevant requirements including the implementation and maintenance of BMPs required under local requirements; and,
 - e) An assessment of the effectiveness of BMPs implemented at the site and the need for any additional BMPs.
5. At a minimum, the inspection frequency shall include the following:
 - a) During the dry season (i.e., May 1 through September 30 of each year), all construction sites shall be inspected at a frequency sufficient to ensure that sediment and other pollutants are properly controlled and that unauthorized, non-storm water discharges are prevented.
 - b) During the wet season (i.e., October 1 through April 30 of each year), all high priority sites are to be inspected, in their entirety, once a month. All medium priority sites are to be inspected at least twice during the wet season. All low priority sites are to be inspected at least once during the wet season. When BMPs or BMP maintenance is deemed inadequate or out of compliance, an

inspection frequency of once every week will be maintained until BMPs and BMP maintenance are brought into compliance.

6. To establish a consistent enforcement program for non-compliant construction sites, the permittees shall enforce their ordinances and permits at all construction sites in a fair, firm and consistent manner. If necessary, the permittees shall revise their LIPs within 12 months of adoption of this order to include a mechanism to notify and to establish a clear and coordinated enforcement linkage for further enforcement action with Regional Board staff. Sanctions for non-compliance must include: a written enforcement order at the time of inspection and other appropriate actions, such as Administrative Compliance Orders, Cease and Desist Orders, Stop Work Orders, Misdemeanor/Infractions, monetary penalties, bonding requirements and/or permit denial or administrative termination.
7. All violations shall be notified as per Section XVII.
8. Each permittee shall respond to complaints received from third parties in a timely manner to ensure that the construction sites are not a source of pollutants in the MS4s and the receiving waters.
9. All construction site inspectors shall be trained in accordance with Section XVI.

IX. MUNICIPAL INSPECTIONS OF INDUSTRIAL FACILITIES

1. Each permittee shall continue to maintain an inventory of industrial facilities within its jurisdiction. All sites that have the potential to discharge pollutants to the MS4 should be included in this inventory regardless of whether the facility is subject to business permits, licensing, the State's General Industrial Permit or other individual NPDES permit. This database must be updated on an annual basis. This inventory must be maintained in a computer-based database system and must include relevant information on ownership, SIC code(s), General Industrial Permit WDID # (if any), size, location, etc. Inclusion of a Geographical Information System (GIS) is required, with latitude/longitude (in decimals) or NAD83/WGS84³⁹ compatible formatting.
2. To establish priorities for inspection requirements under this order, the permittees shall continue to prioritize industrial facilities within their jurisdiction as a high, medium or low threat to water quality. Continuous evaluation of these facilities should be based on such factors as type of industrial activities (SIC codes), materials or wastes used or stored outside, pollutant discharge potential, facility size, proximity and sensitivity of receiving waters and any other relevant factors. At a minimum, a high priority shall be assigned to: facilities subject to section 313 of Title III of the Superfund Amendments and Reauthorization Act of 1986 (SARA); facilities requiring coverage under the General Industrial Permit; facilities with a high potential for, or history of, unauthorized, non-storm water discharges; and facilities that are tributary to, and within 500 feet of, an area defined by the Ocean Plan as an Area of Special Biological Significance.

³⁹ See Footnote 38.

3. Each permittee shall conduct industrial facility inspections, subject to limitations on municipal action under the constitutions of California and the United States, for compliance with its ordinances, permits and this order. Inspections shall include a review of material and waste handling and storage practices, written documentation of pollutant control BMP implementation and maintenance procedures and digital photographic documentation for any water quality violations, as well as, evidence of past or present unauthorized, non-storm water discharges and enforcement actions issued at the time of inspection. All high priority facilities identified in Section IX.2 shall be inspected at least once a year and a report on these inspections shall be submitted in the annual report for each year.
4. All medium priority sites are to be inspected at least once every two years; and all low priority sites are to be inspected at least once per permit cycle. In the event that inappropriate material or waste handling or storage practices are observed, or there is evidence of past or present unauthorized, non-storm water discharges, an enforcement order shall be issued and a re-inspection frequency schedule adequate to bring the site into compliance, must be maintained (at a minimum, once a month). Once compliance is achieved, a minimum inspection frequency of once every six months will be maintained for the next calendar year.
5. Each permittee shall continually identify any industrial facilities within their jurisdiction and shall add them to the database, as identified in Section IX.1. Additionally, each facility shall be listed with its respective prioritization in accordance with the specifications identified in Section IX.2, within 15 days from the initial date of discovery of the facility.
6. Information including, at a minimum, inspection dates, inspectors present, the photographic and written results of the inspection and any enforcement actions taken must be maintained in the database identified in Section IX.1 or must be linked to that database. A copy of this database must be provided to the Regional Board with each annual report.
7. Each permittee shall enforce its ordinances and permits at all industrial facilities in accordance with the Enforcement Consistency Guide to maintain compliance with this order. At a minimum, each facility shall be required to implement source control and pollution prevention measures consistent with the BMP Fact Sheets developed by the permittees. Sanctions for non-compliance shall be adequate to bring the site into compliance and must include: an oral or written warning for minor violations at the time of inspection, a written enforcement order for violations that pose a threat to water quality that should include consideration of monetary penalties, bonding requirements and/or permit denial or revocation depending on the severity of the violation and in accordance with the Enforcement Consistency Guide.
8. Regional Board shall be notified of all violations in accordance with Section XVII.
9. Industrial site inspectors shall be trained as stipulated in Section XVI.

10. The permittees need not inspect facilities already inspected by Regional Board staff, if the inspection was conducted within the specified time period⁴⁰.

X. MUNICIPAL INSPECTIONS OF COMMERCIAL FACILITIES

1. Each permittee shall continue to maintain and update quarterly an inventory of the types of commercial facilities/businesses listed below within its jurisdiction⁴¹. As required under the third term permit, this inventory must be maintained in a computer-based database system (Commercial Database) and must include relevant information on ownership, size, location, etc. For fixed facilities, inclusion of a Geographical Information System (GIS), with latitude/longitude (in decimals) or NAD83/WGS84⁴² compatible formatting is required. For water quality planning purposes, the permittees should consider using a parcel-level GIS that contains an inventory of the types of facilities/discharges listed below.

Commercial facilities may include, but may not be limited to⁴³:

- a) Transport, storage or transfer of pre-production plastic pellets.
- b) Automobile mechanical repair, maintenance, fueling or cleaning;
- c) Airplane maintenance, fueling or cleaning;
- d) Marinas and boat maintenance, fueling or cleaning;
- e) Equipment repair, maintenance, fueling or cleaning;
- f) Automobile impound and storage facilities;
- g) Pest control service facilities;
- h) Eating or drinking establishments, including food markets and restaurants;
- i) Automobile and other vehicle body repair or painting;
- j) Building materials retail and storage facilities;
- k) Portable sanitary service facilities;
- l) Painting and coating;
- m) Animal facilities such as petting zoos and boarding and training facilities;
- n) Nurseries and greenhouses;
- o) Landscape and hardscape installation;
- p) Pool, lake and fountain cleaning;
- q) Golf courses;
- r) Other commercial sites/sources that the permittee determines may contribute a significant pollutant load to the MS4; and,
- s) Any commercial sites or sources that are tributary to and within 500 feet of an area defined by the Ocean Plan as an Area of Special Biological Significance.

⁴⁰ An appropriate framework for inspection coordination will be developed by Regional Board staff and the permittees.

⁴¹ The inventory update schedule may be revised with the approval of the Executive Officer.

⁴² See Footnote 38.

⁴³ Mobile cleaning services are addressed in X.8, below.

The County of Orange, Orange County Flood Control District, and the Incorporated Cities of Orange County
Areawide Urban Storm Water Runoff

2. Each permittee shall conduct, or require to be completed, inspections of its commercial facilities as indicated below and subject to limitations on municipal action under the constitutions of California and the United States. To establish priorities for inspection, the permittees shall continue to prioritize commercial facilities/businesses within their jurisdiction as a high, medium or low threat to water quality based on such factors as the type, magnitude and location of the commercial activity, potential for discharge of pollutants to the MS4, any history of unauthorized, non-storm water discharges, proximity and sensitivity of receiving waters, material used and wastes generated at the site. Within 12 months of adoption of this order, the permittees shall develop a prioritization and inspection schedule for the commercial facilities in Section X.1 for review and approval by the Executive Officer. Until that plan is approved, the following minimum criteria must be met for prioritization of commercial sites for inspections: 10% of commercial sites (not including restaurants/food markets) must be ranked 'high' and these represent the greatest threat to water quality⁴⁴; 20% of commercial sites (not including restaurants/food markets) must be ranked 'medium'; and, the remainder may be ranked 'low'.
3. Each permittee shall conduct, or require to be completed, commercial facility inspections, at frequencies as determined by the threat to water quality prioritization, for compliance with its ordinances, permits and this order. All high priority sites shall be inspected at least once a year; all medium priority sites shall be inspected at least every two years; and all low priority sites shall be inspected at least once per permit cycle. At a minimum, each facility shall be required to implement source control and pollution prevention measures consistent with the BMP Fact Sheets developed by the permittees. Inspections should include a review of control measures implemented, their effectiveness and maintenance; written and photographic documentation of materials and waste handling and storage practices; evidence of past or present unauthorized, non-storm water discharges; and an assessment of management/employees awareness of storm water pollution prevention measures.
4. In the event that inappropriate material or waste handling or storage practices are observed, or there is evidence of past or present unauthorized, non-storm water discharges, a written enforcement order shall be issued, at the time of inspection, to bring the site into compliance.
5. Information, including inspection dates, inspectors present, the written and photographic documentation results of the inspection and any enforcement actions including mitigative compliance orders must be maintained in the Commercial Database or must be linked to that database. A copy of this database must be provided to the Regional Board with each annual report.
6. Each permittee shall enforce its ordinances and permits at commercial facilities. Sanctions for non-compliance must include: enforcement orders issued at the time of inspections, monetary penalties, bonding requirements and/or permit denial or

⁴⁴ Where there are less than 100 commercial sites within a municipality, at least 10 sites must be ranked 'High'.

revocation. Sanctions shall be consistent with methods and protocols established in the Enforcement Consistency Guide.

7. All violations shall be notified as specified in Section XVII.
8. Within 12 months of adoption of this order, the permittees shall develop a mobile business pilot program. The pilot program shall address one category of mobile business from the following list: mobile auto washing/detailing; equipment washing/cleaning; carpet, drape and furniture cleaning; mobile high pressure or steam cleaning. The pilot program shall include at least two notifications of the individual businesses operating within the County regarding the minimum source control and pollution prevention measures that the business must implement. The pilot program shall include outreach materials for the business and an enforcement strategy to address mobile businesses. The permittees shall also develop and distribute the BMP Fact Sheets for the selected mobile businesses. At a minimum, the mobile business Fact Sheets should include: laws and regulations dealing with urban runoff and discharges to storm drains; appropriate BMPs and proper procedure for disposing of wastes generated.
9. The principal permittee shall continue to maintain a restaurant inspection program, or coordinate and collaborate with the Orange County Health Care Agency's restaurant inspection program. The restaurant inspection program shall, at a minimum, continue to conduct annual inspections that address:
 - a) Oil and grease disposal to verify that these wastes are not poured onto a parking lot, street or adjacent catch basin;
 - b) Trash bin areas to verify that these areas are clean, the bin lids are closed, the bins are not filled with liquid and the bins have not been washed out;
 - c) Parking lot, alley, sidewalk and street areas to verify that floor mats, mops, filters and garbage containers are not washed in those areas and that no washwater is poured in those areas or discharged to the MS4;
 - d) Parking lot areas to verify that they are cleaned by sweeping, not by hosing down and that the facility operator uses dry methods for spill cleanup; and,
 - e) Inspection of existing devices designed to separate grease from wastewater (e.g., grease traps or interceptors) to ensure adequate capacity and proper maintenance is currently performed under the Fats, Oils and Grease (FOG) program (the FOG inspections conducted under the Statewide SSO order (Water Quality Order No. 2006-0003) could be substituted for this inspection).

All violations of the Water Quality Ordinance should be enforced by the permittees and all violations of the Health and Safety Code should be enforced by the Health Care Agency.

10. All commercial site inspectors shall be trained as specified in Section XVI.

11. The permittees need not inspect facilities already inspected by Regional Board staff if the inspection was conducted within the specified time period⁴⁵.

XI. RESIDENTIAL PROGRAM

1. Each permittee shall develop and implement a residential program to reduce the discharge of pollutants from residential facilities to the MS4s consistent with the maximum extent practicable standard so as to prevent discharges from the MS4s from causing or contributing to a violation of water quality standards in the receiving waters.
2. The permittees should identify residential areas and activities that are potential sources of pollutants and develop Fact Sheets/BMPs. At a minimum, this should include: residential auto washing and maintenance activities; use and disposal of pesticides, herbicides, fertilizers and household cleaners; and collection and disposal of pet wastes. The permittees shall encourage residents to implement pollution prevention measures. The permittees should work with sub-watershed groups (e.g., the Serrano Creek Conservancy) to disseminate latest research information, such as the UC Master Gardeners Program⁴⁶ and USDA's Backyard Conservation Program⁴⁷.
3. The permittees, collectively or individually, shall facilitate the proper collection and management of used oil, toxic and hazardous materials, and other household wastes. Such facilitation should include educational activities, public information activities, and establishment of curbside or special collection sites managed by the permittees or private entities, such as solid waste haulers.
4. Within 18 months of adoption of this order, the permittees shall develop a pilot program to control pollutant discharges from common interest areas and areas managed by homeowner associations or management companies. The permittees should evaluate the applicability of programs such as the Landscape

⁴⁵ An appropriate framework for inspection coordination will be developed by Regional Board staff and the permittees.

⁴⁶ The UC Master Gardener volunteer program provides gardening and horticulture information to the residents of Orange County through trained volunteers who disseminate University research based scientific information.

⁴⁷ Backyard Conservation, Bringing Conservation from the Countryside to Your Backyard, USDA Natural Resources Conservation Service, National Association of Conservation Districts, Wildlife Habitat Council and National Audubon Society.

Performance Certification Program⁴⁸ to encourage efficient water use and to minimize runoff⁴⁹.

5. The permittees shall enforce their Water Quality Ordinance for all residential areas and activities. The permittees should encourage new developments to use weather-based evapotranspiration (ET) irrigation controllers⁵⁰.
6. Each permittee shall include an evaluation of its Residential Program in the annual report starting with the first annual report after adoption of this order.

XII. NEW DEVELOPMENT (INCLUDING SIGNIFICANT RE-DEVELOPMENT)

A. GENERAL REQUIREMENTS:

1. The permittees shall continue to maintain a computerized database to ensure (prior to issuance of any local permits or other approvals) that all construction sites that are required to obtain coverage under the State's General Construction Permit have filed with the State Board a Notice of Intent for coverage under the General Permit.
2. Within 12 months of adoption of this order, the principal permittee, in collaboration with the co-permittees, shall develop a guidance document for the preparation of conceptual or preliminary WQMPs to more effectively ensure that water quality protection, including LID principles, is considered in the earliest phases of a project. Within 18 months of adoption of this order, each permittee shall revise its LIP to be consistent with the guidance. The permittees are encouraged to require submission of a conceptual WQMP as early in the planning process as possible.
3. Each permittee shall minimize the short and long-term impacts on receiving water quality from new developments and significant re-developments, as required in Section XII.B.2., below, by requiring the submittal of a WQMP, emphasizing implementation of LID principles and addressing hydrologic conditions of concern, prior to issuance of any grading or building permits and/or prior to recordation of any subdivision maps.
4. In the first annual report following adoption of this permit, the permittees shall include a summary of their review of the watershed protection principles and policies in their General Plan and related documents (such as Development Standards, Zoning Codes, Conditions of Approval, Development Project Guidance, Local Coastal Plan, etc.) to ensure that these principles and policies,

⁴⁸ For example, see the Metropolitan Water District of Orange County's Evaluation of the Landscape Performance Certification Program, January 2004.

⁴⁹ The Residential Runoff Reduction Study, Municipal Water District of Orange County, Irvine Ranch Water District and Metropolitan Water District of Southern California, July 2004.

⁵⁰ Westpark Study, Municipal Water District of Orange County, Irvine Ranch Water District and Metropolitan Water District of Southern California, 2001.

including LID principles, are properly considered and are incorporated into these documents. These principles and policies should include, but not be limited to, LID principles discussed in Section XII. C and hydrologic conditions of concern discussed in Section XII. D. Within 6 months of adoption of this order, the principal permittee shall facilitate the formation of a technical advisory committee (TAC) consisting of the Community Development/Planning Department directors of the co-permittees to effectively incorporate watershed protection principles (including LID) and policies during the early stages of a project. The TAC shall meet at least on an annual basis to develop common development standards, zoning codes, conditions of approval and other principles and policies necessary for water quality protection. Each annual report shall include a brief summary of the TAC meetings including its recommendations.

5. Each permittee shall provide the Regional Board with the draft amendment or revision when a pertinent General Plan element or the General Plan is noticed for comment in accordance with Govt. Code § 65350 et seq.
6. The permittees shall review their planning procedures and CEQA document preparation processes at the time of DAMP finalization and no later than 24 months after adoption of this order, to ensure that urban runoff-related issues are properly considered and addressed. If necessary, these processes shall be revised to consider and mitigate impacts to storm water quality. Should findings of the review result in changes to the above processes, the permittee shall include these changes in the LIP and submit a revised copy of the LIP to the Regional Board with the next annual report. The permittees shall ensure that the following potential impacts are considered during CEQA reviews:
 - a) Potential impact of project construction on storm water runoff;
 - b) Potential impact of project's post-construction activity on storm water runoff;
 - c) Potential for discharge of storm water pollutants from areas of material storage, vehicle or equipment fueling, vehicle or equipment maintenance (including washing), waste handling, hazardous materials handling or storage, delivery areas, loading docks or other outdoor work areas;
 - d) Potential for discharge of storm water to affect the beneficial uses of the receiving waters;
 - e) Potential for significant changes in the flow velocity or volume of storm water runoff to cause environmental harm; and,
 - f) Potential for significant increases in erosion of the project site or surrounding areas.
 - g) Potential decreases in quality and quantity of recharge to groundwater.
 - h) Potential impact of pollutants in storm water runoff from the project site on any 303(d) listed waterbodies.
7. The permittees shall modify the project approval process in conjunction with preparation of the DAMP finalization, consistent with the guidance for conceptual

or preliminary WQMP, to ensure that proper conditions of approval, design specifications and tracking mechanisms are included.

8. The permittees shall train their employees involved with the preparation and/or review of CEQA documents as specified in Section XVI.

B. WATER QUALITY MANAGEMENT PLAN (WQMP) FOR URBAN RUNOFF (FOR NEW DEVELOPMENT/SIGNIFICANT REDEVELOPMENT):

1. The permittees shall annually review the existing structural treatment control and other BMPs for New Developments and submit any changes for review and approval by the Executive Officer. Within 12 months of adoption of this order, the principal permittee shall revise the appropriate tables in the Water Quality Management Plan with the latest information on BMPs and provide additional clarification regarding their effectiveness and applicability.
2. Each permittee shall ensure that an appropriate WQMP is prepared for the following categories of new development/significant redevelopment projects (priority development projects). The WQMP shall be developed in accordance with the approved Model WQMP and shall incorporate LID principles in the WQMP.
 - a. All significant redevelopment projects, where significant redevelopment is defined as projects that include the addition or replacement of 5,000 square feet or more of impervious surface on a developed site. Redevelopment does not include routine maintenance activities that are conducted to maintain original line and grade, hydraulic capacity, original purpose of the facility, or emergency redevelopment activity required to protect public health and safety. Where redevelopment results in the addition or replacement of less than fifty percent of the impervious surfaces of a previously existing developed site, and the existing development was not subject to WQMP requirements, the numeric sizing criteria discussed below applies only to the addition or replacement, and not to the entire developed site. Where redevelopment results in the addition or replacement of more than fifty percent of the impervious surfaces of a previously existing developed site, the numeric sizing criteria applies to the entire development.
 - b. New development projects that create 10,000 square feet or more of impervious surface (collectively over the entire project site) including commercial, industrial, residential housing subdivisions (i.e., detached single family home subdivisions, multi-family attached subdivisions (town homes), condominiums, apartments, etc.), mixed-use, and public projects. This category includes development projects on public or private land, which fall under the planning and building authority of the permittees.
 - c. Automotive repair shops (with SIC codes 5013, 5014, 5541, 7532-7534, 7536-7539).
 - d. Restaurants where the land area of development is 5,000 square feet or more.

The County of Orange, Orange County Flood Control District, and the Incorporated Cities of Orange County
Areawide Urban Storm Water Runoff

- e. All hillside developments on 5,000 square feet or more, which are located on areas with known erosive soil conditions or where the natural slope is twenty-five percent or more.
 - f. Developments of 2,500 square feet of impervious surface or more, adjacent to (within 200 feet) or discharging directly⁵¹ into environmentally sensitive areas, such as areas designated in the Ocean Plan as Areas of Special Biological Significance or waterbodies listed on the CWA Section 303(d) list of impaired waters.
 - g. Parking lots of 5,000 square feet or more of impervious surface exposed to storm water. Parking lot is defined as a land area or facility for the temporary storage of motor vehicles.
 - h. Streets, roads, highways and freeways of 5,000 square feet or more of paved surface shall incorporate USEPA guidance, "Managing Wet Weather with Green Infrastructure: Green Streets" in a manner consistent with the maximum extent practicable standard. This category includes any paved surface used for the transportation of automobiles, trucks, motorcycles and other vehicles and excludes any routine road maintenance activities where the footprint is not changed.
 - i. Retail gasoline outlets of 5,000 or more square feet with a projected average daily traffic of 100 or more vehicles per day.
 - j. Emergency and public safety projects in any of the above-listed categories may be excluded if the delay caused due the requirement for a WQMP compromises public safety, public health and/or environmental protection.
3. WQMPs shall include BMPs for source control, pollution prevention, site design, LID implementation (see Section C., below) and structural treatment control BMPs. For all structural treatment controls, WQMPs shall identify the responsible party for maintenance of the treatment system, vector minimization and control measures, and a funding source or sources for its operation and maintenance. WQMPs shall include control measures for any listed pollutant⁵² to an impaired waterbody on the 303(d) list such that the discharge shall not cause or contribute to an exceedance of receiving water quality objectives. The permittees shall require the following source control BMPs for each priority development project, unless formally substantiated as unwarranted in a written submittal to the permittee:
- a) Minimize contaminated runoff, including irrigation runoff, from entering the MS4s;

⁵¹ Discharging directly means a drainage or conveyance which carries flows entirely from the subject development and not commingled with any other flows.

⁵² For a waterbody listed under Section 303(d) of the Clean Water Act, the pollutant that is causing the impairment is the "listed pollutant".

- b) Provide appropriate secondary containment and/or proper covers or lids for materials storage, trash bins, and outdoor processing and work areas;
 - c) Minimize storm water contact with pollutant sources;
 - d) Provide community car wash and equipment wash areas that discharge to sanitary sewers;
 - e) Minimize trash and debris in storm water runoff through regular street sweeping and through litter control ordinances.
 - f) The pollutants in post-development runoff shall be reduced using controls that utilize best management practices, as described in the California Stormwater Quality Handbooks, Caltrans Storm Water Quality Handbook or other reliable sources.
4. At a minimum, structural BMPs shall be designed and built in accordance with the approved model WQMP and must be sized to comply with one of the following numeric sizing criteria:

A. Volume

Volume-based BMPs shall be designed to infiltrate, filter, or treat either:

- 1) The volume of runoff produced from a 24-hour, 85th percentile storm event, as determined from the County of Orange's 85th Percentile Precipitation Isopluvial Map⁵³; or,
- 2) The volume of annual runoff produced by the 85th percentile, 24-hour rainfall event, determined as the maximized capture storm water volume for the area, from the formula recommended in Urban Runoff Quality Management, WEF Manual of Practice No. 23/ASCE Manual of Practice No. 87 (1998); or,
- 3) The volume of annual runoff based on unit basin storage volume, to achieve 80% or more volume treatment by the method recommended in California Stormwater Best Management Practices Handbook – Industrial/Commercial; or,
- 4) The volume of runoff, as determined from the local historical rainfall record, that achieves approximately the same reduction in pollutant loads and flows as achieved by mitigation of the 85th percentile, 24-hour runoff event;

OR

B. Flow

Flow-based BMPs shall be designed to infiltrate, filter, or treat either:

- 1) The maximum flow rate of runoff produced from a rainfall intensity of 0.2 inch of rainfall per hour, for each hour of a storm event; or,

⁵³ The isopluvial map is available from: http://www.ocwatersheds.com/StormWater/PDFs/2003_DAMP_Section_7_New_Development_Significant_Redevelopment.pdf.

- 2) The maximum flow rate of runoff produced by the 85th percentile hourly rainfall intensity, as determined from the local historical rainfall record, multiplied by a factor of two; or,
 - 3) The maximum flow rate of runoff, as determined from the local historical rainfall record, which achieves approximately the same reduction in pollutant loads and flows as achieved by mitigation of the 85th percentile hourly rainfall intensity multiplied by a factor of two.
5. To protect ground water resources any structural infiltration BMPs shall meet the following minimum requirements:
- a) Use of structural infiltration treatment BMPs shall not cause or contribute to an exceedance of groundwater water quality objectives.
 - b) Source control and pollution prevention control BMPs shall be implemented in conjunction with structural infiltration BMPs to protect groundwater quality. The need for sedimentation or filtration should be evaluated prior to infiltration.
 - c) Structural infiltration treatment BMPs shall not cause a nuisance or pollution, as defined in Water Code Section 13050.
 - d) The vertical distance from the bottom of the infiltration system to the seasonal high groundwater must be at least 10 feet. Where the groundwater basins do not support beneficial uses, this vertical distance criteria may be reduced, provided groundwater quality is maintained.
 - e) The infiltration systems must be located at least 100 feet horizontally from any water supply wells.
 - f) Infiltration systems must not be used for areas of industrial or light industrial activity; areas subject to high vehicular traffic (25,000 or more daily traffic) automotive repair shops; car washes; fleet storage areas; nurseries; or any other high threat to water quality land uses or activities⁵⁴.
 - g) Within 18 months of adoption of this order, the principal permittee shall develop a pilot program to monitor the impact of groundwater infiltration systems on the quality of groundwater. This monitoring program may be conducted by: (1) analyzing the quality of the runoff prior to infiltration; (2) by monitoring the quality of the infiltrate through the vadose zone; or (3) by monitoring groundwater quality upstream and downstream of the infiltration systems. The results of the pilot study shall be submitted with the next annual report.
6. Within 12 months from the date of adoption of this order, the principal permittee shall develop recommendations for streamlining regulatory agency approval of

⁵⁴ This restriction applies only to sites that are known to have soil and/or groundwater water contamination. Recent studies by the Los Angeles and San Gabriel Watershed Council of Storm Water Recharge has shown that there is no statistically significant degradation of groundwater quality from the infiltration of storm water-borne constituents.

regional treatment control BMPs. The recommendations should include information needed to be submitted to the Regional Board for consideration of regional treatment control BMPs. At a minimum, it should include: BMP location; type and effectiveness in removing pollutants of concern; projects tributary to the regional treatment system; engineering design details; funding sources for construction, operation and maintenance; and parties responsible for monitoring effectiveness, operation and maintenance.

7. The permittees shall require non-priority development projects to document, via a WQMP or similar mechanism, site design, source control and any other BMPs which may or may not include treatment control BMPs.

C. LOW IMPACT DEVELOPMENT TO CONTROL POLLUTANTS IN URBAN RUNOFF FROM NEW DEVELOPMENT/SIGNIFICANT REDEVELOPMENT:

1. Within 12 months of adoption of this order, the permittees shall update the model WQMP to incorporate LID principles (as per Section XII.C) and to address the impact of urbanization on downstream hydrology (as per Section XII.D) and a copy of the updated model WQMP shall be submitted for review and approval by the Executive Officer⁵⁵. As provided in Section XII.J, 90 days after approval of the revised model WQMP, priority development projects shall implement LID principles described in this section, Section XII.C. To the extent that the Executive Officer has not approved the feasibility criteria within 18 months of adoption of this order as provided in Section XII.E.1, the infeasibility of implementing LID BMPs shall be determined through project specific analyses, each of which shall be submitted to the Executive Officer, 30 days prior to permittee approval.
2. The permittees shall reflect in the WQMP and otherwise require that each priority development project infiltrate, harvest and re-use, evapotranspire, or bio-treat⁵⁶ the 85th percentile storm event ("design capture volume"), as specified in Section XII.B.4.A.1, above. Any portion of the design capture volume that is not infiltrated, harvested and re-used, evapotranspired or bio-treated⁵⁷ onsite by LID BMPs shall be treated and discharged in accordance with the requirements set forth in Section XII.C.7 and/or Section XII.E, below.

⁵⁵ The Executive Officer shall provide members of the public with notice and at least a 30-day comment opportunity for all documents submitted in accordance with this order. If the Executive Officer, after considering timely submitted comments, concludes that the document is adequate or adequate with specified changes, the Executive Officer may approve the document or present it to the Board for its consideration at a regularly scheduled and noticed meeting. If there are significant issues that cannot be resolved by the Executive Officer, the document will be presented to the Board for its consideration at a regularly scheduled meeting.

⁵⁶ A properly engineered and maintained bio-treatment system may be considered only if infiltration, harvesting and reuse and evapotranspiration cannot be feasibly implemented at a project site (feasibility criteria will be established in the model WQMP [Section XII.C.1] and the technically-based feasibility criteria [Section XII.E.1]). Specific design, operation and maintenance criteria for bio-treatment systems shall be part of the model WQMP that will be produced by the permittees.

⁵⁷ For all references to bio-treat/bio-treatment, see footnote 56.

3. The permittees shall incorporate LID site design principles to reduce runoff to a level consistent with the maximum extent practicable standard during each phase of priority development projects. The permittees shall require that each priority development project include site design BMPs during development of the preliminary and final WQMPs. The design goal shall be to maintain or replicate the pre-development hydrologic regime through the use of design techniques that create a functionally equivalent post-development hydrologic regime through site preservation techniques and the use of integrated and distributed micro-scale storm water infiltration, retention, detention, evapotranspiration, filtration and treatment systems as close as feasible to the source of runoff. Site design considerations shall include, but not be limited to:
 - a) Limit disturbance of natural water bodies and drainage systems; conserve natural areas; preserve trees; minimize compaction of highly permeable soils; protect slopes and channels; and minimize impacts from storm water and urban runoff on the biological integrity of natural drainage systems and water bodies;
 - b) Minimize changes in hydrology and pollutant loading; require incorporation of controls, including structural and non-structural BMPs, to mitigate the projected increases in pollutant loads and flows; ensure that post-development runoff durations and volumes from a site have no significant adverse impact on downstream erosion and stream habitat; minimize the quantity of storm water directed to impermeable surfaces and the MS4s; minimize paving, minimize runoff by disconnecting roof leader and other impervious areas and directing the runoff to pervious and/or landscaped areas, minimize directly connected impervious areas; design impervious areas to drain to pervious areas; consider construction of parking lots, walkways, etc., with permeable materials; minimize pipes, culverts and engineered systems for storm water conveyance thereby minimizing changes to time of concentration on site; utilize rain barrels and cisterns to collect and re-use rainwater; maximize the use of rain gardens and sidewalk storage; and maximize the percentage of permeable surfaces distributed throughout the site's landscape to allow more percolation of storm water into the ground;
 - c) Preserve wetlands, riparian corridors, vegetated buffer zones and establish reasonable limits on the clearing of vegetation from the project site;
 - d) Use properly designed and well maintained water quality wetlands, bio-retention areas, filter strips and bio-filtration swales; consider replacing curbs gutters and conventional storm water conveyance systems with bio-treatment systems, where such measures are likely to be effective and technically and economically feasible;
 - e) Provide for appropriate permanent measures to reduce storm water pollutant loads in storm water from the development site;
 - f) Establish development guidelines for areas particularly susceptible to erosion and sediment loss;

- g) Implement effective education programs to educate property owners to use pollution prevention measures and to maintain on-site hydrologically functional landscape controls; and
 - h) During the early planning stages of a project, the LID principles shall be considered to address pollutants of concern identified in the Watershed Action Plans and TMDL Implementation Plans, and the LID BMPs shall be incorporated into the sites conceptual WQMP.
4. The selection of LID principles shall be prioritized in the following manner (from highest to the lowest priority): (1) Preventative measures (these are mostly non-structural measures, e.g., preservation of natural features to a level consistent with the maximum extent practicable standard; minimization of runoff through clustering, reducing impervious areas, etc.) and (2) Mitigation (these are structural measures, such as, infiltration, harvesting and reuse, bio-treatment, etc. The mitigation or structural site design BMPs shall also be prioritized (from highest to lowest priority): (1) Infiltration (examples include permeable pavement with infiltration beds, dry wells, infiltration trenches, surface and sub-surface infiltration basins. All infiltration activities should be coordinated with the groundwater management agencies, such as the Orange County Water District); (2) Harvesting and Re-use (e.g., cisterns and rain barrels); and (3) Bio-treatment such as bio-filtration/bio-retention.
5. Even though the LID principles are universally applicable, there could be constraining factors, such as: soil conditions, including soil compaction, saturation (e.g., hydric soils) and permeability, groundwater levels, soil and/or groundwater contaminants (Brownfield developments), space restrictions (in-fill projects, redevelopment projects, high density development, transit-oriented developments), naturally occurring contaminants (e.g., selenium in the soil and the groundwater in the Newport Bay Watershed), etc. In such cases, the LID principles could be integrated into other programs, such as: Smart Growth⁵⁸, New Urbanism⁵⁹ or regional or sub-watershed management approaches. Also see Section E, below, for alternatives and in-lieu programs.
6. The LID BMPs shall be designed to mimic pre-development site hydrology through technically and economically feasible preventive and mitigative site design techniques. LID combines hydrologically functional site design with pollution prevention methods to compensate for land development impact on hydrology and water quality.

⁵⁸ Smart Growth refers to the use of creative strategies to develop ways that preserve natural lands and critical environmental areas, protect water and air quality, and reuse already-developed land.

⁵⁹ New Urbanism is somewhat similar to Smart Growth and is based on principles of planning and architecture that work together to create human-scale, walkable communities that preserve natural resources.

7. If site conditions do not permit infiltration, harvesting and re-use, and/or evapotranspiration, and/or bio-treatment of the design capture volume at the project site as close to the source as possible, the alternatives discussed below should be considered and the credits and in-lieu programs discussed under Section E, below, may be considered:
 - a. Implement LID principles at the project site. This is the preferred approach. For example, in a single family residential development: connect roof drains to a landscaped area, divert driveway runoff to a vegetated strip and minimize any excess runoff generated from the development. The pervious areas to which the runoff from the impervious areas are connected should have the capacity to infiltrate, harvest, evapotranspire and/or bio-treat and re-use at least the design capture volume.
 - b. Implement as many LID principles as possible at the project site close to the point of storm water generation and infiltrate and/or harvest and re-use at least the design capture volume through designated infiltration/treatment areas elsewhere within the project site. For example, at a condominium development: connect the roof drains to landscaped areas, construct common parking areas with pervious asphalt with a sub-base of rocks or other materials to facilitate percolation of storm water, direct road runoff to curbsless, vegetated sidewalks. The pervious areas which receive runoff from impervious areas should have the capacity to infiltrate, harvest and re-use, evapotranspire and/or bio-treat at least the design capture volume.
 - c. Implement LID on a sub-regional basis. For example, at a 100 unit high density housing unit with a small strip mall and a school: connect all roof drains to vegetated areas (if there are any vegetated areas, otherwise storm water storage and reuse may be considered or else divert to the local storm water conveyance system, to be conveyed to the local treatment system), construct a storm water infiltration gallery below the school playground to infiltrate and/or harvest and re-use the design capture volume. The pervious areas to which the runoff from the impervious areas are connected should have the capacity to infiltrate, harvest and re-use, evapotranspire and/or bio-treat at least the design capture volume. (Also see discussion on hydrologic conditions of concern, below.)
 - d. Implement LID on a regional basis. For example, several developments could propose a regional system to address storm water runoff from all the participating developments. The pervious areas to which the runoff from the impervious areas are connected should have the capacity to infiltrate, harvest and re-use, evapotranspire and/or bio-treat at least the design capture volume from the entire tributary area. (Also see discussion on hydrologic conditions of concern, below.)

D. HYDROLOGIC CONDITIONS OF CONCERN (HYDROMODIFICATION⁶⁰)

1. Each priority development project shall be required to ascertain the impact of the development on the site's hydrologic regime and include the findings in the WQMP, including the following for a two-year frequency storm event:
 - a) Increases in runoff volume;
 - b) Decreases in infiltration;
 - c) Changes in time of concentration;
 - d) Potential for increases in post development downstream erosion; and,
 - e) Potential for adverse downstream impacts on physical structure, aquatic and riparian habitat.
2. The project does not have a hydrologic condition of concern if any one of the following conditions is met:
 - a) The volumes and the time of concentration of storm water runoff for the post-development condition do not significantly exceed those of the pre-development condition for a two-year frequency storm event (a difference of 5% or less is considered insignificant). This may be achieved through site design and source control BMPs.
 - b) All downstream conveyance channels that will receive runoff from the project are engineered, hardened and regularly maintained to ensure design flow capacity, and no sensitive stream habitat areas will be affected.
 - c) The site infiltrates at least the runoff from a two-year storm event. The permittees may request for a variance from these criteria, based on studies conducted by the Storm Water Monitoring Coalition, Southern California Coastal Water Research Project, or other regional studies. Requests for consideration of any variances should be submitted to the Executive Officer.
3. If a hydrologic condition of concern exists, then the WQMP shall include an evaluation of whether the project will adversely impact downstream erosion, sedimentation or stream habitat. This evaluation should include a hydrograph with pre- and post-development time of concentration for a 2-year frequency storm event. If the evaluation determines adverse impacts are likely to occur, the project proponent shall implement additional site design controls, on-site management controls, structural treatment controls and/or in-stream controls to mitigate the impacts. The project proponent should first consider site design controls and on-site controls prior to proposing in-stream controls; in-stream controls must not adversely impact beneficial uses or result in sustained degradation of water quality of the receiving waters.

⁶⁰ Hydromodification is the alteration of natural flow characteristics.

4. The project proponent may also address hydrologic conditions of concern by mimicking the pre-development hydrograph with the post-development hydrograph, for a two year return frequency storm. Generally, the hydrologic conditions of concern are not significant, if the post-development hydrograph is no more than 10% greater than pre-development hydrograph. In cases where excess volume cannot be infiltrated or captured and reused, discharge from the site must be limited to a flow rate no greater than 110% of the pre-development 2-year peak flow.
5. The permittees shall address the hydrologic conditions of concern on a watershed basis by preparing a Watershed Master Plan as described below:

The Watershed Master Plans shall integrate water quality, hydromodification, water supply, and habitat for the following watersheds: Coyote Creek-San Gabriel River; Anaheim Bay-Huntington Harbour; Santa Ana River; and Newport Bay-Newport Coast. Components of the Plan shall include: (1) maps to identify areas susceptible to hydromodification including downstream erosion, impacts on physical structure, impacts on riparian and aquatic habitats and areas where storm water and urban runoff infiltration is possible and appropriate; and, (2) a hydromodification model to make available as a tool to enable proponents of land development projects to readily select storm water preventive and mitigative site BMP measures.

The maps shall be prepared within 12 months of the adoption of this order and a model Plan for one watershed shall be prepared within 24 months of adoption of this order. The model Plan should specify hydromodification management standards for each sub-watershed and provide assessment tools. In the preparation of the model Plan, the permittees are encouraged to use currently available information from other sources such as: (1) Orange County Flood Control Master Plan; (2) Irvine Ranch Water District's Natural Treatment System Master Plan; (3) Orange County Watershed Plans; (4) Nutrient and Selenium Management Program; (5) TMDL and 303(d) Listing information from the U.S. EPA and/or the Regional Board, and (6) and water districts.

The model Watershed Master Plan shall be submitted to the Executive Officer for approval. Watershed Master Plans shall be completed for all watersheds 24 months after approval of the model Watershed Master Plan.

The Watershed Master Plans shall be designed to meet applicable water quality standards and the Federal Clean Water Act.

E. ALTERNATIVES AND IN-LIEU PROGRAMS

1. Within 12 months of adoption of this order, the principal permittee, in collaboration with the co-permittees, shall develop technically-based feasibility criteria for project evaluation to determine the feasibility of implementing LID BMPs (feasibility to be based in part, on the issues identified in Section XII.C). This plan shall be submitted to the Executive Officer for approval. Only those projects that have completed a vigorous feasibility analysis as per the criteria developed by the permittees and approved by the Executive Officer should be considered for alternatives and in-lieu programs. If a particular BMP is not technically feasible, other BMPs should be implemented to achieve the same

level of compliance, or if the cost of BMP implementation greatly outweighs the pollution control benefits, a waiver of the BMPs may be granted. All requests for waivers, along with feasibility analysis including waiver justification documentation, must be submitted to the Executive Officer in writing, 30 days prior to permittee approval.

2. The permittees may collectively or individually propose to establish an urban runoff fund to be used for urban water quality improvement projects within the same watershed that is funded by contributions from developers granted waivers. The contributions should be at least equivalent to the cost savings for waived projects and the urban runoff fund shall be expended for water quality improvement or other related projects approved by the Executive Officer within two years of receipt of the funds. If a waiver is granted and an urban runoff fund is established, the annual report for the year should include the following information with respect to the urban runoff fund:
 - a) Total amount deposited into the funds and the party responsible for managing the urban runoff fund;
 - b) Projects funded or proposed to be funded with monies from the urban runoff fund;
 - c) Party or parties responsible for design, construction, operation and maintenance of urban runoff funded projects; and
 - d) Current status and a schedule for project completion.
3. The obligation to install structural treatment control BMPs at a new development is met if, for a common plan of development, BMPs are constructed with the requisite capacity to serve the entire common project, even if certain phases of the common project may not have BMP capacity located on that phase in accordance with the requirements specified above. The goal of the WQMP is to develop and implement practicable programs and policies to minimize the effects of urbanization on site hydrology, urban runoff flow rates, velocities and pollutant loads. This goal may be achieved through watershed-based structural treatment controls, in combination with site-specific BMPs. All treatment control BMPs should be located as close as possible to the pollutant sources, should not be located within waters of the US, and pollutant removal should be accomplished prior to discharge to waters of the US. Regional treatment control BMPs shall be operational prior to occupation of any of the priority project sites tributary to the regional treatment BMP.
4. The permittees may establish a water quality credit system for alternatives to infiltration, harvesting and reuse, evapotranspiration, and other LID BMPs and hydromodification requirements specified above. A summary of any waivers of LID, hydromodification and treatment control BMPs should be included in the annual report for each year. Any credit system that the permittees establish

should be submitted to the Executive Officer for review and approval. The following types of projects may be considered for the credit system:

- a) Redevelopment projects that reduce the overall impervious footprint
- b) Brownfield redevelopment
- c) High density developments (>7 units per acre)
- d) Mixed use and transit-oriented development (within ½ mile of transit)
- e) Dedication of undeveloped portions of the project to parks, preservation areas and other pervious uses
- f) Regional treatment systems with a capacity to treat flows from all upstream developments
- g) Contribution to an urban runoff fund (see 1, above)
- h) Offsite mitigation or dedications within the same watershed
- i) City Center area
- j) Historic Districts and Historic Preservation areas
- k) Live-work developments
- l) In-fill projects

F. APPROVAL OF WQMPs

1. The permittees shall utilize a mechanism for review and approval of WQMPs, including a checklist that incorporates the minimum requirements from the model WQMP.
2. The permittees shall maintain a database to track all structural treatment control BMPs, including the location of BMPs, parties responsible for construction, operation and maintenance (also see I.3, below).
3. The permittees shall train those involved with WQMP reviews in accordance with Section XVI, Training Requirements.

G. FIELD VERIFICATION OF BMPS

1. The permittees shall establish and implement a mechanism (a checklist or other tools) to verify that treatment control BMPs are designed and constructed in accordance with the approved WQMP.
2. Prior to occupancy of each priority development project, the permittees shall field verify that the site design, source control and treatment control BMPs have been implemented in accordance with the approved WQMP.
3. Prior to occupancy, the permittees shall verify through visual observation, that the BMPs are operating and functional.
4. The permittees may accept self-certification or third-party certification of BMPs from State licensed professional engineers.

H. CHANGE OF OWNERSHIP AND RECORDATION

1. The permittees shall establish a mechanism not only to track treatment control BMPs, but also to ensure that appropriate easements and ownerships are properly recorded in public records at the County and/or the city and the information is conveyed to all appropriate parties when there is a change in project or site ownership.

I. OPERATION AND MAINTENANCE OF POST-CONSTRUCTION BMPS

1. The permittees shall ensure that all structural treatment control BMPs are designed and implemented with control measures necessary to effectively minimize the creation of nuisance or pollution associated with vectors, such as mosquitoes, rodents, flies, etc. The permittees should consult the Orange County Vector Control District to ensure that structural treatment control systems are designed to minimize the potential for vector breeding. The operation and maintenance plans for all post-construction structural treatment controls should include specific vector control mitigation measures to avoid and/or minimize vector breeding.
2. The permittees shall specify conditions of approval that require proper maintenance and operation of all structural treatment control BMPs installed in new developments, including requirements for vector control. The parties responsible for the long-term maintenance and operation of the structural treatment control BMPs for the life of the project and a funding mechanism for operation and maintenance, shall be identified prior to approval of the WQMP.
3. The permittees shall develop a database with information regarding each structural treatment control BMP installed after adoption of this order. At a minimum, it should include: type of BMP, watershed where it is located, date of construction, party responsible for maintenance, source of funding for operation and maintenance, maintenance verification, and any problems identified during inspections including any vector or nuisance problems. If vector or nuisance problems are identified, the site should be referred to the Orange County Vector Control District. The permittees should work with the Vector Control District to remedy the problems associated with vectors.
4. The annual report shall include a list of all structural treatment control BMPs approved, constructed and/or operating within each permittee's jurisdiction.
5. Within 12 months of adoption of this order and annually thereafter, all public agency structural treatment control BMPs, and at least 25% of priority development project structural treatment control BMPs, shall be inspected prior to the rainy season. All structural treatment control BMPs shall be inspected within every four year period. The permittees shall ensure that the BMPs are operating and are maintained properly and all control measures are working effectively to remove pollutants in runoff from the site. All inspections shall be documented and kept as permittee record. The permittees may accept inspections conducted and certified by state licensed professional engineers in lieu of permittee inspections.

J. PRE-APPROVED PROJECTS

1. The above provisions for LID and hydrologic conditions of concern are not applicable to projects that have an approved Water Quality Management Plan. The above provisions shall be implemented in a manner consistent with the maximum extent practicable standard for all other projects 90 days from the date of approval of the revised model WQMP (per Section XII.C.1). The Regional Board recognizes that full implementation may not be feasible for certain projects which have received tentative tract or parcel map or other discretionary approvals.

XIII. PUBLIC EDUCATION AND OUTREACH

1. The permittees shall continue to implement the public education efforts already underway and shall implement the most effective elements of the comprehensive public and business education strategy contained in the Report of Waste Discharge/DAMP. By July 1, 2012, the permittees shall complete a public awareness survey to determine the effectiveness of the current public and business education strategy and any need for changes to the current multimedia public education efforts. The findings of the survey and any proposed changes to the current program shall be included in the annual report for 2011-2012.
2. The permittees shall sponsor or staff a storm water table or booth at community, regional, and/or countywide events to distribute public education materials to the public. Each permittee shall participate in at least one event per year.
3. The permittees shall continue to participate in the Public Education Committee to review and update existing guidance for the implementation of the public education program. The Public Education Committee shall meet at least twice per year. The Public Education Committee shall continue to make recommendations for any changes to the public and business education program including: how to make the multimedia efforts more effective; a reevaluation of audiences and key messages for targeted behaviors; and opportunities for participation in regional and statewide public education efforts. The goal of the public and business education program shall be to target 100% of the residents, including businesses, commercial and industrial establishments. Through use of local print, radio and television, the permittees must ensure that the public and business education program makes a minimum of 10 million impressions per year and that those impressions measurably increase the knowledge and measurably change the behavior of the targeted groups.
4. The permittees shall continue their outreach and other public education activities. Each permittee should try to reach the following sectors: manufacturing facilities; mobile service industry; commercial, distribution and retail sales industry; residential/commercial landscape construction and services industry; residential and commercial construction industry; and residential and community activities. Individual workshops (or regional workshops) for each of the aforementioned elements shall be administered by each permittee (or on a countywide basis) by July 1, 2010 and on an annual basis thereafter. Commercial and industrial facility inspectors shall distribute developed educational information (Fact Sheets) to these facilities during inspections.

Further, for restaurant, automotive service centers and gasoline service station corporate chains, new information or that which has been previously developed shall be provided to corporate environmental managers during outreach visits that should take place twice during the permit term. Some of these outreach activities could be conducted through the chamber of commerce or other similar establishments. The outcomes from all outreach requirements contained herein shall be reported in the applicable annual reports.

5. The permittees shall further develop and maintain public education materials to encourage the public to report illegal dumping and unauthorized, non-storm water discharges from residential, industrial, construction and commercial sites into public streets, storm drains and to surface waterbodies and their tributaries; clogged storm drains; faded or missing catch basin stencils and general storm water and BMP information. Hotline and web site information shall be included in the public and business education program and shall be listed in the governmental pages of all regional phone books and on the permittees' website.
6. Within 12 months from the date of adoption of this order, the permittees shall further develop and maintain BMP guidance for the control of those potentially polluting activities identified during the previous permit cycle, which are not otherwise regulated by any agency, including guidelines for the household use of fertilizers, pesticides, herbicides and other chemicals, and guidance for mobile vehicle maintenance, carpet cleaners, commercial landscape maintenance, and pavement cutting. These guidance documents shall be distributed to the public, trade associations, etc., through participation in community events, trade association meetings and/or by mail.
7. The principal permittee, in collaboration with the co-permittees, shall develop and implement a mechanism for public participation in the updating and implementation of the Drainage Area Management Plans, monitoring plans, Water Quality Management Plan guidance and Fact Sheets for various activities. The public shall be informed of the availability of these documents through public notices in local newspapers, County and/or city websites, local libraries/city halls and/or courthouses.

XIV. MUNICIPAL FACILITIES/ACTIVITIES

1. The permittees shall continue to implement the Model Municipal Activities Program developed by the permittees for fixed facilities, field operations and drainage facilities to ensure that public agency facilities and activities do not cause or contribute to a pollution or nuisance in receiving waters. By July 1 of each year, the permittees shall review all their activities and facilities to determine the need for any revisions to the facility inventories, prioritization, and maintenance programs. The annual report shall include the findings of this review and a schedule for any needed revisions. All revisions should consider a pollution prevention strategy to ensure that the public agency facilities and/or activities that are currently not required to obtain coverage under the State's general storm water permits reduce the discharge of pollutants into waters of the US to the maximum extent practicable.
2. The permittees shall continue to implement BMPs as per the Fact Sheets developed by the permittees for fixed facilities, field programs and drainage facilities for public

The County of Orange, Orange County Flood Control District, and the Incorporated Cities of Orange County
Areawide Urban Storm Water Runoff

- agency and contract field operations and maintenance staff. A reporting of these activities shall be included in each annual report.
3. The permittees shall conduct inspections of open channel systems at least on an annual basis and record the findings in the inspection forms developed by the permittees. At a minimum the following municipal areas should be inspected:
 - a) Parking facilities;
 - b) Flood management and storm water conveyance systems (open channels);
 - c) Areas or facilities discharging directly to lagoons, the ocean, or environmentally sensitive areas such as 303(d) listed waterbodies and Areas of Special Biological Significance; and
 - d) Municipal landfills, solid waste transfer facilities, land application sites, corporate yards, sewage collection and treatment facilities, parks and recreation facilities including golf courses, and airfields.
 4. All applicable public agency staff shall be trained as specified under Section XVI.
 5. In collaboration with the University of California Cooperative Extension and consistent with the Model Integrated Pest Management, Pesticide and Fertilizer Management Guidelines, the permittees shall:
 - a) Conduct annual integrated pest management self-audits;
 - b) Implement the Model Integrated Pest Management, Pesticide and Fertilizer Guidelines;
 - c) Provide proper training to municipal and contract staff involved in the above activities;
 - d) Within one year of adoption of this order, revise the LIP to include an integrated pest management program.
 6. The permittees shall evaluate the need for any revisions to the Integrated Pest Management, Pesticide and Fertilizer Management Guidelines and determine the need for developing pesticide use indicators.
 7. Within one year of adoption of this order, the principal permittee shall evaluate the effectiveness of debris booms and determine if additional debris booms are needed to address floatables in inland streams. This evaluation should also include an evaluation of other control measures such as more effective street sweeping program, litter control measures, and drain inlet screens and /or other inlet controls.
 8. Within twelve months of adoption of this order, the principal permittee shall develop an intragency agreement with the County Integrated Waste Management Department to ensure that household solid and hazardous waste collection, transfer and disposal practices do not cause or contribute to a water quality problem.
 9. The permittees shall ensure that their flood management processes and projects do not contribute pollutants to receiving waters to the MEP.
 10. Each permittee shall examine opportunities to retrofit existing storm water conveyance systems and parks and other recreational areas with water quality protection measures, where feasible. The 2005 RBF Retrofit Study may be used by the principal permittee for a system-wide evaluation in lieu of each permittee conducting its own evaluation. Within 12 months of adoption of this order, the principal permittee shall

submit a proposal for additional retrofit studies that incorporates opportunities for addressing any applicable TMDL implementation plans.

11. The permittees shall continue to implement the established model maintenance procedure for drainage facilities (catch basins, storm drains inlets, open channels, etc.). Each permittee shall clean and maintain at least 80% of its drainage facilities on an annual basis, with 100% of the facilities included in a two-year period, using the model maintenance procedures developed by the permittees. Each permittee shall keep a record of its inspections, maintenance and cleaning activities, and overall quantity of waste removed. This record shall be included in the annual report.
12. The permittees shall determine whether a more aggressive maintenance frequency is necessary for the cleaning of drainage facilities, including catch basins, based on the data generated by the historic and ongoing inspections of these facilities. This program shall be based on a list of drainage facilities and prioritized on such factors as: proximity to receiving waters, receiving water beneficial uses and impairments of beneficial uses, historical pollutant types and loads from past inspections/cleanings and the presence of downstream regional facilities that would remove the types of pollutants found in the drainage facility. Using this list, the permittees shall revise clean out schedules and frequency and provide justification for any proposed clean out frequency that is less than once a year. This information shall be included in the annual report.
13. Within six months of adoption of this order, the permittees shall evaluate the applicability of the Model Municipal Activities Program to municipal maintenance contracts, contracts for field maintenance operations, and leases. The findings from the evaluation shall be included in the next annual report.
14. Each permittee shall implement control measures necessary to minimize infiltration of seepage from sanitary sewers to the storm drain systems through routine preventive maintenance of the storm drain system. The permittees who are also owners and/or operators of sewage collection systems shall also implement a routine maintenance program for the sewage collection systems in accordance with the State Board's Water Quality Order No. 2006-0003. Each permittee shall cooperate and coordinate with the sewage collection/treatment agencies (Orange County Sanitation District and/or Irvine Ranch Water District) to swiftly respond to and contain any sewage spills.

XV. MUNICIPAL CONSTRUCTION PROJECTS/ACTIVITIES

1. This order authorizes the discharge of storm water runoff from construction projects that may result in land disturbance of one (1) acre or more (or less than one acre, if it is part of a larger common plan of development or sale which is one acre or more) that are under ownership and/or direct responsibility of any of the permittees. All permittee construction activities shall be in accordance with DAMP Sections 7 and 8.
2. All construction activities shall be in compliance with the latest version of State's General Permit for Storm Water Discharges Associated with Construction Activities except that an NOI need not be filed with the State Board.
3. Prior to commencement of construction activities, the permittees shall notify the Executive Officer of the Regional Board concerning the proposed construction project. Upon completion of the construction project, the Executive Officer shall be notified of the completion of the project.

4. The permittees shall develop and implement a storm water pollution prevention plan (SWPPP) and a monitoring program that is specific for the construction project greater than one acre, prior to the commencement of any of the construction activities, except for routine maintenance activities. The SWPPP shall be kept at the construction site and released to the public and/or Regional Board staff upon request.
5. The SWPPP (and any other plans and programs required under the General Permit) and the monitoring program for the construction projects shall be consistent with the requirements of the latest version of the State's General Construction Permit.
6. The permittees shall give advance notice to the Executive Officer of the Regional Board concerning any planned changes in the construction activity, which may result in non-compliance with the latest version of the State's General Construction Permit.

XVI. TRAINING PROGRAM FOR STORM WATER MANAGERS, PLANNERS, INSPECTORS AND MUNICIPAL CONTRACTORS

1. Within 12 months from the date of adoption of this order, the principal permittee, in coordination with the co-permittees, shall develop a training program including a training schedule, curriculum content, and defined expertise and competencies for storm water managers, inspectors, maintenance crew, those involved in the review and approval of WQMPs, public works employees, community planners and for those preparing and/or reviewing CEQA documentation and for municipal contractors.
2. The curriculum content should include: federal, state and local water quality laws and regulations as they apply to construction and grading activities, industrial and commercial activities; the potential effects of construction, industrial and commercial activities and urbanization on water quality; implementation and maintenance of erosion control and pollution prevention measures and sediment control BMPs; the proper use and maintenance of erosion and sediment controls; the enforcement protocols and methods established in the Drainage Area Management Plan, Local Implementation Plan, the Construction Runoff Guidance Manual, Enforcement Consistency Guide and Illicit Discharge/Illegal Connection Training Program. Each permittee may develop its own training program curriculum consistent with the general principles discussed in this and the next paragraph. The training program should be coordinated with the Orange County Vector Control District to insure that vector control issues related to post-construction BMPs are incorporated into the training curriculum.
3. The training modules for each category of trainees (managers, inspectors, planners, contractors, public works crew, etc.) should define the required competencies, outline the curriculum, a testing or other procedure at the end of the training program to determine that the trainees have acquired the requisite knowledge in the storm water program to carry out their duties and proof of completion of training, such as Certificate of Completion, attendance sheets or other proof that training has been completed. .
4. At least every two years, the principal permittee shall provide and document training to applicable public agency staff on Fixed Facility Model Maintenance Procedure, Field Program Model Training and Drainage Facility Model Maintenance Training. The field program training should include Model Integrated Pest Management, Pesticide and Fertilizer Guidelines. Each permittee shall attend at least three of these training sessions during the term of this permit. The training sessions may be conducted in classrooms or using videos, DVDs, or other multimedia with appropriate documentation

and a final test to verify that the material has been properly reviewed and understood. The permittees have the option to develop and conduct their own training program as indicated in Paragraph 2, above.

5. The principal permittee shall conduct and document public employee training for model environmental review, and on how to conduct public/business education for preparation of environmental documents. The permittees have the option to develop and conduct their own training program as indicated in Paragraph 2, above.
6. The principal permittee shall provide BMP and training information to municipal contractors to assist the contractors in training their staff. In instances where applicable municipal operations are performed by contract staff, the permittees shall require evidence that contract staff have received a level of training equivalent to that listed above. The permittees have the option to develop and conduct their own training program as indicated in Paragraph 2, above.
7. The principal permittee shall notify designated Regional Board staff via e-mail at least 30 days prior to conducting any of these training sessions.
8. Each permittee shall have adequately trained all its staff involved with storm water related projects within 60 days from being assigned these duties and on an annual basis thereafter, prior to the rainy season.
9. Each permittee shall maintain a written record of all training provided to its storm water and related program staff.

XVII. NOTIFICATION REQUIREMENTS

1. Within 24 hours of discovery, each permittee shall provide oral or e-mail notification to Regional Board staff of non-compliant sites within its jurisdiction that are determined to pose imminent threat to human health or the environment (e.g., sewage spills that could impact water contact recreation, an oil spill that could impact wildlife, a hazardous substance spill where residents are evacuated, etc.). Following oral or email notification, a written report must be submitted to the Regional Board office within 5 business days, detailing the nature of the non-compliance, any corrective action taken by the site owner, other relevant information (e.g., past history of non-compliance, environmental damage resulting from the non-compliance, site owner responsiveness) and the type of enforcement that will be carried out by the permittee. Further, incidences of non-compliance shall be recorded along with the information noted in the written report and the final outcome/enforcement for the incident in the databases for construction, industrial and commercial inspections⁶¹.
2. At a minimum, all sewage spills above 1,000 gallons and all reportable quantities of hazardous waste spills as per 40CFR 117 and 302 shall be reported within 24 hours. All spill incidents shall be also included in the annual report. The permittees may propose a reporting program, including reportable incidents and quantities, jointly with other agencies, such as the County Health Care Agency, for approval by the Executive Officer.

⁶¹ The reporting schedule may be revised with the approval of the Executive Officer.

XVIII. WATERSHED ACTION PLANS AND TMDL IMPLEMENTATION

A. IMPAIRED WATERBODIES WITH NO TMDLS

1. The principal permittee, in collaboration with the co-permittees, shall develop Watershed Action Plans for areas where such a Plan has not been developed. Existing Watershed Action Plans and those under development shall be updated as new TMDLs are approved by the Regional Board.
2. Each Watershed Action Plan shall identify impaired waters [CWA § 303(d) listed], pollutants causing impairment, monitoring programs for these pollutants, control measures, including any BMPs that the permittees are currently implementing, and any BMPs that the permittees are proposing to implement. All construction sites that are adjacent to (within 200 feet) or discharging directly to a waterbody listed for sediments or turbidity shall be treated as high priority sites. In selecting control measures, the listed pollutants shall be treated as primary pollutants of concern and these pollutants shall be addressed through source control, site design, pollution prevention and structural treatment control BMPs.

B. WATERBODIES WITH TECHNICAL TMDLS (NO IMPLEMENTATION PLANS)

1. As required under a consent decree, in 2002, the EPA promulgated technical TMDLs for toxic pollutants in San Diego Creek and Newport Bay, including metals, organochlorine compounds, selenium and organophosphate pesticides. EPA and the Los Angeles Regional Water Quality Control Board established technical TMDLs for metals in Coyote Creek. Technical TMDLs do not include implementation plans or compliance schedules.
2. In collaboration with stakeholders, Regional Board staff are developing revised TMDLs that are expected to supplant the toxics TMDLs promulgated by EPA for the Newport watershed. The TMDLs will include implementation plans and compliance schedules. Implementation plans for the Coyote Creek TMDLs are also being developed.
3. In summary, work related to the following established TMDLs is ongoing:
 - a) Metals (San Diego Creek and Newport Bay (including Rhine Channel))
 - b) Metals (Mercury, Chromium) (Rhine Channel)
 - c) Organochlorine compounds (San Diego Creek and Newport Bay; also see Paragraphs 5 and 6, below)
 - d) Selenium (San Diego Creek and Newport Bay)
 - e) Copper, lead and zinc (Coyote Creek, TMDL developed by the EPA and the Los Angeles Regional Water Quality Control Board for wet weather)
 - f) Copper (Coyote Creek, TMDL developed by the EPA and the Los Angeles Regional Water Quality Control Board for dry weather)
4. The permittees in the Newport Watershed shall comply with the wasteload allocations specified in the established TMDLs and shown in Tables 1 A/B/C, 2 A/B/C/D and 3. These wasteload allocations shall remain in effect unless and

until alternative wasteload allocations are established in TMDLs approved by the Regional Board, State Board, Office of Administrative Law and EPA.

Cu (ug/L)	4.8	3.1
Pb (ug/L)	210	8.1
Zn (ug/L)	90	81

* (Applies to Upper Bay only, estimated as 40% of Newport Bay volume).

⁶² From Total Maximum Daily Loads For Toxic Pollutants San Diego Creek and Newport Bay, California, U.S. EPA – Region 9, established June 14, 2002.

**Tables 2 A/B/C/D – Urban Runoff Waste Load Allocations for Organochlorine Compounds
(TMDLs promulgated by U.S. EPA)⁶³**

A- San Diego Creek and Tributaries

Total DDT	Chlordane	Dieldrin	PCBs	Toxaphene
302.8 g/yr	220.3 g/yr	183.4 g/yr	177.7 g/yr	6.2 g/yr

B- Upper Newport Bay

Total DDT	Chlordane	PCBs
207.4 g/yr	120.5 g/yr	609.7 g/yr

C – Lower Newport Bay

Total DDT	Chlordane	Dieldrin	PCBs
76.3 g/yr	12.6 g/yr	4.45 g/yr	303.3 g/yr

D – Rhine Channel

	Total DDT	Chlordane	Dieldrin	PCBs
WLA	0.7 g/yr	0.1 g/yr	0.13 g/yr	4.1 g/yr

**Table 3 – Urban Runoff Waste Load Allocation for Selenium – San Diego
Creek and Tributaries
(TMDL promulgated by U.S. EPA)⁶⁴**

Base flows (<20 cfs)	Small flows (21-181 cfs)	Med. flows (182–814 cfs)	Large Flows (>814 cfs)
0.4 lbs/yr	1.0 lbs/yr	1.0 lbs/yr	5.3 lbs/yr

5. The Regional Board adopted TMDLs, including an implementation plan, for organochlorine compounds in September 2007. These TMDLs must be submitted for approval by the State Board, Office of Administrative Law and EPA. These TMDLs have not yet been submitted to the State Board for its approval. However, stakeholders in the watershed are already taking steps to implement the TMDLs through a Toxicity Reduction and Investigation Program (TRIP) that will address the organochlorine compounds and other toxic pollutants, including metals, in the Newport Bay watershed. These TMDLs will become effective upon approval by the State Board and Office of Administrative

⁶³ From Total Maximum Daily Loads For Toxic Pollutants San Diego Creek and Newport Bay, California, U.S. EPA – Region 9, established June 14, 2002.

⁶⁴ From Total Maximum Daily Loads For Toxic Pollutants San Diego Creek and Newport Bay, California, U.S. EPA – Region 9, established June 14, 2002.

Law but will not supplant the EPA organochlorine compounds TMDLs until they are approved by EPA. Accordingly, upon approval of the Regional Board-adopted organochlorine compounds TMDLs by the State Board and the Office of Administrative Law, the permittees shall comply with both the EPA and Regional Board wasteload allocations specified in Tables 2 A/B/C/D and Table 4, respectively. In accordance with the Regional Board TMDLs, compliance with the allocations specified in Table 4 shall be achieved as soon as possible but no later than December 31, 2015. Upon approval of the Regional Board-approved organochlorine compounds TMDLs by EPA, the applicable wasteload allocations shall be those specified in Table 4.

Table 4 – Urban Runoff Waste Load Allocations for Organochlorine Compounds (TMDLs approved by Santa Ana Regional Water Quality Control Board)⁶⁵

	Total DDT	Chlordane	Total PCBs	Toxaphene
San Diego Creek	128.3 g/yr			1.9 g/yr
Upper Newport Bay	51.8 g/yr	30.1 g/yr	29.8 g/yr	
Lower Newport Bay	19.1 g/yr	11.0 g/yr	78.1 g/yr	

6. The organochlorine compounds are carried by fine sediment into the water column. Since the use of organochlorine pesticides has been banned, the levels of these compounds have been steadily decreasing in the watershed. The implementation plan requires monitoring to verify the decreasing trend and strict controls on sediment discharges. The stakeholders in the San Diego Creek/Newport Bay watershed have an established Regional Monitoring Program (RMP), and in early 2008, initiated the Toxicity Reduction and Investigation Program (TRIP) consistent with the Regional Board-approved implementation plan for the organochlorine compounds TMDLs. Recognizing the difficulties inherent in measuring the allocations presented in Table 4, the permittees shall evaluate the monitoring results with the targets shown in Tables 5A/B and determine the need for any additional control measures to achieve the targets. Monitoring shall be conducted at representative locations within San Diego Creek and Newport Bay and include water column, sediment and fish tissue monitoring. The permittees may use current monitoring locations.

⁶⁵ From Resolution No. R8-2007-0024, Table NB-OCs-10.

**Tables 5 A /B - Water Column Targets for Protection of
Aquatic Life, Wildlife & Human Health⁶⁶**

A - San Diego Creek and Tributaries

	Total DDT	Toxaphene
Acute Criterion	1.1 µg/l	0.73 µg/l
Chronic Criterion	0.001 µg/l	0.0002 µg/l
Human Health Criterion	0.00059 µg/l	0.00075 µg/l

B - Upper and Lower Newport Bay

	Total DDT	Chlordane	Total PCBs
Acute Criterion	0.13 µg/l	0.09 µg/l	
Chronic Criterion	0.001 µg/l	0.0004 µg/l	0.03 µg/l
Human Health Criterion	0.00059 µg/l	0.00059 µg/l	0.00017 µg/l

7. Regional Board staff, in collaboration with the stakeholders, is developing TMDLs for metals and selenium that will include implementation plans and monitoring programs and that are intended to replace the EPA TMDLs. The permittees within the Newport Bay watershed shall continue to participate in the development and implementation of these TMDLs. This Order will be reopened to incorporate revised allocations based upon TMDLs, including implementation plans, for metals and selenium approved by the Regional Board, State Board and Office of Administrative Law. As for the organochlorine compounds, the EPA promulgated allocations for these constituents will also remain in effect unless and until EPA approves the Regional Board's TMDLs for these constituents.
8. Selenium is a naturally occurring element in the soil but its presence in surface waters in the Newport Bay watershed is largely the result of changes in the hydrologic regime as the result of extensive drainage modifications. Selenium-laden shallow and rising groundwater enters the storm water conveyance systems and flows into San Diego Creek and its tributaries. Groundwater inputs are the major source of selenium in San Diego Creek and Newport Bay. Currently, there are no economically and technically feasible treatment techniques to remove selenium from the water column.

⁶⁶ From Resolution No. R8-2007-0024, Table NB-OCs-4.

The stakeholders have initiated pilot studies to determine the most efficient methods for treatment and removal of selenium. Through the Nitrogen and Selenium Management Program, the watershed stakeholders are developing comprehensive selenium (and nitrogen) management plans, which are expected to form the basis, at least in part, for the selenium implementation plan (and a revised nutrient TMDL implementation plan). A collaborative watershed approach to implement the nitrogen and selenium TMDLs for San Diego Creek and Newport Bay is expected. A proposed Cooperative Watershed Program that will fulfill applicable requirements of the selenium TMDL implementation plan must be submitted by the stakeholders covered by this order within 24 months of adoption of this order, or one month after approval of the selenium TMDLs by OAL, whichever is later. The Program must be implemented upon Regional Board approval. As long as the stakeholders are participating in and implementing the approved Cooperative Watershed Program, they will not be in violation of this order with respect to the nitrogen and selenium TMDLs for San Diego Creek and Newport Bay. In the event that any of the stakeholders does not participate, or if the collaborative approach is not approved or fails to achieve the TMDLs, the Regional Board will exercise its option to issue individual waste discharge requirements or waivers of waste discharge requirements.

9. The permittees with discharges tributary to Coyote Creek or the San Gabriel River shall develop and implement a constituent-specific source control plan for copper, lead and zinc until a TMDL implementation plan is developed. The source control plan shall include a monitoring program and shall be completed within 12 months from the date of adoption of this order. The source control plan shall be designed to ensure compliance with the following wasteload allocations:

Table 6 – Municipal Storm Water Wasteload Allocations - Coyote Creek

	Copper	Lead	Zinc
Dry Weather	0.941 kg/day		
Wet Weather	9.41 kg/day	36.9 kg/day	55.0 kg/day

10. Within 12 months of adoption of this order, the principal permittee, in collaboration with the co-permittees with discharges to the San Gabriel River/Coyote Creek and/or their tributaries, shall develop a monitoring program to monitor dry weather (for copper) and wet weather (for copper,

lead and zinc) flows in Coyote Creek. The monitoring results shall be evaluated against the following numeric targets:

**Table 7 – Numeric Targets - Coyote Creek
 (total recoverable metals)**

	Copper	Lead	Zinc
Dry Weather ⁶⁷	3.7 µg/l		
Wet Weather	27 µg/l	106 µg/l	158 µg/l

C. WATERBODIES WITH TMDL IMPLEMENTATION PLANS AND COMPLIANCE SCHEDULES BEYOND THE PERMIT TERM

1. The Regional Board adopted a TMDL implementation plan for fecal coliform bacteria in Newport Bay that included a compliance date for water contact recreation standards no later than December 30, 2013 (within the permit term), and with shellfish standards no later than December 30, 2019. The allocations are shown in the tables below.

**Table 8A – Fecal Coliform TMDL and Allocations for Newport Bay
 To be achieved no later than December 30, 2013**

Urban Runoff Waste Load Allocation for Fecal Coliform	As soon as possible, but no later than December 30, 2013	5-Sample/30-days Geometric Mean less than 200 organisms/100 mL, and not more than 10% of the samples exceed 400 organisms/100 mL for any 30- day period.
Total Maximum Daily Load for Fecal Coliform		5-Sample/30-days Geometric Mean less than 200 organisms/100 mL, and not more than 10% of the samples exceed 400 organisms/100 mL for any 30-day period.
Load Allocations for Fecal Coliform in Agricultural Runoff, including stormwater, Discharges		5-Sample/30-days Geometric Mean less than 200 organisms/ 100 mL, and not more than 10% of the samples exceed 400 organisms/100 mL for any 30-day period.
Load Allocations for Fecal Coliform from Natural Sources in all Discharges	In effect	5-Sample/30-days Geometric Mean less than 200 organisms/100 mL, and not more than 10% of the samples exceed 400 organisms/100 mL for any 30-day period.
Allocations for Vessel Waste		0 MPN/100 mL - No discharge.

⁶⁷ Based on saltwater CTR criterion in San Gabriel River estuary.

**Table 8B – Fecal Coliform TMDL and Allocations for Newport Bay
Before December 30, 2019**

Urban Runoff Waste Load Allocation for Fecal Coliform	As soon as possible, but no later than December 30, 2019	Monthly Median less than 14 MPN/100 mL, and not more than 10% of the samples exceed 43 MPN/100 mL.
Total Maximum Daily Load for Fecal Coliform		Monthly Median less than 14 MPN/100 mL, and not more than 10% of the samples exceed 43 MPN/100 mL.
Load Allocations for Fecal Coliform in Agricultural Runoff, including stormwater, Discharges		Monthly Median less than 14 MPN/100 mL, and not more than 10% of the samples exceed 43 MPN/100 mL.
Load Allocations for Fecal Coliform from Natural Sources in all Discharges		Monthly Median less than 14 MPN/100 mL, and not more than 10% of the samples exceed 43 MPN/100 mL.
Allocations for Vessel Waste	In effect	0 MPN/100 mL - No discharge.

The permittees shall comply with the wasteload allocations for urban runoff in Tables 8A and 8B in accordance with the deadlines in Tables 8A and 8B. Compliance determination for fecal coliform shall be based on monitoring conducted at representative sampling locations within San Diego Creek and Newport Bay. (The permittees may use the current sampling locations for compliance determination.)

2. The fecal coliform TMDL implementation plan includes a number of studies that are expected to inform possible revision of the TMDL, including the wasteload allocations for urban runoff and the implementation plan. The permittees shall revise the Watershed Action Plans to include implementation measures and schedules for further studies related to the TMDL for fecal coliform in Newport Bay, as set forth in the January 2000, March 2000 and April 2000 Newport Bay Fecal Coliform TMDL Technical Reports submitted by the permittees. The permittees within this watershed shall complete the ongoing source identification and characterization plan for urban runoff by December 31, 2009 and continue their participation in the studies and monitoring programs as specified in the implementation plan. Recommendations for an updated TMDL report and revisions to the fecal coliform TMDL shall be provided within twelve months of completion of the Source Identification and Characterization Investigation and Report submittal, as specified in the implementation plan.
3. The fecal coliform TMDL includes waste load allocations for storm water in urban runoff and load allocations in agricultural runoff. The University of California Cooperative Extension and Orange County Coastkeeper are working with the agricultural operators in the area to reduce runoff from their operations.

D. WATERBODIES WITH TMDL IMPLEMENTATION PLANS AND COMPLIANCE SCHEDULES WITHIN THE PERMIT TERM

1. The Regional Board/EPA developed TMDLs for diazinon and chlorpyrifos in San Diego Creek and for chlorpyrifos in Newport Bay. The following allocations are included in the TMDLs (Tables 9A and 9B are extracted from the Implementation Plan⁶⁸). The permittees in the Newport Bay Watershed shall comply with the allocations in Tables 9 A and B.

Table 9A**Diazinon and Chlorpyrifos Allocations for San Diego Creek***

Category	Diazinon (ng/l)		Chlorpyrifos (ng/l)	
	Acute	Chronic	Acute	Chronic
Wasteload Allocation	72	45	18	12.6

Chronic means 4-consecutive day average

* Pursuant to the TMDLs, compliance with these allocations was achieved no later than December 1, 2007

Table 9B**Chlorpyrifos Allocations for Upper Newport Bay***

Category	Acute (ng/l)	Chronic (ng/l)
Wasteload allocation	18	8.1

Chronic means 4-consecutive day average

* Pursuant to the TMDLs, compliance with these allocations was achieved no later than December 1, 2007

The Regional Board adopted an implementation plan for these TMDLs. In accordance with the implementation plan, the Regional Monitoring Program was modified to include analysis for organophosphate pesticides and toxicity. The Regional Board also performed simulation studies to predict contaminant concentrations in the Bay. Based on the results of these studies, the Regional Board will reevaluate the TMDLs every three years. The permittees shall continue to participate in any additional monitoring that is needed to confirm that the permittees are in compliance with the allocations.

Compliance determination for diazinon and chlorpyrifos for San Diego Creek shall be based on monitoring conducted at representative monitoring locations within San Diego Creek (the permittees may use current monitoring locations for this purpose).

Compliance determination for chlorpyrifos for Upper Newport Bay shall be based on monitoring conducted at representative monitoring locations within Upper Newport Bay (the permittees may use current monitoring locations for this purpose).

⁶⁸ Attachment to Resolution No. R8-2003-0039.

2. The waste load allocations established in the nutrient TMDLs adopted by the Regional Board in 1998 for Newport Bay included 5, 10 and 15 year allocations. The overall allocations for 2012 have been met.

Table 10 - Seasonal Load Allocations of Total Nitrogen for the Newport Bay Watershed (Urban Runoff)⁶⁹

Nutrient TMDL	1990-1997 Loading	2002 Summer Allocation (Apr-Sept) ⁷⁰	2007 Summer Allocation (Apr-Sept) ⁷¹	2012 Winter Allocation (Oct-Mar) ⁷²
Newport Bay Watershed	lbs/year TN ^{73,74}	lbs/season TN	lbs/season TN	lbs/season TN
Urban runoff	277,131 ⁷⁵	20,785	16,628	55,442
		5 year target	10 year target	15 year target

Table 11 - Annual Total Nitrogen Load Allocations for San Diego Creek, Reach 2 During Non-Storm Conditions.⁷⁶

	2012 Allocation lbs/day TN ⁷⁷
TMDL	14 lbs/day (TN)
Waste Load Allocation (Urban runoff)	5.5 lbs/day (TN)

3. The permittees shall verify, through monitoring or other mechanisms, that they have met the following load allocations for phosphorous for urban runoff (recent

⁶⁹ From Attachment to Resolution No. 98-9 as amended by Resolution No. 98-100, Table 5-9b. Compliance dates are as soon as possible but no later than December 31 of the years specified (Table 5-9a of Resolution No. 98-9, as amended).

⁷⁰ Compliance to be achieved no later than this date. The Regional Board may require earlier compliance with these targets when it is feasible and reasonable.

⁷¹ See previous footnote.

⁷² Total nitrogen winter loading limit applies between October 1 and March 31 when the mean daily flow rate at San Diego Creek at Campus Drive is below 50 cubic feet per second (cfs), and when the mean daily flow rate in San Diego Creek at Campus Drive is above 50 cubic feet per second (cfs), but not as the result of precipitation. Compliance to be achieved no later than this date. The Regional Board may require earlier compliance with these targets when it is feasible and reasonable. Assumes 67 non-storm days.

⁷³ TIN = (NO₃+NH₃).

⁷⁴ TN = (TIN + Organic N).

⁷⁵ Estimated annual average (summer and winter loading).

⁷⁶ From Attachment to Resolution No. 98-9 as amended by Resolution No. 98-100, Table 5-9d. Total nitrogen loading limit applies when the mean daily flow rate at San Diego Creek at Culver Drive is below 25 cubic feet per second (cfs), and when the mean daily flow rate in San Diego Creek at Culver Drive is above 25 cubic feet per second (cfs), but not as the result of precipitation.

⁷⁷ Compliance to be achieved no later than December 31, 2012. The Regional Board may require earlier compliance with these targets when it is feasible and reasonable.

monitoring data indicate that these target load allocations have been already met).

**Table 12 - Annual Total Phosphorous Load Allocations
For The Newport Bay Watershed⁷⁸**

	2002 Allocation lbs/year TP ⁷⁹	2007 Allocation lbs/year TP ⁸⁰
TMDL	86,912	62,080
Urban areas	4,102	2,960

The permittees shall comply with the waste load allocations for urban runoff in Tables 10, 11 and 12 in accordance with the schedules in Tables 10, 11 and 12. Compliance determination for nutrients in San Diego Creek and Newport Bay shall be based on monitoring conducted at representative monitoring locations within San Diego Creek and Newport Bay.

4. The permittees shall meet the following target load allocations for sediment in urban runoff by implementing the BMPs contained in Sections 7 and 8 of the DAMP and the "March 1999 Technical Report on the Implementation of the TMDL for Sediment in the Newport Bay Watershed, the October 1999 Preliminary Sediment Load Allocation Analysis for San Diego Creek and Newport Bay, and the February 2000 Sediment Yield and Transport Investigation for San Diego Creek and Newport Bay".
 - a) The load allocations for sediment discharges to Newport Bay from urban areas shall not exceed 2,500 tons per year, implemented as a 10-year running annual average.
 - b) The load allocations for sediment discharges to San Diego Creek and its tributaries from urban areas shall not exceed 2,500 tons per year, implemented as a 10-year running annual average.

Compliance determination for sediment in San Diego Creek and Newport Bay shall be based on monitoring conducted at San Diego Creek at Campus, starting from year 2000 and based on a 10-year running average. The data from this monitoring is to be submitted annually on February 27.

⁷⁸ From Attachment to Resolution No. 98-9 as amended by Resolution No. 98-100, Table 5-9c. Compliance dates are as soon as possible but no later than December 31 of the years specified (Table 5-9a of Resolution No. 98-9, as amended).

⁷⁹ Compliance to be achieved no later than this date. The Regional Board may require earlier compliance with these targets when it is feasible and reasonable.

⁸⁰ See previous footnote.

5. This order may be reopened to include additional requirements based on new or revised TMDLs.

E. COMPLIANCE DETERMINATION WITH TMDLs AND BMP IMPLEMENTATION

1. Except for sediment TMDLs in San Diego Creek and Newport Bay, compliance determinations shall be based on monitoring within the receiving waters. For sediment TMDLs, compliance determination shall be based on monitoring in the Creek.
2. Based on the TMDLs, effluent limits have been specified to ensure consistency with the wasteload allocations. If the monitoring results indicate an exceedance of the wasteload allocations, the permittees shall reevaluate the current control measures and propose additional BMPs/control measures. This reevaluation and proposal for revisions to the current BMPs/control measures (revised plan) shall be submitted to the Executive Officer within 12 months of determining that an exceedance has occurred. Upon approval, the permittees shall immediately start implementation of the revised plan.

XIX. PROGRAM MANAGEMENT/DAMP REVIEW

1. By July 1 of each year, the permittees shall evaluate the DAMP to determine whether any revisions are necessary in order to reduce pollutants in MS4 discharges to the maximum extent practicable. In addition, the first annual review after adoption of this order shall include the following:
 - a) Review of the formal training needs of municipal employees
 - b) Review of coordinating meeting/training for the designated NPDES inspectors.
2. The annual report shall include the findings of this review and a schedule for any needed revisions or a copy of the amended DAMP with the proposed changes.
3. Upon the effective date of this Order, the permittees shall start implementing the 2007 DAMP. If modifications to the 2007 DAMP are determined to be necessary, the permittees shall prepare and submit DAMP modifications to the Regional Board Executive Officer, for consideration by the Regional Board at a public hearing. Such modifications may include regional and watershed-specific requirements and/or waste load allocations developed and approved pursuant to the TMDL process.
4. The Management Committee shall meet at least six times a year to discuss issues related to permit implementation and regional and statewide issues. Each permittee's designated representative or a designated alternate should attend at least 75% of these meetings.

XX. FISCAL ANALYSIS

1. Each permittee shall secure the resources necessary to meet all requirements of this order.

2. The permittees shall prepare and submit a unified fiscal accountability analysis to the Executive Officer of the Regional Board. The fiscal analysis shall be submitted with the annual report shall, at a minimum, include the following:
 - a) Each permittee's expenditures for the previous fiscal year,
 - b) Each permittee's budget for the current fiscal year,
 - c) A description of the source of funds, and
 - d) Each permittee's estimated budget for the next fiscal year.

XXI. PROVISIONS

1. All reports submitted by the permittees as per the requirements in this order for the approval of the Executive Officer shall be publicly noticed and made available on the Regional Board's website, or through other means, for public review and comments. The Executive Officer shall consider all comments received prior to approval of the reports. Any unresolved significant issues shall be scheduled for a public hearing at a Regional Board meeting prior to approval by the Executive Officer.
2. Permittees shall demonstrate compliance with all the requirements in this order and specifically with Section III.2 Discharge Limitations and Section IV. Receiving Water Limitations, through timely implementation of their DAMP and any modifications, revisions, or amendments developed pursuant to this order approved by the Executive Officer or determined by the permittee to be necessary to meet the requirements of this order.
3. The permittees shall, at a minimum, implement all elements of the DAMP. Where the dates in the DAMP are different than those of this order, the dates in this order shall prevail. Any proposed revisions to the DAMP shall be submitted with the annual report to the Executive Officer of the Regional Board for review and approval. All approved revisions to the DAMP shall be implemented as per the time schedules approved by the Executive Officer. In addition to those specific controls and actions required by (1) the terms of this order and (2) the DAMP, each permittee shall implement additional controls, if any are necessary, to reduce the discharge of pollutants in storm water to the maximum extent practicable, as required by this order.
4. The permittees shall comply with Monitoring and Reporting Program NO. R8-2008-0030, and any revisions thereto, which is hereby made a part of this order. The Executive Officer is authorized to revise the Monitoring and Reporting Program to allow the permittees to participate in regional, statewide, national or other monitoring programs in lieu of or in addition to Monitoring and Reporting Program No. R8-2008-0030.
5. Within one year of adoption of this order, the permittees, in coordination with the Orange County Fire Chiefs Association, shall develop a list of appropriate BMPs to be implemented to reduce pollutants from training activities, fire hydrant/sprinkler testing or flushing, non-emergency fire fighting and any BMPs feasible for emergency fire fighting flows.

6. Upon approval by the Executive Officer of the Regional Board, all plans, reports and subsequent amendments required by this order shall be implemented and shall become an enforceable part of this order. Prior to approval by the Executive Officer, these plans, reports and amendments shall not be considered as an enforceable part of this order.
7. The permittees shall report to the Executive Officer of the Regional Board:
 - a) Any enforcement actions and discharges of storm or non-storm water, known to the permittees, which may have an impact on human health or the environment,
 - b) Any suspected or reported activities on federal, state, or other entity's land or facilities, where the permittees do not have any jurisdiction, and where the suspected or reported activities may be contributing pollutants to waters of the US.

(Also see reporting requirements in Monitoring and Reporting Program No. R8-2008-0030)
8. The permit application package and special NPDES program requirements contained in 40 CFR 122.21 (a), (b), (d)(2), (f), (p); 122.41 (a), (b), (c), (d), (e), (f), (g), (h), (i), (j), (k), (l); and 122.42 (c) are incorporated into this order by reference.

XXII. PERMIT MODIFICATION

1. In accordance with 40 CFR 122.41(f), this order may be modified, revoked or reissued prior to its expiration date for the following reasons:
 - a) To address significant changes in conditions identified in the technical reports required by the Regional Board which were unknown at the time of the issuance of this order;
 - b) To incorporate applicable requirements of statewide water quality control plans adopted by the State Water Resources Control Board or any amendments to the Basin Plan approved by the Regional Board, the State Board and, if necessary, by the Office of Administrative Law;
 - c) To comply with any applicable requirements, guidelines, or regulations issued or approved under the Clean Water Act, if the requirements, guidelines, or regulations contain different conditions or additional requirements than those included in this order; or,
 - d) To incorporate any requirements imposed upon the permittees through the TMDL process.
2. The filing of a request by the permittees for modification, revocation and re-issuance, or termination or a notification of planned changes or anticipated noncompliance does not stay any conditions of this order.

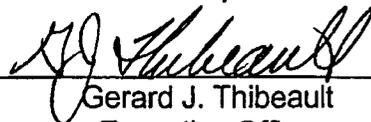

XXIII. PERMIT EXPIRATION AND RENEWAL

1. This order expires on April 1, 2014 and the permittees must file a Report of Waste Discharge (permit application) no later than 180 days in advance of such expiration date as application for issuance of new waste discharge requirements (40 CFR

122.41(b)). The Report of Waste Discharge shall, at a minimum, include the following:

- a) Any revisions to the Drainage Area Management Plan including, but not limited to, all the activities the permittees propose to undertake during the next permit term, goals and objectives of such activities, an evaluation of the need for additional source control and/or structural BMPs, any proposed pilot studies, etc.;
 - b) Changes in land use and/or population including land use map updates;
 - c) Any significant changes to the storm drain systems, outfalls, detention or retention basins or dams and other controls including map updates of the storm drain systems; and,
 - d) Any new or revised program elements and compliance schedule(s) necessary to comply with Section IV of this order.
2. All permit applications (Report of Waste Discharge), annual reports and other information submitted under this order shall be signed by either a principal executive officer or a ranking elected official (40 CFR 122.22(a)(3)) or a duly authorized representative as per 40 CFR 122.22(b).
 3. This order shall serve as a National Pollutant Discharge Elimination System (NPDES) Permit pursuant to Section 402(p) of the Clean Water Act, or amendments thereto, and shall become effective ten days after the date of its adoption, provided the Regional Administrator of the EPA has no objections. If the Regional Administrator objects to its issuance, the permit shall not become effective until such objection is withdrawn.
 4. Order No. R8-2002-0010 is hereby rescinded.

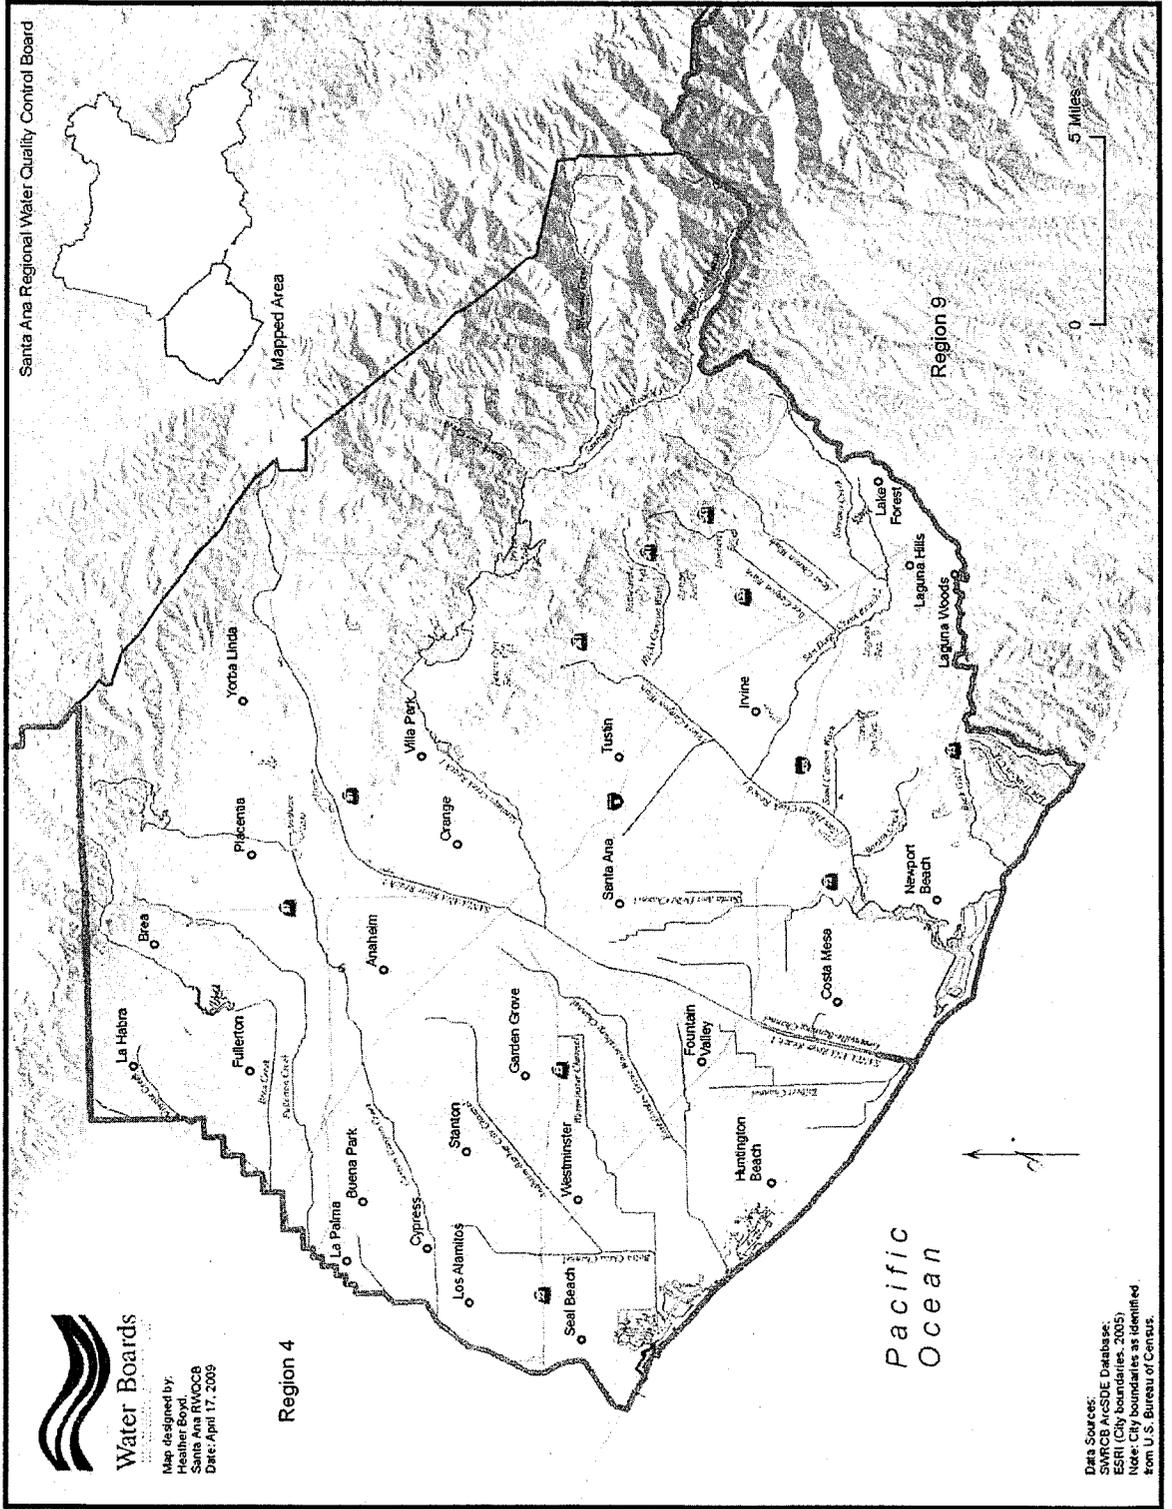

I, Gerard Thibeault, Executive Officer, do hereby certify that the foregoing is a full, true, and correct copy of an order adopted by the California Regional Water Quality Control Board, Santa Ana Region, on May 22, 2009.

Areawide Urban Storm Water Runoff

I. GENERAL

1. Revisions of the monitoring and reporting program are appropriate to ensure that the permittees are in compliance with requirements and provisions contained in this order. Revisions may be made under the direction of the Executive Officer at any time during the term, and may include a reduction or increase in the number of parameters to be monitored, the frequency of monitoring, or the number and size of samples collected.
2. The Executive Officer is authorized to allow the permittees to participate in statewide, national, or other monitoring programs in lieu of or in addition to this monitoring program.
3. All sample collection, handling, storage, and analysis shall be in accordance with 40 CFR Part 136 or other methods approved by the Executive Officer.
4. The permittees are authorized to complement their monitoring data with other monitoring sources, provided the monitoring conditions and sources are similar to those in the Santa Ana Watershed.
5. Any proposals for revisions to the 2003 Monitoring Plan shall be accompanied by a Quality Assurance Project Plan.

II. OBJECTIVES

The Orange County monitoring program was initiated in the mid 1970s with the goal of protecting key environmental resources. Successive iterations of the Orange County MS4 permit required the permittees to develop and implement comprehensive monitoring programs. During the first part of the third term permit, the permittees continued to implement the 1999 Water Quality Monitoring program. In August 2005, the Executive Officer approved the 2003 Monitoring Program that was developed in accordance with the requirements specified in the third term permit. The 2003 Monitoring Program was based on "The Model Monitoring Program for Municipal Separate Storm Sewer Systems in Southern California" developed by the Southern California Monitoring Coalition. The permittees also participate in the Regional Monitoring Program for San Diego Creek Nutrient TMDL, Southern California Bight Regional Monitoring Program, Southern California Stormwater Monitoring/Research Cooperative Program and other regional monitoring programs. The overall goal of these monitoring programs is to develop and

support an effective watershed and key environmental resources management program. The following are the major objectives:

1. To develop and support an effective municipal urban runoff pollutant source control program.
2. To define water quality status, trends, and pollutants of concern associated with urban runoff and their impact on the beneficial uses of the receiving waters.
3. To characterize pollutants associated with urban runoff and to assess the influence of urban land uses on water quality and the beneficial uses of receiving waters.
4. To identify significant water quality problems related to urban runoff.
5. To identify other sources of pollutants in urban runoff to the maximum extent possible (e.g., atmospheric deposition, contaminated sediments, other non-point sources, etc.)
6. To identify and prohibit illicit discharges.
7. To identify those waters, which without additional action to control pollution from urban storm water discharges, cannot reasonably be expected to attain or maintain applicable water quality standards required to sustain the beneficial uses in the Basin Plan (TMDL monitoring).
8. To determine unit loading rates from different urban land use categories.
9. To determine reference loads and concentrations from unimpacted areas of Orange County including sediment loads from open spaces at the foothills.
10. To determine runoff concentrations and loads as close as possible to the source (e.g., golf courses, restaurants, etc.)
11. To evaluate the effectiveness of existing urban runoff water quality management programs, including an estimate of pollutant reductions achieved by the structural and nonstructural BMPs implemented by the permittees. This should also include a determination of concentrations and unit loads that are achievable upon BMP implementation.
12. To evaluate costs and benefits of proposed municipal storm water quality control programs to the stakeholders, including the public.

The Regional Board recognizes that program modifications may be necessary to attain these objectives and authorizes the Executive Officer to evaluate and to determine adequate progress toward meeting each objective and the need for any modifications to the monitoring and reporting program.

III. MONITORING PROGRAM REQUIREMENTS

1. The permittees shall continue to implement the 2003 Monitoring Program. The permittees shall review the 2003 Monitoring Program on an annual basis and

determine the need for any modifications to the program. Each of the following elements of the program shall be evaluated:

- a) **Mass Emissions Monitoring.** Currently the principal permittee monitors 11 mass emissions stations to estimate the total mass emissions from the MS4; assess trends in mass emissions over time; and to determine if the MS4 is contributing to exceedances of water quality objectives or beneficial uses, by comparing results to the California Toxics Rule (CTR), Basin Plan, Ocean Plan and/or other relevant standards. Samples are collected from the first storm event and two more storm events during the rainy season. A minimum of three dry-weather samples are also collected. Samples from the first rain event each year are analyzed for the entire suite of priority pollutants. All samples are analyzed for metals, pH, TSS, TOC, pesticides/herbicides, and constituents which are known to have contributed to impairment of local receiving waters. An additional 4 mass emissions stations are utilized only for nutrient analysis for TMDL requirements. Dry weather samples are also analyzed for oil and grease. Sediments associated with mass emissions are analyzed for constituents of concern.
- b) **Estuary/Wetlands Monitoring:** Currently the permittees monitor 20 sites in Upper Newport estuary, Talbert Marsh, and Bolsa Chica wetlands areas to determine the effects of storm water and non-storm water runoff associated with increased urbanization on these systems. These monitoring locations include representative areas surrounding channel outfalls and areas away from channel outfalls to enable the determination of storm water and non-storm water effects on sediment chemistry, toxicity, benthic communities, nutrient status, and spatial extent of sediment fate within the estuarine environment.
- c) **Water Column Toxicity Monitoring:** The current monitoring program analyses for toxicity to freshwater and marine species on mass emissions samples to determine the impacts of storm water and non-storm water runoff on toxicity of receiving waters.
- d) **Sediment:** The permittees monitor sediment toxicity at seven stations in Newport Bay and seven stations along Huntington Harbour/Talbert Marsh areas.
- e) **Bacteriological/Pathogen Monitoring:** The permittees currently monitor 9 representative areas along the Orange County coastline and six inland water bodies/channels, for total coliform, fecal coliform, and enterococcus in order to determine the impacts of storm water and non-storm water runoff on loss of beneficial uses to receiving waters. Currently weekly channel monitoring is conducted in San Diego Creek and Santa Ana-Delhi channels by both Orange County Environmental Health and the Orange County monitoring program. The Executive Officer is authorized to allow the permittees to integrate their monitoring efforts with other bacteriological/pathogen monitoring programs.

- f) Bioassessment: The permittees currently monitor 12 stations in cooperation with the Southern California Coastal Water Research Project (SCCWRP) in efforts to evaluate the biological index approach for Southern California and to design a research project for developing an Index of Biological Integrity (IBI) for the region. The Executive Officer is authorized to allow the permittees to integrate this element of the monitoring program with the regional bioassessment monitoring initiative being coordinated by the Southern California Monitoring Coalition.
 - g) Reconnaissance: The permittees are currently conducting dry and wet weather reconnaissance surveys to identify and prohibit illicit discharges.
2. TMDL/303(d) Listed Waterbody Monitoring: The Permittees shall continue to participate in the Regional Monitoring Programs for the San Diego Creek Nutrient TMDL and the Toxics TMDL.
 3. In addition, strategies must be revised/developed to evaluate the impacts of storm water or non-storm water runoff on all impairments within the Newport Bay watershed and other 303(d) listed waterbodies. Since the 303(d) listing is dynamic, with new waterbodies and new impairments being identified over time, the permittees shall revise their monitoring plan to incorporate new information as it becomes available.

IV. PROGRAM EFFECTIVENESS ASSESSMENT AND REPORTING

1. All progress reports and proposed strategies and plans required by this order shall be signed by the principal permittee, and copies shall be submitted to the Executive Officer of the Regional Board under penalty of perjury.
2. The permittees shall submit an ANNUAL PROGRESS REPORT to the Executive Officer of the Regional Board and to the Regional Administrator of the U.S. EPA, Region 9, no later than November 15th, of each year. This progress report may be submitted in a mutually agreeable electronic format. At a minimum, annual progress report shall include the following:
 - a) A review of the status of program implementation and compliance (or non-compliance) with the schedules contained in this order;
 - b) An assessment of the effectiveness of control measures established under the illicit discharge elimination program and the Drainage Area Management Plan. The effectiveness may be measured in terms of how successful the program has been in eliminating illicit/illegal discharges and reducing pollutant loads in storm water discharges;

- c) As assessment of control measures and their effectiveness in addressing pollutants causing or contributing to an exceedance of water quality objectives in receiving waters that are on the 303(d) list of impaired waters.
 - d) The annual report shall include an overall program assessment. The permittees may use the "Municipal Stormwater Program Effectiveness Assessment Guidance" developed by the California Stormwater Quality Association in May 2007 as guidance for assessing program activities at the various outcome levels. The assessment should include each program element required under this order, the expected outcome and the measures used to assess the outcome. The permittees may propose any other methodology for program assessment using measurable targeted outcomes.
 - e) Each permittee shall develop and implement a plan and schedule to address program modifications and improvements identified during the program assessment.
 - f) A summary and analysis of monitoring results from the previous year and any changes to the monitoring program for the following year;
 - g) A unified fiscal accountability analysis, as described in Section XX., Provision, 2, of this order;
 - h) A draft workplan which describes the proposed implementation of the DAMP for next fiscal year. The workplan shall include clearly defined tasks, responsibilities, and schedules for implementation of the storm water program and each permittee actions for the next fiscal year;
 - i) Major changes in any previously submitted plans/policies; and
 - j) An assessment of the permittees compliance status with the Receiving Water Limitations, Section IV of the Order, including any proposed modifications to the DAMP if the Receiving Water Limitations are not fully achieved.
3. The permittees shall be responsible for the submittal to the principal permittee of all required information/materials needed to comply with this order in a timely manner. All such submittals shall be signed by a duly authorized representative of the permittee under penalty of perjury.
4. The data transmittals to the Regional Board shall be in the form developed by the Stormwater Monitoring Coalition (SMC) and approved by the State Water Resources Control Board in the document entitled "Standardized Data Exchange Formats." This document was developed in order to provide a standard format for all data transfer so that data can universally be shared and evaluated from various programs.

V. REPORTING SCHEDULE

All reports required by this order shall be submitted to the Executive Officer of the Regional Board in accordance with the following schedule:

ITEM	COMPLETION DATE	REPORT DUE DATE
Review planning procedures and CEQA document preparation processes	Within 24 months of adoption	Annual Report
Public Education Committee Meetings	Twice/year	Annual Report
Review DAMP	Annually	Annual Report
Public education workshops	Annually	Annual Report
Update inventory of construction sites and prioritize for inspections	Twice/year	Annual Report
Inspect municipal facilities	Annually	Annual Report
Maintain drainage facilities	80% annually/100% in every two years	Annual Report
Review/revise Implementation Agreement	Within 6 months of adoption	Annual Report
Review/revise Illegal Discharge/Illicit Connection Training Program	Within 6 months of adoption	Annual Report
Evaluate the need for additional debris control measures	Within 12 months of adoption	Annual Report
Complete Public Awareness Survey	July 1, 2012	Annual Report
Review Monitoring Program	Annually	Annual Report
Update industrial site database, including prioritization for inspection	Annually	Annual Report
Update the commercial site database, including prioritization for inspection	Quarterly	Annual Report
Develop a mobile business pilot program	Within 12 months of adoption	Annual Report
Residential common interest area/HOA pilot program	Within 18 months of adoption	Annual Report

Develop a guidance document for preparing conceptual WQMP	Within twelve months of adoption	Annual Report
Review planning documents to ensure water quality protection	Within 24 months of adoption	Annual Report
Report of Waste Discharge	180 days before permit expires	Six months prior to expiration
Annual Report/Fiscal Analysis	November 15th of each year	November 15
Provide training to public agency staff and to contract field operations staff	Once in two years/3 per permit term	November 15
Re-evaluate monitoring program priorities based on previous year's data	Annually	November 15
Evaluate the DAMP	Annually	November 15
Permittee Committee meetings to discuss permit implementation and regional and state-wide issues	Held at least 6 times each year	November 15

FACT SHEET

April 24, 2009

ITEM: 12

SUBJECT: Waste Discharge Requirements for the County of Orange, Orange County Flood Control District and the Incorporated Cities of Orange County within the Santa Ana Region, Areawide Urban Storm Water Runoff Management Program, Orange County, Order No. R8-2009-0030 (NPDES No. CAS 618030)

I. INTRODUCTION

The 1972 Clean Water Act (CWA) established the National Pollutant Discharge Elimination System (NPDES) permit program to regulate the discharge of pollutants from point sources to waters of the United States (US). Since then, considerable strides have been made in reducing conventional forms of pollution, such as from sewage treatment plants and industrial facilities, through the implementation of the NPDES program and other federal, state and local programs. The adverse effects of some of the persistent toxic pollutants (DDT, PCB, TBT) were addressed through manufacturing and use restrictions and through cleanup of contaminated sites. On the other hand, pollution from land runoff (including atmospheric deposition, urban, suburban and agricultural) was largely unabated until the 1987 CWA amendments. As a result, diffuse sources, including urban storm water runoff, now contribute a larger portion of many kinds of pollutants than the more thoroughly regulated sewage treatment plants and industrial facilities. The National Urban Runoff Program (NURP) final report to the Congress (US EPA, 1983) concluded that the goals of the CWA could not be achieved without addressing urban runoff discharges. The 1987 CWA amendments established a framework for regulating urban storm water runoff. Pursuant to these amendments, the Santa Ana Regional Water Quality Control Board (Regional Board) began regulating municipal storm water runoff in 1990.

The attached pages contain information concerning an application for renewal of Waste Discharge Requirements and a NPDES permit, which prescribes waste discharge requirements for urban storm water runoff from the cities and unincorporated areas in Orange County within the jurisdiction of the Santa Ana Regional Board. On July 21, 2006, the County of Orange and the Orange County Flood Control District (OCFCD), in cooperation with the cities of Anaheim, Brea, Buena Park, Costa Mesa, Cypress, Fountain Valley, Fullerton, Garden Grove, Huntington Beach, Irvine, Laguna Hills, Laguna Woods, La Habra, La Palma, Lake Forest, Los Alamitos, Newport Beach, Orange, Placentia, Santa Ana, Seal Beach, Stanton, Tustin, Villa Park, Westminster, and Yorba Linda (hereinafter collectively referred to as permittees or dischargers), submitted NPDES Application No. CAS 618030 (Report of Waste Discharge) for re-issuance of their areawide storm water NPDES permit. The permit application was submitted in accordance with the requirements of the previous NPDES permit (Order No. R8-2002-0010, NPDES No. CAS618030) which

expired on January 19, 2007. Additionally, the permit application follows guidance provided by staff of the State Water Resources Control Board (State Board), the Regional Water Quality Control Boards (Regional Boards), and the United States Environmental Protection Agency (US EPA).

On February 20, 2007, Order No. R8-2002-0010, NPDES No. CAS618030, was administratively extended in accordance with 40 CFR Part 122.6 and Title 23, Division 3, Chapter 9, §2235.4 of the California Code of Regulations.

Order No. R8-2009-0030 regulates discharges of urban storm water from the lower Santa Ana watershed to waters of the US, which ultimately drain into the Pacific Ocean.

II. REGULATORY BACKGROUND/CLEAN WATER ACT REQUIREMENTS

Urban runoff includes dry and wet weather flows and storm water runoff (collectively referred to as urban runoff) from urbanized areas through a storm water conveyance system. As water flows over streets, parking lots, construction sites, and industrial, commercial, residential and municipal areas, it can intercept pollutants from these areas and transport them to waters of the US. If appropriate pollution control measures are not implemented, urban runoff may contain pathogens (bacteria, protozoa, viruses), sediment, trash, fertilizers (nutrients, mostly nitrogen and phosphorus compounds), oxygen-demanding substances (decaying matter), pesticides (DDT, Chlordane, Diazinon, Chlorpyrifos), heavy metals (cadmium, chromium, copper, lead, zinc) and petroleum products (oil & grease, PAHs, petroleum hydrocarbons). If not properly managed and controlled, urbanization can change the stream hydrology and increase pollutant loading to receiving waters. As a watershed undergoes urbanization, pervious surface area decreases, runoff volume and velocity increase, riparian and wetland habitat decrease, the frequency and severity of flooding increase and pollutant loading increases. Most of these impacts are due to human activities that occur during and/or after urbanization. The pollutants and hydrologic changes can cause declines in aquatic resources, toxicity to marine organisms, and impact human health and the environment.

However, properly planned high-density development, with sufficient open space and low impact developments, can reduce urban sprawl and problems associated with sprawl. Urban in-fill development can be an element of smart growth, creating the opportunity to maintain relatively natural open space elsewhere in the area. The goal of low impact development is to produce post-construction runoff quality and quantity, to mimic that of pre-construction runoff quality and quantity.

The US EPA recognizes urban runoff as the number one source of estuarine pollution in coastal communities¹. Studies² conducted in the Southern California area and other studies have reported a definite link between storm water runoff from urban areas and pollution in

¹ US EPA, 1999, 40CFR Parts 9, 122, 123, 124, National Pollutant Discharge Elimination System – Regulations for Revision of the Water Pollution Control Program Addressing Storm Water Discharges; Final Rule, 64FR 68727.

² Bay, S., Jones, B. H. and Schiff, K, 1999, Study of the Impact of Stormwater Discharge on Santa Monica Bay. Sea Grant Program, University of Southern California; and Haile, R.W., et. al., 1996, An Epidemiological Study of Possible Adverse Health Effects of Swimming in Santa Monica Bay.

nearshore zones. A number of Orange County beaches were closed during 1999 and 2000 due to microbial contamination. One of the studies conducted to determine the source of this microbial contamination indicated that urban runoff may be one of the sources of this contamination. If not properly controlled, urban runoff could be a significant source of pollutants in waters of the US. Table 1 includes a list of pollutants, their sources, and some of the adverse environmental consequences mostly resulting from urbanization.

Table 1³. Pollutants/Impacts of Urbanization on Waters of the US (Marine Pollution)

Pollutants	Sources	Effects and Trends
Toxins (e.g., biocides, PCBs, trace metals, heavy metals)	Industrial and municipal wastewaters; runoff from farms, forests, urban areas, and landfills; erosion of contaminated soils and sediments; vessels; atmospheric deposition	Poison and cause disease and reproductive failure; fat-soluble toxins may bioconcentrate, particularly in birds and mammals, and pose human health risks. Inputs into US waters have declined, but remaining inputs and contaminated sediments in urban and industrial areas pose threats to living resources.
Pesticides (e.g., DDT, diazinon, chlorpyrifos)	Urban runoff, agricultural runoff, commercial, industrial, residential, and farm use	Legacy pesticide (DDT, Chlordane, Dieldrin, etc.) use has been banned; still persists in the environment; some of the other pesticide uses are curtailed or restricted.
Biostimulants (organic wastes, plant nutrients)	Sewage and industrial wastes; runoff from farms and urban areas; nitrogen from combustion of fossil fuels	Organic wastes overload bottom habitats and deplete oxygen; nutrient inputs stimulate algal blooms (some harmful), which reduce water clarity, cause loss of seagrass and coral reef, and alter food chains supporting fisheries. While organic waste loadings have decreased, nutrient loadings have increased.
Petroleum products (oil, grease, petroleum hydrocarbons, PAHs)	Urban runoff and atmospheric deposition from land activities; shipping and tanker operations; accidental spills; coastal and offshore oil and gas production activities; natural seepage; PAHs from internal combustion engines	Petroleum hydrocarbons can affect bottom organisms and larvae; spills affect birds, mammals and nearshore marine life. While oil pollution from ships, accidental spills, and production activities has decreased, diffuse inputs from land-based activities have not.
Radioactive isotopes	Atmospheric fallout, industrial and military activities	Few known effects on marine life; bioaccumulation may pose human health risks where contamination is heavy.

³ Adapted from "Marine Pollution in the United States" prepared for the Pew Oceans Commission, 2001.

Sediments	Erosion from farming, construction activities, forestry, mining, development; river diversions; coastal dredging and mining	Reduce water clarity and change bottom habitats; carry toxins and nutrients; clog fish gills and interfere with respiration in aquatic fauna. Sediment delivery by many rivers has decreased, but sedimentation poses problems in some areas; erosion from coastal development and sea-level rise is a future concern.
-----------	---	--

Plastics and other debris	Ships, fishing nets, containers, trash, urban runoff	Entangles marine life or is ingested; degrades beaches, wetlands and nearshore habitats. Floatables (from trash) are an aesthetic nuisance and can be a substrate for algae and insect vectors.
Thermal	Cooling water from power plants and industry, urban runoff from impervious	Kills some temperature-sensitive species; displaces others. Generally, less a risk to marine life than thought 20 years ago.
Noise	Vessel propulsion, sonar, seismic prospecting, low-frequency sound used in defense and research	May disturb marine mammals and other organisms that use sound for communication.
Pathogens (bacteria, protozoa, viruses)	Sewage, urban runoff, livestock, wildlife, discharges from boats and cruise ships	Pose health risks to swimmers and consumers of seafood. Sanitation has improved, but standards have been raised.
Alien species	Ships and ballast water, fishery stocking, aquarists	Displace native species, introduce new diseases; growing worldwide problem.

The Clean Water Act (CWA) prohibits the discharge of any pollutant to navigable waters from a point source unless an NPDES permit authorizes the discharge. Efforts to improve water quality under the NPDES program traditionally and primarily focused on reducing pollutants in discharges of industrial process wastewater and municipal sewage. The 1987 amendments to the CWA required municipal separate storm sewer systems (MS4s) and industrial facilities, including construction sites, to obtain NPDES permits for storm water runoff from their facilities. On November 16, 1990, the United States Environmental Protection Agency (EPA) promulgated the final Phase I storm water regulations. The storm water regulations are contained in 40 CFR Parts 122, 123 and 124.

The areawide NPDES permit for Orange County areas within the Santa Ana Regional Board's jurisdiction is being considered for renewal in accordance with Section 402 (p) of the CWA and all requirements applicable to an NPDES permit issued under the issuing authority's discretionary authority. The requirements included in this order are consistent with the CWA, the federal regulations governing urban storm water discharges, the Water Quality Control Plan for the Santa Ana River Basin (Basin Plan), the California Water Code, and the State Board's Plans and Policies, including the Ocean Plan.

The Basin Plan is the basis for the Regional Board's regulatory programs. The Plan was developed and is periodically reviewed and updated in accordance with relevant federal and state law and regulations, including the Clean Water Act and the California Water Code. As required, the Basin Plan designates the beneficial uses of the waters of the region and specifies water quality objectives intended to protect those uses. (Beneficial uses and water quality objectives, together with an antidegradation policy, comprise federal "water quality standards"). The Basin Plan also specifies an implementation plan, which includes certain discharge prohibitions. In general, the Basin Plan makes no distinctions between wet and dry weather conditions in designating beneficial uses and setting water quality objectives, i.e., the beneficial uses, and correspondingly, the water quality objectives are assumed to apply year-round. (Note: In some cases, beneficial uses for certain surface waters are

designated as "I", or intermittent, in recognition of the fact that surface flows (and beneficial uses) may be present only during wet weather.) Most beneficial uses and water quality objectives were established in the 1971, 1975 and 1983 Basin Plans.

Water Code Section 13241 requires that certain factors be considered, at a minimum, when water quality objectives are established. These include economics and the need for developing housing in the Region. (The latter factor was added to the Water Code in 1987).

During the previous permit (R8-2002-0010) development process, the permittees raised an issue regarding compliance with Section 13241 of the California Water Code with respect to water quality objectives for wet weather conditions, specifically the cost of achieving compliance during wet weather conditions and the need for developing housing within the Region and its impact on urban storm water runoff. In response to this request, Regional Board staff in collaboration with the permittees in the region has organized a Storm Water Quality Standards Task Force. In the meantime, the provisions of this order will result in reasonable further progress towards the attainment of the existing water quality objectives, in accordance with the discretion in the permitting authority recognized by the United States Court of Appeals for the Ninth Circuit in *Defenders of Wildlife v Browner*, 191 F.3d 1159, 1164 (9th Cir. 1999).

III. BENEFICIAL USES

Storm water flows that are discharged to municipal storm drain systems in Orange County are tributary to various water bodies (inland surface streams, bays and tidal prisms, ocean waters, lakes and reservoirs) of the state. The beneficial uses of these water bodies include municipal and domestic supply, agricultural supply, industrial service and process supply, groundwater recharge, navigation, hydropower generation, water contact recreation, non-contact water recreation, commercial and sportfishing, warm freshwater habitat, cold freshwater habitat, preservation of biological habitats of special significance, wildlife habitat, preservation of rare, threatened or endangered species, marine habitat, shellfish harvesting, spawning, reproduction and development of aquatic habitats and estuarine habitat. The ultimate goal of this storm water management program is to protect the water quality standards of the receiving waters.

IV. PERMITTED AREA

The permitted area is delineated by the Los Angeles County-Orange County boundary line on the northwest, the San Bernardino-Orange County boundary line on the north and northeast, the Riverside County-Orange County boundary line on the east, the Santa Ana Regional Board-San Diego Regional Board boundary line on the southeast, and the Pacific Ocean on the southwest (see Attachment A of the order). The permittees serve a population of approximately 3.006⁴ million, occupying an area of approximately 789 square miles (including unincorporated areas and the limits of 34 cities, 26 of which are within the Santa Ana Regional Board's jurisdiction). The permittees have jurisdiction over, and/or maintenance responsibility for, storm water conveyance systems within Orange County. The County's systems include an estimated 400 miles of storm drain

⁴ SCAG County Population Forecasts for 2005 (this is for the entire County)
(<http://www.eltoroairport.org/issues/population.html>)

systems. A major portion of the urbanized areas of Orange County drains into water bodies within this Regional Board's jurisdiction. Storm water discharges from urbanized areas consist mainly of surface runoff from residential, commercial, and industrial developments. In addition, there are storm water discharges from agricultural land uses, including farming and animal operations. However, the CWA specifically excludes agricultural discharges from regulation under this program. Other areas of the County not addressed or which are excluded by the storm water regulations and areas not under the jurisdiction of the permittees are excluded from the area requested for coverage under this permit. These excluded areas and activities include:

1. Federal lands and state properties, including, but not limited to, military bases, national forests, hospitals, schools, colleges, universities, and highways;
2. Native American tribal lands; and
3. Utilities and special district properties.

Discharges from the permitted area drain into the Pacific Ocean. The watersheds regulated under this order generally referred to as the San Diego Creek/Newport Bay watershed and the Lower Santa Ana River Basin.

V. WATERSHED MANAGEMENT/LOWER SANTA ANA RIVER BASIN

To manage the water resources of the Region efficiently, it is critical to have a holistic approach. The entire storm drain system in Orange County is not controlled by a single entity; the County of Orange, the OCFCD, several cities, Caltrans, US Army Corps of Engineers and a number of other entities own, operate and/or manage the storm drain systems. In addition to the cities, the County and the OCFCD, there are a number of other significant contributors of storm water runoff to these storm drain systems. These include: large institutions such as the State University facilities, schools, hospitals, etc.; federal facilities such as Department of Defense facilities; State agencies such as Caltrans; water and wastewater management agencies such as Orange County Water District, Metropolitan Water District etc.; the National Forest Service; state parks; and entertainment centers such as Disneyland. The quality and quantity of storm water runoff into and out of Orange County also depends upon runoff from San Bernardino and Riverside County areas that are tributary to Orange County. Some of the runoff from Orange County enters the San Gabriel River or systems controlled by other entities, such as the Los Angeles County Flood Control District, which are under the Los Angeles Regional Board's jurisdiction.

Some of these facilities, such as Disneyland and Caltrans, are already under individual permits for storm water runoff. The Los Angeles and San Diego Regional Boards have also issued areawide storm water permits for areas within their jurisdiction.

Cooperation and coordination among all the stakeholders is essential for efficient and economical management of the watershed. It is also critical to manage nonpoint sources at a level consistent with the management of urban storm water runoff in a watershed, in order to prevent or remedy water quality impairment. Regional Board staff will facilitate coordination of monitoring and management programs among the various stakeholders, where necessary.

An integrated watershed management approach is consistent with the Strategic Plan (2008-2012) for the State and Regional Boards. A watershed wide approach is also necessary for implementation of the load and waste load allocations developed under the TMDL process (see Section B, below). The MS4 permittees and all the affected entities should be encouraged to participate in regional or watershed solutions instead of project-specific and fragmented solutions.

The pollutants in urban runoff originate from a multitude of sources and effective control of these pollutants requires a cooperative effort of all the stakeholders and many regulatory agencies. Every stage of urbanization should be considered in developing appropriate urban runoff pollution control methodologies. The program's success depends upon consideration of pollution control techniques during planning, construction and post-construction operations. At each stage, appropriate pollution prevention measures, proper site design considerations, source control measures and, if necessary, treatment techniques should be considered.

1. SUB-WATERSHEDS AND MAJOR CHALLENGES

The Lower Santa Ana River Watershed can be subdivided into five tributary watersheds:

- a. *The San Gabriel River Drainage Area:* Carbon Canyon Creek and Coyote Creek drain into the San Gabriel River. Only a portion of the San Gabriel River is within the Santa Ana Regional Board's jurisdiction. The River empties into the Pacific Ocean at the boundary between two Regional Boards (Regions 4 and 8). Region 4 regulates most of the discharges to the San Gabriel River.

The Los Angeles Regional Board (Region 4) listed the San Gabriel River as an impaired waterbody on the CWA Section 303(d) list of impaired waters. It is listed for ammonia, toxicity, algae, eutrophication, pH, odors, low dissolved oxygen, trash, lead, arsenic, copper, silver, mercury (tissue), coliform, DDT, PCBs, chlordane, and abnormal fish histology. A trash TMDL for the East Fork of the River was adopted by the Regional Board (Region 4) and approved by the US EPA. On July 13, 2006, the Los Angeles Regional Board adopted TMDLs for metals in the San Gabriel River watershed. However, because of the state's inability to meet the March 2007 deadline for an approved TMDL prescribed in a consent decree (Heal the Bay Inc., et al. v. Browner C98-4825 SBA), on March 26, 2007, the EPA promulgated TMDLs for metals and selenium for the San Gabriel River. The upper portions of Coyote Creek flow through Orange County to join the San Gabriel River above the tidal prism. Other unnamed tributaries located in northwestern Orange County also discharge into the San Gabriel River estuary. The EPA promulgated TMDLs include wet weather wasteload allocations for Coyote Creek for copper, lead and zinc and dry weather wasteload allocations for copper for Coyote Creek. The permittees are expected to implement programs and policies consistent with the metals and selenium TMDLs for the San Gabriel River

watershed. This includes constituent-specific source control programs or other equally effective programs to control the discharge of copper, lead and zinc into Coyote Creek and other tributaries in Orange County that discharge into the San Gabriel River.

b. The Huntington Harbour and Bolsa Bay Drainage Area: This includes Anaheim Bay, Huntington Harbour, Bolsa Bay, and Bolsa Chica Ecological Reserve. A number of flood control channels discharge into this area, including Anaheim-Barber, East Garden Grove-Wintersberg, and Bolsa Chica Channel. The area historically had a number of oil production facilities and an oil-well drilling mud disposal area. There are still some production wells in the area. Certain areas of the Bolsa Chica wetlands have been impacted by the oil production and related activities in the area. The drilling mud disposal area has been cleaned up, and through a collaborative effort of a number of state, federal, and local agencies and other entities the Bolsa Chica wetlands have been restored.

Anaheim Bay and Huntington Harbour are listed as impaired waterbodies (see Table 2), and TMDLs will be developed to address the pollutants causing the impairment.

c. The Santa Ana River Drainage Area: This includes Santa Ana River Reaches 1 and 2, Santiago Creek Reaches 1, 2, 3 and 4, Silverado Creek, Black Star Creek, Talbert Channel, Talbert Marsh and Greenville-Banning Channel. The major problem for the area is microbial contamination of the coastal zone. The initial studies conducted by the Orange County Sanitation District determined that their facilities were probably not the cause of the microbial problems in the nearshore zone. Subsequently, the Executive Officer issued a directive to the County of Orange and the cities of Santa Ana, Costa Mesa, Fountain Valley and Huntington Beach (urban storm water dischargers to this tributary area) under Section 13267 of the Water Code. This directive required the dischargers to provide a plan to identify, characterize and control sources that contributed to the microbial problems in the Huntington Beach area. Several studies were conducted to trace the source(s) of the microbial contamination. These studies could not conclusively determine the sources of microbial contamination in the Huntington Beach area. However, urban runoff was identified as one of the sources. The permittees have diverted most of the dry-weather flows to the sanitary sewer system and significant improvements have been noted in the beach water quality.

d. The Newport Bay Drainage Area: Tributaries include Bonita Creek, Serrano Creek, Peters Canyon Wash, Hicks Canyon Wash, Bee Canyon Wash, Borrego Canyon Wash, Agua Chion Wash, Laguna Canyon Wash, Rattlesnake Canyon Wash, Sand Canyon Wash, San Diego Creek Reaches 1 and 2, and San Joaquin Freshwater Marsh.

The Newport Bay watershed has a number of impaired waterbodies listed under Section 303(d) of the CWA (see Section 2, below for

details). The impairments are mostly due to nutrients, sediment, pesticides, pathogens and metals. To date, TMDLs have been developed for nutrients, sediment, and fecal coliform bacteria and some of the pesticides (diazinon and chlorpyrifos). These TMDLs are being implemented. The current and future (year 2012) targets for the nutrient TMDLs are already being met. However, Board staff is currently reevaluating the nutrient TMDLs in light of evidence that there remains impairment of these waters due to eutrophication. In addition, toxics TMDLs were promulgated by USEPA on June 14, 2002, including TMDLs for metals and selenium, and a TMDL specific to the Rhine Channel located in Lower Newport Bay. The Regional Board is in the process of developing TMDL implementation plans for these TMDLs.

The Irvine Ranch Water District (IRWD), which provides sewage collection and treatment services for most areas in this watershed, has been also accepting dry weather flows from some of the storm sewer systems. The IRWD constructed a number of water quality treatment wetlands for treating urban storm water runoff. These treatment wetlands are strategically located to capture and treat flows from different portions of the watershed. The IRWD also sponsored legislation that authorizes the District to collect storm water fees for maintenance of these treatment wetlands. These treatment wetlands are designed to remove sediment and nutrients from urban runoff but may be less efficient in removing pathogens and toxics (metals, pesticides, etc.). It is anticipated that a combination of site design, source control and other best management practices and these treatment wetlands will help to control the discharge of pollutants in urban runoff.

e Irvine Coast and Newport Coast Areas of Special Biological Significance (ASBSs) The Ocean Plan has 35 designated areas of special biological significance throughout the State; two of these ASBSs are within the Santa Ana Region, Irvine Coast Areas of Special Biological Significance, Newport Coast Areas of Special Biological Significance. The ASBSs require protection of species or biological communities to the extent that alteration of natural water quality is undesirable. The Crystal Cove area, which is within the Irvine Coast ASBS, is currently experiencing increased urban runoff from new developments in the area. The Ocean Plan contains a prohibition on discharges of wastes to ASBS. The State Board has developed conditions for special protection of ASBSs. All waste discharges to the ASBS are governed by the prohibition in the Ocean Plan are subject to the special protections prescribed by the State Board.

2. CWA SECTION 303(d) LIST AND TMDLs:

The 2006 water quality assessment conducted by the Regional Board identified a number of waterbodies within the Region as impaired waterbodies, under Section 303(d) of the CWA. These are waterbodies where the designated beneficial uses are not met and/or the water quality objectives are being violated. These waterbodies were placed on the CWA Section 303(d) list of impaired waters. The impaired waterbodies in Orange County within the Santa Ana Regional Board's jurisdiction are listed in Table 2.

Federal regulations require that a total maximum daily load (TMDL) be established for each 303(d) listed waterbody for each of the pollutants causing impairment. The TMDL is the total amount of the problem pollutant that can be discharged while water quality standards in the receiving water are attained, i.e., water quality objectives are met and the beneficial uses are protected. It is the sum of the individual wasteload allocations (WLA) for point source inputs, load allocations (LA) for non-point source inputs and natural background, with a margin of safety. The TMDLs are the basis for limitations established in waste discharge requirements. TMDLs have been developed for sediment and nutrients for San Diego Creek and Newport Bay and for fecal coliform bacteria in Newport Bay. The stakeholders in this watershed are collaborating in the development and implementation of the TMDLs. The Regional Board's Executive Officer has issued requirements for the submittal and implementation by the responsible parties of plans and schedules to address the TMDL requirements.

Table 2. Clean Water Act Section 303(d) Listed Waterbodies

Water Body	Hydro Unit	Pollutant Stressor	Source	Priority	Size Affected	Unit	TMDL End Date

The proposed order includes numeric effluent limits based on the wasteload/load allocations developed and approved by the Regional Board, State Board, Office of Administrative Law and the EPA.

VI. FIRST, SECOND AND THIRD TERM PERMITS: STORM WATER POLLUTION CONTROL PROGRAMS/POLICIES

Prior to EPA's promulgation of the final storm water regulations, the counties of Orange, Riverside and San Bernardino applied for areawide NPDES permits for storm water runoff. On July 13, 1990, the Regional Board issued Order No. 90-71 to the permittees (first term permit). On March 8, 1996, the Board adopted Order No. 96-31 (second term permit). On January 18, 2002, the Board adopted Order No. R8-2002-0010 (third term permit). These permits included the following requirements as outlined in the storm water regulations:

- a. Prohibited non-storm water discharges to the MS4s, with certain exceptions.
- b. Required the municipalities to develop and implement a drainage area management plan (DAMP) to reduce pollutants in urban storm water runoff to the maximum extent practicable (MEP⁹).
- c. Required the discharges from the MS4s to meet water quality standards in receiving waters.
- d. Required the municipalities to identify and eliminate illicit connections and illicit discharges to the MS4s.
- e. Required the municipalities to establish and maintain legal authority to enforce storm water regulations.
- f. Required monitoring of dry weather flows, storm flows, and receiving water quality, and required program assessment.
- g. Required the permittees to identify and inspect construction sites and industrial and commercial facilities.
- h. Required the permittees to develop and implement a Water Quality Management Plan to address post-development runoff.

The following programs and policies have been implemented or are being implemented by the permittees. During the first term permit, the permittees developed a Drainage Area Management Plan (1993 DAMP) which was approved by the Executive Officer of the Regional Board on April 29, 1994. The 1993 DAMP included a number of best management practices (BMPs) and a very extensive public education program. The 1993 DAMP was updated a number of times and a draft 2007 version of the DAMP was submitted with the permit renewal application. The monitoring program for the first term permit included 89 monitoring stations within streams and flood control channels and 21 stations within the bays, estuaries and the ocean. The findings and conclusions from these monitoring stations and monitoring programs of other municipal permittees (Riverside and San Bernardino Counties and others) were used to identify problem areas and to re-evaluate the monitoring program and the effectiveness of the BMPs. The direction of these program elements were depended upon the results of the ongoing studies and a holistic approach to watershed management.

Other elements of the storm water management program included identification and elimination of illicit discharges and illicit connections and establishment of adequate legal authority to control pollutants in storm water discharges. The permittees have completed a survey of their storm drain systems to identify illicit discharges/illicit connections and have adopted appropriate ordinances to establish legal authority. Some of the more specific achievements during the previous term permits are as follows:

1. *Interagency Agreements and Coordination*: Established a program management structure through an Interagency Implementation Agreement. Participated in regional monitoring programs and focused special studies/research programs.

⁹ Maximum Extent Practicable (MEP) means to the maximum extent feasible, taking into account equitable considerations of synergistic, additive, and competing factors, including but not limited to, gravity of the problem, technical feasibility, fiscal feasibility, public health risks, societal concerns, and social benefits.

Worked with the County Sanitation Districts, Health Care Agency, Integrated Waste Management Agency, and the Water Districts to provide a consistent urban storm water pollution control message to the public. Worked with Caltrans, other transportation agencies, the Storm Water Quality Task-Force, and others to further study and understand urban runoff problems and control measures. Supported regional studies to improve storm water management programs and monitoring programs through the Southern California Water Research Project.

- i. Ordinances, Plans and Policies: Adopted a Model Water Quality Ordinance and Enforcement Consistency Guide; prepared a Water Pollution Enforcement Implementation Plan, Public Agency Activity BMP guideline, a Public Pesticide and Fertilizer Use Guideline, Criteria for MS4 Inspections, and a Water Quality Monitoring Plan, Model Water Quality Management Plan; and established a Technical Advisory Committee for overall program development and implementation.
- j. Program Review: A number of existing programs were reviewed to determine their effectiveness in combating urban pollution and to recommend alternatives and or improvements, including litter control measures, street sweeping frequencies and methods, public agency activities and facilities, illicit discharges and illicit connections to the MS4 systems, and existing monitoring programs.
- k. Public Education: A number of steps were taken to educate the public, businesses, industries, and commercial establishments regarding their role in urban runoff pollution controls. The appropriate industrial dischargers were notified of the storm water regulatory requirements. For a number of unregulated activities, BMP guidance (Fact Sheet) was developed (mobile detailing, automotive service centers, restaurants, pool maintenance). Finally, a countywide hotline was established for reporting any suspected water quality problems. The addition of the Residential Program to the fourth term permit includes requirements for permittees to identify residential areas and activities therein that are potential sources of pollutants and to develop Fact Sheets/BMPs for each and encourage residents to implement the pollution prevention measures.
- l. Public Agency Training: Training was provided to public agency employees on how to implement New Development Guidelines and Public Works BMPs, how to conduct investigations of reported water quality problems and how to conduct inspections of industrial facilities, construction sites and public work projects. The municipal planners were trained to recognize water quality related problems in proposed developments. The fourth term permit includes additional training program requirements for storm water program managers and inspection staff. This was added following information collected during Regional Board staff audits of permittee's storm water management programs, which found that many of the permittee's storm water staff were inadequately trained to properly implement the required program elements contained within the third term permit.

- m. *Related Activities:* Flood control channels were stabilized, sediment basins were constructed, and debris booms were installed; illicit connections were eliminated and illicit connections to the MS4s were documented, eradicated or permitted. During the third term permit, litter/trash control ordinances were reviewed and revised, and trash characterization programs were encouraged. Within the fourth term permit, a trash control element has been added as a requirement.

VII. PRIOR TERM PERMITS - WATER QUALITY IMPROVEMENTS

An accurate and quantifiable measurement of the impact of the above stated storm water management programs is difficult for a variety of reasons, such as the variability in chemical water quality data, the incremental nature of BMP implementation, lack of baseline monitoring data, and the existence of some of the programs and policies prior to initiation of formal storm water management programs. There are generally two accepted methodologies for assessing water quality improvements: (1) conventional monitoring such as chemical-specific water quality monitoring; and (2) non-conventional monitoring such as monitoring of the amount of household hazardous waste collected and disposed off at appropriate disposal sites, amount of used oil collected, debris removed by the debris boom, etc.

The water quality monitoring data collected during prior permit terms did not indicate any discernible trends or significant changes. However, the most recent monitoring data indicate that there are reductions in the mass loading rates for some of the metals like copper and zinc and improvements in beach water quality after diversion of dry weather flows to the sanitary sewers. The non-conventional monitoring data also indicate that other programs and policies have been very effective in keeping a significant quantity of wastes from being discharged into waters of the US.

During the second and third term permits, there was an increased focus on watershed management initiatives and coordination among the municipal permittees in Orange, Riverside and San Bernardino Counties. These efforts resulted in a number of regional monitoring programs and other coordinated program and policy developments.

It is anticipated that with continued implementation of the revised DAMP and other requirements specified in this order, including low impact developments, the goals and objectives of the storm water regulations will be met, including protection of water quality standards for all receiving waters.

VIII. FUTURE DIRECTION/2007 DRAFT DAMP

The NPDES permit renewal application included a revised draft of the DAMP (2007 DAMP) that includes programs and policies the permittees are proposing to implement during the fourth term permit. The 2007 draft DAMP is the principal guidance document for urban storm water management programs in Orange County and includes the following major components:

- I. Continues to provide a framework for the program management activities and plan development.
 - n. Continues to provide the legal authority to control discharges to the MS4s.
 - o. Improves current BMPs to achieve further reduction in pollutant loading to the MS4s.
 - p. Continues to include programs and policies for public education processes and to seek public support for urban storm water pollution prevention BMPs.
 - q. Increases requirements for controls on new developments and significant redevelopments.
 - r. Continues to ensure that construction sites implement appropriate pollution control measures during construction and effective post-construction water quality management plan (WQMP) implementation.
 - s. Continues to ensure that industrial sites are adequately identified, categorized and inspected for compliance with storm water regulations.
 - t. Continues to include programs and policies to eliminate illicit discharges and illicit connections to the MS4s.
 - u. Continues to include monitoring of urban runoff.
 - v. Includes provisions for any special focus studies and/or control measures.

A combination of these programs and policies and the requirements specified in this order should ensure control of pollutants in storm water runoff from facilities owned and/or controlled by the permittees.

IX. PERMIT REQUIREMENTS

The legislative history of storm water statutes (1987 CWA Amendments), US EPA regulations (40CFR Parts 122, 123, and 124), and clarifications issued by the State Water Resources Control Board (State Board Orders No. WQ 91-03 and WQ 92-04) indicate that a non-traditional NPDES permitting strategy was anticipated for regulating urban storm water runoff. Due to the economic and technical infeasibility of full-scale end-of-pipe treatments and the complexity of urban storm water runoff quality and quantity, MS4 permits generally include narrative requirements for the implementation of BMPs in place of numeric effluent limits.

The requirements included in this order are meant to specify those management practices, control techniques and system design and engineering methods that will result in maximum extent practicable protection of the beneficial uses of the receiving waters. The State Board (Orders No. WQ 98-01 and WQ 99-05) concluded that MS4s must meet the technology-based maximum extent practicable (MEP) standard and water quality standards (water quality objectives and beneficial uses). The US Court of Appeals for the Ninth Circuit

subsequently held that strict compliance with water quality standards in MS4 permits is at the discretion of the local permitting authority. Any requirements included in the order that are more stringent than the federal storm water regulations are in accordance with the CWA Section 402(p)(3)(iii), and the California Water Code Section 13377 and are consistent with the Regional Board's interpretation of the requisite MEP standard.

The Report of Waste Discharge (ROWD) included a discussion of the current status of Orange County's urban storm water management program and the proposed programs and policies for the next five years (fourth term permit). The proposed order incorporates these documents and the performance commitments made in the ROWD.

This order recognizes the significant progress made by the permittees during the first, second and third term permits in implementing the storm water regulations. The permit also recognizes regional and innovative solutions to such a complex problem. For these reasons, the order is somewhat less prescriptive when compared to some of the MS4 NPDES permits for urban runoff issued by other Regional Boards. However, in many other respects, it incorporates an integrated watershed approach in solving urban runoff related water quality and quantity issues. The proposed permit also includes numeric effluent limits based on wasteload/load allocations. With these requirements, it should achieve the same or better water quality benefits because of the programs and policies already being implemented or proposed for implementation, including regional and watershed wide solutions.

The major requirements include: (1) Discharge prohibitions; (2) Receiving water limitations; (3) Prohibition on illicit connections and illicit discharges; (4) Public and business education; (5) Adequate legal authority; (6) Programs and policies for municipal facilities and activities; (7) Inspection Activities by the municipalities; (8) New development/re-development requirements including a requirement to fully implement low impact development principles and to minimize any hydrologic conditions of concern; (9) Waste load allocations for nutrients, sediment, and fecal coliform bacteria; metals, and pesticides, including numeric effluent limits; and (10) Monitoring and reporting requirements.

These programs and policies are intended to improve urban storm water quality and protect the beneficial uses of receiving waters of the region.

1. DISCHARGE PROHIBITIONS

In accordance with CWA Section 402(p)(3)(B)(ii), this order prohibits the discharge of non-storm water to the MS4s, with a few exceptions. The specified exceptions are consistent with 40 CFR 122.26(d)(2)(iv)(B)(1). If the permittees or the Executive Officer determines that any of the exempted non-storm water discharges contain pollutants, a separate NPDES permit or coverage under the Regional Board's De Minimis permit will be required.

2. RECEIVING WATER LIMITATIONS

Receiving water limitations are included to ensure that discharges from MS4 systems do not cause or contribute to violations of applicable water quality standards in receiving waters. The compliance strategy for receiving water limitations is consistent with the US EPA and State Board guidance and recognizes the complexity of storm water management.

This order requires the permittees to meet water quality standards in receiving waters in accordance with US EPA requirements as specified in State Board Order No. WQ 99-05. If water quality standards are not met by implementation of current BMPs, the permittees are required to re-evaluate the programs and policies and to propose additional BMPs. Compliance determination will be based on this iterative BMP implementation/compliance evaluation process.

3. ILLICIT DISCHARGES AND ILLICIT CONNECTIONS TO MS4s

The permittees have completed their survey of the MS4 systems and eliminated or permitted all identified illicit connections. The permittees have also established a program to address illicit discharges and a mechanism to respond to spills and leaks and other incidents of discharges to the MS4s. The permittees are required to continue these programs to ensure that the discharges from MS4s do not become a source of pollutants in receiving waters.

4. PUBLIC AND BUSINESS EDUCATION OUTREACH PROGRAM

Public outreach is an important element of the overall urban pollution prevention program. The permittees have committed to implement a strategic and comprehensive public education program to maintain the integrity of the receiving waters and their ability to sustain beneficial uses. The principal permittee has taken the lead role in the outreach program and has targeted various groups including businesses, industry, development, utilities, environmental groups, institutions, homeowners, school children, and the general public. The proposed order includes additional requirements to address runoff from residential developments. The permittees have developed a number of educational materials, established a storm water pollution prevention hotline, started an advertising and educational campaign and distribute public education materials at a number of public events. The permittees are required to continue these efforts and to expand public participation and education programs.

5. LEGAL AUTHORITY

During the first two permit cycles, each permittee adopted a number of ordinances, municipal codes, and other regulations to establish legal authority to control discharges to the MS4s and to enforce these regulations as specified in 40 CFR 122.26(d)(2)(I)(B, C, E, and F). The permittees are required to enforce these ordinances and to take enforcement actions against violators (40 CFR 122.26(d)(2)(iv)(A-D)). The enforcement activities undertaken by a majority of the permittees have consisted primarily of Notices of Violation, which act to educate the public on the environmental consequences of illicit discharges. Several coastline municipalities have regularly issue Citations. In the case of the County, additional action has sometimes included recovery of investigation and clean-up costs from a responsible party. In the event of egregious or repeated violations, the option exists for a referral to the County District Attorney for possible prosecution. In order to eliminate unauthorized, non-storm water discharges, reduce the amount of pollutants commingling with storm water runoff and thereby protect water quality, an additional level of enforcement is required between Notices of Violation and District Attorney referrals. The third term permit required the permittees to establish the authority and resources to administer either civil or criminal fines and/or penalties for violations of their local water quality ordinances (and the Federal Clean Water

Act). The permittees now have this authority for civil or criminal penalties. Within the fourth term permit, permittees are required to exercise this authority by developing an enforcement program to be administered within the industrial, commercial and construction elements of their storm water management programs. The enforcement program has been required to be included as an update to each permittee's respective Local Implementation Plan.

6. PUBLIC FACILITIES AND ACTIVITIES

Education of municipal planning, inspection, and maintenance staff is critical to ensure that municipal facilities and activities do not cause or contribute to an exceedance of receiving water quality standards. The second and third term permits required the permittees to prepare an Environmental Performance Report to address public agency facilities and activities that are not regulated under the State's General Industrial Activities Storm Water Permit. It also required the permittees to report on an annual basis the actions taken to eliminate the discharge of pollutants from public agency activities and facilities. The permittees are required to inspect and maintain drainage facilities free of waste materials to control pollutants in storm water runoff flowing through these systems. The proposed order requires the permittees to continue to re-evaluate their facilities and activities on an annual basis to see if additional BMPs are needed to ensure water quality protection.

7. MUNICIPAL INSPECTION PROGRAM

The third term permit included requirements for inspection of construction, industrial, and commercial facilities within the permittees' jurisdiction in order to control the loading of pollutants entering the MS4 system. The permittees were required to inventory construction, industrial and commercial facilities; prioritize those facilities with respect to their potential for discharge of pollutants in runoff and their proximity to sensitive receiving waters; and perform regular inspections to insure compliance with local ordinances. Within the fourth term permit, permittees are also to develop a pilot program targeted at mobile businesses (mobile detailers, pool & carpet cleaning, etc.) that have been identified as potential pollutant sources. While initial observations of non-compliance may result in 'educational' type enforcement, repeated non-compliance will result in more severe forms of enforcement, such as monetary penalties, stop work orders or permit revocation. Regional Board staff audits of permittees' storm water programs during the third term permit found that a large percentage of the permittees had characterized inventories of construction, industrial and commercial facilities within each permittee's respective jurisdiction. However, upon review of each permittees inventory and inspection data, Regional Board staff noted that criteria outlined within the third term permit regarding program element criteria yielded a wide range of interpretation between permittees. Therefore, more prescriptive requirements within this element of the permit are included in the fourth term permit. The fourth term permit has also added a residential program element to be implemented by the permittees. This element improves upon the existing requirements within the third term permit, by adding specific criteria associated with developing a more successful means of reducing the discharge of pollutants from residential areas into the MS4 to the maximum extent practicable.

8. NEW DEVELOPMENT

During the third term permit, the permittees developed and revised existing new development guidelines. The permittees were required to implement these guidelines, with program implementation of post construction Water Quality Management Plan (WQMP) criteria standards. Additionally, this order requires the permittees to work towards the goal of restoring and preserving the natural hydrologic cycles in approving urban developments. To accomplish this goal, the permittees are required to implement low impact development principles through appropriate site design and source control BMPs. Recent studies have indicated that low impact development¹⁰ (LID) is one of the most effective ways to minimize any adverse impacts on storm water runoff quality and quantity resulting from urban developments. The Southern California Monitoring Coalition (SMC), including project lead agency, the San Bernardino County Flood Control District, in collaboration with SMC member, Southern California Coastal Water Research Project (SCCWRP) and the California Storm Water Quality Association (CASQA), is developing a Low Impact Development Manual for Southern California with funding from the State Water Resources Control Board. This manual will be

¹⁰ Low impact development is an approach to land development (or re-development) that works with nature to manage storm water as close to its source as possible by using structural and non-structural best management practices to reduce environmental impacts.

incorporated into the CASQA BMP Handbooks. The permittees are encouraged to utilize the manual as a resource for proper LID design and implementation techniques. In order to avoid becoming a source of nuisance, a source of mobilization for existing subterranean contaminants and/or a source of habitat for vectors, LID infiltration BMPs must be properly designed and subsequently maintained.

The proposed order also includes a requirement to infiltrate, harvest and re-use, evapotranspire or capture the volume of runoff produced from a 24-hour, 85th percentile storm event (design capture volume) for new and re-development projects. It also recognizes that certain soil and groundwater conditions, as well as other site conditions might preclude a particular site from achieving onsite retention and/or treatment of the design capture volume and includes alternatives and in-lieu programs.

Post construction activities conducted at properties that have been developed for commercial or industrial use may substantially increase the risk of post construction pollutants being generated from the developed site. Therefore, the WQMP threshold criteria priority development projects in the proposed order have been redefined from those of third term permit. Third term permit thresholds currently require the development and implementation of post construction WQMP for non-residential commercial/industrial construction projects, where the combined impervious surface area of the project is equal to or greater than 100,000 square feet. WQMP requirement thresholds for residential projects require a WQMP to be prepared when subdivision projects include 10 lots and units or more. Proposed fourth term permit threshold requirements for WQMP development and implementation have become standardized for commercial/industrial, as well as residential construction projects, where the combined impervious surface area of the project is equal to or greater than 10,000 square feet. The aforementioned criteria were redefined in order to adequately address potential pollutant sources, which may exist at properties which undergo development for commercial and industrial uses. Other criteria, which constitute a priority development project have carried over from third term permit to the proposed order.

9. SANITARY SEWER OVERFLOWS, SEPTIC SYSTEM FAILURES AND PORTABLE TOILET DISCHARGES

The third term permit required the permittees to investigate adverse impacts on urban runoff quality from leaking septic systems and portable toilets. The information provided by the permittees indicates that leaking or failing septic systems are not significant problems in Orange County as most areas of the County are sewerred. A number of beach closures in Orange County have been due to spills, overflows, and leaks from the sanitary sewer lines. To address these concerns, waste discharge requirements (SSO order) for local sanitary sewer agencies were adopted by the Regional Board. Subsequently, the State Board adopted an SSO order, Water Quality Order No. 2006-0003, to address this problem on a statewide basis. The Regional Board SSO order has since been rescinded. The permittees are required to comply with the statewide SSO order.

10. MONITORING REQUIREMENTS

During the first term permit and part of the second term permit, the permittees conducted extensive monitoring of the storm water flows, receiving water quality and sediment quality. These early programs focused on identifying pollutants, estimating pollutant loads, tracking compliance with water quality objectives, and identifying sources of pollutants. The Orange County monitoring program, like other monitoring programs nationwide, has established that there is a high degree of uncertainty in the quality of storm water runoff and that there are significant variations in the quality of urban runoff spatially and temporally. However, most of the monitoring programs to date have indicated that there a number of pollutants in urban storm water runoff. Only in a few cases has a definite link between pollutants in urban runoff and beneficial use impairment been established.

In 1999, the permittees re-evaluated their monitoring program and proposed a revised monitoring program. The goals of the 1999 Water Quality Monitoring Program were:

- a. To determine the role of urban runoff in beneficial use impairment;
- b. To collect technical information to develop an effective urban storm water management plan; and
- c. To determine the effectiveness of a number of BMPs, also as an aid to the overall urban storm water management plan.

To accomplish these goals, the monitoring program focused on three areas:

- a. Areas where constituent concentrations are substantially above system-wide averages. These areas were referred to as “warm spots” and the designation is based on monitoring data from prior years.
- b. Areas of Critical Aquatic Resources (sites with important aquatic resources).
- c. Sub-watersheds where certain BMPs have been installed to study their effectiveness.

Based on the results of this monitoring program and the requirements specified in the third term permit and based on guidance provided in “The Model Monitoring Program for Southern California”¹¹, a revised monitoring program was submitted (2003 Monitoring Program).

The permittees also participate in a number of other regional monitoring programs such as those conducted by the Southern California Coastal Water Research Project and the California Regional Marine Monitoring Program.

The permittees are encouraged to continue their participation in regional and watershed-wide monitoring programs. By July 1, 2003, the permittees were required to re-evaluate their Water Quality Monitoring Program and submit a revised plan for approval. In February 2003, a revised plan was developed and final approval was given by the Executive Officer in July 2005. The revised plan includes the following monitoring elements: Mass Emissions, Estuary/Wetlands, Water Column Toxicity, Bacteriological/Pathogen, Bioassessment, Reconnaissance, Land Use Correlation, and TMDL/303(d) Listed Waterbodies.

¹¹ The Model Monitoring Program for Municipal

X. WATER QUALITY BENEFITS/COST ANALYSIS/FISCAL ANALYSIS

There are direct and indirect benefits from clean beaches, clean water, and a clean environment. It is difficult to assign a dollar value to the benefits the public derives from fishable and swimmable waters. In 1972, at the start of the NPDES program, only 1/3 of the US waters were swimmable and fishable. In 2001, 2/3 of the US waters meets these criteria. In the 2008, *Money* magazine survey of the "Best Places to Live", clean water and air ranked as the most important factors in choosing a place to live. Thus, environmental quality has a definite link to property values. Clean beaches and other water recreational facilities also attract tourists. According to the Orange County 2006 Community Indicators Project, it is estimated that on average, an out-of-county visitor spent an average of \$107.00 per day in 2004. Huntington Beach's 8.5-mile shoreline attracts 10 million visitors a year¹². During the summer of 1999 and 2000 when the beaches were closed to water contact recreation, the beach communities reported multi-million-dollar losses in tourist revenues.

The true magnitude of the urban runoff problem is still elusive and any reliable cost estimate for cleaning up urban runoff would be premature. For urban storm water runoff, end-of-pipe treatments are cost prohibitive and are not generally considered as a technologically feasible option. Over the last decade, the permittees have attempted to define the problem and implemented best management practices by implementing regional BMPs to combat the problem. The costs incurred by the permittees in implementing these programs and policies can be divided into three broad categories (the costs indicated below are for the entire Orange County storm water program):

¹² Los Angeles Times, May 9, 2001

1. Shared costs: These are costs that fund activities performed mostly by the principal permittee under the Implementation Agreement. These activities include overall storm water program coordination; intergovernmental agreements; representation at the Storm Water Quality Task Force, Regional Board/State Board meetings and other public forums; preparation and submittal of compliance reports and other reports required under the NPDES permits and Water Code Section 13267, budget and other program documentation; coordination of consultant studies, co-permittee meetings; and training seminars, water quality monitoring, and Countywide public education and outreach. Shared costs have increased from \$0.81M at the inception of the Orange County Stormwater Program to \$4.8M in 2006-7.
2. Individual Costs for DAMP Implementation: These are costs incurred by each permittee for implementing the BMPs (drainage facility inspections for illicit connections, drain inlet/catchbasin stenciling, public education, etc.) included in the DAMP. A number of programs and policies for non-point and storm water pollution controls existed prior to the urban storm water runoff NPDES program. However, the DAMP that was developed and implemented in response to the urban storm water runoff NPDES program required additional programs and policies for pollution control. These costs are attributable to DAMP implementation. In 2006/07, the Permittees determined their total Individual Costs to be \$82.2M.

In addition to these expenditures, volunteer efforts (such as the annual "Beach and Innercoastal Watershed Cleanup Day", etc.) also contributed to the urban runoff pollution control efforts.

The permittees identified the following funding sources (2006/07):

<i>FUNDING SOURCE</i>	<i>PERCENTAGE</i>
General Funds	11.8%
Gas Taxes	1.3%
Grants	30%
Sanitation Fees	31.3%
Time & Materials Ordinance & Permit Fees	0.6%
Special District Funds	24.3%
Other Sources	0.2%

XI. ANTIDegradation ANALYSIS

The Regional Board has considered whether a complete antidegradation analysis, pursuant to 40 CFR 131.12 and State Board Resolution No. 68-16, is required for these storm water discharges. The Regional Board finds that the pollutant loading rates to the receiving waters will be reduced with the implementation of the requirements in this order. As a result, the quality of storm water discharges and receiving waters will be improved. Since this order will not result in a lowering of water quality, a complete antidegradation analysis is not necessary, consistent with the federal and state antidegradation requirements.

XII. PUBLIC WORKSHOP

The Regional Board recognizes the significance of Orange County's Storm Water/Urban Runoff Management Program and will conduct, participate, and/or assist with any workshop

during the term of this order to promote and discuss the progress of the storm water management program. The details of the workshop will be posted on the Regional Board's website, published in local newspapers and mailed to interested parties. Persons wishing to be included in the mailing list for any of the items related to this order may register their e-mail address and/or mailing address with the Regional Board office at the address given below.

XIII. PUBLIC HEARING

The Regional Board opened a public hearing regarding the proposed waste discharge requirements on Friday, November 21, 2008 at 9:30 a.m. at the City Council Chambers, City of Yorba Linda. The public hearing was continued on Friday, January 18, 2002 at 9:00 a.m. at the City Council Chambers, City of Santa Ana, at which time Order No. R8-2002-0010 was adopted.

XIV. INFORMATION AND COPYING

Persons wishing further information may write to the above address or call Marc Brown at (951) 321-4584. Copies of the application, proposed waste discharge requirements, and other documents (other than those which the Executive Officer maintains as confidential) are available at the Regional Board office for inspection and copying by appointment scheduled between the hours of 8:30 a.m. and 4:00 p.m., Monday through Friday (excluding holidays).

XV. REGISTER OF INTERESTED PERSONS

Any person interested in a particular application or group of applications may leave his/her e-mail and/or mailing address and phone number as part of the file for an application. Copies of tentative waste discharge requirements will be mailed to all interested parties.

In addition to the permittees, comments were solicited from the following agencies and/or persons:

TAB "3"

**California Regional Water Quality Control Board
Santa Ana Region**

ORDER NO. R8-2002-0010

NPDES No. CAS618030

**Waste Discharge Requirements
for
the County of Orange, Orange County Flood Control District
and
The Incorporated Cities of Orange County Within the Santa Ana Region
Areawide Urban Storm Water Runoff
Orange County**

The California Regional Water Quality Control Board, Santa Ana Region (hereinafter Regional Board) finds that:

1. The 1987 amendments to the Clean Water Act (CWA) added Section 402(p) establishing a framework for regulating municipal and industrial (including construction) storm water discharges under the National Pollutant Discharge Elimination System (NPDES). Section 402(p) of the CWA requires NPDES permits for storm water discharges from municipal separate storm sewer systems (MS4) as well as other designated storm water discharges that are considered significant contributors of pollutants to waters of the United States. On November 16, 1990, the United States Environmental Protection Agency (hereinafter EPA) amended its NPDES permit regulations (40 CFR Parts 122, 123 and 124) to describe permit application requirements for storm water discharges.
2. Prior to EPA's promulgation of the storm water permit regulations, the three counties (Orange, Riverside, and San Bernardino) and the incorporated cities within the jurisdiction of the Santa Ana Regional Board requested areawide NPDES permits for urban storm water runoff. On July 13, 1990, the Regional Board adopted Order No. 90-71 for urban storm water runoff from urban areas in Orange County within the Santa Ana Region. The County of Orange was named as the principal permittee and the Orange County Flood Control District (OCFCD) and the incorporated cities were named as the co-permittees. Order No. 96-31, issued by the Regional Board on March 8, 1996, renewed the permit for another five years.
3. Order No. 96-31 expired on March 1, 2001. On September 1, 2000, the County of Orange Public Facilities and Resources Department (OCFRD) and the Orange County Flood Control District (OCFCD) in cooperation with the cities of Anaheim, Brea, Buena Park, Costa Mesa, Cypress, Fountain Valley, Fullerton, Garden Grove, Huntington Beach, Irvine, Laguna Woods, La Habra, La Palma, Lake Forest, Los Alamitos, Newport Beach, Orange, Placentia, Santa Ana, Seal Beach, Stanton, Tustin, Villa Park, Westminster, and Yorba Linda (hereinafter collectively referred to as permittees or dischargers), submitted NPDES Application No. CAS618030 and a Report of Waste Discharge for reissuance of their areawide storm water permit. In order to more effectively carry out the requirements of this order, the permittees have agreed that the County of Orange will continue as principal permittee and the OCFCD and the incorporated cities will continue as co-permittees. On March 5, 2001, Order No. 96-31, NPDES No. CAS618030, was

administratively extended in accordance with Title 23, Division 3, Chapter 9, §2235.4 of the California Code of Regulations.

4. The permittees serve a population of approximately 2.8 million, occupying an area of approximately 786 square miles (including unincorporated areas and the limits of 33 cities, 25 of which are within the jurisdiction of this Regional Board; two of the cities, Laguna Woods and Lake Forest, are within both the San Diego and Santa Ana Regional Boards' jurisdictions). The permitted area is shown on Attachment A. The permittees have jurisdiction over and /or maintenance responsibility for storm water conveyance systems within Orange County. The County's systems include an estimated 400 miles of storm drain systems. A major portion of the urbanized areas of Orange County drains into waterbodies within this Regional Board's jurisdiction. In certain cases, where a natural streambed is modified to convey storm water flows, the conveyance system becomes both an MS4 and a receiving water. The major storm drain systems and drainage areas in Orange County, which are within this Region, are shown on Attachment B. A portion of the Orange County drainage area is within the jurisdiction of the San Diego Regional Board and is regulated under an order issued by that Board.
5. Storm water outfalls from the MS4 systems in Orange County enter, or are tributary to, various water bodies of the Region. The permitted area can be subdivided into five tributary watersheds: the San Gabriel River drainage area, the Huntington Harbour and Bolsa Bay drainage area, the Santa Ana River drainage area, the Newport Bay drainage area, and the Irvine and Newport Coast Areas of Special Biological Significance (see Attachment B). These watersheds are tributary to the Pacific Ocean. The surface water bodies in Orange County include:

Inland Surface Streams

- a. Santa Ana River, Reaches 1 and 2,
- b. Silverado Creek (tributary to Santiago Creek),
- c. Santiago Creek, Reaches 1, 2, 3, and 4 (tributary to the Santa Ana River),
- d. San Diego Creek, Reaches 1 and 2 (tributary to Newport Bay),
- e. San Joaquin Freshwater Marsh (tributary to San Diego Creek),
- f. All other tributaries to these Creeks: Bonita Creek, Serrano Creek, Peters Canyon Wash, Hicks Canyon Wash, Bee Canyon Wash, Borrego Canyon Wash, Agua Chinon Wash, Laguna Canyon Wash, Rattlesnake Canyon Wash, Sand Canyon Wash, Black Star Creek, Carbon Canyon Creek, Coyote Creek and other tributaries.

Bays, Estuaries, and Tidal Prisms

- a. Anaheim Bay,
- b. Sunset Bay,
- c. Bolsa Bay and Bolsa Chica Ecological Reserve,
- d. Lower and Upper Newport Bay,
- e. Tidal Prism of Santa Ana River (to within 1000 feet of Victoria Street) and Newport Slough, Santa Ana Salt Marsh,

- f. Tidal Prism of San Gabriel River (River Mouth to Marina Drive),
- g. Tidal Prisms of Flood Control Channels Discharging to Coastal or Bay Waters (e.g. Huntington Harbour).

Ocean Waters

Nearshore Zone

- a. San Gabriel River to Poppy Street in Corona Del Mar,
- b. Poppy Street to Southeast Regional Boundary.

Offshore Zone

- a. Waters between Nearshore Zone and Limit of State Waters.

Lakes and Reservoirs

- a. Anaheim Lakes,
- b. Irvine Lake (Santiago Reservoir),
- c. Laguna, Peters Canyon, and Rattlesnake Reservoirs.

The beneficial uses of these water bodies include: municipal and domestic supply, agricultural supply, industrial service and process supply, groundwater recharge, navigation, hydropower generation, water contact recreation, non-contact water recreation, commercial and sportfishing, warm freshwater and limited warm freshwater habitats, cold freshwater habitat, preservation of biological habitats of special significance, wildlife habitat, preservation of rare, threatened or endangered species, marine habitat, shellfish harvesting, spawning, reproduction and development of aquatic habitats, and estuarine habitat . The ultimate goal of this storm water management program is to protect the beneficial uses of the receiving waters.

- 6. The Santa Ana River Basin is the major watershed within the jurisdiction of the Regional Board. The lower Santa Ana River Basin (downstream from Prado Basin) includes the Orange County drainage areas and the Upper Santa Ana River Basin includes the San Bernardino and the Riverside drainage areas. Generally, the San Bernardino County drainage areas drain to the Riverside County drainage areas, and Riverside County drainage areas discharge to Orange County.
- 7. Within the Region, runoff from the San Bernardino County areas is generally conveyed to the Riverside County areas through the Santa Ana River or other drainage channels tributary to the Santa Ana River. These flows are then discharged to Reach 2 of the Santa Ana River through Prado Basin (Reach 3 of the Santa Ana River). Most of the flow in Reach 2 is recharged in Orange County. During wet weather, some of the flow is discharged to the Pacific Ocean through Reach 1 of the Santa Ana River.
- 8. The three county areas within this Region are regulated under three areawide permits for urban storm water runoff. These areawide NPDES permits are:
 - a. Orange County, NPDES No. CAS618030;

- b. Riverside County, NPDES No. CAS618033; and,
- c. San Bernardino County, NPDES No. CAS618036.

For an effective watershed management program, cooperation and coordination among the regulators, the municipal permittees, the public, and other entities are essential.

9. Studies conducted by the EPA, the states, flood control districts and other entities indicate the following major sources for urban storm water pollution nationwide:
- a. Industrial sites where appropriate pollution control and best management practices (BMPs)¹ are not implemented;
 - b. Construction sites where erosion and siltation controls and BMPs are not implemented; and,
 - c. Urban runoff where the drainage area is not properly managed.
10. A number of permits were adopted to address pollution from the sources identified in Finding 9, above. The State Board issued two statewide general NPDES permits: one for storm water runoff from industrial activities (NPDES No. CAS000001, General Industrial Activities Storm Water Permit) and a second one for storm water runoff from construction activities (NPDES No. CAS000002, General Construction Activity Storm Water Permit). Industrial activities (as identified in 40 CFR 122.26(b)(14)) and construction sites of five acres or more, are required to obtain coverage under these statewide general permits. The permittees have developed project conditions of approval requiring coverage under the State's General Permit for new developments to be implemented at the time of grading or building permit issuance for construction sites on five acres or more and at the time of local permit issuance for industrial facilities. The State Board also adopted Order No. 99-06-DWQ, NPDES No. CAS000003, for storm water runoff from facilities (including freeways and highways) owned and/or operated by Caltrans. The Regional Board adopted Order 99-11, NPDES No. CAG018001, for concentrated animal feeding operations, including dairies. The Regional Board also issues individual storm water permits for certain industrial facilities within the Region. Currently there are 22 individual storm water NPDES permits; 8 of these facilities are located in the Orange County area. Additionally, for a number of facilities that discharge process wastewater and storm water, storm water discharge requirements are included with the facilities' NPDES permit for process wastewater.
11. In most cases, the industries and construction sites covered under the Statewide General Industrial and Construction Permits discharge into storm drains and/or flood control facilities owned and operated by the permittees. These industries and construction sites are also regulated under local laws and regulations. A coordinated effort between the permittees and the Regional Board staff is critical to avoid duplicative and overlapping efforts when overseeing the compliance of dischargers covered under the Statewide General Permits. As part of this coordination, the permittees have been notifying Regional Board staff when they observe conditions that pose a threat or potential threat to water quality, or when an industrial facility or

¹ Best Management Practices (BMPs) are water quality management practices that are maximized in efficiency for the control of storm water runoff pollution.

construction activity that has failed to obtain required coverage under the appropriate general storm water permit.

12. The permittees have the authority to approve plans for residential, commercial, and industrial developments. If not properly controlled and managed, urbanization could result in the discharge of pollutants in storm water runoff. Urban area runoff (Finding 9.c) may contain elevated levels of pathogens (bacteria, protozoa, viruses), sediment, trash, fertilizers (nutrients, compounds of nitrogen and phosphorus), pesticides (DDT, Chlordane, Diazinon, Chlorpyrifos), heavy metals (cadmium, chromium, copper, lead, zinc), and petroleum products (oil, grease, petroleum hydrocarbons, polycyclic aromatic hydrocarbons). Storm water can carry these pollutants to rivers, streams, lakes, bays and the ocean (receiving waters).
13. Pollutants in urban runoff can impact the beneficial uses of the receiving waters and can cause or threaten to cause a condition of pollution or nuisance. Pathogens (from sanitary sewer overflows, septic system leaks, spills and leaks from portable toilets, pets, wildlife and human activities) can impact water contact recreation, non-contact water recreation and shellfish harvesting. Microbial contamination of the beaches from urban runoff and other sources has resulted in a number of health advisories issued by the Orange County Health Officer. Floatables (from trash) are an aesthetic nuisance and can be a substrate for algae and insect vectors. Oil and grease can coat birds and aquatic organisms, adversely affecting respiration and/or thermoregulation. Other petroleum hydrocarbon components can cause toxicity to aquatic organisms and can impact human health. Suspended and settleable solids (from sediment, trash, and industrial activities) can be deleterious to benthic organisms and may cause anaerobic conditions to form. Sediments and other suspended particulates can cause turbidity, clog fish gills and interfere with respiration in aquatic fauna. They can also screen out light, hindering photosynthesis and normal aquatic plant growth and development. Toxic substances (from pesticides, herbicides, petroleum products, metals, industrial wastes) can cause acute and/or chronic toxicity, and can bioaccumulate in organisms to levels that may be harmful to human health. Nutrients (from fertilizers, confined animal facilities, pets, birds) can cause excessive algal blooms. These blooms can lead to problems with taste, odor, color and increased turbidity, and can depress the dissolved oxygen content, leading to fish kills.
14. A major portion of Orange County is urbanized with residential, commercial and industrial developments. Urban development increases impervious surfaces and storm water runoff volume and velocity and decreases vegetated, pervious surface available for infiltration of storm water. Increase in runoff volume and velocity can cause scour, erosion (sheet, rill and/or gully), aggradation (raising of a streambed from sediment deposition) and can change fluvial geomorphology, hydrology and aquatic ecosystems. The local agencies (the permittees) are the owners and operators of the MS4 systems and have established appropriate legal authority to control some but not all discharges to these systems (see Finding 16). The permittees have established appropriate legal authority to control discharges into the MS4 systems. They adopted grading and/or erosion control ordinances, guidelines and best management practices (BMPs) for municipal, commercial, and industrial activities, and a drainage area management plan (DAMP). The permittees must exercise a combination of these programs, policies, and legal authority to ensure that pollutant loads resulting from urbanization are properly controlled and managed.

15. This order regulates urban storm water runoff from areas under the jurisdiction of the permittees. Urban storm water runoff includes those discharges from residential, commercial, industrial and construction areas within the permitted area and excludes discharges from feedlots, dairies, and farms (also see Finding 16). Storm water discharges consist of surface runoff generated from various land uses in all the hydrologic drainage areas that discharge into the water bodies of the U.S. The quality of these discharges varies considerably and is affected by land use activities, basin hydrology and geology, season, the frequency and duration of storm events, and the presence of illicit² disposal practices and illegal connections.
16. The permittees may lack legal jurisdiction over storm water discharges into their systems from some State and Federal facilities, utilities and special districts, Native American tribal lands, waste water management agencies and other point and non-point source discharges otherwise permitted by the Regional Board. The Regional Board recognizes that the permittees should not be held responsible for such facilities and/or discharges. Similarly, certain activities that generate pollutants present in storm water runoff may be beyond the ability of the permittees to eliminate. Examples of these include operation of internal combustion engines, atmospheric deposition, brake pad wear, tire wear and leaching of naturally occurring minerals from local geography.
17. This order is intended to regulate the discharge of pollutants in urban storm water runoff from anthropogenic (generated from human activities) sources within the jurisdiction and control of the permittees and is not intended to address background or naturally occurring pollutants or flows.
18. Water quality assessments conducted by Regional Board staff have identified a number of beneficial use impairments due, in part, to urban runoff. Section 303(b) of the CWA requires each of the regional boards to routinely monitor and assess the quality of waters of the region. If this assessment indicates that beneficial uses and/or water quality objectives are not met, then that waterbody must be listed under Section 303(d) of the CWA as an impaired waterbody. The 1998 water quality assessment listed a number of water bodies within the Region under Section 303(d) as impaired waterbodies. In the Orange County area, these include: (1) San Diego Creek, Reach 1 (listed for sedimentation/siltation, metals, nutrients, pesticides); (2) San Diego Creek, Reach 2 (listed for sedimentation/siltation, nutrients, metals, unknown toxicity); (3) Upper Newport Bay Ecological Reserve (listed for sedimentation/siltation, metals, nutrients, pathogens, pesticides); (4) Lower Newport Bay (listed for metals, pesticides, pathogens, nutrients, priority organics); (5) Anaheim Bay (listed for metals, pesticides); (6) Huntington Harbour (listed for metals, pesticides, pathogens); (7) Santiago Creek, Reach 4 (listed for salinity, TDS, chlorides); and (8) Silverado Creek (listed for pathogens, salinity, TDS, chlorides). For some of these impaired waterbodies, one of the listed causes of impairment is urban runoff.
19. Federal regulations require that a total maximum daily load (TMDL) be established for each 303(d) listed waterbody for each of the pollutants causing impairment. The TMDL is the total amount of the problem pollutant that can be discharged while water quality standards in the receiving water are attained, i.e., water quality objectives are met and the beneficial uses are protected. It is the sum of the individual wasteload allocations (WLA) for point source inputs,

² Illicit Disposal means any disposal, either intentionally or unintentionally, of material or waste that can pollute storm water or create a nuisance.

load allocations (LA) for non-point source inputs and natural background, with a margin of safety. The TMDLs are the basis for limitations established in waste discharge requirements. TMDLs have been developed for sediment and nutrients for San Diego Creek and Newport Bay. A fecal coliform TMDL for Newport Bay has also been established. The WLAs from these TMDLs are included in this order. Dischargers to these water bodies are currently implementing these TMDLs. This order specifies the WLAs and includes requirements for the implementation of these WLAs.

20. The MS4s generally contain non-storm water flows such as irrigation runoff, runoff from non-commercial car washes, runoff from miscellaneous washing and cleaning operations, and other nuisance flows. Discharges of non-storm water containing pollutants into the MS4 systems and to waters of the U.S. are prohibited unless they are regulated under a separate NPDES permit, or are exempt, as indicated in Discharge Prohibitions, Section III.3 of this order.
21. Order No. 90-71 (first term permit) required the permittees to: (1) develop and implement the DAMP and a storm water and receiving water monitoring plan; (2) eliminate illegal³ and illicit discharges⁴ to the MS4s; and (3) enact the necessary legal authority to effectively prohibit such discharges. The overall goal of these requirements was to reduce pollutant loadings to surface waters from urban runoff to the maximum extent practicable (MEP)⁵. Order No. 96-31 (second term permit) required continued implementation of the DAMP and the monitoring plan, and required the permittees to focus on those areas that threaten beneficial uses.
22. This order (Order No. R8-2002-0010, third term permit) outlines additional steps for an effective storm water management program and specifies requirements to protect the beneficial uses of all receiving waters. This order requires the permittees to examine sources of pollutants in storm water runoff from activities which the permittees conduct, approve, regulate and/or authorize by issuing a license or permit.
23. The Report of Waste Discharge (the permit renewal application) included the following major documents:
 - a. A summary of status of current Storm Water Management Program;
 - b. A Proposed Plan of Storm Water Quality Management Activities for 2001-2006, as outlined in the Updated DAMP. The 2000 DAMP includes all the activities the permittees propose to undertake during the next permit term, goals and objectives of such activities, an evaluation of the need for additional source control and/or structural and non-structural BMPs and proposed pilot studies;

³ Illegal discharge means any discharge (or seepage) to the municipal separate storm sewer that is not composed entirely of storm water except for the authorized discharges listed in Section III of this permit. Illegal discharges include the improper disposal of wastes into the storm sewer system.

⁴ Illicit Discharge means any discharge to the storm drain system that is prohibited under local, state, or federal statutes, ordinances, codes, or regulations. The term illicit discharge includes all non storm-water discharges except discharges pursuant to an NPDES permit, discharges that are identified in Section III, Discharge Limitations/Prohibitions, of this order, and discharges authorized by the Regional Board Executive Officer.

⁵ Maximum Extent Practicable (MEP) means to the maximum extent feasible, taking into account considerations of synergistic, additive, and competing factors, including but not limited to, gravity of the problem, technical feasibility, fiscal feasibility, public health risks, societal concerns, and social benefits.

- c. A Performance Commitment that includes new and existing program elements and compliance schedules necessary to implement controls that reduce pollutants to the maximum extent practicable;
 - d. A summary of procedures implemented to detect illegal discharges and illicit disposal practices;
 - e. A summary of enforcement procedures and actions taken to require storm water discharges to comply with the approved storm water management programs;
 - f. A summary of public agency activity, results of monitoring program, and program effectiveness; and,
 - g. A fiscal analysis.
24. The permittees own and/or operate facilities where industrial or related activities take place that may have an impact on storm water quality. Some of the permittees also enter into contracts with outside parties to carry out municipal related activities that may also have an impact on storm water quality. These facilities and related activities include, but are not limited to, street sweeping, catch basin cleaning, maintenance yards, vehicle and equipment maintenance areas, waste transfer stations, corporation and storage yards, parks and recreational facilities, landscape and swimming pool maintenance activities, storm drain system maintenance activities and the application of herbicides, algacides and pesticides. The permittees have prepared and implemented an environmental performance report for appropriate fixed public facilities under their jurisdiction, and identified best management practices for those activities found to require pollution prevention measures. Non-storm water discharges from these facilities and/or activities could also affect water quality. This order prohibits non-storm water discharges from public facilities, unless the discharges are exempt under Section III, Discharge Limitations, 3 & 5 of this order, or are permitted by the Regional Board under an individual NPDES permit. The second term permit required the permittees to prepare an Environmental Performance Reporting Program to identify significant issues and to implement corrective actions at municipal facilities and activities. Most of this work has been completed. However, this is a continuing process and this order requires the permittees to continue this process at least on an annual basis.
25. Successful implementation of the provisions and limitations in this order will require the cooperation of all the public agency organizations within Orange County having programs/activities that have an impact on storm water quality. A list of these organizations is included in Attachment C. As such, these organizations are expected to actively participate in implementing the Orange County NPDES Storm Water Program. The Regional Board has the discretion and authority to require non-cooperating entities to participate in this areawide permit or obtain individual storm water discharge permits, pursuant to 40 CFR 122.26(a). The permittees have developed a Storm Water Implementation Agreement among the County, the cities and the Orange County Flood Control District. The Implementation Agreement establishes the responsibilities of each party and a funding mechanism for the shared costs, and recognizes the Technical Advisory Committee (TAC).
26. The major focus of storm water pollution prevention is the development and implementation of an appropriate DAMP, including best management practices (BMPs). The ultimate goal of the urban storm water management program is to support attainment of water quality objectives for

- the receiving waters and to protect beneficial uses through the implementation of the DAMP. The permittees developed and submitted a DAMP.
27. The DAMP is a dynamic document and the permittees have implemented, or are in the process of implementing, the various elements of the DAMP. A revised DAMP was included with the NPDES permit renewal application. This order requires the permittees to continue to implement the BMPs listed in the revised DAMP; update or modify the DAMP, when appropriate, consistent with the MEP and other applicable standards; and to effectively prohibit illegal and illicit discharges to the storm drain system.
 28. Urban runoff contains pollutants from privately owned and operated facilities, such as residences, businesses, private and/or public institutions, and commercial establishments. Therefore, a successful storm water management plan should include the participation and cooperation of the public, businesses, the permittees and the regulators. The DAMP has a strong emphasis on public education.
 29. The Orange County DAMP defined: (1) a management structure for the permittees' compliance effort; (2) a formal agreement to underpin cooperation; and (3) a detailed municipal effort to develop, implement, and evaluate various BMPs or control programs in the areas of public agency activities, public information, new development and construction, public works construction, industrial discharger identification, and illicit discharger/connection identification and elimination.
 30. In order to characterize storm water discharges, to identify problem areas, to determine the impact of urban runoff on receiving waters, and to determine the effectiveness of the various BMPs, an effective monitoring program is critical. The principal permittee administers the monitoring program for the permittees. This program included storm water monitoring, receiving water monitoring, dry weather monitoring and sediment monitoring. The monitoring data indicate some spatial differences in water quality among Orange County's major watersheds. Based on these monitoring data, the monitoring program was revised in 1998 to focus on "warm spots" (areas where the pollutant concentrations were above the average for the watershed) and "special value" areas (critical aquatic resources). Another element of the monitoring program is the Reconnaissance and Source Identification component that targets areas that are known to exhibit unusually high levels of storm water pollutants. The 1998 monitoring program was approved and the data collection under this program will be completed by July 1, 2003. By January 1, 2003, the State Board is required by SB 72 (Water Code Section 13383.5) to develop a statewide municipal storm water monitoring program. By July 1, 2003, the permittees are required to develop a revised monitoring program as specified in the monitoring and reporting program and consistent with any new requirements developed by the State Board.
 31. In accordance with the Strategic Plan and Initiatives for the State and Regional Boards (June 22, 1995), the Regional Board recognizes the importance of an integrated watershed management approach. The Regional Board also recognizes that a watershed management program should integrate all related programs, including the storm water program and TMDL processes. Consistent with this approach, some of the municipal storm water monitoring programs have already been integrated into regional monitoring programs.

32. Illegal discharges to the storm drains can contribute to storm water and other surface water contamination. A reconnaissance survey of the municipal storm drain systems (open channels and underground storm drains) was completed by the permittees. The permittees also developed a program to prohibit illegal/illicit discharges to their storm drains and flood control facilities. Continued surveillance and enforcement of these programs are required to eliminate illicit discharges. The permittees have a number of mechanisms in place to eliminate illicit discharges to the MS4s, including construction, commercial, and industrial facility inspections, drainage facility inspections, water quality monitoring programs, and public education. The permittees also established a 24-hour water pollution problem reporting hotline. In February 1997, the permittees certified that they had completed a reconnaissance survey of the MS4s to detect and eliminate any illegal connections (undocumented or unpermitted connections to the MS4s). A reconnaissance survey is now being conducted as a part of the routine inspections of all MS4s.
33. The permittees have the authority to control pollutants in storm water discharges, to prohibit illegal connections and illicit discharges, to control spills, and to require compliance and carry out inspections of the storm drain systems within their jurisdictions. The permittees have various forms of legal authority in place, such as charters, State Code provisions for General Law cities, city ordinances, and applicable portions of municipal codes and the State Water Code, to regulate storm water/urban runoff discharges. In order to insure countywide consistency and to provide a legal underpinning to the entire Orange County storm water program, a model water quality ordinance was completed on August 15, 1994 and was adopted by all the permittees. The permittees are required by this order to review their existing enforcement authority to determine whether any additional legal authority is needed in order for permittees to administer civil and/or criminal penalties in enforcement actions for violations of the Water Quality Ordinance.
34. Pollution prevention techniques, appropriate planning processes and early identification of potential storm water impacts and mitigation measures can significantly reduce storm water pollution problems. The permittees should consider these impacts and appropriate mitigation measures in the planning procedures and in the California Environmental Quality Act (CEQA) review process for specific projects, Master Plans, etc. The permittees already require a Water Quality Management Plan, which addresses permanent post-construction BMPs, in addition to the SWPPP, which is required by the statewide general permit for construction activity. The permittees are encouraged to propose and participate in watershed wide and/or regional water quality management programs.
35. The permittees have developed inter-departmental training programs and have made commitments to conduct a certain number of these training programs during the term of this permit.
36. In accordance with the Clean Water Act and its implementing regulations, this order requires the permittees to develop and implement programs and policies necessary to reduce the discharge of pollutants in urban runoff to waters of the U. S. to the maximum extent practicable (MEP).

37. The legislative history and the preamble to the federal storm water regulations indicate that the Congress and the U.S. EPA were aware of the difficulties in regulating urban storm water runoff solely through traditional end-of-pipe treatment. However, it is the Regional Board's intent that this order require the implementation of best management practices to reduce to the maximum extent practicable, the discharge of pollutants in storm water from the MS4s in order to support attainment of water quality standards. This order, therefore, includes Receiving Water Limitations⁶ based upon water quality objectives, prohibits the creation of nuisance and requires the reduction of water quality impairment in receiving waters. In accordance with Section 402 (p) of the Clean Water Act, this order requires the permittees to implement control measures, in accordance with the DAMP, that will reduce pollutants in storm water discharges to the maximum extent practicable. The Receiving Water Limitations similarly require the implementation of control measures to protect beneficial uses and attain water quality objectives of the receiving waters.
38. The Regional Board finds that the unique aspects of the regulation of storm water discharges through municipal storm sewer systems, including the intermittent nature of discharges, difficulties in monitoring and limited physical control over the discharge, will require adequate time to implement and evaluate the effectiveness of BMPs. Therefore, the order includes a procedure for determining whether storm water discharges are causing exceedances of receiving water limitations and for evaluating whether the DAMP must be revised in order to comply with this aspect of the order. The order establishes an iterative process to maintain compliance with the receiving water limitations.
39. The permittees are required to conduct inspections of construction sites, industrial facilities and commercial establishments. To avoid duplicative efforts, the permittees need not inspect facilities that have been inspected by Regional Board staff, if the inspection was conducted during the specified time period. Regional Board staff inspection data will be posted regularly on its internet site. It is anticipated that many of the inspections required under this order can and will be carried out by inspectors currently conducting inspections for the permittees (i.e., grading, building, code enforcement, etc.), during their normal duties.
40. A revised Water Quality Control Plan (Basin Plan) was adopted by the Regional Board and became effective on January 24, 1995. The Basin Plan contains water quality objectives and beneficial uses for water bodies in the Santa Ana Region. The Basin Plan also incorporates by reference all State Board water quality control plans and policies, including the 1990 Water Quality Control Plan for Ocean Waters of California (Ocean Plan) and the 1974 Water Quality Control Policy for Enclosed Bays and Estuaries of California (Enclosed Bays and Estuaries Plan).
41. The requirements contained in this order are necessary to implement the plans and policies described in Finding 40, above. These plans and policies contain numeric and narrative water quality standards for the water bodies in this Region. This order requires permittees to comply with load allocations for constituents with established load allocations for urban runoff, by implementing the necessary BMPs. Continuation of water quality/biota monitoring and analysis

⁶ Receiving Water Limitations are requirements included in the Orders issued by the Board to assure that the regulated discharge does not violate water quality standards established in the Basin Plan at the point of discharge to waters of the State.

of the data are essential to better understand the impacts of storm water discharges on the water quality of the receiving water. The existing Basin Plan, or any further changes to the Basin Plan, may be grounds for the permittees to revise some or all of the DAMP and/or the ROWD.

42. Permittees will be required to comply with any applicable future water quality standards or discharge requirements that may be imposed by the EPA or State of California prior to the expiration of this order. This order may be reopened to include TMDLs and/or other requirements developed and adopted by the Regional Board.
43. The permittees may petition the Regional Board to issue a separate NPDES permit to any discharger of non-storm water into storm drain systems that they own or operate.
44. The permittees under the aegis of the TAC, and in collaboration with the City and County Attorneys, Orange County Sanitation District, the Orange County Building Industry Association, the Food Sanitation Advisory Council, and Western States Petroleum Association, developed an Enforcement Consistency Guide and a Water Quality Ordinance. All of the permittees adopted the Enforcement Consistency Guide and the Water Quality Ordinance. These documents establish legal authority for enforcing storm water ordinances and countywide uniformity in the enforcement actions.
45. It is important to control litter to eliminate trash and other materials in storm water runoff. In addition to the municipal ordinances prohibiting litter, the permittees participate or organize a number of other programs such as "Coastal Cleanup Day", "Pride Days", "Volunteer Connection Day", etc. The permittees also organize solid waste collection programs, household hazardous waste collections, and recycling programs to reduce litter and illegal discharges. Additionally, the permittees have installed debris booms at a number of locations.
46. The permittees are required to continue their drainage system inspection and maintenance program.
47. At a number of locations along the Orange County coast, elevated bacterial levels were detected during the summer of 1999 and 2000. One of the studies conducted to determine the source of bacterial contamination indicated that there is only a minor contribution to the bacterial problems from urban runoff. The permittees currently divert dry weather low flows from some of these areas to sanitary sewer systems on a temporary basis to address this bacterial problem. A number of studies have been initiated to determine the source of this microbial contamination and to develop permanent remedial measures. This order requires the permittees to further investigate and address the coastal bacterial problems.
48. The sampling data indicate the presence of elevated levels of pesticides in storm water runoff from urban areas. The permittees have developed and implemented a model plan entitled, "Management Guidelines for Use of Fertilizers and Pesticides". The permittees are required to review this plan to determine its effectiveness and to make any needed changes. TMDLs are being developed for some of these pesticides for the Newport Bay watershed.
49. Public education is an important part of storm water pollution prevention. The permittees have employed a variety of means to educate the public, business and commercial establishments, industrial facilities and construction sites, and in 1999 developed a long term public education strategy. The permittees are required to continue their efforts in public education programs.

50. The permittees established a taskforce consisting of the principal permittee, Building Industry Association, Association of General Contractors and Civil Engineers and Land Surveyors of California and developed "Best Management Practices for New Development Including Non-Residential Construction Projects (1-5 acres)". The permittees are implementing the BMPs from this guidance document and are requiring new developments and significant redevelopments to develop and implement appropriate Water Quality Management Plans. This order requires structural and non-structural BMPs for new developments and significant redevelopments, only if adequate regional and/or watershed wide management programs are not being implemented.
51. The Regional Board and the permittees recognize the importance of watershed management initiatives and regional planning and coordination in the development and implementation of programs and policies related to water quality protection. A number of such efforts are underway in which the permittees are active participants. This order encourages continued participation in such programs and policies. The Regional Board also recognizes that, in certain cases, diversion of funds targeted for certain monitoring programs to regional monitoring programs may be necessary. The Executive Officer is authorized to approve, after proper public notification and consideration of all comments received, the watershed management initiatives and regional planning and coordination programs and regional monitoring programs. The permittees are required to submit all documents, where appropriate, in an electronic format. All such documents will be posted at the Regional Board's website and all interested parties will be notified. In addition, the website will include the administrative and civil procedures for appealing any decision made by the Executive Officer.
52. The storm water regulations require public participation in the development and implementation of the storm water management program. As such, the permittees are required to solicit and consider all comments received from the public and submit copies of the comments to the Executive Officer of the Regional Board with the annual reports due on November 15. In response to public comments, the permittees may modify reports, plans, or schedules prior to submittal to the Executive Officer.
53. In accordance with California Water Code Section 13389, the issuance of waste discharge requirements for this discharge is exempt from those provisions of the California Environmental Quality Act contained in Chapter 3 (commencing with Section 21100), Division 13 of the Public Resources Code.
54. The permitted discharge is consistent with the anti-degradation provisions of 40 CFR 131.12 and the State Board Resolution 68-16. This order requires implementation of programs (i.e., BMPs) to reduce the level of pollutants in the storm water discharges. The combination of programs and policies required to be implemented under this order for new and existing developments are designed to improve urban storm water quality.
55. The Regional Board has notified the permittees and interested parties of its intent to issue waste discharge requirements for this discharge and has provided them with an opportunity to submit their written views and recommendations.
56. The Regional Board, in a public hearing, heard and considered all comments pertaining to the discharge and to the tentative requirements.

IT IS HEREBY ORDERED that the permittees, in order to meet the provisions contained in Division 7 of the California Water Code and regulations adopted thereunder, and the provisions of the Clean Water Act, as amended, and regulations and guidelines adopted thereunder, shall comply with the following:

I. RESPONSIBILITIES OF PRINCIPAL PERMITTEE

The principal permittee shall be responsible for the overall program management and shall:

1. Conduct chemical and biological water quality monitoring, as required by the Executive Officer of the Regional Board.
2. Conduct inspections and maintain the storm drain systems within its jurisdiction.
3. Review and revise, if necessary, policies/ordinances necessary to establish legal authority as required by the Federal Storm Water Regulations.
4. Respond and/or arrange for responding to emergency situations, such as accidental spills, leaks, illicit discharges and illegal connections, etc., to prevent or reduce the discharge of pollutants to storm drain systems and waters of the U.S. within its jurisdiction.
5. Take appropriate enforcement actions for illicit discharges to the MS4 systems owned or controlled by the principal permittee.
6. Prepare and submit to the Executive Officer of the Regional Board unified reports, plans, and programs as required by this order, including the annual report.

The activities of the principal permittee shall include, but not be limited to, the following:

1. Coordinate and conduct Management Committee meetings on an as needed basis. The principal permittee will take the lead role in initiating and developing area-wide programs and activities necessary to comply with the NPDES Permit.
2. Coordinate permit activities and participate in any subcommittees formed as necessary to coordinate compliance activities with this order.
3. Provide technical and administrative support and inform the co-permittees of the progress of other pertinent municipal programs, pilot projects, research studies, etc.
4. Coordinate the implementation of area-wide storm water quality management activities such as public education, pollution prevention, household hazardous waste collection, etc.
5. Develop and implement mechanisms, performance standards, etc., to promote uniform and consistent implementation of BMPs among the permittees.
6. Pursue enforcement actions as necessary within its jurisdiction to ensure compliance with storm water management programs, ordinances and implementation plans, including physical elimination of undocumented connections and illicit discharges.
7. In conjunction with the other permittees, implement the BMPs listed in the DAMP, and take such other actions as may be necessary to meet the MEP standard.
8. Monitor the implementation of the plans and programs required by this order and determine their effectiveness in protecting beneficial uses.

9. Coordinate all the activities with the Regional Board, including the submittal of all reports, plans, and programs, as required under this order.
10. Obtain public input for any proposed management and implementation plans, where applicable.
11. Cooperate in watershed management programs and regional and/or statewide monitoring programs.

II. RESPONSIBILITIES OF THE CO-PERMITTEES

The co-permittees shall be responsible for the management of storm drain systems within their jurisdictions and shall:

1. Implement management programs, monitoring programs, implementation plans and all BMPs outlined in the DAMP within each respective jurisdiction, and take any other actions as may be necessary to meet the MEP standard.
2. Coordinate among their internal departments and agencies, as appropriate, to facilitate the implementation of this Order and the DAMP.
3. Establish and maintain adequate legal authority, as required by the Federal Storm Water Regulations.
4. Conduct storm drain system inspections and maintenance in accordance with the criteria developed by the principal permittee.
5. Take appropriate enforcement actions for illicit discharges to the MS4 system owned or controlled by the co-permittee.

The co-permittees' activities shall include, but not be limited to, the following:

1. Participate in a Management Committee comprised of the principal permittee and one representative of each co-permittee. The principal permittee will take the lead role in initiating and developing area-wide programs activities necessary to comply with the NPDES Permit. The committee will meet on a regular basis (at least six times per year). Each permittee shall designate one official representative to the Management Committee.
2. Review, approve, implement, and comment on all plans, strategies, management programs, and monitoring programs, as developed by the principal permittee or any permittee subcommittee to comply with this order.
3. Pursue enforcement actions as necessary to ensure compliance with the storm water management programs, ordinances and implementation plans, including physical elimination of undocumented connections and illicit discharges.
4. Conduct and coordinate with the principal permittee any surveys and characterizations needed to identify the pollutant sources and drainage areas.
5. Submit storm drain system maps with periodic revisions, as necessary.

6. Respond to emergency situations, such as accidental spills, leaks, illicit discharges and illegal connections, etc., to prevent or reduce the discharge of pollutants to storm drain systems and waters of the U.S.
7. Prepare and submit all required reports to the principal permittee in a timely manner.

III. DISCHARGE LIMITATIONS/PROHIBITIONS

1. In accordance with the requirements of 40 CFR 122.26(d)(2)(i)(B) and 40 CFR 122.26(d)(2)(i)(F), the permittees shall prohibit illicit/illegal discharges (non-storm water) from entering into the municipal separate storm sewer systems.
2. The discharge of storm water from the MS4s to waters of the United States containing pollutants that have not been reduced to the maximum extent practicable is prohibited.
3. The permittees shall effectively prohibit the discharge of non-storm water into the MS4s, unless such discharges are authorized by a separate NPDES permit or as otherwise specified in this provision. Certain discharges identified below need not be prohibited by the permittees. If, however, any of these discharges are identified by the permittees or the Executive Officer as a significant source of pollutants, coverage under the Regional Board's De Minimus permit may be required.
 - a. Discharges composed entirely of storm water,
 - b. Potable water line flushing and other potable water sources,
 - c. Air conditioning condensate,
 - d. Landscape irrigation, lawn garden watering and other irrigation waters,
 - e. Passive foundation drains,
 - f. Passive footing drains,
 - g. Water from crawl space pumps,
 - h. Dechlorinated swimming pool discharges,
 - i. Non-commercial vehicle washing,
 - j. Diverted stream flows,
 - k. Rising ground waters and natural springs,
 - l. Ground water infiltration as defined in 40 CFR 35.2005 (20) and uncontaminated pumped groundwater,
 - m. Flows from riparian habitats and wetlands,
 - n. Emergency fire fighting flows (i.e., flows necessary for the protection of life and property) do not require BMPs and need not be prohibited. However, where possible, when not interfering with health and safety issues, BMPs should be considered (also see Section XIX, Provision 4),
 - o. Waters not otherwise containing wastes as defined in California Water Code Section 13050 (d), and

- p. Other types of discharges identified and recommended by the permittees and approved by the Regional Board.

The Regional Board may add categories of non-storm water discharges that are not significant sources of pollutants or remove categories of non-storm water discharges listed above based upon a finding that the discharges are a significant source of pollutants.

4. For purposes of this order, a discharge may include storm water or other types of discharges, identified in Section III.3.
5. Non-storm water discharges from public agency activities into waters of the U.S. are prohibited unless the non-storm water discharges are permitted by an NPDES permit or are included in Section III.3. If permitting or immediate elimination of the non-storm water discharges is impractical, the permittees shall include in the Environmental Performance Report, a proposed plan to eliminate the non-storm water discharges in a timely manner.
6. The permittees shall reduce the discharge of pollutants, including trash and debris, from the storm water conveyance systems to the maximum extent practicable.
7. Discharges from the MS4s shall be in compliance with the applicable discharge prohibitions contained in Chapter 5 of the Basin Plan.
8. Discharges from the MS4s of storm water or non-storm water, for which a Permittee is responsible, shall not cause or contribute to a condition of nuisance, as that term is defined in Section 13050 of the Water Code.

IV. RECEIVING WATER LIMITATIONS

1. Discharges from the MS4s shall not cause or contribute to exceedances of receiving water quality standards (designated beneficial uses and water quality objectives) for surface waters or groundwaters.
2. The DAMP and its components shall be designed to achieve compliance with receiving water limitations. It is expected that compliance with receiving water limitations will be achieved through an iterative process and the application of increasingly more effective BMPs. The permittees shall comply with Sections III.2 and IV of this order through timely implementation of control measures and other actions to reduce pollutants in urban storm water runoff in accordance with the DAMP and other requirements of this order, including any modifications thereto.
3. If permittees continue to cause or contribute to an exceedance of water quality standards, notwithstanding implementation of the DAMP and other requirements of this order, the permittees shall assure compliance with Sections III.2 and IV of this order by complying with the following procedure:
 - a. Upon a determination by either the permittees or the Executive Officer that the discharges from the MS4 systems are causing or contributing to an exceedance of an applicable water quality standard, the permittees shall promptly notify and thereafter submit a report to the Executive Officer that describes BMPs that are currently being

implemented and additional BMPs that will be implemented to prevent or reduce any pollutants that are causing or contributing to the exceedance of water quality standards. The report may be incorporated in the annual update to the DAMP, unless the Executive Officer directs an earlier submittal. The report shall include an implementation schedule. The Executive Officer may require modifications to the report;

- b. Submit any modifications to the report required by the Executive Officer within 30 days of notification;
- c. Within 30 days following approval by the Executive Officer of the report described above, the permittees shall revise the DAMP and monitoring program to incorporate the approved modified BMPs that have been and will be implemented, the implementation schedule, and any additional monitoring required; and,
- d. Implement the revised DAMP and monitoring program in accordance with the approved schedule.

So long as the permittees have complied with the procedures set forth above and are implementing the revised DAMP, the permittees do not have to repeat the same procedure for continuing or recurring exceedances of the same receiving water limitations unless the Executive Officer determines it is necessary to develop additional BMPs.

V. IMPLEMENTATION AGREEMENT

1. By July 1, 2002, the existing Implementation Agreement shall be revised to include the cities that were not signatories to this agreement. A copy of the signature page and any revisions to the Agreement shall be included in the annual report.
2. By July 1, 2002, the permittees shall evaluate the storm water management structure and the Implementation Agreement and determine the need for any revision. The corresponding annual report shall include the findings of this review and a schedule for any needed revisions.

VI. LEGAL AUTHORITY/ENFORCEMENT

1. The permittees shall maintain adequate legal authority to control the contribution of pollutants to the MS4 by storm water discharges and enforce those authorities.
2. The permittees shall take appropriate enforcement actions against any violators of their Water Quality Ordinance, in accordance with the adopted/established guidelines and procedures. All enforcement actions shall be consistent with the Enforcement Consistency Guide.
3. Permittees' ordinances or other local regulatory mechanisms shall include sanctions to ensure compliance. Sanctions shall include but are not limited to: monetary penalties, non-monetary penalties, bonding requirements, and/or permit denials/revocations/stays for non-compliance. If the permittees' current ordinances do not have a provision for civil or criminal penalties for violations of their water quality ordinances, the permittees shall enact such ordinances by November 15, 2003.

4. By November 15, 2003, each permittee shall submit a statement, signed by legal counsel, that the permittee has obtained all necessary legal authority to comply with this Order through adoption of ordinances and/or municipal code modifications.
5. The permittees shall continue to provide notification to Regional Board staff regarding storm water related information gathered during site inspections of industrial and construction sites regulated by the Statewide General Storm Water Permits and at sites that should be regulated under the State's General Permits. The notification should include any observed violations of the General Permits, prior history of violations, any enforcement actions taken by the permittee, and any other relevant information.
6. By November 15, 2003, the permittees shall review their water quality ordinances and provide a report on the effectiveness of these ordinances and associated enforcement programs, in prohibiting the following types of discharges to the MS4s (the permittees may propose appropriate control measures in lieu of prohibiting these discharges, where the permittees are responsible for ensuring that dischargers adequately maintain those control measures):
 - a. Sewage, where a co-permittee operates the sewage collection system;
 - b. Wash water resulting from the hosing or cleaning of gas stations, auto repair garages, and other types of automobile service stations;
 - c. Discharges resulting from the cleaning, repair, or maintenance of any type of equipment, machinery, or facility, including motor vehicles, concrete mixing equipment, portable toilet servicing, etc.;
 - d. Wash water from mobile auto detailing and washing, steam and pressure cleaning, carpet cleaning, and other such mobile commercial and industrial activities;
 - e. Water from cleaning of municipal, industrial, and commercial sites, including parking lots, streets, sidewalks, driveways, patios, plazas, work yards and outdoor eating or drinking areas, etc.;
 - f. Runoff from material storage areas or uncovered receptacles that contain chemicals, fuels, grease, oil, or other hazardous materials⁷;
 - g. Discharges of runoff from the washing of toxic materials⁸ from paved or unpaved areas;
 - h. Discharges of pool or fountain water containing chlorine, biocides, or other chemicals; pool filter backwash containing debris and chlorine;
 - i. Pet waste, yard waste, litter, debris, sediment, etc.; and,
 - j. Restaurant or food processing facility wastes such as grease, floor mat and trash bin wash water, food waste, etc.

⁷ Hazardous Material is defined as any substrate that poses a threat to human health or the environment due to its toxicity, corrosiveness, ignitability, explosive nature or chemical reactivity. These also include materials named by EPA to be reported if a designed quantity of the material is spilled into the waters of the United States or emitted into the environment.

⁸ Toxic Material is a chemical or a mixture that may present an unreasonable risk of injury to health or the environment.

7. The Principal Permittee shall, on or before July 1, 2002, develop a restaurant inspection program which shall, at a minimum, address:
 - a. Oil and grease disposal to verify that these wastes are not poured onto a parking lot, street or adjacent catch basin;
 - b. Trash bin areas to verify that these areas are clean, the bin lids are closed, the bins are not filled with liquid and the bins have not been washed out;
 - c. Parking lot, alley, sidewalk and street areas to verify that floormats, filters and garbage containers are not washed in those areas and that no washwater is poured in those areas;
 - d. Parking lot areas to verify that they are cleaned by sweeping, not by hosing down and that the facility operator uses dry methods for spill cleanup; and,
 - e. Inspection of existing devices designed to separate grease from wastewater (e.g., grease traps or interceptors) to ensure adequate capacity and proper maintenance.

VII. ILLEGAL CONNECTIONS; LITTER, DEBRIS AND TRASH CONTROL

1. The permittees shall continue to prohibit all illegal connections to the MS4s through their ordinances, inspections, and monitoring programs. If routine inspections or dry weather monitoring indicate any illegal connections, they shall be investigated and eliminated or permitted within 120 days of discovery and identification.
2. All reports of spills, leaks, and/or illegal dumping shall be promptly investigated and, where appropriate, reported to the Executive Officer within 24 hours (those incidents which may pose an immediate threat to human health or the environment, e.g., sewage spills that could impact water contact recreation, an oil spill that could impact wild life, a hazardous substance spill where residents are evacuated, etc.) by phone or e-mail, with a written report within 5 days. At a minimum, all sewage spills above 1,000 gallons and all reportable quantities of hazardous waste spills as per 40CFR 117 and 302 shall be reported within 24 hours and all other spill incidents shall be included in the annual report. The permittees may propose a reporting program, including reportable incidents and quantities, jointly with other agencies, such as the County Health Care Agency, for approval by the Executive Officer.
3. The permittees shall continue to implement appropriate control measures to reduce and/or to eliminate the discharge of trash and debris to waters of the U.S. These control measures shall be reported in the annual report.
4. By July 1, 2003, the permittees shall review their litter/trash control ordinances to determine the need for any revision. The permittees are encouraged to characterize trash, determine its main source(s) and develop and implement appropriate BMPs to control trash in urban runoff. The findings of this review shall be included in the annual report for 2002-2003.
5. By July 1, 2003, the permittees shall determine the need for any additional debris control measures. The findings shall be included in the annual report for 2002-2003.

VIII. MUNICIPAL INSPECTIONS OF CONSTRUCTION SITES

1. Each permittee shall develop by October 15, 2002, an inventory of all construction sites within its jurisdiction for which building or grading permits are issued and activities at the site include: soil movement; uncovered storage of materials or wastes, such as dirt, sand or fertilizer; or exterior mixing of cementaceous products, such as concrete, mortar or stucco. Sites will be included regardless of whether the construction site is subject to the California Statewide General NPDES Permit for Storm Water Discharges Associated with Construction Activities (General Permit) or other individual NPDES permit. This database shall be updated prior to each rainy season thereafter. This inventory shall be maintained in a computer-based database system and shall include relevant information on site ownership, General Permit WDID # (if any), size, location, etc. Inclusion of a Geographical Information System (GIS) is recommended but not required.
2. To establish priorities for inspection requirements under this Order, the permittees shall prioritize construction sites within their jurisdiction as a high, medium or low threat to water quality. Evaluation of construction sites should be based on such factors as soil erosion potential, project size, proximity and sensitivity of receiving waters and any other relevant factors. At a minimum, high priority construction sites shall include: sites over 50 acres; sites over 5 acres that are tributary to Clean Water Act section 303(d) waters listed for sediment or turbidity impairments; and sites that are tributary to and within 500 feet of an area defined by the Ocean Plan as an Area of Special Biological Significance (ASBS).
3. Each permittee shall conduct construction site inspections for compliance with its ordinances (grading, Water Quality Management Plans, etc.) and local permits (construction, grading, etc.). Inspections shall include a review of erosion control and BMP implementation plans and an evaluation of the effectiveness and maintenance of the BMPs identified. Inspection frequency will, at a minimum, include the following:
 - a. During the wet season (i.e., October 1 through April 30 of each year), all high priority sites are to be inspected, in their entirety, once a month. All medium priority sites are to be inspected at least twice during the wet season. All low priority sites are to be inspected at least once during the wet season. When BMPs or BMP maintenance is deemed inadequate or out of compliance, an inspection frequency of once every week will be maintained until BMPs and BMP maintenance are brought into compliance. During the 2001-2002 wet season, prior to the development of the inventory database, all construction sites must be visited at least twice. If a site is deemed out of compliance, an inspection frequency adequate to bring the site into compliance must be maintained;
 - b. During the dry season (i.e., May 1 through September 30 of each year), all construction sites shall be inspected at a frequency sufficient to ensure that sediment and other pollutants are properly controlled and that unauthorized, non-storm water discharges are prevented; and,
 - c. Information including, at a minimum, inspection dates, inspectors present and the results of the inspection, must be maintained in the database identified in Section VIII.1 or must be linked to that database. A copy of this database must be provided to the Regional Board with each annual report.

4. Each permittee shall enforce its ordinances and permits at all construction sites, as necessary, to maintain compliance with this Order. Sanctions for non-compliance must include: monetary penalties, bonding requirements and/or permit denial or revocation.
5. Within 24 hours of discovery, each permittee shall provide oral or e-mail notification to the Santa Ana Regional Water Quality Control Board of non-compliant sites within their jurisdiction that are determined to pose a threat to human health or the environment (e.g., sewage spills that could impact water contact recreation, an oil spill that could impact wildlife, a hazardous substance spill where residents are evacuated, etc.). Following oral notification, a written report must be submitted to the Santa Ana Regional Water Quality Control Board within 10 days, detailing the nature of the non-compliance, any corrective action taken by the site owner, other relevant information (e.g., past history of non-compliance, environmental damage resulting from the non-compliance, site owner responsiveness) and the type of enforcement that will be carried out by the permittee. Further, incidences of non-compliance shall be recorded along with the information noted in the written report and the final outcome/enforcement for the incident in the database identified in Sections VIII.1 and 3.c or must be linked to these databases.
6. The inspectors responsible for ensuring compliance at construction sites shall be trained in and have an understanding of: federal, state and local water quality laws and regulations as they apply to construction and grading activities; the potential effects of construction and urbanization on water quality; and implementation and maintenance of erosion control BMPs and sediment control BMPs and the applicable use of both. Each permittee shall have adequately trained its inspection staff by October 15, 2002, and on an annual basis, prior to the rainy season, thereafter. Training programs should be coordinated with the Santa Ana Regional Water Quality Control Board and prior notification of training shall be provided to Regional Board staff. New hires or transfers that will be performing construction inspections for the permittees must be trained within one month of starting inspection duties.
7. The permittees need not inspect facilities already inspected by Regional Board staff if the inspection was conducted within the specified time period.

IX. MUNICIPAL INSPECTIONS OF INDUSTRIAL FACILITIES

1. Each permittee shall develop by July 1, 2003, an inventory of industrial facilities within its jurisdiction with business permits or other authorization by permittees, that have the potential to discharge pollutants to the MS4. Facilities will be listed, regardless of whether the facility is subject to the California Statewide General NPDES Permit for Storm Water Discharges Associated with Industrial Activities (General Industrial Permit) or other individual NPDES permit. This database must be updated on an annual basis. This inventory must be maintained in a computer-based database system and must include relevant information on ownership, SIC code(s), General Industrial Permit WDID # (if any), size, location, etc. Inclusion of a Geographical Information System (GIS) is recommended but not required.
2. To establish priorities for inspection requirements under this Order, the permittees shall prioritize industrial facilities within their jurisdiction as a high, medium or low threat to water quality. Evaluation of these facilities should be based on such factors as type of

industrial activities (SIC codes), materials or wastes used or stored outside, pollutant discharge potential, facility size, proximity and sensitivity of receiving waters and any other relevant factors. At a minimum, a high priority shall be assigned to: facilities subject to section 313 of Title III of the Superfund Amendments and Reauthorization Act of 1986 (SARA); facilities requiring coverage under the General Industrial Permit; facilities with a high potential for, or history of, unauthorized, non-storm water discharges; and facilities that are tributary to, and within 500 feet of, an area defined by the Ocean Plan as an Area of Special Biological Significance (ASBS).

3. Each permittee shall conduct industrial facility inspections for compliance with its ordinances and permits. Inspections shall include a review of material and waste handling and storage practices, pollutant control BMP implementation and maintenance and evidence of past or present unauthorized, non-storm water discharges. All high priority facilities identified in IX.2 shall be inspected and a report on these inspections shall be submitted by November 15, 2003 and a report of inspections during subsequent years shall be included in the annual report for that year.
4. After July 1, 2003, all high priority sites are to be inspected at least once a year; all medium priority sites are to be inspected at least once every two years; and all low priority sites are to be inspected at least once per permit cycle. In the event that inappropriate material or waste handling or storage practices are observed or there is evidence of past or present unauthorized, non-storm water discharges, an inspection frequency adequate to bring the site into compliance must be maintained (at a minimum, once a month). Once compliance is achieved, a minimum inspection frequency of once every four months will be maintained for the next calendar year.
5. By July 1, 2005, each permittee shall identify the remaining industrial facilities that do not have business permits or other authorization by the permittees. These facilities shall be added to the database identified in Section IX.1 and shall be prioritized in accordance with the specifications identified in Section IX.2.
6. Information including, at a minimum, inspection dates, inspectors present and the results of the inspection must be maintained in the database identified in Section IX.1 or must be linked to that database. A copy of this database must be provided to the Regional Board with each annual report.
7. Each permittee shall enforce its ordinances and permits at all industrial facilities as necessary to maintain compliance with this Order. Sanctions for non-compliance must include: monetary penalties, bonding requirements and/or permit denial or revocation.
8. Within 24 hours, each permittee shall provide oral or e-mail notification to the Santa Ana Regional Water Quality Control Board of non-compliant facilities within their jurisdiction that are determined to pose a threat to human health or the environment (e.g., sewage spills that could impact water contact recreation, an oil spill that could impact wildlife, a hazardous substance spill where residents are evacuated, etc.). Following oral notification, a written report must be submitted to the Santa Ana Regional Water Quality Control Board within 10 days, detailing the nature of the non-compliance, any corrective action taken by the site owner, other relevant information (e.g., past history of non-compliance, environmental

damage resulting from the non-compliance, facility owner responsiveness) and the type of enforcement that will be carried out by the permittee. Further, incidences of non-compliance shall be recorded along with the information noted in the written report and the final outcome/enforcement for the incident, in the database identified in Section IX.1.

9. The inspectors responsible for ensuring compliance at industrial facilities shall be trained in and have an understanding of: federal, state and local water quality laws and regulations as they apply to industrial activities; the potential effects of industrial discharges and urbanization on water quality; and implementation and maintenance of pollutant control BMPs. Each permittee shall have adequately trained their inspection staff by July 1, 2003, and on an annual basis thereafter. Training programs should be coordinated with the Santa Ana Regional Water Quality Control Board and prior notification of training shall be provided to Regional Board staff. New hires or transfers that will be performing industrial inspections for the permittees must be trained within one month of starting inspection duties.
10. The permittees need not inspect facilities already inspected by Regional Board staff, if the inspection was conducted within the specified time period.

X. MUNICIPAL INSPECTIONS OF COMMERCIAL FACILITIES

1. Each permittee shall develop by July 1, 2003, an inventory of the following commercial facilities/companies listed below within its jurisdiction. This database must be updated on an annual basis. This inventory must be maintained in a computer-based database system and must include relevant information on ownership, size, location, etc. Inclusion of a Geographical Information System (GIS) is recommended but not required.
 - a. Automobile mechanical repair, maintenance, fueling or cleaning;
 - b. Automobile and other vehicle body repair or painting;
 - c. Mobile automobile or other vehicle washing;
 - d. Mobile carpet, drape or furniture cleaning;
 - e. Mobile high pressure or steam cleaning;
 - f. Painting and coating;
 - g. Nurseries and greenhouses;
 - h. Landscape and hardscape installation;
 - i. Pool, lake and fountain cleaning;

- j. Other commercial sites/sources that the Permittee determines may contribute a significant pollutant load to the MS4; and,
 - k. Any commercial sites or sources that are tributary to and within 500 feet of an area defined by the Ocean Plan as an Area of Special Biological Significance (ASBS).
 2. To establish priorities for inspection requirements under this Order, the permittees shall prioritize commercial facilities/companies within their jurisdiction as a high, medium or low threat to water quality based on such factors as the type, magnitude and location of the commercial activity, potential for discharge of pollutants to the MS4 and any history of unauthorized, non-storm water discharges.
 3. Each permittee shall conduct commercial facility inspections for compliance with its ordinances and permits. Inspections shall include a review of material and waste handling and storage practices, pollutant control BMP implementation and maintenance and evidence of past or present unauthorized, non-storm water discharges.
 4. After July 1, 2003, each permittee shall establish inspection frequencies and priorities as determined by the threat to water quality prioritization described in X.2. In the event that inappropriate material or waste handling or storage practices are observed, or there is evidence of past or present unauthorized, non-storm water discharges, an inspection frequency adequate to bring the site into compliance must be maintained.
 5. By July 1, 2004, all high priority sites shall be inspected at least once.
 6. Information including, at a minimum, inspection dates, inspectors present and the results of the inspection must be maintained in the database identified in Section X.1 or must be linked to that database. A copy of this database must be provided to the Regional Board with each annual report.
 7. Each permittee shall enforce its ordinances and permits at commercial facilities. Sanctions for non-compliance must include: monetary penalties, bonding requirements and/or permit denial or revocation.
 8. Within 24 hours, each permittee shall provide oral or e-mail notification to the Santa Ana Regional Water Quality Control Board of non-compliant facilities within their jurisdiction, that are determined to pose a threat to human health or the environment (e.g., sewage spills that could impact water contact recreation, an oil spill that could impact wildlife, a hazardous substance spill where residents are evacuated, etc.). Following oral notification, a written report must be submitted to the Santa Ana Regional Water Quality Control Board within 5 days. For incidents that do not pose a threat to human or environmental health, the permittees shall submit a written report within 30 days of the incident. All written reports shall detail the nature of the non-compliance, identify any corrective action taken by the site owner, note other relevant information (e.g., past history of non-compliance, environmental damage resulting from the non-compliance,

facility owner responsiveness) and the type of enforcement that will be carried out by the permittee. Further, incidences of non-compliance shall be recorded along with the information noted in the written report and the final outcome/enforcement for the incident in the database identified in Section X.1.

9. The inspectors responsible for ensuring compliance at commercial facilities shall be trained in, and have an understanding of, Federal, State and local water quality laws and regulations as they apply to industrial and commercial activities; the potential effects of industrial discharge and urbanization on water quality; and implementation and maintenance of pollutant control BMPs. Each permittee shall have adequately trained their inspection staff by July 1, 2003 and on an annual basis thereafter. Training programs should be coordinated with the Santa Ana Regional Water Quality Control Board and prior notification of training shall be provided to Regional Board staff. New hires or transfers that will be performing commercial inspections for the permittees must be trained within one month of starting inspection duties.
10. The permittees need not inspect facilities already inspected by Regional Board staff if the inspection was conducted within the specified time period.

XI. SEPTIC SYSTEM FAILURES AND PORTABLE TOILET DISCHARGES

1. By July 1, 2003, the permittees, whose jurisdictions have 50 or more septic tank or sub-surface disposal systems in use, shall identify with the appropriate governing agency, a mechanism to determine the effect of septic system failures on storm water quality and a mechanism to address such failures.
2. By July 1, 2003, the principal permittee shall review the permittees' current oversight programs for portable toilets to determine the need for any revision.

XII. NEW DEVELOPMENT (INCLUDING SIGNIFICANT RE-DEVELOPMENT)

A. GENERAL REQUIREMENTS:

1. By July 1, 2002, the permittees shall establish a mechanism to ensure (prior to issuance of any local permits or other approvals) that all construction sites that are required to obtain coverage under the State's General Storm Water Permit for construction sites have filed with the State Board a Notice of Intent to be covered by the relevant general permit.
2. Each permittee shall minimize the short and long-term impacts on receiving water quality from new developments and re-developments, as required in Section XII.B.1., below. In order to reduce pollutants and runoff flows from new developments and re-developments to the maximum extent practicable, permittees should, at a minimum:
 - a. Review General Plan/CEQA Processes
 - b. Modify the Project Approval Process
 - c. Conduct Public/Business Education

3. By December 19, 2002, the permittees shall review their planning procedures and CEQA document preparation processes to ensure that urban runoff-related issues are properly considered and addressed. If necessary, these processes should be revised by that date to consider and mitigate impacts to storm water quality. These changes may include revising the General Plan, modifying the project approval processes, including a section on urban runoff related water quality issues in an addendum CEQA checklist, and conducting training for project proponents. The findings of this review and the actions taken by the permittees shall be reported to the Regional Board by January 2, 2003. The following potential impacts shall be considered during CEQA review:
 - a. Potential impact of project construction on storm water runoff;
 - b. Potential impact of project's post-construction activity on storm water runoff;
 - c. Potential for discharge of storm water pollutants from areas of material storage, vehicle or equipment fueling, vehicle or equipment maintenance (including washing), waste handling, hazardous materials handling or storage, delivery areas, loading docks or other outdoor work areas;
 - d. Potential for discharge of storm water to affect the beneficial uses of the receiving waters;
 - e. Potential for significant changes in the flow velocity or volume of storm water runoff to cause environmental harm; and,
 - f. Potential for significant increases in erosion of the project site or surrounding areas.
4. By July 1, 2004, the permittees shall review their watershed protection principles and policies in their General Plan or related documents (such as Development Standards, Zoning Codes, Conditions of Approval, Development Project Guidance) to ensure that these principals and policies are properly considered and are incorporated into these documents. The findings of this review and the actions taken by the permittees shall be reported to the Regional Board by November 15, 2004. These principles and policies should include, but not be limited to, the following considerations:
 - a. Limit disturbance of natural water bodies and drainage systems; conserve natural areas; protect slopes and channels; and minimize impacts from storm water and urban runoff on the biological integrity of natural drainage systems and water bodies;
 - b. Minimize changes in hydrology and pollutant loading; require incorporation of controls, including structural and non-structural BMPs, to mitigate the projected increases in pollutant loads and flows; ensure that post-development runoff rates and velocities from a site have no significant adverse impact on downstream erosion and stream habitat; minimize the quantity of storm water directed to impermeable surfaces and the MS4s; and maximize the percentage of permeable surfaces to allow more percolation of storm water into the ground;
 - c. Preserve wetlands, riparian corridors, and buffer zones and establish reasonable limits on the clearing of vegetation from the project site;

- d. Encourage the use of water quality wetlands, biofiltration swales, watershed-scale retrofits, etc., where such measures are likely to be effective and technically and economically feasible;
 - e. Provide for appropriate permanent measures to reduce storm water pollutant loads in storm water from the development site; and,
 - f. Establish development guidelines for areas particularly susceptible to erosion and sediment loss.
5. Each permittee shall provide the Regional Board with the draft amendment or revision when a pertinent General Plan element or the General Plan is noticed for comment in accordance with Govt. Code § 65350 et seq.
 6. By July 1, 2003, the permittees shall review and, as necessary, revise their current grading/erosion control ordinances in order to reduce erosion caused by new development or significant re-development projects.
 7. The permittees shall, through conditions of approval, ensure proper maintenance and operation of any permanent flood control structures installed in new developments. The parties responsible for the maintenance and operation of the facilities and a funding mechanism for operation and maintenance, shall be identified prior to approval of the project.
 8. By November 15, 2003, the principal permittee shall submit a proposal for a study to evaluate the effectiveness of a group of selected BMPs for controlling erosion during new development. Based on the results of this study, one or more BMPs will be identified as (a) County-preferred BMP(s) for erosion control during new development. This proposal shall include details of the new development project site, the BMPs selected for the study, and a proposed schedule. The proposed and final BMP selection shall be approved by the Regional Board Executive Officer and the study shall be completed by the end of this permit term.
 9. The permittees shall continue to implement the new development BMPs (DAMP, Appendix G) and BMPs for public works construction (DAMP, Appendix H).
 10. Within six months of adoption of this order, the permittees shall review their DAMP to determine the need for:
 - a. Re-establishing the New Development Task Force
 - b. Establishing a Water Quality Plan verification program.

**B. WATER QUALITY MANAGEMENT PLAN (WQMP) FOR URBAN RUNOFF
(FOR NEW DEVELOPMENT/SIGNIFICANT REDEVELOPMENT):**

1. By March 1, 2003, the permittees shall review their existing BMPs for New Developments (Appendix G of the DAMP) and submit for review and approval by the Executive Officer, a revised WQMP for urban runoff from new developments/significant re-developments for the type of projects listed below:

- a. All significant re-development projects, where significant re-development is defined as the addition of 5,000 or more square feet of impervious surface on an already developed site. This includes additional buildings and/or structures, extension of existing footprint of a building, construction of parking lots, etc.
 - b. Home subdivisions of 10 units or more. This includes single family residences, multi-family residences, condominiums, apartments, etc.
 - c. Commercial and industrial developments of 100,000 square feet or more. This includes non-residential developments such as hospitals, educational institutions (to the extent the permittees have authority to regulate these developments), recreational facilities, mini-malls, hotels, office buildings, warehouses, and light & heavy industrial facilities.
 - d. Automotive repair shops (with SIC codes 5013, 5014, 5541, 7532-7534, 7536-7539).
 - e. Restaurants where the land area of development is 5,000 square feet or more.
 - f. All hillside developments on 10,000 square feet or more, which are located on areas with known erosive soil conditions or where the natural slope is twenty-five percent or more.
 - g. Developments of 2,500 square feet of impervious surface or more adjacent to (within 200 feet) or discharging directly into environmentally sensitive areas, such as areas designated in the Ocean Plan as areas of special biological significance or waterbodies listed on the CWA Section 303(d) list of impaired waters.
 - h. Parking lots of 5,000 square feet or more exposed to storm water. Parking lot is defined as a land area or facility for the temporary storage of motor vehicles.
2. The permittees are encouraged to include in the WQMP the development and implementation of regional and/or watershed management programs that address runoff from new development and significant re-development. The WQMP shall include BMPs for source control, pollution prevention, and/or structural treatment BMPs. For all structural treatment controls, the WQMP shall identify the responsible party for maintenance of the treatment system, and a funding source or sources for its operation and maintenance. The goal of the WQMP is to develop and implement practicable programs and policies to minimize the effects of urbanization on site hydrology, urban runoff flow rates or velocities and pollutant loads. This goal may be achieved through watershed-based structural treatment controls, in combination with site-specific BMPs. The WQMP shall reflect consideration of the following goals, which may be addressed through on-site-and/or watershed-based BMPs.
- a. The pollutants in post-development runoff shall be reduced using controls that utilize best available technology (BAT) and best conventional technology (BCT).
 - b. The discharge of any listed pollutant to an impaired waterbody on the 303(d) list shall not cause an exceedence of receiving water quality objectives.
3. During the time that the WQMP is being revised, the permittees shall implement their existing requirements for new development (Appendix G of the DAMP). If the Executive Officer does not approve the revised WQMP by October 1, 2003, as meeting

the goals proposed in XII.B.2, above and providing an equivalent or superior degree of treatment as the sized criteria outlined in XII.B.3.A, B and C, below, structural BMPs shall be required for all new development and significant redevelopment². Minimum structural BMPs must either be sized to comply with one of the following numeric sizing criteria or be deemed by the Principal Permittee to provide equivalent or superior treatment, either on a site basis or a watershed basis:

A. Volume

Volume-based BMPs shall be designed to infiltrate, filter, or treat either:

1. The volume of runoff produced from a 24-hour, 85th percentile storm event, as determined from the local historical rainfall record; or,
2. The volume of annual runoff produced by the 85th percentile, 24-hour rainfall event, determined as the maximized capture storm water volume for the area, from the formula recommended in Urban Runoff Quality Management, WEF Manual of Practice No. 23/ASCE Manual of Practice No. 87 (1998); or,
3. The volume of annual runoff based on unit basin storage volume, to achieve 80% or more volume treatment by the method recommended in California Stormwater Best Management Practices Handbook – Industrial/Commercial (1993); or,
4. The volume of runoff, as determined from the local historical rainfall record, that achieves approximately the same reduction in pollutant loads and flows as achieved by mitigation of the 85th percentile, 24-hour runoff event;

OR

B. Flow

Flow-based BMPs shall be designed to infiltrate, filter, or treat either:

1. The maximum flow rate of runoff produced from a rainfall intensity of 0.2 inch of rainfall per hour; or,
2. The maximum flow rate of runoff produced by the 85th percentile hourly rainfall intensity, as determined from the local historical rainfall record, multiplied by a factor of two; or,
3. The maximum flow rate of runoff, as determined from the local historical rainfall record, that achieves approximately the same reduction in pollutant loads and flows as achieved by mitigation of the 85th percentile hourly rainfall intensity multiplied by a factor of two.

C. Groundwater Protection

² Where new development is defined as projects for which tentative tract or parcel map approval was not received by July 1, 2003 and new re-development is defined as projects for which all necessary permits were not issued by July 1, 2003. New development does not include projects receiving map approvals after July 1, 2003 that are proceeding under a common scheme of development that was the subject of a tentative tract or parcel map approval that occurred prior to July 1, 2003.

Any structural infiltration BMPs shall meet the following minimum requirements:

1. Use of structural infiltration treatment BMPs shall not cause or contribute to an exceedance of groundwater water quality objectives.
2. Source control and pollution prevention control BMPs shall be implemented to protect groundwater quality.
3. Structural infiltration treatment BMPs shall not cause a nuisance or pollution, as defined in Water Code Section 13050 .
4. The permittees may propose any equivalent sizing criteria for treatment BMPs or other controls that will achieve greater or substantially similar pollution control benefits. In the absence of approved equivalent sizing criteria, the permittees shall implement the above stated sizing criteria.
5. If a particular BMP is not technically feasible, other BMPs should be implemented to achieve the same level of compliance, or if the cost of BMP implementation greatly outweighs the pollution control benefits, the permittees may grant a waiver of the numeric sizing criteria. All waivers, along with waiver justification documentation, must be reported to the Regional Board in writing within 30 days. The permittees may propose to establish an urban runoff fund to be used for urban water quality improvement projects within the same watershed that is funded by contributions from developers granted waivers. If it is determined by the Regional Board that waivers are being inappropriately granted, this Order may be reopened to modify these waiver conditions.
6. The obligation to install minimum structural BMPs at new development is met if, for a common scheme of development, BMPs are constructed with the requisite capacity to serve the entire common scheme, even if certain phases of the common scheme may not have BMP capacity located on that phase in accordance with the requirements specified above.

XIII. PUBLIC EDUCATION AND OUTREACH

1. The permittees shall continue to implement the public education efforts already underway and shall implement the most effective elements of the comprehensive public and business education strategy contained in the Report of Waste Discharge/DAMP. By July 1, 2002, the permittees shall complete a public awareness survey to determine the effectiveness of the current public and business education strategy and provide a future action plan.
2. When feasible, the permittees shall participate in joint outreach with other programs including, but not limited to, the State of California Storm Water Quality Task Force, Caltrans and other municipal storm water programs to ensure that a consistent message on storm water pollution prevention is disseminated to the public. The permittees shall sponsor or staff a storm water table or booth at community, regional, and/or countywide events to distribute public education materials to the public. Each permittee shall participate in at least one event per year.

3. By March 1, 2002, the permittees shall establish a Public Education Committee to provide oversight and guidance for the implementation of the public education program. The Public Education Committee shall meet at least twice per year. The Public Education Committee shall make recommendations for any changes to the public and business education program. The goal of the public and business education program shall be to target 100% of the residents, including businesses, commercial and industrial establishments. Through use of local print, radio and television, the permittees must ensure that the public and business education program makes a minimum of 10 million impressions per year and that those impressions measurably increase the knowledge and measurably change the behavior of the targeted groups. By November 15, 2002, the Public Education Committee shall propose a study for measuring changes in knowledge and behavior as a result of the education program. Upon approval by the Regional Board Executive Officer, the study shall be completed by the end of the permit cycle. By July 1, 2002, the Public Education Committee shall develop BMP guidance for restaurants, automotive service centers and gasoline service stations for the industrial facility inspectors to distribute to these facilities during inspections. Further, for restaurant, automotive service centers and gasoline service station corporate chains, information is to be developed that will be provided to corporate environmental managers during outreach visits that will take place twice during the permit term.
4. By July 1, 2002, the permittees shall develop public education materials to encourage the public to report (including a hotline number and web site to report) illegal dumping and unauthorized, non-storm water discharges from residential, industrial, construction and commercial sites into public streets, storm drains and other waterbodies; clogged storm drains; faded or missing catch basin stencils and general storm water and BMP information. This hotline and web site shall be included in the public and business education program and shall be listed in the governmental pages of all regional phone books.
5. By July 1, 2003, the permittees shall develop BMP guidance for the control of those potentially polluting activities not otherwise regulated by any agency including guidelines for the household use of fertilizers, pesticides, herbicides and other chemicals, and guidance for mobile vehicle maintenance, carpet cleaners, commercial landscape maintenance, and pavement cutting. These guidance documents shall be distributed to the public, trade associations, etc., through participation in community events, trade association meetings and/or mail.
6. By July 1, 2003, the permittees shall conduct an evaluation to determine the best method of establishing a mechanism(s) for providing educational and General Industrial Permit materials to businesses within their jurisdiction.

XIV. MUNICIPAL FACILITIES/ACTIVITIES

1. Each permittee shall implement the recommendations in the Environmental Performance Report to ensure that public agency facilities and activities do not cause or contribute to a pollution or nuisance in receiving waters. By July 1 of each year, the permittees shall review all their activities and facilities to determine the need for any revisions to the Environmental Performance Reports. The annual report shall include the findings of this review and a schedule for any needed revisions. All revisions should consider a pollution prevention

strategy to ensure that the public agency facilities and/or activities that are currently not required to obtain coverage under the State's general storm water permits reduce the discharge of pollutants into the waters of the U.S. to the maximum extent practicable.

2. By July 1, 2003, the permittees shall complete an assessment of their flood control facilities to evaluate opportunities to configure and/or to reconfigure channel segments to function as pollution control devices and to optimize beneficial uses. These modifications may include in-channel sediment basins, bank stabilization, water treatment wetlands, etc. This shall be reported in the 2002-2003 annual report.
3. By July 1, 2002, the principal permittee shall develop and distribute model maintenance procedures for public agency activities such as street sweeping; catch basin stenciling; drainage facility inspection, cleaning and maintenance, etc. This shall be reported in the 2001-2002 annual report.
4. By July 1, 2002, the principal permittee shall develop and distribute BMP guidance for public agency and contract field operations and maintenance staff to provide guidance in appropriate pollution control measures, how to respond to spills and reports of illegal discharges, etc. This shall be reported in the 2001-2002 annual report.
5. At least on an annual basis, the principal permittee shall provide training to public agency staff and to contract field operations staff on fertilizer and pesticide management, model maintenance procedures, implementation of environmental performance reporting program and other pollution control measures. Each permittee shall attend at least three of these training sessions during the five year term of this permit (from 2001 to 2006).
6. By July 1, 2002, the principal permittee shall develop a model maintenance procedure for drainage facilities. This shall be included in the 2001-2002 annual report. Each permittee shall inspect, clean and maintain at least 80% of its drainage facilities on an annual basis, with 100% of the facilities included in a two-year period, using the model maintenance procedures developed by the principal permittee. This shall be included in the annual report.
7. By July 1, 2004, the permittees shall develop and submit for approval by the Executive Officer, a more aggressive program for cleaning out drainage facilities, including catch basins. This program should be based on a list of drainage facilities, prioritized on such factors as distance to receiving water, receiving water beneficial uses and impairments of beneficial uses, historical pollutant types and loads from past inspections/cleanings and the presence of downstream regional facilities that would remove the types of pollutants found in the drainage facility. Using this list, the permittees shall propose clean out schedules for all drainage facilities with a minimum frequency of once a year and a maximum frequency of monthly, during the storm season. The permittees should be prepared to implement the approved clean out program beginning with the 2004-2005 storm season.
8. By July 1, 2002, the permittees shall evaluate the applicability of the Environmental Performance Program to municipal maintenance contracts, contract for field maintenance operations, and leases. This shall be included in the 2001-2002 annual report.

XV. MUNICIPAL CONSTRUCTION PROJECTS/ACTIVITIES

1. This order authorizes the discharge of storm water runoff from construction projects that may result in land disturbance of five (5) acres or more (or less than five acres, if it is part of a larger common plan of development or sale which is five acres or more) that are under ownership and/or direct responsibility of any of the permittees. All permittee construction activities shall be in accordance with DAMP, Appendix H.
2. Prior to commencement of construction activities, the permittees shall notify the Executive Officer of the Regional Board of the proposed construction project. Upon completion of the construction project, the Executive Officer shall be notified of the completion of the project.
3. The permittees shall develop and implement a storm water pollution prevention plan (SWPPP) and a monitoring program that is specific for the construction project, prior to the commencement of any of the construction activities. The SWPPP shall be kept at the construction site and released to the public and/or Regional Board staff upon request.
4. The SWPPP and the monitoring program for the construction projects shall be consistent with the requirements of the latest version of the State's General Construction Activity Storm Water Permit.
5. The permittees shall give advance notice to the Executive Officer of the Regional Board of any planned changes in the construction activity, which may result in non-compliance with the latest version of the State's General Construction Activity Storm Water Permit.
6. All other terms and conditions of the latest version of the State's General Construction Activity Storm Water Permit shall be applicable.

XVI. SUB-WATERSHEDS AND TMDL IMPLEMENTATION

1. The permittees shall meet the following target load allocations for nutrients in urban runoff by implementing the BMPs contained in Appendix N (DAMP, Section 12) and in accordance with the approved TMDL implementation plan incorporated in the Basin Plan.

(This section intentionally left blank.)

Table 1. Seasonal Load Allocations of Total Nitrogen for the Newport Bay Watershed

Nutrient TMDL	1990-1997 Loading	2002 Summer Allocation (Apr-Sept) ⁵	2007 Summer Allocation (Apr-Sept) ⁵	2012 Winter Allocation (Oct-Mar) ^{4,5,6}
Newport Bay Watershed	lbs/year TN ^{1,2}	lbs/season TN	lbs/season TN	lbs/season TN
Wasteload Allocation				
Urban runoff	277,131 ³	20,785	16,628	55,442
		5 year target	10 year target	15 year target

¹ TIN = (NO₃+NH₃).

² TN = (TIN + Organic N).

³ Estimated annual average (summer and winter loading).

⁴ Total nitrogen winter loading limit applies between October 1 and March 31 when the mean daily flow rate at San Diego Creek at Campus Drive is below 50 cubic feet per second (cfs), and when the mean daily flow rate in San Diego Creek at Campus Drive is above 50 cubic feet per second (cfs), but not as the result of precipitation.

⁵ Compliance to be achieved no later than this date. The Regional Board may require earlier compliance with these targets when it is feasible and reasonable.

⁶ Assumes 67 non-storm days.

Table 2. Annual Total Phosphorous Load Allocations For The Newport Bay Watershed

	2002 Allocation lbs/year TP ¹	2007 Allocation lbs/year TP ¹
TMDL	86,912	62,080
Urban areas	4,102	2,960

¹ Compliance to be achieved no later than this date. The Regional Board may require earlier compliance with these targets when it is feasible and reasonable.

Table 3. Annual Total Nitrogen Load Allocations For San Diego Creek, Reach 2 During Non-Storm Conditions.¹

	2012 Allocation lbs/day TN ²
TMDL	14 lbs/day (TN)
Waste Load Allocation (Urban runoff)	5.5 lbs/day (TN)

¹ Total nitrogen loading limit applies when the mean daily flow rate at San Diego Creek at Culver Drive is below 25 cubic feet per second (cfs), and when the mean daily flow rate in San Diego Creek at Culver Drive is above 25 cubic feet per second (cfs), but not as the result of precipitation.

² Compliance to be achieved no later than this date. The Regional Board may require earlier compliance with these targets when it is feasible and reasonable.

2. The permittees shall meet the following target load allocations for sediment in urban runoff by implementing the BMPs contained in Appendix N of the DAMP and the "March 1999 Technical Report on the Implementation of the TMDL for Sediment in the Newport Bay Watershed, the October 1999 Preliminary Sediment Load Allocation Analysis for San Diego Creek and Newport Bay, and the February 2000 Sediment Yield and Transport Investigation for San Diego Creek and Newport Bay".
 - a. The load allocations for sediment discharges to Newport Bay from urban areas shall not exceed 2,500 tons per year, implemented as a 10-year running annual average.
 - b. The load allocations for sediment discharges to San Diego Creek and its tributaries from urban areas shall not exceed 2,500 tons per year, implemented as a 10-year running annual average.
3. The permittees shall revise Appendix N of the DAMP to include implementation measures and schedules for further studies related to the TMDL for fecal coliform in Newport Bay, as set forth in the January 2000, March 2000 and April 2000 Newport Bay Fecal Coliform TMDL Technical Reports submitted by the permittees.
4. This order may be reopened to include additional requirements based on new or revised TMDLs.

XVII. PROGRAM MANAGEMENT/DAMP REVIEW

1. By July 1 of each year, the permittees shall evaluate the DAMP to determine whether any revisions are necessary in order to reduce pollutants in MS4 discharges to the maximum extent practicable. In addition, the first annual review after adoption of this order shall include the following:
 - a. Review of the formal training needs of municipal employees
 - b. Review of coordinating meeting/training for the designated NPDES inspectors.
2. The annual report shall include the findings of this review and a schedule for any needed revisions or a copy of the amended DAMP with the proposed changes.

3. The permittees shall modify the DAMP, at the direction of the Regional Board Executive Officer, to, as necessary, incorporate additional provisions. Such provisions may include regional and watershed-specific requirements and/or waste load allocations developed and approved pursuant to the TMDL process.
4. The Permittee Committee shall meet at least six times a year to discuss issues related to permit implementation and regional and statewide issues. Each permittee's designated representative or a designated alternate should attend at least 75% of these meetings.

XVIII. FISCAL RESOURCES

1. The permittees shall prepare and submit a unified fiscal analysis to the Executive Officer of the Regional Board. The fiscal analysis shall be submitted with the Annual Report document no later than November 15th of each year and shall, at a minimum, include the following:
 - a. Each permittee's expenditures for the previous fiscal year,
 - b. Each permittee's budget for the current fiscal year,
 - c. A description of the source of funds, and
 - d. Each permittee's estimated budget for the next fiscal year.

XIX. PROVISIONS

1. All reports submitted by the permittees as per the requirements in this Order for the approval of the Executive Officer shall be publicly noticed and made available on the Regional Board's website, or through other means, for public review and comments. The Executive Officer shall consider all comments received prior to approval of the reports. Any unresolved significant issues shall be scheduled for a public hearing at a Regional Board meeting prior to approval by the Executive Officer.
2. The purpose of this Order is to require the implementation of best management practices to reduce, to the maximum extent practicable, the discharge of pollutants from the MS4 in order to support reasonable further progress towards attainment of water quality objectives.

Permittees shall demonstrate compliance with all the requirements in this order and specifically with Section III.2 Discharge Limitations and Section IV. Receiving Water Limitations, through timely implementation of their DAMP and any modifications, revisions, or amendments developed pursuant to this order approved by the Executive Officer or determined by the permittee to be necessary to meet the requirements of this order. The DAMP, as included in the Report of Waste Discharge, including any approved amendments thereto, is hereby made an enforceable component of this order.

3. The permittees shall, at a minimum, implement all elements of the DAMP. Where the dates in the DAMP are different than those of this order, the dates in this order shall prevail. Any proposed revisions to the DAMP shall be submitted with the Annual Report to the Executive Officer of the Regional Board for review and approval. All

approved revisions to the DAMP shall be implemented as per the time schedules approved by the Executive Officer. In addition to those specific controls and actions required by (1) the terms of this Order and (2) the DAMP, each permittee shall implement additional controls, if any are necessary, to reduce the discharge of pollutants in storm water to the maximum extent practicable as required by this Order.

4. The permittees shall comply with Monitoring and Reporting Program No. R8-2002-0010, and any revisions thereto, which is hereby made a part of this order. The Executive Officer is authorized to revise the Monitoring and Reporting Program to allow the permittees to participate in regional, statewide, national or other monitoring programs in lieu of or in addition to Monitoring and Reporting Program No. R8-2002-0010.
5. By November 15, 2002, the permittees, in coordination with the Orange County Fire Chiefs Association, shall develop a list of appropriate BMPs to be implemented to reduce pollutants from training activities, fire hydrant/sprinkler testing or flushing, non-emergency fire fighting and any BMPs feasible for emergency fire fighting flows.
6. The permittees should consult the Orange County Vector Control District to ensure that structural treatment systems are designed to minimize the potential for vector breeding.
7. Upon approval by the Executive Officer of the Regional Board, all plans, reports and subsequent amendments required by this order shall be implemented and shall become an enforceable part of this order. Prior to approval by the Executive Officer, these plans, reports and amendments shall not be considered as an enforceable part of this order.
8. The permittees shall report to the Executive Officer of the Regional Board:
 - a. Any enforcement actions and discharges of storm or non-storm water, known to the permittees, which may have an impact on human health or the environment,
 - b. Any suspected or reported activities on federal, state, or other entity's land or facilities, where the permittees do not have any jurisdiction, and where the suspected or reported activities may be contributing pollutants to waters of the US.

(Also see reporting requirements in Monitoring and Reporting Program No. R8-2002-0010)
9. The permit application and special NPDES program requirements contained in 40 CFR 122.21 (a), (b), (d)(2), (f), (p); 122.41 (a), (b), (c), (d), (e), (f), (g), (h), (i), (j), (k), (l); and 122.42 (c) are incorporated into this order by reference.

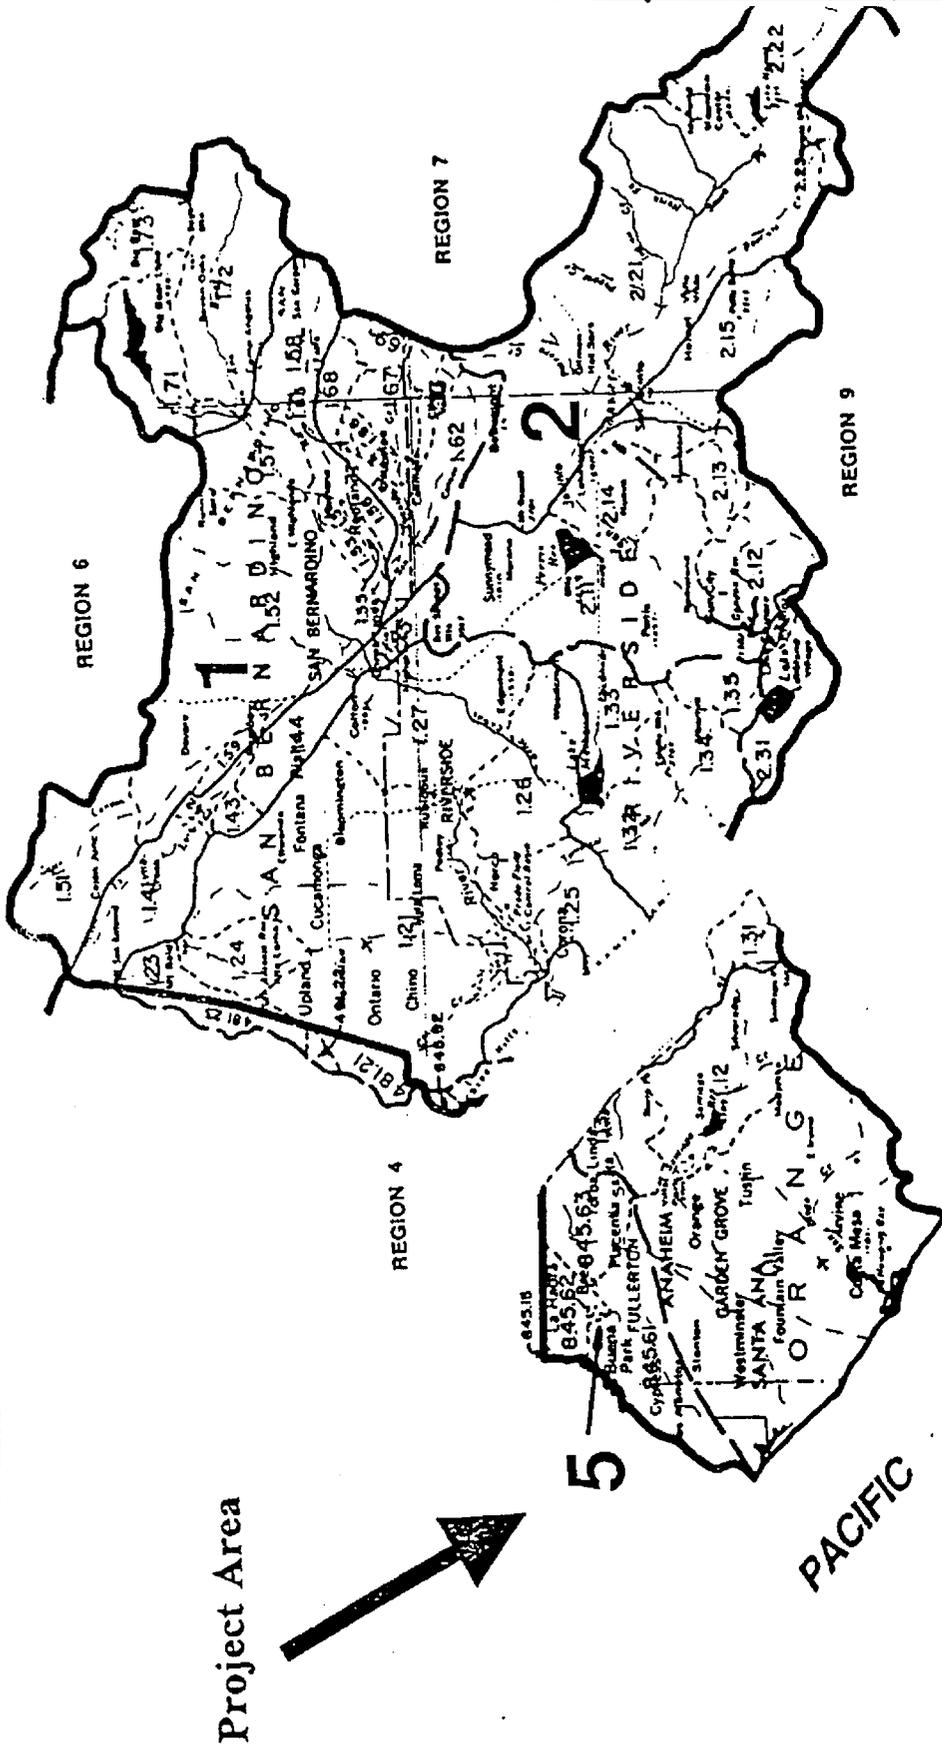

XX. PERMIT EXPIRATION AND RENEWAL

1. This order expires on January 18, 2007 and the permittees must file a Report of Waste Discharge (permit application) no later than 180 days in advance of such expiration date as application for issuance of new waste discharge requirements. The Report of Waste Discharge shall, at a minimum, include the following:
 - a. Any revisions to the Drainage Area Management Plan including, but not limited to, all the activities the permittees propose to undertake during the next permit term,

- goals and objectives of such activities, an evaluation of the need for additional source control and/or structural BMPs, any proposed pilot studies, etc.;
- b. Changes in land use and/or population including land use map updates;
 - c. Any significant changes to the storm drain systems, outfalls, detention or retention basins or dams and other controls including map updates of the storm drain systems; and,
 - d. Any new or revised program elements and compliance schedule(s) necessary to comply with Section IV of this order.
2. This Order may be modified, revoked or reissued prior to its expiration date for the following reasons:
 - a. To address significant changes in conditions identified in the technical reports required by the Regional Board which were unknown at the time of the issuance of this order;
 - b. To incorporate applicable requirements of statewide water quality control plans adopted by the State Water Resources Control Board or any amendments to the Basin Plan approved by the Regional Board, the State Board and, if necessary, by the Office of Administrative Law;
 - c. To comply with any applicable requirements, guidelines, or regulations issued or approved under the Clean Water Act, if the requirements, guidelines, or regulations contain different conditions or additional requirements than those included in this order; or,
 - d. To incorporate any requirements imposed upon the permittees through the TMDL process.
 3. This order shall serve as a National Pollutant Discharge Elimination System (NPDES) Permit pursuant to Section 402 (p) of the Clean Water Act, or amendments thereto, and shall become effective ten days after the date of its adoption, provided the Regional Administrator of the U. S. EPA has no objections. If the Regional Administrator objects to its issuance, the permit shall not become effective until such objection is withdrawn.
 4. Order No. 96-31 is hereby rescinded.

I, Gerard Thibeault, Executive Officer, do hereby certify that the foregoing is a full, true, and correct copy of an order adopted by the California Regional Water Quality Control Board, Santa Ana Region, on January 18, 2002.

Orange County Water District
Metropolitan Water District

**California Regional Water Quality Control Board
Santa Ana Region**

**Monitoring and Reporting Program No. R8-2002-0010
NPDES No. CAS618030**

**for
the County of Orange, Orange County Flood Control District,
and
Incorporated Cities of Orange County Within the Santa Ana Region
Areawide Urban Storm Water Runoff**

I. GENERAL

1. Revisions of the monitoring and reporting program are appropriate to ensure that the permittees are in compliance with requirements and provisions contained in this order. Revisions may be made under the direction of the Executive Officer at any time during the term, and may include a reduction or increase in the number of parameters to be monitored, the frequency of monitoring, or the number and size of samples collected.
2. The Executive Officer is authorized to allow the permittees to participate in statewide, national, or other monitoring programs in lieu of this monitoring program.
3. All sample collection, handling, storage, and analysis shall be in accordance with 40 CFR Part 136 or other methods approved by the Executive Officer.
4. The permittees are authorized to complement their monitoring data with other monitoring sources, provided the monitoring conditions and sources are similar to those in the Santa Ana Watershed.

II. OBJECTIVES

The 1999 Water Quality Monitoring Program prioritized selected monitoring locations in Orange County based on a list of Critical Aquatic Resources and "Warm Spots". This prioritization is based on an analysis of prior years' monitoring data and other available data. It is expected that data collection for the 1999 monitoring program will be completed by July 1, 2003. The permittees also participate in the Regional Monitoring Program for San Diego Creek Nutrient TMDL and other regional monitoring programs, such as those conducted by the Southern California Coastal Water Research Project. The overall goal of these monitoring programs is to develop and support an effective watershed management program. The following are the major objectives:

1. To develop and support an effective municipal urban runoff and non-point source control program.
2. To define water quality status, trends, and pollutants of concern associated with urban storm water and non-storm water discharges and their impact on the beneficial uses of the receiving waters.

3. To characterize pollutants associated with urban storm water and non-storm water discharges and to assess the influence of urban land uses on water quality and the beneficial uses of receiving waters.
4. To identify significant water quality problems related to urban storm water and non-storm water discharges.
5. To identify other sources of pollutants in storm water and non-storm water runoff to the maximum extent possible (e.g., atmospheric deposition, contaminated sediments, other non-point sources, etc.)
6. To identify and prohibit illicit discharges.
7. To identify those waters, which without additional action to control pollution from urban storm water discharges, cannot reasonably be expected to attain or maintain applicable water quality standards required to sustain the beneficial uses in the Basin Plan (TMDL monitoring).
8. To evaluate the effectiveness of existing municipal storm water quality management programs, including an estimate of pollutant reductions achieved by the structural and nonstructural BMPs implemented by the permittees.
9. To evaluate costs and benefits of proposed municipal storm water quality control programs to the stakeholders, including the public.

The Regional Board recognizes that these objectives may not be attainable during this permit period and authorizes the Executive Officer to evaluate and to determine adequate progress toward meeting each objective.

III. MONITORING PROGRAM REQUIREMENTS

1. The permittees shall complete the 1999 Water Quality Monitoring Program.
2. The permittees shall revise, by July 1, 2003, their Water Quality Monitoring Program to include, at a minimum, the following monitoring components or their equivalence:
 - A. Mass Emissions Monitoring.
 - (1) The principal permittee shall monitor mass emissions in order to: (a) estimate the total mass emissions from the MS4; (b) assess trends in mass emissions over time; and (c) to determine if the MS4 is contributing to exceedances of water quality objectives or beneficial uses, by comparing results to the California Toxics Rule (CTR), Basin Plan, Ocean Plan and/or other relevant standards.

- (2) A minimum of seven mass emissions stations shall be placed at locations to include coastal outfalls at Huntington Harbor/Anaheim Bay, the coastline between Huntington Harbor and Newport Bay, Upper/Lower Newport Bay, the Crystal Cove Area of Special Biological Significance (ASBS), and north Orange County where surface flows have not been well-characterized (e.g., Fullerton Creek Channel, Carbon Creek Channel, or Coyote Creek). Additional locations should be based on large discharge volumes, large subwatershed drainage areas, and/or land use distribution.
- (3) Autosamplers shall be programmed to collect representative samples from the first storm event and two more storm events during the rainy season. A minimum of three dry-weather samples shall also be collected. Samples from the first rain event each year shall be analyzed for the entire suite of priority pollutants. All samples must be analyzed for metals, pH, TSS, TOC, pesticides/herbicides, and constituents which are known to have contributed to impairment of local receiving waters. Dry weather samples should also include an analysis for oil and grease. Sediments associated with mass emissions should be analyzed for constituents of concern.

B. Estuary/Wetlands Monitoring

- (1) The permittees shall monitor the Upper Newport estuary, Talbert Marsh, and Bolsa Chica wetlands areas to determine the effects of storm water and non-storm water runoff associated with increased urbanization on these systems.
- (2) Monitoring locations shall include representative areas surrounding channel outfalls and areas away from channel outfalls. Sampling strategies shall be designed to enable the determination of storm water and non-storm water effects on sediment chemistry, toxicity, benthic communities, nutrient status, and spatial extent of sediment fate within the estuarine environment. Additionally, other indicators of biological integrity should be evaluated, such as bird populations or endangered plant/animal species.

C. Water Column Toxicity Monitoring

- (1) Analyses for toxicity to freshwater and marine species shall be performed on mass emissions samples to determine the impacts of storm water and non-storm water runoff on toxicity of receiving waters.
- (2) *Ceriodaphnia dubia* and *Strongylocentrotus purpuratus* fertilization shall be used to evaluate toxicity on the sample from the first rain event, plus one other wet weather sample and two dry weather samples.

- (3) Criteria shall be identified which will trigger the initiation of Toxicity Identification Evaluations (TIEs) and Toxicity Reduction Evaluations (TREs).

D. Bacteriological/Pathogen Monitoring

- (1) The permittees shall obtain monitoring data from other entities (such as the Orange County Health Care Agency) and/or monitor representative areas along the Orange County coastline, as well as a minimum of six inland water bodies/channels, for total coliform, fecal coliform, and Enterococcus in order to determine the impacts of storm water and non-storm water runoff on loss of beneficial uses to receiving waters. Inland monitoring stations shall be located to include channels/creeks which are currently impaired for pathogens.
- (2) Where possible, data shall be obtained from monitoring efforts of Orange County Health Care Agency, POTWs, and/or other public or private agencies/entities. Monitoring shall be conducted directly by the permittees only to the extent that data gaps exist.

E. Bioassessment

- (1) The permittees shall cooperate with the Southern California Coastal Water Research Project (SCCWRP) in efforts to evaluate the biological index approach for Southern California and to design a research project for developing an Index of Biological Integrity (IBI) for the region.
- (2) The permittees shall coordinate with SCCWRP and the Regional Board to identify appropriate bioassessment station locations. Station selection and sampling scheme shall be identified in the revised Monitoring Program, and sampling should commence no later than October 2003.

F. Reconnaissance

- (1) The permittees shall develop new reconnaissance strategies to identify and prohibit illicit discharges. Where possible, the use of GIS to identify geographic areas with a high density of industries associated with gross pollution (e.g. electroplating industries, auto dismantlers) and/or locations subject to maximum sediment loss (e.g. new development) may be used to determine areas for intensive monitoring efforts. Additionally, the permittees shall coordinate with the Regional Board to develop a comprehensive database to include all enforcement actions for storm water violations and unauthorized, non-storm water discharges, that can then be used to more effectively target reconnaissance efforts.

G. Land Use Correlations

- (1) The permittees shall develop and implement strategies for determining the effects of land use on the quality of receiving waters. While it is recognized that a wide range of land uses exist across the region and within each subwatershed, one relationship that may be easily determined is the impact of development on sediment loading within receiving waters, since developed areas contribute relatively little sediment loading compared to areas under construction. Consequently, the permittees shall, at a minimum, analyze the impacts of increasing development and the conversion of agricultural land to the sediment loading of the Upper Newport Bay.
- (2) Where possible, data shall be obtained from monitoring efforts of other public or private agencies/entities (e.g., Caltrans, The Irvine Company).

H. TMDL/303(d) Listed Waterbody Monitoring

The Permittees shall continue to participate in the Regional Monitoring Program for the San Diego Creek Nutrient TMDL. In addition, strategies must be revised/developed to evaluate the impacts of storm water or non-storm water runoff on all impairments within the Newport Bay watershed and other 303(d) listed waterbodies. Since the 303(d) listing is dynamic, with new waterbodies and new impairments being identified over time, the permittees shall revise their monitoring plan to incorporate new information as it becomes available.

3. By July 1, 2003, the permittees shall develop and submit for approval of the Executive Officer, their revised Water Quality Monitoring Program, which should yield an integrated watershed-monitoring approach capable, to the maximum extent possible, of achieving the above-stated goals. In order to minimize cost and maximize benefits, it is highly recommended that this program be developed in cooperation with the SCCRWP, the Orange County Health Care Agency, neighboring coastal regions and/or other public or private agencies/entities. The development and implementation of the monitoring program shall be in accordance with the time schedules prescribed by the Executive Officer. At a minimum, the program shall include the following and any requirements developed by the State Board in accordance with Water Code Section 13383.5:
 - A. Uniform guidelines for quality control, quality assurance, data collection and data analysis that conform to current US EPA standards.
 - B. A mechanism for the collection, analysis and interpretation of existing data from local, regional or national monitoring programs. These data sources may be utilized to characterize different storm water sources; to determine pollutant generation, transport and fate; to develop a relationship between land use, development size, storm size and the event mean concentration of pollutants; to determine spatial and temporal variances in storm water quality and seasonal and other bias in the collected data; and to identify any unique features of the Santa Ana Watershed. The permittees are encouraged to use data from similar studies, if available.

- C. A description of the monitoring program, including:
- (1) The number of monitoring stations;
 - (2) Monitoring locations within flood control channels, bays and estuaries, coastal areas, major outfalls, and other receiving waters;
 - (3) Environmental indicators (e.g., ecosystem, biological, habitat, chemical, sediment, stream health, etc.) chosen for monitoring;
 - (4) Parameters selected for field screening and for laboratory work;
 - (5) Total number of samples to be collected from each station, frequency of sampling during wet and dry weather, short duration or long duration storm events, type of samples (grab, 24-hour composite, etc.), justification for composite versus discrete sampling, type of sampling equipment, quality assurance/quality control procedures followed during sampling and analysis, analysis protocols to be followed (including sample preparation and maximum reporting limits), and identity and qualifications of laboratories performing analyses;
 - (6) A mechanism for analyzing the collected data and interpreting the results including protocols for handling of non-detects and 'outliers', an evaluation of the effectiveness of the management practices, and need for refinement of the management practices; and,
 - (7) A description of the responsibilities of all the participants in this program including cost sharing.

IV. REPORTING

1. All progress reports and proposed strategies and plans required by this order shall be signed by the principal permittee, and copies shall be submitted to the Executive Officer of the Regional Board under penalty of perjury.
2. The permittees shall submit an **ANNUAL PROGRESS REPORT** to the Executive Officer of the Regional Board and to the Regional Administrator of the U.S. EPA, Region 9, no later than November 15th, of each year. This progress report may be submitted in a mutually agreeable electronic format. At a minimum, annual progress report shall include the following:
 - A. A review of the status of program implementation and compliance (or non-compliance) with the schedules contained in this order;

- B. An assessment of the effectiveness of control measures established under the illicit discharge elimination program and the Drainage Area Management Plan. The effectiveness may be measured in terms of how successful the program has been in eliminating illicit/illegal discharges and reducing pollutant loads in storm water discharges;
 - C. An assessment of any storm water management program modifications made to comply with Clean Water Act requirements to reduce the discharge of pollutants to the maximum extent practicable;
 - D. A summary and analysis of monitoring results from the previous year and any changes to the monitoring program for the following year;
 - E. A fiscal analysis progress report as described in Section V., Provision, 25., of this order;
 - F. A draft workplan which describes the proposed implementation of the DAMP for next fiscal year. The workplan shall include clearly defined tasks, responsibilities, and schedules for implementation of the storm water program and each permittee actions for the next fiscal year;
 - G. Major changes in any previously submitted plans/policies; and
 - H. An assessment of the permittees compliance status with the Receiving Water Limitations, Section IV of the Order, including any proposed modifications to the DAMP if the Receiving Water Limitations are not fully achieved.
3. The permittees shall be responsible for the submittal to the principal permittee of all required information/materials needed to comply with this order in a timely manner. All such submittals shall be signed by a duly authorized representative of the permittee under penalty of perjury.

(This section intentionally left blank.)

V. REPORTING SCHEDULE

All reports required by this order shall be submitted to the Executive Officer of the Regional Board in accordance with the following schedule:

ITEM	COMPLETION DATE	REPORT DUE DATE
Review planning procedures and CEQA document preparation processes	December 19, 2002	January 2, 2003
Establish Public Education Committee	March 1, 2002	Nov 15, 2002
Review DAMP	July 1, 2003	Nov 15, 2003
Develop public education materials including reporting hot-line and web site	July 1, 2002	Nov 15, 2002
Develop and update construction site, including site information, priority, and inspection information	October 1, 2002	Nov 15, 2003
Establish mechanism to ensure local permits for proposed construction sites and industrial facilities are conditioned upon proof of obtaining coverage under the state General Permit	July 1, 2002	Nov 15, 2002
Develop and distribute model maintenance procedures for public agency activities	July 1, 2002	Nov 15, 2002
Develop and distribute BMP guidance for public agency and contract field operations and maintenance staff	July 1, 2002	Nov 15, 2002
Develop model maintenance procedures for drainage facilities	July 1, 2002	Nov 15, 2002
Evaluate Environmental Performance Program applicability to municipal maintenance contracts, contract for field maintenance operations, and leases	July 1, 2002	Nov 15, 2002
Review and revise current grading/erosion control ordinances	July 1, 2003	Nov 15, 2003

Implementation Agreement Revision	July 1, 2002	Nov 15, 2002
Litter/Trash Control Ordinance review	July 1, 2003	Nov 15, 2003
Additional Debris Control Measures Determination	July 1, 2003	Nov 15, 2003
Complete Public Awareness Survey	July 1, 2002	Nov 15, 2002
Proposed Monitoring Program	July 1, 2003	July 1, 2003
Develop restaurant inspections program, which includes runoff, grease blockage and spill reduction aspects	July 1, 2002	Nov 15, 2002
Legal Authority & Enforcement Strategy Certification	November 1, 2003	Nov 15, 2003
Review effectiveness of ordinances in prohibiting discharges to MS4's as listed in Section 7.	July 1, 2003	Nov 15, 2003
Develop and update an industrial site database, including facility information, priority, and inspection information	July 1, 2003	Nov 15, 2003
Develop and update a commercial site database, including facility information, priority, and inspection information	July 1, 2003	Nov 15, 2003
Propose mechanism to determine effect of septic system failures on storm water quality and a mechanism to address failures	July 1, 2003	Nov 15, 2003
Review oversight of portable toilets to determine need for any revision	July 1, 2003	Nov 15, 2003
BMP Guidance for Restaurants, Automotive Service Centers, and Gasoline Service Stations, developed by Public Education Committee	July 1, 2002	Nov 15, 2002
BMP Guidance for Control of Potential Polluting Activities not otherwise regulated	July 1, 2003	Nov 15, 2003

Review existing BMPs for New Developments and Water Quality Management Plan to determine need for development of Water Quality Protection Plan	July 1, 2003	Nov 15, 2003
Propose study of erosion control BMPs for new development	November 15, 2003	Nov 15, 2003
Incorporate watershed protection principles and policies into the General Plan	July 1, 2004	Nov 15, 2004
Report of Waste Discharge	180 days before permit expires	Dec. 1, 2005
Annual Report/Fiscal Analysis	November 15th of each year	Nov 15
Evaluate Storm Water Management structure and Implementation Agreement	July 1st of each year	Nov 15
Review Environmental Performance Reports	July 1st of each year	Nov 15
Provide training to public agency staff and to contract field operations staff	Annually	Nov 15
Re-evaluate monitoring program priorities based on previous year's data	Annually	Nov 15
Evaluate the DAMP	July 1st of each year	Nov 15
Permittee Committee meetings to discuss permit implementation and regional and state-wide issues	Held at least 6 times each year	Nov 15

FACT SHEET

January 18, 2002

ITEM: 2

SUBJECT: Waste Discharge Requirements for the County of Orange, Orange County Flood Control District, and the Incorporated Cities of Orange County within the Santa Ana Region, Urban Storm Water Runoff Management Program, Orange County, Order No. R8-2002-0010 (NPDES No. CAS 618030)

I. INTRODUCTION

The 1972 Clean Water Act (CWA) established the National Pollutant Discharge Elimination System (NPDES) permit program to regulate the discharge of pollutants from point sources to waters of the United States (U.S.). Since then, considerable strides have been made in reducing conventional forms of pollution, such as from sewage treatment plants and industrial facilities, through the implementation of the NPDES program and other federal, state and local programs. The adverse effects of some of the persistent toxic pollutants (DDT, PCB, TBT) were addressed through manufacturing and use restrictions and through cleanup of contaminated sites. On the other hand, pollution from land runoff (including atmospheric deposition, urban, suburban and agricultural) was largely unabated until the 1987 CWA amendments. As a result, diffuse sources, including urban storm water runoff, now contribute a larger portion of many kinds of pollutants than the more thoroughly regulated sewage treatment plants and industrial facilities. The National Urban Runoff Program (NURP) final report to the Congress (U.S. EPA, 1983) concluded that the goals of the CWA could not be achieved without addressing urban runoff discharges. The 1987 CWA amendments established a framework for regulating urban storm water runoff. Pursuant to these amendments, the Santa Ana Regional Water Quality Control Board (Regional Board) began regulating municipal storm water runoff in 1990.

The attached pages contain information concerning an application for renewal of Waste Discharge Requirements and a NPDES permit, which prescribe waste discharge requirements for urban storm water runoff from the cities and unincorporated areas in Orange County within the jurisdiction of the Santa Ana Regional Board. On September 1, 2000, the County of Orange and the Orange County Flood Control District (OCFCD), in cooperation with the cities of Anaheim, Brea, Buena Park, Costa Mesa, Cypress, Fountain Valley, Fullerton, Garden Grove, Huntington Beach, Irvine, Laguna Woods, La Habra, La Palma, Lake Forest, Los Alamitos, Newport Beach, Orange, Placentia, Santa Ana, Seal Beach, Stanton, Tustin, Villa Park, Westminster, and Yorba Linda (hereinafter collectively referred to as permittees or dischargers), submitted NPDES Application No. CAS 618030 (Report of Waste Discharge) for reissuance of their areawide storm water NPDES permit. The permit application was submitted in accordance with the requirements of the previous NPDES permit (Order No. 96-31, NPDES No. CAS618030) which expired on March 1,

2001. Additionally, the permit application follows guidance provided by staff of the State Water Resources Control Board (State Board), the Regional Water Quality Control Boards (Regional Boards), and the United States Environmental Protection Agency (U.S. EPA).

On March 5, 2001, Order No. 96-31, NPDES No. CAS618030, was administratively extended in accordance with 40 CFR Part 122.6 and Title 23, Division 3, Chapter 9, §2235.4 of the California Code of Regulations.

Order No. R8-2002-0010 regulates discharges of urban storm water from the lower Santa Ana watershed to waters of the U.S., which ultimately drain into the Pacific Ocean.

II. REGULATORY BACKGROUND/CLEAN WATER ACT REQUIREMENTS

Urban runoff includes dry and wet weather flows from urbanized areas through a storm water conveyance system. As water flows over streets, parking lots, construction sites, and industrial, commercial, residential and municipal areas, it can intercept pollutants from these areas and transport them to waters of the U.S. If appropriate pollution control measures are not implemented, urban runoff may contain pathogens (bacteria, protozoa, viruses), sediment, trash, fertilizers (nutrients, mostly nitrogen and phosphorus compounds), oxygen-demanding substances (decaying matter), pesticides (DDT, Chlordane, Diazinon, Chlorpyrifos), heavy metals (cadmium, chromium, copper, lead, zinc) and petroleum products (oil & grease, PAHs, petroleum hydrocarbons). If not properly managed and controlled, urbanization can change the stream hydrology and increase pollutant loading to receiving waters. As a watershed undergoes urbanization, pervious surface area decreases, runoff volume and velocity increase, riparian and wetland habitat decrease, the frequency and severity of flooding increase and pollutant loading increases. Most of these impacts are due to human activities that occur during and/or after urbanization. The pollutants and hydrologic changes can cause declines in aquatic resources, toxicity to marine organisms, and impact human health and the environment.

However, properly planned high-density development, with sufficient open space, can reduce urban sprawl and problems associated with sprawl. Urban in-fill development can be an element of smart growth, creating the opportunity to maintain relatively natural open space elsewhere in the area.

The U.S. EPA recognizes urban runoff as the number one source of estuarine pollution in coastal communities¹. Recent studies² conducted in the Southern California area have reported a definite link between storm water runoff from urban areas and pollution in nearshore zones. A number of Orange County beaches were closed during 1999 and 2000 due to microbial contamination. One of the studies conducted to determine the source of this microbial contamination indicated that urban runoff may be one of the sources of this contamination. If not properly controlled, urban runoff could be a significant source of

¹ US EPA, 1999, 40CFR Parts 9, 122, 123, 124, National Pollutant Discharge Elimination System – Regulations for Revision of the Water Pollution Control Program Addressing Storm Water Discharges; Final Rule, 64FR 68727.

pollutants in waters of the U.S. Table 1 includes a list of pollutants, their sources, and some of the adverse environmental consequences mostly resulting from urbanization.

(This space has been intentionally left blank.)

Table 1³. Pollutants/Impacts of Urbanization on Waters of the U.S. (Marine Pollution)

Pollutants	Sources	Effects and Trends
Toxins (e.g., biocides, PCBs, trace metals, heavy metals)	Industrial and municipal wastewaters; runoff from farms, forests, urban areas, and landfills; erosion of contaminated soils and sediments; vessels; atmospheric deposition	Poison and cause disease and reproductive failure; fat-soluble toxins may bioconcentrate, particularly in birds and mammals, and pose human health risks. Inputs into U.S. waters have declined, but remaining inputs and contaminated sediments in urban and industrial areas pose threats to living resources.
Pesticides (e.g., DDT, diazinon, chlorpyrifos)	Urban runoff, agricultural runoff, commercial, industrial, residential, and farm use	Legacy pesticide (DDT, Chlordane, Dieldrin, etc.) use has been banned; still persists in the environment; some of the other pesticide uses are curtailed or restricted.
Biostimulants (organic wastes, plant nutrients)	Sewage and industrial wastes; runoff from farms and urban areas; nitrogen from combustion of fossil fuels	Organic wastes overload bottom habitats and deplete oxygen; nutrient inputs stimulate algal blooms (some harmful), which reduce water clarity, cause loss of seagrass and coral reef, and alter food chains supporting fisheries. While organic waste loadings have decreased, nutrient loadings have increased.
Petroleum products (oil, grease, petroleum hydrocarbons, PAHs)	Urban runoff and atmospheric deposition from land activities; shipping and tanker operations; accidental spills; coastal and offshore oil and gas production activities; natural seepage; PAHs from internal combustion engines	Petroleum hydrocarbons can affect bottom organisms and larvae; spills affect birds, mammals and nearshore marine life. While oil pollution from ships, accidental spills, and production activities has decreased, diffuse inputs from land-based activities have not.
Radioactive isotopes	Atmospheric fallout, industrial and military activities	Few known effects on marine life; bioaccumulation may pose human health risks where contamination is heavy.

³ Adapted from "Marine Pollution in the United States" prepared for the Pew Oceans Commission, 2001.

Sediments	Erosion from farming, construction activities, forestry, mining, development; river diversions; coastal dredging and mining	Reduce water clarity and change bottom habitats; carry toxins and nutrients; clog fish gills and interfere with respiration in aquatic fauna. Sediment delivery by many rivers has decreased, but sedimentation poses problems in some areas; erosion from coastal development and sea-level rise is a future concern.
-----------	---	--

Plastics and other debris	Ships, fishing nets, containers, trash, urban runoff	Entangles marine life or is ingested; degrades beaches, wetlands and nearshore habitats. Floatables (from trash) are an aesthetic nuisance and can be a substrate for algae and insect vectors.
Thermal	Cooling water from power plants and industry, urban runoff from impervious	Kills some temperature-sensitive species; displaces others. Generally, less a risk to marine life than thought 20 years ago.
Noise	Vessel propulsion, sonar, seismic prospecting, low-frequency sound used in defense and research	May disturb marine mammals and other organisms that use sound for communication.
Pathogens (bacteria, protozoa, viruses)	Sewage, urban runoff, livestock, wildlife, discharges from boats and cruise ships	Pose health risks to swimmers and consumers of seafood. Sanitation has improved, but standards have been raised.
Alien species	Ships and ballast water, fishery stocking, aquarists	Displace native species, introduce new diseases; growing worldwide problem.

(This space has been intentionally left blank)

The Clean Water Act (CWA) prohibits the discharge of any pollutant to navigable waters from a point source unless an NPDES permit authorizes the discharge. Efforts to improve water quality under the NPDES program traditionally and primarily focused on reducing pollutants in discharges of industrial process wastewater and municipal sewage. The 1987 amendments to the CWA required municipal separate storm sewer systems (MS4s) and industrial facilities, including construction sites, to obtain NPDES permits for storm water runoff from their facilities. On November 16, 1990, the United States Environmental Protection Agency (EPA) promulgated the final Phase I storm water regulations. The storm water regulations are contained in 40 CFR Parts 122, 123 and 124.

The areawide NPDES permit for Orange County areas within the Santa Ana Regional Board's jurisdiction is being considered for renewal in accordance with Section 402 (p) of the CWA and all requirements applicable to an NPDES permit issued under the issuing authority's discretionary authority. The requirements included in this order are consistent with the CWA, the federal regulations governing urban storm water discharges, the Water Quality Control Plan for the Santa Ana River Basin (Basin Plan), the California Water Code, and the State Board's Plans and Policies.

The Basin Plan is the basis for the Regional Board's regulatory programs. The Plan was developed and is periodically reviewed and updated in accordance with relevant federal and state law and regulation, including the Clean Water Act and the California Water Code. As required, the Basin Plan designates the beneficial uses of the waters of the Region and specifies water quality objectives intended to protect those uses. (Beneficial uses and water quality objectives, together with an antidegradation policy, comprise federal "water quality standards"). The Basin Plan also specifies an implementation plan, which includes certain discharge prohibitions. In general, the Basin Plan makes no distinctions between wet and dry weather conditions in designating beneficial uses and setting water quality objectives, i.e., the beneficial uses, and correspondingly, the water quality objectives are assumed to apply year-round. (Note: In some cases, beneficial uses for certain surface waters are designated as "I", or intermittent, in recognition of the fact that surface flows (and beneficial uses) may be present only during wet weather.) Most beneficial uses and water quality objectives were established in the 1971, 1975 and 1983 Basin Plans.

Water Code Section 13241 requires that certain factors be considered, at a minimum, when water quality objectives are established. These include economics and the need for developing housing in the Region. (The latter factor was added to the Water Code in 1987).

During this permit development process, the permittees raised an issue regarding compliance with Section 13241 of the California Water Code with respect to water quality objectives for wet weather conditions, specifically the cost of achieving compliance during wet weather conditions and the need for developing housing within the Region and its impact on urban storm water runoff. During the next review of the Basin Plan, staff will recommend that this matter be incorporated on the triennial review list. In the meantime, the provisions of this order will result in reasonable further progress towards the attainment of the existing water quality objectives, in accordance with the discretion in the permitting authority recognized by the United States Court of Appeals for the Ninth Circuit in *Defenders of Wildlife v Browner*, 191 F.3d 1159, 1164 (9th Cir. 1999).

III. BENEFICIAL USES

Storm water flows that are discharged to municipal storm drain systems in Orange County are tributary to various water bodies (inland surface streams, bays and tidal prisms, ocean waters, and lakes and reservoirs) of the state. The beneficial uses of these water bodies include municipal and domestic supply, agricultural supply, industrial service and process supply, groundwater recharge, navigation, hydropower generation, water contact recreation, non-contact water recreation, commercial and sportfishing, warm freshwater habitat, cold freshwater habitat, preservation of biological habitats of special significance, wildlife habitat, preservation of rare, threatened or endangered species, marine habitat, shellfish harvesting, spawning, reproduction and development of aquatic habitats and estuarine habitat. The ultimate goal of this storm water management program is to protect the beneficial uses of the receiving waters.

IV. PERMITTED AREA

The permitted area is delineated by the Los Angeles County-Orange County boundary line on the northwest, the San Bernardino-Orange County boundary line on the north and northeast, the Riverside County-Orange County boundary line on the east, the Santa Ana Regional Board-San Diego Regional Board boundary line on the southeast, and the Pacific Ocean on the southwest (see Attachment A of the order). The permittees serve a population of approximately 2.8 million, occupying an area of approximately 786 square miles (including unincorporated areas and the limits of 33 cities, 25 of which are within the Santa Ana Regional Board's jurisdiction). The permittees have jurisdiction over, and/or maintenance responsibility for, storm water conveyance systems within Orange County. The County's systems include an estimated 400 miles of storm drain systems. A major portion of the urbanized areas of Orange County drains into water bodies within this Regional Board's jurisdiction. Storm water discharges from urbanized areas consist mainly of surface runoff from residential, commercial, and industrial developments. In addition, there are storm water discharges from agricultural land uses, including farming and animal operations. However, the CWA specifically excludes agricultural discharges from regulation under this program. Other areas of the County not addressed or which are excluded by the storm water regulations and areas not under the jurisdiction of the permittees are excluded from the area requested for coverage under this permit. This includes the following areas and activities:

- Federal lands and state properties, including, but not limited to, military bases, national forests, hospitals, schools, colleges, universities, and highways;
- Native American tribal lands; and
- Utilities and special district properties.

Discharges from the permitted area drain into the Pacific Ocean. The watershed regulated under this order is generally referred to as the Lower Santa Ana River Basin.

V. WATERSHED MANAGEMENT/LOWER SANTA ANA RIVER BASIN

To manage the water resources of the Region efficiently, it is critical to have a holistic approach. The entire storm drain system in Orange County is not controlled by a single entity; the County of Orange, the OCFCD, several cities, Caltrans, U.S. Army Corps of Engineers and a number of other entities own, operate and/or manage the storm drain systems. In addition to the cities, the County and the OCFCD, there are a number of other significant contributors of storm water runoff to these storm drain systems. These include: large institutions such as the State University facilities, schools, hospitals, etc.; federal facilities such as Department of Defense facilities; State agencies such as Caltrans; water and wastewater management agencies such as Orange County Water District, Metropolitan Water District etc.; the National Forest Service; state parks; and entertainment centers such as Disneyland. The quality and quantity of storm water runoff into and out of Orange County also depends upon runoff from San Bernardino and Riverside County areas that are tributary to Orange County. Some of the runoff from Orange County enters systems controlled by other entities, such as the Los Angeles County Flood Control District, which is under the Los Angeles Regional Board's jurisdiction.

Some of these facilities, such as U.S. Marine Corps, Tustin and El Toro Air Stations, Disneyland and Caltrans, are already under individual permits for storm water runoff. The Los Angeles and San Diego Regional Boards have also issued areawide storm water permits for areas within their jurisdiction.

Cooperation and coordination among all the stakeholders are essential for efficient and economical management of the watershed. It is also critical to manage nonpoint sources at a level consistent with the management of urban storm water runoff in a watershed in order to prevent or remedy water quality impairment. Regional Board staff will facilitate coordination of monitoring and management programs among the various stakeholders, where necessary.

An integrated watershed management approach is consistent with the Strategic Plan and Initiatives (June 22, 1995) for the State and Regional Boards. A watershed wide approach is also necessary for implementation of the load and waste load allocations developed under the TMDL process (see Section B, below). The MS4 permittees and all the affected entities should be encouraged to participate in regional or watershed solutions instead of project-specific and fragmented solutions.

The pollutants in urban runoff originate from a multitude of sources and effective control of these pollutants requires a cooperative effort of all the stakeholders and many regulatory agencies. Every stage of urbanization should be considered in developing appropriate urban runoff pollution control methodologies. The program's success depends upon consideration of pollution control techniques during planning, construction and post-construction operations. At each stage, appropriate pollution prevention measures, source control measures and, if necessary, treatment techniques should be considered.

1. SUB-WATERSHEDS AND MAJOR CHALLENGES

The Lower Santa Ana River Watershed can be subdivided into five tributary watersheds:

- a. *The San Gabriel River Drainage Area:* Carbon Canyon Creek and Coyote Creek drain into the San Gabriel River. Only a portion of the San Gabriel River is within the Santa Ana Regional Board's jurisdiction. The River empties into the Pacific Ocean at the boundary between two Regional Boards (Regions 4 and 8). Region 4 regulates most of the discharges to the San Gabriel River.

The Los Angeles Regional Board (Region 4) listed the San Gabriel River as an impaired waterbody on the CWA Section 303(d) list of impaired waters. It is listed for ammonia, toxicity, algae, eutrophication, pH, odors, low dissolved oxygen, trash, lead, arsenic, copper, silver, mercury (tissue), coliform, DDT, PCBs, chlordane, and abnormal fish histology. A trash TMDL for the East Fork of the River was adopted by the Regional Board (Region 4) and approved by the US EPA. A nutrient TMDL is scheduled for adoption in November 2002, a coliform TMDL for May 2003, and a metals TMDL for June 2005.

- b. *The Huntington Harbour and Bolsa Bay Drainage Area:* This includes Anaheim Bay, Huntington Harbour, Bolsa Bay, and Bolsa Chica Ecological Reserve. A number of flood control channels discharge into this area, including Anaheim-Barber, East Garden Grove-Wintersberg, and Bolsa Chica Channel. The area historically had a number of oil production facilities and an oil-well drilling mud disposal area. There are still some production wells in the area. Certain areas of the Bolsa Chica wetlands have been impacted by the oil production and related activities in the area. The drilling mud disposal area has been cleaned up, and there is a collaborative effort of a number of state, federal, and local agencies and other entities to restore the Bolsa Chica wetlands.

Anaheim Bay and Huntington Harbour are listed as impaired waterbodies (see Table 2), and TMDLs will be developed to address the pollutants causing the impairment.

- c. *The Santa Ana River Drainage Area:* This includes Santa Ana River Reaches 1 and 2, Santiago Creek Reaches 1, 2, 3 and 4, Silverado Creek, Black Star Creek, Talbert Channel, Talbert Marsh and Greenville-Banning Channel. The major problem for the area is microbial contamination of the coastal zone. The initial studies conducted by the Orange County Sanitation District determined that their facilities were probably not the cause of the microbial problems in the nearshore zone. Subsequently, the Executive Officer issued a directive to the County of Orange and the cities of Santa Ana, Costa Mesa, Fountain Valley and Huntington Beach (urban storm water dischargers to this tributary area) under Section 13267 of the Water Code. This directive required the dischargers to provide a plan to identify, characterize and control sources that contributed to the microbial problems in the Huntington Beach area.

The first phase of this study is complete, and the second phase is underway. The first phase of the study indicated that urban runoff, including dry weather flows, may be a contributor to this microbial problem. Some of the dry weather flows from the flood control channels are now being diverted to the sanitary sewer. However, other sources of contamination are also suspected and the second phase of the study is intended to further investigate these sources.

The Executive Officer issued a Cleanup and Abatement Order to the City of Huntington Beach requiring the City to investigate any leaking sanitary sewers in the area and to determine if exfiltration from these sources to storm sewer systems or to ocean waters through other channels was causing or contributing to the microbial problems at Huntington State and City beaches. This investigation is also currently under way.

The Orange County Sanitation District is investigating the impact of its ocean discharge (treated sanitary wastewater) on nearshore microbial problems at Huntington Beach.

It is expected that a combination of requirements included in this order and the programs discussed above will address the urban runoff pollution problems in this sub-watershed.

- d. The Newport Bay Drainage Area: Tributaries include Bonita Creek, Serrano Creek, Peters Canyon Wash, Hicks Canyon Wash, Bee Canyon Wash, Borrego Canyon Wash, Agua Chinon Wash, Laguna Canyon Wash, Rattlesnake Canyon Wash, Sand Canyon Wash, San Diego Creek Reaches 1 and 2, and San Joaquin Freshwater Marsh.

The Newport Bay watershed has a number of impaired waterbodies listed under Section 303(d) of the CWA (see Section 2, below for details). The impairments are mostly due to nutrients, sediment, pesticides, pathogens and metals. To date, TMDLs have been developed for nutrients, sediment, and fecal coliform bacteria. These TMDLs are being implemented. Recent monitoring data indicate that the target goals for nutrients for the year 2007 are now being met.

Other TMDLs for the Newport Bay watershed are being developed by the Regional Board (for diazinon, chlorpyrifos and selenium) and U.S. EPA (for legacy pesticides and other metals).

The Irvine Ranch Water District (IRWD), which provides sewage collection and treatment services for most areas in this watershed, has been also accepting dry weather flows from some of the storm sewer systems. Recently, IRWD proposed to construct a number of water quality treatment wetlands for treating urban storm water runoff. These treatment wetlands would be strategically located to capture and treat flows from different portions of the watershed. The IRWD is also exploring the possibility of sponsoring legislation that would authorize the District to collect storm water fees. These treatment wetlands are expected to remove sediment and nutrients from urban runoff but may be

less efficient in removing pathogens and toxics (metals, pesticides, etc.). It is anticipated that a combination of other best management practices and these treatment wetlands will help to control the discharge of pollutants in urban runoff.

- e. Irvine Coast and Newport Coast Areas of Special Biological Significance (ASBSs) The Ocean Plan has 35 designated areas of special biological significance throughout the State; two of these ASBSs are within the Santa Ana Region, Irvine Coast Areas of Special Biological Significance, Newport Coast Areas of Special Biological Significance. The ASBSs require protection of species or biological communities to the extent that alteration of natural water quality is undesirable. The Crystal Cove area, which is within the Irvine Coast ASBS, is currently experiencing increased urban runoff from new developments in the area. The Ocean Plan contains a prohibition on discharges of wastes to ASBS. Regional Board staff identified a number of dischargers potentially violating or threatening to violate this Ocean Plan discharge prohibition in the Crystal Cove area. These dischargers included The Irvine Company, California Department of Transportation, and the California Department of Parks and Recreation. On November 16, 2000, the Regional Board adopted Cease and Desist Order No. 00-87 requiring these dischargers to cease and desist from any violations of the waste discharge prohibition. All future waste discharges to the ASBS governed by the prohibition in the Ocean Plan are prohibited and a time schedule is provided in the Cease and Desist order to eliminate the existing waste discharges.

2. CWA SECTION 303(d) LIST AND TMDLs:

The 1998 water quality assessment conducted by the Regional Board identified a number of waterbodies within the Region as impaired waterbodies, under Section 303(d) of the CWA. These are waterbodies where the designated beneficial uses are not met and/or the water quality objectives are being violated. These waterbodies were placed on the CWA Section 303(d) list of impaired waters. The impaired waterbodies in Orange County within the Santa Ana Regional Board's jurisdiction are listed in Table 2.

Federal regulations require that a total maximum daily load (TMDL) be established for each 303(d) listed waterbody for each of the pollutants causing impairment. The TMDL is the total amount of the problem pollutant that can be discharged while water quality standards in the receiving water are attained, i.e., water quality objectives are met and the beneficial uses are protected. It is the sum of the individual wasteload allocations (WLA) for point source inputs, load allocations (LA) for non-point source inputs and natural background, with a margin of safety. The TMDLs are the basis for limitations established in waste discharge requirements. TMDLs have been developed for sediment and nutrients for San Diego Creek and Newport Bay and for fecal coliform bacteria in Newport Bay. The stakeholders in this watershed are collaborating in the development and implementation of the TMDLs. The Regional Board's Executive Officer has issued requirements for the submittal and implementation by the responsible parties of plans and schedules to address the TMDL requirements. To avoid any duplicative efforts, this permit does not include any further

implementation requirements based on TMDLs. However, this permit may be reopened to include TMDL implementation, if other implementation methodologies are not effective.

Table 2. Clean Water Act Section 303(d) Listed Waterbodies

Water Body	Hydro Unit	Pollutant Stressor	Source	Priority	Size Affected	Unit	TMDL End Date
Anaheim Bay	801.110	Metals	Urban Runoff/Storm Sewers, Unknown Nonpoint Source	Medium	180	Acres	0111
		Pesticides	Unknown Nonpoint Source	Medium	180	Acres	0111
Huntington Harbour	801.110	Metals	Urban Runoff/Storm Sewers, Boatyards	Medium	150	Acres	0111
		Pathogens	Urban Runoff/ Storm Sewers	Medium	150	Acres	0111
		Pesticides	Unknown Nonpoint Source	Medium	150	Acres	0111

Newport Bay, Lower	801.110	Metals	Urban Runoff/Storm Sewers, Contaminated Sediments, Boatyards	High	700	Acres	0107
		Nutrients	Agriculture, Urban Runoff/Storm Sewers	High	700	Acres	0198
		Pathogens	Urban Runoff/Storm Sewers	High	700	Acres	0100
		Pesticides	Agriculture, Contaminated Sediments	High	700	Acres	0102
		Priority Organics	Contaminated Sediments, Unknown Nonpoint Source	High	700	Acres	0102
Upper Newport Bay Ecological Reserve	801.110	Metals	Urban Runoff/Storm Sewers	High	752	Acres	0102
		Nutrients	Agriculture, Urban Runoff/Storm Sewers, Groundwater Loadings	High	752	Acres	0198
		Pathogens	Urban Runoff/Storm Sewers	High	752	Acres	0100
		Pesticides	Agriculture, Unknown Nonpoint Source	High	752	Acres	0102
		Sedimentation/Siltation	Agriculture, Construction/Land Development, Channel Erosion, Erosion/Siltation	High	752	Acres	0198
San Diego Creek, Reach 1	801.110	Metals	Unknown Nonpoint Source	High	6	Miles	0102
		Nutrients	Agriculture, Urban Runoff/Storm Sewer, Groundwater Loadings	High	6	Miles	0198
		Pesticides	Unknown Nonpoint Source	High	6	Miles	0102
		Sedimentation/Siltation	Agriculture, Construction/Land Development, Channel Erosion, Erosion/Siltation	High	6	Miles	0198

San Diego Creek Reach 2	801.110	Metals	Urban Runoff/Storm Sewer	High	6	Miles	0102
		Nutrients	Agriculture, Urban Runoff/Storm Sewer, Groundwater Loadings	High	6	Miles	0198
		Sedimenta tion/ Siltation	Agriculture, Construction/Land Development, Channel Erosion, Erosion/Siltation	High	6	Miles	0198
		Unknown Toxicity	Unknown Nonpoint Source	High	6	Miles	0102
Santiago Creek R4	801.120	Salinity/ TDS/ Chlorides	Source Unknown	Low	2	Miles	0111
Silverado Creek	801.120	Pathogens	Unknown Nonpoint Source	Low	2	Miles	0111
		Salinity/ TDS/ Chlorides	Unknown Nonpoint Source	Low	2	Miles	0111

(This section intentionally left blank.)

VI. FIRST AND SECOND TERM PERMITS: STORM WATER POLLUTION CONTROL PROGRAMS/POLICIES

Prior to EPA's promulgation of the final storm water regulations, the counties of Orange, Riverside and San Bernardino applied for areawide NPDES permits for storm water runoff. On July 13, 1990, the Regional Board issued Order No. 90-71 to the permittees (first term permit). In 1996, the Board adopted Order No. 96-31 (second term permit). First and second term permits included the following requirements as outlined in the storm water regulations:

1. Prohibited non-storm water discharges to the MS4s, with certain exceptions.
2. Required the municipalities to develop and implement a drainage area management plan (DAMP) to reduce pollutants in urban storm water runoff to the maximum extent practicable (MEP⁴).
3. Required the discharges from the MS4s to meet water quality standards in receiving waters.
4. Required the municipalities to identify and eliminate illicit connections and illegal discharges to the MS4s.
5. Required the municipalities to establish legal authority to enforce storm water regulations.
6. Required monitoring of dry weather flows, storm flows, and receiving water quality, and required program assessment.

The following programs and policies have been implemented or are being implemented by the permittees. During the first term permit, the permittees developed a Drainage Area Management Plan (1993 DAMP) which was approved by the Executive Officer of the Regional Board on April 29, 1994. The 1993 DAMP included a number of best management practices (BMPs) and a very extensive public education program. The monitoring program for the first term permit included 89 monitoring stations within streams and flood control channels and 21 stations within the bays, estuaries and the ocean. The findings and conclusions from these monitoring stations and monitoring programs of other municipal permittees (Riverside and San Bernardino Counties and others) have been used to identify problem areas and to re-evaluate the monitoring program and the effectiveness of the BMPs. The future direction of some of these program elements will depend upon the results of the ongoing studies and a holistic approach to watershed management.

Other elements of the storm water management program included identification and elimination of illegal/illicit discharges and establishment of adequate legal authority to control pollutants in storm water discharges. The permittees have completed a survey of their storm drain systems to identify illegal/illicit connections and have adopted appropriate ordinances to establish legal authority. Some of the more specific achievements during the first and second term permits are as follows:

⁴ Maximum Extent Practicable (MEP) means to the maximum extent feasible, taking into account equitable considerations of synergistic, additive, and competing factors, including but not limited to, gravity of the problem, technical feasibility, fiscal feasibility, public health risks, societal concerns, and social benefits.

1. Interagency Agreements and Coordination: Established a program management structure through an Interagency Implementation Agreement. Participated in regional monitoring programs and focused special studies/research programs. Worked with the County Sanitation Districts, Health Care Agency, Integrated Waste Management Agency, and the Water Districts to provide a consistent urban storm water pollution control message to the public. Worked with Caltrans, other transportation agencies, the Storm Water Quality Task-Force, and others to further study and understand urban runoff problems and control measures.
2. Ordinances, Plans and Policies: Adopted a Model Water Quality Ordinance and Enforcement Consistency Guide; prepared a Water Pollution Enforcement Implementation Plan, Public Agency Activity BMP guideline, a Public Pesticide and Fertilizer Use guideline, Criteria for MS4 Inspections, and a Water Quality Monitoring Plan; and established a Technical Advisory Committee for overall program development and implementation.
3. Program Review: A number of existing programs were reviewed to determine their effectiveness in combating urban pollution and to recommend alternatives and or improvements, including litter control measures, street sweeping frequencies and methods, public agency activities and facilities, illegal and illicit connections to the MS4 systems, and existing monitoring programs.
4. Public Education: A number of steps were taken to educate the public, businesses, industries, and commercial establishments regarding their role in urban runoff pollution controls. The appropriate industrial dischargers were notified of the storm water regulatory requirements. For a number of unregulated activities, BMP guidance was developed (mobile detailing, automotive service centers, restaurants, pool maintenance). Finally, a countywide hotline was established for reporting any suspected water quality problems.
5. Public Agency Training: Training was provided to public agency employees on how to implement New Development Guidelines and Public Works BMPs, how to conduct investigations of reported water quality problems and how to conduct inspections of industrial facilities and public work projects. The municipal planners were trained to recognize water quality related problems in proposed developments.
6. Related Activities: Flood control channels were stabilized, sediment basins were constructed, and debris booms were installed; illegal connections were eliminated and illicit connections to the MS4s were documented and/or permitted.

VII. FIRST AND SECOND TERM PERMITS - WATER QUALITY IMPROVEMENTS

An accurate and quantifiable measurement of the impact of the above stated storm water management programs is difficult for a variety of reasons, such as the variability in chemical water quality data, the incremental nature of BMP implementation, lack of baseline monitoring data, and the existence of some of the programs and policies prior to initiation of formal storm water management programs. There are generally two accepted methodologies for assessing water quality improvements: (1) conventional monitoring such as chemical-specific water quality monitoring; and (2) non-conventional monitoring such as monitoring of the amount of household hazardous waste collected and disposed off at

appropriate disposal sites, amount of used oil collected, debris removed by the debris boom, etc.

The water quality monitoring data collected during the first and second term permits did not indicate any discernible trends or significant changes. However, the non-conventional monitoring data indicate that other programs and policies have been very effective in keeping a significant quantity of wastes from being discharged into waters of the U.S.

During the second term permit, there was an increased focus on watershed management initiatives and coordination among the municipal permittees in Orange, Riverside and San Bernardino Counties. These efforts resulted in a number of regional monitoring programs and other coordinated program and policy developments.

It is anticipated that with continued implementation of the revised DAMP and other requirements specified in this order, the goals and objectives of the storm water regulations will be met, including protection of the beneficial uses of all receiving waters.

VIII. FUTURE DIRECTION/2000 DAMP

The NPDES permit renewal application included an updated DAMP (2000 DAMP) that includes programs and policies the permittees are proposing to implement during the third term permit. The 2000 DAMP is the principal guidance document for urban storm water management programs in Orange County and includes the following major components:

1. Continues to provide a framework for the program management activities and plan development.
2. Continues to provide the legal authority to control discharges to the MS4s.
3. Improves current BMPs to achieve further reduction in pollutant loading to the MS4s.
4. Includes programs and policies to increase public education processes and to seek public support for urban storm water pollution prevention BMPs.
5. Increases requirements for controls on new developments and significant redevelopments.
6. Continues to ensure that construction sites implement appropriate pollution control measures.
7. Continues to ensure that industrial sites are in compliance with storm water regulations.
8. Continues to include programs and policies to eliminate illegal discharges and illicit connections to the MS4s.
9. Continues to include monitoring of urban runoff.
10. Includes provisions for any special focus studies and/or control measures.

A combination of these programs and policies and the requirements specified in this order should ensure control of pollutants in storm water runoff from facilities owned and/or controlled by the permittees.

IX. PERMIT REQUIREMENTS

The legislative history of storm water statutes (1987 CWA Amendments), U.S. EPA regulations (40CFR Parts 122, 123, and 124), and clarifications issued by the State Water Resources Control Board (State Board Orders No. WQ 91-03 and WQ 92-04) indicate that a non-traditional NPDES permitting strategy was anticipated for regulating urban storm water runoff. Due to the economic and technical infeasibility of full-scale end-of-pipe treatments and the complexity of urban storm water runoff quality and quantity, MS4 permits generally include narrative requirements for the implementation of BMPs in place of numeric effluent limits.

The requirements included in this order are meant to specify those management practices, control techniques and system design and engineering methods that will result in maximum extent practicable protection of the beneficial uses of the receiving waters. The State Board (Orders No. WQ 98-01 and WQ 99-05) concluded that MS4s must meet the technology-based maximum extent practicable (MEP) standard and water quality standards (water quality objectives and beneficial uses). The U.S. Court of Appeals for the Ninth Circuit subsequently held that strict compliance with water quality standards in MS4 permits is at the discretion of the local permitting agency. Any requirements included in the order that are more stringent than the federal storm water regulations are in accordance with the CWA Section 402(p)(3)(iii), and the California Water Code Section 13377 and are consistent with the Regional Board's interpretation of the requisite MEP standard.

The Report of Waste Discharge (ROWD) included a discussion of the current status of Orange County's urban storm water management program and the proposed programs and policies for the next five years (third term permit). The order incorporates these documents and the performance commitments made in the ROWD.

This order recognizes the significant progress made by the permittees during the first and second term permits in implementing the storm water regulations. The permit also recognizes regional and innovative solutions to such a complex problem. For these reasons, the order is less prescriptive compared to some of the MS4 NPDES permits for urban runoff issued by other Regional Boards. However, it should achieve the same or better water quality benefits because of the programs and policies already being implemented or proposed for implementation, including regional and watershed wide solutions.

The major requirements include: (1) Discharge prohibitions; (2) Receiving water limitations; (3) Prohibition on illicit connections and illegal discharges; (4) Public and business education; (5) Adequate legal authority; (6) Programs and policies for municipal facilities and activities; (7) Inspection Activities by the municipalities; (8) New development/re-development requirements; (9) Waste load allocations for nutrients, sediment, and fecal coliform bacteria; and, (10) Monitoring and reporting requirements.

These programs and policies are intended to improve urban storm water quality and protect the beneficial uses of receiving waters of the region.

1. DISCHARGE PROHIBITIONS

In accordance with CWA Section 402(p)(3)(B)(ii), this order prohibits the discharge of non-storm water to the MS4s, with a few exceptions. The specified exceptions are consistent with 40 CFR 122.26(d)(2)(iv)(B)(1). If the permittees or the

Executive Officer determines that any of the exempted non-storm water discharges contain pollutants, a separate NPDES permit or coverage under the Regional Board's De Minimis permit will be required.

2. RECEIVING WATER LIMITATIONS

Receiving water limitations are included to ensure that discharges from MS4 systems do not cause or contribute to violations of applicable water quality standards in receiving waters. The compliance strategy for receiving water limitations is consistent with the U.S. EPA and State Board guidance and recognizes the complexity of storm water management.

This order requires the permittees to meet water quality standards in receiving waters in accordance with US EPA requirements as specified in State Board Order No. WQ 99-05. If water quality standards are not met by implementation of current BMPs, the permittees are required to re-evaluate the programs and policies and to propose additional BMPs. Compliance determination will be based on this iterative BMP implementation/compliance evaluation process.

3. ILLEGAL DISCHARGES AND ILLICIT CONNECTIONS TO MS4s

The permittees have completed their survey of the MS4 systems and eliminated or permitted all identified illicit connections. The permittees have also established a program to address illegal discharges and a mechanism to respond to spills and leaks and other incidents of discharges to the MS4s. The permittees are required to continue these programs to ensure that the discharges from MS4s do not become a source of pollutants in receiving waters.

4. PUBLIC AND BUSINESS EDUCATION OUTREACH PROGRAM

Public outreach is an important element of the overall urban pollution prevention program. The permittees have committed to implement a strategic and comprehensive public education program to maintain the integrity of the receiving waters and their ability to sustain beneficial uses. The principal permittee has taken the lead role in the outreach program and has targeted various groups including businesses, industry, development, utilities, environmental groups, institutions, homeowners, school children, and the general public. The permittees have developed a number of educational materials, established a storm water pollution prevention hotline, started an advertising and educational campaign and distribute public education materials at a number of public events. The permittees are required to continue these efforts and to expand public participation and education programs.

5. LEGAL AUTHORITY

During the first two permit cycles, each permittee adopted a number of ordinances, municipal codes, and other regulations to establish legal authority to control discharges to the MS4s and to enforce these regulations as specified in 40 CFR 122.26(d)(2)(I)(B, C, E, and F). The permittees are required to enforce these ordinances and to take enforcement actions against violators (40 CFR 122.26(d)(2)(iv)(A-D)). The enforcement activities undertaken by a majority of the permittees have consisted primarily of Notices of Violation, which act to educate the public on the environmental consequences of illegal discharges. In the case of the County, additional action has sometimes included recovery of investigation and

clean-up costs from a responsible party. In the event of egregious or repeated violations, the option exists for a referral to the County District Attorney for possible prosecution. In order to eliminate unauthorized, non-storm water discharges, reduce the amount of pollutants commingling with storm water runoff and thereby protect water quality, an additional level of enforcement is required between Notices of Violation and District Attorney referrals. Therefore, by November 15, 2003, the permittees are required to establish the authority and resources to administer either civil or criminal fines and/or penalties for violations of their local water quality ordinances (and the Federal Clean Water Act). The progress in establishing this program must be fully documented in the annual reports submitted by the permittees and the number, nature and amount of fines and/or penalties levied must be reported, beginning with the 2003/2004 annual report.

6. PUBLIC FACILITIES AND ACTIVITIES

Education of municipal planning, inspection, and maintenance staff is critical to ensure that municipal facilities and activities do not cause or contribute to an exceedance of receiving water quality standards. The second term permit required the permittees to prepare an Environmental Performance Report to address public agency facilities and activities that are not regulated under the State's General Industrial Activities Storm Water Permit. It also required the permittees to report on an annual basis the actions taken to eliminate the discharge of pollutants from public agency activities and facilities. The permittees are required to inspect and maintain drainage facilities free of waste materials to control pollutants in storm water runoff flowing through these systems. This order requires the permittees to re-evaluate their facilities and activities on an annual basis to see if additional BMPs are needed to ensure water quality protection.

7. MUNICIPAL INSPECTION PROGRAM

Inspections by the municipalities, of construction, industrial, and commercial activities within their jurisdiction will be conducted, in order to control the loading of pollutants entering the MS4 system. The municipalities will inventory companies and sites in the above categories; prioritize those companies and sites with respect to their potential for discharge of pollutants in runoff and their proximity to sensitive receiving waters; and perform regular inspections to insure compliance with local ordinances. While initial observations of non-compliance may result in 'educational' type enforcement, repeated non-compliance will result in more disciplinary forms of enforcement, such as, monetary penalties, stop work orders or permit revocation.

8. NEW DEVELOPMENT

During the second term permit, the permittees developed new development guidelines. The permittees are required to implement these guidelines. Additionally, this order requires the permittees to work towards the goal of restoring and preserving the natural hydrologic cycles in approving urban developments. To accomplish this goal, the permittees have the option of using a combination of methodologies. The permittees/project proponents may propose BMPs based on a watershed approach, establish a storm water pollution prevention fund for such BMPs, or any other innovative and proven alternatives to address storm water pollution. If a set of measures, acceptable to the Executive Officer, is not developed

and approved by October 1, 2003, the permittees are required to use the numeric sizing criteria specified in this order. The numeric criteria are identical to the ones used by the San Diego Regional Board in its MS4 permit for permittees within the San Diego County area (Order No. 2001-01).

9. SEPTIC SYSTEM FAILURES AND PORTABLE TOILET DISCHARGES

A number of beach closures in Orange County have been due to spills, overflows, and leaks from sanitary sewer lines. To address these concerns, a set of separate waste discharge requirements for local sanitary sewer agencies is being prepared by the Regional Board. Failing septic systems and improper use of portable toilets have also been linked to microbial contamination of urban runoff. The permittees shall identify, with the appropriate local agency, a mechanism to determine if failure of these septic systems are causing or contributing to urban storm water pollution problems in their jurisdictions. The permittees shall also review their local oversight program for the placement and maintenance of portable toilets to determine the need for any revision.

10. MONITORING REQUIREMENTS

During the first term permit and part of the second term permit, the permittees conducted extensive monitoring of the storm water flows, receiving water quality and sediment quality. These early programs focused on identifying pollutants, estimating pollutant loads, tracking compliance with water quality objectives, and identifying sources of pollutants. The Orange County monitoring program, like other monitoring programs nationwide, has established that there is a high degree of uncertainty in the quality of storm water runoff and that there are significant variations in the quality of urban runoff spatially and temporally. However, most of the monitoring programs to date have indicated that there a number of pollutants in urban storm water runoff. Only in a few cases has a definite link between pollutants in urban runoff and beneficial use impairment been established.

In 1999, the permittees re-evaluated their monitoring program and proposed a revised monitoring program. The goals of the 1999 Water Quality Monitoring Program are:

- a. To determine the role of urban runoff in beneficial use impairment;
- b. To collect technical information to develop an effective urban storm water management plan; and
- c. To determine the effectiveness of a number of BMPs, also as an aid to the overall urban storm water management plan.

To accomplish these goals, the monitoring program focuses on three areas:

- a. Areas where constituent concentrations are substantially above system-wide averages. These areas are referred to as "warm spots" and the designation is based on monitoring data from prior years.
- b. Areas of Critical Aquatic Resources (sites with important aquatic resources).
- c. Sub-watersheds where certain BMPs have been installed to study their effectiveness.

To accomplish these goals, it is anticipated that at least five years worth of monitoring data will be required (1999-2003).

In addition, the monitoring program will continue the Reconnaissance and Source Identification component that targets areas that are known to exhibit unusually high levels of storm water pollutants.

The permittees also participate in a number of other regional monitoring programs such as those conducted by the Southern California Coastal Water Research Project and the California Regional Marine Monitoring Program.

The permittees are encouraged to continue their participation in regional and watershed-wide monitoring programs. By July 1, 2003, the permittees are required to re-evaluate their Water Quality Monitoring Program and submit a revised plan for approval. The revised plan shall include the following monitoring elements: Mass Emissions, Estuary/Wetlands, Water Column Toxicity, Bacteriological/Pathogen, Bioassessment, Reconnaissance, Land Use Correlation, and TMDL/303(d) Listed Waterbodies.

X. WATER QUALITY BENEFITS/COST ANALYSIS/FISCAL ANALYSIS

There are direct and indirect benefits from clean beaches, clean water, and a clean environment. It is difficult to assign a dollar value to the benefits the public derives from fishable and swimmable waters. In 1972, at the start of the NPDES program, only 1/3 of the U.S. waters were swimmable and fishable. In 2001, 2/3 of the U.S. waters meets these criteria. In the 1995, *Money* magazine survey of the "Best Places to Live", clean water and air ranked as the most important factors in choosing a place to live. Thus, environmental quality has a definite link to property values. Clean beaches and other water recreational facilities also attract tourists. It is estimated that on average, an out-of-state visitor spends approximately \$100.00 per day. Huntington Beach's 8.5-mile shoreline attracts 10 million visitors a year⁵. During the summer of 1999 and 2000 when the beaches were closed to water contact recreation, the beach communities reported multi-million-dollar losses in tourist revenues.

The true magnitude of the urban runoff problem is still elusive and any reliable cost estimate for cleaning up urban runoff would be premature. For urban storm water runoff, end-of-pipe treatments are cost prohibitive and are not generally considered as a technologically feasible option. Over the last decade, the permittees have attempted to define the problem and implemented best management practices to combat the problem. The costs incurred by the permittees in implementing these programs and policies can be divided into three broad categories (the costs indicated below are for the entire Orange County storm water program):

1. Shared costs: These are costs that fund activities performed mostly by the principal permittee under the Implementation Agreement. These activities include overall storm water program coordination; intergovernmental agreements; representation at the Storm Water Quality Task Force, Regional Board/State Board meetings and other public forums; preparation and submittal of compliance reports and other

⁵ Los Angeles Times, May 9, 2001

reports required under the NPDES permits and Water Code Section 13267, budget and other program documentation; coordination of consultant studies, co-permittee meetings; and training seminars. The overall costs increased from \$0.81M in 1996/97 to \$0.94M in 1999/00.

2. Individual Costs for DAMP Implementation: These are costs incurred by each permittee for implementing the BMPs (drainage facility inspections for illicit connections, drain inlet/catchbasin stenciling, public education, etc.) included in the DAMP. A number of programs and policies for non-point and storm water pollution controls existed prior to the urban storm water runoff NPDES program. However, the DAMP that was developed and implemented in response to the urban storm water runoff NPDES program required additional programs and policies for pollution control. These costs are attributable to DAMP implementation. These costs increased from \$2.6M in 1996/97 to \$6.9M in 1999/00.
3. Individual Costs of Pre-Existing Programs: These are costs incurred by each permittee for water pollution control measures that were already in existence prior to the urban storm water runoff NPDES program. These programs included recycling, litter control, street sweeping, drainage facility maintenance, and emergency spill response. The overall costs for these programs increased from \$48M in 1996/97 to \$79M in 1999/00.

In addition to these expenditures, volunteer programs (such as the "Beach Cleanup Day", "Pride Days", "Coastal Cleanup Day", etc.) also contributed to the urban runoff pollution control efforts.

The permittees identified the following funding sources (1999/00):

<i>FUNDING SOURCE</i>	<i>PERCENTAGE</i>
General Funds	66%
Gas Taxes	9%
Sewer/Storm Drain Maintenance Fee	7%
Sanitation Fees	5%
Benefit Assessment	3%
Special District Funds	1%
Other Sources	9%

XI. ANTIDegradation Analysis

The Regional Board has considered whether a complete antidegradation analysis, pursuant to 40 CFR 131.12 and State Board Resolution No. 68-16, is required for these storm water discharges. The Regional Board finds that the pollutant loading rates to the receiving waters will be reduced with the implementation of the requirements in this order. As a result, the quality of storm water discharges and receiving waters will be improved. Since this order will not result in a lowering of water quality, a complete antidegradation analysis is not necessary, consistent with the federal and state antidegradation requirements.

XII. PUBLIC WORKSHOP

The Regional Board recognizes the significance of Orange County's Storm Water/Urban Runoff Management Program and will conduct, participate, and/or assist with any workshop during the term of this order to promote and discuss the progress of the storm water management program. The details of the workshop will be posted on the Regional Board's website, published in local newspapers and mailed to interested parties. Persons wishing to be included in the mailing list for any of the items related to this order may register their e-mail address and/or mailing address with the Regional Board office at the address given below.

XIII. PUBLIC HEARING

The Regional Board opened a public hearing regarding the proposed waste discharge requirements on Wednesday, December 19, 2001 at 9:00 a.m. at the City Council Chambers, City of Santa Ana. The public hearing was continued on Friday, January 18, 2002 at 9:00 a.m. at the City Council Chambers, City of Santa Ana, at which time Order No. R8-2002-0010 was adopted.

XIV. INFORMATION AND COPYING

Persons wishing further information may write to the above address or call Aaron Buck at (909) 782-4906. Copies of the application, proposed waste discharge requirements, and other documents (other than those which the Executive Officer maintains as confidential) are available at the Regional Board office for inspection and copying by appointment scheduled between the hours of 8:30 a.m. and 4:00 p.m., Monday through Friday (excluding holidays).

XV. REGISTER OF INTERESTED PERSONS

Any person interested in a particular application or group of applications may leave his/her e-mail and/or mailing address and phone number as part of the file for an application. Copies of tentative waste discharge requirements will be mailed to all interested parties.

In addition to the permittees, comments were solicited from the following agencies and/or persons:

U. S. Environmental Protection Agency – Terry Oda / Eugene Bromley (W-5-1)
U.S. Army District, Los Angeles, Corps of Engineers - Permits Section
NOAA, National Marine Fisheries Service
U.S. Fish and Wildlife Service - Carlsbad

No. C 02-5244 SBA

UNITED STATES DISTRICT COURT FOR THE NORTHERN DISTRICT OF CALIFORNIA

265 F. Supp. 2d 1142; 2003 U.S. Dist. LEXIS 9044

May 16, 2003, Decided
May 16, 2003, Filed

SUBSEQUENT HISTORY: Affirmed by City of Arcadia v. United States EPA, 411 F.3d 1103, 2005 U.S. App. LEXIS 11240 (9th Cir. Cal., 2005)

Related proceeding at City of Arcadia v. State Water Res. Control Bd., 2006 Cal. App. LEXIS 92 (Cal. App. 4th Dist., Jan. 26, 2006)

DISPOSITION: **[**1]** Defendants' motion to dismiss granted; plaintiffs' motion for partial summary judgment denied, and objections overruled. Action dismissed in its entirety, without leave to amend in part and with prejudice in part. Intervenors' evidentiary objections overruled as moot.

CASE SUMMARY:

PROCEDURAL POSTURE: Plaintiffs, California cities, sued defendants, including the United States Environmental Protection Agency (EPA), for declarative and injunctive relief under, inter alia, 5 U.S.C.S. § 706 of the Administrative Procedure Act (APA), 5 U.S.C.S. § 551 et seq. Defendants sought dismissal of the operative complaint. The cities sought partial summary judgment.

OVERVIEW: The first claim for relief alleged APA violations. Generally, it alleged that numerous EPA actions were arbitrary and capricious, and contrary to law, such as the EPA's establishing the EPA Trash Total Daily Maximum Loads (TMDLs) prior to receiving for review the California Trash TMDLs. Violations alleged in

the second claim appeared to relate mostly to procedural requirements under the Regulatory Flexibility Act, 5 U.S.C.S. § 601 et seq., and the Small Business Regulatory Enforcement Fairness Act of 1996, 5 U.S.C.S. § 801 et seq. The third claim sought a declaration as to which party's interpretation of the law was correct and a judicial determination of the cities' rights and duties. The court concluded that all of the cities' claims were moot, meritless, or unripe. The cities' challenges to the EPA Trash TMDLs were obviously mooted the minute that EPA approved the State Trash TMDLs. The cities' challenge to EPA's authority to approve the State Trash TMDLs following its establishment of the EPA Trash TMDLs and their challenge to the "de facto TMDL procedure" were patently meritless. Finally, the cities' challenges to the "merits" of the State Trash TMDLs were premature.

OUTCOME: The EPA's motion to dismiss, in which intervenor environmental organizations joined, was granted. The cities' motion for summary adjudication of issues was denied as moot. Various objections to declarations made by the parties were either overruled or overruled as moot.

CORE TERMS: epa, trash, regional, declaration, approve, de facto, moot, water quality, agency actions, partial, summary judgment, consent decree, monitoring, pollutant, pollution, leave to amend, capriciously, reduction, npdes, intervenors, waterbody, deadline, heading, reply, declaratory relief, acted arbitrarily, injunctive, wasteload, hardship, matter jurisdiction

LexisNexis(R) Headnotes

Civil Procedure > Jurisdiction > Subject Matter Jurisdiction > Jurisdiction Over Actions > General Overview
Civil Procedure > Pleading & Practice > Defenses, Demurrers & Objections > Motions to Dismiss

[HN1]"Extra-record evidence" may be considered by the court in connection with a motion to dismiss for lack of subject matter jurisdiction.

Civil Procedure > Jurisdiction > Subject Matter Jurisdiction > Jurisdiction Over Actions > General Overview
Civil Procedure > Pleading & Practice > Defenses, Demurrers & Objections > Motions to Dismiss

[HN2]Fed. R. Civ. P. 12(b)(1) authorizes a party to seek dismissal of an action for lack of subject matter jurisdiction. When subject matter jurisdiction is challenged under Fed. R. Civ. P. 12(b)(1), the plaintiff has the burden of proving jurisdiction in order to survive the motion. A plaintiff suing in a federal court must show in his pleading, affirmatively and distinctly, the existence of whatever is essential to federal jurisdiction, and, if he does not do so, the court, on having the defect called to its attention or on discovering the same, must dismiss the case, unless the defect be corrected by amendment. In adjudicating such a motion, the court is not limited to the pleadings, and may properly consider extrinsic evidence. The court presumes lack of jurisdiction until the plaintiff proves otherwise.

Civil Procedure > Pleading & Practice > Defenses, Demurrers & Objections > Failures to State Claims

[HN3]A motion to dismiss pursuant to Fed. R. Civ. P. 12(b)(6) tests the legal sufficiency of a claim. A motion to dismiss should not be granted unless it appears beyond doubt that the plaintiff can prove no set of facts in support of his claim which would entitle him to relief. The complaint is construed in the light most favorable to the plaintiff, and all properly pleaded factual allegations are taken as true. Dismissal is proper only where there is no cognizable legal theory or an absence of sufficient facts alleged to support a cognizable legal theory. In adjudicating a motion to dismiss, the court need not accept as true unreasonable inferences or conclusory legal allegations cast in the form of factual allegations.

Civil Procedure > Pleading & Practice > Defenses, Demurrers & Objections > Failures to State Claims

Civil Procedure > Pleading & Practice > Pleadings > Amended Pleadings > Leave of Court
Civil Procedure > Dismissals > Involuntary Dismissals > Failures to State Claims

[HN4]When the complaint is dismissed for failure to state a claim, leave to amend should be granted unless the court determines that the allegation of other facts consistent with the challenged pleading could not possibly cure the deficiency. Leave to amend is properly denied where the amendment would be futile.

Environmental Law > Water Quality > General Overview

[HN5]No authority supports the conclusion that the Environmental Protection Agency (EPA) lacks authority to approve state-submitted Total Daily Maximum Loads (TMDLs) after EPA has established its own TMDLs, nor does this conclusion logically follow from the proposition that EPA is required to approve or disapprove a state-submitted TMDL within 30 days of submission.

Administrative Law > Judicial Review > Reviewability > Final Order Requirement

Civil Procedure > Judgments > Relief From Judgment > General Overview

[HN6]See 5 U.S.C.S. § 551(13).

Administrative Law > Judicial Review > Reviewability > Ripeness

Civil Procedure > Jurisdiction > Subject Matter Jurisdiction > Jurisdiction Over Actions > General Overview
Constitutional Law > The Judiciary > Case or Controversy > Ripeness

[HN7]The ripeness doctrine is drawn both from Article III limitations on judicial power and from prudential reasons for refusing to exercise jurisdiction. Unripe claims are subject to dismissal for lack of subject matter jurisdiction. In determining whether a case is ripe for review, a court must consider two main issues: the fitness of the issues for judicial decision and the hardship to the parties of withholding court consideration. To address these issues in the context of a challenge to the lawfulness of administrative action, the United States Supreme Court has identified three factors to consider: (1) whether delayed review would cause hardship to the plaintiffs; (2) whether judicial intervention would inappropriately interfere with further administrative action; and (3) whether the courts would benefit from further factual development of the issues presented.

Civil Procedure > Justiciability > Ripeness > General Overview

Civil Procedure > Justiciability > Standing > General Overview

[HN8] Injury-in-fact is a concept that relates to the issue of standing, not ripeness.

COUNSEL: For Plaintiff: Noam I. Duzman, Richard Montevideo, Robert S. Bower, Rutan & Tucker LLP, Costa Mesa, CA.

For USA, Defendant: Charles M. O'Connor, AUSA & Chief, Environment & Natural Resources, United States Attorney's Office, San Francisco, CA. AND-- S. Randall Humm - Trial Attorney, Pamela Tonglao - Trial Attorney, U.S. Dept. of Justice, Washington, DC.

JUDGES: SAUNDRA BROWN ARMSTRONG, United States District Judge.

OPINION BY: SAUNDRA BROWN ARMSTRONG

OPINION

[*1143] ORDER GRANTING DEFENDANTS' MOTION TO DISMISS, DENYING AS MOOT PLAINTIFFS' MOTION FOR PARTIAL SUMMARY JUDGMENT, AND DISMISSING ACTION

[Docket Nos. 18, 28, 31, 43, 47]

Plaintiffs City of Arcadia and other California cities (collectively, "Plaintiffs") bring this action against defendants United States Environmental Protection Agency ("EPA"), the EPA Administrator, and the EPA Region IX Administrator (collectively, "Defendants") for injunctive and declaratory relief. The Natural Resources Defense Council, Santa Monica BayKeeper, and Heal the Bay (collectively, "Intervenors") have intervened as defendants.

Now before the Court are Defendants' [*2] Motion to Dismiss Second Amended Complaint (the "Motion to Dismiss"), in which Intervenors join, and Plaintiffs' Motion for Summary Adjudication of Issues (the "Motion for Partial Summary Judgment"). Having read and considered the papers submitted and being fully informed, the Court GRANTS the Motion to Dismiss, DENIES AS MOOT the Motion for Partial Summary Judgment, and DISMISSES this action.¹

¹ These matters are suitable for disposition without a hearing. See Fed. R. Civ. P. 78; Civ. L.R. 7-1(b).

I. BACKGROUND

2

2 Over the years the Court has had the pleasure and privilege of reading some excellent moving papers. Some of these submissions stand out as truly superlative. Defendants' opening and reply briefs for their Motion to Dismiss are shining examples of such superlative submissions. In these briefs Defendants discuss three areas of federal law generally regarded as highly complex--environmental regulation, administrative law, and justiciability--in direct, succinct, well-supported, and powerfully illuminating fashion. Whereas a poor presentation of the statutory and regulatory framework and Defendants' arguments might have required the Court to spend hours to apprehend their arguments, the high quality of Defendants' writing enabled the Court to grasp them in a matter of minutes. Defendants' briefs also thankfully avoid leveling the sorts of thinly veiled (or, at times, not-at-all-veiled) *ad hominem* attacks that unfortunately pervade too much legal writing nowadays. The Court thus commends Defendants' counsel for their outstanding writing and expresses its appreciation for it.

[**3] A. Statutory and Regulatory Background

1. Water Pollution Control Under the Clean Water Act

The Clean Water Act ("CWA"), 33 U.S.C. §§ 1251-1387, utilizes two fundamental approaches to control water pollution: technology-based regulations and water quality standards. Technology-based [*1144] regulations seek to reduce pollution by requiring a discharger to effectuate equipment or process changes, without reference to the effect on the receiving water; water quality standards fix the permissible level of pollution in a specific body of water regardless of the source of pollution.

The National Pollutant Discharge Elimination System ("NPDES") permit program is a key means of implementing both technology-based requirements and water quality standards. 33 U.S.C. §§ 1311(b)(1)(C), 1342(a)(1); 40 C.F.R. § 122.44(a), (d)(1). An NPDES permit establishes specific limits of pollution for an individual discharger. A discharge of pollutants (other than dredged or fill material) from any "point source," which is defined as "any discernible, confined and discrete conveyance . . . from which pollutants are or may [*4] be discharged," 33 U.S.C. § 1362(14), into the waters of the United States is prohibited unless that discharge complies with the discharge limits and other requirements of an NPDES permit. *Id.* §§ 1311(a), 1362(12). At

present, 45 states, including California, are authorized to administer the NPDES permit program. State Program Status, *at* http://cfpub.epa.gov/npdes/statestats.cfm?program_id=45&view=general. In the remaining states, EPA issues the permits. 33 U.S.C. § 1342(a).

2. Total Maximum Daily Loads ("TMDLs")

Section 303(d) of the CWA and EPA's implementing regulations require states to identify and prioritize waterbodies where technology-based effluent limitations and other required controls are insufficiently stringent to attain water quality standards. *See* 33 U.S.C. § 1313(d); 40 C.F.R. § 130.7(b). States must develop a "total maximum daily load," or "TMDL," for each pollutant of concern in each waterbody so identified. A TMDL represents the maximum amount of pollutant "loading" that a waterbody can receive from all combined sources without exceeding applicable [**5] state water quality standards. Although the term "total maximum daily load" is not expressly defined in the CWA, EPA's regulations define a TMDL for a pollutant as the sum of: (1) the "wasteload allocations," which is the amount of pollutant that can be discharged to a waterbody from point sources, (2) the "load allocations," which represent the amount of a pollutant in a waterbody attributable to nonpoint sources or natural background, and (3) a margin of safety. 40 C.F.R. §§ 130.2(g)-(i), 130.7(c)(1).

Under CWA Section 303(d)(2), EPA is required to review and approve or disapprove TMDLs established by states for impaired waters within thirty days of submission. 33 U.S.C. § 1313(d)(2). If EPA disapproves a state TMDL submission, EPA must issue its own TMDL for that waterbody within thirty days. *Id.*

3. Implementation of TMDLs

TMDLs established under Section 303(d)(1) of the CWA function primarily as planning devices and are not self-executing. *Pronsolino v. Nastri*, 291 F.3d 1123, 1129 (9th Cir. 2002) ("TMDLs are primarily informational tools that allow the states to proceed from the identification of [**6] waters requiring additional planning to the required plans.") (citing *Alaska Ctr. for the Env't v. Browner*, 20 F.3d 981, 984-85 (9th Cir. 1994)). A TMDL does not, by itself, prohibit any conduct or require any actions. Instead, each TMDL represents a goal that may be implemented by adjusting pollutant discharge requirements in individual NPDES permits or establishing nonpoint source controls. *See, e.g., Sierra Club v. Meiburg*, 296 F.3d 1021, 1025 (11th Cir. 2002) ("Each TMDL serves as the goal for the level of that pollutant in the waterbody to which that TMDL applies. . . . The theory is that individual-discharge permits [**1145] will be adjusted and other measures taken so that the sum of that pollutant in the waterbody is reduced

to the level specified by the TMDL."); *Idaho Sportsmen's Coalition v. Browner*, 951 F. Supp. 962, 966 (W.D. Wash. 1996) ("TMDL development in itself does not reduce pollution. . . . TMDLs inform the design and implementation of pollution control measures."); *Pronsolino*, 291 F.3d at 1129 ("TMDLs serve as a link in an implementation chain that includes . . . state or local plans for point and nonpoint [**7] source pollution reduction . . ."); *Idaho Conservation League v. Thomas*, 91 F.3d 1345, 1347 (9th Cir. 1996) (noting that a TMDL sets a goal for reducing pollutants). Thus, a TMDL forms the basis for further administrative actions that may require or prohibit conduct with respect to particularized pollutant discharges and waterbodies.

For point sources, limitations on pollutant loadings may be implemented through the NPDES permit system. 40 C.F.R. § 122.44(d)(1)(vii)(B). EPA regulations require that effluent limitations in NPDES permits be "consistent with the assumptions and requirements of any available wasteload allocation" in a TMDL. *Id.* For nonpoint sources, limitations on loadings are not subject to a federal nonpoint source permitting program, and therefore any nonpoint source reductions can be enforced against those responsible for the pollution only to the extent that a state institutes such reductions as regulatory requirements pursuant to state authority. *Pronsolino v. Marcus*, 91 F. Supp. 2d 1337, 1355-56 (N.D. Cal. 2000), *aff'd sub nom. Pronsolino v. Nastri*, 291 F.3d 1123 (9th Cir. 2002). [**8]

4. California Water Quality Control Statutory and Regulatory Framework

California effectuates the foregoing requirements of the CWA primarily through institutions and procedures set out in certain provisions of the California Water Code (the "Water Code"), including those of the California Porter-Cologne Water Quality Control Act (the "Porter-Cologne Act"), Cal. Water Code § 13000 et seq. These Water Code provisions established the State Water Resources Control Board (the "State Board") within the California Environmental Protection Agency to formulate and adopt state policy for water quality control. Cal. Water Code §§ 174-186, 13100, 13140. The State Board is designated as the state water pollution control agency for all purposes stated in the CWA and is the agency authorized to exercise powers delegated to it under the CWA. 33 U.S.C. § 1313; Cal. Water Code § 13160.

The Porter-Cologne Act established nine California Regional Water Quality Control Boards (individually, a "Regional Board"; collectively, the "Regional Boards"), Cal. Water Code §§ 13200, 13201, which operate under the purview of the State Board, *see id.* § 13225. Each Regional [**9] Board is comprised of nine members, *id.* § 13201, and is required to appoint an executive of-

ficer, *id.* § 13220(c), to whom the Regional Board may delegate all but some of its powers and duties, *id.* § 13223. Each Regional Board is required to formulate and adopt water quality control plans for all areas within the region. *Id.* § 13240. The State Board may approve such plan, or it may return it to the Regional Board for further submission and resubmission to the State Board. *Id.* § 13245. It must act on any water quality control plan within 60 days of a Regional Board's submission of such plan to the State Board, or 90 days after resubmission of such plan. *Id.* § 13246. A water quality control plan will not become effective unless and until it is approved by the State Board, followed by approval by the state's Office of Administrative Law ("OAL") in accordance with the appropriate procedures. [*1146] *Id.* § 13245; Cal. Gov't Code §§ 11340.2, 11349.3, 11353(b)(5).

The State Board is required to formulate, adopt, and revise general procedures for the formulation, adoption, and implementation of water quality control plans by the Regional Boards. Cal. Water Code §13164. [*10] The State Board may adopt water quality control plans for purposes of the CWA that include the regional water quality control plans submitted by the Regional Boards. *See id.* § 13170. Such plans, when adopted by the State Board, supersede any regional water quality control plans for the same waters to the extent of any conflict. *Id.*

B. Factual Summary and Procedural History

1. The Consent Decree

The events underlying the instant action were set in motion by the disposition of *Heal the Bay, Inc., et al. v. Browner, et al.*, No. C 98-4825 SBA ("*Heal the Bay*"), an action previously before this Court. In *Heal the Bay*, an individual and two environmental groups (which groups are now two of the three Intervenors in the instant action) brought a civil action against EPA, the EPA Administrator, and the EPA Region IX Administrator. Their suit primarily concerned EPA's alleged failure to perform its alleged duty under the CWA either to approve or to disapprove TMDLs submitted to EPA by the state of California.

On March 23, 1999, the Court filed an Amended Consent Decree (the "Consent Decree")³ in which "EPA agreed to ensure that a TMDL [would] [*11] be completed for each and every pairing of a [Water Quality Limited Segment, as defined in 40 C.F.R. 130.2(j),] and an associated pollutant in the Los Angeles Region" set forth in an attachment to the Consent Decree by specified deadlines. (Consent Decree PP2a, 2b, 3, 3c.)⁴ Pursuant to the Consent Decree, for each pairing EPA was required either to approve a TMDL submitted by California by a specified deadline or, if it did not approve a TMDL by the date specified, to establish a TMDL within one year of the deadline, unless California submitted and

EPA approved a TMDL prior to EPA's establishing the TMDL within the one-year period. (*Id.* P3a.) By March 24, 2002, EPA was required either to have approved a state-submitted TMDL for trash in the Los Angeles River or to have established the TMDL itself. (*Id.* PP2d, 3a; *id.* Att. 2, 3.)⁵

3 No original consent decree was entered. Rather, according to Defendants' representations in their opening brief, the Consent Decree incorporated amendments from an original proposal at the urging of proposed intervenors California Association of Sanitation Agencies and California Alliance of POTWs. (*See* Mot. to Dismiss at 6.)

[**12]

4 The Court takes judicial notice of the existence of the Consent Decree and the contents thereof. *See, e.g., Egan v. Teets, 251 F.2d 571, 577 n.10 (9th Cir. 1957)* (holding that district court was entitled to take judicial notice of prior proceedings involving same petitioner before same district court). The Consent Decree is filed as Docket No. 25 in *Heal the Bay*, No. C 98-4825 SBA.

5 Defendants contend that the relevant deadline was March 22, 2002, (Mot. to Dismiss at 6), and Plaintiffs echo this contention in their Second Amended Complaint, (Second Am. Compl. P25). Review of the terms of the Consent Decree, however, reveal that the deadline was a different date. The Consent Decree defines "effective date" as the date on which the Consent Decree is entered. (*Id.* P2d.) Although the Court signed the Consent Decree on March 22, 1999, (*id.* at 29), it was not entered on the docket until March 24, 1999. Under the terms of Attachments 2 and 3 of the Consent Decree, TMDLs for trash for all Water Quality Limited Segments the Los Angeles River were to be submitted by California within two years of the effective date--March 24, 2001. (*Id.* Atts. 2, 3.) Since EPA was required to ensure that a TMDL was in place within one year of California's deadline to submit a proposed TMDL, (*id.* P3a), the deadline for final approval or establishment of a TMDL was March 24, 2002.

Nevertheless, based on the evidence tendered by EPA, it is clear that EPA believed that the deadline was March 22, 2002. (*See* Decl. of David W. Smith in Supp. of EPA's Mot. to Dismiss, Ex. B at 2.) As is evident from the discussion below, this discrepancy is immaterial to the Court's analysis of the merits of the Motion to Dismiss.

[**13] [*1147] **2. EPA's Issuance of TMDLs and Approval of State-submitted TMDLs**

One of the responsibilities of the Regional Board for the Los Angeles region (the "Los Angeles Regional Board") is to develop TMDLs under the CWA for waterbodies in Los Angeles and Ventura Counties. (Decl. of Dennis Dickerson in Supp. of EPA's Mot. to Dismiss (the "Dickerson Declaration") P2.) With few exceptions, TMDLs are developed as draft TMDLs by Los Angeles Regional Board staff and then submitted to the board to be adopted as amendments to the Los Angeles Regional Board's Water Quality Control Plan, which is known as the Basin Plan. (*Id.*) Basin Plan amendments are then submitted to the State Board, and then subsequently to the OAL; after they have been approved by both of these agencies, they are submitted to EPA. (*Id.*)

On September 19, 2001, the Los Angeles Regional Board adopted TMDLs for trash for the Los Angeles River watershed. (*Id.* P3.) "Trash" was defined as man-made litter, as defined in California Government Code § 68055.1(g). (*Id.* Ex. A at 2.) These TMDLs (the "State Trash TMDLs") were approved by the State Board on February 19, 2002, by OAL on July 16, 2002, and ultimately [**14] by EPA by letter dated August 1, 2002. (*Id.* P3, Ex. C; Second Am. Compl. for Injunctive & Declaratory Relief ("SAC") PP27, 30.) Prior to its approval of the State Trash TMDLs, however, EPA issued its own TMDLs for trash for the Los Angeles River Basin (the "EPA Trash TMDLs") on March 19, 2002. (SAC P26; Decl. of David W. Smith in Supp. of EPA's Mot. to Dismiss (the "Smith Declaration") Ex. B.) The EPA's August 1, 2002, letter approving the State Trash TMDLs announced that they "superceded" the EPA Trash TMDLs. (SAC P31; Smith Decl. P7, Ex. C.)

3. TMDLs Now in Effect and Implementation Provisions

Under the provisions of the TMDLs now in effect--the State Trash TMDLs--the numeric target is zero trash in the Los Angeles River. (Dickerson Decl. Ex. A at 16, 29.) Based on this target, California has determined that the wasteload allocations for trash in the Los Angeles River also must be zero. (*Id.*)

To achieve this goal, California has provided, along with the State Trash TMDLs, implementation provisions that specify a phasing-in of progressive reductions in municipal stormwater wasteload allocations over a ten-year period, following completion of a two-year initial [**15] baseline monitoring period. (*Id.* Ex. A at 21.) While the baseline monitoring program is taking place, cities will be deemed to be in compliance with the wasteload allocations provided that all of the trash that is collected during this period is disposed of in compliance with all applicable regulations. (*Id.* Ex. A at 27.) A base-

line monitoring report is due to the Los Angeles Regional Board by February 15, 2004. (*Id.* P6.)⁶

6 Plaintiffs have filed Plaintiffs' Objections to Declarations of David W. Smith and Dennis Dickerson Offered by Defendants in Support of Defendants' Motion to Dismiss Second Amended Complaint ("Plaintiffs' Objections"). Plaintiffs' Objections challenge the admissibility of, *inter alia*, the statements in paragraph 6 of the Dickerson Declaration. The Court considers and resolves the objections to these statements in note 20, *infra*. Although Plaintiffs have objected to all the statements in paragraph 6, careful review of the arguments advanced in these objections reveals that they are not in fact objecting to the statement in paragraph 6 that "the baseline monitoring report is due to the [Los Angeles] Regional Board by February 15, 2004." (Dickerson Decl. P6; *see* Pls.' Objections at 3-4.) To the extent that Plaintiffs are in fact objecting to this statement, however, the Court OVERRULES their objections to this statement for the reasons set forth in note 20, *infra*.

[**16] [*1148] The State Trash TMDLs and incremental wasteload allocations will be implemented through the Los Angeles stormwater permit, which the Los Angeles Regional Board will need to amend to incorporate specific, enforceable permit requirements. (*Id.* P8.)⁷ The implementation provisions in the TMDLs allow permittees to "employ a variety of strategies to meet the progressive reductions in their Waste Load Allocations" and maintain that they "are free to implement trash reduction in any manner they choose." (*Id.* Ex. A at 29.) The wasteload reduction strategies are broadly classified as either end-of-pipe full capture structural controls, partial capture control systems, and/or institutional controls. (*Id.*) The provisions state that permittees will be deemed to be in compliance with the final wasteload allocation for their associated drainage areas if they utilize "full capture systems" that are adequately sized and maintained and maintenance records are available for inspection by the Los Angeles Regional Board. (*Id.* Ex. A at 30.)

7 Under heading II.2 of Plaintiffs' Objections, Plaintiffs object to the statements in paragraph 8 of the Dickerson Declaration relating to the Los Angeles Regional Board's understanding of how the State Trash TMDLs will be implemented. (Pls.' Objections at 4.) All of the grounds on which Plaintiffs object are meritless. First, Plaintiffs contend that the statements are objectionable as [HN1]"extra-record evidence." Such evidence, however, may be considered by the Court in

connection with a motion to dismiss for lack of subject matter jurisdiction. See *Ass'n of Am. Med. Colleges v. United States*, 217 F.3d 770, 778 (9th Cir. 2000). Since Defendants contend that Plaintiffs' challenges to the merits of EPA's approval of the State Trash TMDLs are unripe, and since the Court considers how these TMDLs will be implemented at least in part for this purpose, this evidence is properly before the Court. Second, Plaintiffs contend that the statements constitute inadmissible hearsay. These statements, however, do not contain or even implicitly rely on any out-of-court statement by one other than Mr. Dickerson for the truth of the matter stated.

Third, Plaintiffs claim that the statements lack foundation, although they do not explain what they mean by this. To the extent Plaintiffs are asserting that the declarant lacks personal knowledge of the Los Angeles Regional Board's intentions, that assertion is refuted by the fact that Mr. Dickerson has been Executive Officer of the board since 1997. (Dickerson Decl. P1.) Fourth, Plaintiffs insist that "the statements are objectionable and inadmissible as the best evidence of the implementation requirements vis-a-vis the TMDLs, is set forth in the TMDLs themselves, as well as in the terms of other enforceable documents, documenting the actions taken by the [Los Angeles] Regional Board, such as the terms of the Municipal Storm Water Permit referenced in the declaration." (Pls.' Objections at 4.) This objection misunderstands the nature of the "best evidence" rule: that rule applies *only* where the witness attempts to testify as to the *contents of a writing, recording, or photograph*. See *Fed. R. Evid. 1002*. Such is not the case here. Moreover, this objection reflects a fundamental misunderstanding of the nature of TMDLs. TMDLs are *not* self-executing; they require the appropriate state to issue regulations implementing them. It is also not clear what Plaintiffs mean by their assertion that documents "documenting the actions taken by the Regional Board" constitute "enforceable documents." Finally, Plaintiffs assail the statements at issue as "not competent." (*Id.*) Plaintiffs do not explain what they mean by this objection. The Court thus disregards it. Accordingly, the Court OVERRULES the objections under Heading II.2 of Plaintiffs' Objections.

[**17] [*1149] **4. The Instant Action**

Plaintiffs filed their initial complaint on June 28, 2002, in the United States District Court for the Central District of California. On August 30, 2002, they filed an amended complaint. On October 30, 2002, the case was

transferred to this Court, the United States District Court for the Northern District of California. Pursuant to the parties' stipulation and the Court's Order thereon, Plaintiffs filed a Second Amended Complaint for Injunctive and Declaratory Relief (the "SAC" or "Complaint") on December 12, 2002.

The SAC is the operative complaint for purposes of the Motion to Dismiss and the Motion for Partial Summary Judgment. The SAC purports to assert three claims for relief. The First Claim for Relief is ostensibly brought pursuant to a provision of the Administrative Procedure Act (the "APA"), 5 U.S.C. § 706, (SAC at 34), although certain allegations thereunder also invoke the CWA, the Regulatory Flexibility Act (the "RFA"), and the Small Business Regulatory Enforcement Fairness Act of 1996 (the "SBREFA"), (*id.* PP84-85).⁸ The First Claim for Relief alleges several violations of the APA: (1) EPA acted without authority [**18] and acted arbitrarily and capriciously by establishing the EPA Trash TMDLs prior to receiving for review the State Trash TMDLs, (SAC PP78-79); (2) EPA acted without authority and arbitrarily and capriciously by reviewing and approving the State Trash TMDLs because EPA had already established the EPA Trash TMDLs, (*id.* PP80, 83); (3) EPA acted arbitrarily and capriciously and in excess of its jurisdiction with regard to the manner by which it established the EPA Trash TMDLs, (*id.* PP81-82); (4) the collective actions of California and EPA relating to issuance of the EPA Trash TMDLs and subsequent approval of the State Trash TMDLs constitute a "*de facto* TMDL procedure" that is arbitrary, capricious, and contrary to law, (*id.* PP84-86);⁹ and (5) EPA acted arbitrarily and capriciously by approving the State Trash TMDLs because those TMDLs were "patently defective" and established not in accordance with the procedures of the CWA and California law, (*id.* P87).¹⁰ The Second Claim for Relief challenges [*1150] the validity of two alleged agency actions, the EPA Trash TMDLs and the "*de facto* TMDL procedure," under the APA, 5 U.S.C. § 551 *et seq.*; the [**19] RFA, 5 U.S.C. § 601 *et seq.*; and the SBREFA, 5 U.S.C. § 801 *et seq.* (SAC at 40; *id.* PP89-99.) The violations alleged under the Second Claim for Relief, however, appear to relate mostly to procedural requirements under the RFA and the SBREFA. (*See id.* PP91-93, 95-98 (invoking 5 U.S.C. §§ 601(5), 601(6), 603, 604(a), 604(b), 605(b), and 611).)¹¹ The Third Claim for Relief is derivative of the first two claims. It seeks a declaration under the Declaratory Judgment Act, 28 U.S.C. §§ 2201-2202, as to which party's interpretation of the law is correct and a judicial determination of Plaintiffs' rights and duties. (*Id.* PP100-105.)

⁸ With respect to the First Claim for Relief, the SAC comes perilously close to violating Federal

Rule of Civil Procedure 8(a)'s mandate of providing "a *short and plain* statement of the claim showing that the pleader is entitled to relief..." Fed. R. Civ. P. 8(a) (emphasis added). In particular, Plaintiffs' practice of indicating that the First Claim for Relief is based exclusively on the APA, (SAC at 34), yet at the same time claiming in the allegations thereunder that the actions at issue violate other statutes, (*id.* PP84-85), is confusing. Aside from potentially misleading Defendants as to the nature of the claims against them, it has required the Court to spend needless additional time and effort scrutinizing the allegations of the SAC because the Court cannot trust the accuracy of the headings of the SAC. The practice is especially reprehensible because the Court has already been forced to spend undue time and effort identifying and parsing out the five independent, discrete claims for relief that are set out in stream-of-consciousness fashion in the allegations underlying the "First Claim for Relief"--which heading necessarily suggests a *single* claim. *See infra*.

[**20]

9 This alleged *de facto* TMDL procedure is also claimed to violate the CWA, the RFA, and the SBREFA. (*Id.* PP84-85.)

10 Although not clearly stated, this last claim (claim (5)) within the First Claim for Relief appears to challenge the *merits* of EPA's approval of the State Trash TMDLs, as opposed to, for example, challenging EPA's authority to approve *any* state-submitted TMDLs after it issued the EPA Trash TMDLs, (*see id.* PP80, 83). Presumably, this last claim encompasses challenges to, for example, EPA's approval of the State Trash TMDLs where these TMDLs covered "unlisted" waters. (*See id.* PP42, 49, 62.) Defendants appear to have also construed this claim as challenging the merits of EPA's approval of the State Trash TMDLs, and they move to dismiss this claim as unripe. (*See Mot. to Dismiss* at 20-24.) Plaintiffs appear to concur in Defendants' construction of this claim. (*See Pls.' Opp. Br.* at 16-20.) Accordingly, the Court construes this last claim as challenging the merits of EPA's approval of the State Trash TMDLs.

11 This is yet another example of Plaintiffs' objectionable drafting of the SAC. In particular, the paragraph alleging improper agency action supposedly giving rise to the Second Claim for Relief, paragraph 96, identifies four bases on which the CWA, the APA, the RFA, and the SBREFA were violated. (*Id.* P96.) Of these four bases, however, only the first (denoted reason

"(a)") appears to have anything to do with the APA; the remaining three ("(b)," "(c)," and "(d)") appear to relate solely to provisions of the RFA and SBREFA, at least based on the allegations of the previous paragraphs under the heading "Second Claim for Relief." (*Id.*; *compare id.* (*e.g.*, alleging that EPA failed to perform an initial screening of the EPA Trash TMDLs to determine whether they would have a significant economic impact on a substantial number of small entities) *with id.* PP91-93, 95 (*e.g.*, alleging that RFA requires agencies to screen all proposed rules and identify whether such rules would have such an impact, (*id.* P92))).

The Court is thus left with the distinct impression that either Plaintiffs have been careless in drafting the Second Claim for Relief or they have invoked various statutes and inserted a number of allegations in scattershot fashion in the hope that something will slip by Defendants undetected and "stick." Aside from arguably violating Rule 8(a), this practice is unfair not only to Defendants, but also to the Court, because it makes the Court's resolution of Defendants' arguments considerably more difficult. (Nor is the Court interested in any supporting evidence or clarification from Plaintiffs' counsel regarding the nature of their claims that is not in the four corners of the SAC or incorporated therein by reference. The SAC speaks for itself on that score.) Based on its review of the SAC, the Court construes the allegations underlying the Second Claim for Relief as alleging violation of the APA, the RFA, and the SBREFA only with respect to EPA's alleged failure to provide Plaintiffs with notice and an opportunity for comment with regard to the *de facto* TMDL procedure, discussed *infra*, and the establishment of the EPA Trash TMDLs; the Court construes them to allege violation of the RFA and the SBREFA, but not the APA, with regard to the remaining allegations under the heading of "Second Claim for Relief." (*See SAC* P96.)

[**21] On January 13, 2003, Defendants and Intervenor filed answers to the SAC. On that same day, Defendants also filed the instant Motion to Dismiss, which seeks dismissal of the entire action pursuant to Federal Rules of Civil Procedure 12(b)(1) and 12(b)(6). Intervenor filed Intervenor's Notice in Support of Defendants' Motion to Dismiss on February 3, 2003, indicating in brief fashion that they agreed with the arguments in the Motion to Dismiss and therefore supported the motion. On March 10, 2003, Plaintiffs filed their Motion for Partial Summary Judgment.

Most of the plaintiffs in the instant action are currently plaintiffs in a California state court action against the Los Angeles Regional Board and the State Board challenging the legality of the State Trash TMDLs. (*Id.* P33.) Three other lawsuits have similarly been filed challenging either [*1151] California's establishment of the State Trash TMDLs or EPA's approval of the same. (*Id.*)

II. LEGAL STANDARD

A. Rule 12(b)(1)

[HN2]Federal Rule of Civil Procedure 12(b)(1) authorizes a party to seek dismissal of an action for lack of subject matter jurisdiction. "When subject matter jurisdiction is challenged under [*22] Federal Rule of Procedure 12(b)(1), the plaintiff has the burden of proving jurisdiction in order to survive the motion." *Tosco Corp. v. Communities for a Better Env't*, 236 F.3d 495, 499 (9th Cir. 2001). "A plaintiff suing in a federal court must show in his pleading, affirmatively and distinctly, the existence of whatever is essential to federal jurisdiction, and, if he does not do so, the court, on having the defect called to its attention or on discovering the same, must dismiss the case, unless the defect be corrected by amendment." *Id.* (quoting *Smith v. McCullough*, 270 U.S. 456, 459, 70 L. Ed. 682, 46 S. Ct. 338 (1926)). In adjudicating such a motion, the court is not limited to the pleadings, and may properly consider extrinsic evidence. See *Ass'n of Am. Med. Colleges v. United States*, 217 F.3d 770, 778 (9th Cir. 2000). The court presumes lack of jurisdiction until the plaintiff proves otherwise. See *Stock West, Inc. v. Confederated Tribes*, 873 F.2d 1221, 1225 (9th Cir. 1989).

B. Rule 12(b)(6)

[HN3]A motion to dismiss pursuant to Federal Rule of Civil Procedure 12(b)(6) tests the legal sufficiency of a claim. [*23] *Navarro v. Block*, 250 F.3d 729, 731 (9th Cir. 2001). A motion to dismiss should not be granted "unless it appears beyond doubt that the plaintiff can prove no set of facts in support of his claim which would entitle him to relief." *Conley v. Gibson*, 355 U.S. 41, 45-46, 2 L. Ed. 2d 80, 78 S. Ct. 99 (1957); accord *Johnson v. Knowles*, 113 F.3d 1114, 1117 (9th Cir. 1997). The complaint is construed in the light most favorable to the plaintiff, and all properly pleaded factual allegations are taken as true. *Jenkins v. McKeithen*, 395 U.S. 411, 421, 23 L. Ed. 2d 404, 89 S. Ct. 1843 (1969); see also *Everest & Jennings, Inc. v. Am. Motorists Ins. Co.*, 23 F.3d 226, 228 (9th Cir. 1994). "Dismissal is proper only where there is no cognizable legal theory or an absence of sufficient facts alleged to support a cognizable legal theory." *Navarro*, 250 F.3d at 731. In adjudicating a motion to dismiss, the court need not accept as

true unreasonable inferences or conclusory legal allegations cast in the form of factual allegations. *W. Mining Council v. Watt*, 643 F.2d 618, 624 (9th Cir. 1981). [*24]

[HN4]When the complaint is dismissed for failure to state a claim, "leave to amend should be granted unless the court determines that the allegation of other facts consistent with the challenged pleading could not possibly cure the deficiency." *Schreiber Distrib. Co. v. Serv-Well Furniture Co.*, 806 F.2d 1393, 1401 (9th Cir. 1986). Leave to amend is properly denied "where the amendment would be futile." *DeSoto v. Yellow Freight Sys., Inc.*, 957 F.2d 655, 658 (9th Cir. 1992).

III. DISCUSSION

Defendants have filed a Motion to Dismiss; Plaintiffs have filed a Motion for Partial Summary Judgment. The Motion for Partial Summary Judgment seeks adjudication of issues pertaining to Plaintiffs' challenge to the procedural legitimacy of the State Trash TMDLs. Because the Court grants the Motion to Dismiss (as discussed below), it does not reach the merits of the Motion for Partial Summary Judgment and therefore denies it as moot. Accordingly, the following discussion pertains [*1152] only to the Motion to Dismiss, except where noted.

At the outset, the Court notes that it need not analyze all the arguments presented in Defendants' opening brief because Plaintiffs [*25] concede that certain of their claims are moot. In particular, Defendants contend in their opening brief for the Motion to Dismiss that the EPA Trash TMDLs no longer have any force or effect because EPA has announced that the State Trash TMDLs "supersede" the EPA Trash TMDLs; consequently, Defendants maintain, Plaintiffs' claims that EPA lacked authority to establish the EPA Trash TMDLs, (SAC P78-79), and that the procedures by which EPA established them were unlawful, (*id.* PP81-82, 90, 94, 96-97, 99), are moot. (Mot. to Dismiss at 12-15.) In their opposition brief, Plaintiffs express satisfaction with Defendants' assurances that the EPA Trash TMDLs are no longer (and can never be) in effect and therefore "withdraw their claims directly challenging the validity of EPA's TMDLs . . ." (Pls.' Opp. Br. at 4 n.6.) Defendants acknowledge this withdrawal in their reply brief. (Defs.' Reply Br. at 1.) As a result, the Court GRANTS the Motion to Dismiss pursuant to Federal Rule of Civil Procedure 12(b)(1) with regard to claims (1) and (3) (SAC PP78-79 and SAC PP81-82, respectively) within the First Claim for Relief of the SAC identified in Part I.B.4 of this Order, *supra*. The Court [*26] also GRANTS the Motion to Dismiss pursuant to Rule 12(b)(1) with regard to the Second Claim for Relief of the SAC to the extent it challenges the validity of the EPA Trash

TMDLs. (See SAC PP90, 94, 96-97, 99.) The Court now addresses the parties' arguments in relation to the remaining claims.

A. Challenge to EPA's Authority to Approve the State Trash TMDLs

Plaintiffs claim that EPA lacked authority to approve the State Trash TMDLs because it had already established the EPA Trash TMDLs. (SAC PP80, 83.) Defendants move to dismiss this claim pursuant to Rule 12(b)(6) for failure to state a claim upon which relief can be granted. (Mot. to Dismiss at 19-20.) Defendants contend that EPA in fact has a statutory obligation under 33 U.S.C. § 1313 to review any proposed TMDLs submitted by a state and either approve them or disapprove them. (*Id.*) Defendants assert that nothing in the CWA or otherwise divests EPA of jurisdiction to approve a state-submitted TMDL once EPA has issued its own TMDLs, and in fact, recognizing such a principle would thwart Congressional intent to vest states with the primary responsibility of implementing the CWA's provisions. [**27] (*Id.* at 20.) Plaintiffs counter (in less than straightforward fashion) that by allowing California to submit the State Trash TMDLs to EPA after EPA established the EPA Trash TMDLs, EPA effectively "remanded" a "TMDL submission" to California, and EPA lacked authority to "remand" this submission and subsequently approve California's "resubmission." (See Pls.' Opp. Br. at 15-16.)¹²

¹² Plaintiffs also argue that EPA lacked authority to approve the State Trash TMDLs because these TMDLs cover "unlisted" waters; according to Plaintiffs, EPA has authority only to approve TMDLs for "listed" waters. (*Id.* at 14-15.) As Defendants correctly point out, this argument goes to the merits of EPA's approval of the State Trash TMDLs, not to the issue of whether EPA had any authority to approve any state-submitted TMDLs after issuing its own TMDLs--the issue raised by this claim. (Defs.' Reply Br. at 10 n.9.) Plaintiffs' argument is relevant only to their own Motion for Partial Summary Judgment, not to the arguments raised in the Motion to Dismiss.

[**28] Plaintiffs' counterargument is meritless. [HN5] No authority supports the conclusion that EPA lacks authority to approve [*1153] state-submitted TMDLs after EPA has established its own TMDLs, nor does this conclusion logically follow from the proposition that EPA is required to approve or disapprove a state-submitted TMDL within 30 days of submission. Moreover, as Defendants astutely note, recognizing such a principle "would lead to absurd results. Under this scenario, once EPA establishes a TMDL, the State could

never update it or modify it based on changed circumstances." (Mot. to Dismiss at 20.) Finally, like Defendants, (*see* Defs.' Reply Br. at 10), the Court is at a loss to understand what Plaintiffs mean by their contention that EPA "remanded" the EPA Trash TMDLs to California for revision and resubmission. Nothing in the allegations of the Complaint remotely suggest any sort of sending back of TMDLs to California for revision or additional development. And even if there were such a "remand," it does not follow that EPA lacked authority to approve the State Trash TMDLs.

For these reasons, the Court GRANTS the Motion to Dismiss with respect to claim (2) within the First Claim for Relief, [**29] (SAC PP80, 83), *see supra* Part I.B.4. Additionally, it is evident that Plaintiffs cannot amend the SAC to allege facts sufficient to rehabilitate this claim because it is meritless as a matter of law. Accordingly, this claim is DISMISSED WITHOUT LEAVE TO AMEND and WITH PREJUDICE.

B. The "De_Facto TMDL Procedure"

Under claim (4) within their First Claim for Relief, *see supra* Part I.B.4, and the Second Claim for Relief, Plaintiffs challenge the "de facto TMDL procedure,"¹³ which they consider to consist of:

the establishment by the [Los Angeles] Regional Board of the TMDL, followed by the preparation and notice of the TMDL by USEPA, followed by the approval of the TMDL by the State Board, followed by the "establishment" by USEPA of the EPA TMDL, followed by the determination by USEPA to review and/or approve the subsequently submitted State TMDL, and to thereafter find the USEPA established TMDL is "superceded"

(SAC P85.) Plaintiffs assert that this procedure violates the APA, the RFA, and the SBREFA. (*Id.* PP84-85, 96-98.) Plaintiffs allege not only that they have previously suffered from the effectuation of the *de facto* [**30] TMDL procedure, but also that they will suffer from the effectuation of the procedure in the future. (*See id.* PP84-86.)

¹³ Plaintiffs do not expressly use the phrase "de facto TMDL procedure" in the SAC. Instead, they refer to this procedure as the "TMDL Procedure" and contend that EPA has effected a "de facto adoption" of the "TMDL Procedure." (SAC P85.) For ease of reference, the Court will refer to

what Plaintiffs call the "TMDL Procedure" as the "*de facto* TMDL procedure."

Defendants move to dismiss these claims by pointing out that the APA and the RFA, which was amended by the SBREFA, permit challenges *only* to "final agency action." (Mot. to Dismiss at 16-19.) " They explain that the APA defines [HN6]"agency action" to include "the whole or a part of any agency rule, order, license, sanction, relief, or the equivalent or denial thereof, or failure to act." (*Id.* at 16 (quoting 5 U.S.C. § 551(13).) (They do not indicate whether this definition applies to the RFA and [**31] SBREFA as well.) Defendants assert that what Plaintiffs characterize as a *de* [*1154] *facto* TMDL procedure is not an "agency action," much less a final agency action, but in fact a sequence of events; as such, they maintain, the procedure cannot give rise to a challenge under the APA or under the RFA, as amended by the SBREFA.

14 Defendants also contend that the RFA, as amended by the SBREFA, provides a narrow and exclusive means of judicial review that is not available here due to the nature of Plaintiffs' challenge to the *de facto* TMDL procedure. (*See id.* at 16.)

Plaintiffs respond to Defendants' arguments somewhat curiously. Despite vehemently asserting that Defendants' arguments are incorrect, they do not dispute that a challenge will lie only to final agency action. Instead, they contend that the *de facto* TMDL procedure "led up to and resulted in 'final agency action,'" (Pls.' Opp. Br. at 22), namely the August 1, 2002, approval of the State Trash TMDLs. Plaintiffs also argue at great length that [**32] their challenge to this procedure is not moot because it falls under the "capable of repetition, yet evading review" exception to the mootness doctrine. (*Id.* at 22-25.)

Defendants' arguments are persuasive, and Plaintiffs' responses are both unconvincing and nonresponsive. As Defendants correctly note, (*see* Defs.' Reply Br. at 4-5), Plaintiffs' suggestion that they are challenging EPA's approval of the State Trash TMDLs, as opposed to the so-called "TMDL procedure," is belied by the allegations of the SAC: by their plain language, the allegations of paragraphs 84 through 86 and paragraphs 96 through 98 challenge the "TMDL procedure," (SAC 84-86, 96-98); Plaintiffs' challenge to EPA's approval of the State Trash TMDLs is set out in paragraph 87, (*see id.* P87), the justiciability of which challenge is discussed in Part III.C of this Order, *infra*. Plaintiffs do not demonstrate how the "procedure" is "the whole or a part of any agency rule, order, license, sanction, relief, or the equivalent or denial thereof, or failure to act" or falls within any other definition, statutory or otherwise, of final agency action. ¹⁵ In-

deed, as Defendants also correctly note, (*see* [**33] Defs.' Reply Br. at 4-5), Plaintiffs' assertion that the TMDL procedure *consummated* in final agency action, namely EPA's approval of the State Trash TMDLs, is an implicit admission that the "procedure" itself is not final agency action. Nor do Plaintiffs make any effort to distinguish or refute any of the authorities cited by Defendants in support of their arguments. Finally, as Defendants yet again correctly point out, Plaintiffs' mootness argument is nonresponsive because Defendants do not contend that this claim is moot. (*Id.* at 8.) ¹⁶

15 Even though the Court has not been able to locate a statutory definition of "agency action" for purposes of the RFA and SBREFA, Plaintiffs have put forward no argument to suggest that it should be given a meaning substantially different than that provided in the APA. The Court sees no reason to conclude that "agency action" should be given a significantly more expansive definition than that provided for purposes of the APA.

16 Plaintiffs do not respond to Defendants' argument that judicial review is unavailable under the RFA, as amended by the SBREFA, for alleged violations of 5 U.S.C. § 603. (Mot. to Dismiss at 18.) The Court agrees with Defendants that the implication of this lack of response is that any opposition to this argument is waived. (*See* Defs.' Reply Br. at 3-4.) The Court disagrees with Defendants, however, that Plaintiffs have failed to respond to Defendants' arguments that the *de facto* TMDL procedure does not constitute "final agency action" under the RFA, as amended by the SBREFA; but the Court finds their response to this argument meritless for the reasons stated above.

[**34] In sum, it is apparent that the alleged *de facto* TMDL procedure, consisting of the various events identified in paragraph 85 of the SAC, is not subject to challenge under the APA, RFA, or SBREFA because it is not final agency action within the meaning of those statutes. *Cf. Lujan v. Nat'l Wildlife Fed'n*, 497 U.S. 871, 890, 111 L. Ed. 2d 695, 110 S. Ct. 3177 (1990) (rejecting challenge to alleged land withdrawal [*1155] review program on grounds that alleged program was not final agency action within meaning of APA). Accordingly, the Court GRANTS Defendants' motion to dismiss pursuant to Federal Rule of Civil Procedure 12(b)(6) with respect to claim (4) within the First Claim for Relief, (SAC PP84-86). The Court also GRANTS Defendants' motion pursuant to Rule 12(b)(6) with regard to the Second Claim for Relief. Given that the Second Claim for Relief challenges the validity of the EPA Trash TMDLs and the alleged *de facto* TMDL procedure alone, and given that Plaintiffs have withdrawn their challenge to the validity

of the EPA Trash TMDLs, the Second Claim for Relief is now dismissed in its entirety.

It is further evident that Plaintiffs cannot amend the SAC to allege [**35] facts sufficient to rehabilitate these claims because they are not actionable as a matter of law. Accordingly, both claim (4) within the First Claim for Relief and the Second Claim for Relief are DISMISSED WITHOUT LEAVE TO AMEND and WITH PREJUDICE.

C. Ripeness of Plaintiffs' Challenge to EPA's Approval of State Trash TMDLs

Plaintiffs' remaining claim (aside from the Third Claim for Relief, which is dependent on the First and Second Claims for Relief) challenges the merits of EPA's approval of the State Trash TMDLs. (*See id.* P87.) Defendants move to dismiss this claim as unripe for judicial review. Specifically, Defendants contend that the issues are not yet sufficiently developed to be fit for judicial review under the APA because Plaintiffs' existing NPDES permit imposes no obligations on Plaintiffs in connection with the State Trash TMDLs and because the Los Angeles Regional Board intends to revisit these TMDLs at the end of the monitoring period. (Mot. to Dismiss at 21-23.) Defendants further contend that Plaintiffs will not suffer any immediate hardship if review is withheld because EPA's approval of the State Trash TMDLs imposes no present, affirmative duties on [**36] Plaintiffs and requires no immediate changes in Plaintiffs' conduct. (*Id.* at 23-24.)

Plaintiffs respond by arguing that they have suffered "injury in fact," both economic and non-economic. (Pls.' Opp. Br. at 16-17.) Citing to the text of the State Trash TMDLs, a copy of which is appended to the Declaration of Richard Montevideo in Support of Plaintiffs' Motion for Summary Adjudication of Issues, and in Opposition to Defendants' Motion to Dismiss (the "Montevideo Declaration") as Exhibit 3, Plaintiffs claim that they are impacted by these TMDLs:

By the terms of the TMDL itself, most Plaintiffs are directly impacted by its terms and presently have express monitoring obligations to comply with, not to mention pending compliance dates requiring annual reductions in trash. Moreover, the TMDL calls out very specific and expensive implementation measures, including possible implementation through full capture vortex systems totaling \$ 109.3 million for all affected entities within the County [of Los Angeles] by the end of Year 1, and a total of \$ 2,053,100,000 for the first 12 years of im-

plementation. Even the Trash TMDL itself concludes that "Trash abatement in the Los Angeles [**37] River system may be expensive."

(Pls.' Opp. Br. at 18 (citing Montevideo Decl., Ex. 3 (State Trash TMDLs)) (internal citations and emphasis omitted).) Similarly, Plaintiffs maintain that "to come into compliance by the Compliance Dates, [they] must begin employing strategies now to meet the progressive reductions in Waste Load Allocations required by the State Trash TMDL[s]." (*Id.* at 19.) [**1156] Plaintiffs further allege that the NPDES permit that applies to all of Plaintiffs provides that the State Trash TMDLs are "effective and enforceable." (*Id.* at 18 (citing Montevideo Decl., Ex. 5, at 10 P14).) Citing paragraph 36 of the SAC, they also contend that they have suffered from the TMDLs' being in effect because they are exposed to "unwarranted enforcement action and third party citizen suits." (*Id.*) Finally, Plaintiffs contend that they have suffered "procedural injuries," to wit, their being "forced to submit comments to two different levels of government (the State of California and the EPA) on two sets of TMDL over a series of many months and several hearings." (*Id.* at 20.)

Defendants dispute all of Plaintiffs' arguments in their reply. Defendants note that [**38] "Plaintiffs point to no present effect of the TMDLs on their day-to-day conduct." (Defs.' Reply Br. at 12.) They point out that, contrary to Plaintiffs' contention, Plaintiffs in fact have no monitoring obligations with which to comply because the Los Angeles County Department of Public Works has assumed that responsibility for all of Plaintiffs. (*Id.*) Defendants clarify that the first compliance date under the TMDLs is not until 2006, and the TMDLs identify several potential compliance options without mandating the use of any particular measure. (*Id.*) They further note that Plaintiffs fail to respond to the record evidence that the Los Angeles Regional Board will revisit the TMDLs at the conclusion of the monitoring period, that is, prior to the first compliance deadline, and that such reconsideration has been considered a rational basis for delaying judicial review. (*Id.* at 13 (citing Ohio Forestry Ass'n v. Sierra Club, 523 U.S. 726, 735, 140 L. Ed. 2d 921, 118 S. Ct. 1665 (1998), and Municipality of Anchorage v. United States, 980 F.2d 1320, 1323 (9th Cir. 1992)).) Finally, Defendants assail Plaintiffs' reliance on the aforementioned [**39] statement in Plaintiffs' NPDES permit because this statement does not establish that the State Trash TMDLs are effective or enforceable against Plaintiffs. (*Id.*)

[HN7]The "ripeness doctrine is drawn both from Article III limitations on judicial power and from prudential

reasons for refusing to exercise jurisdiction." Reno v. Catholic Social Services, Inc., 509 U.S. 43, 57 n.18, 125 L. Ed. 2d 38, 113 S. Ct. 2485 (1993). Unripe claims are subject to dismissal for lack of subject matter jurisdiction. See Ass'n of Am. Med. Colleges v. United States, 217 F.3d 770, 784 n.9 (9th Cir. 2000). In determining whether a case is ripe for review, a court must consider two main issues: "the fitness of the issues for judicial decision" and "the hardship to the parties of withholding court consideration." Abbott Labs. v. Gardner, 387 U.S. 136, 149, 18 L. Ed. 2d 681, 87 S. Ct. 1507 (1967). To address these issues in the context of a challenge to the lawfulness of administrative action, the Supreme Court has identified three factors to consider: "(1) whether delayed review would cause hardship to the plaintiffs; (2) whether judicial intervention would inappropriately interfere with further [**40] administrative action; and (3) whether the courts would benefit from further factual development of the issues presented." Ohio Forestry Ass'n, Inc. v. Sierra Club, 523 U.S. 726, 733, 140 L. Ed. 2d 921, 118 S. Ct. 1665 (1998).

In light of these three factors, the Court finds this claim unripe for review. First, delayed review would cause, at most, minimal hardship to the parties. Indeed, Plaintiffs have not demonstrated that they will suffer *any* hardship if review is delayed. Despite their preoccupation with various official pronouncements that the State Trash TMDLs are "effective" and "enforceable," Plaintiffs cannot point to a single future event or condition that is fairly certain to occur and will adversely [*1157] impact *Plaintiffs* themselves.¹⁷ That is because the TMDLs do not presently impose any obligations on Plaintiffs and because they are subject to revision before such obligations will be imposed. Nor do Plaintiffs provide any evidence or explanation whatever of the "unwarranted enforcement action and third party citizen suits" to which they claim to be exposed.

17 The Court notes parenthetically that Plaintiffs' invocation of "injury in fact" in their opposition brief, (Pls.' Opp. Br. at 16-17), is inapposite. [HN8] Injury-in-fact is a concept that relates to the issue of standing, not ripeness. See Lujan v. Defenders of Wildlife, 504 U.S. 555, 560-61, 119 L. Ed. 2d 351, 112 S. Ct. 2130 (1992). Plaintiffs appear to confuse Defendants' arguments as relating to standing, not ripeness. (Pls.' Opp. Br. at 20 ("Federal courts have long recognized procedural injuries, as well as actual injuries, as an alternative basis for standing.")) Nevertheless, the Court construes Plaintiffs' allegations of "injury in fact" as allegations of hardship.

[**41] Equally unsupported is Plaintiffs' contention that they will bear economic costs in complying with

the State Trash TMDLs. The sole evidentiary basis of this allegation, set out in paragraph 35 of the SAC and discussed more thoroughly in Plaintiffs' Opposition, is the estimates provided in the text of the TMDLs themselves. (See SAC P35; Pls.' Opp. Br. at 18.) But this matter is inadmissible hearsay because it is offered by an out-of-court declarant, *i.e.*, the Los Angeles Regional Board, for the truth of the matter stated, *i.e.*, that the TMDLs will in fact impose these costs.¹⁸ Yet even if this evidence were admissible, it would be insufficient to support Plaintiffs' contention that they will suffer economic injury: the cited portions of the State Trash TMDLs provide estimates of costs to be borne by "permittees"; there is no indication that these costs will be borne by *Plaintiffs* in particular. (See Montevideo Decl., Ex. 3, at 37, 40, *cited in* Pls.' Opp. Br. at 18.) Similarly, Plaintiffs provide no evidentiary support for the bald contention in their opposition brief that *Plaintiffs* must begin employing "strategies" now to meet the progressive reductions [**42] in wasteload allocations required by the State Trash TMDLs. (Pls.' Opp. Br. at 19.)

18 The author of the State Trash TMDLs appears to be the Los Angeles Regional Board. (See Montevideo Decl., Ex. 3.) Since the Los Angeles Regional Board is an entity created by state law and is subordinate to a state agency, the State Board, the text of the State Trash TMDLs is arguably ascribable to the State Board and the state of California as well.

But these statements cannot be attributed to EPA by virtue of its approval of the State Trash TMDLs. Plaintiffs have laid no legal or evidentiary foundation tending to show that EPA's mere approval of the *TMDLs themselves* implies that EPA further agreed with or endorsed as accurate California's estimates of the costs of compliance provided with those TMDLs.

Even if Plaintiffs will be forced to comply with obligations imposed by the State Trash TMDLs and will suffer costs therefrom, the first Compliance Point is not until Year 3 of the implementation period, which runs [**43] from October 1, 2005, to September 30, 2006. (See Montevideo Decl., Ex. 3, at 28.) Thus, as a practical matter, Plaintiffs have three years to reach the specified Compliance Point. They have "ample opportunity later to bring [their] legal challenge at a time when harm is more imminent and more certain." Ohio Forestry Ass'n, 523 U.S. at 734. Accordingly, Plaintiffs cannot be heard to complain that they will suffer hardship if review is withheld at the present time.¹⁹

19 To the extent that Plaintiffs identify past events that are not alleged to recur in the future,

such as Plaintiffs' allegedly having to submit comments to two levels of government, for the purpose of demonstrating hardship, those events are irrelevant because Plaintiffs are solely seeking *prospective* relief (aside from attorney's fees and costs of suit).

[*1158] Second, judicial intervention would likely interfere with further administrative action on the part of the state of California. Plaintiffs have not refuted Defendants' [**44] evidence that the Los Angeles Regional Board will be revisiting the State Trash TMDLs at the end of the monitoring period.²⁰ It is thus possible that the compliance [*1159] dates or compliance points will be altered or abolished altogether. The State Board may submit new TMDLs to EPA for review and potential approval well before the compliance dates in the State Trash TMDLs. And even if the State Trash TMDLs remain mostly intact, it is certainly possible that the State Board will approve additional regulations that alleviate much of the burden on Plaintiffs. Again, Plaintiffs must bear in mind that it is the state of California, not the federal government, that is charged with implementing the State Trash TMDLs.

20 Plaintiffs' Objections challenge the admissibility of, *inter alia*, the portion of Defendants' evidence tending to show that the Los Angeles Regional Board will be revisiting the State Trash TMDLs at the end of the monitoring period, namely relevant statements in paragraphs 6 and 12 of the Dickerson Declaration. (The statements in paragraph 7 of the Dickerson Declaration and Exhibit C thereto also constitute such evidence, (*see* Mot. to Dismiss at 22), although Plaintiffs do not object to those statements.)

Plaintiffs challenge the statements in paragraph 6 of the Dickerson Declaration on five grounds. First, Plaintiffs contend that these statements are irrelevant "to the issue in question." (Pls.' Objections at 3.) The Court is unclear about what Plaintiffs mean by "the issue in question," but at any rate, the Court overrules this objection because these statements are indeed relevant to an important issue relating to ripeness: whether the Los Angeles Regional Board will revisit the State Trash TMDLs at the end of the monitoring period. Second, Plaintiffs assert that the statements are inadmissible hearsay because they seek "to introduce statements from parties other than the declarant, into evidence." (*Id.*) This argument fails because the statements are not offered for the truth of the matter stated by persons or parties other than Mr. Dickerson. That the Los Angeles Regional Board's *discussed* (*i.e.*, verbal-

ly articulated) the possibility of reopening the TMDLs in the future does not implicate hearsay concerns, *see United States v. Ballis*, 28 F.3d 1399, 1405 (5th Cir. 1994); and the board's orders to its staff are more akin to written or verbal acts.

Third, Plaintiffs assail the statements as "incompetent" because "the opinions and views of individual Regional Board members is [*sic*] not relevant or admissible evidence of the actions or positions of the entire Board." (Pls.' Objections at 3 (emphasis omitted).) But nowhere are the "opinions and views" of the individual Regional Board members set out in the statements in paragraph 6. Fourth, Plaintiffs claim that these statements are "not the best evidence of the position of the entire Regional Board, as the views and positions of an entire Board can only be discerned from the meeting minutes and resolutions which confirm the actions of the public body." (*Id.* (emphasis omitted).) But the "views and positions" of the board are not set out therein. Fifth, Plaintiffs argue that the statements should be excluded as "extra-record evidence." This objection is meritless because the statements are relevant to the ripeness of Plaintiffs' challenge to EPA's approval of the State Trash TMDLs, and the Court may appropriately look beyond the pleadings in evaluating a motion to dismiss pursuant to Rule 12(b)(1).

In sum, Plaintiffs appear to have construed the statements in paragraph 6 of the Dickerson Declaration as stating that the Los Angeles Regional Board intends to *revise* the State Trash TMDLs after completion of the monitoring period, and they have evidently made their objections with this understanding in mind. Careful review of these statements reveals, however, that these statements demonstrate only that board staff have been ordered to report on the TMDLs and make recommendations on whether or not to revise the TMDLs based on the result of the monitoring. Thus, the import of the statements in paragraph 6 is that *the board will be in a position to revisit, and potentially reconsider, the TMDLs at the end of the monitoring period*, not that they have actually decided to revise the TMDLs. Accordingly, and for the reasons stated above, the Court **OVERRULES** the objections under heading II.1 in Plaintiffs' Objections.

Although Plaintiffs have objected to the admissibility of the statements in paragraph 12 of the Dickerson Declaration, the Court does not rely on those statements in evaluating issues of ripeness. The Court finds that the statements in

paragraphs 6 and 7 of the Dickerson Declaration are sufficient to support a conclusion that the Los Angeles Regional Board will be revisiting--which is not to be confused with an intent to revise--the State Trash TMDLs at the end of the monitoring period. Accordingly, the Court OVERRULES AS MOOT the objections under heading II.5 in Plaintiffs' Objections.

Finally, the Court has reviewed the remaining objections in Plaintiffs' Objections. The Court does not rely on any of the matter to which Plaintiffs have objected other than those under headings II.1 and II.2 in evaluating the Motion to Dismiss. Accordingly, the Court OVERRULES AS MOOT the remaining objections in Plaintiffs' Objections.

[**45] Finally, the Court would benefit from further factual development of the issues presented. For example, Plaintiffs allege that in approving the State Trash TMDLs, EPA failed "to use 'best science' and [failed] to carefully consider suggestions on how to structure the TMDL program to be more effective and flexible to ensure workable solutions, with such failure resulting in an inequitable share of the burden [of pollution reduction] being placed on municipalities, such as Plaintiffs herein, to attain water quality standards." (SAC P47.) Since TMDLs are not self-executing, but require issuance of state regulations for implementation, delaying review will enable the Court to determine more easily and accurately whether the TMDL program could in fact have been structured more flexibly and whether Plaintiffs are bearing an inequitable share of the burden of pollution reduction.

In light of the Court's evaluation of the foregoing three factors, the Court concludes that Plaintiffs' claim is unripe for judicial review. Accordingly, Plaintiffs' claim (5) within the First Claim for Relief, (*id.* P87), is DISMISSED pursuant to Rule 12(b)(1) due to the Court's lack of subject matter jurisdiction. [**46] Since the Court lacks jurisdiction over this claim, it lacks authority to grant Plaintiffs leave to amend the claim; accordingly, the claim is dismissed WITHOUT LEAVE TO AMEND in this action. Finally, because the Court necessarily does not reach the merits of the claim, the dismissal is WITHOUT PREJUDICE.

D. Third Claim for Relief

Plaintiffs' Third Claim for Relief is wholly predicated on their first two claims for relief. Because these two claims for relief are dismissed, the Third Claim for Relief is DISMISSED on the same bases, and to the same extent, as the two claims (and sub-claims thereunder) are dismissed.

E. Motion for Partial Summary Judgment

Plaintiffs' Motion for Partial Summary Judgment seeks summary judgment in Plaintiffs' favor on the issues of (1) whether Defendants had authority and jurisdiction to approve the State Trash TMDLs to the extent that they covered unlisted waters and (2) whether Defendants had authority and jurisdiction to approve the State Trash TMDLs given that they had previously established the EPA Trash TMDLs. For the reasons stated above, the Court grants the Motion to Dismiss. Accordingly, the Motion for Partial Summary Judgment [**47] is DENIED AS MOOT. For the same reason, the Court OVERRULES AS MOOT Intervenor's Evidentiary Objections to Declaration of Richard Montevideo in Support of Plaintiffs' Motion for Summary Adjudication of Issues, and in Opposition to Defendants' Motion to Dismiss²¹ and Plaintiffs' Objections to [*1160] Declaration of Anjali I. Jaiswal and Exhibits.

21 Although the Montevideo Declaration relates both to Plaintiffs' opposition to the Motion to Dismiss and to Plaintiffs' Motion for Partial Summary Judgment, Intervenor's objections to the Montevideo Declaration are made in connection with their opposition to the Motion for Partial Summary Judgment. Accordingly, the Court considers their objections solely for that purpose.

IV. CONCLUSION

Plaintiffs have no reason or right to be before this Court, at least at this time. All of their claims are moot, meritless, or unripe. Plaintiffs' challenges to the EPA Trash TMDLs were quite obviously mooted out the minute that EPA approved the State Trash TMDLs. Indeed, given [**48] that Plaintiffs readily withdrew these challenges based solely on Defendants' representations in their moving papers that the EPA Trash TMDLs are void, (Pls.' Opp. Br. at 4 n.6), the Court wonders why Plaintiffs proceeded to file a lawsuit on this basis. Plaintiffs' challenge to EPA's authority to approve the State Trash TMDLs following its establishment of the EPA Trash TMDLs and their challenge to the "*de facto* TMDL procedure" are so patently meritless that the Court fails to understand why Plaintiffs decided to assert these claims in the first place. Finally, Plaintiffs' challenges to the "merits" of the State Trash TMDLs may very well be valid, but in the absence of any indication that they will suffer imminent hardship, these claims are premature.

The Court does not suggest by any means that Plaintiffs have acted in bad faith by continuing to prosecute this action after EPA approved the State Trash TMDLs. But after receiving Defendants' opening brief for their Motion to Dismiss, Plaintiffs should have recognized

that their claims could not be maintained at present, if at all. The arguments in their opposition brief appear to reflect more of a "win at all costs" approach than [**49] considered judgment. And while the Court does not doubt that Plaintiffs would appreciate a judicial declaration as to the validity of the State Trash TMDLs, the Court lacks jurisdiction to grant such relief where Plaintiffs are not in jeopardy of imminent harm and future events could obviate the controversy.

Accordingly,

IT IS HEREBY ORDERED THAT:

1. The Motion to Dismiss Second Amended Complaint [Docket No. 18] is GRANTED, such that:

a. The First Claim for Relief in the Second Amended Complaint for Injunctive and Declaratory Relief is DISMISSED, as follows:

i. The claim that EPA acted without authority and acted arbitrarily and capriciously by establishing the EPA Trash TMDLs prior to receiving for review the State Trash TMDLs, (SAC PP78-79), is DISMISSED WITHOUT LEAVE TO AMEND and WITH PREJUDICE as moot and, thus, for lack of subject matter jurisdiction;

ii. The claim that EPA acted without authority and arbitrarily and capriciously by reviewing and approving the State Trash TMDLs because EPA had already established the EPA Trash TMDLs, (SAC PP80, 83), is DISMISSED WITHOUT LEAVE TO AMEND and WITH PREJUDICE for failure to state a claim upon which relief [**50] can be granted;

iii. The claim that EPA acted arbitrarily and capriciously and in excess

of its jurisdiction with regard to the manner by which it established the EPA Trash TMDLs, (SAC PP81-82), is DISMISSED WITHOUT LEAVE TO AMEND and [**1161] WITH PREJUDICE as moot and, thus, for lack of subject matter jurisdiction;

iv. The claim that the collective actions of California and EPA relating to issuance of the EPA Trash TMDLs and subsequent approval of the State Trash TMDLs constitute a "*de facto* TMDL procedure" that is arbitrary, capricious, and contrary to law, (SAC PP84-86), is DISMISSED WITHOUT LEAVE TO AMEND and WITH PREJUDICE for failure to state a claim upon which relief can be granted;

v. The claim that EPA acted arbitrarily and capriciously by approving the State Trash TMDLs because those TMDLs were "patently defective" and established not in accordance with the procedures of the CWA and California law, (SAC P87), is DISMISSED WITHOUT LEAVE TO AMEND in this action and WITHOUT PREJUDICE as unripe and, thus, for lack of subject matter jurisdiction;

b. The Second Claim for Relief in the Second Amended Complaint for Injunctive and Declaratory Relief is DISMISSED, as [**51] follows:

i. To the extent the Second Claim for Relief challenges the validity of the EPA Trash TMDLs, the claim is DISMISSED

WITHOUT LEAVE TO AMEND and WITH PREJUDICE as moot and, thus, for lack of subject matter jurisdiction;

ii. To the extent the Second Claim for Relief challenges the validity of the alleged *de facto* TMDL procedure, the claim is DISMISSED WITHOUT LEAVE TO AMEND and WITH PREJUDICE for failure to state a claim upon which relief can be granted;

c. The Third Claim for Relief in the Second Amended Complaint for Injunctive and Declaratory Relief is DISMISSED on the same bases, and to the same extent, as the First and Second Claims for Relief are dismissed, given that the Third Claim for Relief is derivative of the first two claims.

2. Plaintiffs' Motion for Summary Adjudication of Issues [Docket No. 28] is DENIED AS MOOT.

3. Plaintiffs' Objections to Declarations of David W. Smith and Dennis Dickerson Offered by Defendants in Support of Defendants' Motion to Dismiss Second Amended Complaint [Docket No. 31] are OVERRULED on the merits with respect to the objections under headings II.1 and II.2 therein and OVERRULED AS MOOT with respect [**52] to all remaining objections.

4. Intervenors' Evidentiary Objections to Declaration of Richard Montevideo in Support of Plaintiffs' Motion for Summary Adjudication of Issues, and in Opposition to Defendants' Motion to Dismiss [Docket No. 43] are OVERRULED AS MOOT.

5. Plaintiffs' Objections to Declaration of Anjali I. Jaiswal and Exhibits

[Docket No. 47] are OVERRULED AS MOOT.

IT IS FURTHER ORDERED THAT this action is DISMISSED in its entirety. The Clerk shall enter judgment in favor of defendants accordingly. All deadlines and events presently calendared are VACATED. [*1162] The Clerk shall close the file and terminate any pending matters.

IT IS SO ORDERED.

Dated: May 16, 2003

SAUNDRA BROWN ARMSTRONG

United States District Judge

JUDGMENT

In accordance with the Court's Order Granting Defendants' Motion to Dismiss, Denying as Moot Plaintiffs' Motion for Partial Summary Judgment, and Dismissing Action,

IT IS HEREBY ORDERED THAT judgment is entered in favor of defendants and defendants-intervenors, and against plaintiffs, on all of plaintiffs' claims for relief as follows:

1. The First Claim for Relief in the Second Amended Complaint for Injunctive and [**53] Declaratory Relief ("SAC") is DISMISSED, such that:

a. The claim that EPA acted without authority and acted arbitrarily and capriciously by establishing the EPA Trash TMDLs prior to receiving for review the State Trash TMDLs, (SAC PP78-79), is DISMISSED WITH PREJUDICE;

b. The claim that EPA acted without authority and arbitrarily and capriciously by reviewing and approving the State Trash TMDLs because EPA had already established the EPA Trash TMDLs, (SAC PP80, 83), is DISMISSED WITH PREJUDICE;

c. The claim that EPA acted arbitrarily and capri-

ciously and in excess of its jurisdiction with regard to the manner by which it established the EPA Trash TMDLs, (SAC PP81-82), is DISMISSED WITH PREJUDICE;

d. The claim that the collective actions of California and EPA relating to issuance of the EPA Trash TMDLs and subsequent approval of the State Trash TMDLs constitute a "*de facto* TMDL procedure" that is arbitrary, capricious, and contrary to law, (SAC PP84-86), is DISMISSED WITH PREJUDICE;

e. The claim that EPA acted arbitrarily and capriciously by approving the State Trash TMDLs because those TMDLs were "patently defective" and established not in accordance [**54] with the

procedures of the CWA and California law, (SAC P87), is DISMISSED WITHOUT PREJUDICE;

2. The Second Claim for Relief in the Second Amended Complaint for Injunctive and Declaratory Relief is DISMISSED WITH PREJUDICE in its entirety; and

3. The Third Claim for Relief in the Second Amended Complaint for Injunctive and Declaratory Relief is DISMISSED to the same extent as the First and Second Claims for Relief are dismissed.

IT IS SO ORDERED.

* Together with No. 90-1266, *Environmental Protection Agency v. Oklahoma et al.*, also on certiorari to the same court.

PRIOR HISTORY: ON WRITS OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE TENTH CIRCUIT.

DISPOSITION: 908 F.2d 595, reversed.

CASE SUMMARY:

PROCEDURAL POSTURE: Petitioners, Arkansas and Environmental Protection Agency (EPA), sought review of a decision of the United States Court of Appeals for the Tenth Circuit, which reversed the EPA's issuance of a discharge permit to Arkansas pursuant to the Clean Water Act, 33 U.S.C.S. § 1251 et seq., and rendered judgment in favor of respondent Oklahoma.

OVERVIEW: Arkansas sought a discharge permit from the EPA, which was for a new point source in Arkansas, 39 miles upstream from Oklahoma's state line. The EPA issued the permit. Oklahoma challenged the permit before the EPA, on grounds that the discharge violated Oklahoma's water quality standards. The trial court affirmed the issuance of the permit, but the court of appeals reversed. On certiorari, the Court reversed and held that when a new permit was being issued by the source state's permit-granting agency, the downstream state did not have the authority to block the issuance of the permit if it was dissatisfied with the proposed standards. The Court

further held that an affected state's only recourse was to apply to the EPA Administrator, who then had the discretion to disapprove the permit if he concluded that the discharges would have an undue impact on interstate waters, pursuant to 33 U.S.C.S. § 1342(d)(2). Finally, the Court stated that the Clean Water Act made it clear that affected states occupied a subordinate position to source states in the federal regulatory program.

OUTCOME: The Court reversed the denial of the discharge permit in favor of Arkansas.

CORE TERMS: water quality, river, effluent, issuance, downstream, pollution, Clean Water Act, point source, interstate, detectable, plant, lake, degradation, recommendation, stream, license, border, federal law, body of water, reasonable exercise, substantial evidence, arbitrary and capricious, promulgated, designated, phosphorus, authorize, degraded, nuisance, eutrophication, federal common law

LexisNexis(R) Headnotes

Environmental Law > Water Quality > General Overview

[HN1] See 33 U.S.C.S. § 1370.

Environmental Law > Federal & State Interrelationships > Federal Preemption

Environmental Law > Water Quality > General Overview

[HN2]The Clean Water Act, 33 U.S.C.S. § 1251 et seq., preempts an action based on the law of the affected state and that the only state law applicable to an interstate discharge is the law of the state in which the point source is located.

Environmental Law > Water Quality > Clean Water Act > Discharge Permits > General Overview

[HN3]When a new permit is being issued by the source state's permit-granting agency, the downstream state does not have the authority to block the issuance of the permit if it is dissatisfied with the proposed standards. An affected state's only recourse is to apply to the Environmental Protection Agency Administrator, who then has the discretion to disapprove the permit if he concludes that the discharges will have an undue impact on interstate waters. 33 U.S.C.S. § 1342(d)(2). Thus the Clean Water Act, 33 U.S.C.S. § 1251 et seq., makes it clear that affected states occupy a subordinate position to source states in the federal regulatory program.

Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Effluent Limitations

Environmental Law > Water Quality > Clean Water Act > Water Quality Standards

[HN4]If the Environmental Protection Agency (EPA) recommends changes to the standards and the state fails to comply with that recommendation, the Clean Water Act, 33 U.S.C.S. § 1251 et seq., authorizes the EPA to promulgate water quality standards for the state. 33 U.S.C.S. § 1313(c).

Environmental Law > Water Quality > Clean Water Act > Discharge Permits > General Overview

[HN5]Section 402(b) of the Clean Water Act authorizes each state to establish its own permit program for discharges into navigable waters within its jurisdiction. 33 U.S.C.S. § 1342(b). Although these provisions do not authorize the downstream state to veto the issuance of a permit for a new point source in another state, the Administrator retains authority to block the issuance of any state-issued permit that is outside the guidelines and requirements of the Act. 33 U.S.C.S. § 1342(d)(2).

Environmental Law > Water Quality > General Overview

[HN6]See 33 U.S.C.S. § 1342(b).

Environmental Law > Water Quality > Ocean Dumping

[HN7]See 33 U.S.C.S. § 1442(d)(2).

Environmental Law > Water Quality > Clean Water Act > Discharge Permits > State Water Quality Certifications

[HN8]In the absence of an approved state program, the Environmental Protection Agency (EPA) may issue a National Pollution Discharge Elimination System permit under 33 U.S.C.S. § 1341(a). The EPA's permit program is subject to the same terms, conditions, and requirements as a state permit program. 33 U.S.C.S. § 1342(a)(3).

Environmental Law > Water Quality > Clean Water Act > Discharge Permits > State Water Quality Certifications

[HN9]See 33 U.S.C.S. § 1341(a)(2).

Environmental Law > Water Quality > Clean Water Act > Discharge Permits > General Overview

Environmental Law > Water Quality > Clean Water Act > Water Quality Standards

[HN10]Environmental Protection Agency regulations have provided that a National Pollution Discharge Elimination System permit shall not be issued when the imposition of conditions cannot ensure compliance with the applicable water quality requirements of all affected States. 40 C.F.R. § 122.4(d) (1991).

Environmental Law > Water Quality > Clean Water Act > Discharge Permits > General Overview

[HN11]Section 402(a)(2) of the Clean Water Act provides that for Environmental Protection Agency-issued permits the Administrator shall prescribe conditions to assure compliance with the requirements of § 402(a)(1) of the Clean Water Act and such other requirements as he deems appropriate. 33 U.S.C.S. § 1342(a)(2).

Environmental Law > Water Quality > General Overview

[HN12]See 33 U.S.C.S. § 1342(d)(2).

Administrative Law > Judicial Review > Standards of Review > Substantial Evidence

Environmental Law > Litigation & Administrative Proceedings > Judicial Review

[HN13]A court reviewing an agency's adjudicative action should accept the agency's factual findings if those findings are supported by substantial evidence on the record as a whole. The court should not supplant the agency's findings merely by identifying alternative findings that could be supported by substantial evidence.

Administrative Law > Judicial Review > Reviewability > Factual Determinations

Administrative Law > Judicial Review > Standards of Review > Arbitrary & Capricious Review

[HN14]An agency ruling is arbitrary and capricious if the agency has entirely failed to consider an important aspect of the problem.

DECISION:

EPA's issuance of discharge permit to sewage plant, based on finding that discharges would not cause detectable violation of downstream state's water quality standards, held authorized by Clean Water Act.

SUMMARY:

An Arkansas city, in an application to the United States Environmental Protection Agency (EPA), sought a permit for the city's new sewage treatment plant under the National Pollution Discharge Elimination System (NPDES). The EPA, pursuant to 402(a)(1) of the Clean Water Act (33 USCS 1342(a)(1)), issued a permit which (1) authorized the plant to discharge up to half of its effluent into a stream whose waters ultimately entered a river which flowed into Oklahoma, but (2) imposed various conditions, including a provision that the permit would be modified if a pending study determined that more stringent limitations were necessary to insure compliance with Oklahoma's water quality standards. Oklahoma authorities, challenging the permit before the EPA, alleged that the plant's discharge violated Oklahoma standards prohibiting any degradation of water quality in the river in question. An administrative law judge (ALJ) affirmed the issuance of the permit on the ground that the discharge would not have an "undue impact" on Oklahoma waters; but the EPA's Chief Judicial Officer (CJO), remanding for application of a different standard of review, interpreted Oklahoma's ban on degradation of the river in question as allowing the permit to be upheld if the record showed by a preponderance of the evidence that the authorized discharges would not cause an actual detectable violation of Oklahoma water quality standards. On remand, the ALJ made detailed factual findings and determined that the CJO's standard had been met. The CJO sustained the issuance of the permit.

However, the United States Court of Appeals for the Tenth Circuit, on judicial review, reversed the issuance of the permit, as the court (1) interpreted the Act as providing that a proposed source may not be permitted where it would discharge effluent that would contribute to conditions currently constituting a violation of applicable water quality standards, (2) found that the river in question was already degraded in water quality and that effluent from the sewage treatment plant could be expected to contribute to the river's ongoing deterioration even though it would not detectably affect water quality, and (3) determined that the EPA's decision was arbitrary and capricious because the EPA had misinterpreted Oklahoma water quality standards and failed to consider the important and relevant fact of the river's degraded status (908 F2d 595).

On certiorari, the United States Supreme Court reversed. In an opinion by Stevens, J., expressing the unanimous view of the court, it was held that the EPA's decision to issue the NPDES permit was authorized by the Clean Water Act, as (1) the Act did not prohibit any discharge of effluent that would reach waters already in violation of existing water quality standards; (2) the CJO's interpretation of the Oklahoma water quality standards was reasonable and consistent with the purposes and principles of the Act, and the EPA's reasonable, consistently held interpretation of the Oklahoma standards was entitled to substantial deference since the standards had been incorporated into EPA regulations, and thus had a federal character at least insofar as they affected the issuance of a permit in another state; (3) the ALJ's findings that the sewage plant discharge would not lead to a detectable change in four primary measures of water quality under the Oklahoma standards were supported by substantial evidence; and (4) although it might arguably be wise to prohibit any discharge into the river in question, it was not arbitrary for the EPA to conclude, given perceived benefits to the river and in Arkansas, that allowing the discharge would be even wiser, and such policy decisions were properly made by the EPA rather than by the courts.

LAWYERS' EDITION HEADNOTES:

[***LEdHN1]

ENVIRONMENTAL LAW §30

Clean Water Act -- discharge permit --

Headnote:[1A][1B][1C][1D][1E]

A decision by the United States Environmental Protection Agency (EPA) to issue a National Pollution Discharge Elimination System (NPDES) permit, pursuant to 402(a)(1) of the Clean Water Act (33 USCS 1341(a)(1)), to an Arkansas city for a sewage treatment plant located

upstream from Oklahoma, based on the EPA's finding that discharges from the new source would not cause a detectable violation of Oklahoma's water quality standards, is authorized by the Act, notwithstanding a Federal Court of Appeals' findings on judicial review that effluent from the plant would reach a river in Oklahoma which was already "degraded" in water quality and that such effluent could be expected to contribute to the deterioration of the river, as (1) the Act does not prohibit any discharge of effluent that would reach waters already in violation of existing water quality standards; (2) the interpretation of the Oklahoma standards by the EPA's Chief Judicial Officer, who ruled that the standard requiring no degradation of the river in question would be violated only if the discharge effected an actual detectable or measurable change in water quality, is reasonable and consistent with the purposes and principles of the Act, and the EPA's reasonable, consistently held interpretation of the Oklahoma standards is entitled to substantial deference, since the standards, at least insofar as they affect the issuance of a permit in another state, have a federal character; (3) an administrative law judge's findings that the sewage plant discharge would not lead to a detectable change in four primary measures of water quality under the Oklahoma standards are supported by substantial evidence; and (4) although it might arguably be wise to prohibit any discharge into the river in question, even if that discharge would have no adverse impact on water quality, it is not arbitrary for the EPA to conclude--given the benefits to the river from the increased flow of relatively clean water and the benefits achieved in Arkansas by allowing the new plant to operate as designed--that allowing the discharge would be even wiser, and such policy decisions are properly made by the EPA rather than by the courts.

[***LEdHN2]

ENVIRONMENTAL LAW §32

Clean Water Act -- state and federal standards --

Headnote:[2]

Water quality standards, which are generally promulgated by the states, supplement the effluent limitations promulgated by the United States Environmental Protection Agency under 301 and 304 of the Clean Water Act (33 USCS 1311, 1314), so that numerous point sources, despite individual compliance with effluent limitations, may be further regulated to prevent water quality from falling below acceptable levels.

[***LEdHN3]

ENVIRONMENTAL LAW §18

scope of judicial review --

Headnote:[3A][3B]

In determining the propriety of the issuance of a discharge permit by the United States Environmental Protection Agency (EPA) to a sewage treatment plant pursuant to 402(a)(1) of the Clean Water Act (33 USCS 1341(a)(1)), it is neither necessary nor prudent for the United States Supreme Court to resolve the question whether the Act requires the EPA, in crafting and issuing a permit to a point source in one state, to apply the water quality standards of a downstream state, where (1) in issuing the permit in question, the EPA assumed that it was obligated by both the Act and its own regulation to insure that the sewage plant discharge would not violate a downstream state's standards, (2) this assumption was permissible and reasonable, and therefore, there is no need for the Supreme Court to address whether the Act requires as much, and (3) much of the analysis and argument in the parties' briefs relied on statutory provisions which govern not only federal permits issued pursuant to 401(a) and 402(a) of the Act (33 USCS 1341(a), 1342(a)), but also state permits issued under 402(b) of the Act (33 USCS 1342(b)), and it would be unwise to evaluate those arguments in a case which involves only a federal permit; the Supreme Court's decision not to determine the scope of the EPA's statutory obligations, however, does not affect the Supreme Court's resolution of a question concerning the EPA's statutory authority to mandate compliance with a downstream state's water quality standards.

[***LEdHN4]

ENVIRONMENTAL LAW §30

Clean Water Act -- discharge permits -- enforcement of state standards --

Headnote:[4A][4B][4C]

The Clean Water Act (33 USCS 1251-1376) does not limit the authority of the United States Environmental Protection Agency (EPA) to mandate that point sources receiving National Pollution Discharge Elimination System (NPDES) permits from the EPA pursuant to 402(a)(1) of the Act (33 USCS 1341(a)(1)) comply with a downstream state's water quality standards; an EPA regulation (40 CFR 122.4(d)) which provides that NPDES permits shall not be issued when the imposition of conditions cannot insure compliance with the applicable water quality requirements of all affected states constitutes a reasonable exercise of the EPA's statutory authority, as (1) the application of state water quality standards in the interstate context is wholly consistent with the Act's broad purpose of restoring and maintaining the chemical, physical, and biological integrity of the nation's waters, and (2) 301(b)(1)(C) of the Act (33 USCS 1311(b)(1)(C)) expressly identifies the achievement of

state water quality standards as one of the Act's central objectives; the EPA's requirement, as a condition of issuing an NPDES permit to an Arkansas sewage treatment plant located upstream from Oklahoma, that the discharge from the plant comply with Oklahoma water quality standards is a reasonable exercise of the EPA's substantial statutory discretion.

[**LEdHN5]

ENVIRONMENTAL LAW §30

Clean Water Act -- discharge permits --

Headnote:[5]

The Administrator of the United States Environmental Protection Agency (EPA) is vested by Congress with (1) broad discretion to establish conditions for National Pollution Discharge Elimination System (NPDES) permits issued by the EPA pursuant to 402(a)(1) of the Clean Water Act (33 USCS 1341(a)(1)), and (2) broad authority to oversee state permit programs.

[**LEdHN6]

ENVIRONMENTAL LAW §30

Clean Water Act -- state and federal authority --

Headnote:[6]

The Clean Water Act (33 USCS 1251-1376) vests in the United States Environmental Protection Agency and in the states broad authority to develop long-range, area-wide programs to alleviate and eliminate existing pollution.

[**LEdHN7]

APPEAL §1535

harmless error -- EPA decisions --

Headnote:[7A][7B]

The error of an administrative law judge (ALJ) and of the Chief Judicial Officer of the United States Environmental Protection Agency (EPA) in misinterpreting a provision of Oklahoma's water quality standards as governing only the discharge of phosphorus into lakes, rather than the discharge of phosphorus into lakes and into all perennial and intermittent streams--which misinterpretation was made in the course of a determination that a National Pollution Discharge Elimination System (NPDES) permit was properly issued by the EPA to an Arkansas sewage treatment plant upstream from Oklahoma based on a finding that discharges from the plant would not cause a detectable violation of Oklahoma water quality standards--is harmless, because (1) the ALJ found that the discharge into a particular lake would

comply with the Oklahoma phosphorus standard, and (2) it was undisputed that such discharge produced a greater threat to the slow-moving water of the lake than to the rapid flow in an affected river.

[**LEdHN8]

APPEAL §1535

harmless error -- EPA decisions --

Headnote:[8A][8B]

The error of an administrative law judge (ALJ) and of the Chief Judicial Officer of the United States Environmental Protection Agency (EPA) in relying on the 1985 version of Oklahoma's water quality standards, rather than the 1982 version, for purposes of a determination that an Arkansas municipality's 1985 application for a National Pollution Discharge Elimination System (NPDES) permit for a sewage treatment plant located upstream from Oklahoma was properly granted by the EPA based on a finding that discharges from the plant would not cause a detectable violation of Oklahoma water quality standards, is harmless, because the portions of the two versions relevant to the determination did not differ materially.

[**LEdHN9]

ENVIRONMENTAL LAW §18

scope of judicial review --

Headnote:[9A][9B][9C][9D][9E]

A Federal Court of Appeals' determination that the United States Environmental Protection Agency (EPA) acted arbitrarily and capriciously in granting an Arkansas city's 1985 application for a National Pollution Discharge Elimination System (NPDES) permit for a sewage treatment plant located upstream from Oklahoma exceeds the legitimate scope of judicial review of an agency adjudication, in that the Court of Appeals (1) in finding that the EPA had misinterpreted water quality standards promulgated by the state of Oklahoma, failed to give due regard and deference to the EPA's interpretation of its own regulations, as those regulations incorporated the Oklahoma standards by providing (40 CFR 122.4(d)) that NPDES permits shall not be issued when the imposition of conditions cannot insure compliance with the applicable water quality requirements of all affected states; (2) in reviewing the EPA's findings that the sewage plant effluent would not cause a detectable violation of Oklahoma water quality standards, disregarded established standards for reviewing the factual findings of agencies and improperly made its own factual findings by determining that there was substantial evidence to support findings which the Court of Appeals thought were appropriate but

which were contrary to those made by an administrative law judge; and (3) incorrectly concluded that the EPA's decision was arbitrary and capricious due to the EPA's failure to consider the allegedly important and relevant fact that the affected Oklahoma river was, by the Court of Appeals' assessment, already degraded in water quality, a circumstance which was an "important aspect" of the case only because of the Court of Appeals' novel and erroneous interpretation of the controlling law as banning any effluent sources that would contribute to conditions constituting a violation of applicable water quality standards.

[***LEdHN10]

ENVIRONMENTAL LAW §30

Clean Water Act -- incorporating state regulations --

Headnote:[10]

A United States Environmental Protection Agency (EPA) regulation (40 CFR 122.4(d)), which provides that National Pollution Discharge Elimination System permits shall not be issued pursuant to 402(a)(1) of the Clean Water Act (33 USCS 1341(a)(1)) when the imposition of conditions cannot insure compliance with the applicable water quality requirements of all affected states, effectively incorporates into federal law those state-law standards which the EPA determines to be applicable.

[***LEdHN11]

ADMINISTRATIVE LAW §265

judicial review -- factual findings --

Headnote:[11]

A court reviewing an administrative agency's adjudicative action should accept the agency's factual findings if those findings are supported by substantial evidence on the record as a whole; the court should not supplant the agency's findings merely by identifying alternative findings that could be supported by substantial evidence.

[***LEdHN12]

ADMINISTRATIVE LAW §250

judicial review --

Headnote:[12]

An administrative agency ruling is arbitrary and capricious, for purposes of judicial review, if the agency has entirely failed to consider an important aspect of the problem.

SYLLABUS

The Clean Water Act provides for two sets of water quality measures: effluent limitations, which are promulgated by the Environmental Protection Agency (EPA or Agency), and water quality standards, which are promulgated by the States. The Act generally prohibits the discharge of effluent into a navigable body of water unless the point source obtains a National Pollution Discharge Elimination System (NPDES) permit from a State with an EPA-approved permit program or from the EPA itself. A Fayetteville, Arkansas, sewage treatment plant received an EPA-issued permit, authorizing it to discharge effluent into a stream that ultimately reaches the Illinois River upstream from the Oklahoma border. Respondents, Oklahoma and other Oklahoma parties, challenged the permit before the EPA, alleging, *inter alia*, that the discharge violated Oklahoma water quality standards, which allow no degradation of water quality in the upper Illinois River. The EPA's Chief Judicial Officer remanded the initial affirmance of the permit by the Administrative Law Judge (ALJ), ruling that the Act requires an NPDES permit to impose any effluent limitations necessary to comply with applicable state water quality standards, and that those standards would be violated only if the record shows by a preponderance of the evidence that the discharge would cause an actual *detectable* violation of Oklahoma's water quality standards. The ALJ then made detailed findings of fact, concluding that Fayetteville had satisfied the Chief Judicial Officer's standard, and the Chief Judicial Officer sustained the permit's issuance. The Court of Appeals reversed, ruling that the Act does not allow a permit to be issued where a proposed source would discharge effluent that would contribute to conditions currently constituting a violation of applicable water quality standards. It concluded that the Illinois River was already degraded, that the Fayetteville effluent would reach the river in Oklahoma, and that the effluent would contribute to the river's deterioration even though it would not detectably affect the river's water quality.

Held: The EPA's action was authorized by the Clean Water Act. Pp. 98-114.

(a) Where interstate discharge is involved, both federal common law of nuisance, *Milwaukee v. Illinois*, 451 U.S. 304, 68 L. Ed. 2d 114, 101 S. Ct. 1784, and an affected State's common law, *International Paper Co. v. Ouellette*, 479 U.S. 481, 493, 93 L. Ed. 2d 883, 107 S. Ct. 805, are pre-empted. Affected States may not block a permit, but must apply to the EPA Administrator, who may disapprove a plan if he concludes that the discharge will have an undue impact on interstate waters. *Id.*, at 490-491. Pp. 98-101.

(b) The EPA has construed the Act as requiring that EPA-issued permits comply with the requirements for a permit issued under an approved state plan and with § 401(a) of the Act, which appears to prohibit the issuance of a federal permit over the objection of an affected State unless compliance with the affected State's water quality requirements can be insured. Pp. 101-103.

(c) The EPA's requirement that the Fayetteville discharge comply with Oklahoma's water quality standards is a reasonable exercise of the substantial statutory discretion Congress has vested in the Agency. There is no need to address the question whether the Act requires compliance with affected States' standards, for it clearly does not limit the EPA's authority to mandate such compliance. EPA regulations, which since 1973 have required that an NPDES permit not be issued when compliance with affected States' water quality standards cannot be insured, are a reasonable exercise of the Agency's discretion and are a well-tailored means of reaching the Act's goal of achieving state water quality standards. The EPA's authority is not constrained by the limits in *Quellette, supra*, concerning an affected State's direct input into the permit process, does not conflict with the Act's legislative history and statutory scheme, and is not incompatible with the balance among competing policies and interests that Congress struck in the Act. Pp. 104-107.

(d) Contrary to the Court of Appeals' interpretation, nothing in the Act mandates a complete ban on discharges into a waterway that is in violation of existing water quality standards. Instead, the Act vests in the EPA and the States broad authority to develop long-range, areawide programs to alleviate and eliminate existing pollution. Pp. 107-108.

(e) The Court of Appeals exceeded the legitimate scope of judicial review of an agency adjudication when it invalidated the EPA's issuance of the permit on the ground that the Agency misinterpreted Oklahoma's water quality standards. It substituted its own reading of the law for the EPA's. Thus, it failed to give substantial deference to the Agency's reasonable, consistently held interpretation of its own regulations, which incorporate the Oklahoma standards. It also disregarded well-established standards for reviewing factual findings of agencies by making its own factual findings when the ALJ's findings were supported by substantial evidence. See generally *Universal Camera Corp. v. NLRB*, 340 U.S. 474, 95 L. Ed. 456, 71 S. Ct. 456. As a result, the court's conclusion that the river's degradation was an important and relevant factor which the EPA failed to consider was based on its own erroneous interpretation of the controlling law. Had it been properly respectful of the EPA's permissible reading of the Act -- that what matters is not the river's current status, but whether the

proposed discharge will have a detectable effect on that status -- it would not have adjudged the Agency's decision arbitrary and capricious. Pp. 109-114.

COUNSEL: Edward W. Warren argued the cause for petitioners in No. 90-1262. With him on the briefs were Winston Bryant, Attorney General of Arkansas, Mary B. Stallcup, Angela S. Jegley, David G. Norrell, James N. McCord, Walter R. Niblock, and Nancy L. Hamm. Deputy Solicitor General Wallace argued the cause for petitioner in No. 90-1266. With him on the briefs were Solicitor General Starr, Assistant Attorney General Stewart, Harriet S. Shapiro, Michael A. McCord, Anne S. Almy, Gary S. Guzy, and E. Donald Elliott.

Robert A. Butkin, Assistant Attorney General of Oklahoma, argued the cause for respondents in both cases. With him on the brief for respondents State of Oklahoma et al. were Susan B. Loving, Attorney General, Brita Haugland Cantrell, Assistant Attorney General, and Julian Fite. Theodore E. Dinsmoor and Susan Hedman filed a brief for respondent Oklahoma Wildlife Federation. *

+ Briefs of amici curiae urging reversal were filed for the State of Colorado by Gale A. Norton, Attorney General, Raymond T. Slaughter, Chief Deputy Attorney General, Timothy M. Tymkovich, Solicitor General, Martha E. Rudolph, Assistant Attorney General, and Martha Phillips Allbright; for the State of Nevada et al. by Nicholas J. Spaeth, Attorney General of North Dakota, Frankie Sue Del Papa, Attorney General of Nevada, John P. Arnold, Attorney General of New Hampshire, and Mark Barnett, Attorney General of South Dakota; for the Association of Metropolitan Sewerage Agencies et al. by Lee C. White, Benjamin L. Brown, Howard Holme, Don A. Zimmerman, Geoff Wilson, Thomas W. Kelty, James M. Kaup, Fred G. Stickel III, Robert E. Johnson, John E. Gotherman, Mark I. Wallach, Roy D. Bates, Ogden Stokes, Thomas S. Smith, Robert J. Alfton, and John Dodge; for Champion International Corp. et al. by J. Jeffrey McNealey, Michael K. Glenn, Theodore L. Garrett, Corinne A. Goldstein, Charles R. Nestrud, Richard A. Flye, Jerry C. Jones, and Jess Askew III; for the Colorado Water Congress by Mark T. Pifher; and for the Mountain States Legal Foundation et al. by William Perry Pendley.

Briefs of amici curiae urging affirmance were filed for the State of Illinois et al. by Roland W. Burris, Attorney General of Illinois, Rosalyn Kaplan, Solicitor General, and James L. Morgan, Assistant Attorney General, Charles W. Burson,

Attorney General of Tennessee, John Knox Walkup, Solicitor General, and Michael D. Pearigen, Deputy Attorney General, Jimmy Evans, Attorney General of Alabama, Grant Woods, Attorney General of Arizona, Daniel E. Lungren, Attorney General of California, Richard Blumenthal, Attorney General of Connecticut, Charles M. Oberly III, Attorney General of Delaware, Robert A. Butterworth, Attorney General of Florida, Michael E. Carpenter, Attorney General of Maine, and Jon H. Edwards, Assistant Attorney General, Frank J. Kelley, Attorney General of Michigan, Mike Moore, Attorney General of Mississippi, Robert J. Del Tufo, Attorney General of New Jersey, and T. JUDGES: STEVENS, J., delivered the opinion for a unanimous Court.

OPINION BY: STEVENS

OPINION

[*94] [***247] [**1050] JUSTICE STEVENS delivered the opinion of the Court.

[***LEdHR1A] [1A] Pursuant to the Clean Water Act, 86 Stat. 816, as amended, 33 U. S. C. § 1251 *et seq.*, the Environmental Protection Agency (EPA or Agency) issued a discharge permit to a new point source in Arkansas, about 39 miles upstream from the Oklahoma state line. The question presented in this litigation is whether the EPA's finding that discharges from the new source would not cause a detectable [**1051] violation of Oklahoma's [*95] water quality standards satisfied the EPA's duty to protect the interests of the downstream State. Disagreeing with the Court of Appeals, we hold that the Agency's action was authorized by the statute.

I

In 1985, the city of Fayetteville, Arkansas, applied to the EPA, seeking a permit for the city's new sewage treatment plant under the National Pollution Discharge Elimination System (NPDES). After the appropriate

procedures, the EPA, pursuant to § 402(a)(1) of the Act, 33 U. S. C. § 1342(a)(1), issued a permit authorizing the plant to discharge up to half of its effluent (to a limit of 6.1 million gallons per day) into an unnamed [***248] stream in northwestern Arkansas.¹ That flow passes through a series of three creeks for about 17 miles, and then enters the Illinois River at a point 22 miles upstream from the Arkansas-Oklahoma border.

1 The permit also authorized the plant to discharge the remainder of its effluent into the White River, a river that does not flow into Oklahoma; this aspect of the permit is not at issue in this litigation.

The permit imposed specific limitations on the quantity, content, and character of the discharge and also included a number of special conditions, including a provision that if a study then underway indicated that more stringent limitations were necessary to ensure compliance with Oklahoma's water quality standards, the permit would be modified to incorporate those limits. App. 84.

Respondents challenged this permit before the EPA, alleging, *inter alia*, that the discharge violated the Oklahoma water quality standards. Those standards provide that "no degradation [of water quality] shall be allowed" in the upper Illinois River, including the portion of the river immediately downstream from the state line.²

2 Section 5 of the Oklahoma water quality standards provides:

"All streams and bodies of water designated as (a) are protected by prohibition of any new point source discharge of wastes or increased load from an existing point source except under conditions described in Section 3.

"All streams designated by the State as 'scenic river areas,' and such tributaries of those streams as may be appropriate will be so designated. Best management practices for control of nonpoint source discharge should be initiated when feasible." App. 46-47.

Oklahoma has designated the portion of the Illinois River immediately downstream from the state line as a "scenic river." Okla. Stat., Tit. 82, § 1452(b)(1) (Supp. 1989); see also App. 54.

Section 3 of the Oklahoma water quality standards provides, in relevant part:

"The intent of the Anti-degradation Policy is to protect all waters of the State from quality degradation. Existing instream water uses shall be

maintained and protected. No further water quality degradation which would interfere with or become injurious to existing instream water uses shall be allowed. Oklahoma's waters constitute a valuable State resource and shall be protected, maintained and improved for the benefit of all the citizens.

....

"No degradation shall be allowed in high quality waters which constitute an outstanding resource or in waters of exceptional recreational or ecological significance. These include water bodies located in national and State parks, Wildlife Refuges, and those designated 'Scenic Rivers' in Appendix A." App. 27-28.

[*96] Following a hearing, the Administrative Law Judge (ALJ) concluded that the Oklahoma standards would not be implicated unless the contested discharge had "something more than a mere *de minimis* impact" on the State's waters. He found that the discharge would not have an "undue impact" on Oklahoma's waters and, accordingly, affirmed the issuance of the permit. App. to Pet. for Cert. in No. 90-1262, pp. 101a-103a (emphasis deleted).

On a petition for review, the EPA's Chief Judicial Officer first ruled that § 301(b)(1)(C) of the Clean Water Act "requires an NPDES permit to impose any effluent limitations necessary to comply with applicable state water quality standards." ³ *Id.*, at 116a-117a. He [****1052**] then held that [*****249**] the Act [***97**] and EPA regulations offered greater protection for the downstream State than the ALJ's "undue impact" standard suggested. He explained the proper standard as follows:

"[A] mere theoretical impairment of Oklahoma's water quality standards -- *i. e.*, an infinitesimal impairment predicted through modeling but not expected to be actually detectable or measurable -- should not by itself block the issuance of the permit. In this case, the permit should be upheld if the record shows by a preponderance of the evidence that the authorized discharges would not cause an actual *detectable* violation of Oklahoma's water quality standards." *Id.*, at 117a (emphasis in original).

3 Section 301(b)(1)(C) provides, in relevant part, that

"there shall be achieved --

....

"(C) not later than July 1, 1977, any more stringent limitation, including those necessary to meet *water quality standards . . . established pursuant to any State law or regulations . . .* or required to implement any applicable water quality standard established pursuant to this chapter." 33 U. S. C. § 1311(b)(1)(C) (emphasis added).

On remand, the ALJ made detailed findings of fact and concluded that the city had satisfied the standard set forth by the Chief Judicial Officer. Specifically, the ALJ found that there would be no detectable violation of any of the components of Oklahoma's water quality standards. *Id.*, at 127a-143a. The Chief Judicial Officer sustained the issuance of the permit. *Id.*, at 145a-153a.

Both the petitioners in No. 90-1262 (collectively Arkansas) and the respondents in this litigation sought judicial review. ⁴ Arkansas argued that the Clean Water Act did not require an Arkansas point source to comply with Oklahoma's water quality standards. Oklahoma challenged the EPA's determination that the Fayetteville discharge would not produce a detectable violation of the Oklahoma standards.

4 The Arkansas petition was filed in the Court of Appeals for the Eighth Circuit and transferred to the Tenth Circuit where it was consolidated with the petition filed by the respondents.

The Court of Appeals did not accept either of these arguments. The court agreed with the EPA that the statute required compliance with Oklahoma's water quality standards, [***98**] see 908 F.2d 595, 602-615 (CA10 1990), and did not disagree with the Agency's determination that the discharges from the Fayetteville plant would not produce a detectable violation of those standards. *Id.*, at 631-633. Nevertheless, relying on a theory that neither party had advanced, the Court of Appeals reversed the Agency's issuance of the Fayetteville permit. The court first ruled that the statute requires that "where a proposed source would discharge effluents that would contribute to conditions currently constituting a violation of applicable water quality standards, such [a] proposed source may not be permitted." *Id.*, at 620. Then the court found that the Illinois River in Oklahoma was "already degraded," that the Fayetteville effluent would reach the Illinois River in Oklahoma, and that that effluent could "be expected to contribute to the ongoing deterioration of the scenic [Illinois R]iver" in Oklahoma even though it

would not detectably affect the river's water quality. *Id.*, at 621-629.

The importance and the novelty of the Court of Appeals' decision persuaded us to grant certiorari. 499 U.S. 946 (1991). We now reverse.

II

Interstate waters have been a font [***250] of controversy since the founding of the Nation. *E. g.*, *Gibbons v. Ogden*, 22 U.S. 1, 9 Wheat. 1, 6 L. Ed. 23 (1824). This Court has frequently resolved disputes between States that are separated by a common river, see, *e. g.*, *Ohio v. Kentucky*, 444 U.S. 335, 62 L. Ed. 2d 530, 100 S. Ct. 588 (1980), that border the same body of water, see, *e. g.*, *New York v. New Jersey*, 256 U.S. 296, 65 L. Ed. 937, 41 S. Ct. 492 [**1053] (1921), or that are fed by the same river basin, see, *e. g.*, *New Jersey v. New York*, 283 U.S. 336, 75 L. Ed. 1104, 51 S. Ct. 478 (1931).

Among these cases are controversies between a State that introduces pollutants to a waterway and a downstream State that objects. See, *e. g.*, *Missouri v. Illinois*, 200 U.S. 496, 50 L. Ed. 572, 26 S. Ct. 268 (1906). In such cases, this Court has applied principles of common law tempered by a respect for the sovereignty of the States. Compare *id.*, at 521, with *Georgia v. Tennessee Copper Co.*, 206 U.S. 230, 237, 51 L. Ed. 1038, 27 S. Ct. 618 (1907). In forging what "may [*99] not improperly be called interstate common law," *Illinois v. Milwaukee*, 406 U.S. 91, 105-106, 31 L. Ed. 2d 712, 92 S. Ct. 1385 (1972) (*Milwaukee I*), however, we remained aware "that new federal laws and new federal regulations may in time pre-empt the field of federal common law of nuisance." *Id.*, at 107.

In *Milwaukee v. Illinois*, 451 U.S. 304, 68 L. Ed. 2d 114, 101 S. Ct. 1784 (1981) (*Milwaukee II*), we held that the Federal Water Pollution Control Act Amendments of 1972 did just that. In addressing Illinois' claim that Milwaukee's discharges into Lake Michigan constituted a nuisance, we held that the comprehensive regulatory regime created by the 1972 amendments pre-empted Illinois' federal common law remedy. We observed that Congress had addressed many of the problems we had identified in *Milwaukee I* by providing a downstream State with an opportunity for a hearing before the source State's permitting agency, by requiring the latter to explain its failure to accept any recommendations offered by the downstream State, and by authorizing the EPA, in its discretion, to veto a source State's issuance of any permit if the waters of another State may be affected. *Milwaukee II*, 451 U.S. at 325-326.

In *Milwaukee II*, the Court did not address whether the 1972 amendments had supplanted *state* common law

remedies as well as the federal common law remedy. See *id.*, at 310, n. 4. On remand, Illinois argued that § 510 of the Clean Water Act, 33 U. S. C. § 1370, expressly preserved the State's right to adopt and enforce rules that are more stringent than federal standards.⁵ The Court of Appeals accepted Illinois' reading of § 510, but held that that section did "no more than [*100] to save the right and jurisdiction [***251] of a state to regulate activity occurring within the confines of its boundary waters." *Illinois v. Milwaukee*, 731 F.2d 403, 413 (CA7 1984), cert. denied, 469 U.S. 1196 (1985).

5 [HN1]Section 510 provides in relevant part:

"Except as expressly provided in this [Act], nothing in this [Act] shall (1) preclude or deny the right of any State or political subdivision thereof or interstate agency to adopt or enforce (A) any standard or limitation respecting discharges of pollutants, or (B) any requirement respecting control or abatement of pollution [with exceptions]; or (2) be construed as impairing or in any manner affecting any right or jurisdiction of the States with respect to the waters (including boundary waters) of such States." 33 U. S. C. § 1370 (emphasis added).

This Court subsequently endorsed that analysis in *International Paper Co. v. Ouellette*, 479 U.S. 481, 93 L. Ed. 2d 883, 107 S. Ct. 805 (1987), in which Vermont property owners claimed that the pollution discharged into Lake Champlain by a paper company located in New York constituted a nuisance under Vermont law. The Court held [HN2]the Clean Water Act taken "as a whole, its purposes and its history" pre-empted an action based on the law of the affected State and that the only state law applicable to an interstate discharge is "the law of the State in which the point source is located." *Id.*, at 493, 487. Moreover, in reviewing § 402(b) of the Act, the Court pointed out that [HN3]when a new permit is being issued by the source State's permit-granting agency, the downstream State

" [**1054] does not have the authority to block the issuance of the permit if it is dissatisfied with the proposed standards. An affected State's only recourse is to apply to the EPA Administrator, who then has the discretion to disapprove the permit if he concludes that the discharges will have an undue impact on interstate waters. § 1342(d)(2). . . . Thus the Act makes it clear that affected States occupy a subordinate position to source States in the federal regulatory program." *Id.*, at 490-491.⁶

6 This description of the downstream State's role in the issuance of a new permit by a source State was apparently consistent with the EPA's interpretation of the Act at the time. The Government's *amicus curiae* brief in *Ouellette* stated that "the affected neighboring state [has] only an advisory role in the formulation of applicable effluent standards or limitations. The affected state may try to persuade the federal government or the source state to increase effluent requirements, but ultimately possesses no statutory authority to compel that result, even when its waters are adversely affected by out-of-state pollution. See 33 U. S. C. § 1341(a)(2), 1342(b)(3) and (5)" Brief for United States as *Amicus Curiae*, O. T. 1986, No. 85-1233, p. 19 (emphasis added; footnote omitted).

[*101] Unlike the foregoing cases, this litigation involves not a state-issued permit, but a federally issued permit. To explain the significance of this distinction, we comment further on the statutory scheme before addressing the specific issues raised by the parties.

III

[**LEdHR2] [2]The Clean Water Act anticipates a partnership between the States and the Federal Government, animated by a shared objective: "to restore and maintain the chemical, physical, and biological integrity of the Nation's waters." 33 U. S. C. § 1251(a). Toward this end, the Act provides for two sets of water quality measures. "Effluent limitations" are promulgated by the EPA and restrict the quantities, rates, and concentrations of specified substances which are discharged from point sources. See §§ 1311, 1314. "Water quality standards" are, in general, promulgated by the States and establish the desired condition of a waterway. [***252] See § 1313. These standards supplement effluent limitations "so that numerous point sources, despite individual compliance with effluent limitations, may be further regulated to prevent water quality from falling below acceptable levels." *EPA v. California ex rel. State Water Resources Control Bd.*, 426 U.S. 200, 205, n. 12, 48 L. Ed. 2d 578, 96 S. Ct. 2022 (1976).

The EPA provides States with substantial guidance in the drafting of water quality standards. See generally 40 CFR pt. 131 (1991) (setting forth model water quality standards). Moreover, § 303 of the Act requires, *inter alia*, that state authorities periodically review water qual-

ity standards and secure the EPA's approval of any revisions in the standards. [HN4]If the EPA recommends changes to the standards and the State fails to comply with that recommendation, the Act authorizes the EPA to promulgate water quality standards for the State. 33 U. S. C. § 1313(c).

The primary means for enforcing these limitations and standards is the NPDES, enacted in 1972 as a critical part of Congress' "complete rewriting" of federal water pollution [*102] law. *Milwaukee II*, 451 U.S. at 317. Section 301(a) of the Act, 33 U. S. C. § 1311(a), generally prohibits the discharge of any effluent into a navigable body of water unless the point source has obtained an NPDES permit. Section 402 establishes the NPDES permitting regime, and describes two types of permitting systems: state permit programs that must satisfy federal requirements and be approved by the EPA, and a federal program administered by the EPA.

[HN5]Section 402(b) authorizes each State to establish "its own permit program for discharges into navigable waters within its jurisdiction." 33 U. S. C. § 1342(b). Among the requirements the state program must satisfy [**1055] are the procedural protections for downstream States discussed in *Ouellette* and *Milwaukee II*. See §§ 1342(b)(3), (5).⁷ Although these provisions do not authorize the downstream State to veto the issuance of a permit for a new point source in another State, the Administrator retains authority to block the issuance of any state-issued permit that is " [***253] outside the guidelines and requirements" of the Act. § 1342(d)(2).⁸

7 [HN6]Section 402(b) requires state permit programs

"(3) to insure that . . . any other State the waters of which may be affected . . . receive notice of each application for a permit and to provide an opportunity for public hearing before a ruling on each such application;

. . . .

"(5) to insure that any State (other than the permitting State), whose waters may be affected by the issuance of a permit may submit written recommendations to the permitting State (and the Administrator) with respect to any permit application and, if any part of such written recommendations are not accepted by the permitting State, that the permitting State will notify such affected State (and the Administrator) in writing of its failure to so accept such recommendations together with its reasons for so doing." 33 U. S. C. § 1342(b).

Although § 402(b) focuses on state-issued permits, § 402(a)(3) requires that, in issuing an NPDES permit, the Administrator follow the same procedures required of state permit programs. See 33 U. S. C. § 1342(a)(3); see also § 1341(a)(2).

8 [HN7]Section 402(d)(2) provides:

"(2) No permit shall issue (A) if the Administrator within ninety days of the date of his notification under subsection (b)(5) of this section objects in writing to the issuance of such permit, or (B) if the Administrator within ninety days of the date of transmittal of the proposed permit by the State objects in writing to the issuance of such permit as being outside the guidelines and requirements of this chapter. Whenever the Administrator objects to the issuance of a permit under this paragraph such written objection shall contain a statement of the reasons for such objection and the effluent limitations and conditions which such permit would include if it were issued by the Administrator." 33 U. S. C. § 1342(d)(2).

[*103] [HN8]In the absence of an approved state program, the EPA may issue an NPDES permit under § 402(a) of the Act. (In these cases, for example, because Arkansas had not been authorized to issue NPDES permits when the Fayetteville plant was completed, the permit was issued by the EPA itself.) The EPA's permit program is subject to the "same terms, conditions, and requirements" as a state permit program. 33 U. S. C. § 1342(a)(3). Notwithstanding this general symmetry, the EPA has construed the Act as requiring that EPA-issued NPDES permits also comply with § 401(a). That section, which predates § 402 and the NPDES, applies to a broad category of federal licenses, and sets forth requirements for "any applicant for a Federal license or permit to conduct any activity including, but not limited to, the construction or operation of facilities, which may result in any discharge into the navigable waters." 33 U. S. C. § 1341(a). Section 401(a)(2) appears to prohibit the issuance of any federal license or permit over the objection of an affected State unless compliance with the affected State's water quality requirements can be ensured.⁹

9 [HN9]Section 401(a)(2) provides, in relevant part:

"Whenever such a discharge may affect, as determined by the Administrator, the quality of the waters of any other State, the Administrator . . . shall so notify such other State, the licensing or permitting agency, and the applicant. If, within sixty days after receipt of such notification, such other State determines that such discharge will affect the quality of its waters so as to violate any

water quality requirements in such State, and within such sixty-day period notifies the Administrator and the licensing or permitting agency in writing of its objection to the issuance of such license or permit and requests a public hearing on such objection, the licensing or permitting agency shall hold such a hearing. The Administrator shall at such hearing submit his evaluation and recommendations with respect to any such objection to the licensing or permitting agency. Such agency, based upon the recommendations of such State, the Administrator, and upon any additional evidence, if any, presented to the agency at the hearing, shall condition such license or permit in such manner as may be necessary to insure compliance with applicable water quality requirements. If the imposition of conditions cannot insure such compliance such agency shall not issue such license or permit." 33 U. S. C. § 1341(a)(2).

[*104] [**1056] IV

The parties have argued three analytically distinct questions concerning the interpretation of the Clean Water Act. First, does the Act require the EPA, in crafting and issuing a permit to a point source in one State, to apply the water quality standards of downstream States? Second, even if the Act does not *require* as much, does the Agency have the statutory authority to mandate such compliance? Third, does the Act provide, as the Court of Appeals held, that once a body of [***254] water fails to meet water quality standards no discharge that yields effluent that reach the degraded waters will be permitted?

[**LEdHR3A] [3A]In these cases, it is neither necessary nor prudent for us to resolve the first of these questions. In issuing the Fayetteville permit, the EPA assumed it was obligated by both the Act and its own regulations to ensure that the Fayetteville discharge would not violate Oklahoma's standards. See App. to Pet. for Cert. in No. 90-1262, pp. 116a-117a, and n. 14. As we discuss below, this assumption was permissible and reasonable and therefore there is no need for us to address whether the Act requires as much. Moreover, much of the analysis and argument in the briefs of the parties relies on statutory provisions that govern not only federal permits issued pursuant to §§ 401(a) and 402(a), but also state permits issued under § 402(b). It seems unwise to evaluate those arguments in a case such as these, which only involve a federal permit.

[*105] [***LEdHR3B] [3B] [***LEdHR4A] [4A]Our decision not to determine at this time the scope of the Agency's statutory *obligations* does not affect our

resolution of the second question, which concerns the Agency's statutory *authority*. Even if the Clean Water Act itself does not require the Fayetteville discharge to comply with Oklahoma's water quality standards, the statute clearly does not limit the EPA's authority to mandate such compliance.

[**LEdHR4B] [4B]Since 1973, [HN10]EPA regulations have provided that an NPDES permit shall not be issued "when the imposition of conditions cannot ensure compliance with the applicable water quality requirements of all affected States." ¹⁰ 40 CFR § 122.4(d) (1991); see also 38 Fed. Reg. 13533 (1973); 40 CFR § 122.44(d) (1991). Those regulations -- relied upon by the EPA in the issuance of the Fayetteville permit -- constitute a reasonable exercise of the Agency's statutory authority.

10 This restriction applies whether the permit is issued by the EPA or by an approved state program. See 40 CFR § 123.25 (1991).

[**LEdHR5] [5]Congress has vested in the Administrator broad discretion to establish conditions for NPDES permits. [HN11]Section 402(a) (2) provides that for EPA-issued permits "the Administrator shall prescribe conditions . . . to assure compliance with the requirements of [§ 402(a)(1)] and *such other requirements as he deems appropriate*." 33 U. S. C. § 1342(a)(2) (emphasis added). Similarly, Congress preserved for the Administrator broad authority to oversee state permit programs:

[HN12]"No permit shall issue . . . if the Administrator . . . objects in writing to the issuance of such permit as being outside the guidelines and requirements of this chapter." § 1342(d)(2).

[**LEdHR4C] [4C]The regulations relied on by the EPA were a perfectly reasonable exercise of the Agency's statutory discretion. The application of state water quality standards in the interstate context is wholly consistent with the Act's broad purpose "to restore and maintain the chemical, physical, and [*106] biological integrity of the Nation's waters." 33 U.S.C. § 1251(a). Moreover, as noted above, § 301(b)(1)(C) expressly identifies the achievement of state water quality standards as [***255] one of the Act's central objectives. The Agency's regulations conditioning NPDES permits are a well-tailored means of achieving this goal.

Notwithstanding this apparent reasonableness, Arkansas argues that our description [*1057] in *Ouellette* of the role of affected States in the permit process

and our characterization of the affected States' position as "subordinate," see 479 U.S. at 490-491, indicates that the EPA's application of the Oklahoma standards was error. We disagree. Our statement in *Ouellette* concerned only an affected State's input into the permit process; that input is clearly limited by the plain language of § 402(b). Limits on an affected State's direct participation in permitting decisions, however, do not in any way constrain the EPA's authority to require a point source to comply with downstream water quality standards.

Arkansas also argues that regulations requiring compliance with downstream standards are at odds with the legislative history of the Act and with the statutory scheme established by the Act. Although we agree with Arkansas that the Act's legislative history indicates that Congress intended to grant the Administrator discretion in his oversight of the issuance of NPDES permits, ¹¹ we find nothing in that history to indicate that Congress intended to preclude the EPA from establishing a general requirement that such permits be conditioned to ensure compliance with downstream water quality standards.

11 See, e. g., 1 Legislative History of Water Pollution Control Act Amendments of 1972 (Committee Print compiled for the Senate Committee on Public Works by the Library of Congress), Ser. No. 93-1, pp. 322, 388-389, 814 (1973); see also 33 U. S. C. § 1342(d)(3).

Similarly, we agree with Arkansas that in the Clean Water Act Congress struck a careful balance among competing policies and interests, but do not find the EPA regulations concerning [*107] the application of downstream water quality standards at all incompatible with that balance. Congress, in crafting the Act, protected certain sovereign interests of the States; for example, § 510 allows States to adopt more demanding pollution-control standards than those established under the Act. Arkansas emphasizes that § 510 preserves such state authority only as it is applied to the waters of the regulating State. Even assuming Arkansas' construction of § 510 is correct, cf. *id.*, at 493, that section only concerns *state* authority and does not constrain the EPA's authority to promulgate reasonable regulations requiring point sources in one State to comply with water quality standards in downstream States.

For these reasons, we find the EPA's requirement that the Fayetteville discharge comply with Oklahoma's water quality standards to be a reasonable exercise of the Agency's substantial statutory discretion. Cf. *Chevron U.S.A. Inc. v. Natural Resources Defense Council, Inc.*, 467 U.S. 837, 842-845, 81 L. Ed. 2d 694, 104 S. Ct. 2778 (1984).

[**LEdHR1B] [1B]The Court of Appeals construed the Clean Water Act to prohibit any discharge of effluent that would reach waters already in violation of existing water quality standards. ¹² [**256] We find nothing in the Act to support this reading.

12 "We hold that the Clean Water Act prohibits granting an NPDES permit under the circumstances of this case (i. e., where applicable water quality standards have already been violated) and reverse EPA's decision to permit Fayetteville to discharge any part of its effluent to the Illinois River Basin." 908 F.2d 595, 616 (CA10 1990).

"Congress cannot reasonably be presumed to have intended to exclude from the CWA's 'all-encompassing program,' 451 U.S. at 318, a permitting decision arising in circumstances such as those of this case. It is even more unfathomable that Congress fashioned a '*comprehensive . . . policy for the elimination of water pollution*,' *id.*, which sanctions continued pollution once minimum water quality standards have been transgressed. More likely, Congress simply never contemplated that EPA or a state would consider it permissible to authorize further pollution under such circumstances. We will not ascribe to the Act either the gaping loophole or the irrational purpose necessary to uphold EPA's action in this case." *id.*, at 632 (footnotes omitted).

[*108] [**1058] The interpretation of the statute adopted by the court had not been advanced by any party during the Agency or court proceedings. Moreover, the Court of Appeals candidly acknowledged that its theory "has apparently never before been addressed by a federal court." 908 F.2d at 620, n. 39. The only statutory provision the court cited to support its legal analysis was § 402(h), see *id.*, at 633, which merely authorizes the EPA (or a state permit program) to prohibit a publicly owned treatment plant that is violating a condition of its NPDES permit from accepting any additional pollutants for treatment until the ongoing violation has been corrected. See 33 U. S. C. § 1342(h).

[**LEdHR1C] [1C] [**LEdHR6] [6]Although the Act contains several provisions directing compliance with state water quality standards, see, e. g., § 1311(b)(1)(C), the parties have pointed to nothing that mandates a complete ban on discharges into a waterway that is in violation of those standards. The statute does, however, contain provisions designed to remedy existing water quality violations and to allocate the burden of reducing undesirable discharges between existing sources and new sources. See, e. g., § 1313(d). Thus, rather than establishing the categorical ban announced by the Court of Appeals -- which might frustrate the con-

struction of new plants that would improve existing conditions -- the Clean Water Act vests in the EPA and the States broad authority to develop long-range, areawide programs to alleviate and eliminate existing pollution. See, e. g., § 1288(b)(2).

To the extent that the Court of Appeals relied on its interpretation of the Act to reverse the EPA's permitting decision, that reliance was misplaced.

[*109] VI

[**LEdHR7A] [7A] [**LEdHR8A] [8A] [**LEdHR9A] [9A]The Court of Appeals also concluded that the EPA's issuance of the Fayetteville permit was arbitrary and capricious because the Agency misinterpreted Oklahoma's water quality standards. The primary difference ¹³ between the court's [**257] and the Agency's interpretation of the standards derives from the court's construction of the Act. Contrary to the EPA's interpretation of the Oklahoma standards, the Court of Appeals read those standards as containing the same categorical ban on new discharges that the court had found in the Clean Water Act itself. Although we do not believe the text of the Oklahoma standards supports the court's reading (indeed, we note that Oklahoma itself had not advanced that interpretation in its briefs in the Court of Appeals), we reject it for a more fundamental reason -- namely, that the Court of Appeals exceeded the legitimate scope of judicial review of an agency adjudication. To emphasize the importance of this point, we shall first briefly assess the soundness of the EPA's interpretation and application of the Oklahoma [*110] standards and then comment more specifically on the Court of Appeals' approach.

[**LEdHR7B] [7B]

13 The court identified three errors in the EPA's reading of the Oklahoma standards. First, the court correctly observed that the ALJ and the Chief Judicial Officer misinterpreted § 4.10(c) of the standards as governing only the discharge of phosphorus into lakes, rather than the discharge of phosphorus into lakes and into all "perennial and intermittent streams." *Id.*, at 617 (emphasis omitted). This error was harmless because the ALJ found that the discharge into Lake Francis would comply with § 4.10(c) and it is undisputed that that discharge produced a greater threat to the slow-moving water of the lake than to the rapid flow in the river.

[**LEdHR8B] [8B]

The second flaw identified by the court was the ALJ's mistaken reliance on the 1985, rather than the 1982 version, of the Oklahoma stan-

dards. We agree with the Chief Judicial Officer, who also noted this error, that the portions of the two versions relevant to this case "do not differ materially." App. to Pet. for Cert. in No. 90-1262, p. 150a. Therefore, this error was also harmless.

Because these two errors were harmless, we have focused in the text on the major difference between the court's and the EPA's readings of the Oklahoma standards: the "no degradation" provision.

[***LEdHR10] [10]As discussed above, an EPA regulation requires an NPDES permit to comply "with the applicable water quality requirements of [**1059] all affected States." 40 CFR § 122.4(d) (1991). This regulation effectively incorporates into federal law those state-law standards the Agency reasonably determines to be "applicable." In such a situation, then, state water quality standards -- promulgated by the States with substantial guidance from the EPA¹⁴ and approved by the Agency -- are part of the federal law of water pollution control.

14 See *supra*, at 101. Oklahoma's water quality standards closely track the EPA's model standards in effect at that time. Compare § 3 of the Oklahoma standards with 40 CFR § 35.1550(e)(1) (1981).

Two features of the body of law governing water pollution support this conclusion. First, as discussed more thoroughly above, we have long recognized that interstate water pollution is controlled by *federal* law. See *supra*, at 98-100. Recognizing that the system of federally approved state standards as applied in the interstate context constitutes federal law is wholly consistent with this principle. Second, treating state standards in interstate controversies as federal law accords with the Act's purpose of authorizing the EPA to create and manage a uniform system of interstate water pollution regulation.

[***LEdHR1D] [1D]Because we recognize that, at least insofar as they affect the issuance of a permit in another State, the Oklahoma standards have a federal character, the EPA's reasonable, consistently held interpretation of those standards is entitled to substantial deference. Cf. *INS v. National Center for Immigrants' Rights*, 502 U.S. 183, 189-190, 116 L. Ed. 2d 546, 112 S. Ct. 551 (1991); *Chevron U. S. A. Inc. v. Natural Resources Defense [***258] Council, Inc.*, 467 U.S. 837, 81 L. Ed. 2d 694, 104 S. Ct. 2778 (1984). In these cases, the Chief Judicial Officer ruled that the Oklahoma standards -- which require that there be "no degradation" of the upper Illinois River -- would [*111] only be violated if the discharge effected an "actually detectable or

measurable" change in water quality. App. to Pet. for Cert. in No. 90-1262, p. 117a.

This interpretation of the Oklahoma standards is certainly reasonable and consistent with the purposes and principles of the Clean Water Act. As the Chief Judicial Officer noted, "unless there is some method for measuring compliance, there is no way to ensure compliance." *Id.*, at 118a, n. 16 (internal quotation marks omitted; citation omitted). Moreover, this interpretation of the Oklahoma standards makes eminent sense in the interstate context: If every discharge that had some theoretical impact on a downstream State were interpreted as "degrading" the downstream waters, downstream States might wield an effective veto over upstream discharges.

The EPA's application of those standards in these cases was also sound. On remand, the ALJ scrutinized the record and made explicit factual findings regarding four primary measures of water quality under the Oklahoma standards: eutrophication,¹⁵ esthetics,¹⁶ dissolved oxygen,¹⁷ and [**1060] metals.¹⁸ [*112] In each case, the ALJ found that the Fayetteville discharge would not lead to a detectable change in water quality. He therefore concluded that the Fayetteville discharge would not violate the Oklahoma water quality standards. Because we agree with the Agency's Chief Judicial Officer that these findings are supported by substantial evidence, we conclude that the Court of Appeals should have affirmed both the EPA's construction of the regulations and the issuance of the Fayetteville permit.

15 Eutrophication is the "normally slow aging process by which a lake evolves into a bog or marsh During eutrophication the lake becomes so rich in nutritive compounds (especially nitrogen and phosphorus) that algae and other microscopic plant life become superabundant, thereby 'choking' the lake" App. 57-58. With regard to eutrophication, the ALJ found that the Fayetteville plant would discharge 30 pounds of phosphorus per day, only about 6 pounds of which would reach the Arkansas/Oklahoma border, and that such a small amount would not result in an increase in eutrophication. App. to Pet. for Cert. in No. 90-1262, p. 129a.

16 With regard to esthetics, the ALJ concluded that the only discharged compound that would affect esthetics was phosphorus and that, again, the amount of that substance crossing the border would not affect the esthetic quality of Oklahoma's waters. *Id.*, at 135a-136a.

17 With regard to dissolved oxygen, the ALJ found that in the 39 miles between discharge and the border the effluent would experience "complete oxygen recovery" and therefore would not

affect the dissolved oxygen levels in the river. *Id.*, at 140a.

18 With regard to metals, the ALJ concluded that the concentrations of metals would be so low as not to violate the Oklahoma standards. *Id.*, at 143a.

[***LEdHR9B] [9B]In its review of the EPA's interpretation and application of the Oklahoma standards, the Court of Appeals committed three mutually compounding errors.

First, the court failed to give due regard to the EPA's interpretation of its own regulations, as those regulations incorporate the Oklahoma standards. Instead the court voiced its own interpretation of the governing law and concluded that "where a [***259] proposed source would discharge effluents that would contribute to conditions currently constituting a violation of applicable water quality standards, such [a] proposed source may not be permitted." 908 F.2d at 620. As we have already pointed out, that reading of the law is not supported by the statute or by any EPA regulation. The Court of Appeals sat in review of an agency action and should have afforded the EPA's interpretation of the governing law an appropriate level of deference. See generally *Chevron, supra*, at 842-844.

[***LEdHR9C] [9C] [***LEdHR11] [11]Second, the court disregarded well-established standards for reviewing the factual findings of agencies and instead made its own factual findings. The troubling nature of the court's analysis appears on the face of the opinion itself: At least four times, the court concluded that "there was substantial evidence before the ALJ to support" particular findings which the court thought appropriate, but which were [*113] contrary to those actually made by the ALJ. 908 F.2d at 620, 625, 627, 629. Although we have long recognized the "substantial evidence" standard in administrative law, the court below turned that analysis on its head. [HN13]A court reviewing an agency's adjudicative action should accept the *agency's* factual findings if those findings are supported by substantial evidence on the record as a whole. See generally *Universal Camera Corp. v. NLRB*, 340 U.S. 474, 95 L. Ed. 456, 71 S. Ct. 456 (1951). The court should not supplant the agency's findings merely by identifying alternative findings that could be supported by substantial evidence.

[***LEdHR9D] [9D]Third, the court incorrectly concluded that the EPA's decision was arbitrary and capricious. This error is derivative of the court's first two errors. Having substituted its reading of the governing law for the Agency's, and having made its own factual findings, the Court of Appeals concluded that the EPA erred in not considering an important and relevant fact --

namely, that the upper Illinois River was (by the court's assessment) already degraded.

[***LEdHR9E] [9E] [***LEdHR12] [12]As we have often recognized, [HN14]an agency ruling is "arbitrary and capricious if the agency has . . . entirely failed to consider an important aspect of the problem." *Motor Vehicle Mfrs. Assn. of United States, Inc. v. State Farm Mut. Automobile Ins. Co.*, 463 U.S. 29, 43, 77 L. Ed. 2d 443, 103 S. Ct. 2856 (1983). However, in these cases, the degraded status of the river is only an "important aspect" because of the Court of Appeals' novel and erroneous interpretation of the controlling law. Under the EPA's interpretation of that law, what matters is not the river's current status, but rather whether the proposed discharge will have a "detectable effect" on that status. If the Court of Appeals had been properly respectful of the Agency's permissible reading of the Act and [**1061] the Oklahoma standards, the court would not have adjudged the Agency's decision arbitrary and capricious for this reason.

[***LEdHR1E] [1E]In sum, the Court of Appeals made a policy choice that it was not authorized to make. Arguably, as that court suggested, [*114] it might be wise to prohibit any discharge into the Illinois River, even if that discharge would have no adverse impact on water quality. But it was surely not arbitrary for the EPA to conclude -- given the benefits to the river from the increased flow of relatively [***260] clean water¹⁹ and the benefits achieved in Arkansas by allowing the new plant to operate as designed -- that allowing the discharge would be even wiser. It is not our role, or that of the Court of Appeals, to decide which policy choice is the better one, for it is clear that Congress has entrusted such decisions to the Environmental Protection Agency.

19 Justice Holmes recognized this potential benefit years ago:

"There is no pretence that there is a nuisance of the simple kind that was known to the older common law. There is nothing which can be detected by the unassisted senses -- no visible increase of filth, no new smell. On the contrary, it is proved that the great volume of pure water from Lake Michigan which is mixed with the sewage at the start has improved the Illinois River in these respects to a noticeable extent. Formerly it was sluggish and ill smelling. Now it is a comparatively clear stream to which edible fish have returned. Its water is drunk by the fisherman, it is said, without evil results." *Missouri v. Illinois*, 200 U.S. 496, 522, 50 L. Ed. 572, 26 S. Ct. 268 (1906).

Accordingly, the judgment of the Court of Appeals
is
Reversed.

**August 11, 1999, Argued and Submitted, San Francisco, California
September 15, 1999, Filed**

SUBSEQUENT HISTORY: [**1] As Amended
December 7, 1999.

PRIOR HISTORY: Petition to Review a Decision
of the Environmental Protection Agency. EPA No. 97-3.

DISPOSITION: PETITION DENIED.

CASE SUMMARY:

PROCEDURAL POSTURE: Petitioners appealed decision of the Environmental Appeals Board denying reconsideration of the Environmental Protection Agency's decision issuing five municipalities National Pollution Discharge System permits, without requiring numeric limitations to ensure compliance with state water-quality standards.

OVERVIEW: The Environmental Protection Agency (EPA) issued permits to municipalities without requiring limitations on storm-sewer discharges. Petitioners alleged that the Water Quality Act (WQA), 33 U.S.C.S. § 1311(b)(1)(C), required municipalities to strictly comply with state water-quality standards. Court concluded that EPA's decision was not arbitrary or capricious. Court determined that WQA unambiguously expressed Congress' intent that municipal storm-sewer discharges did not have to strictly comply with WQA. Congress expressly put in provision for industrial storm-water dis-

charges requiring compliance with WQA, but there was no similar provision in WQA for municipal storm-sewer discharges. The plain language of WQA thus exempted municipal storm-sewer discharges from strict compliance. Court found other provisions in WQA excluded certain discharges from permit altogether. Based on that fact, court concluded exemption of municipal storm-sewer discharges from strict compliance with WQA was not so unusual that the court should not interpret the statute as written.

OUTCOME: Court denied petition for reconsideration, because Environmental Protection Agency did not act arbitrarily or capriciously in issuing permits. In examining Water Quality Act, court determined that it was Congress' specific intent to exempt municipal storm-sewer discharges from strict compliance with the statute.

CORE TERMS: municipal, water quality, storm, water-quality, industrial, pollutant, administrator, storm-sewer, strict compliance, storm-water, environmental, quotation marks omitted, unambiguously, numeric, storm sewers, practicable, dischargers, effluent, entity, exempt, statutory construction, engineering, capricious, stringent, maximum, runoff, Clean Water Act, decision to issue, permit requirements, ensure compliance

LexisNexis(R) Headnotes

Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Public Participation

[HN1] 26 U.S.C.S. § 1342(a)(1) authorizes the Environmental Protection Agency to issue National Pollution Discharge Elimination System permits, thereby allowing entities to discharge some pollutants.

Administrative Law > Judicial Review > Reviewability > Standing

Civil Procedure > Justiciability > General Overview

Environmental Law > Litigation & Administrative Proceedings > Judicial Review

[HN2] 33 U.S.C.S. § 1369(b)(1)(F) authorizes any interested person to seek review in court of an Environmental Protection Agency decision issuing or denying any permit under 26 U.S.C.S. § 1342(a)(1). Any interested person means any person that satisfies the injury-in-fact requirement for U.S. Const. art. III standing.

Environmental Law > Litigation & Administrative Proceedings > Nuisances, Trespasses & Strict Liability

[HN3] A plaintiff claiming injury from environmental damage must use the area affected by the challenged activity.

Administrative Law > Judicial Review > Standards of Review > Abuse of Discretion

Administrative Law > Judicial Review > Standards of Review > Arbitrary & Capricious Review

Environmental Law > Litigation & Administrative Proceedings > Judicial Review

[HN4] The Administrative Procedures Act, 5 U.S.C.S. § 701, et seq., provides the standard of review for the Environmental Protection Agency's decision to issue a permit. Under the Administrative Procedures Act, the court generally reviews such a decision to determine whether it was arbitrary, capricious, an abuse of discretion, or otherwise not in accordance with law.

Administrative Law > Agency Rulemaking > Rule Application & Interpretation > Validity

Administrative Law > Judicial Review > Standards of Review > General Overview

Governments > Legislation > Interpretation

[HN5] The court has established a two-step process for reviewing an agency's construction of a statute it administers. Under the first step, the court employs traditional tools of statutory construction to determine whether

Congress has expressed its intent unambiguously on the question before the court. If the intent of Congress is clear, that is the end of the matter; for the court, as well as the agency, must give effect to the unambiguously expressed intent of Congress. If, instead, Congress has left a gap for the administrative agency to fill, the court proceeds to step two. At step two, the court must uphold the administrative regulation unless it is arbitrary, capricious, or manifestly contrary to the statute.

Environmental Law > Water Quality > Clean Water Act > Coverage & Definitions > Discharges

Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Effluent Limitations

[HN6] The Clean Water Act, 33 U.S.C.S. § 1251, et seq., generally prohibits the discharge of any pollutant from a point source into the navigable waters of the United States. An entity can, however, obtain a National Pollution Discharge Elimination System permit that allows for the discharge of some pollutants.

Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Effluent Limitations

Environmental Law > Water Quality > Clean Water Act > Water Quality Standards

[HN7] A National Pollution Discharge Elimination System permit imposes effluent limitations on discharges. First, a permit-holder shall achieve effluent limitations which shall require the application of the best practicable control technology currently available. Second, a permit-holder shall achieve any more stringent limitation, including those necessary to meet water quality standards, treatment standards or schedules of compliance, established pursuant to any state law or regulations.

Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Storm Water Discharges

[HN8] See 33 U.S.C.S. § 1342(p)(3).

Governments > Legislation > Interpretation

[HN9] Questions of congressional intent that can be answered with traditional tools of statutory construction are still firmly within the province of the courts. Using traditional tools of statutory construction, when interpreting a statute, the court looks first to the words that Congress used. Rather than focusing just on the word or phrase at issue, the court looks to the entire statute to determine congressional intent.

Governments > Legislation > Interpretation

[HN10]Where Congress includes particular language in one section of a statute but omits it in another section of the same Act, it is generally presumed that Congress acts intentionally and purposely in the disparate inclusion or exclusion.

Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Storm Water Discharges Governments > Legislation > Interpretation

[HN11]The court generally refuses to interpret a statute in a way that renders a provision superfluous.

Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Effluent Limitations Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Storm Water Discharges Governments > Local Governments > Licenses

[HN12]The Water Quality Act contains other provisions that undeniably exempt certain discharges from the permit requirement altogether, and therefore from 33 U.S.C.S. § 1311. For example, the Administrator shall not require a permit under this section for discharges composed entirely of return flows from irrigated agriculture. 33 U.S.C.S. § 1342(l)(1). Similarly, a permit is not required for certain storm-water runoff from oil, gas, and mining operations. See 33 U.S.C.S. § 1342(l)(2).

Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Storm Water Discharges

[HN13]Congress gave the administrator discretion to determine what controls are necessary. Under that discretionary provision, the Environmental Protection Agency (EPA) has the authority to determine that ensuring strict compliance with state water-quality standards is necessary to control pollutants. The EPA also has the authority to require less than strict compliance with state water-quality standards. The EPA has adopted an interim approach, which uses best management practices (BMPs) in first-round storm water permits to provide for the attainment of water quality standards.

COUNSEL: Jennifer Anderson and David Baron, Arizona Center for Law in the Public Interest, Phoenix, Arizona, for the petitioners.

Alan Greenberg, Attorney, U.S. Department of Justice, Environment & Natural Resources Division, Denver, Colorado, for the respondent.

Craig Reece, Phoenix City Attorney's Office, Phoenix, Arizona; Stephen J. Burg, Mesa City Attorney's Office, Mesa, Arizona; Timothy Harrison, Tucson City Attor-

ney's Office, Tucson, Arizona; and Harlan C. Agnew, Deputy County Attorney, Tucson, Arizona, for the intervenors-respondents.

David Burchmore, Squire, Sanders & Dempsey, Cleveland, Ohio, for the amici curiae.

JUDGES: Before: John T. Noonan, David R. Thompson, and Susan P. Graber, Circuit Judges. Opinion by Judge Graber.

OPINION BY: SUSAN P. GRABER

OPINION

[*1161] AMENDED OPINION

GRABER, Circuit Judge:

Petitioners challenge the Environmental Protection Agency's (EPA) decision to issue National Pollution Discharge Elimination System (NPDES) permits to five municipalities, for their separate storm sewers, without requiring numeric limitations ^[**2] to ensure compliance with state water-quality standards. Petitioners sought administrative review of the decision within the EPA, which the Environmental Appeals Board (EAB) denied. This timely petition for review ensued. For the reasons that follow, we deny the petition.

FACTUAL AND PROCEDURAL BACKGROUND

Title [HN1] 26 U.S.C. § 1342(a)(1) authorizes the EPA to issue NPDES permits, thereby allowing entities to discharge some pollutants. In 1992 and 1993, the cities of Tempe, Tucson, Mesa, and Phoenix, Arizona, and Pima County, Arizona (Intervenors), submitted applications for NPDES permits. The EPA prepared draft permits for public comment; those draft permits did not attempt to ensure compliance with Arizona's water-quality standards.

Petitioner Defenders of Wildlife objected to the permits, arguing that they must contain numeric limitations to ensure strict compliance with state water-quality standards. The State of Arizona also objected.

Thereafter, the EPA added new requirements:

To ensure that the permittee's activities achieve timely compliance with applicable water quality standards (Arizona Administrative Code, Title 18, Chapter 11, Article 1), the ^[**3] permittee shall implement the [Storm Water Management Program], monitoring, reporting and other requirements of this permit in accordance with the time frames established in the

[Storm Water Management Program] referenced in Part I.A.2, and elsewhere in the permit. This timely implementation of the requirements of this permit shall constitute a schedule of compliance authorized by Arizona Administrative Code, section R18-11-121(C).

The Storm Water Management Program included a number of structural environmental controls, such as storm-water detention basins, retention basins, and infiltration ponds. It also included programs to remove illegal discharges.

With the inclusion of those "best management practices," the EPA determined that the permits ensured compliance with state water-quality standards. The Arizona Department of Environmental Quality agreed:

The Department has reviewed the referenced municipal NPDES storm-water permit pursuant to Section 401 of the Federal Clean Water Act to ensure compliance with State water quality standards. We have determined that, based on the information provided in the permit, and the fact sheet, adherence to provisions and [**4] requirements set forth in the final municipal permit, will protect the water quality of the receiving water.

On February 14, 1997, the EPA issued final NPDES permits to Intervenor. Within 30 days of that decision, Petitioners requested an evidentiary hearing with the regional administrator. *See* 40 C.F.R. § 124.74. Although Petitioners requested a hearing, they conceded that they raised only a legal issue and that a hearing was, in fact, unnecessary. Specifically, Petitioners raised only the legal question whether the Clean Water Act (CWA) requires numeric limitations to ensure strict compliance with state water-quality standards; they did not raise the factual question whether the management practices that the EPA chose would be effective.

[*1162] On June 16, 1997, the regional administrator summarily denied Petitioners' request. Petitioners then filed a petition for review with the EAB. *See* 40 C.F.R. § 124.91(a). On May 21, 1998, the EAB denied the petition, holding that the permits need not contain numeric limitations to ensure strict compliance with state water-quality standards. Petitioners then moved for reconsideration, *see* 40 C.F.R. § 124.91(i), which the EAB denied.

[**5] JURISDICTION

[HN2] Title 33 U.S.C. § 1369(b)(1)(F) authorizes "any interested person" to seek review in this court of an EPA decision "issuing or denying any permit under section 1342 of this title." "Any interested person" means any person that satisfies the injury-in-fact requirement for Article III standing. *See Natural Resources Defense Council, Inc. v. EPA*, 966 F.2d 1292, 1297 (9th Cir. 1992) [NRDC II]. It is undisputed that Petitioners satisfy that requirement. Petitioners allege that "members of Defenders and the Club use and enjoy ecosystems affected by storm water discharges and sources thereof governed by the above-referenced permits," and no other party disputes those facts. *See Lujan v. Defenders of Wildlife*, 504 U.S. 555, 565-66, 119 L. Ed. 2d 351, 112 S. Ct. 2130 (1992) [HN3] ("[A] plaintiff claiming injury from environmental damage must use the area affected by the challenged activity."); *see also NRDC II*, 966 F.2d at 1297 ("NRDC claims, inter alia, that [the] EPA has delayed unlawfully promulgation of storm water regulations and that its regulations, as published, inadequately control storm water [**6] contaminants. NRDC's allegations . . . satisfy the broad standing requirement applicable here.").

Intervenors argue, however, that they were not parties when this action was filed and that this court cannot redress Petitioners' injury without them. Their real contention appears to be that they are indispensable parties under *Federal Rule of Civil Procedure* 19. We need not consider that contention, however, because in fact Intervenor have been permitted to intervene in this action and to present their position fully. In the circumstances, Intervenor have suffered no injury.

DISCUSSION

A. Standard of Review

[HN4] The Administrative Procedures Act (APA), 5 U.S.C. §§ 701-06, provides our standard of review for the EPA's decision to issue a permit. *See American Mining Congress v. EPA*, 965 F.2d 759, 763 (9th Cir. 1992). Under the APA, we generally review such a decision to determine whether it was "arbitrary, capricious, an abuse of discretion, or otherwise not in accordance with law." 5 U.S.C. § 706(2)(A).

On questions of statutory interpretation, we follow the approach from *Chevron U.S.A. Inc. v. Natural Resources Defense Council, Inc.*, 467 U.S. 837, 81 L. Ed. 2d 694, 104 S. Ct. 2778 (1984). [**7] *See NRDC II*, 966 F.2d at 1297 (so holding). In *Chevron*, 467 U.S. at 842-44, the Supreme Court devised a two-step process for reviewing an administrative agency's interpretation of a statute that it administers. *See also Bicycle Trails Council of Marin v. Babbitt*, 82 F.3d 1445, 1452 (9th Cir.

1996) ("The [HN5]Supreme Court has established a two-step process for reviewing an agency's construction of a statute it administers."). Under the first step, we employ "traditional tools of statutory construction" to determine whether Congress has expressed its intent unambiguously on the question before the court. *Chevron*, 467 U.S. at 843 n.9. "If the intent of Congress is clear, that is the end of the matter; for the court, as well as the agency, must give effect to the unambiguously expressed intent of Congress." *Id.* at 842-43 (footnote omitted). If, instead, Congress has left a gap for the administrative agency to fill, we proceed to step two. *See id.* at 843. At step two, we must uphold the administrative regulation unless it is "arbitrary, capricious, or manifestly contrary to the statute." *Id.* at 844.

[**8] [*1163] B. Background

[HN6]The CWA generally prohibits the "discharge of any pollutant," 33 U.S.C. § 1311(a), from a "point source" into the navigable waters of the United States. *See* 33 U.S.C. § 1362(12)(A). An entity can, however, obtain an NPDES permit that allows for the discharge of some pollutants. *See* 33 U.S.C. § 1342(a)(1).

[HN7]Ordinarily, an NPDES permit imposes effluent limitations on such discharges. *See* 33 U.S.C. § 1342(a)(1) (incorporating effluent limitations found in 33 U.S.C. § 1311). First, a permit-holder "shall . . . achieve . . . effluent limitations . . . which shall require the application of the best practicable control technology [BPT] currently available." 33 U.S.C. § 1311(b)(1)(A). Second, a permit-holder "shall . . . achieve . . . any more stringent limitation, including those necessary to meet water quality standards, treatment standards or schedules of compliance, established pursuant to any State law or regulations (under authority preserved by section 1370 of this title)." 33 U.S.C. § 1311 [**9] (b)(1)(C) (emphasis added). Thus, although the BPT requirement takes into account issues of practicability, *see Rybachek v. EPA*, 904 F.2d 1276, 1289 (9th Cir. 1990), the EPA also "is under a specific obligation to require that level of effluent control which is needed to implement existing water quality standards without regard to the limits of practicability," *Oklahoma v. EPA*, 908 F.2d 595, 613 (10th Cir. 1990) (internal quotation marks omitted), *rev'd on other grounds sub nom. Arkansas v. Oklahoma*, 503 U.S. 91, 117 L. Ed. 2d 239, 112 S. Ct. 1046 (1992). *See also Ackels v. EPA*, 7 F.3d 862, 865-66 (9th Cir. 1993) (similar).

The EPA's treatment of storm-water discharges has been the subject of much debate. Initially, the EPA determined that such discharges generally were exempt from the requirements of the CWA (at least when they were uncontaminated by any industrial or commercial activity). *See* 40 C.F.R. § 125.4 (1975).

The Court of Appeals for the District of Columbia, however, invalidated that regulation, holding that "the EPA Administrator does not have authority to exempt categories of point sources from [**10] the permit requirements of § 402 [33 U.S.C. § 1342]." *Natural Resources Defense Council, Inc. v. Costle*, 186 U.S. App. D.C. 147, 568 F.2d 1369, 1377 (D.C. Cir. 1977). "Following this decision, [the] EPA issued proposed and final rules covering storm water discharges in 1980, 1982, 1984, 1985 and 1988. These rules were challenged at the administrative level and in the courts." *American Mining Congress*, 965 F.2d at 763.

Ultimately, in 1987, Congress enacted the Water Quality Act amendments to the CWA. *See NRDC II*, 966 F.2d at 1296 ("Recognizing both the environmental threat posed by storm water runoff and [the] EPA's problems in implementing regulations, Congress passed the Water Quality Act of 1987 containing amendments to the CWA.") (footnotes omitted). Under the Water Quality Act, from 1987 until 1994, 'most entities discharging storm water did not need to obtain a permit. *See* 33 U.S.C. § 1342(p).

1 As enacted, the Water Quality Act extended the exemption to October 1, 1992. Congress later amended the Act to change that date to October 1, 1994. *See* Pub. L. No. 102-580.

[**11] Although the Water Quality Act generally did not require entities discharging storm water to obtain a permit, it did require such a permit for discharges "with respect to which a permit has been issued under this section before February 4, 1987," 33 U.S.C. § 1342(p)(2)(A); discharges "associated with industrial activity," 33 U.S.C. § 1342(p)(2)(B); discharges from a "municipal separate sewer system serving a population of [100,000] or more," 33 U.S.C. § 1342(p)(2)(C) & (D); and "[a] discharge for which the Administrator . . . determines that the stormwater discharge contributes to a violation of a water quality standard or is a significant contributor of pollutants to waters of the United States," 33 U.S.C. § 1342(p)(2)(E).

[*1164] When a permit is required for the discharge of storm water, the Water Quality Act sets two different standards:

(A) Industrial discharges

Permits for discharges associated with industrial activity shall meet all applicable provisions of this section and *section 1311* of this title.

(B) Municipal discharge

Permits for discharges from municipal [**12] storm sewers -

(i) may be issued on a system- or jurisdiction-wide basis;

(ii) shall include a requirement to effectively prohibit non-stormwater discharges into the storm sewers; and

(iii) shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator . . . determines appropriate for the control of such pollutants.

[HN8] 33 U.S.C. § 1342(p)(3) (emphasis added).

C. Application of Chevron

The EPA and Petitioners argue that the Water Quality Act is ambiguous regarding whether Congress intended for municipalities to comply strictly with state water-quality standards, under 33 U.S.C. § 1311(b)(1)(C). Accordingly, they argue that we must proceed to step two of *Chevron* and defer to the EPA's interpretation that the statute does require strict compliance. See *Zimmerman v. Oregon Dep't of Justice*, 170 F.3d 1169, 1173 (9th Cir. 1999) ("At step two, we must uphold the administrative regulation unless it is arbitrary, capricious, or [**13] manifestly contrary to the statute.") (citation and internal quotation marks omitted), *petition for cert. filed*, No. 99-243 (Aug. 10, 1999).

Intervenors and *amici*, on the other hand, argue that the Water Quality Act expresses Congress' intent unambiguously and, thus, that we must stop at step one of *Chevron*. See, e.g., *National Credit Union Admin. v. First Nat'l Bank & Trust Co.*, 522 U.S. 479, 118 S. Ct. 927, 938-39, 140 L. Ed. 2d 1 (1998) ("Because we conclude that Congress has made it clear that the *same* common bond of occupation must unite each member of an occupationally defined federal credit union, we hold that the NCUA's contrary interpretation is impermissible under the first step of *Chevron*." (emphasis in original); *Sierra Club v. EPA*, 118 F.3d 1324, 1327 (9th Cir. 1997) ("Congress has spoken clearly on the subject and the regulation violates the provisions of the statute. Our inquiry ends at the first prong of *Chevron*."). We agree with Intervenors and *amici*: For the reasons discussed below, the Water Quality Act unambiguously demonstrates that Congress did not require municipal storm-sewer discharges to comply [**14] strictly with

33 U.S.C. § 1311(b)(1)(C). That being so, we end our inquiry at the first step of the *Chevron* analysis.

"Questions [HN9] of congressional intent that can be answered with 'traditional tools of statutory construction' are still firmly within the province of the courts" under *Chevron*. *NRDC II*, 966 F.2d at 1297 (citation omitted). "Using our 'traditional tools of statutory construction,' *Chevron*, 467 U.S. at 843 n.9, 104 S. Ct. 2778, when interpreting a statute, we look first to the words that Congress used." *Zimmerman*, 170 F.3d at 1173 (alterations, citations, and internal quotation marks omitted). "Rather than focusing just on the word or phrase at issue, we look to the entire statute to determine Congressional intent." *Id.* (alterations, citations, and internal quotation marks omitted).

As is apparent, Congress expressly required industrial storm-water discharges to comply with the requirements of 33 U.S.C. § 1311. See 33 U.S.C. § 1342(p)(3)(A) ("Permits for discharges associated with industrial activity shall meet all applicable [**15] provisions of this section and section 1311 of this title.") (emphasis added). By incorporation, then, industrial [**165] storm-water discharges "shall . . . achieve . . . any more stringent limitation, including those necessary to meet water quality standards, treatment standards or schedules of compliance, established pursuant to any State law or regulation (under authority preserved by section 1370 of this title)." 33 U.S.C. § 1311(b)(1)(C) (emphasis added); see also Sally A. Longroy, *The Regulation of Storm Water Runoff and its Impact on Aviation*, 58 J. Air. L. & Com. 555, 565-66 (1993) ("Congress further singled out industrial storm water dischargers, all of which are on the high-priority schedule, and requires them to satisfy all provisions of section 301 of the CWA [33 U.S.C. § 1311]. . . . Section 301 further mandates that NPDES permits include requirements that receiving waters meet water quality based standards.") (emphasis added). In other words, industrial discharges must comply strictly with state water-quality standards.

Congress chose not to include a similar provision for municipal [**16] storm-sewer discharges. Instead, Congress required municipal storm-sewer discharges "to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator . . . determines appropriate for the control of such pollutants." 33 U.S.C. § 1342(p)(3)(B)(iii).

The EPA and Petitioners argue that the difference in wording between the two provisions demonstrates ambiguity. That argument ignores precedent respecting the reading of statutes. Ordinarily, "where [HN10] Congress includes particular language in one section of a statute

but omits it in another section of the same Act, it is generally presumed that Congress acts intentionally and purposely in the disparate inclusion or exclusion." *Russello v. United States*, 464 U.S. 16, 23, 78 L. Ed. 2d 17, 104 S. Ct. 296 (1983) (citation and internal quotation marks omitted); see also *United States v. Hanousek*, 176 F.3d 1116, 1121 (9th Cir. 1999) (stating the same principle), *petition for cert. filed*, No. 98-323 (Aug. 23, 1999). Applying that familiar [**17] and logical principle, we conclude that Congress' choice to require industrial storm-water discharges to comply with 33 U.S.C. § 1311, but not to include the same requirement for municipal discharges, must be given effect. When we read the two related sections together, we conclude that 33 U.S.C. § 1342(p)(3)(B)(iii) does not require municipal storm-sewer discharges to comply strictly with 33 U.S.C. § 1311(b)(1)(C).

Application of that principle is significantly strengthened here, because 33 U.S.C. § 1342(p)(3)(B) is not merely silent regarding whether municipal discharges must comply with 33 U.S.C. § 1311. Instead, § 1342(p)(3)(B)(iii) replaces the requirements of § 1311 with the requirement that municipal storm-sewer dischargers "reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator . . . determines appropriate for the control of such pollutants." 33 U.S.C. § 1342(p)(3)(B)(iii). [**18] In the circumstances, the statute unambiguously demonstrates that Congress did not require municipal storm-sewer discharges to comply strictly with 33 U.S.C. § 1311(b)(1)(C).

Indeed, the EPA's and Petitioners' interpretation of 33 U.S.C. § 1342(p)(3)(B)(iii) would render that provision superfluous, a result that we prefer to avoid so as to give effect to all provisions that Congress has enacted. See *Government of Guam ex rel. Guam Econ. Dev. Auth. v. United States*, 179 F.3d 630, 634 (9th Cir. 1999) ("This [HN11] court generally refuses to interpret a statute in a way that renders a provision superfluous."), as amended, 1999 U.S. App. LEXIS 18691, 1999 WL 604218 (9th Cir. Aug. 12, 1999). Section 1342(p)(3)(B)(iii) creates a lesser standard than § 1311. Thus, if § 1311 continues to apply to municipal storm-sewer discharges, [**1166] the more stringent requirements of that section always would control.

Contextual clues support the plain meaning of § 1342(p)(3)(B)(iii), which we have described above. [HN12] The Water Quality Act contains other provisions that undeniably exempt certain discharges from the permit requirement altogether (and therefore from [**19] § 1311). For example, "the Administrator shall not require a permit under this section for discharges composed en-

tirely of return flows from irrigated agriculture." 33 U.S.C. § 1342(1)(1). Similarly, a permit is not required for certain storm-water runoff from oil, gas, and mining operations. See 33 U.S.C. § 1342(1)(2). Read in the light of those provisions, Congress' choice to exempt municipal storm-sewer discharges from strict compliance with § 1311 is not so unusual that we should hesitate to give effect to the statutory text, as written.

Finally, our interpretation of § 1342(p)(3)(B)(iii) is supported by this court's decision in *NRDC II*. There, the petitioner had argued that "the EPA has failed to establish substantive controls for municipal storm water discharges as required by the 1987 amendments." *NRDC II*, 966 F.2d at 1308. This court disagreed with the petitioner's interpretation of the amendments:

Prior to 1987, municipal storm water dischargers were subject to the same substantive control requirements as industrial and other types of storm water. In the 1987 amendments, Congress retained the [**20] existing, stricter controls for industrial storm water dischargers but prescribed new controls for municipal storm water discharge.

Id. (emphasis added). The court concluded that, under 33 U.S.C. § 1342(p)(3)(B)(iii), "Congress did not mandate a minimum standards approach." *Id.* (emphasis added). The question in *NRDC II* was not whether § 1342(p)(3)(B)(iii) required strict compliance with state water-quality standards, see 33 U.S.C. § 1311(b)(1)(C). Nonetheless, the court's holding applies equally in this action and further supports our reading of 33 U.S.C. § 1342(p).

In conclusion, the text of 33 U.S.C. § 1342(p)(3)(B), the structure of the Water Quality Act as a whole, and this court's precedent all demonstrate that Congress did not require municipal storm-sewer discharges to comply strictly with 33 U.S.C. § 1311(b)(1)(C).

D. Required Compliance with 33 U.S.C. § 1311(b)(1)(C)

We are left with Intervenors' contention that the EPA may not, under the CWA, require strict compliance with state water-quality [**21] standards, through numerical limits or otherwise. We disagree.

Although Congress did not require municipal storm-sewer discharges to comply strictly with § 1311(b)(1)(C), § 1342(p)(3)(B)(iii) states that "permits for discharges from municipal storm sewers . . . shall require . . . such other provisions as the Administrator . . . determines appropriate for the control of such pollu-

tants." (Emphasis added.) That provision gives the EPA discretion to determine what pollution controls are appropriate. As this court stated in *NRDC II*, "Congress [HN13]gave the administrator discretion to determine what controls are necessary. . . . NRDC's argument that the EPA rule is inadequate cannot prevail in the face of the clear statutory language." 966 F.2d at 1308.

Under that discretionary provision, the EPA has the authority to determine that ensuring strict compliance with state water-quality standards is necessary to control pollutants. The EPA also has the authority to require less than strict compliance with state water-quality standards. The EPA has adopted an interim approach, which "uses

best management practices (BMPs) in first-round storm water permits . . . to provide [**22] for the attainment of water quality standards." The EPA applied that approach to the permits at issue here. Under 33 U.S.C. § 1342(p)(3)(B)(iii), the EPA's choice to include [*1167] either management practices or numeric limitations in the permits was within its discretion. See *NRDC II*, 966 F.2d at 1308 ("Congress did not mandate a minimum standards approach or specify that [the] EPA develop minimal performance requirements."). In the circumstances, the EPA did not act arbitrarily or capriciously by issuing permits to Intervenors.

February 23, 1994, Argued
May 31, 1994, Decided

PRIOR HISTORY: ON WRIT OF CERTIORARI
TO THE SUPREME COURT OF WASHINGTON.

DISPOSITION: 121 Wash. 2d 179, 849 P.2d 646,
affirmed.

CASE SUMMARY:

PROCEDURAL POSTURE: Petitioners, a city and a local utility district, desired to build a hydroelectric project on the Dosewallips River in Washington State. Respondent state environmental agency conditioned a permit for the project on the maintenance of specific minimum stream flows to protect salmon and steelhead runs. The Supreme Court of Washington upheld the agency's decision. Petitioners sought certiorari.

OVERVIEW: Because a Federal Energy Regulatory Commission license was required and because the project might result in discharges into the Dosewallips River, petitioners were required to obtain state certification of the project pursuant to § 401 (33 U.S.C.S. § 1341) of the Federal Water Pollution Control Act, commonly known as the Clean Water Act (Act), 33 U.S.C.S. § 1251 et seq. The principal dispute was whether the minimum stream flow requirement that the state imposed on the hydroelectric project was a permissible condition of a § 401 certification under the Act. The Court concluded that it was, upholding the state supreme court's judgment. The Court held that a state may include minimum stream flow requirements in a § 401 certification insofar as ne-

cessary to enforce a designated use contained in a state water quality standard. In so doing, the Court rejected petitioners' assertion that the Act was only concerned with water quality and did not allow the regulation of water quantity. Indeed, there was recognition in the Act itself that reduced stream flow, or diminishment of water quantity, could constitute water pollution.

OUTCOME: The Court affirmed the judgment of the state supreme court.

Environmental Law > Water Quality > Clean Water Act > Water Quality Standards
Real Property Law > Water Rights > Beneficial Use
Real Property Law > Water Rights > Nonconsumptive Uses > General Overview

[HN1] Pursuant to § 303 (33 U.S.C.S. § 1313) of the Federal Water Pollution Control Act, commonly known as the Clean Water Act (Act), 33 U.S.C.S. § 1251 et seq., a state water quality standard shall consist of the desig-

nated uses of the navigable waters involved and the water quality criteria for such waters based upon such uses. 33 U.S.C.S. § 1313(c)(2)(A). In setting standards, the state must comply with the following broad requirements: such standards shall be such as to protect the public health or welfare, enhance the quality of water and serve the purposes of the Act. Such standards shall be established taking into consideration their use and value for public water supplies, propagation of fish and wildlife, recreational, and other purposes. Section 303 also contains an "antidegradation policy," a policy requiring that state standards be sufficient to maintain existing beneficial uses of navigable waters, preventing their further degradation.

Environmental Law > Water Quality > Clean Water Act > Discharge Permits > State Water Quality Certifications

Environmental Law > Water Quality > Clean Water Act > Enforcement > General Overview

Environmental Law > Water Quality > Clean Water Act > Water Quality Standards

[HN2]States are responsible for enforcing water quality standards on intrastate waters. 33 U.S.C.S. § 1319(a). In addition to these primary enforcement responsibilities, § 401 of the Federal Water Pollution Control Act, 33 U.S.C.S. § 1341, requires states to provide a water quality certification before a federal license or permit can be issued for activities that may result in any discharge into intrastate navigable waters. Specifically, § 401 requires an applicant for a federal license or permit to conduct any activity which may result in any discharge into the navigable waters to obtain from the state a certification that any such discharge will comply with the applicable provisions of 33 U.S.C.S. §§ 1311, 1312, 1313, 1316, and 1317. 33 U.S.C.S. § 1341(a). Section 401(d) further provides that any certification shall set forth any effluent limitations and other limitations, and monitoring requirements necessary to assure that any applicant will comply with any applicable effluent limitations and other limitations, under 33 U.S.C.S. § 1311 or 1312, and with any other appropriate requirement of State law set forth in such certification. 33 U.S.C. § 1341(d). The limitations included in the certification become a condition on any federal license.

Environmental Law > Water Quality > Clean Water Act > Discharge Permits > State Water Quality Certifications

[HN3]See 33 U.S.C.S. § 1341.

Environmental Law > Water Quality > Clean Water Act > Discharge Permits > State Water Quality Certifications

Environmental Law > Water Quality > Clean Water Act > Water Quality Standards

Environmental Law > Water Quality > Clean Water Act > Wetlands

[HN4]State water quality standards adopted pursuant to § 303 (33 U.S.C.S. § 1313) of the Federal Water Pollution Control Act, commonly known as the Clean Water Act (Act), 33 U.S.C.S. § 1251 et seq., are among the "other limitations" with which a state may ensure compliance through the certification process under § 401 (33 U.S.C.S. § 1341) of the Act.

Environmental Law > Water Quality > Clean Water Act > Discharge Permits > State Water Quality Certifications

Environmental Law > Water Quality > Clean Water Act > Water Quality Standards

[HN5]Pursuant to § 401 (33 U.S.C.S. § 1341) of the Federal Water Pollution Control Act, commonly known as the Clean Water Act, 33 U.S.C.S. § 1251 et seq., states may condition certification upon any limitations necessary to ensure compliance with state water quality standards or any other appropriate requirement of state law.

Environmental Law > Water Quality > Clean Water Act > Coverage & Definitions > Navigable Waters

Environmental Law > Water Quality > Clean Water Act > Discharge Permits > State Water Quality Certifications

Environmental Law > Water Quality > Clean Water Act > Water Quality Standards

[HN6]Pursuant to § 401(d) (33 U.S.C.S. § 1341(d)) of the Federal Water Pollution Control Act, commonly known as the Clean Water Act (Act), 33 U.S.C.S. § 1251 et seq., a state may require that a permit applicant comply with both the designated uses and the water quality criteria of the state standards. In granting certification pursuant to § 401(d), the state shall set forth any limitations necessary to assure that the applicant will comply with any limitations under § 303 (33 U.S.C.S. § 1313) of the Act and with any other appropriate requirement of state law. A certification requirement that an applicant operate the project consistently with state water quality standards, consistently with the designated uses of the water body and the water quality criteria, is both a "limitation" to assure compliance with limitations imposed under § 303, and an "appropriate" requirement of state law.

> Water Quality Standards***

[HN9]A state may include minimum stream flow requirements in a certification issued pursuant to § 401 (33 U.S.C.S. § 1341) of the Federal Water Pollution Control Act, commonly known as the Clean Water Act, 33 U.S.C.S. § 1251 et seq., insofar as necessary to enforce a designated use contained in a state water quality standard.

DECISION:

State's minimum stream flow requirement held to be permissible condition of certification under 33 USCS 1341 to build hydroelectric project.

SUMMARY:

The Clean Water Act (33 USCS 1251 et seq.) requires (1) under 303 of the Act (33 USCS 1313), that each state, subject to federal approval, institute comprehensive water quality standards establishing water quality goals for all intrastate waters, (2) under 401 of the Act (33 USCS 1341), that states provide a water quality certification before a federal license or permit is issued for activities that might result in any discharge into intrastate navigable waters, and (3) under 401(d) of the Act (33 USCS 1341(d)), that any certification shall set forth any effluent limitations and other limitations necessary to assure that any applicant will comply with various provisions of the Act and appropriate state law requirements, which limitations will become a condition on any federal license. The state of Washington adopted comprehensive water quality standards intended to regulate all of the state's navigable waters under an administrative scheme that classified certain waters as extraordinary, which waters had characteristic uses including fish migration, rearing, and spawning. A city and a local utility district proposed to build on a river that had been classified as extraordinary a hydroelectric project that would divert water from a 1.2-mile bypass reach of the river, run the water through turbines to generate electricity, and then return the water to the river below the bypass reach. The state ecology department issued a 401 water quality certification imposing on the project conditions that included a minimum stream flow requirement of between 100 and 200 cubic feet per second, depending on the season. The state Pollution Control Hearings Board determined that the flow requirement, by being intended to enhance rather than maintain the fishery in the river, exceeded the ecology department's authority under state law, but the Thurston County Superior Court, holding that the Board had erred, reinstated the department's flow requirement. The Supreme Court of Washington, holding that the antidegradation provisions of the state water quality standards required the imposition of minimum stream flows, and that 401(d) authorized the flow requirement imposed by the ecology department, affirmed the Superior Court judgment (121 Wash 2d 179, 849 P2d 646).

On certiorari, the United States Supreme Court affirmed. In an opinion by O'Connor, J., joined by Rehnquist, Ch. J., and Blackmun, Stevens, Kennedy, Souter, and Ginsburg, JJ., it was held that the minimum flow requirement was a permissible condition of a 401 certification, because (1) pursuant to 401, states may condition certification upon any limitations necessary to insure compliance with state water quality standards or any other appropriate requirement of state law; (2) the minimum flow requirement was such a limitation; and (3) the court was unwilling to read implied limitations into 401 based on a purported conflict with the authority of the Federal Energy Regulatory Commission (FERC), under

the Federal Power Act (FPA) (16 USCS 791a et seq.), to license hydroelectric projects, since (a) 401's certification requirement applied to statutes and regulatory schemes other than those concerning FERC's authority under the FPA, and (b) any conflict with such authority was hypothetical, where FERC had not yet acted on the license application from the city and the local utility district.

Stevens, J., concurring, expressed the view that the Clean Water Act (1) did not purport to place any constraint on a state's power to regulate the quality of its own waters more stringently than federal law might require, and (2) explicitly recognized states' ability to impose stricter standards.

Thomas, J., joined by Scalia, J., dissenting, expressed the view that (1) the majority opinion fundamentally altered the federal-state balance Congress had carefully crafted in the Federal Power Act (16 USCS 791a et seq.), and (2) such a result was neither mandated nor supported by the text of 401.

LAWYERS' EDITION HEADNOTES:

[***LEdHN1]

ENERGY §30

ENVIRONMENTAL LAW §32

WATERS §20

hydroelectric power -- federal license -- state minimum flow requirement -- protection of fisheries --

Headnote:[1A][1B][1C][1D]

A minimum stream flow requirement of between 100 and 200 cubic feet per second imposed, in order to protect a river's fisheries, by a state environmental agency under a water quality certification issued, with respect to a proposed hydroelectric project on the river, pursuant to 401 of the Clean Water Act (33 USCS 1341)--which requires states to provide a water quality certification before a federal license or permit can be issued for activities that might result in any discharge into intrastate navigable waters--is a permissible condition of 401 certification, because the United States Supreme Court has determined that (1) pursuant to 401, states may condition certification upon any limitations necessary to insure compliance with state water quality standards or any other appropriate requirement of state law; (2) the minimum flow requirement is such a limitation; and (3) the court is unwilling to read implied limitations into 401 based on a purported conflict with the authority of the Federal Energy Regulatory Commission (FERC), under the Federal Power Act (FPA) (16 USCS 791a et seq.), to license hydroelectric projects, since (a) 401's certification requirement applies to other statutes and regulatory

schemes in addition to that concerning FERC's authority under the FPA, and (b) any conflict with such authority is hypothetical, where FERC has not yet acted on the license application for the project in question. (Thomas and Scalia, JJ., dissented from this holding.)

[***LEdHN2]

ENVIRONMENTAL LAW §32

Clean Water Act -- federal license -- state water quality certification --

Headnote:[2A][2B]

Pursuant to 401 of the Clean Water Act (33 USCS 1341), which requires states to provide a water quality certification before a federal license or permit can be issued for activities that might result in any discharge into intrastate navigable waters, states may condition certification upon any limitations necessary to insure compliance with state water quality standards or any other appropriate requirement of state law, rather than on only water quality standards specifically tied to a discharge, because (1) the text of 401(d) of the Act (33 USCS 1341(d)), providing that any certification shall set forth any effluent limitations and other limitations necessary to assure that any applicant will comply with various provisions of the Act and appropriate state law requirements, refers to the compliance of the applicant, not the discharge, (2) the conclusion of the Environmental Protection Agency (EPA)--whose regulations implementing 401 expressly interpret 401 as requiring the state to find that there is a reasonable assurance that the activity will be conducted in a manner which will not violate applicable water quality standards--that activities, not merely discharges, must comply with state water quality standards is a reasonable interpretation of 401 and is entitled to deference, (3) consistent with the EPA's view of the Act, state water quality standards adopted pursuant to 303 of the Act (33 USCS 1313), which requires each state, subject to federal approval, to institute comprehensive standards establishing water quality goals for all intrastate waters, are among the "other limitations" with which a state may insure compliance through the 401 certification process, (4) limitations to assure compliance with state water quality standards are permitted by 401(d)'s reference to any other appropriate requirement of state law, and (5) at a minimum, limitations imposed pursuant to 303 are "appropriate" requirements of state law. (Thomas and Scalia, JJ., dissented from this holding.)

[***LEdHN3]

ENVIRONMENTAL LAW §32

Clean Water Act -- federal license -- compliance with state standards --

Headnote:[3A][3B]

Although 401(d) of the Clean Water Act (33 USCS 1341(d))--providing that any certification under 401 of the Act (33 USCS 1341), which requires states to provide a water quality certification before a federal license or permit can be issued for activities that might result in any discharge into intrastate navigable waters, shall set forth any effluent limitations and other limitations necessary to assure that any applicant will comply with various provisions, including certain specified statutory provisions, of the Act, and with appropriate state law requirements--authorizes a state to place restrictions on the activity as a whole, that authority is not unbounded; however, insuring compliance with 303 of the Act (33 USCS 1313), which requires each state, subject to federal approval, to institute comprehensive standards establishing water quality goals for all intrastate waters, is a proper function of the 401 certification, because, although 303 is not one of the statutory provisions listed in 401(d), the statute allows states to impose limitations to insure compliance with 301 of the Act (33 USCS 1311), and 301 in turn incorporates 303 by reference.

[***LEdHN4]

ENVIRONMENTAL LAW §32

Clean Water Act -- federal license -- state minimum stream flow requirement -- protection of fish habitat --

Headnote:[4A][4B]

With respect to the determination of the United States Supreme Court that pursuant to 401 of the Clean Water Act (33 USCS 1341), which requires states to provide a water quality certification before a federal license or permit can be issued for activities that might result in any discharge into intrastate navigable waters, states may condition certification upon any limitations necessary to insure compliance with state water quality standards or any other appropriate requirement of state law, a minimum stream flow requirement of between 100 and 200 cubic feet per second imposed by a state environmental agency for certification for a proposed hydroelectric project on a river with a state-designated use as a fish habitat is such a necessary limitation, because (1) the designated use directly reflects the Act's goal (stated in 33 USCS 1251(a)) of maintaining the chemical, physical, and biological integrity of the nation's waters, (2) pursuant to 401(d), the state may require that a permit applicant comply with both the designated uses and the water quality criteria of the state standards, and a certification requirement that an applicant operate the project consistently with the designated uses of the water

body and the water quality criteria is both a limitation to assure compliance with limitations imposed under 303 of the Act (33 USCS 1313), which requires each state to institute standards establishing water quality goals for intrastate waters, and an appropriate requirement of state law, (3) Environmental Protection Agency (EPA) regulations implicitly recognize that in some circumstances, criteria alone are insufficient to protect a designated use, (4) the Act permits enforcement of broad, narrative criteria which cannot reasonably be expected to anticipate all the water quality issues arising from every activity which can affect the state's hundreds of individual water bodies, (5) the minimum flow requirement is a proper application of the state and federal antidegradation regulations, as the requirement insures that an existing instream water use will be maintained and protected, (6) there is recognition in the Act itself that reduced stream flow can constitute water pollution, where the Act's definition of water pollution (under 33 USCS 1362(19)) encompasses the effects of reduced water quantity and 304 of the Act (33 USCS 1314(f)) expressly recognizes that water pollution may result from changes in the flow of navigable waters, which concern is also embodied in the EPA regulations, (7) 101(g) and 510(2) of the Act (33 USCS 1251(g), 1370(2)) preserve the authority of each state to allocate water quantity as between users, (8) the certification merely determines the nature of the use to which that proprietary right of the parties seeking to build the hydroelectric project may be put under the Act, and (9) this view is reinforced by the legislative history of the 1977 amendment to the Act adding 101(g), which history indicates that the purpose of the amendment is not to prohibit incidental effects of the requirements of the Act on individual water rights, but to insure that state allocation systems are not subverted and that any effects on individual rights are prompted by legitimate and necessary water quality standards. (Thomas and Scalia, JJ., dissented from this holding.)

SYLLABUS

Section 303 of the Clean Water Act requires each State, subject to federal approval, to institute comprehensive standards establishing water quality goals for all intrastate waters, and requires that such standards "consist of the designated uses of the navigable waters involved and the water quality criteria for such waters based upon such uses." Under Environmental Protection Agency (EPA) regulations, the standards must also include an antidegradation policy to ensure that "existing instream water uses and the level of water quality necessary to protect [those] uses [are] maintained and protected." States are required by § 401 of the Act to provide a water quality certification before a federal license or permit can be issued for any activity that may result in a discharge into intrastate navigable waters. As relevant

here, the certification must "set forth any effluent limitations and other limitations . . . necessary to assure that any applicant" will comply with various provisions of the Act and "any other appropriate" state law requirement. § 401(d). Under Washington's comprehensive water quality standards, characteristic uses of waters classified as Class AA include fish migration, rearing, and spawning. Petitioners, a city and a local utility district, want to build a hydroelectric project on the Dosewallips River, a Class AA water, which would reduce the water flow in the relevant part of the river to a minimal residual flow of between 65 and 155 cubic feet per second (cfs). In order to protect the river's fishery, respondent state environmental agency issued a § 401 certification imposing, among other things, a minimum stream flow requirement of between 100 and 200 cfs. A state administrative appeals board ruled that the certification condition exceeded respondent's authority under state law, but the State Superior Court reversed. The State Supreme Court affirmed, holding that the antidegradation provisions of the State's water quality standards require the imposition of minimum stream flows, and that § 401 authorized the stream flow condition and conferred on States power to consider all state action related to water quality in imposing conditions on § 401 certificates.

Held:

Washington's minimum stream flow requirement is a permissible condition of a § 401 certification. Pp. 710-723.

(a) A State may impose conditions on certifications insofar as necessary to enforce a designated use contained in the State's water quality standard. Petitioners' claim that the State may only impose water quality limitations specifically tied to a "discharge" is contradicted by § 401(d)'s reference to an applicant's compliance, which allows a State to impose "other limitations" on a project. This view is consistent with EPA regulations providing that activities -- not merely discharges -- must comply with state water quality standards, a reasonable interpretation of § 401 which is entitled to deference. State standards adopted pursuant to § 303 are among the "other limitations" with which a State may ensure compliance through the § 401 certification process. Although § 303 is not specifically listed in § 401(d), the statute allows States to impose limitations to ensure compliance with § 301 of the Act, and § 301 in turn incorporates § 303 by reference. EPA's view supports this interpretation. Such limitations are also permitted by § 401(d)'s reference to "any other appropriate" state law requirement. Pp. 710-713.

(b) Washington's requirement is a limitation necessary to enforce the designated use of the river as a fish habitat. Petitioners err in asserting that § 303 requires

States to protect such uses solely through implementation of specific numerical "criteria." The section's language makes it plain that water quality standards contain two components and is most naturally read to require that a project be consistent with both: the designated use and the water quality criteria. EPA has not interpreted § 303 to require the States to protect designated uses exclusively through enforcement of numerical criteria. Moreover, the Act permits enforcement of broad, narrative criteria based on, for example, "aesthetics." There is no anomaly in the State's reliance on both use designations and criteria to protect water quality. Rather, it is petitioners' reading that leads to an unreasonable interpretation of the Act, since specified criteria cannot reasonably be expected to anticipate all the water quality issues arising from every activity that can affect a State's hundreds of individual water bodies. Washington's requirement also is a proper application of the state and federal antidegradation regulations, as it ensures that an existing instream water use will be "maintained and protected." Pp. 713-719.

(c) Petitioners' assertion that the Act is only concerned with water quality, not quantity, makes an artificial distinction, since a sufficient lowering of quantity could destroy all of a river's designated uses, and since the Act recognizes that reduced stream flow can constitute water pollution. Moreover, §§ 101(g) and 510(2) of the Act do not limit the scope of water pollution controls that may be imposed on users who have obtained, pursuant to state law, a water allocation. Those provisions preserve each State's authority to allocate water quantity as between users, but the § 401 certification does not purport to determine petitioners' proprietary right to the river's water. In addition, the Court is unwilling to read implied limitations into § 401 based on petitioners' claim that a conflict exists between the condition's imposition and the Federal Energy Regulatory Commission's authority to license hydroelectric projects under the Federal Power Act, since FERC has not yet acted on petitioners' license application and since § 401's certification requirement also applies to other statutes and regulatory schemes. Pp. 719-723.

COUNSEL: Howard E. Shapiro argued the cause for petitioners. With him on the briefs were Michael A. Swiger, Gary D. Bachman, Albert R. Malanca, and Kenneth G. Kieffer.

Christine O. Gregoire, Attorney General of Washington, argued the cause for respondents. With her on the briefs were Jay J. Manning, Senior Assistant Attorney General, and William C. Frymire, Assistant Attorney General.

Deputy Solicitor General Wallace argued the cause for the United States as amicus curiae urging affirmance.

With him on the brief were Solicitor General Days, Acting Assistant Attorney General Schiffer, James A. Feldman, and Anne S. Almy. *

* Briefs of amici curiae urging reversal were filed for the American Forest & Paper Association et al. by John R. Molm, Winifred D. Simpson, and James A. Lamberth; for Niagara Mohawk Power Corp. by Edward Berlin, Kenneth G. Jaffe, Paul J. Kaleta, Brian K. Billinson, and Timothy P. Sheehan; for the Northwest Hydroelectric Association by Richard M. Glick and Lory J. Kraut; for Pacific Northwest Utilities by Sherilyn Peterson and R. Gerard Lutz; and for the Western Urban Water Coalition by Benjamin S. Sharp and Guy R. Martin.

Briefs of amici curiae urging affirmance were filed for the State of Vermont et al. by Jeffrey L. Amestoy, Attorney General of Vermont, and Ronald A. Shems, Assistant Attorney General, Robert Abrams, Attorney General of New York, and Kathleen Liston Morrison, Assistant Attorney General, Grant Woods, Attorney General of Arizona, Winston Bryant, Attorney General of Arkansas, Daniel E. Lungren, Attorney General of California, Richard Blumenthal, Attorney General of Connecticut, Charles M. Oberly III, Attorney General of Delaware, Robert A. Butterworth, Attorney General of Florida, Michael J. Bowers, Attorney General of Georgia, Robert A. Marks, Attorney General of Hawaii, Larry EchoHawk, Attorney General of Idaho, Roland A. Burris, Attorney General of Illinois, Pamela Fanning Carter, Attorney General of Indiana, Bonnie J. Campbell, Attorney General of Iowa, Robert T. Stephan, Attorney General of Kansas, Chris Gorman, Attorney General of Kentucky, Michael E. Carpenter, Attorney General of Maine, J. Joseph Curran, Jr., Attorney General of Maryland, Scott Harshbarger, Attorney General of Massachusetts, Frank J. Kelley, Attorney General of Michigan, Hubert H. Humphrey III, Attorney General of Minnesota, Mike Moore, Attorney General of Mississippi, Jeremiah W. Nixon, Attorney General of Missouri, Joseph P. Mazurek, Attorney General of Montana, Don Stenberg, Attorney General of Nebraska, Frankie Sue Del Papa, Attorney General of Nevada, Jeffrey R. Howard, Attorney General of New Hampshire, Fred DeVesa, Acting Attorney General of New Jersey, Tom Udall, Attorney General of New Mexico, Michael F. Easley, Attorney General of North Carolina, Heidi Heitkamp, Attorney General of North Dakota, Lee Fisher, Attorney General of Ohio, Susan B.

Loving, Attorney General of Oklahoma, Theodore R. Kulongoski, Attorney General of Oregon, Ernest D. Preate, Jr., Attorney General of Pennsylvania, Jefferey B. Pine, Attorney General of Rhode Island, T. Travis Medlock, Attorney General of South Carolina, Charles W. Burson, Attorney General of Tennessee, Dan Morales, Attorney General of Texas, Jan Graham, Attorney General of Utah, Stephen D. Rosenthal, Attorney General of Virginia, Darrell V. McGraw, Jr., Attorney General of West Virginia, James E. Doyle, Attorney General of Wisconsin, Joseph B. Meyer, Attorney General of Wyoming, and John Payton, Corporation Counsel of the District of Columbia; and for American Rivers et al. by Paul M. Smith.

JUDGES: O'CONNOR, J., delivered the opinion of the Court, in which REHNQUIST, C. J., and BLACKMUN, STEVENS, KENNEDY, SOUTER, and GINSBURG, JJ., joined. STEVENS, J., filed a concurring opinion, post, p. 723. THOMAS, J., filed a dissenting opinion, in which SCALIA, J., joined, post, p. 724.

OPINION BY: O'CONNOR

OPINION

[*703] [***723] [**1905] JUSTICE O'CONNOR delivered the opinion of the Court.

[***LEdHR1A] [1A]Petitioners, a city and a local utility district, want to build a hydroelectric project on the Dosewallips River in Washington State. We must decide whether respondent state environmental agency (hereinafter respondent) properly conditioned a permit for the project on the maintenance of specific minimum stream flows to protect salmon and steelhead runs.

[*704] I

This case involves the complex statutory and regulatory scheme that governs our Nation's waters, a scheme that implicates both federal and state administrative responsibilities. The Federal Water Pollution Control Act, commonly known as the Clean Water Act, 86 Stat. 816, as amended, 33 U.S.C. § 1251 et seq., is a comprehensive water quality statute designed to "restore and maintain the chemical, physical, and biological integrity of the Nation's waters." § 1251(a). The Act also seeks to attain "water quality which provides for the protection and propagation of fish, shellfish, and wildlife." § 1251(a)(2).

To achieve these ambitious goals, the Clean Water Act establishes distinct roles for the Federal and State Governments. Under the Act, the Administrator of the

Environmental Protection Agency (EPA) is required, among other things, to establish and enforce technology-based limitations on individual discharges into the country's navigable waters from point sources. See §§ 1311, 1314. Section 303 of the Act also requires each State, subject to federal approval, to institute comprehensive water quality standards establishing water quality goals for all intrastate waters. §§ 1311(b)(1)(C), 1313. These state water quality standards provide "a supplementary basis . . . so that numerous point sources, despite individual compliance with effluent limitations, may be further regulated to prevent water quality from falling below acceptable levels." *EPA v. California ex rel. State Water Resources Control Bd.*, 426 U.S. 200, 205, n. 12, 48 L. Ed. 2d 578, 96 S. Ct. 2022 (1976).

[HN1]A state water quality standard "shall consist of the designated uses of the navigable waters involved and the water quality criteria for such waters based upon such uses." 33 U.S.C. § 1313(c)(2)(A). In setting standards, the State must comply with the following broad requirements:

"Such standards shall be such as to protect the public health or welfare, enhance the quality of water and [*705] serve the purposes of this chapter. Such standards shall be established taking into consideration their use and value for public water supplies, propagation of fish and wildlife, recreational [and other purposes.]" *Ibid.*

See also § 1251(a)(2).

A 1987 amendment to the Clean Water Act makes clear that § 303 also contains an "antidegradation policy" -- that is, a policy requiring [**1906] that state standards be sufficient to maintain existing beneficial uses of navigable waters, preventing their further degradation. Specifically, the Act permits the revision of certain effluent limitations or water quality [***724] standards "only if such revision is subject to and consistent with the antidegradation policy established under this section." § 1313(d)(4)(B). Accordingly, EPA's regulations implementing the Act require that state water quality standards include "a statewide antidegradation policy" to ensure that "existing instream water uses and the level of water quality necessary to protect the existing uses shall be maintained and protected." 40 CFR § 131.12 (1993). At a minimum, state water quality standards must satisfy these conditions. The Act also allows States to impose more stringent water quality controls. See 33 U.S.C. §§ 1311(b)(1)(C), 1370. See also 40 CFR § 131.4(a) (1993) ("As recognized by section 510 of the Clean Water Act[,

33 U.S.C. § 1370], States may develop water quality standards more stringent than required by this regulation").

The State of Washington has adopted comprehensive water quality standards intended to regulate all of the State's navigable waters. See Washington Administrative Code (WAC) 173-201-010 to 173-201-120 (1986). The State created an inventory of all the State's waters, and divided the waters into five classes. 173-201-045. Each individual fresh surface water of the State is placed into one of these classes. 173-201-080. The Dosewallips River is classified AA, extraordinary. 173-201-080(32). The water quality [*706] standard for Class AA waters is set forth at 173-201-045(1). The standard identifies the designated uses of Class AA waters as well as the criteria applicable to such waters. ¹

1 WAC 173-201-045(1) (1986) provides in pertinent part:

"(1) Class AA (extraordinary).

"(a) General characteristic. Water quality of this class shall markedly and uniformly exceed the requirements for all or substantially all uses.

"(b) Characteristic uses. Characteristic uses shall include, but not be limited to, the following:

"(i) Water supply (domestic, industrial, agricultural).

"(ii) Stock watering.

"(iii) Fish and shellfish:

"Salmonid migration, rearing, spawning, and harvesting.

"Other fish migration, rearing, spawning, and harvesting.

...

"(iv) Wildlife habitat.

"(v) Recreation (primary contact recreation, sport fishing, boating, and aesthetic enjoyment).

"(vi) Commerce and navigation.

"(c) Water quality criteria

"(i) Fecal coliform organisms.

"(A) Freshwater -- fecal coliform organisms shall not exceed a geometric mean value of 50 organisms/100 mL, with not more than 10 percent of samples exceeding 100 organisms/100 mL.

"(B) Marine water -- fecal coliform organisms shall not exceed a geometric mean value of 14 organisms/100 mL, with not more than 10 percent of samples exceeding 43 organisms/100 mL.

"(ii) Dissolved oxygen [shall exceed specific amounts].

...

"(iii) Total dissolved gas shall not exceed 110 percent of saturation at any point of sample collection.

"(iv) Temperature shall not exceed [certain levels].

...

"(v) pH shall be within [a specified range].

"(vi) Turbidity shall not exceed [specific levels].

"(vii) Toxic, radioactive, or deleterious material concentrations shall be less than those which may affect public health, the natural aquatic environment, or the desirability of the water for any use.

"(viii) Aesthetic values shall not be impaired by the presence of materials or their effects, excluding those of natural origin, which offend the senses of sight, smell, touch, or taste."

[*707] In addition to these specific standards applicable to Class AA waters, the State has adopted a statewide [***725] antidegradation policy. That policy provides:

"(a) Existing beneficial uses shall be maintained and protected and no further degradation which would interfere with or become injurious to existing beneficial uses will be allowed.

"(b) No degradation will be allowed of waters lying in national parks, national recreation areas, national wildlife refuges, national scenic rivers, and other areas of national ecological importance.

...

"(f) In no case, will any degradation of water quality be allowed if this degradation interferes with or becomes injurious to existing water uses and causes long-term [**1907] and irreparable

harm to the environment."
173-201-035(8).

As required by the Act, EPA reviewed and approved the State's water quality standards. See 33 U.S.C. § 1313(c)(3); 42 Fed. Reg. 56792 (1977). Upon approval by EPA, the state standard became "the water quality standard for the applicable waters of that State." 33 U.S.C. § 1313(c)(3).

[HN2] States are responsible for enforcing water quality standards on intrastate waters. § 1319(a). In addition to these primary enforcement responsibilities, § 401 of the Act requires States to provide a water quality certification before a federal license or permit can be issued for activities that may result in any discharge into intrastate navigable waters. 33 U.S.C. § 1341. Specifically, § 401 requires an applicant for a federal license or permit to conduct any activity "which may result in any discharge into the navigable waters" to obtain from the State a certification "that any such discharge will comply with the applicable provisions of sections [1311, 1312, 1313, 1316, and 1317 of this title]." 33 U.S.C. § 1341(a). Section 401(d) further provides that "any certification [*708] . . . shall set forth any effluent limitations and other limitations, and monitoring requirements necessary to assure that any applicant . . . will comply with any applicable effluent limitations and other limitations, under section [1311 or 1312 of this title] . . . and with any other appropriate requirement of State law set forth in such certification." 33 U.S.C. § 1341(d). The limitations included in the certification become a condition on any federal license. *Ibid.* ²

2 Section 401, as set forth in [HN3] 33 U.S.C. § 1341, provides in relevant part:

"(a) Compliance with applicable requirements; application; procedures; license suspension

"(1) Any applicant for a Federal license or permit to conduct any activity including, but not limited to, the construction or operation of facilities, which may result in any discharge into the navigable waters, shall provide the licensing or permitting agency a certification from the State . . . that any such discharge will comply with the applicable provisions of sections 1311, 1312, 1313, 1316, and 1317 of this title.

...

"(d) Limitations and monitoring requirements of certification

"Any certification provided under this section shall set forth any effluent limitations and other limitations, and monitoring requirements necessary to assure that any applicant for a Federal license or permit will comply with any applicable effluent limitations and other limitations, under section 1311 or 1312 of this title, standard of performance under section 1316 of this title, or prohibition, effluent standard, or pretreatment standard under section 1317 of this title, and with any other appropriate requirement of State law set forth in such certification, and shall become a condition on any Federal license or permit subject to the provisions of this section."

[***726] II

Petitioners propose to build the Elkhorn Hydroelectric Project on the Dosewallips River. If constructed as presently planned, the facility would be located just outside the Olympic National Park on federally owned land within the Olympic National Forest. The project would divert water from a 1.2-mile reach of the river (the bypass reach), run the [*709] water through turbines to generate electricity and then return the water to the river below the bypass reach. Under the Federal Power Act (FPA), 41 Stat. 1063, as amended, 16 U.S.C. § 791a et seq., the Federal Energy Regulatory Commission (FERC) has authority to license new hydroelectric facilities. As a result, petitioners must get a FERC license to build or operate the Elkhorn Project. Because a federal license is required, and because the project may result in discharges into the Dosewallips River, petitioners are also required to obtain state certification of the project pursuant to § 401 of the Clean Water Act, 33 U.S.C. § 1341.

The water flow in the bypass reach, which is currently undiminished by appropriation, ranges seasonally between 149 and 738 cubic feet per second (cfs). The Dosewallips supports two species of salmon, coho and chinook, as well as steelhead trout. As originally proposed, the project was to include a diversion dam which would completely block [**1908] the river and channel approximately 75% of the river's water into a tunnel alongside the streambed. About 25% of the water would remain in the bypass reach, but would be returned to the original riverbed through sluice gates or a fish ladder. Depending on the season, this would leave a residual minimum flow of between 65 and 155 cfs in the river. Respondent undertook a study to determine the minimum stream flows necessary to protect the salmon and steelhead fishery in the bypass reach. On June 11, 1986, respondent issued a § 401 water quality certification imposing a variety of conditions on the project, including a minimum stream flow requirement of between 100 and 200 cfs depending on the season.

A state administrative appeals board determined that the minimum flow requirement was intended to enhance, not merely maintain, the fishery, and that the certification condition therefore exceeded respondent's authority under state law. App. to Pet. for Cert. 55a-57a. On appeal, the [*710] State Superior Court concluded that respondent could require compliance with the minimum flow conditions. *Id.*, at 29a-45a. The Superior Court also found that respondent had imposed the minimum flow requirement to protect and preserve the fishery, not to improve it, and that this requirement was authorized by state law. *Id.*, at 34a.

The Washington Supreme Court held that the anti-degradation provisions of the State's water quality standards require the imposition of minimum stream flows. 121 Wash. 2d 179, 186-187, 849 P.2d 646, 650 (1993). [***727] The court also found that § 401(d), which allows States to impose conditions based upon several enumerated sections of the Clean Water Act and "any other appropriate requirement of State law," 33 U.S.C. § 1341(d), authorized the stream flow condition. Relying on this language and the broad purposes of the Clean Water Act, the court concluded that § 401(d) confers on States power to "consider all state action related to water quality in imposing conditions on section 401 certificates." 121 Wash. 2d at 192, 849 P.2d at 652. We granted certiorari, 510 U.S. 810 (1993), to resolve a conflict among the state courts of last resort. See 121 Wash. 2d 179, 849 P.2d 646 (1993); Georgia Pacific Corp. v. Dept. of Environmental Conservation, 159 Vt. 639, 628 A.2d 944 (1992) (table); Power Authority of New York v. Williams, 60 N.Y.2d 315, 457 N.E.2d 726, 469 N.Y.S.2d 620 (1983). We now affirm.

III

[***LEdHR1B] [1B]The principal dispute in this case concerns whether the minimum stream flow requirement that the State imposed on the Elkhorn Project is a permissible condition of a § 401 certification under the Clean Water Act. To resolve this dispute we must first determine the scope of the State's authority under § 401. We must then determine whether the limitation at issue here, the requirement that petitioners maintain minimum stream flows, falls within the scope of that authority.

[*711] A

There is no dispute that petitioners were required to obtain a certification from the State pursuant to § 401. Petitioners concede that, at a minimum, the project will result in two possible discharges -- the release of dredged and fill material during the construction of the project, and the discharge of water at the end of the tailrace after the water has been used to generate electricity. Brief for Petitioners 27-28. Petitioners contend, however, that the

minimum stream flow requirement imposed by the State was unrelated to these specific discharges, and that as a consequence, the State lacked the authority under § 401 to condition its certification on maintenance of stream flows sufficient to protect the Dosewallips fishery.

[**LEdHR2A] [2A]If § 401 consisted solely of subsection (a), which refers to a state certification that a "discharge" will comply with certain provisions of the Act, petitioners' assessment of the scope of the State's certification authority would have considerable force. Section 401, however, also contains subsection (d), which expands the State's authority to impose conditions on the certification of a [**1909] project. Section 401(d) provides that any certification shall set forth "any effluent limitations and other limitations . . . necessary to assure that *any applicant*" will comply with various provisions of the Act and appropriate state law requirements. 33 U.S.C. § 1341(d) (emphasis added). The language of this subsection contradicts petitioners' claim that the State may only impose water quality limitations specifically tied to a "discharge." The text refers to the compliance of the applicant, not the discharge. Section 401(d) thus allows the State to impose "other limitations" on the project in general to assure compliance with various provisions of the Clean Water Act and with "any other appropriate [***728] requirement of State law." Although the dissent asserts that this interpretation of § 401(d) renders § 401(a)(1) superfluous, *post*, at 726, we see no such anomaly. Section 401(a)(1) identifies the category of activities [*712] subject to certification -- namely, those with discharges. And § 401(d) is most reasonably read as authorizing additional conditions and limitations on the activity as a whole once the threshold condition, the existence of a discharge, is satisfied.

Our view of the statute is consistent with EPA's regulations implementing § 401. The regulations expressly interpret § 401 as requiring the State to find that "there is a reasonable assurance that the *activity* will be conducted in a manner which will not violate applicable water quality standards." 40 CFR § 121.2(a)(3) (1993) (emphasis added). See also EPA, *Wetlands and 401 Certification* 23 (Apr. 1989) ("In 401(d), the Congress has given the States the authority to place any conditions on a water quality certification that are necessary to assure that the applicant will comply with effluent limitations, water quality standards, . . . and with 'any other appropriate requirement of State law'"). EPA's conclusion that *activities* -- not merely discharges -- must comply with state water quality standards is a reasonable interpretation of § 401, and is entitled to deference. See, *e. g.*, *Arkansas v. Oklahoma*, 503 U.S. 91, 110, 117 L. Ed. 2d 239, 112 S. Ct. 1046 (1992); *Chevron U.S. A. Inc. v. Natural Resources Defense Council, Inc.*, 467 U.S. 837, 81 L. Ed. 2d 694, 104 S. Ct. 2778 (1984).

[**LEdHR3A] [3A]Although § 401(d) authorizes the State to place restrictions on the activity as a whole, that authority is not unbounded. The State can only ensure that the project complies with "any applicable effluent limitations and other limitations, under 33 U.S.C. §§ 1311, 1312" or certain other provisions of the Act, "and with any other appropriate requirement of State law." 33 U.S.C. § 1341(d). The State asserts that the minimum stream flow requirement was imposed to ensure compliance with the state water quality standards adopted pursuant to § 303 of the Clean Water Act, 33 U.S.C. § 1313.

[**LEdHR2B] [2B] [**LEdHR3B] [3B]We agree with the State that ensuring compliance with § 303 is a proper function of the § 401 certification. Although § 303 is not one of the statutory provisions listed in § 401(d), [*713] the statute allows States to impose limitations to ensure compliance with § 301 of the Act, 33 U.S.C. § 1311. Section 301 in turn incorporates § 303 by reference. See 33 U.S.C. § 1311(b)(1)(C); see also H. R. Conf. Rep. No. 95-830, p. 96 (1977) ("Section 303 is always included by reference where section 301 is listed"). As a consequence, [HN4]state water quality standards adopted pursuant to § 303 are among the "other limitations" with which a State may ensure compliance through the § 401 certification process. This interpretation is consistent with EPA's view of the statute. See 40 CFR § 121.2(a)(3) (1992); EPA, *Wetlands and 401 Certification*, *supra*. Moreover, limitations to assure compliance with state water quality standards are also permitted by § 401(d)'s reference to "any other appropriate requirement of State law." We do not speculate on what additional state laws, if any, might be incorporated by this language. ³ [***729] [**1910] But at a minimum, limitations imposed pursuant to state water quality standards adopted pursuant to § 303 are "appropriate" requirements of state law. Indeed, petitioners appear to agree that the State's authority under § 401 includes limitations designed to ensure compliance with state water quality standards. Brief for Petitioners 9, 21.

3 The dissent asserts that § 301 is concerned solely with discharges, not broader water quality standards. *Post*, at 730, n. 2. Although § 301 does make certain discharges unlawful, see 33 U.S.C. § 1311(a), it also contains a broad enabling provision which requires States to take certain actions, to wit: "In order to carry out the objective of this chapter [viz. the chemical, physical, and biological integrity of the Nation's water] there shall be achieved . . . not later than July 1, 1977, any more stringent limitation, including those necessary to meet water quality standards, . . . established pursuant to any State law or regula-

tions" 33 U.S.C. § 1311(b)(1)(C). This provision of § 301 expressly refers to state water quality standards, and is not limited to discharges.

B

[**LEdHR1C] [1C] [**LEdHR4A] [4A] Having concluded that, [HN5] pursuant to § 401, States may condition certification upon any limitations necessary to ensure [*714] compliance with state water quality standards or any other "appropriate requirement of State law," we consider whether the minimum flow condition is such a limitation. Under § 303, state water quality standards must "consist of the designated uses of the navigable waters involved and the water quality criteria for such waters based upon such uses." 33 U.S.C. § 1313(c)(2)(A). In imposing the minimum stream flow requirement, the State determined that construction and operation of the project as planned would be inconsistent with one of the designated uses of Class AA water, namely "salmonid [and other fish] migration, rearing, spawning, and harvesting." App. to Pet. for Cert. 83a-84a. The designated use of the river as a fish habitat directly reflects the Clean Water Act's goal of maintaining the "chemical, physical, and biological integrity of the Nation's waters." 33 U.S.C. § 1251(a). Indeed, the Act defines pollution as "the man-made or man induced alteration of the chemical, physical, biological, and radiological integrity of water." § 1362(19). Moreover, the Act expressly requires that, in adopting water quality standards, the State must take into consideration the use of waters for "propagation of fish and wildlife." § 1313(c)(2)(A).

Petitioners assert, however, that § 303 requires the State to protect designated uses solely through implementation of specific "criteria." According to petitioners, the State may not require them to operate their dam in a manner consistent with a designated "use"; instead, say petitioners, under § 303 the State may only require that the project comply with specific numerical "criteria."

[**LEdHR4B] [4B] We disagree with petitioners' interpretation of the language of § 303(c)(2)(A). Under the statute, a water quality standard must "consist of the designated uses of the navigable waters involved and the water quality criteria for such waters based upon such uses." 33 U.S.C. § 1313(c)(2)(A) (emphasis added). The text makes it plain that water quality standards contain two components. We think the language [*715] of § 303 is most naturally read to require [**730] that a project be consistent with *both* components, namely, the designated use and the water quality criteria. Accordingly, under the literal terms of the statute, a project that does not comply with a designated use of the water does not comply with the applicable water quality standards.

Consequently, [HN6] pursuant to § 401(d) the State may require that a permit applicant comply with both the designated uses and the water quality criteria of the state standards. In granting certification pursuant to § 401(d), the State "shall set forth any . . . limitations . . . necessary to assure that [the applicant] will comply with any . . . limitations under [§ 303] . . . and with any other appropriate requirement of State law." A certification requirement that an applicant operate the project consistently with state water quality standards -- *i. e.*, consistently with the designated uses of the water body and the water quality criteria -- is both a "limitation" to assure "compl[iance] with . . . [**1911] limitations" imposed under § 303, and an "appropriate" requirement of state law.

EPA has not interpreted § 303 to require the States to protect designated uses exclusively through enforcement of numerical criteria. In its regulations governing state water quality standards, EPA defines criteria as "*elements* of State water quality standards, expressed as constituent concentrations, levels, or narrative statements, representing a quality of water that supports a particular use." 40 CFR § 131.3(b) (1993) (emphasis added). The regulations further provide that "when criteria are met, water quality will *generally* protect the designated use." *Ibid.* (emphasis added). Thus, the EPA regulations implicitly recognize that in some circumstances, criteria alone are insufficient to protect a designated use.

Petitioners also appear to argue that use requirements are too open ended, and that the Act only contemplates enforcement of the more specific and objective "criteria." But this argument is belied by the open-ended nature of the criteria [*716] themselves. As the Solicitor General points out, even "criteria" are often expressed in broad, narrative terms, such as "there shall be no discharge of toxic pollutants in toxic amounts." Brief for United States as *Amicus Curiae* 18. See *American Paper Institute, Inc. v. EPA*, 302 U.S. App. D.C. 80, 996 F.2d 346, 349 (CADCA 1993). In fact, under the Clean Water Act, only one class of criteria, those governing "toxic pollutants listed pursuant to section 1317(a)(1)," need be rendered in numerical form. See 33 U.S.C. § 1313(c)(2)(B); 40 CFR § 131.11(b)(2) (1993).

Washington's Class AA water quality standards are typical in that they contain several open-ended criteria which, like the use designation of the river as a fishery, must be translated into specific limitations for individual projects. For example, the standards state that "toxic, radioactive, or deleterious material concentrations shall be less than those which may affect public health, the natural aquatic environment, or the desirability of the water for any use." WAC 173-201-045(1)(c)(vii) (1986). Similarly, the state standards specify that "aesthetic values shall not be impaired by the presence of materials or

their effects, excluding those of natural origin, which offend the senses of sight, smell, touch, or taste." 173-201-045(1)(c)(viii). We think petitioners' [***731] attempt to distinguish between uses and criteria loses much of its force in light of the fact that the Act permits enforcement of broad, narrative criteria based on, for example, "aesthetics."

Petitioners further argue that enforcement of water quality standards through use designations renders the water quality criteria component of the standards irrelevant. We see no anomaly, however, in the State's reliance on both use designations and criteria to protect water quality. The specific numerical limitations embodied in the criteria are a convenient enforcement mechanism for identifying minimum water conditions which will generally achieve the requisite water quality. And, in most circumstances, satisfying the criteria will, as EPA recognizes, be sufficient to maintain the [*717] designated use. See 40 CFR § 131.3(b) (1993). Water quality standards, however, apply to an entire class of water, a class which contains numerous individual water bodies. For example, in the State of Washington, the Class AA water quality standard applies to 81 specified fresh surface waters, as well as to all "surface waters lying within the mountainous regions of the state assigned to national parks, national forests, and/or wilderness areas," all "lakes and their feeder streams within the state," and all "unclassified surface waters that are tributaries to Class AA waters." WAC 173-201-070 (1986). While enforcement of criteria will in general protect the uses of these diverse waters, a complementary requirement that activities also comport with designated uses enables the States to ensure that each activity -- even if not foreseen by the criteria -- will be consistent with the specific uses and attributes of a particular body of water.

Under petitioners' interpretation of the statute, however, if a particular criterion, such as turbidity, were missing from the list [**1912] contained in an individual state water quality standard, or even if an existing turbidity criterion were insufficient to protect a particular species of fish in a particular river, the State would nonetheless be forced to allow activities inconsistent with the existing or designated uses. We think petitioners' reading leads to an unreasonable interpretation of the Act. The criteria components of state water quality standards attempt to identify, for all the water bodies in a given class, water quality requirements generally sufficient to protect designated uses. These criteria, however, cannot reasonably be expected to anticipate all the water quality issues arising from every activity that can affect the State's hundreds of individual water bodies. Requiring the States to enforce only the criteria component of their water quality standards would in essence require the States to study to a level of great specificity each indi-

vidual surface water to ensure that the criteria applicable to that water are sufficiently detailed and individualized to fully protect the [*718] water's designated uses. Given that there is no textual support for imposing this requirement, we are loath to attribute to Congress an intent to impose this heavy regulatory burden on the States.

The State also justified its minimum stream flow as necessary to implement the "antidegradation policy" of § 303, 33 U.S.C. § 1313(d)(4)(B). When the Clean Water Act was enacted in 1972, the water quality standards of [***732] all 50 States had antidegradation provisions. These provisions were required by federal law. See U.S. Dept. of Interior, Federal Water Pollution Control Administration, Compendium of Department of Interior Statements on Non-degradation of Interstate Waters 1-2 (Aug. 1968); see also Hines, A Decade of Nondegradation Policy in Congress and the Courts: The Erratic Pursuit of Clean Air and Clean Water, 62 Iowa L. Rev. 643, 658-660 (1977). By providing in 1972 that existing state water quality standards would remain in force until revised, the Clean Water Act ensured that the States would continue their antidegradation programs. See 33 U.S.C. § 1313(a). EPA has consistently required that revised state standards incorporate an antidegradation policy. And, in 1987, Congress explicitly recognized the existence of an "antidegradation policy established under [§ 303]." § 1313(d)(4)(B).

EPA has promulgated regulations implementing § 303's antidegradation policy, a phrase that is not defined elsewhere in the Act. These regulations require States to "develop and adopt a statewide antidegradation policy and identify the methods for implementing such policy." 40 CFR § 131.12 (1993). These "implementation methods shall, at a minimum, be consistent with the . . . existing instream water uses and the level of water quality necessary to protect the existing uses shall be maintained and protected." *Ibid.* EPA has explained that under its antidegradation regulation, "no activity is allowable . . . which could partially or completely eliminate any existing use." EPA, Questions and [*719] Answers on Antidegradation 3 (Aug. 1985). Thus, States must implement their antidegradation policy in a manner "consistent" with existing uses of the stream. The State of Washington's antidegradation policy in turn provides that "existing beneficial uses shall be maintained and protected and no further degradation which would interfere with or become injurious to existing beneficial uses will be allowed." WAC 173-201-035(8)(a) (1986). The State concluded that the reduced stream flows would have just the effect prohibited by this policy. The Solicitor General, representing EPA, asserts, Brief for United States as *Amicus Curiae* 18-21, and we agree, that the State's minimum stream flow condition is a proper application

of the state and federal antidegradation regulations, as it ensures that an "existing instream water use" will be "maintained and protected." 40 CFR § 131.12(a)(1) (1993).

Petitioners also assert more generally that the Clean Water Act is only concerned with water "quality," and does not allow the regulation of water "quantity." This is an artificial distinction. In many cases, water quantity is closely related to water quality; a sufficient lowering of the [*1913] water quantity in a body of water could destroy all of its designated uses, be it for drinking water, recreation, navigation or, as here, as a fishery. In any event, [HN7]there is recognition in the Clean Water Act itself that reduced stream flow, *i. e.*, diminishment of water quantity, can constitute water pollution. First, the Act's definition of pollution as "the man-made or man induced alteration of the chemical, physical, biological, and radiological integrity of water" encompasses the effects of reduced water quantity. 33 U.S.C. § 1362(19). This broad conception of pollution -- one which [***733] expressly evinces Congress' concern with the physical and biological integrity of water -- refutes petitioners' assertion that the Act draws a sharp distinction between the regulation of water "quantity" and water "quality." Moreover, § 304 of the Act expressly recognizes that water "pollution" may result from "changes [*720] in the movement, flow, or circulation of any navigable waters . . . , including changes caused by the construction of dams." 33 U.S.C. § 1314(f). This concern with the flowage effects of dams and other diversions is also embodied in the EPA regulations, which expressly require existing dams to be operated to attain designated uses. 40 CFR § 131.10(g)(4) (1992).

Petitioners assert that two other provisions of the Clean Water Act, §§ 101(g) and 510(2), 33 U.S.C. §§ 1251(g) and 1370(2), exclude the regulation of water quantity from the coverage of the Act. Section 101(g) provides "that the authority of each State to allocate quantities of water within its jurisdiction shall not be superseded, abrogated or otherwise impaired by this chapter." 33 U.S.C. § 1251(g). Similarly, § 510(2) provides that nothing in the Act shall "be construed as impairing or in any manner affecting any right or jurisdiction of the States with respect to the waters . . . of such States." 33 U.S.C. § 1370. In petitioners' view, these provisions exclude "water quantity issues from direct regulation under the federally controlled water quality standards authorized in § 303." Brief for Petitioners 39 (emphasis deleted).

This language gives the States authority to allocate water rights; we therefore find it peculiar that petitioners argue that it prevents the State from regulating stream flow. In any event, we read these provisions more narrowly than petitioners. [HN8]Sections 101(g) and 510(2)

preserve the authority of each State to allocate water quantity as between users; they do not limit the scope of water pollution controls that may be imposed on users who have obtained, pursuant to state law, a water allocation. In California v. FERC, 495 U.S. 490, 498, 109 L. Ed. 2d 474, 110 S. Ct. 2024 (1990), construing an analogous provision of the Federal Power Act, ⁴ we explained that "minimum stream [*721] flow requirements neither reflect nor establish 'proprietary rights'" to water. Cf. First Iowa Hydro-Electric Cooperative v. FPC, 328 U.S. 152, 176, 90 L. Ed. 1143, 66 S. Ct. 906, and n. 20 (1946). Moreover, the certification itself does not purport to determine petitioners' proprietary right to the water of the Dosewallips. In fact, the certification expressly states that a "State Water Right Permit (Chapters 90.03.250 RCW and 508-12 WAC) must be obtained prior to commencing construction of the project." App. to Pet. for Cert. 83a. The certification merely determines the nature of the use to which that proprietary right may be put under the Clean Water Act, if and when it is obtained from the State. Our view is reinforced by the legislative history of the 1977 [***734] amendment to the Clean Water Act adding § 101(g). See 3 Legislative History of the Clean Water Act of 1977 (Committee Print compiled for the Committee on Environment and Public Works by the Library of Congress), Ser. No. 95-14, p. 532 (1978) ("The requirements [of the Act] may incidentally affect individual water rights. . . . [*1914] It is not the purpose of this amendment to prohibit those incidental effects. It is the purpose of this amendment to insure that State allocation systems are not subverted, and that effects on individual rights, if any, are prompted by legitimate and necessary water quality considerations").

4 The relevant text of the Federal Power Act provides: "That nothing herein contained shall be construed as affecting or intending to affect or in any way to interfere with the laws of the respective States relating to the control, appropriation, use, or distribution of water used in irrigation or for municipal or other uses, or any vested right acquired therein." 41 Stat. 1077, 16 U.S.C. § 821.

IV

Petitioners contend that we should limit the State's authority to impose minimum flow requirements because FERC has comprehensive authority to license hydroelectric projects pursuant to the FPA, 16 U.S.C. § 791a et seq. In petitioners' view, the minimum flow requirement imposed here interferes with FERC's authority under the FPA.

[*722] The FPA empowers FERC to issue licenses for projects "necessary or convenient . . . for the development, transmission, and utilization of power

across, along, from, or in any of the streams . . . over which Congress has jurisdiction." § 797(e). The FPA also requires FERC to consider a project's effect on fish and wildlife. §§ 797(e), 803(a)(1). In *California v. FERC, supra*, we held that the California Water Resources Control Board, acting pursuant to state law, could not impose a minimum stream flow which conflicted with minimum stream flows contained in a FERC license. We concluded that the FPA did not "save" to the States this authority. *Id.*, 495 U.S. at 498.

[**LEdHR1D] [1D]No such conflict with any FERC licensing activity is presented here. FERC has not yet acted on petitioners' license application, and it is possible that FERC will eventually deny petitioners' application altogether. Alternatively, it is quite possible, given that FERC is required to give equal consideration to the protection of fish habitat when deciding whether to issue a license, that any FERC license would contain the same conditions as the state § 401 certification. Indeed, at oral argument the Deputy Solicitor General stated that both EPA and FERC were represented in this proceeding, and that the Government has no objection to the stream flow condition contained in the § 401 certification. Tr. of Oral Arg. 43-44.

Finally, the requirement for a state certification applies not only to applications for licenses from FERC, but to all federal licenses and permits for activities which may result in a discharge into the Nation's navigable waters. For example, a permit from the Army Corps of Engineers is required for the installation of any structure in the navigable waters which may interfere with navigation, including piers, docks, and ramps. Rivers and Harbors Appropriation Act of 1899, 30 Stat. 1151, § 10, 33 U.S.C. § 403. Similarly, a permit must be obtained from the Army Corps of Engineers [*723] for the discharge of dredged or fill material, and from the Secretary of the Interior or Agriculture for the construction of reservoirs, canals, and other water storage systems on federal land. See 33 U.S.C. §§ 1344(a), (e); 43 U.S.C. § 1761 (1988 ed. and Supp. IV). [***735] We assume that a § 401 certification would also be required for some licenses obtained pursuant to these statutes. Because § 401's certification requirement applies to other statutes and regulatory schemes, and because any conflict with FERC's authority under the FPA is hypothetical, we are unwilling to read implied limitations into § 401. If FERC issues a license containing a stream flow condition with which petitioners disagree, they may pursue judicial remedies at that time. Cf. *Escondido Mut. Water Co. v. La Jolla Band of Mission Indians*, 466 U.S. 765, 778, n. 20, 80 L. Ed. 2d 753, 104 S. Ct. 2105 (1984).

In summary, we hold that [HN9]the State may include minimum stream flow requirements in a certifica-

tion issued pursuant to § 401 of the Clean Water Act insofar as necessary to enforce a designated use contained in a state water quality standard. The judgment of the Supreme Court of Washington, accordingly, is affirmed.

So ordered.

CONCUR BY: STEVENS

CONCUR

JUSTICE STEVENS, concurring.

While I agree fully with the thorough analysis in the Court's opinion, I add this comment [**1915] for emphasis. For judges who find it unnecessary to go behind the statutory text to discern the intent of Congress, this is (or should be) an easy case. Not a single sentence, phrase, or word in the Clean Water Act purports to place any constraint on a State's power to regulate the quality of its own waters more stringently than federal law might require. In fact, the Act explicitly recognizes States' ability to impose stricter standards. See, e. g., § 301(b)(1)(C), 33 U.S.C. § 1311(b)(1)(C).

DISSENT BY: THOMAS

DISSENT

[*724] JUSTICE THOMAS, with whom JUSTICE SCALIA joins, dissenting.

The Court today holds that a State, pursuant to § 401 of the Clean Water Act, may condition the certification necessary to obtain a federal license for a proposed hydroelectric project upon the maintenance of a minimum flow rate in the river to be utilized by the project. In my view, the Court makes three fundamental errors. First, it adopts an interpretation that fails adequately to harmonize the subsections of § 401. Second, it places no meaningful limitation on a State's authority under § 401 to impose conditions on certification. Third, it gives little or no consideration to the fact that its interpretation of § 401 will significantly disrupt the carefully crafted federal-state balance embodied in the Federal Power Act. Accordingly, I dissent.

I

A

Section 401(a)(1) of the Federal Water Pollution Control Act, otherwise known as the Clean Water Act (CWA or Act), 33 U.S.C. § 1251 *et seq.*, provides that "any applicant for a Federal license or permit to conduct any activity . . ., which may result in any discharge into the navigable waters, shall provide the licensing or permitting agency a certification from the State in which the

discharge originates . . . that any such [***736] discharge will comply with . . . applicable provisions of [the CWA]." 33 U.S.C. § 1341(a)(1). The terms of § 401(a)(1) make clear that the purpose of the certification process is to ensure that discharges from a project will meet the requirements of the CWA. Indeed, a State's authority under § 401(a)(1) is limited to certifying that "any discharge" that "may result" from "any activity," such as petitioners' proposed hydroelectric project, will "comply" with the enumerated provisions of the CWA; if the discharge will fail to comply, the State may "deny" the certification. *Ibid.* In addition, under § 401(d), a State may place conditions on a [*725] § 401 certification, including "effluent limitations and other limitations, and monitoring requirements," that may be necessary to ensure compliance with various provisions of the CWA and with "any other appropriate requirement of State law." § 1341(d).

The minimum stream flow condition imposed by respondents in this case has no relation to any possible "discharge" that might "result" from petitioners' proposed project. The term "discharge" is not defined in the CWA, but its plain and ordinary meaning suggests "a flowing or issuing out," or "something that is emitted." Webster's Ninth New Collegiate Dictionary 360 (1991). Cf. 33 U.S.C. § 1362(16) ("The term 'discharge' when used without qualification includes a discharge of a pollutant, and a discharge of pollutants"). A minimum stream flow requirement, by contrast, is a limitation on the amount of water the project can take in or divert from the river. See *ante*, at 709. That is, a minimum stream flow requirement is a limitation on intake -- the opposite of discharge. Imposition of such a requirement would thus appear to be beyond a State's authority as it is defined by § 401(a)(1).

The Court remarks that this reading of § 401(a)(1) would have "considerable force," *ante*, at 711, were it not for what the Court understands to be the expansive terms of § 401(d). That subsection, as set forth in 33 U.S.C. § 1341(d), provides:

"Any certification provided under this section shall set forth any effluent limitations and other limitations, and monitoring requirements necessary to assure that any applicant for a Federal license or permit [**1916] will comply with any applicable effluent limitations and other limitations, under section 1311 or 1312 of this title, standard of performance under section 1316 of this title, or prohibition, effluent standard, or pretreatment standard under section 1317 of this title, and with any other appropriate requirement of State

law set forth in such certification, and shall become a condition on any Federal [*726] license or permit subject to the provisions of this section." (Emphasis added.)

According to the Court, the fact that § 401(d) refers to an "applicant," rather than a "discharge," complying with various provisions of the Act "contradicts petitioners' claim that the State may only impose water quality limitations specifically tied to a 'discharge.'" *Ante*, at 711. In the Court's view, § 401(d)'s reference to an applicant's compliance "expands" a State's authority beyond the limits set out in § 401(a)(1), *ibid.*, [***737] thereby permitting the State in its certification process to scrutinize the applicant's proposed "activity as a whole," not just the discharges that may result from the activity, *ante*, at 712. The Court concludes that this broader authority allows a State to impose conditions on a § 401 certification that are unrelated to discharges. *Ante*, at 711-712.

While the Court's interpretation seems plausible at first glance, it ultimately must fail. If, as the Court asserts, § 401(d) permits States to impose conditions unrelated to discharges in § 401 certifications, Congress' careful focus on discharges in § 401(a)(1) -- the provision that describes the scope and function of the certification process -- was wasted effort. The power to set conditions that are unrelated to discharges is, of course, nothing but a conditional power to deny certification for reasons unrelated to discharges. Permitting States to impose conditions unrelated to discharges, then, effectively eliminates the constraints of § 401(a)(1).

Subsections 401(a)(1) and (d) can easily be reconciled to avoid this problem. To ascertain the nature of the conditions permissible under § 401(d), § 401 must be read as a whole. See *United Sav. Assn. of Tex. v. Timbers of Inwood Forest Associates, Ltd.*, 484 U.S. 365, 371, 98 L. Ed. 2d 740, 108 S. Ct. 626 (1988) (statutory interpretation is a "holistic endeavor"). As noted above, § 401(a)(1) limits a State's authority in the certification process to addressing concerns related to discharges and to ensuring that any discharge resulting from a project will comply with specified provisions of the Act. It is reasonable [*727] to infer that the conditions a State is permitted to impose on certification must relate to the very purpose the certification process is designed to serve. Thus, while § 401(d) permits a State to place conditions on a certification to ensure compliance of the "applicant," those conditions must still be related to discharges. In my view, this interpretation best harmonizes the subsections of § 401. Indeed, any broader interpretation of § 401(d) would permit that subsection to swallow § 401(a)(1).

The text of § 401(d) similarly suggests that the conditions it authorizes must be related to discharges. The Court attaches critical weight to the fact that § 401(d) speaks of the compliance of an "applicant," but that reference, in and of itself, says little about the nature of the conditions that may be imposed under § 401(d). Rather, because § 401(d) conditions can be imposed only to ensure compliance with specified provisions of law -- that is, with "applicable effluent limitations and other limitations, under section 1311 or 1312 of this title, standard[s] of performance under section 1316 of this title, . . . prohibition[s], effluent standard[s], or pretreatment standard[s] under section 1317 of this title, [or] . . . any other appropriate requirement[s] of State law" -- one should logically turn to those provisions for guidance in determining the nature, scope, and purpose of § 401(d) conditions. Each of the four identified CWA provisions describes discharge-related limitations. See § 1311 (making it unlawful to discharge any pollutant except in compliance with enumerated provisions of the Act); § 1312 (establishing effluent limitations on point source discharges); [***738] § 1316 (setting national standards of performance [**1917] for the control of discharges); and § 1317 (setting pretreatment effluent standards and prohibiting the discharge of certain effluents except in compliance with standards).

The final term on the list -- "appropriate requirement[s] of State law" -- appears to be more general in scope. Because [*728] this reference follows a list of more limited provisions that specifically address discharges, however, the principle *ejusdem generis* would suggest that the general reference to "appropriate" requirements of state law is most reasonably construed to extend only to provisions that, like the other provisions in the list, impose discharge-related restrictions. Cf. Cleveland v. United States, 329 U.S. 14, 18, 91 L. Ed. 12, 67 S. Ct. 13 (1946) ("Under the *ejusdem generis* rule of construction the general words are confined to the class and may not be used to enlarge it"); Arcadia v. Ohio Power Co., 498 U.S. 73, 84, 112 L. Ed. 2d 374, 111 S. Ct. 415 (1990). In sum, the text and structure of § 401 indicate that a State may impose under § 401(d) only those conditions that are related to discharges.

B

The Court adopts its expansive reading of § 401(d) based at least in part upon deference to the "conclusion" of the Environmental Protection Agency (EPA) that § 401(d) is not limited to requirements relating to discharges. *Ante*, at 712. The agency regulation to which the Court defers is 40 CFR § 121.2(a)(3) (1993), which provides that the certification shall contain "[a] statement that there is a reasonable assurance that the activity will be conducted in a manner which will not violate applicable water quality standards." *Ante*, at 712. According to

the Court, "EPA's conclusion that *activities* -- not merely discharges -- must comply with state water quality standards . . . is entitled to deference" under *Chevron U.S. A. Inc. v. Natural Resources Defense Council, Inc.*, 467 U.S. 837, 81 L. Ed. 2d 694, 104 S. Ct. 2778 (1984). *Ante*, at 712.

As a preliminary matter, the Court appears to resort to deference under *Chevron* without establishing through an initial examination of the statute that the text of the section is ambiguous. See *Chevron*, *supra*, 467 U.S. at 842-843. More importantly, the Court invokes *Chevron* deference to support its interpretation even though the Government does not seek [*729] deference for the EPA's regulation in this case. ¹ That the Government itself has not contended that an agency interpretation exists reconciling the scope of the conditioning authority under § 401(d) with the terms of § 401(a)(1) should suggest to the Court that there is no "agency construction" directly addressing the question. *Chevron*, *supra*, at 842.

1 The Government, appearing as *amicus curiae* "supporting affirmance," instead approaches the question presented by assuming, *arguendo*, that petitioners' construction of § 401 is correct: "Even if a condition imposed under Section 401(d) were valid only if it assured that a 'discharge' will comply with the State's water quality standards, the [minimum flow condition set by respondents] satisfies that test." Brief for United States as *Amicus Curiae* 11.

In fact, the regulation to which the [***739] Court defers is hardly a definitive construction of the scope of § 401(d). On the contrary, the EPA's position on the question whether conditions under § 401(d) must be related to discharges is far from clear. Indeed, the only EPA regulation that specifically addresses the "conditions" that may appear in § 401 certifications speaks exclusively in terms of limiting discharges. According to the EPA, a § 401 certification shall contain "[a] statement of *any conditions* which the certifying agency deems necessary or desirable *with respect to the discharge of the activity*." 40 CFR § 121.2(a)(4) (1993) (emphases added). In my view, § 121.2(a)(4) should, at the very least, give the Court pause before it resorts to *Chevron* deference in this case.

II

The Washington Supreme Court held that the State's water quality standards, promulgated [**1918] pursuant to § 303 of the Act, 33 U.S.C. § 1313, were "appropriate" requirements of state law under § 401(d), and sustained the stream flow condition imposed by respondents as necessary to ensure compliance with a "use" of

the river as specified in those standards. As an alternative to their argument that § 401(d) conditions must be discharge related, petitioners assert that [*730] the state court erred when it sustained the stream flow condition under the "use" component of the State's water quality standards without reference to the corresponding "water quality criteria" contained in those standards. As explained above, petitioners' argument with regard to the scope of a State's authority to impose conditions under § 401(d) is correct. I also find petitioners' alternative argument persuasive. Not only does the Court err in rejecting that § 303 argument, in the process of doing so it essentially removes all limitations on a State's conditioning authority under § 401.

The Court states that, "at a minimum, limitations imposed pursuant to state water quality standards adopted pursuant to § 303 are 'appropriate' requirements of state law" under § 401(d). *Ante*, at 713. ² A water quality standard promulgated pursuant to § 303 must "consist of the designated uses of the navigable waters involved and the water quality criteria for such waters based upon such uses." 33 U.S.C. § 1313(c)(2)(A). The Court asserts that this language "is most naturally read to require that a project be consistent with *both* components, namely, the designated use *and* the water quality criteria." *Ante*, at 715. In the Court's view, then, the "use" of a body of water is independently enforceable through § 401(d) without reference to the corresponding criteria. *Ibid*.

2 In the Court's view, § 303 water quality standards come into play under § 401(d) either as "appropriate" requirements of state law or through § 301 of the Act, which, according to the Court, "incorporates § 303 by reference." *Ante*, at 713 (citations omitted). The Court notes that through § 303, "the statute allows States to impose limitations to ensure compliance with § 301 of the Act." *Ibid*. Yet § 301 makes unlawful only "the [unauthorized] *discharge* of any pollutant by any person." 33 U.S.C. § 1311(a) (emphasis added); cf. *supra*, 511 U.S. at 727. Thus, the Court's reliance on § 301 as a source of authority to impose conditions unrelated to discharges is misplaced.

[***740] The Court's reading strikes me as contrary to common sense. It is difficult to see how compliance with a "use" of a body of water could be enforced without reference to the [*731] corresponding criteria. In this case, for example, the applicable "use" is contained in the following regulation: "Characteristic uses shall include, but not be limited to, . . . salmonid migration, rearing, spawning, and harvesting." Wash. Admin. Code (WAC) 173-201-045(1)(b)(iii) (1986). The corres-

ponding criteria, by contrast, include measurable factors such as quantities of fecal coliform organisms and dissolved gases in the water. 173-201-045(1)(c)(i) and (ii). ³ Although the Act does not further address (at least not expressly) the link between "uses" and "criteria," the regulations promulgated under § 303 make clear that a "use" is an aspirational goal to be attained through compliance with corresponding "criteria." Those regulations suggest that "uses" are to be "achieved and protected," and that "water quality criteria" are to be adopted to "protect the designated use[s]." 40 CFR §§ 131.10(a), 131.11(a)(1) (1993).

3 Respondents concede that petitioners' project "will likely not violate any of Washington's water quality criteria." Brief for Respondents 24.

The problematic consequences of decoupling "uses" and "criteria" become clear once the Court's interpretation of § 303 is read in the context of § 401. In the Court's view, a State may condition the § 401 certification "upon *any limitations* necessary to ensure compliance" with the "uses of the water body." *Ante*, at 713-714, 715 (emphasis added). Under the Court's interpretation, then, state environmental agencies may pursue, through § 401, their water goals in any way they choose; the conditions imposed on certifications need not relate to discharges, nor to water quality criteria, nor to any objective or quantifiable standard, so long as they tend to [**1919] make the water more suitable for the uses the State has chosen. In short, once a State is allowed to impose conditions on § 401 certifications to protect "uses" in the abstract, § 401(d) is limitless.

To illustrate, while respondents in this case focused only on the "use" of the Dosewallips River as a fish habitat, this particular river has a number of other "characteristic uses," [*732] including "recreation (primary contact recreation, sport fishing, boating, and aesthetic enjoyment)." WAC 173-201-045(1)(b)(v) (1986). Under the Court's interpretation, respondents could have imposed any number of conditions related to recreation, including conditions that have little relation to water quality. In *Town of Summersville*, 60 F.E.R.C. P61,291, p. 61,990 (1992), for instance, the state agency required the applicant to "construct . . . access roads and paths, low water stepping stone bridges, . . . a boat launching facility . . . , and a residence and storage building." These conditions presumably would be sustained under the approach the Court adopts today. ⁴ In the end, it is difficult to conceive of a condition that would fall outside a [***741] State's § 401(d) authority under the Court's approach.

4 Indeed, as the § 401 certification stated in this case, the flow levels imposed by respondents

are "in excess of those required to maintain water quality in the bypass region," App. to Pet. for Cert. 83a, and therefore conditions not related to water quality must, in the Court's view, be permitted.

III

The Court's interpretation of § 401 significantly disrupts the careful balance between state and federal interests that Congress struck in the Federal Power Act (FPA), 16 U.S.C. § 791 et seq. Section 4(e) of the FPA authorizes the Federal Energy Regulatory Commission (FERC) to issue licenses for projects "necessary or convenient . . . for the development, transmission, and utilization of power across, along, from, or in any of the streams . . . over which Congress has jurisdiction." 16 U.S.C. § 797(e). In the licensing process, FERC must balance a number of considerations: "In addition to the power and development purposes for which licenses are issued, [FERC] shall give equal consideration to the purposes of energy conservation, the protection, mitigation of damage to, and enhancement of, fish and wildlife (including related spawning grounds and habitat), the protection of recreational [*733] opportunities, and the preservation of other aspects of environmental quality." *Ibid.* Section 10(a) empowers FERC to impose on a license such conditions, including minimum stream flow requirements, as it deems best suited for power development and other public uses of the waters. See 16 U.S.C. § 803(a); California v. FERC, 495 U.S. 490, 494-495, 506, 109 L. Ed. 2d 474, 110 S. Ct. 2024 (1990).

In *California v. FERC*, the Court emphasized FERC's exclusive authority to set the stream flow levels to be maintained by federally licensed hydroelectric projects. California, in order "to protect [a] stream's fish," had imposed flow rates on a federally licensed project that were significantly higher than the flow rates established by FERC. *Id.*, at 493. In concluding that California lacked authority to impose such flow rates, we stated:

"As Congress directed in FPA § 10(a), FERC set the conditions of the [project] license, including the minimum stream flow, after considering which requirements would best protect wildlife and ensure that the project would be economically feasible, and thus further power development. Allowing California to impose significantly higher minimum stream flow requirements would disturb and conflict with the balance embodied in that considered federal agency determination. FERC has indicated that the California requirements interfere with its compre-

hensive planning authority, and we agree that allowing California to impose the challenged requirements would be contrary to congressional intent regarding the Commission's licensing authority and would constitute a veto of the project that was approved and licensed by [**1920] FERC." *Id.*, 495 U.S. at 506-507 (citations and internal quotation marks omitted).

California v. FERC reaffirmed our decision in *First Iowa Hydro-Electric Cooperative v. FPC*, 328 U.S. 152, 164, 90 L. Ed. 1143, 66 S. Ct. 906 (1946), in which we warned against "vesting in [state authorities] [*734] a veto power" over federal hydroelectric projects. Such authority, we concluded, could "destroy the effectiveness" of the FPA and "subordinate to the control of the State the 'comprehensive' [***742] planning" with which the administering federal agency (at that time the Federal Power Commission) was charged. *Ibid.*

Today, the Court gives the States precisely the veto power over hydroelectric projects that we determined in *California v. FERC* and *First Iowa* they did not possess. As the language of § 401(d) expressly states, any condition placed in a § 401 certification, including, in the Court's view, a stream flow requirement, "shall become a condition on any Federal license or permit." 33 U.S.C. § 1341(d) (emphasis added). Any condition imposed by a State under § 401(d) thus becomes a "term . . . of the license as a matter of law," *Department of Interior v. FERC*, 293 U.S. App. D.C. 182, 952 F.2d 538, 548 (CADC 1992) (citation and internal quotation marks omitted), regardless of whether FERC favors the limitation. Because of § 401(d)'s mandatory language, federal courts have uniformly held that FERC has no power to alter or review § 401 conditions, and that the proper forum for review of those conditions is state court.⁵ Section 401(d) conditions imposed by States are [*735] therefore binding on FERC. Under the Court's interpretation, then, it appears that the mistake of the State in *California v. FERC* was not that it had trespassed into territory exclusively reserved to FERC; rather, it simply had not hit upon the proper device -- that is, the § 401 certification -- through which to achieve its objectives.

5 See, e. g., *Keating v. FERC*, 288 U.S. App. D.C. 344, 927 F.2d 616, 622 (CADC 1991) (federal review inappropriate because a decision to grant or deny § 401 certification "presumably turns on questions of substantive state environmental law -- an area that Congress expressly intended to reserve to the states and concerning which federal agencies have little competence");

Department of Interior v. FERC, 952 F.2d at 548; United States v. Marathon Development Corp., 867 F.2d 96, 102 (CA1 1989); Proffitt v. Rohm & Haas, 850 F.2d 1007, 1009 (CA3 1988). FERC has taken a similar position. See Town of Summersville, 60 F.E.R.C. P61,291, p. 61,990 (1992) ("Since pursuant to Section 401(d) . . . all of the conditions in the water quality certification must become conditions in the license, review of the appropriateness of the conditions is within the purview of state courts and not the Commission. The only alternatives available to the Commission are either to issue a license with the conditions included or to deny" the application altogether); accord, Central Maine Power Co., 52 F.E.R.C. P61,033, pp. 61,172-61,173 (1990).

Although the Court notes in passing that "the limitations included in the certification become a condition on any federal license," *ante*, at 708, it does not acknowledge or discuss the shift of power from FERC to the States that is accomplished by its decision. Indeed, the Court merely notes that "any conflict with FERC's authority under the FPA" in this case is "hypothetical" at this stage, *ante*, at 723, because "FERC has not yet acted on petitioners' license application," *ante*, at 722. We are assured that "it is quite possible . . . that any FERC license would contain the same conditions as the state § 401 certification." *Ibid*.

The Court's observations simply miss the point. Even if FERC might have no objection to the stream flow condition established by respondents *in this case*, such a happy coincidence will likely prove to be the exception, rather than the rule. In issuing licenses, FERC must balance the *Nation's* power needs together with the need for energy conservation, [***743] irrigation, flood control, fish and wildlife protection, and recreation. 16 U.S.C. § 797(e). State environmental agencies, by contrast, need only consider parochial environmental interests. Cf., e. g., Wash. Rev. Code § 90.54.010(2) (1992) (goal of State's water policy is to "insure that waters of the state are protected and fully utilized for the greatest benefit to the people of the state of Washington"). As a result, it is likely that conflicts will arise between a [**1921] FERC-established stream flow level and a state-imposed level.

Moreover, the Court ignores the fact that its decision nullifies the congressionally mandated process for resolving such state-federal disputes when they develop. Section 10(j)(1) of the FPA, 16 U.S.C. § 803(j)(1), which was added as part [**736] of the Electric Consumers Protection Act of 1986 (ECPA), 100 Stat. 1244, provides that every FERC license must include conditions to "protect, mitigate damage to, and enhance" fish and wildlife, including "related spawning grounds and habi-

tat," and that such conditions "shall be based on recommendations" received from various agencies, including state fish and wildlife agencies. If FERC believes that a recommendation from a state agency is inconsistent with the FPA -- that is, inconsistent with what FERC views as the proper balance between the Nation's power needs and environmental concerns -- it must "attempt to resolve any such inconsistency, giving due weight to the recommendations, expertise, and statutory responsibilities" of the state agency. § 803(j)(2). If, after such an attempt, FERC "does not adopt in whole or in part a recommendation of any [state] agency," it must publish its reasons for rejecting that recommendation. *Ibid*. After today's decision, these procedures are a dead letter with regard to stream flow levels, because a State's "recommendation" concerning stream flow "shall" be included in the license when it is imposed as a condition under § 401(d).

More fundamentally, the 1986 amendments to the FPA simply make no sense in the stream flow context if, in fact, the States already possessed the authority to establish minimum stream flow levels under § 401(d) of the CWA, which was enacted years before those amendments. Through the ECPA, Congress strengthened the role of the States in establishing FERC conditions, but it did not make that authority paramount. Indeed, although Congress could have vested in the States the final authority to set stream flow conditions, it instead left that authority with FERC. See California v. FERC, 495 U.S. at 499. As the Ninth Circuit observed in the course of rejecting California's effort to give *California v. FERC* a narrow reading, "there would be no point in Congress requiring [FERC] to consider the state agency recommendations on environmental matters and [**737] make its own decisions about which to accept, if the state agencies had the power to impose the requirements themselves." Sayles Hydro Associates v. Maughan, 985 F.2d 451, 456 (1993).

Given the connection between § 401 and federal hydroelectric licensing, it is remarkable that the Court does not at least attempt to fit its interpretation of § 401 into the larger statutory framework governing the licensing process. At the very least, the significant impact the [***744] Court's ruling is likely to have on that process should compel the Court to undertake a closer examination of § 401 to ensure that the result it reaches was mandated by Congress.

IV

Because the Court today fundamentally alters the federal-state balance Congress carefully crafted in the FPA, and because such a result is neither mandated nor supported by the text of § 401, I respectfully dissent.

CITY OF ARCADIA et al., Plaintiffs and Appellants, v. STATE WATER RESOURCES CONTROL BOARD et al., Defendants and Appellants.

D043877

**COURT OF APPEAL OF CALIFORNIA, FOURTH APPELLATE DISTRICT,
DIVISION ONE**

135 Cal. App. 4th 1392; 38 Cal. Rptr. 3d 373; 2006 Cal. App. LEXIS 92; 2006 Cal. Daily Op. Service 797; 2006 Daily Journal DAR 1145; 36 ELR 20025

January 26, 2006, Filed

SUBSEQUENT HISTORY: Rehearing denied by City of Arcadia v. State Water Resources Control Board, 2006 Cal. App. LEXIS 221 (Cal. App. 4th Dist., Feb. 17, 2006)

Review denied by City of Arcadia v. State Water Res. Control Bd., 2006 Cal. LEXIS 4781 (Cal., Apr. 19, 2006)

PRIOR HISTORY: [***1] Superior Court of San Diego County, No. GIC803631, Wayne L. Peterson and Linda B. Quinn, Judges.

City of Arcadia v. United States EPA, 265 F. Supp. 2d 1142, 2003 U.S. Dist. LEXIS 9044 (N.D. Cal., 2003)

CASE SUMMARY:

PROCEDURAL POSTURE: Plaintiff cities alleged that defendants, regional and state water quality boards, violated the Clean Water Act, 33 U.S.C. § 1251 et seq., or the Porter-Cologne Act, Wat. Code, § 13000 et seq., by enacting a basin plan with the levels of permissible pollution, or total maximum daily loads (TMDLs), set at zero. The Superior Court of San Diego County (California) partially granted the cities' petition for writ of mandate. Both parties appealed.

OVERVIEW: The cities agreed that litter discharged from storm drains into a river had to be remedied but opposed the target of zero as unattainable and inordinately expensive. The court found that the regional board's environmental checklist was deficient and that

there was sufficient evidence of a fair argument that the project might have a significant effect on the environment, thus necessitating an environmental impact report or its functional equivalent under the California Environmental Quality Act (CEQA). The trial court erred by granting declaratory relief on the cities' claim that the Trash TMDL did not apply to "nonwaters" and by substituting its own judgment for that of the boards on the issue of whether the adoption of the Trash TMDL should have been preceded by a scientific study of the assimilative capacity of the channel. The Trash TMDL sufficiently notified affected parties of its inclusion in the state's 1998 303(d) list as an impaired water body. The court rejected the cities' claim that the trial court should have invalidated the Trash TMDL on the additional ground that the boards failed to provide for deemed compliance with the target of zero trash through certain methods.

OUTCOME: The judgment was affirmed as to the Trash TMDL's violation of CEQA and as to the cities' appeal. The judgment was reversed insofar as it was based on the Trash TMDL's lack of an assimilative capacity study, inclusion on the impaired water body list, and a cost/benefit analysis or the consideration of economic factors, and also insofar as it granted declaratory relief regarding the purported inclusion of non-navigable waters in the Trash TMDL.

CORE TERMS: trash, environmental, pollution, water board', regional boards, epa, water quality, load, non-point, river, Clean Water Act, pollutant, basin, zero,

maximum, monitoring, target, impaired, checklist, watershed, storm, state board, point sources, significant effect, beneficial uses, negative declarations, mitigation measures, regulatory programs, assimilative, numeric

LexisNexis(R) Headnotes

Environmental Law > Water Quality > Clean Water Act > Water Quality Standards

[HN1]The Clean Water Act places primary reliance for developing water quality standards on the states. It requires each state to develop such standards and review them at least once every three years for required modifications, pursuant to 33 U.S.C. § 1313(a), (c)(1). The standards must include designated uses such as recreation, navigation or the propagation of fish, shellfish and wildlife; water quality criteria sufficient to protect the designated uses, and an anti-degradation policy, pursuant to 40 C.F.R. §§ 131.6, 131.10-131.12 (2003). The water quality criteria can be expressed in narrative form or in a numeric form, e.g., specific pollutant concentrations. Narrative criteria are broad statements of desirable water quality goals in a water quality plan. For example, "no toxic pollutants in toxic amounts" would be a narrative description. The Clean Water Act focuses on two possible sources of pollution: point sources and nonpoint sources. "Point source" means any discernable, confined and discrete conveyance such as a pipe, ditch, channel, tunnel, or conduit, as provided in 33 U.S.C. § 1362(14). The Clean Water Act does not define nonpoint source pollution, but it has been described as nothing more than a water pollution problem not involving a discharge from a point source.

Environmental Law > Water Quality > Clean Water Act > Coverage & Definitions > Point Sources

Environmental Law > Water Quality > Clean Water Act > Nonpoint Source Pollution

[HN2]Congress has dealt with the problem of point source pollution using the National Pollution Discharge Elimination System (NPDES) permit process. Under this approach, compliance rests on technology-based controls that limit the discharge of pollution from any point source into certain waters unless that discharge complies with the Clean Water Act's specific requirements, pursuant to 33 U.S.C. § 1311(b)(1)(A). Nonpoint sources, because of their very nature, are not regulated under the NPDES program. Instead, Congress addressed nonpoint sources of pollution in a separate portion of the Clean Water Act which encourages states to develop areawide waste treatment management plans.

Environmental Law > Water Quality > Clean Water Act > Coverage & Definitions > Discharges

Environmental Law > Water Quality > Clean Water Act > Water Quality Standards

[HN3]When the National Pollution Discharge Elimination System (NPDES) system fails to adequately clean up certain rivers, streams or smaller water segments, the Clean Water Act requires use of a water-quality based approach. States are required to identify such waters and rank them in order of priority, and based on that ranking, calculate levels of permissible pollution called total maximum daily loads (TMDLs) under 33 U.S.C. § 1313(d)(1)(A) and 40 C.F.R. § 130.7(b) (2003). This list of substandard waters is known as the 303(d) list (§ 303 of the Clean Water Act having been codified as 33 U.S.C. § 1313). A TMDL defines the specified maximum amount of a pollutant which can be discharged or "loaded" into the waters at issue from all combined sources. A TMDL must be established at a level necessary to implement the applicable water quality standards. A TMDL assigns a waste load allocation to each point source, which is that portion of the TMDL's total pollutant load, which is allocated to a point source for which an NPDES permit is required. Once a TMDL is developed, effluent limitations in NPDES permits must be consistent with the waste load allocations in the TMDL. Under 33 U.S.C. § 1313(d)(1)(C), a TMDL requires a margin of safety which takes into account any lack of knowledge concerning the relationship between effluent limitations and water quality.

Environmental Law > Federal & State Interrelationships > General Overview

Environmental Law > Water Quality > Clean Water Act > Discharge Permits > General Overview

[HN4]The Environmental Protection Agency may allow states to adopt and administer National Pollution Discharge Elimination System permit programs, and it has authorized California to administer such a program.

Environmental Law > Water Quality > Clean Water Act > Water Quality Standards

[HN5]California implements the Clean Water Act through the Porter-Cologne Act, Wat. Code, § 13000 et seq. Under the Porter-Cologne Act, nine regional water quality control boards regulate the quality of waters within their regions under the purview of the State Water Resources Control Board, pursuant to Wat. Code, §§ 13000, 13100, 13200, 13241, 13242. In accordance with Wat. Code, §§ 13050, subd. (j), 13240, regional boards must formulate and adopt water quality control plans, commonly called basin plans, which designate the bene-

ficial uses to be protected, water quality objectives and a program to meet the objectives. "Water quality objectives" means the limits or levels of water quality constituents or characteristics which are established for the reasonable protection of beneficial uses of water or the prevention of nuisance within a specific area, as provided in Wat. Code, § 13050, subd. (h). The Environmental Protection Agency (EPA) must approve or disapprove a state's total maximum daily load (TMDL) within 30 days of its submission, pursuant to 33 U.S.C. § 1313(d)(2). If the EPA disapproves a state's submission, it must establish its own TMDL within 30 days of the disapproval.

Administrative Law > Judicial Review > Remedies > Mandamus

[HN6]Code Civ. Proc., § 1094.5, the administrative mandamus statute, applies when the writ is issued for the purpose of inquiring into the validity of any final administrative order or decision made as the result of a proceeding in which by law a hearing is required to be given, evidence is required to be taken, and discretion in the determination of facts is vested in the inferior tribunal, pursuant to § 1094.5, subd. (a). Acts of an administrative agency that are quasi-legislative in nature, e.g., establishment of regulations to carry out a statutory policy or direction, are not reviewable by administrative mandamus. Rather, review of a quasi-legislative action is limited to traditional mandamus.

Civil Procedure > Appeals > Standards of Review > General Overview

Civil Procedure > Appeals > Standards of Review > De Novo Review

Civil Procedure > Appeals > Standards of Review > Substantial Evidence > General Overview

Evidence > Procedural Considerations > Burdens of Proof > General Overview

[HN7]Under Code Civ. Proc., § 1085, review is limited to an inquiry into whether the action was arbitrary, capricious or entirely lacking in evidentiary support, and the petitioner has the burden of proof to show that the decision is unreasonable or invalid as a matter of law. An appellate court reviews the record de novo except where the trial court made foundational factual findings, which are binding on appeal if supported by substantial evidence.

Environmental Law > Litigation & Administrative Proceedings > Judicial Review

[HN8]As to California Environmental Quality Act issues, an abuse of discretion standard applies. Abuse of discretion is established if an agency has not proceeded

in a manner required by law or if the determination or decision is not supported by substantial evidence, pursuant to Pub. Resources Code, § 21168.5. A reviewing court's task on appeal is the same as the trial court's. Thus, the court conducts its review independent of the trial court's findings.

Administrative Law > Judicial Review > Standards of Review > Statutory Interpretation

[HN9]Generally, considerable weight should be accorded to an executive department's construction of a statutory scheme it is entrusted to administer.

Environmental Law > Water Quality > Clean Water Act > Water Quality Standards

[HN10]A regional water quality control board is authorized to investigate the quality of waters in its region, pursuant to Wat. Code, § 13267, subd. (a), and when it requires a polluter to furnish technical or monitoring program reports, the burden, including costs, of these reports shall bear a reasonable relationship to the need for the reports and the benefits to be obtained from the reports, pursuant to § 13267, subd. (b)(1).

Governments > Legislation > Interpretation

[HN11]A reviewing court's primary aim in construing any law is to determine the legislative intent. In doing so the court looks first to the words of the statute, giving them their usual and ordinary meaning.

Environmental Law > Water Quality > Clean Water Act > Discharge Permits > General Overview

[HN12]A total maximum daily load (TMDL) does not, by itself, prohibit any conduct or require any actions. Instead, each TMDL represents a goal that may be implemented by adjusting pollutant discharge requirements in individual National Pollution Discharge Elimination System permits or establishing nonpoint source controls. A TMDL forms the basis for further administrative actions that may require or prohibit conduct with respect to particularized pollutant discharges and water bodies.

Environmental Law > Water Quality > Clean Water Act > Water Quality Standards

[HN13]Wat. Code, § 13241, provides that each regional water quality control board shall establish such water quality objectives in water quality control plans as in its judgment will ensure the reasonable protection of beneficial uses and the prevention of nuisance. In establishing water quality objectives a regional board is required to

consider several factors, including economic considerations, pursuant to § 13241, subd. (d). Section 13241, subd. (d), does not define "economic considerations" or specify a particular manner of compliance. Thus, the matter is within a regional board's discretion.

Environmental Law > Water Quality > Clean Water Act > Water Quality Standards

[HN14]The Clean Water Act provides that each state shall identify those waters within its boundaries for which the effluent limitations are not stringent enough to implement any water quality standards applicable to such waters. The State shall establish a priority ranking for such waters, taking into account the severity of the pollution and the uses to be made of such waters under 33 U.S.C. § 1313(d)(1)(A). Further, it provides in § 1313(d)(1)(C) that each state shall establish for the waters identified in § 1313(d)(1)(A), and in accordance with the priority ranking, the total maximum daily load (TMDL). These provisions do not prohibit a regional water quality control board from identifying a water body and establishing a TMDL for it at essentially the same time, or indicate that formal designation on a state's 303(d) list is a prerequisite to a TMDL. Further, § 1313(d)(2) provides that each state shall submit to the Environmental Protection Agency (EPA) Administrator from time to time, for his or her approval the waters identified and the loads established under § 1313(d)(1)(A) and (1)(C). The EPA Administrator shall either approve or disapprove such identification and load not later than 30 days after the date of submission. This clarifies that a regional board may simultaneously identify an impaired water body and establish a TMDL for it.

Environmental Law > Federal & State Interrelationships > General Overview

Environmental Law > Water Quality > Clean Water Act > Water Quality Standards

[HN15]States remain at the front line in combating pollution, and so long as the State does not attempt to adopt more lenient pollution control measures than those already in place under the Clean Water Act, it does not prohibit state action.

Environmental Law > National Environmental Policy Act > Environmental Assessments

[HN16]The California Environmental Quality Act (CEQA) compels the government first to identify the environmental effects of projects, and then to mitigate those adverse effects through the imposition of feasible mitigation measures or through the selection of feasible alternatives. CEQA mandates that public agencies refrain

from approving projects with significant environmental effects if there are feasible alternatives or mitigation measures that can substantially lessen or avoid those effects.

Environmental Law > National Environmental Policy Act > Environmental Impact Statements

[HN17]The California Environmental Quality Act (CEQA) is implemented through initial studies, negative declarations, and environmental impact reports (EIR). CEQA requires a governmental agency to prepare an EIR whenever it considers approval of a proposed project that may have a significant effect on the environment. If there is no substantial evidence a project may have a significant effect on the environment or the initial study identifies potential significant effects, but provides for mitigation revisions which make such effects insignificant, a public agency must adopt a negative declaration to such effect and, as a result, no EIR is required. CEQA requires the preparation of an EIR whenever it can be fairly argued on the basis of substantial evidence that the project may have significant environmental impact. Thus, if substantial evidence in the record supports a fair argument that significant impacts or effects may occur, an EIR is required and a negative declaration cannot be certified.

Environmental Law > National Environmental Policy Act > Environmental Impact Statements

[HN18]"Significant effect on the environment," for purposes of the California Environmental Quality Act requirement for preparation of an environmental impact report, means a substantial, or potentially substantial, adverse change in any of the physical conditions within the area affected by the project including land, air, water, minerals, flora, fauna, ambient noise, and objects of historic or aesthetic significance. An economic or social change by itself shall not be considered a significant effect on the environment. A social or economic change related to a physical change may be considered in determining whether the physical change is significant, pursuant to Cal. Code Regs., tit. 14, § 15382.

Environmental Law > National Environmental Policy Act > General Overview

[HN19]State regulatory programs that meet certain environmental standards and are certified by the Secretary of the California Resources Agency are exempt from the California Environmental Quality Act's (CEQA) requirements for preparation of environmental impact reports, negative declarations, and initial studies. Environmental review documents prepared by certified pro-

grams may be used instead of environmental documents that CEQA would otherwise require. Certified regulatory programs remain subject, however, to other CEQA requirements, pursuant to Pub. Resources Code, § 21080.5. Documents prepared by certified programs are considered the functional equivalent of documents CEQA would otherwise require. An agency seeking certification must adopt regulations requiring that final action on the proposed activity include written responses to significant environmental points raised during the decisionmaking process. The agency must also implement guidelines for evaluating the proposed activity consistently with the environmental protection purposes of the regulatory program. The document generated pursuant to the agency's regulatory program must include alternatives to the proposed project and mitigation measures to minimize significant adverse environmental effects, and be made available for review by other public agencies and the public.

Environmental Law > National Environmental Policy Act > General Overview

[HN20]The guidelines for implementation of the California Environmental Quality Act (CEQA), Cal. Code Regs., tit. 14, § 15000 et seq., do not directly apply to a certified regulatory program's environmental document. However, when conducting its environmental review and preparing its documentation, a certified regulatory program is subject to the broad policy goals and substantive standards of CEQA. In a certified program, an environmental document used as a substitute for an environmental impact report must include alternatives to the activity and mitigation measures to avoid or reduce any significant or potentially significant effects that the project might have on the environment, and a document used as a substitute negative declaration must include a statement that the agency's review of the project would not have any significant or potentially significant effects on the environment and therefore no alternatives or mitigation measures are proposed to avoid or reduce any significant effects on the environment. This statement shall be supported by a checklist or other documentation to show the possible effects that the agency examined in reaching this conclusion, pursuant to Cal. Code Regs., tit. 14, § 15252, subd. (a).

Environmental Law > National Environmental Policy Act > Environmental Impact Statements

[HN21]A regional water quality control board's submission of a plan for State Water Resources Control Board approval must be accompanied by a brief description of the proposed activity, a completed environmental checklist prescribed by the state board, and a written report

addressing reasonable alternatives to the proposed activity and mitigation measures to minimize any significant adverse environmental impacts, pursuant to Cal. Code Regs., tit. 23, § 3777, subd. (a).

Environmental Law > National Environmental Policy Act > Environmental Impact Statements

[HN22]"Tiering" refers to the coverage of general matters in broader environmental impact reports (EIRs) (such as on general plans or policy statements) with subsequent narrower EIRs or ultimately site-specific EIRs incorporating by reference the general discussions and concentrating solely on the issues specific to the EIR subsequently prepared. Tiering is appropriate when the sequence of EIRs is from a general plan, policy, or program EIR to a site-specific EIR. Courts have allowed first tier EIR's to defer detailed analysis to subsequent project EIR's.

Environmental Law > National Environmental Policy Act > Environmental Assessments

[HN23]Pub. Resources Code, § 21159, which allows expedited environmental review for mandated projects, provides that an agency shall perform, at the time of the adoption of a rule or regulation requiring the installation of pollution control equipment, or a performance standard or treatment requirement, an environmental analysis of the reasonably foreseeable methods of compliance. The environmental analysis shall, at a minimum, include, all of the following: (1) an analysis of the reasonably foreseeable environmental impacts of the methods of compliance; (2) an analysis of reasonably foreseeable mitigation measures; and (3) an analysis of reasonably foreseeable alternative means of compliance with the rule or regulation, pursuant to § 21159, subd. (a).

Civil Procedure > Appeals > Reviewability > Preservation for Review

[HN24]Issues not presented to the trial court are ordinarily waived on appeal.

Environmental Law > National Environmental Policy Act > Environmental Impact Statements

[HN25]Because a negative declaration ends environmental review, the fair argument test provides a low threshold for requiring an environmental impact report.

Environmental Law > National Environmental Policy Act > Environmental Assessments

[HN26]Substantial evidence is not argument, speculation, unsubstantiated opinion or narrative or evidence which is clearly inaccurate or erroneous under Pub. Resources Code, § 21082.2, subd. (c). However, letters and testimony from government officials with personal knowledge of the anticipated effects of a project on their communities supports a fair argument that the project may have a significant environmental impact.

Civil Procedure > Justiciability > Case or Controversy Requirements > Actual Disputes

Civil Procedure > Declaratory Judgment Actions > General Overview

[HN27]The fundamental basis of declaratory relief is the existence of an actual, present controversy.

Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Storm Water Discharges

[HN28]33 U.S.C. § 1342(p)(3)(B)(iii), provides that a National Pollution Discharge Elimination System (NPDES) permit for a municipal discharge into a storm drain shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Environmental Protection Act Administrator or the State determines appropriate for the control of such pollutants. Best management practices are generally pollution control measures set forth in NPDES permits.

Environmental Law > Water Quality > Clean Water Act > Water Quality Standards

[HN29]The statute applicable to establishing a total maximum daily load (TMDL), 33 U.S.C. § 1313(d)(1)(C), does not suggest that practicality is a consideration. To the contrary, a regional water quality control board is required to establish a TMDL at a level necessary to implement the applicable water quality standards with seasonal variations and a margin of safety, pursuant to § 1313(d)(1)(C).

Civil Procedure > Appeals > Briefs

[HN30]Parties are required to include argument and citation to authority in their briefs, and the absence of these necessary elements allows an appellate court to treat an appellant's issue as waived.

Environmental Law > Water Quality > Clean Water Act > Water Quality Standards

[HN31]33 U.S.C. § 1342(p)(3)(B)(iii) does not divest a regional water quality control board's discretion to impose a National Pollution Discharge Elimination System permit condition requiring compliance with state water quality standards more stringent than the maximum extent practicable standard.

Environmental Law > Water Quality > Clean Water Act > Water Quality Standards

[HN32]When the Environmental Protection Agency makes a total maximum daily load or permitting decision, it will make each decision on a case-by-case basis and will be guided by applicable requirements of the Clean Water Act and implementing regulations, taking into account comments and information presented at that time by interested persons regarding the appropriateness of applying these recommendations to the particular situation.

Environmental Law > Water Quality > Clean Water Act > Coverage & Definitions > Point Sources

Environmental Law > Water Quality > Clean Water Act > Nonpoint Source Pollution

Environmental Law > Water Quality > Clean Water Act > Water Quality Standards

[HN33]Although the Clean Water Act focuses on both point and nonpoint sources of pollution, the measure does not require states to take regulatory action to limit the amount of non-point water pollution introduced into its waterways. While the Clean Water Act requires states to designate water standards and identify bodies of water that fail to meet these standards, nothing in the Clean Water Act demands that a state adopt a regulatory system for nonpoint sources.

Environmental Law > Water Quality > Clean Water Act > Water Quality Standards

[HN34]Section 303(d)(1)(A) of the Clean Water Act, 33 U.S.C. § 1313(d)(1)(A), provides that in identifying impaired waters for its 303(d) list, states shall establish a priority ranking for such waters, taking into account the severity of the pollution and the uses to be made of such waters. Wat. Code, § 13241, subd. (a), requires regional water quality control boards to establish water quality objectives in water quality control plans by considering a variety of factors, including past, present, and probable future beneficial uses of water.

Environmental Law > Water Quality > Clean Water Act > Water Quality Standards

[HN35]See 33 U.S.C. § 1313(d)(1)(C).

Administrative Law > Agency Rulemaking > General Overview

Administrative Law > Agency Rulemaking > Notice Requirements

Environmental Law > Water Quality > Clean Water Act > Water Quality Standards

[HN36]The California Administrative Procedures Act (APA), Gov. Code, §§ 11340 et seq. and 11370, establishes the procedures by which state agencies may adopt regulations. The agency must give the public notice of its proposed regulatory action; issue a complete text of the proposed regulation with a statement of the reasons for it; give interested parties an opportunity to comment on the proposed regulation; respond in writing to public comments; and forward a file of all materials on which the agency relied in the regulatory process to the Office of Administrative Law, which reviews the regulation for consistency with the law, clarity, and necessity. One purpose of the APA is to ensure that those persons or entities whom a regulation will affect have a voice in its creation, as well as notice of the law's requirements so that they can conform their conduct accordingly. The APA does not apply to the adoption or revision of state policy for water quality control unless the agency adopts a policy, plan, or guideline, or any revision thereof, pursuant to Gov. Code, § 11353, subs. (a), (b)(1).

SUMMARY:

CALIFORNIA OFFICIAL REPORTS SUMMARY

Regional and state water quality boards sought to ameliorate the problem of litter discharged from municipal storm drains into a river through the adoption and approval of a planning document. Several cities alleged that the boards violated the Clean Water Act (33 U.S.C. § 1251 et seq.), or the Porter-Cologne Act (Wat. Code, § 13000 et seq.), by setting the levels of permissible pollution, known as total maximum daily loads (TMDL's), at zero. The cities agreed that trash pollution had to be remedied but opposed the target of zero as unattainable and inordinately expensive. The trial court partially granted the cities' petition for writ of mandate. (Superior Court of San Diego County, No. GIC803631, Wayne L. Peterson and Linda B. Quinn, Judges.)

The Court of Appeal affirmed as to the trial court's judgment that the TMDL violated the California Environmental Quality Act (CEQA) and as to the cities' appeal. However, the court reversed the judgment insofar as it was based on the TMDL's lack of an assimilative capacity study, inclusion on the impaired water body list, and consideration of economic factors, and also insofar as it granted declaratory relief regarding the purported

inclusion of nonnavigable waters in the TMDL. The court found that the regional board's environmental checklist was deficient and that there was sufficient evidence of a fair argument that the project might have a significant effect on the environment, thus necessitating an environmental impact report or its functional equivalent under CEQA. The trial erred by substituting its own judgment for that of the boards on the issue of whether the adoption of the TMDL should have been preceded by a scientific study of the assimilative capacity of the river. Federal law did not require the regional board to conduct an assimilative capacity study before adopting the TMDL. By its plain terms, Wat. Code, § 13267, is inapplicable at the TMDL stage, and thus the trial court erred by invalidating the TMDL on that ground. The TMDL sufficiently notified affected parties of its inclusion in the state's 1998 "303(d) list" of substandard waters as an impaired water body. The court rejected the cities' claim that the trial court erred by not invalidating the TMDL on the additional ground that the boards [*1393] failed to provide for deemed compliance with the target through certain methods. (Opinion by McConnell, P. J., with McIntyre and Irion, JJ., concurring.)

HEADNOTES

CALIFORNIA OFFICIAL REPORTS HEADNOTES
Classified to California Digest of Official Reports

(1) Pollution and Conservation Laws § 5--Clean Water Act--Effect on States.--The federal Clean Water Act places primary reliance for developing water quality standards on the states. It requires each state to develop such standards and review them at least once every three years for required modifications, pursuant to 33 U.S.C. § 1313(a), (c)(1). The standards must include designated uses such as recreation, navigation or the propagation of fish, shellfish and wildlife; water quality criteria sufficient to protect the designated uses; and an antidegradation policy, pursuant to 40 C.F.R. §§ 131.6, 131.10-131.12 (2003). The water quality criteria can be expressed in narrative form or in a numeric form, e.g., specific pollutant concentrations. Narrative criteria are broad statements of desirable water quality goals in a water quality plan. For example, "no toxic pollutants in toxic amounts" would be a narrative description. The Clean Water Act focuses on two possible sources of pollution: point sources and nonpoint sources. "Point source" means any discernable, confined and discrete conveyance such as a pipe, ditch, channel, tunnel, or conduit, as provided in 33 U.S.C. § 1362(14). The Clean Water Act does not define nonpoint source pollution, but it has been described as nothing more than a water pollution problem not involving a discharge from a point source.

(2) Pollution and Conservation Laws § 5--Water--National Discharge Elimination System Permits--Total Maximum Daily Loads.--Congress has dealt with the problem of point source pollution using the National Pollution Discharge Elimination System (NPDES) permit process. Under this approach, compliance rests on technology-based controls that limit the discharge of pollution from any point source into certain waters unless that discharge complies with the Clean Water Act's specific requirements. Nonpoint sources, because of their very nature, are not regulated under the NPDES program. [*1394] Instead, Congress has addressed nonpoint sources of pollution in a separate portion of the Clean Water Act which encourages states to develop areawide waste treatment management plans. When the NPDES system fails to adequately clean up certain rivers, streams, or smaller water segments, the Clean Water Act requires use of a water-quality-based approach. States are required to identify such waters and rank them in order of priority, and based on that ranking, calculate levels of permissible pollution called total maximum daily loads (TMDL's). This list of substandard waters is known as the 303(d) list (§ 303 of the Clean Water Act having been codified as 33 U.S.C. § 1313). A TMDL defines the specified maximum amount of a pollutant which can be discharged or "loaded" into the waters at issue from all combined sources. A TMDL must be established at a level necessary to implement the applicable water quality standards. A TMDL assigns a waste load allocation to each point source, which is that portion of the TMDL's total pollutant load, which is allocated to a point source for which an NPDES permit is required. Once a TMDL is developed, effluent limitations in NPDES permits must be consistent with the waste load allocations in the TMDL. Under 33 U.S.C. § 1313(d)(1)(C), a TMDL requires a margin of safety which takes into account any lack of knowledge concerning the relationship between effluent limitations and water quality. The Environmental Protection Agency may allow states to adopt and administer NPDES permit programs, and it has authorized California to administer such a program.

(3) Pollution and Conservation Laws § 5--Water--Porter-Cologne Act--Regional Quality Control Boards and Plans.--California implements the Clean Water Act through the Porter-Cologne Act (Wat. Code, § 13000 et seq.). Under the Porter-Cologne Act, nine regional water quality control boards regulate the quality of waters within their regions under the purview of the State Water Resources Control Board, pursuant to Wat. Code, §§ 13000, 13100, 13200, 13241, 13242. In accordance with Wat. Code, §§ 13050, subd. (j), 13240, regional boards must formulate and adopt water quality

control plans, commonly called basin plans, which [*1395] designate the beneficial uses to be protected, water quality objectives and a program to meet the objectives. "Water quality objectives" means the limits or levels of water quality constituents or characteristics which are established for the reasonable protection of beneficial uses of water or the prevention of nuisance within a specific area, as provided in Wat. Code, § 13050, subd. (h). The Environmental Protection Agency (EPA) must approve or disapprove a state's total maximum daily load (TMDL) within 30 days of its submission, pursuant to 33 U.S.C. § 1313(d)(2). If the EPA disapproves a state's submission, it must establish its own TMDL within 30 days of the disapproval.

(4) Administrative Law § 95--Judicial Review and Relief--Methods--Mandamus--Quasi-legislative Acts.--Code Civ. Proc., § 1094.5, the administrative mandamus statute, applies when the writ is issued for the purpose of inquiring into the validity of any final administrative order or decision made as the result of a proceeding in which by law a hearing is required to be given, evidence is required to be taken, and discretion in the determination of facts is vested in the inferior tribunal, pursuant to § 1094.5, subd. (a). Acts of an administrative agency that are quasi-legislative in nature, e.g., establishment of regulations to carry out a statutory policy or direction, are not reviewable by administrative mandamus. Rather, review of a quasi-legislative action is limited to traditional mandamus.

(5) Mandamus § 74--Rehearing and Appeal--Review; Scope--Petitioner's Burden of Proof.--Under Code Civ. Proc., § 1085, review of an administrative action is limited to an inquiry into whether the action was arbitrary, capricious or entirely lacking in evidentiary support, and the petitioner has the burden of proof to show that the decision is unreasonable or invalid as a matter of law. An appellate court reviews the record de novo except where the trial court made foundational factual findings, which are binding on appeal if supported by substantial evidence. [*1396]

(6) Administrative Law § 10--Powers and Functions of Agencies--Deference to Construction of Laws.--Generally, considerable weight should be accorded to an executive department's construction of a statutory scheme it is entrusted to administer.

(7) Statutes § 21--Construction--Legislative Intent--Examination of Language.--A court's primary aim in construing any law is to determine the legislative intent. In doing so the court looks first to the words of the statute, giving them their usual and ordinary meaning.

(8) Pollution and Conservation Laws § 5--Water--Total Maximum Daily Load and Pollutant Discharge Requirements.--A total maximum daily load (TMDL) does not, by itself, prohibit any conduct or require any actions. Instead, each TMDL represents a goal that may be implemented by adjusting pollutant discharge requirements in individual National Pollution Discharge Elimination System permits or establishing nonpoint source controls. A TMDL forms the basis for further administrative actions that may require or prohibit conduct with respect to particularized pollutant discharges and water bodies.

(9) Pollution and Conservation Laws § 5--Water--Environmental Checklist Requirement--Regional Quality Control Board's Basin Plan to Incorporate Trash in Total Maximum Daily Load.--In an action challenging a regional water quality control board's basin plan, which set the levels of permissible pollution for a flood control channel, the trial court correctly concluded that an environmental impact report or its functional equivalent was necessary because the regional water board's environmental checklist and total maximum daily load were deficient and there was sufficient evidence of a fair argument that the project might have a significant effect on the environment.

[8 Witkin, Cal. Procedure (4th ed. 1997) Extraordinary Writs, § 268; 12 Witkin, Summary of Cal. Law (10th ed. 2005) Real Property, §§ 833, 893, 896; 5 Witkin, Cal. Procedure (4th ed. 1997) Pleading, § 817.]

(10) Pollution and Conservation Laws § 2.1--California Environmental Quality Act--Impact Reports--Necessity of Preparing; Requirements.--The California Environmental Quality Act (CEQA) compels the government first to identify the environmental effects of projects, and then to mitigate those adverse effects through the imposition of feasible mitigation measures or through the selection of feasible alternatives. CEQA mandates that public agencies refrain from approving projects with significant environmental effects if there are feasible alternatives or [*1397] mitigation measures that can substantially lessen or avoid those effects. CEQA is implemented through initial studies, negative declarations, and environmental impact reports (EIR's). CEQA requires a governmental agency to prepare an EIR whenever it considers approval of a proposed project that may have a significant effect on the environment. If there is no substantial evidence a project may have a significant effect on the environment or the initial study identifies potential significant effects, but provides for mitigation revisions which make such effects insignificant, a public agency must adopt a negative declaration to such effect and, as a result, no EIR is required. CEQA

requires the preparation of an EIR whenever it can be fairly argued on the basis of substantial evidence that the project may have significant environmental impact. Thus, if substantial evidence in the record supports a fair argument that significant impacts or effects may occur, an EIR is required and a negative declaration cannot be certified. "Significant effect on the environment" means a substantial, or potentially substantial, adverse change in any of the physical conditions within the area affected by the project, including land, air, water, minerals, flora, fauna, ambient noise, and objects of historic or aesthetic significance. An economic or social change by itself shall not be considered a significant effect on the environment. A social or economic change related to a physical change may be considered in determining whether the physical change is significant, pursuant to Cal. Code Regs., tit. 14, § 15382.

(11) Pollution and Conservation Laws § 2.1--California Environmental Quality Act--Impact Reports--Necessity of Preparing; Exemptions.--State regulatory programs that meet certain environmental standards and are certified by the Secretary of the California Resources Agency are exempt from the California Environmental Quality Act's (CEQA) requirements for preparation of environmental impact reports, negative declarations, and initial studies. Environmental review documents prepared by certified programs may be used instead of environmental documents that CEQA would otherwise require. Certified regulatory programs remain subject, however, to other CEQA requirements. Documents prepared by certified programs are considered the functional equivalent of documents CEQA would otherwise require. An agency seeking [*1398] certification must adopt regulations requiring that final action on the proposed activity include written responses to significant environmental points raised during the decisionmaking process. The agency must also implement guidelines for evaluating the proposed activity consistently with the environmental protection purposes of the regulatory program. The document generated pursuant to the agency's regulatory program must include alternatives to the proposed project and mitigation measures to minimize significant adverse environmental effects, and be made available for review by other public agencies and the public.

(12) Pollution and Conservation Laws § 2.1--California Environmental Quality Act--Impact Reports--Necessity of Preparing; Application to Certified Regulatory Program.--The guidelines for implementation of the California Environmental Quality Act (CEQA), Cal. Code Regs., tit. 14, § 15000 et seq., do not directly apply to a certified regulatory program's environmental document. However, when conducting its en-

environmental review and preparing its documentation, a certified regulatory program is subject to the broad policy goals and substantive standards of CEQA. In a certified program, an environmental document used as a substitute for an environmental impact report must include alternatives to the activity and mitigation measures to avoid or reduce any significant or potentially significant effects that the project might have on the environment, and a document used as a substitute negative declaration must include a statement that the agency's review of the project would not have any significant or potentially significant effects on the environment and therefore no alternatives or mitigation measures are proposed to avoid or reduce any significant effects on the environment. This statement shall be supported by a checklist or other documentation to show the possible effects that the agency examined in reaching this conclusion, pursuant to Cal. Code Regs., tit. 14, § 15252, subd. (a)(2)(A), (B). A regional water quality control board's submission of a plan for State Water Resources Control Board approval must be accompanied by a brief description of the proposed activity, a completed environmental checklist prescribed by the state board, and a written report addressing reasonable alternatives to the proposed activity and mitigation measures to minimize any significant adverse environmental impacts, pursuant to Cal. Code Regs., tit. 23, § 3777, subd. (a).

(13) Pollution and Conservation Laws § 1--California Environmental Quality Act--Expedited Review for Mandated Projects--Analysis of Reasonably Foreseeable Impacts.--Pub. Resources Code, § 21159, which allows expedited environmental review for mandated projects, provides that an agency shall perform, at the time of the adoption of a [*1399] rule or regulation requiring the installation of pollution control equipment, or a performance standard or treatment requirement, an environmental analysis of the reasonably foreseeable methods of compliance. The environmental analysis shall, at a minimum, include all of the following: (1) an analysis of the reasonably foreseeable environmental impacts of the methods of compliance; (2) an analysis of reasonably foreseeable mitigation measures; and (3) an analysis of reasonably foreseeable alternative means of compliance with the rule or regulation, pursuant to § 21159, subd. (a). Substantial evidence is not argument, speculation, unsubstantiated opinion or narrative, or evidence which is clearly inaccurate or erroneous, as stated in Pub. Resources Code, § 21082.2, subd. (c). However, letters and testimony from government officials with personal knowledge of the anticipated effects of a project on their communities supports a fair argument that the project may have a significant environmental impact.

(14) Declaratory Relief § 7--Actual Controversy; Fundamental Basis of Relief.--The fundamental basis of declaratory relief is the existence of an actual, present controversy.

(15) Pollution and Conservation Laws § 5--Water--National Discharge Elimination System Permit for Municipal Discharge into Storm Drain.--33 U.S.C. § 1342(p)(3)(B)(iii), provides that a National Pollution Discharge Elimination System (NPDES) permit for a municipal discharge into a storm drain shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Environmental Protection Act Administrator or the state determines appropriate for the control of such pollutants. Best management practices are generally pollution control measures set forth in NPDES permits.

(16) Pollution and Conservation Laws § 5--Water--Regional Quality Control Board and Establishment of Total Maximum Daily Load.--The statute applicable to establishing a total maximum daily load (TMDL), 33 U.S.C. § 1313(d)(1)(C), does not suggest that practicality is a consideration. To the contrary the statute requires a regional water quality control board to establish a TMDL at a level necessary to implement the applicable water quality standards with seasonal variations and a margin of safety. [*1400]

(17) Appellate Review § 109--Briefs--Form and Requisites--Argument and Authority--Waiver.--Parties are required to include argument and citation to authority in their briefs, and the absence of these necessary elements allows an appellate court to treat an appellant's issue as waived.

(18) Pollution and Conservation Laws § 5--Water--Requirements for Total Maximum Daily Load or Permitting Decisions.--When the Environmental Protection Agency makes a total maximum daily load or permitting decision, it will make each decision on a case-by-case basis and will be guided by applicable requirements of the Clean Water Act and implementing regulations, taking into account comments and information presented at that time by interested persons regarding the appropriateness of applying these recommendations to the particular situation.

(19) Pollution and Conservation Laws § 5--Water--Clean Water Act and Effect on States.--Although the Clean Water Act focuses on both point and nonpoint sources of pollution, the measure does not require states to take regulatory action to limit

the amount of nonpoint water pollution introduced into its waterways. While the Clean Water Act requires states to designate water standards and identify bodies of water that fail to meet these standards, nothing in the Clean Water Act demands that a state adopt a regulatory system for nonpoint sources.

(20) Administrative Law § 19--Actions--Legislation or Rulemaking--Practice and Procedure.--The California Administrative Procedure Act (APA) (Gov. Code, §§ 11340 et seq., 11370), establishes the procedures by which state agencies may adopt regulations. The agency must give the public notice of its proposed regulatory action; issue a complete text of the proposed regulation with a statement of the reasons for it; give interested parties an opportunity to comment on the proposed regulation; respond in writing to public comments; and forward a file of all materials on which the agency relied in the regulatory process to the Office of Administrative Law, which reviews the regulation for consistency with the law, clarity, and necessity. One purpose of the APA is to ensure that those persons or entities whom a regulation will affect have a voice in its creation, as well as notice of the law's requirements so that they can conform their conduct accordingly. The APA does not apply to the adoption or revision of state policy for water quality control unless the agency adopts a policy, plan, or guideline, or any revision thereof, pursuant to Gov. Code, § 11353, subs. (a), (b)(1). [*1401]

COUNSEL: Rutan & Tucker, Richard Montevideo and Terence J. Gallagher for Plaintiffs and Appellants.

Downey Brand, Melissa A. Thorne; Lewis, Brisbois, Bisgaard, & Smith and B. Richard Marsh for County Sanitation Districts of Los Angeles County as Amici Curiae on behalf of Plaintiffs and Appellants.

Demetriou, Del Guercio, Springer & Francis, Stephen A. Del Guercio, Michael A. Francis and Brian D. Langa for California Contract Cities Association as Amicus Curiae on behalf of Plaintiffs and Appellants.

Richards, Watson & Gershon and John J. Harris for The League of California Cities as Amicus Curiae on behalf of Plaintiffs and Appellants.

Bill Lockyer, Attorney General, Tom Greene, Chief Assistant Attorney General, Mary E. Hackenbracht, Assistant Attorney General, Marilyn H. Levin and Gregory J. Newmark, Deputy Attorneys General, for Defendants and Appellants.

Law Office of Michael R. Lozeau, Michael R. Lozeau; and Dana P. Palmer for Santa Monica Baykeeper, Inc.,

Heal the Bay, Inc., [***2] and Natural Resources Defense Council, Inc., as Amici Curiae on behalf of Defendants and Appellants.

JUDGES: McConnell, P. J., with McIntyre and Irion, JJ., concurring.

OPINION BY: McConnell

OPINION

[**378] **McCONNELL, P. J.**--This case concerns the serious environmental problem of litter discharged from municipal storm drains into the Los Angeles River, and efforts of the California Regional Water Quality Control Board, Los Angeles Region (Regional Board) and the State Water Resources Control Board (State Board) ¹ to ameliorate the problem through the adoption and approval of a planning document setting a target of zero trash discharge within a multi-year implementation period.

¹ We refer to these entities together as the Water Boards.

The Water Boards appeal a judgment partially granting a petition for writ of mandate brought by the City of Arcadia and 21 other cities (Cities), ² who [*1402] agree trash pollution must be remedied but oppose the target of zero trash as unattainable and inordinately expensive. The Water Boards challenge [***3] the court's findings that an assimilative capacity study is a required element of its action; a cost-benefit analysis and consideration of economic factors are required under state law and are not met; the zero trash target is inapplicable to the Los Angeles River Estuary (Estuary) because it does not appear on the state's list of impaired waters; and, the Water Boards failed to comply with the California Environmental Quality Act (CEQA) by not preparing an environmental impact report (EIR) or its functional equivalent.

² In addition to Arcadia the Cities include Baldwin Park, Bellflower, Cerritos, Commerce, Diamond Bar, Downey, Irwindale, Lawndale, Monrovia, Montebello, Monterey Park, Pico Rivera, Rosemead, San Gabriel, Santa Fe Springs, Sierra Madre, Signal Hill, South Pasadena, Vernon, West Covina and Whittier.

The Water Boards also contend the court erred by granting the Cities declaratory relief on their claim the trash total maximum daily load (TMDL) does not apply to "nonwaters," meaning areas that do [***4] not drain into navigable waters such as the Los Angeles River or tributaries, as the parties agreed during this proceeding that the trash TMDL applies only to navigable waters.

The Cities also appeal, contending the trial court erred by not invalidating the trash TMDL on the additional grounds the Water Boards failed to provide for deemed compliance with the target of zero trash through certain methods; failed to implement load allocations for nonpoint sources of trash pollution; failed to adhere to the data collection and analysis required by federal and state law; relied on nonexistent, illegal and irrational uses to be made of the Los Angeles River; and, violated the Administrative Procedures Act (APA).

We conclude the Cities' appeal lacks merit. As to the Water Boards' appeal, we conclude the court properly invalidated the planning document on the ground of noncompliance with CEQA, and we affirm the judgment insofar as it is based on that ground. We reverse the judgment to the extent it is based on other grounds. Further, we hold the court erred by granting declaratory relief on the nonwaters issue as there was no controversy when the court ruled.

[**379] BACKGROUND INFORMATION

I

[***5] *Statutory and Regulatory Scheme*

The "quality of our nation's waters is governed by a 'complex statutory and regulatory scheme ... that implicates both federal and state administrative responsibilities.' " (*City of Burbank v. State Water Resources Control Bd.* [*1403] (2005) 35 Cal.4th 613, 619 [26 Cal. Rptr. 3d 304, 108 P.3d 862] (*City of Burbank*)). An overview of applicable law is required to place the facts here in context.

A

Federal Law

In 1972 Congress enacted amendments to the Federal Water Pollution Control Act (Pub.L. No. 92-500 (Oct. 18, 1972) 86 Stat. 816; 33 U.S.C. § 1251 et seq.), which, as amended in 1977, is commonly known as the Clean Water Act. (*City of Burbank, supra*, 35 Cal.4th at pp. 619-620.) Its stated goal is "to restore and maintain the chemical, physical, and biological integrity of the Nation's waters" by eliminating the discharge of pollutants into navigable waters. (33 U.S.C. § 1251(a).)

(1) [HN1]The Clean Water Act places "primary reliance for developing water quality standards on the states." (*Scott v. Hammond* (7th Cir. 1984) 741 F.2d 992, 994.) It requires each state to develop such standards [***6] and review them at least once every three years for required modifications. (33 U.S.C. § 1313(a), (c)(1).) The standards must include designated uses such as

recreation, navigation or the propagation of fish, shellfish and wildlife; water quality criteria sufficient to protect the designated uses; and an antidegradation policy. (40 C.F.R. §§ 131.6, 131.10-131.12 (2003).) The water quality criteria "can be expressed in narrative form or in a numeric form, e.g., specific pollutant concentrations." (*Florida Public Interest Research Group v. E.P.A.* (11th Cir. 2004) 386 F.3d 1070, 1073.) "Narrative criteria are broad statements of desirable water quality goals in a water quality plan. For example, 'no toxic pollutants in toxic amounts' would be a narrative description." (*City of Burbank, supra*, 35 Cal.4th at p. 622, fn. 4.)

The Clean Water Act focuses on two possible sources of pollution: point sources and nonpoint sources. "Point source" means "any discernable, confined and discrete conveyance" such as a pipe, ditch, channel, tunnel, or [***7] conduit. (33 U.S.C. § 1362(14).) The Clean Water Act does not define nonpoint source pollution, but it has been described as " ' nothing more [than] a [water] pollution problem not involving a discharge from a point source.' " (*Defenders of Wildlife v. U.S. Environ. Protec.* (10th Cir. 2005) 415 F.3d 1121, 1124.)³

3 According to the Environmental Protection Act (EPA), nonpoint source pollution is caused by rainfall or snowmelt moving over and through the ground, and includes excess fertilizers, herbicides, and insecticides from agricultural lands and residential areas; oil, grease and toxic chemicals from urban runoff and energy production; sediment from improperly managed construction sites, crop and forest land, and eroding stream banks; salt from irrigation practices and acid drainage from abandoned mines; and bacteria and nutrients from livestock, pet wastes and faulty septic systems. (<<http://www.epa.gov/owow/nps/qa.html>> [as of Jan. 26, 2006].)

[*1404] [HN2](2) "Congress dealt with the problem of point source [***8] pollution using the National Pollution Discharge Elimination System [NPDES] permit process. Under this approach, compliance rests on technology- [**380] based controls that limit the discharge of pollution from any point source into certain waters unless that discharge complies with the [Clean Water] Act's specific requirements." (*San Francisco BayKeeper v. Whitman* (2002) 297 F.3d 877, 880; see 33 U.S.C. § 1311(b)(1)(A).) " Nonpoint sources, because of their very nature, are not regulated under the NPDES [program]. Instead, Congress addressed nonpoint sources of pollution in a separate portion of the [Clean Water] Act which encourages states to develop areawide waste treatment management plans." (*Pronsolino v. Marcus*

(N.D.Cal. 2000) 91 F. Supp. 2d 1337, 1348, citing 33 U.S.C. § 1288; see also 33 U.S.C. § 1329.)

[HN3]"When the NPDES system fails to adequately clean up certain rivers, streams or smaller water segments, the [Clean Water] Act requires use of a water-quality based approach. States are required to identify such waters ... [and] rank [them] in order of priority, and [***9] based on that ranking, calculate levels of permissible pollution called 'total maximum daily loads' or 'TMDLs.' " (*San Francisco BayKeeper v. Whitman, supra*, 297 F.3d at p. 880; see 33 U.S.C. § 1313(d)(1)(A); 40 C.F.R. § 130.7(b) (2003).) "This list of substandard waters is known as the '303(d) list' (section 303 of the Clean Water Act having been codified as [title 33 United States Code] section 1313)." (*City of Arcadia v. U.S. Environmental* (9th Cir. 2005) 411 F.3d 1103, 1105 (*City of Arcadia II*).)

"A TMDL defines the specified maximum amount of a pollutant which can be discharged or 'loaded' into the waters at issue from all combined sources." (*Dioxin/Organochlorine Center v. Clarke* (9th Cir. 1995) 57 F.3d 1517, 1520.) "A TMDL must be 'established at a level necessary to implement the applicable water quality standards' [Citation.] A TMDL assigns a *waste load allocation* ... to each point source, which is that portion of the TMDL's total pollutant load, which is allocated to a point source for which an NPDES permit is required. [Citation.] Once a TMDL is developed, effluent limitations [***10] in NPDES permits must be consistent with the [waste load allocations] in the TMDL." (*Communities for a Better Environment v. State Water Resources Control Bd.* (2003) 109 Cal.App.4th 1089, 1095-1096 [1 Cal. Rptr. 3d 76]; see *Dioxin/Organochlorine Center v. Clarke*, at p. 1520.)⁴ A TMDL requires a [*1405] "margin of safety which takes into account any lack of knowledge concerning the relationship between effluent limitations and water quality." (33 U.S.C. § 1313(d)(1)(C).)

4 The Clean Water Act "does not define total maximum daily load. EPA's regulations break it into a 'waste[]load allocation' for point sources and a 'load allocation' for nonpoint sources." (*Pronsolino v. Marcus, supra*, 91 F. Supp. 2d at p. 1344, fn. 8; see 40 C.F.R. § 130.2(g)-(i) (2005).)

[HN4]The EPA may allow states to adopt and administer NPDES permit programs (*Pronsolino v. Marcus, supra*, 91 F. Supp. 2d at p. 1347, fn. 10), and it has authorized California to administer [***11] such a program. (54 Fed.Reg. 40664 (Oct. 3, 1989).)

B

State Law

[HN5](3) California implements the Clean Water Act through the Porter-Cologne Act (*Wat. Code, § 13000 et seq.*), which was promulgated in 1969. Under the Porter-Cologne Act, nine regional boards regulate the quality of waters within their regions under the purview of the State Board. (*Wat. Code, §§ 13000, 13100, 13200, 13241, 13242.*)

[**381] Regional boards must formulate and adopt water quality control plans, commonly called basin plans, which designate the beneficial uses to be protected, water quality objectives and a program to meet the objectives. (*Wat. Code, §§ 13050, subd. (j), 13240.*) "Water quality objectives" means the limits or levels of water quality constituents or characteristics which are established for the reasonable protection of beneficial uses of water or the prevention of nuisance within a specific area." (*Id.*, § 13050, subd. (h).)

The EPA must approve or disapprove a state's TMDL within 30 days of its submission. [***12] (33 U.S.C. § 1313(d)(2).) If the EPA disapproves a state's submission, it must establish its own TMDL within 30 days of the disapproval. (*Ibid.*)

II

Trash TMDL

The Los Angeles River is a 51-mile flood control channel, largely concrete-lined, which runs through the City of Los Angeles and surrounding municipalities in Los Angeles County and terminates at the Pacific Ocean. In 1990 the Regional Board issued an NPDES storm water permit to the Los Angeles County Department of Public Works as the principal permittee and 84 cities as copermitees, to address various chemical pollutants discharged into the region's water bodies (Municipal NPDES Permit).

[*1406] In 1994 the Regional Board adopted a revised water quality control plan, or basin plan (1994 Basin Plan), which includes narrative water quality objectives. It provides that "[w]aters shall not contain floating materials, including solids, liquids, foams, and scum, in concentrations that cause nuisance or adversely affect beneficial uses," and "[w]aters shall not contain suspended or settleable material in concentrations that cause nuisance or adversely affect beneficial uses." (Italics [***13] omitted.) Beneficial uses of the Los Angeles River and surrounds include wildlife and marine habitat, including habitat for endangered species, and recreational activities such as fishing, walking, hiking, jogging, bicycling, horseback riding, bird watching and photography.

In 1996 and 1998 the Regional Board identified certain reaches of the Los Angeles River on the state's "303(d) list" as being impaired by trash, primarily through storm water runoff in thousands of municipal storm drains. ⁵ On September 19, 2001, the Regional Board adopted a resolution to amend its 1994 Basin Plan to incorporate a TMDL for trash in the Los Angeles River (Trash TMDL). Despite many objections from affected municipalities, the Trash TMDL sets a numeric target of zero trash as "even a single piece of trash can be detrimental, and no level of trash is acceptable in waters of the state." ⁶ "The numeric target is staff's interpretation of the narrative water quality objective [in [**382] the 1994 Basin Plan], including an implicit margin of safety."

5 The Regional Board defines "trash" as "man-made litter" within the meaning of Government Code section 68055.1, subdivision (g), which provides: " 'Litter' means all improperly discarded waste material, including, but not limited to, convenience food, beverage, and other produce packages or containers constructed of steel, aluminum, glass, paper, plastic; and other natural and synthetic materials, thrown or deposited on the lands and waters of the state, but not including the properly discarded waste of the primary processing of agriculture, mining, logging, sawmilling, or manufacturing."

[**14]

6 The Regional Board adopted a Trash TMDL in January 2001, which also had a target of zero trash. It reconsidered the matter on September 19, 2001, "to provide clarifying language and greater flexibility in implementing the [Trash] TMDL."

The reduction of trash is to be phased over a 14-year period, including an optional two-year baseline monitoring period. In lieu of baseline monitoring, cities may accept a default baseline allocation of "640 gallons of uncompressed trash per square mile per year," a value based on data the City of Calabasas provided. The Trash TMDL provides for a "review of the current target [of zero trash] ... once a reduction of 50% has been achieved and sustained," "based on the findings of future studies regarding the threshold levels needed for protecting beneficial uses."

Under the Trash TMDL, cities may use a variety of compliance methods, including "[e]nd-of-pipe full capture structural controls," "partial capture [*1407] control systems" and "[i]nstitutional controls." Cities using a full-capture system meeting certain criteria will be deemed in compliance with [**15] the zero target if the systems are properly maintained and maintenance records are available for the Regional Board's inspection.

On December 21, 2001, the Regional Board issued an order under Water Code section 13267 to the County of Los Angeles and copermittees under the Municipal NPDES Permit to submit baseline monitoring plans by February 1, 2002, and to monitor trash in the Los Angeles River between January 2002 and December 2003, with a final report due February 2004. ⁷ The Regional Board intends to use resulting data to "refine" the default baseline waste load allocations in the Trash TMDL.

7 In City of Arcadia v. U.S. Environ. Protection Agency (N.D.Cal. 2003) 265 F. Supp. 2d 1142, 1156 (City of Arcadia I), the court noted the Los Angeles County Department of Public Works has assumed responsibility for the baseline monitoring burden for all municipalities to which the Trash TMDL applies. The Trash TMDL states that "[e]ach of the permittees and copermittees are responsible for monitoring land uses within their jurisdiction," but "monitoring responsibilities may be delegated to a third-party monitoring entity such as the [Department of Public Works]."

[**16] In February and July 2002, the State Board and the Office of Administrative Law, respectively, approved the Trash TMDL. In August 2002 the EPA approved it and announced it supersedes an interim TMDL for trash the EPA adopted in March 2002 as a result of a consent decree in litigation between environmental groups and the EPA. (City of Arcadia I, supra, 265 F. Supp. 2d 1142, 1147.) ⁸

8 In City of Arcadia I, supra, 265 F. Supp. 2d at page 1153, the City of Arcadia and other cities unsuccessfully challenged the EPA's approval of the Trash TMDL on the ground it was unauthorized to do so after adopting its own TMDL. In City of Arcadia II, supra, 411 F.3d at pages 1106-1107, the court affirmed the lower court's dismissal of the case.

III

Procedural History

The Cities are within the Regional Board's jurisdiction and are permittees under the 2001 Municipal NPDES Permit. In July 2002 the Cities filed a petition for writ of mandate and complaint for declaratory [**17] and injunctive relief against the Water Boards. They filed the action in the Los Angeles County Superior Court, but the parties stipulated to its transfer to the San Diego County Superior Court.

The second amended petition alleges numerous grounds on which the Trash TMDL violates the Clean

Water Act or the Porter-Cologne Act, and the court adjudicated some issues in favor of each party. It found the [*1408] Water Boards improperly (1) failed to conduct an analysis of the Los Angeles River's assimilative capacity; (2) failed to conduct a cost-benefit analysis or [**383] consider economic factors under Water Code sections 13267 and 13241; (3) purported to apply the Trash TMDL to the Estuary even though it is not listed on the state's 1998 303(d) list as impaired; and (4) failed to prepare a required EIR or its functional equivalent under CEQA. The court issued a writ of mandate commanding the Water Boards to set aside the amendment to the 1994 Basin Plan and the Trash TMDL to the extent it was based on the above findings and to not take any further steps to implement it. The court denied the Water Boards' motion to vacate the judgment or grant [***18] a new trial, and judgment was entered on December 24, 2003.

The Cities later moved for an order that the prohibitory terms of the writ of mandate and judgment not be stayed on appeal. (Code Civ. Proc., § 1110b.) The court granted the motion, and further ordered that "to preserve the status quo and prevent injustice to [the Cities], the ... implementation schedule and compliance dates, and all milestones contained in the [Trash TMDL] shall be tolled effective December 24, 2003, through and until a final determination has been rendered on the pending appeal." The Water Boards appealed that order, and in accordance with the parties' stipulation we consolidated it with the other appeals.

DISCUSSION

WATER BOARDS' APPEAL

I

Standard of Review

(4) The Water Boards contend a deferential standard of review applies to our review of their action under Code of Civil Procedure section 1085, and the Cities claim an independent standard applies under Code of Civil Procedure section 1094.5. [HN6]Code of Civil Procedure section 1094.5, the administrative mandamus [***19] statute, applies when "the writ is issued for the purpose of inquiring into the validity of any final administrative order or decision made as the result of a proceeding in which by law a hearing is required to be given, evidence is required to be taken, and discretion in the determination of facts is vested in the inferior tribunal." (Code Civ. Proc., § 1094.5, subd. (a).) "Acts of an administrative agency that are quasi-legislative in nature, e.g., establishment of regulations to carry out a statutory policy or direction, are not reviewable by administrative

mandamus." (8 Witkin, Cal. Procedure (4th ed. 1997) Extraordinary Writs, § 268, pp. 1067-1068.) Rather, review of a quasi-legislative action is limited to traditional mandamus. (*Id.* at p. 1068.)

[*1409] (5) The trial court correctly found this proceeding is for traditional mandamus because the Regional Board's adoption and the State Water Board's approval of the Trash TMDL was quasi-legislative. [HN7]Under Code of Civil Procedure section 1085, " 'review is limited to an inquiry into whether the action was arbitrary, capricious or entirely lacking [***20] in evidentiary support, ...' ' ... [and] [t]he petitioner has the burden of proof to show that the decision is unreasonable or invalid as a matter of law. [Citation.] We review the record de novo except where the trial court made foundational factual findings, which are binding on appeal if supported by substantial evidence." (Citizens for Improved Sorrento Access, Inc. v. City of San Diego (2004) 118 Cal.App.4th 808, 814 [13 Cal. Rptr. 3d 259], citations omitted.)

The Cities' reliance on Water Code section 13330 is misplaced. It provides that "[a]ny party aggrieved by a final decision or order of a regional board for which the state board denies review may obtain review of the decision or order of the regional [**384] board in the superior court" (*id.*, § 13330, subd. (b), italics added), and "[e]xcept as otherwise provided herein, Section 1094.5 of the Code of Civil Procedure shall govern proceedings for which petitions are filed pursuant to this section" (*id.*, § 13330, subd. (d)). Given the language italicized *ante*, Water Code section 13330 necessarily applies to an administrative appeal of a quasi-judicial action [***21] under Code of Civil Procedure section 1094.5. Here, an appeal to the State Board was unnecessary because the Trash TMDL was ineffective without its approval. (Wat. Code, § 13245.) Indeed, the State Board notified the Cities in March 2001 that it "lacks statutory authority to accept petitions for review of water quality control plan (basin plan) amendments adopted" by regional boards.

[HN8]As to CEQA issues, the parties agree an abuse of discretion standard applies. (Federation of Hillside & Canyon Assns. v. City of Los Angeles (2004) 126 Cal.App.4th 1180, 1199 [24 Cal. Rptr. 3d 543].) Abuse of discretion "is established if the agency has not proceeded in a manner required by law or if the determination or decision is not supported by substantial evidence." (Pub. Resources Code, § 21168.5.) "Our task on appeal is 'the same as the trial court's.' [Citation.] Thus, we conduct our review independent of the trial court's findings." (Quail Botanical Gardens Foundation, Inc. v. City of Encinitas (1994) 29 Cal.App.4th 1597, 1602, fn. 3 [35 Cal. Rptr. 2d 470].)

II

Assimilative Capacity Study

The trial court [***22] invalidated the Trash TMDL based in part on the Cities' argument an "assimilative capacity study" is a required element of a TMDL and none was performed here. In its statement of decision, the court [*1410] explained "[i]t is unreasonable to conclude that the beneficial uses of the [Los Angeles] River could not be maintained with some 'target' other than zero. Of course, it is possible the River would not support a greater target, however, without a study it is yet undetermined."

The Water Boards contend the trial court erred by substituting its own judgment for that of the Water Boards on the issue of whether the adoption of the Trash TMDL should have been preceded by a scientific study of the assimilative capacity of the Los Angeles River. They assert the matter was best suited for their determination rather than the court's and the evidence adequately supports their decision. We agree with the Water Boards.

During the notice and comment period, the Regional Board received numerous complaints that a zero Trash TMDL is infeasible, or at least unwarranted without a scientific assimilative capacity study, or load capacity study, showing a zero limit is the only means of protecting beneficial [***23] uses. For instance, the City of Los Angeles worried that "[i]f there's one gum wrapper in the [Los Angeles] River, you can get sued."

The Regional Board responded to one complaint as follows: "For more typical pollutants, the loading parameters are flow and pollutant concentration. For this pollutant [trash], flow does not serve to dilute the pollutant, but merely serves as a transport mechanism. Therefore, the typical loading calculation does not apply to trash." The Regional Board took the position that since littering is unlawful, a target of zero trash in the Los Angeles River is the only defensible position. It also explained that its staff "found no study to document that there is an acceptable level of trash that will cause no harm to aquatic life," and absent such a study it was compelled to adopt a zero target.

[**385] At a Regional Board hearing, Dr. Mark Gold, executive director of Heal the Bay, testified he was unaware of any assimilative capacity study having been performed anywhere on trash. He explained, "Basically it's a physical object. It's trash. It's not something that breaks down and becomes part of the environment in many, many cases. And so honestly, it probably [***24] won't reach any sort of threshold of being a scientific study of any value."

At a State Board hearing Dave Smith, an EPA team leader working with the Regional Board on the trash

issue, testified "it would be difficult to design [an assimilative capacity] study and come up with firm answers." He also explained that both the Regional Board and the State Board "have conducted pretty diligent efforts to find research studies, reports, that look at the affects of trash on the aquatic environment," and neither they nor the EPA could find any literature to support a target of more than zero trash.

[*1411] Alex Helperin, of the Natural Resources Defense Council, testified at a Regional Board hearing that "[e]ven small quantities [of trash] can maim and kill wildlife, [which] becomes entangled in it or ingest[s] it. [Trash] [c]an obstruct and repel boaters and contract recreators and compromise the aesthetic quality that's essential to the recognized aspect of non-contact recreation beneficial use for the Los Angeles River."

The administrative record includes numerous photographs of copious amounts of trash deposited in the Los Angeles River watershed through storm water drains. Dennis [***25] Dickerson, the executive officer of the Regional Board, testified he took photographs of trash in the Long Beach area shortly after storms, and among them are photographs of "water birds foraging among the trash." One photograph is of a bird with a cigarette butt in its mouth and another is of a fish trapped in a plastic six-ring can holder.

In arguing an assimilative capacity study is required *before* adopting a TMDL, the Cities rely principally on an EPA document issued January 7, 2000, entitled "Guidance for Developing TMDLs in California" (2000 EPA Guidance). It states: "The TMDL document must describe the relationship between numeric target(s) and identified pollutant sources, and estimate total assimilative capacity (loading capacity) of the water[]body for the pollutant of concern [¶] The loading capacity is the critical quantitative link between the applicable water quality standards (as interpreted through numeric targets) and the TMDL. Thus, a maximum allowable pollutant load must be estimated to address the site-specific nature of the impairment. ... [¶] The loading capacity section must discuss the methods and data used to estimate loading capacity. [***26] A range of methods can be used" (Boldface omitted.)

The 2000 EPA Guidance, however, contains the following disclaimer: "[I]t does not impose legally-binding requirements on the EPA, the State of California, or the regulated community, and may not apply to a particular situation based upon the circumstances. EPA and State decision makers retain the discretion to adopt approaches on a case-by-case basis that differ from this guidance where appropriate and consistent with the requirements of section 303(d) [of the Clean Water Act] and EPA's regulations."

(6) Smith, of the EPA, testified at a Regional Board hearing that he wrote the 2000 EPA Guidance and the Trash TMDL "fully complies with the Clean Water Act, its regulations and [the 2000 EPA Guidance]." Smith explained the "TMDL process specifically contemplates making decisions under uncertainty," and "[i]t does so by providing that a margin of safety has to be [*386] incorporated in every TMDL to account for the uncertainty in the analysis." Smith said states are required "to move forward to make TMDL decisions [*1412] based on available information and data, not to wait again and again and again for better information to come forward." [***27] [HN9] Generally, " 'considerable weight should be accorded to an executive department's construction of a statutory scheme it is entrusted to administer.' " (*United States v. Mead Corp.* (2001) 533 U.S. 218, 227-228 [150 L. Ed. 2d 292, 121 S. Ct. 2164].)

In *Natural Resources Defense Council v. Muszynski* (2d Cir. 2001) 268 F.3d 91 (*Muszynski*), the plaintiff asked the court to invalidate a TMDL that the EPA had approved to control phosphorus pollution in drinking water, on the ground a margin of safety of only 10 percent was insufficient to account for uncertainty regarding the effects of phosphorus on water quality. The plaintiff argued "that no scientific or mathematical basis prescribed this percentage as opposed to any other." (*Id.* at p. 102.) The EPA countered that "because 'there is no "standard" or guideline for choosing a specific margin of safety, best professional judgment and the available information are used in setting [it].' " (*Ibid.*) The *Muszynski* court agreed with the EPA, explaining: "While the [margin of safety] may ... be set with an uncomfortable degree of discretion, requiring that EPA [or authorized regional board] show a rigorous [***28] scientific methodology dictates one course of action as opposed to another and would effectively prevent the agency from acting in situations where action is required in the face of a clear public health or environmental danger but the magnitude of that danger cannot be effectively quantified. '[A]s long as Congress delegates power to an agency to regulate on the borders of the unknown, courts cannot interfere with reasonable interpretations of equivocal evidence.' [Citation.] ... [S]imply to reject EPA's efforts to implement the [Clean Water Act] because it must respond to real water quality problems without the guidance of a rigorously precise methodology would essentially nullify the exercise of agency discretion in the form of 'best professional judgment.' " (*Muszynski, supra*, 268 F.3d at pp. 102-103, italics added.)

Further, in *Muszynski, supra*, 268 F.3d 91, 103, the court noted "that approval of the Phase I [margin of safety] was based, in part, on the limited information available. The EPA approval contemplates revision of the [margin of safety] as more information becomes

available: 'As additional reservoir data and loading [***29] data become available, Phase I model assumptions are being reexamined under Phase II.' "

We conclude federal law does not require the Regional Board to conduct an assimilative capacity study before adopting the Trash TMDL. Moreover, the evidence amply shows that because of the nature of trash, including Styrofoam containers and other materials that are undiluted by water, in contrast to chemical pollutants, and the dangers to wildlife of even small amounts of trash, an assimilative capacity study would be difficult to conduct and of little value at the outset. For instance, given the ill effects of trash in a [*1413] water body it is unlikely such a study would determine the Los Angeles River may be loaded with a certain percentage of trash without affecting beneficial uses, particularly since a TMDL must include a margin of safety that "takes into account any lack of knowledge concerning the relationship between effluent limitations and water quality." (33 U.S.C. § 1313(d)(1)(C).) In any event, the Trash TMDL requires the Regional Board to reconsider the zero trash target after a 50 percent reduction of trash is achieved, and no party suggests a trash reduction of [***30] at least 50 percent is unwarranted or unattainable. Because of [***387] this escape hatch, compliance with a zero trash target may never actually be mandated. The Water Boards' decision not to conduct or require an assimilative capacity study is within their expertise, not the court's, and we defer to them on the issue.

III

Cost-Benefit Analysis and Economic Considerations

The Water Boards next contend the court erred by finding the Trash TMDL is invalid because they violated state law by not conducting a cost-benefit analysis (*Wat. Code, § 13267*) or considering economic factors (*id.* at § 13241) before adopting and approving it.

A

Water Code Section 13267

[HN10] A regional board is authorized to investigate the quality of waters in its region (*Wat. Code, § 13267, subd. (a)*), and when it requires a polluter to furnish "technical or monitoring program reports," the "burden, including costs, of these reports shall bear a reasonable relationship to the need for the report[s] and the benefits to be obtained from the reports." (*Wat. Code, § 13267, subd. (b)(1)*.) The court [***31] found the Regional Board adopted the Trash TMDL under the authority of *Water Code section 13267*, as the document mentions the statute several times and "expressly requires monitoring

plans and submission of data to establish baselines for trash discharges."

The Water Boards persuasively contend Water Code section 13267 is inapplicable, and references to that statute in the Trash TMDL are to contemplated future orders. For instance, the Trash TMDL states "[b]aseline monitoring will be required via [Water Code] Section 13267," and the submission of baseline monitoring plans will be due 30 days after receipt of the Executive Officer's request as authorized by [Water Code] Section 13267." [*1414] It also states that "future storm water permits will be modified to incorporate the Waste Load Allocations and to address monitoring and implementation of this [Trash] TMDL."

Further, the Trash TMDL states "the permittee [under the Municipal NPDES permit] will submit a monitoring plan with the proposed monitoring sites and at least two alternative monitoring locations for each site. The plan must [***32] include maps of the drainage and storm drain data for each proposed and alternate monitoring location. The monitoring plan(s) will be submitted to the Regional Board within 30 days after receipt of the Executive Officer's letter requesting such a plan. Such a request is authorized pursuant to [Water Code] section 13267. ... The Regional Board's Executive Officer will have full authority to review the monitoring plan(s), to modify the plan, to select among the alternate monitoring sites, and to approve or disapprove the plan(s)."

Additionally, the Water Boards submit that the December 21, 2001 order the Regional Board issued under Water Code section 13267 to the County of Los Angeles and copermitees under the Municipal NPDES permit regarding baseline monitoring and reporting would have been "useless and unnecessary" had the Trash TMDL itself required monitoring and reporting, and since there was no appeal of the December 21 order to the State Board within 30 days (Wat. Code, § 13320, subd. (a)) the cost-benefit analysis issue is not subject to appellate review. We note that the December 21 order, but not the Trash TMDL, warns [***33] that under Water Code section 13268 the "failure to conduct the required monitoring and/or to provide the required information in a timely manner [***388] may result in civil liability imposed by the Regional Board in an amount not to exceed ... \$ 1000."

(7) [HN11]"Our primary aim in construing any law is to determine the legislative intent. [Citation.] In doing so we look first to the words of the statute, giving them their usual and ordinary meaning." (Committee of Seven Thousand v. Superior Court (1988) 45 Cal.3d 491, 501 [247 Cal. Rptr. 362, 754 P.2d 708].) We agree that by its plain terms Water Code section 13267 is inapplicable at

the TMDL stage, and thus the court erred by invalidating the Trash TMDL on this ground. The monitoring and reports are required by the December 21, 2001 order, not the Trash TMDL, and the reduction of trash will be implemented by other NPDES permits. "TMDLs are primarily informational tools that allow the states to proceed from the identification of waters requiring additional planning to the required plans." (Pronsolino v. Nastro (9th Cir. 2002) 291 F.3d 1123, 1129.) (8) [HN12]"A TMDL does not, by itself, [***34] prohibit any conduct or require any actions. Instead, each TMDL represents a goal that may be implemented by adjusting pollutant discharge requirements in individual NPDES permits or establishing nonpoint source [*1415] controls." (City of Arcadia I, supra, 265 F. Supp. 2d at p. 1144.) A "TMDL forms the basis for further administrative actions that may require or prohibit conduct with respect to particularized pollutant discharges and water[]bodies." (Id. at p. 1145.)

B

Water Code Section 13241

[HN13]Water Code section 13241 provides that "[e]ach regional board shall establish such water quality objectives in water quality control plans as in its judgment will ensure the reasonable protection of beneficial uses and the prevention of nuisance." In establishing water quality objectives a regional board is required to consider several factors, including "[e]conomic considerations." (Wat. Code, § 13241, subd. (d).)

The Water Boards contend Water Code section 13241 is inapplicable because the Trash TMDL does not establish water quality objectives, but [***35] merely implements, under Water Code section 13242, the existing narrative water quality objectives in the 1994 Basin Plan. It provides that waters shall not contain floating materials, including solids, or suspended or settleable materials in concentrations that adversely affect beneficial uses. The Cities counter that the Trash TMDL effectively establishes new water quality objectives, because when the 1994 Basin Plan was adopted a TMDL for trash was not contemplated and thus economic considerations of such a TMDL were not considered. Further, the Trash TMDL imposes for the first time a numeric limit for trash and significantly increases the costs of compliance.

We need not, however, decide whether the Trash TMDL adopts new or revised water quality objectives within the meaning of Water Code section 13241, because even if the statute is applicable, the Water Boards sufficiently complied with it. Water Code section 13241, subdivision (d) does not define "economic considerations" or specify a particular manner of com-

pliance, and thus, as the Water Boards assert, the matter is within a regional [**389] board's discretion. [***36] It appears there is no reported opinion analyzing the "economic considerations" phrase of this statute. In *City of Burbank, supra*, 35 Cal.4th at page 625, the court, without discussion, concluded that in adopting Water Code section 13241 the Legislature intended "that a regional board consider the *cost of compliance* [with numeric pollutant restrictions] when setting effluent limitations in a wastewater discharge permit." (Italics added.)

9 For the same reason, we are not required to reach the Water Boards' assertion that to any extent the California Supreme Court's recent opinion in *City of Burbank, supra*, 35 Cal.4th 613, applies to a TMDL, it precludes them from considering economic factors in establishing the Trash TMDL.

[*1416] The Trash TMDL discusses the costs of gathering and disposing of trash at the mouth of the Los Angeles River watershed during the rainy seasons between 1995 and 1999. It also states: "Cleaning up the river, its tributaries and [***37] the beaches is a costly endeavor. The Los Angeles County Department of Public Works contracts out the cleaning of over 75,000 catchments (catch basins) for a total cost of slightly over \$ 1 million per year, billed to 42 municipalities. ... [¶] Over 4,000 tons of trash are collected from Los Angeles County beaches annually, at a cost of \$ 3.6 million to Santa Monica Bay communities in fiscal years 1988-1989 alone. In 1994 the annual cost to clean the 31 miles of beaches (19 beaches) along Los Angeles County was \$ 4,157,388."

The Trash TMDL also discusses the costs of various types of compliance measures, and explains the "cost of implementing this TMDL will range widely, depending on the method that the Permittees select to meet the Waste Load Allocations. Arguably, enforcement of existing litter ordinances could be used to achieve the final Waste Load Allocations at minimal or no additional cost. The most costly approach in the short-term is the installation of full-capture structural treatment devices on all discharges into the river. However, in the long term this approach would result in lower labor costs and may be less expensive than some other approaches."

The Trash TMDL [***38] defines catch basin inserts as "the least expensive structural treatment device in the short term," at a cost of approximately \$ 800 each. It cautions, however, that because catch basin inserts "are not a full capture method, they must be monitored frequently and must be used in conjunction with frequent street sweeping." The Trash TMDL estimates that if the approximately 150,000 catch basins throughout the wa-

tershed were retrofitted with inserts, capital costs would be \$ 120 million over 10 years, maintenance and operation costs would be \$ 330 million over 10 years, and maintenance and operation costs after full implementation would be \$ 60 million per year.

Further, the Trash TMDL discusses the full capture vortex separation system (VSS), which "diverts the incoming flow of storm[]water and pollutants into a pollutant separation and containment chamber. Solids within the separation chamber are kept in continuous motion, and are prevented from blocking the screen so that water can pass through the screen and flow downstream. This is a permanent device that can be retrofitted for oil separation as well. Studies have shown that VSS [units] remove virtually all of the trash contained [***39] in treated water. The cost of installing a VSS is assumed to be high, so limited funds will place a cap on the number of units which can be installed during any single fiscal year."

[*1417] The Trash TMDL estimates the retrofitting of the entire Los Angeles River watershed with low capacity VSS units would be \$ 945 million in capital costs and \$ 813 million in operation and maintenance costs over 10 years, and \$ 148 million in annual operation and maintenance costs after full implementation. The installation of large capacity VSS units would run [***390] approximately \$ 332 million in capital costs and \$ 41 million in operation and maintenance costs over 10 years, and \$ 7.4 million per year in operation and maintenance costs after full implementation. The yearly cost of servicing one VSS unit is estimated to be \$ 2,000. The Trash TMDL explains that "outfitting a large drainage with a number of large VSS [units] may be less costly than using a larger number of small VSS [units]. Maintenance costs decrease dramatically as the size of the system increases." The Trash TMDL also contains a cost comparison of catch basin inserts and low capacity and large capacity VSS units.

Additionally, the Trash [***40] TMDL estimates the costs for end-of-pipe nets at between \$ 10,000 and \$ 80,000, depending on the length of the pipe network. It explains that " '[r]elease nets' are a relatively economical way to monitor trash loads from municipal drainage systems. However, in general they can only be used to monitor or intercept trash at the end of a pipe and are considered to be partial capture systems, as nets are usually sized at a 1/2&inches; to 1&inches; mesh."

The Cities assert that "a 'consideration' of economics should have included a discussion of the economic *impacts* associated with the vortex separation systems. Alternatively, the Water Boards could have analyzed other methods of compliance, such as a series of [best management practices], including increased street sweeping,

catch basin inserts, release nets, or some other combination of [best management practices] that should have been evaluated for purposes of allowing the municipalities to be in deemed compliance with the zero [Trash] TMDL." (Italics added.) As stated, though, the Trash TMDL does include the estimated costs of several types of compliance methods and a cost comparison of capital costs and costs of operation and maintenance. [***41] The Cities cite no authority for the proposition that a consideration of economic factors under Water Code section 13241 must include an analysis of every conceivable compliance method or combinations thereof or the fiscal impacts on permittees.

Given the lack of any definition for "economic considerations" as used in Water Code section 13241, and our deference to the Water Boards' expertise, we conclude the Trash TMDL's discussion of compliance costs is adequate [*1418] and does not fulfill the arbitrary or capricious standard. Accordingly, the Trash TMDL is not invalid on this ground.¹⁰

10 The Cities also assert that under federal law an economic analysis is a prerequisite to the adoption of a TMDL. They rely on 40 Code of Federal Regulations, part 130.6(c)(4), but it pertains to nonpoint sources of pollution that need not be addressed in a TMDL, as discussed further *post*. The portion of the regulation covering TMDL's does not mention economics (*id.*, § 130.6(c)(1)). Parts 130.6(5) and (6) of 40 Code of Federal Regulations discuss economics, but in the context of the area wide planning process under section 208(b)(2) of the Clean Water Act (33 U.S.C. § 1288(b)(2)), which is inapplicable here. According to the Water Boards, the Southern California Association of Governments is the designated area-wide planning agency.

[***42] IV

Los Angeles River Estuary

Additionally, the Water Boards challenge the court's finding they abused their discretion by attempting to include the Estuary in the Trash TMDL, as the Estuary is not on the state's 1998 303(d) list of impaired waters. The Water Boards contend a water body's formal listing on the state's 303(d) list is not a prerequisite to formulating a TMDL for it. Rather, an agency may simultaneously submit to the EPA the *identification* of a [***391] water body as impaired and a corresponding TMDL.

[HN14]The Clean Water Act provides: "Each state shall identify those waters within its boundaries for which the effluent limitations ... are not stringent enough to implement any water quality standards applicable to

such waters. The State shall establish a priority ranking for such waters, taking into account the severity of the pollution and the uses to be made of such waters." (33 U.S.C. § 1313(d)(1)(A).) Further, it provides that "[e]ach state shall establish for the waters identified in paragraph (1)(A) of this subsection, and in accordance with the priority ranking, the total maximum daily load" (*Id.* at § 1313(d)(1)(C).) [***43] These provisions do not prohibit a regional board from identifying a water body and establishing a TMDL for it at essentially the same time, or indicate that formal designation on a state's 303(d) list is a prerequisite to a TMDL.

Further, 33 United States Code section 1313(d)(2) provides: "Each State shall submit to the [EPA] Administrator from time to time, ... for his [or her] approval the waters identified *and* the loads established under paragraphs (1)(A) [and] ... (1)(C) ... of this subsection. The [EPA] Administrator shall either approve or disapprove such identification *and* load not later than thirty days after the date of submission." (Italics added.) This clarifies that a regional board may simultaneously identify an impaired water body and establish a TMDL for it.

[*1419] In *San Francisco BayKeeper v. Whitman*, *supra*, 297 F.3d 877, 884-885, the court held an agency has no *duty* to submit a TMDL at the same time it identifies an impaired water body, noting the development of a TMDL "to correct the pollution is obviously a more intensive and time-consuming project than simply identifying the polluted waters, as the [***44] EPA has indicated." (*Id.* at p. 885.) The Water Boards assert the case does not deprive an agency from exercising its *discretion* to simultaneously submit to the EPA the identification of an impaired water body and a TMDL for it. Given the plain language of 33 United States Code section 1313(d)(2), we agree. Moreover, [HN15]"[s]tates remain at the front line in combating pollution" (*City of Arcadia II*, *supra*, 411 F.3d at p. 1106), and "[s]o long as the [s]tate does not attempt to adopt more *lenient* pollution control measures than those already in place under the [Clean Water] Act, [it] does not prohibit state action." (*Id.* at p. 1107.)

Alternatively, the Cities complain the Regional Board did not sufficiently identify the Estuary as being impaired and included in the Trash TMDL until after its adoption and approval by the State Board and Office of Administrative Law and the completion of all public hearings. On July 29, 2002, the Regional Board sent the EPA a memorandum "to provide clarification on specific aspects" of the Trash TMDL. It stated that a "TMDL was established for the reaches of the Los [***45] Angeles River, tributaries and lakes listed on the [state's] 1998 303(d) list," and "[i]n addition, a TMDL was established for the Los Angeles River [E]stuary in the City of Long Beach. As described on page 12, paragraph 2 of the

[staff] report, staff found that the impairment in the [E]stuary due to trash is 'even more acute in Long Beach where debris flushed down by the upper reaches collects.' [¶] The impairment in the [E]stuary was well documented during TMDL development," and it "would have been included in the 1998 303(d) list if the attached photographic evidence had been available at the time of the listing."

The Trash TMDL lists the reaches of the Los Angeles River "that are impaired by trash, and listed on the [state's] 303(d) [***392] list." The list does not include the Estuary. The Water Boards assert that even so, it was always obvious the Estuary is impaired and included in the Trash TMDL. The Trash TMDL states it is "for the Los Angeles River Watershed," and "watershed" is defined as "a region or area bounded peripherally by a divide and draining ultimately to a particular watercourse or body of water." (Merriam-Webster's Collegiate Dict. (10th ed. 1996) p. [***46] 1336.) "Estuary" is defined as "a water passage where the tide meets a river current," especially "an arm of the sea at the lower end of a river." (*Id.* at p. 397.)

The Trash TMDL describes the watershed as beginning at the "western end of the San Fernando Valley to the Queensway Bay and Pacific Ocean at Long Beach," and it also states the watershed continues from "Willow Street all [*1420] the way through the [E]stuary." An amici curiae brief by Santa Monica BayKeeper, Inc., Heal the Bay, Inc., and Natural Resources Defense Council, Inc. (collectively BayKeeper), asserts Queensway Bay is the site of the Estuary, and no party has challenged the assertion. Further, the Trash TMDL lists and discusses the beneficial uses of the Estuary, including habitat for many species of birds, some endangered, and fish. It also states beneficial uses "are impaired by large accumulations of suspended and settled debris throughout the river system," and in particular "estuarine habitat" is impaired. Further, the administrative record contains several pictures of trash deposited in the Estuary during high flows, depicting "the variety of ways through which trash ... becomes an integral part of wildlife, [***47] affecting all plant and animal communities in the process."

The Trash TMDL's identification of the Estuary as impaired could have been clearer, but we conclude it was sufficient to put all affected parties on notice, and does not meet the arbitrary-and-capricious standard. Further, although the identification of impaired water bodies requires a priority ranking (33 U.S.C. § 1313(d)(2)), and the Trash TMDL does not prioritize the Estuary's need for a TMDL, we agree with amici curiae BayKeeper that any error in the Water Boards' procedure was not prejudicial because the Trash TMDL shows amelioration of the trash problem in the entire Los Angeles River wa-

tershed is highly important, and it is unlikely the Water Boards would single out the Estuary for lower priority or that inclusion of the Estuary would disturb their existing priorities.

V

CEQA

(9) The Water Boards challenge the sufficiency of the evidence to support the trial court's finding that the amendment adding the Trash TMDL to the 1994 Basin Plan does not comport with CEQA. The court found the Regional Board's environmental checklist was deficient and there is sufficient evidence of a fair argument that [***48] the project may have a significant effect on the environment, thus necessitating an EIR or its functional equivalent. We conclude the court was correct.

A

General Legal Principles

(10) [HN16]"CEQA compels government first to identify the environmental effects of projects, and then to mitigate those adverse effects through the [*1421] imposition of feasible mitigation measures or through the selection of feasible alternatives." (*Sierra Club v. State Bd. of Forestry* (1994) 7 Cal.4th 1215, 1233 [32 Cal. Rptr. 2d 19, 876 P.2d 505].) CEQA mandates that public agencies refrain from approving projects with significant environmental effects if [***393] there are feasible alternatives or mitigation measures that can substantially lessen or avoid those effects. (*Mountain Lion Foundation v. Fish & Game Com.* (1997) 16 Cal.4th 105, 134 [65 Cal. Rptr. 2d 580, 939 P.2d 1280].)

[HN17]CEQA is implemented through initial studies, negative declarations and EIR's. (*Sierra Club v. State Bd. of Forestry, supra*, 7 Cal.4th at p. 1229.) "CEQA requires a governmental agency [to] prepare an [EIR] whenever it considers approval of a proposed project that 'may have a significant effect on the environment.'" (*Quail Botanical Gardens Foundation, Inc. v. City of Encinitas, supra*, 29 Cal.App.4th at p. 1601.) [***49] "If there is no substantial evidence a project 'may have a significant effect on the environment' or the initial study identifies potential significant effects, but provides for mitigation revisions which make such effects insignificant, a public agency must adopt a negative declaration to such effect and, as a result, no EIR is required. [Citations.] However, the Supreme Court has recognized that CEQA requires the preparation of an EIR 'whenever it can be fairly argued on the basis of substantial evidence that the project may have significant environmental impact.' [Citations.] Thus, if substantial evidence in the record supports a 'fair argument' significant

impacts or effects may occur, an EIR is required and a negative declaration cannot be certified." (*Id.* at pp. 1601-1602.)

[HN18]" Significant effect on the environment? means a substantial, or potentially substantial, adverse change in any of the physical conditions within the area affected by the project including land, air, water, minerals, flora, fauna, ambient noise, and objects of historic or aesthetic significance. An economic or social change by itself shall not be considered a significant effect on the [***50] environment. A social or economic change related to a physical change may be considered in determining whether the physical change is significant." (Cal. Code Regs., tit. 14, § 15382.)

B

Certified Regulatory Program

[HN19](11) "State regulatory programs that meet certain environmental standards and are certified by the Secretary of the California Resources Agency are exempt from CEQA's requirements for preparation of EIRs, negative declarations, and initial studies. [Citations.] Environmental review documents prepared by certified programs may be used instead of environmental documents that CEQA would otherwise require. [Citations.] Certified regulatory [*1422] programs remain subject, however, to other CEQA requirements." (2 Kostka & Zischke, Practice Under the Cal. Environmental Quality Act (Cont.Ed.Bar 2005) § 21.2, p. 1076; see Pub. Resources Code, § 21080.5.) Documents prepared by certified programs are considered the "functional equivalent" of documents CEQA would otherwise require. (Mountain Lion Foundation v. Fish & Game Com., supra, 16 Cal.4th at p. 113; 2 Kostka & Zischke, Practice Under the Cal. Environmental [***51] Quality Act, *supra*, § 21.10, p. 1086 ["the documentation required of a certified program essentially duplicates" that required for an EIR or negative declaration].)

An "agency seeking certification must adopt regulations requiring that final action on the proposed activity include written responses to significant environmental points raised during the decisionmaking process. [Citation.] The agency must also implement guidelines for evaluating the proposed activity consistently with the [***394] environmental protection purposes of the regulatory program. [Citation.] The document generated pursuant to the agency's regulatory program must include alternatives to the proposed project and mitigation measures to minimize significant adverse environmental effects [citation], and be made available for review by other public agencies and the public [citation]." (Mountain Lion Foundation v. Fish & Game Com., supra, 16 Cal.4th at p. 127.)

[HN20](12) The guidelines for implementation of CEQA (Cal. Code Regs., tit. 14, § 15000 et seq.) do not directly apply to a certified regulatory program's environmental document. (2 Kostka & Zischke, [***52] Practice Under the Cal. Environmental Quality Act, *supra*, § 21.10, p. 1086.) However, "[w]hen conducting its environmental review and preparing its documentation, a certified regulatory program is subject to the broad policy goals and substantive standards of CEQA." (*Ibid.*)

In a certified program, an environmental document used as a substitute for an EIR must include "[a]lternatives to the activity and mitigation measures to avoid or reduce any significant or potentially significant effects that the project might have on the environment," and a document used as a substitute negative declaration must include a "statement that the agency's review of the project showed that the project would not have any significant or potentially significant effects on the environment and therefore no alternatives or mitigation measures are proposed to avoid or reduce any significant effects on the environment. This statement shall be supported by a checklist or other documentation to show the possible effects that the agency examined in reaching this conclusion." (Cal. Code Regs., tit. 14, § 15252, subd. (a)(2)(A), (B).)

The basin planning process of the State Board and regional boards is [***53] a certified regulatory program (Cal. Code Regs., tit. 14, § 15251, subd. (g)), and [*1423] the regulations implementing the program appear in the California Code of Regulations, title 23, sections 3775 to 3782. [HN21]A regional board's submission of a plan for State Board approval must be accompanied by a brief description of the proposed activity, a completed environmental checklist prescribed by the State Board, and a written report addressing reasonable alternatives to the proposed activity and mitigation measures to minimize any significant adverse environmental impacts. (*Id.*, § 3777, subd. (a).)

C

Environmental Documentation

The Regional Board's environmental documentation in lieu of documents CEQA ordinarily requires consists of a checklist and the Trash TMDL. The checklist asked a series of questions regarding whether implementation of the Trash TMDL would cause environmental impacts, to which the Regional Board responded "yes," "maybe" or "no." "Yes" or "maybe" answers required an explanation. The checklist described beneficial impacts pertaining to plant and animal life, water quality [***54] and recreation. The checklist denied the project would have any environmental impact on land, including soil displacement, air, noise, natural resources or traffic, and

thus it included no discussion of those factors. The checklist concluded "the proposed Basin Plan amendment [adding the Trash TMDL] could not have a significant effect on the environment."

The Regional Board obviously intended its documentation to be the functional equivalent of a negative declaration. Nonetheless, on appeal the Water Boards claim for the first time that the Regional [**395] Board's environmental review process is tiered, and its documentation meets the requirements of a first tier EIR under Public Resources Code section 21159. They assert the court's criticism of the checklist is baseless "because it ignores the concept of tiered environmental review and specific provisions for pollution control performance standards."

[HN22] "Tiering" refers 'to the coverage of general matters in broader EIRs (such as on general plans or policy statements) with subsequent narrower EIRs or ultimately *site-specific* EIRs incorporating by reference the general discussions and concentrating solely [***55] on the issues specific to the EIR subsequently prepared. Tiering is appropriate when the sequence of EIRs is: [¶] ... [f]rom a general plan, policy, or program EIR to a ... site-specific EIR.'" (Natural Resources Defense Council, Inc. v. City of Los Angeles (2002) 103 Cal.App.4th 268, 285 [126 Cal. Rptr. 2d 615].) "[C]ourts have allowed first tier EIR's to defer detailed analysis to subsequent project EIR's." (Friends of [*1424] Mammoth v. Town of Mammoth Lakes Redevelopment Agency (2000) 82 Cal.App.4th 511, 532 [98 Cal. Rptr. 2d 334].)

(13) [HN23] Public Resources Code section 21159, which allows expedited environmental review for mandated projects, provides that an agency "shall perform, at the time of the adoption of a rule or regulation requiring the installation of pollution control equipment, or a performance standard or treatment requirement, an environmental analysis of the reasonably foreseeable methods of compliance. ... The environmental analysis shall, at [a] minimum, include, all of the following: [¶] (1) An analysis of the reasonably foreseeable environmental impacts of the methods of compliance. [¶] (2) An analysis of reasonably foreseeable mitigation measures. [***56] [¶] (3) An analysis of reasonably foreseeable alternative means of compliance with the rule or regulation." (Pub. Resources Code, § 21159, subd. (a).) The Water Boards submit they complied with the statute, and the "tier two environmental review is the responsibility of the local agencies who will determine how they intend to comply with the performance standards" of the Trash TMDL.

[HN24] Issues not presented to the trial court are ordinarily waived on appeal. (Rovster v. Montanez (1982) 134 Cal. App. 3d 362, 367 [184 Cal. Rptr. 560].) In any

event, we conclude the checklist and Trash TMDL are insufficient as either the functional equivalent of a negative declaration " or a tiered EIR. Moreover, an EIR is required since the Trash TMDL itself presents substantial evidence of a fair argument that significant environmental impacts may occur. [HN25]" Because a negative declaration ends environmental review, the fair argument test provides a low threshold for requiring an EIR." (Ocean View Estates Homeowners Assn., Inc. v. Montecito Water Dist. (2004) 116 Cal.App.4th 396, 399 [10 Cal. Rptr. 3d 451].)

11 A negative declaration may not be based on a "bare bones" approach in a checklist. (Snarled Traffic Obstructs Progress v. City and County of San Francisco (1999) 74 Cal.App.4th 793, 797, fn. 2 [88 Cal. Rptr. 2d 455], and cases cited therein.) A "certified program's statement of no significant impact must be supported by documentation *showing* the potential environmental impacts that the agency examined in reaching its conclusions," and "[t]his documentation would be similar to an initial study." (2 Kostka & Zischke, Practice Under the Cal. Environmental Quality Act, *supra*, § 21.11, pp. 1088-1089, italics added.) Because we conclude an EIR is required, we need not expand on how the checklist and Trash TMDL fail to satisfy negative declaration requirements or their functional equivalent.

[***57] [**396] The Trash TMDL discusses various compliance methods or combinations thereof that permittees may employ, including the installation of catch basin inserts and VSS units. The Trash TMDL estimates that if the catch basin method is used exclusively, approximately 150,000 catch basins throughout the watershed would require retrofitting at a cost of approximately \$ 120 million. It explains, however, that the "ideal way to capture trash deposited into a storm[] drain system would be to install a VSS unit. This device diverts [*1425] the incoming flow of storm[] water and pollutants into a pollution separation and containment chamber." Only VSS units or similar full-capture devices will be deemed fully compliant with the zero trash target. The Trash TMDL estimates the cost of installing low capacity VSS units would be \$ 945 million and the cost of installing large capacity VSS units would be \$ 332 million.

The checklist and the Trash TMDL, however, ignore the temporary impacts of the construction of these pollution controls, which logically may result in soils disruptions and displacements, an increase in noise levels and changes in traffic circulation. Further, the Trash TMDL explains that since [***58] catch basin inserts "are not a full capture method, they must be monitored frequently

and must be used in conjunction with frequent street sweeping." The checklist and the Trash TMDL also ignore the effects of increased street sweeping on air quality, and possible impacts caused by maintenance of catch basin inserts, VSS units and other compliance methods.

Indeed, the County of Los Angeles wrote to the Regional Board that "cleanout of structural controls, such as [catch basin inserts] and VSSs, naturally will increase existing noise levels due to vehicle and vacuuming noises." The City of Los Angeles advised that the Trash TMDL would result in increased maintenance vehicle traffic and "substantial air emissions or deterioration of ambient air quality," increased noise, increased use of natural resources and adverse impacts on existing transportation systems.

The Water Boards contend those comments are merely "unsubstantiated opinion and speculation by biased project opponents." [HN26] Substantial evidence is not "[a]rument, speculation, unsubstantiated opinion or narrative [or] evidence which is clearly inaccurate or erroneous." (Pub. Resources Code, § 21082.2, subd. (c).) [***59] However, letters and testimony from government officials with personal knowledge of the anticipated effects of a project on their communities "certainly supports a fair argument that the project may have a significant environmental impact." (*City of Livermore v. Local Agency Formation Com.* (1986) 184 Cal. App. 3d 531, 542 [230 Cal. Rptr. 867].) Again, however, the Trash TMDL itself satisfies the fair argument criterion.

Even if the Water Boards had relied on Public Resources Code section 21159 at the trial court, the environmental documents do not meet its minimum requirements. Neither the checklist nor the Trash TMDL includes an analysis of the reasonably foreseeable impacts of construction and maintenance of pollution control devices or mitigation measures, and in fact the Water Boards develop no argument as to how they ostensibly complied with the statute. While we agree a tiered environmental analysis is appropriate here, the Regional Board did not prepare a first-level EIR or its functional equivalent. We reject the Water Boards' argument the Regional Board did all it [*1426] could because there "is no way to examine project level [***60] impacts that are entirely dependent upon the speculative possibilities of how subsequent [***397] decision[]makers may choose to comply" with the Trash TMDL. Tier two project-specific EIR's would be more detailed under Public Resources Code section 21159.2, but the Trash TMDL sets forth various compliance methods, the general impacts of which are reasonably foreseeable but not discussed.

As a matter of policy, in CEQA cases a public agency must explain the reasons for its actions to afford

the public and other agencies a meaningful opportunity to participate in the environmental review process, and to hold it accountable for its actions. (*Federation of Hillside & Canyon Assns. v. City of Los Angeles, supra*, 126 Cal.App.4th 1180, 1198.) The Water Boards' CEQA documentation is inadequate, and remand is necessary for the preparation of an EIR or tiered EIR, or functional equivalent, as substantial evidence raises a fair argument the Trash TMDL may have significant impacts on the environment. The court correctly invalidated the Trash TMDL on CEQA grounds.¹²

12 The Water Boards also contend the trial court erred by staying the implementation schedule for the Trash TMDL pending this appeal. The matter is moot given our holding on the CEQA issue.

[***61] VI

Declaratory Relief

In its statement of decision, the trial court explained the Cities "contend [the Water Boards] improperly attempted to control the watershed including the 'entire 584 square miles' of incorporated and unincorporated areas of the County [of Los Angeles], and nowhere in the [Trash] TMDL or the [1994] Basin Plan Amendment did [they] assert that the numeric Waste Load Allocations ... are to apply to the entire 584 square miles of watershed." The court, however, explained the Water Boards "concede the [Trash] TMDL only applies to navigable waters by asserting [they] didn't intend to control non-navigable waters," and it found "the parties are in agreement that the trash load allocations apply to the portion of the subject watershed as defined on pages 3575 and 3584 of the Administrative Record [pages of the Trash TMDL] and the Waste Load Allocations do not apply to non-waters."

The statement of decision nonetheless states the court granted the Cities' "relief as requested" as to "regulation of non-waters." In their third cause of action, the Cities sought a judicial declaration that the amendment to the 1994 Basin Plan and the Trash [***62] TMDL are invalid because they violate federal and state law. The judgment declared unenforceable a July 29, 2002, letter from [*1427] the Regional Board to the EPA that stated the "Waste Load Allocations apply to the entire urbanized portion of the watershed The urbanized portion of the watershed was calculated to encompass 584 square miles of the total watershed."

(14) [HN27]"The fundamental basis of declaratory relief is the existence of an *actual, present controversy*." (5 Witkin, Cal. Procedure, *supra*, Pleadings, § 817, p. 273.) Because the parties agreed during this proceeding there was no *present* controversy, the judgment should

not have included declaratory relief on the nonwaters issue.

CITIES' APPEAL

I

Concepts of "Maximum Extent Practicable" and "Best Management Practices"

(15) The Cities contend a zero target for trash in the Los Angeles River is unattainable, [**398] and thus the Trash TMDL violates the law by not deeming compliance through the federal "maximum extent practicable" and "best management practices" standards, which are less stringent than the numeric target of zero. The Cities rely on [HN28] 33 United States Code section 1342(p)(3)(B)(iii), [***63] under which an NPDES permit for a municipal discharge into a storm drain "shall require controls to reduce the discharge of pollutants to the *maximum extent practicable*, including management practices, control techniques and system, design and engineering methods, and such other provisions as the [EPA] Administrator or the State determines appropriate for the control of such pollutants." (Italics added.)¹³ "Best management practices" are generally pollution control measures set forth in NPDES permits. (*BIA, supra*, 124 Cal.App.4th at p. 877.)

13 The Clean Water Act and applicable regulations do not define the maximum extent practicable standard. (*Building Industry Assn. of San Diego County v. State Water Resources Control Bd.* (2004) 124 Cal.App.4th 866, 889 [22 Cal. Rptr. 3d 128] (*BIA*).) In *BIA*, the NPDES permit at issue defined the standard as "a highly flexible concept that depends on balancing numerous factors." (*Ibid.*)

The Cities assert that "as the [r]ecord [***64] reflects, compliance with the 'zero' [Trash] TMDL ... is impossible," and the Water Boards "themselves recognize that 'zero' is an impossible standard to meet." Contrary to the Cities' suggestion, the Water Boards made no implied finding or concession of impossibility. Rather, the record shows that members of the Water Boards questioned whether a zero trash target is actually attainable. A zero limit on [*1428] trash within the meaning of the Trash TMDL *is* attainable because there are methods of deemed compliance with the limit. The record does not show the limit is unattainable, and the burden was on the Cities as opponents of the Trash TMDL to establish impossibility. Further, the impossibility issue is not germane at this juncture, as the matter is at the planning stage with an interim goal of a 50 percent reduction in

trash, a goal everyone agrees is necessary and achievable.

In any event, the trial court found 33 United States Code section 1342(p)(3)(B)(iii) inapplicable to the adoption of a TMDL. The court also found state and federal laws authorize regional boards to "use water quality, and not be limited to practicability as the guiding principle for [***65] developing limits [in a TMDL] on pollution." Further, the court noted the Cities presented no authority for their proposition the Regional Board is required to adopt a storm water TMDL that is achievable.

(16) We agree with the court's assessment. [HN29]The statute applicable to establishing a TMDL, 33 United States Code section 1313(d)(1)(C), does not suggest that practicality is a consideration. To the contrary, a regional board is required to establish a TMDL "at a level necessary to implement the applicable water quality standards with seasonal variations and a margin of safety." (33 U.S.C. § 1313(d)(1)(C).) The NPDES permit provision, 33 United States Code 1342(p)(3)(B), is inapplicable because, again, we are only considering the propriety of the Trash TMDL, a precursor to NPDES permits implementing it. Under the Trash TMDL, the numeric target will be reconsidered after several years when a reduction in trash of 50 percent is achieved, and thus it is presently unknown whether compliance with a trash limit of zero will ever actually be mandated.

(17) To bolster their position the Cities rely on 33 United States Code section 1329(a)(1)(C). [***66] [**399] It provides, however, that in a state's assessment report for a *nonpoint* source management program, the state must "describe[] the process, including intergovernmental coordination and public participation, for identifying best management practices and measures to control each category and subcategory of nonpoint sources and, where appropriate, particular nonpoint sources identified under subparagraph (B) and to reduce, to the maximum extent practicable, the level of pollution resulting from such category, subcategory, or source." (*Ibid.*) In *BIA, supra*, 124 Cal.App.4th at page 887, we rejected the argument the statute shows Congress intended to apply a maximum extent practicable standard to point source discharges as well as nonpoint discharges. The Cities say they disagree with *BIA*, but they develop no argument revealing any flaw in the opinion. [HN30]"[P]arties are required [*1429] to include argument and citation to authority in their briefs, and the absence of these necessary elements allows this court to treat appellant's ... issue as waived." (*Interinsurance Exchange v. Collins* (1994) 30 Cal.App.4th 1445, 1448 [37 Cal. Rptr. 2d 126].)

The Cities' reliance [***67] on *Defenders of Wildlife v. Browner* (9th Cir. 1999) 191 F.3d 1159, for the

proposition that municipalities, unlike private companies, may not be required to strictly comply with numeric discharge limits is likewise misplaced. *Defenders of Wildlife v. Browner* involves a challenge to an NPDES permit, not the adoption of a TMDL. Further, the court there rejected the argument that "the EPA [or authorized regional or state board] may not, under the [Clean Water Act], require strict compliance with state water-quality standards, through numerical limits or otherwise." (*Id.* at p. 1166.) The court explained: "Although Congress did not require municipal storm-sewer discharges to comply strictly with [numerical effluent limitations], [section] 1342(p)(3)(B)(iii) [of United States Code, title 33] states that '[p]ermits for discharges from municipal storm sewers ... shall require ... such other provisions as the [EPA] Administrator ... determines appropriate for the control of such pollutants.' (Emphasis added.) That provision gives the EPA discretion to determine what pollution controls are appropriate. ... [¶] Under that [***68] discretionary provision, the EPA has the authority to determine that ensuring strict compliance with state water-quality standards is necessary to control pollutants. The EPA also has the authority to require less than strict compliance with state water-quality standards. ... Under 33 [United States Code section] 1342(p)(3)(B)(iii), the EPA's choice to include either management practices or numeric limitations in the permits was within its discretion." (*Id.* at pp. 1166-1167.)

In *BIA*, this court similarly held that [HN31]33 United States Code section 1342(p)(3)(B)(iii) does not divest a regional board's discretion to impose an NPDES permit condition requiring compliance with state water quality standards more stringent than the maximum-extent-practicable standard. (*BIA, supra*, 124 Cal.App.4th at pp. 871, 882-885; see also Wat. Code, § 13377 [waste discharge requirements shall meet federal standards and may also include "more stringent effluent standards or limitations necessary to implement water quality control plans, or for the protection of beneficial uses, or to prevent nuisance".]) [***69] Thus, even if the analysis in *Defenders of Wildlife v. Browner* or *BIA* arguably has any application to a TMDL, the opinions do not help the Cities.

(18) Additionally, the Cities' reliance on a November 2002 EPA memorandum on establishing TMDL's and issuing NPDES [**400] permits is misplaced, as it postdates the Regional Board's adoption of the Trash TMDL and its approval by the State Board and the EPA. Further, the memorandum states it [*1430] is not binding, and "indeed, there may be other approaches that would be appropriate in particular situations. [HN32]When EPA makes a TMDL or permitting decision, it will make each decision on a case-by-case basis and will be guided by applicable requirements of the

[Clean Water Act] and implementing regulations, taking into account comments and information presented at that time by interested persons regarding the appropriateness of applying these recommendations to the particular situation."

II

Nonpoint Sources of Pollution

The Cities contend the court should have invalidated the Trash TMDL on additional grounds, including the Water Boards' failure to identify load allocations and implementation measures for nonpoint sources of trash discharge. [***70] The Cities assert the Water Boards are required to adopt implementation measures "for the homeless and aerial sources of trash, [and] also for the other nonpoint sources of trash consisting of State and federal facilities, and other facilities not yet subject to NPDES Permits." The Cities submit that the Clean Water Act does not allow the Water Boards "to effectively impose the burden of the load allocation from all nonpoint sources solely on municipalities."

The Cities further claim the Water Boards acted arbitrarily and capriciously by imposing a trash target of zero on municipalities, but imposing a "de minimus" requirement on non-point source discharges." The Cities cite the July 29, 2002, letter from the Regional Board to the EPA, clarifying that it identified nonpoint sources of trash pollution "as wind blown trash and direct deposit of trash into the water," but "as the non-point sources were determined to be de-minimus, we did not believe it necessary to outline a reduction schedule for non-point sources." Contrary to the Cities' position, the Regional Board did not adopt a "de minimus" load allocation for nonpoint sources. Rather, as the trial court found, the Regional [***71] Board found the trash pollution from nonpoint sources is de minimus compared to trash pollution from point sources. The TMDL states the "major source of trash in the [Los Angeles River] results from litter, which is intentionally or accidentally discarded in the watershed drainage areas."

In arguing the Trash TMDL is required to include a specific load allocation for nonpoint sources of pollution, the Cities rely on the 2000 EPA Guidance, which provides: "Load allocations for nonpoint sources *may* be expressed as specific allocations for specific discharges or as 'gross allotments' to nonpoint source discharger categories. Separate nonpoint source allocations *should* be established for background loadings. Allocations may be based on a variety [*1431] of technical, economic, and political factors. The methodology used to set allocations *should* be discussed in detail." (Italics added.)

The 2000 EPA Guidance, however, states it does not impose legally binding requirements. Further, the load allocation for nonpoint sources is implicitly zero for trash. Federal regulations define a TMDL as the sum of waste load allocations for point sources, load allocations for nonpoint sources [***72] and natural backgrounds. (40 C.F.R. § 130.2(i) (2003).) Since "[a] TMDL defines the specified maximum amount of a pollutant which can be discharged into a body of water from all sources combined" (*American Wildlands v. Browner* (10th Cir. 2001) 260 F.3d 1192, 1194), [**401] and the Trash TMDL specifies a zero numeric target for trash in Los Angeles River, load allocations are necessarily zero as well as waste load allocations.

Additionally, the Cities cite no authority for the proposition the Water Boards are required to identify an implementation program for nonpoint pollution sources. Again, "[w]here a point is merely asserted by counsel without any argument of or authority for its proposition, it is deemed to be without foundation and requires no discussion." (*People v. Ham* (1970) 7 Cal. App. 3d 768, 783 [86 Cal. Rptr. 906], disapproved on another ground in *People v. Compton* (1971) 6 Cal.3d 55, 60, fn. 3 [98 Cal. Rptr. 217, 490 P.2d 537]; see *People v. Sierra* (1995) 37 Cal.App.4th 1690, 1693, fn. 2 [44 Cal. Rptr. 2d 575].)

(19) In any event, [HN33] although the Clean Water Act focuses on both point and nonpoint sources of pollution, it is settled that [***73] the measure "does not require states to take regulator[y] action to limit the amount of non-point water pollution introduced into its waterways. While the [Clean Water Act] requires states to designate water standards and identify bodies of water that fail to meet these standards, "nothing in the [Clean Water Act] demands that a state adopt a regulatory system for nonpoint sources." ' ' (*Defenders of Wildlife v. U.S. Environ. Protec.*, *supra*, 415 F.3d at pp. 1124-1125, citing *American Wildlands v. Browner*, *supra*, 260 F.3d 1192, 1197 ["In the [Clean Water] Act, Congress has chosen not to give the EPA the authority to regulate nonpoint source pollution"]; *Appalachian Power Co. v. Train* (4th Cir. 1976) 545 F.2d 1351, 1373 ["Congress consciously distinguished between point source and nonpoint source discharges, giving EPA authority under the [Clean Water] Act to regulate only the former"]; *City of Arcadia I. supra*, 265 F. Supp. 2d at p. 1145 ["For nonpoint sources, limitations on loadings are not subject to a federal nonpoint source permitting program, and therefore any nonpoint source reductions can be enforced ... only to [***74] the extent that a state institutes such reductions as regulatory requirements pursuant to state [*1432] authority"].) "Nonpoint sources, because of their very nature, are not regulated under the NPDES [program]. Instead, Congress addressed nonpoint sources

of pollution in a separate portion of the [Clean Water] Act which encourages states to develop areawide waste treatment management plans." (*Pronsolino v. Marcus*, *supra*, 91 F. Supp. 2d at p. 1348, citing 33 U.S.C. § 1288; see also 33 U.S.C. § 1329.)

We conclude the court correctly ruled on this issue.

III

Uses To Be Made of Watershed

The Cities next contend the Trash TMDL is invalid because the Water Boards "improperly relied on non-existent, illegal and irrational 'uses to be made' of the [Los Angeles] River." (Boldface and some capitalization omitted.) The Cities complain that the Trash TMDL states a purported beneficial use of one of numerous reaches of the river on the state's 303(d) list is "recreation and bathing, in particular by homeless people who seek shelter there," and the State Board chairman questioned the legality of such uses. The Cities also assert there is no [***75] evidence to support the Trash TMDL's finding that swimming is an actual use of the river in any location.

The Cities rely on [HN34] section 303(d)(1)(A) of the Clean Water Act (33 U.S.C. § 1313(d)(1)(A)), which provides that in identifying impaired waters for its 303(d) list, states "shall establish a priority ranking for such waters, taking into account the severity of the pollution and the *uses to be made* of such waters." (Italics added.) [**402] The Cities assert "an 'illegal' use cannot be a 'use to be made' for the water body."

Additionally, the Cities cite Water Code section 13241, which requires regional boards to establish water quality objectives in water quality control plans by considering a variety of factors, including "[p]ast, present, and probable future beneficial uses of water." (Wat. Code, § 13241, subd. (a).) They assert the "Water Boards acted contrary to law by basing the [Trash] TMDL on any uses of the [Los Angeles] River other than the actual 'uses to be made' of the River." (Boldface omitted.)

The Cities, however, make no showing of prejudice. Swimming and bathing by the homeless are only [***76] two among numerous other beneficial uses that the Cities do not challenge, and there is no suggestion the numeric target of zero trash in the Los Angeles River would have been less stringent without consideration of the factors the Cities raise.

[*1433] IV

Scientific Methodology

Further, the Cities contend the Trash TMDL is invalid on the additional ground that before adopting and approving it the Water Boards failed to comply with the requisite data collection and analysis. The Cities rely on a federal regulation providing that "[s]tates must establish appropriate monitoring methods and procedures (including biological monitoring) necessary to compile and analyze data on the quality of waters of the United States and, to the extent practicable, ground-waters." (40 C.F.R. § 130.4(a) (2003).) "The State's water monitoring program shall include collection and analysis of physical, chemical and biological data and quality assurance and control programs to assure scientifically valid data" in developing, among other things, TMDL's. (*Id.*, § 130.4(b).)

The trial court rejected the Cities' position, finding they failed to establish the Water Boards' [***77] scientific data is inadequate or scientifically invalid. The court explained the Water Boards "have not failed to conduct ongoing studies, as they say, how else would [they] know the River is impaired by trash[?] And the Record reveals studies relied upon by the Boards."

This argument is a variation on the assimilative capacity study issue, and we similarly reject it. As the Water Boards point out, "trash is different than other pollutants. ... The complex modeling and analytical effort that may be necessary for typical pollutants that may be present in extremely low concentrations have no relevance to calculating a trash TMDL." Further, the Trash TMDL does discuss sources of trash in the Los Angeles River. It states the "City of Los Angeles conducted an Enhanced Catch Basin Cleaning Project in compliance with a consent decree between the [EPA], the State of California, and the City of Los Angeles. The project goals were to determine debris loading rates, characterize the debris, and find an optimal cleaning schedule through enhancing basin cleaning. The project evaluated trash loading at two drainage basins[.]" It goes on to discuss the amounts and types of trash collected [***78] in the drainage basins between March 1992 and December 1994. The Cities cite no authority for the notion the Water Boards may not rely on data collected by another entity.

The Trash TMDL also states "[s]everal studies conclude that urban runoff is the dominant source of trash. The large amounts of trash conveyed by the urban storm water to the Los Angeles River is evidenced by the amount of ... trash that accumulates at the base of storm drains."

[*1434] [**403] Alternatively, the Cities contend a TMDL is not suitable for trash calculation. They rely on 33 United States Code section 1313(d)(1)(C), which provides: [HN35]"Each State shall establish for

[impaired] waters ... the total maximum daily load, for those pollutants which the [EPA] Administrator identifies ... as *suitable for such calculation*. Such load shall be established at a level *necessary* to implement the applicable water quality standards with seasonal variations and a margin of safety." (Italics added.)

The Cities also cite a 1978 EPA regulation that states a TMDL is "suitable for ... calculation" only under "proper technical conditions." (43 Fed.Reg. 60662, 60665 (Dec. 28, 1978) [***79] (italics omitted).) "Proper technical conditions" require "the availability of the analytical methods, modeling techniques and data base necessary to develop a technically defensible TMDL." (*Id.* at p. 60662.) The Cities assert the proper technical conditions do not exist, referring to the Trash TMDL's comment that "[e]xtensive research has not been done on trash generation or the precise relationship between rainfall and its deposition in waterways."

The Cities ignore the EPA's determination that a TMDL *may* be calculated for trash as a pollutant. It approved the Regional Board's Trash TMDL, and had previously approved a trash TMDL for the East Fork of the San Gabriel River. (See Cal. Code Regs., tit. 23, § 3933.) Thus, the Cities' view that the 1978 EPA regulation prohibits a TMDL for trash is unfounded. TMDL's for trash are relatively new, and there is no evidence that in 1978 the EPA contemplated their establishment.

We find irrelevant the Cities' discussion of the EPA's proposed July 2000 TMDL "rule," as their federal register citation is not a regulation and merely concerns the 2003 withdrawal of a rule that never took effect. [***80] (68 Fed.Reg. 13608, 13609 (Mar. 19, 2003)) ["The July 2000 rule was controversial from the outset"].) In August 2001 the EPA delayed implementation of the July 2000 rule for further consideration, noting that some local government officials argued "some pollutants are not suitable for TMDL calculation." (66 Fed.Reg. 41817, 41819 (Aug. 9, 2001).) Nothing is said, however, about whether a trash TMDL is unsuitable for calculation, and again, the EPA has approved such TMDL's. The withdrawal of the proposed July 2000 rule left the existing rule regarding the establishment of a TMDL in place. (33 U.S.C. § 1313(d)(1)(C).)

V

APA Requirements

Lastly, the Cities contend the trial court erred by finding the Water Boards did not violate the APA. They assert the July 29, 2002, "clarification [*1435] memorandum" from the Regional Board to the EPA makes substantive changes to the Trash TMDL regulation-the inclusion of the Estuary in the Trash TMDL and desig-

nating an allocation of zero for nonpoint pollution sources-violates the notice and hearing provisions of the APA. The Cities also contend the Trash TMDL and the clarification memorandum [***81] "establish[] a regulation in violation of the APA's elements of 'clarity,' 'consistency,' and 'necessity,' as defined in [Government] Code section 11349."

[HN36](20) The APA (Gov. Code, §§ 11340 et seq., 11370) "establishes the procedures by which state agencies may adopt regulations. The agency must give the public notice of its proposed regulatory action [citations]; issue a complete text of the proposed regulation with a statement of the reasons for it [citation]; give interested parties an opportunity to comment on [***404] the proposed regulation [citation]; respond in writing to public comments [citations]; and forward a file of all materials on which the agency relied in the regulatory process to the Office of Administrative Law [citation], which reviews the regulation for consistency with the law, clarity, and necessity [citations]." (*Tidewater Marine Western, Inc. v. Bradshaw* (1996) 14 Cal.4th 557, 568 [59 Cal. Rptr. 2d 186, 927 P.2d 296].) "One purpose of the APA is to ensure that those persons or entities whom a regulation will affect have a voice in its creation [citation], as well as notice of the law's requirements so [***82] that they can conform their conduct accordingly [citation]." (*Id.* at pp. 568-569.)

The APA does not apply to "the adoption or revision of state policy for water quality control" unless the agency adopts a "policy, plan, or guideline, or any revision thereof." (Gov. Code, § 11353, subs. (a), (b)(1).) The Water Boards contend that while the Trash TMDL and amendment adding it to the 1994 Basin Plan are policies or plans covered by the APA, the clarification memorandum is not because it does not revise the terms of the Trash TMDL.

We are not required to reach the issue, because assuming the APA is applicable the Cities' position lacks merit. As to the Estuary, we have determined the Trash TMDL sufficiently notified affected parties of its inclusion in the document as an impaired water body. Further, we have determined the load allocation for nonpoint sources of trash pollution is also necessarily zero, and the Trash TMDL is not required to include implementation measures for nonpoint sources. Accordingly, the clarification memorandum is not germane.¹⁴

14 We deny the Water Boards' June 16, 2005, request for judicial notice.

[***83]

[*1436] DISPOSITION

The judgment is affirmed insofar as it is based on the Trash TMDL's violation of CEQA, and on a rejection of each of the issues the Cities raised in their appeal. The judgment is reversed insofar as it is based on the Trash TMDL's lack of an assimilative capacity study, inclusion of the Estuary as an impaired water body, and a cost-benefit analysis under Water Code section 13267 or the consideration of economic factors under Water Code section 13241, and also insofar as it grants declaratory relief regarding the purported inclusion of nonnavigable waters in the Trash TMDL.

The court's postjudgment order staying the Trash TMDL's implementation schedule is affirmed. The parties are to bear their own costs on appeal.

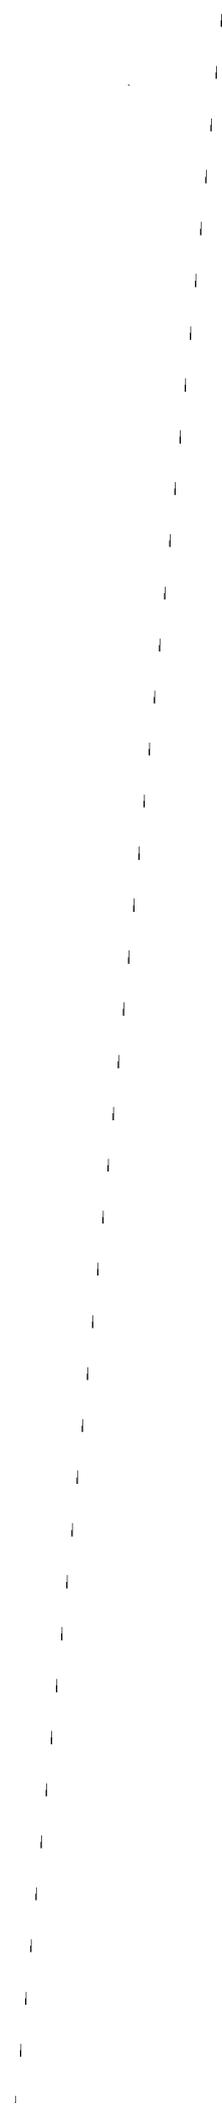

McIntyre, J., and Irion, J., concurred.

A petition for a rehearing was denied January 17, 2006, and the petition of plaintiffs and appellants for review by the Supreme Court was denied April 19, 2006, S141673.

As modified Jan. 4, 2005. [***1] CERTIFIED FOR PARTIAL PUBLICATION¹

¹ Pursuant to California Rules of Court, rule 976.1, this opinion is certified for publication with the exception of Discussion parts III, IV, V, VI and VII.

SUBSEQUENT HISTORY: Modified by, Rehearing denied by Building Industry Assn. v. State Water Resources Control Bd., 2005 Cal. App. LEXIS 7 (Cal. App. 4th Dist., Jan. 4, 2005)

Time for Granting or Denying Review Extended Building Industry Assn. of San Diego v. Calif Regional Water Qlty Bd., 2005 Cal. LEXIS 2502 (Cal., Feb. 24, 2005)

Review denied by, Request denied by Building Industry Association of San Diego County v. California Regional Water Quality Control Board, 2005 Cal. LEXIS 3489 (Cal., Mar. 30, 2005)

PRIOR HISTORY: Superior Court of San Diego County, No. GIC 780263, Wayne L. Peterson, Judge.

DISPOSITION: Affirmed.

CASE SUMMARY:

PROCEDURAL POSTURE: Plaintiff building industry association filed an administrative appeal with defendant California Water Resources Control Board (State Water Board) regarding the Board's issuance of a comprehensive municipal storm sewer permit. The Board denied the appeal. The association then petitioned for a writ of mandate, asserting numerous claims. The Superior Court of San Diego County, California, found the association failed to prove its claims.

OVERVIEW: The association argued that the permit violated federal law because it allowed the State Water Board and a regional water board to impose municipal storm sewer control measures more stringent than a federal standard known as "maximum extent practicable" set forth in 33 U.S.C.S. § 1342(p)(3)(B)(iii). The instant court held the language of § 1342(p)(3)(B)(iii) communicates the basic principle that the Environmental Protection Agency, and/or a state approved to issue a National Pollution Discharge Elimination System (NPDES) permit, retains the discretion to impose "appropriate" water pollution controls in addition to those that come within the definition of "maximum extent practicable." The NPDES permit did not violate federal law. The water boards had the authority to include a permit provision requiring compliance with the more stringent state water quality standards.

OUTCOME: The judgment was affirmed.

CORE TERMS: water quality, water board, storm sewer, Clean Water Act, 'practicable', pollution, maximum, pollutant, municipality, municipal, regional, federal law, environmental, effluent, stringent, challenging, runoff, storm, state laws, regulatory agency, "point sources", iterative, stormwater, entity, Conservation Laws, statutory language, waste discharge, permit requirements, strict compliance, industrial

LexisNexis(R) Headnotes

Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Effluent Limitations

[HN1]The Clean Water Act employs the basic strategy of prohibiting pollutant emissions from "point sources" unless the party discharging the pollutants obtains a National Pollution Discharge Elimination System (NPDES) permit. It is unlawful for any person to discharge a pollutant without obtaining a permit and complying with its terms. 33 U.S.C.S. § 1311(a). An NPDES permit is issued by the Environmental Protection Agency or by a state that has a federally-approved water quality program. 33 U.S.C.S. § 1342(a), (b). Before an NPDES is issued, the federal or state regulatory agency must follow an extensive administrative hearing procedure. 40 C.F.R. §§ 124.3, 124.6, 124.8, 124.10. NPDES permits are valid for five years. 33 U.S.C.S. § 1342(b)(1)(B).

Environmental Law > Water Quality > Clean Water Act > Coverage & Definitions > Point Sources

[HN2]The Clean Water Act defines a "point source" to be any discernible, confined and discrete conveyance, including but not limited to any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, or vessel or other floating craft, from which pollutants are or may be discharged. 33 U.S.C.S. § 1362(14).

Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Effluent Limitations

Environmental Law > Water Quality > Clean Water Act > Water Quality Standards

Real Property Law > Water Rights > Beneficial Use

[HN3]Under the Clean Water Act, the proper scope of the controls in a National Pollution Discharge Elimination System (NPDES) permit depends on the applicable state water quality standards for the affected water bodies. Each state is required to develop water quality standards that establish the desired condition of a waterway. A water quality standard for any given water segment has two components: (1) the designated beneficial

uses of the water body; and (2) the water quality criteria sufficient to protect those uses. As enacted in 1972, the Act mandated that an NPDES permit require compliance with state water quality standards and that this goal be met by setting forth a specific "effluent limitation," which is a restriction on the amount of pollutants that may be discharged at the point source. 33 U.S.C.S. §§ 1311, 1362(11).

Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Storm Water Discharges

Environmental Law > Water Quality > Clean Water Act > Water Quality Standards

Governments > Local Governments > Licenses

[HN4]In 1987, Congress amended the Clean Water Act to add provisions that specifically concerned National Pollution Discharge Elimination System (NPDES) permit requirements for storm sewer discharges. 33 U.S.C.S. § 1342(p). In these amendments, enacted as part of the Water Quality Act of 1987, Congress distinguished between industrial and municipal storm water discharges. With respect to municipal storm water discharges, Congress clarified that the Environmental Protection Agency had the authority to fashion NPDES permit requirements to meet water quality standards without specific numerical effluent limits and instead to impose controls to reduce the discharge of pollutants to the maximum extent practicable. 33 U.S.C.S. § 1342(p)(3)(B)(iii).

Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Storm Water Discharges

[HN5]See 33 U.S.C.S. § 1342(p)(3)(B)(iii).

Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Effluent Limitations

[HN6]See Cal. Water Code § 13377.

Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Effluent Limitations

Real Property Law > Water Rights > Beneficial Use

[HN7]See Cal. Water Code § 13374.

Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Public Participation

Governments > Local Governments > Licenses

[HN8]The waste discharge requirements issued by the regional water boards ordinarily also serve as National Pollution Discharge Elimination System permits under federal law. Cal. Water Code § 13374.

*Administrative Law > Judicial Review > Reviewability
> Standing*

*Civil Procedure > Remedies > Writs > Common Law
Writs > Mandamus*

*Environmental Law > Water Quality > General Over-
view*

[HN9]See Cal. Water Code § 13330(b).

*Administrative Law > Judicial Review > Reviewability
> Standing*

*Civil Procedure > Remedies > Writs > Common Law
Writs > Mandamus*

*Evidence > Inferences & Presumptions > Presumption
of Regularity*

[HN10]Where a party has been aggrieved by a final decision of a regional water board for which the California Water Resources Control Board denies review, Cal. Code Civ. Proc. § 1094.5 governs the writ of mandate proceedings, and the superior court must exercise its independent judgment in examining the evidence and resolving factual disputes. Cal. Water Code § 13330(d). In exercising its independent judgment, a trial court must afford a strong presumption of correctness concerning the administrative findings, and the party challenging the administrative decision bears the burden of convincing the court that the administrative findings are contrary to the weight of the evidence.

*Administrative Law > Judicial Review > Administrative
Record > General Overview*

*Administrative Law > Judicial Review > Standards of
Review > Substantial Evidence*

*Civil Procedure > Appeals > Standards of Review > De
Novo Review*

[HN11]In reviewing the trial court's factual determinations on the administrative record, an appellate court applies a substantial evidence standard. However, in reviewing the trial court's legal determinations, an appellate court conducts a de novo review. Thus, the appellate court is not bound by the legal determinations made by the state or regional agencies or by the trial court, but it must give appropriate consideration to an administrative agency's expertise underlying its interpretation of an applicable statute.

*Environmental Law > Water Quality > General Over-
view*

[HN12]It is well settled that the Clean Water Act authorizes states to impose water quality controls that are more stringent than are required under federal law, 33 U.S.C.S.

§ 1370, and California law specifically allows the imposition of controls more stringent than federal law, Cal. Water Code § 13377.

*Environmental Law > Water Quality > Clean Water Act
> Discharge Permits > Storm Water Discharges*

[HN13]The language of 33 U.S.C.S. § 1342(p)(3)(B)(iii) does communicate the basic principle that the Environmental Protection Agency (and/or a state approved to issue a National Pollution Discharge Elimination System permit) retains the discretion to impose "appropriate" water pollution controls in addition to those that come within the definition of "maximum extent practicable."

Governments > Legislation > Interpretation

[HN14]While punctuation and grammar should be considered in interpreting a statute, neither is controlling unless the result is in harmony with the clearly expressed intent of the legislature. If the statutory language is susceptible to more than one reasonable interpretation, a court must also look to a variety of extrinsic aids, including the ostensible objects to be achieved, the evils to be remedied, the legislative history, public policy, contemporaneous administrative construction, and the statutory scheme of which the statute is a part.

*Environmental Law > Water Quality > Clean Water Act
> Discharge Permits > Effluent Limitations*

*Environmental Law > Water Quality > Clean Water Act
> Water Quality Standards*

*Governments > Public Improvements > General Over-
view*

[HN15]With respect to National Pollution Discharge Elimination System (NPDES) permits, the legislative purpose underlying the Water Quality Act of 1987, and 33 U.S.C.S. § 1342(p) in particular, supports that Congress intended to provide the Environmental Protection Agency (or the regulatory agency of an approved state) the discretion to require compliance with water quality standards in a municipal storm sewer NPDES permit, particularly where that compliance will be achieved primarily through an iterative process.

*Administrative Law > Judicial Review > Standards of
Review > Statutory Interpretation*

Governments > Legislation > Interpretation

[HN16]A court is required to give substantial deference to an administrative interpretation of a statute.

Civil Procedure > Appeals > Standards of Review > Reversible Errors

Evidence > Inferences & Presumptions > General Overview

[HN17]All judgments and orders are presumed correct, and persons challenging them must affirmatively show reversible error.

Civil Procedure > Appeals > Briefs

[HN18]A party challenging the sufficiency of evidence to support a judgment must summarize (and cite to) all of the material evidence, not just the evidence favorable to his or her appellate positions.

Administrative Law > Judicial Review > Standards of Review > Abuse of Discretion

Environmental Law > Water Quality > Clean Water Act > Water Quality Standards

[HN19]The party challenging the scope of an administrative permit has the burden of showing the agency abused its discretion or its findings were unsupported by the facts.

Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Storm Water Discharges

[HN20]BAT is an acronym for "best available technology economically achievable," which is a technology-based standard for industrial storm water dischargers that focuses on reducing pollutants by treatment or by a combination of treatment and best management practices.

SUMMARY:

CALIFORNIA OFFICIAL REPORTS SUMMARY

A building industry association filed an administrative appeal with the State Water Resources Control Board regarding the board's issuance of a comprehensive municipal storm sewer permit. The board denied the appeal. The association then petitioned for a writ of mandate, asserting numerous claims. Three environmental groups intervened as defendants. The trial court found the association failed to prove its claims. The association argued that the permit violated federal law because it allowed the state water board and a regional water board to impose municipal storm sewer control measures more stringent than a federal standard known as "maximum extent practicable" under 33 U.S.C. § 1342(p)(3)(B)(iii). (Superior Court of San Diego County, No. GIC 780263, Wayne L. Peterson, Judge.)

The Court of Appeal affirmed. The court held the language of § 1342(p)(3)(B)(iii) communicates the basic principle that the Environmental Protection Agency, and or a state approved to issue a National Pollution Discharge Elimination System (NPDES) permit, retains the discretion to impose "appropriate" water pollution controls in addition to those that come within the definition of "maximum extent practicable." The NPDES permit did not violate federal law. The water boards had the authority to include a permit provision requiring compliance with the more stringent state water quality standards. (Opinion by Haller, J., with Benke, Acting P. J., and Aaron, J., concurring.) [*867]

HEADNOTES

CALIFORNIA OFFICIAL REPORTS HEADNOTES
Classified to California Digest of Official Reports

(1) Pollution and Conservation Laws § 5--Water Pollution--Clean Water Act--Regulatory Permit--Municipal Storm Sewer Control Measures.--A regulatory permit issued by the State Water Resources Control Board allowing it and a regional water board to impose municipal storm sewer control measures more stringent than a federal standard known as "maximum extent practicable," set forth in 33 U.S.C. § 1342(p)(3)(B)(iii), did not violate federal law.

[4 Witkin, Summary of Cal. Law (9th ed. 1987) Real Property, § 69.]

(2) Pollution and Conservation Laws § 5--Water Pollution--Clean Water Act--NPDES Permits.--The Clean Water Act (33 U.S.C. 1251 et seq.) employs the basic strategy of prohibiting pollutant emissions from "point sources" unless the party discharging the pollutants obtains a National Pollution Discharge Elimination System (NPDES) permit. Pursuant to 33 U.S.C. § 1311(a), it is unlawful for any person to discharge a pollutant without obtaining a permit and complying with its terms. Pursuant to 33 U.S.C. § 1342(a) and (b) an NPDES permit is issued by the Environmental Protection Agency or by a state that has a federally-approved water quality program. Pursuant to 40 C.F.R. §§ 124.3, 124.6, 124.8, 124.10, before an NPDES is issued, the federal or state regulatory agency must follow an extensive administrative hearing procedure. Pursuant to 33 U.S.C. § 1342(b)(1)(B), NPDES permits are valid for five years.

(3) Pollution and Conservation Laws § 5--Water Pollution--Clean Water Act--NPDES Permits.--Under the Clean Water Act (33 U.S.C. § 1251 et seq.), the proper scope of the controls in a National Pollution Discharge Elimination System (NPDES) permit depends on the applicable state water quality standards for the affected

water bodies. Each state is required to develop water quality standards that establish the desired condition of a waterway. A water quality standard for any given water segment has two components: (1) the designated beneficial uses of the water body; and (2) the water quality criteria sufficient to protect those uses. As enacted in 1972, 33 U.S.C. §§ 1311, 1362(11) of the Act mandated that an NPDES permit require compliance with state water quality standards and that this goal be met by setting forth a specific "effluent limitation," which is a restriction on the amount of pollutants that may be discharged at the point source. [*868]

(4) Pollution and Conservation Laws § 5--Water Pollution--Clean Water Act--NPDES Permits.--In 1987, Congress amended the Clean Water Act (33 U.S.C. 1251 et seq.), to add provisions, specifically, 33 U.S.C. § 1342(p), that specifically concerned National Pollution Discharge Elimination System (NPDES) permit requirements for storm sewer discharges. In these amendments, enacted as part of the Water Quality Act of 1987 (33 U.S.C. § 251 et seq.), Congress distinguished between industrial and municipal storm water discharges. With respect to municipal storm water discharges, Congress clarified in 33 U.S.C. § 1342(p)(3)(B)(iii) that the Environmental Protection Agency had the authority to fashion NPDES permit requirements to meet water quality standards without specific numerical effluent limits and instead to impose controls to reduce the discharge of pollutants to the maximum extent practicable.

(5) Pollution and Conservation Laws § 5--Water Pollution--Waste Discharge Requirements.--Pursuant to Wat. Code, § 13374, the waste discharge requirements issued by the regional water boards ordinarily also serve as National Pollution Discharge Elimination System permits under federal law.

(6) Pollution and Conservation Laws § 5--Water Pollution--Writ of Mandate--Exercise of Independent Judgment.--Where a party has been aggrieved by a final decision of a regional water board for which the State Water Resources Control Board denies review, Code Civ. Proc., § 1094.5, governs the writ of mandate proceedings, and the superior court must, pursuant to Wat. Code, § 13330, subd. (d), exercise its independent judgment in examining the evidence and resolving factual disputes. In exercising its independent judgment, a trial court must afford a strong presumption of correctness concerning the administrative findings, and the party challenging the administrative decision bears the burden of convincing the court that the administrative findings are contrary to the weight of the evidence.

(7) Appellate Review § 144--Scope of Review--Questions of Law and Fact--Factual Determinations--Substantial Evidence Standard--De Novo Review.--In reviewing the trial court's factual determinations on the administrative record, an appellate court applies a substantial evidence standard. However, in reviewing the trial court's legal determinations, an appellate court conducts a de novo review. Thus, the appellate court is not bound by the legal determinations made by the state or regional agencies or by the trial court, but it must give appropriate consideration to an administrative agency's expertise underlying its interpretation of an applicable statute. [*869]

(8) Pollution and Conservation Laws § 5--Water Pollution--Clean Water Act--More Stringent State Controls.--It is well settled that the Clean Water Act (33 U.S.C. § 1251 et seq.) authorizes states to impose water quality controls that are more stringent than are required under federal law, 33 U.S.C. § 1370, and California law specifically allows the imposition of controls more stringent than federal law, Wat. Code, § 13377.

(9) Pollution and Conservation Laws § 5--Water Pollution--Clean Water Act--NPDES Permits.--The language of 33 U.S.C. § 1342(p)(3)(B)(iii) does communicate the basic principle that the Environmental Protection Agency (and/or a state approved to issue a National Pollution Discharge Elimination System permit) retains the discretion to impose "appropriate" water pollution controls in addition to those that come within the definition of "maximum extent practicable."

(10) Statutes § 21--Construction--Legislative Intent.--While punctuation and grammar should be considered in interpreting a statute, neither is controlling unless the result is in harmony with the clearly expressed intent of the Legislature. If the statutory language is susceptible to more than one reasonable interpretation, a court must also look to a variety of extrinsic aids, including the ostensible objects to be achieved, the evils to be remedied, the legislative history, public policy, contemporaneous administrative construction, and the statutory scheme of which the statute is a part.

(11) Pollution and Conservation Laws § 5--Water Pollution--Clean Water Act--NPDES Permits.--With respect to National Pollution Discharge Elimination System (NPDES) permits, the legislative purpose underlying the Water Quality Act of 1987 (33 U.S.C. § 251 et seq.), and 33 U.S.C. § 1342(p) in particular, supports that Congress intended to provide the Environmental Protection Agency (or the regulatory agency of an approved state) the discretion to require compliance with water quality standards in a municipal storm sewer NPDES

permit, particularly where that compliance will be achieved primarily through an iterative process.

(12) Statutes § 44--Construction--Administrative--Judicial Deference.--A court is required to give substantial deference to an administrative interpretation of a statute.

(13) Appellate Review § 135--Scope of Review--Presumptions.--All judgments and orders are presumed correct, and persons challenging them must affirmatively show reversible error. [*870]

(14) Appellate Review § 108--Briefs--Requisites--Reference to Record--Party Challenging Sufficiency of Evidence--Summarization of All Material Evidence Required.--A party challenging the sufficiency of evidence to support a judgment must summarize (and cite to) all of the material evidence, not just the evidence favorable to his or her appellate positions.

(15) Administrative Law § 116--Judicial Review and Relief--Scope of Review--Abuse of Discretion--Administrative Permit.--The party challenging the scope of an administrative permit has the burden of showing the agency abused its discretion or its findings were unsupported by the facts.

(16) Pollution and Conservation Laws § 5--Water Pollution--Industrial Storm Water Dischargers--Best Available Technology Economically Achievable.--BAT is an acronym for "best available technology economically achievable," which is a technology-based standard for industrial storm water dischargers that focuses on reducing pollutants by treatment or by a combination of treatment and best management practices.

Conservancy, Heal the Bay, Environmental Defense Center, Santa Monica BayKeeper, Orange County CoastKeeper, Ventura CoastKeeper, Environmental Health Coalition, CalBeach Advocates, San Diego Audubon Society, Endangered Habitats League and Sierra Club as Amici Curiae on behalf [***2] of Defendants and Respondents and Interveners and Respondents.

JUDGES: Haller, J., with Benke, Acting P. J., and Aaron, J., concurring.

OPINION BY: HALLER [*871]

OPINION

[**130] **HALLER, J.**--This case concerns the environmental regulation of municipal storm sewers that carry excess water runoff to lakes, lagoons, rivers, bays, and the ocean. The waters flowing through these sewer systems have accumulated numerous harmful pollutants that are then discharged into the water body without receiving any treatment. To protect against the resulting water quality impairment, federal and state laws impose regulatory controls on storm sewer discharges. In particular, municipalities and other public entities are required to obtain, and comply with, a regulatory permit limiting the quantity and quality of water runoff that can be discharged from these storm sewer systems.

In this case, the California Regional Water Control Board, San Diego Region, (Regional Water Board) conducted numerous public hearings and then issued a comprehensive municipal storm sewer permit governing 19 local public entities. Although these entities did not bring an administrative challenge to the permit, one business organization, the Building Industry [***3] Association of San Diego County (Building Industry), filed an administrative appeal with the State Water Resources Control Board (State Water Board). After making some modifications to the permit, the State Water Board denied the appeal. Building Industry then petitioned for a writ of mandate in the superior court, asserting numerous claims, including that the permit violates state and federal law because the permit provisions are too stringent and impossible to satisfy. Three environmental groups intervened as defendants in the action. After a hearing, the trial court found Building Industry failed to prove its claims and entered judgment in favor of the administrative agencies (the Water Boards) and the intervener environmental groups.

(I) On appeal, Building Industry's main contention is that the regulatory permit violates federal law because it allows the Water Boards to impose municipal storm sewer control measures more stringent than a federal standard known as "maximum extent practicable." (33 U.S.C. § 1342(p)(3)(B)(iii).) ² [*131] In the published

portion of this opinion, we reject this contention, and conclude the Water Boards had the authority to include [***4] a permit provision requiring compliance with state water quality standards. In the unpublished portion of the opinion, we find Building Industry's additional contentions to be without merit. We affirm the judgment.

2 Further statutory references are to title 33 of the United States Code, unless otherwise specified.

[*872] RELEVANT BACKGROUND INFORMATION

I. Summary of Relevant Clean Water Act Provisions

Before setting forth the factual background of this particular case, it is helpful to summarize the federal and state statutory schemes for regulating municipal storm sewer discharges.³

3 The systems that carry untreated urban water runoff to receiving water bodies are known as "[m]unicipal separate storm sewer" systems (40 C.F.R. § 122.26(b)(8)), and are often referred to as "MS4s" (40 C.F.R. § 122.30). For readability, we will identify these systems as municipal storm sewers. To avoid confusion in this case, we will generally use descriptive names, rather than initials or acronyms, when referring to parties and concepts.

[***5] A. Federal Statutory Scheme

When the United States Congress first enacted the Federal Water Pollution Control Act in 1948, the Congress relied primarily on state and local enforcement efforts to remedy water pollution problems. (*Middlesex Cty. Sewerage Auth. v. Sea Clammers* (1981) 453 U.S. 1, 11 [69 L. Ed. 2d 435, 101 S. Ct. 2615]; *Tahoe-Sierra Preservation Council v. State Water Resources Control Bd.* (1989) 210 Cal. App. 3d 1421, 1433 [259 Cal. Rptr. 132].) However, by the early 1970's, it became apparent that this reliance on local enforcement was ineffective and had resulted in the "accelerating environmental degradation of rivers, lakes, and streams" (*Natural Resources Defense Council, Inc. v. Costle* (D.C. Cir. 1977) 568 F.2d 1369, 1371 (*Costle*); see *EPA v. State Water Resources Control Board* (1976) 426 U.S. 200, 203 [48 L. Ed. 2d 578, 96 S. Ct. 2022].) In response, in 1972 Congress substantially amended this law by mandating compliance with various minimum technological effluent standards established by the federal government and creating a comprehensive regulatory scheme to implement these laws. (See *EPA v. State Water Resources Control Board, supra*, 426 U.S. at pp. 204-205.) [***6]

The objective of this law, now commonly known as the Clean Water Act, was to "restore and maintain the chemical, physical, and biological integrity of the Nation's waters." (§ 1251(a).)

[HN1](2) The Clean Water Act employs the basic strategy of prohibiting pollutant emissions from "point sources" ⁴ unless the party discharging the pollutants obtains a permit, known as an NPDES ⁵ permit. (See *EPA v. State Water Resources Control Board, supra*, 426 U.S. at p. 205.) It is "unlawful [*873] for any person to discharge a pollutant without obtaining a permit and complying with its terms." (*Ibid.*; see § 1311(a); *Costle, supra*, 568 [***132] F.2d at p. 1375.) An NPDES permit is issued by the United States Environmental Protection Agency (EPA) or by a state that has a federally approved water quality program. (§ 1342(a), (b); *EPA v. State Water Resources Control Board, supra*, 426 U.S. at p. 209.) Before an NPDES is issued, the federal or state regulatory agency must follow an extensive administrative hearing procedure. (See 40 C.F.R. §§ 124.3, 124.6, 124.8, 124.10; see generally Wardzinski et al., *National Pollutant Discharge Elimination System [***7] Permit Application and Issuance Procedures*, in The Clean Water Act Handbook (Evans edit., 1994) pp. 72-74 (Clean Water Act Handbook).) NPDES permits are valid for five years. (§ 1342(b)(1)(B).)

4 [HN2]The Clean Water Act defines a "point source" to be "any discernible, confined and discrete conveyance, including but not limited to any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, or vessel or other floating craft, from which pollutants are or may be discharged." (§ 1362(14).)

5 NPDES stands for National Pollution Discharge Elimination System.

[HN3](3) Under the Clean Water Act, the proper scope of the controls in an NPDES permit depends on the applicable state water quality standards for the affected water bodies. (See *Communities for a Better Environment v. State Water Resources Control Bd.* (2003) 109 Cal.App.4th 1089, 1092 [1 Cal. Rptr. 3d 76].) Each state is required to develop water quality standards that establish " 'the desired [***8] condition of a waterway.' " (*Ibid.*) A water quality standard for any given water segment has two components: (1) the designated beneficial uses of the water body; and (2) the water quality criteria sufficient to protect those uses. (*Ibid.*) As enacted in 1972, the Clean Water Act mandated that an NPDES permit require compliance with state water quality standards and that this goal be met by setting forth a specific "effluent limitation," which is a restriction on the

amount of pollutants that may be discharged at the point source. (§§ 1311, 1362(11).)

Shortly after the 1972 legislation, the EPA promulgated regulations exempting most municipal storm sewers from the NPDES permit requirements. (*Costle, supra*, 568 F.2d at p. 1372; see *Defenders of Wildlife v. Browner* (9th Cir. 1999) 191 F.3d 1159, 1163 (*Defenders of Wildlife*)). When environmental groups challenged this exemption in federal court, the Ninth Circuit held a storm sewer is a point source and the EPA did not have the authority to exempt categories of point sources from the Clean Water Act's NPDES permit requirements. (*Costle, supra*, 568 F.2d at pp. 1374-1383.) [***9] The *Costle* court rejected the EPA's argument that effluent-based storm sewer regulation was administratively infeasible because of the variable nature of storm water pollution and the number of affected storm sewers throughout the country. (*Id.* at pp. 1377-1382.) Although the court acknowledged the practical problems relating to storm sewer regulation, the court found the EPA had the flexibility under the Clean Water Act to design regulations that would overcome these problems. (*Id.* at pp. 1379-1383.)

[*874] During the next 15 years, the EPA made numerous attempts to reconcile the statutory requirement of point source regulation with the practical problem of regulating possibly millions of diverse point source discharges of storm water. (*Defenders of Wildlife, supra*, 191 F.3d at p. 1163; see Gallagher, *Clean Water Act in Environmental Law Handbook* (Sullivan edit., 2003) p. 300 (Environmental Law Handbook); Eisen, *Toward a Sustainable Urbanism: Lessons from Federal Regulation of Urban Stormwater Runoff* (1995) 48 Wash. U. J. Urb. & Contemp. L. 1, 40-41 (*Regulation of Urban Stormwater Runoff*)).

(4) Eventually, [HN4] in 1987, Congress amended the [***10] Clean Water Act to add provisions that specifically concerned NPDES permit requirements for storm sewer discharges. (§ 1342(p); see *Defenders of Wildlife, supra*, [**133] 191 F.3d at p. 1163; *Natural Resources Defense Council v. U.S. E.P.A.* (1992) 966 F.2d 1292, 1296.) In these amendments, enacted as part of the *Water Quality Act of 1987*, Congress distinguished between industrial and municipal storm water discharges. With respect to *industrial* storm water discharges, Congress provided that NPDES permits "shall meet all applicable provisions of this section and section 1311 [requiring the EPA to establish effluent limitations under specific timetables]" (§ 1342(p)(3)(A).) With respect to *municipal* storm water discharges, Congress clarified that the EPA had the authority to fashion NPDES permit requirements to meet water quality standards without specific numerical effluent limits and instead to impose "controls to reduce the discharge of pol-

lutants to the maximum extent practicable" (§ 1342(p)(3)(B)(iii); see *Defenders of Wildlife, supra*, 191 F.3d at p. 1163.) Because the statutory language pertaining to municipal [***11] storm sewers is at the center of this appeal, we quote the relevant portion of the statute in full:

"[HN5](B) ... Permits for discharges from municipal storm sewers--

"(i) may be issued on a system- or jurisdiction-wide basis;

"(ii) shall include a requirement to effectively prohibit non-stormwater discharges into the storm sewers; and

"(iii) shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants." (§ 1342(p)(3)(B).) To ensure this scheme would be administratively workable, Congress placed a moratorium on many new types of required stormwater permits until 1994 (§ 1342(p)(1)), and created a phased approach to necessary municipal [*875] stormwater permitting depending on the size of the municipality (§ 1342(p)(2)(D)). (See *Environmental Defense Center, Inc. v. U.S. E.P.A.* (9th Cir. 2003) 344 F.3d 832, 841-842.)

B. State Statutory Scheme

Three years before the 1972 Clean Water Act, the California Legislature enacted [***12] its own water quality protection legislation, the *Porter-Cologne Water Quality Control Act* (Porter-Cologne Act), seeking to "attain the highest water quality which is reasonable" (*Wat. Code*, § 13000.) The Porter-Cologne Act created the State Water Board to formulate statewide water quality policy and established nine regional boards to prepare water quality plans (known as basin plans) and issue permits governing the discharge of waste. (*Wat. Code*, §§ 13100, 13140, 13200, 13201, 13240, 13241, 13243.) The Porter-Cologne Act identified these permits as "waste discharge requirements," and provided that the waste discharge requirements must mandate compliance with the applicable regional water quality control plan. (*Wat. Code*, §§ 13263, subd. (a), 13377, 13374.)

Shortly after Congress enacted the Clean Water Act in 1972, the California Legislature added chapter 5.5 to the Porter-Cologne Act, for the purpose of adopting the necessary federal requirements to ensure it would obtain EPA approval to issue NPDES permits. (*Wat. Code*, § 13370, subd. (c).) As part of these amendments, the Legislature provided that the state and regional water boards

"[HN6]shall, as required or authorized [***13] by the [Clean Water Act], issue waste discharge requirements ... which apply and ensure compliance with all applicable provisions [**134] [of the Clean Water Act], together with any more stringent effluent standards or limitations necessary to implement water quality control plans, or for the protection of beneficial uses, or to prevent nuisance." (Wat. Code, § 13377.) Water Code section 13374 provides that "[HN7][t]he term 'waste discharge requirements' as referred to in this division is the equivalent of the term 'permits' as used in the [Clean Water Act]."

(5) California subsequently obtained the required approval to issue NPDES permits. (WaterKeepers Northern California v. State Water Resources Control Bd. (2002) 102 Cal.App.4th 1448, 1453 [126 Cal. Rptr. 2d 389].) Thus, [HN8]the waste discharge requirements issued by the regional water boards ordinarily also serve as NPDES permits under federal law. (Wat. Code, § 13374.)

II. The NPDES Permit at Issue in this Case

Under its delegated authority and after numerous public hearings, in February 2001 the Regional Water Board issued a 52-page NPDES permit [*876] and Waste Discharge Requirements (the Permit) governing municipal storm sewers owned [***14] by San Diego County, the San Diego Unified Port District, and 18 San Diego-area cities (collectively, Municipalities).⁶ The first 10 pages of the Permit contain the Regional Water Board's detailed factual findings. These findings describe the manner in which San Diego-area water runoff absorbs numerous harmful pollutants and then is conveyed by municipal storm sewers into local waters without any treatment. The findings state that these storm sewer discharges are a leading cause of water quality impairment in the San Diego region, endangering aquatic life and human health. The findings further state that to achieve applicable state water quality objectives, it is necessary not only to require municipalities to comply with existing pollution-control technologies, but also to require compliance with applicable "receiving water limits" (state water quality standards) and to employ an "iterative process" of "development, implementation, monitoring, and assessment" to improve existing technologies.

⁶ Under the Clean Water Act, entities responsible for NPDES permit conditions pertaining to their own discharges are referred to as "co-permittees." (40 C.F.R. § 122.26(b)(1).) For clarity and readability, we shall refer to these entities as Municipalities.

[***15] Based on these factual findings, the Regional Water Board included in the Permit several over-

all prohibitions applicable to municipal storm sewer discharges. Of critical importance to this appeal, these prohibitions concern two categories of restrictions. First, the Municipalities are prohibited from discharging those pollutants "which have not been reduced to the *maximum extent practicable*" ⁷ (Italics added). Second, the Municipalities [**135] are prohibited from discharging pollutants "which cause or contribute to exceedances of receiving water quality objectives ... " and/or that "cause or contribute to the violation of water quality standards" This second category of restrictions (referred to in this opinion as the Water Quality Standards provisions) essentially provide that a municipality may not discharge pollutants if those pollutants would cause the receiving water body to exceed the applicable water quality standard. It is these latter restrictions that are challenged by Building Industry in this appeal.

⁷ The Permit does not precisely define this phrase, and instead, in its definition section, contains a lengthy discussion of the variable nature of the maximum extent practicable concept, referred to as MEP. A portion of this discussion is as follows: "[T]he definition of MEP is dynamic and will be defined by the following process over time: municipalities propose their definition of MEP by way of their [local storm sewer plan]. Their total collective and individual activities conducted pursuant to the [plan] becomes their proposal for MEP as it applies both to their overall effort, as well as to specific activities (e.g., MEP for street sweeping, or MEP for municipal separate storm sewer maintenance). In the absence of a proposal acceptable to the [Regional Water Board], the [Regional Water Board] defines MEP." The definition also identifies several factors that are "useful" in determining whether an entity has achieved the maximum extent practicable standard, including "Effectiveness," "Regulatory Compliance," "Public Acceptance," "Cost," and "Technical Feasibility."

[***16] [*877] Part C of the Permit (as amended) qualifies the Water Quality Standards provisions by detailing a procedure for enforcing violations of those standards through a step-by-step process of "timely implementation of control measures" known as an "iterative" process. Under this procedure, when a municipality "caus[es] or contribute[s] to an exceedance of an applicable water quality standard," the municipality must prepare a report documenting the violation and describing a process for improvement and prevention of further violations. The municipality and the regional water board must then work together at improving methods and monitoring progress to achieve compliance. But the final provision of Part C states that "Nothing in this section

shall prevent the [Regional Water Board] from enforcing any provision of this Order while the [municipality] prepares and implements the above report."

In addition to these broad prohibitions and enforcement provisions, the Permit requires the Municipalities to implement, or to require businesses and residents to implement, various pollution control measures referred to as "best management practices," which reflect techniques for preventing, [***17] slowing, retaining or absorbing pollutants produced by stormwater runoff. These best management practices include structural controls that minimize contact between pollutants and flows, and nonstructural controls such as educational and public outreach programs. The Permit also requires the Municipalities to regulate discharges associated with new development and redevelopment and to ensure a completed project will not result in significantly increased discharges of pollution from storm water runoff.

III. Administrative and Trial Court Challenges

After the Regional Water Board issued the Permit, the Building Industry, an organization representing the interests of numerous construction-related businesses, filed an administrative challenge with the State Water Board. Although none of the Municipalities joined in the administrative appeal, Building Industry claimed its own independent standing based on its assertion that the Permit would impose indirect obligations on the regional building community. (See Wat. Code, § 13320 [permitting any "aggrieved person" to challenge regional water board action].) Among its numerous contentions, Building Industry argued that the Water [***18] Quality Standards provisions in the Permit require strict compliance with state water quality standards beyond what is "practicable" and therefore violate federal law.

In November 2001, the State Water Board issued a written decision rejecting Building Industry's appeal after making certain modifications to the Permit. (Cal. Wat. Resources Control Bd. Order WQ2001-15 (Nov. 15, 2001).) Of particular relevance here, the State Water [*878] Board modified the Permit to make clear that the iterative enforcement process applied to the Water Quality Standards provisions in the Permit. But the State Water Board did not delete the Permit's [*136] provision stating that the Regional Water Board retains the authority to enforce the Water Quality Standards provisions even if a Municipality is engaged in this iterative process.

Building Industry then brought a superior court action against the Water Boards, challenging the Regional Board's issuance of the Permit and the State Water Board's denial of Building Industry's administrative challenge. * Building Industry asserted numerous legal

claims, including that the Water Boards: (1) violated the Clean Water Act by imposing a standard greater [***19] than the "maximum extent practicable" standard; (2) violated state law by failing to consider various statutory factors before issuing the Permit; (3) violated the California Environmental Quality Act (CEQA) by failing to prepare an environmental impact report (EIR); and (4) made findings that were factually unsupported.

8 Several other parties were also named as petitioners: Building Industry Legal Defense Foundation, California Business Properties Association, Construction Industry Coalition for Water Quality, San Diego County Fire Districts Association, and the City of San Marcos. However, because these entities were not parties in the administrative challenge, the superior court properly found they were precluded by the administrative exhaustion doctrine from challenging the administrative agencies' compliance with the federal and state water quality laws. Although these entities were named as appellants in the notice of appeal, they are barred by the exhaustion doctrine from asserting appellate contentions concerning compliance with federal and state water quality laws. However, as to any other claims (such as CEQA), these entities are proper appellants. For ease of reference and where appropriate, we refer to the appellants collectively as Building Industry.

Three environmental organizations, San Diego BayKeeper, Natural Resources Defense Council, and California CoastKeeper (collectively, Environmental Organizations), [***20] requested permission to file a complaint in intervention, seeking to uphold the Permit and asserting a direct and substantial independent interest in the subject of the action. Over Building Industry's objections, the trial court permitted these organizations to file the complaint and enter the action as parties-interveners.

After reviewing the lengthy administrative record and the parties' briefs, and conducting an oral hearing, the superior court ruled in favor of the Water Boards and Environmental Organizations (collectively, respondents). Applying the independent judgment test, the court found Building Industry failed to meet its burden to establish the State Water Board abused its discretion in approving the Permit or that the administrative findings are contrary to the weight of the evidence. In particular, the court found Building Industry failed to establish the Permit requirements were "impracticable under federal law or unreasonable under state law," and noted that there was evidence showing the Regional Water Board considered many practical aspects of the regulatory [*879] controls

before issuing the Permit. Rejecting Building Industry's legal arguments, the court also stated that [***21] under federal law the Water Boards had the discretion "to require strict compliance with water quality standards" or "to require less than strict compliance with water quality standards." The court also sustained several of respondents' evidentiary objections, including to documents relating to the legislative history of the Clean Water Act.

Building Industry appeals, challenging the superior court's determination that the Permit did not violate the federal Clean Water Act. In its appeal, Building Industry does not reassert its claim that the Permit violates state law, except for its contentions pertaining to CEQA.

DISCUSSION

I. Standard of Review

[HN9](6) A party aggrieved by a final decision of the State Water Board may obtain review of the decision by filing a timely [**137] petition for writ of mandate in the superior court. (Wat. Code, § 13330, subd. (a).) [HN10]Code of Civil Procedure section 1094.5 governs the proceedings, and the superior court must exercise its independent judgment in examining the evidence and resolving factual disputes. (Wat. Code, § 13330, subd. [***22] (d).) "In exercising its independent judgment, a trial court must afford a strong presumption of correctness concerning the administrative findings, and the party challenging the administrative decision bears the burden of convincing the court that the administrative findings are contrary to the weight of the evidence." (*Fukuda v. City of Angels* (1999) 20 Cal.4th 805, 817 [85 Cal. Rptr. 2d 696, 977 P.2d 693].)

[HN11](7) In reviewing the trial court's factual determinations on the administrative record, a Court of Appeal applies a substantial evidence standard. (*Fukuda v. City of Angels, supra*, 20 Cal.4th at p. 824.) However, in reviewing the trial court's legal determinations, an appellate court conducts a de novo review. (See *Alliance for a Better Downtown Millbrae v. Wade* (2003) 108 Cal.App.4th 123, 129 [133 Cal. Rptr. 2d 249].) Thus, we are not bound by the legal determinations made by the state or regional agencies or by the trial court. (See *Yamaha Corp. of America v. State Bd. of Equalization* (1998) 19 Cal.4th 1, 7-8 [78 Cal. Rptr. 2d 1, 960 P.2d 1031].) But we must give appropriate consideration to an administrative agency's expertise underlying its interpretation of an applicable statute.⁹ (*Ibid.*)

⁹ We note that in determining the meaning of the Clean Water Act and its amendments, federal courts generally defer to the EPA's statutory construction if the disputed portion of the statute is ambiguous. (See *Chevron U.S.A. v. Natural Res.*

Def. Council, Inc. (1984) 467 U.S. 837, 842-844 [81 L. Ed. 2d 694, 104 S. Ct. 2778] (*Chevron*).) However, the parties do not argue this same principle applies to a *state agency's* interpretation of the Clean Water Act. Nonetheless, under governing state law principles, we do consider and give due deference to the Water Boards' statutory interpretations in this case. (See *Yamaha Corp. of America v. State Bd. of Equalization, supra*, 19 Cal.4th at pp. 7-8.)

[***23]

[*880] II. Water Boards' Authority to Enforce Water Quality Standards in NPDES Permit

Building Industry's main appellate contention is very narrow. Building Industry argues that two provisions in the Permit (the Water Quality Standards provisions) violate federal law because they prohibit the Municipalities from discharging runoff from storm sewers if the discharge would cause a water body to exceed the applicable water quality standard established under state law.¹⁰ Building Industry contends that under federal law the "maximum extent practicable" standard is the "exclusive" measure that may be applied to municipal storm sewer discharges and a regulatory agency may not require a Municipality to comply with a state water quality standard if the required controls exceed a "maximum extent practicable" standard.

¹⁰ These challenged Permit provisions state "Discharges from [storm sewers] which cause or contribute to exceedances of receiving water quality objectives for surface water or groundwater are prohibited" (Permit, § A.2), and "Discharges from [storm sewers] that cause or contribute to the violation of water quality standards ... are prohibited" (Permit, § C.1).

[***24] In the following discussion, we first reject respondents' contentions that Building Industry waived these arguments by failing to raise a substantial evidence challenge to the court's factual findings and/or [**138] to reassert its state law challenges on appeal. We then focus on the portion of the Clean Water Act (§ 1342(p)(3)(B)(iii)) that Building Industry contends is violated by the challenged Permit provisions. On our de novo review of this legal issue, we conclude the Permit's Water Quality Standards provisions are proper under federal law, and Building Industry's legal challenges are unsupported by the applicable statutory language, legislative purpose, and legislative history.

A. Building Industry Did Not Waive the Legal Argument

Respondents (the Water Boards and Environmental Organizations) initially argue that Building Industry waived its right to challenge the Permit's consistency with the maximum extent practicable standard because Building Industry did not challenge the trial court's *factual* findings that Building Industry failed to prove any of the Permit requirements were "impracticable" or "unreasonable."

In taking this position, respondents misconstrue the [***25] nature of Building Industry's appellate contention challenging the Water Quality Standards provisions. Building Industry's contention concerns the scope of the authority given to the Regional Water Board under the Permit terms. Specifically, [*881] Building Industry argues that the Regional Water Board does not have the authority to require the Municipalities to adhere to the applicable water quality standards because federal law provides that the "maximum extent practicable" standard is the exclusive standard that may be applied to storm sewer regulation. This argument--concerning the proper scope of a regulatory agency's authority--presents a purely legal issue, and is not dependent on the court's factual findings regarding the practicality of the specific regulatory controls identified in the Permit.

Respondents alternatively contend that Building Industry waived its right to challenge the propriety of the Water Quality Standards provisions under federal law because the trial court found the provisions were valid under state law and Building Industry failed to reassert its state law challenges on appeal. Under the particular circumstances of this case, we conclude Building Industry did [***26] not waive its rights to challenge the Permit under federal law.

(8) Although[HN12] it is well settled that the Clean Water Act authorizes states to impose water quality controls that are more stringent than are required under federal law (§ 1370; see PUD No. 1 of Jefferson Cty. v. Washington Dept. of Ecology (1994) 511 U.S. 700, 705 [128 L. Ed. 2d 716, 114 S. Ct. 1900]; Northwest Environmental Advocates v. Portland (9th Cir. 1995) 56 F.3d 979, 989), and California law specifically allows the imposition of controls more stringent than federal law (Wat. Code, § 13377), the Water Boards made a tactical decision in the superior court to assert the Permit's validity based solely on federal law, and repeatedly made clear they were not seeking to justify the Permit requirements based on the Boards' independent authority to act under state law. On appeal, the Water Boards continue to rely primarily on federal law to uphold the Permit requirements, and their assertions that we may decide the matter based solely on state law are in the nature of asides rather than direct arguments. On this record, it would be improper to rely solely on state law to uphold the challenged Permit provisions. [***27]

B. *The Water Quality Standards Requirement Does Not Violate Federal Law*

We now turn to Building Industry's main substantive contention on appeal-- [***139] that the Permit's Water Quality Standards provisions (fn. 10, *ante*) violate federal law. Building Industry's contention rests on its interpretation of the 1987 Water Quality Act amendments containing NPDES requirements for municipal storm sewers. The portion of the relevant statute reads: "(B) ... Permits for discharges from municipal storm sewers ... [¶] ... [¶] (iii) shall require controls to reduce the discharge of pollutants to the *maximum extent practicable, including* management practices, control techniques and [*882] system, design and engineering methods, and such other provisions as the [EPA] Administrator or the State determines appropriate for the control of such pollutants." (§ 1342(p)(3)(B)(iii), italics added.)

1. *Statutory Language*

Focusing on the first 14 words of subdivision (iii), Building Industry contends the statute means that the maximum extent practicable standard sets the upper limit on the type of control that can be used in an NPDES permit, and that each of the phrases following the [***28] word "*including*" identify examples of "maximum extent practicable" controls. (§ 1342(p)(3)(B)(iii), italics added.) Building Industry thus reads the final "and such other provisions" clause as providing the EPA with the authority only to include *other* types of "maximum extent practicable" controls in an NPDES storm sewer permit.

Respondents counter that the term "including" refers only to the three identified types of pollution control procedures--(1) "management practices"; (2) "control techniques"; and (3) "system, design and engineering methods"--and that the last phrase, "*and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants,*" provides the EPA (or the approved state regulatory agency) the specific authority to go beyond the maximum extent practicable standard to impose effluent limitations or water-quality based standards in an NPDES permit. In support, respondents argue that because the word "system" in section 1342(p)(3)(B)(iii) is singular, it necessarily follows from parallel-construction grammar principles that the word "system" is part of the phrase "system, design and engineering methods" rather [***29] than the phrase "control techniques and system." Under this view and given the absence of a comma after the word "techniques," respondents argue that the "and such other provisions" clause cannot be fairly read as restricted by the "maximum extent practicable" phrase, and instead the "and such other provisions" clause is a separate and dis-

tinct clause that acts as a second direct object to the verb "require" in the sentence. (§ 1342(p)(3)(B)(iii).)

Building Industry responds that respondents' proposed statutory interpretation is "not logical" because if the "and such other provisions" phrase is the direct object of the verb "require," the sentence would not make sense. Building Industry states that "permits" do not generally "require" provisions; they "include" or "contain" them.

(9) As a matter of grammar and word choice, respondents have the stronger position. The second part of Building Industry's proposed interpretation--"control techniques and system, design and engineering methods"--without a comma after the word "techniques" does not logically serve as a [*883] parallel construct with the "and such other provisions" clause. Moreover, we disagree that the "and such other provisions" [***30] clause cannot be a direct object to the word "require." (§ 1342(p)(3)(B)(iii).) Although it is not the clearest way of articulating the concept, [HN13]the language of section 1342(p)(3)(B)(iii) does communicate the [***140] basic principle that the EPA (and/or a state approved to issue the NPDES permit) retains the discretion to impose "appropriate" water pollution controls in addition to those that come within the definition of "maximum extent practicable." (*Defenders of Wildlife, supra*, 191 F.3d at pp. 1165-1167.) We find unpersuasive Building Industry's reliance on several statutory interpretation concepts, *ejusdem generis*, *noscitur a sociis*, and *expressio unius est exclusion alterius*, to support its narrower statutory construction.

2. Purpose and History of Section 1342(p)(3)(B)(iii)

(10) Further, "[HN14][w]hile punctuation and grammar should be considered in interpreting a statute, neither is controlling unless the result is in harmony with the clearly expressed intent of the Legislature." (*In re John S.* (2001) 88 Cal.App.4th 1140, 1144, fn. 1 [106 Cal. Rptr. 2d 476]; see *Estate of Coffee* (1941) 19 Cal.2d 248, 251 [120 P.2d 661].) If the statutory language is susceptible [***31] to more than one reasonable interpretation, a court must also "look to a variety of extrinsic aids, including the ostensible objects to be achieved, the evils to be remedied, the legislative history, public policy, contemporaneous administrative construction, and the statutory scheme of which the statute is a part." (*Nolan v. City of Anaheim* (2004) 33 Cal.4th 335, 340 [14 Cal. Rptr. 3d 857, 92 P.3d 350].)

[HN15](11) The legislative purpose underlying the Water Quality Act of 1987, and section 1342(p) in particular, supports that Congress intended to provide the EPA (or the regulatory agency of an approved state) the discretion to require compliance with water quality standards in a municipal storm sewer NPDES permit, partic-

ularly where, as here, that compliance will be achieved primarily through an iterative process.

Before section 1342(p) was enacted, the courts had long recognized that the EPA had the authority to require a party to comply with a state water quality standard even if that standard had not been translated into an effluent limitation. (See *EPA v. State Water Resources Control Board, supra*, 426 U.S. at p. 205, fn. 12; *PUD No. 1 of Jefferson Cty. v. Washington Dept. of Ecology, supra*, 511 U.S. at p. 715; [***32] *Northwest Environmental Advocates v. Portland* (9th Cir. 1995) 56 F.3d 979, 987; *Natural Resources Defense Council v. U.S.E.P.A.* (9th Cir. 1990) 915 F.2d 1314, 1316.) Specifically, section 1311(b)(1)(C) gave the regulatory agency the authority to impose "any more stringent limitation, including those necessary to meet water quality standards," and section 1342(a)(2) provided that "[t]he [EPA] Administrator shall [***884] prescribe conditions for [NPDES] permits to assure compliance" with requirements identified in section 1342(a)(1), which encompass state water quality standards. The United States Supreme Court explained that when Congress enacted the 1972 Clean Water Act, it retained "[w]ater quality standards ... as a supplementary basis for effluent limitations, ... so that numerous point sources despite individual compliance with effluent limitations, may be further regulated to prevent water quality from falling below acceptable levels. ... " (*EPA v. State Water Resources Control Board, supra*, 426 U.S. at p. 205, fn. 12; see also *Arkansas v. Oklahoma* (1992) 503 U.S. 91, 101 [117 L. Ed. 2d 239, 112 S. Ct. 1046].)

There [***33] is nothing in section 1342(p)(3)(B)(iii)'s statutory language or legislative history showing that Congress intended to eliminate this discretion when it amended the Clean Water Act in 1987. [***141] To the contrary, Congress added the NPDES storm sewer requirements to strengthen the Clean Water Act by making its mandate correspond to the practical realities of municipal storm sewer regulation. As numerous commentators have pointed out, although Congress was reacting to the physical differences between municipal storm water runoff and other pollutant discharges that made the 1972 legislation's blanket effluent limitations approach impractical and administratively burdensome, the primary point of the legislation was to address these administrative problems while giving the administrative bodies the tools to meet the fundamental goals of the Clean Water Act in the context of stormwater pollution. (See *Regulation of Urban Stormwater Runoff, supra*, 48 Wash. U. J. Urb. & Contemp. L. at pp. 44-46; *Environmental Law Handbook, supra*, at p. 300; *Clean Water Act Handbook, supra*, at pp. 62-63.) In the 1987 congressional debates, the Senators and Representatives emphasized the need to prevent the widespread

and escalating problems [***34] resulting from untreated storm water toxic discharges that were threatening aquatic life and creating conditions dangerous to human health. (See Remarks of Sen. Durenberger, 133 Cong. Rec. 1279 (Jan. 14, 1987); Remarks of Sen. Chaffee, 133 Cong. Rec. S738 (daily ed. Jan 14, 1987); Remarks of Rep. Hammerschmidt, 133 Cong. Rec. 986 (Jan. 8, 1987); Remarks of Rep. Roe, 133 Cong. Rec. 1006, 1007 (Jan. 8, 1987); Remarks of Sen. Stafford, 132 Cong. Rec. 32381, 32400 (Oct. 16, 1986).) This legislative history supports that in identifying a maximum extent practicable standard Congress did not intend to substantively bar the EPA/state agency from imposing a more stringent water quality standard if the agency, based on its expertise and technical factual information and after the required administrative hearing procedure, found this standard to be a necessary and workable enforcement mechanism to achieving the goals of the Clean Water Act.

To support a contrary view, Building Industry relies on comments by Minnesota Senator David Durenberger during the lengthy congressional [*885] debates on the 1987 Water Quality Act amendments.¹¹ (132 Cong. Rec. 32400 (Oct. 16, 1986); 133 Cong. Rec. S752 (daily [***35] ed. Jan. 14, 1987).) In the cited portions of the Congressional Record, Senator Durenberger states that NPDES permits "shall require controls to reduce the discharge of pollutants to the maximum extent practicable. Such controls include management practices, control techniques and systems, design and engineering methods, and such other provisions, as the Administrator determines appropriate for the control of pollutants in the stormwater discharge." (*Ibid.*) When viewing these statements in context, it is apparent that the Senator was merely paraphrasing the words of the proposed statute and was not intending to address the issue of whether the maximum extent practicable standard was a regulatory ceiling or whether he believed the proposed amendments limited the EPA's existing discretion.¹²

11 We agree with Building Industry that the trial court's refusal to consider this legislative history on the basis that it was not presented to the administrative agencies was improper. However, this error was not prejudicial because we apply a de novo review standard in interpreting the relevant statutes.

[***36]

12 In the cited remarks, Senator Durenberger in fact expressed his dissatisfaction with the EPA's prior attempts to regulate municipal storm sewers. He pointed out, for example, that "[r]unoff from municipal separate storm sewers and industrial sites contain significant values of both toxic and conventional pollutants," and that

despite the Clean Water Act's "clear directive," the EPA "has failed to require most stormwater point sources to apply for permits which would control the pollutants in their discharge." (133 Cong. Rec. 1274, 1279-1280 (daily ed. Jan. 14, 1987).)

[**142] Building Industry's reliance on comments made by Georgia Representative James Rowland, who participated in drafting the 1987 Water Quality Act amendments, is similarly unhelpful. During a floor debate on the proposed amendments, Representative Rowland noted that cities have "millions of" stormwater discharge points and emphasized the devastating financial burden on cities if they were required to obtain a permit for each of these points. (133 Cong. Rec. 522 (daily ed. Feb. 3, 1987).) Representative Rowland then explained [***37] that the amendments would address this problem by "allow[ing] communities to obtain far less costly single jurisdictionwide permits." (*Ibid.*) Viewed in context, these comments were directed at the need for statutory provisions permitting the EPA to issue jurisdiction-wide permits thereby preventing unnecessary administrative costs to the cities, and do not reflect a desire to protect cities from the cost of complying with strict water quality standards when deemed necessary by the regulatory agency.

3. Interpretations by the EPA and Other Courts

(12) Our conclusion that Congress intended section 1342(p)(3)(B)(iii) to provide the regulatory agency with authority to impose standards stricter than a "maximum extent practicable" standard is consistent with interpretations by [*886] the EPA and the Ninth Circuit. In its final rule promulgated in the Federal Register, the EPA construed section 1342(p)(3)(B)(iii) as providing the administrative agency with the authority to impose water-quality standard controls in an NPDES permit if appropriate under the circumstances. Specifically, the EPA stated this statutory provision requires "controls to reduce the discharge of pollutants to the [***38] maximum extent practicable, and where necessary water quality-based controls" (55 Fed. Reg. 47990, 47994 (Nov. 16, 1990), italics added.) [HN16] We are required to give substantial deference to this administrative interpretation, which occurred after an extensive notice and comment period. (See *ibid.*; *Chevron, supra*, 467 U.S. at pp. 842-844.)

The only other court that has interpreted the "such other provisions" language of section 1342(p)(3)(B)(iii) has reached a similar conclusion. (*Defenders of Wildlife, supra*, 191 F.3d at pp. 1166-1167.) In *Defenders of Wildlife*, environmental organizations brought an action against the EPA, challenging provisions in an NPDES permit requiring several Arizona localities to adhere to

various best management practice controls without requiring numeric effluent limitations. (*Id.* at p. 1161.) The environmental organizations argued that section 1342(p) did not allow the EPA to issue NPDES permits without requiring strict compliance with effluent limitations. (*Defenders of Wildlife, supra*, at p. 1161.) Rejecting this argument, the Ninth Circuit found section 1342(p)(3)(B)(iii)'s statutory language "unambiguously [***39] demonstrates that Congress did not require [**143] municipal storm-sewer discharges to comply strictly" with effluent limitations. (*Defenders of Wildlife, supra*, at p. 1164.)

But in a separate part of the opinion, the *Defenders of Wildlife* court additionally rejected the reverse argument made by the affected municipalities (who were the interveners in the action) that "the EPA may not, under the [Clean Water Act], require strict compliance with state water-quality standards, through numerical limits or otherwise." (*Defenders of Wildlife, supra*, 191 F.3d at p. 1166.) The court stated: "Although Congress did not require municipal storm-sewer discharges to comply strictly with [numerical effluent limitations], § 1342(p)(3)(B)(iii) states that '[p]ermits for discharges from municipal storm sewers ... shall require ... such other provisions as the Administrator ... determines appropriate for the control of such pollutants.' (Emphasis added.) That provision gives the EPA discretion to determine what pollution controls are appropriate. ... [¶] Under that discretionary provision, the EPA has the authority to determine that ensuring [***40] strict compliance with state water-quality standards is necessary to control pollutants. The EPA also has the authority to require less than strict compliance with state water-quality standards Under 33 U.S.C. § 1342(p)(3)(B)(iii), the EPA's choice to include either management practices or numeric limitations in the permits was within its discretion. [Citations.]" (*Defenders of Wildlife, supra*, 191 F.3d at pp. 1166-1167, second italics added.) Although dicta, this [*887] conclusion reached by a federal court interpreting federal law is persuasive and is consistent with our independent analysis of the statutory language.¹³

13 Building Industry's reliance on two other Ninth Circuit decisions to support a contrary statutory interpretation is misplaced. (See *Natural Res. Def. Council, Inc. v. U.S.E.P.A., supra*, 966 F.2d at p. 1308; *Environmental Defense Center, Inc. v. U.S. E.P.A.* (9th Cir. 2003) 344 F.3d 832.) Neither of these decisions addressed the issue of the scope of a regulatory agency's authority to exceed the maximum extent practicable standard in issuing NPDES permits for municipal storm sewers.

[***41] To support its interpretation of section 1342(p)(3)(B)(iii), Building Industry additionally relies on the statutory provisions addressing nonpoint source runoff (a diffuse runoff not channeled through a particular source), which were also part of the 1987 amendments to the Clean Water Act. (§ 1329.) In particular, Building Industry cites to section 1329(a)(1)(C), which states, "The Governor of each State shall ... prepare and submit to the [EPA] Administrator for approval, a report which ... [¶] ... [¶] describes the process ... for identifying best management practices and measures to control each [identified] category ... of nonpoint sources and ... to reduce, to the *maximum extent practicable*, the level of pollution resulting from such category" (Italics added.) Building Industry argues that because this "nonpoint source" statutory language expressly identifies only the maximum extent practicable standard, we must necessarily conclude that Congress meant to similarly limit the storm sewer point source pollution regulations to the maximum extent practicable standard.

The logic underlying this analogy is flawed because the critical language in the [***42] two statutory provisions is different. In the nonpoint source statute, Congress chose to include only the maximum extent practicable standard (§ 1329(a)(1)(C)); whereas in the municipal storm sewer provisions, Congress elected to include the "and such other provisions" clause (§ 1342(p)(3)(B)(iii)). This difference leads to the reasonable inference that Congress had a different intent when it enacted the two statutory provisions. Moreover, because of a fundamental difference between point and nonpoint source pollution, Congress has historically treated the two types of pollution differently and has subjected each type to entirely different requirements. (See *Pronsolino v. Nastri* (9th Cir. 2002) 291 F.3d 1123, 1126-1127.) Given this different treatment, it would be improper to presume Congress intended to apply the same standard in both statutes. Building Industry's citation to comments during the 1987 congressional debates regarding nonpoint source regulation does [**144] not support Building Industry's contentions.

[*888] 4. *Contention that it is "Impossible" for Municipalities to Meet Water Quality Standards*

We also reject Building Industry's arguments woven throughout [***43] its appellate briefs, and emphasized during oral arguments, that the Water Quality Standards provisions violate federal law because compliance with those standards is "impossible." The argument is not factually or legally supported.

(13) First, there is no showing on the record before us that the applicable water quality standards are unattainable. The trial court specifically concluded that Building Industry failed to make a factual showing to

support this contention, and Building Industry does not present a proper appellate challenge to this finding sufficient to warrant our reexamining the evidence. [HN17]All judgments and orders are presumed correct, and persons challenging them must affirmatively show reversible error. (14) (*Walling v. Kimball* (1941) 17 Cal.2d 364, 373 [110 P.2d 58].) [HN18]A party challenging the sufficiency of evidence to support a judgment must summarize (and cite to) *all* of the material evidence, not just the evidence favorable to his or her appellate positions. (*In re Marriage of Fink* (1979) 25 Cal.3d 877, 887-888 [160 Cal. Rptr. 516, 603 P.2d 881]; *People v. Dougherty* (1982) 138 Cal. App. 3d 278, 282 [188 Cal. Rptr. 123].) Building Industry has made [***44] no attempt to comply with this well-established appellate rule in its briefs.

In a supplemental brief, Building Industry attempted to overcome this deficiency by asserting that "[t]he record clearly establishes that [the Water Quality Standards provisions] are unattainable during the period the permit is in effect." This statement, however, is not supported by the proffered citation or by the evidence viewed in the light most favorable to the respondents. Further, the fact that many of the Municipalities' storm sewer discharges currently violate water quality standards does not mean that the Municipalities cannot comply with the standards during the five-year term of the Permit. Additionally, Building Industry's assertions at oral argument that the trial court never reached the impossibility issue and/or that respondents' counsel conceded the issue below are belied by the record, including the trial court's rejection of Building Industry's specific challenge to the proposed statement of decision on this very point.¹⁴

14 Because we are not presented with a proper appellate challenge, we do not address the trial court's factual determinations in this case concerning whether it is possible or practical for a Municipality to achieve any specific Permit requirement.

[***45] (15) We reject Building Industry's related argument that it was respondents' burden to affirmatively show it is feasible to satisfy each of the applicable Water Quality Standards provisions. [HN19]The party challenging the scope of an administrative permit, such as an NPDES, has the burden of [***889] showing the agency abused its discretion or its findings were unsupported by the facts. (See *Fukuda v. City of Angels*, *supra*, 20 Cal.4th at p. 817; *Huntington Park Redevelopment Agency v. Duncan* (1983) 142 Cal. App. 3d 17, 25 [190 Cal. Rptr. 744].) Thus, it was not respondents' burden to affirmatively demonstrate it was possible for the Municipalities to meet the Permit's requirements.

Building Industry alternatively contends it was not required to challenge the facts underlying the trial court's determination that the Permit requirements were feasible [***145] because the court's determination was wrong as a matter of law. Specifically, Building Industry asserts that a Permit requirement that is more stringent than a "maximum extent practicable" standard is, by definition, "not practicable" and therefore "technologically impossible" to achieve under any circumstances. Building [***46] Industry relies on a dictionary definition of "practicable," which provides that the word means "something that can be done; feasible," citing the 1996 version of "Webster's Encyclopedic Unabridged Dictionary."

(16) This argument is unpersuasive. The federal maximum extent practicable standard is not defined in the Clean Water Act or applicable regulations, and thus the Regional Water Board properly included a detailed description of the term in the Permit's definitions section. (See *ante*, fn. 7.) As broadly defined in the Permit, the maximum extent practicable standard is a highly flexible concept that depends on balancing numerous factors, including the particular control's technical feasibility, cost, public acceptance, regulatory compliance, and effectiveness. This definition conveys that the Permit's maximum extent practicable standard is a term of art, and is not a phrase that can be interpreted solely by reference to its everyday or dictionary meaning. Further, the Permit's definitional section states that the maximum extent practicable standard "considers economics and is generally, but not necessarily, *less* stringent than BAT." (Italics added.) [HN20]BAT is an acronym [***47] for "best available technology economically achievable," which is a technology-based standard for industrial storm water dischargers that focuses on reducing pollutants by treatment or by a combination of treatment and best management practices. (See *Texas Oil & Gas Ass'n v. U.S. E.P.A.* (5th Cir. 1998) 161 F.3d 923, 928.) If the maximum extent practicable standard is generally "less stringent" than another Clean Water Act standard that relies on available technologies, it would be unreasonable to conclude that anything more stringent than the maximum extent practicable standard is necessarily impossible. In other contexts, courts have similarly recognized that the word "practicable" does not necessarily mean the most that can possibly be done. (See *Nat. Wildlife Federation v. Norton* (E.D.Cal. 2004) 306 F. Supp. 2d 920, 928, fn. 12 ["[w]hile the meaning of the term 'practicable' in the [Endangered Species Act] is not entirely clear, the term does not simply equate to 'possible'"]; *Primavera Familienstiftung v. Askin* (S.D.N.Y. 1998) 178 F.R.D. [***890] 405, 409 [noting that "impracticability does not mean impossibility, but rather difficulty [***48] or inconvenience"].)

We additionally question whether many of Building Industry's "impossibility" arguments are premature on the record before us. As we have explained, the record does not support that any required control is, or will be, impossible to implement. Further, the Permit allows the Regional Water Board to enforce water quality standards during the iterative process, but does not impose any obligation that the board do so. Thus, we cannot determine with any degree of certainty whether this obligation would ever be imposed, particularly if it later turns out that it is not possible for a Municipality to achieve that standard.

Finally, we comment on Building Industry's repeated warnings that if we affirm the judgment, all affected Municipalities will be in immediate violation of the Permit because they are not now complying with applicable water quality standards, subjecting them to immediate and substantial civil penalties, and leading to a potential "shut down" of public operations. These doomsday arguments are unsupported. The Permit makes clear that Municipalities [**146] are required to adhere to numerous specific controls (none of which are challenged in this case) and [***49] to comply with water quality standards through "timely implementation of control measures" by engaging in a cooperative iterative process where the Regional Water Board and Municipality work together to identify violations of water quality standards in a written report and then incorporate approved modified best management practices. Although the Permit allows the regulatory agencies to enforce the water quality standards during this process, the Water Boards have made clear in this litigation that they envision the ongoing iterative process as the centerpiece to achieving water quality standards. Moreover, the regulations provide an affected party reasonable time to comply with new permit requirements under certain circumstances. (See 40 C.F.R. § 122.47.) There is nothing in this record to show the Municipalities will be subject to immediate penalties for violation of water quality standards.

We likewise find speculative Building Industry's predictions that immediately after we affirm the judgment, citizens groups will race to the courthouse to file lawsuits against the Municipalities and seek penalties for violation of the Water Quality Standards provisions.¹⁵ As noted, the applicable [***50] laws provide time for an affected entity to comply with new standards. Moreover, although we do not reach the enforcement issue in this case, we note the [*891] Permit makes clear that the iterative process is to be used for violations of water quality standards, and gives the Regional Water Board the discretionary authority to enforce water quality standards during that process. Thus, it is not at all clear that a citizen would have standing to compel a municipality to comply with a water quality standard despite an ongoing iterative process. (See § 1365(a)(1)(2).) [***51]

15 The Clean Water Act allows a citizen to sue a discharger to enforce limits contained in NPDES permits, but requires the citizen to notify the alleged violator, the state, and the EPA of its intention to sue at least 60 days before filing suit, and limits the enforcement to nondiscretionary agency acts. (See § 1365(a)(1)(2).)

III.-VII.* [NOT CERTIFIED FOR PUBLICATION]

* See footnote, *ante*, page 866.

DISPOSITION

Judgment affirmed. Appellants to pay respondents' costs on appeal.

Benke, Acting P. J., and Aaron, J., concurred.

A petition for a rehearing was denied January 4, 2005, and the opinion was modified to read as printed above. Appellants' petition for review by the Supreme Court was denied March 30, 2005. Baxter, J., and Brown, J., were of the opinion that the petition should be granted. [***52]

Court of Appeal of California, Second Appellate District, Division Five

190 Cal. App. 3d 521; 234 Cal. Rptr. 795; 1987 Cal. App. LEXIS 1266

February 19, 1987

SUBSEQUENT HISTORY: [***1] As Modified March 10, 1987. A petition for a rehearing was denied March 17, 1987, and appellants' petition for review by the Supreme Court was denied May 14, 1987. Eagle-son, J., did not participate therein.

PRIOR HISTORY: Superior Court of Los Angeles County, No. C437471, Norman L. Epstein, Judge; No. C514623 and No. C515319, Jack T. Ryburn, Judge.

DISPOSITION: As modified, the judgment is affirmed. Respondents to recover costs on appeal.

CASE SUMMARY:

PROCEDURAL POSTURE: Appellant state challenged the judgments of the Superior Court of Los Angeles County (California), which ordered appellant to reimburse respondent county for state-mandated costs in three consolidated appeals.

OVERVIEW: Respondent county purchased protective clothing and equipment for firefighters within its employ as required by Cal. Code Regs. tit. 8, §§ 3401- 3409 (1978). Respondent argued that it was entitled to reimbursement from appellant state for these expenditures because they constituted a state-mandated "new program" or "higher level of service" under Cal. Rev. & Tax. Code §§ 2207 and 2231 and Cal. Const. art. XIII B.

§ 6. Respondent filed a test claim with the California State Board of Control (board) for these costs and the board determined that there was a state mandate and that respondent should have been reimbursed. Appellant did not seek judicial review of the decision and respondent filed a petition for writ of mandate and complaint for declaratory judgment. The trial court issued a writ of mandate and ordered appellant to pay the costs. On appeal, three cases were consolidated. The court affirmed with modifications and held that appellant had waived its right to challenge the board's findings and also was collaterally estopped from doing so. The court also held that the expenditures were pursuant to a new program within the meaning of Cal. Const. art. XIII B, § 6.

OUTCOME: The court affirmed the judgments, ordering appellant state to reimburse respondent county for state-mandated costs because appellant was collaterally estopped from challenging findings of the California State Board of Control and because the reimbursement was for a new program within the meaning of the California Constitution. The court modified the judgments primarily to command the comptroller to draw warrants if necessary.

CORE TERMS: reimbursement, appropriation, state-mandated, budget, local agencies, executive orders, appropriated, reimburse, mandated, offset, budget acts, fire fighters, industrial, complying, protective clothing, fire protection, new program, local governments, ex-

penditure, forfeitures, invalid, fines, collateral estoppel, single subject rule, writ of mandate, state mandate, mandamus, mandate to compel, order to provide, expended

LexisNexis(R) Headnotes

Governments > State & Territorial Governments > Finance

[HN1]See Cal. Rev. & Tax. Code § 2207.

Governments > State & Territorial Governments > Finance

[HN2]See Cal. Rev. & Tax. Code § 2231(a).

Governments > State & Territorial Governments > Finance

[HN3]See Cal. Const art. XIII B, § 6.

Governments > Local Governments > Finance

[HN4]The right to reimbursement is triggered when the local agency incurs costs mandated by the state in either complying with a new program or providing an increased level of service of an existing program. Cal. Rev. & Tax. §§ 2207, 2231.

Civil Procedure > Pleading & Practice > Defenses, Demurrers & Objections > Waiver & Preservation

[HN5]Waiver occurs where there is an existing right; actual or constructive knowledge of its existence; and either an actual intention to relinquish it, or conduct so inconsistent with an intent to enforce the right as to induce a reasonable belief that it has been waived. A right that is waived is lost forever. The doctrine of waiver applies to rights and privileges afforded by statute.

Administrative Law > Agency Adjudication > Decisions > Collateral Estoppel

Civil Procedure > Judgments > Preclusion & Effect of Judgments > Estoppel > Collateral Estoppel

[HN6]Collateral estoppel has been applied to bar relitigation of an issue decided in a prior court proceeding. In order for the doctrine to apply, the issues in the two proceedings must be the same, the prior proceeding must have resulted in a final judgment on the merits, and the same parties or their privies must be involved.

Administrative Law > Agency Adjudication > Decisions > Collateral Estoppel

Civil Procedure > Judgments > Preclusion & Effect of Judgments > Estoppel > Collateral Estoppel

Criminal Law & Procedure > Double Jeopardy > Collateral Estoppel

[HN7]The doctrine of collateral estoppel applies to a final adjudication of an administrative agency of statutory creation so as to preclude relitigation of the same issues in a subsequent criminal case. Collateral estoppel applies to such prior adjudications where three requirements are met: (1) the administrative agency acts in a judicial capacity; (2) it resolves disputed issues properly before it; and (3) all parties are provided with the opportunity to fully and fairly litigate their claims.

Administrative Law > Agency Adjudication > Hearings > General Overview

Governments > Local Governments > Administrative Boards

[HN8]The California State Board of Control (board) exercises quasi-judicial powers in adjudging the validity of claims against the State of California and is the sole administrative remedy available to local agencies seeking reimbursement for state-mandated costs. Cal. Rev. & Tax. Code § 2250. Board examiners have the power to administer oaths, examine witnesses, issue subpoenas, and receive evidence. Cal. Gov't Code § 13911. The hearings are adversarial in nature and allow for the presentation of evidence by claimant, the Department of Finance, and any other affected agency. Cal. Rev. & Tax. Code § 2252.

Civil Procedure > Judgments > Preclusion & Effect of Judgments > Estoppel > Collateral Estoppel

[HN9]The courts have held that the agents of the same government are in privity with each other, since they represent not their own rights but the right of the government.

Civil Procedure > Judgments > Preclusion & Effect of Judgments > Estoppel > Collateral Estoppel

[HN10]A prior judgment on a question of law decided by a court is conclusive in a subsequent action between the same parties where both causes involved arise out of the same subject matter or transaction, and where holding the judgment to be conclusive will not result in an injustice.

Administrative Law > Agency Adjudication > Decisions > Collateral Estoppel

Civil Procedure > Judgments > Preclusion & Effect of Judgments > Estoppel > Collateral Estoppel Governments > Local Governments > Licenses

[HN11]There is no policy reason to limit the application of the collateral estoppel doctrine to successive court proceedings.

Administrative Law > Agency Adjudication > Decisions > Collateral Estoppel

Civil Procedure > Pleading & Practice > Defenses, Demurrers & Objections > Waiver & Preservation

Civil Procedure > Judgments > Preclusion & Effect of Judgments > Estoppel > Collateral Estoppel

[HN12]Questions of law decided by an administrative agency invoke the collateral estoppel doctrine only when a determination of conclusiveness will not work an injustice. Likewise, the doctrine of waiver is inapplicable if a litigant has no actual or constructive knowledge of his rights.

Governments > Local Governments > Duties & Powers

[HN13]Fire protection is a peculiarly governmental function. Police and fire protection are two of the most essential and basic functions of local government.

Governments > Legislation > Interpretation

[HN14]A different interpretation of a word in a statute must fall before a constitutional provision of similar import.

Governments > State & Territorial Governments > Finance

[HN15]Cal. Const. art. XIII B, § 6 and Cal. Rev. & Tax. Code §§ 2207, 2231 are not appropriations measures.

Governments > State & Territorial Governments > Employees & Officials

[HN16]See Cal. Const. art. III, § 3.

Governments > State & Territorial Governments > Finance

[HN17]See Cal. Const. art. XVI, § 7.

Governments > State & Territorial Governments > Finance

[HN18]Once funds have already been appropriated by legislative action, a court transgresses no constitutional principle when it orders the state controller or other sim-

ilar official to make appropriate expenditures from such funds.

Constitutional Law > Separation of Powers Governments > State & Territorial Governments > Finance

[HN19]As long as appropriated funds are reasonably available for the expenditures in question, the separation of powers doctrine poses no barrier to a judicial order directing the payment of such funds.

Governments > State & Territorial Governments > Finance

[HN20]The California Occupational Safety and Health Act, 1973 Cal. Stat. ch. 993 is modeled after federal law and is designed to assure safe working conditions for all California workers. A legislative disclaimer appears in 1973 Cal. Stat. ch. 993, § 106 at 1954.

Governments > State & Territorial Governments > Finance

[HN21]See 1973 Cal. Stat. ch. 993, § 106 at 1954.

Governments > State & Territorial Governments > Finance

[HN22]See 1974 Cal. Stat. ch. 1284, § 106 at 2787.

Governments > State & Territorial Governments > Finance

[HN23]See 1981 Cal. Stat. ch. 1090, § 3 at 4193.

Governments > State & Territorial Governments > Finance

[HN24]California Budget Acts of 1981, 1983, and 1984 prohibit encumbering appropriations to reimburse costs incurred under the executive orders, except under certain limited circumstances. 1981 Cal. Stat. ch. 99, § 28.40 at 606; 1983 Cal. Stat. ch. 324, § 26.00 at 1504; 1984 Cal. Stat. ch. 258, § 26.00.

Governments > Local Governments > Finance Governments > State & Territorial Governments > Finance

[HN25]The concept of federally mandated costs has provided local agencies with a financial escape valve ever since passage of the Property Tax Relief Act of 1972 (Act), 1972 Cal. Stat. ch. 1406, § 1 at 2931. That Act limited local governments' power to levy property taxes,

while requiring that they be reimbursed by the state for providing compulsory increased levels of service or new programs. However, under Cal. Rev. & Tax. Code § 2271, costs mandated by the federal government are not subject to reimbursement and local governments are permitted to levy taxes in addition to the maximum property tax rate to pay such costs.

Governments > Local Governments > Finance

[HN26]The limitation on local government's ability to raise property taxes, and the duty of the state to reimburse for state-mandated costs, is a part of Cal. Const. art. XIII B, § 6, which directs state subvention similar in nature to that required by the preexisting provisions of Cal. Rev. & Tax. Code §§ 2207, 2231.

Governments > Local Governments > Finance

[HN27] Cal. Rev. & Tax. Code § 2206 defines nonreimbursable costs mandated by the federal government to include the following: costs resulting from enactment of a state law or regulation where failure to enact such law or regulation to meet specific federal program or service requirements would result in substantial monetary penalties or loss of funds to public or private persons in the state.

Governments > Legislation > Interpretation

[HN28]Interpretation of statutory language is purely a judicial function. Legislative declarations are not binding on the courts and are particularly suspect when they are the product of an attempt to avoid financial responsibility.

Governments > Legislation > Interpretation

[HN29]See Cal. Const. art. IV, § 9.

Governments > Legislation > Interpretation

[HN30]The single subject rule essentially requires that a statute have only one subject matter and that the subject be clearly expressed in the statute's title. The rule's primary purpose is to prevent "log-rolling" in the enactment of laws. This disfavored practice occurs where a provision unrelated to a bill's main subject matter and title is included in it with the hope that the provision will remain unnoticed and unchallenged. By invalidating these unrelated clauses, the single subject rule prevents the passage of laws which otherwise might not have passed had the legislative mind been directed to them. However, in order to minimize judicial interference in the legislature's activities, the single subject rule is to be construed

liberally. A provision violates the rule only if it does not promote the main purpose of the act or does not have a necessary and natural connection with that purpose.

Governments > Legislation > Effect & Operation > Operability

Governments > Legislation > Effect & Operation > Retrospective Operation

[HN31]A retroactive statute is one that relates back to a previous transaction and gives that transaction a legal effect different from that which it had under the law when it occurred. Absent some clear policy requiring the contrary, statutes modifying liability in civil cases are not to be construed retroactively.

Governments > State & Territorial Governments > Finance

[HN32]See 1981 Cal. Stat. ch. 99, § 28.40 at 606; 1983 Cal. Stat. ch. 324, § 26 at 1504; 1984 Cal. Stat. ch. 258, § 26.00.

Governments > State & Territorial Governments > Finance

[HN33]Cal. Const. art. XIV, § 4 concerns the power to enact workers' compensation statutes and regulations. It does not focus on the issue of reimbursement for state-mandated costs, which is covered by Cal. Rev. & Tax. Code §§ 2207, 2231, and Cal. Const. art. XIII B, § 6. Since these latter provisions do not effect a pro tanto repeal of the legislature's plenary power over workers' compensation law, they do not conflict with Cal. Const. art. XIV, § 4.

Governments > State & Territorial Governments > Finance

[HN34]Under Cal. Const. art. XIII B, § 6(c), the legislature may reimburse mandates enacted prior to January 1, 1975, and must reimburse mandates passed after that date, but does not have to begin such reimbursement until the effective date of article XIII B which is July 1, 1980. In other words, the amendment of article XIII B, § 6(c) operates on "window period" mandates even though the reimbursement process may not actually commence until later.

Governments > Legislation > Statutes of Limitations > Time Limitations

Governments > State & Territorial Governments > Claims By & Against

[HN35] Cal. Civ. Proc. Code § 335 is a general introductory section to the statute of limitations for all matters except recovery of real property. Cal. Civ. Proc. Code § 338(1) requires an action upon a liability created by statute to be commenced within three years.

Administrative Law > Judicial Review > Reviewability > Exhaustion of Remedies

Civil Procedure > Justiciability > Exhaustion of Remedies > Administrative Remedies

Labor & Employment Law > Collective Bargaining & Labor Relations > Exhaustion of Remedies

[HN36] A claimant does not exhaust its administrative remedies and cannot come under the court's jurisdiction until the legislative process is complete.

Governments > Local Governments > Claims By & Against

[HN37] See Cal. Gov't Code § 17612(b).

Governments > State & Territorial Governments > Finance

[HN38] The remedy under Cal. Gov't Code § 17612 is purely a discretionary course of action. By using the permissive word "may," the legislature does not intend to override Cal. Const. art. XIII B, § 6 and Cal. Rev. & Tax. Code §§ 2207 and 2231. These constitutional and statutory imprimaturs each impose upon the state an obligation to reimburse for state-mandated costs. Once that determination is finally made, the state is under a clear and present ministerial duty to reimburse. In the absence of compliance, traditional mandamus lies. Cal. Civ. Proc. Code § 1085.

Governments > Legislation > Interpretation

[HN39] The Cal. Const. is supreme. Any statute in conflict therewith is invalid.

Governments > State & Territorial Governments > Finance

[HN40] Cal. Rev. & Tax. Code § 2255(c) cannot abrogate the constitutional directive to reimburse.

Civil Procedure > Trials > Jury Trials > Actions in Equity

Governments > State & Territorial Governments > Claims By & Against

[HN41] The right to offset is a long-established principle of equity. Either party to a transaction involving mutual

debts and credits can strike a balance, holding himself owing or entitled only to the net difference. Although this doctrine exists independent of statute, its governing principle has been partially codified. Cal. Civ. Proc. Code § 431.70. The doctrine has been applied in favor of a local agency against the state.

Governments > State & Territorial Governments > Finance

[HN42] See Cal. Gov't Code § 12419.5.

Governments > State & Territorial Governments > Finance

[HN43] See Cal. Gov't Code § 16304.1.

*Civil Procedure > Jurisdiction > Subject Matter Jurisdiction > Jurisdiction Over Actions > General Overview
Civil Procedure > Parties > Joinder > Necessary Parties*

[HN44] See Cal. Civ. Proc. Code § 389(a).

Governments > Local Governments > Duties & Powers

[HN45] The Auditor Controller is an officer of the county and is subject to the direction and control of the county board of supervisors. Cal. Gov't Code §§ 24000(d), (e), 26880; L.A. County Code, § 2.10.010.

Civil Procedure > Remedies > Judgment Interest > General Overview

Governments > Local Governments > Finance

Governments > State & Territorial Governments > Claims By & Against

[HN46] Cal. Civ. Code § 3287(a) allows interest to any person entitled to recover damages certain, or capable of being made certain by calculation. Interest begins on the day that the right to recover vests in the claimant. By its own terms, this section applies to any judgment debtor, including the state or any political subdivision of the state.

Civil Procedure > Remedies > Judgment Interest > General Overview

[HN47] An invalid statute voluntarily enacted and promulgated by the state is not a defense to its obligation to pay interest under Cal. Civ. Code § 3287(a).

Civil Procedure > Appeals > Standards of Review > General Overview

[HN48]An appellate court is not limited by the interpretation of statutes given by the trial court.

Civil Procedure > Parties > Joinder > Necessary Parties

[HN49]Through the notion of privity, a government agent can be held in contempt for knowingly violating a court order issued against another agent of the same government.

Governments > Courts > Authority to Adjudicate

[HN50]An appellate court is empowered to add a directive that the trial court order be modified to include charging orders against funds appropriated by subsequent budget acts.

SUMMARY:

CALIFORNIA OFFICIAL REPORTS SUMMARY

The trial court, in separate proceedings brought by three counties against the state for reimbursement of funds expended by the counties in complying with a state order to provide protective clothing and equipment for county fire fighters, issued writs of mandate compelling the state to reimburse the counties. Previously, the counties had filed test claims with the State Board of Control for reimbursement of similar expenses. The board determined that there was a state mandate and the counties should be reimbursed. The state did not seek judicial review of the board's decision. Thereafter, a local government claims bill, Sen. Bill No. 1261 (Stats. 1981, ch. 1090, p. 4191) was introduced to provide appropriations to pay some of the counties' claims for the state-mandated costs. After various amendments, the legislation was enacted into law without the appropriations. The counties then sought reimbursement by filing petitions for writs of mandate and complaints for declaratory relief. (Superior Court of Los Angeles County, No. C437471, Norman L. Epstein, Judge; No. C514623 and No. C515319, Jack T. Ryburn, Judge.)

In a consolidated appeal, the Court of Appeal affirmed with certain modifications. It held that, by failing to seek judicial review of the board's decision, the state had waived its right to contest the board's finding that the counties' expenditures were state mandated. Similarly, it held that the state was collaterally estopped from attacking the board's findings. It also held that the executive orders requiring the expenditures constituted the type of "program" that is subject to the constitutional imperative of subvention under Cal. Const., art. XIII B, § 6. The court also held that the trial courts had not ordered an appropriation in violation of the separation of powers

doctrine, and that the trial courts correctly determined that certain legislative disclaimers, findings, and budget control language did not exonerate the state from its constitutionally and statutorily imposed obligation to reimburse the counties' state-mandated costs. Further, the court held that the trial courts properly authorized the counties to satisfy their claims by offsetting fines and forfeitures due to the state, and that the counties were entitled to interest. (Opinion by Eagleson, J., with Ashby, Acting P. J., and Hastings, J., concurring.)

HEADNOTES

CALIFORNIA OFFICIAL REPORTS HEADNOTES

Classified to California Digest of Official Reports, 3d Series

(1a) (1b) Estoppel and Waiver § 23--Waiver--Trial and Appeal--Failure to Seek Judicial Review of Administrative Decision--Waiver of Right to Contest Findings. --In a proceeding by a county for a writ of mandate to compel reimbursement by the state for funds expended in complying with a state order to provide protective clothing and equipment to county fire fighters, the state waived its right to contest findings made by the State Board of Control in a previous proceeding. The board found that the costs were state-mandated and that the county was entitled to reimbursement. The state failed to seek judicial review of the board's decision, and the statute of limitations applicable to such review had passed. Moreover, the state, through its agents, had acquiesced in the board's findings by seeking an appropriation to satisfy the validated claims, which, however, was rebuffed by the Legislature.

(2) Estoppel and Waiver § 19--Waiver--Requisites. --Waiver occurs where there is an existing right; actual or constructive knowledge of its existence; and either an actual intention to relinquish it, or conduct so inconsistent with an intent to enforce the right as to induce a reasonable belief that it has been waived. A right that is waived is lost forever. The doctrine of waiver applies to rights and privileges afforded by statute.

(3a) (3b) (3c) (3d) Judgments § 81--Res Judicata--Collateral Estoppel--County's Action for Reimbursement of State-mandated Costs--Findings of State Board of Control. --In a proceeding brought by a county for a writ of mandate to compel reimbursement by the state for funds expended in complying with a state order to provide protective clothing and equipment to county fire fighters, the state was collaterally estopped from attacking the findings made, in a previous proceeding, by the State Board of Control that the costs were

state-mandated and that the county was entitled to reimbursement. The issues were fully litigated before the board. Similarly, although the state was not a party to the board hearings, it was in privity with those state agencies which did participate. Moreover, a determination of conclusiveness would not work an injustice.

(4) Judgments § 81--Res Judicata--Collateral Estoppel--Elements. --In order for the doctrine of collateral estoppel to apply, the issues in the two proceedings must be the same, the prior proceeding must have resulted in a final judgment on the merits, and the parties or their privies must be involved.

(5) Judgments § 84--Res Judicata--Collateral Estoppel--Identity of Parties--Privity--Governmental Agents. --The agents of the same government are in privity with each other for purposes of collateral estoppel, since they represent not their own rights but the right of the government.

(6) Judgments § 96--Res Judicata--Collateral Estoppel--Matters Concluded--Questions of Law. --A prior judgment on a question of law decided by a court is conclusive in a subsequent action between the same parties where both causes involved arose out of the same subject matter or transaction, and where holding the judgment to be conclusive will not result in an injustice.

(7) State of California § 11--Fiscal Matters--Reimbursement to County for State-mandated Costs--New Programs. --A "new program," for purposes of determining whether the program is subject to the constitutional imperative of subvention under Cal. Const., art. XIII B, § 6, is one which carries out the governmental function of providing services to the public, or laws which, to implement a state policy, impose unique requirements on local governments and do not apply generally to all residents and entities in the state.

(8) State of California § 7--Actions--Reimbursement of County Funds for State-mandated Costs--New Programs. --In an action brought by a county for a writ of mandate to compel reimbursement by the state for funds expended in complying with state executive orders to provide protective clothing and equipment to county fire fighters, the trial court properly determined that the executive orders constituted the type of "new program" that was subject to the constitutional imperative of subvention under Cal. Const., art. XIII B, § 6. Fire protection is a peculiarly governmental function. Also, the executive orders manifest a state policy to provide updated equipment to all fire fighters, impose unique requirements on local governments, and do not apply generally

to all residents and entities in the state, but only to those involved in fire fighting.

(9) Constitutional Law § 37--Doctrine of Separation of Powers--Violations of Doctrine--Judicial Order of Appropriation. --In a proceeding brought by a county for a writ of mandate to compel reimbursement by the state for funds expended in complying with a state order to provide protective clothing and equipment to county fire fighters, the trial court's judgment granting the writ was not in violation of the separation of powers doctrine. The court order did not directly compel the Legislature to appropriate funds or to pay funds not yet appropriated, but merely affected an existing appropriation.

(10) Constitutional Law § 40--Distribution of Governmental Powers--Between Branches of Government--Judicial Power and Its Limits--Order Directing Treasurer to Pay on Already Appropriated Funds. --Once funds have been appropriated by legislative action, a court transgresses no constitutional principle when it orders the State Controller or other similar official to make appropriate expenditures from such funds. Thus, a judgment which ordered the State Controller to draw warrants and directed the State Treasurer to pay on already-appropriated funds permissibly compelled performance of a ministerial duty.

(11) State of California § 12--Fiscal Matters--Appropriations--Reimbursement to County for State-mandated Costs. --Appropriations affected by a court order need not specifically refer to the particular expenditure in question in order to be available. Thus, in a proceeding brought by a county for a writ of mandate to compel reimbursement by the state for funds expended in complying with a state order to provide protective clothing and equipment to county fire fighters, the funds appropriated for the Department of Industrial Relations for the prevention of industrial injuries and deaths of state workers were available for reimbursement, despite the fact that the funds were not specifically appropriated for reimbursement. The funds were generally related to the nature of costs incurred by the county.

(12a) (12b) Fires and Fire Districts § 2--Statutes and Ordinances--County Compliance With State Executive Order to Provide Protective Equipment--Federal Mandate. --A county's purchase of protective clothing and equipment for its fire fighters was not the result of a federally mandated program so as to relieve the state of its obligation (Cal. Const., art. XIII B, § 6) to reimburse the county for the cost of the purchases. The county had made the purchase in compliance with a state executive order. The federal government does not have jurisdiction over local fire departments and there are no applicable

federal standards for local government structural fire fighting clothing and equipment. Hence, the county's obedience to the state executive orders was not federally mandated.

(13) Statutes § 20--Construction--Judicial Function--Legislative Declarations. --The interpretation of statutory language is purely a judicial function. Legislative declarations are not binding on the courts and are particularly suspect when they are the product of an attempt to avoid financial responsibility.

(14a) (14b) Statutes § 10--Title and Subject Matter--Single Subject Rule. --In a proceeding brought by a county for a writ of mandate to compel reimbursement by the state for funds expended in complying with a state order to provide protective clothing and equipment to county fire fighters (Cal. Admin. Code, tit. 8, §§ 3401-3409), the trial court properly invalidated, as violating the single subject rule, the budget control language of Stats. 1981, ch. 1090, § 3. The express purpose of ch. 1090 was to increase funds available for reimbursing certain claims. The budget control language, on the other hand, purported to make the reimbursement provisions of Rev. & Tax. Code, § 2207, and former Rev. & Tax. Code, § 2231, unavailable to the county. Because the budget control language did not reasonably relate to the bill's stated purpose, it was invalid.

(15) Statutes § 10--Title and Subject Matter--Single Subject Rule. --The single subject rule essentially requires that a statute have only one subject matter and that the subject be clearly expressed in a statute's title. The rule's primary purpose is to prevent "logrolling" in the enactment of laws, which occurs where a provision unrelated to a bill's main subject matter and title is included in it with the hope that the provision will remain unnoticed and unchallenged. By invalidating these unrelated clauses, the single subject rule prevents the passage of laws which might otherwise not have passed had the legislative mind been directed to them. However, in order to minimize judicial interference in the Legislature's activities, the single subject rule is to be construed liberally. A provision violates the rule only if it does not promote the main purpose of the act or does not have a necessary and natural connection with that purpose.

(16) Statutes § 5--Operation and Effect--Retroactivity--Reimbursement to County for State-mandated Costs. --The budget control language of Stats. 1981, ch. 1090, § 3, which purported to make the reimbursement provisions of Rev. & Tax. Code, § 2207 and former Rev. & Tax. Code, § 2231, unavailable to a county seeking reimbursement (Cal. Const., art. XIII B, § 6) for expenditures made in purchasing

state-required protective clothing and equipment for county fire fighters (Cal. Admin. Code, tit. 8, §§ 3401-3409), was invalid as a retroactive disclaimer of the county's right to reimbursement for debts incurred in prior years.

(17) State of California § 13--Fiscal Matters--Limitations on Disposal--Reimbursement to Counties for State-mandated Costs. --The budget control language of § 28.40 of the 1981 Budget Act and § 26.00 of the 1983 and 1984 Budget Acts did not exonerate the state from its constitutional and statutory obligations to reimburse a county for the expenses incurred in complying with a state mandate to purchase protective clothing and equipment for county fire fighters. The language was invalid in that it violated the single subject rule, attempted to amend existing statutory law, and was unrelated to the Budget Acts' main purpose of appropriating funds to support the annual budget.

(18) Constitutional Law § 4--Legislative Power to Create Workers' Compensation System--Effect on County's Right to Reimbursement. --Cal. Const., art. XIV, § 4, which vests the Legislature with unlimited plenary power to create and enforce a complete workers' compensation system, does not affect a county's right to state reimbursement for costs incurred in complying with state-mandated safety orders.

(19) Constitutional Law § 7--Mandatory, Directory, and Self-executing Provisions--Subvention Provisions--County Reimbursement for Statemandated Costs. --The subvention provisions of Cal. Const., art. XIII B, § 6, operate so as to require the state to reimburse counties for state-mandated costs incurred between January 1, 1975, and June 30, 1980. The amendment, which became effective on July 1, 1980, provided that the Legislature "may, but need not," provide reimbursement for mandates enacted before January 1, 1975. Nevertheless, the Legislature must reimburse mandates passed after that date, even though the state did not have to begin reimbursement until the effective date of the amendment.

(20) Mandamus and Prohibition § 5--Mandamus--Conditions Affecting Issuance--Exhaustion of Administrative Remedies--County Reimbursement for State-mandated Costs. --A county's right of action in traditional mandamus to compel reimbursement for state-mandated costs did not accrue until the county had exhausted its administrative remedies. The exhaustion of remedies occurred when it became unmistakably clear that the legislative process was complete and that the state had breached its duty to reimburse the county.

(21) Mandamus and Prohibition § 13--Mandamus--Conditions Affecting Issuance--Existence and Adequacy of Other Remedy. --A party seeking relief by mandamus is not required to exhaust a remedy that was not in existence at the time the action was filed.

(22a) (22b) State of California § 7--Actions--Reimbursement to County for State-mandated Costs--County's Right to Offset Fines and Forfeitures Due to State. --In a proceeding by a county for a writ of mandate to compel reimbursement by the state for funds expended in complying with a state order to provide protective clothing and equipment for county fire fighters, the trial court did not err in authorizing the county to satisfy its claims by offsetting fines and forfeitures due to the state. The order did not impinge upon the Legislature's exclusive power to appropriate funds or control budget matters.

(23) Equity § 5--Scope and Types of Relief--Offset. --The right to offset is a long-established principle of equity. Either party to a transaction involving mutual debits and credits can strike or balance, holding himself owing or entitled only to the net difference. Although this doctrine exists independent of statute, its governing principle has been partially codified in Code Civ. Proc., § 431.70 (limited to cross-demands for money).

(24) State of California § 7--Actions--Reimbursement to County for State-mandated Costs--State's Use of Statutory Offset Authority. --In a proceeding brought by a county for a writ of mandate to compel reimbursement by the state for funds expended in complying with a state order to provide protective clothing and equipment to county fire fighters, the trial court did not err in enjoining the exercise of the state's statutory offset authority (Gov. Code, § 12419.5) until the county was fully reimbursed. In view of the state's manifest reluctance to reimburse, and its otherwise unencumbered statutory right of offset, the trial court was well within its authority to prevent this method of frustrating the county's collection efforts from occurring.

(25) State of California § 7--Actions--Reimbursement to County for State-mandated Costs--State's Right to Revert or Dissipate Undistributed Appropriations. --In a proceeding brought by a county for a writ of mandate to compel reimbursement by the state for funds expended in complying with a state order to provide protective clothing and equipment to county fire fighters, the trial court properly enjoined, and was not precluded by Gov. Code, § 16304.1, from enjoining, the state from directly or indirectly reverting the reimbursement award sum from the general fund line item accounts, and from

otherwise dissipating that sum in a manner that would make it unavailable to satisfy the court's judgment in favor of the county.

(26) Parties § 2--Indispensable Parties--County Auditor Controller--County Action to Collect Reimbursement From State. --In an action brought by a county for a writ of mandate to compel reimbursement by the state for funds expended in complying with a state order to provide protective clothing and equipment to county fire fighters, the county auditor-controller was not an indispensable party whose absence would result in a loss of the trial court's jurisdiction. The auditor-controller was an officer of the county and was subject to the direction and control of the county board of supervisors. He was indirectly represented in the proceedings because his principal, the county, was the party litigant. Additionally, he claimed no personal interest in the action and his pro forma absence in no way impeded complete relief.

(27) Parties § 2--Indispensable Parties--Fines and Forfeitures--County Action to Collect Reimbursement From State. --In an action brought by a county for a writ of mandate to compel reimbursement by the state for costs expended in complying with a state order to provide protective clothing and equipment to county fire fighters, the funds created by the collected fines and forfeitures which the county was allowed to offset to satisfy its claims against the state were not "indispensable parties" to the litigation. The action was not an rem proceeding, and the ownership of a particular stake was not in dispute. Complete relief could be afforded without including the specified funds as a party.

(28) Interest § 4--Interest on Judgments--County Action for Reimbursement of State-mandated Costs--State Reliance on Invalid Statute. --An invalid statute voluntarily enacted and promulgated by the state is not a defense to its obligation to pay interest on damages under Civ. Code, § 3287, subd. (a). Thus, in an action brought by a county for writ of mandate to compel reimbursement by the state for funds expended in complying with a state order to provide protective clothing and equipment to county fire fighters, the state could not avoid its obligation to pay interest on the funds by relying on invalid budget control language which purported to restrict payment on reimbursement claims.

(29) Appellate Review § 127--Review--Scope and Extent--Interpretation of Statutes. --An appellate court is not limited by the interpretation of statutes given by the trial court.

(30) Appellate Review § 162--Determination of Disposition of Cause--Modification--Action Against

State--Appropriation. --In an action against the state, an appellate court is empowered to add a directive that the trial court order be modified to include charging orders against funds appropriated by subsequent budget acts.

De Witt Clinton, County Counsel, Amanda F. Susskind, Deputy County Counsel, Ross & Scott, William D. Ross and Diana P. Scott, for Plaintiffs and Respondents.

JUDGES: Opinion by Eagleson, J., with Ashby, Acting P. J., and Hastings, J., concurring.

OPINION BY: EAGLESON

OPINION

[*529] [**799] These consolidated appeals arise from three separate trial court proceedings concerning the heretofore unsuccessful efforts of various local agencies to secure reimbursement of state-mandated costs.

Case No. 2d Civ. B006078 (Carmel Valley et al. case) was the first matter decided by the trial [***2] court. The memorandum of decision in that case was judicially noticed by the trial court which heard the consolidated matters in 2d Civ. B011941 (Rincon et al. case) and 2d Civ. B011942 (County of Los Angeles case). Issues common to all three cases will be discussed together [*530] under the County of Los Angeles appeal, while issues unique to the other two appeals will be considered separately.

We identify the parties to the various proceedings in footnote I. ¹ For literary convenience, however, we will refer to all appellants as the State and all respondents as the County unless otherwise indicated.

1 2d Civ. B006078: The petitioners below and respondents on appeal are Carmel Valley Fire Protection District, City of Anaheim, Aptos Fire Protection District, Citrus Heights Fire Protection District, Fair Haven Fire Protection District, City of Glendale, City of San Luis Obispo, County of Santa Barbara and Ventura County Fire Protection District.

The respondents below and appellants here are State of California, Kenneth Cory and Jesse Marvin Unruh.

2d Civ. B011941: The petitioners below and respondents on appeal are Rincon Del Diablo Municipal Water District, Twenty-Nine Palms Water District, Alpine Fire Protection District, Bonita-Sunnyside Fire Protection District, Encinitas Fire Protection District, Fallbrook Fire Protection District, City of San Luis Obispo, Montgomery Fire Protection District, San Marcos Fire Protection District, Spring Valley Fire Protection District, Vista Fire Protection District and City of Coronado.

Respondents below and appellants here are State of California, State Department of Finance, State Department of Industrial Relations, State Board of Control, Kenneth Cory, State Controller, Jesse Marvin Unruh, State Treasurer, and Mark H. Bloodgood, Auditor-Controller, County of Los Angeles.

2d Civ. B011942: The County of Los Angeles is the petitioner below and respondent on appeal. Respondents below and appellants here are State of California, State Department of Finance, State Department of Industrial Relations, Kenneth Cory, and Jesse Marvin Unruh.

All respondents on appeal are conceded to be "local agencies," as defined in Revenue and Taxation Code section 2211.

[***3] Appeal In Case No. 2 Civil B011942

(County of Los Angeles Case)

Facts and Procedural History

County employs fire fighters for whom it purchased protective clothing and equipment, as required by title 8, California Administrative Code, sections 3401-3409, enacted in 1978 (executive orders). County argues that it is entitled to State reimbursement for these expenditures because they constitute a state-mandated "new program" or "higher level of service." County relies on Revenue and Taxation Code section 2207 ² and former [*531] section 2231, ³ and California Constitution, article XIII B, section 6 ⁴ to support its claim.

2 [HN1]The pertinent parts of Revenue and Taxation Code section 2207 provide: "'Costs mandated by the state' means any increased costs which a local agency is required to incur as a result of the following: [para.] (a) Any law enacted after January 1, 1973, which mandates a new program or an increased level of service of an existing program; [para.] (b) Any executive order issued after January 1, 1973, which mandates a new program; [para.] (c) Any executive order issued after January 1, 1973, which (i) imple-

ments or interprets a state statute and (ii), by such implementation or interpretation, increases program levels above the levels required prior to January 1, 1973. . . ."

[***4]

3 [HN2]The pertinent parts of former Revenue and Taxation Code section 2231, subdivision (a) provide: "The state shall reimburse each local agency for all 'costs mandated by the state', as defined in Section 2207." This section was repealed (Stats. 1986, ch. 879, § 23), and replaced by Government Code section 17561. We will refer to the earlier code section.

4 [HN3]The pertinent parts of section 6, article XIII B of the California Constitution, enacted by initiative measure, provide: "Whenever the Legislature or any state agency mandates a new program or higher level of service on any local government, the state shall provide a subvention of funds to reimburse such local government for the costs of such program or increased level of service, except that the Legislature may, but need not, provide such subvention of funds for the following mandates: [para.] . . . [para.] (c) Legislative mandates enacted prior to January 1, 1975, or executive orders or regulations initially implementing legislation enacted prior to January 1, 1975." This constitutional amendment became effective July 1, 1980.

[***5] [**800] County filed a test claim with the State Board of Control (Board) for these costs incurred during fiscal years 1978-1979 and 1979-1980. ⁵ After hearings were held on the matter, the Board determined on November 20, 1979, that there was a state mandate and that County should be reimbursed. State did not seek judicial review of this quasi-judicial decision of the Board.

5 County filed its test claim pursuant to former Revenue and Taxation Code section 2218, which was repealed by Statutes 1986, chapter 879, section 19.

Additionally, the Board is no longer in existence. The Commission on State Mandates has succeeded to these functions. (Gov. Code, §§ 17525, 17630.)

Thereafter, a local government claims bill, Senate Bill Number 1261 (Stats. 1981, ch. 1090, p. 4191) (S.B. 1261) was introduced to provide appropriations to pay some of County's claims for these state-mandated costs. This bill was amended by the Legislature to delete all appropriations for the payment of these claims. Other claims [***6] of County not provided for in S.B. 1261 were contained in another local government claims bill,

Assembly Bill Number 171 (Stats. 1982, ch. 28, p. 51) (A.B. 171). The appropriations in this bill were deleted by the Governor. Both pieces of legislation, sans appropriations, were enacted into law. ⁶

6 The final legislation did include appropriations for other local agencies on other types of approved claims.

On September 21, 1984, following these legislative rebuffs, County sought reimbursement by filing a petition for writ of mandate (Code Civ. Proc., § 1085) and complaint for declaratory relief. After appropriate responses were filed and a hearing was held, the court executed a judgment on February 6, 1985, granting a peremptory writ of mandate. A writ of mandate was issued and other findings and orders made. It is from this judgment of [*532] February 6, 1985, that State appeals. The relevant portions of the judgment are set forth verbatim below. ⁷

7 "1. The Court adjudges and declares that funds appropriated by the Legislature for the State Department of Industrial Relations for the Prevention of Industrial Injuries and Deaths of California Workers within the Department's General Fund may properly be and should be spent for the reimbursement of state-mandated costs incurred by Petitioner as established in this action.

"2. A peremptory writ of mandamus shall issue under the seal of this Court, commanding Respondent State of California, through its Department of Finance, to give notification in writing as specified in Section 26.00 of the Budget Act of 1984 (Chapter 258, Statutes of 1984) of the necessity to encumber funds in conformity [with] this order and, unless the Legislature approves a bill that would enact a general law, within 30 days of said notification that would obviate the necessity of such payment, Respondent [Kenneth] Cory, the State Controller of the State of California, or his successors in office, if any, shall draw warrants on funds appropriated for the State Department of Industrial Relations for the 1984-85 Budget Year in account numbers 8350-001-001, 8350-001-452, 8350-001-453, and 8350-001-890 as implemented in Chapter 258 Statutes of 1984, sufficient to satisfy the claims of Petitioner, plus interest, as set forth in the motion and accompanying writ of mandamus. Said writ shall also issue against Jessie [sic] Marvin Unruh, the State Treasurer of the State of California, and his successors in office, if any, com-

manding him to make payment on the warrants drawn by Respondent Kenneth Cory.

"3. Pending the final disposition of this proceeding, or the payment of the applicable reimbursement claims and interest as set forth herein, Respondents, and each of of [*sic*] them, their successors in office, agents, servants and employees and all persons acting in concert [or] participation with them, are hereby enjoined and restrained from directly or indirectly expending from the 1984-85 General Fund Budget of the State Department of Industrial Relations as is more particularly described in paragraph number 2 hereinabove, any sums greater than that which would leave in said budget at the conclusion of the 1984-85 fiscal year an amount less than the reimbursement amounts on the aggregate amount of \$ 307,685 in this case, together with interest at the legal rate through payment of said reimbursement amounts. Said amounts are hereinafter referred to collectively as the 'reimbursement award sum'.

"4. Pending the final disposition of this proceeding or the payment of the reimbursement award sum at issue herein, Respondents, and each of them, their successors in office, agents, servants and employees, and all persons acting in concert or participation with them, are hereby enjoined and restrained from directly or indirectly reverting the reimbursement award sum from the General Fund line-item accounts of the Department of Industrial Relations to the General Funds of the State of California and from otherwise dissipating the reimbursement award sum in a manner that would make it unavailable to satisfy this Court's judgment.

"5. In addition to the foregoing relief, Petitioner is entitled to offset amounts sufficient to satisfy the claims of Petitioner, plus interest, against funds held by Petitioner as fines and forfeitures which are collected by the local Courts, transferred to the Petitioner and remitted to Respondents on a monthly basis. Those fines and forfeitures are levied, and their distribution provided, as set forth in Penal Code Sections 1463.02, 1463.03, 14[6]3.5[a], and 1464; Government Code Sections 13967, 26822.3 and 72056, Fish and Game Code Section 13100; Health and Safety Code Section 11502 and Vehicle Code Sections 1660.7, 42004, and 41103.5.

"6. The Court adjudges and declares that the State has a continuing obligation to reimburse Petitioner for costs incurred in fiscal years sub-

sequent to its claim for expenditures in the 1978-79 and 1979-80 fiscal years as set forth in the petition and the accompanying motion for the issuance of a writ of mandate.

"7. The Court adjudges and declares that deletion of funding and prohibition against accepting claims for expenditures incurred as a result of the state-mandated program of Title 8, California Administrative Code Sections 3401 through 3409 as contained in Section 3 of Chapter [1090], Statutes of 1981 were invalid and unconstitutional.

"8. The Court adjudges and declares that the expenditures incurred by Petitioner as a result of the state-mandated program of Title 8, California Administrative Code Sections 3401 through 3409 were not the result of any federally mandated program.

"9. A peremptory writ of mandamus shall issue under the seal of this Court commanding Respondent State Board of Control, or its successor-in-interest, to hear and approve the claims of Petitioner for costs incurred in complying with the state-mandated program of Title 8, California Administrative Code Sections 3401 through 3409 subsequent to fiscal year 1979-80.

". . .

"11. The Court [adjudges] and declares that the State Respondents are prohibited from offsetting, or attempting to implement an offset against moneys due and owing Petitioner until Petitioner is completely reimbursed for all of its costs in complying with the state mandate of Title 8, California Administrative Code Sections 3401 through 3409."

[***7] [*533] [**801] Contentions

State advances two basic contentions. It first asserts that the costs incurred by County are not state mandated because they are not the result of a "new program," and do not provide a "higher level of service." Either or both of these requirements are the sine qua non of reimbursement. Second, assuming a "new program" or "higher level of service" exists, portions of the trial court order aimed at assisting the reimbursement process were made in excess of the court's jurisdiction.

These contentions are without merit. We modify and affirm all three judgments.

Discussion

I

Issue of State Mandate

The threshold question is whether County's expenditures are state mandated. [HN4]The right to reimbursement is triggered when the local agency incurs "costs mandated by the state" in either complying with a "new program" or providing "an increased level of service of an existing program." * State advances many theories as to why the Board erred in concluding that these expenditures are state-mandated costs. One of these arguments is whether the executive orders are a "new program" as that phrase has been recently defined by our Supreme Court in County [***8] of Los Angeles [***802] v. State of California (1987) 43 Cal.3d 46 [233 Cal.Rptr. 38, 729 P.2d 202].

8 This language is taken from Revenue and Taxation Code section 2207 and former section 2231. Article XIII B, section 6 refers to "higher" level of service rather than "increased" level of service. We perceive the intent of the two provisions to be identical. The parties also use these words interchangeably.

[*534] As we shall explain, State has waived its right to challenge the Board's findings and is also collaterally estopped from doing so. Additionally, although State is not similarly precluded from raising issues presented by the State of California case, we conclude that the executive orders are a "new program" within the meaning of article XIII B, section 6.

A. Waiver

(1a) We initially conclude that State has waived its right to contest the Board's findings. (2) [HN5]Waiver occurs where there is an existing right; actual or constructive knowledge of its existence; and either an actual [***9] intention to relinquish it, or conduct so inconsistent with an intent to enforce the right as to induce a reasonable belief that it has been waived. (Medico-Dental etc. Co. v. Horton & Converse (1942) 21 Cal.2d 411, 432 [132 P.2d 457]; Loughan v. Harger-Haldeman (1960) 184 Cal.App.2d 495, 502-503 [7 Cal.Rptr. 581].) A right that is waived is lost forever. (L.A. City Sch. Dist. v. Landier Inv. Co. (1960) 177 Cal.App.2d 744, 752 [2 Cal.Rptr. 662].) The doctrine of waiver applies to rights and privileges afforded by statute. (People v. Murphy (1962) 207 Cal.App.2d 885, 888 [24 Cal.Rptr. 803].)

(1b) State now contends to be an aggrieved party and seeks to dispute the Board's findings. However it failed to seek judicial review of that November 20, 1979 decision (Code Civ. Proc., § 1094.5) as authorized by former Revenue and Taxation Code section 2253.5. The three-year statute of limitations applicable to such review has long since passed. (Green v. Obledo (1981) 29

Cal.3d 126, 141, fn. 10 [172 Cal.Rptr. 206, 624 P.2d 256]; Code Civ. Proc., § 338, subd. 1.)

In addition, State, through its agents, acquiesced in the Board's findings [***10] by seeking an appropriation to satisfy the validated claims. (Former Rev. & Tax. Code, § 2255, subd. (a).) On September 30, 1981, S.B. 1261 became law. On February 12, 1982, A.B. 171 was enacted. Appropriations had been stripped from each bill. State did not then seek review of the Board determinations even though time remained before the three-year statutory period expired. This inaction is clearly inconsistent with any intent to contest the validity of the Board's decision and results in a waiver.

B. Administrative Collateral Estoppel

(3a) We next conclude that State is collaterally estopped from attacking the Board's findings. (4) Traditionally, [HN6]collateral estoppel has been applied to bar relitigation of an issue decided in a prior court proceeding. In order for the doctrine to apply, the issues in the two proceedings must [*535] be the same, the prior proceeding must have resulted in a final judgment on the merits, and the same parties or their privies must be involved. (People v. Sims (1982) 32 Cal.3d 468, 484 [186 Cal.Rptr. 77, 651 P.2d 321].)

[HN7]The doctrine was extended in Sims to apply to a final adjudication of an administrative agency of statutory [***11] creation so as to preclude relitigation of the same issues in a subsequent criminal case. Our Supreme Court held that collateral estoppel applies to such prior adjudications where three requirements are met: (1) the administrative agency acted in a judicial capacity; (2) it resolved disputed issues properly before it; and (3) all parties were provided with the opportunity to fully and fairly litigate their claims. (Id. at p. 479.) All of the elements of administrative collateral estoppel are present here.

(3b) [HN8]The Board was created by the state Legislature to exercise quasi-judicial powers in adjudging the validity of claims against the State. (County of Sacramento v. Loeb (1984) 160 Cal.App.3d 446, 452 [206 Cal.Rptr. 626].) At the time of the hearings, the Board proceedings were the sole administrative remedy available to local agencies seeking reimbursement for state-mandated costs. (Former Rev. & [***803] Tax. Code, § 2250.) Board examiners had the power to administer oaths, examine witnesses, issue subpoenas, and receive evidence. (Gov. Code, § 13911.) The hearings were adversarial in nature and allowed for the presentation of evidence by the claimant, the Department [***12] of Finance, and any other affected agency. (Former Rev. & Tax. Code, § 2252.)

The record indicates that the state mandate issues in this case were fully litigated before the Board. A representative of the state Division of Occupational Safety and Health and the Department of Industrial Relations testified as to why County's costs were not state mandated. Representatives of the various claimant fire districts in turn offered testimony contradicting that view. The proceedings culminated in a verbatim transcript and a written statement of the basis for the Board's decision.

State complains, however, that some of the traditional elements of the collateral estoppel doctrine are missing. In particular, State argues that it was not a party to the Board hearings and was not in privity with those state agencies which did participate.

(5) [HN9]"[The] courts have held that the agents of the same government are in privity with each other, since they represent not their own rights but the right of the government. [Fn. omitted.]" (*Lerner v. Los Angeles City Board of Education* (1963) 59 Cal.2d 382, 398 [29 Cal.Rptr. 657, 380 P.2d 97].) (3e) As we stated in our introduction of the parties [***13] in this case, the party [*536] known as "State" is merely a shorthand reference to the various state agencies and officials named as defendants below. Each of these defendants is an agent of the State of California and had a mutual interest in the Board proceedings. They are thus in privity with those state agencies which did participate below (e.g., Occupational Safety and Health Division).

It is also clear that even though the question of whether a cost is state mandated is one of law (*City of Merced v. State of California* (1984) 153 Cal.App.3d 777, 781 [200 Cal.Rptr. 642]), subsequent litigation on that issue is foreclosed here. (6) [HN10]A prior judgment on a question of law decided by a court is conclusive in a subsequent action between the same parties where both causes involved arose out of the same subject matter or transaction, and where holding the judgment to be conclusive will not result in an injustice. (*City of Los Angeles v. City of San Fernando* (1975) 14 Cal.3d 199, 230 [123 Cal.Rptr. 1, 537 P.2d 1250]; *Beverly Hills Nat. Bank v. Glynn* (1971) 16 Cal.App.3d 274, 286-287 [93 Cal.Rptr. 907]; Rest.2d Judgments, § 28, p. 273.)⁹

9 As it happened, the entire Board determination involved a question of law since the dollar amount of the claimed reimbursement was not disputed.

[***14] (3d) Here, the basic issues of state mandate and the amount of reimbursement arose out of County's required compliance with the executive orders. In either forum -- Board or court -- the claims and the evidentiary and legal determination of their validity would be considered in similar fashion.

Furthermore, a determination of conclusiveness would not work an injustice. As we have noted, the Board was statutorily created to consider the validity of the various claims now being litigated. Processing of reimbursement claims in this manner was the only administrative remedy available to County. If we were to grant State's request and review the Board's determination de novo, we would, in any event, adhere to the well-settled principle of affording "great weight" to "the contemporaneous administrative construction of the enactment by those charged with its enforcement . . ." (*Coca-Cola Co. v. State Bd. of Equalization* (1945) 25 Cal.2d 918, 921 [156 P.2d 1].)

[HN11]There is no policy reason to limit the application of the collateral estoppel doctrine to successive court proceedings. In *City and County of San Francisco v. Ang* (1979) 97 Cal.App.3d 673, 679 [159 Cal.Rptr. [***15] 56], the doctrine was applied to bar relitigation in a subsequent civil proceeding of a zoning issue previously decided by a city board of permit appeals. We similarly hold [**804] that the questions of law decided by the Board are binding in all of the subsequent civil proceedings presented here. State therefore is collaterally [*537] estopped to raise the issues of state mandate and amount of reimbursement in this appeal.

C. Executive Orders -- A "New Program" Under Article XIII B, Section 6

(7) The recent decision by our Supreme Court in *County of Los Angeles v. State of California*, *supra*, 43 Cal.3d at p. 49 presents a new issue not previously considered by the Board or the trial court. That question is whether the executive orders constitute the type of "program" that is subject to the constitutional imperative of subvention under article XIII B, section 6.¹⁰ We conclude that they are.

10 State is not precluded from raising this new issue on appeal. [HN12]Questions of law decided by an administrative agency invoke the collateral estoppel doctrine only when a determination of conclusiveness will not work an injustice. Likewise, the doctrine of waiver is inapplicable if a litigant has no actual or constructive knowledge of his rights. Since the *State of California* rule had not been announced at the time of the Board or trial court proceedings herein, the doctrines of waiver and collateral estoppel are inapplicable to State on this particular issue. Both parties have been afforded additional time to brief the matter.

[***16] In *State of California*, the Court concluded that the term "program" has two alternative meanings: "programs that carry out the governmental

function of providing services to the public, or laws which, to implement a state policy, impose unique requirements on local governments and do not apply generally to all residents and entities in the state." (*Id.* at p. 56, italics added.) Although only one of these findings is necessary to trigger reimbursement, both are present here.

(8) First, [HN13] fire protection is a peculiarly governmental function. (*County of Sacramento v. Superior Court* (1972) 8 Cal.3d 479, 481 [105 Cal.Rptr. 374, 503 P.2d 1382].) "Police and fire protection are two of the most essential and basic functions of local government." (*Verreos v. City and County of San Francisco* (1976) 63 Cal.App.3d 86, 107 [133 Cal.Rptr. 649].) This classification is not weakened by State's assertion that there are private sector fire fighters who are also subject to the executive orders. Our record on this point is incomplete because the issue was not presented below. Nonetheless, we have no difficulty in concluding as a matter of judicial notice that the overwhelming [***17] number of fire fighters discharge a classical governmental function. ¹¹

¹¹ County suggests that to the extent private fire brigades exist, they are customarily part-time individuals who perform the function on a part-time basis. As such, they are excluded by the balance of the definitional term in title 8, California Administrative Code section 3402, which provides, in pertinent part: ". . . The term [fire fighter] does not apply to emergency pick-up labor or other persons who may perform first-aid fire extinguishment as collateral to their regular duties."

[*538] The second, and alternative, prong of the *State of California* definition is also satisfied. The executive orders manifest a state policy to provide updated equipment to all fire fighters. Indeed, compliance with the executive orders is compulsory. The requirements imposed on local governments are also unique because fire fighting is overwhelmingly engaged in by local agencies. Finally, the orders do not apply generally to all residents [***18] and entities in the State but only to those involved in fire fighting.

These facts are distinguishable from those presented in *State of California*. There, the court held that a state-mandated increase in workers' compensation benefits did not require state subvention because the costs incurred by local agencies were only an incidental impact of laws that applied generally to all state residents and entities (i.e., to all workers and all governmental and nongovernmental employers). Governmental employers in that setting were indistinguishable from private em-

ployers who were obligated through insurance [**805] or direct payment to pay the statutory increases.

State of California only defined the scope of the word "program" as used in *California Constitution, article XIII B, section 6*. We apply the same interpretation to former *Revenue and Taxation Code section 2231* even though the statute was enacted much earlier. The pertinent language in the statute is identical to that found in the constitutional provision and no reason has been advanced to suggest that it should be construed differently. In any event, [HN14] a different interpretation must fall before a constitutional [***19] provision of similar import. (*County of Los Angeles v. Payne* (1937) 8 Cal.2d 563, 574 [66 P.2d 658].)

II

Issue of Whether Court Orders Exceeded Its Jurisdiction

A. *The Court Has Not Ordered an Appropriation in Violation of the Separation of Powers Doctrine*

(9) State begins its general attack on the judgment by citing the longstanding principle that a court order which directly compels the Legislature to appropriate funds or to pay funds not yet appropriated violates the separation of powers doctrine. (Cal. Const., art. III, § 3; art. XVI, § 7; *Mandel v. Myers* (1981) 29 Cal.3d 531, 540 [174 Cal.Rptr. 841, 629 P.2d 935].) ¹² State [*539] observes (and correctly so) that the relevant constitutional [HN15] (art. XIII B, § 6) and statutory (*Rev. & Tax. Code, § 2207 & former § 2231*) provisions are not appropriations measures. (See *City of Sacramento v. California State Legislature* (1986) 187 Cal.App.3d 393, 398 [231 Cal.Rptr. 686].) Since State otherwise discerns no manifest legislative intent to appropriate funds to pay County's claims (*City & County of S. F. v. Kuchel* (1948) 32 Cal.2d 364, 366 [196 P.2d 545]), it concludes that the [***20] judgment unconstitutionally compels performance of a legislative act.

¹² [HN16] *Article III, section 3 of the California Constitution* provides: "The powers of state government are legislative, executive, and judicial. Persons charged with the exercise of one power may not exercise either of the others except as permitted by this Constitution."

[HN17] *Article XVI, section 7 of the California Constitution* provides: "Money may be drawn from the Treasury only through an appropriation made by law and upon a Controller's duly drawn warrant."

State further argues that the judiciary's ability to reach an existing agency-support appropriation (State Department of Industrial Relations) (fn. 7, [para.] 1,

ante) has been approved in only two contexts. First, the court can order payment from an existing appropriation, the expenditure of which has been legislatively prohibited by an unconstitutional or unlawful restriction. (*Committee to Defend Reproductive Rights v. Cory* (1982) 132 Cal.App.3d 852, 856 [183 Cal.Rptr. [***21] 475].) Second, once an adjudication has finally determined the rights of the parties, the court may compel satisfaction of the judgment from a current unexpended, unencumbered appropriation which administrative agencies routinely have used for the purpose in question. (*Mandel v. Myers, supra*, 29 Cal.3d at p. 544.) State insists that these facts are not present here.

County rejoins that a writ of traditional mandate (Code Civ. Proc., § 1085) is the correct method of compelling State to perform a clear and present ministerial legal obligation. (*County of Sacramento v. Loeb, supra*, 160 Cal.App.3d at pp. 451-452.) The ministerial obligation here is contained in California Constitution, article XIII B, section 6 and in Revenue and Taxation Code section 2207 and former section 2231. These provisions require State to reimburse local agencies for state-mandated costs.

We reject State's general characterization of the judgment by noting that it only affects an existing appropriation. It declares (fn. 7, para. 1, *ante*) that only funds already "*appropriated*" by the Legislature for the State Department of Industrial Relations for the Prevention of Industrial Injuries [***22] and Deaths of California Workers within the Department's General Fund" [*806] shall be spent for reimbursement of County's state-mandated costs. (Italics added.) There is absolutely no language purporting to require the Legislature to enact appropriations or perform any other act that might violate separation of powers principles. (10) By simply ordering the State Controller to draw warrants and directing the State Treasurer to pay on already appropriated funds (fn. 7, para. 2, *ante*), the judgment permissibly compels performance of a ministerial duty: [HN18]"[Once] funds have already been appropriated by legislative action, a court transgresses no constitutional principle when it orders the State Controller or other similar official to make appropriate expenditures [*540] from such funds. [Citations.]" (*Mandel v. Myers, supra*, 29 Cal.3d at p. 540.)

As we will discuss in further detail below, the subject funds (fn. 7, para. 1, *ante*) were saddled with an unconstitutional restriction (fn. 7, para. 7, *ante*). However, *Mandel* establishes that such a restriction does not necessarily infect the entire appropriation. There, the Legislature had improperly prohibited [***23] the use of budget funds to pay a court-ordered and administratively approved attorney's fees award. The court reasoned that [HN19]as long as appropriated funds were "reasonably

available for the expenditures in question, the separation of powers doctrine poses no barrier to a judicial order directing the payment of such funds." (*Id.* at p. 542.) The court went on to find that money in a general "operating expenses and equipment" fund was, by both the Budget Act's terms and prior administrative practice, reasonably available to pay the attorney's fees award.

Contrary to State's argument, *Mandel* does not require that past administrative practice support a judgment for reimbursement from an otherwise available appropriation. Although there was evidence of a prior administrative practice of paying counsel fees from funds in the "operating expenses and equipment" budget, this fact was not the main predicate of the court's holding. Rather, the decisive factor was that the budget item in question functioned as a "catchall" appropriation in which funds were still reasonably available to satisfy the State's adjudicated debt. (*Id.* at pp. 543-544.)

Another illustration of this principle [***24] is found in *Serrano v. Priest* (1982) 131 Cal.App.3d 188 [182 Cal.Rptr. 387]. Plaintiffs in that case secured a judgment against the State of California for \$ 800,000 in attorney's fees. The judgment was not paid, and subsequent proceedings were brought against State to satisfy the judgment. The trial court directed the State Controller to pay the \$ 800,000 award, plus interest, from funds appropriated by the Legislature for "operating expenses and equipment" of the Department of Education, Superintendent of Public Instruction and State Board of Education. (*Id.* at p. 192.) This court affirmed that order even though there was no evidence that the agencies involved had ever paid court-ordered attorney's fees from that portion of the budget. Relying on *Mandel*, we concluded that funds were reasonably available from appropriations enacted in the Budget Act in effect at the time of the court's order, as well as from similar appropriations in subsequent budget acts.

(11) State also incorrectly asserts that the appropriations affected by the court's order must specifically refer to the particular expenditure in question in order to be available. This notion was summarily [***25] dismissed in *Mandel v. Myers, supra*, 29 Cal.3d at pp. 543-544. Likewise, in *Committee to Defend Reproductive Rights v. Cory, supra*, 132 Cal.App.3d at pp. 857-858, the court decreed that payments for Medi-Cal abortions could properly be ordered from monies appropriated for other Medi-Cal services, even though this use had been specifically prohibited by the Legislature.

Applying these various principles here, we note that the judgment (fn. 7, para. 2, *ante*) identified funds in account numbers 8350-001-001, 8350-001-452, 8350-001-453 and [*807] 8350-001-890 as being

available for reimbursement. Within these 1984-1985 account appropriations for the Department of Industrial Relations were monies for Program 40, the Prevention of Industrial Injuries and Deaths of California Workers. The evidence clearly showed that the remaining balances on hand would cover the cost of reimbursement. Since it is conceded that the fire fighting protective clothing and equipment in this case was purchased to prevent deaths and injuries to fire fighters, these funds, although not specifically appropriated for the reimbursement in question, were generally related to [***26] the nature of costs incurred by County and are therefore reasonably available for reimbursement.

B. Legislative Disclaimers, Findings and Budget Control Language Are No Defense to Reimbursement

As a general defense against the order to reimburse, State insists that the Legislature has itself concluded that the claimed costs are not reimbursable. This determination took the combined form of disclaimers, findings and budget control language. State interprets this self-serving legislation, as well as the legislative and gubernatorial deletions, as forever sweeping away State's obligation to reimburse the state-mandated costs at issue. Consequently, any order that ignores these restrictions on payment would amount to a court-ordered appropriation. As we shall conclude, these efforts are merely transparent attempts to do indirectly that which cannot lawfully be done directly.

The seminal legislation that gave rise to the 1978 executive orders was enacted by [HN20]Statutes 1973, chapter 993, and is labeled the California Occupational Safety and Health Act (Cal/OSHA). It is modeled after federal law and is designed to assure safe working conditions for all California workers. A [***27] legislative disclaimer appearing in [HN21]section 106 of that bill reads: "No appropriation is made by this act . . . for the reimbursement of any local agency for any costs that may be incurred by it in carrying on any program or performing any service required to be carried on . . ." The stated reason for this decision not to appropriate was that the cost of implementing the act was "minimal on a statewide basis in relation to the effect on local tax rates." (Stats. 1973, ch. 993, § 106, p. 1954.)

[*542] Again, in 1974, [HN22]the Legislature stated: "Notwithstanding Section 2231 of the Revenue and Taxation Code, there shall be no reimbursement pursuant to this section, nor shall there be an appropriation made by this act, because the Legislature finds that this act and any executive regulations or safety orders issued pursuant thereto merely implement federal law and regulations." (Stats. 1974, ch. 1284, § 106, p. 2787.) This statute amended section 106 of Statutes 1973,

chapter 993, and was a post facto change in the stated legislative rationale for not providing reimbursement.

Presumably because of the large number of reimbursement claims being filed, the Legislature subsequently [***28] used budget control language to confirm that compliance with the executive orders should not trigger reimbursement. Some of this legislation was effective September 30, 1981, as part of a local agency and school district reimbursement bill. The control language provided that [HN23]"[the] Board of Control shall not accept, or submit to the Legislature, any more claims pursuant to . . . Sections 3401 to 3409, inclusive, of Title 8 of the California Administrative Code." (Stats. 1981, ch. 1090, § 3, p. 4193.)¹³

13 When Governor Brown deleted the appropriations from A.B. 171, he stated that he was relying on the pronouncements in Statutes 1974, chapter 1284 and Statutes 1981, chapter 1090.

Further control language was inserted in the 1981, 1983 and 1984 Budget Acts. [HN24](Stats. 1981, ch. 99, § 28.40, p. 606; Stats. 1983, ch. 324, § 26.00, p. 1504; Stats. 1984, ch. 258, § 26.00.) This language prohibits encumbering appropriations to reimburse costs incurred under the executive orders, except under certain limited [***29] circumstances.

(12a) State first challenges the trial court's finding that expenditures mandated by the [**808] executive orders were not the result of a federally mandated program (fn. 7, para. 8, *ante*), despite the legislative finding in Statutes 1974, chapter 1284, section 106. We agree with the court's decision that there was no federal mandate.

The significance of this no-federal-mandate finding is revealed by examining past changes in the statutory definition of state-mandated costs. As thoroughly discussed in *City of Sacramento v. State of California* (1984) 156 Cal.App.3d 182, 196-197 [203 Cal.Rptr. 258] disapproved on other grounds in *County of Los Angeles v. State of California, supra*, 43 Cal.3d at p. 58, fn. 10, [HN25]the concept of federally mandated costs has provided local agencies with a financial escape valve ever since passage of the "Property Tax Relief Act of 1972." (Stats. 1972, ch. 1406, § 1, p. 2931.) That act limited local governments' power to levy property taxes, while requiring that they be reimbursed by the State for providing compulsory increased levels of service or [*543] new programs. However, under Revenue and Taxation Code section [***30] 2271, "costs mandated by the federal government" were not subject to reimbursement and local governments were permitted to levy taxes in addition to the maximum property tax rate to pay such costs.

On November 6, 1979, [HN26]the limitation on local government's ability to raise property taxes, and the duty of the State to reimburse for state-mandated costs, became a part of the California Constitution through the initiative process. Article XIII B, section 6, enacted at that time, directs state subvention similar in nature to that required by the preexisting provisions of Revenue and Taxation Code section 2207 and former section 2231. As a defense against this duty to reimburse local agencies, the Legislature began to insert disclaimers in bills which mandated costs on local agencies. It also amended [HN27]Revenue and Taxation Code section 2206 to expand the definition of nonreimbursable "costs mandated by the federal government" to include the following: "costs resulting from enactment of a state law or regulation where failure to enact such law or regulation to meet specific federal program or service requirements would result in substantial monetary penalties or loss of funds to public [***31] or private persons in the state."

In applying this definition here, State offers nothing more than the bare legislative finding contained in Statutes 1974, chapter 1284, section 106. State contends that a federally mandated cost cannot, by definition, be a state-mandated cost. Therefore, if the cost is federally mandated, local agency reimbursement is not required. (13) (See fn. 14.) Although State's argument is correct in the abstract, neither the facts nor federal law supports the underlying assumption that there is a federal mandate. ¹⁴

14 We address this subject only because the trial court found that the costs were not federally mandated. Actually, State cannot raise this issue on appeal because of the waiver and administrative collateral estoppel doctrines. We note, however, where there is a quasi-judicial finding that a cost is state mandated, there is an implied finding that the cost is not federally mandated; the two concepts are mutually exclusive.

Moreover, our task is aided by the fact that [HN28]interpretation of statutory language is purely a judicial function. Legislative declarations are not binding on the courts and are particularly suspect when they are the product of an attempt to avoid financial responsibility. (*City of Sacramento v. State of California, supra*, 156 Cal.App.3d at pp. 196-197.)

[***32] (12b) Both the Board and the court had in evidence a letter from a responsible official of the federal Occupational Safety and Health Administration (OSHA). The letter emphasizes the independence of state and federal OSHA standards: "OSHA does not have jurisdiction over the fire departments of any political subdivision of a state whether the state has elected to have its own state plan under the OSHA act or not. . . .

[para.] More specifically, in 1978, the State of California promulgated standards applicable to fire departments in California. Therefore, California standards, rather than [*544] federal OSHA standards, are applicable to fire departments in that state. . . ." This theme is also reflected in a section of [**809] OSHA which expressly disclaims jurisdiction over local agencies such as County. (29 U.S.C. § 652(5).) Accordingly, as a matter of law, there are no federal standards for local government structural fire fighting clothing and equipment.

In short, while the Legislature's enactment of Cal/OSHA to comply with federal OSHA standards is commendable, it certainly was not compelled. Consequently, County's obedience to the 1978 executive orders is not [***33] federally mandated.

(14a) The trial court also properly invalidated the budget control language in Statutes 1981, chapter 1090, section 3 (fn. 7, [para.] 7, *ante*) because it violated the single subject rule. ¹⁵ This legislative restriction purported to make the reimbursement provisions of Revenue and Taxation Code section 2207 and former section 2231 unavailable to County.

15 [HN29]Article IV, section 9 of the California Constitution reads: "A statute shall embrace but one subject, which shall be expressed in its title. If a statute embraces a subject not expressed in its title, only the part not expressed is void. A statute may not be amended by reference to its title. A section of a statute may not be amended unless the section is re-enacted as amended."

(15) [HN30]The single subject rule essentially requires that a statute have only one subject matter and that the subject be clearly expressed in the statute's title. The rule's primary purpose is to prevent "log-rolling" in the enactment of laws. This disfavored practice [***34] occurs where a provision unrelated to a bill's main subject matter and title is included in it with the hope that the provision will remain unnoticed and unchallenged. By invalidating these unrelated clauses, the single subject rule prevents the passage of laws which otherwise might not have passed had the legislative mind been directed to them. (*Planned Parenthood Affiliates v. Swoap* (1985) 173 Cal.App.3d 1187, 1196 [219 Cal.Rptr. 664].) However, in order to minimize judicial interference in the Legislature's activities, the single subject rule is to be construed liberally. A provision violates the rule only if it does not promote the main purpose of the act or does not have a necessary and natural connection with that purpose. (*Metropolitan Water Dist. v. Marquardt* (1963) 59 Cal.2d 159, 172-173 [28 Cal.Rptr. 724, 379 P.2d 28].)

(14b) The stated purpose of chapter 1090 is to increase funds available for reimbursing certain claims. It describes itself as an "act making an appropriation to pay claims of local agencies and school districts for additional reimbursement for specified state-mandated local costs, awarded by the State Board of Control, and declaring the [***35] urgency thereof, to take effect immediately." (Stats. 1981, ch. 1090, p. 4191.) There is nothing in this introduction [*545] alerting the reader to the fact that the bill prohibits the Board from entertaining claims pursuant to the Cal/OSHA executive orders. The control language does not modify or repeal these orders, nor does it abrogate the necessity for County's continuing compliance therewith. It simply places County's claims reimbursement process in limbo.

This special appropriations bill is similar in kind to appropriations in an annual budget act. Observations that have been made in connection with the enactment of a budget bill are appropriate here. "[The] annual budget bill is particularly susceptible to abuse of [the single subject] rule. 'History tells us that the general appropriation bill presents a special temptation for the attachment of riders. It is a necessary and often popular bill which is certain of passage. If a rider can be attached to it, the rider can be adopted on the merits of the general appropriation bill without having to depend on its own merits for adoption.' [Citation.]" (*Planned Parenthood Affiliates v. Swoap*, *supra*, 173 [***36] Cal.App.3d at p. 1198.) Therefore, the annual budget bill must only concern the subject of appropriations to support the annual budget and may not constitutionally be used to substantively amend or change existing statutory law. (*Association for Retarded Citizens v. Department of Developmental Services* (1985) 38 Cal.3d 384, 394 [211 Cal.Rptr. 758, 696 P.2d 150].) We see no reason to apply a [**810] less stringent standard to a special appropriations bill. Because the language in chapter 1090 prohibiting the Board from processing claims does not reasonably relate to the bill's stated purpose, it is invalid.

(16) The budget control language in chapter 1090 is also invalid as a retroactive disclaimer of County's right to reimbursement for debts incurred in prior years. This legislative technique was condemned in *County of Sacramento v. Loeb*, *supra*, 160 Cal.App.3d at p. 446. There, the Legislature had enacted a Government Code section which prohibited using appropriations for any purpose which had been denied by any formal action of the Legislature. The State attempted to use this code section to uphold a special appropriations bill which had deleted County's Board-approved [***37] claims for costs which were incurred prior to the enactment of the code section. The court held that the code section did not apply retroactively to defeat County's claims: [HN31]"A retroactive statute is one which relates back to a previous

transaction and gives that transaction a legal effect different from that which it had under the law when it occurred. . . . 'Absent some clear policy requiring the contrary, statutes modifying liability in civil cases are not to be construed retroactively.'" (*Id.* at p. 459, quoting *Robinson v. Pediatric Affiliates Medical Group, Inc.* (1979) 98 Cal.App.3d 907, 912 [159 Cal.Rptr. 791].) Similarly, the control language in chapter 1090 does not apply retroactively to County's prior, Board-approved claims.

[*546] (17) Finally, the control language in section 28.40 of the 1981 Budget Act and section 26.00¹⁶ of the 1983 and 1984 Budget Acts does not work to defeat County's claims. (Stats. 1981, ch. 99, § 28.40, p. 606; Stats. 1983, ch. 324, § 26.00, p. 1504; Stats. 1984, ch. 258, § 26.00.) This section is comprised of both substantive and procedural provisions. We are concerned primarily with those portions that purport to exonerate [***38] State from its constitutionally and statutorily imposed obligation to reimburse County's state-mandated costs.

16 [HN32]Each of these sections contains the following language: "No funds appropriated by this act shall be encumbered for the purpose of funding any increased state costs or local governmental costs, or both such costs, arising from the issuance of an executive order as defined in section 2209 of the Revenue and Taxation Code or subject to the provisions of section 2231 of the Revenue and Taxation Code, unless (a) such funds to be encumbered are appropriated for such purpose, or (b) notification in writing of the necessity of the encumbrance of funds available to the state agency, department, board, bureau, office, or commission is given by the Department of Finance, at least 30 days before such encumbrance is made, to the chairperson of the committee in each house which considers appropriations and the Chairperson of the Joint Legislative Budget Committee, or such lesser time as the chairperson of the committee, or his or her designee, determines."

[***39] The writ of mandate directed compliance with the procedural provisions of these sections and is not a point of dispute on appeal. Subsection (a) affords the Legislature one last opportunity to appropriate funds which are to be encumbered for the purpose of paying state-mandated costs, an invitation repeatedly rejected. Subsection (b) directs that the Department of Finance notify the chairpersons of the appropriate committees in each house and chairperson of the Joint Legislative Budget Committee of the need to encumber funds. Presumably, the objective of this procedure is to give the

Legislature another opportunity to amend or repeal substantive legislation requiring local agencies to incur state-mandated costs. Again, the Legislature declined to act. Legislative action pursuant to subsection (b) could arguably ameliorate the plight of local agencies prospectively, but would be of no practical assistance to a local agency creditor seeking reimbursement for costs already incurred.

The first portion of each section, however, imposes a budgetary restriction on encumbering appropriated funds to reimburse for state-mandated costs arising out of compliance with the executive orders, [***40] absent a specific appropriation pursuant to subparagraph (b). For the reasons stated above, this substantive language is invalid under the single subject rule. It attempts [**811] to amend existing statutory law and is unrelated to the Budget Acts' main purpose of appropriating funds to support the annual budget. (*Association for Retarded Citizens v. Department of Developmental Services, supra*, 38 Cal.3d at p. 394.) Now unfettered by invalid restrictions, the appropriations involved in this case are reasonably available for reimbursement.

[*547] C. *The Legislature's Plenary Power to Regulate Worker Safety Does Not Affect the Right to Reimbursement*

(18) State contends that article XIV, section 4 of the California Constitution vests the Legislature with unlimited plenary power to create and enforce a complete workers' compensation system. It postulates that the Legislature may determine that the interest in worker safety and health is furthered by requiring local agencies to bear the costs of safety devices. This non sequitur is advanced without citation of authority.

[HN33]Article XIV, section 4 concerns the power to enact workers' compensation statutes and regulations. [***41] It does not focus on the issue of reimbursement for state-mandated costs, which is covered by Revenue and Taxation Code section 2207 and former section 2231, and article XIII B, section 6. Since these latter provisions do not effect a pro tanto repeal of the Legislature's plenary power over workers' compensation law (see *County of Los Angeles v. State of California, supra*, 43 Cal.3d 46), they do not conflict with article XIV, section 4.

Moreover, even though the reimbursement issue has come before the Legislature repeatedly since 1972, no law has been enacted to exempt compliance with workers' compensation executive orders from the mandatory reimbursement provisions of Revenue and Taxation Code section 2207 and former section 2231. Likewise, article XIII B, section 6 does not provide an exception to

the obligation to reimburse local agencies for compliance with these safety orders.

D. *Pre-1980 Claims Are Reimbursable Under Article XIII B, Section 6, Effective July 1, 1980*

(19) State further argues that to the extent County's claims for fiscal years 1978-1979 and 1979-1980 are predicated on the subvention provisions of article XIII B, section 6, they fall within a [***42] "window period" of nonreimbursement. This assertion emanates from section 6, subdivision (c), which states that the Legislature "[may], but need not," provide reimbursement for mandates enacted before January 1, 1975. State reasons that because the constitutional amendment did not become effective until July 1, 1980, claims for costs incurred between January 1, 1975 and June 30, 1980, need not be reimbursed.

This notion was rejected in *City of Sacramento v. State of California, supra*, 156 Cal.App.3d at p. 182 on behalf of local agencies seeking reimbursement of unemployment insurance costs mandated by a 1978 statute. Basing its decision on well-settled principles of constitutional interpretation [*548] and upon a prior published opinion of the Attorney General, the court interpreted [HN34]section 6, subdivision (c) as follows: "[The] Legislature may reimburse mandates enacted prior to January 1, 1975, and must reimburse mandates passed after that date, but does not have to begin such reimbursement until the effective date of article XIII B (July 1, 1980)." (*Id.* at p. 191, italics in original.) In other words, the amendment operates on "window period" mandates [***43] even though the reimbursement process may not actually commence until later.

We agree with this reasoning and find costs incurred by County under the 1978 executive orders subject to reimbursement under the Constitution.

E. *Claims Under Revenue and Taxation Code Section 2207 and Former Section 2231 Are Not Time-barred*

(20) State collaterally asserts that to the extent County bases its claims on Revenue and Taxation Code section 2207 and former [**812] section 2231, they are barred by Code of Civil Procedure sections 335 and 338, subdivision 1. This omnibus challenge to the order directing payment has no merit.

[HN35]Code of Civil Procedure section 335 is a general introductory section to the statute of limitations for all matters except recovery of real property. Code of Civil Procedure section 338, subdivision 1 requires "[an] action upon a liability created by statute" to be commenced within three years.

[HN36]A claimant does not exhaust its administrative remedies and cannot come under the court's jurisdic-

tion until the legislative process is complete. (*County of Contra Costa v. State of California* (1986) 177 Cal.App.3d 62, 77 [222 Cal.Rptr. 750].) Here, County pursued [***44] its remedy before the Board and prevailed. Thereafter, as required by law, appropriate legislation was introduced. Both the Board hearings and the subsequent efforts to secure legislative appropriations were part of the legislative process. (Former *Rev. & Tax. Code, § 2255, subd. (a)*.) It was not until the legislation was enacted sans appropriations on September 30, 1981 (S.B. 1261) and February 12, 1982 (A.B. 171) that it became unmistakably clear that this process had ended and State had breached its duty to reimburse. At these respective moments of breach, County's right of action in traditional mandamus accrued. County's petition was filed on September 21, 1984, within the three-year statutory period.¹⁷ (*Lerner v. Los Angeles City Board of Education, supra*, 59 Cal.2d at p. 398.)

17 Technically, Statute has waived the statute of limitations defense because it was not raised in its answer. (*Ventura County Employees' Retirement Association v. Pope* (1978) 87 Cal.App.3d 938, 956 [151 Cal.Rptr. 695].)

[***45] [*549] F. *Government Code Section 17612's Remedy for Unfunded Mandates Does Not Supplant the Court's Order*

State continues its general attack on the order directing payment by arguing that the Legislature has "defined" the remedy available to a local agency if a mandate is unfunded. That remedy is found in [HN37] *Government Code section 17612, subdivision (b)* and reads: "If the Legislature deletes from a local government claims bill funding for a mandate, the local agency . . . may file in the Superior Court of the County of Sacramento an action in declaratory relief to declare the mandate unenforceable and enjoin its enforcement." (Italics added.) (See also former *Rev. & Tax. Code, § 2255, subd. (c)*, eff. Oct. 1, 1982.)

State hints that this procedure is the only remedy available to a local agency if funding is not provided. At oral argument, State admitted that this declaration of enforceability and injunction against enforcement would be prospective only. This remedy would provide no relief to local agencies which have complied with the executive orders.

We conclude that *Government Code section 17612, subdivision (b)* is inapplicable here because it did not become [***46] operative until January 1, 1985. It was not in place when the Board rendered its decision on November 20, 1979; when funding was deleted from S.B. 1261 (Sept. 30, 1981) and A.B. 171 (Feb. 12, 1982); or when this litigation commenced on September 21,

1984. (21) A party is not required to exhaust a remedy that was not in existence at the time the action was filed. (*Ross v. Superior Court* (1977) 19 Cal.3d 899, 912, fn. 9 [141 Cal.Rptr. 133, 569 P.2d 727].) To abide by this post facto legislation now would condone legislative interference in a specific controversy already assigned to the judicial branch for resolution. (*Serrano v. Priest, supra*, 131 Cal.App.3d at p. 201.)

Also, [HN38] this remedy is purely a discretionary course of action. By using the permissive word "may," the Legislature did not intend to override article XIII B, section 6 and *Revenue and Taxation Code section 2207* and former *section 2231*. These constitutional and statutory imprimaturs each impose upon the State an obligation to reimburse for state-mandated [**813] costs. Once that determination is finally made, the State is under a clear and present ministerial duty to reimburse. In the absence of [***47] compliance, traditional mandamus lies. (*Code Civ. Proc., § 1085*.)¹⁸

18 We leave undecided the question of whether this type of legislation could ever be held to override *California Constitution, article XIII B, section 6*. [HN39] The Constitution of the State is supreme. Any statute in conflict therewith is invalid. (*County of Los Angeles v. Payne, supra*, 8 Cal.2d at p. 574.)

Similarly, [HN40] former *Revenue and Taxation Code section 2255, subdivision (c)* cannot abrogate the constitutional directive to reimburse.

[*550] G. *The Court's Order Properly Allows County the Right of Offset*

(22a) As the first in a series of objections to portions of the judgment which assist in the reimbursement process, State argues that the court has improperly authorized County to satisfy its claims by offsetting fines and forfeitures due to State. (Fn. 7, para. 5, *ante*.) The fines and forfeitures are those found in *Penal Code sections 1463.02, 1463.03, 1463.5a and 1464; Government Code sections 13967, 26822.3 and [***48] 72056; Fish and Game Code section 13100; Health and Safety Code section 11502; and Vehicle Code sections 1660.7, 42004 and 41103.5*.¹⁹

19 At oral argument, County conceded that the order authorizing offset of *Fish and Game Code section 13100* fines and forfeitures is inappropriate. These collected funds must be spent exclusively for protection, conservation, propagation or preservation of fish, game, mollusks, or crustaceans, and for administration and enforcement of laws relating thereto, or for any such

purpose. (Cal. Const., art. XVI, § 9; 20 Ops. Cal. Atty. Gen. 110 (1952).)

Broadly speaking, these statutes require County to periodically transfer all or part of the fines and forfeitures collected by it for specified law violations to the State Treasury. They are to be held there "to the credit" of various state agencies, or for payment into specific funds. State contends that since these statutes require mandatory, regular transfers and do not expressly permit diversion for other purposes, the court [***49] had no power to allow County to offset. State cites no authority for this contention.

(23) [HN41]The right to offset is a long-established principle of equity. Either party to a transaction involving mutual debits and credits can strike a balance, holding himself owing or entitled only to the net difference. (*Kruger v. Wells Fargo Bank* (1974) 11 Cal.3d 352, 362 [113 Cal.Rptr. 449, 521 P.2d 441, 65 A.L.R.3d 1266].) Although this doctrine exists independent of statute, its governing principle has been partially codified (*Code Civ. Proc.*, § 431.70) (limited to cross-demands for money).

The doctrine has been applied in favor of a local agency against the State. In *County of Sacramento v. Lackner* (1979) 97 Cal.App.3d 576 [159 Cal.Rptr.1], for example, the court of appeal upheld a trial court's decision to grant a writ of mandate that ordered funds awarded the County under a favorable judgment to be offset against its current liabilities to the State under the Medi-Cal program. The court stated that such an order does not interfere with the "Legislature's control over the 'submission, approval and enforcement of budgets . . .'" (*Id.* at p. 592, quoting Cal. Const., art. [***50] IV, § 12, subd. (e).)

(22b) The order herein likewise does not impinge upon the Legislature's exclusive power to appropriate funds or control budget matters. The identified [*551] fines and forfeitures are collected by the County for statutory law violations. Some of these funds remain with the County, while others are transferred to the State. State's portions are uncertain as to amount and date of transfer. State does not come into actual possession of these funds until they are transferred. State's holding of these funds "to the credit" of a particular agency, or for payment to a specific fund, does not commence until their receipt. Until that time, they are unencumbered, unrestricted and subject to offset.

H. *State's Use of its Statutory Offset Authority Was Properly Enjoined*

(24) State further contends that the trial court exceeded its jurisdiction by enjoining [***814] the exercise of State's statutory offset authority until County is

fully reimbursed. (Fn. 7, para. 11, *ante.*)²⁰ This order complemented that portion of the order discussed, *infra*, which allowed County to temporarily offset fines and forfeitures as an aid in the reimbursement process. [***51]

20 [HN42]Government Code section 12419.5 provides: "The Controller may, in his discretion, offset any amount due a state agency from a person or entity, against any amount owing such person or entity by any state agency. The Controller may deduct from the claim, and draw his warrants for the amounts offset in favor of the respective state agencies to which due, and, for any balance, in favor of the claimant. . . . The amount due any person or entity from the state or any agency thereof is the net amount otherwise owing such person or entity after any offset as in this section provided." (See also *Tyler v. State of California* (1982) 134 Cal.App.3d 973, 975-976 [185 Cal.Rptr. 491].)

State correctly observes that it has not unlawfully used its offset authority during the course of this dispute. However, State has not needed to do so because it has adopted other means of avoiding payment on County's claims. In view of State's manifest reluctance to reimburse, and its otherwise unencumbered statutory right [***52] of offset, the trial court was well within its authority to prevent this method of frustrating County's collection efforts from occurring. (See *County of Los Angeles v. State of California* (1984) 153 Cal.App.3d 568 [200 Cal.Rptr. 394].)

1. *The Injunction Against Reversion or Dissipation of Undisbursed Appropriations Is Proper*

(25) State continues that the order (fn. 7, para. 4, *ante*) enjoining it from directly or indirectly reverting the reimbursement award sum from the general fund line item accounts, and from otherwise dissipating that sum in a manner that would make it unavailable to satisfy this court's judgment, violates Government Code section 16304.1.²¹ This section reverts undisbursed [*552] balances in any appropriation to the fund from which the appropriation was made. No authority is cited for State's proposition. To the contrary, *County of Sacramento v. Loeb, supra*, 160 Cal.App.3d at pp. 456-457 expressly confirms this type of ancillary remedy as a legitimate exercise of the court's authority to assist in collecting on an adjudicated debt, the payment of which has been delayed all too long.

21 [HN43]Government Code section 16304.1 provides: "Disbursements in liquidation of encumbrances may be made before or during the

two years following the last day an appropriation is available for encumbrance Whenever, during [such two-year period], the Director of Finance determines that the project for which the appropriation was made is completed and that a portion of the appropriation is not necessary for disbursements, such portion shall, upon order of the Director of Finance, revert to and become a part of the fund from which the appropriation was made. Upon the expiration of two years . . . following the last day of the period of its availability, the undisbursed balance in any appropriation shall revert to and become a part of the fund from which the appropriation was made. . . ."

[**53] That portion of the order restraining reversion is particularly innocuous because it only affects undisbursed balances in an appropriation. At the time of reversion, it is crystal clear that these remaining funds are unneeded for the primary purpose for which appropriated; otherwise, they would not exist. Moreover, that portion of the order restraining dissipation of the reimbursement award sum in a manner that would make it unavailable to satisfy a court's judgment is similarly a proper exercise of the court's authority. By not reimbursing County for the state-mandated costs, State would be contravening its constitutional and statutory obligations to subvent. To the extent it is not reimbursed, County would be compelled, contrary to law, to bear the cost of complying with a state-imposed obligation.

J. The Auditor Controller and the Specified Funds Are Not Indispensable Parties

(26) (27) State next contends that the Auditor Controller of Los Angeles County and the "specified" fines and forfeitures County was allowed to offset are indispensable [**815] parties. Failure to join them in the action or to serve them with process purportedly renders the trial court's order void [**54] as in excess of its jurisdiction. ²² State cites only the general statutory definition of an indispensable party (Code Civ. Proc., § 389) to support this assertion.

22 [HN44]Code of Civil Procedure section 389, subdivision (a) provides: "A person who is subject to service of process and whose joinder will not deprive the court of jurisdiction over the subject matter of the action shall be joined as a party in the action if (1) in his absence complete relief cannot be accorded among those already parties or (2) he claims an interest relating to the subject of the action and is so situated that the disposition of the action in his absence may (i) as a practical matter impair or impede his ability to protect that interest or (ii) leave any of the persons already parties subject to a substantial risk

of incurring double, multiple, or otherwise inconsistent obligations by reason of his claimed interest. If he has not been so joined, the court shall order that he be made a party."

[HN45]The Auditor Controller is an officer [**55] of the County and is subject to the [*553] direction and control of the County board of supervisors. (Gov. Code, §§ 24000, subds. (d), (e), 26880; L.A. County Code, § 2.10.010.) He is indirectly represented in these proceedings because his principal, the County, is the party litigant. Additionally, he claims no personal interest in the fines and forfeitures and his pro forma absence in no way impedes complete relief.

The funds created by the collected fines and forfeitures also are not indispensable parties. This is not an in rem proceeding, and the ownership of a particular stake is not in dispute. Rather, this is an action to compel a ministerial obligation imposed by law. Complete relief may be afforded without including the specified funds as a party.

K. County is Entitled to Interest

(28) State insists that an award of interest to County unfairly penalizes State for not paying claims which it was prohibited by law from paying under Statutes 1981, chapter 1090, section 3. This argument is unavailing.

[HN46]Civil Code section 3287, subdivision (a) allows interest to any person "entitled to recover damages certain, or capable of being made certain by calculation . . . [**56] . ." Interest begins on the day that the right to recover vests in the claimant. By its own terms, this section applies to any judgment debtor, "including the state . . . or any political subdivision of the state."

The judgment orders interest at the legal rate from September 30, 1981, for reimbursement funds originally contained in S.B. 1261, and from February 12, 1982, for the funds originally contained in A.B. 171. These are the respective dates that the bills were enacted without appropriations. As we concluded earlier, County's cause of action did not arise and its right to recover did not vest until this legislative process was complete. County offers no authority to suggest that any other vesting date is appropriate.

Furthermore, State cannot avoid its obligation to pay interest by relying on the invalid budget control language in Statutes 1981, chapter 1090, section 3. [HN47]"An invalid statute voluntarily enacted and promulgated by the state is not a defense to its obligation to pay interest under Civil Code section 3287, subdivision (a)." (*Olson v. Cory* (1983) 35 Cal.3d 390, 404 [197 Cal.Rptr. 843, 673 P.2d 720].)

Appeal in Case No. 2 Civil B011941

(Rincon et al. Case)

The procedural history and legal issues raised in the *Rincon et al.* appeal are essentially similar to those discussed in the County of Los Angeles matter.

[*554] County, although not a party to this underlying trial court proceeding, filed a test claim with the Board. All parties agree that County represented the interests of the named respondents here.

The Board action resulted in a finding of state-mandated costs. It further found that Rincon et al. were entitled to reimbursement [**816] in the amount of \$ 39,432. After the Legislature and the Governor, respectively, deleted the funding from the two appropriations bills, S.B. 1261 and A.B. 171, Rincon et al. filed a petition for writ of mandate and declaratory relief. This action was consolidated for hearing in the trial court with the action in B011942 (County of Los Angeles matter). The within judgment was also signed, filed and entered on February 6, 1985. The reimbursement order was directed against the 1984-1985 budget appropriations. State appeals from that judgment.

The court here included a judicial determination that the Board, or its successors, hear and approve the claims of certain other [***58] respondents for costs incurred in connection with the state-mandated program. (Fn. 7, para. 9, *ante.*) This special directive was necessary because the claims of these respondents (petitioners below) have not yet been determined.²³ Since we have ruled that State is barred by the doctrines of waiver and administrative collateral estoppel from raising the state mandate issue, the validity of these claims becomes a question of law susceptible to but one conclusion, and mandamus properly lies. (*County of Sacramento v. Loeb, supra*, 160 Cal.App.3d at p. 453.) This portion of the order also underscores, for the Board's edification, the determination that the statutory restriction on the Board authority to proceed is invalid.²⁴

23 Responding to the budget control language directing it to refuse to process these claims, the Board declined to hear these matters.

24 Because certain claims have not yet been processed, we assume that the issue of the amount of reimbursement may still be at large. Our record is not clear on this point.

[***59] Once again, our determinations and conclusions in the County of Los Angeles matter are equally applicable here.

Appeal in Case No. 2 Civil B006078

(Carmel Valley et al.)

Again, the procedural history and legal issues raised in this appeal are essentially similar to those discussed in the County of Los Angeles matter.

County filed a test claim with the Board. All parties agree that the County represented the interests of the named respondents here.

[*555] On December 17, 1980, the Board found that a state mandate existed and that specific amounts of reimbursement were due several respondents totalling \$ 159,663.80. Following the refusal of the Legislature to appropriate funds for reimbursement, Carmel Valley et al. filed a petition for writ of mandate and declaratory relief on January 3, 1983. Judgment was entered on May 23, 1984. The reimbursement order was directed against 1983-1984 budget appropriations.

The judgment differs from the other two because it does not decree a specific reimbursement amount. The trial court determined that even though the Board had approved the claims, the State was not precluded from contesting that determination. The court's reasons [***60] were that the State, in its answer, had denied that the money claimed was actually spent, and that Board approval had not been implemented by subsequent legislation. The court concluded that the reimbursement process, of which the Board action was an intrinsic part, was "aborted."

We disagree with this portion of the court's analysis. The moment S.B. 1261 and A.B. 171 were enacted into law without appropriations, Carmel Valley et al. had exhausted their administrative remedies and were entitled to seek a writ of mandate. At the time of trial, State was barred by the doctrines of waiver and administrative collateral estoppel from contesting the state mandate issue or the amount of reimbursement. The trial court therefore should have rendered a judgment for the amount of reimbursement. Having failed to do so, this fact-finding responsibility falls upon this court. Although we [**817] ordinarily are not equipped to handle this function, the writ of mandate in this case identifies the amount of the approved claims as \$ 159,663.80. We accordingly will amend the judgment to reflect that amount.

The trial court also predicated its judgment for Carmel Valley et al. solely on the [***61] basis of Revenue and Taxation Code section 2207 and former section 2231. In doing so, the court did not have the benefit of the decision in *City of Sacramento v. State of California, supra*, 156 Cal.App.3d at p. 182.²⁵ That case held that mandates passed after January 1, 1975, must be reimbursed pursuant to article XIII B, section 6 of the California Constitution, but that reimbursement need not commence until July 1, 1980. In light of this rule, we

conclude that the trial court's decision ordering reimbursement is also supported by article XIII B, section 6.

25 The decision in City of Sacramento, supra, was filed just one day before the trial court signed the written order in this case. The Revenue and Taxation Code sections on which the court relied were operational before the costs claimed in this case were incurred.

[*556] State raises another point specific to this particular appeal. In its answer to the writ petition, State admitted that the local agency expenditures were state mandated. [***62] Consequently, the issue was not contested at the trial court level. However, State vigorously contends here that it is not bound by its trial court admissions because the state mandate issue is purely a question of law.

(29) State is correct in contending that [HN48]an appellate court is not limited by the interpretation of statutes given by the trial court. (City of Merced v. State of California, supra, 153 Cal.App.3d at p. 781.) However, State's victory on this point is Pyrrhic. Regardless of how the issue is characterized, State is precluded from contesting the Board findings on appeal because of the independent application of the doctrines of waiver and administrative collateral estoppel. These doctrines would also have applied at the trial court level if State's answer had raised the issue of state mandate in the first instance.

We also reject State's argument, advanced for the first time on appeal, that the executive orders of 1978 initially implement legislation enacted prior to January 1, 1975, and that state reimbursement is therefore discretionary. (Cal. Const., art. XIII B, § 6, subd. (c).) Again, State is barred by the doctrines of waiver and administrative collateral [***63] estoppel from arguing that costs incurred under the executive orders are not subject to reimbursement.

State continues that the Carmel Valley judgment against the Department of Industrial Relations is erroneous. Since the department was never made a party in the suit, nor served with process, the resulting judgment reflects a denial of due process and is in excess of the court's jurisdiction. (See Code Civ. Proc., § 389; fn. 22, *ante*.)

This assertion is but a variant of the same argument advanced in the County of Los Angeles case, *supra*, which we rejected as meritless. The department is part of the State of California. (Lab. Code, § 50.) State extensively argued the department's position and even offered into evidence a declaration from the chief of fiscal

accounting of the department. As stated earlier, agents of the same government are in privity with each other. (People v. Sims, supra, 32 Cal.3d at p. 487.)

Ross v. Superior Court, supra, 19 Cal.3d at p. 899 demonstrates how, [HN49]through the notion of privity, a government agent can be held in contempt for knowingly violating a court order issued against another agent of the same government. There, [***64] a court in an earlier proceeding had decided that defendant Department of Health and Welfare must pay unlawfully withheld welfare benefits to qualified recipients. The County Board of Supervisors, [*557] who were not parties to this action, knew about the court's order but refused to comply. The Supreme Court affirmed a trial court decision holding the Board in contempt for violating the [**818] order directing payment. The court reasoned that, as an agent of the Department of Health and Welfare, the Board did not collectively or individually need to be named as a party in order to be bound by a court order of which they had actual knowledge.

The determinations and conclusions in the County of Los Angeles case are likewise applicable here.

Modification of Judgments in All Three Appeals

The trial court judgments ordering reimbursement from specific account appropriations were entered many months ago. We will affirm these judgments and thereby validate the trial courts' determination that funds already appropriated for the State Department of Industrial Relations were reasonably available for payment at the time of the courts' orders.

Due to the passage of time, we requested [***65] State at oral argument to confirm whether the appropriations designated in the respective judgments are still available for encumbrance. State's counsel responded by rearguing that the weight of the evidence did not support the trial courts' findings that specific funds were reasonably available for reimbursement. Counsel further hinted that the funds may not actually be available.

We hope that counsel for the State is mistaken. But in order to emphasize our strong and unequivocal determination that the local agency petitioners be promptly reimbursed, we will take judicial notice of the enactment of the 1985-1986 Budget Act (Stats. 1985, ch. 111) and the 1986-1987 Budget Act (Stats. 1986, ch. 186). (Serrano v. Priest, supra, 131 Cal.App.3d at p. 197.) Both acts appropriate money for the State Department of Industrial Relations and fund the identical account numbers referred to in the trial courts' judgments. They are:

Account Numbers	1985-1986 Budget Act	1986-1987 Budget Act
8350-001-001	\$ 94,673,000	\$ 106,153,000
8350-001-452	2,295,000	2,514,000
8350-001-453	2,859,000	2,935,000
8350-001-890	16,753,000	17,864,000

(30) [HN50]An appellate court is [***66] empowered to add a directive that the trial court order be modified to include charging orders against funds appropriated by subsequent budget acts. (*Serrano v. Priest, supra*, 131 Cal.App.3d at pp. 198, 201.) We do so here with respect to all three judgments.

[*558] 2d Civ. B011942 (*County of Los Angeles Case*)

The judgment is modified as follows:

(1) The following sentence is added to paragraph 2: "If the hereinabove described funds are not available for reimbursement, the warrants shall be drawn against funds in the same account numbers enacted in the 1985-86 and 1986-87 Budget Acts."

(2) The words "Fish and Game Code Section 13100" are deleted from paragraph 5.

(3) The peremptory writ of mandate is modified to command the Controller to draw warrants, if necessary, against the same account numbers identified in the judgment as appropriated by the 1985-1986 and 1986-1987 Budget Acts.

As modified, the judgment is affirmed. Respondents to recover costs on appeal.

2d Civ. B011941 (*Rincon et al. Case*)

The judgment is modified as follows:

(1) The following sentence is added to paragraph 2: "If the hereinabove described funds are not available [***67] for reimbursement, the warrants shall be drawn against funds in the same account numbers enacted in the 1985-86 and 1986-87 Budget Acts."

[**819] (2) The peremptory writ of mandate is modified to command the Controller to draw warrants, if necessary, against the same account numbers identified in the judgment as appropriated by the 1985-1986 and 1986-1987 Budget Acts.

As modified, the judgment is affirmed. Respondents to recover costs on appeal.

2d Civ. B006078 (*Carmel Valley et al. Case*)

The judgment is modified as follows:

[*559] (1) The following sentences are added to paragraph 2: "The reimbursement amounts total \$ 159,663.80. If the hereinabove described funds are not available for reimbursement, the warrants shall be drawn against funds in the same account numbers enacted in the 1985-86 and 1986-87 Budget Acts."

(2) The peremptory writ of mandate is modified to command the Controller to draw warrants, if necessary, against the same account numbers identified in the judgment as appropriated by the 1985-1986 and 1986-1987 Budget Acts.

As modified, the judgment is affirmed. Respondents to recover costs on appeal.

SUBSEQUENT HISTORY: Time for Granting or Denying Rehearing Extended Burbank, City of v. State Water Resources Control Board, 2005 Cal. LEXIS 4271 (Cal., Apr. 21, 2005)

Rehearing denied by, Request denied by City of Burbank v. State Water Res. Control Bd., 2005 Cal. LEXIS 7185 (Cal., June 29, 2005)

PRIOR HISTORY: Superior Court of Los Angeles County, Nos. BS060960, BS060957, Dzintra I. Janavs, Judge. Court of Appeal, Second Dist., Div. Three, Nos. B150912, B151175 & B152562.

City of Burbank v. State Water Resources Control Bd., 111 Cal. App. 4th 245, 4 Cal. Rptr. 3d 27, 2003 Cal. App. LEXIS 1236 (Cal. App. 2d Dist., 2003)

DISPOSITION: Judgment affirmed in part and remanded in part..

CASE SUMMARY:

PROCEDURAL POSTURE: Plaintiff cities sought review of a judgment of the Court of Appeal of California, Second Appellate District, Division Three, holding that Cal. Water Code §§ 13241 and 13263 required a regional water control quality board to take into account economic considerations when it adopted water quality standards in a basin plan but not when the board set spe-

cific pollutant restrictions in wastewater discharge permits intended to satisfy those standards.

OVERVIEW: The cities owned three treatment plants that discharged wastewater under National Pollutant Discharge Elimination System permits issued by the regional board. The court held that whether the regional board should have complied with Cal. Water Code §§ 13263 and 13241 of California's Porter-Cologne Water Quality Control Act, Cal. Water Code § 13000 et seq., by taking into account "economic considerations," such as the costs the permit holder would incur to comply with the numeric pollutant restrictions set out in the permits depended on whether those restrictions met or exceeded the requirements of the federal Clean Water Act, 33 U.S.C.S. § 1251 et seq. To comport with the principles of federal supremacy, California law could not authorize California's regional boards to allow the discharge of pollutants into the navigable waters of the United States in concentrations that would exceed the mandates of federal law. The federal Clean Water Act did not prohibit a state, when imposing effluent limitations that were more stringent than required by federal law, from taking into account the economic effects of doing so.

OUTCOME: The court affirmed the judgment of the court of appeal, reinstating the wastewater discharge permits to the extent that the specified numeric limitations on chemical pollutants were necessary to satisfy federal Clean Water Act requirements for treated waste-

water. The court remanded for further proceedings to determine whether the pollutant limitations in the permits met or exceeded federal standards.

CORE TERMS: water quality, wastewater, regional boards, pollutant, Clean Water Act, effluent, federal law, basin, plant's, stringent', pollution, discharged, economic factors, narrative, federal standards, clean, Porter-Cologne Act, numeric, beneficial uses, concentration, navigable waters, regional, river, issuing, Conservation Laws, point sources, environmental, authorize, chemical, Control Act

LexisNexis(R) Headnotes

Environmental Law > Water Quality > General Overview

Real Property Law > Water Rights > Beneficial Use

[HN1]Whereas the State Water Resources Control Board establishes statewide policy for water quality control, Cal. Water Code § 13140, the regional boards formulate and adopt water quality control plans for all areas within a region. Cal. Water Code § 13240. The regional boards' water quality plans, called "basin plans," must address the beneficial uses to be protected as well as water quality objectives, and they must establish a program of implementation. Cal. Water Code § 13050(j). Basin plans must be consistent with state policy for water quality control. Cal. Water Code § 13240.

Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Effluent Limitations

Environmental Law > Water Quality > Clean Water Act > Enforcement > General Overview

[HN2]Under the federal Clean Water Act, 33 U.S.C.S. § 1251 et seq., each state is free to enforce its own water quality laws so long as its effluent limitations are not less stringent than those set out in the Clean Water Act. 33 U.S.C.S. § 1370.

Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Effluent Limitations

Environmental Law > Water Quality > Clean Water Act > Water Quality Standards

[HN3]The Clean Water Act, 33 U.S.C.S. § 1251 et seq., provides for two sets of water quality measures. Effluent limitations are promulgated by the Environmental Protection Agency and restrict the quantities, rates, and concentrations of specified substances which are discharged from point sources. 33 U.S.C.S. §§ 1311, 1314. Water quality standards are, in general, promulgated by

the states and establish the desired condition of a waterway. 33 U.S.C.S. § 1313. These standards supplement effluent limitations so that numerous point sources, despite individual compliance with effluent limitations, may be further regulated to prevent water quality from falling below acceptable levels.

Environmental Law > Water Quality > Clean Water Act > Coverage & Definitions > Point Sources

[HN4]See 33 U.S.C.S. § 1362(14).

Environmental Law > Water Quality > Clean Water Act > Water Quality Standards

[HN5]The Environmental Protection Agency (EPA) provides states with substantial guidance in the drafting of water quality standards. Moreover, the Clean Water Act, 33 U.S.C.S. § 1251 et seq., requires, inter alia, that state authorities periodically review water quality standards and secure the EPA's approval of any revisions in the standards. If the EPA recommends changes to the standards and the state fails to comply with that recommendation, the Act authorizes the EPA to promulgate water quality standards for the state. 33 U.S.C.S. § 1313(c).

Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Effluent Limitations

Environmental Law > Water Quality > Clean Water Act > Enforcement > General Overview

[HN6]Part of the federal Clean Water Act, 33 U.S.C.S. § 1251 et seq., is the National Pollutant Discharge Elimination System (NPDES), the primary means for enforcing effluent limitations and standards under the Clean Water Act. The NPDES sets out the conditions under which the federal Environmental Protection Agency or a state with an approved water quality control program can issue permits for the discharge of pollutants in wastewater. 33 U.S.C.S. § 1342(a), (b). In California, wastewater discharge requirements established by the regional boards are the equivalent of the NPDES permits required by federal law. Cal. Water Code § 13374.

Environmental Law > Water Quality > General Overview

Real Property Law > Water Rights > Beneficial Use

[HN7]See Cal. Water Code § 13263(a).

Environmental Law > Water Quality > General Overview

Real Property Law > Water Rights > Beneficial Use

[HN8]See Cal. Water Code § 13241.

Governments > Legislation > Interpretation

[HN9]When construing any statute, the reviewing court's task is to determine the legislature's intent when it enacted the statute so that the court may adopt the construction that best effectuates the purpose of the law. In doing this, the court looks to the statutory language, which ordinarily is the most reliable indicator of legislative intent.

Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Effluent Limitations

[HN10]Cal. Water Code § 13263 directs regional boards, when issuing wastewater discharge permits, to take into account various factors including those set out in Cal. Water Code § 13241. Listed among the § 13241 factors is economic considerations. Cal. Water Code § 13241(d).

Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Effluent Limitations

[HN11]Cal. Water Code § 13377 specifies that wastewater discharge permits issued by California's regional boards must meet the federal standards set by federal law. In effect, § 13377 forbids a regional board's consideration of any economic hardship on the part of the permit holder if doing so would result in the dilution of the requirements set by Congress in the Clean Water Act. That act prohibits the discharge of pollutants into the navigable waters of the United States unless there is compliance with federal law, 33 U.S.C.S. § 1311(a), and publicly operated wastewater treatment plants must comply with the act's clean water standards, regardless of cost. 33 U.S.C.S. §§ 1311(a), (b)(1)(B), (C), 1342(a)(1), (3).

Constitutional Law > Supremacy Clause > General Overview

Environmental Law > Water Quality > General Overview

[HN12]Because Cal. Water Code § 13263 cannot authorize what federal law forbids, it cannot authorize a regional board, when issuing a wastewater discharge permit, to use compliance costs to justify pollutant restrictions that do not comply with federal clean water standards. Such a construction of § 13263 would not only be inconsistent with federal law, it would also be inconsistent with the Legislature's declaration in Cal. Water Code § 13377 that all discharged wastewater must satisfy federal standards. Moreover, under the federal Constitution's Supremacy Clause, U.S. Const. art. VI, cl. 2, a state law that conflicts with federal law is without

effect. To comport with the principles of federal supremacy, California law cannot authorize the state's regional boards to allow the discharge of pollutants into the navigable waters of the United States in concentrations that would exceed the mandates of federal law.

Environmental Law > Water Quality > Clean Water Act > Discharge Permits > Effluent Limitations
Environmental Law > Water Quality > Clean Water Act > Enforcement > General Overview

[HN13]The federal Clean Water Act, 33 U.S.C.S. § 1251 et seq., reserves to the states significant aspects of water quality policy, 33 U.S.C.S. § 1251(b), and it specifically grants the states authority to "enforce any effluent limitation" that is not "less stringent" than the federal standard, 33 U.S.C.S. § 1370. It does not prescribe or restrict the factors that a state may consider when exercising this reserved authority, and thus it does not prohibit a state-when imposing effluent limitations that are more stringent than required by federal law-from taking into account the economic effects of doing so.

SUMMARY:

CALIFORNIA OFFICIAL REPORTS SUMMARY

The trial court ruled that California law required a regional water quality control board to weigh the economic burden on a wastewater treatment facility against the expected environmental benefits of reducing pollutants in the wastewater discharge. The cities owned three treatment plants that discharged wastewater under National Pollutant Discharge Elimination System permits issued by the regional board. (Superior Court of Los Angeles County, Nos. BS060960 and BS060957, Dzintra I. Janavs, Judge.) The Court of Appeal, Second Dist., Div. Three, Nos. B150912, B151175 and B152562, concluded that Wat. Code, §§ 13241 and 13263, required a regional board to take into account "economic considerations" when it adopted water quality standards in a basin plan but not when the regional board set specific pollutant restrictions in wastewater discharge permits intended to satisfy those standards.

The Supreme Court affirmed the judgment of the Court of Appeal, reinstating the wastewater discharge permits in part and remanding for further proceedings. The court held that whether the regional board should have complied with Wat. Code, §§ 13263 and 13241, of California's Porter-Cologne Water Quality Control Act, Wat. Code, § 13000 et seq., by taking into account "economic considerations," such as the costs the permit holder would incur to comply with the numeric pollutant restrictions set out in the permits, depended on whether those restrictions met or exceeded the requirements of

the federal Clean Water Act, 33 U.S.C. § 1251 et seq. To comport with the principles of federal supremacy, California law could not authorize California's regional boards to allow the discharge of pollutants into the navigable waters of the United States in concentrations that would exceed the mandates of federal law. The federal Clean Water Act did not prohibit a state, when imposing effluent limitations that were more stringent than required by [*614] federal law, from taking into account the economic effects of doing so. (Opinion by Kennard, J., with George, C. J., Baxter, Werdegar, Chin, and Moreno, JJ., concurring. Concurring opinion by Brown, J. (see p. 629).)

HEADNOTES

CALIFORNIA OFFICIAL REPORTS HEADNOTES Classified to California Digest of Official Reports

(1) Pollution and Conservation Laws § 5--Water--"Basin Plans."--Whereas the State Water Resources Control Board establishes statewide policy for water quality control, Wat. Code, § 13140, the regional boards formulate and adopt water quality control plans for all areas within a region, Wat. Code, § 13240. Under Wat. Code, § 13050, subd. (j), the regional boards' water quality plans, called "basin plans," must address the beneficial uses to be protected as well as water quality objectives, and they must establish a program of implementation. Basin plans must be consistent with state policy for water quality control under Wat. Code, § 13240.

(2) Pollution and Conservation Laws § 5--Water--Federal and State Standards.--Under 33 U.S.C. § 1370, of the federal Clean Water Act, 33 U.S.C. § 1251 et seq., each state is free to enforce its own water quality laws so long as its effluent limitations are not less stringent than those set out in the Clean Water Act.

(3) Pollution and Conservation Laws § 5--Water--Federal and State Standards.--The Clean Water Act, 33 U.S.C. § 1251 et seq., provides for two sets of water quality measures. Pursuant to 33 U.S.C. §§ 1311 and 1314, effluent limitations are promulgated by the Environmental Protection Agency and restrict the quantities, rates, and concentrations of specified substances which are discharged from point sources. Water quality standards are, in general, promulgated by the states and establish the desired condition of a waterway under 33 U.S.C. § 1313. These standards supplement effluent limitations so that numerous point sources, despite individual compliance with effluent limitations, may be further regulated to prevent water quality from falling below acceptable levels.

(4) Pollution and Conservation Laws § 5--Water--Federal and State Standards.--The Environmental Protection Agency (EPA) provides states with substantial guidance in the drafting of water quality standards. Moreover, the Clean Water Act, 33 U.S.C. § 1251 et seq., requires, inter alia, that state authorities periodically review water quality [*615] standards and secure the EPA's approval of any revisions in the standards. If the EPA recommends changes to the standards and the state fails to comply with that recommendation, 33 U.S.C. § 1313(c), authorizes the EPA to promulgate water quality standards for the state.

(5) Pollution and Conservation Laws § 5--Water--National Pollutant Discharge Elimination System.--Part of the federal Clean Water Act, 33 U.S.C. § 1251 et seq., is the National Pollutant Discharge Elimination System (NPDES), the primary means for enforcing effluent limitations and standards under the Clean Water Act. Title 33 U.S.C. § 1342(a), (b), of the NPDES sets out the conditions under which the federal Environmental Protection Agency or a state with an approved water quality control program can issue permits for the discharge of pollutants in wastewater. Under California law, Wat. Code, § 13374, wastewater discharge requirements established by the regional boards are the equivalent of the NPDES permits required by federal law.

(6) Statutes § 21--Construction--Legislative Intent.--When construing any statute, the reviewing court's task is to determine the Legislature's intent when it enacted the statute so that the court may adopt the construction that best effectuates the purpose of the law. In doing this, the court looks to the statutory language, which ordinarily is the most reliable indicator of legislative intent.

(7) Pollution and Conservation Laws § 5--Water--Wastewater Discharge Permits--Economic Considerations.--Wat. Code, § 13263, directs regional boards, when issuing wastewater discharge permits, to take into account various factors, including those set out in Wat. Code, § 13241. Listed among the § 13241 factors is economic considerations, in § 13241, subd. (d).

(8) Pollution and Conservation Laws § 5--Water--Wastewater Discharge Permits--Economic Considerations.--Wat. Code, § 13377, specifies that wastewater discharge permits issued by California's regional boards must meet the federal standards set by federal law. In effect, § 13377 forbids a regional board's consideration of any economic hardship on the part of the permit holder if doing so would result in the dilution of the requirements set by Congress in the Clean Water

Act. That act prohibits the discharge of pollutants into the navigable waters of [*616] the United States unless there is compliance with federal law (33 U.S.C. § 1311(a)), and publicly operated wastewater treatment plants must comply with the act's clean water standards under 33 U.S.C. §§ 1311(a), (b)(1)(B) and (C), 1342(a)(1) and (3), regardless of cost.

(9) Pollution and Conservation Laws § 5--Water--Wastewater Discharge Permits--Economic Considerations.--Because Wat. Code, § 13263, cannot authorize what federal law forbids, it cannot authorize a regional board, when issuing a wastewater discharge permit, to use compliance costs to justify pollutant restrictions that do not comply with federal clean water standards. Such a construction of § 13263 would not only be inconsistent with federal law, it would also be inconsistent with the Legislature's declaration in Wat. Code, § 13377, that all discharged wastewater must satisfy federal standards. Moreover, under the federal Constitution's supremacy clause, U.S. Const., art. VI, a state law that conflicts with federal law is without effect. To comport with the principles of federal supremacy, California law cannot authorize the state's regional boards to allow the discharge of pollutants into the navigable waters of the United States in concentrations that would exceed the mandates of federal law.

(10) Pollution and Conservation Laws § 5--Water--Federal and State Standards.--The federal Clean Water Act, 33 U.S.C. § 1251 *et seq.*, reserves to the states significant aspects of water quality policy under 33 U.S.C. § 1251(b), and it specifically grants the states authority to enforce any effluent limitation that is not less stringent than the federal standard under 33 U.S.C. § 1370. It does not prescribe or restrict the factors that a state may consider when exercising this reserved authority, and thus it does not prohibit a state--when imposing effluent limitations that are more stringent than required by federal law--from taking into account the economic effects of doing so. Thus, a regional board, when issuing a wastewater discharge permit, may not consider economic factors to justify imposing pollutant restrictions that are less stringent than the applicable federal standards require. When, however, a regional board is considering whether to make the pollutant restrictions in a wastewater discharge permit more stringent than federal law requires, California law allows the board to take into account economic factors, including the wastewater discharger's cost of compliance.

JUDGES: Kennard, J., with George, C. J., Baxter, Werdegar, Chin, and Moreno, JJ., concurring. Concurring opinion by Brown, J.

OPINION BY: KENNARD [**864]

OPINION

KENNARD, J.--Federal law establishes national water quality standards but allows the states to enforce their own water quality laws so long as they comply with federal standards. Operating within this federal-state framework, California's nine Regional Water Quality Control Boards establish water quality policy. They also issue permits for the discharge of treated wastewater; these permits specify the maximum allowable concentration of chemical pollutants in the discharged wastewater.

The question here is this: When a regional board issues a permit to a wastewater treatment facility, must the board take into account the facility's costs of complying with the board's restrictions on pollutants in the wastewater to be discharged? The trial court ruled that California law required a regional board to weigh the economic burden on the facility against the expected environmental benefits of reducing pollutants in the wastewater discharge. The Court of Appeal disagreed. On petitions by the municipal operators of three wastewater treatment facilities, we granted review.

We reach the following conclusions: Because both California law and federal law require regional boards to comply with federal clean water standards, and because the supremacy clause of the United States Constitution requires state law to yield to federal law, a regional board, when issuing a wastewater discharge permit, may not consider economic factors to justify imposing pollutant restrictions that are *less stringent* than the applicable federal standards require. When, however, a regional board is considering whether to make the pollutant restrictions in a wastewater discharge permit *more stringent* than federal law requires, California law allows the board to take into account economic [**865] factors,

including the wastewater discharger's cost of compliance. We remand this case for further proceedings to determine whether the pollutant limitations in the permits challenged here meet or exceed federal standards.

[*619] I. Statutory Background

The quality of our nation's waters is governed by a "complex statutory and regulatory scheme ... that implicates both federal and state administrative responsibilities." (*PUD No. 1 of Jefferson County v. Washington Department of Ecology* (1994) 511 U.S. 700, 704 [128 L. Ed. 2d 716, 114 S. Ct. 1900].) We first discuss California law, then federal law.

A. California Law

In California, the controlling law is the Porter-Cologne Water Quality Control Act (Porter-Cologne Act), which was enacted in 1969. (Wat. Code, § 13000 et seq., added by Stats. 1969, ch. 482, § 18, p. 1051.)¹ Its goal is "to attain the highest water [***307] quality which is reasonable, considering all demands being made and to be made on those waters and the total values involved, beneficial and detrimental, economic and social, tangible and intangible." (§ 13000.) The task of accomplishing this belongs to the State Water Resources Control Board (State Board) and the nine Regional Water Quality Control Boards; together the State Board and the regional boards comprise "the principal state agencies with primary responsibility for the coordination and control of water quality." (§ 13001.) As relevant here, one of those regional boards oversees the Los Angeles region (the Los Angeles Regional Board).²

1 Further undesignated statutory references are to the Water Code.

2 The Los Angeles water region "comprises all basins draining into the Pacific Ocean between the southeasterly boundary, located in the westerly part of Ventura County, of the watershed of Rincon Creek and a line which coincides with the southeasterly boundary of Los Angeles County from the ocean to San Antonio Peak and follows thence the divide between San Gabriel River and Lytle Creek drainages to the divide between Sheep Creek and San Gabriel River drainages." (§ 13200, subd. (d).)

(1) [HN1]Whereas the State Board establishes statewide policy for water quality control (§ 13140), the regional boards "formulate and adopt water quality control plans for all areas within [a] region" (§ 13240). The regional boards' water quality plans, called "basin plans," must address the beneficial uses to be protected as well as water quality objectives, and they must establish a program of implementation. (§ 13050, subd. (j).) Basin

plans must be consistent with "state policy for water quality control." (§ 13240.)

B. Federal Law

In 1972, Congress enacted amendments (Pub.L. No. 92-500 (Oct. 18, 1972) 86 Stat. 816) to the Federal Water Pollution Control Act (33 U.S.C. § 1251 et seq.), which, as amended in 1977, is commonly known as the Clean [*620] Water Act. The Clean Water Act is a "comprehensive water quality statute designed to 'restore and maintain the chemical, physical, and biological integrity of the Nation's waters.'" (*PUD No. 1 of Jefferson County v. Washington Dept. of Ecology, supra*, 511 U.S. at p. 704, quoting 33 U.S.C. § 1251(a).) The act's national goal was to eliminate by the year 1985 "the discharge of pollutants into the navigable waters" of the United States. (33 U.S.C. § 1251(a)(1).) To accomplish this goal, the act established "effluent limitations," which are restrictions on the "quantities, rates, and concentrations of chemical, physical, biological, and other constituents"; these effluent limitations allow the discharge of pollutants only when the water has been satisfactorily treated to conform with federal water quality standards. (33 U.S.C. §§ 1311, 1362(11).)

(2) [HN2] Under the federal Clean Water Act, each state is free to enforce its own water quality laws so long as its effluent limitations are not "less stringent" than those set out in the Clean Water Act. (33 U.S.C. § 1370.) This led the California Legislature in 1972 to amend the state's Porter-Cologne Act "to ensure consistency with the requirements for state programs implementing the Federal Water Pollution Control Act." (§ 13372.)

[**866] (3) Roughly a dozen years ago, the United States Supreme Court, in *Arkansas v. Oklahoma* (1992) 503 U.S. 91 [117 L. Ed. 2d 239, 112 S. Ct. 1046], described the distinct roles of the state and federal agencies in enforcing water quality: "The Clean Water Act anticipates a partnership between the States and the Federal Government, animated by a shared objective: 'to restore and maintain the chemical, physical, and biological integrity of the Nation's waters.' 33 U.S.C. § 1251(a). Toward [***308] this end, [HN3][the Clean Water Act] provides for two sets of water quality measures. 'Effluent limitations' are promulgated by the [Environmental Protection Agency (EPA)] and restrict the quantities, rates, and concentrations of specified substances which are discharged from point sources.[³] See §§ 1311, 1314. '[W]ater quality standards' are, in general, promulgated by the States and establish the desired condition of a waterway. See § 1313. These standards supplement effluent limitations 'so that numerous point sources, despite individual compliance with effluent limitations, may be further regulated to prevent water quality from falling below acceptable levels.' *EPA v. California ex*

rel. State Water Resources Control Bd., 426 U.S. 200, 205, n. 12 [48 L. Ed. 2d 578, 96 S. Ct. 2022, 2025, n. 12] (1976).

3 A "[HN4]point source" is "any discernible, confined and discrete conveyance" and includes "any pipe, ditch, channel ... from which pollutants ... may be discharged." (33 U.S.C. § 1362 (14).)

[*621] (4) [HN5] The EPA provides States with substantial guidance in the drafting of water quality standards. See generally 40 CFR pt. 131 (1991) (setting forth model water quality standards). Moreover, [the Clean Water Act] requires, *inter alia*, that state authorities periodically review water quality standards and secure the EPA's approval of any revisions in the standards. If the EPA recommends changes to the standards and the State fails to comply with that recommendation, the Act authorizes the EPA to promulgate water quality standards for the State. 33 U.S.C. § 1313(c). (*Arkansas v. Oklahoma, supra*, 503 U.S. at p. 101.)

(5) [HN6] Part of the federal Clean Water Act is the National Pollutant Discharge Elimination System (NPDES), "[t]he primary means" for enforcing effluent limitations and standards under the Clean Water Act. (*Arkansas v. Oklahoma, supra*, 503 U.S. at p. 101.) The NPDES sets out the conditions under which the federal EPA or a state with an approved water quality control program can issue permits for the discharge of pollutants in wastewater. (33 U.S.C. § 1342(a) & (b).) In California, wastewater discharge requirements established by the regional boards are the equivalent of the NPDES permits required by federal law. (§ 13374.)

With this federal and state statutory framework in mind, we now turn to the facts of this case.

II. Factual Background

This case involves three publicly owned treatment plants that discharge wastewater under NPDES permits issued by the Los Angeles Regional Board.

The City of Los Angeles owns and operates the Donald C. Tillman Water Reclamation Plant (Tillman Plant), which serves the San Fernando Valley. The City of Los Angeles also owns and operates the Los Angeles-Glendale Water Reclamation Plant (Los Angeles-Glendale Plant), which processes wastewater from areas within the City of Los Angeles and the independent cities of Glendale and Burbank. Both the Tillman Plant and the Los Angeles-Glendale Plant discharge wastewater directly into the Los Angeles River, now a concrete-lined flood control channel that runs through the City of Los Angeles, ending at the Pacific Ocean. The State Board and the Los Angeles Regional Board consider the Los Angeles River to be a navigable water of

the United States for purposes of the federal Clean Water Act.

The third plant, the Burbank Water Reclamation Plant (Burbank Plant), is owned and operated by the City of Burbank, serving residents and businesses within that city. The Burbank Plant discharges wastewater into the Burbank Western Wash, which drains into the Los Angeles River.

[*622] All three plants, which together process hundreds of millions of gallons of sewage [*867] each day, are tertiary treatment facilities; that is, the treated wastewater they release is processed sufficiently to be safe not only for use in watering food crops, parks, and playgrounds, but also for human body contact during recreational water activities such as swimming.

In 1998, the Los Angeles Regional Board issued renewed NPDES permits to the three wastewater treatment facilities under a basin plan it had adopted four years earlier for the Los Angeles River and its estuary. That 1994 basin plan contained general narrative criteria pertaining to the existing and potential future beneficial uses and water quality objectives for the river and estuary.⁴ The narrative criteria included municipal and domestic water supply, swimming and other recreational water uses, and fresh water habitat. The plan further provided: "All waters shall be maintained free of toxic substances in concentrations that are toxic to, or that produce detrimental physiological responses in human, plant, animal, or aquatic life." The 1998 permits sought to reduce these narrative criteria to specific numeric requirements setting daily maximum limitations for more than 30 pollutants present in the treated wastewater, measured in milligrams or micrograms per liter of effluent.⁵

4 This opinion uses the terms "narrative criteria" or descriptions, and "numeric criteria" or effluent limitations. Narrative criteria are broad statements of desirable water quality goals in a water quality plan. For example, "no toxic pollutants in toxic amounts" would be a narrative description. This contrasts with numeric criteria, which detail specific pollutant concentrations, such as parts per million of a particular substance.

5 For example, the permits for the Tillman and Los Angeles-Glendale Plants limited the amount of fluoride in the discharged wastewater to 2 milligrams per liter and the amount of mercury to 2.1 micrograms per liter.

The Cities of Los Angeles and Burbank (Cities) filed appeals with the State Board, contending that achievement of the numeric requirements would be too costly when considered in light of the potential benefit to water quality, and that the pollutant restrictions in the

NPDES permits were unnecessary to meet the narrative criteria described in the basin plan. The State Board summarily denied the Cities' appeals.

Thereafter, the Cities filed petitions for writs of administrative mandate in the superior court. They alleged, among other things, that the Los Angeles Regional Board failed to comply with sections 13241 and 13263, part of California's Porter-Cologne Act, because it did not consider the economic burden on the Cities in having to reduce substantially the pollutant content of their discharged wastewater. They also alleged that compliance with the pollutant restrictions set out in the NPDES permits issued by the regional [*623] board would greatly increase their costs of treating the wastewater to be discharged into the Los Angeles River. According to the City of Los Angeles, its compliance costs would exceed \$ 50 million annually, representing more than 40 percent of its entire budget for operating its four wastewater treatment plants and its sewer system; the City of Burbank estimated its added costs at over \$ 9 million annually, a nearly 100 percent increase above its \$ 9.7 million annual budget for wastewater treatment.

[**310] The State Board and the Los Angeles Regional Board responded that sections 13241 and 13263 do not require consideration of costs of compliance when a regional board issues a NPDES permit that restricts the pollutant content of discharged wastewater.

The trial court stayed the contested pollutant restrictions for each of the three wastewater treatment plants. It then ruled that sections 13241 and 13263 of California's Porter-Cologne Act required a regional board to consider costs of compliance not only when it adopts a basin or water quality plan but also when, as here, it issues an NPDES permit setting the allowable pollutant content of a treatment plant's discharged wastewater. The court found no evidence that the Los Angeles Regional Board had considered economic factors at either stage. Accordingly, the trial court granted the Cities' petitions for writs of mandate, and it ordered the Los Angeles Regional Board to vacate the contested restrictions on pollutants in the wastewater discharge permits issued to the three municipal plants here and to conduct hearings [*868] to consider the Cities' costs of compliance before the board's issuance of new permits. The Los Angeles Regional Board and the State Board filed appeals in both the Los Angeles and Burbank cases.⁶

6 Unchallenged on appeal and thus not affected by our decision are the trial court's rulings that (1) the Los Angeles Regional Board failed to show how it derived from the narrative criteria in the governing basin plan the specific numeric pollutant limitations included in the permits; (2)

the administrative record failed to support the specific effluent limitations; (3) the permits improperly imposed daily maximum limits rather than weekly or monthly averages; and (4) the permits improperly specified the manner of compliance.

The Court of Appeal, after consolidating the cases, reversed the trial court. It concluded that sections 13241 and 13263 require a regional board to take into account "economic considerations" when it adopts water quality standards in a basin plan but not when, as here, the regional board sets specific pollutant restrictions in wastewater discharge permits intended to satisfy those standards. We granted the Cities' petition for review.

[*624] III. Discussion

A. Relevant State Statutes

The California statute governing the issuance of *wastewater permits* by a regional board is section 13263, which was enacted in 1969 as part of the Porter-Cologne Act. (See *ante*, at p. 619.) Section 13263 provides in relevant part: "[HN7]The regional board, after any necessary hearing, shall prescribe requirements as to the nature of any proposed discharge [of wastewater]. The requirements shall implement any relevant water quality control plans that have been adopted, and shall take into consideration the beneficial uses to be protected, the water quality objectives reasonably required for that purpose, other waste discharges, the need to prevent nuisance, and the provisions of Section 13241." (§ 13263, subd. (a), italics added.)

Section 13241 states: "[HN8]Each regional board shall establish such water quality objectives in water quality control plans as in its judgment will ensure the reasonable protection of beneficial uses and the prevention of nuisance; however, it is recognized that it may be possible for the quality of water to be changed to some degree without unreasonably affecting beneficial uses. Factors to be considered by a regional board in establishing water quality objectives shall include, but not necessarily be limited to, all of the following:

[***311] "(a) Past, present, and probable future beneficial uses of water.

"(b) Environmental characteristics of the hydrographic unit under consideration, including the quality of water available thereto.

"(c) Water quality conditions that could reasonably be achieved through the coordinated control of all factors which affect water quality in the area.

"(d) *Economic considerations*.

"(e) The need for developing housing within the region.

"(f) The need to develop and use recycled water." (Italics added.)

The Cities here argue that section 13263's express reference to section 13241 requires the Los Angeles Regional Board to consider section 13241's listed factors, notably "[e]conomic considerations," before issuing NPDES permits requiring specific pollutant reductions in discharged effluent or treated wastewater.

[*625] Thus, at issue is language in section 13263 stating that when a regional board "prescribe[s] requirements as to the nature of any proposed discharge" of treated wastewater it must "take into consideration" certain factors including "the provisions of Section 13241." According to the Cities, this statutory language requires that a regional board make an independent evaluation of the section 13241 factors, including "economic considerations," before restricting the pollutant content in an NPDES permit. This was the view expressed in the trial court's ruling. The Court of Appeal rejected that view. It held that a regional board need consider the section 13241 factors only when it adopts a basin or water quality plan, but not when, as in this case, it issues a wastewater discharge [***869] permit that sets specific numeric limitations on the various chemical pollutants in the wastewater to be discharged. As explained below, the Court of Appeal was partly correct.

B. Statutory Construction

(6) [HN9]When construing any statute, our task is to determine the Legislature's intent when it enacted the statute "so that we may adopt the construction that best effectuates the purpose of the law." (*Hassan v. Mercy American River Hospital* (2003) 31 Cal.4th 709, 715 [3 Cal. Rptr. 3d 623, 74 P.3d 726]; see *Esberg v. Union Oil Co.* (2002) 28 Cal.4th 262, 268 [121 Cal. Rptr. 2d 203, 47 P.3d 1069].) In doing this, we look to the statutory language, which ordinarily is "the most reliable indicator of legislative intent." (*Hassan, supra*, at p. 715.)

(7) As mentioned earlier, our Legislature's 1969 enactment of the Porter-Cologne Act, which sought to ensure the high quality of water in this state, predated the 1972 enactment by Congress of the precursor to the federal Clean Water Act. Included in California's original Porter-Cologne Act were sections 13263 and 13241. [HN10]Section 13263 directs regional boards, when issuing wastewater discharge permits, to take into account various factors, including those set out in section 13241. Listed among the section 13241 factors is "[e]conomic considerations." (§ 13241, subd. (d).) The plain language of sections 13263 and 13241 indicates the Legislature's intent in 1969, when these statutes were enacted, that a

regional board consider the cost of compliance when setting effluent limitations in a wastewater discharge permit.

Our construction of sections 13263 and 13241 does not end with their plain statutory language, however. We must also analyze them in the context of the statutory scheme of which they are a part. (*State Farm Mutual Automobile Ins. Co. v. Garamendi* (2004) 32 Cal.4th 1029, 1043 [12 ***312] Cal. Rptr. 3d 343, 88 P.3d 71.) Like sections 13263 and 13241, section 13377 is part of the Porter-Cologne Act. But unlike the former two statutes, section 13377 was [*626] not enacted until 1972, shortly after Congress, through adoption of the Federal Water Pollution Control Act Amendments, established a comprehensive water quality policy for the nation.

(8) [HN11]Section 13377 specifies that wastewater discharge permits issued by California's regional boards must meet the federal standards set by federal law. In effect, section 13377 forbids a regional board's consideration of any economic hardship on the part of the permit holder if doing so would result in the dilution of the requirements set by Congress in the Clean Water Act. That act prohibits the discharge of pollutants into the navigable waters of the United States unless there is compliance with federal law (33 U.S.C. § 1311(a)), and publicly operated wastewater treatment plants such as those before us here must comply with the act's clean water standards, regardless of cost (see *id.*, §§ 1311(a), (b)(1)(B) & (C), 1342(a)(1) & (3)). [HN12](9) Because section 13263 cannot authorize what federal law forbids, it cannot authorize a regional board, when issuing a wastewater discharge permit, to use compliance costs to justify pollutant restrictions that do not comply with federal clean water standards.⁷ Such a construction of section 13263 would not only be inconsistent with federal law, it would also be inconsistent with the Legislature's [*870] declaration in section 13377 that all discharged wastewater must satisfy federal standards.⁸ This was also the conclusion of the Court of Appeal. Moreover, under the federal Constitution's supremacy clause (art. VI), a state law that conflicts with federal law is "without effect." (*Cipollone v. Liggett Group, Inc.* (1992) 505 U.S. 504, 516 [120 L. Ed. 2d 407, 112 S. Ct. 2608]; see *Dowhal v. SmithKline Beecham Consumer Healthcare* (2004) 32 Cal.4th 910, 923 [12 Cal. Rptr. 3d 262, 88 P.3d 1].) To comport with the principles of federal supremacy, California law cannot authorize this [*627] state's regional boards to allow the discharge of pollutants into the navigable waters of the United States in concentrations that would exceed the mandates of federal law.

7 The concurring opinion misconstrues both state and federal clean water law when it de-

scribes the issue here as "whether the Clean Water Act prevents or prohibits the regional water board from considering economic factors to justify pollutant restrictions *that meet the clean water standards in more cost-effective and economically efficient ways.*" (Conc. opn. of Brown, J., *post*, at p. 629, some italics added.) This case has nothing to do with meeting federal standards in more cost effective and economically efficient ways. State law, as we have said, allows a regional board to consider a permit holder's compliance cost to *relax* pollutant concentrations, as measured by numeric standards, for pollutants in a wastewater discharge permit. (§§ 13241 & 13263.) Federal law, by contrast, as stated above in the text, "prohibits the discharge of pollutants into the navigable waters of the United States unless there is compliance with federal law (33 U.S.C. § 1311(a)), and publicly operated wastewater treatment plants such as those before us here must comply with the [federal] act's *clean water standards, regardless of cost* (see *id.*, §§ 1311(a), (b)(1)(B) & (C), 1342(a)(1) & (3))." (Italics added.)

8 As amended in 1978, section 13377 provides for the issuance of waste discharge permits that comply with federal clean water law "together with any more stringent effluent standards or limitations necessary to implement water quality control plans, or for the protection of beneficial uses, or to prevent nuisance." We do not here decide how this provision would affect the cost-consideration requirements of sections 13241 and 13263 when more stringent effluent standards or limitations in a permit are justified for some reason independent of compliance with federal law.

[***313] Thus, in this case, whether the Los Angeles Regional Board should have complied with sections 13263 and 13241 of California's Porter-Cologne Act by taking into account "economic considerations," such as the costs the permit holder will incur to comply with the numeric pollutant restrictions set out in the permits, depends on whether those restrictions meet or exceed the requirements of the federal Clean Water Act. We therefore remand this matter for the trial court to resolve that issue.

C. Other Contentions

The Cities argue that requiring a regional board at the wastewater discharge permit stage to consider the permit holder's cost of complying with the board's restrictions on pollutant content in the water is consistent with federal law. In support, the Cities point to certain

provisions of the federal Clean Water Act. They cite section 1251(a)(2) of title 33 United States Code, which sets, as a national goal "*wherever attainable*," an interim goal for water quality that protects fish and wildlife, and section 1313(c)(2)(A) of the same title, which requires consideration, among other things, of waters' "*use and value for navigation*" when revising or adopting a "water quality standard." (Italics added.) These two federal statutes, however, pertain not to permits for wastewater discharge, at issue here, but to establishing water quality standards, not at issue here. Nothing in the federal Clean Water Act suggests that a state is free to disregard or to weaken the federal requirements for clean water when an NPDES permit holder alleges that compliance with those requirements will be too costly.

(10) At oral argument, counsel for amicus curiae National Resources Defense Council, which argued on behalf of California's State Board and regional water boards, asserted that the federal Clean Water Act incorporates state water policy into federal law, and that therefore a regional board's consideration of economic factors to justify greater pollutant concentration in discharged wastewater would conflict with the federal act even if the specified pollutant restrictions were not less stringent than those required under federal law. We are not persuaded. [HN13]The federal Clean Water Act reserves to the states significant aspects of water quality policy (33 U.S.C. § 1251(b)), and it specifically grants the states authority to "enforce any effluent limitation" that is not "*less stringent*" than the federal standard (33 U.S.C. § 1370, italics added). It does not prescribe or restrict the factors that a state may consider when exercising this reserved authority, and thus it does not prohibit [*628] a state--when imposing effluent limitations that are *more stringent* than required by federal law--from taking into account the economic effects of doing so.

Also at oral argument, counsel for the Cities asserted that if the three municipal wastewater treatment facilities ceased releasing their treated wastewater into the concrete channel that makes up the Los Angeles River, it would (other than during the rainy season) contain no water at all, and thus would not be a "navigable water" of the [*871] United States subject to the Clean Water Act. (See *Solid Waste Agency v. United States Army Corps of Engineers* (2001) 531 U.S. 159, 172 [148 L. Ed. 2d 576, 121 S. Ct. 675] ["The term 'navigable' has at least the import of showing us what Congress had in mind as its authority for enacting the CWA: its traditional jurisdiction over waters that were or had been navigable in fact or which could reasonably be so made."].) It is unclear when the Cities first raised this issue. The Court of Appeal did not discuss it in its opinion, and the Cities did not seek rehearing on this ground. (See Cal. Rules of

Court. rule [***314] 28(c)(2).) Concluding that the issue is outside our grant of review, we do not address it.

Conclusion

Through the federal Clean Water Act, Congress has regulated the release of pollutants into our national waterways. The states are free to manage their own water quality programs so long as they do not compromise the federal clean water standards. When enacted in 1972, the goal of the Federal Water Pollution Control Act Amendments was to *eliminate* by the year 1985 the discharge of pollutants into the nation's navigable waters. In furtherance of that goal, the Los Angeles Regional Board indicated in its 1994 basin plan on water quality the intent, insofar as possible, to remove from the water in the Los Angeles River toxic substances in amounts harmful to humans, plants, and aquatic life. What is not clear from the record before us is whether, in limiting the chemical pollutant content of wastewater to be discharged by the Tillman, Los Angeles-Glendale, and Burbank wastewater treatment facilities, the Los Angeles Regional Board acted only to implement requirements of the federal Clean Water Act or instead imposed pollutant limitations that exceeded the federal requirements. This is an issue of fact to be resolved by the trial court.

Disposition

We affirm the judgment of the Court of Appeal reinstating the wastewater discharge permits to the extent that the specified numeric limitations on chemical pollutants are necessary to satisfy federal Clean Water Act requirements for treated wastewater. The Court of Appeal is directed to remand this [*629] matter to the trial court to decide whether any numeric limitations, as described in the permits, are "more stringent" than required under federal law and thus should have been subject to "economic considerations" by the Los Angeles Regional Board before inclusion in the permits.

George, C. J., Baxter, J., Werdegar, J., Chin, J., and Moreno, J., concurred.

CONCUR BY: BROWN

CONCUR

BROWN, J., Concurring.--I write separately to express my frustration with the apparent inability of the government officials involved here to answer a simple question: How do the federal clean water standards (which, as near as I can determine, are the state standards) prevent the state from considering economic factors? The majority concludes that because "the supremacy clause of the United States Constitution requires state law to yield to federal law, a regional board, when is-

suing a wastewater discharge permit, may not consider economic factors to justify imposing pollutant restrictions that are *less stringent* than the applicable federal standards require." (Maj. opn., *ante*, at p. 618.) That seems a pretty self-evident proposition, but not a useful one. The real question, in my view, is whether the Clean Water Act prevents or prohibits the regional water board from considering economic factors to justify pollutant restrictions that *meet* the clean water standards in more cost-effective and economically efficient ways. I can see no reason why a federal law--which purports to be an example of cooperative federalism--would decree such a result. I do not think the majority's reasoning is at fault here. Rather, the agencies involved seemed to have worked hard to make this simple question impenetrably obscure.

A brief review of the statutory framework at issue is necessary to understand my concerns. [***315]

[**872] I. Federal Law

"In 1972, Congress enacted the Federal Water Pollution Control Act (33 U.S.C. § 1251 *et seq.*), commonly known as the Clean Water Act (CWA) [Citation.] ... [¶] Generally, the CWA 'prohibits the discharge of any pollutant except in compliance with one of several statutory exceptions. [Citation.]' ... The most important of those exceptions is pollution discharge under a valid NPDES [National Pollution Discharge Elimination System] permit, which can be issued either by the Environmental Protection Agency (EPA), or by an EPA-approved state permit program such as California's. [Citations.] NPDES permits are valid for five years. [Citation.] [¶] Under the CWA's NPDES permit system, the states are required to develop *water quality standards*. [Citations.] A water quality standard 'establish[es] the desired condition of a waterway.' [Citation.] A water quality standard for any [*630] given waterway, or 'water body,' has two components: (1) the designated beneficial uses of the water body and (2) the *water quality criteria* sufficient to protect those uses. [Citations.] [¶] Water quality criteria can be either *narrative* or *numeric*. [Citation.]" (*Communities for a Better Environment v. State Water Resources Control Bd.* (2003) 109 Cal.App.4th 1089, 1092-1093 [1 Cal. Rptr. 3d 76].)

With respect to satisfying water quality standards, "a polluter must comply with *effluent limitations*. The CWA defines an effluent limitation as 'any restriction established by a State or the [EPA] Administrator on quantities, rates, and concentrations of chemical, physical, biological, and other constituents which are discharged from point sources into navigable waters, the waters of the contiguous zone, or the ocean, including schedules of compliance.' [Citation.] 'Effluent limitations are a means of *achieving* water quality standards.' [Citation.] [¶]

NPDES permits establish effluent limitations for the polluter. [Citations.] CWA's NPDES permit system provides for a two-step process for the establishing of effluent limitations. First, the polluter must comply with *technology-based effluent limitations*, which are limitations based on the best available or practical technology for the reduction of water pollution. [Citations.] [¶] Second, the polluter must also comply with more stringent *water quality-based effluent limitations* (WQBEL's) where applicable. In the CWA, Congress 'supplemented the "technology-based" effluent limitations with "water quality-based" limitations "so that numerous point sources, despite individual compliance with effluent limitations, may be further regulated to prevent water quality from falling below acceptable levels." ' [Citation.] [¶] The CWA makes WQBEL's applicable to a given polluter whenever WQBEL's are 'necessary to meet water quality standards, treatment standards, or schedules of compliance, established pursuant to any State law or regulations' [Citations.] Generally, NPDES permits must conform to state water quality laws insofar as the state laws impose more stringent pollution controls than the CWA. [Citations.] Simply put, WQBEL's implement water quality standards." (*Communities for a Better Environment v. State Water Resources Control Bd.*, *supra*, 109 Cal.App.4th at pp. 1093-1094, fns. omitted.)

This case involves water quality-based effluent limitations. As set forth above, "[u]nder the CWA, states have the primary role in promulgating water quality standards." (*Piney Run Preservation Ass'n v. Commrs. of Carroll Co.* (4th Cir. 2001) 268 F.3d 255, 265, fn. 9.) "Under the CWA, the water quality standards referred to in section 301 [see 33 U.S.C. § 1311] are primarily the states' handiwork." [***316] (*American Paper Institute, Inc. v. U.S. Envtl. Protection Agency* (D.C. Cir. 1993) 302 U.S. App. D.C. 80 [996 F.2d 346, 349] (*American Paper*)). In fact, upon the 1972 passage of the CWA, "[s]tate water quality standards in effect at the time ... were deemed to be the initial water quality benchmarks for CWA purposes The states were to revisit and, if [*631] necessary, revise those initial standards at least once every three years." (*American Paper*, at p. 349.) Therefore, "once a water quality standard has been promulgated, section 301 of the CWA requires all NPDES permits for point sources to incorporate discharge limitations necessary to satisfy that standard." (*American Paper*, at p. 350.) Accordingly, it appears that in most instances, [**873] state water quality standards are identical to the federal requirements for NPDES permits.

II. State Law

In California, pursuant to the Porter-Cologne Water Quality Control Act (Wat. Code, § 13000 et seq.; Stats. 1969, ch. 482, § 18, p. 1051; hereafter Porter-Cologne Act), the regional water quality control boards establish water quality standards--and therefore federal requirements for NPDES permits--through the adoption of water quality control plans (basin plans). The basin plans establish water quality objectives using enumerated factors--including economic factors--set forth in Water Code section 13241.

In addition, as one court observed: "The Porter-Cologne Act ... established nine regional boards to prepare water quality plans (known as basin plans) and issue permits governing the discharge of waste. (Wat. Code, §§ 13100, 13140, 13200, 13201, 13240, 13241, 13243.) The Porter-Cologne Act identified these permits as 'waste discharge requirements,' and provided that the waste discharge requirements must mandate compliance with the applicable regional water quality control plan. (Wat. Code, §§ 13263, subd. (a), 13377, 13374.) [¶] Shortly after Congress enacted the Clean Water Act in 1972, the California Legislature added Chapter 5.5 to the Porter-Cologne Act, for the purpose of adopting the necessary federal requirements to ensure it would obtain EPA approval to issue NPDES permits. (Wat. Code, § 13370, subd. (c).) As part of these amendments, the Legislature provided that the state and regional water boards 'shall, as required or authorized by the [Clean Water Act], issue waste discharge requirements ... which apply and ensure compliance with all applicable provisions [of the Clean Water Act], together with any more stringent effluent standards or limitations necessary to implement water quality control plans, or for the protection of beneficial uses, or to prevent nuisance.' (Wat. Code, § 13377.) Water Code section 13374 provides that '[t]he term "waste discharge requirements" as referred to in this division is the equivalent of the term "permits" as used in the [Clean Water Act].' [¶] California subsequently obtained the required approval to issue NPDES permits. [Citation.] Thus, the waste discharge requirements issued by the regional water boards ordinarily also serve as NPDES permits under federal law. (Wat. Code, § 13374.)" (Building Industry Assn. of San Diego County v. State Water Resources Control Bd. (2004) 124 Cal.App.4th 866, 875 [22 Cal. Rptr. 3d 128].)

[*632] Applying this federal-state statutory scheme, it appears that throughout this entire process, the Cities of Burbank and Los Angeles (Cities) were unable to have economic factors considered because the Los Angeles Regional Water Quality Control Board (Board)--the body responsible to enforce the statutory framework--failed to comply with its statutory mandate.

[***317] For example, as the trial court found, the Board did not consider costs of compliance when it in-

itially established its basin plan, and hence the water quality standards. The Board thus failed to abide by the statutory requirement set forth in Water Code section 13241 in establishing its basin plan. Moreover, the Cities claim that the initial narrative standards were so vague as to make a serious economic analysis impracticable. Because the Board does not allow the Cities to raise their economic factors in the permit approval stage, they are effectively precluded from doing so. As a result, the Board appears to be playing a game of "gotcha" by allowing the Cities to raise economic considerations when it is not practical, but precluding them when they have the ability to do so.

Moreover, the Board acknowledges that it has neglected other statutory provisions that might have provided an additional opportunity to air these concerns. As set forth above, pursuant to the CWA, "[t]he states were to revisit and, if necessary, revise those initial standards at least once every three years--a process commonly known as triennial review. [Citation.] Triennial reviews consist of public hearings in which current water quality standards are examined to assure that they 'protect the public health or welfare, enhance the quality of water and serve the purposes' of the Act. [Citation.] Additionally, the CWA directs [**874] states to consider a variety of competing policy concerns during these reviews, including a waterway's 'use and value for public water supplies, propagation of fish and wildlife, recreational purposes, and agricultural, industrial, and other purposes.'" (American Paper, supra, 996 F.2d at p. 349.)

According to the Cities, "[t]he last time that the narrative water quality objective for toxicity contained in the Basin Plan was reviewed and modified was 1994." The Board does not deny this claim. Accordingly, the Board has failed its duty to allow public discussion--including economic considerations--at the required intervals when making its determination of proper water quality standards.

What is unclear is why this process should be viewed as a contest. State and local agencies are presumably on the same side. The costs will be paid by taxpayers and the Board should have as much interest as any other agency in fiscally responsible environmental solutions.

[*633] Our decision today arguably allows the Board to continue to shirk its statutory duties. The majority holds that when read together, Water Code sections 13241, 13263, and 13377 do not allow the Board to consider economic factors when issuing NPDES permits to satisfy federal CWA requirements. (Maj. opn., ante, at pp. 625-627.) The majority then bifurcates the issue when it orders the Court of Appeal "to remand this mat-

ter to the trial court to decide whether any numeric limitations, as described in the permits, are 'more stringent' than required under federal law and thus should have been subject to 'economic considerations' by the Los Angeles Regional Board before inclusion in the permits." (*Id.* at pp. 628-629.)

The majority overlooks the feedback loop established by the CWA, under which federal standards are linked to state-established water quality standards, including narrative water quality criteria. (See 33 U.S.C. § 1311 (b)(1)(C); 40 C.F.R. § 122.44(d)(1) (2004).) Under the CWA, NPDES permit requirements include the state narrative criteria, which are incorporated into the Board's basin plan under the description "no toxins in toxic amounts." As far as I can determine, NPDES permits [***318] designed to achieve this narrative criteria (as well as designated beneficial uses) will usually implement the state's basin plan, while satisfying federal requirements as well.

If federal water quality standards are typically identical to state standards, it will be a rare instance that a state exceeds its own requirements and economic factors are taken into consideration. ¹ In light of the Board's initial failure to consider costs of compliance and its repeated failure to conduct required triennial reviews, the result here is an unseemly bureaucratic bait-and-switch that we should not endorse. The likely outcome of the majority's decision is that the Cities will be economically burdened to meet standards imposed on them in a highly questionable manner. ² In these times of tight fiscal budgets, it is difficult to imagine imposing additional financial burdens on municipalities without at least allowing them to present alternative views.

1 (But see *In the Matter of the Petition of City and County of San Francisco, San Francisco Baykeeper et al.* (Order No. WQ 95-4, Sept. 21, 1995) 1995 WL 576920.)

2 Indeed, given the fact that "water quality standards" in this case are composed of broadly worded components (i.e., a narrative criteria and "designated beneficial uses of the water body"), the Board possessed a high degree of discretion in setting NPDES permit requirements. Based on the Board's past performance, a proper exercise of this discretion is uncertain.

Based on the facts of this case, our opinion today appears to largely retain the status quo for the Board. If the Board can actually demonstrate that only the precise limitations at issue here, implemented in only one way, will achieve the desired water standards, perhaps its obduracy is justified. That case has yet to be made.

[*634] Accordingly, I cannot conclude that the majority's decision is wrong. The analysis [**875] may provide a reasonable accommodation of conflicting provisions. However, since the Board's actions "make me wanna holler and throw up both my hands," ³ I write separately to set forth my concerns and concur in the judgment--*dubitante*. ⁴

3 Marvin Gaye (1971) "Inner City Blues."

4 I am indebted to Judge Berzon for this useful term. (See *Credit Suisse First Boston Corp. v. Grunwald* (9th Cir. 2005) 400 F.3d 1119 [2005 WL 466202] (conc. opn. of Berzon, J).)

The petitions of all appellants and respondent for a rehearing were denied June 29, 2005. Brown, J., did not participate therein.

**COUNTY OF FRESNO, Plaintiff and Appellant, v. THE STATE OF CALIFORNIA
et al., Defendants and Respondents.**

No. S015637.

Supreme Court of California

**53 Cal. 3d 482; 808 P.2d 235; 280 Cal. Rptr. 92; 1991 Cal. LEXIS 1363; 91 Cal. Daily
Op. Service 2870; 91 Daily Journal DAR 4617**

April 22, 1991.

PRIOR HISTORY: Superior Court of Fresno
County, No. 379518-4, Gary S. Austin, Judge.

CASE SUMMARY:

PROCEDURAL POSTURE: Appellant county sought review of a judgment from the Court of Appeal (California), which affirmed the trial court's dismissal of appellant's petition for writ of mandate that sought a declaration that the state reimbursement statute, Cal. Gov't Code § 17556(d), was facially unconstitutional under Cal. Const. art. XIII B, § 6.

OVERVIEW: Appellant county filed a petition for writ of mandate and a complaint for declaratory relief against respondents, state, commission, and others, that sought to vacate respondent commission's decision, and sought a declaration that Cal. Gov't Code § 17556(d) was unconstitutional under Cal. Const. art. XIII B, § 6. The trial court denied appellant's petition for writ of mandate and complaint for declaratory relief. The appellate court affirmed. The court granted review for determination on whether § 17556(d) was facially constitutional under Cal. Const. art. XIII B, § 6. The court rejected appellant's argument that the state's enactment of § 17556(d) created a new exception to the reimbursement requirement of Cal. Const. art. XIII B, § 6. The court held that the § 17556(d) was facially constitutional under Cal. Const. art. XIII B, § 6. The court affirmed the appellate court's judgment.

OUTCOME: The court affirmed the appellate court's judgment, and affirmed the dismissal of appellant county's petition for writ of mandate because the state's reimbursement statute was facially constitutional under the California constitution.

CORE TERMS: local governments, mandated, user fees, reimbursement, initiative, level of service, appropriations, facially, taxation, voter, state mandates, new program, levy, constitutional provision, tax revenues, expenditure, recoverable, excluding, statewide, ballot, subvention of funds, self-financing, implementing, subvention, reimburse, spending, duck, local agency, hazardous materials, sufficient to pay

LexisNexis(R) Headnotes

Constitutional Law > Congressional Duties & Powers > Spending & Taxation
[HN1] See Cal. Const. art. XIII B, § 6.

Constitutional Law > Congressional Duties & Powers > Spending & Taxation
Governments > Local Governments > Administrative Boards
Governments > Local Governments > Claims By & Against

[HN2] Cal. Gov't Code §§ 17500-17630 is enacted to implement Cal. Const. art. XIII B, § 6. Cal. Gov't Code § 17500. A quasi-judicial body is created called the

Commission on State Mandates to hear and decide upon any claim by a local government that the local government is entitled to be reimbursed by the state for costs as required by Cal. Const. art. XIII B, § 6. Cal. Gov't. Code § 17551(a).

Constitutional Law > Congressional Duties & Powers > Spending & Taxation

[HN3] Costs is defined as costs mandated by the state for any increased costs that the local government is required to incur as a result of any statute, or any executive order implementing any statute, which mandates a new program or higher level of service of any existing program within the meaning of Cal. Const. art. XIII B, § 6. Cal. Gov't. Code § 17514.

Constitutional Law > Congressional Duties & Powers > Spending & Taxation

Governments > Local Governments > Duties & Powers

[HN4] Cal. Gov't Code § 17556(d) declares that the commission shall not find costs mandated by the state if, after a hearing, the commission finds that the local government has the authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service.

Constitutional Law > Congressional Duties & Powers > Spending & Taxation

[HN5] Cal. Const. arts. XIII A, XIII B work in tandem, together restricting the California government's power both to levy and to spend taxes for public purposes.

Constitutional Law > Congressional Duties & Powers > Spending & Taxation

Tax Law > State & Local Taxes > General Overview

[HN6] Cal. Const. art. XIII B intention is to apply to taxation specifically that provides permanent protection for taxpayers from excessive taxation, and a reasonable way to provide discipline in tax spending at state and local levels.

Constitutional Law > Congressional Duties & Powers > Spending & Taxation

[HN7] The relevant appropriations subject to limitation is defined as any authorization to expend during a fiscal year the proceeds of taxes. Cal. Const. art. XIII B, § 8(b). Proceeds of taxes is defined as including all tax revenues and the proceeds to government from regulatory licenses, user charges, and user fees to the extent that such proceeds exceed the costs reasonably borne by govern-

ment in providing the regulation, product, or service. Cal. Const. art. XIII B, § 8(c). Excess proceeds from licenses, charges, and fees are taxes.

Constitutional Law > Congressional Duties & Powers > Spending & Taxation

Governments > Local Governments > Finance

[HN8] Cal. Const. art. XIII B, § 6 is included in recognition that Cal. Const. art. XIII A severely restricts the taxing powers of local governments. The provision was intended to preclude the state from shifting financial responsibility for carrying out governmental functions onto local entities that are ill equipped to handle the task.

Constitutional Law > Congressional Duties & Powers > Spending & Taxation

Governments > Local Governments > Duties & Powers

[HN9] Cal. Gov't Code § 17556(d) provides that the commission shall not find costs mandated by the state if, after a hearing, the commission finds that the local government has the authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service.

SUMMARY:

CALIFORNIA OFFICIAL REPORTS SUMMARY

A county filed a test claim with the Commission on State Mandates seeking, under Cal. Const., art. XIII B, § 6 (state must provide subvention of funds to reimburse local governments for costs of state-mandated programs or increased levels of service), reimbursement from the state for costs incurred in implementing the Hazardous Materials Release Response Plans and Inventory Act (Health & Saf. Code, § 25500 et seq.). The commission found the county had the authority to charge fees to pay for the program, and the program was thus not a reimbursable state-mandated program under Gov. Code, § 17556, subd. (d), which provides that costs are not state-mandated if the agency has the authority to levy a charge or fee sufficient to pay for the program. The county filed a petition for writ of mandate and a complaint for declaratory relief against the state. The trial court denied relief. (Superior Court of Fresno County, No. 379518-4, Gary S. Austin, Judge.) The Court of Appeal, Fifth Dist., No. F011925, affirmed.

The Supreme Court affirmed the decision of the Court of Appeal. The court held, as to the single issue on review, that Gov. Code, § 17556, subd. (d), was facially constitutional under Cal. Const., art. XIII B, § 6. It held art. XIII B was not intended to reach beyond taxation, and § 6 was included in art. XIII B in recognition that

Cal. Const., art. XIII A, severely restricted the taxing powers of local governments. It held that art. XIII B, § 6 was designed to protect the tax revenues of local governments from state mandates that would require an expenditure of such revenues and, when read in textual and historical context, requires subvention only when the costs in question can be recovered solely from tax revenues. Accordingly, the court held that Gov. Code, § 17556, subd. (d), effectively construed the term "cost" in the constitutional provision as excluding expenses that are recoverable from sources other than taxes, and that such a construction is altogether sound. (Opinion by Mosk, J., with Lucas, C. J., Broussard, Panelli, Kennard, JJ., and Best (Hollis G.), J., * concurring. Separate concurring opinion by Arabian, J.)

* Presiding Justice, Court of Appeal, Fifth Appellate District, assigned by the Chairperson of the Judicial Council.

HEADNOTES

CALIFORNIA OFFICIAL REPORTS HEADNOTES

Classified to California Digest of Official Reports, 3d Series

(1) State of California § 11--Reimbursement to Local Governments for State-mandated Costs--Costs for Which Fees May Be Levied--Validity of Exclusion.

--In a proceeding by a county seeking reversal of a decision by the Commission on State Mandates that the state was not required by Cal. Const., art. XIII B, § 6, to reimburse the county for costs incurred in implementing the Hazardous Materials Release Response Plans and Inventory Act (Health & Saf. Code, § 25500 et seq.), the trial court properly found that Gov. Code, § 17556, subd. (d) (costs are not state-mandated if agency has authority to levy charge or fee sufficient to pay for program), was facially constitutional. Cal. Const., art. XIII B, was intended to apply to taxation and was not intended to reach beyond taxation, as is apparent from its language and confirmed by its history. It was designed to protect the tax revenues of local governments from state mandates that would require expenditure of such revenues; read in its textual and historical contexts, it requires subvention only when the costs in question can be recovered solely from tax revenues. Gov. Code, § 17556, subd. (d), effectively construes the term "costs" in the constitutional provision as excluding expenses that are recoverable from sources other than taxes, and that construction is altogether sound. Accordingly, Gov. Code, § 17556, subd. (d), is facially constitutional under Cal. Const., art. XIII B, § 6.

OPINION BY: MOSK

OPINION

[*484] [**236] [***93] MOSK, J.

We granted review in this proceeding to decide whether section 17556, subdivision (d), of the Government Code (section 17556(d)) is facially valid under article XIII B, section 6, of the California Constitution (article XIII B, section 6).

[HN1]Article XIII B, section 6, provides: "Whenever the Legislature or any state agency mandates a new program or higher level of service on any local government, the state shall provide a subvention of funds to reimburse such local government for the costs of such program or increased level of service, except that the Legislature may, but need not, provide such subvention of funds for the following mandates: [P] (a) Legislative mandates requested by the local agency affected; [P] (b) Legislation defining a new crime or changing an existing definition of a crime; or [P] (c) Legislative mandates enacted prior to January 1, 1975, or executive orders or regulations initially implementing legislation enacted prior to January 1, 1975."

The Legislature enacted [HN2] Government Code sections 17500 through 17630 to implement article XIII B, section 6. (Gov. Code, § 17500.) It created a "quasi-judicial body" (*ibid.*) called the Commission on State Mandates (commission) (*id.*, § 17525) to "hear and decide upon [any] claim" by a local government that the

local government "is entitled to be reimbursed by the state for costs" as required by article XIII B, section 6. (Gov. Code, § 17551, subd. (a).) It defined [HN3]"costs" as "costs mandated by the state"--"any increased costs" that the local government "is required to incur . . . as a result of any statute . . . , or any executive order implementing any statute . . . , which mandates a new program or higher level of service of any existing program" within the meaning of article XIII B, section 6. (Gov. Code, § 17514.) Finally, [HN4]in section 17556(d) it declared that "The commission shall not find costs mandated by the state . . . if, after a hearing, the commission finds that" the local government "has the authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service."

For the reasons discussed below, we conclude that section 17556(d) is facially constitutional under article XIII B, section 6.

[*485] I. FACTS AND PROCEDURAL HISTORY

The present proceeding arose after the Legislature enacted the Hazardous Materials Release Response Plans and Inventory Act (Act). (Health & Saf. Code, § 25500 et seq.) The Act establishes minimum statewide standards for business and area plans relating to the handling and release or threatened release of hazardous materials. (*Id.*, § 25500.) It requires local governments to implement its provisions. (*Id.*, § 25502.) To cover the costs they may incur, it authorizes them to collect fees from those who handle hazardous materials. (*Id.*, § 25513.)

The County of Fresno (County) implemented the Act but chose not to impose the authorized fees. Instead, it filed a so-called "test" or initial claim with the commission (Gov. Code, § 17521) seeking reimbursement from the State of California (State) under article XIII B, section 6. After a hearing, the commission rejected the claim. In its statement of decision, the commission made the following findings, among others: the Act constituted a "new program"; the County did indeed incur increased [**237] [***94] costs; but because it had authority under the Act to levy fees sufficient to cover such costs, section 17556(d) prohibited a finding of reimbursable costs.

The County then filed a petition for writ of mandate and complaint for declaratory relief against the State, the commission, and others, seeking vacation of the commission's decision and a declaration that section 17556(d) is unconstitutional under article XIII B, section 6. While the matter was pending, the commission amended its statement of decision to include another basis for denial of the test claim: the Act did not constitute a "program" under the rationale of *County of Los Angeles v. State of California* (1987) 43 Cal.3d 46 [233

Cal.Rptr. 38, 729 P.2d 202] (*County of Los Angeles*), because it did not impose unique requirements on local governments.

After a hearing, the trial court denied the petition and effectively dismissed the complaint. It determined, inter alia, that mandate under Code of Civil Procedure section 1094.5 was the County's sole remedy, and that the commission was the sole properly named respondent. It also determined that section 17556(d) is constitutional under article XIII B, section 6. It did not address the question whether the Act constituted a "program" under *County of Los Angeles*. Judgment was entered accordingly.

The Court of Appeal affirmed. It held the Act did indeed constitute a "program" under *County of Los Angeles, supra*, 43 Cal.3d 46. It also held section 17556(d) is constitutional under article XIII B, section 6.

[*486] (1) We granted review to decide a single issue, i.e., whether section 17556(d) is facially constitutional under article XIII B, section 6.

II. DISCUSSION

We begin our analysis with the California Constitution. At the June 6, 1978, Primary Election, article XIII A was added to the Constitution through the adoption of Proposition 13, an initiative measure aimed at controlling ad valorem property taxes and the imposition of new "special taxes." (*Amador Valley Joint Union High Sch. Dist. v. State Bd. of Equalization* (1978) 22 Cal.3d 208, 231-232 [149 Cal.Rptr. 239, 583 P.2d 1281].) The constitutional provision imposes a limit on the power of state and local governments to adopt and levy taxes. (*City of Sacramento v. State of California* (1990) 50 Cal.3d 51, 59, fn. 1 [266 Cal.Rptr. 139, 785 P.2d 522] (*City of Sacramento*).)

At the November 6, 1979, Special Statewide Election, article XIII B was added to the Constitution through the adoption of Proposition 4, another initiative measure. That measure places limitations on the ability of both state and local governments to appropriate funds for expenditures.

[HN5]"Articles XIII A and XIII B work in tandem, together restricting California governments' power both to levy and to spend [taxes] for public purposes." (*City of Sacramento, supra*, 50 Cal.3d at p. 59, fn. 1.)

[HN6]Article XIII B of the Constitution was intended to apply to taxation specifically, to provide "permanent protection for taxpayers from excessive taxation" and "a reasonable way to provide discipline in tax spending at state and local levels." (See *County of Placer v. Corin* (1980) 113 Cal.App.3d 443, 446 [170 Cal.Rptr. 232], quoting and following *Ballot Pamp.*,

Proposed Stats. and Amends. to Cal. Const. with arguments to voters, Special Statewide Elec. (Nov. 6, 1979), argument in favor of Prop. 4, p. 18.) To this end, it establishes an "appropriations limit" for both state and local governments (Cal. Const., art. XIII B, § 8, subd. (h)) and allows no "appropriations subject to limitation" in excess thereof (*id.*, § 2). (See *County of Placer v. Corin*, *supra*, 113 Cal.App.3d at p. 446.) It defines [HN7]the relevant "appropriations subject to limitation" as "any authorization to expend during a fiscal year the proceeds of taxes . . ." (Cal. Const., art. XIII B, § 8, subd. (b).) It defines "proceeds of taxes" as including "all tax revenues and the proceeds to . . . government from," inter alia, "regulatory licenses, user charges, and user fees to the extent that such proceeds exceed the costs reasonably borne by [government] in providing [**238] [***95] the regulation, product, or service . . ." (Cal. Const., art. XIII B, § 8, subd. (c), italics added.) Such "excess" proceeds from "licenses," "charges," and "fees" "are but [**487] taxes" for purposes here. (*County of Placer v. Corin*, *supra*, 113 Cal.App.3d at p. 451, italics in original.)

Article XIII B of the Constitution, however, was not intended to reach beyond taxation. That fact is apparent from the language of the measure. It is confirmed by its history. In his analysis, the Legislative Analyst declared that Proposition 4 "would not restrict the growth in appropriations financed from other [i.e., nontax] sources of revenue, including federal funds, bond funds, traffic fines, user fees based on reasonable costs, and income from gifts." (Ballot Pamp., Proposed Stats. and Amends. to Cal. Const. with arguments to voters, Special Statewide Elec. (Nov. 6, 1979), analysis by Legislative Analyst, p. 16.)

[HN8]Section 6 was included in article XIII B in recognition that article XIII A of the Constitution severely restricted the taxing powers of local governments. (See *County of Los Angeles*, *supra*, 43 Cal.3d at p. 61.) The provision was intended to preclude the state from shifting financial responsibility for carrying out governmental functions onto local entities that were ill equipped to handle the task. (*Ibid.*; see *Lucia Mar Unified School Dist. v. Honig* (1988) 44 Cal.3d 830, 836, fn. 6 [244 Cal.Rptr. 677, 750 P.2d 318].) Specifically, it was designed to protect the tax revenues of local governments from state mandates that would require expenditure of such revenues. Thus, although its language broadly declares that the "state shall provide a subvention of funds to reimburse . . . local government for the costs [of a state-mandated new] program or higher level of service," read in its textual and historical context section 6 of article XIII B requires subvention only when the costs in question can be recovered *solely from tax revenues*.

In view of the foregoing analysis, the question of the facial constitutionality of section 17556(d) under article XIII B, section 6, can be readily resolved. As noted, [HN9]the statute provides that "The commission shall not find costs mandated by the state . . . if, after a hearing, the commission finds that" the local government "has the authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service." Considered within its context, the section effectively construes the term "costs" in the constitutional provision as excluding expenses that are recoverable from sources other than taxes. Such a construction is altogether sound. As the discussion makes clear, the Constitution requires reimbursement only for those expenses that are recoverable solely from taxes. It follows that section 17556(d) is facially constitutional under article XIII B, section 6.

The County argues to the contrary. It maintains that section 17556(d) in essence creates a new exception to the reimbursement requirement of article XIII B, section 6, for self-financing programs and that the Legislature cannot create exceptions to the reimbursement requirement beyond those enumerated in the Constitution.

We do not agree that in enacting section 17556(d) the Legislature created a new exception to the reimbursement requirement of article [**488] XIII B, section 6. As explained, the Legislature effectively and properly construed the term "costs" as excluding expenses that are recoverable from sources other than taxes. In a word, such expenses are outside of the scope of the requirement. Therefore, they need not be explicitly excepted from its reach.

The County nevertheless argues that no matter how characterized, section 17556(d) is indeed inconsistent with article XIII B, section 6. Its contention is in substance as follows: the source of section 17556(d) is former Revenue and Taxation Code section 2253.2; at the time of Proposition 4, subdivision (b)(4) of that former section stated that the State Board of Control shall not allow a claim for reimbursement of costs mandated by the state if the legislation contains a self-financing authority; the [**239] [***96] drafters of Proposition 4 incorporated some of the provisions of former Revenue and Taxation Code section 2253.2 into article XIII B, section 6, but did not incorporate former subdivision (b)(4); their failure to do so reveals an intent to treat as immaterial the presence or absence of a "self-financing" provision; and such an intent is confirmed by the "legislative history" set out at page 55 in Spirit of 13, Inc., Summary of Proposed Implementing Legislation and Drafters' Intent: "the state may not arbitrarily declare that it is not going to comply with Section 6 . . . if the state provides new compensating revenues."

In our view, the County's argument is unpersuasive. Even if we assume arguendo that the intent of those who drafted Proposition 4 is as claimed, what is crucial here is the intent of those who voted for the measure. (See *County of Los Angeles*, *supra*, 43 Cal.3d 46, 56.) There is no substantial evidence that the voters sought what the County assumes the drafters desired. Moreover, the "legislative history" cited above cannot be considered relevant; it was written and circulated after the passage of Proposition 4. As such, it could not have affected the voters in any way.

To avoid this result, the County advances one final argument: "Based on the authority of [section 17556(d)], the Commission on State Mandates refuses to hear mandates on the merits once it finds that the authority to charge fees is given by the Legislature. This position is taken whether or not fees can actually or legally be charged to recover the entire costs of the program."

[*489] The County appears to be making one or both of the following arguments: (1) the commission applies section 17556(d) in an unconstitutional manner; or (2) the Act's self-financing authority is somehow lacking. Such contentions, however, miss the designated mark. They raise questions bearing on the constitutionality of section 17556(d) as applied and the legal efficacy of the authority conferred by the Act. The sole issue on review, however, is the facial constitutionality of section 17556(d).

III. CONCLUSION

For the reasons set forth above, we conclude that section 17556(d) is facially constitutional under article XIII B, section 6.

The judgment of the Court of Appeal is affirmed.

Lucas, C. J., Broussard, J., Panelli, J., Kennard, J., and Best (Hollis G.), J., * concurred.

CONCUR BY: ARABIAN

CONCUR

ARABIAN, J., Concurring.

I concur in the determination that Government Code section 17556, subdivision (d) (section 17556(d)), does not offend article XIII B, section 6, of the California Constitution (article XIII B, section 6). In my estimation, however, the constitutional measure of the issue before

us warrants fuller examination than the majority allow. A literalistic analysis begs the question of whether the Legislature had the authority to act statutorily upon a subject matter the electorate has spoken to constitutionally through the initiative process.

1 Unless otherwise indicated, all further statutory references are to the Government Code.

Article XIII B, section 6, unequivocally commands that "the state shall provide a subvention of funds to reimburse . . . local government for the costs of [a new] program or increased level of service" except as specified therein. Article XIII B does not define this reference to "costs." (See Cal. Const., art. XIII B, § 8.) Rather, the Legislature assumed the task of explicating the related concept of "costs mandated by the state" when it created the Commission on State Mandates and enacted procedures intended to implement article XIII B, section 6, more effectively. (See § 17500 et seq.) As part of this statutory scheme, it exempted the state from its constitutionally imposed subvention obligation under certain enumerated circumstances. Some of these exemptions the electorate expressly contemplated in approving article XIII B, section 6 (§ 17556, subs. (a), (c), & (g)); see [**240] [***97] § 17514), while others are strictly of legislative formulation and derive from [*490] former Revenue and Taxation Code section 2253.2. (§ 17556, subs. (b), (d), (e), & (f).)

The majority find section 17556 valid notwithstanding the mandatory language of article XIII B, section 6, based on the circular and conclusory rationale that "the Legislature effectively and properly construed the term 'costs' as excluding expenses that are recoverable from sources other than taxes. In a word, such expenses are outside of the scope of the [subvention] requirement. Therefore, they need not be explicitly excepted from its reach." (Maj. opn., *ante*, at p. 488.) In my view, excluding or otherwise removing something from the purview of a law is tantamount to creating an exception thereto. When an exclusionary implication is clear from the import or effect of the statutory language, use of the word "except" should not be necessary to construe the result for what it clearly is. In this circumstance, "I would invoke the folk wisdom that if an object looks like a duck, walks like a duck and quacks like a duck, it is likely to be a duck." (*In re Deborah C.* (1981) 30 Cal.3d 125, 141 [177 Cal.Rptr. 852, 635 P.2d 446] (conc. opn. by Mosk, J.))

Of at least equal importance, section 17500 et seq. constitutes a legislative implementation of article XIII B, section 6. As such, the overall statutory scheme must comport with the express constitutional language it was designed to effectuate as well as the implicit electoral intent. Eschewing semantics, I would squarely and forth-

rightly address the fundamental and substantial question of whether the Legislature could lawfully enlarge upon the scope of article XIII B, section 6, to include exceptions not originally designated in the initiative.

I do not hereby seek to undermine the majority holding but rather to set it on a firmer constitutional footing. "[S]tatutes must be given a reasonable interpretation, one which will carry out the intent of the legislators and render them valid and operative rather than defeat them. In so doing, sections of the Constitution, as well as the codes, will be harmonized where reasonably possible, in order that all may stand." (*Rose v. State of California* (1942) 19 Cal.2d 713, 723 [123 P.2d 505]; see also *County of Los Angeles v. State of California* (1987) 43 Cal.3d 46, 58 [233 Cal.Rptr. 38, 729 P.2d 202].) To this end, it is a fundamental premise of our form of government that "the Constitution of this State is not to be considered as a grant of power, but rather as a restriction upon the powers of the Legislature; and . . . it is competent for the Legislature to exercise all powers not forbidden . . ." (*People v. Coleman* (1854) 4 Cal. 46, 49.) "Two important consequences flow from this fact. First, the entire law-making authority of the state, except the people's right of initiative and referendum, is vested in the [*491] Legislature, and that body may exercise any and all legislative powers which are not expressly or by necessary implication denied to it by the Constitution. [Citations.] *In other words, 'we do not look to the Constitution to determine whether the legislature is authorized to do an act, but only to see if it is prohibited.'* [Citation.] [P] Secondly, all intendments favor the exercise of the Legislature's plenary authority: 'If there is any doubt as to the Legislature's power to act in any given case, the doubt should be resolved in favor of the Legislature's action. Such restrictions and limitations [imposed by the Constitution] are to be construed strictly, and are not to be extended to include matters not covered by the language used.' [Citations.]" (*Methodist Hosp. of Sacramento v. Saylor* (1971) 5 Cal.3d 685, 691 [97 Cal.Rptr. 1, 488 P.2d 161], italics added.) "Specifically, the express enumeration of legislative powers is not an exclusion of others not named unless accompanied by negative terms. [Citations.]" (*Dean v. Kuchel* (1951) 37 Cal.2d 97, 100 [230 P.2d 811].)

As the majority opinion impliedly recognizes, neither the language nor the intent of article XIII B conflicts with the exercise of legislative prerogative we review today. Of paramount significance, neither section 6 nor any other provision of article XIII B prohibits statutory delineation of additional [***241] [***98] circumstances obviating reimbursement for state mandated programs. (See *Dean v. Kuchel*, *supra*, 37 Cal.2d at p. 101; *Roth Drugs, Inc. v. Johnson* (1936) 13 Cal.App.2d 720,

729 [57 P.2d 1022]; see also *Kehrlein v. City of Oakland* (1981) 116 Cal.App.3d 332, 338 [172 Cal.Rptr. 111].)

Furthermore, the initiative was "[b]illed as a flexible way to provide discipline in government spending" by creating appropriations limits to restrict the amount of such expenditures. (*County of Placer v. Corin* (1980) 113 Cal.App.3d 443, 447 [170 Cal.Rptr. 232]; see Cal. Const., art. XIII B, § 1.) By their nature, user fees do not affect the equation of local government spending: While they facilitate implementation of newly mandated state programs or increased levels of service, they are excluded from the "appropriations subject to limitations" calculation and its attendant budgetary constraints. (See Cal. Const., art. XIII B, § 8; see also *City Council v. South* (1983) 146 Cal.App.3d 320, 334 [194 Cal.Rptr. 110]; *County of Placer v. Corin*, *supra*, 113 Cal.App.3d at pp. 448-449; Cal. Const., art. XIII B, § 3, subd. (b); cf. *Russ Bldg. Partnership v. City and County of San Francisco* (1987) 199 Cal.App.3d 1496, 1505 [246 Cal.Rptr. 21] ["fees not exceeding the reasonable cost of providing the service or regulatory activity for which the fee is charged and which are not levied for general revenue purposes, have been considered outside the realm of "special taxes" [limited by California Constitution, article XIII A]q"]; *Terminal Plaza Corp. v. City* [*492] and *County of San Francisco* (1986) 177 Cal.App.3d 892, 906 [223 Cal.Rptr. 379] [same].)

This conclusion fully accommodates the intent of the voters in adopting article XIII B, as reflected in the ballot materials accompanying the proposition. (See *Amador Valley Joint Union High Sch. Dist. v. State Bd. of Equalization* (1978) 22 Cal.3d 208, 245-246 [149 Cal.Rptr. 239, 583 P.2d 1281].) In general, these materials convey that "[t]he goals of article XIII B, of which section 6 is a part, were to protect residents from excessive taxation and government spending." (*County of Los Angeles v. State of California*, *supra*, 43 Cal.3d at p. 61; *Huntington Park Redevelopment Agency v. Martin* (1985) 38 Cal.3d 100, 109-110 [211 Cal.Rptr. 133, 695 P.2d 220].) To the extent user fees are not borne by the general public or applied to the general revenues, they do not bear upon this purpose. Moreover, by imputation, voter approval contemplated the continued imposition of reasonable user fees outside the scope of article XIII B. (Ballot Pamp., Proposed Amends. to Cal. Const. with arguments to voters, Limitation of Government Appropriations, Special Statewide Elec. (Nov. 6, 1979), arguments in favor of and against Prop. 4, p. 18 [initiative "WILL curb excessive user fees imposed by local government" but "will NOT eliminate user fees . . ."]; see *County of Placer v. Corin*, *supra*, 113 Cal.App.3d at p. 452.)

"The concern which prompted the inclusion of section 6 in article XIII B was the perceived attempt by the

state to enact legislation or adopt administrative orders creating programs to be administered by local agencies, thereby transferring to those agencies the fiscal responsibility for providing services which the state believed should be extended to the public." (*County of Los Angeles v. State of California*, *supra*, 43 Cal.3d at p. 56; see *City of Sacramento v. State of California* (1990) 50 Cal.3d 51, 66 [266 Cal.Rptr. 139, 785 P.2d 522].) "Section 6 had the additional purpose of precluding a shift of financial responsibility for carrying out governmental functions from the state to local agencies which had had their taxing powers restricted by the enactment of article XIII A in the preceding year and were ill equipped to take responsibility for any new programs." (*County of Los Angeles v. State of California*, *supra*, 43 Cal.3d at p. 61.) An exemption from reimbursement for state mandated programs for which local governments are authorized to charge offsetting user fees does not frustrate or compromise these goals or otherwise disturb the balance of local government financing [**242] [***99] and expenditure. ² (See *County of Placer v. Corin*, *supra*, 113 Cal.App.3d at p. 452, [*493] *fn.* 7.) Article XIII B, section 8, subdivision (c), specifically includes regulatory licenses, user charges, and user fees in the appropriations limitation equation only "to the extent that those proceeds exceed the costs reasonably borne by [the governmental] entity in providing the regulation, product, or service . . ."

2 This conclusion also accords with the traditional and historical role of user fees in promoting the multifarious functions of local government by imposing on those receiving a service the cost of providing it. (Cf. *County of Placer v. Corin*, *supra*, 113 Cal.App.3d at p. 454 ["Special assessments, being levied only for improvements that benefit particular parcels of land, and not to raise general revenues, are simply not the type of exaction that can be used as a mechanism for circumventing these tax relief provisions. [Citation.]".])

The self-executing nature of article XIII B does not alter this analysis. "It has been uniformly held that the legislature has the power to enact statutes providing for reasonable regulation and control of rights granted under constitutional provisions. [Citations.]" (*Chesney v. Byram* (1940) 15 Cal.2d 460, 465 [101 P.2d 1106].) ""Legislation may be desirable, by way of providing convenient remedies for the protection of the right secured, or of regulating the claim of the right so that its exact limits may be known and understood; but all such legislation must be subordinate to the constitutional provision, and in furtherance of its purpose, and must not in any particular attempt to narrow or embarrass it." [Citations.]" (*Id.*, at pp. 463-464; see also *County of Contra*

Costa v. State of California (1986) 177 Cal.App.3d 62, 75 [222 Cal.Rptr. 750].) Section 17556(d) is not "merely [a] transparent attempt[] to do indirectly that which cannot lawfully be done directly." (*Carmel Valley Fire Protection Dist. v. State of California* (1987) 190 Cal.App.3d 521, 541 [234 Cal.Rptr. 795].) On the contrary, it creates no conflict with the constitutional directive it subserves. Hence, rather than pursue an interpretive expedient, this court should expressly declare that it operates as a valid legislative implementation thereof.

"[Initiative] provisions of the Constitution and of charters and statutes should, as a general rule, be liberally construed in favor of the reserved power. [Citations.] As opposed to that principle, however, 'in examining and ascertaining the intention of the people with respect to the scope and nature of those . . . powers, it is proper and important to consider what the consequences of applying it to a particular act of legislation would be, and if upon such consideration it be found that by so applying it the inevitable effect would be greatly to impair or wholly destroy the efficacy of some other governmental power, the practical application of which is essential and, perhaps, . . . indispensable, to the convenience, comfort, and well-being of the inhabitants of certain legally established districts or subdivisions of the state or of the whole state, then in such case the courts may and should assume that the people intended no such result to flow from the application of those powers and that they do not so apply.' [Citation.]" (*Hunt v. Mayor & Council of Riverside* (1948) 31 Cal.2d 619, 628-629 [191 P.2d 426].)

[*494] This court is not infrequently called upon to resolve the tension of apparent or actual conflicts in the express will of the people. ³ Whether that expression emanates directly from the ballot or indirectly through legislative implementation, each deserves our fullest estimation and effectuation. Given the historical and abiding role of government by initiative, I decline to circumvent that responsibility and accept uncritically the Legislature's self-validating statutory scheme as the basis for approving [***100] the exercise [**243] of its prerogative. It is not enough to say a broader constitutional analysis yields the same result and therefore is unnecessary. We provide a higher quality of justice harmonizing rather than ignoring the divers voices of the people, for such is the nature of our office.

CITY OF MERCED, Plaintiff and Appellant, v. THE STATE OF CALIFORNIA et al., Defendants and Respondents

Civ. No. 7590

Court of Appeal of California, Fifth Appellate District

153 Cal. App. 3d 777; 200 Cal. Rptr. 642; 1984 Cal. App. LEXIS 1824

March 27, 1984

SUBSEQUENT HISTORY: [***1] Appellant's petition for a hearing by the Supreme Court was denied May 24, 1984.

PRIOR HISTORY: Superior Court of Merced County, No. 69797, George G. Murry, Judge.

DISPOSITION: The judgment is affirmed.

CASE SUMMARY:

PROCEDURAL POSTURE: Appellant, the city of Merced, sought review of an order of the Superior Court of Merced County (California), that denied a petition for a writ of mandamus to compel payment of the costs of business goodwill incurred in an eminent domain proceeding.

OVERVIEW: Appellant, the City of Merced, was ordered to pay \$ 72,350 to land owners in a condemnation action. Appellant applied to respondent, State of California, for reimbursement of that amount, and filed a petition for writ of mandamus to compel reimbursement when respondent refused to pay. The lower court denied the petition. The court affirmed the denial of the writ of mandamus and held that whether a city or county decided to exercise eminent domain was, essentially, an option of the city or county, rather than a mandate of the state. The court found that the fundamental concept was that the city or county was not required to exercise eminent domain, but if the power of eminent domain was exercised, then the city would be required to pay for loss

of goodwill and the payment for loss of goodwill was not a state-mandated cost.

OUTCOME: The court affirmed the order of the lower court that denied a petition for a writ of mandamus to compel respondent. State of California, to reimburse appellant, city of Merced, for the costs of business goodwill incurred in an eminent domain proceeding because the costs were not state mandated.

CORE TERMS: state-mandated, business goodwill, reimbursement, eminent domain, mandated, optional, goodwill, eminent domain laws, loss of goodwill, local agency, legal theory, eminent domain proceeding, writ of mandamus, line item, reasonable alternatives, discretionary, accorded, revised, incur, system of law, state agency, business conducted, statutes enacted, condemnation, acquisition, recodified, acquire, italics, executive order, question of law

SUMMARY:

CALIFORNIA OFFICIAL REPORTS SUMMARY

The trial court entered judgment denying a city's petition for a writ of mandamus to compel payment of its claim against the State of California for costs of business goodwill it incurred in an eminent domain proceeding as a result of the enactment of Stats. 1975, ch. 1275, which revised and recodified the state's eminent domain laws. The revisions included a new requirement that, upon proof of satisfaction of certain stated conditions, the owner of a business conducted on the condemned property is entitled to compensation for loss of goodwill (Code Civ. Proc., § 1263.510). In entering judgment de-

nying the writ, the court concluded that the state was liable to the city for payment of business goodwill, but that the court could not order subvention from state funds. (Superior Court of Merced County, No. 69797, George G. Murry, Judge.)

The Court of Appeal affirmed. The court held that the city's payment for business goodwill in a condemnation proceeding it elected to pursue did not constitute the payment of a state-mandated cost pursuant to Rev. & Tax. Code, § 2231, subd. (a), and Rev. & Tax. Code, § 2207. In so ruling, the court held that the Legislature made clear the discretionary nature of the acquisition of property by eminent domain by the passage of Code Civ. Proc., § 1230.030 (also included within Stats. 1975, ch. 1275). Thus, the court held that the Legislature intended for payment of business goodwill to be discretionary as well, and that such an increased cost so incurred as a result of the enactment of the revised eminent domain laws was not a cost which the city was required or mandated to incur. (Opinion by Hamlin, J., with Franson, Acting P. J., and Zenovich, J., concurring.)

HEADNOTES

CALIFORNIA OFFICIAL REPORTS HEADNOTES

Classified to California Digest of Official Reports, 3d Series

(1) Appellate Review § 55 -- Presenting and Preserving Questions in Trial Court -- Adherence to Theory of Case -- Assertion of New Legal Theory on Appeal.
--On appeal from the denial of a city's petition for a writ to compel the state to pay the city for the costs of business goodwill incurred in an eminent domain proceeding, it was permissible for defendants to assert a new legal theory. Although defendants argued for the first time on appeal that in governmental-entity-initiated eminent domain proceedings, payment for business goodwill pursuant to the requirements of Stats. 1975, ch. 1275 (which revised and recodified the state's eminent domain laws), is not a state-mandated cost subject to reimbursement by the state, which argument was a change in defendants' position from its answer to the petition and its stipulation at the hearing on the petition, such issue was purely a question of law. Thus, since the appellate court is not limited by the interpretation of statutes by the trial court, on appeal defendants could correct a position mistakenly taken in the trial court that allegedly was inconsistent with the clear manifestation of the intent of the Legislature.

(2a) (2b) (2c) Eminent Domain § 22 -- Compensable Property and Rights -- Business Goodwill -- Payment by City -- Reimbursement From State --

State-mandated Cost. --A city's payment for business goodwill in a condemnation proceeding it elected to pursue did not constitute the payment of a state-mandated cost under Rev. & Tax. Code, § 2231, subd. (a), and Rev. & Tax. Code, § 2207. Although Stats. 1975, ch. 1275, which revised and recodified the state's eminent domain laws, included the requirement that upon proof of satisfaction of certain stated conditions the owner of a business conducted on the condemned property is entitled to compensation for a loss of goodwill (Code Civ. Proc., § 1263.510), the Legislature made clear the discretionary nature of acquisition of property by eminent domain by the passage of Code Civ. Proc., § 1230.030 (also included within Stats. 1975, ch. 1275). Thus, the Legislature intended for payment of goodwill to be discretionary, and such an increased cost so incurred as a result of the enactment of the revised eminent domain laws was not a cost which the county was required or mandated to incur.

(3) Statutes § 28 -- Construction -- Language -- Harmony With Whole System of Law. --The meaning of a statute must, in the first instance, be sought in the language in which it is framed, and if that is plain the sole judicial function is to enforce it according to its terms. Where the language is clear there is no room for interpretation. Moreover, courts will not determine the wisdom, desirability, or propriety of statutes enacted by the Legislature. Additionally, every statute should be construed with reference to the whole system of law of which it is a part so that all may be harmonized and have effect. Furthermore, administrative interpretations of statutes should be accorded great respect and followed if not clearly erroneous.

(4) Appellate Review § 135 -- Review -- Presumptions -- Finding by State Agency. --A finding by a state agency is accorded great weight unless it is shown to be clearly erroneous.

COUNSEL: Steven F. Nord, City Attorney, for Plaintiff and Appellant.

John K. Van de Kamp, Attorney General, N. Eugene Hill, Assistant Attorney General, and Geoffrey L. Graybill, Deputy Attorney General, for Defendants and Respondents.

JUDGES: Opinion by Hamlin, J., with Franson, Acting P. J., and Zenovich, J., concurring.

OPINION BY: HAMLIN

OPINION

[*779] [**643] The Case

By its petition for writ of mandamus and its complaint for declaratory judgment plaintiff sought to compel payment of its claim against the State of California (the State) for costs of business goodwill it incurred in an eminent domain proceeding as a result of the enactment of chapter 1275, Statutes of 1975. Specifically, plaintiff asked the court to order the State Controller to pay plaintiff \$ 71,350, plus interest, from a "State budget line item he deems appropriate" or, alternatively, to direct the State Controller to pay the amount from a line item the court deems appropriate. The trial court concluded that the [***2] State was liable to plaintiff for payment of business goodwill, but that the court could not order subvention from state funds. It therefore entered judgment denying the peremptory writ of mandamus. Plaintiff filed a timely notice of appeal.

[*780] On appeal, defendants argue for the first time, as we believe they may, that plaintiff's payment for business goodwill in a condemnation proceeding it elected to pursue does not constitute a state-mandated cost. We agree and find it unnecessary to discuss the other contentions of the parties.

The Facts

We include only a brief statement of the undisputed facts which are essential to resolution of the pivotal legal issue involved, i.e., whether plaintiff's payment for business goodwill in the proceeding it initiated to condemn property for its use is a state-mandated cost.

On April 8, 1980, the Merced County Superior Court entered a final order of condemnation in the case entitled City of Merced v. Rodney Barbour and Thomas L. Barbour. This order required plaintiff to pay, along with other sums, \$ 71,350 allocated to loss of goodwill pursuant to the provisions of Code of Civil Procedure section 1263.510 [***3]. Plaintiff applied to the State for reimbursement of that amount under the provisions of Revenue and Taxation Code section 2201 et seq. Plaintiff's application for reimbursement was directed to the State Board of Control. That board approved plaintiff's claim. It was included, along with other similar claims, as a line item in chapter 1090, Statutes of 1981. [**644] The Legislature deleted from chapter 1090 all claims seeking reimbursement for business goodwill under chapter 1275, Statutes of 1975 (1275 claims). Additionally, the Legislature included in chapter 1090, as amended, a direction that the Board of Control not accept, or submit to the Legislature, any more 1275 claims.

After plaintiff received notice of the above-mentioned action of the Legislature, it initiated this case.

Discussion

I. *The State may assert a new legal theory on appeal.*

(1) Defendants admitted in their answer to the petition for writ of mandamus that chapter 1275, Statutes of 1975, mandated a new program or increased level of service under provisions of the Revenue and Taxation Code. At the hearing on the petition, defendants stipulated to the same effect [***4] and added that plaintiff had not requested that mandate. For the first time on appeal, defendants argue that in governmental-entity-initiated eminent domain proceedings payment for business goodwill pursuant to the requirements of chapter 1275, Statutes of 1975, is not a state-mandated cost subject to reimbursement by the State. Defendants admit this represents a change [*781] in their position but that they mistakenly took a position in the trial court inconsistent with the clear manifestation of the intent of the Legislature.

To support their position that defendants may argue on appeal at variance with their answer and admission in the trial court, defendants rely on *Barton v. Owen* (1977) 71 Cal.App.3d 484 [139 Cal.Rptr. 494]. There the plaintiff sought medical treatment from defendant for acute sinusitis. After a series of unsuccessful treatments, plaintiff developed a brain abscess which resulted in a prefrontal lobotomy. The plaintiff tried the case on the theory that the physician was negligent in not taking a culture and sensitivity test as part of his diagnosis. He did not prevail. On appeal, plaintiff argued the trial court erred in instructing [***5] the jury on contributory negligence. Additionally, plaintiff stated a new theory that failure to take the culture and sensitivity test was negligence as a matter of law. The court allowed the new legal theory on appeal.

Plaintiff points to 3 Witkin, California Procedure (2d ed. 1971) Pleadings, sections 342-344, pages 2009-2011, for the general rule that an admission of fact may not be argued differently on appeal. We agree, but that is not what defendants seek to do. Here, the question of whether a cost is state-mandated is purely a question of law. [HN1]This court is not limited by the interpretation of statutes by the trial court. (See *In re Davis* (1978) 87 Cal.App.3d 919, 921 [151 Cal.Rptr. 29]; *Barton v. Owen*, *supra*, 71 Cal.App.3d at p. 491.) Thus defendants may argue their new legal theory on appeal.

II. *Payment of goodwill is not a state-mandated cost.*

(2a) By this appeal, plaintiff seeks to compel reimbursement of its payment for business goodwill in a proceeding to acquire property under its power of eminent domain. Plaintiff can succeed only if the payment for which it seeks reimbursement was a state-mandated cost. [***6] Our decision on this issue turns upon the meaning of various statutory provisions. (3) In examining the

relevant statutes we apply the basic rules of statutory construction stated by the court in *Marin Hospital Dist. v. Rothman* (1983) 139 Cal.App.3d 495, 498-499 [188 Cal.Rptr. 828]. "[HN2]The meaning of a statute must, in the first instance, be sought in the language in which it is framed, and if that is plain the sole judicial function is to enforce it according to its terms [citation]; where the language is clear there is no room for interpretation [citation]. And courts will not determine the *wisdom*, desirability, or propriety of statutes enacted by the Legislature. [Citation.]

"Moreover, "[HN3]every statute should be construed with reference to the whole system of law of which it is a part so [**645] that all may be harmonized and [*782] have effect." (*Select Base Materials v. Board of Equal.* (1959) 51 Cal.2d 640, 645) We inquire further into 'the whole system of law of which [Government Code section 26912] is a part.'" (Italics in original.)

Also applicable in this case is [***7] the rule that [HN4]administrative interpretations of statutes should be accorded great respect and followed if not clearly erroneous. (*Noroian v. Department of Administration* (1970) 11 Cal.App.3d 651, 655 [89 Cal.Rptr. 889].) We also rely on extrinsic aids such as the history of relevant statutes, committee reports, and the legislative debates. (*Ibid.*)

(2b) Revenue and Taxation Code section 2231, subdivision (a), includes a direction that: "[HN5]The state shall reimburse each local agency for all 'costs mandated by the state', as defined in Section 2207" Section 2207, in turn, provides in pertinent part: "[HN6]'Costs mandated by the state' means any increased costs which a local agency is required to incur as a result of the following: [para.] (a) Any law enacted after January 1, 1973, which mandates a new program or an increased level of service of an existing program; . . ."

Chapter 1275, Statutes of 1975 (Code Civ. Proc., § 1230.010 et seq.) revised and recodified the eminent domain laws of this state. The revisions included a new requirement that, upon proof of satisfaction of [***8] four stated conditions, the owner of a business conducted on the condemned property is entitled to compensation for loss of goodwill (Code Civ. Proc., § 1263.510).¹

1 Code of Civil Procedure section 1263.510 provides: "(a) [HN7]The owner of a business conducted on the property taken, or on the remainder if such property is part of a larger parcel, shall be compensated for loss of goodwill if the owner proves all of the following:

"(1) The loss is caused by the taking of the property or the injury to the remainder.

"(2) The loss cannot reasonably be prevented by a relocation of the business or by taking steps and adopting procedures that a reasonably prudent person would take and adopt in preserving the goodwill.

"(3) Compensation for the loss will not be included in payments under Section 7262 of the Government Code.

"(4) Compensation for the loss will not be duplicated in the compensation otherwise awarded to the owner.

"(b) Within the meaning of this article, 'goodwill' consists of the benefits that accrue to a business as a result of its location, reputation for dependability, skill or quality, and any other circumstances resulting in probable retention of old or acquisition of new patronage."

[***9] The costs for which plaintiff seeks reimbursement in this proceeding were incurred by reason of this newly imposed obligation to compensate for loss of business goodwill. ² This squarely presents the issue which we conclude [*783] is dispositive of plaintiff's appeal, i.e., is the increased cost so incurred as a result of enactment of chapter 1275, Statutes of 1975, a cost which plaintiff was *required* or *mandated* to incur?

2 Until enactment of chapter 1275, Statutes of 1975, goodwill was not compensable in eminent domain proceedings. (See 5 Witkin, Summary of Cal. Law (8th ed. 1974) Constitutional Law, § 586, p. 3882.)

In support of the statutory construction it urges, plaintiff points to the Board of Control's decision in March 1981 that 1275 claims were for reimbursement of state-mandated costs. (4) Plaintiff correctly notes that such a finding by a state agency is accorded great weight unless shown to be clearly erroneous. (*Norioian v. Department of Administration, supra*, 11 Cal.App.3d at p. 655.)[***10]

(2c) Defendants counter that the Legislature declared its intent that 1275 claims not be considered state-mandated by rejecting the line item of the budget providing funds for payment of 1275 claims and by directing that the Board of Control not approve or submit to the Legislature any more 1275 claims. (Stats. 1981, ch. 1090.) Defendants rely on *Tyler v. State of California* (1982) 134 Cal.App.3d 973, 977 [162 Cal.Rptr. 82], to support their position that, where a statute is unclear, a later expression of the Legislature bearing upon the intent of the prior statute may be properly [*646] considered in determining the effect and meaning of the prior statute.

More significantly, defendants argue that the Legislature made clear the discretionary nature of acquisition of property by eminent domain by passage of Code of Civil Procedure section 1230.030. Section 1230.030 was included within chapter 1275, Statutes of 1975, the same legislation that changed the law of eminent domain to require compensation for business goodwill. Section 1230.030 provides: "Nothing in this title requires that the power of eminent domain [***11] be exercised to acquire property necessary for public use. Whether property necessary for public use is to be acquired by purchase or other means or by eminent domain is a decision left to the discretion of the person authorized to acquire the property."

We agree that the Legislature intended for payment of goodwill to be discretionary. The above authorities reveal that whether a city or county decides to exercise eminent domain is, essentially, an option of the city or county, rather than a mandate of the state. The fundamental concept is that the city or county is not required to exercise eminent domain. If, however, the power of eminent domain is exercised, then the city will be required to pay for loss of goodwill. Thus, payment for loss of goodwill is not a state-mandated cost.

This construction is confirmed by subsequent legislative actions, including the enactment of Senate Bill No. 90 (Russell), 1979-1980 Regular Session. [*784] Among other things, that bill (Sen. Bill No. 90) added Revenue and Taxation Code section 2207, subdivision (h):

"[HN8]'Costs mandated by the state' means any increased costs which a local agency is required to incur [***12] as the result of the following:

". . . .

"(h) Any statute enacted after January 1, 1973, or executive order issued after January 1, 1973, which adds new requirements to an existing optional program or service and thereby increases the cost of such program or service if the local agencies have no reasonable alternatives other than to continue the optional program."

Senate Bill No. 90 became effective on July 1, 1981, after plaintiff incurred the cost of business goodwill for which it seeks reimbursement. Subdivision (h) appears to have been included in the bill to provide for reimbursement of increased costs in an optional program such as eminent domain when the local agency has no reasonable alternative to eminent domain. The legislative history of Senate Bill No. 90 supports the conclusion that subdivision (h) was added to Revenue and Taxation Code section 2207 to extend state liability rather than to clarify existing law. The Report of the Assembly Revenue and Taxation Committee (June 9, 1980) includes a statement:

"SB 90 further defines 'mandated costs' in Sections 4 and 5 to include the following:

". . . .

"e. Where a statute or executive [***13] order adds *new requirements to an existing optional program*, which increases costs if the local agency has no reasonable alternative than to continue that optional program." (Rep., p. 1, italics in original.)

Additionally, the Ways and Means Committee's Staff Analysis (Aug. 4, 1980) notes that Senate Bill No. 90: "Expands the definition of *local* reimbursable costs mandated and paid by the state to include:

". . . .

"e. Statutes or executive orders adding *new requirements to an existing optional program*, which increases costs if the local agency has no reasonable alternative than to continue that optional program." (P. 2, italics in original.)

[*785] Both reports quoted above characterize Senate Bill No. 90 as expanding the definition of local

reimbursable costs. The Legislative Analyst's Report of July 30, 1980, on Senate Bill No. 90 similarly includes a [*647] statement that the bill expands the definition of state-mandated costs. Such characterizations of the purpose of Senate Bill No. 90 are consistent only with the conclusion that, until that bill was enacted, increased costs incurred in an optional program such as eminent domain were not state-mandated. [***14] Thus the cost of business goodwill for which plaintiff was required by chapter 1275, Statutes of 1975, to pay in April 1980, was not a state-mandated cost. It follows that the trial court properly denied the petition for a writ of mandamus to compel payment of that cost. Our conclusion on this pivotal issue makes it unnecessary to consider plaintiff's contentions that article XIII B of the California Constitution requires the State to provide a subvention of funds to reimburse state-mandated costs, that there are appropriated funds available to pay plaintiff's claim, and that a peremptory writ of mandate is the appropriate remedy in this case.

The judgment is affirmed.

May 10, 2007, Filed

PRIOR HISTORY: [***1] Superior Court of Los Angeles County, Nos. BS089769 and BS089785, Victoria G. Chaney, Judge.

DISPOSITION: Affirmed.

CASE SUMMARY:

PROCEDURAL POSTURE: The Superior Court of Los Angeles County, California, issued a writ of mandate directing defendant California Commission on State Mandates to set aside its decisions affirming its executive director's rejections of test claims presented by plaintiffs, a county and cities, and to consider fully the claims and determine whether plaintiffs were entitled to reimbursement without consideration of Gov. Code, § 17516, subd. (c). The Commission appealed.

OVERVIEW: Plaintiffs cross-appealed. The court held that § 17516, subd. (c), was unconstitutional to the extent it exempted regional water quality control boards from the constitutional state mandate subvention requirement. Its creation of an exception for regional boards, which were state agencies, contravened the plain, unequivocal, and all-inclusive reference to "any state agency" in Cal. Const., art. XIII B, § 6. Moreover, a contrary conclusion

was not compelled by virtue of the fact that § 17516, subd. (c), essentially mirrored the language of Rev. & Tax. Code, § 2209, subd. (c). A statute could not trump the constitution. The court found persuasive the Commission's position that should it conclude § 17516, subd. (c), was unconstitutional, the appropriate remedy was to afford the Commission the opportunity to pass on the merits of the subject test claims on the issues of whether: (1) the subject permit qualified as a state mandated program under art. XIII B, § 6; (2) the permit amounted to a new program or higher level of service; and (3) the permit imposed costs on local entities. The court concluded that plaintiffs' cross-appeal, which was simply protective in nature, was moot.

OUTCOME: The court affirmed the trial court's judgment.

CORE TERMS: regional, water boards, subvention, local governments, state mandate, reimbursement, executive order, mandated, local agencies, levels of service, new program, state agency, test claim, subvention of funds, cause of action, water quality, writ of mandate directing, federal mandate, federal law, Clean Water Act, order issued, cross-appeal, state law, pollution, pollutants, funding, statute of limitations, implementing, carrying, demurrer

[HN1]See Cal. Const., art. XIII B, § 6.

Governments > Local Governments > Finance
Governments > State & Territorial Governments > Finance

[HN2]"Subvention" generally means a grant of financial aid or assistance, or a subsidy. As used in connection with state-mandated costs, the basic legal requirements of subvention can be easily stated; it is in the application of the rule that difficulties arise. Essentially, the constitutional rule of state subvention provides that the state is required to pay for any new governmental programs, or for higher levels of service under existing programs, that it imposes upon local governmental agencies. This does not mean that the state is required to reimburse local agencies for any incidental cost that may result from the enactment of a state law; rather, the subvention requirement is restricted to governmental services which the local agency is required by state law to provide to its residents. The subvention requirement is intended to prevent the state from transferring the costs of government from itself to local agencies. Reimbursement is required when the state freely chooses to impose on local agencies any peculiarly governmental cost which they were not previously required to absorb.

Governments > Local Governments > Finance
Governments > State & Territorial Governments > Finance

[HN3]The subvention requirement of Cal. Const., art. XIII B, § 6, is triggered if the legislature or any state agency mandates a new program or higher level of service. Cal. Const., art. XIII B, § 6. Such requirement is inapplicable where the additional costs on local governments are imposed by a federal mandate, i.e., the federal government. Cal. Const., art. XIII B, § 9, subd. (b), defines federally mandated appropriations as those required to comply with mandates of the courts or the federal government which, without discretion, require an expenditure for additional services or which unavoidably make the provision of existing services more costly.

Governments > Local Governments > Finance

Governments > State & Territorial Governments > Finance

[HN4]Whether a particular cost incurred by a local government arises from carrying out a state mandate for which subvention is required under Cal. Const., art. XIII B, § 6, is a matter for the California Commission on State Mandates to determine in the first instance. A local government initiates the process for subvention under Cal. Const., art. XIII B, § 6, by filing a claim with the Commission. Gov. Code, § 17521. The initial claim is referred to as a test claim. Gov. Code, § 17521. The provisions of Gov. Code, § 17500 et seq., provide the sole and exclusive procedure by which a local agency may claim reimbursement for costs mandated by the state as required by Cal. Const., art. XIII B, § 6. Gov. Code, § 17552.

Governments > Local Governments > Finance
Governments > State & Territorial Governments > Finance

[HN5]The legislature has created a quasi-judicial body called the California Commission on State Mandates, Gov. Code, § 17525, to hear and decide upon any claim by a local government that the local government is entitled to be reimbursed by the state for costs as required by Cal. Const., art. XIII B, § 6. Gov. Code, § 17551, subd. (a). It has defined "costs" as costs mandated by the state -- any increased costs that the local government is required to incur as a result of any statute, or any executive order implementing any statute, which mandates a new program or higher level of service of any existing program within the meaning of Cal. Const., art. XIII B, § 6. Gov. Code, § 17514. Finally, in Gov. Code, § 17556, subd. (d), it has declared that the Commission shall not find costs mandated by the state if, after a hearing, the Commission finds that the local government has the authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service.

Civil Procedure > Pleading & Practice > Defenses, Demurrers & Objections > Demurrers

Civil Procedure > Pretrial Judgments > Judgment on the Pleadings

Civil Procedure > Appeals > Standards of Review > De Novo Review

[HN6]A motion for judgment on the pleadings is the equivalent of a general demurrer but is made after the time for demurrer has expired. The rules governing demurrers apply. The grounds for a motion for judgment on the pleadings must appear on the face of the challenged complaint or be based on facts which the court may judicially notice. On review, an appellate court must deter-

mine if the complaint states a cause of action as a matter of law. The appellate court reviews the complaint de novo to determine whether it alleges facts sufficient to state a cause of action under any legal theory.

Civil Procedure > Remedies > Writs > Common Law Writs > Mandamus

Civil Procedure > Appeals > Standards of Review > De Novo Review

Civil Procedure > Appeals > Standards of Review > Substantial Evidence > General Overview

[HN7]In reviewing a trial court's ruling on a writ of mandate, an appellate court is ordinarily confined to an inquiry as to whether the findings and judgment of the trial court are supported by substantial evidence. However, where the facts are undisputed and the issues present questions of law, the appellate court is not bound by the trial court's decision but may make its own determination.

Constitutional Law > The Judiciary > Case or Controversy > Constitutionality of Legislation > General Overview

Governments > Legislation > Statutes of Limitations > Time Limitations

[HN8]See Code Civ. Proc., § 341.5.

Civil Procedure > Pleading & Practice > Defenses, Demurrers & Objections > Affirmative Defenses > General Overview

Civil Procedure > Pleading & Practice > Defenses, Demurrers & Objections > Demurrers

[HN9]The time-bar of a statute of limitations may be raised by demurrer where the complaint discloses on its face that the statute of limitations has run on the causes of action stated in the complaint, for the reason that it fails to state facts sufficient to state a cause of action. Forfeiture of a time-bar defense transpires by the failure to raise the applicable statute of limitations in the answer.

Civil Procedure > Remedies > Writs > Common Law Writs > Mandamus

Governments > Legislation > Statutes of Limitations > Equitable Estoppel

Governments > Legislation > Statutes of Limitations > Waivers

[HN10]If a time limit in a mandamus proceeding is held to be jurisdictional, estoppel or waiver cannot extend the time.

Constitutional Law > The Judiciary > Case or Controversy > Constitutionality of Legislation > General Overview

Governments > Legislation > Statutes of Limitations > Time Limitations

[HN11]The time-bar of Code Civ. Proc., § 341.5, applies to a challenge to the constitutionality of any statute relating to state funding for counties and other local governmental entities, not to a challenge to an action by an administrative agency.

Civil Procedure > Appeals > Reviewability > Preservation for Review

Governments > Legislation > Statutes of Limitations > Time Limitations

[HN12]Case law does not stand for the proposition that the bar of the applicable statute of limitations may be raised for the first time on appeal.

Environmental Law > Water Quality > Clean Water Act > Discharge Permits > General Overview

[HN13]Part of the federal Clean Water Act, 33 U.S.C. § 1251 et seq., is the National Pollutant Discharge Elimination System (NPDES), the primary means for enforcing effluent limitations and standards under the Clean Water Act. The NPDES sets out the conditions under which the federal Environmental Protection Agency or a state with an approved water quality control program can issue permits for the discharge of pollutants in wastewater. 33 U.S.C. § 1342(a) & (b). In California, wastewater discharge requirements established by the regional water quality control boards (regional water boards) are the equivalent of the NPDES permits required by federal law. Wat. Code, § 13374. California's Porter-Cologne Act, Wat. Code, § 13000 et seq., establishes a statewide program for water quality control. Nine regional water boards, overseen by the California Water Board, administer the program in their respective regions. Wat. Code, §§ 13140, 13200 et seq., 13240, and 13301. Wat. Code, §§ 13374 and 13377, authorize the regional water board to issue federal NPDES permits for five-year periods. 33 U.S.C. § 1342, subd. (b)(1)(B).

Governments > Local Governments > Finance

Governments > State & Territorial Governments > Finance

[HN14]See Gov. Code, § 17556, subd. (c).

Governments > State & Territorial Governments > General Overview

[HN15]See Rev. & Tax. Code, § 2209, subd. (c).

Constitutional Law > State Constitutional Operation

[HN16]In construing the meaning of Cal. Const., art. XIII B, § 6, a court's inquiry is not focused on what the legislature intended in adopting the former statutory reimbursement scheme, but rather on what the voters meant when they adopted art. XIII B, § 6. To determine this intent, the court must look to the language of the provision itself.

***Governments > Local Governments > Finance
Governments > State & Territorial Governments > Finance***

[HN17]The subvention requirement of Cal. Const., art. XIII B, § 6, applies whenever the legislature or any state agency mandates a new program or higher level of service. The all-encompassing "any state agency" language defeats any perceived presumption that the electorate intended to incorporate into Cal. Const., art. XIII B, § 6, the exclusion of a particular state agency from its subvention requirement.

Constitutional Law > The Judiciary > Case or Controversy > Constitutionality of Legislation > General Overview

Environmental Law > Water Quality > General Overview

***Governments > Local Governments > Finance
Governments > State & Territorial Governments > Finance***

[HN18]The constitutional infirmity of Gov. Code, § 17516, subd. (c), is readily apparent from its plain language that the definition of "executive order" does not include any order, plan, requirement, rule, or regulation issued by the California Water Board or by any regional water quality control board (regional water board) pursuant to Division 7 (commencing with Wat. Code, § 13000) of the California Water Code. § 17516, subd. (c). This exclusion of any order issued by any regional water board contravenes the clear, unequivocal intent of Cal. Const., art. XIII B, § 6, that subvention of funds is required whenever any state agency mandates a new program or higher level of service on any local government. § 17516, subd. (c). Therefore, § 17516, subd. (c), is unconstitutional to the extent it excludes any order issued by any regional water board pursuant to Division 7 (commencing with Wat. Code, § 13000) of the Water Code from the definition of "executive order." This conclusion leads to the further conclusion that whether one or both of the subject two obligations constitutes a state mandate necessitating subvention of funds under Cal.

Const., art. XIII B, § 6, is an issue that must in the first instance be resolved by the California Commission on State Mandates.

SUMMARY:

CALIFORNIA OFFICIAL REPORTS SUMMARY

The trial court issued a writ of mandate directing the Commission on State Mandates to set aside its decisions affirming its executive director's rejections of test claims presented by a county and several cities and to consider fully the test claims and determine whether the county and the cities were entitled to reimbursement without consideration of Gov. Code, § 17516, subd. (c). The county and the cities sought reimbursement for carrying out obligations required by a National Pollutant Discharge Elimination System Permit for municipal stormwater and urban runoff discharges that was issued by the Regional Water Quality Control Board (Regional Water Board), Los Angeles Region. (Superior Court of Los Angeles County, Nos. BS089769 and BS089785, Victoria G. Chaney, Judge.)

The Court of Appeal affirmed the judgment, holding that Gov. Code, § 17516, subd. (c), is unconstitutional to the extent that it exempts regional water boards from the constitutional state mandate subvention requirement. Its creation of an exception for regional water boards, which are state agencies, contravenes the plain, unequivocal, and all-inclusive reference to "any state agency" in Cal. Const., art. XIII B, § 6. Moreover, a contrary conclusion was not compelled by virtue of the fact that § 17516, subd. (c), essentially mirrors the language of Rev. & Tax. Code, § 2209, subd. (c). A statute cannot trump the constitution. The court found persuasive the commission's position that should the court conclude § 17516, subd. (c), was unconstitutional, the appropriate remedy was to afford the commission the opportunity to pass on the merits of the subject test claims on the issues of whether: (1) the subject permit qualified as a state mandated program under Cal. Const., art. XIII B, § 6; (2) the permit amounted to a new program or higher level of service; and (3) the permit imposed costs on local entities (Gov. Code, §§ 17514, 17556). A cross-appeal filed by the county and the cities was premised on the theory that if subvention of funds from the commission was foreclosed by § 17516, subd. (c), they were entitled to pursue an independent action against the Regional Water Board, Los Angeles Region. Accordingly, the court concluded that the cross-appeal, which was simply protective in nature, was moot. (Opinion by Aldrich, J., with Klein, P. J., and Croskey, J., concurring.)

CALIFORNIA OFFICIAL REPORTS HEADNOTES
Classified to California Digest of Official Reports

(1) State of California § 11--Fiscal Matters--Reimbursement to Local Governments--New Programs and Services--Subvention.--"Subvention" generally means a grant of financial aid or assistance, or a subsidy. As used in connection with state-mandated costs, the basic legal requirements of subvention can be easily stated; it is in the application of the rule that difficulties arise. Essentially, the constitutional rule of state subvention provides that the state is required to pay for any new governmental programs, or for higher levels of service under existing programs, that it imposes upon local governmental agencies. This does not mean that the state is required to reimburse local agencies for any incidental cost that may result from the enactment of a state law; rather, the subvention requirement is restricted to governmental services which the local agency is required by state law to provide to its residents. The subvention requirement is intended to prevent the state from transferring the costs of government from itself to local agencies. Reimbursement is required when the state freely chooses to impose on local agencies any peculiarly governmental cost which they were not previously required to absorb. The subvention requirement of Cal. Const., art. XIII B, § 6, is triggered if the Legislature or any state agency mandates a new program or higher level of service (art. XIII B, § 6). Such requirement is inapplicable where the additional costs on local governments are imposed by a federal mandate, i.e., the federal government. Article XIII B, § 9, subd. (b), defines federally mandated appropriations as those required to comply with mandates of the courts or the federal government which, without discretion, require an expenditure for additional services or which unavoidably make the provision of existing services more costly. [*900]

(2) State of California § 11--Fiscal Matters--Reimbursement to Local Governments--New Programs and Service--Subvention--Procedure for Claims.--Whether a particular cost incurred by a local government arises from carrying out a state mandate for which subvention is required under Cal. Const., art. XIII B, § 6, is a matter for the Commission on State Mandates to determine in the first instance. A local government initiates the process for subvention under art. XIII B, § 6, by filing a claim with the commission (Gov. Code, § 17521). The initial claim is referred to as a test claim (§ 17521). The provisions of Gov. Code, § 17500 et seq., provide the sole and exclusive procedure by which a local agency may claim reimbursement for costs mandated by the state as required by art. XIII B, § 6 (Gov. Code, § 17552). The Legislature has created a quasi-judicial body called the Commission on State Man-

dates, Gov. Code, § 17525, to hear and decide upon any claim by a local government that the local government is entitled to be reimbursed by the state for costs as required by Cal. Const., art. XIII B, § 6 (Gov. Code, § 17551, subd. (a)). It has defined "costs" as costs mandated by the state--any increased costs that the local government is required to incur as a result of any statute, or any executive order implementing any statute, which mandates a new program or higher level of service of any existing program within the meaning of Cal. Const., art. XIII B, § 6 (Gov. Code, § 17514). Finally, in Gov. Code, § 17556, subd. (d), it has declared that the commission shall not find costs mandated by the state if, after a hearing, the commission finds that the local government has the authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service.

(3) Limitation of Actions § 28--Defenses--Raising by Demurrer--Forfeiture.--The time bar of a statute of limitations may be raised by demurrer where the complaint discloses on its face that the statute of limitations has run on the causes of action stated in the complaint, for the reason that it fails to state facts sufficient to constitute a cause of action. Forfeiture of a time-bar defense transpires by the failure to raise the applicable statute of limitations in the answer.

(4) Mandamus and Prohibition § 57--Mandamus--Time Limits.--If a time limit in a mandamus proceeding is held to be jurisdictional, estoppel or waiver cannot extend the time.

(5) Limitation of Actions § 5--Validity, Construction, and Application of Statutes--Challenge to Constitutionality--State Funding Statute.--The time bar of Code Civ. Proc., § 341.5, applies to a challenge to the [*901] constitutionality of any statute relating to state funding for counties and other local governmental entities, not to a challenge to an action by an administrative agency.

(6) Pollution and Conservation Laws § 5--Water Pollution--Statewide Program for Quality Control--Administration by Regional Water Quality Control Boards--Issuance of Discharge Permits.--Part of the federal Clean Water Act (33 U.S.C. § 1251 et seq.) is the National Pollutant Discharge Elimination System (NPDES), the primary means for enforcing effluent limitations and standards under the Clean Water Act. The NPDES sets out the conditions under which the federal Environmental Protection Agency or a state with an approved water quality control program can issue permits for the discharge of pollutants in wastewater (33 U.S.C. § 1342(a) & (b)). In California, wastewater discharge requirements established by the Regional Water Quality

Control Boards are the equivalent of the NPDES permits required by federal law (Wat. Code, § 13374). California's Porter-Cologne Act (Wat. Code, § 13000 et seq.) establishes a statewide program for water quality control. Nine regional water boards, overseen by the State Water Board, administer the program in their respective regions (Wat. Code, §§ 13140, 13200 et seq., 13240, and 13301). Wat. Code, §§ 13374 and 13377, authorize the regional water board to issue federal NPDES permits for five-year periods (33 U.S.C. § 1342, subd. (b)(1)(B)).

(7) Constitutional Law § 13--Construction of Constitutions--Language of Enactment--Voters' Intent.--In construing the meaning of Cal. Const., art. XIII B, § 6, a court's inquiry is not focused on what the Legislature intended in adopting the former statutory reimbursement scheme, but rather on what the voters meant when they adopted art. XIII B, § 6. To determine this intent, the court must look to the language of the provision itself.

(8) State of California § 11--Fiscal Matters--Reimbursement to Local Governments--New Programs and Services--Subvention.--The subvention requirement of Cal. Const., art. XIII B, § 6, applies whenever the Legislature or any state agency mandates a new program or higher level of service. The all-encompassing "any state agency" language defeats any perceived presumption that the electorate intended to incorporate into art. XIII B, § 6, the exclusion of a particular state agency from its subvention requirement. [*902]

(9) State of California § 11--Fiscal Matters--Reimbursement to Local Governments--New Programs and Services--Subvention--Unconstitutionality of Conflicting Statute--Order Issued by Regional Water Board.--The constitutional infirmity of Gov. Code, § 17516, subd. (c), is readily apparent from its plain language that the definition of "executive order" does not include any order, plan, requirement, rule, or regulation issued by the State Water Board or by any regional water quality control board pursuant to division 7 (commencing with Wat. Code, § 13000) of the Water Code (§ 17516, subd. (c)). This exclusion of any order issued by any regional water board contravenes the clear, unequivocal intent of Cal. Const., art. XIII B, § 6, that subvention of funds is required whenever any state agency mandates a new program or higher level of service on any local government (§ 17516, subd. (c)). Therefore, § 17516, subd. (c), is unconstitutional to the extent it excludes any order issued by any regional water board pursuant to division 7 (commencing with Wat. Code, § 13000) of the Water Code from the definition of "executive order." This conclusion leads to the further conclu-

sion that whether one or both of the subject two obligations constitutes a state mandate necessitating subvention of funds under Cal. Const., art. XIII B, § 6, is an issue that must in the first instance be resolved by the Commission on State Mandates.

(10) State of California § 11--Fiscal Matters--Reimbursement to Local Governments--New Programs and Services--Subvention--Unconstitutionality of Conflicting Statute--Order Issued by Regional Water Board--Remedy.--Because Gov. Code, § 17516, subd. (c), is unconstitutional to the extent it purports to exempt orders issued by regional water quality control boards from the definition of "executive orders" for which subvention of funds to local governments for carrying out state mandates is required pursuant to Cal. Const., art. XIII B, § 6, a trial court properly issued a writ of mandate directing the Commission on State Mandates to resolve four test claims presented by a county and several cities on the merits without reference to § 17516, subd. (c).

OPINION BY: Aldrich

OPINION

[**764] **ALDRICH, J.--**

INTRODUCTION

The California Commission on State Mandates (the Commission) appeals from the judgment entered following the partial grant of cross-motions for judgment on the pleadings. The County of Los Angeles, the Los Angeles County Flood Control District, and the Cities of Commerce, Carson, Downey, Hawaiian Gardens, Montebello, Santa Fe Springs, Signal Hill, Artesia, Beverly Hills, La Mirada, Monrovia, Norwalk, Rancho Palos Verdes, San Marino and Westlake Village (collectively, County/Cities) filed a cross-appeal from the judgment.

In 2001, the Regional Water Quality Control Board (Regional Water Board), Los Angeles Region, issued a National Pollutant Discharge Elimination System (NPDES) permit for municipal stormwater and urban runoff discharges, which obligated County/Cities to inspect industrial, [*904] commercial, and construction water treatment facilities (which obligation County/Cities claim [***3] the state previously performed) and to install and maintain trash receptacles at transit stops.

County/Cities presented "test claims" ¹ to the executive director of the Commission [**765] seeking reimbursement for carrying out these obligations pursuant to the constitutional requirement for subvention arising from a state mandate (Cal. Const., art. XIII B, § 6). The executive director returned the claims unadjudicated, because they did not involve an executive order under section 17516 of the Government Code (Section 17516(c)). In denying the appeals of County/Cities, the Commission noted it was without authority to declare a statute unconstitutional and concluded that Section 17516(c) excludes from the subvention requirement any order, which includes a permit, issued by the Regional Water Boards of the State Water Resources Control Board (State Water Board).

¹ "Test claim" means the first claim filed with the commission alleging that a particular statute

or executive order imposes costs mandated by the state." (Gov. Code, § 17521.)

[***4] Section 6 of article XIII B of the California Constitution (article XIII B, section 6) provides in pertinent part: [HN1]"Whenever the Legislature or *any state agency* mandates a new program or higher level of service on any local government, the State shall provide a subvention of funds to reimburse that local government for the costs of the program or increased level of service" (Italics added.)

As we shall discuss, Section 17516(c) is unconstitutional to the extent it exempts Regional Water Boards from the constitutional state mandate subvention requirement. Its creation of an exception for Regional Water Boards, which are state agencies, contravenes the plain, unequivocal, and all-inclusive reference to "any state agency" in article XIII B, section 6. Moreover, a contrary conclusion is not compelled by virtue of the fact that Section 17516(c) essentially mirrors the language of section 2209, subdivision (c) (§ 2209(c)) of the Revenue and Taxation Code. A statute cannot trump the Constitution.

We decline to consider the Commission's new claim that the constitutional challenge to Section 17516(c) by County/Cities is barred by the 90-day limitation period [***5] of section 341.5 of the Code of Civil Procedure. This statute of limitations defense, which should have been raised before the trial court, is not cognizable on this appeal. [*905]

The Commission urges that should this court conclude Section 17516(c) is unconstitutional, the appropriate remedy is to afford the Commission the opportunity to pass on the merits of the subject test claims on the issues of whether (1) the subject permit qualifies as a state-mandated program under article XIII B, section 6; (2) the permit amounts to a new program or higher level of service; and (3) the permit imposes costs on local entities (Gov. Code, §§ 17514, 17556). We find its position persuasive.

The cross-appeal filed by County/Cities is premised on the theory that if subvention of funds from the Commission is foreclosed by Section 17516(c), County/Cities are entitled to pursue an independent action against the Regional Water Board, Los Angeles Region (LA Regional Water Board). This cross-appeal, which is simply protective in nature, is moot.

In sum, we uphold the trial court's issuance of a writ of mandate directing the Commission [***6] to set aside its decisions affirming its executive director's rejections of the subject test claims and to consider fully these test claims and determine whether County/Cities are entitled to reimbursement without consideration of

Section 17516(c), and we affirm the judgment in its entirety.

BACKGROUND

1. Article XIII B, Section 6, Subvention of Funds for State Mandates

"The electorate approved Proposition 4 in 1979, thus adding article XIII B to the state Constitution. [**766] While the earlier Proposition 13 limited the state and local governments' power to increase taxes (see Cal. Const., art. XIII A, added by initiative measure in Primary Elec. (June 6, 1978)), Proposition 4, the so-called 'Spirit of 13,' imposed a complementary limit on the rate of growth in governmental spending." (*San Francisco Taxpayers Assn. v. Board of Supervisors* (1992) 2 Cal.4th 571, 574 [7 Cal. Rptr. 2d 245, 828 P.2d 147].) This measure also "provided [for] reimbursement to local governments for the costs of complying with certain requirements mandated by the state." (*Long Beach Unified Sch. Dist. v. State of California* (1990) 225 Cal. App. 3d 155, 172 [275 Cal. Rptr. 449].)

"[V]oters were told [***7] that section 6 of Proposition 4 was intended to prevent state government attempts 'to force programs on local governments without the state paying for them.' (Ballot Pamp., Special State-wide Elec. [Nov. 6, 1979] p. 18.)" (*County of Sonoma v. Commission on State Mandates* (2000) 84 Cal.App.4th 1264, 1282 [101 Cal. Rptr. 2d 784]; see also *County of Los Angeles v. State of California* (1987) 43 Cal.3d 46, 56 [233 Cal. Rptr. 38, 729 P.2d 202] [intent was not all local costs arising from compliance with state law to be reimbursable; rather, intent was to prevent "the perceived [*906] attempt by the state to enact legislation or adopt administrative orders creating programs to be administered by local agencies, thereby transferring to those agencies the fiscal responsibility for providing services which the state believed should be extended to the public".])

"Section 6 was included in article XIII B in recognition that article XIII A of the Constitution severely restricted the taxing powers of local governments. [Citation.] The provision was intended to preclude the state from shifting financial responsibility for carrying out governmental functions onto local entities that were ill equipped [***8] to handle the task. [Citations.] Specifically, it was designed to protect the tax revenues of local governments from state mandates that would require expenditure of such revenues. Thus, although its language broadly declares that the 'state shall provide a subvention of funds to reimburse ... local government for the costs [of a state-mandated new] program or higher level of service,' read in its textual and historical context section 6 of article XIII B requires subvention only when

the costs in question can be recovered *solely from tax revenues.*" (*County of Fresno v. State of California* (1991) 53 Cal.3d 482, 487 [280 Cal. Rptr. 92, 808 P.2d 235], original italics; see also *Lucia Mar Unified School Dist. v. Honig* (1988) 44 Cal.3d 830, 836, fn. 6 [244 Cal. Rptr. 677, 750 P.2d 318] [a reimbursement requirement was "enshrined in the Constitution ... to provide local entities with the assurance that state mandates would not place additional burdens on their increasingly limited revenue resources".])

Article XIII B, section 6 provides: "(a) Whenever the Legislature or any state agency mandates a new program or higher level of service on any local government, the State [***9] shall provide a subvention of funds to reimburse that local government for the costs of the program or increased level of service, except that the Legislature may, but need not, provide such a subvention of funds for the following mandates. [¶] (1) Legislative mandates requested by the local agency affected. [¶] (2) Legislation defining a new crime or changing an existing definition of a crime. [¶] (3) Legislative mandates enacted prior to January 1, 1975, or executive orders or regulations initially implementing legislation enacted prior to January 1, 1975."

[HN2](1) " 'Subvention' generally means a grant of financial aid or assistance, or a [**767] subsidy. [Citation.] As used in connection with state-mandated costs, the basic legal requirements of subvention can be easily stated; it is in the application of the rule that difficulties arise.

"Essentially, the constitutional rule of state subvention provides that the state is required to pay for any new governmental programs, or for higher levels of service under existing programs, that it imposes upon local governmental agencies. [Citation.] This does not mean that the state is required to [*907] reimburse local agencies for any incidental [***10] cost that may result from the enactment of a state law; rather, the subvention requirement is restricted to governmental services which the local agency is required by state law to provide to its residents. [Citation.] The subvention requirement is intended to prevent the state from transferring the costs of government from itself to local agencies. [Citation.] Reimbursement is required when the state 'freely chooses to impose on local agencies *any* peculiarly "governmental" cost which they were not previously required to absorb.' [Citation.]" (*Hayes v. Commission on State Mandates* (1992) 11 Cal.App.4th 1564, at 1577-1578 [15 Cal. Rptr. 2d 547].)

[HN3]The subvention requirement of article XIII B, section 6 is triggered if "the Legislature or any state agency" mandates a new program or higher level of service. (Art. XIII B, § 6.) Such requirement is inapplicable

where the additional costs on local governments are imposed by a federal mandate, i.e., the federal government. Article XIII B, section 9, subdivision (b) of the California Constitution, defines federally mandated appropriations as those "required to comply with mandates of the courts or the federal government which, *without discretion*, [***11] require an expenditure for additional services or which *unavoidably make the provision of existing services more costly*." ² (Italics added.)

2 "In 1980, after the adoption of article XIII B, [the Legislature] amended the statutory definition of 'costs mandated by the federal government' to provide that these include 'costs resulting from enactment of a state law or regulation where failure to enact such law or regulation to meet specific federal program or service requirements would result in *substantial monetary penalties or loss of funds to public or private persons* in the state. ...' (Rev. & Tax. Code, § 2206, italics added; Stats. 1980, ch. 1256, § 3, p. 4247.)" (*City of Sacramento v. State of California* (1990) 50 Cal.3d 51, 75 [266 Cal. Rptr. 139, 785 P.2d 522].)

There is no precise formula or rule for determining whether the "costs" are the product of a federal mandate. Our Supreme Court explained: "Given the variety of cooperative federal-state-local programs, we here attempt no final test for 'mandatory' versus 'optional' compliance with federal law. A determination in each case must depend on such factors as the nature and purpose of the federal program; whether its design suggests an intent to coerce; when state and/or local participation began; the penalties, if any, assessed for withdrawal or refusal to participate or comply; and any other legal and practical consequences of nonparticipation, noncompliance, or withdrawal. Always, the courts and the Commission must respect the governing principle of article XIII B, section 9(b): neither state nor local agencies may escape their spending limits when their participation in federal programs is truly voluntary." (*City of Sacramento v. State of California, supra*, 50 Cal.3d at p. 76.)

[***12] 2. *Existence of State Mandate Matter for the Commission*

[HN4](2) Whether a particular cost incurred by a local government arises from carrying out a state mandate for which subvention is required under article XIII B, section 6, is a matter for the Commission to determine in the first instance. [*908]

A local government initiates the process for subvention under article XIII B, section 6 by filing a claim with the Commission. (Gov. Code, § 17521; [**768] cf. *County of San Diego v. State of California* (1997) 15 Cal.4th 68, 89 [61 Cal. Rptr. 2d 134, 931 P.2d 312] [futility exception to exhaustion of administrative remedies doctrine applicable to failure to file claim before Commission].) The initial claim is referred to as a "test claim." (Gov. Code, § 17521.)

"The Legislature enacted Government Code sections 17500 through 17630 to implement article XIII B, section 6. (Gov. Code, § 17500.)" (*County of Fresno v. State of California, supra*, 53 Cal. 3d at p. 484.) The provisions of Government Code section 17500 et seq. "provide the sole and exclusive [***13] procedure by which a local agency ... may claim reimbursement for costs mandated by the state as required by" article XIII B, section 6. (Gov. Code, § 17552.)

[HN5]"It created a 'quasi-judicial body' (*ibid.*) called the Commission on State Mandates ... ([Gov. Code], § 17525) to 'hear and decide upon [any] claim' by a local government that the local government 'is entitled to be reimbursed by the state for costs' as required by article XIII B, section 6. (Gov. Code, § 17551, subd. (a).) It defined 'costs' as 'costs mandated by the state'--'any increased costs' that the local government 'is required to incur ... as a result of any statute ... , or any executive order implementing any statute ... , which mandates a new program or higher level of service of any existing program' within the meaning of article XIII B, section 6. (Gov. Code, § 17514.) Finally, in section 17556(d) it declared that 'The commission shall not find costs mandated by the state ... if, after a hearing, the commission finds that' the local government 'has the authority to levy service charges, fees, [***14] or assessments sufficient to pay for the mandated program or increased level of service.' " (*County of Fresno v. State of California, supra*, 53 Cal. 3d at p. 484.)

3. *Regional Water Board Order Not "Executive Order"*

Section 17516(c) defines, in pertinent part, an "[e]xecutive order" [as] any order, plan, requirement, rule, or regulation issued by ... [¶] ... [¶] ... [a]ny agency ... of state government, " except an "[e]xecutive order" does not include any order, plan, requirement, rule, or regulation issued by the State Water ... Board or by any regional water ... board pursuant to Division 7 (commencing with Section 13000) of the Water Code." ³ (Added by Stats. 1984, ch. 1459, § 1, p. 5113.)

3 Section 17516(c) further provides: "It is the intent of the Legislature that the State Water ... Board and regional water ... boards will not adopt enforcement orders against publicly owned dis-

chargers which mandate major waste water treatment facility construction costs unless federal financial assistance and state financial assistance pursuant to the Clean Water Bond Act of 1970 and 1974, is simultaneously made available. 'Major' means either a new treatment facility or an addition to an existing facility, the cost of which is in excess of 20 percent of the cost of replacing the facility."

LA Regional Water Board argues the trial court's ruling sustaining its demurrer to the fourth cause of action for a writ of mandate directing it to delete the subject two obligations under the permit as violative of Government Code section 17516 should be upheld, because section 17516 "applies to construction of major waste treatment facilities, not trash receptacles or inspections." This analysis, however, is inconsistent with the plain language of section 17516 in its entirety.

[*909]

[***15] In light of the above definition, the subject permit issued by an order of the LA Regional Water Board cannot constitute an "executive order implementing any statute, ... which mandates a new program or higher level of service of an existing program within the meaning of" the article XIII B, section 6 [*769] requirement of subvention of funds to local governments for carrying out a state mandate. (Gov. Code, § 17514.)

4. Procedural Posture

LA Regional Water Board issued order No. 01-182, which adopted NPDES permit No. CAS004001 (Permit). This Permit imposed two obligations on County/Cities for the purpose of regulating municipal stormwater and urban runoff discharges in Los Angeles County. The first required County/Cities to inspect industrial, commercial, and construction sites to ensure compliance with the law, and the other required County/Cities to install and maintain trash receptacles at transit stops.

County/Cities filed four test claims, i.e., test claims 03-TC-04, 03-TC-19, 03-TC-20, and 03-TC-21, seeking reimbursement of costs for carrying out these obligations. The executive director rejected these test claims as excluded from subvention [***16] pursuant to Section 17516(c).

In the administrative appeals, the Commission found it was bound by Section 17516(c), upheld its executive director's decision, and denied the appeals.

In their amended and consolidated petitions and complaints, County/Cities sought, among other things: (1) An order requiring the State to reimburse them for the new programs or higher level of service under the

Permit or, alternatively, to allow them to offset payment of permit and other fees or moneys owed or to be transferred to the state against their costs; (2) an order enjoining state from refusing to reimburse them in the future; or, alternatively, (3) a peremptory writ of mandate directing the Commission to accept their test claims and find they are entitled to reimbursement; (4) a declaration that Government Code section 17516 is unconstitutional; (5) a peremptory writ of mandate directing LA Regional Water Board either to delete or not [*910] enforce the subject obligations under the Permit; and (6) a stay of the challenged portions of the permit.

The Commission and County/Cities filed cross-motions for judgment on the pleadings. The trial court granted the Commission's motion as to the second cause of action for declaratory [***17] relief. The court explained: "The only actual controversy between [County/Cities] and [Commission] is whether [County/Cities]' claims should be deemed reimbursable. The sole and exclusive procedure by which to adjudicate this controversy is a mandate action under Code of Civil Procedure section 1094.5. (Government Code sections 17552, 17559.) The only pertinent relief under ... section 1094.5 is a finding that [the Commission] 'has not proceeded in the manner required by law.' Declaratory relief is not available."

After construing the motion addressed to the third cause of action as a motion to strike improper requested relief, the court granted the motion and struck that part of the third cause of action requesting an order directing the Commission to find their claims to be reimbursable on the ground "[t]he court has no power at this time to do so. [Citations.]"

Turning to County/Cities' motion for judgment on the pleadings, the trial court granted the motion as to the third cause of action for extraordinary writ relief, except as to the stricken request for improper relief. ⁴

4 In the third cause of action, County/Cities sought a writ of mandate (Code Civ. Proc., § 1094.5) compelling a court finding that Government Code section 17516 was unconstitutional on its face or as applied in this action and directing the Commission to accept their test claims for filing and approving them for reimbursement.

[***18] The court found that to the extent Section 17516(c) excepted the orders of Regional [***770] The Water Boards from the definition of "executive orders," Section 17516(c) was unconstitutional in that it expressly contravened article XIII B, section 6. The court ordered the Commission to set aside its order affirming its executive director's rejections of the four test claims and to consider these claims on the merits.

In granting in part County/Cities' petitions for a writ of mandate, the trial court found the Commission, "though it proceeded as required by statutory law, as it was constrained to do, has not proceeded as required by superior constitutional law. (Code Civ. Proc., [§ 1094.5, subd. (a).]) The question whether [County/Cities] state valid claims for reimbursement must be remanded to [C]ommission, which is ordered to consider [these] claims on their merits. [Citations.]" [*911]

A peremptory writ of mandate was issued on May 24, 2005. Judgment was entered the same date. This appeal and cross-appeal followed.

STANDARD OF REVIEW

"The standard for reviewing a judgment on the pleadings is settled: [HN6]'A motion for judgment on the pleadings is the equivalent [***19] of a general demurrer but is made after the time for demurrer has expired. The rules governing demurrers apply. [Citation.] The grounds for a motion for judgment on the pleadings must appear on the face of the challenged complaint or be based on facts which the court may judicially notice. [Citations.] On review we must determine if the complaint states a cause of action as a matter of law.' [Citation.] 'We review the complaint de novo to determine whether [it] alleges facts sufficient to state a cause of action under any legal theory. [Citation.]" [Citation.]" (McCormick v. Travelers Ins. Co. (2001) 86 Cal.App.4th 404, 408 [103 Cal. Rptr. 2d 258].)

[HN7]"In reviewing the trial court's ruling on a writ of mandate, the appellate court is ordinarily confined to an inquiry as to whether the findings and judgment of the trial court are supported by substantial evidence. (Evans v. Unemployment Ins. Appeals Bd. (1985) 39 Cal.3d 398, 407 [216 Cal. Rptr. 782, 703 P.2d 122].) However, where the facts are undisputed and the issues present questions of law, the appellate court is not bound by the trial court's decision but may make its own determination. (*Ibid.*)" (Connell v. Superior Court (1997) 59 Cal.App.4th 382, 394 [69 Cal. Rptr. 2d 231].)

[***20] DISCUSSION

1. Defense of Statute of Limitations Forfeited

On appeal for the first time, the Commission asserts the challenge of County/Cities to the constitutionality of Section 17156(c) is barred by the 90-day limitation period of section 341.5 of the Code of Civil Procedure, which governs the timeliness of actions challenging the constitutionality of state funding for municipalities, school districts, special districts, and local agencies.

Code of Civil Procedure section 341.5 provides: [HN8]"Notwithstanding any other provision of law, any

action or proceeding in which a county, city, city and county, school district, special district, or any other local agency is a plaintiff or petitioner, that is brought against the State of California challenging the constitutionality of any statute relating to state funding for counties, cities, cities and counties, school districts, special districts, or other local agencies, shall be commenced within 90 days of the effective date of the [*912] statute at issue in the action. For purposes of this section, 'State of California' means the State of California itself, or any of its agencies, [***21] departments, commissions, boards, or public officials." (Added by [**771] Stats. 1994, ch. 155, § 1, p. 1601, eff. July 11, 1994; amended by Stats. 1994, ch. 156, § 1, p. 1619, eff. July 11, 1994.)

The Commission argues the constitutional challenge to Section 17516(c) is time-barred, because: "Government Code section 17500 et seq., including section 17516, relates to state funding for counties and cities relative to state-mandated local programs. ... [S]ection 17516 was enacted in 1984 and became effective January 1, 1985. The petition in this case challenging section 17516 as unconstitutional was filed April 28, 2004," which was more than 90 days after the effective date of section 17516.

[HN9](3) The time bar of a statute of limitations may be raised by demurrer "[w]here the complaint discloses on its face that the statute of limitations has run on the causes of action stated in the complaint, [for the reason that] it fails to state facts sufficient to constitute a cause of action. [Citation.]" (ABF Capital Corp. v. Berglass (2005) 130 Cal.App.4th 825, 833 [30 Cal. Rptr. 3d 588].) Forfeiture of a time-bar defense transpires by the failure to raise [***22] the applicable statute of limitations in the answer. (See, e.g., Minton v. Cavanaugh (1961) 56 Cal.2d 576, 581 [15 Cal. Rptr. 641, 364 P.2d 473]; Davies v. Krasna (1975) 14 Cal.3d 502, 508 [121 Cal. Rptr. 705, 535 P.2d 1161]; Mitchell v. County Sanitation Dist. (1957) 150 Cal. App. 2d 366, 371 [309 P.2d 930]; see also Code Civ. Proc., § 458.)

As the Commission concedes, it did not raise "[Code of Civil Procedure] section 341.5 as an affirmative defense in its pleadings in the trial court." This omission signifies that the Commission therefore has forfeited any right it may have had to assert section 341.5 to bar, as untimely, the claims of County/Cities to the constitutionality of Section 17516(c).

(4) For a contrary conclusion, the Commission argues "the statute of limitations to challenge an administrative action is jurisdictional and should not be considered waived. (United Farm Workers of America v. Agricultural Labor Relations Board (1977) 74 Cal. App. 3d 347, 350 [141 Cal. Rptr. 437]; Tietch v. City of Anaheim (1984) 160 Cal. App. 3d 576, 578 [206 Cal. Rptr.

740]; [***23] Domellan v. City of Novato (2001) 86 Cal.App.4th 1097, 1103 [103 Cal. Rptr. 2d 882].) [HN10]If a time limit in a mandamus proceeding is held to be jurisdictional, estoppel or waiver cannot extend the time. (Hollister Convalescent Hosp., Inc. v. Rico (1975) 15 Cal.3d 660, 666, 674 [125 Cal. Rptr. 757, 542 P.2d 1349].) [*913]

The Commission's fallback position is that this court should exercise its discretion to determine the applicability of the time bar, because this "issue is a question of law rather than of fact" and "[t]his matter affects the public interest since [County/Cities] are seeking reimbursement from the state for costs incurred to comply with a permit" issued by the LA Regional Water Board. In other words, "taxpayers statewide could unjustly suffer the consequences of funding a local program if Code of Civil Procedure section 341.5 is not considered and ... section 17516 is held to be unconstitutional." As authority, the Commission relies primarily on City of Sacramento v. State of California, *supra*, 50 Cal.3d at pages 64-65 (where issue of law rather than fact raised, public interest exception governs over [***24] collateral estoppel bar) and Connell v. Superior Court, *supra*, 59 Cal.App.4th at pages 387-388, 396-397 (public interest exception applicable to allow review of question of law as to whether recycled wastewater regulation constituted reimbursable state mandate.)

(5) Neither of the Commission's positions is successful. In the first instance, [HN11]the time [**772] bar of section 341.5 of the Code of Civil Procedure applies to a challenge to the constitutionality of any statute relating to state funding for counties and other local governmental entities, *not* to a challenge to an action by an administrative agency. As for the second, [HN12]neither City of Sacramento nor Connell stands for the proposition that the bar of the applicable statute of limitations may be raised for the first time on appeal.

Additionally, the Commission's characterization of the public interest to be served is a non sequitur. If Government Code section 17516 were in fact unconstitutional, it does not follow that "taxpayers statewide could *unjustly* suffer the consequences of funding a local program." (Italics added.) How could such funding result in injustice when any requirement of [***25] reimbursement to local governments would be under the constitutional compulsion of article XIII B, section 6

2. Existence of Federal or State Mandate Issue for the Commission

It is undisputed that a federal mandate is not subject to the subvention requirement of article XIII B, section 6 for a state mandate. Accordingly, if the Permit, including the subject two obligations thereunder, constitutes a fed-

eral mandate, the constitutionality of Section 17516(c) is not implicated, and thus, no issue as to its constitutionality is before this court to address on the merits. (See People ex rel. Lynch v. Superior Court (1970) 1 Cal.3d 910, 912 [83 Cal. Rptr. 670, 464 P.2d 126] ["The rendering of advisory opinions falls within neither the functions nor the jurisdiction of this court."].) [*914]

In its amicus curiae brief, LA Regional Water Board takes the position that, as a matter of law, Section 17516(c) is consistent with article XIII B, section 6 (and thus not unconstitutional) "to the extent Division 7, Chapter 5.5 (commencing with Water Code section 13370)" simply implements federal mandates under the Clean Water Act (33 U.S.C. § 1342(b)). [***26] The water boards, i.e., the State Water Board and its Regional Water Boards, implement the federal permit program under chapter 5.5, which the California Legislature enacted to bypass administration of such program directly by the federal Environmental Protection Agency.

LA Regional Water Board takes the further position that the federal mandate nature of its NPDES permits remains constant although it exercises discretion to control the discharge of pollutants through municipal stormwater programs not appearing in federal regulations. Specifically, LA Regional Water Board argues: "When a state [Regional Water Board] issues an NPDES permit requiring municipalities to inspect facilities as a means of controlling their discharge of pollutants, this is not shifting state responsibilities onto local agencies[, because f]ederal law imposes inspection requirements upon municipal permittees."

As for the trash receptacle obligation, LA Regional Water Board points out the Clean Water Act allows the use of programs to control discharge of pollutants in connection with a municipal stormwater permit and argues one such program under the Permit is the ability of "municipalities to employ 'Best [***27] Management Practices' (BMPs) to ... attain water quality standards." It identifies "[t]he Permit's trash receptacle requirement as one such [BMP]."

It further argues that the trash receptacle obligation cannot be deemed a state-mandated program, because it is not "an absolute requirement. Any permittee may petition the Regional Water Board to substitute another equally effective BMP for one included within the Permit.[.] [For instance, i]f a permittee demonstrates that [**773] a pre-existing program or level of service will be equally effective in controlling pollution, it may seek to substitute that program."

We are not convinced that the obligations imposed by a permit issued by a Regional Water Board necessarily constitute federal mandates under all circumstances.

As explained, *ante*, the existence of a federal, as contrasted with a state, mandate is not easily ascertainable.

By letter, we invited the parties and LA Regional Water Board to address whether an obligation under an NPDES permit by a Regional Water Board can qualify as a state mandate within the meaning of article XIII B, section 6, assuming an NPDES permit itself qualified as a federal mandate, and if so, [*915] why each [***28] of the subject two obligations does or does not constitute a state mandate. We have received their responses.

a. *NPDES Permits Issued by Regional Water Boards*

"California cases have repeatedly explained the complicated web of federal and state laws and regulations concerning water pollution, especially storm sewer discharge into the public waterways. (*City of Burbank v. State Water Resources Control Bd.* (2005) 35 Cal.4th 613, 619-621 [26 Cal. Rptr. 3d 304, 108 P.3d 862] (*Burbank*); *Building Industry Assn. of San Diego County v. State Water Resources Control Board* (2004) 124 Cal.App.4th 866, 872-875 [22 Cal. Rptr. 3d 128] ... ; *Communities for a Better Environment v. State Water Resources Control Bd.* (2003) 109 Cal.App.4th 1089, 1092-1094 [1 Cal. Rptr. 3d 76] ... ; *WaterKeepers Northern California v. State Water Resources Control Bd.* (2002) 102 Cal.App.4th 1448, 1451-1453 [126 Cal. Rptr. 2d 389].)

(6) "For purposes of this case, the important point is described by the California Supreme Court in *Burbank*: [HN13]"Part of the Federal Clean Water Act [33 U.S.C. § 1251 et seq.] is the National Pollutant Discharge Elimination System (NPDES), "[t]he primary means" for enforcing effluent limitations [***29] and standards under the Clean Water Act. (*Arkansas v. Oklahoma* [(1992) 503 U.S. 91, 101 [117 L. Ed. 2d 239, 112 S. Ct. 1046]].) The NPDES sets out the conditions under which the federal [Environmental Protection Agency] or a state with an approved water quality control program can issue permits for the discharge of pollutants in wastewater. (33 U.S.C. § 1342(a) & (b).) In California, wastewater discharge requirements established by the regional [water] boards are the equivalent of the NPDES permits required by federal law. (§ 13374.)' (*Burbank, supra*, 35 Cal.4th at p. 621.)

"California's Porter-Cologne Act (Wat. Code, § 13000 et seq.) establishes a statewide program for water quality control. Nine regional [water] boards, overseen by the State [Water] Board, administer the program in their respective regions. (Wat. Code, §§ 13140, 13200 et seq., 13240, and 13301.) Water Code sections 13374 and 13377 authorize the Regional [Water] Board to issue federal NPDES permits for five-year periods. (33 U.S.C. § 1342, subd. (b)(1)(B).)" [***30] ⁵ [***774] (*City of*

Rancho Cucamonga v. Regional Water Quality Control Bd. (2006) 135 Cal.App.4th 1377, 1380-1381 [38 Cal. Rptr. 3d 450].) In a related case, Division Five of this district upheld the authority of LA Regional Water Board to issue the Permit here. (*County of Los Angeles v. State Water Resources Control Board* (2006) 143 Cal.App.4th 985, 999-1000 [50 Cal. Rptr. 3d 619], review den. [holding the nine Regional Water Boards authorized under state law to issue NPDES permits].)

5 In pertinent part, article XIII B, section 6, provides: "[T]he Legislature may, but need not, provide a subvention of funds for the following mandates: [¶] ... [¶] (3) Legislative mandates enacted prior to January 1, 1975, or executive orders ... initially implementing legislation enacted prior to January 1, 1975." (Art. XIII B, § 6, subd. (a)(3).) LA Regional Water Board argues that subvention under article XIII B, section 6, is not required as to the Permit, because it is an executive order implementing the Porter-Cologne Water Quality Control Act (Wat. Code, § 13020 et seq.), which is legislation enacted in 1969. This argument fails for the reason that the executive order resulting in the 2001 Permit was not one "initially" implementing such pre-1975 legislation. Equally unsuccessful is LA Regional Water Board's apparent argument that Section 17516(c) should be deemed constitutional for the reason that "most of" the Porter-Cologne Act (div. 7) was enacted prior to 1975. The fatal fallacy of this position is that the exclusion of Section 17516(c) applies to all orders issued pursuant to division 7 *regardless* of the date the statute in question was enacted.

[***31] b. *Potential Federal and State Components of NPDES Permit*

As expected, LA Regional Water Board contends that as in the case of NPDES "permits as a whole, the individual conditions of an NPDES permit are federally required to meet the mandates of the Clean Water Act." It argues: "The Permit is federally required. The conditions within it are federally required to implement the Clean Water Act's mandates. The two cannot be separated into a 'federal' permit with 'state' conditions. [Citation.]"

County/Cities respond, contrariwise, that "[a]n NPDES permit can contain both federal and nonfederal requirements." As case authority, they rely primarily on *City of Burbank v. State Water Resources Control Bd., supra*, 35 Cal.4th 613. Our Supreme Court concluded that under the supremacy clause of the federal Constitution, a Regional Water Board must comply with the fed-

eral Clean Water Act in issuing an NPDES permit. (35 Cal. 4th at pp. 626-627.) Nonetheless, "[u]nder the federal Clean Water Act, each state is free to enforce its own water quality laws so long as its effluent limitations are not 'less stringent' than those set out in the Clean Water Act. [Citation.]" (*Id.* at p. 620.) [***32] The court thus acknowledged in *Burbank* that an NPDES permit may contain terms federally mandated and terms exceeding federal law. (See also *Burbank, supra.* at pp. 618, 628.) County/Cities also point out that the potential for non-federally mandated components of an NPDES permit is acknowledged under both federal law ⁶ and state law. ⁷

6 In this regard, they rely on this federal statute: "Except as expressly provided in this Act [33 USCS §§ 1251 et seq.], nothing in this Act [33 USCS §§ 1251 et seq.] shall (1) preclude or deny the right of any State or political subdivision thereof or interstate agency to adopt or enforce (A) any standard or limitation respecting discharges of pollutants, or (B) any requirement respecting control or abatement of pollution; except that if an effluent limitation, or other limitation ... is in effect under this Act [33 USCS §§ 1251 et seq.], such State[, etc.] ... may not adopt or enforce any effluent limitation or other limitation ... which is less stringent than the effluent limitation, or other limitation" (33 U.S.C.S. § 1370.) [***33]

7 On this point, they rely on this statutory provision: "Notwithstanding any other provision of this division, the state board or the regional boards shall, as required or authorized by the Federal Water Pollution Control Act, as amended, issue waste discharge requirements ... which apply and ensure compliance with all applicable provisions of the act and acts amendatory thereof or supplementary, thereto, together with any more stringent effluent standards or limitations necessary to implement water quality control plans, or for the protection of beneficial uses, or to prevent nuisance." (Wat. Code, § 13377.) [***33]

[*917]

[**775] Additionally, County/Cities argue "that an obligation imposed on a municipality arises as a result of a federal law or program does not, in and of itself, render that obligation a federal mandate." Rather, they assert that to qualify as a federal mandate, "federal law itself must impose the obligation upon the municipality." They point out Government Code section 17556 provides that costs flowing from a federal mandate may be subject [***34] to subvention if such costs exceed such

mandate. ⁸ They also cite two cases in support of their position.

8 Government Code section 17556, subdivision (c), provides: [HN14]"The commission shall not find costs mandated by the state, as defined in Section 17514, in any claim submitted by a local agency or school district, if, after a hearing, the commission finds ... [¶] ... [¶] [t]he statute or executive order imposes a requirement that is mandated by a federal law or regulation and results in costs mandated by the federal government, unless the statute or executive order mandates costs that exceed the mandate in that federal law or regulation."

In *San Diego Unified School Dist. v. Commission on State Mandates* (2004) 33 Cal.4th 859 [16 Cal. Rptr. 3d 466, 94 P.3d 589], our Supreme Court concluded the costs incurred by school districts in holding mandatory expulsion hearings under Education Code section 48915 were state mandates subject to subvention under article XIII B, section 6. [***35] The court explained that expulsion was mandated under the Education Code, rather than federal law, and thus, the fact the costs were incurred to comport with federal due process, a federal mandate, was not controlling. (*San Diego Unified School Dist. v. Commission on State Mandates, supra.* at pp. 880-882.)

In the other case, *Hayes v. Commission on State Mandates, supra.* 11 Cal.App.4th 1564, the appellate court concluded that the finding a mandate was federal turned on whether "the state freely chose to impose the costs upon the local agency as a means of implementing a federal program" and that under these circumstances, "the costs are the result of a reimbursable state mandate regardless whether the costs were imposed upon the state by the federal government." (*Id.* at p. 1594.)

c. *Existence of State Mandates Matter for the Commission*

A review of the pleadings and the matters that may be judicially noticed (Evid. Code, §§ 451, 452, 459) leads to the inescapable conclusion that whether the two obligations in question constitute federal or state mandates [***36] presents factual issues which must be addressed in the first instance by the [*918] Commission if Section 17516(c) were found to be unconstitutional. Resolution of the federal or state nature of these obligations therefore is premature and, thus, not properly before this court.

In its response, the Commission argues that if this court determines Section 17516(c) is unconstitutional, the subject test claims "should be remanded to ... Com-

mission to 'decide in the first instance whether a local agency is entitled to reimbursement under [article XIII B.] section 6[.]' (*Lucia Mar Unified School District v. Honig*, *supra*.) 44 Cal.3d 830, 837; Gov. Code, § 17552.)"

The Commission stated that on such remand, it would apply the following cases in determining whether state mandates exist: *City of Sacramento v. State of California*, *supra*, 50 Cal.3d 51, which sets forth various factors and criteria for determining whether the federal program imposes a mandate on the state; *Haves v. Commission on State Mandates*, *supra*, 11 Cal.App.4th 1564, [**776] which it contends "provides guidance on whether the state, [***37] in turn, has mandated a federal program on the local governments"; *Long Beach Unified Sch. Dist. v. State of California*, *supra*, 225 Cal. App. 3d 155, which analyzes whether the state-mandated activities exceed federal requirements; and *San Diego Unified School Dist. v. Commission on State Mandates*, *supra*, 33 Cal.4th 859, which also provides guidance on this same issue.

3. "Executive Order" Under Revenue and Taxation Code Not Probative

The Commission contends the exclusion of orders of the Regional Water Boards from the definition of "executive order" in Section 17516(c) does not contravene article XIII B, section 6, because Government Code section 17516 derives from the definition of "executive order" in Revenue and Taxation Code section 2209, ' of which the voters were presumed to have known to exist [*919] when they adopted Proposition 4 (i.e., art. XIII B, § 6) in 1979, and thus, Proposition 4 intended to endorse and continue such exclusion from the definition of "executive order" which was later carried over to Section 17516(c). We disagree.

9 Revenue and Taxation Code section 2209(c) provides: [HN15]" 'Executive order' means any order, plan, requirement, rule or regulation issued ... [¶] ... [¶] ... [b]y any agency ... of state government; provided that the term 'executive order' shall not include any order ... issued by the State Water ... Board or by any regional water ... board pursuant to Division 7 (commencing with Section 13000) of the Water Code.

"It is the intent of the Legislature that the State Water ... Board and regional water ... boards will not adopt enforcement orders against publicly owned discharges which mandate major waste water treatment facility construction costs unless federal financial assistance and state financial assistance pursuant to the Clean Water Bond Act of 1970 and 1974, is simultaneously made available.

" 'Major' means either a new treatment facility or an addition to an existing facility, the cost of which is in excess of 20 percent of the cost of replacing the facility." (Rev. and Tax. Code, § 2209(c), added by Stats. 1974, ch. 457, § 2, p. 1079, and amended by Stats. 1975, ch. 486, § 2, p. 998, eff. Sept. 2, 1975.)

[**38] We further disagree with the Commission's reliance on a presumption that when the voters adopted Proposition 1A in November 2004, they knew of, and thus, necessarily approved of Section 17516(c)'s exclusion of orders of Regional Water Boards from the definition of "executive order."

(7) Our focus, instead, must be on the import of article XIII B, section 6, not on the preconstitutional scheme for subvention of funds to local agencies of which section 2209 of the Revenue and Taxation Code was part. As our Supreme Court instructs: [HN16]"In construing the meaning of the constitutional provision [i.e., article XIII B, section 6], our inquiry is not focussed on what the Legislature intended in adopting the former statutory reimbursement scheme, but rather on what the voters meant when they adopted article XIII B in 1979. To determine this intent, we must look to the language of the provision itself. [Citation.]" (*County of Los Angeles v. California*, *supra*, 43 Cal.3d at p. 56.)

[HN17](8) The subvention requirement of article XIII B, section 6 applies "[w]henever the Legislature or any state agency mandates a new program or higher level of service" The all-encompassing [**39] "any state agency" language defeats any perceived presumption that the electorate intended to incorporate into article XIII B, section 6 the exclusion of a particular state agency, e.g., the Regional Water Board, from its subvention requirement.

[**777] 4. Section 17516(c) Unconstitutional as to Regional Water Boards

LA Regional Water Board argues in its amicus curiae brief that Section 17516(c) is constitutional for the additional reason that its exemption from the subvention requirement of article XIII B, section 6, is "appropriate because the Water Boards regulate water pollution with an even hand. Whether the pollution originates from a local public agency or a private industrial source, the Water Boards must assure their permits protect water quality consistent with state and federal law."

This argument is not persuasive. Whether the permit in question issued by Regional Water Boards governs both public and private pollution dischargers to the same extent presents factual issues not yet resolved. In any event, the applicability of permits to public and private dischargers does not inform us about whether a particular

permit or an obligation thereunder imposed on local governments constitutes [***40] a state mandate necessitating subvention under article XIII B, section 6. (See Carmel Valley Fire Protection Dist. v. State of California (1987) 190 Cal. App. 3d 521, 530-531, 534, 537, 541 [234 Cal. Rptr. 795] [executive orders for protective fire clothing and equipment state mandated even if record, which was incomplete, revealed private sector firefighters also subject to the executive orders].)

(9) In contrast, [HN18]the constitutional infirmity of Section 17516(c) is readily apparent from its plain language that the definition of "[e]xecutive order" does not include *any* order, plan, requirement, rule, or regulation issued by the State Water ... Board or by any regional water ... board pursuant to Division 7 (commencing with Section 13000) of the Water Code." (§ 17516(c), italics added.) This exclusion of any order issued by any Regional Water Board contravenes the clear, unequivocal intent of article XIII B, section 6 that subvention of funds is required "[w]henver ... any state agency mandates a new program or higher level of service on any local government" ¹⁰ (Italics added.) We therefore conclude that Section 17516(c) [***41] is unconstitutional to the extent it excludes "any order ... issued by ... any regional water ... board pursuant to Division 7 (commencing with Section 13000) of the Water Code" from the definition of "[e]xecutive order." (Art. XIII B, §6.)

10 At oral argument, when asked to identify the public policy or other reason that would be served by exempting Regional Water Boards from the constitutional subvention requirement, counsel for LA Regional Water Board responded exemption is warranted, because water is an important concern. No one can quarrel with the fact water plays an important role in California. Nonetheless, this reason does not compel the conclusion that an exemption should be carved out for Regional Water Boards as contrasted with those state agencies which regulate other important state interests.

This conclusion leads to the further conclusion that whether one or both of the subject two obligations constitutes a state mandate necessitating subvention of funds under [***42] article XIII B, section 6 is an issue that must in the first instance be resolved by the Commission. Accordingly, we uphold the trial court's issuance of a writ of mandate directing the Commission to vacate its decisions affirming its executive director's rejection of the four test claims and to consider these claims on the merits.

5. Cross-appeal Moot

County/Cities filed a protective cross-appeal from the judgment to the extent the trial court dismissed the portions of their writ of mandate petitions against LA Regional Water Board. ¹¹ The threshold [***778] issue raised is whether County/Cities are entitled to proceed directly in superior court against LA [***921] Regional Water Board for reimbursement relief if they are statutorily precluded from obtaining a hearing before the Commission.

11 The trial court sustained the demurrer to the fourth cause of action for a writ of mandate directing LA Regional Water Board to delete or not enforce the inspection and trash receptacle obligations. The court granted its own motion for judgment on the pleadings without leave to amend as to LA Regional Water Board on the first cause of action for a writ of mandate directing reimbursement; the second cause of action for declaratory relief; and the fifth cause of action for a writ of mandate directing LA Regional Water Board to delete or not enforce the subject obligations.

[***43] County/Cities' position is they are entitled to a hearing on the merits of their claims before either the Commission or LA Regional Water Board. If this court determines the Commission's jurisdiction is exclusive, the Commission must afford them a hearing and determine the merits of their subvention claim under article XIII B, section 6. If not exclusive, County/Cities must be allowed to seek relief directly against Regional Water Board before the superior court.

LA Regional Water Board argues County/Cities have no right to seek subvention relief from a Regional Water Board, because reimbursement of costs mandated by the state must be pursued through the statutory subvention scheme, which is "the sole and exclusive procedure by which a local agency ... may claim reimbursement for costs mandated by the state as required by Section 6 of Article XIII B" (Gov. Code, § 17552.) Their claims thus must be addressed exclusively to the Commission in first instance.

The cross-appeal against LA Regional Water Board is moot in light of our above conclusion that the Commission is to hear and determine the merits of the County/Cities' test claims. We therefore do [***44] not reach the merits of the issues raised in the cross-appeal.

CONCLUSION

(10) Section 17516(c) is unconstitutional to the extent it purports to exempt orders issued by Regional Water Boards from the definition of "executive orders" for which subvention of funds to local governments for car-

rying out state mandates is required pursuant to article XIII B, section 6. The trial court therefore properly issued a writ of mandate directing the Commission to resolve the four test claims on the merits without reference to Section 17516(c). In light of this conclusion, we need not, and therefore do not, address the issues raised on the now moot cross-appeal. [*922]

DISPOSITION

The judgment is affirmed. Each party shall bear its own costs on appeal and cross-appeal.

Klein, P. J., and Croskey, J., concurred.

COUNTY OF LOS ANGELES et al., Plaintiffs and Appellants, v. THE STATE OF CALIFORNIA et al., Defendants and Respondents. CITY OF SONOMA et al., Plaintiffs and Appellants, v. THE STATE OF CALIFORNIA et al., Defendants and Respondents

L.A. No. 32106

Supreme Court of California

43 Cal. 3d 46; 729 P.2d 202; 233 Cal. Rptr. 38; 1987 Cal. LEXIS 273

January 2, 1987

SUBSEQUENT HISTORY: Appellants' petition for a rehearing was denied February 26, 1987.

PRIOR HISTORY: Superior Court of Los Angeles County, Nos. C 424301 and C 464829, Leon Savitch and John L. Cole, Judges. The Court of Appeal, Second Dist., Div. Five, affirmed the first action; the second action was reversed and remanded to the State Board of Control for further and adequate findings (B001713 and B003561).

DISPOSITION: The judgment of the Court of Appeal is reversed. Each side shall bear its own costs.

CASE SUMMARY:

PROCEDURAL POSTURE: Appellant county and city sought review of a decision of the Court of Appeals, Third Appellate District, Second Division (California), which held that state-mandated increases in workers' compensation benefits, that do not exceed the rise in the cost of living, were not costs which must be borne by respondent state under Cal. Const. art. XIII B, and its legislative implementing statutes.

OVERVIEW: Proceedings were initiated to determine whether legislation, which increased certain workers' compensation benefit payments, was subject to the command of Cal. Const. art. XIII B that local government costs mandated by respondent state must be funded by respondent. Appellant county and city sought review

of the appellate court decision which held that state-mandated increases in workers' compensation benefits, that did not exceed the rise in the cost of living, were not costs which must be borne by respondent under Cal. Const. art. XIII B. On appeal, the court agreed that the State Board of Control properly denied appellants' claims but the court's conclusion rested on entirely new grounds. Thus, the judgment was reversed on a finding that appellants' petitions for writs of mandate to compel approval of appellants' claims lacked merit and should have been denied outright. The court concluded that Cal. Const. art. XIII B, § 6 had no application to, and respondent need not provide subvention for, the costs incurred by local agencies in providing to their employees the same increase in workers' compensation benefits that employees of private individuals or organizations received.

OUTCOME: The judgment of the court of appeal was reversed in favor of respondent state. The court concluded that appellant county and city's reimbursement claims were both properly denied by the California State Board of Control. Their petitions for writs of mandate seeking to compel the board to approve the claims lacked merit and should have been denied by the superior court without the necessity of further proceedings before the board.

Workers' Compensation & SSDI > Administrative Proceedings > Awards > Enforcement

[HN1]The legislative intent of the Cal. Const. art. XIII B was subvention for the expense or increased cost of programs administered locally and for expenses occasioned by laws that impose unique requirements on local governments and do not apply generally to all state residents or entities. In using the word "programs" the commonly understood meaning of the term was meant, as in programs which carry out the governmental function of providing services to the public.

Governments > Legislation > Expirations, Repeals & Suspensions

[HN2]It is ordinarily to be presumed that the legislature by deleting an express provision of a statute intended a substantial change in the law.

Governments > Legislation > Interpretation

[HN3]In construing the meaning of the constitutional provision, the court's inquiry is not focussed on what the legislature intended in adopting the former statutory reimbursement scheme, but rather on what the voters meant when they adopted Cal. Const. art. XIII B. To determine this intent, the court must look to the language of the provision itself.

*Governments > Legislation > Enactment
Governments > Legislation > Types of Statutes
Governments > Local Governments > Elections*

[HN4]Although a bill for state subvention for the incidental cost to local governments of general laws may be passed by simple majority vote of each house of the legislature pursuant to Cal. Const. art. IV, § 8(b), the revenue measures necessary to make them effective may not. A bill which will impose costs subject to subvention of local agencies must be accompanied by a revenue measure providing the subvention required by Cal. Const. art. XIII B. Cal. Rev. & Tax. Code § 2255(c). Revenue bills

must be passed by two-thirds vote of each house of the legislature. Cal. Const. art. IV, § 12(d).

*Governments > State & Territorial Governments > Relations With Governments
Workers' Compensation & SSDI > Administrative Proceedings > Judicial Review > General Overview
Workers' Compensation & SSDI > Benefit Determinations > General Overview*

[HN5]In no sense can employers, public or private, be considered to be administrators of a program of workers' compensation or to be providing services incidental to administration of the workers' compensation program. Workers' compensation is administered by the state through the Division of Industrial Accidents and the Workers' Compensation Appeals Board. Cal. Lab. Code § 3201 et seq. Therefore, although the state requires that employers provide workers' compensation for nonexempt categories of employees, increases in the cost of providing this employee benefit are not subject to reimbursement as state-mandated programs or higher levels of service within the meaning of Cal. Const. art. XIII B, § 6.

Governments > Legislation > Interpretation

[HN6]In the absence of irreconcilable conflict among their various parts, constitutional provisions must be harmonized and construed to give effect to all parts.

Governments > Legislation > Effect & Operation > General Overview

Workers' Compensation & SSDI > Coverage > General Overview

[HN7]Cal. Const. art. XIV, § 4 gives the legislature plenary power, unlimited by any provision of the California Constitution, over workers' compensation.

Governments > Legislation > Effect & Operation > General Overview

Workers' Compensation & SSDI > Coverage > General Overview

[HN8]See Cal. Const. art. XIV, § 4.

Governments > Legislation > Expirations, Repeals & Suspensions

[HN9]A pro tanto repeal of conflicting state constitutional provisions removes "insofar as necessary" any restrictions which would prohibit the realization of the objectives of the new article.

SUMMARY:

CALIFORNIA OFFICIAL REPORTS SUMMARY

The trial court denied a petition for writ of mandate to compel the State Board of Control to approve reimbursement claims of local government entities, for costs incurred in providing an increased level of service mandated by the state for workers' compensation benefits. The trial court found that Cal. Cosnt., art. XIII B, § 6, requiring reimbursement when the state mandates a new program or a higher level of service, is subject to an implied exception for the rate of inflation. In another action, the trial court, on similar claims, granted partial relief and ordered the board to set aside its ruling denying the claims. The trial court, in this second action, found that reimbursement was not required if the increases in benefits were only cost of living increases not imposing a higher or increased level of service on an existing program. Thus, the second matter was remanded due to insubstantial evidence and legally inadequate findings. (Superior Court of Los Angeles County, Nos. C 424301 and C 464829, Leon Savitch and John L. Cole, Judges.) The Court of Appeal, Second Dist., Div. Five, Nos. B001713 and B003561 affirmed the first action; the second action was reversed and remanded to the State Board of Control for further and adequate findings.

The Supreme Court reversed the judgment of the Court of Appeal, holding that the petitions lacked merit and should have been denied by the trial court without the necessity of further proceedings before the board. The court held that when the voters adopted art. XIII B, § 6, their intent was not to require that state to provide subvention whenever a newly enacted statute results incidentally in some cost to local agencies, but only to require subvention for the expense or increased cost of programs administered locally, and for expenses occasioned by laws that impose unique requirements on local governments and do not apply generally to all state residents or entities. Thus, the court held, reimbursement was not required by art. XIII B, § 6. Finally, the court held that no pro tanto repeal of Cal. Const., art. XIV, § 4 (workers' compensation), was intended or made necessary by the adoption of art. XIII B, § 6. (Opinion by Grodin, J., with Bird, C. J., Broussard, Reynoso, Lucas and Panelli, JJ., concurring. Separate concurring opinion by Mosk, J.)

HEADNOTES

CALIFORNIA OFFICIAL REPORTS HEADNOTES

Classified to California Digest of Official Reports, 3d Series

(1) **State of California § 12--Fiscal Matters--Appropriations--Reimbursement to Local Governments--Costs to Be Reimbursed.** --When the voters adopted Cal. Const., art. XIII B, § 6 (reimbursement to local agencies for new programs and services), their intent was not to require the state to provide subvention whenever a newly enacted statute resulted incidentally in some cost to local agencies. Rather, the drafters and the electorate had in mind subvention for the expenses occasioned by laws that impose unique requirements on local governments and do not apply generally to all state residents or entities.

(2) **Statutes § 18--Repeal--Effect--"Increased Level of Service."** --The statutory definition of the phrase "increased level of service," within the meaning of Rev. Tax. Code, § 2207, subd. (a) (programs resulting in increased costs which local agency is required to incur), did not continue after it was specifically repealed, even though the Legislature, in enacting the statute, explained that the definition was declaratory of existing law. It is ordinarily presumed that the Legislature, by deleting an express provision of a statute, intended a substantial change in the law.

[See Am.Jur.2d, Statutes, § 384.]

(3) **Constitutional Law § 13--Construction of Constitutions--Language of Enactment.** --In construing the meaning of an initiative constitutional provision, a reviewing court's inquiry is focused on what the voters meant when they adopted the provision. To determine this intent, courts must look to the language of the provision itself.

(4) **Constitutional Law § 13--Construction of Constitutions--Language of Enactment--"Program"** --The word "program," as used in Cal. Const., art. XIII B, § 6 (reimbursement to local agencies for new programs and services), refers to programs that carry out the governmental function of providing services to the public, or laws which, to implement a state policy, impose unique requirements on local governments and do not apply generally to all residents and entities in the state.

(5) **State of California § 12--Fiscal Matters--Appropriations--Reimbursement to Local Governments--Increases in Workers' Compensation Benefits.** --The provisions of Cal. Const., art. XIII B, § 6 (reimbursement to local agencies for nw programs and services), have no application to, and the state need not provide subvention for, the costs incurred by local agencies in providing to their employees the same increase in workers' compensation benefits that employees of private individuals or organizations receive. Although the state requires that employers provide workers' compensation

for nonexempt categories of employees, increases in the cost of providing this employee benefit are not subject to reimbursement as state-mandated programs or higher levels of service within the meaning of art. XIII B, § 6. Accordingly, the State Board of Control properly denied reimbursement to local governmental entities for costs incurred in providing state-mandated increases in workers' compensation benefits. (Disapproving *City of Sacramento v. State of California* (1984) 156 Cal. App. 3d 182 [203 Cal. Rptr. 258], to the extent it reached a different conclusion with respect to expenses incurred by local entities as the result of a newly enacted law requiring that all public employees be covered by unemployment insurance.)

[See Cal.Jur.3d, State of California, § 78.]

(6) Constitutional Law § 14--Construction of Constitutions--Reconcilable and Irreconcilable Conflicts.
--Controlling principles of construction require that in the absence of irreconcilable conflict among their various parts, constitutional provisions must be harmonized and construed to give effect to all parts.

(7) Constitutional Law § 14--Construction of Constitutions--Reconcilable and Irreconcilable Conflicts--Pro Tanto Repeal of Constitutional Provision.
--The goals of Cal. Const., art XIII B, § 6 (reimbursement to local agencies for new programs and services), were to protect residents from excessive taxation and government spending, and to preclude a shift of financial responsibility for governmental functions from the state to local agencies. Since these goals can be achieved in the absence of state subvention for the expense of increases in workers' compensation benefit levels for local agency employees, the adoption of art. XIII B, § 6, did not effect a pro tanto repeal of Cal. Const., art. XIV, § 4, which gives the Legislature plenary power over workers' compensation.

OPINION BY: GRODIN

OPINION

[*49] [**203] [***38] We are asked in this proceeding to determine whether legislation enacted in 1980 and 1982 increasing certain workers' compensation benefit payments is subject to the command of article XIII B of the California Constitution that local government costs mandated by the state must be funded by the state. The County of Los Angeles and the City of Sonoma sought review by this court of a decision of the Court of Appeal which held that state-mandated increases [***39] in workers' compensation benefits that do not exceed the rise in the cost of living are not costs which must be borne by the state under article XIII B, an initiative constitutional provision, and legislative implementing statutes.

Although we agree that the State Board of Control properly denied plaintiffs' claims, our conclusion rests on grounds other than those relied upon by the Court of Appeal, and requires that its judgment be reversed. (1) We conclude that when the voters adopted article XIII B, section 6, their intent was not to require the state to provide subvention whenever a newly enacted statute resulted incidentally in some cost to local agencies. [HN1]Rather, the drafters and the electorate had in mind subvention for the expense or [*50] increased cost of programs administered locally and for expenses occasioned by laws that impose unique requirements on local governments and do not apply generally to all state residents or entities. In using the word "programs" they had in mind the commonly understood meaning of the term, programs which carry out the governmental function of providing services to the public. Reimbursement for the cost or increased cost of providing workers' compensation benefits to employees of local agencies is not, therefore, required by section 6.

We recognize also the potential conflict between article XIII B and the grant of plenary power over workers' compensation bestowed upon the Legislature by section 4 of article XIV, but in accord with established rules of

construction our construction of article XIII B, section 6, harmonizes these constitutional provisions.

I

On November 6, 1979, the voters approved an initiative measure which added article XIII B to the California Constitution. That article imposed spending limits on the state and local governments and provided in section 6 (hereafter section 6): "Whenever the Legislature or any state agency mandates a new program or higher level of [**204] service on any local government, the state shall provide a subvention of funds to reimburse such local government for the costs of such program or increased level of service, except that the Legislature may, but need not, provide such subvention of funds for the following mandates: [para.] (a) Legislative mandates requested by the local agency affected; [para.] (b) Legislation defining a new crime or changing an existing definition of a crime; or [para.] (c) Legislative mandates enacted prior to January 1, 1975, or executive orders or regulations initially implementing legislation enacted prior to January 1, 1975." No definition of the phrase "higher level of service" was included in article XIII B, and the ballot materials did not explain its meaning.¹

1 The analysis by the Legislative Analyst advised that the state would be required to "reimburse local governments for the cost of complying with 'state mandates.' 'State mandates' are requirements imposed on local governments by legislation or executive orders." Elsewhere the analysis repeats: "[The] initiative would establish a requirement that the state provide funds to reimburse local agencies for the cost of complying with state mandates

The one ballot argument which made reference to section 6, referred only to the "new program" provision, stating, "Additionally, this measure [para.] (1) will not allow the state government to force programs on local governments without the state paying for them."

The genesis of this action was the enactment in 1980 and 1982, after article XIII B had been adopted, of laws increasing the amounts which [*51] employers, including local governments, must pay in workers' compensation benefits to injured employees and families of deceased employees.

The first of these statutes, Assembly, Bill No. 2750 (Stats. 1980, ch. 1042, p. 3328), amended several sections of the Labor Code related to workers' compensation. The amendments of Labor Code sections 4453, 4453.1 and 4460 increased the maximum weekly wage upon which temporary and permanent disability indemnity is computed from \$ 231 per week to \$ 262.50 per

week. The amendment of section 4702 of the Labor Code increased certain death benefits from \$ 55,000 to \$ 75,000. No appropriation [***40] for increased state-mandated costs was made in this legislation.²

2 The bill was approved by the Governor and filed with the Secretary of State on September 22, 1980. Prior to this, the Assembly gave unanimous consent to a request by the bill's author that his letter to the Speaker stating the intent of the Legislation be printed in the Assembly Journal. The letter stated: (1) that the Assembly Ways and Means Committee had recommended approval without appropriation on grounds that the increases were a result of changes in the cost of living that were not reimbursable under either Revenue and Taxation Code section 2231, or article XIII B; (2) the Senate Finance Committee had rejected a motion to add an appropriation and had approved a motion to concur in amendments of the Conference Committee deleting any appropriation.

Legislative history confirms only that the final version of Assembly Bill No. 2750, as amended in the Assembly on April 16, 1986, contained no appropriation. As introduced on March 4, 1980, with a higher minimum salary of \$ 510 on which to base benefits, an unspecified appropriation was included.

Test claims seeking reimbursement for the increased expenditure mandated by these changes were filed with the State Board of Control in 1981 by the County of San Bernardino and the City of Los Angeles. The board rejected the claims, after hearing, stating that the increased maximum workers' compensation benefit levels did not change the terms or conditions under which benefits were to be awarded, and therefore did not, by increasing the dollar amount of the benefits, create an increased level of service. The first of these consolidated actions was then filed by the County of Los Angeles, the County of San Bernardino, and the City of San Diego, seeking a writ of mandate to compel the board to approve the reimbursement claims for costs incurred in providing an increased level of service mandated by the state pursuant to Revenue and Taxation Code section 2207.³ They also sought a declaration that because the State of California and the board were obliged by article XIII B to reimburse them, they were not obligated to [**205] pay the increased benefits until the state provided reimbursement.

3 The superior court consolidated another action by the County of Butte, Novato Fire Protection District, and the Galt Unified School District

with that action. Neither those plaintiffs nor the County of San Bernardino are parties to the appeal.

The superior court denied relief in that action. The court recognized that although increased benefits reflecting cost of living raises were not expressly [*52] excepted from the requirement of state reimbursement in section 6 the intent of article XIII B to limit governmental expenditures to the prior year's level allowed local governments to make adjustment for changes in the cost of living, by increasing their own appropriations. Because the Assembly Bill No. 2750 changes did not exceed cost of living changes, they did not, in the view of the trial court, create an "increased level of service" in the existing workers' compensation program.

The second piece of legislation (Assem. Bill No. 684), enacted in 1982 (Stats. 1982, ch. 922, p. 3363), again changed the benefit levels for workers' compensation by increasing the maximum weekly wage upon which benefits were to be computed, and made other changes among which were: The bill increased minimum weekly earnings for temporary and permanent total disability from \$ 73.50 to \$ 168, and the maximum from \$ 262.50 to \$ 336. For permanent partial disability the weekly wage was raised from a minimum of \$ 45 to \$ 105, and from a maximum of \$ 105 to \$ 210, in each case for injuries occurring on or after January 1, 1984. (Lab. Code, § 4453.) A \$ 10,000 limit on additional compensation for injuries resulting from serious and willful employer misconduct was removed (Lab. Code, § 4553), and the maximum death benefit was raised from \$ 75,000 to \$ 85,000 for deaths in 1983, and to \$ 95,000 for deaths on or after January 1, 1984. (Lab. Code, § 4702.)

Again the statute included no appropriation and this time the statute expressly acknowledged that the omission was made "[notwithstanding] section 6 of Article XIII B of the California Constitution and section 223 . . . of the Revenue and Taxation [***41] Code." (Stats. 1982, ch. 922, § 17, p. 3372.)⁴

4 The same section "recognized," however, that a local agency "may pursue any remedies to obtain reimbursement available to it" under the statutes governing reimbursement for state-mandated costs in chapter 3 of the Revenue and Taxation Code, commencing with section 2201.

Once again test claims were presented to the State Board of Control, this time by the City of Sonoma, the County of Los Angeles, and the City of San Diego. Again the claims were denied on grounds that the statute made no change in the terms and conditions under which

workers' compensation benefits were to be awarded, and the increased costs incurred as a result of higher benefit levels did not create an increased level of service as defined in Revenue and Taxation Code section 2207, subdivision (a).

The three claimants then filed the second action asking that the board be compelled by writ of mandate to approve the claims and the state to pay them, and that chapter 922 be declared unconstitutional because it was not adopted in conformity with requirements of the Revenue and Taxation Code or [*53] section 6. The trial court granted partial relief and ordered the board to set aside its ruling. The court held that the board's decision was not supported by substantial evidence and legally adequate findings on the presence of a state-mandated cost. The basis for this ruling was the failure of the board to make adequate findings on the possible impact of changes in the burden of proof in some workers' compensation proceedings (Lab. Code, § 3202.5); a limitation on an injured worker's right to sue his employer under the "dual capacity" exception to the exclusive remedy doctrine (Lab. Code, §§ 3601- 3602); and changes in death and disability benefits and in liability in serious and wilful misconduct cases. (Lab. Code, § 4551.)

The court also held: "[The] changes made by chapter 922, Statutes of 1982 may be excluded from state-mandated costs if that change effects a cost of living increase which does not impose a higher or increased level of service on an existing program." The City of Sonoma, the County of Los Angeles, and the City of San Diego [**206] appeal from this latter portion of the judgment only.

II

The Court of Appeal consolidated the appeals. The court identified the dispositive issue as whether legislatively mandated increases in workers' compensation benefits constitute a "higher level of service" within the meaning of section 6, or are an "increased level of service" ^s described in subdivision (a) of Revenue and Taxation Code section 2207 . The parties did not question the proposition that higher benefit payments might constitute a higher level of "service." The dispute centered on whether higher benefit payments which do not exceed increases in the cost of living constitute a higher level of service. Appellants maintained that the reimbursement requirement of section 6 is absolute and permits no implied or judicially created exception for increased costs that do not exceed the inflation rate. The Court of Appeal addressed the problem as one of defining "increased level of service."

5 The court concluded that there was no legal or semantic difference in the meaning of the terms and considered the intent or purpose of the two provisions to be identical.

The court rejected appellants' argument that a definition of "increased level of service" that once had been included in section 2231, subdivision (e) of the Revenue and Taxation Code should be applied. That definition brought any law that imposed "additional costs" within the scope of "increased level of service." The court concluded that the repeal of section 2231 in 1975 (Stats. 1975, ch. 486, § 7, pp. 999-1000) and the failure of the Legislature by statute or the electorate in article XIII B to readopt the [*54] definition must be treated as reflecting an intent to change the law. (*Eu v. Chacon* (1976) 16 Cal.3d 465, 470 [128 Cal. Rptr. 1, 546 P.2d 289].) ⁶ On that basis the court [***42] concluded that increased costs were no longer tantamount to an increased level of service.

6 The Court of Appeal also considered the expression of legislative intent reflected in the letter by the author of Assembly Bill No. 2750 (see fn. 2, *ante*). While consideration of that expression of intent may have been proper in construing Assembly Bill No. 2750, we question its relevance to the proper construction of either section 6, adopted by the electorate in the prior year, or of Revenue and Taxation Code section 2207, subdivision (a) enacted in 1975. (Cf. *California Employment Stabilization Co. v. Payne* (1947) 31 Cal.2d 210, 213-214 [187 P.2d 702].) There is no assurance that the Assembly understood that its approval of printing a statement of intent as to the later bill was also to be read as a statement of intent regarding the earlier statute, and it was not relevant to the intent of the electorate in adopting section 6.

The Court of Appeal also recognized that the history of Assembly Bill No. 2750 and Statutes 1982, chapter 922, which demonstrated the clear intent of the Legislature to omit any appropriation for reimbursement of local government expenditures to pay the higher benefits precluded reliance on reimbursement provisions included in benefit-increase bills passed in earlier years. (See e.g., Stats. 1973, chs. 1021 and 1023.)

The court nonetheless assumed that an increase in costs mandated by the Legislature did constitute an increased level of service if the increase exceeds that in the cost of living. The judgment in the second, or "Sonoma" case was affirmed. The judgment in the first, or "Los Angeles" case, however, was reversed and the matter

"remanded" to the board for more adequate findings, with directions. ⁷

7 We infer that the intent of the Court of Appeal was to reverse the order denying the petition for writ of mandate and to order the superior court to grant the petition and remand the matter to the board with directions to set aside its order and reconsider the claim after making the additional findings. (See Code Civ. Proc. § 1094.5, subd. (f).)

III

The Court of Appeal did not articulate the basis for its conclusion that costs in excess of the increased cost of living do constitute a reimbursable increased level of service within the meaning of section 6. Our task in ascertaining the meaning of the phrase is aided somewhat by one explanatory reference to this part of section 6 in the ballot materials.

A statutory requirement of state reimbursement was in effect when section 6 [**207] was adopted. That provision used the same "increased level of service" phraseology but it also failed to include a definition of "increased level of service," providing only: "Costs mandated by the state" means any increased costs which a local agency is required to incur as a result of the following: [para.] (a) Any law . . . which mandates a new program or an increased level of service of an existing program." (Rev. & Tax. Code § 2207.) As noted, however, the definition of that term which had been [**55] included in Revenue and Taxation Code section 2164.3 as part of the Property Tax Relief Act of 1972 (Stats. 1972, ch. 1406, § 14.7, p. 2961), had been repealed in 1975 when Revenue and Taxation Code section 2231, which had replaced section 2164.3 in 1973, was repealed and a new section 2231 enacted. (Stats. 1975, ch. 486, §§ 6 & 7, p. 999.) * Prior to repeal, Revenue and Taxation Code section 2164.3, and later section 2231, after providing in subdivision (a) for state reimbursement, explained in subdivision (e) that "'Increased level of service' means any requirement mandated by state law or executive regulation . . . which makes necessary expanded or additional costs to a county, city and county, city, or special district." (Stats. 1972, ch. 1406, § 14.7, p. 2963.)

8 Pursuant to the 1972 and successor 1973 property tax relief statutes the Legislature had included appropriations in measures which, in the opinion of the Legislature, mandated new programs or increased levels of service in existing programs (see, e.g., Stats. 1973, ch. 1021, § 4, p. 2026; ch. 1022, § 2, p. 2027; Stats. 1976, ch. 1017, § 9, p. 4597) and reimbursement claims

filed with the State Board of Control pursuant to Revenue and Taxation Code sections 2218-2218.54 had been honored. When the Legislature fails to include such appropriations there is no judicially enforceable remedy for the statutory violation notwithstanding the command of Revenue and Taxation Code section 2231, subdivision (a) that "[the] state shall reimburse each local agency for all 'costs mandated by the state,' as defined in Section 2207" and the additional command of subdivision (b) that any statute imposing such costs "provide an appropriation therefor." (*County of Orange v. Flourney* (1974) 42 Cal. App. 3d 908, 913 [117 Cal. Rptr. 224].)

[***43] (2) Appellants contend that despite its repeal, the definition is still valid, relying on the fact that the Legislature, in enacting section 2207, explained that the provision was "declaratory of existing law." (Stats. 1975, ch. 486, § 18.6, p. 1006.) We concur with the Court of Appeal in rejecting this argument. [HN2]"[It] is ordinarily to be presumed that the Legislature by deleting an express provision of a statute intended a substantial change in the law." (*Lake Forest Community Assn. v. County of Orange* (1978) 86 Cal. App. 3d 394, 402 [150 Cal. Rptr. 286]; see also *Eu v. Chacon, supra*, 16 Cal.3d 465, 470.) Here, the revision was not minor: a whole subdivision was deleted. As the Court of Appeal noted, "A change must have been intended; otherwise deletion of the preexisting definition makes no sense."

Acceptance of appellants' argument leads to an unreasonable interpretation of section 2207. If the Legislature had intended to continue to equate "increased level of service" with "additional costs," then the provision would be circular: "costs mandated by the state" are defined as "increased costs" due to an "increased level of service," which, in turn, would be defined as "additional costs." We decline to accept such an interpretation. Under the repealed provision, "additional costs" may have been deemed tantamount to an "increased level of service," but not under the post-1975 statutory scheme. Since that definition has been repealed, an act of which the drafters of section 6 and the electorate are presumed to have been [*56] aware, we may not conclude that an intent existed to incorporate the repealed definition into section 6.

(3) [HN3]In construing the meaning of the constitutional provision, our inquiry is not focussed on what the Legislature intended in adopting the former statutory reimbursement scheme, but rather on what the voters meant when they adopted article XIII B in 1979. To determine this intent, we must look to the language of the provision itself. (*ITT World Communications, Inc. v. City and County of San Francisco* (1985) 37 Cal.3d 859, 866 [210 Cal. Rptr. 226, 693 P.2d 811].) In section 6, the

electorate commands [**208] that the state reimburse local agencies for the cost of any "new program or higher level of service." Because workers' compensation is not a new program, the parties have focussed on whether providing higher benefit payments constitutes provision of a higher level of service. As we have observed, however, the former statutory definition of that term has been incorporated into neither section 6 nor the current statutory reimbursement scheme.

(4) Looking at the language of section 6 then, it seems clear that by itself the term "higher level of service" is meaningless. It must be read in conjunction with the predecessor phrase "new program" to give it meaning. Thus read, it is apparent that the subvention requirement for increased or higher level of service is directed to state mandated increases in the services provided by local agencies in existing "programs." But the term "program" itself is not defined in article XIII B. What programs then did the electorate have in mind when section 6 was adopted? We conclude that the drafters and the electorate had in mind the commonly understood meanings of the term -- programs that carry out the governmental function of providing services to the public, or laws which, to implement a state policy, impose unique requirements on local governments and do not apply generally to all residents and entities in the state.

The concern which prompted the inclusion of section 6 in article XIII B was the perceived attempt by the state to enact legislation or adopt administrative orders creating programs to be administered by local agencies, thereby transferring to those agencies the fiscal responsibility for providing services which the state believed should be extended to the public. In their ballot arguments, the proponents of article XIII B explained section 6 to the voters: "Additionally, this measure: (1) Will not allow the state government to *force programs* on local governments without the state paying for them." (Ballot Pamp., Proposed Amend. to Cal. Const. with arguments [***44] to voters, Spec. Statewide Elec. (Nov. 6, 1979) p. 18. Italics added.) In this context the phrase "to force programs on local governments" confirms that the intent underlying section 6 was to require reimbursement to local agencies for the costs involved in carrying out functions peculiar to government, not [*57] for expenses incurred by local agencies as an incidental impact of laws that apply generally to all state residents and entities. Laws of general application are not passed by the Legislature to "force" programs on localities.

The language of section 6 is far too vague to support an inference that it was intended that each time the Legislature passes a law of general application it must discern the likely effect on local governments and provide an appropriation to pay for any incidental increase in

local costs. We believe that if the electorate had intended such a far-reaching construction of section 6, the language would have explicitly indicated that the word "program" was being used in such a unique fashion. (Cf. Fuentes v. Workers' Comp. Appeals Bd. (1976) 16 Cal.3d 1, 7 [128 Cal. Rptr. 673, 547 P.2d 449]; Big Sur Properties v. Mott (1976) 63 Cal. App. 3d 99, 105 [132 Cal. Rptr. 835].) Nothing in the history of article XIII B that we have discovered, or that has been called to our attention by the parties, suggests that the electorate had in mind either this construction or the additional indirect, but substantial impact it would have on the legislative process.

[HN4]Were section 6 construed to require state subvention for the incidental cost to local governments of general laws, the result would be far-reaching indeed. Although such laws may be passed by simple majority vote of each house of the Legislature (art. IV, § 8, subd. (b)), the revenue measures necessary to make them effective may not. A bill which will impose costs subject to subvention of local agencies must be accompanied by a revenue measure providing the subvention required by article XIII B. (Rev. & Tax. Code, §§ 2255, subd. (c).) Revenue bills must be passed by two-thirds vote of each house of the Legislature. (Art. IV, § 12, subd. (d).) Thus, were we to construe section 6 as [**209] applicable to general legislation whenever it might have an incidental effect on local agency costs, such legislation could become effective only if passed by a supermajority vote. ⁹ Certainly no such intent is reflected in the language or history of article XIII B or section 6.

9 Whether a constitutional provision which requires a supermajority vote to enact substantive legislation, as opposed to funding the program, may be validly enacted as a Constitutional amendment rather than through revision of the Constitution is an open question. (See Amador Valley Joint Union High Sch. Dist. v. State Bd. of Equalization (1978) 22 Cal.3d 208, 228 [149 Cal. Rptr. 239, 583 P.2d 1281].)

(5) We conclude therefore that section 6 has no application to, and the state need not provide subvention for, the costs incurred by local agencies in providing to their employees the same increase in workers' compensation [**58] benefits that employees of private individuals or organizations receive. ¹⁰ Workers' compensation is not a program administered by local agencies to provide service to the public. Although local agencies must provide benefits to their employees either through insurance or direct payment, they are indistinguishable in this respect from private employers. [HN5]In no sense can employers, public or private, be considered to be administrators of a program of workers' compensation or to be

providing services incidental to administration of the program. Workers' compensation is administered by the state through the Division of Industrial Accidents and the Workers' Compensation Appeals Board. (See [***45] Lab. Code, § 3201 et seq.) Therefore, although the state requires that employers provide workers' compensation for nonexempt categories of employees, increases in the cost of providing this employee benefit are not subject to reimbursement as state-mandated programs or higher levels of service within the meaning of section 6.

10 The Court of Appeal reached a different conclusion in City of Sacramento v. State of California (1984) 156 Cal. App. 3d 182 [203 Cal. Rptr. 258], with respect to a newly enacted law requiring that all public employees be covered by unemployment insurance. Approaching the question as to whether the expense was a "state mandated cost," rather than as whether the provision of an employee benefit was a "program or service" within the meaning of the Constitution, the court concluded that reimbursement was required. To the extent that this decision is inconsistent with our conclusion here, it is disapproved.

IV

(6) [HN6]Our construction of section 6 is further supported by the fact that it comports with controlling principles of construction which "require that in the absence of irreconcilable conflict among their various parts, [constitutional provisions] must be harmonized and construed to give effect to all parts. (Clean Air Constituency v. California State Air Resources Bd. (1974) 1 Cal.3d 801, 813-814 [114 Cal. Rptr. 577, 523 P.2d 617]; Serrano v. Priest (1971) 5 Cal.3d 584, 596 [96 Cal. Rptr. 601, 487 P.2d 1241, 41 A.L.R.3d 1187]; Select Base Materials v. Board of Equal. (1959) 51 Cal.2d 640, 645 [335 P.2d 672].)" (Legislature v. Deukmejian (1983) 34 Cal.3d 658, 676 [194 Cal. Rptr. 781, 669 P.2d 17].)

[HN7]Our concern over potential conflict arises because article XIV, section 4, ¹¹ gives the [**210] Legislature "plenary power, unlimited by any provision of [**59] this Constitution" over workers' compensation. Although seemingly unrelated to workers' compensation, section 6, as we have shown, would have an indirect, but substantial impact on the ability of the Legislature to make future changes in the existing workers' compensation scheme. Any changes in the system which would increase benefit levels, provide new services, or extend current service might also increase local agencies' costs. Therefore, even though workers' compensation is a program which is intended [***46] to provide benefits to all injured or deceased employees and their families, because the change might have some incidental impact

on local government costs, the change could be made only if it commanded a supermajority vote of two-thirds of the members of each house of the Legislature. The potential conflict between section 6 and the plenary power over workers' compensation granted to the Legislature by article XIV, section 4 is apparent.

11 [HN8]Section 4: "The Legislature is hereby expressly vested with plenary power, unlimited by any provision of this Constitution, to create, and enforce a complete system of workers' compensation, by appropriate legislation, and in that behalf to create and enforce a liability on the part of any or all persons to compensate any or all of their workers for injury or disability, and their dependents for death incurred or sustained by the said workers in the course of their employment, irrespective of the fault of any party. A complete system of workers' compensation includes adequate provisions for the comfort, health and safety and general welfare of any and all workers and those dependent upon them for support to the extent of relieving from the consequences of any injury or death incurred or sustained by workers in the course of their employment, irrespective of the fault of any party; also full provision for securing safety in places of employment; full provision for such medical, surgical, hospital and other remedial treatment as is requisite to cure and relieve from the effects of such injury; full provision for adequate insurance coverage against liability to pay or furnish compensation; full provision for regulating such insurance coverage in all its aspects, including the establishment and management of a State compensation insurance fund; full provision for otherwise securing the payment of compensation and full provision for vesting power, authority and jurisdiction in an administrative body with all the requisite governmental functions to determine any dispute or matter arising under such legislation, to the end that the administration of such legislation shall accomplish substantial justice in all cases expeditiously, inexpensively, and without encumbrance of any character; all of which matters are expressly declared to be the social public policy of this State, binding upon all departments of the State government.

"The Legislature is vested with plenary powers, to provide for the settlement of any disputes arising under such legislation by arbitration, or by an industrial accident commission, by the courts, or by either, any, or all of these agencies, either separately or in combination, and may fix and control the method and manner of trial of any

such dispute, the rules of evidence and the manner of review of decisions rendered by the tribunal or tribunals designated by it; provided, that all decisions of any such tribunal shall be subject to review by the appellate courts of this State. The Legislature may combine in one statute all the provisions for a complete system of workers' compensation, as herein defined.

"The Legislature shall have power to provide for the payment of an award to the state in the case of the death, arising out of and in the course of the employment, of an employee without dependents, and such awards may be used for the payment of extra compensation for subsequent injuries beyond the liability of a single employer for awards to employees of the employer.

"Nothing contained herein shall be taken or construed to impair or render ineffectual in any measure the creation and existence of the industrial accident commission of this State or the State compensation insurance fund, the creation and existence of which, with all the functions vested in them, are hereby ratified and confirmed." (Italics added.)

The County of Los Angeles, while recognizing the impact of section 6 on the Legislature's power over workers' compensation, argues that the "plenary power" granted by article XIV, section 4, is power over the substance of workers' compensation legislation, and that this power would be unaffected by article XIII B if the latter is construed to compel reimbursement. The subvention requirement, it is argued, is analogous to other procedural [*60] limitations on the Legislature, such as the "single subject rule" (art. IV, § 9), as to which article XIV, section 4, has no application. We do not agree. A constitutional requirement that legislation either exclude employees of local governmental agencies or be adopted by a supermajority vote would do more than simply establish a format or procedure by which legislation is to be enacted. It would place workers' compensation legislation in a special classification of substantive legislation and thereby curtail the power of a majority to enact substantive changes by any procedural means. If section 6 were applicable, therefore, article XIII B would restrict the power of the Legislature over workers' compensation.

The City of Sonoma concedes that so construed article XIII B *would* restrict the plenary power of the Legislature, and reasons that the provision therefore either effected a pro tanto repeal of article XIV, section 4, or must be accepted as a limitation on the power of the Legislature. We need not accept that conclusion, how-

ever, because our construction of section 6 permits the constitutional provisions to be reconciled.

Construing a recently enacted constitutional provision such as section 6 to avoid conflict with, and thus pro tanto repeal of, an earlier provision is also consistent with [**211] and reflects the principle applied by this court in Hustedt v. Workers' Comp. Appeals Bd. (1981) 30 Cal.3d 329 [178 Cal. Rptr. 801, 636 P.2d 1139]. There, by coincidence, article XIV, section 4, was the later provision. A statute, enacted pursuant to the plenary power of the Legislature over workers' compensation, gave the Workers' Compensation Appeals Board authority to discipline attorneys who appeared before it. If construed to include a transfer of the authority to discipline attorneys from the Supreme Court to the Legislature, or to delegate that power to the board, article XIV, section 4, would have conflicted with the constitutional power of this court over attorney discipline and might have violated the separation of powers doctrine. (Art. III, § 3.) The court was thus called upon to determine whether the adoption of article XIV, section 4, granting the Legislature plenary power over workers' compensation effected a pro tanto repeal of the preexisting, exclusive jurisdiction of the Supreme Court over attorneys.

We concluded that there had been no pro tanto repeal because article XIV, section 4, did not give the Legislature the authority to enact the statute. Article XIV, section 4, did not expressly give the Legislature power over attorney discipline, and that power was not integral to or necessary to the establishment of a complete system of workers' compensation. In those circumstances the presumption against implied repeal controlled. "It is well established that the adoption of article XIV, section 4 'effected a repeal *pro tanto*' of any state constitutional provisions which conflicted with that [*61] amendment. (Subsequent Etc. Fund. v. Ind. Acc. Com. (1952) 39 Cal.2d 83, 88 [244 P.2d 889]; Western Indemnity Co. v. Pillsbury (1915) 170 Cal. 686, 695, [151 P. 398].) [HN9]A *pro tanto* repeal of conflicting state constitutional provisions removes 'insofar as necessary' any restrictions which would prohibit the realization [***47] of the objectives of the new article. (Methodist Hosp. of Sacramento v. Saylor (1971) 5 Cal.3d 685, 691-692 [97 Cal. Rptr. 1, 488 P.2d 161]; cf. City and County of San Francisco v. Workers' Comp. Appeals Bd. (1978) 22 Cal.3d 103, 115-117 [148 Cal. Rptr. 626, 583 P.2d 151].) Thus the question becomes whether the board must have the power to discipline attorneys if the objectives of article XIV, section 4 are to be effectuated. In other words, does the achievement of those objectives compel the modification of a power -- the disciplining of attorneys -- that otherwise rests exclusively with this court?" (Hustedt v. Workers' Comp. Appeals Bd., *supra*, 30 Cal.3d 329, 343.) We concluded that the ability to dis-

cipline attorneys appearing before it was not necessary to the expeditious resolution of workers' claims or the efficient administration of the agency. Thus, the absence of disciplinary power over attorneys would not preclude the board from achieving the objectives of article XIV, section 4, and no pro tanto repeal need be found.

(7) A similar analysis leads to the conclusion here that no pro tanto repeal of article XIV, section 4, was intended or made necessary here by the adoption of section 6. The goals of article XIII B, of which section 6 is a part, were to protect residents from excessive taxation and government spending. (Huntington Park Redevelopment Agency v. Martin (1985) 38 Cal.3d 100, 109-110 [211 Cal. Rptr. 133, 695 P.2d 220].) Section 6 had the additional purpose of precluding a shift of financial responsibility for carrying out governmental functions from the state to local agencies which had had their taxing powers restricted by the enactment of article XIII A in the preceding year and were ill equipped to take responsibility for any new programs. Neither of these goals is frustrated by requiring local agencies to provide the same protections to their employees as do private employers. Bearing the costs of salaries, unemployment insurance, and workers' compensation coverage -- costs which all employers must bear -- neither threatens excessive taxation or governmental spending, nor shifts from the state to a local agency the expense of providing governmental services.

[**212] Therefore, since the objectives of article XIII B and section 6 can be achieved in the absence of state subvention for the expense of increases in workers' compensation benefit levels for local agency employees, section 6 did not effect a pro tanto repeal of the Legislature's otherwise plenary power over workers' compensation, a power that does not contemplate that the Legislature rather than the employer must fund the cost or increases in [*62] benefits paid to employees of local agencies, or that a statute affecting those benefits must garner a supermajority vote.

Because we conclude that section 6 has no application to legislation that is applicable to employees generally, whether public or private, and affects local agencies only incidentally as employers, we need not reach the question that was the focus of the decision of the Court of Appeal -- whether the state must reimburse localities for state-mandated cost increases which merely reflect adjustments for cost-of-living in existing programs.

V

It follows from our conclusions above, that in each of these cases the plaintiffs' reimbursement claims were properly denied by the State Board of Control. Their petitions for writs of mandate seeking to compel the board to approve the claims lacked merit and should

have been denied by the superior court without the necessity of further proceedings before the board.

In B001713, the Los Angeles case, the Court of Appeal reversed the judgment of the superior court denying the petition. In the B003561, the Sonoma case, the superior court granted partial relief, ordering further proceedings before the board, and the Court of Appeal affirmed that judgment.

The judgment of the Court of Appeal is reversed. Each side shall bear its own costs.

CONCUR BY: MOSK

CONCUR

MOSK, J. I concur in the result reached by the majority, but I prefer the rationale of the Court of Appeal, i.e., that neither article XIII B, section 6, of the Constitution nor Revenue and Taxation Code sections 2207 and

2231 require state subvention for increased workers' compensation benefits provided by chapter 1042, Statutes of 1980, and chapter 922, Statutes of 1982, but only if the increases do not exceed applicable cost-of-living adjustments because such payments do not result in an increased level of service.

Under the majority theory, the state can order unlimited financial burdens on local units of government without providing the funds to meet those burdens. This may have serious implications in the future, and does violence to the requirement of section 2231, subdivision (a), that the state reimburse local government for "all costs mandated by the state."

In this instance it is clear from legislative history that the Legislature did not intend to mandate additional burdens, but merely to provide a cost-of-living [*63] adjustment. I agree with the Court of Appeal that this was permissible.

**COUNTY OF SAN DIEGO, Cross-complainant and Respondent, v. THE STATE
OF CALIFORNIA et al., Cross-defendants and Appellants.**

No. S046843.

SUPREME COURT OF CALIFORNIA

**15 Cal. 4th 68; 931 P.2d 312; 61 Cal. Rptr. 2d 134; 1997 Cal. LEXIS 630; 97 Cal.
Daily Op. Service 1555; 97 Daily Journal DAR 2296**

March 3, 1997, Decided

PRIOR HISTORY: Superior Court of San Diego County, Super. Ct. No. 634931. Michael I. Greer, * Harrison R. Hollywood and Judith McConnell, Judges.

* Retired judge of the San Diego Superior Court assigned by the Chief Justice pursuant to article VI, section 6 of the California Constitution.

DISPOSITION: The judgment of the Court of Appeal is affirmed insofar as it holds that the exclusion of adult MIP's from Medi-Cal imposed a mandate on San Diego within the meaning of section 6. The judgment is reversed insofar as it holds that the state required San Diego to spend at least \$ 41 million on the CMS program in fiscal years 1989-1990 and 1990-1991. The matter is remanded to the Commission to determine whether, and by what amount, the statutory standards of care (e.g., Health & Saf. Code, § 1442.5, former subd. (c); Welf. & Inst. Code, § 10000, 17000) forced San Diego to incur costs in excess of the funds provided by the state, and to determine the statutory remedies to which San Diego is entitled.

CASE SUMMARY:

PROCEDURAL POSTURE: Appellant state sought review of the judgment from the Court of Appeal (California), which affirmed the trial court that reversed a decision of the state mandates commission. The state mandates commission had held that respondent county was not entitled to reimbursement under Cal. Const. art.

XIII B, § 6, for its treatment of medically indigent adults after the legislature excluded such persons from the California Medical Assistance Program.

OVERVIEW: The legislature excluded medically indigent adults from receiving medical care pursuant to the California Medical Assistance Program (Medi-Cal). Subsequently, respondent county provided medical care to these persons and sought reimbursement from appellant state pursuant to Cal. Const. art. XIII B, § 6. The state mandates commission held for appellant, but the trial court reversed the commission's decision, and the court of appeals affirmed the trial court. The court affirmed the court of appeal's decision in part and reversed in part. The court found that the legislature's exclusion of medically indigent adults from Medi-Cal mandated a new program within the meaning of art. XIII B, § 6. Former statutes, however, did not establish a \$ 41 million spending floor for respondent's county medical services program. The court remanded the action to the state mandates commission to determine whether, and by what amount, respondent was forced to incur costs in excess of state-provided funds to comply with the standards of care provided by the former Cal. Health & Safety Code § 1442.5(c) and Cal. Welf. & Inst. Code §§ 10000, 17000.

OUTCOME: The court affirmed the court of appeal's judgment that respondent county could recover costs incurred to treat medically indigent adults because the legislature mandated a new program by excluding medically indigent adults from the California Medical Assistance Program. The court reversed the court of appeal's judgment that respondent was entitled to at least \$ 41

million and remanded to the state mandates commission for a cost determination.

Public Health & Welfare Law > Healthcare > General Overview

Public Health & Welfare Law > Social Security > Medicaid > Coverage > General Overview

[HN1]The California Medical Assistance Program, Cal. Welf. & Inst. Code § 14063, which began operating March 1, 1966, establishes a program of basic and extended health care services for recipients of public assistance and for medically indigent persons. It represents California's implementation of the federal medicaid program, 42 U.S.C.S. §§ 1396-1396v, through which the federal government provides financial assistance to states so that they may furnish medical care to qualified indigent persons.

*Governments > Local Governments > Finance
Healthcare Law > Insurance > Reimbursement > General Overview*

Public Health & Welfare Law > Social Security > Medicaid > Providers > Payments & Reimbursements > Hospitals

[HN2]Former Cal. Welf. & Inst. Code § 14150.1 provides in part that a county may elect to pay as its share of costs under the California Medical Assistance Program, Cal. Welf. & Inst. Code § 14063, 100 percent of the county cost of health care uncompensated from any source in 1964-65 for all categorical aid recipients, and all other persons in the county hospital or in a contract hospital, increases for such county for each fiscal year subsequent to 1964-65 by an amount proportionate to the increase in population for such county. If the county so elects, the county costs of health care in any fiscal year shall not exceed the total county costs of health care uncompensated from any source in 1964-65 for all categorical aid recipients, and all other persons in the county hospital or in a contract hospital, increases for such

county for each fiscal year subsequent to 1964-65 by an amount proportionate to the increase in population for such county.

*Governments > Local Governments > Finance
Healthcare Law > Insurance > Reimbursement > General Overview*

Public Health & Welfare Law > Social Security > Medicaid > General Overview

[HN3]Former Cal. Welf. & Inst. Code § 14150 provides the standard method for determining the counties' share of costs under the California Medical Assistance Program, Cal. Welf. & Inst. Code § 14063. Under it, a county is required to pay the state a specific sum, in return for which the state will pay for the medical care of all categorically linked individuals. Financial responsibility for nonlinked individuals remains with the counties.

*Governments > Local Governments > Finance
Governments > State & Territorial Governments > Finance*

[HN4]Cal. Const. art. XIII A imposes a limit on the power of state and local governments to adopt and levy taxes. Cal. Const. art. XIII B imposes a complementary limit on the rate of growth in governmental spending. These two constitutional articles work in tandem, together restricting California governments' power both to levy and to spend for public purposes.

*Governments > Local Governments > Finance
Governments > State & Territorial Governments > Finance*

[HN5]Cal. Const. art. XIII B, § 6, provides in part that whenever the legislature or any state agency mandates a new program or higher level of service on any local government, the state shall provide a subvention of funds to reimburse such local government for the costs of such program or increased level of service, except that the legislature may, but need not, provide such subvention of funds for legislative mandates that are enacted prior to January 1, 1975, or executive orders or regulations initially implementing legislation enacted prior to January 1, 1975.

Governments > State & Territorial Governments > Finance

[HN6]Cal. Const. art. XIII B § 6, essentially requires the state to pay for any new governmental programs, or for higher levels of service under existing programs, that it imposes upon local governmental agencies.

Governments > State & Territorial Governments > Finance

[HN7]To determine whether a statute imposes state-mandated costs on a local agency within the meaning of Cal. Const. art. XIII B, § 6, the local agency must file a test claim with the Commission on State Mandates, which, after a public hearing, decides whether the statute mandates a new program or increased level of service. Cal. Gov't Code §§ 17521, 17551, 17555. If the commission finds a claim to be reimbursable, it determines the amount of reimbursement. Cal. Gov't Code § 17557. The local agency then follows certain statutory procedures to obtain reimbursement. Cal. Gov't Code § 17558 et seq.

*Civil Procedure > Declaratory Judgment Actions > State Judgments > General Overview
Governments > State & Territorial Governments > Finance*

[HN8]If the legislature refuses to appropriate money for a reimbursable mandate, the local agency may file an action in declaratory relief to declare the mandate unenforceable and enjoin its enforcement. Cal. Gov't Code § 17612(c). If the Commission on State Mandates finds no reimbursable mandate, the local agency may challenge this finding by administrative mandate proceedings under Cal. Civ. Proc. Code § 1094.5. Cal. Gov't Code § 17559. Cal. Gov't Code § 17552 declares that these provisions provide the sole and exclusive procedure by which a local agency may claim reimbursement for costs mandated by the state as required by Cal. Const. art. XIII B, § 6.

Constitutional Law > The Judiciary > Case or Controversy > Standing > General Overview

[HN9]Individual taxpayers and recipients of government benefits lack standing to enforce Cal. Const. art. XIII B, § 6, because the applicable administrative procedures, which are the exclusive means for determining and enforcing the state's § 6 obligations, are available only to local agencies and school districts directly affected by a state mandate.

Administrative Law > Judicial Review > Remedies > Mandamus

Civil Procedure > Jurisdiction > Subject Matter Jurisdiction > General Overview

Constitutional Law > The Judiciary > Jurisdiction > General Overview

[HN10]The power of superior courts to perform mandamus review of administrative decisions derives in part from Cal. Const. art. VI, § 10. Section 10 gives the Supreme Court, courts of appeal, and superior courts original jurisdiction in proceedings for extraordinary relief in the nature of mandamus. Cal. Const. art. VI, § 10. The jurisdiction may not lightly be deemed to be destroyed. While the courts are subject to reasonable statutory regulation of procedure and other matters, they maintain their constitutional powers in order effectively to function as a separate department of government. Consequently an intent to defeat the exercise of the court's jurisdiction is not supplied by implication.

Administrative Law > Judicial Review > Reviewability > Jurisdiction & Venue

Civil Procedure > Jurisdiction > Subject Matter Jurisdiction > Jurisdiction Over Actions > General Overview

[HN11]Under Cal. Gov't Code § 17500 et seq., the statutes governing determination of unfunded mandate claims, the court hearing the test claim has primary jurisdiction.

Civil Procedure > Jurisdiction > Subject Matter Jurisdiction > Jurisdiction Over Actions > General Overview

[HN12]A court that refuses to defer to another court's primary jurisdiction is not without jurisdiction.

Administrative Law > Judicial Review > Administrative Record > General Overview

Civil Procedure > Appeals > Reviewability > General Overview

[HN13]The threshold determination of whether a statute imposes a state mandate is an issue of law.

Administrative Law > Judicial Review > Reviewability > Exhaustion of Remedies

Civil Procedure > Justiciability > Exhaustion of Remedies > Administrative Remedies

Governments > Local Governments > Claims By & Against

[HN14]Counties seeking to pursue an unfunded mandate claim under Cal. Const. art. XIII B, § 6, must exhaust their administrative remedies. However, counties may pursue § 6 claims in superior court without first resorting to administrative remedies if they can establish an exception to the exhaustion requirement. The futility exception to the exhaustion requirement applies if a county can state with assurance that the Commission on State Mandates will rule adversely in its own particular case.

Public Health & Welfare Law > Healthcare > General Overview

[HN15] Cal. Welf. & Inst. Code § 17000 creates the residual fund to sustain indigents who cannot qualify under any specialized aid programs. By its express terms, § 17000 requires a county to relieve and support indigent persons only when such persons are not supported and relieved by their relatives or friends, by their own means, or by state hospitals or other state or private institutions. Cal. Welf. & Inst. Code § 17000.

Governments > State & Territorial Governments > Legislatures

Public Health & Welfare Law > Healthcare > General Overview

[HN16] In adopting the California Medical Assistance Program (Medi-Cal), Cal. Welf. & Inst. Code § 14063, the state legislature, for the most part, shifted indigent medical care from being a county responsibility to a state responsibility under the Medi-Cal program.

Governments > Legislation > Effect & Operation > General Overview

[HN17] Cal. Const. art. XIII B, § 6, prohibits the state from shifting to counties the costs of state programs for which the state assumed complete financial responsibility before adoption of § 6.

Governments > Local Governments > Finance

Public Health & Welfare Law > Healthcare > General Overview

[HN18] As amended in 1982, Cal. Welf. & Inst. Code § 16704(c)(1), provides in part that the county board of supervisors shall assure that it will expend Medically Indigent Services Account funds only for the health services specified in Cal. Welf. & Inst. Code §§ 14132 and 14021 provided to persons certified as eligible for such services pursuant to Cal. Welf. & Inst. Code § 17000 and shall assure that it will incur no less in net costs of county funds for county health services in any fiscal year than the amount that is required to obtain the maximum allocation under Cal. Welf. & Inst. Code § 16702.

Governments > Local Governments > Finance

Labor & Employment Law > Disability & Unemployment Insurance > Disability Benefits > Coverage & Definitions > General Overview

Public Health & Welfare Law > Healthcare > Services for Disabled & Elderly Persons > General Overview

[HN19] Cal. Welf. & Inst. Code § 16704(c)(3) provides in part that any person whose income and resources meet the income and resource criteria for certification for services pursuant to Cal. Welf. & Inst. Code § 14005.7 other than for the aged, blind, or disabled, shall not be excluded from eligibility for services to the extent that state funds are provided. Such persons may be held financially liable for these services based upon the person's ability to pay. A county may not establish a payment requirement which will deny medically necessary services. This section shall not be construed to mandate that a county provide any specific level or type of health care service.

Public Health & Welfare Law > Healthcare > General Overview

[HN20] The provisions of Cal. Welf. & Inst. Code § 16704(c)(3) shall become inoperative if a court ruling is issued which decrees that the provisions of this paragraph mandate that additional state funds be provided and which requires that additional state reimbursement be made to counties for costs incurred under this paragraph. This paragraph shall be operative only until June 30, 1983, unless a later enacted statute extends or deletes that date.

Governments > Local Governments > Charters

Public Health & Welfare Law > Healthcare > General Overview

[HN21] See Cal. Welf. & Inst. Code § 17000.

Governments > Local Governments > Duties & Powers

[HN22] Cal. Welf. & Inst. Code § 17001 confers broad discretion upon the counties in performing their statutory duty to provide general assistance benefits to needy residents.

Administrative Law > Agency Rulemaking > General Overview

Governments > Local Governments > Duties & Powers

[HN23] When a statute confers upon a state agency the authority to adopt regulations to implement, interpret, make specific or otherwise carry out its provisions, the agency's regulations must be consistent, not in conflict with the statute, and reasonably necessary to effectuate its purpose. Cal. Gov't Code § 11374.

Administrative Law > Judicial Review > Reviewability > Questions of Law

[HN24] Courts have the final responsibility for the interpretation of the law.

*Governments > Local Governments > Duties & Powers
Public Health & Welfare Law > Healthcare > General
Overview*

[HN25] Cal. Welf. & Inst. Code § 17000 requires counties to relieve and support all indigent persons lawfully resident therein, when such persons are not supported and relieved by their relatives or by some other means.

*Governments > Local Governments > Duties & Powers
Public Health & Welfare Law > Healthcare > General
Overview*

[HN26] Counties have no discretion to refuse to provide medical care to "indigent persons" within the meaning of Cal. Welf. & Inst. Code § 17000 who do not receive it from other sources.

*Public Health & Welfare Law > Healthcare > General
Overview*

[HN27] Adult medically indigent persons are "indigent persons" within the meaning of Cal. Welf. & Inst. Code § 17000 for medical care purposes. Section 17000 requires counties to relieve and support all indigent persons.

*Evidence > Inferences & Presumptions > General
Overview*

*Pensions & Benefits Law > Governmental Employees >
County Pensions*

*Public Health & Welfare Law > Social Security > Me-
dicaid > Coverage > General Overview*

[HN28] An attorney general's opinion, although not binding, is entitled to considerable weight. Absent controlling authority, it is persuasive because the court presumes that the legislature is cognizant of the attorney general's construction of Cal. Welf. & Inst. Code § 17000 and would have taken corrective action if it disagreed with that construction.

*Governments > Local Governments > Duties & Powers
Public Health & Welfare Law > Healthcare > General
Overview*

[HN29] Cal. Welf. & Inst. Code § 17000 mandates that medical care is provided to indigents and Cal. Welf. & Inst. Code § 10000 requires that such care be provided promptly and humanely. The duty is mandated by statute. There is no discretion concerning whether to provide such care.

*Governments > Local Governments > Duties & Powers
Public Health & Welfare Law > Healthcare > General
Overview*

[HN30] Cal. Welf. & Inst. Code § 17000 imposes a mandatory duty upon all counties to provide medically necessary care, not just emergency care. It further imposes a minimum standard of care below which the provision of medical services may not fall.

*Governments > Local Governments > Duties & Powers
Healthcare Law > Insurance > Reimbursement > Gen-
eral Overview*

*Public Health & Welfare Law > Healthcare > General
Overview*

[HN31] The former Cal. Health & Safety Code § 1442.5(c) provides that, whether a county's duty to provide care to all indigent people is fulfilled directly by the county or through alternative means, the availability of services, and the quality of the treatment that is received by people who cannot afford to pay for their health care, shall be the same as that available to nonindigent people receiving health care services in private facilities in that county.

*Governments > Local Governments > Duties & Powers
Public Health & Welfare Law > Healthcare > General
Overview*

[HN32] The Supreme Court of California disapproves Cooke v. Superior Court, 261 Cal. Rptr. 706, 213 Cal. App. 3d 401 (1989), to the extent it held that the former Cal. Health & Safety Code § 1442.5(c) was merely a limitation on a county's ability to close facilities or reduce services provided in those facilities, and was irrelevant absent a claim that a county facility was closed or that any services in the county were reduced.

*Governments > Local Governments > Duties & Powers
Governments > Local Governments > Finance
Public Health & Welfare Law > Healthcare > General
Overview*

[HN33] Former Cal. Welf. & Inst. Code § 16990(a) requires counties receiving California Healthcare for the Indigent Program funds, at a minimum, to maintain a level of financial support of county funds for health services at least equal to its county match and any overmatch of county funds in the 1988-89 fiscal year, adjusted annually as provided.

*Public Health & Welfare Law > Healthcare > General
Overview*

[HN34]See former Cal. Welf. & Inst. Code § 16991(a)(5).

Administrative Law > Judicial Review > Remedies > Mandamus

Civil Procedure > Remedies > Writs > General Overview

[HN35]Mandamus pursuant to Cal. Civ. Proc. Code § 1094.5, commonly denominated "administrative" mandamus, is mandamus still. It is not possessed of a separate and distinctive legal personality. It is not a remedy removed from the general law of mandamus or exempted from the latter's established principles, requirements and limitations. The full panoply of rules applicable to "ordinary" mandamus applies to "administrative" mandamus proceedings, except where modified by statute. Where the entitlement to mandamus relief is adequately alleged, a trial court may treat a proceeding brought under Cal. Civ. Proc. Code § 1085 as one brought under Cal. Civ. Proc. Code § 1094.5 and deny a demurrer asserting that the wrong mandamus statute is invoked.

Civil Procedure > Appeals > Standards of Review

[HN36]The determination whether statutes establish a mandate under Cal. Const. art. XIII B, § 6, is a question of law. Where a purely legal question is at issue, the courts exercise independent judgment, no matter whether the issue arises by traditional or administrative mandate.

Civil Procedure > Remedies > Writs > Common Law Writs > Mandamus

[HN37]The denial of a peremptory disqualification motion pursuant to Cal. Civ. Proc. Code § 170.6 is reviewable only by writ of mandate under Cal. Civ. Proc. Code § 170.3(d).

Civil Procedure > Remedies > Injunctions > Preliminary & Temporary Injunctions

Civil Procedure > Appeals > Reviewability > General Overview

[HN38]A preliminary injunction is immediately and separately appealable under Cal. Civ. Proc. Code § 904.1(a)(6).

SUMMARY:

CALIFORNIA OFFICIAL REPORTS SUMMARY

After a county's unsuccessful administrative attempts to obtain reimbursement from the state for expenses incurred through its County Medical Services (CMS) program, and after a class action was filed on

behalf of CMS program beneficiaries seeking to enjoin termination of the program, the county filed a cross-complaint and petition for a writ of mandate (Code Civ. Proc., § 1085) against the state, the Commission on State Mandates, and various state officers, to determine the county's rights under Cal. Const., art. XIII B, § 6 (reimbursement to local government for state-mandated new program or higher level of service). The county alleged that the Legislature's 1982 transfer to counties of responsibility for providing health care for medically indigent adults mandated a reimbursable new program. The trial court found that the state had an obligation to fund the county's CMS program. (Superior Court of San Diego County, No. 634931, Michael I. Greer, * Harrison R. Hollywood, and Judith McConnell, Judges.) The Court of Appeal, Fourth Dist., Div. One, No. D018634, affirmed the judgment of the trial court insofar as it provided that Cal. Const., art. XIII B, § 6, required the state to fund the CMS program. The Court of Appeal also affirmed the trial court's finding that the state had required the county to spend at least \$ 41 million on the CMS program in fiscal years 1989-1990 and 1990-1991. However, the Court of Appeal reversed those portions of the judgment determining the final reimbursement amount and specifying the state funds from which the state was to satisfy the judgment. The Court of Appeal remanded to the commission to determine the reimbursement amount and appropriate statutory remedies.

* Retired judge of the San Diego Superior Court, assigned by the Chief Justice pursuant to article VI, section 6 of the California Constitution.

The Supreme Court affirmed the judgment of the Court of Appeal insofar as it held that the exclusion of medically indigent adults from Medi-Cal imposed a mandate on the county within the meaning of Cal. Const., art. XIII B, § 6. The Supreme Court reversed the judgment insofar as it held that the state required the county to spend at least \$ 41 million on the CMS program in fiscal years 1989-1990 and 1990-1991, and remanded the matter to the commission to determine whether, and by what amount, the statutory standards of care (e.g., Health & Saf. Code, § 1442.5, former subd. (c), Welf. & Inst. Code, §§ 10000, 17000) forced the county to incur costs in excess of the funds provided by the state, and to determine the statutory remedies to which the county was entitled. The court held that the trial court had jurisdiction to adjudicate the county's mandate claim, notwithstanding that a test claim was pending in an action by a different county. The trial court should not have proceeded while the other action was pending, since one purpose of the test claim procedure is to avoid multiple proceedings addressing the same claim. However, the error was not jurisdictional; the governing

statutes simply vest primary jurisdiction in the court hearing the test claim. The court also held that the Legislature's 1982 transfer to counties of responsibility for providing health care for medically indigent adults mandated a reimbursable new program. The state asserted the source of the county's obligation to provide such care was Welf. & Inst. Code, § 17000, enacted in 1965, rather than the 1982 legislation, and since Cal. Const., art. XIII B, § 6, did not apply to "mandates enacted prior to January 1, 1975," there was no reimbursable mandate. However, Welf. & Inst. Code, § 17000, requires a county to support indigent persons only in the event they are not assisted by other sources. The court further held that there was a reimbursable new program, despite the state's assertion that the county had discretion to refuse to provide the medical care. While Welf. & Inst. Code, § 17001, confers discretion on counties to provide general assistance, there are limits to this discretion. The standards must meet the objectives of Welf. & Inst. Code, § 17000, or be struck down as void by the courts. The court also held that the Court of Appeal, in reversing the damages portion of the trial court's judgment and remanding to the commission to determine the amount of any reimbursement due, erred in finding the county had a minimum required expenditure on its CMS program. (Opinion by Chin, J., with George, C. J., Mosk, and Baxter, JJ., Anderson, J., ** and Aldrich, J., + concurring. Dissenting opinion by Kennard, J.)

** Presiding Justice, Court of Appeal, First Appellate District, Division Four, assigned by the Chief Justice pursuant to article VI, section 6 of the California Constitution.

+ Associate Justice, Court of Appeal, Second Appellate District, Division Three, assigned by the Chief Justice pursuant to article VI, section 6 of the California Constitution.

HEADNOTES

CALIFORNIA OFFICIAL REPORTS HEADNOTES

Classified to California Digest of Official Reports

(1) **State of California § 12--Fiscal Matters--Appropriations--Reimbursement to Local Government for State-mandated Program.** --Cal. Const., art. XIII A, and art. XIII B, work in tandem, together restricting California governments' power both to levy and to spend for public purposes. Their goals are to protect residents from excessive taxation and government spending. The purpose of Cal. Const., art. XIII B, § 6 (reimbursement to local government for state-mandated new program or higher level of service), is to preclude the state from shifting financial responsibility for carry-

ing out governmental functions to local agencies, which are ill equipped to assume increased financial responsibilities because of the taxing and spending limitations that Cal. Const., arts. XIII A and XIII B, impose. With certain exceptions, Cal. Const., art. XIII B, § 6, essentially requires the state to pay for any new governmental programs, or for higher levels of service under existing programs, that it imposes upon local governmental agencies.

(2a) (2b) **State of California § 12--Fiscal Matters--Appropriations--Reimbursement to Local Government for State-mandated Program--County's Reimbursement for Cost of Health Care to Indigent Adults--Jurisdiction--With Pending Test Claim.**

--The trial court had jurisdiction to adjudicate a county's mandate claim asserting the Legislature's transfer to counties of the responsibility for providing health care for medically indigent adults constituted a new program or higher level of service that required state funding under Cal. Const., art. XIII B, § 6 (reimbursement to local government for costs of new state-mandated program), notwithstanding that a test claim was pending in an action by a different county. The trial court should not have proceeded while the other action was pending, since one purpose of the test claim procedure is to avoid multiple proceedings addressing the same claim. However, the error was not jurisdictional; the governing statutes simply vest primary jurisdiction in the court hearing the test claim. The trial court's failure to defer to the primary jurisdiction of the other court did not prejudice the state. The trial court did not usurp the Commission on State Mandates' authority, since the commission had exercised its authority in the pending action. Since the pending action was settled, no multiple decisions resulted. Nor did lack of an administrative record prejudice the state, since determining whether a statute imposes a state mandate is an issue of law. Also, attempts to seek relief from the commission would have been futile, thus triggering the futility exception to the exhaustion requirement, given that the commission rejected the other county's claim.

(3) **Administrative Law § 99--Judicial Review and Relief--Administrative Mandamus--Jurisdiction--As Derived From Constitution.** --The power of superior courts to perform mandamus review of administrative decisions derives in part from Cal. Const., art. VI, § 10. That section gives the Supreme Court, Courts of Appeal, and superior courts "original jurisdiction in proceedings for extraordinary relief in the nature of mandamus." The jurisdiction thus vested may not lightly be deemed to have been destroyed. While the courts are subject to reasonable statutory regulation of procedure and other matters, they will maintain their constitutional powers in

order effectively to function as a separate department of government. Consequently an intent to defeat the exercise of the court's jurisdiction will not be supplied by implication.

(4) State of California § 12--Fiscal Matters--Appropriations--Reimbursement to Local Government for State-mandated Program--County's Reimbursement for Cost of Health Care to Indigent Adults--Existence of Mandate. --In a county's action against the state to determine the county's rights under Cal. Const., art. XIII B, § 6 (reimbursement to local government for state-mandated new program or higher level of service), the Legislature's 1982 transfer to counties of responsibility for providing health care for medically indigent adults mandated a reimbursable new program. The state asserted the source of the county's obligation to provide such care was Welf. & Inst. Code, § 17000, enacted in 1965, rather than the 1982 legislation, and since Cal. Const., art. XIII B, § 6, did not apply to "mandates enacted prior to January 1, 1975," there was no reimbursable mandate. However, Welf. & Inst. Code, § 17000, requires a county to support indigent persons only in the event they are not assisted by other sources. To the extent care was provided prior to the 1982 legislation, the county's obligation had been reduced. Also, the state's assumption of full funding responsibility prior to the 1982 legislation was not intended to be temporary. The 1978 legislation that assumed funding responsibility was limited to one year, but similar legislation in 1979 contained no such limiting language. Although the state asserted the health care program was never operated by the state, the Legislature, in adopting Medi-Cal, shifted responsibility for indigent medical care from counties to the state. Medi-Cal permitted county boards of supervisors to prescribe rules (Welf. & Inst. Code, § 14000.2), and Medi-Cal was administered by state departments and agencies.

[See 9 Witkin, Summary of Cal. Law (9th ed. 1989) Taxation, § 123.]

(5a) (5b) State of California § 12--Fiscal Matters--Appropriations--Reimbursement to Local Government for State-mandated Program--County's Reimbursement for Cost of Health Care to Indigent Adults--Existence of Mandate--Discretion to Set Standards--Eligibility. --In a county's action against the state to determine the county's rights under Cal. Const., art. XIII B, § 6 (reimbursement to local government for state-mandated new program or higher level of service), the Legislature's 1982 transfer to counties of responsibility for providing health care for medically indigent adults mandated a reimbursable new program, despite the state's assertion that the county had discretion to refuse to provide such care. While Welf. & Inst. Code,

§ 17001, confers discretion on counties to provide general assistance, there are limits to this discretion. The standards must meet the objectives of Welf. & Inst. Code, § 17000 (counties shall relieve and support "indigent persons"), or be struck down as void by the courts. As to eligibility standards, counties must provide care to all adult medically indigent persons (MIP's). Although Welf. & Inst. Code, § 17000, does not define "indigent persons," the 1982 legislation made clear that adult MIP's were within this category. The coverage history of Medi-Cal demonstrates the Legislature has always viewed all adult MIP's as "indigent persons" under Welf. & Inst. Code, § 17000. The Attorney General also opined that the 1971 inclusion of MIP's in Medi-Cal did not alter the duty of counties to provide care to indigents not eligible for Medi-Cal, and this opinion was entitled to considerable weight. Absent controlling authority, the opinion was persuasive since it was presumed the Legislature was cognizant of the Attorney General's construction and would have taken corrective action if it disagreed. (Disapproving Bay General Community Hospital v. County of San Diego (1984) 156 Cal.App.3d 944 [203 Cal.Rptr. 184] insofar as it holds that a county's responsibility under Welf. & Inst. Code, § 17000, extends only to indigents as defined by the county's board of supervisors, and suggests that a county may refuse to provide medical care to persons who are "indigent" within the meaning of Welf. & Inst. Code, § 17000, but do not qualify for Medi-Cal.)

(6) Public Aid and Welfare § 4--County Assistance--Counties' Discretion. --Counties may exercise their discretion under Welf. & Inst. Code, § 17001 (county board of supervisors or authorized agency shall adopt standards of aid and care for indigent and dependent poor), only within fixed boundaries. In administering General Assistance relief the county acts as an agent of the state. When a statute confers upon a state agency the authority to adopt regulations to implement, interpret, make specific or otherwise carry out its provisions, the agency's regulations must be consistent, not in conflict with the statute, and reasonably necessary to effectuate its purpose (Gov. Code, § 11374). Despite the counties' statutory discretion, courts have consistently invalidated county welfare regulations that fail to meet statutory requirements.

(7) State of California § 12--Fiscal Matters--Appropriations--Reimbursement to Local Government for State-mandated Program--County's Reimbursement for Cost of Health Care to Indigent Adults--Existence of Mandate--Discretion to Set Standards--Service. --In a county's action against the state to determine the county's rights under Cal. Const., art. XIII B, § 6 (reimbursement to local government for

state-mandated new program or higher level of service), the Legislature's 1982 transfer to counties of responsibility for providing health care for medically indigent adults mandated a reimbursable new program, despite the state's assertion that the county had discretion to refuse to provide such care by setting its own service standards. Welf. & Inst. Code, § 17000, mandates that medical care be provided to indigents, and Welf. & Inst. Code, § 10000, requires that such care be provided promptly and humanely. There is no discretion concerning whether to provide such care. Courts construing Welf. & Inst. Code, § 17000, have held it imposes a mandatory duty upon counties to provide medically necessary care, not just emergency care, and it has been interpreted to impose a minimum standard of care. Until its repeal in 1992, Health & Saf. Code, § 1442.5, former subd. (c), also spoke to the level of services that counties had to provide under Welf. & Inst. Code, § 17000, requiring that the availability and quality of services provided to indigents directly by the county or alternatively be the same as that available to nonindigents in private facilities in that county. (Disapproving *Cooke v. Superior Court* (1989) 213 Cal.App.3d 401 [261 Cal.Rptr. 706] to the extent it held that Health & Saf. Code, § 1442.5, former subd. (c), was merely a limitation on a county's ability to close facilities or reduce services provided in those facilities, and was irrelevant absent a claim that a county facility was closed or that services in the county were reduced.)

(8) State of California § 12--Fiscal Matters--Appropriations--Reimbursement to Local Government for State-mandated Program--County's Reimbursement for Cost of Health Care to Indigent Adults--Minimum Required Expenditure. --In a county's action against the state to determine the county's rights under Cal. Const., art. XIII B, § 6 (reimbursement to local government for state-mandated new program or higher level of service), in which the trial court found that the Legislature's 1982 transfer to counties of the responsibility for providing health care for medically indigent adults mandated a reimbursable new program entitling the county to reimbursement, the Court of Appeal, in reversing the damages portion of the trial court's judgment and remanding to the Commission on State Mandates to determine the amount of any reimbursement due, erred in finding the county had a minimum required expenditure on its County Medical Services (CMS) program. The Court of Appeal relied on Welf. & Inst. Code, former § 16990, subd. (a), which set forth the financial maintenance-of-effort requirement for counties that received California Healthcare for the Indigent Program (CHIP) funding. However, counties that chose to seek CHIP funds did so voluntarily. Thus, Welf. & Inst. Code, former § 16990, subd. (a), did not mandate a minimum funding requirement. Nor did Welf. & Inst. Code, former

§ 16991, subd. (a)(5), establish a minimum financial obligation. That statute required the state, for fiscal years 1989-1990 and 1990-1991, to reimburse a county if its allocation from various sources was less than the funding it received under Welf. & Inst. Code, § 16703, for 1988-1989. Nothing about this requirement imposed on the county a minimum funding requirement.

(9) State of California § 12--Fiscal Matters--Appropriations--Reimbursement to Local Government for State-mandated Program--County's Reimbursement for Cost of Health Care to Indigent Adults--Proper Mandamus Proceeding: Mandamus and Prohibition § 23--Claim Against Commission on State Mandates. --In a county's action against the state to determine the county's rights under Cal. Const., art. XIII B, § 6 (reimbursement to local government for state-mandated new program or higher level of service), after the Commission on State Mandates indicated the Legislature's 1982 transfer to counties of the responsibility for providing health care for medically indigent adults did not mandate a reimbursable new program, a mandamus proceeding under Code Civ. Proc., § 1085, was not an improper vehicle for challenging the commission's position. Mandamus under Code Civ. Proc., § 1094.5, commonly denominated "administrative" mandamus, is mandamus still. The full panoply of rules applicable to ordinary mandamus applies to administrative mandamus proceedings, except where they are modified by statute. Where entitlement to mandamus relief is adequately alleged, a trial court may treat a proceeding under Code Civ. Proc., § 1085, as one brought under Code Civ. Proc., § 1094.5, and should overrule a demurrer asserting that the wrong mandamus statute has been invoked. In any event, the determination whether the statutes at issue established a mandate under Cal. Const., art. XIII B, § 6, was a question of law. Where a purely legal question is at issue, courts exercise independent judgment, no matter whether the issue arises by traditional or administrative mandate.

OPINION BY: CHIN

OPINION

[*75] [*314] [***136] CHIN, J.

Section 6 of article XIII B of the California Constitution (section 6) requires the State of California (state), subject to certain exceptions, to "provide a subvention of funds to reimburse" local governments "[w]henver the Legislature or any state agency mandates a new program or higher level of service" In this action, the County of San Diego (San Diego or the County) seeks reimbursement under section 6 from the state for the costs of providing health care services to certain adults who formerly received medical care under the California Medical Assistance Program (Medi-Cal) (see Welf. & Inst. Code, [*315] [***137] § 14063) ¹ because they were medically indigent, i.e., they had insufficient financial resources to pay for their own medical care. In 1979, when the electorate adopted section 6, the state provided Medi-Cal coverage to these medically indigent adults without requiring financial contributions from counties. Effective January 1, 1983, the Legislature excluded this population from Medi-Cal. (Stats. 1982, ch. 328, § 6, 8.3, 8.5, pp. 1574-1576; Stats. 1982, ch. 1594, § 19, 86, pp. 6315, 6357.) Since that date, San Diego has provided medical care to these individuals with varying levels of state financial assistance.

1 Except as otherwise indicated, all further statutory references are to the Welfare and Institutions Code.

To resolve San Diego's claim, we must determine whether the Legislature's exclusion of medically indigent adults from Medi-Cal "mandate[d] a new program or higher level of service" on San Diego within the meaning of section 6. The Commission on State Mandates (Commission), which the Legislature created to determine claims under section 6, has ruled that section 6 does not apply to the Legislature's action and has rejected reimbursement claims like San Diego's. (See Kinlaw v. State of California (1991) 54 Cal. 3d 326, 330, fn. 2 [285 Cal. Rptr. 66, 814 P.2d 1308] (*Kinlaw*)). The trial court and Court of Appeal in this case disagreed with the Commission, finding that San Diego was entitled to reimburse-

ment. The state seeks [*76] reversal of this finding. It also argues that San Diego's failure to follow statutory procedures deprived the courts of jurisdiction to hear its claim. We reject the state's jurisdictional argument and affirm the finding that the Legislature's exclusion of medically indigent adults from Medi-Cal "mandate[d] a new program or higher level of service" within the meaning of section 6. Accordingly, we remand the matter to the Commission to determine the amount of reimbursement, if any, due San Diego under the governing statutes.

I. FUNDING OF INDIGENT MEDICAL CARE

Before the start of Medi-Cal, "the indigent in California were provided health care services through a variety of different programs and institutions." (Assem. Com. on Public Health, Preliminary Rep. on Medi-Cal (Feb. 29, 1968) p. 3 (Preliminary Report).) County hospitals "provided a wide range of inpatient and outpatient hospital services to all persons who met county indigency requirements whether or not they were public assistance recipients. The major responsibility for supporting county hospitals rested upon the counties, financed primarily through property taxes, with minor contributions from" other sources. (*Id.* at p. 4.)

[HN1]Medi-Cal, which began operating March 1, 1966, established "a program of basic and extended health care services for recipients of public assistance and for medically indigent persons." (*Morris v. Williams* (1967) 67 Cal. 2d 733, 738 [63 Cal. Rptr. 689, 433 P.2d 697] (*Morris*); *id.* at p. 740; see also Stats. 1966, Second Ex. Sess. 1965, ch. 4, § 2, p. 103.) It "represent[ed] California's implementation of the federal Medicaid program (42 U.S.C. § 1396-1396v), through which the federal government provide[d] financial assistance to states so that they [might] furnish medical care to qualified indigent persons. [Citation.]" (*Robert F. Kennedy Medical Center v. Belsh* (1996) 13 Cal. 4th 748, 751 [55 Cal. Rptr. 2d 107, 919 P.2d 721] (*Belsh*)). "[B]y meeting the requirements of federal law," Medi-Cal "qualif[ied] California for the receipt of federal funds made available under title XIX of the Social Security Act." (*Morris, supra*, 67 Cal. 2d at p. 738.) "Title [XIX] permitted the combination of the major governmental health care systems which provided care for the indigent into a single system financed by the state and federal governments. By 1975, this system, at least as originally proposed, would provide a wide range of health care services for all those who [were] indigent regardless of whether they [were] public assistance recipients" (Preliminary Rep., *supra*, at p. 4; see also Act of July 30, 1965, Pub.L. No. 89-97, § 121(a), 79 Stat. 286, reprinted in 1965 U.S. Code [*77] Cong. & Admin. News, p. 378 [states must make effort to [*316] [***138] liberalize

eligibility requirements "with a view toward furnishing by July 1, 1975, comprehensive care and services to substantially all individuals who meet the plan's eligibility standards with respect to income and resources"].²

2 Congress later repealed the requirement that states work towards expanding eligibility. (See Cal. Health and Welfare Agency, *The Medi-Cal Program: A Brief Summary of Major Events* (Mar. 1990) p. 1 (Summary of Major Events).)

However, eligibility for Medi-Cal was initially limited only to persons linked to a federal categorical aid program by age (at least 65), blindness, disability, or membership in a family with dependent children within the meaning of the Aid to Families with Dependent Children program (AFDC). (See Legis. Analyst, Rep. to Joint Legis. Budget Com., *Analysis of 1971-1972 Budget Bill*, Sen. Bill No. 207 (1971 Reg. Sess.) pp. 548, 550 (1971 Legislative Analyst's Report).) Individuals possessing one of these characteristics (categorically linked persons) received full benefits if they actually received public assistance payments. (*Id.* at p. 550.) Lesser benefits were available to categorically linked persons who were only medically indigent, i.e., their income and resources, although rendering them ineligible for cash aid, were "not sufficient to meet the cost of health care." (*Morris, supra*, 67 Cal. 2d at p. 750; see also 1971 Legis. Analyst's Rep., *supra*, at pp. 548, 550; Stats. 1966, Second Ex. Sess. 1965, ch. 4, § 2, pp. 105-106.)

Individuals not linked to a federal categorical aid program (non-categorically linked persons) were ineligible for Medi-Cal, regardless of their means. Thus, "a group of citizens, not covered by Medi-Cal and yet unable to afford medical care, remained the responsibility of" the counties. (*County of Santa Clara v. Hall* (1972) 23 Cal. App. 3d 1059, 1061 [100 Cal. Rptr. 629] (*Hall*)). In establishing Medi-Cal, the Legislature expressly recognized this fact by enacting former section 14108.5, which provided: "The Legislature hereby declares its concern with the problems which will be facing the counties with respect to the medical care of indigent persons who are not covered [by Medi-Cal] . . . and . . . whose medical care must be financed entirely by the counties in a time of heavily increasing medical costs." (Stats. 1966, Second Ex. Sess. 1965, ch. 4, § 2, p. 116.) The Legislature directed the Health Review and Program Council "to study this problem and report its findings to the Legislature no later than March 1, 1967." (*Ibid.*)

Moreover, although it required counties to contribute to the costs of Medi-Cal, the Legislature established a method for determining the amount of their contributions that would "leave them with [sufficient funds to provide hospital care for those persons not eligible for Medi-Cal." (*Hall, supra*, 23 Cal. App. 3d at p. 1061, fn.

omitted.) Former section 14150.1, [*78] which was known as the "county option" or the "option plan," required a county "to pay the state a sum equal to 100 percent of the county's health care costs (which included both linked and nonlinked individuals) provided in the 1964-1965 fiscal year, with an adjustment for population increase; in return the state would pay the county's entire cost of medical care."³ (*County of Sacramento v. Lackner* (1979) 97 Cal. App. 3d 576, 581 [159 Cal. Rptr. 1] (*Lackner*)). Under the county option, "the state agreed to assume all county health care costs . . . in excess of" the county's payment. (*Id.* at p. 586.) It "made no distinction between 'linked' and 'nonlinked' persons," and "simply guaranteed a medical cost ceiling to counties electing to come within the option plan." (*Ibid.*) "Any difference [**317] [***139] in actual operating costs and the limit set by the option provision [was] assumed entirely by the state." (Preliminary Rep., *supra*, at p. 10, fn. 2.) Thus, the county option "guarantee[d] state participation in the cost of care for medically indigent persons who [were] not otherwise covered by the basic Medi-Cal program or other repayment programs."⁴ (1971 Legis. Analyst's Rep., *supra*, at p. 549.)

3 [HN2]Former section 14150.1 provided in relevant part: "[A] county may elect to pay as its share [of Medi-Cal costs] one hundred percent . . . of the county cost of health care uncompensated from any source in 1964-65 for all categorical aid recipients, and all other persons in the county hospital or in a contract hospital, increased for such county for each fiscal year subsequent to 1964-65 by an amount proportionate to the increase in population for such county If the county so elects, the county costs of health care in any fiscal year shall not exceed the total county costs of health care uncompensated from any source in 1964-65 for all categorical aid recipients, and all other persons in the county hospital or in a contract hospital, increased for such county for each fiscal year subsequent to 1964-65 by an amount proportionate to the increase in population for such county" (Stats. 1966, Second Ex. Sess. 1965, ch. 4, § 2, p. 121.)

4 [HN3]Former section 14150 provided the standard method for determining the counties' share of Medi-Cal costs. Under it, "a county was required to pay the state a specific sum, in return for which the state would pay for the medical care of all [categorically linked] individuals Financial responsibility for nonlinked individuals . . . remained with the counties." (*Lackner, supra*, 97 Cal. App. 3d at p. 581.)

Primarily through the county option, Medi-Cal caused a "significant shift in financing of health care

from the counties to the state and federal government. . . . During the first 28 months of the program the state . . . paid approximately \$ 76 million for care of non-Medi-Cal indigents in county hospitals." (Preliminary Rep., *supra*, at p. 31.) These state funds paid "costs that would otherwise have been borne by counties through increases in property taxes." (Legis. Analyst, Rep. to Joint Legis. Budget Com., Analysis of 1974-1975 Budget Bill, Sen. Bill No. 1525 (1973-1974 Reg. Sess.) p. 626 (1974 Legislative Analyst's Report).) "[F]aced with escalating Medi-Cal costs, the Legislature in 1967 imposed strict guidelines on reimbursing counties electing to come under the 'option' plan. ([Former] § 14150.2.) Pursuant to subdivision (c) of [former] section 14150.2, the state imposed a limit on its obligation to pay for medical services to nonlinked persons [*79] served by a county within the 'option' plan." (*Lackner, supra*, 97 Cal. App. 3d at p. 589; see also Stats. 1967, ch. 104, § 3, p. 1019; Stats. 1969, ch. 21, § 57, pp. 106-107; 1974 Legis. Analyst's Rep., *supra*, at p. 626.)

In 1971, the Legislature substantially revised Medi-Cal. It extended coverage to certain noncategorically linked minors and adults "who [were] financially unable to pay for their medical care." (Legis. Counsel's Dig., Assem. Bill No. 949, 3 Stats. 1971 (Reg. Sess.) Summary Dig., p. 83; see Stats. 1971, ch. 577, § 12, 23, pp. 1110-1111, 1115.) These medically indigent individuals met "the income and resource requirements for aid under [AFDC] but [did] not otherwise qualify[] as a public assistance recipient." (56 Ops.Cal.Atty.Gen. 568, 569 (1973).) The Legislature anticipated that this eligibility expansion would bring "approximately 800,000 additional medically needy Californians" into Medi-Cal. (Stats. 1971, ch. 577, § 56, p. 1136.) The 1971 legislation referred to these individuals as "'[n]oncategorically related needy person[s]'" (Stats. 1971, ch. 577, § 23, p. 1115.) Subsequent legislation designated them as "medically indigent person[s]" (MIP's) and provided them coverage under former section 14005.4. (Stats. 1976, ch. 126, § 7, p. 200; *id.* at § 20, p. 204.)

The 1971 legislation also established a new method for determining each county's financial contribution to Medi-Cal. The Legislature eliminated the county option by repealing former section 14150.1 and enacting former section 14150. That section specified (by amount) each county's share of Medi-Cal costs for the 1972-1973 fiscal year and set forth a formula for increasing the share in subsequent years based on the taxable assessed value of certain property. (Stats. 1971, ch. 577, § 41, 42, pp. 1131-1133.)

For the 1978-1979 fiscal year, the state assumed each county's share of Medi-Cal costs under former section 14150. (Stats. 1978, ch. 292, § 33, p. 610.) In July

1979, the Legislature repealed former section 14150 altogether, thereby eliminating the counties' responsibility to share in Medi-Cal costs. (Stats. 1979, ch. 282, § 74, p. 1043.) Thus, in November 1979, when the electorate adopted section 6, "the state was funding Medi-Cal coverage for [MIP's] without requiring any county financial contribution." (*Kinlaw, supra*, 54 Cal. 3d at p. 329.) The state continued to provide full funding for MIP medical care through 1982.

In 1982, the Legislature passed two Medi-Cal reform bills that, as of January 1, 1983, excluded from Medi-Cal most adults who had been eligible [*80] under the MIP category [***140] (adult [*318] MIP's or Medically Indigent Adults).⁵ (Stats. 1982, ch. 328, § 6, 8.3, 8.5, pp. 1574-1576; Stats. 1982, ch. 1594, § 19, 86, pp. 6315, 6357; *Cooke v. Superior Court* (1989) 213 Cal. App. 3d 401, 411 [261 Cal. Rptr. 706] (*Cooke*).) As part of excluding this population from Medi-Cal, the Legislature created the Medically Indigent Services Account (MISA) as a mechanism for "transfer[ing] [state] funds to the counties for the provision of health care services." (Stats. 1982, ch. 1594, § 86, p. 6357.) Through MISA, the state annually allocated funds to counties based on "the average amount expended" during the previous three fiscal years on Medi-Cal services for county residents who had been eligible as MIP's. (Stats. 1982, ch. 1594, § 69, p. 6345.) The Legislature directed that MISA funds "be consolidated with existing county health services funds in order to provide health services to low-income persons and other persons not eligible for the Medi-Cal program." (Stats. 1982, ch. 1594, § 86, p. 6357.) It further provided: "Any person whose income and resources meet the income and resource criteria for certification for [Medi-Cal] services pursuant to Section 14005.7 other than for the aged, blind, or disabled, shall not be excluded from eligibility for services to the extent that state funds are provided." (Stats. 1982, ch. 1594, § 70, p. 6346.)

5 In this opinion, the terms "adult MIP's" and "Medically Indigent Adults" refer only to those persons who were excluded from the Medi-Cal program by the 1982 legislation.

After passage of the 1982 legislation, San Diego established a county medical services (CMS) program to provide medical care to adult MIP's. According to San Diego, between 1983 and June 1989, the state fully funded San Diego's CMS program through MISA. However, for fiscal years 1989-1990 and 1990-1991, the state only partially funded San Diego's CMS program. For example, San Diego asserts that, in fiscal year 1990-1991, it exhausted state-provided MISA funds by December 24, 1990. Faced with this shortfall, San Diego's board of supervisors voted in February 1991 to

terminate the CMS program unless the state agreed by March 8 to provide full funding for the 1990-1991 fiscal year. After the state refused to provide additional funding, San Diego notified affected individuals and medical service providers that it would terminate the CMS program at midnight on March 19, 1991. The response to the County's notification ultimately resulted in the unfunded mandate claim now before us.

II. UNFUNDED MANDATES

Through adoption of Proposition 13 in 1978, the voters [HN4]added article XIII A to the California Constitution, which "imposes a limit on the power of state and local governments to adopt and levy taxes. [Citation.]" (*County of Fresno v. State of California* (1991) 53 Cal. 3d 482, 486 [280 Cal. Rptr. 92, [*81] 808 P.2d 235] (*County of Fresno*)). The next year, the voters added article XIII B to the Constitution, which "impose[s] a complementary limit on the rate of growth in governmental spending." (*San Francisco Taxpayers Assn. v. Board of Supervisors* (1992) 2 Cal. 4th 571, 574 [7 Cal. Rptr. 2d 245, 828 P.2d 147].) (1) These two constitutional articles "work in tandem, together restricting California governments' power both to levy and to spend for public purposes." (*City of Sacramento v. State of California* (1990) 50 Cal. 3d 51, 59, fn. 1 [266 Cal. Rptr. 139, 785 P.2d 522].) Their goals are "to protect residents from excessive taxation and government spending. [Citation.]" (*County of Los Angeles v. State of California* (1987) 43 Cal. 3d 46, 61 [233 Cal. Rptr. 38, 729 P.2d 202] (*County of Los Angeles*)).

[HN5]Article XIII B of the California Constitution includes section 6, which is the constitutional provision at issue here. It provides in relevant part: "Whenever the Legislature or any state agency mandates a new program or higher level of service on any local government, the state shall provide a subvention of funds to reimburse such local government for the costs of such program or increased level of service, except that the Legislature may, but need not, provide such subvention of funds for the following mandates: [P] . . . [P] (c) Legislative mandates enacted prior to January 1, 1975, or executive orders or regulations initially implementing legislation enacted prior to January 1, 1975." Section 6 [**319] [***141] recognizes that articles XIII A and XIII B severely restrict the taxing and spending powers of local governments. (*County of Fresno, supra*, 53 Cal. 3d at p. 487.) Its purpose is to preclude the state from shifting financial responsibility for carrying out governmental functions to local agencies, which are "ill equipped" to assume increased financial responsibilities because of the taxing and spending limitations that articles XIII A and XIII B impose. (*County of Fresno, supra*, 53 Cal. 3d at p. 487; *County of Los Angeles, supra*, 43 Cal. 3d at p. 61.)

With certain exceptions, [HN6]section 6 "[e]ssentially" requires the state "to pay for any new governmental programs, or for higher levels of service under existing programs, that it imposes upon local governmental agencies. [Citation.]" (*Hayes v. Commission on State Mandates* (1992) 11 Cal. App. 4th 1564, 1577 [15 Cal. Rptr. 2d 547].)

In 1984, the Legislature created a statutory procedure for [HN7]determining whether a statute imposes state-mandated costs on a local agency within the meaning of section 6. (*Gov. Code, § 17500 et seq.*) The local agency must file a test claim with the Commission, which, after a public hearing, decides whether the statute mandates a new program or increased level of service. (*Gov. Code, § 17521, 17551, 17555.*) If the Commission finds a claim to be reimbursable, it must determine the amount of reimbursement. (*Gov. Code, § 17557.*) The local agency must then follow certain statutory procedures to [*82] obtain reimbursement. (*Gov. Code, § 17558 et seq.*) [HN8]If the Legislature refuses to appropriate money for a reimbursable mandate, the local agency may file "an action in declaratory relief to declare the mandate unenforceable and enjoin its enforcement." (*Gov. Code, § 17612, subd. (c).*) If the Commission finds no reimbursable mandate, the local agency may challenge this finding by administrative mandate proceedings under section 1094.5 of the Code of Civil Procedure. (*Gov. Code, § 17559.*) Government Code section 17552 declares that these provisions "provide the sole and exclusive procedure by which a local agency . . . may claim reimbursement for costs mandated by the state as required by Section 6"

III. ADMINISTRATIVE AND JUDICIAL PROCEEDINGS

A. *The Los Angeles Action*

On November 23, 1987, the County of Los Angeles (Los Angeles) filed a claim (the Los Angeles action) with the Commission asserting that the exclusion of adult MIP's from Medi-Cal constituted a reimbursable mandate under section 6. (*Kinlaw, supra*, 54 Cal. 3d at p. 330, fn. 2.) Alameda County subsequently filed a claim on November 30, 1987, but the Commission rejected it because of the pending Los Angeles claim. (*Id.* at p. 331, fn. 4.) Los Angeles refused to permit Alameda County to join as a claimant, but permitted San Bernardino County to join. (*Ibid.*)

In April 1989, the Commission rejected the Los Angeles claim, finding no reimbursable mandate. ⁶ (*Kinlaw, supra*, 54 Cal. 3d at p. 330, fn. 2.) It found that the 1982 legislation did not impose on counties a new program or a higher level of service for an existing program because counties had a "pre-existing duty" to pro-

vide medical care to the medically indigent under section 17000. That section provides in relevant part: "Every county . . . shall relieve and support all incompetent, poor, indigent persons . . . lawfully resident therein, when such persons are not supported and relieved by their relatives or friends, by their own means, or by state hospitals or other state or private institutions." Section 17000 did not impose a reimbursable mandate under section 6, the Commission further reasoned, because it "was enacted prior to January 1, 1975 . . ." Finally, the Commission found no mandate because the 1982 legislation "neither establish[ed] the level of care to be provided nor . . . define[d] the class of persons determined to be eligible for medical care since these criteria were established by boards of supervisors" pursuant to section 17001.

6 San Diego lodged with the trial court a copy of the Commission's decision in the Los Angeles action.

[**320] [***142] On March 20, 1990, the Los Angeles Superior Court filed a judgment reversing the Commission's decision and directing issuance of a peremptory [*83] writ of mandate. On April 16, 1990, the Commission and the state filed an appeal in the Second District Court of Appeal. (*County of Los Angeles v. State of California*, No. B049625.)⁷ In early 1992, the parties to the Los Angeles action agreed to settle their dispute and to seek dismissal. In April 1992, after learning of this agreement, San Diego sought to intervene. Explaining that it had been waiting for resolution of the action, San Diego requested that the Court of Appeal deny the dismissal request and add (or substitute in) the County as a party. The Court of Appeal did not respond. On December 15, 1992, the parties to the Los Angeles action entered into a settlement agreement that provided for vacation of the superior court judgment and dismissal of the appeal and superior court action. Consistent with the settlement agreement, on December 29, 1992, the Court of Appeal filed an order vacating the superior court judgment, dismissing the appeal, and instructing the superior court to dismiss the action without prejudice on remand. ⁸

7 In setting forth the facts relating to the Los Angeles action, we rely in part on the appellate record from that action, of which we take judicial notice. (Evid. Code, § 452, subd. (d), 459.)

8 The settlement resulted from 1991 legislation that changed the system of health care funding as of June 30, 1991. (See § 17600 et seq.; Stats. 1991, chs. 87, 89, pp. 231-235, 243-341.) That legislation provided counties with new revenue sources, including a portion of state vehicle license fees, to fund health care programs. Howev-

er, the legislation declared that the statutes providing counties with vehicle license fees would "cease to be operative on the first day of the month following the month in which the Department of Motor Vehicles is notified by the Department of Finance of a final judicial determination by the California Supreme Court or any California court of appeal" that "[t]he state is obligated to reimburse counties for costs of providing medical services to medically indigent adults pursuant to Chapters 328 and 1594 of the Statutes of 1982." (Rev. & Tax. Code, § 10753.8, subd. (b)(2), 11001.5, subd. (d)(2); see also Stats. 1991, ch. 89, § 210, p. 340.) Los Angeles and San Bernardino Counties settled their action to avoid triggering these provisions. Unlike the dissent, we do not believe that consideration of these recently enacted provisions is appropriate in analyzing the 1982 legislation. Nor do we assume, as the dissent does, that our decision necessarily triggers these provisions. That issue is not before us.

B. *The San Diego Action*

1. *Administrative Attempts to Obtain Reimbursement*

On March 13, 1991, San Diego submitted an invoice to the State Controller seeking reimbursement of its uncompensated expenditures on the CMS program for fiscal year 1989-1990. The Controller is a member of the Commission. (Gov. Code, § 17525.) On April 12, the Controller returned the invoice "without action," stating that "[n]o appropriation has been given to this office to allow for reimbursement" of medical costs for adult MIP's, and noting that litigation was pending regarding the state's reimbursement obligation. On December 18, 1991, San Diego submitted a similar invoice for the 1990-1991 fiscal year. The state has not acted regarding this second invoice.

[*84] 2. *Court Proceedings*

Responding to San Diego's notice of intent to terminate the CMS program, on March 11, 1991, the Legal Aid Society of San Diego filed a class action on behalf of CMS program beneficiaries seeking to enjoin termination of the program. The trial court later issued a preliminary injunction prohibiting San Diego "from taking any action to reduce or terminate" the CMS program.

On March 15, 1991, San Diego filed a cross-complaint and petition for writ of mandate under Code of Civil Procedure section 1085 against the state, the Commission, and various state officers. ⁹ The cross-complaint alleged that, by excluding adult MIP's from Medi-Cal and transferring responsibility for [**321] [***143] their medical care to counties, the

state had mandated a new program and higher level of service within the meaning of section 6. The cross-complaint further alleged that the state therefore had a duty under section 6 to reimburse San Diego for the entire cost of its CMS program, and that the state had failed to perform its duty.

9 The cross-complaint named the following state officers: (1) Kenneth W. Kizer, Director of the Department of Health Services; (2) Kim Belsh, Acting Secretary of the Health and Welfare Agency; (3) Gray Davis, the State Controller; (4) Kathleen Brown, the State Treasurer; and (5) Thomas Hayes, the Director of the Department of Finance. Where the context suggests, subsequent references in this opinion to "the state" include these officers.

Proceeding from these initial allegations, the cross-complaint alleged causes of action for indemnification, declaratory and injunctive relief, reimbursement and damages, and writ of mandate. In its first declaratory relief claim, San Diego alleged (on information and belief) that the state contended the CMS program was a nonreimbursable, county obligation. In its claim for reimbursement, San Diego alleged (again on information and belief) that the Commission had "previously denied the claims of other counties, ruling that county medical care programs for [adult MIP's] are not state-mandated and, therefore, counties are not entitled to reimbursement from the State for the costs of such programs." "Under these circumstances," San Diego asserted, "denial of the County's claim by the Commission . . . is virtually certain and further administrative pursuit of this claim would be a futile act."

For relief, San Diego requested a judgment declaring the following: (1) that the state must fully reimburse San Diego if it "is compelled to provide any CMS Program services to plaintiffs . . . after March 19, 1991"; (2) that section 6 requires the state "to fully fund the CMS Program" (or, alternatively, that the CMS program is discretionary); (3) that the state must pay San Diego for all of its unreimbursed costs for the CMS program during [*85] the 1989-1990 and 1990-1991 fiscal years; and (4) that the state shall assume responsibility for operating any court-ordered continuation of the CMS program. San Diego also requested that the court issue a writ of mandamus requiring the state to fulfill its reimbursement obligation. Finally, San Diego requested issuance of preliminary and permanent injunctions to ensure that the state fulfilled its obligations to the County.

In April 1991, San Diego determined that it could continue operating the CMS program using previously unavailable general fund revenues. Accordingly, San

Diego and plaintiffs settled their dispute, and plaintiffs dismissed their complaint.

The matter proceeded solely on San Diego's cross-complaint. The court issued a preliminary injunction and alternative writ in May 1991. At a hearing on June 25, 1991, the court found that the state had an obligation to fund San Diego's CMS program, granted San Diego's request for a writ of mandate, and scheduled an evidentiary hearing to determine damages and remedies. On July 1, 1991, it issued an order reflecting this ruling and granting a peremptory writ of mandate. The writ did not issue, however, because of the pending hearing to determine damages. In December 1992, after an extensive evidentiary hearing and posthearing proceedings on the claim for a peremptory writ of mandate, the court issued a judgment confirming its jurisdiction to determine San Diego's claim, finding that section 6 required the state to fund the entire cost of San Diego's CMS program, determining the amount that the state owed San Diego for fiscal years 1989-1990 and 1990-1991, identifying funds available to the state to satisfy the judgment, and ordering issuance of a peremptory writ of mandate.¹⁰ The court also issued a peremptory writ of mandate directing the state and various state officers to comply with the judgment.

10 The judgment dismissed all of San Diego's other claims.
