In addition, the claimants mistakenly contend that the NALs "are similar to strict numeric effluent limits in that they impose new mandated requirements on the Copermittees to meet such numeric limits."[468] The test claim permit simply identifies action levels for each pollutant that, if detected in monitoring and field screening to be in excess of the action level, triggers the investigation, identification of the discharge, removal, and reporting activities required by federal law. The claimants do not violate the permit by exceeding the NAL, as implied by the claimant; a violation occurs only if the claimant fails to timely implement the required actions following an exceedance of an action level.[469] [470] In this sense, NALs established in the test claim permit function the same as the prior permit, which required the claimant to identify numeric criteria to determine if significant sources of pollutants were present in dry weather non-stormwater discharges.[471] Under both permits, the action levels or criteria are intended to determine the presence of an illicit discharge, which then triggers the federal requirements to investigate, identify, and remove the illicit discharge, and report the findings to the Regional Board.

---

[468] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 43 (Test Claim narrative).

[469] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 203 (test claim permit, Section C.3.).

[470] This is in contrast to the industrial dischargers, which are subject to strict liability standards for exceeding effluent limits. Industrial dischargers are required to meet applicable effluent limitations with the "best practicable control technology currently available," and are required to achieve "any more stringent limitation, including those necessary to meet water quality standards, treatment standards, or schedules of compliance…or any other Federal law or regulations, or required to implement any applicable water quality standard established pursuant to this chapter." United States Code, title 33, section 1311(b)(1)(C); *Defenders of Wildlife v. Browner* (1999) 191 F.3d 1159, 1164-1166. The US EPA's Multi-Sector General Permit for Stormwater Discharges, applicable to industrial activity, states simply, "Your discharge must be controlled as necessary to meet applicable water quality standards." Any exceedance of an applicable water quality standard by an industrial discharger requires corrective action, reporting, and potential monetary penalties for failing to strictly comply with the effluent limit. Exhibit X (14), EPA, Multi-Sector General Permit For Stormwater Discharges Associated With Industrial Activity, May 27, 2009, pages 21-24, 183, ("The CWA provides that any person who violates a permit condition implementing Sections 301, 302, 306, 307, 308, 318, or 405 of the Act is subject to a civil penalty not to exceed the maximum amounts authorized by Section 309(d) of the Act and the Federal Civil Penalties Inflation Adjustment Act…").

[471] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 594 (Order R9-2004-0001, Section J.4.).

As indicated above, the CWA requires that NPDES permits for MS4s "shall include a requirement to effectively prohibit non-stormwater discharges into the storm sewers."[472] Federal law also requires that if a discharge causes, has the reasonable potential to cause, or contributes to an excursion of a numeric or narrative water quality criteria, the Regional Board must develop permit limits as necessary to meet water quality standards.[473] In this case, the Regional Board found, based on the dry weather monitoring in receiving waters conducted under the prior permit, that concentrations of bacteria, pH, dissolved oxygen, nitrate, turbidity, MBAS, and metals exceed water quality criteria, and that the exceedances relating to non-stormwater discharges require it to now establish TMDLs.[474] Thus, the Regional Board established the action levels that trigger the federally-required activities instead of continuing to allow the claimants to identify the criteria for the presence of an illicit discharge. The NALs were established by the Regional Board "at levels appropriate to protect water quality standards [, which] is expected to lead to the identification of significant sources of pollutants in dry weather non-storm water discharges."[475] The action levels are based on previously adopted numeric or narrative water quality objectives and criteria for pollutants in the receiving waters as identified in the Ocean Plan; the Basin Plan; the State Policy for Implementation of Toxics Standards for Inland Surface Waters, Enclosed Bays, and Estuaries of California (State Implementation Policy or SIP); and the California Toxics Rule.[476] The action levels determine the presence of an illicit discharge detected with monitoring and field screening, which then triggers the existing federal requirements to investigate, identify, and remove the illicit discharge, and report the findings to the Regional Board.

The test claim permit, however, does contain more specificity to effectively prohibit non-stormwater discharges and to protect the region's water quality standards, when compared to the prior permit. For example, the test claim permit includes deadlines to investigate the potential illicit discharge when screening results exceed action levels and to report to the Regional Board.[477] Although the requirements to investigate and report were contained in the prior permit and are not new, the prior permit did not specify deadlines. A deadline may affect the timing, but it does not require that any new activities be performed.

[472] United States Code, title 33, section 1342(p)(3)(B)(ii) (Public Law 100-4).

[473] Code of Federal Regulations, title 40, section 122.44(d)(1).

[474] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 463, 482 (Fact Sheet/Technical Report).

[475] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 197 (test claim permit, Finding E.10.).

[476] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 197-198 (test claim permit, Finding E.10.).

[477] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 202-203, 251, 311 (test claim permit, Sections C.2.d., F.4.e.2., and Attachment E, Section II.C.2.b.).

The test claim permit also specifies that claimants must "conduct, and report on a year-round watershed based Dry Weather Non-stormwater MS4 Discharge Monitoring Program."[478] The prior permit required that "dry weather analytical and field screening monitoring shall be conducted at each identified station at least twice between May 1st and September 30th of each year, *or as more frequently as the Permittee determines is necessary to comply with the order*."[479] The Findings in the test claim permit indicate that the permittees had not previously complied with applicable water quality standards and did not effectively prohibit non-stormwater discharges under the prior permit. Finding 9 states the following:

> The Copermittees' water quality monitoring data submitted to date documents persistent violations of Basin Plan water quality objectives for various runoff-related pollutants (indicator bacteria, dissolved solids, turbidity, metals, pesticides, etc.) at various watershed monitoring stations. Persistent toxicity has also been observed at some watershed monitoring stations. In addition, bioassessment data indicate that the majority of the monitored receiving waters have Poor to Very Poor Index of Biotic Integrity ratings. In sum, the above findings indicate that runoff discharges are causing or contributing to water quality impairments, and are the leading cause of such impairments in Riverside County.[480]

And Finding 14 states that "dry weather non-storm water discharges have been shown to contribute significant levels of pollutants and flow in arid, developed Southern California watersheds and are to be effectively prohibited under the CWA."[481]

The claimants were therefore required by the prior permit to conduct dry weather monitoring and field screening more often than twice per year, and as necessary to comply with the receiving water limitations and discharge prohibitions. Thus, a year-round monitoring program is not a new requirement.

In addition, the test claim permit requires sampling of a representative percentage of major outfalls within each hydrologic area to allow monitoring of effluent at the end of pipe prior to discharge into the receiving waters, and other outfall sampling points (or any other point of access such as manholes) identified by the claimants as potential high risk sources of polluted effluent.[482] This requirement is not new. The prior permit did not specifically require monitoring at major outfalls, but allowed the claimants to select monitoring stations at accessible

[481] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 187 (test claim permit, Finding 14.).

[482] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 203, 309 (test claim permit, Section C.4; Attachment E, Section II.C.1.a.1.).

points (i.e., outfalls, manholes or open channels) located downstream of potential sources of illicit discharges (i.e., commercial, industrial, and residential areas), and in a quantity sufficient to represent the MS4 and detect illicit discharges that may occur throughout the system.[483] However, the Clean Water Act has always required an NPDES permittee to monitor its discharges into the waters of the United States in a manner sufficient to determine whether it is in compliance with the permit, including the receiving water limitations and discharge prohibitions.[484] An NPDES permit is unlawful if a permittee is not required to effectively monitor its permit compliance.[485] Thus, the specificity of the sampling locations in the test claim permit does not constitute a new state-mandated activity.

Finally, the test claim permit specifies additional pollutants to be sampled in non-stormwater monitoring based on prior monitoring and the presence in 303(d) listed waterbodies. Under the prior permit, the claimants had to analyze specific conductance or calculate total dissolved solids, turbidity, pH, temperature, and dissolved oxygen in non-stormwater.[486] The test claim permit requires effluent samples of non-stormwater to undergo analytical laboratory analysis for (a) all constituents described in Table 1. Analytical Testing for Mass Loading and Stream Assessment of this Order;[487] (b) constituents with assigned NALs; and (c) Total Residual Chlorine.[488] The Fact Sheet explains that the requirement to test the additional pollutants (including indicator bacteria, nutrients (nitrate and phosphorous), Methylene Blue Active Substances (MBAS), pesticides and metals) was based on the fact that these pollutants exceed

[488] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 250, 310 (test claim permit, Section F.4.d.; Attachment E, Section II.C.1.b.).

water quality limits in receiving waters that are 303(d) listed as impaired, or they were previously identified as present through receiving water monitoring:

> The Order requires an increase in the number and type of pollutants sampled in nonstorm water from major outfalls. To date, Copermittees have not sampled major outfalls, only receiving waters, and sampling was limited to total dissolved solids, dissolved oxygen, pH, turbidity and specific conductance. Additional sampling was generally, though not always, conducted by Copermittees if initial sampling exceeded a Copermittee threshold. With the exception of dissolved oxygen, the current thresholds do not represent water quality objectives, as sampling may not trigger a threshold, but may still be exceeding a water quality objective. This Order requires non-storm water discharges to be sampled for additional pollutants including indicator bacteria, nutrients (nitrate and phosphorous), Methylene Blue Active Substances (MBAS), pesticides and metals. These pollutants are expected to be present in nonstorm water discharges, are pollutants for which receiving waters are 303(d) listed as impaired or have been identified as present through receiving water monitoring.[489]

These requirements, however, are not new. As stated above, federal law has always required an NPDES permittee to monitor its discharges into the waters of the United States in a manner sufficient to determine whether it is in compliance with the permit, including the receiving water limitations and discharge prohibitions.[490] An NPDES permit is unlawful if a permittee is not required to effectively monitor its permit compliance.[491] Furthermore, federal law mandates that permits for discharges from MS4s "shall include a requirement to effectively prohibit non-stormwater discharges into the storm sewers," unless those discharges are conditionally exempted from this prohibition.[492] To "effectively prohibit" non-stormwater discharges requires the implementation of a program to detect and remove illicit discharges, which under federal law shall contain inspections, on-going field screening, a description of procedures to investigate portions of the MS4 that, based on field screening or other information, indicate a reasonable potential for containing illicit discharges or other sources of non-stormwater pollution.[493] And the prior permit, in Section J., required each permittee to develop and implement an illicit

[493] Code of Federal Regulations, title 40, section 122.26(d)(2)(iv)(B).

discharge detection and elimination program to actively seek and eliminate "all types of illicit discharges and connections excluding those non-storm water discharges that are exempt."[494]

Indicator bacteria, nutrients (nitrate and phosphorous), Methylene Blue Active Substances (MBAS), pesticides and metals were previously identified and exceeded water quality standards in 303(d) listed water bodies. Thus, the claimants were required by federal law and the prior permit to monitor for these pollutants, investigate the source of the pollutants, remove any illicit discharges or connections causing the water quality impairment, and report the results and the test claim permit requirements to perform these activities are not new.

Moreover, the requirements do not constitute a new program or higher level of service. The Supreme Court has clarified that "simply because a state law or order may *increase the costs* borne by local government *in providing services*, this does not necessarily establish that the law or order constitutes an *increased or higher level* of the resulting 'service to the public' under article XIII B, section 6, and Government Code section 17514."[495] Rather, the new program or higher level of service must "increase the actual level or quality of governmental services provided."[496] In this case, federal law has long required that all dischargers, including private industrial dischargers and local governments effectively prohibit "all types" of non-stormwater discharges identified as sources of pollutants to waters of the United States.[497] The requirements imposed by the test claim permit do not change or increase the level or quality of service to the public; they simply make the claimants comply with existing federal law imposed on all dischargers to comply with water quality standards.[498]

Accordingly, the Commission finds that the requirements of Sections C. and F.4.d. and e., and Section II.C. of Attachment E. of the test claim permit are not new, are required by federal law, and do not mandate a new program or higher level of service.

3. Section D. of the Test Claim Permit, Which Addresses Stormwater Action Levels (SALs), Does Not Mandate a New Program or Higher Level of Service Because the Activities to Monitor Discharges of Stormwater, Determine if the Discharges Are Meeting Existing Water Quality Standards Identified in the SALs and If Not, Implement or Modify BMPs to Meet Water Quality Standards and Report that Information to the Regional Board Were Required by the Prior Permit and Are Mandated by Existing Federal Law..

The claimants pled Section D., of the test claim permit,[499] which establishes numeric stormwater action levels (SALs) that are incorporated into the wet weather monitoring for seven designated pollutants (turbidity,[500] nitrate and nitrite,[501] phosphorus and the following metals: cadmium, copper, lead, and zinc). The action levels are based on US EPA Rain Zone 6 Phase I MS4 monitoring data for pollutants in stormwater, and reflect the water quality standards in the Basin Plan, the federal California Toxics Rule (CTR), and the US EPA Water Quality Criteria.[502] Section D., requires the copermittees to implement a stormwater pollution control program, including monitoring MS4 outfalls and implementing necessary stormwater controls if there is an

[500] "Turbidity is a measure of the clarity of a water body and is related to erosion and sedimentation which impacts streams and lakes." Exhibit X (21), EPA, Turbidity, https://nepis.epa.gov/Exe/tiff2png.cgi/P10070Q2.PNG?-r+75+-g+7+D%3A%5CZYFILES%5CINDEX%20DATA%5C06THRU10%5CTIFF%5C00000726%5CP10070Q2.TIF (accessed on April 7, 2022).

[501] "Most nitrogenous materials in natural waters tend to be converted to nitrate, so all sources of combined nitrogen, particularly organic nitrogen and ammonia, should be considered as potential nitrate sources. Primary sources of organic nitrates include human sewage and livestock manure, especially from feedlots. The primary inorganic nitrates which may contaminate drinking water are potassium nitrate and ammonium nitrate both of which are widely used as fertilizers. . . . Nitrate in drinking water can be responsible for a temporary blood disorder in infants called methemoglobinemia (blue baby syndrome). In infants less than six months old, a condition exists in their digestive systems which allows for the chemical reduction of nitrate to nitrite. The nitrite absorbs through the stomach and reacts with hemoglobin to form methemoglobin, which does not have the oxygen carrying capacity of hemoglobin. Thus, the oxygen deficiency in the infant's blood results in the "blue baby" syndrome. When the nitrate-contaminating source is removed, the effects are reversible. Since ingestion of water containing high nitrate concentrations can be fatal to infants and livestock, the U.S. EPA has established a level of 10 mg/L total nitrate (measured as nitrogen) as the Maximum Contaminant Level Goal (MCLG) and Maximum Contaminant Level (MCL) in drinking water." Exhibit X (44), Water Quality Association, Nitrate/Nitrite Fact Sheet, 2014, pages 2-3, https://www.wqa.org/Portals/0/Technical/Technical%20Fact%20Sheets/2014_NitrateNitrite.pdf (accessed on April 7, 2022).

[502] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 431 (Fact Sheet/Technical Report, Finding D.1.h.).

exceedance of a SAL, to reduce the discharge of these pollutants in stormwater to the MEP so as not to exceed the SALs.[503] "[I]t is the goal of the SALs, through the iterative and MEP process, to have MS4 storm water discharges meet all applicable water quality standards."[504]

As described below, the Commission finds that Section D. of the test claim permit does not mandate a new program or higher level of service. The SALs imposed by the test claim permit are simply numbers that reflect the existing water quality standards applicable to the waterbodies in the Basin Plan, the California Toxics Rule (CTR), and the US EPA Water Quality Criteria for the pollutants at issue, and if there is an exceedance of a SAL detected with monitoring, then the claimants have to address those exceedances by implementing or modifying BMPs to the MEP as required by existing federal law. Thus, the Regional Board has imposed an iterative, BMP-based compliance regime, using the SALs as a target, or trigger, but leaving substantial flexibility to the permittees to determine how to comply with long-standing federal requirements to monitor, implement BMPs, and report exceedances to the Regional Board. The SALs themselves do not impose any new mandated activities. Moreover, monitoring and implementing BMPs to ensure that stormwater discharges meet water quality standards for these constituents are not new, but have long been required and thus, these activities do not constitute a new program or higher level of service.

a. Background

i. Federal law requires permittees to effectively monitor and implement BMPs to achieve water quality standards, and established water quality criteria for the pollutants at issue in section D.

Federal law requires that permits for discharges from municipal storm sewers "shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants."[505] Federal regulations define "best management practices" as:

> . . . schedules of activities, prohibitions of practices, maintenance procedures, and other management practices to prevent or reduce the pollution of "waters of the United States." BMPs also include treatment requirements, operating procedures, and practices to control plant site runoff, spillage or leaks, sludge or waste disposal, or drainage from raw material storage.[506]

Applications for an NPDES permit from medium and large MS4 dischargers are required to identify the following information, including monitoring and BMPs proposals, to reduce pollutants to the MEP:

---

[503] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 205-206 (test claim permit, Section D.).

[504] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 490 (Fact Sheet/Technical Report).

[505] United States Code, title 33, section 1342(p)(3)(B)(iii) (Public Law 100-4).

[506] Code of Federal Regulations, title 40, section 122.2.

- The location of known municipal storm sewer system outfalls discharging to waters of the United States.[507]
- A list of water bodies that receive discharges from the MS4, including downstream segments, lakes, and estuaries, where pollutants from the system discharges may accumulate and cause water degradation, and a description of water quality impacts.[508]
- Existing quantitative data describing the volume and quality of discharges from the MS4, including a description of the outfalls sampled, sampling procedures and analytical methods used.[509]
- A description of the existing management programs to control pollutants from the municipal separate storm sewer system. The description shall provide information on existing structural and source controls, including operation and maintenance measures for structural controls that are currently being implemented.[510]
- The quality and quantity of discharges covered in the permit application, including:
    - Quantitative data from representative outfalls or field screening points that include samples of effluent analyzed for the pollutants listed in Table II and Table III of appendix D of 40 C.F.R. part 122 (which include, as relevant here, cadmium, copper, lead, and zinc); and for total suspended solids, total dissolved solids, Chemical Oxygen Demand (COD), Biological Oxygen Demand (BOD), oil and grease, fecal coliform, fecal streptococcus, pH, total Kjeldahl nitrogen, dissolved phosphorus, total ammonia plus organic nitrogen, total phosphorus, and nitrate/nitrite.
    - Estimates of the annual pollutant load and the event mean concentration of the cumulative discharges to waters of the United States from all identified municipal outfalls for BOD, COD, total suspended solids, dissolved solids, total nitrogen, total ammonia plus organic nitrogen, total phosphorus, dissolved phosphorus, cadmium, copper, lead, and zinc. The estimates shall be accompanied by a description of the procedures for estimating constituent loads and concentrations, including any modeling, data analysis, and calculation methods.
    - A proposed monitoring program for representative data collection that describes the location of outfalls or field screening points to be sampled, why the location is representative, the frequency of sampling, parameters to be sampled, and a description of the sampling equipment.[511]
- A proposed management program that covers the duration of the permit. The management program "shall include a comprehensive planning process which involves

[507] Code of Federal Regulations, title 40, section 122.26(d)(1)(iii)(B).

[508] Code of Federal Regulations, title 40, section 122.26(d)(1)(iv)(C).

[509] Code of Federal Regulations, title 40, section 122.26(d)(1)(iv)(B).

[510] Code of Federal Regulations, title 40, section 122.26(d)(1)(v).

[511] Code of Federal Regulations, title 40, section 122.26(d)(2)(iii)(A)-(D).

public participation and where necessary intergovernmental coordination, to reduce the discharge of pollutants to the maximum extent practicable using management practices, control techniques and system, design and engineering methods, and such other provisions which are appropriate." The proposed programs will be considered when developing permit conditions to reduce pollutants in discharges to the MEP.[512]

Federal law then requires the Regional Board to establish conditions, as required on a case-by-case basis, to provide for and ensure compliance with all applicable requirements of the CWA and its implementing regulations.[513]

In addition, when the Regional Board determines that an MS4 discharge causes, has the reasonable potential to cause, or contributes to an excursion of a numeric or narrative water quality criteria, the Regional Board is required by federal law to develop NPDES permit effluent limits as necessary to meet water quality standards.[514]

Water quality standards and criteria protect the beneficial uses of any given waterbody and are developed by the states, and included in the Regional Board's Basin Plans.[515] States are required to adopt water quality standards and criteria based on sound scientific rationale that identifies sufficient parameters or constituents to protect the designated use, and numerical values related to any constituents should be based on the US EPA's guidance documents or other defensible methods.[516] US EPA publishes water quality criteria in receiving waters to reflect the latest scientific knowledge on the kind and extent of all identifiable effects on health and welfare, which may be expected from the presence of pollutants in any body of water.[517] And the US EPA's water quality criteria for human health and aquatic life include recommended numeric criteria for the pollutants identified in Section D., of the test claim permit.[518] In addition, on May 18, 2000, the US EPA also established numeric water quality criteria for priority toxic pollutants and other provisions for water quality standards to be applied to waters in the state of California, which is known as the California Toxics Rule (CTR)[519] As the courts have

explained, the CTR is a water quality standard that applies to "'all waters' for 'all purposes and programs under the Clean Water Act'" [520] as follows:

> The EPA's Summary of the Final CTR Rule provides that "[t]hese Federal criteria are legally applicable in the State of California for inland surface waters, enclosed bays and estuaries for all purposes and programs under the Clean Water Act." [Citation omitted] "All waters (including lakes, estuaries and marine waters) . . . are subject to the criteria promulgated today. Such criteria will need to be attained at the end of the discharge pipe, unless the State authorizes a mixing zone."[521]

All of the metals identified in Section D. of the test claim permit are priority toxic pollutants identified in the CTR.[522]

The CWA requires an NPDES permittee to monitor its discharges into the waters of the United States in a manner sufficient to determine whether it is in compliance with the permit.[523] An NPDES permit is unlawful if a permittee is not required to effectively monitor its permit compliance.[524] Federal regulations further require that samples and measurements taken for the purpose of monitoring shall be representative of the monitored activity and shall be retained for at least five years. Monitoring must be conducted according to approved test procedures, unless another method is required as specified.[525]

Monitoring results must be reported, including any instances of noncompliance.[526] In addition, the permittee is required by federal regulations to report any noncompliance that may endanger health or the environment verbally within 24 hours, followed by a written report within five days. The report shall state whether the noncompliance has been corrected and the steps taken or planned to reduce or eliminate the noncompliance.[527]

ii. The prior permit required receiving water monitoring and implementation of best management practices (BMPs) to achieve water quality standards, and if an exceedance occurred, the permittee was required to notify the Regional Board and modify best management practices (BMPs) to meet water quality standards.

The prior permit required the permittees to monitor receiving waters through core monitoring, regional monitoring, and special studies.[528] Core monitoring included mass loading, water column toxicity testing, bioassessment, follow-up analysis and action, and tributary monitoring.[529] Core monitoring required the use of stations where three types of monitoring occur: chemical, toxicity, and bioassessment. At these stations, called triad stations, the copermittees take both wet season — October 1 through April 30[530] — and dry season water samples for analysis.[531] The stations were located at Lower Temecula Creek, Lower Murrieta Creek at the United States Geological Survey Weir, and a representative reference station at a place of the copermittee's choosing which must be evaluated annually for suitability.[532] The first wet weather sample required analysis for the full US EPA priority pollutant list that includes 232 pollutants and water properties, including nitrate and nitrate, phosphorus, and the metals at issue here.[533] Thereafter, the required analysis was limited to 25 pollutants and water properties, including the metals at issue here.[534] When there was a lack of sampling data, the permittees were required to submit an explanation with the annual report.[535] Toxicity testing was performed on crustaceans and algae and bioassessment samples were compared with biological

[533] The list is codified at Code of Federal Regulations, title 40, section 122, Appendix D.

[534] Trace metals: total cadmium, total chromium, total copper, total nickel, total lead, total zinc; Nutrients: ammonia, total Kjeldahl nitrogen, nitrate, total phosphorus; Bacteria: total coliform, fecal coliform, E. coli; Pesticides: diazinon, chlorpyrifos, other OP [organophosphate] pesticides; Conventionals: Temperature, pH, hardness, specific conductance, dissolved oxygen, MBAS [methyl blue active substances]; PAHs [polycyclic aromatic hydrocarbons]; Volatiles (dry weather only); and total suspended solids. Exhibit X (35), Order R9-2004-0001, Monitoring and Reporting Program, Table 1, page 4.

[535] Exhibit X (35), Order R9-2004-0001, Monitoring and Reporting Program, Section II.A.I.1., pages 2-4.

metrics.[536] The results of all three tests were evaluated using Toxicity Identification Evaluations (TIEs) to determine the cause of toxicity, and Toxicity Reduction Evaluations (TREs) to identify sources, and the permittees were required to implement management actions to reduce the pollutants.[537] The permittees were also required to sample and test four specific tributaries for constituents of concern, which were determined from exceedances of water quality objectives from the testing of the triad samples and land use.[538] Finally, the permittees were required to report on monitoring stations, sampling, testing, and analyses in the monitoring program annual report.[539]

The prior permit also required the permittees to meet receiving water limitations that prohibited the discharge of pollutants from the MS4 that cause or contribute to a violation of water quality standards as follows:

1. Discharges from MS4s that cause or contribute to the violation of water quality standards (designated beneficial uses and water quality objectives developed to protect beneficial uses of receiving waters) are prohibited.

2. Each permittee shall comply with Requirement C.l, Prohibition A.2, and Prohibition A.4 as it applies to Prohibition No. 5 in Attachment A of this Order through timely implementation of control measures and other actions to reduce pollutants in urban runoff discharges in accordance with the SWMP and other requirements of this Order including any modifications.[540]

Prohibition A.2., referred to above, prohibited discharges from MS4s that cause or contribute to exceedances of receiving water quality objectives for surface water or groundwater.[541] Prohibition A.4. stated that "[i]n addition to the above prohibitions, discharges from MS4s are subject to all Basin Plan prohibitions cited in Attachment A to this Order."[542] Prohibition 5 in Attachment A to the prior permit states that the "discharge of waste to inland surface waters,

except in cases where the quality of the discharge complies with applicable receiving water quality objectives, is prohibited."[543]

If an exceedance of a pollutant was detected, the permittee was required by Section C.2., of the receiving water limitations to notify the Regional Board and revise its stormwater management program SWMP and monitoring plan to implement additional BMPs as follows:

> 2. … The SWMP shall be designed to achieve compliance with Requirement C. l, Prohibition A.2, and Prohibition A.4 as it applies to Prohibition 5 in **Attachment A** of this Order. If exceedance(s) of water quality standards persist notwithstanding implementation of the SWMP and other requirements of this Order, the permittee shall assure compliance with Requirement C. l, Prohibition A.2, and Prohibition A.4 as it applies to Prohibition 5 in **Attachment A** of this Order by complying with the following procedure:
>
> a) Upon a determination by either a permittee or the SDRWQCB that MS4 discharges are causing or contributing to an exceedance of an applicable water quality standard, the permittee shall promptly notify and thereafter submit a report to the SDRWQCB that describes BMPs that are currently being implemented and additional BMPs that will be implemented to prevent or reduce any pollutants that are causing or contributing to the exceedance of water quality standards. The report may be incorporated in the SWMP annual report unless the SDRWQCB directs an earlier submittal. The report shall include an implementation schedule. The SDRWQCB may require modifications to the report;
>
> b) Submit any modifications to the report required by the SDRWQCB within 30 days of notification;
>
> c) Within 30 days following SDRWQCB approval of the report described above, the permittee shall revise its SWMP and monitoring program to incorporate the approved modified BMPs that have been and will be implemented, the implementation schedule, and any additional monitoring required;
>
> d) Implement the revised SWMP and monitoring program in accordance with the approved schedule.[544]

In addition, the principal permittee was required to submit an annual report on the receiving waters monitoring that included a description of the monitoring results and answers to the following questions:

- Are conditions in receiving waters protective, or likely to be protective, of beneficial uses?

---

[543] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 598 (Order R9-2004-0001, Attachment A, Section A.5.).

[544] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 573 (Order R9-2004-0001, Section C.2.), emphasis in original.

- What is the extent and magnitude of the current or potential receiving water problems?
- What is the relative urban runoff contribution to the receiving water problem(s)?
- What are the sources of urban runoff that contribute to receiving water problem(s)?
- Are conditions in receiving waters getting better or worse?[545]

The fourth-year monitoring report also had to include the following information:

- A discussion of any long-term trends that can be detected from existing data (from all previous permit terms).
- Recommendations for future monitoring based on the results of previous efforts and the progress towards answering the management questions listed in Section II.A. of this MRP (bulleted above) and achieving the goals listed in Section I. of this MRP.[546]
- Recommended modifications to individual or watershed SWMPs to address identified source of pollutants in urban runoff.[547]

Finally, the prior permit stated that "nothing in this Order shall be construed to relieve the permittee from civil or criminal penalties for noncompliance."[548]

[545] 2004 MRP, Section III.B., page 16 (which refers to the questions in Section II.A., on page 2.)

[546] Exhibit X (35), Order R9-2004-0001, Monitoring and Reporting Program, page 2. Section 1 of the 2004 MRP identifies the following goals:

1. Assess compliance with Order No. R9-2004-001;
2. Measure and improve the effectiveness of the SWMPs;
3. Assess the chemical, physical, and biological impacts of receiving waters resulting from urban runoff;
4. Characterize urban runoff discharges;
5. Identify sources of specific pollutants;
6. Prioritize drainage and sub-drainage areas that need management actions;
7. Detect and eliminate illicit discharges and illicit connections to the MS4; and
8. Assess the overall health of receiving waters.

[547] Exhibit X (35), Order R9-2004-0001, Monitoring and Reporting Program, page 16.

[548] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 606 (Order R9-2004-0001, Attachment B, Standard Provisions).

b. Section D. of the test claim permit (SALs), does not mandate a new program or higher level of service.

i. Section D. of the test claim permit establishes stormwater action levels (SALs) for turbidity, nitrate and nitrite, phosphorus, cadmium, copper, lead, and zinc, and requires the claimants to monitor and implement best management practices (BMPs), and when an exceedance of a stormwater action level (SAL) occurs, the copermittees are required to notify the Regional Board and modify the best management practices (BMPs).

The test claim permit, at Finding C.9., explains that the copermittees' monitoring data showed persistent violations of water quality objectives and that runoff discharges are a leading cause of water quality impairments in Riverside County:

> The Copermittees' water quality monitoring data submitted to date documents persistent violations of Basin Plan water quality objectives for various runoff-related pollutants (indicator bacteria, dissolved solids, turbidity, metals, pesticides, etc.) at various watershed monitoring stations. Persistent toxicity has also been observed at some watershed monitoring stations. In addition, bioassessment data indicate that the majority of the monitored receiving waters have Poor to Very Poor Index of Biotic Integrity ratings. In sum, the above findings indicate that runoff discharges are causing or contributing to water quality impairments, and are a leading cause of such impairments in Riverside County.[549]

The Fact Sheet further explains that water quality in receiving waters downstream of the MS4 discharges failed to meet CTR standards and Basin Plan objectives:

> The Copermittees have produced data that demonstrates water quality objectives are frequently not met during dry and wet weather. The 2009 Report of Waste Discharge and the 2008-2009 Annual Reports document that receiving water monitoring stations often fail to meet water quality objectives established in the Basin Plan.
>
> Water quality in receiving waters downstream of MS4 discharges fail to meet California Toxics Rule standards [footnote omitted] and Basin Plan objectives. Data submitted in the MS4 Annual Reports indicate that at various times chemical, bacteria, pesticide, and metal concentrations may exceed water quality objectives in receiving waters in both wet and dry weather conditions.
>
> There are no other significant NPDES permitted discharges to the creeks. For instance, there are no live-stream discharges of treated waste water in the Riverside County area of the Santa Margarita watershed. The few NPDES permits in the watershed are mainly for recycled water which only discharges occasionally during the rainy season. Because the water quality monitoring indicates exceedances of water quality standards and MS4 discharges are the

[549] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 374 (test claim permit, Finding C.9.).

> main source of pollutants in the watersheds, it can be inferred that the MS4 discharges are causing or contributing to water quality impairments, and are a leading cause of such impairments in Riverside County.[550]

Thus, Section D. of the test claim permit establishes numeric SALs for turbidity, nitrate and nitrite, phosphorus, cadmium, copper, lead, and zinc that are incorporated into the monitoring requirements for wet weather. The Fact Sheet explains that:

> SALs were developed based upon receiving water monitoring results and CWA section 303(d) impaired waters listings. Nitrogen, Copper and Phosphorous are all pollutants for which receiving waters are 303(d) listed as impaired and for which sufficient data was available to develop SALs. Additionally, receiving water monitoring, including from storm events monitored by the Copermittees, has demonstrated excursions and/or potential excursions, often absent receiving water hardness, above water quality criteria for turbidity (NTU), Cadmium, Lead, and Zinc. SALs were not developed for some pollutants for which receiving waters are 303(d) listed as impaired due to a lack of representative data available. These pollutants are required to be monitored but are not subject to a SAL under the Order.[551]

SALs were developed by using the national US EPA Rain Zone 6 Phase I MS4 stormwater monitoring data which includes MS4 effluent data from Orange, San Diego, Los Angeles, Ventura and San Bernardino counties, were set as the 90th percentile of the dataset for each constituent, and reflect the water quality standards in the Basin Plan, the federal California Toxics Rule (CTR), and the US EPA Water Quality Criteria.[552] "[I]t is the goal of the SALs, through the iterative and MEP process, to have MS4 storm water discharges meet all applicable water quality standards,"[553] and that any exceedance of a SAL indicates BMPs being implemented are insufficient to protect the beneficial uses of waters:

> Since the first permit (adopted 20 years ago), Copermittees have utilized nonnumerical limitations (BMPs) to control and abate the discharge of any pollutants in storm water discharges to the MEP. Copermittees have been accorded 20 years to research, develop, and deploy BMPs that are capable of reducing storm water discharges from the MS4 to levels represented in SALs. Storm Water Action Levels are set at such a level that any exceedance of a SAL will clearly indicate BMPs being implemented are insufficient to protect the Beneficial Uses of waters of the State. Copermittee shall utilize the exceedance

---

[550] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 401 (Fact Sheet/Technical Report, Discussion of Finding C.9.).

[551] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 491 (Fact Sheet/Technical Report).

[552] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 376, 431-434, 484 (Fact Sheet/Technical Report).

[553] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 490 (Fact Sheet/Technical Report).

> information as a high priority consideration when adjusting and executing annual work plans, as required by this Permit. Failure to appropriately consider and react to SAL exceedances in an iterative manner creates a presumption that the Copermittee(s) have not complied to the MEP.[554]

Accordingly, Section D. of the test claim permit requires the copermittees to "implement the Wet Weather MS4 Discharge Monitoring as described in Attachment E of this Order, and beginning three years after the Order adoption date, the Copermittees must annually evaluate their data compared to the Stormwater Action Levels (SALs)."[555] The following requirements are imposed by Section D., and the Wet Weather MS4 Discharge Monitoring program in Attachment E:

1. Each copermittee is required collaborate with the other copermittees to develop, conduct, and report on a year-round, watershed-based, wet weather MS4 discharge monitoring program. The monitoring program design, implementation, analysis, assessment, and reporting must be conducted on a watershed basis for each of the hydrologic subareas.[556]
2. The principal copermittee is required to submit to the Regional Board for review and approval, a detailed draft of the wet weather MS4 discharge monitoring program to be implemented. The description must identify and provide the rationale for all constituents monitored, locations of monitoring, frequency of monitoring, and analyses to be conducted with the data generated.[557]
3. The monitoring program is required to include MS4 outfall monitoring and source identification monitoring as follows:
    a) MS4 outfall monitoring. The monitoring program is required to be designed to sample a representative percentage of the major outfalls within each hydrologic subarea and must begin no later than the 2012-2013 monitoring year; is required to characterize pollutant discharges from MS4 outfalls in each watershed during wet weather; must include the rationale and criteria for selection of outfalls to be

[554] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 433 (Fact Sheet/Technical Report, Discussion of Finding D.1.h.).

[555] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 205 (test claim permit, Section D.).

[556] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 205, 307 (test claim permit, Section D.1.; Attachment E., Section II.B.).

[557] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 309 (test claim permit, Attachment E., Section II.B.3.).

monitored; must, at a minimum, include collection of samples for pollutants listed in Table 4;[558] and must comply with the SALs.[559]

- Samples must be collected during the first 24 hours of the stormwater discharge or for the entire storm water discharge if it is less than 24 hours. Grab samples may be utilized only for pH, indicator bacteria, dissolved oxygen, temperature and hardness. All other constituents must be sampled using 24-hour composite samples or for the entire stormwater discharge if the storm event is less than 24 hours.[560]
- Sampling to compare MS4 outfall discharges with total metal SALs is required to include a measurement of receiving water hardness at each outfall. If a total metal concentration exceeds a SAL in Section D., that concentration must be compared to the California Toxic Rule criteria and the EPA one-hour maximum concentration for the detected level of receiving water hardness associated with that sample. If it is determined that the sample's total metal concentration for that specific pollutant exceeds the SAL but does not exceed the applicable one-hour criteria for the measured level of hardness, then the SAL shall be considered not exceeded for that measurement.[561] (Attachment E., Section II.B.1.b.)[562]

---

[558] Table 4 of Attachment E lists the following pollutants, including those with SALs: Conventionals, Nutrients, Hydrocarbons: Total Dissolved Solids, Total Suspended Solids, Turbidity, Total Hardness, pH, Specific Conductance, Temperature, Dissolved Oxygen, Total Phosphorus, Dissolved Phosphorus, Nitrite, Nitrate, Total Kjeldahl Nitrogen, Ammonia, 5-day Biological Oxygen Demand, Chemical Oxygen Demand, Total Organic Carbon, Dissolved Organic Carbon, Methylene Blue Active Substances, Oil and Grease, Sulfate: Pesticides: Diazinon, Chlorpyrifos, Malathion, Carbamates, Pyrethroids; Metals (Total and Dissolved): Arsenic, Cadmium, Total Chromium, Hexavalent Chromium, Copper, Lead, Iron, Manganese, Nickel, Selenium, Zinc, Mercury, Silver, Thallium; Bacteriological (mass loading): E.coli, Fecal Coliform, Enterococcus. Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 308 (test claim permit, Attachment E, Section II.B.) The Fact Sheet explains that "the Copermittees are required to monitor for those pollutants in 40 CFR 122.26(d)(2)(iii)(B); for 303(d) listed pollutants for the Santa Margarita Hydrologic Unit; and for pollutants with Storm Water Action Levels." Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 559 (Fact Sheet/Technical Report).

[559] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 206, 307 (test claim permit, Section D.2.; Attachment E., Section II.B.1.).

[560] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 307, (test claim permit, Attachment E., Section II.B.1.a.).

[561] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 307-308, (test claim permit, Attachment E., Section II.B.1.b.).

[562] The Fact Sheet explains that "when an exceedance of a SAL concentration is detected for a metal, the Copermittee must determine if that exceedance is above the existing applicable water

- SAL samples must be 24 hour time-weighted composites.[563]

b) Source identification monitoring. The monitoring program shall identify sources of pollutants causing the priority water quality problems within each hydrologic subarea. The monitoring program is required to include focused monitoring which moves upstream into each watershed as necessary to identify sources. This monitoring program must be implemented within each hydrologic subarea and must begin no later than the 2012-2013 monitoring year.[564]

4. Responding to an exceedance of a SAL. At each monitoring station, a running average of twenty percent or greater of exceedances of any discharge of stormwater from the MS4 to waters of the U.S. that exceed the SALs for turbidity, nitrate and nitrite, phosphorus, cadmium, copper, lead, and zinc requires the copermittee having jurisdiction to affirmatively augment and implement all necessary stormwater controls and measures to reduce the discharge of the associated class of pollutants to the MEP. The copermittees must utilize the exceedance information when adjusting and executing annual work plans. The copermittees must take the magnitude, frequency, and number of constituents exceeding the SAL, in addition to receiving water quality data and other information, into consideration when prioritizing and reacting to SAL exceedances in an iterative manner. Failure to appropriately consider and react to SAL exceedances in an iterative manner creates a presumption that the copermittees have not reduced pollutants in storm water discharges to the MEP.[565]
5. Beginning three years after the Order adoption date, the Copermittees are required to annually evaluate their data compared to the SALs.[566]
6. At a minimum, outfalls that exceed SALs must be monitored in the subsequent year.[567]

---

quality limitation based upon the hardness of the receiving water. The water quality limitations Copermittees must use to assess total metal SAL exceedances are the California Toxic Rule (CTR) and USEPA National Recommended Water Quality Criteria for Freshwater Aquatic Life 1 hour maximum concentrations." Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 490 (Fact Sheet/Technical Report).

[563] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 206 (test claim permit, Section D.2.).

[564] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 308, (test claim permit, Attachment E., Section II.B.2.).

[565] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 205 (test claim permit, Section D.1.).

[566] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 205 (test claim permit, Section D.1.).

[567] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 206 (test claim permit, Section D.2.).

7. To be relieved of the requirements to take action as described in D.1., above, the copermittee must demonstrate that the likely and expected cause of the SAL exceedance is not anthropogenic in nature (generated from human activity).[568]

Thus, Section D. requires the copermittees to monitor the discharge of stormwater from MS4 outfalls in addition to the receiving water monitoring (which is still required by the test claim permit).[569] As stated in the Fact Sheet, the copermittees were not required to monitor MS4 outfalls under the prior permit:

> Currently the Copermittees do not monitor the discharge of storm water from the MS4 outfalls. As a result, a substantial amount of information regarding the quality of MS4 effluent is unknown, and in-stream stations monitored under R9-2004-001 have not accurately characterized MS4 effluent data during the permit term. [Fn. omitted.] The collection of wet-weather MS4 effluent data will enable the Copermittees to assess the effectiveness of existing storm water BMP measures, estimate cumulative annual pollutant loads from MS4 storm water discharges, and estimate seasonal pollutant loads from individual major outfalls. This data can be used to more effectively target storm water management program efforts. The MRP also requires compliance with Section D. of the Order for Storm Water Action Levels.
>
> The monitoring of outfalls is expected to be used to identify storm drains that are discharging pollutants in concentrations that may pose a threat to receiving waters. Source investigations are expected to be conducted as a response to the data. The Copermittees are required to monitor for those pollutants in 40 CFR 122.26(d)(2)(iii)(B); for 303(d) listed pollutants for the Santa Margarita Hydrologic Unit; and for pollutants with Storm Water Action Levels.[570]

The Fact Sheet also explains that "[t]he MRP provides the Copermittees great flexibility in assigning stations and sampling frequency for wet-weather monitoring" in that "Copermittees are to propose the number and frequency of monitoring stations, thus proposing the overall cost of their program."[571] The Regional Board will review the proposed program "to ensure that it will comply with Federal regulations and section D of the Order for Storm Water Action Levels."[572]

[572] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 559 (Fact Sheet/Technical Report).

ii. Section D. does not mandate a new program or higher level of service since the activities to monitor discharges of stormwater, determine if the discharges are meeting existing water quality standards identified in the SALs and if not, implement or modify best management practices (BMPs) to meet water quality standards and report that information to the Regional Board were required by the prior permit and are mandated by federal law.

The claimants contend that Section D. imposes a reimbursable state-mandated program. The claimants argue that the prior permit did not include any SAL-related requirements. Further, they contend that there is no federal requirement that municipal NPDES permits include monitoring, reporting or compliance obligations that are triggered by an exceedance of a SAL, as follows:

> Contrary to any requirement to include a SAL-related mandate within an MS4 permit, the plain language of the CWA, as well as controlling case authority interpreting the Act, make clear that no form of SALs or any related mandates are required to be included within a municipal NPDES Permit by federal law. *See Defenders of Wildlife, supra*, 191 F.3d 1159, 1163 **("Industrial discharges must strictly comply with State water-quality standards," while "Congress chose not to include a similar provision for municipal storm-sewer discharges.")** (emphasis supplied); *Divers' Environmental, supra*, 145 Cal.App.4th at 256 ("In regulating stormwater permits the EPA has repeatedly expressed a preference for doing so by the way of BMPs, rather than by way of imposing either technology-based or water quality-based numerical limitations."); *BIA, supra*, 124 Cal.App.4th at 874 ("With respect to municipal stormwater discharges, Congress clarified that the EPA has the authority to fashion NPDES Permit requirements to meet water quality standards ***without specific numeric effluent limits*** and to instead impose 'controls to reduce the discharge of pollutants to the maximum extent practicable.'") (emphasis supplied); State Board Order No. 2006-12, p. 17 (**"Federal regulations do not require numeric effluent limitations for discharges of stormwater.")** (emphasis supplied); and State Board Order No. 91-03, pgs. 30-31 ("***We . . . conclude that numeric effluent limitations are not legally required***. Further we have determined that the program of prohibitions, source control measures and 'best management practices' set forth in the Permit constitutes effluent limitations as required by law.'") (emphasis supplied).[573]

The claimants further contend that, "while not "traditional 'strict' numeric effluent limits," the SALs, like the NALs, are a new program imposed on the claimants "tied to achieving compliance with specific numeric limits." If the claimants exceed the SALs, they "were subject to additional and costly requirements, regardless of the feasibility or practicability of complying with the SALs."[574] The claimants therefore contend that "the SAL mandates went beyond what

[573] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017 page 45 (Test Claim narrative), emphasis in original.

[574] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017 page 45 (Test Claim narrative).

is required to be imposed in an MS4 permit, and the RWQCB had a 'true choice' in deciding to impose the SAL mandates."[575]

The Water Boards disagree and contend that Section D., does not impose a state-mandated new program or higher level of service as follows:

> As in prior permits, Copermittees are required to comply with water quality standards and to control pollutants in storm water discharges to the MEP. They remain required "through timely implementation of control measures and other actions to reduce pollutants in storm water discharges." [Footnote omitted.] Contrary to Claimants' assertions, SALs, like NALs, do not exceed the requirements of federal law, but instead are required in this case to encourage the Copermittees to take appropriate measures to control of pollutants in storm water to the maximum extent practicable standard.[576]

The Commission finds that Section D. of the test claim permit does not mandate a new program or higher level of service.

First, the requirements to monitor stormwater discharges, determine if the discharges are meeting water quality standards and if not, implement or modify BMPs and annually evaluate and report that information to the Regional Board are not new. The CWA requires an NPDES permittee to monitor discharges into the waters of the United States in a manner sufficient to determine whether it is meeting water quality standards.[577] Federal regulations require that samples and measurements taken for the purpose of monitoring shall be representative of the monitored activity.[578] Conditions to achieve water quality standards and objectives include BMPs, or "controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants."[579] Further, federal law requires that monitoring results must be reported, including any instances of noncompliance.[580] A permittee is also required by federal regulations to report any noncompliance that may endanger health or the environment verbally within 24 hours,

followed by a written report within five days. The report shall state whether the noncompliance has been corrected and the steps taken or planned to reduce or eliminate the noncompliance.[581]

In addition, under the prior permit, discharges from MS4s that cause or contribute to the violation of water quality standards were expressly prohibited.[582] The prior permit also prohibited discharges from MS4s that cause or contribute to exceedances of receiving water quality objectives for surface water or groundwater.[583] The monitoring program required by the prior permit required the claimants to assess compliance with the permit and determine whether the discharges were meeting water quality standards.[584] If a claimant determined that the MS4 discharges were causing or contributing to an exceedance of an applicable water quality objective, the claimant was required under the prior permit to promptly notify and submit a report to the Regional Board that describes the BMPs that are currently implemented and additional BMPs that will be implemented to prevent or reduce any pollutants that are causing or contributing to the exceedance of water quality standards.[585] In addition, the claimants were required to annually evaluate their monitoring and report the findings to the Regional Board.[586]

The SALs were established because the claimants were not meeting water quality standards despite having monitored and implemented BMPs for the last twenty years. Their reports indicated "that runoff discharges are causing or contributing to water quality impairments, and are a leading cause of such impairments in Riverside County."[587] The SALs imposed by the test claim permit are simply numbers that reflect the existing water quality standards in the Basin Plan, the federal California Toxics Rule (CTR), and the US EPA Water Quality Criteria for turbidity, nitrate and nitrite, phosphorus, cadmium, copper, lead, and zinc, and if there is an exceedance of a SAL detected with monitoring, then the claimants have to address those exceedances by implementing or modifying BMPs.[588] As indicated above, federal law requires the Regional Board to develop NPDES permit effluent limits as necessary to meet water quality standards when it determines that an MS4 discharge causes, has the reasonable potential to

cause, or contributes to an excursion of a numeric or narrative water quality criteria.[589] But the SALs themselves do not impose any new mandated activities. As indicated above, both federal law and the prior permit required the claimants to monitor discharges of stormwater, determine if the discharges were meeting water quality standards and if not, implement or modify BMPs and evaluate and report that information to the Regional Board. These activities have long been required by law and are not new.

Section D. of the test claim permit does require that the claimants monitor and "sample a representative percentage of the major outfalls within each hydrologic subarea" during wet weather, with the number of monitoring stations and frequency of sampling at the discretion of the claimants, and then implement or modify BMPs when an exceedance occurs at those monitoring stations and report that information to the Regional Board.[590] As indicated above, the prior permit only required stormwater monitoring at the receiving waters and did not also require monitoring outfalls.[591] But the claimants were not meeting water quality standards and "[t]he monitoring of outfalls is expected to be used to identify storm drains that are discharging pollutants in concentrations that may pose a threat to receiving waters."[592] Monitoring a representative sample of major outfalls, however, is not a new state-mandated activity. The requirement in Section D. to conduct wet weather monitoring of MS4 outfalls simply implements existing federal law, which requires permittees to monitor its discharges into the waters of the United States in a manner sufficient to determine whether it is in compliance with the permit, including the receiving water limitations and discharge prohibitions, and if water quality standards are not met, permittees are required implement or modify BMPs to meet water quality standards and report that information to the Regional Board.[593] An NPDES permit is unlawful if a permittee is not required to effectively monitor its permit compliance.[594]

Moreover, the requirement to monitor MS4 outfalls and implement BMPs to ensure that water quality standards are met does not constitute a new program or higher level of service. The Supreme Court has clarified that "simply because a state law or order may *increase the costs* borne by local government *in providing services*, this does not necessarily establish that the law or order constitutes an *increased or higher level* of the resulting 'service to the public' under

article XIII B, section 6, and Government Code section 17514."[595] Rather, the new program or higher level of service must "increase the actual level or quality of governmental services provided," or be imposed on local government uniquely.[596]

In this case, federal law has long required that NPDES permits include conditions to achieve water quality standards and objectives, including monitoring requirements to ensure that water quality standards are met.[597] As stated above, the SALs were developed to reflect the water quality standards in the Basin Plan, the federal California Toxics Rule (CTR), and the US EPA Water Quality Criteria.[598] "[I]t is the goal of the SALs, through the iterative and MEP process, to have MS4 storm water discharges meet all applicable water quality standards,"[599] and that any exceedance of a SAL indicates BMPs being implemented are insufficient to protect the beneficial uses of waters.[600]

The requirement imposed by the test claim permit to monitor MS4 outfalls and implement BMPs if an exceedance occurs at those monitoring stations simply makes the claimants comply with existing federal law imposed on *all* dischargers to comply with water quality standards.[601]

Moreover, the prior permit expressly prohibited discharges from MS4s that cause or contribute to the violation of water quality standards.[602] The prior permit also prohibited discharges from MS4s that cause or contribute to exceedances of receiving water quality objectives for surface water or groundwater.[603] The prior permit further stated that "nothing in this Order shall be construed to relieve the permittee from civil or criminal penalties for noncompliance."[604] As

indicated in the findings, the claimants were not meeting water quality standards.[605] Based on these facts, the plain language of the prior permit, and the cases described below, the claimants could have been held liable for violating the CWA under the prior permit.

In *Building Industry Association of San Diego County v. State Water Resources Control Board*,[606] the Building Industry Association (BIA) challenged a 2001 NPDES stormwater permit issued by Regional Board that expressly prohibited the discharge of pollutants that "cause or contribute to exceedances of receiving water quality objectives," and that "cause or contribute to the violation of water quality standards."[607] The permit contained an enforcement provision that required a municipality to report any violations or exceedances of an applicable water quality standard and describe a process for improvement and prevention of further violations.[608] The permit also contained a provision that "Nothing in this section shall prevent the Regional Water Board from enforcing any provision of this Order while the municipality prepares and implements the above report."[609] BIA, concerned that the permit provisions were too stringent, impossible to satisfy, and would result in all affected municipalities being in immediate violation of the permit and subject to substantial civil penalties because they were not then complying with applicable water quality standards, contended that under federal law, the "maximum extent practicable" standard is the exclusive measure that may be applied to municipal storm sewer discharges. BIA asserted that the Regional Board may not require a municipality to comply with a state water quality standard if the required controls exceed a maximum extent practicable standard.[610] The court, however, rejected BIA's interpretation, and held that the permit provisions requiring compliance with water quality standards are proper under federal law.[611]

[611] *Building Industry Association of San Diego County v. State Water Resources Control Board* (2004) 124 Cal.App.4th 866, 880; see also, *Defenders of Wildlife v. Browner* (1999) 191 F.3d 1159, 1166-1167, which also held that the US EPA or the state administrator has the authority to determine that ensuring strict compliance with state water quality standards is necessary to control pollutants.

Similarly, in *Natural Resources Defense Council, Inc. v. County of Los Angeles*,[612] the permit prohibited discharges from the MS4 that cause or contribute to the violation of water quality standards and objectives contained in the Basin Plan, the California Toxics Rule, the National Toxics Rule, and other state or federal approved surface water quality plans. The permit further provided that the permittees comply with the discharge prohibitions with monitoring and timely implementation of control measures and other actions to reduce pollutants in their discharges.[613] Between 2002 and 2008, annual monitoring reports were published, and identified 140 separate exceedances of the water quality standards for aluminum, copper, cyanide, zinc, and fecal coliform bacteria in the Los Angeles and San Gabriel Rivers.[614] NRDC filed a lawsuit alleging that the permittees violated the CWA and its causes of actions were based on the following assertions: that the permit incorporated the water quality limits for each receiving water body; that the monitoring stations had recorded pollutant loads in the receiving water bodies that exceed those permitted under the relevant standards; that an exceedance constitutes non-compliance with the permit and, thereby, the CWA; and that the permittees were liable for these exceedances under the CWA.[615] The permittees argued they could not be held liable for violating the permit and, thus, the CWA, based solely on monitoring data because the monitoring was not designed or intended to measure compliance of any permittee, which the court disagreed with based on the plain language of the permit; and the monitoring data cannot parse out precisely whose discharge contributed to any given exceedance because the monitoring stations manage samples downstream and not at the discharge points.[616] The court disagreed with the permittees, finding that:

> . . . . the data collected at the Monitoring Stations is intended to determine whether the Permittees are in compliance with the Permit. If the District's monitoring data shows that the level of pollutants in federally protected water bodies exceeds those allowed under the Permit, then, as a matter of permit construction, the monitoring data conclusively demonstrates that the County Defendants are not "in compliance" with the Permit conditions. Thus, the County Defendants are liable for Permit violations.[617]

The court also found that "the Clean Water Act requires every NPDES permittee to monitor its discharges into the navigable waters of the United States in a manner sufficient to determine

[617] *Natural Resources Defense Council, Inc. v. County of Los Angeles* (2013) 725 F.3d 1194, 1199, 1206-1207.

whether it is in compliance with the relevant NPDES permit."[618] The court stated that Congress recognized that MS4s often cover many square miles and comprise numerous, geographically scattered sources of pollution including streets, catch basins, gutters, man-made channels, and storm drains, and that for large urban areas, MS4 permitting could not be accomplished on a source-by-source basis. Thus, Congress delegated to the US EPA and the state administrators discretion to issue permits on a jurisdiction-wide basis, instead of requiring separate permits for individual discharge points. Nothing in the MS4 permitting scheme of federal law, however, relieves permittees of the obligation to monitor their compliance with the permit and the CWA.[619] "Because the results of County Defendants' pollution monitoring conclusively demonstrate that pollution levels in the Los Angeles and San Gabriel Rivers are in excess of those allowed under the Permit, the County Defendants are *liable* for Permit violations as a matter of law."[620] The court remanded the case to the lower courts to determine the appropriate remedy for the county's violations.[621]

Therefore, Section D. does not increase the level or quality of service to the public; it simply helps the claimants comply with existing law imposed on all dischargers to meet water quality standards.

Finally, with the adoption of the test claim permit, the claimants will not be held strictly liable if a pollutant exceeds a SAL. Section D. expressly states that claimants simply have to "affirmatively augment and implement all necessary storm water controls and measures to reduce the discharge of the associated class of pollutant(s) to the MEP standard."[622] As the test claim permit states, "[f]ailure to appropriately consider and react to SAL exceedances in an iterative manner creates a presumption that the Copermittee(s) have not complied with the MEP standard."[623] The Fact Sheet also makes clear that:

> SALs are not numeric effluent limitations, which is reflected in language which clarifies an excursion above a SAL does not create a presumption that MEP is not being met. Instead, a SAL exceedance is to be used by the Copermittee as an indication that the MS4 storm water discharge point is a definitive "bad actor,"

[621] *Natural Resources Defense Council, Inc. v. County of Los Angeles* (2013) 725 F.3d 1194, 1199, 1210.

[622] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017 page 205 (test claim permit, Section D.1.).

[623] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017 page 205 (test claim permit, Section D.1.).

and the result from the monitoring needs to be considered as part of the iterative process for reducing pollutants in storm water to the MEP.[624]

Thus, claimants' argument that the numeric SALs are similar to numeric effluent limits in that they are new programs imposed on the copermittees that are tied to achieving compliance with specific numeric limits is not supported by the plain language of the test claim permit.

Accordingly, Section D. of the test claim permit does not mandate a new program or higher level of service.

4. Sections F.1.d.1., 2., 4., 7., and h. and F.3.d.1.-5. of the Test Claim Permit, Addressing Low Impact Development (LID), Hydromodification Plans, Best Management Practices (BMPs) for Priority Development Projects, and a Retrofitting Program to Reduce Impacts from Hydromodification and Promote Low Impact Development Best Management Practices (LID BMPs), Impose Some State-Mandated New Programs or Higher Levels of Service When Local Agencies Regulate Land Use and Development.

On pages 21 and 22 of the Test Claim, the claimants state they are pleading "Requirements relating to the Priority Development Projects, local impact development (LID) and hydromodification, contained in Section F.1." and the "Requirements relating to the retrofitting of existing development, contained in Section F.3.d."[625] On pages 46-52 of the Test Claim, the claimants discuss only Section F.1.d.1., 2., 4., and 7. relating to LID, and no other provisions of Section F.1.d, and cite Section F.1.h, which addresses the hydromodification requirements.[626] On pages 65-66 of the Test Claim, the claimants discuss Section F.3.d.1.-5., and do not discuss the remaining provisions of Section F.3.d.[627]

Government Code section 17553(b)(1) requires test claims to identify the specific sections of the executive order alleged to contain a mandate *and* a detailed description of the new activities mandated by the state. Thus, this Decision will address the specific sections properly pled; namely Sections F.1.d.1., 2., 4., 7., and h. and F.3.d.1.-5., of the test claim permit as they relate to the activities relating to the retrofitting of existing development, contained in Section F.3.d, LID in Section F.1.d.1., 2., 4., and 7. and hydromodification in Section F.1.h. These sections are part of the Standard Stormwater Mitigation Plan (SSMP) that requires, in the continuing effort to reduce the discharges of stormwater pollution from the MS4 to the MEP and to prevent those discharges from causing or contributing to a violation of water quality standards, an updated plan for review of priority development projects proposed by residential, commercial, industrial, mixed-use, and public project proponents and the implementation of LID site design BMPs at new development and redevelopment projects; the development of a hydromodification plan to manage increases in runoff discharge rates and durations from priority development projects; and

[624] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017 pages 266, 432 (test claim permit; Fact Sheet/Technical Report, Discussion of Finding D.1.h.).

[625] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017 pages 21-22.

[626] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017 pages 46-52.

[627] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017 pages 65-66.

the development and implementation of a retrofitting program to reduce the impacts from hydromodification and promote LID BMPs.

The claimants seek reimbursement when regulating priority development projects *and* implementing LID and hydromodification requirements for their own municipal priority development projects and identify the following LID and hydromodification "mandated" activities for municipal projects:[628]

- Applying Standard Stormwater Mitigation Plan ("SSMP") requirements to an increased range of municipal projects implemented by the Claimants, which meet the requirements of to [sic] F.1.d.(1) and F.1.d.(2).
- Requiring implementation of LID practices and development and implementation of an LID Waiver program, as described in F.1.d.(4) and F.1.d.(7), on municipal PDPs implemented by the Claimants. This will require creating a formalized review process for all PDPs, developing protocols for assessing each PDP for various required types of LID, training staff on the new protocols, assessing potential on- or off-site collection and reuse of storm water, amending local ordinances to remove barriers to LID implementation, maintaining or restoring natural storage reservoirs and drainage corridors, draining a portion of impervious areas into pervious areas, and constructing low-traffic areas with permeable surfaces. Projects that are subject to these requirements include municipal yards, recreation centers, civic centers, and road improvements, and any other municipal projects meeting the permit-specified thresholds or geographical criteria.
- Requiring development of an HMP [hydromodification plan], and implementation of those HMP requirements on municipal PDPs implemented by the Claimants pursuant to Part F.1.h. To comply with part F.1.h, the Copermittees must invest significant resources to hold public hearings, hold collaborative meetings, perform studies and develop an HMP, train staff and the public, and adopt the local SSMP. In addition, as noted above, Claimants are prohibited from using non-natural materials in reinforcing stream channels, a prohibition which is not practicable. Continued compliance with these sections will also require Copermittees to add requirements to municipal projects and will significantly increase the costs of design and construction.[629]

The claimants also allege that the following activities related to the retrofitting program addressed in Section F.3.d.1.-5. of the test claim permit are newly mandated as follows:

- Section F.3.d. imposed at least five new requirements on Claimants, requirements which were not required by federal law and represented state mandates for which Claimants are entitled to reimbursement. The costs of developing and implementing the retrofitting program for existing development for which

[628] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 56 (Test Claim narrative).

[629] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 56 (Test Claim narrative).

Permittees should be reimbursed arise from the extensive list of requirements in the 2010 Permit. These requirements include:

- Identifying potential retrofitting candidates by researching and locating developments that contribute to a TMDL or ESA, that are channelized or hardened, that are tributary to receiving waters which are an ASBS, SWQPA, or are significantly eroded;
- Evaluating the feasibility, cost effectiveness, pollutant removal effectiveness, tributary area, maintenance requirements, landowner cooperation, neighborhood acceptance, aesthetic qualities, efficacy at addressing concern, and potential for improvement in public health and safety for each potential retrofitting candidate and then ranking each candidate accordingly;
- Prioritizing retrofit projects in the following year's municipal work plan and designing retrofit projects according to the SSMP requirements and hydromodification where feasible;
- Cooperating with and encouraging private landowners to undertake site-specific retrofit projects; and
- Tracking and inspecting retrofit BMPs.[630]

As described below, the Commission finds that:

- All LID, hydromodification, and retrofitting costs required by Sections F.1.d.1., 2., 4., 7., and h. and F.3.d.1.-5. of the test claim permit and incurred and triggered by a project proponent of a *municipal* priority development project are not mandated by the state and do not impose a new program or higher level of service because such costs are incurred at the discretion of the local agency, are not unique to government, and do not provide a governmental service to the public.
- The remaining new LID, hydromodification, and retrofitting administrative, planning, and regulatory activities required by Sections F.1.d.1., 2., 4., 7., and h., and F.3.d.1.-5. are mandated by the state and impose a new program or higher level of service.

a. Background

i. Federal law requires an NPDES applicant to propose structural and source control measures to reduce pollutants from runoff from all construction sites and all new development and redevelopment of commercial, residential, and industrial areas to the maximum extent practicable (MEP), and the US EPA encourages green infrastructure as an integral part of stormwater management.

Under federal law, NPDES permits "shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and

[630] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 67 (Test Claim narrative).

system, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants."[631] Federal regulations define "best management practices" as:

> . . . schedules of activities, prohibitions of practices, maintenance procedures, and other management practices to prevent or reduce the pollution of "waters of the United States." BMPs also include treatment requirements, operating procedures, and practices to control plant site runoff, spillage or leaks, sludge or waste disposal, or drainage from raw material storage.[632]

Federal regulations require that the application for an NPDES permit for large and medium MS4 dischargers to describe a proposed management program that covers the duration of the permit to be considered by the Regional Board when developing permit conditions to reduce pollutants in discharges to the MEP. As relevant here, the proposed management programs shall include the following information:

- A description of structural and source control measures to reduce pollutants from runoff from *commercial and residential areas* that are discharged from the MS4 and that are to be implemented during the life of the permit, accompanied with an estimate of the expected reduction of pollutant loads and a proposed schedule for implementing such controls. At a minimum, the description shall include, as relevant here:
    - A description of planning procedures including a comprehensive master plan to develop, implement, and enforce controls to reduce the discharge of pollutants from MS4s that receive discharges from areas of *new development and significant redevelopment*. The plan shall address controls to reduce pollutants in discharges from MS4s after construction is completed.
    - A description of practices for operating and maintaining *public streets, roads, and highways*, and procedures for reducing the impact on receiving waters of discharges from MS4s.
- A description of a program to monitor and control pollutants in stormwater discharges to municipal systems from *industrial facilities* that the municipal permit applicant determines is contributing a substantial pollutant loading to the MS4. The description shall identify priorities and procedures for inspections and establishing and implementing control measures for such discharges.
- A description of a program to *implement and maintain structural and non-structural BMPs* to reduce pollutants in stormwater runoff *from construction sites* to the MS4. The description shall include procedures for site planning, which incorporates consideration of potential water quality impacts; requirements for nonstructural and structural BMPs; procedures for identifying priorities for inspecting sites and enforcing control measures that consider the nature of the construction activity, topography, and the characteristics of

[631] United States Code, title 33, section 1342(p)(3)(B)(iii) (Public Law 100-4).

[632] Code of Federal Regulations, title 40, section 122.2.

> soils and receiving water quality; and appropriate educational and training measures for construction site owners.[633]

The application shall also include estimated reductions in loadings of pollutants from discharges of runoff from MS4s expected as a result of the water quality management programs and the identification of known impacts of stormwater controls on ground water.[634]

In 2006, the US EPA requested the National Research Council of the National Academy of Sciences (NRC) to conduct a review of the existing stormwater regulatory program.[635] NRC issued its report in 2008, and found that "the rapid conversion of land to urban and suburban areas has profoundly altered how water flows during and following storm events, putting higher volumes of water and more pollutants into the nation's rivers, lakes, and estuaries. These changes have degraded water quality and habitat in virtually every urban stream system."[636] The NRC report recommended "a number of actions, including conserving natural areas, reducing hard surface cover (e.g., roads and parking lots — impervious surface areas), and retrofitting urban areas with features that hold and treat stormwater."[637] The report also recommended that the US EPA adopt a watershed-based permitting system encompassing all discharges that could affect waterways in a particular drainage basin. Under this watershed approach, responsibility to implement watershed-based permits and control all types of municipal, industrial, and construction stormwater discharges would reside with MS4 permittees. The report criticized the US EPA's current approach, "which leaves much discretion to regulated entities to set their own standards through stormwater management plans and to self-monitor."[638]

After the NRC report was issued in 2008, the US EPA, in 2009, initiated information-gathering and public dialogue activities for possible regulatory changes that would respond to the NRC report and embrace the report's recommendations. As part of this project, the US EPA was considering establishing specific requirements and standards to control stormwater discharges from new development and redevelopment that promote sustainable practices that mimic natural processes to infiltrate and recharge, evapotranspire, and harvest and reuse precipitation as follows:

> For example, there could be a national requirement for on-site stormwater controls such that post development hydrology mimics predevelopment hydrology on a site-specific basis. EPA could establish a suite of specific options of standards for meeting such a requirement, for example, on-site retention of a

[638] Exhibit X (6), Congressional Research Service, "Stormwater Permits: Status of EPA's Regulatory Program," (November 28, 2016), page 12.

specific size storm event in an area, limits on the amount of effective impervious surfaces (defines as impervious surfaces with direct hydraulic connection to the downstream drainage (or stream) system, also referred to as directly connected impervious area), use of site-specific calculations to determine predevelopment hydrology, and/or use of regional specific standards to reflect local circumstances.[639]

US EPA was also seeking input to require MS4s to address stormwater discharges in areas of existing development through retrofitting of the sewer system, drainage area, or individual structures with improved stormwater control measures.[640]

In March 2014, however, the US EPA announced that it would defer action on the rule and, instead, would provide incentives and technical assistance to address stormwater runoff. "In particular, the agency said that it will leverage existing requirements to strengthen municipal stormwater permits and will continue to promote green infrastructure as an integral part of stormwater management."[641]

ii. The prior permit required each copermittee to submit a storm water management plan (SWMP) to reduce pollutants in urban runoff to the maximum extent practicable (MEP), which included source control and treatment control best management practices (BMPs) for all priority development projects, and implementation of pollution prevention methods for construction and industrial sites.

The prior permit recognized that with urban development, natural vegetated pervious ground cover is converted to impervious surfaces such as paved highways, streets, rooftops, and parking lots. While natural vegetated soil can both absorb rainwater and remove pollutants providing an effective natural purification process, pavement and concrete cannot.[642] The prior permit also recognized that urban runoff contains waste and pollutants that can threaten human health and toxic pollutants can impact the overall quality of aquatic systems and beneficial uses of receiving waters.[643] As a result, the runoff leaving the developed urban area is significantly greater in volume, velocity, and pollutant load than the pre-development runoff in the same area.[644]

The prior permit also recognized that pollutants can be effectively reduced in urban runoff by the application of pollution prevention, source control, and treatment control BMPs. Source control

BMPs (both structural and non-structural) minimize the contact between the pollutants and flows (for example, re-routing pollutant sources). Treatment control (or structural) BMPs remove pollutants from urban runoff.[645]

Thus, Section F., of the prior permit required each permittee, as a component of their SWMP, to address land use planning by minimizing the short and long-term impacts on receiving water quality from *new development and redevelopment*. In order to reduce pollutants in urban runoff from new development and redevelopment to the MEP, each permittee was required to include in its General Plan water quality and watershed protection principles and policies to direct land use decisions and require implementation of consistent water quality protection measures of their choosing for development projects. Examples of water quality and watershed protection principles and policies to be considered for inclusion in the General Plan included the following: (1) minimize the amount of impervious surfaces and directly connected impervious surfaces in areas of new development and redevelopment, where feasible, to slow runoff and maximize its on-site infiltration; (2) implement pollution prevention methods supplemented by pollutant source controls and treatment; (3) preserve, create, or restore areas that provide important water quality benefits, such as riparian corridors, wetlands, and buffer zones; (4) limit disturbances of natural water bodies and natural drainage systems caused by development including roads, highways, and bridges; (5) prior to making land use decisions, utilize methods to estimate increases in pollutant loads and flows resulting from projected future development and require appropriate BMPs to mitigate the projected increases in pollutant loads and flows; (6) avoid development of areas that are susceptible to erosion and sediment loss or develop guidance that identifies these areas and protects them from erosion and sediment loss; (7) reduce pollutants associated with vehicles and increasing traffic resulting from development; and (8) post-development runoff from a site shall not contain pollutant loads that cause or contribute to an exceedance of receiving water quality objectives and which have not been reduced to the MEP.[646]

Before the issuance of a local building permit, the prior permit required the permittees to require each proposed project proponent to implement BMPs to ensure that pollutants and runoff from the development will be reduced to the MEP. The project proponent was required to ensure that receiving water quality objectives were not violated throughout the life of the project. All development was required to be in compliance with stormwater ordinances and the following requirements, which were required to be included in local permits:

- Require project proponent to implement pollution prevention and source control BMPs.
- Require project proponent to implement site design/landscape characteristics that maximize infiltration, provide retention, slow runoff, and minimize impervious land coverage for all development projects.

[645] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 568 (Order R9-2004-0001, Finding 15).

[646] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 575-576 (Order R9-2004-0001, Section F.1.).

- Require project proponent to implement buffer zones for natural water bodies. Where buffer zones are not feasible, require project proponent to implement other buffers such as trees, lighting restrictions, access restrictions, etc.
- Require industrial applicants to provide evidence of coverage under the General Industrial Permit.
- Require project proponent to ensure its grading or other construction activities meet the requirements of the Standard Urban Storm Water Mitigation Plan (SUSMP), which is described below.
- Require project proponent to provide proof of a mechanism which will ensure ongoing long-term maintenance of all structural post-construction BMPs.[647]

In addition, the prior permit required the permittees to develop, adopt, and implement a SUSMP to reduce pollutants and to maintain or reduce downstream erosion and stream habitat from all *priority development projects*, which included all new development and redevelopment projects[648] that create, add, or replace at least 5,000 square feet of impervious surfaces on an already existing developed site. The permittees were required to ensure that the following priority development projects meet SUSMP requirements:[649]

- Home subdivisions of 10 or more housing units.
- Commercial developments greater than 100,000 square feet defined as any development on private land that is not for heavy industrial or residential uses and includes hospitals, laboratories, and other medical facilities; educational institutions; recreational facilities; commercial nurseries; multi-apartment buildings; car wash facilities; mini-malls and other business complexes; shopping malls; hotels; office buildings; public warehouses; automotive dealerships; commercial airfields; and other light industrial facilities.
- Automotive repair shops.
- Restaurants, where the land area for development is greater than 5,000 square feet. If the land development is less than 5,000 square feet, the restaurant shall meet all SUSMP requirements, except for structural treatment BMP, numeric sizing criteria, and peak flow requirements.

---

[647] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 576-577 (Order R9-2004-0001, Section F.2.).

[648] Redevelopment includes, but is not limited to, the expansion of a building footprint or addition or replacement of a structure; structural development including an increase in gross floor area and/or exterior construction or remodeling; replacement of impervious surface that is not part of a routine maintenance activity; and land disturbing activities related with structural or impervious surfaces. Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 577 (Order R9-2004-0001, Section F.2.b.).

[649] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 577 (Order R9-2004-0001, Section F.2.b.).

- All hillside development greater than 5,000 square feet defined as any development which creates 5,000 square feet of impervious surface that is located in an area with known erosive soil conditions and where the development will grade on any natural slope that is 25 percent or greater.
- Environmentally sensitive areas (ESAs).[650] All development and redevelopment located within or directly adjacent to (within 200 feet of an environmentally sensitive area) or discharging directly (outflow from a drainage conveyance system that is composed entirely of flows from the development or redevelopment site) to an environmentally sensitive area (where discharges from the development or redevelopment will enter receiving waters within the environmentally sensitive area), which either creates 2,500 square feet of impervious surface on a proposed project site or increases the area of imperviousness of a proposed project site to ten percent or more of its naturally occurring condition.
- Parking lots 5,000 square feet or more.
- Street, roads, highways, and freeways. This includes any paved surface that is 5,000 square feet or greater used for the transportation of automobiles, trucks, motorcycles, and other vehicles
- Retail Gasoline Outlets that are 5,000 square feet or more or have a projected average daily traffic of 100 or more vehicles per day.[651]

The SUSMP was also required to include a list of recommended source control and treatment control BMPs and had to require that all priority development projects implement a combination of on-site source control and on-site/shared treatment control BMPs selected from the recommended BMP list. The BMPs shall, at a minimum:

- Control the post-development peak stormwater runoff discharge rates and velocities to maintain or reduce pre-development downstream erosion and to protect stream habitat.
- Conserve natural areas where feasible.

---

[650] Environmentally Sensitive Areas are defined as areas "in which plant or animal life or their habitats are either rare or especially valuable because of their special nature or role in an ecosystem and which would easily be disturbed or degraded by human activities and developments." ESAs subject to urban runoff requirements include but are not limited to all CWA section 303(d) impaired water bodies, areas designated as Areas of Special Biological Significance by the State Resources Water Control Board Basin Plan; water bodies designated with the RARE beneficial use by the State Resources Water Control Board Basin Plan; areas within the Western Riverside County Multi-Species Habitat Conservation Plan (MSHCP) plan area that contain rare or especially valuable plant or animal life or their habitat; and any other equivalent environmentally sensitive areas which the copermittees have identified. Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 610 (Order R9-2004-0001, Attachment C), quoting Public Resources Code section 30107.5.

[651] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 577 (Order R9-2004-0001, Section F.2.b.).

- Minimize stormwater pollutants of concern in urban runoff from the priority development projects through implementation of source control BMPs. Identification of pollutants of concern should include, at a minimum, all pollutants for which water bodies receiving the development's runoff are listed as impaired under CWA section 303(d), all pollutants associated with the land use type of the development, and all pollutants commonly associated with urban runoff.
- Be effective at removing or treating the pollutants of concern associated with the project.
- Minimize directly connected impervious areas where feasible.
- Protect slopes and channels from eroding.
- Include storm drain stenciling and signage.
- Include properly designed outdoor material storage areas.
- Include properly designed trash storage areas.
- Include proof of a mechanism, to be provided by the project proponent or copermittee, which will ensure ongoing long-term structural BMP maintenance.
- Include additional water quality provisions applicable to individual priority development project categories.
- Be correctly designed so as to remove pollutants to the MEP.
- Be implemented close to pollutant sources, when feasible, and prior to discharging into receiving waters.
- Ensure that post-development runoff does not contain pollutant loads which cause or contribute to an exceedance of water quality objectives and which have not been reduced to the MEP.[652]

The prior permit required that the SUSMP require priority development projects to implement treatment control BMPs, which had to be located to infiltrate, filter, or treat the required runoff volume or flow prior to its discharge to any receiving water. Treatment control BMPs could be shared by multiple priority development projects as long as construction of any shared treatment control BMPs is completed prior to the use of any development project from which the treatment control BMP will receive runoff, and prior to discharge to a receiving water. In addition, all treatment control BMPs for a single priority development project had to be collectively sized to comply with the following specified numeric criteria for volume or flow:

- Volume-based BMPs shall be designed to infiltrate, filter, or treat the volume of runoff produced from a 24-hour 85th percentile storm event, as specified.
- Flow based BMPs shall be designed to infiltrate, filter, or treat either the maximum flow rate of runoff produced from a rainfall intensity of 0.2 inch of rainfall per hour, for each hour; or the maximum flow rate of runoff produced by the 85th percentile hourly rainfall

[652] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 577-578 (Order R9-2004-0001, Section F.2.b.1.).

intensity; or the maximum flow rate of runoff that achieves approximately the same reduction in pollutant loads and flows as achieved by mitigation of the 85th percentile hourly rainfall intensity multiplied by a factor to two.

- Alternatively, the copermittees could develop an equivalent method for calculating the numeric sizing criteria for volume or flow.[653]

The prior permit also required that the SUSMP, require the permittees to develop a procedure for pollutants of concern to be identified for each priority development project. The procedure had to address receiving water quality (including pollutants for which receiving waters are listed as impaired under section 303(d)); pollutants associated with land use type of the development project; pollutants expected to be present on site; changes in stormwater discharge flow rates, velocities, durations, and volumes resulting from the development project; and sensitivity of receiving waters to changes in stormwater discharges flow rates, velocities, durations, and volumes.[654]

In addition, under the prior permit, the permittees were required to develop a process by which the SUSMP requirements would be implemented and at what point of the planning process development projects would be required to meet all SUSMP requirements. The process had to "also include identification of the roles and responsibilities of various municipal departments in implementing the SUSMP requirements, as well as any other measures necessary for the implementation of SUSMP requirements."[655]

The prior permit further required that the SUSMP contain a waiver provision that allows a permittee to waive the requirement of implementing all treatment control BMPs for a project if infeasibility can be established. A waiver of infeasibility shall only be granted when all available treatment control BMPs have been considered and rejected as infeasible. In addition, the prior permit gave the permittees authority to require project proponents that received waivers to transfer the cost savings, as determined by the permittee, to a stormwater mitigation fund to be used on projects to improve urban runoff quality within the watershed of the waived project.[656]

To protect groundwater quality, the prior permit required permittees to apply restrictions to the use of treatment control BMPs that are designed to function primarily as infiltration devices (such as infiltration trenches and infiltration basins) to ensure that their use shall not cause or contribute to an exceedance of groundwater quality objectives. The use of treatment control BMPs designed to function primarily as infiltration devices shall meet the following conditions:

---

[653] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 578-580 (Order R9-2004-0001, Section F.2.b.2.-4.).

[654] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 581 (Order R9-2004-0001, Section F.2.b.5.).

[655] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 581 (Order R9-2004-0001, Section F.2.b.6.).

[656] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 581 (Order R9-2004-0001, Section F.2.b.7.).

- Urban runoff shall undergo pretreatment such as sedimentation or filtration prior to infiltration.
- All dry weather flows shall be diverted from infiltration devices.
- Pollution prevention and source control BMPs shall be implemented to protect groundwater quality at sites where infiltration treatment control BMPs are to be used.
- Infiltration treatment control BMPs shall be adequately maintained so that they remove pollutants to the MEP.
- The vertical distance from the base of any infiltration treatment control BMP to the seasonal high groundwater mark shall be at least 10 feet unless the groundwater basins do not support beneficial uses.
- The soil through which infiltration is to occur shall have physical and chemical characteristics (such as appropriate cation exchange capacity, organic content, clay content, and infiltration rate) for proper infiltration durations and treatment of urban runoff.
- Infiltration treatment control BMPs shall not be used for areas of industrial or light industrial activity; areas subject to high vehicular traffic (25,000 or greater average daily traffic on main roadway or 15,000 or more average daily traffic on any intersecting roadway); automotive repair shops; car washes; fleet storage areas (bus, truck, etc.); nurseries; and other high threat to water quality land uses and activities as designated by each permittee.
- Infiltration treatment control BMPs shall be located a minimum of 100 feet horizontally from any water supply wells.

As part of the SUSMPs, the permittees were granted the authority to develop alternative restrictions on the use of treatment control BMPs that are designed to function primarily as infiltration devices.[657]

In addition, the prior permit required the permittees to develop and propose numeric criteria to control urban runoff discharge velocities, volumes, durations, and peak rates to ensure that discharges from priority development projects maintain or reduce pre-development downstream erosion and protect stream habitat.[658] The permittees were required to revise their current environmental review processes as necessary to include requirements for evaluation of water quality effects and identification of appropriate mitigation measures for all development projects.[659] The permittees were also required to implement education programs to include an annual training for planning and development review staffs, planning boards, and elected

[657] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 581-582 (Order R9-2004-0001, Section F.2.b.8.).

[658] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 582-583 (Order R9-2004-0001, Section F.2.b.9.).

[659] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 583 (Order R9-2004-0001, Section F.3.).

officials, as well as training for project applicants, developers, contractors, property owners, and community planning groups.[660]

Section G. of the prior permit contained SWMP provisions relating to construction sites and inspection of those sites. Each permittee was required to implement pollution prevention methods and to require construction site owners, developers, contractors, and other responsible parties to use the prevention methods. Each permittee had to also review and update its grading ordinances to require implementation of BMPs that addressed erosion prevention, slope stabilization, phased grading, revegetation, preservation of natural hydrologic features, preservation of riparian buffers and corridors, maintenance of all source control and treatment control BMPs, and retention and proper management of sediment and other construction pollutants on site. BMP implementation was year round, but requirements could vary during the wet and dry seasons. Each permittee was required to implement, or require implementation of, additional controls for construction sites tributary to CWA section 303(d) water bodies impaired for sediment as well as additional controls for construction sites within or adjacent to or discharging directly to receiving waters within ESAs. The permittees were required to conduct construction site inspections, as specified, for compliance with its local ordinances, permits, and the test claim permit. Based upon site inspection findings, follow-up actions were required including sanctions to ensure compliance with the prior permit, ordinances, and the building permit. Each permittee was also required to implement an education program that included annual training for its construction, building, and grading review staff and inspectors and a program for project applicants, contractors, developers, property owners, and other responsible parties.[661]

Finally, Section H. of the prior permit required each permittee to develop and implement programs to prevent or reduce pollutants in runoff to the MEP from all existing developments within its jurisdiction (municipal, industrial and commercial, and residential developments). Generally, each permittee had to require the use of pollution prevention methods; designate BMPs for implementation; identify pollution sources through developing and updating an inventory of existing development sites; conduct inspections of municipal and industrial and commercial sites and enforce its ordinances to ensure compliance with the prior permit and local ordinances. For industrial and commercial sites, each permittee was required to prioritize the inventory by threat to water quality standards and schedule inspections accordingly; use enforcement actions, including sanctions, to ensure compliance; and provide training to permittee staff and development site owners, operators and employers. In addition, each permittee was required to implement a schedule of maintenance for its MS4 BMPs.[662]

---

[660] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 583-584 (Order R9-2004-0001, Section F.4.).

[661] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 584-587 (Order R9-2004-0001, Section G.).

[662] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 587-593 (Order R9-2004-0001, Section H.).

b. Except for costs incurred by a project proponent of a municipal project (which are not eligible for reimbursement), Sections F.1.d.1., 2., 4., 7., F.1.h., and F.3.d.1.-5. of the test claim permit mandate a new program or higher level of service.

i. New LID, hydromodification plan, and retrofitting requirements imposed by sections F.1.d.1., 2., 4., 7., and h. and F.3.d.1.-5.

The test claim permit explains that while the copermittees have generally been implementing the jurisdictional urban runoff programs required by the prior permit, MS4 discharges continue to cause or contribute to violations of water quality standards as evidenced by the copermittees' monitoring results.[663]

The Fact Sheet further explains that when the prior permit was adopted, studies showed that the level of imperviousness in an area strongly correlated with the quality of nearby receiving waters and stream degradation occurred at levels of imperviousness as low as 10 to 20 percent resulting in a decline in the biological integrity and physical habitat conditions necessary to support natural biological diversity. More recently, however, a study and report by the Southern California Coastal Water Research Program on the effects of imperviousness in southern California streams found that local ephemeral and intermittent streams are even more sensitive to such effects than streams in other parts of the country, with a threshold of response at a two or three percent change of impervious cover. Urban stream flows have greater peaks and volumes, and shorter retention times, than natural stream flows. This results in stream degradation and less time for sediment and other pollutants to settle before being carried out to the ocean, which then accelerates the erosion of the beds and banks within downstream receiving waters. The sediment and pollutants can be a significant cause of water quality degradation.[664] Thus, the test claim permit "contains new or modified requirements that are necessary to improve Copermittees' efforts to reduce the discharge of pollutants in storm water runoff to the MEP and achieve water quality standards."[665]

The claimants pled Sections F.1.d.1., 2., 4., 7., and h., and F.3.d.1.-5. of the test claim permit.[666] These sections require an updated plan for review of priority development projects and implementation of Low-Impact Development (LID) site design BMPs at new development and redevelopment projects in Section F.1.d.1., 2., 4., 7.;[667] the development of a hydromodification plan to manage increases in runoff discharge rates and durations from priority development

projects in Section F.1.h.;[668] and the development and implementation of a retrofitting program to reduce the impacts from hydromodification and promote LID BMPs in Section F.3.d.1.-5.[669]

The goal of the LID and hydromodification management requirements is to restore and preserve the natural hydrologic cycles typically impacted by urbanization and development by requiring appropriate site design and source control BMPs in the approval of development and redevelopment projects: "…[i]ncreased storm water runoff; decreased groundwater recharge; and flow constriction….can often be avoided or minimized by implementing LID and hydromodification BMPs."[670]

"Low Impact Development (LID)" is defined in the test claim permit as "A storm water management and land development strategy that emphasizes conservation and the use of on-site natural features integrated with engineered, small-scale hydrologic controls to more closely reflect pre-development hydrologic functions."[671]

"Hydromodification" is defined as "[t]he change in the natural watershed hydrologic processes and runoff characteristics (i.e., interception, infiltration, overland flow, interflow and groundwater flow) caused by urbanization or other land use changes that result in increased stream flows and sediment transport. In addition, alteration of stream and river channels, installation of dams and water impoundments, and excessive streambank and shoreline erosion are also considered hydromodification, due to their disruption of natural watershed hydrologic processes."[672] The test claim permit finds that hydromodification measures for discharges to hardened channels is necessary to restore the channels and the beneficial uses of local receiving waters to their natural state, as follows:

> The increased volume, velocity, frequency and discharge duration of storm water runoff from developed areas has the potential to greatly accelerate downstream erosion, impair stream habitat in natural drainages, and negatively impact beneficial uses. Development and urbanization increase pollutant loads in storm water runoff and the volume of storm water runoff. Impervious surfaces can neither absorb water nor remove pollutants and thus lose the purification and infiltration provided by natural vegetated soil. Hydromodification measures for discharges to hardened channels to their natural state, thereby restoring the

chemical, physical, and biological integrity and Beneficial Uses of local receiving waters.[673]

The new requirements are addressed below.

a) Section F.1.d.1., 2., 4., 7., of the test claim permit imposes new requirements to update the Model Standard Stormwater Mitigation Plans (SSMPs) for review of priority development projects and implementation of LID BMPs.

Priority development projects (Section F.1.d.1. and 2.)

Priority development project categories are defined in Section F.1.d.1. of the test claim permit as follows:

> (a) All new development projects that fall under the project categories or locations listed in section F.1.d.(2), and
>
> (b) Those redevelopment projects that create, add, or replace at least 5,000 square feet of impervious surfaces on an already developed site and the existing development and/or the redevelopment project falls under the project categories or locations listed in section F.1.d.(2). Where redevelopment results in an increase of less than fifty percent of the impervious surfaces of a previously existing development, and the existing development was not subject to SSMP requirements, the numeric sizing criteria discussed in section F.1.d.(6) applies only to the addition or replacement, and not to the entire development. Where redevelopment results in an increase of more than fifty percent of the impervious surfaces of a previously existing development, the numeric sizing criteria applies to the entire development.
>
> (c) One acre threshold: In addition to the priority development project categories identified in section F.1.d.(2), priority development projects must also include all other post-construction pollutant-generating new development projects that result in the disturbance of one acre or more of land by July 1, 2012.[674]

"Pollutant generating Development Projects" are defined as "those projects that generate pollutants at levels greater than natural background levels."[675]

Section F.1.d.2. defines the priority development project categories as follows:

---

[673] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 187 (test claim permit, Finding 12).

[674] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 212-213 (test claim permit, Section F.1.d.1.).

[675] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 213, footnote 11 (test claim permit).

Where a new development project feature, such as a parking lot, falls into a Priority Development Project Category, the entire project footprint is subject to SSMP requirements.

(a) New development projects that create 10,000 square feet or more of impervious surfaces (collectively over the entire project site) including commercial, industrial, residential, mixed-use, and public projects. This category includes development projects on public or private land which fall under the planning and building authority of the Copermittees.

(b) Automotive repair shops. This category is defined as a facility that is categorized in any one of the following Standard Industrial Classification (SIC) codes: 5013, 5014, 5541, 7532-7534, or 7536-7539.

(c) Restaurants. This category is defined as a facility that sells prepared foods and drinks for consumption, including stationary lunch counters and refreshment stands selling prepared foods and drinks for immediate consumption (SIC code 5812), where the land area for development is greater than 5,000 square feet. Restaurants where land development is less than 5,000 square feet must meet all SSMP requirements *except for* structural treatment BMP and numeric sizing criteria requirement F.1.d.(6) and hydromodification requirement F.1.h.

(d) All hillside development greater than 5,000 square feet. This category is defined as any development which creates 5,000 square feet of impervious surface which is located in an area with known erosive soil conditions, where the development will grade on any natural slope that is twenty-five percent or greater.

(e) Environmentally Sensitive Areas (ESAs). All development located within, or directly adjacent to, or discharging directly to an ESA (where discharges from the development or redevelopment will enter receiving waters within the ESA), which either creates 2,500 square feet of impervious surface on a proposed project site or increases the area of imperviousness of a proposed project site to 10 percent or more of its naturally occurring condition. “Directly adjacent” means situated within 200 feet of the ESA. “Discharging directly to” means outflow from a drainage conveyance system that is composed entirely of flows from the subject development or redevelopment site, and not commingled with flows from adjacent lands.

(f) Impervious parking lots 5,000 square feet or more and potentially exposed to runoff. Parking lot is defined as a land area or facility for the temporary parking or storage of motor vehicles used personally, for business, or for commerce.

(g) Street, roads, highways, and freeways. This category includes any paved impervious surface that is 5,000 square feet or greater used for the transportation of automobiles, trucks, motorcycles, and other vehicles. To the extent that the Copermittees develop revised standard roadway design and post-construction BMP guidance that comply with the provisions of section F.1. of the Order, then public works projects that implement the revised standard roadway sections do not have to develop a project specific SSMP. The standard roadway design and

post-construction BMP guidance must be submitted with the Copermittee's updated SSMP.

(h) Retail Gasoline Outlets (RGOs). This category includes RGOs that meet the following criteria: (a) 5,000 square feet or more or (b) a projected Average Daily Traffic (ADT) of 100 or more vehicles per day.[676]

The categories of priority development projects are generally the same as the prior permit (new development projects and redevelopment projects, as identified, and automotive repair shops, restaurants, hillside developments greater than 5,000 square feet, environmentally sensitive areas, parking lots, and streets, roads, highways, and freeways). The test claim permit, however expands the new development category. For example, the prior permit defined a priority development project to include all new development projects, and listed housing subdivisions of ten or more dwelling units of single family homes, multi-family homes, condominiums, and apartments (i.e., residential) and commercial projects greater than 100,000 square feet.[677] Section F.1.d.2. of the test claim permit now defines "new development projects" as those "that create 10,000 square feet or more of impervious surfaces, including commercial, industrial, residential, mixed-use, and public projects," which is smaller and likely to include more projects as priority development projects.[678] Thus, multi-use developments, residential, commercial developments (that create between 10,000 square feet and 99,999 square feet, rather than 100,000 square feet under the prior permit), mixed use projects, public projects (except for public streets, roads, highways, and freeways, and those considered hillside developments or municipal projects built in environmentally sensitive areas), and industrial projects that create 10,000 square feet or more of impervious surfaces (collectively over the entire project site), are new categories of new priority development projects. Finding D.2.e. of the test claim permit confirms that industrial projects are a new category of new priority development projects.

Industrial sites are significant sources of pollutants in runoff. Pollutant concentrations and loads in runoff from industrial sites are similar or exceed pollutant concentrations and loads in runoff from other land uses, such as commercial or residential land uses. As with other land uses, LID site design, source control, and treatment control BMPs are needed at industrial sites in order to meet the MEP standard. These BMPs are necessary where the industrial site is larger than 10,000 square feet. The 10,000 square feet threshold is appropriate, since it is consistent with requirements in other Phase I NPDES storm water regulations throughout California.[679]

---

[676] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 213-214 (test claim permit, Section F.1.d.2.), emphasis added.

[677] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 577-578 (Order R9-2004-0001, Section F.2.b.1.).

[678] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 213 (test claim permit, Section F.1.d.2.a.).

[679] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 190-191 (test claim permit, Finding D.2.e.).

The Fact Sheet further states the following:

> Industrial sites can be a significant source of pollutants in storm water runoff. In an extensive review of storm water literature, the Los Angeles Water Board found widespread support for the finding that "industrial and commercial activities can also be considered hot spots as sources of pollutants." It also found that "industrial and commercial areas were likely to be the most significant pollutant source areas" of heavy metals. Likewise, storm water runoff from heavy industry in the Santa Clara Valley has been found to be extremely toxic. These findings are corroborated by USEPA, which states in the preamble to the 1990 Phase I NPDES storm water regulations that "Because storm water from industrial facilities may be a major contributor of pollutants to municipal separate storm sewer systems, municipalities are obligated to develop controls for storm water discharges associated with industrial activity through their system in their storm water management program." Since heavy industrial sites can be a significant source of pollutants in runoff in a manner similar to other SSMP project categories such as commercial development or automotive repair shops, it is appropriate to include heavy industrial sites as a SSMP category in the Order.[680]

Section F.1.d.1.c. of the test claim permit also added as a priority development project all other post-construction pollutant-generating new development projects that result in the disturbance of one acre or more of land.[681] The Fact Sheet explains that the one acre pollutant-generating development projects were added to be consistent with Phase II NPDES regulations for small municipalities and the State Water Board's Construction General Permit to ensure all development projects subject to the post-construction BMP requirements of the Construction General Permit will implement SSMP post-construction BMP requirements.[682]

The test claim permit, in Section F.1.d.2., also states that where a new development project feature, such as a parking lot, falls into a priority development project category, the entire project footprint is subject to the stormwater mitigation plan requirements.[683] The Fact Sheet explains that this criterion is new and was not included in the prior permit as follows:

> One of the most significant changes is that where a Development Project feature, such as a parking lot, falls into a Priority Development Project Category, the entire project footprint is subject to SSMP requirements. This criterion was not included in Order No. R9-2004-0001. It is included, however, in the Model San Diego SSMP that was approved by the Regional Board in 2002. It is included in

[682] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 494 (Fact Sheet/Technical Report).

[683] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 213-214 (test claim permit, Section F.1.d.2.).

> this Order because existing development inspections by Riverside County municipalities show that facilities included in the Priority Development Project Categories routinely pose threats to water quality. This permit requirement will improve water quality and program efficiency by preventing future problems associated with partly treated storm water runoff from redevelopment sites. This approach to improving storm water runoff from existing developments is practicable because municipalities have a better ability to regulate new developments than existing developments.[684]

As described below, the copermittees have to ensure that these priority development projects comply with the activities in Sections F.1.d. and F.1.h.

LID BMP Requirements for Priority Development Projects (Section F.1.d.4.)

Section F.1.d.4. of the test claim permit states that each copermittee "must require each priority development project to implement LID BMPs which will collectively minimize directly connected impervious areas, limit loss of existing infiltration capacity, and protect areas that provide important water quality benefits necessary to maintain riparian and aquatic biota, and/or are particularly susceptible to erosion and sediment loss."[685] To ensure compliance with the LID BMPs, each copermittee must require LID BMPs or make a finding of infeasibility in accordance with the LID waiver program; incorporate formalized consideration, such as thorough checklists, ordinances, or other means of LID BMPs into the plan review process for priority development projects; and, within two years after adoption of the permit, review its local codes, policies, and ordinances and identify barriers to the implementation of LID BMPs, and take appropriate actions to remove the barriers.[686]

The Fact Sheet explains that the LID BMP plan review process "is expected to include an assessment of LID BMP techniques to infiltrate, filter, store, evaporate, and/or retain runoff close to the source of the runoff. The review process is also expected to include an assessment of the potential collection of storm water for on site and off site reuse opportunities."[687]

Section F.1.d.4.b. identifies the following LID BMPs that are required to be implemented at all priority development projects where technically feasible:

- Maintain or restore natural storage reservoirs and drainage corridors.
- Projects with landscaped or other pervious areas must properly design and construct the pervious areas to effectively receive and infiltrate, retain and/or treat runoff from impervious areas, prior to discharge to the MS4. Soil compaction for these areas must be

[684] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 495 (Fact Sheet/Technical Report).

[685] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 215 (test claim permit, Section F.1.d.4.).

[686] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 215 (test claim permit, Section F.1.d.4.a.).

[687] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 496 (Fact Sheet/Technical Report).

minimized. The amount of the impervious areas that are to drain to pervious areas must be based upon the total size, soil conditions, slope, and other pertinent factors.

- Projects with low traffic areas and appropriate soil conditions must be constructed with permeable surfaces.[688]

The LID BMPs shall be "sized and designed to ensure onsite retention without runoff, of the volume of runoff produced from a 24-hour 85th percentile storm event" calculated using pertinent local rain data or extrapolated from isopluvial maps, unless technically infeasible, and shall be "designed for an appropriate surface loading rate to prevent erosion, scour and channeling within the BMP."[689] In addition, the LID BMPs shall be designed and implemented with measures to avoid the creation of nuisance or pollution associated with vectors, such as mosquitoes, rodents, and flies.[690]

Under the prior permit, the copermittees were required to review and ensure that all priority development projects met SUSMP requirements to reduce pollutants to the MEP and to maintain or reduce downstream erosion and protect stream habitat. The requirements included that all priority development projects implement a combination of on-site source control and on-site/shared treatment control BMPs.[691] As relevant here, the BMPs under the prior permit, at a minimum, had to control the post-development urban runoff discharge velocities, volumes, durations, and peak rates to maintain or reduce pre-development downstream erosion, and to protect stream habitat; conserve natural areas where feasible; minimize directly connected impervious areas where feasible; protect slopes and channels from eroding; be correctly designed to remove pollutants to the MEP; and be implemented close to pollutant sources and prior to discharge into receiving waters supporting beneficial uses.[692] In addition, the prior permit required that each copermittee protect groundwater quality by applying restrictions to the use of structural treatment BMPs that are designed to primarily function as infiltration devices (such as infiltration trenches and basins).[693] Therefore, LID site design BMPs and protection of groundwater quality have always been required and had to be reviewed by the copermittee for existing categories of priority development projects. But under the prior permit, the project

[688] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 215 (test claim permit, Section F.1.d.4.b.).

[689] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 216 (test claim permit, Section F.1.d.4.c.), footnote omitted.

[690] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 216 (test claim permit, Section F.1.d.4.e.).

[691] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 577 (Order R9-2004-0001, Section F.2.b.).

[692] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 578-579 (Order R9-2004-0001, Section F.2.b.2.).

[693] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 581 (Order R9-2004-0001, Section F.2.b.8.).

proponent could select the BMPs from a list of recommended BMPs contained in a copermittee's local SUSMP.[694]

The test claim permit now directs the copermittees to:

> ". . . . require new development projects to employ certain classes of LID site design BMPs. The required LID site design BMPs take advantage of features that are incorporated into the Priority Development Project, such as landscaping or walkways. It also requires that projects seek to maintain natural water drainage features rather than instinctively convey water in buried pipes and engineered ditches that eliminate natural water quality treatment functions."[695]

For example, and as stated in Section F.1.d.4.b.ii. of the permit, "projects with landscaped or other pervious areas must, where feasible, properly design and construct the pervious areas to effectively receive and infiltrate, retain and/or treat runoff from impervious areas, prior to discharge to the MS4."[696] Thus, the test claim permit establishes and requires specific site design BMP criteria to be used by the priority development projects.

The Fact Sheet also explains that the test claim permit now requires that LID BMPs be sized and designed to ensure onsite retention without runoff of the volume of runoff produced from a 24-hour 85th percentile storm event.[697] Under the prior permit, these sizing requirements applied only to structural treatment BMPs.[698] The change is consistent with other municipal stormwater NPDES permits adopted by the Los Angeles and Santa Ana Regional Boards, and the permit recently adopted by the San Diego Water Board for Orange County.[699]

Finally, the requirement in Section F.1.d.4.a. to review local codes, policies, and ordinances and identify barriers to the implementation of LID BMPs, and take appropriate actions to remove the barriers within two years of the adoption of the permit is a new requirement when compared to the prior permit.

Therefore, Section F.1.d.4. imposes the following new requirements on all new development and redevelopment priority development projects identified in Sections F.1.d.1. and 2.:

---

[694] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 578 (Order R9-2004-0001, Section F.2.b.2.).

[695] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 496 (Fact Sheet/Technical Report).

[696] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 215 (test claim permit, Section F.1.d.4.b.ii.).

[697] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 496 (Fact Sheet/Technical Report).

[698] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 579-580, 496 (Order No. R9-2004-0001, Section F.1.b.3.b.).

[699] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 496 (Fact Sheet/Technical Report).

- Require each priority development project to implement LID BMPs as described in Sections F.1.d.4.b., c., and e., which will collectively minimize directly connected impervious areas, limit loss of existing infiltration capacity, and protect areas that provide important water quality benefits necessary to maintain riparian and aquatic biota, and/or are particularly susceptible to erosion and sediment loss.
- Take the following measures to ensure that LID BMPs are implemented at priority development projects:

  (i) Each copermittee must require LID BMPs or make a finding of technical infeasibility for each priority development project in accordance with the LID waiver program in Section F.1.d.7.;

  (ii) Each copermittee must incorporate formalized consideration, such as thorough checklists, ordinances, and/or other means, of LID BMPs into the plan review process for priority development projects; and

  (iii) On or before July 1, 2012, each copermittee must review its local codes, policies, and ordinances and identify barriers therein to implementation of LID BMPs. Following the identification of these barriers to LID implementation, where feasible, the copermittee must take, by the end of the permit cycle, appropriate actions to remove such barriers. The copermittees must include this review with the updated JRMP.[700]

LID Waiver Program Requirements (Section F.1.d.7.)

Pursuant to Section F.1.d.7. of the test claim permit, the copermittees are required to develop (collectively or individually) a LID waiver program to incorporate into the SSMP, which would allow a priority development project to substitute implementation of all or some of the required LID BMPs with implementation of treatment control BMPs and a mitigation project. The LID BMP waiver program must meet the following requirements:

- Prior to implementation, the LID waiver program must clearly exhibit that it will not allow priority development projects to result in a net impact (after consideration of any mitigation) from pollutant loadings over and above the impact caused by projects meeting the onsite LID retention requirements.
- For each participating priority development project, a feasibility analysis must be included demonstrating that it is technically infeasible to implement LID BMPs. The copermittees are required to develop criteria for the technical feasibility of implementing LID BMPs. Each priority development project must demonstrate that LID BMPs were implemented as much as feasible given the site's unique conditions. Technical infeasibility may result from the following conditions: locations cannot meet the infiltration and groundwater protection requirements; insufficient demand for stormwater reuse; smart growth and infill or redevelopment locations where the density or nature of the project would create significant difficulty for compliance with the LID BMP

[700] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 215 (test claim permit, Section F.1.d.4.).

requirements; or other site, geologic, soil, or implementation constraints identified in the updated SSMP document.

- Each participating priority development project must mitigate for the pollutant loads expected to be discharged due to not implementing the LID BMPs in Section F.1.d.4.[701]

A copermittee may choose to implement additional mitigation programs (e.g., pollutant credit system, mitigation fund) as part of the waiver program provided that the mitigation program clearly exhibits that it will not allow priority development projects to result in a net impact from pollutant loadings over and above the impact caused by projects meeting LID requirements.[702] However, additional mitigation programs are within the copermittee's discretion and are not required by the test claim permit.

The requirement to develop a LID BMP waiver program pursuant to Section F.1.d.7.c. is new for all priority development projects. Under the prior permit, a copermittee was authorized to waive a project from implementing *treatment control* BMPs, but was not required to develop a LID BMP waiver program.[703] The Fact Sheet explains the new requirement as follows:

> . . . the Regional Board has added to the Order a requirement for the Copermittees to develop such a [LID BMP waiver] program. The LID BMP waiver program would provide the opportunity for development projects to avoid partial or full LID BMP implementation in exchange for implementation of treatment control BMPs and mitigation. The program would maintain equal water quality benefits as properly implemented LID BMPs when partial LID BMPs are coupled with some form of mitigation.
>
> LID BMPs are not limited to infiltration BMPs, and may also include storage, evaporation, evapotranspiration, filtration, and/or on site reuse BMPs. Thus, the San Diego Water Board expects that every site will be able to implement some form of LID BMPs to some extent.[704]

b) Section F.1.h. imposes new requirements to develop and implement hydromodification plans and controls for priority development projects to ensure that estimated post-project runoff discharge rates and durations do not exceed pre-development discharge rates and durations.

Section F.1.h. of the test claim permit requires each copermittee to collaborate with other copermittees to develop and implement a Hydromodification Management Plan (HMP) to manage increases in runoff discharge rates and durations from all priority development projects.

---

[701] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 218-219 (test claim permit, Section F.1.d.7.).

[702] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 218-219 (test claim permit, Section F.1.d.7.).

[703] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 581 (Order R9-2004-0001, Section F.2.b.7.).

[704] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 500 (Fact Sheet/Technical Report).

This requirement does not apply to small restaurants, however. Pursuant to Section F.1.d.2. of the test claim permit, "Restaurants where land development is less than 5,000 square feet must meet all SSMP requirements except for . . . hydromodification requirement F.1.h." The HMP shall be incorporated into the SSMP and implemented by each copermittee so that estimated post-project runoff discharge rates and durations do not exceed pre-development discharge rates and durations.

Section F.1.h.1. states that the HMP is required to:

- Identify a method for assessing susceptibility and geomorphic stability of channel segments which receive runoff discharges from priority development projects. A performance standard shall be established that ensures that the geomorphic stability within the channel not be comprised as a result of receiving runoff discharges from priority development projects.
- Utilize continuous simulation of the entire rainfall record (or other method acceptable to the Regional Board) to identify a range of runoff flows for which priority development projects post-project runoff flow rates and durations shall not exceed pre-development (naturally occurring) runoff flow rates and durations by more than ten percent, and which will result in increased potential for erosion or other significant adverse impacts to beneficial uses.
- Identify a method to assess and compensate for the loss of sediment supply to streams due to development. The copermittees must create a performance and/or design standard to ensure that the loss of sediment supply does not cause or contribute to increased erosion within channel segments downstream from priority development project discharge points.
- Require priority development projects to implement control measures so that post-development runoff flow rates and duration (1) do not exceed pre-project runoff flow and duration rates by more than ten percent; (2) do not result in channel conditions that do not meet channel standards for segments downstream of priority development project discharge points; and (3) compensate for the loss of sediment supply due to development.
- Include a protocol to evaluate potential hydrograph change impacts to downstream watercourses from priority development projects.
- Include other performance criteria (numeric or otherwise) for priority development projects that are necessary to prevent runoff from the projects from increasing or contributing unnatural rates of erosion of channel beds and banks, silt pollutants generation, or other impacts to beneficial uses and stream habitat due to increased erosive force.
- Include a review of pertinent literature.
- Identify areas within the Santa Margarita Hydrologic Unit for potential opportunities to restore or rehabilitate stream channels where historic hydromodification of receiving waters that are tributary to documented low or very low Index of Biotic Integrity (IBI) scores.

- Include a protocol to evaluate potential hydrograph changes impacts to downstream watercourses from priority development projects.
- Include a description of how the copermittees will incorporate the HMP requirements into their local approval process.
- Include criteria on selection and design of management practices and measures (such as detention, retention, and infiltration) to control flow rates and durations, and address potential hydromodification impacts.
- Include technical information supporting any standards and criteria proposed.
- Include a description of inspections and maintenance to be conducted for management practices and measures to control flow rates and durations and address potential hydromodification impacts.
- Include a description of pre and post project monitoring and program evaluations, including physical and biological conditions of receiving water channels, to be conducted to assess the effectiveness of implementation of the HMP.
- Include mechanisms for assessing and addressing cumulative impacts within a watershed on channel morphology.[705]

Section F.1.h.2. states that the HMP must also include management measures to be used on priority development projects to mitigate hydromodification impacts, protect and restore downstream beneficial uses, and to prevent adverse physical changes to downstream channels. The measures must be prioritized based on consideration of: site design control measures, on-site management measures, regional controls located upstream of receiving waters, and in-stream management and control measures. The management measures must include stream restoration as an option. In-stream controls cannot include the use of nonnaturally occurring hardscape materials to reinforce stream channels. Where stream channels are adjacent to or are to be modified by the priority development project, management measures must include buffer zones and setbacks.[706]

Sections F.1.h.3. and 4. authorize the copermittee to establish a hydromodification waiver program for redevelopment priority development projects and provide the copermittees discretion to not impose the HMP requirements for certain projects.[707] These sections do not impose any requirements on the claimants.

Section F.1.h.5. requires the copermittees to submit a draft HMP that has been reviewed by the public to the Regional Board within three years of adoption of the permit. Within 180 days of receiving the Regional Board's comments on the draft HMP, the copermittees shall submit a

---

[705] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 223-225 (test claim permit, Section F.1.h.1.).

[706] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 226 (test claim permit, Section F.1.h.2.).

[707] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 226-227 (test claim permit, Section F.1.h.3., 4.)

final HMP that addresses the comments. Within 90 days of receiving a finding of adequacy from the Regional Board, each copermittee shall incorporate and implement the HMP for all priority development projects. Prior to the adequacy finding by the Regional Board, the copermittees must encourage early implementation of those measures likely to be included in the HMP.[708]

Section F.1.h.6. requires each copermittee, from the time of adoption of the Order until the adequacy finding of the HMP by the Regional Board, to ensure that all priority development projects are implementing the interim hydromodification criteria (the requirements in the 2006 Riverside County WQMP, updated in 2009), unless the following four conditions are met: the runoff discharges directly to a concrete lined channel or storm drain, the discharge complies with copermittee's requirements for connections and discharges to the MS4, the discharge will not cause increased upstream or downstream erosion or adversely impact downstream habitat, and the discharge is authorized by the copermittee. Other exceptions are that the project disturbs less than one acre or the runoff flow rate, volume, velocity, and duration for the post-development condition do not exceed the pre-development (naturally occurring) condition for the 2-year, 24-hour and 10-year, 24-hour rainfall events.[709]

The requirement in Section F.1.h.6. for each copermittee, from the time of adoption of the test claim permit until the adequacy finding of the HMP by the Regional Board, to ensure that all priority development projects are implementing the interim hydromodification criteria is not new for priority development projects as defined under the prior permit (new commercial developments greater 100,000 square feet, automotive repair shops, restaurants, hillside developments greater than 5,000 square feet, environmentally sensitive areas, parking lots, and streets, roads, highways, and freeways). Under the prior permit, the claimants had to require that all priority development projects implement BMPs that control post-development stormwater runoff discharge velocities, volumes, durations, and peak rates to maintain or reduce pre-development downstream erosion and to protect stream habitat and ensure that post-development runoff does not contain pollutant loads that cause or contribute to an exceedance of water quality objectives.[710] The Fact Sheet further explains that

> Section F.1.h (6) describes interim hydromodification criteria that must be implemented by the Copermittees until the final HMP is found to be adequate by the San Diego Water Board Executive Officer. The Copermittees currently have hydromodification requirements in the SSMP (section 4.4 of the Riverside County WQMP). Until the final HMP is required to be implemented, the Copermittees must continue implementing their existing hydromodification requirements.[711]

---

[708] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 227 (test claim permit, Section F.1.h.5.).

[709] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 227-228 (test claim permit, Section F.1.h.6.).

[710] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 578-579 (Order R9-2004-0001, Sections F.2.b.2.a. and n.).

[711] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 508 (Fact Sheet/Technical Report).

However, the requirement to ensure implementation of the interim hydromodification criteria until the adoption of the HMP is new for the following newly added priority development projects under the test claim permit:

- Multi-use developments, residential developments, commercial developments (that create between 10,000 square feet and 99,999 square feet, mixed use projects, public projects (except for public streets, roads, highways, and freeways, and those considered hillside developments or municipal projects built in environmentally sensitive areas), and industrial projects, which create 10,000 square feet or more of impervious surfaces (collectively over the entire project site).[712]
- All other post-construction pollutant-generating new development projects that result in the disturbance of one acre or more of land.[713]
- Where a new development project feature, such as a parking lot, falls into a priority development project category, the entire project footprint is subject to these stormwater mitigation plan requirements.[714]

In addition, the requirements to develop a draft HMP, make the draft available for public review and comment, submit the draft to the Regional Board, prepare a final HMP, and encourage early implementation of those measures likely to be included in the HMP are new.[715]

Moreover, the test claim permit provides greater specificity and detail with respect to the requirement to implement the requirements of the HMP for all priority development projects. As explained in the Fact Sheet,

> Hydromodification expands and clarifies current requirements for control of MS4 discharges to limit hydromodification effects caused by changes in runoff resulting from development and urbanization. The requirements are based on findings and recommendations of the Riverside County Storm Water Program, the Stormwater Monitoring Coalition (SMC), and the Storm Water Panel on Numeric Effluent Limits (Numeric Effluent Panel). Added specificity is needed due to the current lack of a clear standard for controlling hydromodification resulting from development. More specific requirements are also warranted because hydromodification is increasingly recognized as a major factor affecting water quality and beneficial uses.

[714] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 213-214 (test claim permit, Section F.1.d.2.).

[715] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 223, 227 (test claim permit, Sections F.1.h., F.1.h.5.)

> The Copermittees recognize the need to improve management of hydromodification. The ROWD proposes to revise the SSMP to incorporate additional information from ongoing hydromodification studies conducted by the SMC.[716]

Accordingly, the requirement in Section F.1.h.5. to develop and implement the HMP in accordance with Sections F.1.h.1. and 2. is new for all priority development projects, except that pursuant to Section F.1.d.2., restaurants where land development is less than 5,000 square feet are not required to meet the hydromodification requirements. The requirement in Section F.1.h.6. to ensure that priority development projects are implementing the interim hydromodification criteria until the adoption of the HMP is new only for the new priority development projects listed above.

c) Section F.3.d.1.-5. imposes new requirements to develop a retrofitting program for existing development, encourage owners to retrofit existing developments, and track completed retrofit BMPs.

The claimants pled Section F.3.d.1.-5. of the test claim permit, which requires each copermittee to develop and implement a retrofitting program for existing development. The goals of the program are to reduce impacts from hydromodification, promote LID, support riparian and aquatic habitat restoration, reduce the discharges of stormwater pollutants from the MS4 to the MEP, and prevent discharges from the MS4 from causing or contributing to a violation of water quality standards. The retrofitting program may be coordinated with flood control projects and infrastructure improvement programs.

The retrofitting program is required to meet the following provisions:

- Identify and inventory existing developments (municipal, industrial, commercial, and residential) as candidates for retrofitting. Potential candidates for retrofitting include development that contributes to pollutants of concern to a TMDL or environmentally sensitive area; receiving waters that are channelized or otherwise hardened; development tributary to receiving waters that are channelized or otherwise hardened; development tributary to receiving waters that are significantly eroded; and developments tributary to Areas of Special Biological Significance or State Water Quality Protected Areas.[717]
- Evaluate and rank the inventoried existing developments to prioritize retrofitting based on the following criteria: feasibility, cost effectiveness, pollutant removal effectiveness, tributary area potentially treated, maintenance requirements, landowner cooperation, neighborhood acceptance, aesthetic qualities, efficacy at addressing concern, and potential improvements on public health and safety.[718]

---

[716] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 504-506 (Fact Sheet/Technical Report), footnotes omitted.

[717] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 247-248 (test claim permit, Section F.3.d.1.).

[718] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 248 (test claim permit, Section F.3.d.2.).

- Consider the results of the evaluation in prioritizing work plans for the following year. Highly feasible projects expected to benefit water quality should be given a high priority to implement source control and treatment control BMPs. The retrofit projects should be designed in accordance with the SSMP requirements within Sections F.1.d.3.-8. and the hydromodification requirements in Section F.1.h., where feasible.[719]
- To encourage retrofitting projects, the copermittees must cooperate with private landowners and must consider the following practices in cooperating and encouraging private landowners to retrofit their existing development: demonstration retrofit projects, retrofits on public land and easements, education and outreach, subsidies for retrofit projects, requiring retrofit as mitigation or ordinance compliance, public and private partnerships, and fees for existing discharges to the MS4 and reduction of fees for retrofit implementation.[720]
- The completed retrofit BMPs shall be tracked and inspected. Public properties shall be inspected in accordance with Section F.1.f. and private properties, as needed.[721]

Based on the plain language of Section F.3.d.1.-4., claimants are required to develop a retrofitting program by identifying and creating an inventory of existing developments for retrofit, evaluating and ranking those projects for retrofit, and encouraging retrofit projects to be designed in accordance with SSMP LID and hydromodification requirements in Sections F.1.d.3.-9. and F.1.h.[722] These requirements are new as the prior permit included no activities regarding retrofitting. In addition, the Fact Sheet confirms that Section F.3.d. was added to the permit to impose specific requirements for the retrofit program and when appropriately applied, retrofitting existing development meets the MEP.[723] The Fact Sheet further states the following:

> Existing BMPs are not sufficient, as evidenced by 303(d) listings and exceedances of Water Quality Objectives from the Copermittees monitoring reports. More advanced BMPs, including the retrofitting of existing development with LID, are part of the iterative process. Previous permits limited the requirement of treatment control BMPs to new development and redevelopment. Based on the current rate of redevelopment compared to existing BMPs, the use of LID only on new and redevelopment will not adequately address current water quality problems, including downstream hydromodification. Retrofitting existing development is

[719] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 248 (test claim permit, Section F.3.d.3.).

[720] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 248 (test claim permit, Section F.3.d.4.).

[721] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 249 (test claim permit, Section F.3.d.5.).

[722] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 247-248 (test claim permit, Section F.3.d.1.-4.).

[723] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 523 (Fact Sheet/Technical Report).

> practicable for a municipality through a systematic evaluation, prioritization and implementation plan focused on impaired water bodies, pollutants of concern, areas of downstream hydromodification, feasibility and effective communication and cooperation with private property owners.[724]

However, the permit does *not* require the claimant to require an existing development to be retrofitted for LID and hydromodification. Nor does the permit require the copermittees to retrofit existing public properties. Thus, all retrofitted BMP inspection and tracking activities that flow from the discretionary decision of a copermittee to retrofit existing public developments are likewise not required by the test claim permit.[725]

Moreover, even if a property owner of an existing development decides to retrofit and seeks a permit to do so, then the copermittee is required by Section F.1.c., prior to approval and issuance of the permit, to prescribe the necessary requirements so that the project's discharges of stormwater pollutants from the MS4 will be reduced to the MEP, will not cause or contribute to a violation of water quality standards, and will comply with all requirements of the test claim permit and ordinances adopted by the copermittee, including those in compliance with Sections F.1.d.3.-9. and F.1.h.[726] The claimants, however, did not plead Section F.1.c. of the test claim permit and, thus, the activities and the process to approve permits for retrofit projects are not eligible for reimbursement.

Section F.3.d.(5), however, does require that once a property owner of an existing development decides to retrofit, the completed retrofit BMPs shall be tracked and inspected in accordance with Section F.1.f. of the test claim permit and that requirement is new.[727]

d) Summary of new LID, Hydromodification Plan, Treatment Control, LID Waiver, and Retrofitting requirements imposed by sections F.1.d.1., 2., 4., 7., F.1.h., and F.3.d.1.-5. of the test claim permit.

Sections F.1.d.1., 2., 4., 7., F.1.h., and F.3.d.1.-5. of the test claim permit impose the following new requirements:

1. Administrative and Planning Activities

[724] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 523 (Fact Sheet/Technical Report).

[725] *Department of Finance v. Commission on State Mandates (Kern High School Dist.)* (2003) 30 Cal.4th 727; *City of Merced v. State* (1984) 153 Cal.App.3d 777; *Coast Community College Dist. v. Commission on State Mandates* (2022) 13 Cal.5th 800, 815-817.

[726] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 209-210 (test claim permit, Section F.1.c.).

[727] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 249 (test claim permit, Section F.3.d.5.).

a. Incorporate formalized consideration, such as thorough checklists, ordinances, and/or other means, of LID BMPs into the plan review process for priority development projects.[728]

b. Within two years after adoption of the permit, review local codes, policies, and ordinances and identify barriers to the implementation of LID BMPs, and take appropriate actions to remove the barriers.[729]

c. Develop a LID BMP waiver program to incorporate into the SSMP.[730]

d. Collaborate with other copermittees to develop a Hydromodification Management Plan (HMP) in accordance with Section F.1.h.1. and 2. of the test claim permit to manage increases in runoff discharge rates and durations from all priority development projects. Submit a draft HMP that has been available to public review and comment, to the Regional Board within three years of adoption of the permit. Within 180 days of receiving the Regional Board's comments on the draft HMP, submit a final HMP to the Regional Board that addresses the comments. Within 90 days of receiving a finding of adequacy from the Regional Water Board, incorporate the HMP into the SSMPs so that estimated post-project runoff discharge rates and durations do not exceed pre-development discharge rates and durations.[731]

e. Develop a retrofitting program for existing developments (municipal, industrial, commercial, and residential) by identifying and creating an inventory of existing developments for retrofit, evaluating and ranking those projects for retrofit, prioritizing work plans, and encouraging retrofit projects to be designed in accordance with SSMP LID and hydromodification requirements.[732] (Section F.3.d.1.-4.)

2. Ensure Priority Development Projects Comply With LID, Treatment Control, LID Waiver and Hydromodification Requirements

Each of the sections below require the claimants, in their regulatory capacity, to ensure that proponents of new development or significant redevelopment priority development projects, as specified, perform the following activities.[733] In addition, since priority

[728] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 215 (test claim permit, Section F.1.d.4.a.ii.).

[729] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 215 (test claim permit, Section F.1.d.4.a.iii.).

[730] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 218 (test claim permit, Section F.1.d.7.c.).

[731] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 223, 227 (test claim permit, Section F.1.h. and F.1.h.5.).

[732] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 247-248 (test claim permit, Section F.3.d.1.-4.).

[733] Section F.1.c. of the test claim permit states the following: "For all proposed Development Projects, each Copermittee, during the planning process, and prior to project approval and

development projects are defined in Section F.1.d.2. to include "public" projects, the claimant is seeking reimbursement to implement these activities when any new municipal development or significant redevelopment projects is proposed by a copermittee.

- Require each priority development project listed in Section F.1.d.1. and 2. to implement LID BMPs as described in Section F.1.d.4.b., c., and e., which will collectively minimize directly connected impervious areas, limit loss of existing infiltration capacity, and protect areas that provide important water quality benefits necessary to maintain riparian and aquatic biota, and/or are particularly susceptible to erosion and sediment loss, or make a finding of technical infeasibility for each priority development project in accordance with the LID waiver program in Section F.1.d.7.[734]
- Require all priority development projects, except for smaller restaurants where land development is less than 5,000 square feet, to implement the approved Hydromodification Plan (HMP).[735]

3. Retrofit Existing Development

   a. Develop a retrofitting program by identifying and creating an inventory of existing developments for retrofit, evaluating and ranking those projects for retrofit, and encouraging retrofit projects to be designed in accordance with SSMP LID and hydromodification requirements in Sections F.1.d.3.-9. and F.1.h.[736] (Section F.3.d.1.-4.)

   b. Once a property owner of an existing development decides to retrofit, the completed retrofit BMPs shall be tracked and inspected in accordance with section F.1.f. of the test claim permit.[737] (Section F.3.d.5.) Reimbursement is *not* required to track and inspect retrofitted BMPs of an existing *public or municipal* development.

---

issuance of local permits, must prescribe the necessary requirements so that Development Project discharges of storm water pollutants from the MS4 will be reduced to the MEP, will not cause or contribute to a violation of water quality standards, and will comply with the Copermittee's ordinances, permits, plans, and requirements, and with this Order. Exhibit A, Test Claim filed November 10, 2011 and Revised April 28, 2017, pages 209-210 (test claim permit, Section F.1.c.).

[735] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 213, 223 (test claim permit, Sections F.1.d.2.c., F.1.h.).

[736] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 247-248 (test claim permit, Section F.3.d.1.-4.).

[737] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 249 (test claim permit, Section F.3.d.5.).

ii. All costs incurred to implement the LID, hydromodification, and retrofitting requirements of sections F.1.d.1., 2., 4., 7., and h. and F.3.d.1.-5. of the test claim permit which are triggered by a project proponent of a municipal priority development project are not mandated by the state and do not impose a new program or higher level of service because such costs are incurred at the discretion of the local agency, are not unique to government, and do not provide a governmental service to the public.

As indicated above, priority development projects are defined to include "public" projects.[738] The claimants contend that the above activities are eligible for reimbursement under article XIII B, section 6 of the California Constitution when they propose new public or "municipal development or redevelopment projects" and incur costs related to LID and hydromodification for recreational facilities, parking lots, streets, roads, highways, and other projects large enough to exceed specified thresholds. The claimants seek reimbursement for municipal projects as follows:

- Applying Standard Stormwater Mitigation Plan (SSMP) requirements to an increased range of municipal projects implemented by the claimants, which meet the requirements of Sections F.1.d.1. and F.1.d.2.
- Requiring implementation of LID practices and development and implementation of an LID Waiver program, as described in Sections F.1.d.4. and F.1.d.7., on municipal priority development projects implemented by the claimants. This will require creating a formalized review process for all priority development projects, developing protocols for assessing each priority development project for various required types of LID, training staff on the new protocols, assessing potential on- or off-site collection and reuse of stormwater, amending local ordinances to remove barriers to LID implementation, maintaining or restoring natural storage reservoirs and drainage corridors, draining a portion of impervious areas into pervious areas, and constructing low-traffic areas with permeable surfaces. Projects that are subject to these requirements include municipal yards, recreation centers, civic centers, and road improvements, and any other municipal projects meeting the permit-specified thresholds or geographical criteria.
- Requiring development of an HMP, and implementation of those HMP requirements on municipal priority development projects implemented by the claimants pursuant to Section F.1.h. To comply with Section F.1.h., the claimants must invest significant resources to hold public hearings, hold collaborative meetings, perform studies and develop an HMP, train staff and the public, and adopt the local SSMP. In addition, as noted above, the claimants are prohibited from using non-natural materials in reinforcing stream channels, a prohibition which is not practicable. Continued compliance with these

[738] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 212-214 (test claim permit, Section F.1.d.1. and 2.).

sections will also require the claimants to add requirements to municipal projects and will significantly increase the costs of design and construction.[739]

The claimants assert that development and upkeep of these municipal land uses is not optional, but is an integral part of the claimants' function as municipal entities. The claimants further assert that the failure to make necessary repairs, upgrades, and extensions can expose them to liability.[740]

In addition, Sections F.3.d.1.-5. require the permittees to identify and inventory all existing development, including municipal development, evaluate and rank them, and as mentioned earlier, inspect and track any retrofitted BMPs on municipal development. The Commission finds that the costs incurred by a local agency as a project proponent of a new municipal development or redevelopment project under the test claim permit are not mandated by the state but are the result of a local discretionary decision, and therefore are not eligible for reimbursement.

a) Costs incurred by a municipality for LID, hydromodification, and retrofitting activities required by sections F.1.d.1., 2., 4., 7., and h. and F.3.d.1.-5. of the test claim permit , as a project proponent of a municipal priority development project, are not mandated by the state.

To determine whether a requirement is mandated by the state, the requirement must be legally compelled by state law; that is, the law creates a mandatory legal obligation to comply with the requirements.[741] In the absence of legal compulsion, the courts have acknowledged the possibility that a state mandate can be found if local government can show that it faces "certain and severe penalties, such as double taxation or other draconian consequences," leaving local government no choice but to comply with the conditions established by the state.[742]

All costs incurred by a municipality as a project proponent under the LID and hydromodification sections of the test claim permit can be analogized to *City of Merced v. State* (1984) 153 Cal.App.3d 777 and *Department of Finance v. Commission on State Mandates* (*Kern*) (2003) 30 Cal.4th 727. In *City of Merced*, the statute at issue required a local government, when exercising

[739] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 56 (Test Claim narrative).

[740] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 53-55 (Test Claim narrative), citing to *Department of Finance v. Commission on State Mandates (Kern High School Dist.)* (2003) 30 Cal.4th 727; *City of Merced v. State* (1984) 153 Cal.App.3d 777; and *San Diego Unified School Dist. v. Commission on State Mandates* (2004) 33 Cal.4th 859.

[741] *Coast Community College Dist. v. Commission on State Mandates* (2022) 13 Cal.5th 800, 815 [". . . legal compulsion is present when the local entity has a mandatory, legally enforceable duty to obey. This standard is similar to the showing necessary to obtain a traditional writ of mandate, which requires the petitioning party to establish the respondent has "a clear, present, and usually ministerial duty to act. ... Mandate will not issue if the duty is ... mixed with discretionary power."].

[742] *Coast Community College Dist. v. Commission on State Mandates* (2022) 13 Cal.5th 800, 815-817.

the power of eminent domain, to compensate a business owner for the loss of business goodwill as part of compensating for the property subject to the taking.[743] The court found that nothing *required* the local entity to exercise the power of eminent domain, and thus any costs experienced as a result of the requirement to compensate for business goodwill was the result of an initial discretionary act.[744]

In *Kern High School Dist.*, the statute at issue required certain local school committees to comply with notice and agenda requirements in conducting their public meetings.[745] There, the court held that the underlying school site councils and advisory committees were part of several separate voluntary grant funded programs, and therefore any notice and agenda costs were an incidental impact of participating or continuing to participate in those programs.[746] The court acknowledged that the district was already participating in the underlying programs, and "as a practical matter, they feel they must participate in the programs, accept program funds, and…incur expenses necessary to comply with the procedural conditions imposed on program participants."[747] However, the court held that "[c]ontrary to the situation that we described in *City of Sacramento* [*v. State* (1990)] 50 Cal.3d 51, a claimant that elects to discontinue participation in one of the programs here at issue does not face 'certain and severe…penalties' such as 'double…taxation' or other 'draconian' consequences, but simply must adjust to the withdrawal of grant money along with the lifting of program obligations."[748]

The claimants specifically dispute the application of *City of Merced* and *Kern High School Dist.*, stating the test claim permit is not a voluntary program.[749] Furthermore, the claimants argue that since issuing the *Kern High School Dist*. decision, the California Supreme Court has rejected the application of *City of Merced* in circumstances beyond those strictly present in *Kern High School*

State* (1990) 50 Cal.3d 51, 74 (The "certain and severe…penalties" and "double…taxation" referred to the situation in *City of Sacramento* in which the state was compelled, by the potential loss of *both* federal tax credits *and* subsidies provided to businesses statewide, to impose mandatory unemployment insurance coverage on public agencies consistent with a change in federal law.).

[749] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 53-54 (Test Claim narrative).

Dist.[750] The claimants cite *San Diego Unified School Dist. v. Commission* (2004) 33 Cal.4th 859, 887-888, in which the court stated "there is reason to question an extension of the holding of *City of Merced* so as to preclude reimbursement…whenever an entity makes an initial discretionary decision that in turn triggers mandated costs."[751]

The claimants misinterpret *San Diego Unified*, and place too much emphasis on dicta. In *San Diego Unified,* the court discussed the example of *Carmel Valley Fire Protection Dist. v. State* (1987) 190 Cal.App.3d 521, in which an executive order requiring that county firefighters be provided with protective clothing and safety equipment was held to impose a reimbursable state mandate for the costs of the clothing and equipment.[752] The *San Diego Unified* court reasoned that under a strict application of the rule of *City of Merced* "such costs would not be reimbursable for the simple reason that the local agency's decision to employ firefighters involves an exercise of discretion concerning, for example, how many firefighters are needed to be employed, etc."[753] In a footnote, the court acknowledged the argument made by amici and discussed by the court of appeal, below, that based on a school district's legal obligation to maintain a safe educational environment for both students and staff, it is inevitable that at least *some* expulsion proceedings will occur, and thus the hearing procedures should not be said to be entirely the result of voluntary or discretionary activity.[754] However, the court did not decide *San Diego Unified* on that ground, finding instead that hearing costs incurred relating to so-called discretionary expulsion proceedings under the Education Code were adopted to implement a federal due process mandate, and were, in context, de minimis, and were therefore nonreimbursable.[755] Therefore, the language cited by the claimants is merely dicta and the case does not reach a *conclusion* with respect to the prospective application of the *City of Merced* and *Kern High School Dist.* rules.

The Third District Court of Appeal addressed the bounds of the *Kern High School Dist.* rule in greater detail in *POBRA*, holding that following *City of Merced*, *Kern High School Dist.*, and *San Diego Unified*, there may be activities that involve the exercise of discretion but are nevertheless

[750] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 54-55 (Test Claim narrative).

[751] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 54-55, (Test Claim narrative) citing *San Diego Unified School Dist. v. Commission on State Mandates* (2004) 33 Cal.4th 859, 887-888.

[752] *Carmel Valley Fire Protection Dist. v. State of California* (1987) 190 Cal.App.3d 521.

[753] *San Diego Unified School Dist. v. Commission on State Mandates* (2004) 33 Cal.4th 859, 887-888.

[754] *San Diego Unified School Dist. v. Commission on State Mandates* (2004) 33 Cal.4th 859, 887, footnote 22.

[755] *San Diego Unified School Dist. v. Commission on State Mandates* (2004) 33 Cal.4th 859, 888 ("As we shall explain, we conclude, regarding the reimbursement claim that we face presently, that all hearing procedures set forth in Education Code section 48918 properly should be considered to have been adopted to implement a federal due process mandate, and hence that all such hearing costs are nonreimbursable under article XIII B, section 6…")

inevitable in the administration of a mandatory program. The issue, then, for the court in *POBRA*, was whether the alleged mandated costs spring from a local entity's "essential and basic function."[756] In *POBRA*, the alleged mandate pertained to due process protections required to be extended to all peace officers in the state, and the question was whether those costs constituted a reimbursable state mandate with respect to school districts, which were authorized, but not required, to employ peace officers. The court held that school districts "do not have provision of police protection as an essential and basic function," and therefore the decision to employ peace officers entitled to the protections of POBRA was a discretionary act that led the district to incur the costs alleged.[757] The court concluded that "[i]t is not essential unless there is a showing that, as a practical matter, exercising the authority to higher peace officers is the only reasonable means to carry out their core mandatory functions."[758]

Therefore, based on *Kern*, *POBRA*, and *Coast Community College Dist.* where statutory or regulatory requirements result from an apparently or facially *discretionary* decision, and are therefore not *legally* compelled, they may be *practically* compelled if the failure to act would subject the claimant to "certain and severe…penalties" such as "double…taxation" or other "draconian" consequences, which may occur if the discretionary act is "the only reasonable means to carry out [the claimant's] core mandatory functions.[759] Substantial evidence in the record is required to make a finding of practical compulsion.[760]

Here, the claimants assert, without support, that certain municipal projects, including roads and streets "are not optional."[761] Rather, "[t]hey are integral to the Permittee's function as municipal entities [*sic*], and the failure to make necessary repairs, upgrades, and extensions can expose the Permittees to liability."[762] This amounts to asserting *both* that the projects are "the only

reasonable means to carry out their core mandatory functions"[763] *and* that potential tort liability constitutes "certain and severe…penalties" or other "draconian" consequences.[764]

The claimants' position is not supported by the law or any evidence in the record. First, the requirements detailed in the test claim permit do not apply to regular maintenance activities, based on the plain language of the order. Section F.1.d.1.b. defines significant redevelopment projects triggering the planning requirements as those that include the *addition or replacement* of 5,000 square feet or more of impervious surface on a developed site.[765] In addition, there is nothing in state statute or case law that imposes a legal obligation on local agencies to construct, expand, or improve municipal projects, including roads.[766]

Moreover, there is no evidence in the record that local agencies are practically compelled, as the only reasonable means necessary to carry out core mandatory functions, to develop or redevelop priority municipal projects.[767] Nor is there evidence in the record that a failure to develop or redevelop priority municipal projects would subject the claimant to "certain and severe…penalties" such as "double…taxation" or other "draconian" consequences.[768]

[765] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 212 (test claim permit, Section F.1.d.1.b.).

[766] For example, see Government Code section 23004 (counties may purchase, receive by gift or bequest, and hold land within its limits, or elsewhere when permitted by law; and manage, sell, lease, or otherwise dispose of its property as the interests of its inhabitants require); Government Code sections 37350-37353 (cities may purchase, lease, receive, hold, and enjoy real and personal property, and control and dispose of it for the common benefit; may erect and maintain buildings for municipal purposes; and may acquire property for parking motor vehicles, and for opening and laying out any street; Government Code section 37111 ("When the legislative body deems it necessary that land purchased for park or other purposes be used for construction of public buildings or creation of a civic center, it may adopt an ordinance by a four-fifths vote declaring the necessity and providing for such use"); Streets and Highways Code section 1800 ("The legislative body of any city may do any and all things necessary to lay out, acquire, and construct any section or portion of any street or highway within its jurisdiction as a freeway, and to make any existing street or highway a freeway."); and Streets and Highways Code section 1801 ("The legislative body of any city may close any street or highway within its jurisdiction at or near the point of its intersection with any freeway, or may make provision for carrying such street or highway over, under, or to a connection with the freeway, and may do any and all necessary work on such street or highway.").

[767] *Department of Finance v. Commission on State Mandates* (2009) 170 Cal.App.4th 1355, 1368 (*POBRA*).

[768] *Department of Finance v. Commission on State Mandates* (*Kern High School Dist.)* (2003) 30 Cal.4th 727, 754 citing *City of Sacramento v. State* (1990) 50 Cal.3d 51, 74.

Therefore, the Commission finds that the new requirements of the test claim permit, in Sections F.1.d.1., 2., 4., 7., and h., and F.3.d.1.-5., listed above, as applied to municipal project proponents are not mandated by the state.

> *b) The LID, hydromodification, and retrofitting requirements of sections F.1.d.1., 2., 4., 7., and h. and F.3.d.1.-5. of the test claim permit, when triggered by a project proponent of a municipal priority development project, do not impose a new program or higher level of service because the requirements are not unique to government and do not provide a governmental service to the public.*

Moreover, these activities do not impose a new program or higher level of service. Article XIII B, section 6 requires reimbursement whenever the Legislature or any state agency mandates a new program or higher level of service that results in costs mandated by the state. "New program or higher level of service" is defined as "programs that carry out the governmental function of providing services to the public, or laws which, to implement a state policy, impose unique requirements on local governments and do not apply generally to all residents and entities in the state."[769] Here, the new LID and hydromodification requirements imposed on new development and significant redevelopment applies to both public and private project proponents, is not unique to government, and does not provide a governmental service to the public.

The California Supreme Court explained in *County of Los Angeles v. State of California* (1987) 43 Cal.3d 46, explained that "the intent underlying section 6 was to require reimbursement to local agencies for the costs involved in carrying out functions *peculiar to government*, not for expenses incurred by local agencies as an incidental impact of laws that apply generally to all state residents and entities."[770] The law at issue in the *County of Los Angeles* case addressed increased workers' compensation benefits for government employees, and the court concluded that:

> …section 6 has no application to, and the state need not provide subvention for, the costs incurred by local agencies in providing to their employees the same increase in worker's compensation benefits that employees of private individuals or organizations receive. Workers' compensation is *not* a program administered by local agencies to *provide service to the public*.[771]

The court also concluded that the statute did not impose unique requirements on local government:

> Although local agencies must provide benefits to their employees either through insurance or direct payment, they are indistinguishable in this respect from private employers. In no sense can employers, public or private, be considered to be administrators of a program of workers' compensation or to be providing services incidental to administration of the program. Workers' compensation is

> administered by the state through the Division of Industrial Accidents and the Workers' Compensation Appeals Board. [Citation omitted.] Therefore, although the state requires that employers provide workers' compensation for nonexempt categories of employees, increases in the cost of providing this employee benefit are not subject to reimbursement as state-mandated programs or higher levels of service within the meaning of section 6.[772]

In *City of Sacramento*, the court considered whether a state law extending mandatory unemployment insurance coverage to include local government employees imposed a reimbursable state mandate.[773] The court followed *County of Los Angeles*, holding that "[b]y requiring local governments to provide unemployment compensation protection to their own employees, the state has not compelled provision of new or increased 'service to the public' at the local level…[nor] imposed a state policy 'uniquely' on local governments."[774] Rather, the court observed that most employers were already required to provide unemployment protection to their employers, and "[e]xtension of this requirement to local governments, together with the state government and nonprofit corporations, merely makes the local agencies 'indistinguishable in this respect from private employers.'"[775]

A few other examples are instructive. In *Carmel Valley*, the claimants sought reimbursement from the state for protective clothing and equipment required by regulation, and the state argued that private sector firefighters were also subject to the regulations, and thus the regulations were not unique to government.[776] The court rejected that argument, finding that "police and fire protection are two of the most essential and basic functions of local government."[777] And since there was no evidence on that point in the trial court, the court held "we have no difficulty in concluding as a matter of judicial notice that the overwhelming number of fire fighters discharge a classic governmental function."[778] Thus, the court found that the regulations requiring local agencies to provide protective clothing and equipment to firefighters carried out the governmental function of providing services to the public. The court also found that the requirements were uniquely imposed on government because:

[778] *Carmel Valley Fire Protection District v. State of California* (1987) 190 Cal.App.3d 521, 537.

> The executive orders manifest a state policy to provide updated equipment to all fire fighters. Indeed, compliance with the executive orders is compulsory. The requirements imposed on local governments are also unique because fire fighting is overwhelmingly engaged in by local agencies. Finally, the orders do not generally apply to all residents and entities in the State but only to those involved in fire fighting.[779]

Later, in *County of Los Angeles*, counties sought reimbursement for elevator fire and earthquake safety regulations that applied to all elevators, not just those that were publicly-owned.[780] The court found that the regulations were plainly not unique to government.[781] The court also found that the regulations did not carry out the *governmental* function of providing a service to the public, despite declarations by the county that without those elevators, "no peculiarly governmental functions and no purposes mandated on County by State law could be performed in those County buildings . . . ."[782] The court held that the regulations did not constitute an increased or higher level of service, because "[t]he regulations at issue do not mandate elevator service; they simply establish safety measures."[783] The court continued:

> In determining whether these regulations are a program, the critical question is whether the mandated program carries out the governmental function of providing services to the public, not whether the elevators can be used to obtain these services. Providing elevators equipped with fire and earthquake safety features simply is not "a governmental function of providing services to the public." This case is therefore unlike *Lucia Mar, supra*, 44 Cal.3d 830, in which the court found the education of handicapped children to be a governmental function (44 Cal.3d at p. 835) and *Carmel Valley, supra*, where the court reached a similar conclusion regarding fire protection services. (190 Cal.App.3d at p. 537.)[784]

Here, the claimants have alleged the LID and hydromodification requirements are mandated by the state *as applied to their own municipal projects.*[785] However, the LID and hydromodification prevention requirements applicable to all priority development projects are not uniquely imposed on government. Many of the categories of "priority development projects" in the test claim

[785] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 56 (Test Claim narrative,).

permit, especially automotive repair shops, restaurants, and gas stations, contemplate a private person or entity as the project proponent, rather than a municipal entity. The LID and hydromodification prevention requirements are triggered based on the size and impact of a development project, not whether its proponent is a private or government entity.[786] In this respect, the requirements of the test claim permit are not unique to government, but apply only *incidentally* to the copermittees when they are the proponent of a project that meets the criteria of a priority development project. This is no different from the situation addressed in the *County of Los Angeles* and *City of Sacramento* cases; in each of those cases the alleged mandate applied to the local government as an employer, and applied in substantially the same manner as to all other employers, and for that reason the law at issue was not considered a "program" uniquely imposed on local government within the meaning of article XIII B.[787] An even closer analogy is seen in *County of Los Angeles v. Department of Industrial Relations*, in which the regulations complained of applied to publicly- and privately-owned elevators alike, and the court found that this did not constitute a unique requirement imposed on local government.[788] The LID and hydromodification requirements apply to both municipal and private development projects. A public library is no different under the test claim permit than a restaurant or gas station, as long as the development meets the size criteria.

Accordingly, the Commission finds that the new requirements of the test claim permit, in Sections F.1.d.1., 2., 4., 7., and h., and F.3.d.1.-5. listed above, as applied to local agency municipal priority development or significant redevelopment projects are *not* mandated by the state and do not impose a new program or higher level of service.

iii. The remaining new administrative, planning, and regulatory activities required by sections F.1.d.1., 2., 4., 7., and h. and F.3.d.1.-5. are mandated by the state, and impose a new program or higher level of service.

The remaining activities are regulatory in nature and apply uniquely to the claimants as local agencies. The Water Boards contend, however, that the priority development project and hydromodification requirements are based exclusively on federal law, are necessary to meet MEP and water quality problems, and are consistent with US EPA guidance. The Water Boards assert that "U.S. EPA's views on what federal law requires is entitled to considerable deference."[789] The Water Boards further contend that the challenged provisions do not impose a new program or higher level of service.[790]

[790] Exhibit C, Water Boards' Comments on the Test Claim, filed September 22, 2017, pages 29-30.

The Commission finds that the regulatory activities required by Sections F.1.d.1., 2., 4., 7., and h. and F.3.d.1.-5. are mandated by the state and impose a new program or higher level of service.

a) The regulatory activities required by sections F.1.d.1., 2., 4., 7., and h. and F.3.d.1.-5. are mandated by the state.

Federal law requires that NPDES permits "shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants."[791]

In the 2016 decision in *Department of Finance v. Commission on State Mandates*, the California Supreme Court reviewed that federal law and identified the following test to determine whether certain conditions imposed by an NPDES stormwater permit issued by the Los Angeles Regional Board were mandated by the state or the federal government:

> If federal law compels the state to impose, or itself imposes, a requirement, that requirement is a federal mandate. On the other hand, if federal law gives the state discretion whether to impose a particular implementing requirement, and the state exercises its discretion to impose the requirement by virtue of a "true choice," the requirement is not federally mandated.[792]

The court also held that if the state, in opposition, contends its requirements are federal mandates, the state has the burden to establish the requirements are in fact mandated by federal law.[793]

Applying that test to the permit issued by the Los Angeles Regional Water Board in the *Department of Finance* case, the court found that the Water Board was not required by federal law to impose any specific permit conditions, including the requirements to install and maintain trash, and inspect commercial, industrial, and construction sites. The court explained that the CWA broadly directs the Water Board to issue permits with conditions designed to reduce pollutant discharges to the MEP, and the federal regulations give broad discretion to the Water Boards to determine which specific controls are necessary to meet the MEP standard.[794] The court also found that the Commission did not have to defer to the Regional Board's conclusion that the challenged requirements were federally mandated since the determination is largely a question of law. However, "[h]ad the Regional Board found, when imposing the disputed permit conditions, that those conditions were the *only means* by which the maximum extent practicable

[792] *Department of Finance v. Commission on State Mandates* (2016) 1 Cal.5th 749, 765. This case addressed a challenge by the State to the Commission's decision in *Municipal Storm Water and Urban Runoff Discharges*, 03-TC-04, 03-TC-19, 03-TC-20, 03-TC-21, adopted July 31, 2009.

[793] *Department of Finance v. Commission on State Mandates* (2016) 1 Cal.5th 749, 769.

[794] *Department of Finance v. Commission on State Mandates* (2016) 1 Cal.5th 749, 767-768, citing to Code of Federal Regulations, title 40, section 122.26(d)(2)(iv).

standard could be implemented, deference to the board's expertise in reaching that finding would be appropriate."[795]

In 2017, the Third District Court of Appeal applied the Supreme Court's test to an NPDES permit issued by the San Diego Regional Board, which contained LID and hydromodification plan requirements similar to the test claim permit at issue in this case.[796] The court held that there is no dispute that CWA and its regulations grant the San Diego Regional Board discretion to meet the MEP standard. "The CWA requires NPDES permits for MS4's to 'require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions *as the Administrator or the State determines appropriate* for the control of such pollutants."[797] The US EPA regulations also describe the discretion the State will exercise to meet the MEP standard. The regulations require a permit application by an MS4 to propose a management program, as specified, which "*will be considered by the Director when developing permit conditions* to reduce pollutants in discharges to the maximum extent practicable."[798]

Despite this language, the state argued in that case that the Regional Board "really did not exercise discretion" in imposing the challenged requirements since the Regional Board made a finding that its requirements were "necessary" to reduce pollutant discharges to the MEP. The state also contended that it did not make a true choice because the requirements were based on proposals in the application, which were modified by the Regional Board to achieve the federal standard.[799]

The court disagreed with the state's arguments. The court held that the state misconstrued the Supreme Court's decision in the 2016 case, where the Supreme Court made it clear that "except where a regional board finds the conditions are the *only means* by which the 'maximum extent practicable' standard can be met, the State exercises a true choice by determining what controls are necessary to meet the standard."[800] "That the San Diego Regional Board found the permit

[800] *Department of Finance v. Commission on State Mandates* (2017) 18 Cal.App.5th 661, 682 citing *Department of Finance v. Commission on State Mandates* (2016) 1 Cal.5th 749, 768, emphasis added.

requirements were 'necessary' to meet the standard establishes only that the San Diego Regional Board exercised its discretion."[801]

With respect to the hydromodification plan requirements in the permit, the state claimed the requirement arises from US EPA regulations (40 C.F.R. 122.26(d)(2)(iv)(A)(2)) requiring the permit applicant to include in its application a description of planning procedures to develop and enforce controls to reduce the discharge of pollutants from MS4s that receive discharges from areas of new development and significant redevelopment. The court held, however, that the federal regulation does not require a hydromodification plan, nor does it restrict the Regional Board from exercising its discretion to require a specific type of plan to address the impacts of new development. The hydromodification plan requirements were held to be mandated by the state.[802]

The LID provisions in that case required the permittees to implement specified LID BMPs at most new development and redevelopment projects, and required the permittees to develop a model SUSMP to establish LID BMPs that meet or exceed the requirements. The state, relying on the same federal regulation cited in the paragraph above, argued that the requirements were necessary to achieve federal law. The court held that "nothing in the application regulation required the San Diego Regional Board to impose these specific requirements. As a result, they are state mandates subject to [article XIII B] section 6."[803]

The same analysis and findings apply to the planning and verification activities relating to the LID, hydromodification, and retrofit provisions required by the test claim permit. Like the 2017 case, the test claim permit here also states that it "contains new or modified requirements that are *necessary* to improve Copermittees' efforts to reduce the discharge of pollutants in storm water runoff to the MEP and achieve water quality standards."[804] The Water Boards rely on this language and also cite to comments made by a representative from the US EPA that he could not "really overemphasize the importance of incorporating these L.I.D. provisions in the permit" to contend that the requirements are mandated by federal law.[805]

Although, as stated in the background, the US EPA was considering the adoption of LID and hydromodification regulations, those regulations were never adopted. As a result, the federal government continues to encourage such provisions, but does not require these activities. As determined by the Third District Court of Appeal, the Regional Board exercised the discretion provided by federal law to impose these conditions. Moreover, there is no evidence in the record that these conditions were the "only means by which the MEP standard could be met."

---

[801] *Department of Finance v. Commission on State Mandates* (2017) 18 Cal.App.5th 661, 682.

[802] *Department of Finance v. Commission on State Mandates* (2017) 18 Cal.App.5th 661, 684.

[803] *Department of Finance v. Commission on State Mandates* (2017) 18 Cal.App.5th 661, 685.

[804] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 188 (test claim permit, Finding D.1.b.).

[805] Exhibit C, Water Boards' Comments on the Test Claim, filed September 22, 2017, page 28, quoting testimony from John Kemmerer at the November 18, 2009 Regional Board Hearing.

Accordingly, the remaining new activities related to the claimants' regulatory activities for the LID, hydromodification, and retrofit provisions for non-municipal projects are mandated by the state.

b) The new mandated activities constitute a new program or higher level of service.

Article XIII B, section 6 requires reimbursement whenever the Legislature or any state agency mandates a new program or higher level of service that results in costs mandated by the state. "New program or higher level of service" is defined as "programs that carry out the governmental function of providing services to the public, or laws which, to implement a state policy, impose unique requirements on local governments and do not apply generally to all residents and entities in the state."[806] Only one of these alternatives is required to establish a new program or higher level of service.[807]

Here, the new mandated activities cited above are expressly directed toward the local agency claimants under their regulatory authority, and thus are unique to local government. The requirements ensure that priority development projects incorporate LID and hydromodification prevention principles in the planning process at an early stage, and are intended to promote water quality and reduce the discharge of pollutants from new development and significant redevelopment activities.[808] "The challenged requirements are not bans or limits on pollution levels, they are mandates to perform specific actions" designed to reduce pollution entering stormwater drainage systems and receiving waters.[809] Thus, the new mandated activities also provide a governmental service to the public.

Accordingly, the following new activities related to the claimants' requirement to plan and regulate development *other than their own municipal developments* for the LID, hydromodification, and retrofit provisions required by Sections F.1.d.1., 2., 4., 7., and h., and F.3.d.1.-5. of the test claim permit mandate a new program or higher level of service:

1. Administrative and Planning Activities

    a. Incorporate formalized consideration, such as thorough checklists, ordinances, and/or other means, of LID BMPs into the plan review process for priority development projects.[810]

[807] *Carmel Valley Fire Protection Dist. v. State of California* (1987) 190 Cal.App.3d 521, 537; *Department of Finance v. Commission on State Mandates* (2021) 59 Cal.App.5th 546, 557.

[808] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 212-216 (test claim permit, Section F.1.d.).

[809] *Department of Finance v. Commission on State Mandates* (2021) 59 Cal.App.5th 546, 560.

[810] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 215 (test claim permit, Section F.1.d.4.a.ii.).

b. Within two years after adoption of the permit, review local codes, policies, and ordinances and identify barriers to the implementation of LID BMPs, and take appropriate actions to remove the barriers.[811]

c. Develop a LID BMP waiver program to incorporate into the SSMP.[812]

d. Collaborate with other copermittees to develop a Hydromodification Management Plan (HMP) in accordance with Sections F.1.h.1. and 2. of the test claim permit to manage increases in runoff discharge rates and durations from all priority development projects. Submit a draft HMP that has been available to public review and comment, to the Regional Board within three years of adoption of the permit. Within 180 days of receiving the Regional Board's comments on the draft HMP, submit a final HMP to the Regional Board that addresses the comments. Within 90 days of receiving a finding of adequacy from the Regional Water Board, incorporate the HMP into the SSMPs so that estimated post-project runoff discharge rates and durations do not exceed pre-development discharge rates and durations.[813]

e. Develop a retrofitting program for existing developments (municipal, industrial, commercial, and residential) by identifying and creating an inventory of existing developments for retrofit, evaluating and ranking those projects for retrofit, prioritizing work plans, and encouraging retrofit projects to be designed in accordance with SSMP LID and hydromodification requirements.[814])

2. Ensure Priority Development Projects (*Except for a Claimant's Own Municipal Priority Development Projects*) Comply With LID, Treatment Control, LID Waiver and Hydromodification Requirements, and Track and Inspect BMPS for Retrofitted Projects[815]

a. Require each priority development project listed in Section F.1.d.1. and 2., *except a claimant's own municipal projects*, to implement LID BMPs as described in Section

[811] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 215 (test claim permit, Section F.1.d.4.a.iii.).

[812] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 219 (test claim permit, Section F.1.d.7.c.).

[813] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 223, 227 (test claim permit, Sections F.1.h., F.1.h.5.)

[814] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 247-248 (test claim permit, Sections F.3.d.1.-4.)

[815] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 209-210 (test claim permit), Section F.1.c. requires the following: "For all proposed Development Projects, each Copermittee, during the planning process, and prior to project approval and issuance of local permits, must prescribe the necessary requirements so that Development Project discharges of storm water pollutants from the MS4 will be reduced to the MEP, will not cause or contribute to a violation of water quality standards, and will comply with the Copermittee's ordinances, permits, plans, and requirements, and with this Order.".

F.1.d.4.b., c., and e., which will collectively minimize directly connected impervious areas, limit loss of existing infiltration capacity, and protect areas that provide important water quality benefits necessary to maintain riparian and aquatic biota, and/or are particularly susceptible to erosion and sediment loss, or make a finding of technical infeasibility for each priority development project in accordance with the LID waiver program in section F.1.d.7.[816]

b. Require all priority development projects, *except for a claimant's own municipal projects and smaller restaurants where land development is less than 5,000 square feet*, to implement the approved Hydromodification Plan (HMP)[817]

c. Once a property owner of an existing development decides to retrofit, the completed retrofit BMPs shall be tracked and inspected in accordance with Section F.1.f. of the test claim permit. *This does not include the activity to track and inspect retrofitted BMPs of a claimant's own existing municipal development*.[818]

3. Retrofit Existing Development

a. Develop a retrofitting program by identifying and creating an inventory of existing developments for retrofit, evaluating and ranking those projects for retrofit, and encouraging retrofit projects to be designed in accordance with SSMP LID and hydromodification requirements in Sections F.1.d.3.-9. and F.1.h.[819] This activity does *not* include *a claimant's own public or municipal* project.

b. Once a property owner of an existing development decides to retrofit, the completed retrofit BMPs shall be tracked and inspected in accordance with Section F.1.f. of the test claim permit.[820] This does not include tracking and inspecting retrofitted BMPs *of a claimant's own existing public or municipal development*.

5. Except as Applicable to a Claimant's Own Municipal Development, Section F.1.f, Addressing BMP Maintenance Tracking, Imposes Some State-Mandated New Programs or Higher Levels of Service.

The claimants pled Section F.1.f. of the test claim permit, which requires each copermittee, as part of their Jurisdictional Runoff Management Program (JRMP) to develop and maintain a

[816] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 215-216 (test claim permit, Section F.1.d.4.).

[820] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 249 (test claim permit, Sections F.3.d.5.)

watershed-based database.[821] The database shall track and inventory all approved structural post-construction BMPs and BMP maintenance for existing municipal, industrial, commercial, and residential projects within its jurisdiction since July 2005; conduct inspections of the projects as specified; and verify that approved post-construction BMPs are operating effectively and have been adequately maintained as specified in the permit.[822]

The Commission finds that, *except* as applicable to a claimant's own municipal development (which is not mandated by the state), the following activities are newly required by Section F.1.f., of the test claim permit and constitute state-mandated new programs or higher levels of service:

- Develop and maintain a watershed-based database to track and inventory all projects, within its jurisdiction, that have a final approved SSMP with structural post-construction BMPs implemented since July 2005. The database must include information on BMP type; location; watershed; date of construction; the party responsible for maintenance, maintenance verifications, and corrective actions; and whether the site was referred to the local vector control agency.[823]
- Verify that the required structural post-construction BMPs on inventoried *residential* projects have been implemented, are maintained, and are operating effectively every five years. Verification can be made through inspections, self-certifications, surveys, or other equally effective approaches.[824]
- Annually inspect the required structural post-construction BMPs at high priority *residential* projects.[825]
- For all inventoried projects, verifications performed through a means other than direct copermittee inspection, adequate documentation must be submitted to the copermittee to provide assurance that the required maintenance has been completed.[826]
- Inspections of the required structural post-construction BMPs at all inventoried projects must note observations of vector conditions and, where conditions are contributing to

mosquito production, the copermittee is required to notify the local vector control agency.[827]

All other activities required by Section F.1.f. are not new and, thus, do not impose a new program or higher level of service.

a. Background

i. Federal law requires an NPDES applicant to propose a management program that includes a maintenance schedule to reduce pollutants in discharges from the MS4 to the maximum extent practicable (MEP), after construction projects are completed.

Under federal law, NPDES permits "shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants."[828]

Federal regulations require applicants for an NPDES permit for large and medium MS4 discharges to describe a proposed management program that covers the duration of the permit to be considered by the Regional Board when developing permit conditions to reduce pollutants in discharges to the MEP. The management program is required to include a maintenance schedule for structural controls to reduce pollutants in discharges from the MS4.[829] The management program is also required to include a comprehensive master plan to develop, implement, and enforce controls to reduce the discharge of pollutants from the MS4s that receive discharges from areas of new development and significant redevelopment. Additionally, the plan shall "address controls to reduce pollutants in discharges from municipal separate storm sewers *after construction is completed*."[830] The plan shall also include inspections to implement and enforce ordinances, orders, or similar means to prevent illicit discharges to the MS4.[831] Federal regulations further state that NPDES permits must include "any requirements in addition to or more stringent than promulgated effluent limitations guidelines . . . necessary to . . . [a]chieve water quality standards established under section 303 of the CWA."[832]

[827] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 222 (test claim permit, Section F.1.f.2.b.vii.).

[828] United States Code, title 33, section 1342(p)(3)(B)(iii) (Public Law 100-4).

[829] Code of Federal Regulations, title 40, section 122.26(d)(2)(iv)(A)(1).

[830] Code of Federal Regulations, title 40, section 122.26(d)(2)(iv)(A)(2), emphasis added.

[831] Code of Federal Regulations, title 40, section 122.26(d)(2)(iv)(B)(1).

[832] Code of Federal Regulations, title 40, section 122.44(d)(1).

ii. The prior permit required each permittee to develop and implement programs for existing development, including post-construction BMPs, to prevent or reduce pollutants in runoff to the MEP, and to maintain and enforce adequate legal authority (through ordinances, permits, and inspections) to control pollutant discharges into and from the MS4.

Section H. of the prior permit required the permittees, as part of their JRMP, to develop and implement programs to prevent or reduce pollutants in runoff to the MEP from existing development, specifically, municipal facilities and activities, industrial and commercial facilities, and residential activities. To comply, the prior permit required the permittees to do the following activities:

For municipal facilities and activities:

- Require the use of pollution prevention methods.[833]
- Develop, and annually update, an inventory of facilities and activities that generate pollutants.[834]
- Implement or require implementation of BMPs to reduce pollutants in runoff to the MEP.[835] For municipal facilities and activities tributary to 303(d) impaired water bodies that generate pollutants for which the water body is impaired, implement or require implementation of additional BMPs to target that pollutant was required.[836]
- Implement a schedule of maintenance activities for structural source and treatment control BMPs designed to reduce pollutant discharges to or from its MS4s and related drainage structures.[837]
- Implement BMPs to reduce the contribution of pollutants to the MEP associated with the application, storage, and disposal of pesticides, herbicides, and fertilizers to the MS4.[838]

[833] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 587 (Order R9-2004-0001, Section H.1.a.).

[834] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 587-588 (Order R9-2004-0001, Section H.1.b.).

[835] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 588 (Order R9-2004-0001, Section H.1.c.1.).

[836] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 588 (Order R9-2004-0001, Section H.1.c.2.).

[838] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 588-589 (Order R9-2004-0001, Section H.1.e.).

- Conduct inspections annually and implement all follow-up actions necessary to comply with the Order.[839]
- Enforce the stormwater ordinance as necessary to maintain compliance with the Order.[840]

For industrial and commercial facilities:

- Require the use of pollution prevention methods.[841]
- Develop, and regularly update, an inventory of facilities that could contribute to a significant pollutant load to the MS4.[842]
- Designate a set of minimum BMP requirements to reduce the discharge of pollutants in runoff to the MEP and require the implementation of the designated minimum BMPs at each inventoried facility.[843]
- Prioritize each inventoried facility by threat to water quality and inspect: high priority facilities annually, medium priority facilities biannually, low priority facilities once during the 5-year term of the permit, and mobile operations as needed.[844]
- Enforce the stormwater ordinance, including sanctions, as necessary to maintain compliance with the Order.[845]
- Report, in the annual report, a list of industrial facilities that may require coverage under the General Industrial Permit but no notice of intent was filed.[846]

[839] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 589 (Order R9-2004-0001, Section H.1.f.).

[840] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 589 (Order R9-2004-0001, Section H.1.g.).

[841] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 589 (Order R9-2004-0001, Section H.2.a.).

[842] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 589-590 (Order R9-2004-0001, Section H.2.b.).

[843] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 590 (Order R9-2004-0001, Section H.2.c.).

[844] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 590-592 (Order R9-2004-0001, Section H.2.d.).

[845] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 592 (Order R9-2004-0001, Section H.2.e.).

[846] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 592 (Order R9-2004-0001, Section H.2.f.).

- Train staff responsible for conducting inspections of industrial/commercial facilities at least once a year.[847]

For existing residential developments:

- Encourage the use of pollution prevention methods.[848]
- Identify high priority residential activities that may contribute a significant pollutant load to the MS4 including those high threat activities specified in the permit (i.e. automobile repair, washing, and parking; home and garden activities and product use like fertilizer; disposal of hazardous waste, pet waste, and green waste).[849]
- Designate a set of minimum BMPs for high priority residential activities and require the implementation of the designated minimum BMPs.[850]
- Enforce the stormwater ordinance for all residential activities necessary to maintain compliance with the Order.[851]

Finding 30 of the prior permit recognized that certain BMPs for urban runoff management may create a habitat for vectors if not properly designed or maintained, stating that:

> If not properly designed or maintained, certain BMPs implemented or required by municipalities for urban runoff management may create a habitat for vectors (e.g. mosquitoes and rodents). However, proper BMP design to avoid standing water can prevent the creation of vector habitat. Nuisances and public health impacts resulting from vector breeding can be prevented with close collaboration and cooperative effort between municipalities and local vector control agencies and the State Department of Health Services during the development and implementation of the SWMP.[852]

Section D. of the prior permit required each copermittee to establish, maintain, and enforce adequate legal authority (through ordinances and permits) to control pollutant discharges into and from the MS4. Legal authority had to:

---

[847] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 592 (Order R9-2004-0001, Section H.2.g.).

[848] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 592 (Order R9-2004-0001, Section H.3.a.).

[849] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 592 (Order R9-2004-0001, Section H.3.b.).

[850] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 592-593 (Order R9-2004-0001, Section H.3.c.).

[851] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 593 (Order R9-2004-0001, Section H.3.d.).

[852] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 571 (Order R9-2004-0001, Finding 30).

- Control the contribution of pollutants in discharges of runoff associated with industrial and construction activity to the MS4 and from the industrial and construction sites.
- Prohibit all illicit discharges, including those from sewage; wash water from automotive service facilities; discharges from cleaning, repair, or maintenance of equipment, machinery, motor vehicles, cement-related equipment, and port-a-potty servicing; wash water from mobile operations such as mobile automobile washing, steam cleaning, power washing, and carpet cleaning; wash water from the cleaning or hosing of impervious surfaces in municipal, industrial, commercial, and residential areas including parking lots, streets, sidewalks, driveways, patios, etc; runoff from material storage areas containing chemicals, fuels, grease, oil, or other hazardous materials; pool or fountain water containing chlorine, biocides, or other chemicals; sediment, pet waste, vegetation clippings, or other landscape or construction-related wastes; and food-related wastes.
- Prohibit and eliminate all illicit connections.
- Control the discharge of spills, dumping, and disposal of materials other than stormwater.
- Require compliance with conditions in the ordinances, permits, contracts, and orders.
- Require the use of BMPs to prevent or reduce the discharge of pollutants into MS4s to the MEP.
- Carry out all inspections, surveillance, and monitoring necessary to determine compliance and noncompliance with local ordinances, permits, and the Order, including the prohibition on illicit discharges to the MS4. This means the copermittee must have the authority to enter, sample, inspect, review and copy records, and require regular reports from industrial facilities and construction sites that discharge into MS4.
- Utilize enforcement mechanisms to require compliance.
- Control the contribution of pollutants from one portion to another portion of the shared MS4 through interagency agreements among the copermittees.[853]

b. Section F.1.f. of the test claim permit imposes new requirements that are mandated by the state and constitute a new program or higher level of service.

i. Section F.1.f. of the test claim permit adds new requirements, including the requirement to develop and maintain a watershed-based database to track and inventory all projects, to ensure that structural post-construction BMPs are operating effectively and have been adequately maintained.

Findings D.1.b. and c. of the test claim permit indicate that the copermittees have generally been implementing their JRMPs since the prior permit, but the runoff discharges continue to cause or contribute to violations of water quality standards as evidenced by the copermittees' monitoring

[853] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 574-575 (Order R9-2004-0001, Section D.1.).

results. According to the Fact Sheet, Section F. was included in the test claim permit to ensure the continued effectiveness of the post-construction BMP requirements.[854]

Accordingly, Section F.1.f.1. of the test claim permit requires, as part of the JRMP, that each copermittee perform the following:

- Develop and maintain a watershed-based database to track and inventory all projects, within its jurisdiction, that have a final approved SSMP with structural post-construction BMPs implemented since July 2005. LID BMPs implemented on a lot by lot basis at a single family residential home, such as rain barrels, are not required to be tracked or inventoried. The database must include information on BMP type; location; watershed; date of construction; the party responsible for maintenance, maintenance verifications, and corrective actions; and whether the site was referred to the local vector control agency.[855]

The requirement in Section F.1.f.1. is new. Under the prior permit, claimants had to develop an inventory of municipal facilities and activities that generate pollutants, and develop and inventory or database of industrial and commercial facilities that could contribute a significant pollutant load to the MS4.[856] The inventory for industrial and commercial facilities had to include the facility name, address, a description of the principal products or services provided, and SIC code for industrial facilities.[857] However, the claimants were not required to develop and maintain a watershed-based database to track and inventory the approved structural post-construction BMPs and verification of BMP maintenance for existing developments. Thus, the requirement in Section F.1.f.1. is new.

Section F.1.f.2. of the test claim permit requires each copermittee to verify that approved post-construction BMPs are operating effectively and have been adequately maintained by implementing the following measures:

- Designate high priority SSMP projects through consideration of BMP size, recommended maintenance frequency, likelihood of operational and maintenance issues, location, receiving water quality, compliance record, land use, and other relevant factors. At a minimum, high priority projects include those projects that generate pollutants (prior to treatment) within the tributary area of and within the same hydrologic subarea as a 303(d) listed water body impaired for that pollutant and those projects generating pollutants

within the tributary area for and within the same hydrologic subarea as an observed action level exceedance of that pollutant.[858]

- Beginning on July 1, 2012, verify implementation, operation, and maintenance of structural post-construction BMPs on inventoried SSMP projects by inspection, self-certification, survey, or other equally effective approaches, by complying with the following requirements:

    1. The implementation, operation, and maintenance of all approved and inventoried final project public and private SSMPs must be verified every five years.[859]
    2. All projects with BMPs that are high priority shall be inspected annually before each rainy season.[860]
    3. All copermittee's projects with BMPs must be inspected annually.[861]
    4. For verifications performed by means other than copermittee inspection, adequate documentation that the required maintenance has been completed must be submitted to the copermittee.[862]
    5. Appropriate follow-up measures, including re-inspections, enforcement, and maintenance, must be conducted to ensure the treatment BMPs continue to reduce stormwater pollutants as originally designed.[863]
    6. Inspections must note observations of vector conditions and, where conditions are contributing to mosquito production, the copermittee is required to notify the local vector control agency.[864]

[858] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 221-222 (test claim permit, Section F.1.f.2.a.).

[864] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 222 (test claim permit, Section F.1.f.2.b.vii.).

Section F.1.f.2.b.iv. does not impose any requirements on the claimants, but states that "At the discretion of the Copermittee, its inspections may be coordinated with the facility inspections implemented pursuant to section F.3. of this Order."[865]

Some of the requirements of Section F.1.f.2. are new, and some are not.

The requirement in F.1.f.2.a. to designate high priority SSMP projects, which at a minimum include those projects that generate pollutants (prior to treatment) within the tributary area of and within the same hydrologic subarea as a 303(d) listed water body impaired for that pollutant and those projects generating pollutants within the tributary area for and within the same hydrologic subarea as an observed action level exceedance of that pollutant, is *not* new. The prior permit, in sections H.2.b. and d., required the claimants to develop an inventory or database of all industrial and commercial facilities within its jurisdiction and establish priorities for inspections and oversight of those facilities based on threat to water quality.[866] Thus, the requirement to designate high priority industrial and commercial projects is not new and does not impose a new program or higher level of service. The prior permit, in section H.3., also required the claimants to identify high priority residential activities that may contribute a significant pollutant load to the MS4, designate BMPs for those activities, and additional controls for high priority residential activities within or directly adjacent to or discharging directly to 303(d) impaired receiving waters.[867] Thus, the requirement to designate high priority residential activities is also not new and does not impose a new program or higher level of service. And the requirement to designate high priority municipal projects is not new and does not impose a new program or higher level of service. The prior permit, in section H.1., required the claimants to inventory all municipal facilities and activities that generate pollutants, and for those municipal facilities and activities tributary to 303(d) impaired water bodies that generate pollutants for which the water body is impaired, the implementation of additional BMPs to target that pollutant was required.[868]

The Commission further finds that the requirement in Section F.1.f.2.b. of the test claim permit to inspect and verify implementation, operation, and maintenance of structural post-construction BMPs on inventoried SSMP projects as specified is *partially new*. The requirement imposed by Section F.1.f.2.b.vii. of the test claim permit, that inspections for all inventoried projects must note observations of vector conditions and, where conditions are contributing to mosquito production, the copermittee is required to notify the local vector control agency, is new. The prior permit recognized that certain BMPs for urban runoff management may create a habitat for vectors if not properly designed or maintained, creating potential nuisance and public health issues. The prior permit further recognized that "[n]uisances and public health impacts resulting

---

[865] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 222 (test claim permit, Section F.1.f.2.b.iv.).

[866] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 589-591 (Order R9-2004-0001, Section H.2.).

[867] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 587-589 (Order R9-2004-0001, Section H.3.).

[868] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 587-589 (Order R9-2004-0001, Section H.1.).

from vector breeding can be prevented with close collaboration and cooperative effort between municipalities and local vector control agencies and the State Department of Health Services during the development and implementation of the SWMP."[869] These findings are also contained in Finding D.2.f.[870] and a similar finding appears in Section F.1.d.6.[871] which states "treatment control BMPs must be designed and implemented with measures to avoid the creation of nuisance or pollution associated with vectors, such as mosquitoes, rodents, and flies."[872] However, the prior permit did not impose any specific requirements with respect to vector control, and the inspections required by the prior permit of existing development were focused on water quality and not public health.

The requirement imposed by Section F.1.f.2.b.v. of the test claim permit, that "[f]or verifications performed by means other than copermittee inspection, adequate documentation that the required maintenance has been completed must be submitted to the copermittee," is new for all existing development. The prior permit did not require the submittal of BMP maintenance documentation.

In addition, the requirements in Section F.1.f.2.b.i. and ii., to verify every five years the implementation, operation, and maintenance of structural post-construction BMPs on inventoried *residential* projects, and to annually inspect the required structural post-construction BMPs at high priority *residential* projects is new. Under the prior permit, the claimants had to encourage the use of pollution prevention methods,[873] designate a set of minimum BMPs for high priority residential activities and require the implementation of the designated minimum BMPs,[874] and enforce the stormwater ordinance for all residential activities necessary to maintain compliance with the Order.[875] However, there was no requirement to inspect residential projects or verify the operation and maintenance of structural post-construction BMPs every five years.

The remaining requirements imposed by Section F.1.f.2.b. with respect to municipal, industrial, and commercial facilities are *not new* and do not impose a new program or higher level of service. Section H.1.f. of the prior permit required the claimants to conduct annual inspections

[874] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 592-593 (Order R9-2004-0001, Section H.3.c.).

[875] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 593 (Order R9-2004-0001, Section H.3.d.).

of all municipal facilities and activities.[876] Section H.2.d. required claimants to inspect industrial and commercial facilities according to priority: high priority annually, medium priority biannually, low priority once during the 5-year term of the permit, and mobile operations as needed.[877] The inspection of municipal, industrial, and commercial facilities had to include the assessment of BMP implementation and effectiveness and, thus, any structural post-construction BMPs would have been verified at the time of inspection.[878] The prior permit also required the claimants to enforce the stormwater ordinance in order to achieve water quality standards for municipal, industrial, and commercial facilities necessary to maintain compliance with the prior permit (including the requirements to use BMPs to prevent or reduce the discharge of pollutants to the MEP; use pollution prevention methods; and carry out all inspections and monitoring of industrial and commercial facilities necessary to determine compliance and noncompliance with local ordinances and permits).[879] The prior permit also required the claimants to implement all follow-up actions necessary to comply with the Order.[880]

Thus, with respect to all municipal facilities and activities and high priority industrial and commercial facilities, the requirements of the test claim permit to annually inspect; verify effective operation and maintenance of the post construction BMPs, as well as compliance with all ordinances, permits, and the Order; and conduct follow-up measures to ensure that BMPs continue to reduce stormwater pollutants, are not new and do not impose a new program or higher level of service.

With respect to all medium or low threat industrial and commercial facilities, the requirements of the test claim permit to inspect every five years; verify effective operation and maintenance of the structural post-construction BMPs, as well as compliance with all ordinances, permits, and the Order; and follow-up measures to ensure that post-construction BMPs continue to reduce stormwater pollutants, are not new and do not impose a new program or higher level of service. In fact, for medium industrial and commercial facilities, fewer inspections are required: every five years rather than every two years.

With regard to mobile facilities, which were inspected as needed under the prior permit,[881] the test claim permit imposes the following time requirements: "The inspection, verification, and

---

[876] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 589 (Order R9-2004-0001, Section H.1.f.).

[877] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 590-592 (Order R9-2004-0001, Section H.2.d.).

[878] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 589, 591 (Order R9-2004-0001, Sections H.1.f., H.2.d.2. and 3.).

[879] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 587-593 (Order R9-2004-0001, Sections H.1.a., H.1.c., H.1.f., H.1.g., H.2.a., H.2.c.-e., H.3.a., H.3.c., H.3.d.).

[880] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 589, 592, (Order R9-2004-0001, Sections H.1.f., H.2.d.6.).

[881] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 591 (Order R9-2004-0001, Section H.2.d.2.d.).

follow-up activities for all approved and inventoried final project public and private SSMP are required every five years." The time requirements, however, do not impose any new activities on the claimants or increase the actual level or quality of governmental services required; they simply ensure that BMPs continue to be maintained and stormwater pollutants are reduced to the MEP as required under existing law. Thus, the requirement to inspect, verify, and conduct follow-up activities for mobile facilities is not new and does not impose a new program or higher level of service.

Thus, Section F.1.f. imposes the following new requirements:

- Develop and maintain a watershed-based database to track and inventory all projects, within its jurisdiction, that have a final approved SSMP with structural post-construction BMPs implemented since July 2005. The database must include information on BMP type; location; watershed; date of construction; the party responsible for maintenance, maintenance verifications, and corrective actions; and whether the site was referred to the local vector control agency.[882]
- Verify that the required structural post-construction BMPs on inventoried *residential* projects have been implemented, are maintained, and are operating effectively every five years. Verification can be made through inspections, self-certifications, surveys, or other equally effective approaches.[883]
- Annually inspect the required structural post-construction BMPs at high priority *residential* projects.[884]
- For all inventoried projects, verifications performed through a means other than direct copermittee inspection, adequate documentation must be submitted to the copermittee to provide assurance that the required maintenance has been completed.[885]
- Inspections of the required structural post-construction BMPs at all inventoried projects must note observations of vector conditions and, where conditions are contributing to mosquito production, the copermittee is required to notify the local vector control agency.[886]

[882] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 221 (test claim permit, Section F.1.f.1.).

[885] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 222 (test claim permit, Section F.1.f.2.b.v.).

[886] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 222 (test claim permit, Section F.1.f.2.b.vii.).

ii. Except as applicable to a claimant's own municipal development, the new requirements imposed by section F.1.f. mandate a new program or higher level of service.

The claimants contend that the activities required by Section F.1.f. of the test claim permit are mandated by the state and not required by federal law, "Nothing in the CWA, its regulations, or case law requires local agencies to develop, fund, and implement a retroactive BMP maintenance tracking database and inspection program."[887] The claimants contend that the Water Boards exercised their "true choice" in requiring these activities and are thus mandated by the state.[888]

The Water Boards contend that the requirements in Section F.1.f. are not mandated by the state since the requirements implement and are necessary to meet federal law. "The BMP maintenance tracking requirement is integral to the successful implementation of runoff management programs that must be continually assessed, modified and improved upon, in order to achieve the evolving federal MEP standard."[889] The Water Boards further contend that tracking inspections of BMPs is consistent with US EPA guidance, which states the following:

> Creating an inventory of post-construction structural stormwater control measures, including tracking of specific information, will first enable Permittees to know what control measures they are responsible for. Without this information, the permittee will not be protecting water quality to their full potential since inspections, maintenance, and follow-up changes cannot be performed. Tracking information such as latitude/longitude, maintenance and inspection requirements and follow-up will allow the permittee to be able to better allocate their resources for those activities that are immediately necessary. . . ."[890]

The Water Boards further rely on the following recommendation by the US EPA:

> Permit writers should clearly specify requirements for inspections. Inspecting and properly maintaining structural stormwater controls to ensure they are working as designed is just as important as installing them in the first place. By having specific requirements, Permittees will be reminded that they must allocate resources to ensure control measures are properly maintained and functioning.[891]

The Water Boards also contend that the requirements do not impose a new program or higher level of service since the claimants' 2009 Report of Waste Discharge (ROWD) already included

[887] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 58 (Test Claim narrative).

[888] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 58 (Test Claim narrative) citing *Department of Finance v. Commission on State Mandates* (2016) 1 Cal.5th 749.

[889] Exhibit C, Water Boards' Comments on the Test Claim, filed September 22, 2017, page 30.

[890] Exhibit C, Water Boards' Comments on the Test Claim, filed September 22, 2017, page 31; see also, Exhibit X (12), EPA, MS4 Permit Improvement Guide (April 14, 2010), page 66.

[891] Exhibit C, Water Boards' Comments on the Test Claim, filed September 22, 2017, pages 30-32; see also, Exhibit X (12), EPA, MS4 Permit Improvement Guide (April 14, 2010), page 68.

an approach for inspecting and/or verifying maintenance of treatment control BMPs implemented for priority development projects to ensure effectiveness, among other things.[892]

The Commission finds that some of the new activities required by section F.1.f. apply to all development, and as those activities apply to a claimant's own *municipal* development, they are not mandated by the state. However, the remaining new activities constitute a state-mandated new program or higher level of service.

The following activities required by section F.1.f. apply to all development, including municipal development:

- Develop and maintain a watershed-based database to track and inventory all projects, within its jurisdiction, that have a final approved SSMP with structural post-construction BMPs implemented since July 2005. The database must include information on BMP type; location; watershed; date of construction; the party responsible for maintenance, maintenance verifications, and corrective actions; and whether the site was referred to the local vector control agency.[893]
- For all inventoried projects, verifications performed through a means other than direct copermittee inspection, adequate documentation must be submitted to the copermittee to provide assurance that the required maintenance has been completed.[894]
- Inspections of the required structural post-construction BMPs at all inventoried projects must note observations of vector conditions and, where conditions are contributing to mosquito production, the copermittee is required to notify the local vector control agency.[895]

When determining whether a test claim statute or order compels compliance and, thus, creates a state-mandated program for purposes of reimbursement under article XIII B, section 6, the courts have identified two distinct theories: legal compulsion and practical compulsion.[896] Activities undertaken at the option or discretion of local government, without legal or practical compulsion, do not trigger a state-mandated program within the meaning or article XIII B, section 6.[897] The California Supreme Court has described legal compulsion as follows:

---

[892] Exhibit C, Water Boards' Comments on the Test Claim, filed September 22, 2017, page 32.

[893] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 221 (test claim permit, Section F.1.f.1.).

[895] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 222 (test claim permit, Section F.1.f.2.b.vii.).

[896] *Coast Community College Dist. v. Commission on State Mandates* (2022) 13 Cal.5th 800, 815-817.

[897] *City of Sacramento v. State of California* (1990) 50 Cal.3d 51, 73-76; *Department of Finance v. Commission on State Mandates* (*Kern*) (2003) 30 Cal.4th 727; *Department of Finance v. Commission on State Mandates* (POBRA) (2009) 170 Cal.App.4th 1355, 1365-1366.

> Legal compulsion occurs when a statute or executive action uses mandatory language that require[s] or command[s] a local entity to participate in a program or service… Stated differently, legal compulsion is present when the local entity has a mandatory, legally enforceable duty to obey. This standard is similar to the showing necessary to obtain a traditional writ of mandate, which requires the petitioning party to establish the respondent has a clear, present, and usually ministerial duty to act. ... Mandate will not issue if the duty is ... mixed with discretionary power.
>
> Thus, as a general matter, a local entity's voluntary or discretionary decision to undertake an activity cannot be said to be legally compelled, even if that decision results in certain mandatory actions.[898]

In the absence of legal compulsion, the courts have acknowledged the possibility that a state mandate can be found if local government can show that it faces "certain and severe penalties, such as double taxation or other draconian consequences," leaving local government no choice but to comply with the conditions established by the state.[899] Substantial evidence in the record is required to make a finding of practical compulsion.[900]

Nothing in state statute or case law imposes a legal obligation on local agencies to construct, expand, or improve municipal projects.[901] Nor is there evidence in the record that the claimants

---

[899] *Coast Community College Dist. v. Commission on State Mandates* (2022) 13 Cal.5th 800, 815-817.

[900] *Department of Finance v. Commission on State Mandates* (2009) 170 Cal.App.4th 1355, 1368-1369 (*POBRA*); Government Code section 17559; California Code of Regulations, title 2, section 1187.5.

[901] For example, see Government Code section 23004 (counties *may* purchase, receive by gift or bequest, and hold land within its limits, or elsewhere when permitted by law; and manage, sell, lease, or otherwise dispose of its property as the interests of its inhabitants require); Government Code sections 37350-37353 (cities *may* purchase, lease, receive, hold, and enjoy real and personal property, and control and dispose of it for the common benefit; may erect and maintain buildings for municipal purposes; and may acquire property for parking motor vehicles, and for opening and laying out any street; Government Code section 37111 ("When the legislative body deems it necessary that land purchased for park or other purposes be used for construction of public buildings or creation of a civic center, it *may* adopt an ordinance by a four-fifths vote declaring the necessity and providing for such use"); Streets and Highways Code, sections 1800 ["The legislative body of any city *may* do any and all things necessary to lay out, acquire, and construct any section or portion of any street or highway within its jurisdiction as a freeway, and to make any existing street or highway a freeway."]; 1801 ["The legislative body of any city *may* close any street or highway within its jurisdiction at or near the point of its intersection with any freeway, or *ma*y make provision for carrying such street or highway over, under, or to a

would suffer certain and severe penalties such as "double…taxation" or other "draconian" consequences" if they fail to comply with the permit's annual reporting requirements for municipal projects.[902]

Accordingly, the new activities as they apply to municipal developments are not mandated by the state.

However, *except as applicable to a claimant's own municipal development*, the remaining requirements mandate a new program or higher level of service:

- Develop and maintain a watershed-based database to track and inventory all projects, within its jurisdiction, that have a final approved SSMP with structural post-construction BMPs implemented since July 2005. The database must include information on BMP type; location; watershed; date of construction; the party responsible for maintenance, maintenance verifications, and corrective actions; and whether the site was referred to the local vector control agency.[903]
- Verify that the required structural post-construction BMPs on inventoried *residential* projects have been implemented, are maintained, and are operating effectively every five years. Verification can be made through inspections, self-certifications, surveys, or other equally effective approaches.[904]
- Annually inspect the required structural post-construction BMPs at high priority *residential* projects.[905]
- For all inventoried projects, verifications performed through a means other than direct copermittee inspection, adequate documentation must be submitted to the copermittee to provide assurance that the required maintenance has been completed.[906]
- Inspections of the required structural post-construction BMPs at all inventoried projects must note observations of vector conditions and, where conditions are contributing to

---

connection with the freeway, and *may* do any and all necessary work on such street or highway."].

> mosquito production, the copermittee is required to notify the local vector control agency.[907]

In *Department of Finance v. Commission on State Mandates*, the California Supreme Court identified the following test to determine whether certain conditions imposed by an NPDES stormwater permit issued by the Los Angeles Regional Water Board were mandated by the state or the federal government:

> If federal law compels the state to impose, or itself imposes, a requirement, that requirement is a federal mandate. On the other hand, if federal law gives the state discretion whether to impose a particular implementing requirement, and the state exercises its discretion to impose the requirement by virtue of a "true choice," the requirement is not federally mandated.[908]

The courts have also explained that "except where a regional board finds the conditions are the *only means* by which the [federal] 'maximum extent practicable' standard can be met, the state exercises a true choice by determining what controls are necessary to meet the standard."[909] "That the San Diego Regional Board found the permit requirements were 'necessary' to meet the standard establishes only that the San Diego Regional Board exercised its discretion."[910]

In this case, the Water Boards argue that the requirements in Section F.1.f. are necessary to meet the MEP standard under federal law and that the US EPA recommended the copermittees create an inventory of post-construction structural stormwater control measures and specific inspection requirements to meet the MEP requirements. Federal law requires that NPDES permits "shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants."[911] Federal law also requires the claimants to propose a management program that includes a comprehensive master plan to develop, implement, and enforce controls to reduce the discharge of pollutants from the MS4s that receive discharges from areas of new development and significant redevelopment. The plan is required to "address controls to reduce pollutants in discharges from municipal separate storm sewers *after construction is completed*."[912] And the program is required to include inspections to prevent illicit discharges from entering the MS4.[913] Federal law, however, gives the Water Boards

discretion to determine what controls and inspections are necessary to meet the MEP standard, and does not require any specific activities. Moreover, there is no evidence in the record that the new required activities are the only means by which the federal MEP standard can be met.

Accordingly, the Commission finds that *except as applicable to a claimant's own municipal development* the new activities required by Section F.1.f. are mandated by the state.

Moreover, these activities constitute a new program or higher level of service. "New program or higher level of service" is defined as "programs that carry out the governmental function of providing services to the public, or laws which, to implement a state policy, impose unique requirements on local governments and do not apply generally to all residents and entities in the state."[914]

The new requirements cited above are expressly directed toward the local agency permittees under their regulatory authority and, thus, are unique to government, and, except as applicable to their own municipal development, detail their responsibilities to:

- Develop and maintain a watershed-based database to track and inventory all projects, within its jurisdiction, that have a final approved SSMP with structural post-construction BMPs implemented since July 2005. The database must include information on BMP type; location; watershed; date of construction; the party responsible for maintenance, maintenance verifications, and corrective actions; and whether the site was referred to the local vector control agency.[915]
- Verify that the required structural post-construction BMPs on inventoried *residential* projects have been implemented, are maintained, and are operating effectively every five years. Verification can be made through inspections, self-certifications, surveys, or other equally effective approaches.[916]
- Annually inspect the required structural post-construction BMPs at high priority *residential* projects.[917]
- For all inventoried projects, verifications performed through a means other than direct copermittee inspection, adequate documentation must be submitted to the copermittee to provide assurance that the required maintenance has been completed.[918]
- Inspections of the required structural post-construction BMPs at all inventoried projects must note observations of vector conditions and, where conditions are contributing to

mosquito production, the copermittee is required to notify the local vector control agency.[919]

"The challenged requirements are not bans or limits on pollution levels, they are mandates to perform specific actions" designed to reduce the discharge of pollutants in stormwater runoff to the MEP, and prevent runoff discharges from the MS4 from causing or contributing to a violation of water quality standards.[920] Therefore, the new requirements also carry out the governmental function of providing services to the public.

Accordingly, the new state-mandated activities required by Sections F.1.f. of the test claim permit impose a new program or higher level of service.

6. Section F.2.d.3. Imposes a State-Mandated New Program or Higher Level of Service to Require Implementation of Active/Passive Sediment Treatment at Construction Sites (Other Than the Claimants' Own Municipal Construction Site), But the Requirements in Section F.2.e.(6)(e) Are Not New and Do Not Impose a New Program or Higher Level of Service.

The claimants pled the requirements in Sections F.2.d.3. and F.2.e.6.e. of the test claim permit, which require the copermittees to require the implementation of Active/Passive Sediment Treatment (AST)[921] at construction sites that are determined by the copermittee to be an exceptional threat to water quality, and to review site monitoring data, if the site monitors its runoff, as part of construction site inspections.[922]

The Commission finds that Section F.2.d.3. imposes a state-mandated new program or higher level of service only when the claimant is acting in its regulatory capacity and is performing the following activity for construction sites other than its own:

- Require implementation of AST for sediment at construction sites other than its own (or portions thereof) that are determined to be an exceptional threat to water quality.[923]

---

[919] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 222 (test claim permit, Section F.1.f.2.b.vii.).

[920] *Department of Finance v. Commission on State Mandates* (2021) 59 Cal.App.5th 546, 560; Exhibit A, Test Claim filed November 10, 2011 and Revised April 28, 2017, pages 188, 212, 503 (test claim permit; Fact Sheet/Technical Report).

[921] Active/Passive Sediment Treatment is defined as "[u]sing mechanical, electrical or chemical means to flocculate or coagulate suspended sediment for removal from runoff from construction sites prior to discharge. Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 283 (test claim permit, Attachment C).

[922] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 22, 59-60. The claimants have not alleged any other activities in section F.2.d., and, thus, only Sections F.2.d.3. and F.2.e.6.e. of the test claim permit are analyzed in this Decision.

[923] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 231 (test claim permit, Section F.2.d.3.).

However, with respect to a local agency's own *municipal* construction sites, the requirement to implement AST is not mandated by the state, but is triggered by a local discretionary decision to construct new municipal projects. Moreover, implementing AST at a local agency's own municipal construction site does not impose a new program or higher level of service because such costs are not unique to government and do not provide a governmental service to the public.

Finally, the Commission finds that Section F.2.e.6.e. of the test claim permit, which requires that inspections of construction sites must include a review of facility monitoring data results if the site monitors its runoff, is not new, and does not impose a new program or higher level of service.

a. Background

i. Federal law requires an NPDES applicant to propose structural and source control measures to reduce pollutants from runoff from all construction sites to the maximum extent practicable (MEP).

Under federal law, NPDES permits "shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants."[924]

Federal regulations require that the application for an NPDES permit for large and medium MS4 dischargers must describe a proposed management program that covers the duration of the permit to be considered by the Regional Board when developing permit conditions to reduce pollutants in discharges to the MEP. The proposed management program shall include a comprehensive planning process which involves public participation and where necessary, intergovernmental coordination, to reduce the discharge of pollutants to the MEP using management practices, control techniques and system, design and engineering methods, and other appropriate conditions.[925] Further, the application must demonstrate adequate legal authority, through ordinance, permit, or other means, to control pollutants to the MS4 from stormwater discharges associated with industrial activity and to carry out all inspection, surveillance, and monitoring procedures necessary to determine compliance and noncompliance with permit conditions.[926] Stormwater discharges associated with industrial activity are defined to include construction activity.[927] The legal authority shall also prohibit illicit discharges to the MS4.[928]

As relevant here, the proposed management program shall include a description of a program to implement and maintain structural and non-structural BMPs to reduce pollutants in stormwater runoff from construction sites to the MS4, including:

---

[924] United States Code, title 33, section 1342(p)(3)(B)(iii) (Public Law 100-4).

[925] Code of Federal Regulations, title 40, section 122.26(d)(2)(iv).

[926] Code of Federal Regulations, title 40, section 122.26(d)(2)(i)(A), (F).

[927] Code of Federal Regulations, title 40, section 122.26(b)(14)(x).

[928] Code of Federal Regulations, title 40, section 122.26(d)(2)(i)(B).

- Procedures for site planning, which incorporates consideration of potential water quality impacts.
- Requirements for nonstructural and structural BMPs.
- Procedures for identifying priorities for inspecting sites and enforcing control measures, which consider the nature of the construction activity, topography, and the characteristics of soils and receiving water quality.
- Appropriate educational and training measures for construction site owners.[929]

ii. The prior permit required each permittee to implement a program, which included inspections, to reduce pollutants in construction site runoff to the MEP.

The prior permit identifies the following general prohibitions and receiving water limitations with which the permittees are required to comply:

- Discharges into and from MS4s in a manner causing, or threatening to cause, a condition of pollution, contamination, or nuisance (as defined in CWC section 13050), in the waters of the state are prohibited.
- Discharges from MS4s that cause or contribute to exceedances of water quality objectives for surface water and ground water are prohibited.
- Discharges from MS4s containing pollutants which have not been reduced to the MEP are prohibited.
- Discharges from MS4s that are subject to all Basin Plan prohibitions (cited in Attachment A to the order) are prohibited.
- All types of non-stormwater discharges into the MS4, unless authorized by an NPDES permit, are prohibited.
- Discharges from MS4s that cause or contribute to the violation of water quality standards (designated beneficial uses and water quality objectives developed to protect beneficial uses of receiving waters) are prohibited.[930]

The prior permit also requires the permittees to have adequate legal authority to control pollutant discharges into and from the MS4 through ordinance, statute, permit, contract, or other similar means. The legal authority, at a minimum, must authorize the permittee to do the following:

- Control the contribution of pollutants in discharges of runoff associated with industrial and construction activity to its MS4 and control the quality of runoff from industrial and construction sites. This requirement applies to both industrial and construction sites that have coverage under the General Industrial Permit and the General Construction Permit, as well as to those sites that do not.

[929] Code of Federal Regulations, title 40, section 122.26(d)(2)(iv)(D).

[930] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 572-573, 597 (Order R9-2004-0001, Sections A., B.1., C.1.).

- Prohibit all illicit discharges and connections to the MS4.
- Control the discharge of spills, dumping or disposal of materials other than stormwater to its MS4.
- Require compliance with the copermittee's ordinances, permits, contracts, or orders by holding dischargers accountable for the contributions to pollutants and flows.
- Require the use of BMPs to reduce or prevent the discharge of pollutants into the MS4 to the MEP.
- Carry out all inspections and monitoring necessary to determine compliance and noncompliance with local ordinances and orders, and the prior permit.[931]

To comply with the prohibitions and receiving water limitations, the prior permit required each permittee to implement a program to reduce pollutants in runoff to the MEP during all construction phases. The permittees were required to include the following in their programs:

- Implement and require implementation of pollution prevention methods.[932]
- Review and update grading ordinances as necessary for compliance with stormwater ordinances and the prior permit.[933]
- Develop and implement a process to ensure that BMPs to reduce the discharge of pollutants to the MEP are applicable to construction and grading permits and plans prior to their approval.[934]
- Develop and annually update an inventory of all construction sites within its jurisdiction.[935]
- Designate a set of minimum BMPs and implement or require their implementation to ensure erosion prevention, slope stabilization, phased grading, revegetation, preservation of natural hydraulic features and riparian buffers and corridors, maintenance of all source and treatment control BMPs, and retention and proper management of sediment and other construction-related pollutants.[936]

- Enforce its ordinances (grading, stormwater, etc.) and permits (building, grading, etc.) at all construction sites as necessary to maintain compliance with the prior permit.[937]

In addition, the permittees were required to conduct inspections of construction sites for compliance with their local ordinances (grading, stormwater, etc.), permits (construction, grading, etc.), and the prior permit.[938] During the wet season, the frequencies of the inspections depended on the size of the site and the threat to water quality.[939] The following sites had to be inspected every two weeks during the wet season:

- All sites 5 acres or more, and tributary to a CWA section 303(d) water body impaired for sediment or within or directly adjacent to or discharging directly to a receiving water within ESA.
- Other sites determined by the permittees or the SDRWQCB as a significant threat to water quality. In evaluating threat to water quality, the following factors shall be considered: (1) soil erosion potential; (2) site slope; (3) project size and type; (4) sensitivity of receiving water bodies; (5) proximity to receiving water bodies; (6) non-stormwater discharges; and (7) any other relevant factors.[940]

During the dry season, the permittees were required to inspect all construction sites as needed.[941]

Finally, based upon site inspection findings, each permittee was required to implement all follow-up actions necessary to comply with the prior permit.[942] In this respect, the prior permit required additional controls for construction sites tributary to 303(d) waterbodies impaired for sediment as necessary to comply with this Order. "Each Permittee shall implement, or require implementation of, additional controls for construction sites within or adjacent to or discharging directly to receiving waters within ESAs as necessary to comply with this Order."[943]

The Findings of the prior permit explain the rationale for these requirements as follows:

---

[937] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 586 (Order R9-2004-0001, Section G.7.).

[940] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 586 (Order R9-2004-0001, Sections G.6.b.).

[941] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 586 (Order R9-2004-0001, Section G.6.e.).

[942] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 586 (Order R9-2004-0001, Section G.6.f.).

[943] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 585 (Order R9-2004-0001, Sections G.5.d.).

> As operators of the MS4s, the Permittees cannot passively receive and discharge pollutants from third parties. By providing free and open access to an MS4 that conveys discharges to waters of the U.S., the operator essentially accepts responsibility for discharges into the MS4 that it does not prohibit or control. These discharges may cause or contribute to a condition of contamination or exceedances of water quality objectives.[944]

The Findings also state the following:

> In accordance with federal NPDES regulations and to ensure the most effective oversight of . . . construction site discharges, discharges of runoff from . . . construction sites are subject to dual (state and local) storm water regulation. Under this dual system, the SDRWQCB is responsible for enforcing the General Construction Activities Storm Water Permit . . . , and each municipal Permittee is responsible for enforcing its local permits, plans, and ordinances, which may require the implementation of additional BMPs than required under the statewide general permits.[945]

b. Section F.2.d.3. of the test claim permit imposes a state-mandated new program or higher level of service.

i. Section F.2.d.3. of the test claim permit adds a new requirement for the implementation of active/passive sediment treatment at construction sites determined to be an exceptional threat to water quality.

The requirement to have a construction program is set forth in the test claim permit in Section F.2., and, like the prior permit, the program must include an ordinance update, an updated inventory of construction sites, a process to review BMPs before issuing a permit, BMP designation and implementation, inspections, and enforcement.[946] The goals of the program are to prevent illicit discharges into the MS4, implement structural and non-structural BMPs to reduce pollutants in stormwater runoff from construction sites to the MEP, reduce construction site discharges of stormwater pollutants to the MEP, and prevent construction site discharges from causing or contributing to a violation of water quality standards.[947] As stated in Finding 1.f.: "Construction sites without adequate BMP implementation result in sediment runoff rates which greatly exceed natural erosion rates of undisturbed lands, causing siltation and

[946] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 229-234 (test claim permit, Section F.2.).

[947] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 229 (test claim permit, Section F.2.).

impairment of receiving waters."[948] The importance of focusing on construction sites is further explained in the Fact Sheet:

> Management of storm water runoff during the construction phase is also essential. USEPA explains in the preamble to the Phase II regulations that storm water discharges generated during construction activities can cause an array of physical, chemical, and biological water quality impacts. Specifically, the biological, chemical and physical integrity of the waters may become severely compromised due to runoff from construction sites. Fine sediment from construction sites can adversely affect aquatic ecosystems by reducing light penetration, impeding sight-feeding, smothering benthic organisms, abrading gills and other sensitive structures, reducing habitat by clogging interstitial spaces within the streambed, and reducing intergravel dissolved oxygen by reducing the permeability of the bed material. Water quality impairment also results, in part, because a number of pollutants are preferentially absorbed onto mineral or organic particles found in fine sediment. The interconnected process of erosion (detachment of the soil particles), sediment transport, and delivery is the primary pathway for introducing key pollutants, such as nutrients, metals, and organic compounds into aquatic systems.[949]

Accordingly, Section F.2.d.3. of the test claim permit requires each copermittee to require implementation of Active/Passive Sediment Treatment (AST) at construction sites, or portions of sites, that the copermittee determines to be an exceptional threat to water quality.[950] AST requires the use of "mechanical, electrical or chemical means to flocculate or coagulate suspended sediment for removal from runoff from construction sites prior to discharge."[951]

The copermittees must consider the following in making their determination of whether a site is an exceptional threat to water quality: soil erosion potential or soil type, the site's slopes, project size and type, sensitivity of receiving water bodies, proximity to receiving water bodies, non-stormwater discharges, ineffectiveness of other BMPs, proximity and sensitivity of aquatic threatened and endangered species of concern, known effects of AST chemicals, and any other relevant factors.[952] As the Fact Sheet explains:

> For sites that are identified as exceptional threat to water quality, active/passive sediment treatment (AST) is required to be implemented *in addition* to the

---

[948] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 189 (test claim permit, Finding 1.f.).

[949] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 430 (Fact Sheet/Technical Report) citing 64 Federal Register 68728.

[950] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 231 (test claim permit, Section F.2.d.3.).

[951] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 283 (test claim permit, Attachment C).

[952] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 230-231 (test claim permit, Section F.2.d.3.a.-j.).

> minimum set and/or enhanced sediment control BMPs. AST is required at construction sites that are identified by the Copermittee as an exceptional threat to water quality due to high turbidity or suspended sediment levels in the site's effluent even when other sediment control BMPs have been implemented. In cases where the Copermittee's designated minimum set of BMPs and/or enhanced BMPs are not able or expected to be able to reduce turbidity or suspended sediment levels to a level that will be protective of water quality, AST is *necessary* and is considered MEP for the discharges from these sites.[953]

Although the prior permit required additional controls necessary to comply with water quality standards for construction sites tributary to 303(d) waterbodies impaired for sediment and those within or adjacent to or discharging directly to receiving waters within ESAs,[954] it did not specifically require the implementation of AST at those sites and instead left the decision about which additional controls to use to the local agency permittees. The Water Boards acknowledge that this requirement was not in the prior permit.[955]

Therefore, Section F.2.d.3. imposes the following new requirement:

- Require implementation of AST for sediment at construction sites (or portions thereof) that are determined to be an exceptional threat to water quality.[956]

> *ii. The activity to require implementation of active/passive sediment treatment (AST) at a copermittee's own municipal construction site is not mandated by the state, but is triggered by a local discretionary decision to construct new municipal projects, and does not impose a new program or higher level of service because such costs are not unique to government and do not provide a governmental service to the public.*

As set forth above, the implementation of AST for any construction site where the copermittee has determined that the site is an exceptional threat to water quality is required by the test claim permit. The claimants contend that this activity is eligible for reimbursement under article XIII B, section 6 of the California Constitution. However, any costs related to implementation of AST that are incurred by a local agency permittee as a project proponent of new municipal

[955] Exhibit C, Water Boards' Comments on the Test Claim, filed September 22, 2017, page 34 ("*Although the specific challenged provisions were not contained in the prior permit*, it contained numerous requirements directing Claimants to control pollutants in discharges of runoff associated with industrial and construction activity and to require construction sites to comply with construction and grading ordinances and permits." Emphasis added.).

[956] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 231 (test claim permit, Section F.2.d.3.).

projects are not mandated by the state, are the result of a local discretionary decision, and are, therefore, not eligible for reimbursement.

In *City of Merced*, the statute at issue required a local government, when exercising the power of eminent domain, to compensate a business owner for the loss of business goodwill, as part of the compensation paid for the property subject to the taking.[957] The court found that no state law *required* the local entity to exercise the power of eminent domain, and thus any costs experienced as a result of the requirement to compensate for business goodwill was the result of an initial discretionary act.[958]

In *Kern High School Dist.*, the statute at issue required certain local school committees to comply with notice and agenda requirements in conducting their public meetings.[959] There, the court held that the underlying school site councils and advisory committees were part of several separate voluntary grant funded programs, and therefore any notice and agenda costs were an incidental impact of participating or continuing to participate in those programs and were not legally compelled by state law.[960] The court left open the possibility that a state mandate could be based on practical compulsion if the failure to comply resulted in "'certain and severe…penalties' such as 'double…taxation' or other 'draconian' consequences."[961] The court acknowledged that the district was already participating in the underlying programs, and "as a practical matter, they feel they must participate in the programs, accept program funds, and…incur expenses necessary to comply with the procedural conditions imposed on program participants."[962] However, the court held that "[c]ontrary to the situation that we described in *City of Sacramento* [*v. State* (1990)] 50 Cal.3d 51, a claimant that elects to discontinue participation in one of the programs here at issue does not face 'certain and severe…penalties' such as 'double…taxation' or other 'draconian' consequences, but simply must adjust to the withdrawal of grant money along with the lifting of program obligations."[963]

[963] *Department of Finance v. Commission on State Mandates* (*Kern High School Dist.*) (2003) 30 Cal.4th 727, 754 citing *City of Sacramento v. State* (1990) 50 Cal.3d 51, 74.

More recently, the Third District Court of Appeal addressed the bounds of the *Kern High School Dist.* rule in greater detail in *Department of Finance v. Commission* (2009) 170 Cal.App.4th 1355 (*POBRA*), holding that following *City of Merced*, *Kern High School Dist.*, and *San Diego Unified School Dist. v. Commission on State Mandates* (dealing with discretionary expulsions),[964] there may be activities that involve the exercise of discretion but are nevertheless inevitable in the administration of a mandatory program and, thus, any downstream activities required by state law could be determined mandated by the state. The issue, then, for the court in *POBRA*, was whether the alleged mandated costs spring from a local entity's "essential and basic function."[965] In *POBRA*, the alleged mandate pertained to due process protections required to be extended to all peace officers in the state, and the question was whether those costs constituted a reimbursable state mandate with respect to school districts, which were authorized, but not required, to employ peace officers. The court held that school districts "do not have provision of police protection as an essential and basic function," and therefore the decision to employ peace officers entitled to the protections of POBRA was a discretionary act that led the district to incur the costs alleged.[966] The court concluded that "[i]t is not essential unless there is a showing that, as a practical matter, exercising the authority to higher peace officers is the only reasonable means to carry out their core mandatory functions."[967]

Here the statutes do not legally compel local agencies to construct new municipal sites.[968] They have the discretion to do so.[969] Thus, the state has not legally compelled them to implement

Commission on State Mandates* (2022) 13 Cal.5th 800, 815-817; *Department of Finance v. Commission on State Mandates* (2009) 170 Cal.App.4th 1355, 1368 (*POBRA*).

[969] For example, see Government Code section 23004 (counties may purchase, receive by gift or bequest, and hold land within its limits, or elsewhere when permitted by law; and manage, sell, lease, or otherwise dispose of its property as the interests of its inhabitants require); Government Code sections 37350-37353 (cities may purchase, lease, receive, hold, and enjoy real property, and control and dispose of it for the comment benefit; may erect and maintain buildings for municipal purposes; and may acquire property for parking motor vehicles, and for opening and laying out any street; Government Code section 37111 ("When the legislative body deems it necessary that land purchased for park or other purposes be used for construction of public buildings or creation of a civic center, it may adopt an ordinance by a four-fifths vote declaring the necessity and providing for such use").

AST for sediment at their own municipal construction sites that are determined to be an exceptional threat to water quality.

Further, there is no evidence in the record that a failure to construct new municipal sites would subject the claimant to "certain and severe…penalties" such as "double…taxation" or other "draconian" consequences.[970] Substantial evidence in the record is required to make a finding of practical compulsion.[971]

Therefore, the Commission finds that Section F.2.d.3. of the test claim permit, as applied to the local agency permittee's own municipal construction sites, are not mandated by the state.

Moreover, the activity to implement AST at the agency's own municipal construction sites determined to be an exceptional threat to water quality does not impose a new program or higher level of service. Article XIII B, section 6 requires reimbursement whenever the Legislature or any state agency mandates a new program or higher level of service that results in costs mandated by the state. "New program or higher level of service" is defined as "programs that carry out the governmental function of providing services to the public, or laws which, to implement a state policy, impose unique requirements on local governments and do not apply generally to all residents and entities in the state."[972] Here, the AST requirement is imposed on *all* construction sites that are an exceptional threat to water quality. As the Fact Sheet explains: "AST is required at construction sites that are identified by the Copermittee as an exceptional threat to water quality due to high turbidity or suspended sediment levels in the site's effluent even when other sediment control BMPs have been implemented."[973] Thus, AST implementation applies without regard to whether the construction project is public or private. Further, implementing AST at all sites that are determined to be an exceptional threat to water quality is not unique to government and does not provide a *governmental* service to the public.

Accordingly, the Commission finds that Section F.2.d.3., as applied to a local agency permittee's own municipal construction sites, does not impose a state-mandated new program or higher level of service.

[973] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 512 (Fact Sheet/Technical Report).

iii. The requirement imposed on claimants by section F.2.d.3. to require the implementation of active/passive sediment treatment (AST) at construction sites (or portions thereof) that are determined to be an exceptional threat to water quality, which is performed by the claimants in their capacity to regulate construction sites other than their own, is mandated by the state and imposes a new program or higher level of service.

The requirement imposed on the claimants by Section F.2.d.3. to require the implementation of AST at construction sites (or portions thereof) that are determined to be an exceptional threat to water quality, is also imposed on the claimants in their regulatory capacity. In this respect, the required activity mandates a new program or higher level of service.

Federal law requires that NPDES permits "shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants."[974]

In *Department of Finance v. Commission on State Mandates*, the California Supreme Court identified the following test to determine whether certain conditions imposed by an NPDES stormwater permit issued by the Los Angeles Regional Water Board were mandated by the state and or the federal government:

> If federal law compels the state to impose, or itself imposes, a requirement, that requirement is a federal mandate. On the other hand, if federal law gives the state discretion whether to impose a particular implementing requirement, and the state exercises its discretion to impose the requirement by virtue of a "true choice," the requirement is not federally mandated.[975]

The courts have also explained that "except where a regional board finds the conditions are the *only means* by which the [federal] 'maximum extent practicable' standard can be met, the State exercises a true choice by determining what controls are necessary to meet the standard."[976] "That the San Diego Regional Board found the permit requirements were 'necessary' to meet the standard establishes only that the San Diego Regional Board exercised its discretion."[977]

In this case, the Water Boards argue that the requirement in Section F.2.d.3. is necessary to meet the federal MEP standard. This is supported by the Fact Sheet, which states that, "AST is

[975] *Department of Finance v. Commission on State Mandates* (2016) 1 Cal.5th 749, 765. This case addressed a challenge by the State to the Commission's Decision in *Municipal Stormwater and Urban Runoff Discharges*, 03-TC-04, 03-TC-19, 03-TC-20, 03-TC-21, adopted July 31, 2009.

[976] *Department of Finance v. Commission on State Mandates* (2017) 18 Cal.App.5th 661, 682, citing *Department of Finance v. Commission on State Mandates* (2016) 1 Cal.5th 749, 768, emphasis added.

[977] *Department of Finance v. Commission on State Mandates* (2017) 18 Cal.App.5th 661, 682.

necessary and is considered MEP for the discharges from [construction] sites."[978] Federal law, however, gives the Water Boards discretion to determine what controls are necessary to meet the MEP standard, and does not require any specific activities.[979] Moreover, there is no evidence in the record that the new required activities are the only means by which the federal MEP standard can be met.

Accordingly, the new requirement imposed on the claimants by Section F.2.d.3. to require, in their regulatory capacity, the implementation of AST for sediment at construction sites other than their own (or portions thereof) that are determined to be an exceptional threat to water quality, is mandated by the state.

The Commission also finds that the activity constitutes a new program or higher level of service. "New program or higher level of service" is defined as "programs that carry out the governmental function of providing services to the public, or laws which, to implement a state policy, impose unique requirements on local governments and do not apply generally to all residents and entities in the state."[980] Only one of these alternatives is required to establish a new program or higher level of service.[981]

Here, the new mandated activity is expressly directed toward the local agency permittees under their regulatory authority, and thus is unique to local government. The mandate to require that AST is implemented at construction sites that are determined to be an exceptional threat to water quality is intended to promote water quality and reduce the discharge of pollutants from construction activity.[982] "The challenged requirements are not bans or limits on pollution levels, they are mandates to perform specific actions" designed to reduce pollution entering stormwater drainage systems and receiving waters.[983] Thus, the new mandated activity also provides a governmental service to the public.

Accordingly, Section F.2.d.3. mandates a new program or higher level of service when performed by the claimants in their regulatory capacity:

- Require implementation of AST for sediment at construction sites other than their own (or portions thereof), that are determined to be an exceptional threat to water quality.[984]

[984] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 231 (test claim permit, Section F.2.d.3.).

c. Section F.2.e.6.e. of the test claim permit, which requires that inspections of construction sites must include a review of facility monitoring data results if the site monitors its runoff, does not impose a new program or higher level of service.

i. Section F.2.e.6.e. of the test claim permit provides that inspections of construction sites must include a review of facility monitoring data results, if the site monitors its runoff.

Section F.2.e. of the test claim permit, like the prior permit, requires each copermittee to conduct construction site inspections for compliance with its ordinances (grading, stormwater, etc.), permits (construction, grading, etc.), and this Order.[985] Section F.2.e.6.e. adds the following language to these provisions: "[i]nspections must include . . . a review of the site monitoring data results, if the site monitors its runoff."[986] According to the Water Boards, this means that the claimants are now also required to review the monitoring results if a construction site it is inspecting has monitored its runoff.[987]

The claimants seek reimbursement only for the costs to review the monitoring data results if the construction site monitors its runoff, and the associated costs to train inspectors, and not for the full inspection.[988]

> Claimants were required, when they inspected construction sites, to review any collected monitoring data. This required Claimants to ensure that their inspection staff were trained at the same level as state inspectors, such as those from the RWQCB. It should be noted that Claimants cannot collect fees to cover the increased costs to train on and review this data, as the State already collects fees for such a service as part of the General Construction Permit.
>
> To address these requirements, the District, through the cost-sharing mechanism in the Implementation Agreement, conducted training of Claimant staff and updated the JRMP template.[989]

As described below, the requirement to review the monitoring results if a construction site it is inspecting has monitored its runoff is not new and, therefore, does not impose a new program or

higher level of service. In addition, Section F.2.e.6.e. does not require the claimants to provide training to their employees.

> *ii. Section F.2.e.6.e. of the test claim permit clarifies the duties under existing law, but does not impose a new requirement on the claimants to review the monitoring results if a construction site it is inspecting has monitored its runoff and, thus, section F.2.e.6.e. does not impose a new program or higher level of service. In addition, section F.2.e.6.e. does not require the claimants to provide training to their employees.*

Section F.2.e.6. lists the items that need review on inspection of construction sites. Section F.2.e.6.e. states that "[i]nspections must include . . . a review of the site monitoring data results, if the site monitors its runoff."[990]

The claimants argue that the requirement to review monitoring data results of construction sites is a new state-mandated activity that has been shifted by the state to local governments.[991] The claimants rely on the Supreme Court's decision in *Department of Finance v. Commission on State Mandates* (2016) 1 Cal.5th 749. That case addressed the Commission's Decision in *Municipal Stormwater and Urban Runoff Discharges*, 03-TC-04, 03-TC-19, 03-TC-20, 03-TC-21, where the Commission found that the NPDES permit issued by the Los Angeles Regional Water Control Board imposed *new* state-mandated requirements on the local agency permittees to inspect restaurants, automotive service facilities, retail gasoline outlets, and automotive dealerships.[992] The Supreme Court agreed, finding that the Regional Board had primary responsibility for inspecting industrial and commercial facilities under state and federal law and shifted that responsibility to the permittees as follows:

> Neither the CWA's "maximum extent practicable" provision nor the EPA regulations on which the State relies expressly required the Operators to inspect these particular facilities or construction sites. The CWA makes no mention of inspections. (33 U.S.C. § 1342(p)(3)(B)(iii).) The regulations required the Operators to include in their permit application a description of priorities and procedures for inspecting certain industrial facilities and construction sites, but suggested that the Operators would have discretion in selecting which facilities to inspect. (See C.F.R. § 122.26(d)(2)(iv)(C)(1).) The regulations do not mention commercial facility inspections at all.

---

[990] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 233 (test claim permit, Section F.2.e.6.e.).

[991] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 60 (Test Claim narrative).

[992] The Commission ultimately denied reimbursement for the inspection activities because the claimants had adequate fee authority to pay for such costs pursuant to Government Code section 17556(d) and, therefore, there were no costs mandated by the state. The Second District Court of Appeal, in *Department of Finance v. Commission on State Mandates* (2021) 59 Cal.App.5th 546, 562-565, upheld the Commission's Decision.

Further, as the Operators explained, state law made the *Regional Board* responsible for regulating discharges of waste within its jurisdiction. (Wat. Code, §§ 13260, 13263.) This regulatory authority included the power to "inspect the facilities of any person to ascertain whether ... waste discharge requirements are being complied with." (Wat. Code, § 13267, subd. (c).) Thus, state law imposed an overarching mandate that the Regional Board inspect the facilities and sites.

In addition, federal law and practice required the Regional Board to inspect all industrial facilities and construction sites. Under the CWA, the State Board, as an issuer of NPDES permits, was required to issue permits for storm water discharges "associated with industrial activity." (33 U.S.C. § 1342(p)(3)(A).) The term "industrial activity" includes "construction activity." (40 C.F.R. § 122.26(b)(14)(x).) The Operators submitted evidence that the State Board had satisfied its obligation by issuing a general industrial activity stormwater permit and a general construction activity stormwater permit. Those statewide permits imposed controls designed to reduce pollutant discharges from industrial facilities and construction sites. Under the CWA, those facilities and sites could operate under the statewide permits rather than obtaining site-specific pollutant discharge permits.

The Operators showed that, in those statewide permits, the State Board had placed responsibility for inspecting facilities and sites on the *Regional Board*. The Operators submitted letters from the EPA indicating the State and regional boards were responsible for enforcing the terms of the statewide permits. The Operators also noted the State Board was authorized to charge a fee to facilities and sites that subscribed to the statewide permits (Wat. Code, § 13260, subd. (d)), and that a portion of that fee was earmarked to pay the Regional Board for "inspection and regulatory compliance issues." (Wat. Code, § 13260, subd. (d)(2)(B)(iii).) Finally, there was evidence the Regional Board offered to pay the County to inspect industrial facilities. There would have been little reason to make that offer if federal law required the County to inspect those facilities.

This record demonstrates that the Regional Board had primary responsibility for inspecting these facilities and sites. It shifted that responsibility to the Operators by imposing these Permit conditions. The reasoning of *Hayes, supra,* 11 Cal.App.4th 1564, 15 Cal.Rptr.2d 547, provides guidance. There, the EHA required the state to provide certain services to special education students, but gave the state discretion in implementing the federal law. (*Hayes*, at p. 1594, 15 Cal.Rptr.2d 547.) The state exercised its "true discretion" by selecting the specific requirements it imposed on local governments. As a result, the *Hayes* court held the costs incurred by the local governments were state-mandated costs. (*Ibid*.) Here, state and federal law required the Regional Board to conduct inspections. The Regional Board exercised its discretion under the CWA, and shifted that obligation to the Operators. That the Regional Board did so while exercising its permitting authority under the CWA does not change the nature of the Regional

Board's action under section 6. Under the reasoning of *Hayes*, the inspection requirements were not federal mandates.[993]

Unlike the facts in the *Department of Finance* case, however, inspection of construction sites in this case, including all activities necessary to assess compliance with ordinances and water quality standards, is *not* new, but was imposed by the prior permit.

Reimbursement under article XIII B, section 6 requires that all elements be met, including that any increased costs result from a new program or higher level of service mandated by the state on the local agency.[994] To determine whether a test claim statute imposes a new program or higher level of service, the required activities imposed by the state must be *new.*[995] Alternatively, a new program or higher level of service can occur if the state transfers to local agencies complete or partial financial responsibility for a required program for which the state previously had complete or partial financial responsibility.[996] To determine if a mandated activity or shift in costs from the state is new, the courts have used the ordinary meaning of the word "new" and have found that if local government was not required to perform the activity or incur the cost shifted from the state at the time the test claim statute or regulation became effective (which, in effect, requires a comparison of the law immediately before the effective date of the test claim statute or regulation), the mandated activity or shifted cost is new.

For example, in *Lucia Mar Unified School Dist.*, the 1981 test claim statute required local school districts to pay the cost of educating pupils in state schools for the severely handicapped — costs that the state had previously paid in full until the 1981 statute became effective.[997] The court held that the requirement imposed on local school districts to fund the cost of educating these pupils was new "*since at the time [the test claim statute] became effective* they were not required to contribute to the education of students from their districts at such schools."[998] The same analysis was applied in *County of San Diego*, where the court found that the state took full responsibility to fund the medical care of medically indigent adults in 1979, which lasted until the 1982 test claim statute shifted the costs back to counties.[999] In *City of San Jose*, the court addressed the 1990 test claim statute, which authorized counties to charge cities for the costs of booking into county jails persons who had been arrested by employees of the cities.[1000] The court denied the city's claim for reimbursement, finding that the costs were not shifted by the state since "*at the time [the 1990 test claim statute] was enacted*, and indeed long before that

statute, the financial and administrative responsibility associated with the operation of county jails and detention of prisoners was borne entirely by the county."[1001] In *San Diego Unified School District*, the court determined that the required activities imposed by 1993 test claim statutes, which addressed the suspension and expulsion of K-12 students from school, were "new in comparison with the preexisting scheme in view of the circumstances that they did not exist prior to the enactment of [the 1993 test claim statutes]."[1002] And in *Department of Finance. v. Commission on State Mandates* (2021) 59 Cal.App.5th 546 (on remand from the California Supreme Court), the court found that installing and maintaining trash receptacles at transit stops and performing inspections of industrial and commercial facilities were *new duties* that local governments were required to perform, when compared to prior law.[1003] The purpose of article XIII B, section 6 is to prevent the state from forcing extra programs on local government each year in a manner that negates their careful budgeting of increased expenditures that are counted against the local government's annual spending limit.[1004]

In this case, although the prior permit did not expressly state that reviewing construction site monitoring data results if the site monitors its runoff was required as part of the inspection, it did expressly require the claimants to conduct inspections for compliance with local stormwater ordinances on construction sites and to enforce its ordinances "as necessary to maintain compliance with this Order," including the permit's receiving water limitations and prohibitions banning any discharge of pollutant and non-stormwater discharges into the MS4 that would cause or contribute to the violation of water quality standards.[1005]

If anything, the requirement to review monitoring data results if the site monitors its runoff simply clarifies the existing legal requirement to assess a site's compliance with local ordinances and water quality standards. The courts have recognized that changes in statutory or regulatory language can be intended to clarify the law, rather than change it.

[1001] *City of San Jose v. State* (1996) 45 Cal.App.4th 1802, 1812, emphasis added.

[1002] *San Diego Unified School Dist. v. Commission on State Mandates* (2004) 33 Cal.4th 859, 878; see also page 869, footnotes 6 and 7, and page 870, footnote 9 (where the court describes in detail the state of the law immediately before the enactment of the 1993 test claim statutes).

[1003] *Department of Finance. v. Commission State Mandates* (2021) 59 Cal.App.5th 546, 558. As indicated earlier, however, the court also found there were no costs mandated by the state because the permittees had fee authority sufficient to pay for the costs of the inspections pursuant to Government Code section 17556(d). *Department of Finance. v. Commission State Mandates* (2021) 59 Cal.App.5th 546, 562-565.

[1004] California Constitution, articles XIII B, sections 1, 8(a) and (b); *County of Los Angeles v. State of California* (1987) 43 Cal.3d 46, 56; *Lucia Mar Unified School Dist. v. [1005] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 574-575, 584 (Order R9-2004-0001, Prohibitions and Receiving Water Limitations; Industrial/Commercial Inspections, Section G.).

> We assume the Legislature amends a statute for a purpose, but that purpose need not necessarily be to change the law. [Citation.] Our consideration of the surrounding circumstances can indicate that the Legislature made ... changes in statutory language in an effort only to clarify a statute's true meaning.[1006]

In addition, there has been no shift of costs from the state to the local agencies. As indicated in the test claim permit, the State Water Board has issued a statewide General Construction Permit (State Water Board Order 2009-0009-DWQ, NPDES No. CAS000002), which is intended to cover any construction or demolition activity and regulates stormwater runoff from construction sites and prohibits non-stormwater discharges.[1007] To be authorized to discharge stormwater under the General Permit, the legally responsible person is required to file a notice of intent, storm water pollution prevention plan, and other documents with the State Water Board.[1008] The statewide General Construction Permit does *not*, however, "preempt or supersede the authority of local storm water management agencies to prohibit, restrict, or control storm water discharges to municipal separate storm sewer systems or other watercourses within their jurisdictions."[1009] Thus, as indicated in the Fact Sheet for the test claim permit, discharges of runoff from construction sites are subject to stormwater regulation under both state and local systems to ensure the most effective oversight. The copermittees enforce their local permits, plans, and ordinances, and the State Water Boards enforce the General Construction Permit.[1010]

Thus, reviewing monitoring data results if the site monitors its runoff is not a new requirement imposed or shifted by the state, and does not constitute a new program or higher level of service.

Moreover, Section F.2.e.6.e. does not require the claimants to train their employees to review monitoring data results if the site monitors runoff.

Accordingly, Section F.2.e.6.e. does not mandate a new program or higher level of service.

7. Sections F.1.i. and F.3.a.10. of the Test Claim Permit, Addressing Erosion and Sediment Control Best Management Practices (BMPs) After Construction and During Maintenance of Unpaved Roads, Do Not Mandate a New Program or Higher Level of Service Because the Activities Are Not New and Any Downstream Costs Incurred for Municipal Unpaved Roads Are at the Discretion of the Local Agency.

The claimants have pled Sections F.1.i. and F.3.a.10. of the test claim permit.[1011] These sections are part of the Jurisdictional Runoff Management Program (JRMP) that requires the development and implementation of erosion and sediment control BMPs after construction of new unpaved roads and during maintenance activities on unpaved roads.

As described below, the Commission finds that Sections F.1.i. and F.3.a.10. of the test claim permit are not mandated by the state and do not impose a new program or higher level of service because the activities are not new and any costs incurred for municipal unpaved roads are at the discretion of the local agency.

a. Background

i. Federal law requires permittees to implement control measures to reduce pollutants from operating and maintaining public streets, roads, and highways.

Under federal law, NPDES permits "shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants."[1012] A permittee's proposed management program shall include a description of structural and source control measures to reduce pollutants from runoff from commercial and residential areas, including "practices for operating and maintaining public streets, roads and highways and procedures for reducing the impact on receiving waters of discharges from municipal storm sewer systems."[1013]

ii. The prior permit required each permittee to develop and implement programs to prevent or reduce pollutants in runoff to the maximum extent practicable (MEP) during all phases of construction and from all existing development including municipal roads.

Section A. of the 2004 prior permit contained the following general prohibitions:

- Discharges into and from MS4s in a manner causing, or threatening to cause, a condition of pollution, contamination, or nuisance (as defined in CWC section 13050), in waters of the state are prohibited.

[1011] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 21, 61-62 (Test Claim narrative).

[1012] United States Code, title 33, section 1342(p)(3)(B)(iii) (Public Law 100-4).

[1013] Code of Federal Regulations, title 40, section 122.26(d)(2)(iv)(A)(3) (71 FR 33639, June 12, 2006).

- Discharges from MS4s containing pollutants which have not been reduced to the MEP are prohibited.[1014]

Section F. of the prior permit addressed development planning and required that "[e]ach Permittee's General Plan or equivalent plan (e.g., Comprehensive, Master, or Community Plan) shall include water quality and watershed protection principles and policies to direct land-use decisions and require implementation of consistent water quality protection measures for development projects," including the following:

- Limit disturbances of natural water bodies and natural drainage systems caused by development including roads, highways; and bridges.
- Establish development guidance that protects areas from erosion and sediment loss.
- Post-development runoff from a site shall not contain pollutant loads that cause or contribute to an exceedance of receiving water quality objectives and which have not been reduced to the MEP.[1015]

Section G. of the prior permit required each permittee to implement a program to reduce pollutants in runoff to the MEP during all construction phases, including the requirement to designate and implement BMPs for the retention and proper management of sediment and other construction pollutants on site.[1016]

Section H. of the prior permit also contained provisions on existing development including municipal facilities and activities.[1017] Municipal facilities and activities "included, but were not limited to," roads, streets, highways, and parking facilities and drainage facilities.[1018] The term "road" was not defined beyond the fact that roads are municipal facilities. Under existing law, the permittees are only responsible for maintaining roads that are accepted into either the county road system or the city street system.[1019] A road is accepted into the system only through an action by the governing body or its designee.[1020] Thus, the term "roads" included whatever

[1014] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 572 (Order R9-2004-0001, Section A.1., 3.).

[1020] Streets and Highways Code sections 941(b) and 1806(a).

paved or unpaved roads had been accepted into the permittees' road system. As relevant here, the municipal program required the following:

- Develop and update annually an inventory of all of the permittee's municipal facilities and activities that generate pollutants, including not limited to, roads, streets, and highways.[1021]
- Implement or require the implementation of BMPs to reduce pollutants in urban runoff to the MEP from all the permittee's municipal facilities and activities.[1022]
- Implement, or require implementation of, additional controls for municipal facilities and activities tributary to section 303(d) impaired water bodies or within or directly adjacent to or discharging directly to receiving waters within ESAs.[1023]
- Implement a schedule of maintenance activities for structural source and treatment control BMPs designed to reduce pollutant discharges to or from its MS4s and related drainage structures.[1024]
- Inspect all municipal facilities and activities annually and implement all follow-up actions necessary to comply with the prior permit.[1025]

The Findings of the prior permit explain the rationale for these requirements as follows:

> Development and urbanization especially threaten environmentally sensitive areas (ESAs), such as water bodies designated as supporting a RARE beneficial use (supporting rare, threatened or endangered species) and CWA 303(d) impaired water bodies. Such areas have a much lower capacity to withstand pollutant shocks than might be acceptable in the general circumstance. In essence, development that is ordinarily insignificant in its impact on the environment may become significant in a particular sensitive environment. Therefore, additional control to reduce pollutants from new and existing development may be necessary for areas adjacent to or discharging directly to an ESA.[1026]

[1021] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 587 (Order R9-2004-0001, Section H.1.b.).

[1022] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 588 (Order R9-2004-0001, Section H.1.c.1.).

[1024] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 588 (Order R9-2004-0001, Section H.1.d.1.).

[1025] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 589 (Order R9-2004-0001, Section H.1.f.).

[1026] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 568 (Order R9-2004-0001, Finding 8).

As explained in the 2004 Fact Sheet, the Report of Waste Discharge (ROWD) filed on May 30, 2003, set forth the permittees' municipal facilities strategy pursuant to the permit issued in 1998 listing the municipal facilities and activities that have the potential to contribute pollutants to stormwater runoff. While roads were not included as a facility of concern, the permittees asserted that they could not control pollutants from brake pad and tire wear and internal combustion engines.[1027] The Regional Board disagreed with this assertion quoting the US EPA's Guidance Manual for the Preparation of Part 2 of the NPDES Permit Applications for Discharges from Municipal Separate Storm Sewer Systems (Guidance Manual):

> proposed management programs must include a description of practices for operation and maintenance of public streets, roads, and highways, and procedures for reducing the impact of runoff from these areas on receiving waters. [...] Pollutants from traffic can be minimized by using nonstructural controls (e.g., traffic reduction and improved traffic management), structural controls (e.g., traditional and innovative BMPs), and changing maintenance activities.[1028]

The Guidance Manual also states that road maintenance activities can contribute pollutants due to erosion because of the removal of vegetation from the shoulders and roadside ditches.[1029]

b. Sections F.1.i. and F.3.a.10. of the test claim permit do not mandate a new program or higher level of service.

i. Sections F.1.i. and F.3.a.10. of the test claim permit include specific requirements for the development and implementation of erosion and sediment control best management practices (BMPs) after construction of new unpaved roads and during maintenance activities by copermittees on unpaved roads.

The test claim permit specifically addresses unpaved roads and includes specific requirements for erosion and sediment controls to reduce and minimize the impacts of sediment discharged during storm events to the MS4s and receiving waters.[1030] Unpaved roads are defined as "a long, narrow stretch without pavement used for traveling by motor passenger vehicle between two or

[1029] Exhibit X (11), EPA, Guidance Manual for the Preparation of Part 2 of the NPDES Permit Applications for Discharges from Municipal Separate Storm Sewer Systems, November 1992, page 78, https://www3.epa.gov/npdes/pubs/owm0246.pdf (accessed on January 25, 2022).

[1030] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 424 (Fact Sheet/Technical Report, Discussion of Finding D.1.c.).

more points. Unpaved roads are generally constructed of dirt, gravel, aggregate or macadam and may be improved or unimproved."[1031]

The Fact Sheet explains the need to focus on unpaved roads as source of sediment and its impacts on water quality:

> During the previous permit period, the San Diego Water Board identified, through investigations and complaints, sediment discharges from unpaved roads as a significant source of water quality problems in the Riverside County portion of the San Diego Region. Enforcement and inspection activities conducted by the San Diego Water Board during the previous permit term have found a lack of source control for many unpaved roads within the jurisdiction of the Copermittees. Unpaved roads are a source of sediment that can be discharged in runoff to receiving waters, especially during storm events. Erosion of unpaved roadways occurs when soil particles are loosened and carried away from the roadway base, ditch, or road bank by water, wind, traffic, or other transport means. Exposed soils, high runoff velocities and volumes, sandy or silty soil types, and poor compaction increase the potential for erosion.
>
> Road construction, culvert installation, and other maintenance activities can disturb the soil and drainage patterns to streams in undeveloped areas, causing excess runoff and thereby erosion and the release of sediment. Poorly designed roads can act as preferential drainage pathways that carry runoff and sediment into natural streams, impacting water quality. In addition, other public works activities along unpaved roads have the potential to significantly affect sediment discharge and transport within streams and other waterways, which can degrade the beneficial uses of those waterways.[1032]

Accordingly, Section F.1.i., which is part of the development planning component of the JRMP, requires the following activities for unpaved road development:

- Develop, where they do not already exist, and implement or require implementation of erosion and sediment control BMPs after construction of new unpaved roads. At a minimum, the BMPs must include the following, or alternative BMPs that are equally effective:

  (1) Practices to minimize road related erosion and sediment transport.

  (2) Grading of unpaved roads to slope outward where consistent with road engineering safety standards.

  (3) Installation of water bars as appropriate.

[1031] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 293 (test claim permit, Attachment C).

[1032] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 423-424 (Fact Sheet/Technical Report, Discussion of Finding D.1.c.).

(4) Unpaved roads and culvert[1033] designs that do not impact creek functions and where applicable, that maintain migratory fish passage.[1034]

The Fact Sheet explains that guidance documents by several government agencies[1035] that include design, construction specifications, and source control BMPs that can be implemented by private and public entities are available to the copermittees.[1036]

Section F.3.a.10 of the test claim permit addresses the maintenance work on "copermittee-maintained unpaved roads," which are those unpaved roads that the copermittees maintain in their road system.[1037] Maintenance of copermittee-maintained unpaved roads requires implementation of BMPs for erosion and sediment control during and after maintenance activities, particularly in or adjacent to stream channels or wetlands. This requirement is necessary to ensure the discharge of sediment during maintenance activities is minimized.[1038] Accordingly, Section F.3.a.10. requires the following:

- Develop, where they do not already exist, and implement or require implementation of BMPs for erosion and sediment control measures during their maintenance activities on copermittee-maintained unpaved roads, particularly in or adjacent to receiving waters.[1039]
- Develop and implement or require implementation of appropriate BMPs to minimize impacts on streams and wetlands during their unpaved road maintenance activities.[1040]

[1033] A culvert is "a transverse drain" or, more specifically, "a drain or pipe that allows water to flow under a road." Exhibit X (31), Merriam-Webster Dictionary, culvert, https://www.merriam-webster.com/dictionary/culvert (accessed on February 10, 2022).

[1037] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 841, 843-844 (Riverside County's Comments on Tentative Order R9-2010-0016, Attachment 5: Proposed Unpaved Road Requirements of the Draft 2010 Santa Margarita Region MS4 Permit, Section F.3.c.5. (privately owned unpaved road maintenance was deleted and not included in the final version of the test claim permit)).

[1038] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 518 (Fact Sheet/Technical Report).

[1039] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 239 (test claim permit, Section F.3.a.10.a.).

[1040] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 239 (test claim permit, Section F.3.a.10.b.).

- Maintain as necessary their unpaved roads adjacent to streams and riparian habitat to reduce erosion and sediment transport.[1041]
- Slope outward the re-grading of unpaved roads during maintenance where consistent with road engineering safety standards or alternative equally effective BMPs must be implemented to minimize erosion and sedimentation from unpaved roads.[1042]
- Examine, through unpaved road maintenance, the feasibility of replacing existing culverts or design of new culverts or bridge crossings to reduce erosion and maintain natural stream geomorphology.[1043]

The claimants contend that the unpaved roads requirements in the test claim permit are newly required and go beyond the federal regulations, which require the claimants to address discharges from the MS4, and instead require the claimants address all discharges from any unpaved roads.[1044] The claimants conclude that the requirements are not a federal mandate but the "true choice" of the Water Boards to impose such requirements.[1045]

The Water Boards contend that the requirements addressing unpaved roads are not new requirements and do not impose a new program or higher level of service. The prior permit required implementation of BMPs to reduce pollutants in runoff to the MEP during the construction and maintenance of unpaved roads, although the prior permit did not explicitly specify unpaved roads by name.[1046]

ii. A copermittee's construction of new municipal unpaved roads and maintenance work on copermittee-maintained unpaved roads are not mandated by the state because such costs are incurred at the discretion of the local agency.

The claimants contend that the activities to comply with Sections F.1.i. and F.3.a.10. of the test claim permit are eligible for reimbursement under article XIII B, section 6 of the California Constitution. However, when the claimants engage in construction of new unpaved roads or maintenance of copermittee-maintained unpaved roads, the costs incurred by a local agency are

[1041] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 239 (test claim permit, Section F.3.a.10.c.).

[1042] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 239 (test claim permit, Section F.3.a.10.d.).

[1043] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 239 (test claim permit, Section F.3.a.10.e.).

[1044] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 62 (Test Claim narrative).

[1045] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 62-63 (Test Claim narrative), citing *Department of Finance v. Commission on State Mandates* (2016) 1 Cal. 5th 749, 765.

[1046] Exhibit C, Water Boards' Comments on the Test Claim, filed September 22, 2017, pages 35-37.

not mandated by the state, but are the result of a local discretionary decision, which are, therefore, not eligible for reimbursement.

The courts have found that when statutory or regulatory requirements result from an apparently or facially *discretionary* decision, and are therefore not *legally* compelled by the state, they may be *practically* compelled if the discretionary act is "the only reasonable means to carry out [the claimant's] core mandatory functions,"[1047] or if the failure to act would subject the claimant to "certain and severe…penalties" such as "double…taxation" or other "draconian" consequences.[1048] Substantial evidence in the record is required to make a finding of practical compulsion.[1049]

Here, the construction and maintenance of roads accepted into the municipal system is entirely voluntary. The claimants have provided no evidence to support that they have a legal or practical compulsion to construct or maintain unpaved roads. Moreover, as explained above, even if there were some type of compulsion to construct or repair roads, the claimants are only responsible for roads that are accepted into either their road system which can only be accomplished by the voluntary action of the governing body.[1050]

Therefore, the Commission finds that the requirements in Sections F.1.i. and F.3.a.10. of the test claim permit, as applied to local agency municipal construction of new unpaved roads and maintenance of copermittee-maintained unpaved roads are not mandated by the state.

iii. Sections F.1.i. and F.3.a.10. of the test claim permit clarify the duties under the prior permit, but do not impose new requirements on the claimants and, thus, sections F.1.i. and F.3.a.10. do not constitute a new program or higher level of service.

Reimbursement under article XIII B, section 6 requires that all elements be met, including that any increased costs result from a new program or higher level of service mandated by the state on the local agency.[1051] To determine whether a test claim statute imposes a new program or higher level of service, the required activities imposed by the state must be *new.*[1052] Alternatively, a new program or higher level of service can occur if the state transfers to local agencies complete or partial financial responsibility for a required program for which the state

previously had complete or partial financial responsibility.[1053] To determine if a mandated activity or shift in costs from the state is new, the courts have used the ordinary meaning of the word "new" and have found that if local government was not required to perform the activity or incur the cost shifted from the state at the time the test claim statute or regulation became effective (which, in effect, requires a comparison of the law immediately before the effective date of the test claim statute or regulation), the mandated activity or shifted cost is new.[1054]

Section F.1.i. of the test claim permit requires implementation of erosion and sediment control BMPs after construction of new unpaved roads. Although Section F.1.i. identifies BMPs for unpaved roads, the section also permits the copermittees to implement equally effective alternative BMPs of their choosing; "At a minimum, the BMPs must include the following, *or alternative BMPs that are equally effective*. . . ."[1055] Thus the requirement under Section F.1.i., like the requirement under the prior permit, is to implement effective BMPs after construction. The prior permit specifically required the claimants to amend their General Plans to require that post-development runoff from a site shall not contain pollutant loads that cause or contribute to an exceedance of receiving water quality objectives and which have not been reduced to the MEP.[1056] The prior permit also required the claimants to implement a program to reduce pollutants in runoff to the MEP during all construction phases, including the requirement to designate and implement BMPs for the retention and proper management of sediment and other construction pollutants on site.[1057] In addition, the prior permit required the claimants to implement or require the implementation of BMPs to reduce pollutants in urban runoff to the MEP from all municipal facilities and activities, which was defined to include roads, and to implement or require implementation of additional BMPs for roads tributary to section 303(d) impaired water bodies.[1058] Thus, Section F.1.i. of the test claim permit does not impose any new requirements.

[1058] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 588 (Order R9-2004-0001, Section H.1.c.1.).

Similarly, the requirements in section F.3.a.10. of the test claim permit, which specifically addresses maintenance work on copermittee-maintained unpaved roads, does not impose any new activities; the section simply requires the claimants to continue to maintain and use BMPs that the claimants develop for erosion and sediment when maintaining unpaved roads to ensure that those pollutants are reduced to the MEP particularly around receiving waters, and that water quality standards for the receiving waters are met. Section F.3.a.10. requires claimants to: (a) develop, *where they do not already exist*, and implement or require implementation of BMPs for erosion and sediment control measures during their maintenance activities on copermittee-maintained unpaved roads, particularly in or adjacent to receiving waters; (b) develop and implement or require implementation of appropriate BMPs to minimize impacts on streams and wetlands during their unpaved road maintenance activities; (c) maintain as necessary their unpaved roads adjacent to streams and riparian habitat to reduce erosion and sediment transport; (d) slope outward re-grading of unpaved roads during maintenance where consistent with road engineering safety standards or alternative equally effective BMPs must be implemented to minimize erosion and sedimentation from unpaved roads; (e) examine, through unpaved road maintenance, the feasibility of replacing existing culverts or design of new culverts or bridge crossings to reduce erosion and maintain natural stream geomorphology.[1059]

Although the prior permit did not expressly identify the BMPs necessary to address runoff when maintaining municipal unpaved roads, it did require the claimants to inventory and implement BMPs to reduce pollutants in urban runoff to the MEP from all their municipal facilities and activities.[1060] Municipal facilities "included, but were not limited to," roads, streets, highways, and parking facilities.[1061] The prior permit also required the claimants to implement additional controls for municipal facilities and activities tributary to section 303(d) impaired water bodies or within or directly adjacent to or discharging directly to receiving waters within ESAs.[1062] Finally, the prior permit required the claimants to inspect all municipal facilities and activities annually and implement all follow-up actions necessary to comply with the prior permit, which including the order that discharges into and from the MS4 in a manner causing or threatening to cause a condition of pollution in the waters of the state are prohibited.[1063] Thus, under the prior permit, the claimants were required to implement BMPs to reduce pollutants in runoff to the MEP from unpaved roads, and to inspect unpaved roads and implement all follow-up actions

[1059] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 239 (test claim permit, Section F.3.a.10.).

[1060] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 588 (Order R9-2004-0001, Section H.1.c.1.).

[1061] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 587 (Order R9-2004-0001, Section H.1.b.).

[1062] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 588 (Order R9-2004-0001, Section H.1.c.2.).

[1063] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 572, 589 (Order R9-2004-0001, Sections A., H.1.f.).

necessary to comply with the permit to ensure that water quality standards are met.[1064] If anything, the requirements in the test claim permit regarding unpaved roads simply clarify the existing legal requirement to assess a site's compliance with local ordinances and water quality standards. The courts have recognized that changes in statutory or regulatory language can be intended to clarify the law, rather than change it.[1065]

Accordingly, the Commission finds that the development and implementation of erosion and sediment control BMPs after construction of new unpaved roads and during maintenance activities on unpaved roads pursuant to Sections F.1.i. and F.3.a.10. are not a new requirements imposed or shifted by the state, and do not constitute a new program or higher level of service.

8. Section F.3.b.4.a.ii. of the Test Claim Permit, Which Addresses Industrial and Commercial Site Inspections, Does Not Require the Claimants to Perform Any New Activities and, Thus, Does Not Impose a New Program or Higher Level of Service.

The claimants pled Section F.3.b.4.a.ii. of the test claim permit, which is part of the Existing Development Component of the Jurisdictional Runoff Management Program (JRMP). The claimants specifically allege that Section F.3.b.4.a.ii. of the test claim permit imposes new state-mandated requirements to inspect industrial and commercial sites, including a review of site monitoring data if the site monitors its runoff.[1066]

As described below, the Commission finds that the requirement imposed by Section F.3.b.4.a.ii., to review as part of industrial and commercial site inspections industrial or commercial site monitoring data, if the site monitors its runoff, clarifies the existing legal requirement to assess a site's compliance with local ordinances and water quality standards, but is not a new requirement and does not impose a new program or higher level of service.

a. Background

i. Federal law requires an NPDES applicant to adopt ordinances to control pollutants to the MS4 from stormwater discharges associated with industrial activities and to prevent illicit non-stormwater discharges, and to monitor and inspect these sites to ensure compliance with the permit and water quality standards.

NPDES permits must include conditions to achieve water quality standards and objectives.[1067] As relevant to this section, federal regulations require that the application for an NPDES permit for large and medium MS4 dischargers must demonstrate adequate legal authority, through ordinance, permit, or other means, to control pollutants *to* the MS4 from stormwater discharges

[1064] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 587-588 (Order R9-2004-0001, Sections H.1.b., c.).

[1065] *Western Security Bank v. Superior Court* (1997) 15 Cal.4th 232, 243.

[1066] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 22, 63-64. No other provision in section F.3.b. was discussed in the Test Claim and, thus, the analysis in this Decision is limited to the activity required by section F.3.b.4.a.ii.

[1067] Code of Federal Regulations, title 40, section 122.44(d)(1).

associated with *industrial activity* and to carry out *inspections*, surveillance, and monitoring to ensure compliance with the permit conditions.[1068] The legal authority shall also prohibit illicit discharges to the MS4.[1069]

In addition, the proposed management program shall include structural and source control measures to reduce pollutants from runoff from *commercial* areas, and inspections to implement and enforce ordinances that prevent illicit discharges to the MS4.[1070] The program is also required to monitor and control pollutants from runoff from industrial facilities that the permit applicant determines are contributing substantial pollutant loading to the MS4 and in such cases, the program shall "identify priorities and procedures for inspections and establishing and implementing control measures for such discharges" and a monitoring program.[1071]

> *ii. The prior permit required each permittee to inspect and assess industrial and commercial facilities to ensure compliance with local ordinances, effective best management practice (BMP) implementation, and for potential illicit discharges and connections, and to implement all follow-up actions necessary to comply with the receiving water limitations and prohibitions identified in the prior permit.*

The prior permit identifies the following general prohibitions and receiving water limitations for which the permittees are required to comply:

- Discharges into and from MS4s in a manner causing, or threatening to cause, a condition of pollution, contamination, or nuisance (as defined in Water Code section 13050), in the waters of the state are prohibited.
- Discharges from MS4s that cause or contribute to exceedances of water quality objectives for surface water and ground water are prohibited.
- Discharges from MS4s containing pollutants which have not been reduced to the MEP are prohibited.
- Discharges from MS4s that are subject to all Basin Plan prohibitions (cited in Attachment A to the order) are prohibited.
- All types of non-stormwater discharges into the MS4, unless authorized by an NPDES permit, are prohibited.
- Discharges from MS4s that cause or contribute to the violation of water quality standards (designated beneficial uses and water quality objectives developed to protect beneficial uses of receiving waters) are prohibited.[1072]

[1068] Code of Federal Regulations, title 40, section 122.26(d)(2)(i)(A), (F).

[1069] Code of Federal Regulations, title 40, section 122.26(d)(2)(i)(B).

[1070] Code of Federal Regulations, title 40, section 122.26(d)(2)(iv)(A), (B).

[1071] Code of Federal Regulations, title 40, section 122.26(d)(2)(iv)(C).

[1072] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 572-573 (Order R9-2004-0001, Sections A., B.1., C.1.).

The prior permit also requires the permittees to have adequate legal authority to control pollutant discharges into and from the MS4 through ordinance, statute, permit, contract, or other similar means. The legal authority, at a minimum, must authorize the permittee to do the following:

- Control the contribution of pollutants in discharges of runoff associated with industrial and construction activity to its MS4 and control the quality of runoff from industrial and construction sites. This requirement applies to both industrial and construction sites that have coverage under the General Industrial Permit and the General Construction Permit, as well as to those sites that do not.
- Prohibit all illicit discharges and connections to the MS4.
- Control the discharge of spills, dumping or disposal of materials other than stormwater to its MS4.
- Require compliance with the permittee's ordinances, permits, contracts, or orders by holding dischargers accountable for the contributions to pollutants and flows.
- Require the use of BMPs to reduce or prevent the discharge of pollutants into the MS4 to the MEP.
- Carry out all inspections and monitoring necessary to determine compliance and noncompliance with local ordinances and orders, and the prior permit.[1073]

In order to comply with the above requirements, the prior permit included an industrial/commercial facilities program that, among other things, required inspections of all industrial and commercial facilities under the permittee's jurisdiction that could contribute a significant pollutant load to the MS4. At a minimum, the following commercial and industrial facilities were required to be inspected:

1. Commercial facilities:
    - Automobile repair, maintenance, fueling, or cleaning
    - Airplane repair, maintenance, fueling, or cleaning
    - Boat repair, maintenance, fueling, or cleaning
    - Equipment repair, maintenance, fueling, or cleaning
    - Automobile and other vehicle body repair or painting
    - Mobile automobile or other vehicle washing (base of operations)
    - Automobile (or other vehicle) parking lots and storage facilities
    - Retail or wholesale fueling
    - Pest control services (base of operations)
    - Eating or drinking establishments

[1073] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 575-576 (Order R9-2004-0001, Section D.1.).

- Mobile carpet, drape or furniture cleaning (base of operations)
- Cement mixing or cutting (base of operations)
- Masonry (base of operations)
- Painting and coating (base of operations)
- Landscaping (base of operations)
- Nurseries and greenhouses
- Golf courses, parks and other recreational areas/facilities
- Cemeteries
- Pool and fountain cleaning (base of operations)
- Port-a-potty servicing (base of operations)

2. Industrial Sites/Sources:
    - Industrial Facilities, as defined at 40 Code of Federal Regulations section 122.26(b)(14), including those subject to the General Industrial Permit or other individual NPDES permit;
    - Operating and closed landfills;
    - Facilities subject to Superfund Amendments and Reauthorization Act (SARA) Title III, also known as the Emergency Planning and Community Right-to-Know Act (EPCRA); and
    - Hazardous waste treatment, disposal, storage and recovery facilities.
3. All other facilities tributary to a CWA section 303(d) impaired water body, where a facility generates pollutants for which the water body segment is impaired.
4. All other facilities that the permittee determines may contribute a significant pollutant load to the MS4.[1074]

Each permittee was required to designate a set of minimum BMP requirements for the commercial and industrial facilities in its jurisdiction to reduce the discharge of pollutants in runoff to the MEP.[1075] In addition, based on the threat to water quality, the permittees were required to establish priorities for inspections of industrial and commercial facilities and to inspect the facilities according to the permit's schedule with high priority facilities being inspected annually, and low priority facilities inspected once during the five-year term of the

[1074] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 589-590 (Order R9-2004-0001, Section H.2.a., b.).

[1075] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 590 (Order R9-2004-0001, Section H.2.c.).

permit.[1076] In addition to ensuring implementation of minimum BMPs, inspections "shall include, but not be limited to" the following:

- Assessment of compliance with local ordinances and permits related to stormwater runoff, including the implementation and maintenance of designated minimum BMPs.
- Assessment of BMP effectiveness.
- Visual observations for non-stormwater discharges, potential illicit connections, and potential discharge of pollutants in stormwater runoff.
- Education and outreach on stormwater pollution prevention.[1077]

Inspections of industrial facilities also required the permittees to check for coverage under the General Industrial Permit.[1078] If the Regional Board conducted an inspection of an industrial facility during a particular year, however, the requirement for the responsible permittee to inspect the site during that same year was deemed satisfied.[1079]

Based upon facility inspection findings, each permittee was required to implement all follow-up actions necessary to comply with the prior permit, and enforce local ordinances as necessary to comply with the prior permit.[1080]

The Findings of the prior permit explain the rationale for these requirements as follows:

> As operators of the MS4s, the Permittees cannot passively receive and discharge pollutants from third parties. By providing free and open access to an MS4 that conveys discharges to waters of the U.S., the operator essentially accepts responsibility for discharges into the MS4 that it does not prohibit or control. These discharges may cause or contribute to a condition of contamination or exceedances of water quality objectives.[1081]

The Findings also state the following:

> In accordance with federal NPDES regulations and to ensure the most effective oversight of industrial . . . site discharges, discharges of runoff from industrial . . .

[1076] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 590-591 (Order R9-2004-0001, Section H.2.d.1., 2.).

[1077] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 591 (Order R9-2004-0001, Sections H.2.d.3., 4.).

[1079] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 592 (Order R9-2004-0001, Section H.2.d.5.).

[1080] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 592 (Order R9-2004-0001, Sections H.2.d.6., e.).

[1081] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 569 (Order R9-2004-0001, Finding 20).

sites are subject to dual (state and local) storm water regulation. Under this dual system, the SDRWQCB is responsible for enforcing the . . . General Industrial Activities Storm Water Permit, . . . , and each municipal Permittee is responsible for enforcing its local permits, plans, and ordinances, which may require the implementation of additional BMPs than required under the statewide general permits.[1082]

b. Section F.3.b.4.a.ii. of the test claim permit does not impose a new program or higher level of service.

i. Section F.3.b.4.a.ii. of the test claim permit requires that inspections of industrial and commercial sites include a review of facility monitoring data results, if the site monitors its runoff.

The claimants pled Section F.3.b.4.a.ii. of the test claim permit, which requires as part of the industrial and commercial site inspection program, that such "[i]nspections must include . . . a review of facility monitoring data results, if the site monitors its runoff."[1083] The Fact Sheet explains that "monitoring data can provide the inspector pertinent information that can be used during the visual inspection of the facility (e.g., BMPs implemented, maintenance records for BMPs, pollutants in storm water runoff). The Copermittees' inspectors have the discretion to determine the depth and detail of the review and use of the information in conducting the inspection."[1084]

The test claim permit refers to the same types of commercial and industrial facilities listed in the prior permit that require inspection. However, the test claim permit adds botanical and zoological gardens and exhibits, marinas, building material retailers and storage, animal boarding facilities and kennels, mobile pet services, power washing services, and plumbing services, to the list of sites requiring inspection and a review of their monitoring data results. The Fact Sheet explains that "[t]hese commercial or industrial sites and sources have been identified by the Copermittees and/or the San Diego Water Board as facilities that may contribute a significant pollutant load to the MS4."[1085] In addition, the mobile businesses and service industries, where the business travels to the customer to perform the service rather than the customer traveling to the business to receive the service (i.e. mobile pet services, power washing services, and

[1082] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 570 (Order R9-2004-0001, Finding 21).

[1083] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 243 (test claim permit, Section F.3.b.4.a.ii.).

[1084] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 521 (Fact Sheet/Technical Report).

[1085] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 519 (Fact Sheet/Technical Report).

plumbing services) "produce waste streams that could potentially impact water quality if appropriate BMPs are not implemented."[1086]

The test claim permit also clarifies that "eating or drinking establishments" includes retail establishments with food markets, and that all other commercial or industrial sites within or directly adjacent to or discharging directly to receiving waters within environmentally sensitive areas or that generate pollutants tributary to and within the same hydrologic subarea as an observed exceedance of an action level require inspection and review of the monitoring data results if the site monitors its runoff.[1087]

Like the prior permit, the inspections, "at a minimum" must be inspected each year if the site is determined to pose a high threat to water quality, or at least once during a five year period.[1088] In addition, like the prior permit, if the Regional Board has conducted an inspection of an industrial site during a particular year, the requirement for the responsible permittee to inspect this facility during the same year is deemed satisfied.[1089]

The claimants do not seek reimbursement for the total cost of inspecting the newly identified facilities, but only for the costs to review the monitoring data results if the industrial or commercial site monitors its runoff, and the associated costs to train inspectors.[1090]

ii. Section F.3.b.4.a.ii. of the test claim permit clarifies the duties under existing law, but does not impose a new requirement on the claimants and, thus, section F.3.b.4.a.ii. does not constitute a new program or higher level of service.

The claimants argue that the requirement to review monitoring data results of industrial and commercial facilities is a new state-mandated activity that has been shifted by the state to local governments.[1091] The claimants rely on the Supreme Court's decision in *Department of Finance v. Commission on State Mandates* (2016) 1 Cal.5th 749. That case addressed the Commission's decision in *Municipal Stormwater and Urban Runoff Discharges*, 03-TC-04, 03-TC-19, 03-TC-20, 03-TC-21, where the Commission found that the NPDES permit issued by the Los Angeles Regional Water Control Board imposed *new* state-mandated requirements on the local agency permittees to inspect restaurants, automotive service facilities, retail gasoline outlets, and

[1089] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 244 (test claim permit, Section F.3.b.4.e.).

[1090] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 63-65 (Test Claim narrative).

[1091] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 64 (Test Claim narrative).

automotive dealerships.[1092] The Supreme Court agreed, finding that the Regional Board had primary responsibility for inspecting industrial and commercial facilities under state and federal law and shifted that responsibility to the permittees.[1093]

However, unlike the facts in the *Department of Finance* case, inspection of the industrial and commercial facilities in this case, including all activities necessary to assess compliance with ordinances and water quality standards, is *not* new, but was imposed by the prior permit.

Reimbursement under article XIII B, section 6 requires that all elements be met, including that any increased costs result from a new program or higher level of service mandated by the state on the local agency.[1094] To determine whether a test claim statute imposes a new program or higher level of service, the required activities imposed by the state must be *new.*[1095] Alternatively, a new program or higher level of service can occur if the state transfers to local agencies complete or partial financial responsibility for a required program for which the state previously had complete or partial financial responsibility.[1096] To determine if a mandated activity or shift in costs from the state is new, the courts have used the ordinary meaning of the word "new" and have found that if local government was not required to perform the activity or incur the cost shifted from the state at the time the test claim statute or regulation became effective (which, in effect, requires a comparison of the law immediately before the effective date of the test claim statute or regulation), the mandated activity or shifted cost is new.[1097]

Although the prior permit did not expressly state that reviewing facility monitoring data results if the site monitors its runoff was required as part of the inspection, it did expressly require the claimants to inspect all industrial and commercial sites, including all other facilities not expressly identified that are tributary to a section 303(d) impaired water body, where a facility generates pollutants for which the water body segment is impaired, and all other facilities that the permittee

---

[1092] The Commission ultimately denied reimbursement for the inspection activities because the claimants had adequate fee authority to pay for such costs pursuant to Government Code section 17556(d) and, therefore, there were no costs mandated by the state. The Second District Court of Appeal, in *Department of Finance v. Commission on State Mandates* (2021) 59 Cal.App.5th 546, 562-565, upheld the Commission's Decision.

State* (1996) 45 Cal.App.4th 1802, 1812; *San Diego Unified School Dist. v. Commission on State Mandates* (2004) 33 Cal.4th 859, 878; see also page 869, footnotes 6 and 7, and page 870, footnote 9 (where the court describes in detail the state of the law immediately before the enactment of the 1993 test claim statutes); and *Department of Finance. v. Commission State Mandates* (2021) 59 Cal.App.5th 546, 558.

determines may contribute a significant pollutant load to the MS4.[1098] "All other facilities" would include botanical and zoological gardens and exhibits, marinas, building material retailers and storage, animal boarding facilities and kennels, mobile pet services, power washing services, and plumbing services, which were identified as contributing a significant pollutant load to the MS4,"[1099] and "produce waste streams that could potentially impact water quality if appropriate BMPs are not implemented."[1100] Moreover, the inspections under the prior permit had to *include "but not be limited to"* an assessment of the site's compliance with local ordinances and permits related to stormwater runoff, including the implementation and maintenance of designated minimum BMPs, and visual observations for non-stormwater discharges, potential illicit connections, and potential discharge of pollutants in stormwater runoff.[1101] The prior permit also required the permittee to carry out all inspections and monitoring, and to enforce local stormwater ordinances on industrial and commercial facilities "as necessary to maintain compliance with this Order," including the permit's receiving water limitations and prohibitions banning any discharge of pollutant and non-stormwater discharges into the MS4 that would cause or contribute to the violation of water quality standards.[1102]

It is a general rule of statutory construction that "use of the language 'including, but not limited to' in the statutory definition is a phrase of enlargement rather than limitation."[1103] In this respect, the claimants' inspections required by the prior permit were not limited to visual observations of the site, but had to include whatever was necessary to ensure that discharges into the MS4 were complying with the claimants' local ordinances enforcing the prohibitions and receiving water limitations of the permit, and ensuring water quality standards were met. Otherwise follow-up action was necessary to ensure that the facility met water quality standards.[1104]

If anything, the requirement to review monitoring data results if the site monitors its runoff simply clarifies the existing legal requirement to assess a site's compliance with local ordinances

and water quality standards. The courts have recognized that changes in statutory or regulatory language can be intended to clarify the law, rather than change it.

> We assume the Legislature amends a statute for a purpose, but that purpose need not necessarily be to change the law. [Citation.] Our consideration of the surrounding circumstances can indicate that the Legislature made ... changes in statutory language in an effort only to clarify a statute's true meaning.[1105]

Moreover, there has been no shift of costs from the state to the claimants. As indicated in both the prior permit and the test claim permit, the claimants are required to also inspect industrial facilities that are subject to the State's General Industrial Permit.[1106] The State Water Board has issued a statewide General Industrial Permit (State Water Board Order 97-03 DWQ, NPDES No. CAS000001), which is intended to cover all new or existing stormwater discharges and authorized non-stormwater discharges from industrial facilities required by federal regulations to obtain a permit.[1107] To be authorized to discharge stormwater under the General Permit, industrial facilities are required to file a Notice of Intent with the State Water Board.[1108] The statewide General Industrial Permit does *not*, however, "preempt or supersede the authority of local agencies to prohibit, restrict, or control storm water discharges and non-storm water discharges to storm drain systems or other water-courses within their jurisdictions as allowed by State and Federal law."[1109] Thus, as indicated in the Fact Sheet for the test claim permit, discharges of runoff from industrial sites are subject to stormwater regulation under both state and local systems to ensure the most effective oversight. The claimants enforce their local permits, plans, and ordinances, and the Water Boards enforce the General Industrial Permit.[1110] In addition, the permit states that if the Regional Board has conducted an inspection of an

[1109] Exhibit X (42), State Water Resources Control Board, General Industrial Permit, Order 97-03-DWQ, page 17, https://www.waterboards.ca.gov/water_issues/programs/stormwater/docs/induspmt.pdf (accessed on January 26, 2022).

[1110] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 441 (Fact Sheet/Technical Report, Finding D.3.a.).

industrial site during a particular year, the requirement for the responsible claimant to inspect this facility during the same year is deemed satisfied.[1111]

Accordingly, the Commission finds that reviewing monitoring data results if the site monitors its runoff is not a new requirement imposed or shifted by the state, and does not constitute a new program or higher level of service.

9. Sections G.1.-5. of the Test Claim Permit, Addressing the Watershed Workplan, Impose Some State-Mandated New Programs or Higher Level of Service.

The claimants pled Section G.1.-5. of the test claim permit regarding the development and implementation of the Watershed Water Quality Workplan to identify, prioritize, address, and mitigate the highest priority water quality issues/pollutants in the Upper Santa Margarita Watershed.[1112] The claimants specifically allege that Sections G.1.-5. of the test claim permit impose a reimbursable state-mandated program.[1113]

These sections comprise the majority of the Watershed Water Quality Workplan (watershed workplan), a collaborative effort that requires copermittees in a watershed management area to develop a workplan to assess and prioritize the water quality problems within the watershed's receiving waters, identify sources of the highest priority water quality problems, develop a watershed-wide BMP implementation strategy to abate the highest priority water quality problems, and a monitoring strategy to evaluate BMP effectiveness and changing water quality prioritization in the watershed management area.[1114] A watershed workplan is not new. Under the prior permit, the claimants were required to collaborate with other watershed permittees to develop and implement a watershed stormwater management plan (watershed SWMP).[1115]

As described below, the Commission finds that Sections G.1.d, G.3., G.4., and G.5. of the test claim permit mandate a new program or higher level of service for the following activities:

- The watershed BMP implementation strategy shall include a map of any implemented and proposed BMPs.[1116]

[1111] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 244 (test claim permit, Section F.3.b.4.e.).

[1112] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 22, 68-70 (Test Claim narrative).

[1113] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 68-72 (Test Claim narrative), 255-257 (test claim permit, Sections G.1.-G.5.). The claimants did not plead Section G.6., regarding the pyrethroid pollutant reduction program and, thus, this Decision does not address Section G.6.

[1114] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 255-257 (test claim permit, Sections G.1.-G.5.).

[1115] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 595 (Order R9-2004-0001, Sections K.1., 2.).

[1116] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 255 (test claim permit, Section G.1.d.).

- The copermittees shall pursue efforts to obtain any interagency agreements, or other coordination efforts, with non-copermittee owners of the MS4 (such as Caltrans, Native American tribes, and school districts) to control the contribution of pollutants from one portion of the shared MS4 to another portion of the shared MS4.[1117]
- The watershed workplan must include the identification of the persons or entities anticipated to be involved during the development and implementation of the Watershed Workplan.[1118]
- The annual watershed review meetings shall be open to the public and adequately noticed.[1119]
- Each permittee shall review and modify jurisdictional programs and JRMP annual reports, as necessary, so they are consistent with the updated watershed workplan.[1120]

All other activities required by Sections G.1. through G.5. are not new and, thus, do not impose a new program or higher level of service.

a. Background

i. Federal law requires permittees to propose a management program to reduce pollutants in discharges to the maximum extent practicable (MEP), which must involve public participation, and may impose controls on a systemwide basis, a watershed basis, or a jurisdiction basis necessary to meet water quality standards.

Under federal law, NPDES permits "shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants."[1121]

Federal regulations require that the application for an NPDES permit for large and medium MS4 dischargers must describe a proposed management program that covers the duration of the permit to be considered by the Regional Board when developing permit conditions to reduce pollutants in discharges to the MEP. The proposed management program shall include a comprehensive planning process which involves public participation and where necessary, intergovernmental coordination, to reduce the discharge of pollutants to the MEP using management practices, control techniques and system, design and engineering methods, and

other appropriate conditions. Proposed programs may impose controls on a systemwide basis, a watershed basis, a jurisdiction basis, or on individual outfalls.[1122]

ii. The prior permit required the permittees to mitigate highest priority water quality issues; develop and implement a watershed Storm Water Management Plan; participate in watershed management efforts; and meet annually to review the watershed Storm Water Management Plan.

Section E. of the prior permit required a watershed Storm Water Management Plan (SWMP) for the Upper Santa Margarita Watershed.[1123] The watershed SWMP had to consist of a written account of all area-wide and watershed-based programs and activities conducted by the permittees including the programs and items required in sections K.l.-K.4. of the prior permit.[1124]

Sections K.l.-K.4. of the prior permit required each permittee to do the following:

1. Collaborate with the other permittees to identify, address, and mitigate the highest priority water quality issues/pollutants in the Upper Santa Margarita Watershed.[1125]
2. Collaborate with the other permittees to develop and implement a watershed SWMP.[1126]
3. Participate in watershed management efforts to address stormwater quality issues within the entire watershed, including efforts conducted by other entities in the watershed, such as San Diego County, U.S. Marine Corps Base Camp Pendleton, Native American tribes, and other state, federal, and local agencies.[1127]
4. Meet with all permittees, at least once a year, to review and assess available water quality data, from the MRP and other reliable sources, to assess program effectiveness, and to review and update the watershed SWMP.[1128]

The watershed SWMP described in Section K.2. of the prior permit had to contain the following:

- An accurate map of the Upper Santa Margarita Watershed that identifies all receiving waters, all CWA section 303(d) impaired receiving waters, existing and planned land

uses, MS4s, major highways, jurisdictional boundaries, industrial and commercial facilities, municipal sites, and residential areas.[1129]

- A description of any interagency agreement, or other efforts, with non-permittee owners of the MS4, such as Caltrans, Native American tribes, and school districts, to control the contribution of pollutants from one portion of the shared MS4 to another portion.[1130]
- An assessment of the water quality of all receiving waters based upon existing water quality data and results from the receiving waters and illicit discharge monitoring programs in the MRP.[1131]
- An identification and prioritization of major water quality problems caused or contributed to by MS4 discharges and the likely sources of the problems.[1132]
- A time schedule for implementation of short and long-term recommended activities needed to address the highest priority water quality problem(s).[1133]
- A watershed-based education program focusing on water quality issues specific to the Santa Margarita watershed.[1134]
- A mechanism to facilitate collaborative watershed-based land use planning with neighboring local governments.[1135]
- A description of any other urban runoff management programs or activities being conducted to address water quality issues.[1136]

- A description of the permittees' responsibilities for implementing the watershed SWMP.[1137]
- The expenditures and funding sources for the area-wide and watershed-based activities and programs.[1138]
- Standardized reporting formats developed by the permittees.[1139]
- Short-term strategy (completed during the life of the 2004 permit) for assessing the effectiveness of the activities and programs implemented as part of the watershed SWMP. The short-term strategy shall also discuss the role of monitoring data collected by the permittees in substantiating or refining the assessment. [1140]
- Long-term strategy (completed beyond the life of the 2004 permit) for assessing the effectiveness of the watershed SWMP in achieving improvements in receiving water quality impacted by urban runoff discharges. Methods used for assessing effectiveness shall include the following or their equivalent: surveys, pollutant loading estimations, receiving water quality monitoring, and achievement of measurable goals. The long-term strategy shall also discuss the role of monitoring data in substantiating or refining the assessment.[1141]

In addition, the 2004 MRP required the permittees to participate and coordinate with federal, state, and local agencies and other dischargers in the Santa Margarita Watershed in development and implementation of a regional watershed monitoring program.[1142]

The 2004 Fact Sheet explains the watershed SWMP as follows:

> The requirements in Section K of the Order are necessary for the Permittees to identify and mitigate sources of pollutants in urban runoff from the entire watershed that impact common downstream receiving waters. This is the key to addressing the impacts from areas and activities within the Permittees' jurisdiction on downstream receiving waters and their beneficial uses (i.e. Camp Pendleton's drinking water supply) as well as addressing pollutant sources in the watershed which are outside the Permittees' jurisdiction. **Finding No. 20** emphasizes the

[1142] Exhibit X (35), Order R9-2004-0001, Monitoring and Reporting Program, Section A.II., page 8.

need for watershed-based activities and collaboration among dischargers in a common watershed. It states, "As operators of the MS4s, the Permittees cannot passively receive and discharge pollutants from third parties. By providing free and open access to an MS4 that conveys discharges to waters of the U.S., the operator essentially accepts responsibility for discharges into the MS4 that it does not prohibit or control. These discharges may cause or contribute to a condition of contamination or exceedances of receiving water quality objectives." Permittees could be held responsible for discharges of pollutants from sources outside of their jurisdiction if they cause or contribute to exceedances of water quality objectives, therefore, it is necessary for Permittees to make efforts to address all sources of pollutants in the watershed.[1143]

b. Sections G.1.d., G.3., G.4., and G.5. of the test claim permit mandate a new program of higher level of service by requiring the claimants to perform additional watershed activities.

i. Sections G.1.-.5. of the test claim permit impose some new requirements on the claimants.

The approach under the prior permit, however, did not result in improvements to water quality. The Fact Sheet to the test claim permit states the following:

> **Section G** requires Copermittees to continue implementation of their watershed runoff management program (WRMP), however the implementation approach has changed. Order No. R9-2004-001 required a Watershed SWMP that included a collaborative strategy to abate the sources and reduce the discharges causing high priority water quality problems. This strategy was to guide each watershed Copermittee's selection and implementation of Watershed Activities, so that the activities selected and implemented would remove that pollutant contribution responsible for the identified high priority water quality problem. Outcomes of these requirements were not able to demonstrate improvements to water quality.
>
> Revised language in Order No. R9-2010-0016 attempts to focus each watershed Copermittee's efforts and resources on addressing the highest water quality problems in the watershed by focusing attention on the health of the receiving water body and the most efficient use of the watershed Copermittee's time and resources. Order No. R9-2010-0016 requires the watershed Copermittees to develop and follow a workplan approach towards assessing receiving water body conditions, prioritizing the highest priority water quality problems, implementing effective BMPs, and measuring water quality improvement in the receiving water.[1144]

Thus, Sections G.1.-5. of the test claim permit impose a few new requirements on the claimants.

[1143] Exhibit X (34), Order R9-2004-0001, Fact Sheet/Technical Report, page 70, emphasis in original.

[1144] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 531-532 (Fact Sheet/Technical Report).

Sections G.1.-5. of the test claim permit, like the prior permit, require a watershed SWMP, now renamed a watershed water quality workplan (watershed workplan).[1145] Section G. requires that each copermittee to "collaborate with other copermittees to develop and implement a watershed water quality workplan (watershed workplan) to identify, prioritize, address, and mitigate the highest priority water quality issues/pollutants in the Upper Santa Margarita Watershed."[1146]

The watershed workplan must include, at a minimum, the following components identified in Section G.1.:

- Characterize the receiving water quality in the watershed including an assessment and analysis of regularly collected water quality data, reports, monitoring, and analysis generated by the Receiving Waters Monitoring and Reporting Program, as well as applicable information available from other public and private organizations.[1147]
- An updated watershed map.[1148]
- Identify and prioritize water quality problem(s) in the watershed's receiving waters in terms of constituents by location giving consideration to TMDLs; CWA section 303(d) listed receiving waters; waters with persistent violations of water quality standards, toxicity, or other impacts to beneficial uses, and other pertinent conditions.[1149]
- Identify the likely sources, pollutant discharges and/or other factors causing the highest water quality problem(s) within the watershed. Determining the sources must include, but not be limited to: information from the construction, industrial/commercial, municipal, and residential source identification programs within the Jurisdictional Runoff Management Program (JRMP); water quality monitoring data collected as part of the Receiving Water Monitoring and Reporting Program; and additional focused water quality monitoring to identify specific sources within the watershed.[1150]
- Develop a watershed BMP implementation strategy to attain receiving water quality objectives in the identified highest priority water quality problem(s) and locations, which must include a schedule for implementation of the BMPs to abate specific

[1145] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 424 (Fact Sheet/Technical Report, Finding D.1.d.).

[1146] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 439 (test claim permit, Section G.).

[1147] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 439 (test claim permit, Section G.1.a.).

[1148] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 439 (test claim permit, Section G.1.a.).

[1149] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 439 (test claim permit, Section G.1.b.).

[1150] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 439 (test claim permit, Section G.1.c.).

receiving water quality problems, a list of criteria to be used to evaluate BMP effectiveness, and a map of any implemented and/or proposed BMPs.[1151]

- Develop a strategy to monitor improvements in receiving water quality directly resulting from implementation of the BMPs described in the watershed workplan including reviewing the necessary data to report on the measured pollutant reduction that results from proper BMP implementation. The monitoring must, at a minimum, be conducted in the receiving water to demonstrate reduction in pollutant concentrations and progression towards attainment of receiving water quality objectives.[1152]
- Establish a schedule for development and implementation of the watershed strategy outlined in the workplan. The schedule must, at a minimum, include forecasted dates of planned actions to address the watershed workplan components listed above[1153] and dates for watershed review meetings through the remaining portion of this permit cycle.[1154]

Section G.2. requires that the watershed workplan be implemented within 90 days of submittal unless otherwise directed by the Regional Board.[1155]

Most of these requirements are *not* new. For example, Sections G. and G.1.a. require the claimants to collaborate with other copermittees to develop and implement a watershed workplan to identify, prioritize, address, and mitigate the highest priority water quality issues/pollutants in the watershed. The workplan must characterize the receiving water quality in the watershed including an assessment and analysis of regularly collected water quality data, reports, monitoring, and analysis generated by the receiving waters monitoring and reporting program, as well as applicable information available from other public and private organizations, and must include an updated map. The prior permit, in Sections K.1. and K.2., required the same activities. The claimants were required to collaborate with the other copermittees to identify, address, and mitigate the highest priority water quality issues/pollutants in the in the Upper Santa

---

[1151] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 439 (test claim permit, Section G.1.d.).

[1152] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 439-440 (test claim permit, Section G.1.e.).

[1153] The language in Section G.1.f. states, "The schedule must, at a minimum, include forecasted dates of planned actions to address Provisions E.2(a) through E.2(e) and dates for watershed review meetings through the remaining portion of this Permit cycle." The phrase "Provisions E.2(a) through E.2(e)" must be an error as section E. includes only subdivisions a. through c. and addresses local ordinances and section G.2. has no subdivisions. Thus, the only reading that makes sense and must have been the intended language is "Provisions G.1.a. through G.1.e.", which includes all the watershed workplan components listed before Section G.1.f.

[1154] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 440 (test claim permit, Section G.1.f.).

[1155] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 440 (test claim permit, Section G.2.).

Margarita Watershed and implement a watershed workplan.[1156] Section K.2.c. required the workplan to include an assessment of the water quality of all receiving waters based upon "existing water quality data" and "results from the Receiving Waters and Illicit Discharge Monitoring Programs described in the MRP."[1157] The claimants contend that the requirement in Section G.1.a. "to not only review monitoring data collected under the permit, but also data from 'applicable information available from other public and private organizations'" is a new, different, and more demanding requirement.[1158] However, the phrase "existing water quality data" does not have any limiting language and thus, includes relevant data from any source, including public or private organizations. The addition of "public and private organizations" provides additional detail to the requirement, but it does not make it new nor a higher level of service. In addition, the prior permit in Section K.2.a. required the workplan to contain "an *accurate* map of the Upper Santa Margarita Watershed that identifies all receiving waters, all CWA section 303(d) impaired receiving waters, existing and planned land uses, MS4s, major highways, jurisdictional boundaries, industrial and commercial facilities, municipal sites, and residential areas.[1159] The test claim permit simply requires an "updated" watershed map, but since a map must be *updated* to be *accurate,* the requirement in Section G.1.a. for the map has not changed. Therefore, the requirements in Sections G. and G.1.a. are not new and do not impose a new program or higher level of service.

The claimants also contend that the requirement in Section G.1.b. to "identify and prioritize water quality problem(s) in terms of constituents by locations, in the watershed's receiving waters" is a new, different, and more demanding requirement.[1160] The prior permit required "[a]n identification and prioritization of major water quality problems in the watershed caused or contributed to by MS4 discharges . . ."[1161] As set forth above, the 2004 Fact Sheet explained that the requirements "are necessary for the Permittees to *identify and mitigate* sources of pollutants in urban runoff from the entire watershed that impact common downstream *receiving waters*."[1162] The 2010 Fact Sheet emphasizes the importance of a watershed workplan that implements "a collective watershed strategy to assess and prioritize the water quality problems, and *identify,*

[1156] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 595 (Order R9-2004-0001, Sections K.1., and K.2.).

[1160] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 70 (Test Claim narrative).

[1161] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 595 (Order R9-2004-0001, Section K.2.d.).

[1162] Exhibit X (34), Order R9-2004-0001, Fact Sheet/Technical Report, page 70, emphasis in original.

address, and mitigate the highest priority water quality issues/pollutants within the Upper Santa Margarita watershed's *receiving waters*."[1163] Thus, the requirement to identify and prioritize water quality problems has not changed and nor has its purpose changed. The change in the requirement is the addition of the phrase "in terms of constituents by locations" which is how the claimants are to identify the water quality problems. However, this requirement is not new and does not impose a new program or higher level of service. The prior permit MRP required the claimants to implement the MRP to achieve certain objectives including:

> 3. Assess the chemical, physical, and biological impacts of receiving waters resulting from urban runoff;
>
> 4. Characterize urban runoff discharges;
>
> 5. Identify sources of specific pollutants . . .[1164]

Specifically, receiving waters monitoring under the prior permit required the claimants "to address on-going, site-specific needs" through water sampling at stations for pollutants and toxicity with follow-up analyses using Toxicity Identification Evaluations (TIEs) to determine the cause of toxicity and Toxicity Reduction Evaluations (TREs) to identify sources and implement management actions.[1165] The claimants were also required to implement tributary monitoring through station sampling to help identify sources of pollutants.[1166] Each of these samplings would yield a quantified water quality problem in terms of constituent by location.

The objectives stated in the prior permit's MRP were echoed in the test claim permit's MRP.[1167] In addition, the MRP requires the claimants to design receiving waters monitoring to meet the stated goals.[1168] The test claim permit's MRP, like the prior MRP, requires water sampling at stations for pollutants and toxicity and also requires stream assessment monitoring. Both require follow-up analyses using TIEs to determine the cause of toxicity and TREs to identify the sources.[1169] Again, these analyses will yield quantified results by constituent and location. Thus, the requirement in Section G.1.b. to identify and prioritize water quality problem(s) in terms of constituents by locations is *not* a new requirement or a higher level of service.

The claimants further contend that the requirement in Section G.1.c. that the workplan "identify likely sources, pollutant discharges and/or other factors causing the highest water quality

---

[1168] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 299 (test claim permit, Attachment E.).

[1169] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 299- 305 (test claim permit, Attachment E.).

problem(s) within the watershed" where identification efforts must include "additional focused water quality monitoring to identify specific sources within the watershed" is also a new, different, and more demanding requirement.[1170] However, the prior permit required "[a]n identification and prioritization of major water quality problems in the watershed caused or contributed to by MS4 discharges and the likely source(s) of the problem(s)."[1171] Thus, the requirement to identify likely sources of the water quality problems has not changed. While the prior permit provided no additional language on the steps to be taken to fulfill the requirement, the test claim permit adds that the efforts must include "additional focused water quality monitoring to identify specific sources within the watershed." The prior permit, however, prohibited discharges from MS4s that cause or contribute to the violation of water quality standards.[1172] As part of Receiving Water Limitations, the claimants were required to assure compliance with the prohibition by providing notice and a report regarding BMPs to the Regional Board upon a determination by either the claimants or the Regional Board that MS4 discharges are causing or contributing to an exceedance of an applicable water quality standard.[1173] Such a determination would require sufficiently focused water quality monitoring to identify the specific source of the exceedance. The test claim permit includes the same prohibition and the same procedure upon the determination of an exceedance.[1174] The requirement to perform additional focused water quality monitoring to identify specific sources within the watershed is part of a pre-existing duty of the claimants to comply with the prohibition against discharges from MS4s that cause or contribute to the violation of water quality standards and is not a new requirement or a higher level of service. Thus, the requirement in Section G.1.c. is *not* new and does not impose a new program or higher level of service.

The test claim permit in Sections G.1.d., G.1.e., and G.1.f. also require the claimants to develop a watershed BMP implementation strategy as part of the workplan to attain receiving water quality objectives and to include a schedule for implementation of the BMPs and a list of criteria to be used to evaluate BMP effectiveness;[1175] develop a strategy to monitor improvements in receiving

[1175] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 439 (test claim permit, Section G.1.d.).

water quality directly resulting from implementation of the BMPs including reviewing the necessary data to report on the measured pollutant reduction;[1176] and establish a schedule for development and implementation of the watershed strategy outlined in the workplan.[1177] These requirements are *not* new and do not impose a new program or higher level of service. The prior permit, in Sections K.2.l. and m., required the claimants to include and implement short and long-term strategies to assess the effectiveness of activities, programs, and the Watershed SWMP in improving receiving water quality, including the use of monitoring data collected by the permittees in substantiating or refining the assessment.[1178] And the prior permit's MRP required the claimants to participate and coordinate with federal, state, and local agencies and other dischargers in the Santa Margarita Watershed in development and implementation of a regional watershed monitoring program.[1179] While the test claim permit clarified that the implementation strategies include the development of BMPs, that requirement is not new. The claimants have long been required "to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants."[1180] Federal regulations define "best management practices" as "schedules of activities, prohibitions of practices, maintenance procedures, and other management practices to prevent or reduce the pollution of "waters of the United States." BMPs also include treatment requirements, operating procedures, and practices to control plant site runoff, spillage or leaks, sludge or waste disposal, or drainage from raw material storage.[1181] And that is exactly what the prior permit required; implementation of strategies to assess the effectiveness of activities and programs. Section K.2.e. of the prior permit also required the claimants to have a time schedule for implementation of short and long-term recommended activities needed to address the highest priority water quality problem(s).[1182] Thus, these requirements in Sections G.1.d., G.1.e., and G.1.f. are *not* new and do not impose a new program or higher level of service.

However, the following requirement imposed in Section G.1.d., was not required by the prior permit and is new:

[1176] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 439-440 (test claim permit, Section G.1.e.).

[1181] Code of Federal Regulations, title 40, section 122.2.

[1182] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 595-596 (Order R9-2004-0001, Section K.2.e.).

- The watershed BMP implementation strategy shall include a map of any implemented and proposed BMPs.[1183]

Section G.2. requires that the watershed workplan be implemented within 90 days of submittal unless otherwise directed by the Regional Board.[1184] The prior permit did not include deadline to start implementation, however, the claimants were still required to implement a watershed SWMP.[1185] Imposing a deadline on the claimants does not result in any newly required activities.

Section G.3. requires the watershed copermittees to hold frequent regularly scheduled meetings; pursue efforts to obtain any interagency agreements, or other coordination efforts, with non-copermittee owners of the MS4 (such as Caltrans, Native American tribes, and school districts) to control the contribution of pollutants from one portion of the shared MS4 to another portion of the shared MS4; and, as appropriate, participate in watershed management efforts to address water quality issues within the entire Santa Margarita Watershed (such as the County of San Diego and U.S. Marine Corps Camp Pendleton).[1186]

Even though the prior permit did not expressly state that the watershed permittees are required to hold frequent regularly scheduled meetings, this activity is *not* new. The requirement to meet frequently encourages the claimants to continue to collaborate on watershed issues. However, under the prior permit, in Sections K.1. and K.2., the claimants were required to collaborate with other permittees to identify, address, and mitigate the highest priority water quality issues/pollutants in the Upper Santa Margarita Watershed, and to develop and implement a Watershed SWMP for the Upper Santa Margarita Watershed. The SWMP had to include "a mechanism to facilitate collaborative "watershed-based" (i.e. natural resource-based) land use planning with neighboring local governments in the watershed" pursuant to Section K.2.g.[1187] Thus, the collaboration requirements under the prior permit mean that the claimants had to meet frequently on these issues.

The requirement in Section G.3. to pursue efforts to obtain any interagency agreements, or other coordination efforts, with non-copermittee owners of the MS4 (such as Caltrans, Native American tribes, and school districts) to control the contribution of pollutants from one portion of the shared MS4 to another portion of the shared MS4 is new. The prior permit, in Section K.2.b. required that the SWMP include "A description of any interagency agreement, or other efforts, with non-Permittee owners of the MS4 (such as Caltrans, Native American Tribes, and

[1185] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 595 (Order R9-2004-0001, Section K.2.).

[1186] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 440 (test claim permit, Section G.3.).

[1187] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 595 (Order R9-2004-0001, Sections K.1., K.2.).

school districts) to control the contribution of pollutants from one portion of the shared MS4 to another portion of the shared MS4."[1188] However, it did not require the claimants to pursue such agreements. Thus, Section G.3. imposes the following new requirement:

- The copermittees shall pursue efforts to obtain any interagency agreements, or other coordination efforts, with non-copermittee owners of the MS4 (such as Caltrans, Native American tribes, and school districts) to control the contribution of pollutants from one portion of the shared MS4 to another portion of the shared MS4.[1189]

The last requirement in Section G.3., to participate in watershed management efforts to address water quality issues within the entire Santa Margarita Watershed (such as the County of San Diego and U.S. Marine Corps Camp Pendleton) is *not* new and does not impose a new program or higher level of service. Section K.3. of the prior permit, required the claimants to "participate in watershed management efforts to address storm water quality issues within the entire Santa Margarita Watershed, including efforts conducted by other entities in the watershed, such as San Diego County, U.S. Marine Corps Base Camp Pendleton, Native American tribes, and other state, federal, and local agencies."

Section G.4. requires the watershed copermittees to implement a watershed-specific public participation mechanism within each watershed, which must include a minimum 30-day public review of and opportunity to comment on the watershed workplan prior to submittal to the Regional Board. The workplan must include a description of the public participation mechanisms to be used and identification of the persons or entities anticipated to be involved during the development and implementation of the watershed workplan.[1190] The Water Boards' comments suggest the public participation requirements in section G.4. are new as follows:

> To the extent the requirement to allow public participation prior to submittal of a draft Watershed workplan is new to the 2010 Permit, for purposes of responding to Claimant's challenge, it is important to note that the 2010 Permit does not *mandate* that Copermittees actually consider or respond to comments on the draft Watershed Workplan, [fn. omitted.] nor does it mandate holding a public meeting at that stage. By its term, it simply mandates that Copermittees make a draft available for public review and comment. To the extent allowing public comment on the draft Watershed Workplan is determined to be a new requirement, any costs associated with making a draft available for public comment, with no additional associated mandated requirements to respond to any public comments or modify the draft, would be *de minimis*.[1191]

[1188] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 595 (Order R9-2004-0001, Section K.2.b.).

[1189] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 256 (test claim permit, Section G.3.).

[1190] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 440 (test claim permit, Section G.4.).

[1191] Exhibit C, Water Boards' Comments on the Test Claim, filed September 22, 2017, page 48.

However, Section E.3. of prior permit (which addresses both the individual and watershed SWMP) required that "[e]ach Permittee shall incorporate a mechanism for public participation during the development and implementation of its SWMP," and thus the public participation requirement for the watershed workplan is *not* new.[1192] Public participation was not defined in the prior permit, but as stated in the background, federal regulations require proposed management programs to "include a comprehensive planning process which involves public participation and where necessary intergovernmental coordination, to reduce the discharge of pollutants to the maximum extent practicable . . . ."[1193], and the US EPA's MS4 Program Evaluation Guidance describes the public participation activities as requiring, at a minimum, notice and an opportunity to comment.[1194]

The requirement in Section G.4., that the workplan must include the identification the persons or entities anticipated to be involved during the development and implementation of the watershed workplan, however, was not required by prior law and is new. Thus, Section G.4. of the test claim permit imposes the following new requirement:

- The Watershed Workplan must include the identification of the persons or entities anticipated to be involved during the development and implementation of the Watershed Workplan.[1195]

Section G.5. requires the claimants to review and update the watershed workplan annually to identify needed changes to the prioritized water quality problems identified in the plan and present all updates to the watershed workplan during an annual watershed review meeting. The watershed review meeting must be open to the public and adequately noticed.[1196] Section K.4. of the prior permit required the claimants to annually "meet to review and assess available water quality data (from the MRP and other reliable sources), assess program effectiveness, and to review and update the Watershed SWMP." Thus, the annual meeting is not new, and the costs to review and update the plan are likewise not new. However, the requirement in Section G.5. that the "annual watershed review meeting must be open to the public and adequately noticed" is new and is not required by the prior permit. The Water Boards suggest that the claimants were already subject to open meeting act requirements and thus, the test claim permit requirements of providing notice and opening the annual meeting to the public are not new.[1197] The Ralph M. Brown Act, which applies to cities, counties and other local governmental bodies, is not applicable to the watershed copermittees as they are not the body of a local agency created by the

---

governing body of a local agency or any other statutorily-created local body.[1198] The Bagley-Keene Open Meeting Act, which applies to state bodies, is also not applicable to the watershed copermittees. The Regional Board is subject to the Bagley-Keene Open Meeting Act but the watershed copermittees are not delegated the authority of the Regional Board, are not advisory to the Regional Board, and no member of the Regional Board is a watershed copermittee.[1199] Therefore, there is no pre-existing duty for the watershed copermittees to comply with open meeting act requirements. Accordingly, Section G.5. imposes the following new requirement:

- The annual watershed review meetings shall be open to the public and adequately noticed.[1200]

Finally, Section G.5. requires each claimant to also review and modify their jurisdictional programs and JRMP annual reports, as necessary, so that they are consistent with the updated watershed workplan.[1201] This was not required by the prior permit. Therefore, Section G.5. imposes the following new requirement:

- Each copermittee shall review and modify jurisdictional programs and JRMP annual reports, as necessary, so they are consistent with the updated watershed workplan.[1202]

ii. The new requirements imposed by sections G.1.d., G.3., G.4., and G.5. are mandated by the state.

As indicated above, Section G. imposes the following new requirements:

- The watershed BMP implementation strategy shall include a map of any implemented and proposed BMPs.[1203]
- The copermittees shall pursue efforts to obtain any interagency agreements, or other coordination efforts, with non-copermittee owners of the MS4 (such as Caltrans, Native American tribes, and school districts) to control the contribution of pollutants from one portion of the shared MS4 to another portion of the shared MS4.[1204]

- The watershed workplan must include the identification of the persons or entities anticipated to be involved during the development and implementation of the Watershed Workplan.[1205]
- The annual watershed review meetings shall be open to the public and adequately noticed.[1206]
- Each copermittee shall review and modify jurisdictional programs and JRMP annual reports, as necessary, so they are consistent with the updated watershed workplan.[1207]

The Commission finds that that these activities are mandated by the state.

The California Supreme Court, in *Department of Finance v. Commission on State Mandates*, identified the following test to determine whether certain conditions imposed by an NPDES stormwater permit issued by the Los Angeles Regional Water Board were mandated by the state or the federal government:

> If federal law compels the state to impose, or itself imposes, a requirement, that requirement is a federal mandate. On the other hand, if federal law gives the state discretion whether to impose a particular implementing requirement, and the state exercises its discretion to impose the requirement by virtue of a "true choice," the requirement is not federally mandated.[1208]

The court recognized that the "federal CWA broadly directed the board to issue permits with conditions designed to reduce pollutant discharges to the maximum extent practicable. But the US EPA's regulations gave the board discretion to determine which specific controls were necessary to meet that standard. (40 C.F.R. § 122.26(d)(2)(iv).)"[1209] "[E]xcept where a regional board finds the conditions are the *only means* by which the [federal] 'maximum extent practicable' standard can be met, the State exercises a true choice by determining what controls are necessary to meet the standard."[1210] "That the San Diego Regional Board found the permit requirements were 'necessary' to meet the standard establishes only that the San Diego Regional Board exercised its discretion."[1211]

[1209] *Department of Finance v. Commission on State Mandates* (2016) 1 Cal.5th 749, 767-768.

[1210] *Department of Finance v. Commission on State Mandates* (2017) 18 Cal.App.5th 661, 682, citing *Department of Finance v. Commission on State Mandates* (2016) 1 Cal.5th 749, 768, emphasis added.

[1211] *Department of Finance v. Commission on State Mandates* (2017) 18 Cal.App.5th 661, 682.

Here, the federal regulations require the proposed management program to include "a comprehensive planning process which involves public participation and where necessary, intergovernmental coordination, to reduce the discharge of pollutants to the MEP using management practices, control techniques and system, design and engineering methods, and other appropriate conditions."[1212] But the decision on whether to require controls on a jurisdictional or watershed basis, and to determine which controls to require, is left to the discretion of the Regional Board. Federal law simply provides that "[p]roposed management programs *may* impose controls on a systemwide basis, a watershed basis, a jurisdiction basis, or on individual outfalls, but does not require watershed planning.[1213] In 2017, the Third District Court of Appeal agreed with this conclusion, finding that permit requirements to develop and implement regional watershed management programs was mandated by the state as follows:

> The regulation relied upon by the State [40 C.F.R. § 122.26(d)(2)(iv), which states that "Proposed programs *may* impose controls on a systemwide basis, a watershed basis, a jurisdiction basis, or on individual outfalls."] does not mandate any of these watershed and regional management requirements. It clearly leaves to the San Diego Regional Board the discretion to require controls on a systemwide, watershed, or jurisdictional basis. The State exercised that discretion in imposing the controls it imposed. They thus are state mandates subject to section 6.[1214]

The new activities are not required by federal law and there is no evidence in the record that these activities are the *only means* by which the federal MEP standard can be met. The Regional Board, therefore, exercised true discretion when requiring the claimants to perform the new activities bulleted above. Thus, the new activities required by Sections G.1.d., G.3., G.4., and G.5. are mandated by the state.

iii. The new activities mandated by sections G.1.d., G.3., G.4., and G.5. of the test claim permit constitute a new program or higher level of service.

The Commission also finds that the new state-mandated activities constitute a new program or higher level of service within the meaning of article XIII B, section 6. A new program or higher level of service is defined as one that carries out the governmental function of providing services to the public, or laws which, to implement a state policy, impose unique requirements on local governments and do not apply generally to all residents and entities in the state.[1215] Only one of these alternatives is required to establish a new program or higher level of service.[1216]

Here, the new requirements mandated by Sections G.1.d., G.3., G.4., and G.5. are expressly directed toward the local agency copermittees and are therefore uniquely imposed on local

---

[1212] Code of Federal Regulations, title 40, section 122.26(d)(2)(iv).

[1213] Code of Federal Regulations, title 40, section 122.26(d)(2)(iv).

[1214] *Department of Finance v. Commission on State Mandates* (2017) 18 Cal.App.5th 661, 687.

[1215] *County of Los Angeles v. State of California* (1987) 43 Cal.3d 46, 56.

[1216] *Carmel Valley Fire Protection Dist. v. State of California* (1987) 190 Cal.App.3d 521, 537; *Department of Finance v. Commission on State Mandates* (2021) 59 Cal.App.5th 546, 557.

government. In addition, the new requirements provide a governmental service to the public by protecting the beneficial uses of receiving waters, and ensuring notice and public participation when assessing the water quality problems.

Accordingly, the new requirements in Sections G.1.d., G.3., G.4., and G.5. of the test claim permit mandate a new program or higher level of service within the meaning of article XIII B, section 6 of the California Constitution.

10. Section K.3.a.-c. of the Test Claim Permit Imposes Some New Annual Reporting Requirements That Are Mandated by the State and Impose a New Program or Higher Level of Service.

The claimants pled Section K.3.a.-c.of the test claim permit requiring that certain information be included in the annual Jurisdictional Runoff Management Program (JRMP) report.[1217] Section K.3.a.-c. of the test claim permit requires that each claimant prepare an individual JRMP annual report that covers implementation of its jurisdictional activities during the past annual reporting period, and specifies the contents of the annual report, which claimants contend includes a new reporting requirements that constitute a reimbursable state-mandated program.[1218]

The Commission finds that sections K.3.a. and b. do not impose any new activities. Sections K.3.c.1., 2., 3., and 4. impose some new requirements, and except for reporting on the claimant's own municipal projects (which is not mandated by the state), the new requirements are mandated by the state and impose a new program or higher level of service.

a. Background

i. Federal law requires that permittees submit an annual report to the Regional Board covering program status and proposed changes, data, budget, enforcement actions, inspections, public education programs and water quality improvements or degradation.

Federal law requires that an annual report be filed by the permittees by the anniversary date of the issuance of the permit and include the following information:

- The status of implementing the components of the stormwater management program that are established as permit conditions.
- Proposed changes to the stormwater management programs that are established as permit conditions. Such proposed changes shall be consistent with Code of Federal Regulations, title 40, 122.26(d)(2)(iii) [which requires a permittee to provide information, as specified, characterizing the quality and quantity of discharges covered in the permit application].
- Revisions, if necessary, to the assessment of controls and the fiscal analysis reported in the permit.

[1217] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 22, 72-75.

[1218] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262-267 (test claim permit, section K.3.).

- A summary of data, including monitoring data, that is accumulated throughout the reporting year.
- Annual expenditures and budget for the year following each annual report.
- A summary describing the number and nature of enforcement actions, inspections, and public education programs.
- Identification of water quality improvements or degradation.[1219]

Federal law also requires the retention of monitoring records, copies of required reports, and records of all data used to complete the permit application for a period of at least three years.[1220]

ii. The prior permit required the submission of an annual report to the Regional Board containing descriptions of the activities and data for each of the components of the permit.

To assess compliance with the prior permit, measure the effectiveness of the stormwater plans, and to assess the overall health of the receiving waters, the prior permit's MRP required each permittee to submit an individual SWMP Annual Report documenting the permit activities performed by the permittee during the prior year with a signed certified statement under penalty of perjury.[1221] The report would be combined with the other permittees' SWMP reports and the watershed SWMP before being submitted to the Regional Board. Each individual report was required to contain, at a minimum, data addressing the following components:

- A comprehensive description of all activities conducted by the permittee to meet the permit requirements, described more fully below.[1222]
- An assessment of program effectiveness, requiring that "each Permittee shall include an assessment of the effectiveness of its Individual SWMP using the measurable goals and direct and indirect assessment measurements developed in the SWMP in accordance with Attachment D of Order No. R9-2004-001."[1223]
- An annual fiscal analysis that evaluates the expenditures (such as capital, operation and maintenance, education, and administrative expenditures) necessary to accomplish the activities of the permittee's individual SWMP. The analysis had to include a report of the previous reporting period's budget and source of funds, and a budget and identification of source of funds for the upcoming budget year, broken down by program components (program management, construction inspections, development plan review and SUSMP

[1219] Code of Federal Regulations, title 40, section 122.42(c).

[1220] Code of Federal Regulations, title 40, section 122.41(j)(2).

[1221] Exhibit X (35), Order R9-2004-0001, Monitoring and Reporting Program, Sections I., III.C., pages 2, 17.

[1222] Exhibit X (35), Order R9-2004-0001, Monitoring and Reporting Program, Section III.A.1., page 12.

[1223] Exhibit X (35), Order R9-2004-0001, Monitoring and Reporting Program, Section III.A.1.b., page 14.

implementation, industrial and commercial inspections, illicit discharge and connection response and elimination, municipal activities, education, monitoring, and other).

- Non-Storm Water Discharges. Permittees shall report on any discharge category listed in Requirement B.2 of Order No. R9-2004-001 that was identified as a source of pollutants during the reporting period. For each identified category, the permittee had to report whether it elected to prohibit the discharge or to require BMPs to reduce pollutants in the discharge to the MEP. If the discharge is not prohibited, the BMPs that will be implemented, or required to be implemented, had to be described in each permittee's annual report.
- Receiving Water Limitations. The report required pursuant to Requirement C.2.a. of the prior permit, if applicable.
- A summary of all urban runoff related data not included in the annual monitoring report (e.g., special investigations).
- Proposed revisions to the Individual SWMP, including areas in need of improvement based on the assessment of effectiveness of each program component.[1224]

The prior permit then identifies specific reporting requirements for the first bullet above, the "comprehensive description of all activities conducted by the Permittee to meet all requirements of Order No. R9-2004-001," which included, "but [was] not limited to, the following information" (which includes for each component an assessment of the program's effectiveness based on the measurable goals and direct and indirect assessment measurements developed in the SWMP in accordance with Attachment D.):[1225]

- Development Planning (Section F.): (i) Description of any amendments to the General Plan or the development project approval process; (ii) Number of grading permits issued; (iii) Number of developments conditioned to meet SUSMP requirements; (iv) Attach one example of a development project that was conditioned to meet SUSMP requirements and a description of the required BMPs; (v) Description of any updates to the environmental review process; (vi) Description and number of training efforts conducted during the reporting period (for staff, developers, contractors, etc.), including the number of staff trained; and (vii) An assessment of program effectiveness based on the measurable goals established in the copermittee's SWMP.[1226]
- Construction (Section G.): (i) Number of inspections conducted; (ii) Number and type of enforcement actions related to construction sites; (iii) Description of modifications made to the construction and grading approval process; (iv) Description and number of training efforts conducted during the reporting period (for staff inspectors, contractors, and

construction site operators); and (v) An assessment of program effectiveness based on the measurable goals established in the permittee's SWMP.[1227]

- Municipal (Section H.1.): (i) Number of municipal inspections conducted; (ii) Number and types of enforcement actions taken; (iii) Number of catch basins and inlets that were inspected and the number that were cleaned; (iv) Assessment of the amount and type of debris removed from catch basins, streets, and open channels, including an identification of problem areas that generate the most pollutants; (v) Assessment of effectiveness of BMPs that have been implemented for municipal facilities and activities; (vi) Description and number of training efforts conducted over the last year (for municipal facility operators and inspectors); and (vii) An assessment of program effectiveness based on the measurable goals established in the permittee's SWMP.[1228]
- Industrial/Commercial (Section H.2.): (i) Number of inspections conducted; (ii) Number and type of enforcement actions taken; and (iii) An assessment of overall program effectiveness based on the measurable goals established in the permittee's SWMP.[1229]
- Residential (Section H.3.): (i) A description of residential areas that were focused on during the past year; (ii) Number and types of enforcement actions taken; and (iii) Assessment of overall program effectiveness based on the measurable goals established in the permittee's SWMP.[1230]
- Education (Section I.): (i) Description of education efforts conducted by the permittee (not collectively with other permittees) during the previous year; (ii) Assessment of overall program effectiveness based on the measurable goals established in the permittee's SWMP.[1231]
- Illicit Discharge Detection and Elimination (Section J.): (i) Number of illicit discharges, connections and spills reported and/or identified during the reporting period; (ii) Number of illicit discharges or connections investigated during the reporting period and the outcome of the investigations; (iii) Number and types of enforcement actions taken for illicit discharges or connections during the reporting period; (iv) Number of times the permittee's hotline was called during the reporting period, as compared to previous reporting periods; (v) Number and location of dry weather monitoring sites that were monitored during the reporting period; (vi) Summary of Illicit Discharge Monitoring

[1227] Exhibit X (35), Order R9-2004-0001, Monitoring and Reporting Program, Section III.A.1.a.2., page 12.

Program results, including: 1) All inspection, field screening, and analytical monitoring results; 2) All follow-up and elimination activities; and 3) Any proposed changes to station locations and/or sampling frequencies; and (vii) An assessment of overall program effectiveness based on the measurable goals established in the permittee's SWMP.[1232]

- Public Participation: a description of efforts to include the public in urban runoff management programs during the reporting period.[1233]

b. Sections K.3.a. and b. do not impose any new requirements, but section K.3.c.1., 2., 3., and 4. of the test claim permit mandate a new program or higher level of service.

The findings in the test claim permit indicate that the "[a]nnual reporting requirements included in this Order are necessary to meet federal requirements and to evaluate the effectiveness and compliance of the Copermittees' programs."[1234] The Fact Sheet for Section K. cites to the federal regulation requiring annual reports, Code of Federal Regulations, title 40, section 122.42(c), and Water Code section 13267 (which provides that "the Regional Board may require that any person who has discharged [...] shall furnish, under penalty of perjury, technical or monitoring reports which the regional board requires") as the legal authority for this section.[1235] The Fact Sheet further explains that the reporting requirements include less activity-based reporting and instead focuses on results and responses to effectiveness assessments using the data collected under the prior permit as a baseline to determine whether the programs are successful.[1236]

The claimants have pled only the reporting requirements in Section K.3.a.-c., which addresses the individual annual report, now called the JRMP Annual Report. As indicated above, the copermittees are required to review and modify their JRMP and JRMP annual reports after the annual watershed review meeting to ensure their individual plans are consistent with the updated watershed workplan.[1237] Thus, given the potential for modifications of the JRMP annual report based on the updates to the watershed workplan, Section K. begins by stating that "the

[1237] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 257, 267 (test claim permit, Sections G.5., Section L.).

Copermittees *may propose* alternate reporting criteria and schedules, as part of their updated JRMP, for the Executive Officer's acceptance."[1238]

Each part of Section K.3.a.-c. is addressed below.

i. Section K.3.a. and b.

Section K.3.a. and b. of the test claim permit require each copermittee to generate and submit an individual JRMP annual report, by October 31 of each year, which covers activities during the prior reporting period. Section K.3.a. further requires each copermittee to retain records of all monitoring information and copies of reports for at least three years in accordance with the Standard Provisions in Attachment B.[1239] These requirements are not new. The requirement in Section K.3.b. to submit the annual report by October 31 does not impose any new activities on the claimants. Annual reports were required by the prior permit to be submitted by October 31 and are required by existing federal law.[1240] In addition, although a retention period was not included in the prior permit, federal law requires the retention of monitoring records, copies of required reports, and records of all data used to complete the permit application for a period of at least three years.[1241] Thus, the retention of records required by Section K.3.b. of the test claim permit is not new, but is required by existing federal law.

ii. Section K.3.c.1.

Section K.3.c. provides that each annual report "must contain, at a minimum, the following information, as applicable to the Copermittee:

> (1) Information required to be reported annually in Section H (Fiscal Analysis) of this Order;
>
> (2) Information required to be reported annually in Section J (Program Effectiveness) of this Order;
>
> (3) The completed Reporting Checklist found in Attachment D; and

[1238] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 260 (test claim permit, Section K.). The test claim permit states, "The San Diego Water Board by prior resolution has delegated all matters that may legally be delegated to its Executive Officer to act on its behalf pursuant to CWC §13223. Therefore, the Executive Officer is authorized to act on the San Diego Water Board's behalf on any matter within this Order unless such delegation is unlawful under CWC §13223 or this Order explicitly states otherwise." Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 199, footnote 4 (test claim permit, Section A.).

[1239] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 275 (test claim permit, Section K.3.a.-b.; Attachment B, Section 4).

[1240] Exhibit X (35), Order R9-2004-0001, Monitoring and Reporting Program, Section III.C., pages 12, 17; Code of Federal Regulations, title 40, section 122.42(c).

[1241] Code of Federal Regulations, title 40, section 122.41(j)(2).

(4) Information for each program component as described in the following Table 5."[1242]

The first provision in Section K.3.c.1 states that each JRMP annual report contain information required to be reported annually in Section H. (Fiscal Analysis),[1243] which requires an annual fiscal analysis of the capital and operation and maintenance expenditures necessary to accomplish the requirements of the test claim permit and estimated expenditures for the current reporting period, the preceding period, and the next period. The analysis must include a description of the source of funds that are proposed to meet the necessary expenditures and a narrative description of circumstances resulting in a 25 percent or greater annual change for any budget line items.[1244] The copermittees are required to submit their annual fiscal analysis containing this information with the annual JRMP report.[1245]

The claimants did not plead Section H. and, thus, this Decision does not address whether preparing the annual fiscal analysis is eligible for reimbursement under article XIII B, section 6. The claimants pled only the reporting requirement in Section K.3.c.1.

Federal law requires reporting on annual expenditures and the budget for the year following each annual report, and any necessary revisions to the fiscal analysis.[1246] In addition, the prior permit required the claimants to analyze capital, operational, and maintenance expenditures and describe the source of funding for the next year in their annual report.[1247] Thus, these requirements in Section K.3.c.1. are not new and do not mandate a new program or higher level of service.

However, the requirement to provide a narrative description of circumstances resulting in a 25 percent or greater annual change for any budget line items was not expressly required by prior law. Thus Section K.3.c.1. imposes the following new requirement:

- Include in the annual fiscal analysis a narrative description of circumstances resulting in a 25 percent or greater annual change for any budget line items.[1248]

[1242] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 262 (test claim permit, Section K.3.c.).

[1243] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 262 (test claim permit, Section K.3.c.1.).

[1244] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 257 (test claim permit, Section H.2.).

[1245] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 258 (test claim permit, Section H.3.).

[1246] Code of Federal Regulations, title 40, section 122.42(c).

[1247] Exhibit X (35), Order R9-2004-0001, Monitoring and Reporting Program, Section III.A.1.c., page 14.

[1248] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 262 (test claim permit, Section K.3.c.1.).

iii. Section K.3.c.2.

Section K.3.c.2. requires that each JRMP annual report contain information required to be reported annually in Section J. (Program Effectiveness).[1249] Generally, Section J. requires an annual assessment of the implementation of JRMP components (Development Planning, Construction, Municipal, Industrial/Commercial, Residential, Education, and Illicit Discharge Detection and Elimination Programs) to ensure that they "(1) reduce the discharge of storm water pollutants from its MS4 to the MEP; (2) prohibit non-stormwater discharges; and (3) prevent runoff discharges from the MS4 from causing or contributing to a violation of water quality standards."[1250]

The assessment shall be based on the assessment measures or methods for each of the six outcome levels described by the California Stormwater Quality Association (CASQA), and a determination of whether the desired outcome has been met.[1251] Where the assessments indicate that the outcome level has not been achieved within the projected timeframe, each copermittee is required to review its activities and BMPs to identify any needed modifications and improvements and develop and implement a work plan and schedule to address any program modifications and improvements.[1252]

[1249] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 262 (test claim permit, Section K.3.c.2.).

[1250] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 258 (test claim permit, Section J.1.).

[1251] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 258-259 (test claim permit, Section J.1.). The six effective assessment outcome levels are: Level 1 Compliance with Activity-based Permit Requirements: Level 1 outcomes are those directly related to the implementation of specific activities prescribed by the test claim permit or established pursuant to it. Level 2 Changes in Attitudes, Knowledge, and Awareness: Level 2 outcomes are measured as increases in knowledge and awareness among target audiences such as residents, businesses, and municipal employees. Level 3 Behavioral Change and BMP Implementation: Level 3 outcomes measure the effectiveness of activities in affecting behavioral change and BMP implementation. Level 4 Load Reductions: Level 4 outcomes measure load reductions which quantify changes in the amounts of pollutants associated with specific sources before and after a BMP or other control measure is employed. Level 5 Changes in Runoff and Discharge Quality: Level 5 outcomes measures changes in one or more specific constituents or stressors in discharges into or from MS4s. Level 6 Changes in Receiving Water Quality: Level 6 outcomes measure changes to receiving water quality resulting from discharges into and from MS4s, and may be expressed through a variety of means such as compliance with water quality objectives or other regulatory benchmarks, protection of biological integrity, or beneficial use attainment. Exhibit A, Test Claim filed November 10, 2011 and Revised April 28, 2017, page 285 (test claim permit, Attachment C).

[1252] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 259 (test claim permit, Section J.2.b.). The work plan must include, at a minimum, the following: (1) The problems and priorities identified during the assessment; (2) A list of priority pollutants and known or suspected sources; (3) A brief description of the strategy employed to reduce,

The claimants did not plead Section J. and, thus, this Decision does not address whether conducting the assessments and developing and implementing work plans are eligible for reimbursement under article XIII B, section 6. However, Section K.3.c.2. (which was pled) incorporates the reporting requirements in Section J., which requires that the following information be included in the annual report:

- Provide the following information in the summary of its effectiveness assessments in the annual report:
  a. The results of each of the effectiveness assessments performed pursuant to Section J.1.b, including the demonstrated CASQA effectiveness level(s).
  b. Responses to effectiveness assessments: A description of any program modifications planned in accordance with Section J.2., including the work plan and identified schedule for implementation. The description must include the basis for determining that each modified activity and/or BMP represents an improvement expected to result in improved water quality.
  c. A description of any steps to be implemented to improve the copermittee's ability to assess program effectiveness.[1253]
- Provide an updated timeframe for attainment of a desired outcome level in the annual report when an assessment indicates that the desired outcome level has not been achieved at the end of the projected timeframe, but the review of the existing activities and BMPs are adequate, or that the projected timeframe should be extended.[1254]
- Provide the updated work plan and schedule to address any program modifications and improvements in response to the findings of its assessment.[1255]

Federal law requires that the annual report identify the status of implementing the components of the stormwater program, any proposed changes to the stormwater management programs, and any necessary revisions to the assessment of controls.[1256] The prior permit required the annual

---

eliminate, or mitigate the negative impacts; (4) A description and schedule for new and/or modified BMPs with dates for significant milestones; (5) A description of how the selected activities will address an identified high priority problem, including a description of the expected effectiveness and benefits of the new or modified BMPs; (6) A description of implementation effectiveness metrics; (7) A description of how efficacy results will be used to modify priorities and implementation; and (8) A review of past activities implemented, progress in meeting water quality standards, and planned program adjustments.

[1253] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 260 (test claim permit, Section J.3.).

[1254] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 259 (test claim permit, Section J.2.a.).

[1255] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 259 (test claim permit, Section J.2.b.).

[1256] Code of Federal Regulations, title 40, section 122.42(c).

report to include an assessment of the effectiveness of its Individual SWMP (which included an assessment of the Development Planning, Construction, Municipal, Industrial/Commercial, Residential, Education, and Illicit Discharge Detection and Elimination Programs), using measurable goals and direct and indirect assessment measurements developed in the SWMP, and proposed revisions to the Individual SWMP including areas in need of improvement based on the assessment of effectiveness of each program component.[1257] Therefore, the requirements in the first bullet — to provide the results of the effectiveness assessments, responses to those assessments, proposed program modifications expected to result in improved water quality, and a description of steps to improve the ability to assess program effectiveness — are not new, but fall within these existing requirements.

In addition, the last bullet — to provide an updated work plan and schedule to address any program modifications and improvements in response to the findings of the assessment — is not new. The prior permit required that the annual report include proposed revisions to the Individual SWMP including areas in need of improvement based on the assessment of effectiveness of each program component.[1258] The prior permit also required that the individual SWMPs be designed to achieve compliance with the receiving water limitations and prohibitions to ensure that water quality standards are met, and that the claimant's individual SWMPs be timely implemented using control measures and other actions to reduce pollutants in urban runoff discharges. If an exceedance of water quality standards persisted notwithstanding implementation of the SWMP, the claimants had to assure compliance with the receiving water limitations and prohibitions by reporting to the Regional Board the BMPs that were currently being implemented and additional BMPs that will be implemented (if approved by the Regional Board) to prevent or reduce any pollutants that are causing or contributing to the exceedance of water quality standards. This report was expressly allowed to be incorporated into the SWMP annual report, and had to include an implementation schedule.[1259]

However, the second bullet above was not expressly stated in prior law. The second bullet requires the claimant to provide in the annual report an updated timeframe to attain a desired outcome level when the desired outcome has not yet been achieved, but the claimant believes that the existing controls and BMPs are adequate and need more time. Federal law does require the permittee to report on the status of the program, but does not expressly require the reporting of an updated timeframe to attain a desired outcome level when the permittee believes that BMP modifications are not necessary. Thus, the following activity is new:

- Provide in the annual report an updated timeframe for attainment of a desired outcome level in the annual report when an assessment indicates that the desired outcome level has

[1257] Exhibit X (35), Order R9-2004-0001, Monitoring and Reporting Program, Section III.A.1.b., page 14.

[1258] Exhibit X (35), Order R9-2004-0001, Monitoring and Reporting Program, Section III.A.1.b., page 14.

[1259] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 573 (Order R9-2004-0001, Section C.).

not been achieved at the end of the projected timeframe, but the review of the existing activities and BMPs are adequate, or that the projected timeframe should be extended.[1260]

iv. Section K.3.c.3.

Section K.3.c.3. requires that each JRMP annual report contain the reporting checklist in Attachment D,[1261] which must be no longer than two pages, be current as of the first day of the rainy season, include a signed certification statement, and provide the following information:

- Order Requirements: were all requirements of this order met?
- Construction: number of active sites, number of inactive sites, number of sites inspected, number of inspections, number of violations, number of construction enforcement actions taken.
- New Development: number of development plan reviews, number of grading permits issued, number of projects exempted from interim/final hydromodification requirements.
- Post Construction Development: number of priority development projects, number of SUSMP required post-construction BMP inspections, number of SUSMP required post-construction BMP violations, number of SUSMP required post-construction BMP enforcement actions taken.
- Illicit Discharges and Connections: number of inspections, number of detections by staff, number of detections from the public, number of eliminations, number of violations, number of enforcement actions taken.
- MS4 Maintenance: number of inspections conducted, amount of waste removed, total miles of MS4 inspected.
- Municipal/Commercial/Industrial: number of facilities, number of inspections conducted, number of facilities inspected, number of violations, number of enforcement actions taken.[1262]

The prior permit did not include a checklist. However, some of the information in the checklist was required to be reported under the prior permit. In addition, federal law requires that the annual report include some of the information described below. Thus, gathering and reporting the following information required by Section K.3.c.3. is *not* new and does not constitute a new program or higher level of service:

- Order Requirements: were all requirements of this order met? Federal law requires a permittee to file reports to ensure compliance with the permit and water quality

[1260] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 262 (test claim permit, Section K.3.c.2.).

[1261] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 262 (test claim permit, Section K.3.c.3.).

[1262] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 296 (test claim permit, Attachment D.).

standards.[1263] Federal law also requires the report to include the status of implementing the components of the storm water management program that are established as permit conditions; a summary of data, including monitoring data, that is accumulated throughout the reporting year; and identification of water quality improvements or degradation.[1264] In addition, the prior permit required that the annual report contain a "comprehensive description of all activities conducted by the copermittee to meet all requirements" of the permit.[1265] Thus, reporting on whether the permittee met the requirements of the order is not new.

- Construction: The number of inspections and number of construction enforcement actions taken are required by federal law.[1266] In addition, these reporting requirements are in the prior permit which required reporting on "(i) Number of inspections conducted; (ii) Number and type of enforcement actions related to construction sites."[1267]
- New Development: The number of grading permits issued is a reporting requirement in the prior permit which required reporting on "(ii) Number of grading permits issued."[1268]
- Illicit Discharges and Connections: The number of IC/ID detections by staff, number of IC/ID detections from the public, and number of IC/ID enforcement actions taken are reporting requirements in the prior permit which required reporting on "(i) Number of illicit discharges, connections and spills reported and/or identified during the reporting period; . . . (iii) Number and types of enforcement actions taken for illicit discharges or connections during the reporting period."[1269] The requirement to report the number of IC/ID inspections and number enforcement actions are also required by federal law.[1270]
- MS4 Maintenance: The number of inspections conducted is required to be reported by federal law.[1271] The amount of waste removed was required under the prior permit which

[1263] United States Code, title 33, section 1342(a)(2) (Public Law 100-4).

[1264] Code of Federal Regulations, title 40, section 122.42(c).

[1265] Exhibit X (35), Order R9-2004-0001, Monitoring and Reporting Program, Section III.A.1., page 12.

[1266] Code of Federal Regulations, title 40, section 122.42(c).

[1267] Exhibit X (35), Order R9-2004-0001, Monitoring and Reporting Program, Section III.A.1.a.2., page 12.

[1270] Code of Federal Regulations, title 40, section 122.42(c).

[1271] Code of Federal Regulations, title 40, section 122.42(c).

included "an assessment of the amount and type of debris removed from catch basins, streets, and open channels."[1272]

- Municipal/Commercial/Industrial: The number of inspections conducted and number of enforcement actions taken are required by federal law.[1273] In addition, these reporting requirements are in the prior permit which required reporting on "(i) Number of inspections conducted; (ii) Number and type of enforcement actions taken."[1274]

The following reporting requirements in Section K.3.c.3. require the reporting of numbers on the checklist, including but not limited to the number of sites, inspections, violations, and enforcement actions, which are not expressly required by federal law or the prior permit. Therefore, gathering and reporting the following specific numbers on the checklist required by Section K.3.c.3. *is new*:

- Construction:

  Number of Active Sites

  Number of Inactive Sites

  Number of Sites Inspected

  Number of Violations

- New Development:

  Number of Development Plan Reviews

  Number of Projects Exempted from Interim/Final Hydromodification Requirements

- Post Construction Development:

  Number of Priority Development Projects

  Number of SUSMP Required Post-Construction BMP Inspections

  Number of SUSMP Required Post-Construction BMP Violations

  Number of SUSMP Required Post-Construction BMP Enforcement Actions Taken

- Illicit Discharges and Connections:

  Number of IC/ID Eliminations

  Number of IC/ID Violations

- MS4 Maintenance:

  Total Miles of MS4 Inspected

  Number of Facilities

  Number of Violations[1275]

v. Section K.3.c.4.

Section K.3.c.4. requires the following information identified in Table 5 to be included in the annual report:[1276]

a. New Development:

- All updated relevant sections of the general plan and environmental review process and a description of any planned updates within the next annual reporting period, if applicable;
- All revisions to the SSMP, including where applicable: (a) identification and summary of where the SSMP fails to meet the requirements of this Order; (b) updated procedures for identifying pollutants of concern for each priority development project; (c) updated treatment BMP ranking matrix; (d) updated site design and treatment control BMP design standards;
- Number of priority development projects reviewed and approved during the reporting period. Brief description of BMPs required at approved priority development projects. Verification that site design, source control, and treatment BMPs were required on all applicable priority development projects;
- Name and location of all priority development projects that were granted a waiver from implementing LID BMPs pursuant to Section F.1.d.4. during the reporting period;
- Updated watershed-based BMP maintenance tracking database of approved treatment control BMPs and treatment control BMP maintenance within its jurisdiction, including updates to the list of high-priority priority development projects; and verification that the requirements of this Order were met during the reporting period;
- Name and brief description of all approved priority development projects required to implement hydrologic control measures in compliance with Section F.1.h., including a brief description of the management measures planned to protect downstream beneficial uses and prevent adverse physical changes to downstream stream channels;

[1275] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 296 (test claim permit, Section K.3.c.3., Attachment D).

[1276] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 262 (test claim permit, Section K.3.c.4.).

- Number and description of all enforcement activities applicable to the new development and redevelopment component and a summary of the effectiveness of those activities.[1277]

b. Construction:

- All updated relevant ordinances and description of planned ordinance updates within the next annual reporting period, if applicable;
- A description of any changes to procedures used for identifying priorities for inspecting sites and enforcing control measures that consider the nature of the construction activity, topography, and the characteristics of soils and receiving water quality;
- Any changes to the designated minimum and enhanced BMPs;
- Summary of the inspection program, including the following information: (a) total number and date of inspections conducted at each facility; (b) number, date, and types of enforcement actions by facility; (c) brief description of each high-level enforcement actions at construction sites including the effectiveness of the enforcement. Supporting paper (or electronic) files must be maintained and made available upon the Regional Board's request. Supporting files must include a record of inspection dates, the results of each inspection, photographs (if any), and a summary of any enforcement actions taken.[1278]

c. Municipal:

- Updated source inventory;
- All changes to the designated municipal BMPs;
- Descriptions of any changes to procedures to assure that flood management projects assess the impacts on the water quality of receiving water bodies;
- Summary and assessment of BMP retrofits implemented at flood control structures, including: (a) list of projects retrofitted; (b) list and description of structures evaluated for retrofitting; (c) list of structures still needing to be evaluated and the schedule for evaluation;
- Summary of the municipal structural treatment control operations and maintenance activities, including: (a) number of inspections and types of facilities; (b) summary of findings;

[1277] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 263-264 (test claim permit, Table 5.).

[1278] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 264 (test claim permit, Table 5.).

- Summary of the MS4 and MS4 facilities operations and maintenance activities, including: (a) number and types of facilities maintained; (b) amount of material removed; (c) list of facilities planned for bi-annual inspections and the justification;
- Summary of the municipal areas/programs inspection activities, including: (a) number and date of inspections conducted at each facility; (b) the BMP violations identified during the inspection by facility; (c) number, date and types of enforcement actions by facility; (d) summary of inspection findings and follow-up activities for each facility;
- Description of activities implemented to address sewage infiltration into the MS4;
- Description of BMPs and their implementation for unpaved roads construction and maintenance.[1279]

d. Commercial/Industrial:

- Updated inventory of commercial/industrial sources;
- Summary of the inspection program, including the following information: (a) number and date of inspections conducted at each facility or mobile business; (b) the BMP violations identified during the inspection by facility; (c) number, date, and types of enforcement actions by facility or mobile business; (d) brief description of each high-level enforcement actions at commercial/industrial sites including the effectiveness of the enforcement and follow-up activities for each facility;
- All changes to designated minimum and enhanced BMPs;
- A list of industrial sites, including each name, address, and Standard Industrial Classification (SIC) code, that the copermittee suspects may require coverage under the General Industrial Permit, but has not submitted a Notice of Intent (NOI).[1280]

e. Residential:

- All updated minimum BMPs required for residential areas and activities;
- Quantification and summary of applicable runoff and storm water enforcement actions within residential areas and activities;
- Description of efforts to manage runoff and storm water pollution in common interest areas and mobile home parks.[1281]

[1279] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 264-265 (test claim permit, Table 5.).

[1280] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 265 (test claim permit, Table 5.).

[1281] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 266 (test claim permit, Table 5.).

f. Retrofitting Existing Development:

- Updated inventory and prioritization of existing development identified as candidates for retrofitting;
- Description of efforts to retrofit existing developments during the reporting year;
- Description of efforts taken to encourage private landowners to retrofit existing development;
- A list of all retrofit projects that have been implemented, including site location, a description of the retrofit project, pollutants expected to be treated, and the tributary acreage of runoff that will be treated;
- Any proposed retrofit or regional mitigation projects and time lines for future implementation;
- Any proposed changes to the copermittee's overall retrofitting program.[1282]

g. Illicit Discharge Detection and Elimination:

- Any changes to the legal authority to implement illicit discharge detection and elimination activities;
- Any changes to the established investigation procedures;
- Any changes to public reporting mechanisms, including phone numbers and web pages;
- Summaries of illicit discharges (including spills and water quality data events) and how each significant case was resolved;
- A description of instances when field screening and analytical data exceeded action levels, including those instances for which no investigation was conducted;
- A description of follow-up and enforcement actions taken in response to investigations of illicit discharges and a description of the outcome of the investigation/enforcement actions.[1283]

h. Workplans:

- Updated workplans including priorities, strategy, implementation schedule, and effectiveness evaluation.[1284] The test claim permit discusses the following

[1282] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 266 (test claim permit, Table 5.).

[1283] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 266 (test claim permit, Table 5.).

[1284] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 266 (test claim permit, Table 5.).

workplans: the watershed water quality workplan (watershed workplan),[1285] special studies workplans,[1286] and monitoring program workplan.[1287]

Both federal law and the prior permit required the copermittees to report on much of the information found in Table 5. Thus, reporting the following information in Table 5, and as required by Section K.3.c.4., is *not* new and does not impose a new program or higher level of service:

a. New Development:

- All updated relevant sections of the general plan and the environmental review process. The prior permit required the permittees to include a description of any amendments to the general plan and a description of any updates to the environmental review process in the annual report.[1288]
- Number of priority development projects reviewed and approved during the reporting period. The prior permit required the copermittees to report on the number of developments conditioned to meet SUSMP requirements.[1289] The SUSMP was a plan to reduce pollutants and to maintain or reduce downstream erosion and stream habitat from all priority development projects.[1290]
- Number and description of all enforcement activities applicable to the new development and redevelopment component. Federal law requires the reporting of a summary describing the number and nature of enforcement actions.[1291]
- A summary of the effectiveness of all enforcement activities applicable to the new development and redevelopment component. The prior permit required each copermittee to review and "ensure" that all priority development projects meet

[1285] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 255-257 (test claim permit, Section G.).

[1286] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 314-318 (test claim permit, Monitoring and Reporting Program, Section E.).

[1287] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 321 (test claim permit, Monitoring and Reporting Program, Section E.).

[1288] Exhibit X (35), Order R9-2004-0001, Monitoring and Reporting Program, Section III.A.1.a.1., page 12.

[1289] Exhibit X (35), Order R9-2004-0001, Monitoring and Reporting Program, Section III.A.1.a.1., page 12.

[1290] Redevelopment includes, but is not limited to, the expansion of a building footprint or addition or replacement of a structure; structural development including an increase in gross floor area and/or exterior construction or remodeling; replacement of impervious surface that is not part of a routine maintenance activity; and land disturbing activities related with structural or impervious surfaces. Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 577 (Order R9-2004-0001, Section F.2.b.).

[1291] Code of Federal Regulations, title 40, section 122.42(c).

SUSMP requirements[1292] and provide in the annual report, an assessment of entire program's effectiveness based on the measurable goals established in the copermittee's SWMP.[1293]

- All revisions to the SSMP, including where applicable: (a) Identification and summary of where the SSMP fails to meet the requirements of this Order. The prior permit required the annual report to include proposed revisions to the Individual SWMP, including areas in need of improvement based on the assessment of effectiveness of each program component.[1294]

b. Construction:

- All updated relevant ordinances. One of the permit requirements under federal law is to show that the copermittee has adequate legal authority to control through ordinance, permit, contract, order or similar means, the contribution of pollutants to the municipal storm sewer by stormwater discharges associated with industrial activity and "industrial activity" is defined to include construction activities.[1295] Federal law then requires reporting proposed changes to the stormwater management programs that are established as permit conditions.[1296]
- Summary of the inspection program, including the following information: Total number of inspections conducted at each facility; number and types of enforcement actions by facility; brief description of each high-level enforcement actions at construction sites. The prior permit required the number of inspections and number and type of enforcement actions.[1297] The prior permit also required that the SWMP contain a description of enforcement mechanisms and steps that will be used.[1298] And the annual report had to include an assessment of program effectiveness based on the measurable goals established in the copermittee's

[1292] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 577, (Order R9-2004-0001, Section F.2.b.).

[1293] Exhibit X (35), Order R9-2004-0001, Monitoring and Reporting Program, Section III.A.1.a.1., page 12.

[1294] Exhibit X (35), Order R9-2004-0001, Monitoring and Reporting Program, Section III.A.2., page 12.

[1295] Code of Federal Regulations, title 40, section 122.26(b)(12) and section 122.26(d)(2)(i)(A).

[1296] Code of Federal Regulations, title 40, section 122.42(c).

[1297] Exhibit X (35), Order R9-2004-0001, Monitoring and Reporting Program, Section III.A.2., page 12.

[1298] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 618 (Order R9-2004-0001, Attachment D, Section 3.j.).

SWMP.[1299] In addition, federal law requires the reporting of a summary describing the number and nature of enforcement actions and inspections.[1300]

- Supporting paper (or electronic) files must be maintained by the copermittees and made available upon San Diego Water Board's request. Federal law requires the retention of monitoring records, copies of required reports, and records of all data used to complete the permit application for a period of at least three years.[1301]

c. Municipal:

- Include the number of inspections in the summary of the municipal structural treatment control operations and maintenance activities. The prior permit required that the annual report include the number of municipal inspections conducted.[1302] In addition, federal law requires the reporting of a summary describing the number and nature of inspections.[1303]
- Include in the summary of the MS4 and MS4 facilities operations and maintenance activities, the (b) amount of material removed. The prior permit also required the permittees to report an assessment of the amount and type of debris removed from catch basins, streets, and open channels.[1304]
- Summary of the municipal areas/programs inspection activities, including: number of inspections conducted at each facility; number and types of enforcement actions by facility; summary of inspection findings and follow-up actions for each facility. The prior permit required the number of municipal inspections conducted.[1305] In addition, federal law requires the reporting of a summary describing the number and nature of enforcement actions and inspections.[1306]

[1299] Exhibit X (35), Order R9-2004-0001, Monitoring and Reporting Program, Section III.A.2., page 12.

[1300] Code of Federal Regulations, title 40, section 122.42(c).

[1301] Code of Federal Regulations, title 40, section 122.41(j)(2).

[1302] Exhibit X (35), Order R9-2004-0001, Monitoring and Reporting Program, Section III.A.1.a.3., pages 12-13.

[1303] Code of Federal Regulations, title 40, section 122.42(c).

[1304] Exhibit X (35), Order R9-2004-0001, Monitoring and Reporting Program, Section III.A.1.a.3., pages 12-13.

[1305] Exhibit X (35), Order R9-2004-0001, Monitoring and Reporting Program, Section III.A.1.a.3., pages 12-13.

[1306] Code of Federal Regulations, title 40, section 122.42(c).

d. Commercial/Industrial:

- Summary of the inspection program, including the following information: Number of inspections conducted at each facility or mobile business;[1307] number and types of enforcement actions by facility or mobile business; brief description of each high-level enforcement action at commercial/industrial sites. The prior permit required the copermittees to report on the number of inspections conducted, and the number and type of enforcement actions taken.[1308] In addition, federal law requires the reporting of a summary describing the number and nature of enforcement actions and inspections.[1309]
- A list of industrial sites, including each name, address, and the Standard Industrial Classification (SIC) code, that the copermittee suspects may require coverage under the General Industrial Permit, but has not submitted a Notice of Intent (NOI) to be covered by the General Industrial Permit. The prior permit required that as part of each annual report, each copermittee shall report a list of industrial facilities, including the name, address, and SIC code, that may require coverage under the General Industrial Permit for which a NOI has not been filed.[1310]

e. Residential:

- Quantification and summary of applicable runoff and storm water enforcement actions within residential areas and activities. Federal law requires the reporting of a summary describing the number and nature of enforcement actions.[1311]

f. Retrofitting Existing Development:

- Any proposed changes to the copermittee's overall retrofitting program. Federal law requires reporting proposed changes to the stormwater management programs that are established as permit conditions.[1312]

g. Illicit Discharge Detection and Elimination:

- Any changes to the established investigation procedures. Under federal law, the illicit discharge detection and elimination program is required to contain a description of procedures to investigate portions of the MS4 that, based on field screening or other information, indicate a reasonable potential for containing

---

[1307] Section IV.B.7.b.ii., of this Decision finds that inspection of mobile businesses is not new.

[1308] Exhibit X (35), Order R9-2004-0001, Monitoring and Reporting Program, Section III.A.1.a.4., page 13.

[1309] Code of Federal Regulations, title 40, section 122.42(c).

[1310] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 592 (Order R9-2004-0001, Section H.2.f.).

[1311] Code of Federal Regulations, title 40, section 122.42(c).

[1312] Code of Federal Regulations, title 40, section 122.42(c).

illicit discharges or other sources of non-storm water pollution.[1313] Federal law then requires reporting proposed changes to the stormwater management programs that are established as permit conditions.[1314]

- Any changes to public reporting mechanisms, including phone numbers and web pages. Under federal law, the illicit discharge detection and elimination program is required to contain a description of a program to promote, publicize, and facilitate public reporting of the presence of illicit discharges or water quality impacts associated with discharges from MS4s.[1315] Federal law then requires reporting proposed changes to the stormwater management programs that are established as permit conditions.[1316]
- Any changes to the legal authority to implement illicit discharge detection and elimination activities. One of the permit requirements under federal law is to show that the permittee has adequate legal authority to prohibit through ordinance, order or similar means, illicit discharges to the municipal separate storm sewer.[1317] In addition, the illicit discharge detection and elimination program is required to contain a description of a program to implement and enforce an ordinance to prevent illicit non-stormwater discharges to the MS4.[1318] Federal law then requires reporting proposed changes to the stormwater management programs that are established as permit conditions.[1319]
- A description of enforcement actions taken in response to investigations of illicit discharges. Federal law requires the reporting of a summary describing the number and nature of enforcement actions.[1320] The prior permit also required the reporting of the number and types of enforcement actions taken for illicit discharges or connections during the reporting period.[1321]
- Summaries of illicit discharges (including spills and water quality data events) and how each significant case was resolved. The prior permit required a summary of illicit discharge monitoring program results, including: 1) all inspection, field screening, and analytical monitoring results; 2) all follow-up and elimination

[1313] Code of Federal Regulations, title 40, section 122.26(d)(2)(iv)(B).

[1314] Code of Federal Regulations, title 40, section 122.42(c).

[1315] Code of Federal Regulations, title 40, section 122.26(d)(2)(iv)(B).

[1316] Code of Federal Regulations, title 40, section 122.42(c).

[1317] Code of Federal Regulations, title 40, section 122.26(d)(2)(i)(B).

[1318] Code of Federal Regulations, title 40, section 122.26(d)(2)(iv)(B)(1).

[1319] Code of Federal Regulations, title 40, section 122.42(c).

[1320] Code of Federal Regulations, title 40, section 122.42(c).

[1321] Exhibit X (35), Order R9-2004-0001, Monitoring and Reporting Program, Section III.A.1.a.7., page 13.

activities; and 3) any proposed changes to station locations and/or sampling frequencies.[1322]

- A description of follow-up actions taken in response to investigations of illicit discharges. The prior permit required that the summary of illicit discharge monitoring program results include "All follow-up and elimination activities."[1323]
- A description of the outcome of the investigation/enforcement actions. The prior permit provided, "All reported incidents, and how each was resolved, shall be summarized in each Permittee's Individual Annual Report."[1324]

The following information contained in Table 5, and required to be reported by Section K.3.c.4., are not specifically required by federal law and are not expressly required by the prior permit. Therefore, reporting the following specific information required by Section K.3.c.4. *is new*:

a. New Development:

- All revisions to the SSMP, including where applicable: (b) updated procedures for identifying pollutants of concern for each priority development project; (c) updated treatment BMP ranking matrix; (d) updated site design and treatment control BMP design standards.[1325]
- Brief description of BMPs required at approved priority development projects. Verification that site design, source control, and treatment BMPs were required on all applicable priority development projects.[1326]

  The prior permit required the copermittees to attach one example of a development project that was conditioned to meet SUSMP requirements and a description of the required BMPs for that example,[1327] but did not require the copermittees to describe the BMPs required at all approved priority development projects or provide verification that BMPs were required. In addition, the prior permit required project proponents to provide the copermittee proof of a mechanism which will ensure

[1322] Exhibit X (35), Order R9-2004-0001, Monitoring and Reporting Program, Section III.A.1.a.7., page 13.

[1326] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 263 (test claim permit, Section K.3.c.4., Table 5. New Development 3.).

[1327] Exhibit X (35), Order R9-2004-0001, Monitoring and Reporting Program, Section III.A.1.a.1., page 12.

ongoing long-term maintenance of all structural post-construction BMPs,[1328] but there was no requirement for the copermittee to provide that verification in the annual report to the Regional Board.

- Name and location of all priority development projects that were granted a waiver from implementing LID BMPs pursuant to Section F.1.d.4. during the reporting period.[1329]
- Updated watershed-based BMP maintenance tracking database of approved treatment control BMPs and treatment control BMP maintenance within its jurisdiction, including updates to the list of high-priority priority development projects; and verification that the requirements of the test claim permit were met during the reporting period.[1330]
- Name and brief description of all approved priority development projects required to implement hydrologic control measures in compliance with Section F.1.h., including a brief description of the management measures planned to protect downstream beneficial uses and prevent adverse physical changes to downstream stream channels.[1331]

b. Construction:

- A description of planned ordinance updates within the next annual reporting period, if applicable.[1332]
- A description of any changes to procedures used for identifying priorities for inspecting sites and enforcing control measures that consider the nature of the construction activity, topography, and the characteristics of soils and receiving water quality.[1333]
- Any changes to the designated minimum and enhanced BMPs.[1334]

[1328] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 577 (Order R9-2004-0001, Section F.2.a.6.).

[1329] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 263 (test claim permit, Section K.3.c.4., Table 5. New Development 4.).

[1330] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 263 (test claim permit, Section K.3.c.4., Table 5. New Development 5.).

- Include the following information in the summary of the inspection program: (a) date of inspections conducted at each facility; (b) date of enforcement actions by facility; (c) brief description of the effectiveness of each high-level enforcement action at construction sites.[1335]
- Supporting files must include a record of inspection dates, the results of each inspection, photographs (if any), and a summary of any enforcement actions taken.[1336]

c. Municipal:

- Updated source inventory.[1337]
- All changes to the designated municipal BMPs.[1338]
- Descriptions of any changes to procedures to assure that flood management projects assess the impacts on the water quality of receiving water bodies.[1339]
- Summary and assessment of BMP retrofits implemented at flood control structures, including: (a) list of projects retrofitted; (b) list and description of structures evaluated for retrofitting; (c) list of structures still needing to be evaluated and the schedule for evaluation.[1340]
- Include in the summary of the MS4 and MS4 facilities operations and maintenance activities, the (a) number and types of facilities maintained.[1341]

  The prior permit required the copermittees to inventory all municipal facilities and activities, including a description of the facilities and activities, and to report the

[1335] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 264 (test claim permit, Section K.3.c.4., Table 5. Construction 4.).

[1336] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 264 (test claim permit, Section K.3.c.4., Table 5. Construction 4.).

[1337] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 264 (test claim permit, Section K.3.c.4., Table 5. Municipal 1.).

[1340] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 264 (test claim permit, Section K.3.c.4., Table 5. Municipal 4.).

[1341] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 265 (test claim permit, Section K.3.c.4., Table 5. Municipal 5.a.).

number of municipal inspections conducted.[1342] But the claimants were not required to report the number of facilities maintained.

- Include (a) types of facilities and (b) summary of the inspection findings in the summary of the municipal structural treatment control operations and maintenance activities.[1343]
- Include a list of facilities planned for bi-annual inspections and the justification in the summary of the MS4 and MS4 facilities operations and maintenance activities.[1344]
- Include in the summary of the municipal areas/programs inspection activities: (a) date of inspections conducted at each facility; (b) The BMP violations identified during the inspection by facility; (c) date of enforcement actions by facility.[1345]
- Description of activities implemented to address sewage infiltration into the MS4.[1346]
- Description of BMPs and their implementation for unpaved roads construction and maintenance.[1347]

d. Commercial/Industrial:

- Updated inventory of commercial/industrial sources of discharges.[1348]
- Include the following information in the summary of the inspection program: (a) date of inspections conducted at each facility or mobile business; (b) the BMP violations identified during the inspection by facility; (c) date of enforcement actions by facility or mobile business; (d) brief description of the effectiveness each high-level

enforcement actions at commercial/industrial sites including the follow-up activities for each facility.[1349]

- All changes to designated minimum and enhanced BMPs.[1350]

e. Residential:

- All updated minimum BMPs required for residential areas and activities.[1351]
- Description of efforts to manage runoff and storm water pollution in common interest areas and mobile home parks.[1352]

f. Retrofitting Existing Development:

- Updated inventory and prioritization of existing development identified as candidates for retrofitting.[1353]
- Description of efforts to retrofit existing developments during the reporting year.[1354]
- Description of efforts taken to encourage private landowners to retrofit existing development.[1355]
- A list of all retrofit projects that have been implemented, including site location, a description of the retrofit project, pollutants expected to be treated, and the tributary acreage of runoff that will be treated.[1356]

[1349] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 265 (test claim permit, Section K.3.c.4., Table 5. Commercial/Industrial 2.).

[1356] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 266 (test claim permit, Section K.3.c.4., Table 5. Retrofitting Existing Development 4.).

- Any proposed retrofit or regional mitigation projects and time lines for future implementation.[1357]

g. Illicit Discharge Detection and Elimination:

- A description of instances when field screening and analytical data exceeded action levels, including those instances for which no investigation was conducted.[1358]

h. Workplans:

- Updated workplans including priorities, strategy, implementation schedule, and effectiveness evaluation.[1359]

c. Except for the reporting on claimants' own municipal projects required by section K.3.c.3., 4., the new requirements imposed by section K.3.c.1.-4. are mandated by the state.

i. The arguments raised by the parties

The claimants contend that these requirements are mandated by the state and impose a new program or higher level of service. The claimants state that federal regulations require an annual report, which includes a "summary of data, including monitoring data" and a summary describing the number and nature of enforcement actions, inspections and public educations programs. The test claim permit requires far more.[1360] The claimants conclude that the additional requirements imposed are the true choice of the Regional Board and, thus, are mandated by the state and impose new program or higher level of service.[1361]

The Water Boards contend that the information challenged by the claimants are not mandated by the state and do not impose a new program or higher level of service. Rather, the Water Boards contend that the reporting is required under federal law (Code of Federal Regulations, title 40, section 122.42(c)) and is necessary to demonstrate whether the storm water management programs are implementing the most effective controls to reduce the discharge of pollutants to the MEP standard.[1362]

[1357] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 266 (test claim permit, Section K.3.c.4., Table 5. Retrofitting Existing Development 5.).

[1358] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 266 (test claim permit, Section K.3.c.4., Table 5. Illicit Discharge Detection and Elimination 5.).

[1359] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 266 (test claim permit, Section K.3.c.4., Table 5. Workplans).

[1360] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 73 (Test Claim narrative).

[1361] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 74 (Test Claim narrative), citing *Department of Finance v. Commission on State Mandates* (2016) 1 Cal.5th 479, 765, 768.

[1362] Exhibit C, Water Boards' Comments on the Test Claim, filed September 22, 2017, page 50.

> Unlike in the LA Permit case considered in *Department of Finance* [*v. Commission on State Mandates* (2016) 1 Cal.5th 479, 765], the San Diego Water Board found that the provisions in the 2010 Permit are exclusively based on federal law and found that the underlying substantive provisions to be reported upon were necessary to meet the MEP standard. Consistently, the 2010 Permit found that "[a]nnual reporting requirements included in this Order are necessary to meet federal requirements and to evaluate the effectiveness and compliance of the Copermittees' programs." [Footnote omitted.] The San Diego Water Board's findings are entitled to deference under *Department of Finance*.[1363]

The Water Boards further contend that the prior permit included annual reporting and the contents of the report was specified in great detail as part of the MRP. The test claim permit reduces the amount of activity-based reporting. Thus, the Water Boards argue that the "extensive level of detailed reporting requirements already in place prior to adoption of the 2010 Permit support the conclusion that no new program or higher level of service was imposed."[1364] Further, the Water Boards state that, for many of the provisions underlying the reporting requirements, the claimants have fee authority. Also, some of the reporting is on municipal projects that are undertaken voluntarily by the claimants and do not result in reimbursable costs. Finally, the inclusion of information generated from programmatic data should only result in de minimis costs.[1365]

For the reasons below, the Commission finds that, *except* for the reporting on claimants' own municipal projects, the new requirements imposed by Section K.3.c.1.-4. are mandated by the state.

ii. Except for the reporting on claimants' own municipal projects, the new requirements imposed by Section K.3.c.1.-4. are mandated by the state.

Both parties rely on the 2016 Supreme Court decision in *Department of Finance v. Commission on State Mandates* to support or distinguish their positions. As stated earlier in this Decision, the California Supreme Court in the 2016 *Department of Finance* case reviewed prior court decisions on the federal mandate issue and identified the following test to determine whether certain conditions imposed by an NPDES stormwater permit issued by the Los Angeles Regional Water Board were mandated by the state or the federal government:

> If federal law compels the state to impose, or itself imposes, a requirement, that requirement is a federal mandate. On the other hand, if federal law gives the state discretion whether to impose a particular implementing requirement, and the state

[1363] Exhibit C, Water Boards' Comments on the Test Claim, filed September 22, 2017, page 50, quoting Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 431 (Fact Sheet/Technical Report, Finding D.1.g.), citing Code of Federal Regulations, title 40, section 122.42(c).

[1364] Exhibit C, Water Boards' Comments on the Test Claim, filed September 22, 2017, page 51.

[1365] Exhibit C, Water Boards' Comments on the Test Claim, filed September 22, 2017, page 54.

> exercises its discretion to impose the requirement by virtue of a "true choice," the requirement is not federally mandated.[1366]

The court recognized that the "federal CWA broadly directed the board to issue permits with conditions designed to reduce pollutant discharges to the maximum extent practicable. But the US EPA's regulations gave the board discretion to determine which specific controls were necessary to meet the MEP standard. (40 C.F.R. § 122.26(d)(2)(iv).)"[1367] "Except where a regional board finds the conditions are the *only means* by which the [federal] 'maximum extent practicable' standard can be met, the State exercises a true choice by determining what controls are necessary to meet the standard."[1368]

The Supreme Court in *Department of Finance* also addressed the inspection requirements of that permit, finding that federal regulations "required the Operators to include in their permit application a description of priorities and procedures for inspecting certain industrial facilities and construction sites, but suggested that the Operators would have discretion in selecting which facilities to inspect" and agreed with the State that "some kind of operator inspections would be required."[1369] The court found that even though the federal regulations "contemplated some form of inspections, however, does not mean that federal law required the scope and detail of inspections required by the Permit conditions. As explained, the evidence before the Commission showed the opposite to be true."[1370]

The Supreme Court relied heavily on *Hayes v. Commission on State Mandates* in its determination of the whether a requirement is a state or federal mandate, and in its analysis of the inspection requirements.[1371] *Hayes* addressed state statutes that implemented the federal Education of the Handicapped Act, which required the state to provide certain services to special education students, and the court agreed that the Act imposed a federal mandate on the state.[1372] However, the court's "conclusion that the Education of the Handicapped Act is a federal mandate with respect to the state marks the starting point rather than the end of the consideration which will be required to resolve the Santa Barbara and Riverside test claims."[1373] The state's response to the federal mandate still needs to be viewed to determine if the state exercised "true discretion" in requiring local government to act.

> When the federal government imposes costs on local agencies those costs are not mandated by the state and thus would not require a state subvention. Instead, such costs are exempt from local agencies' taxing and spending limitations. This should be true even though the state has adopted an implementing statute or regulation pursuant to the federal mandate so long as the state had no "true choice" in the manner of implementation of the federal mandate. [Citation omitted.]
>
> This reasoning would not hold true where the manner of implementation of the federal program was left to the true discretion of the state. A central purpose of the principle of state subvention is to prevent the state from shifting the cost of government from itself to local agencies. [Citation omitted.] Nothing in the statutory or constitutional subvention provisions would suggest that the state is free to shift state costs to local agencies without subvention merely because those costs were imposed upon the state by the federal government. In our view the determination whether certain costs were imposed upon a local agency by a federal mandate must focus upon the local agency which is ultimately forced to bear the costs and how those costs came to be imposed upon that agency. If the state freely chose to impose the costs upon the local agency as a means of implementing a federal program then the costs are the result of a reimbursable state mandate regardless whether the costs were imposed upon the state by the federal government.[1374]

The court remanded the matter back to the Commission, finding as follows:

> In short, even though the state had no real choice in deciding whether to comply with the federal act, the act did not necessarily require the state to impose all of the costs of implementation upon local school districts. To the extent the state implemented the act by freely choosing to impose new programs or higher levels of service upon local school districts, the costs of such programs or higher levels of service are state mandated and subject to subvention.[1375]

Here, like the program in *Hayes* and the inspection requirement in *Department of Finance*, there is a federal mandate to submit an annual report with the information required to be included in that report, and this Decision denies those reporting activities required by Section K.3. that are already expressly required by federal law.[1376] However, the test claim permit in Sections K.3.c.1.-4. goes beyond the federal mandate and impose many new reporting requirements and define the detailed scope of data the Regional Board requests that cannot be identified as incidental or "de minimis" in context, and thus, the new requirements are not part and parcel of a federal mandate.[1377] The findings in the test claim permit indicate that the "[a]nnual reporting

[1374] *Hayes v. Commission on State Mandates* (1992) 11 Cal.App.4th 1564, 1593-1594.

[1375] *Hayes v. Commission on State Mandates* (1992) 11 Cal.App.4th 1564, 1594.

[1376] Code of Federal Regulations, title 40, section 122.42(c).

[1377] Referring to the Supreme Court's holding in *San Diego Unified School Dist. v. Commission on State Mandates* (2004) 33 Cal.4th 859, 890, which adopted the reasoning in *County of Los*

requirements included in this Order are necessary to meet federal requirements *and* to evaluate the effectiveness and compliance of the Copermittees' programs,"[1378] and the Fact Sheet clarifies that the reporting requirements are based on federal law *and* Water Code section 13267 (which provides that "the Regional Board *may* require that any person who has discharged [...] shall furnish, under penalty of perjury, technical or monitoring reports which the regional board requires").[1379]

Federal law does not specifically require the information described above and there is no evidence in the record that providing the new required information is the only means by which program effectiveness and compliance can be evaluated. Thus, the new reporting requirements are mandated by the state.

Moreover, the introductory language to Section K. states "the Copermittees *may propose* alternate reporting criteria and schedules, as part of their updated JRMP, for the Executive Officer's acceptance," which if approved, could conceivably reduce the scope of the reporting requirements.[1380] However, there is no evidence that any proposals were filed or approved or that the reporting requirements in Section K. have been amended or reduced. Thus, the claimants are required to comply with the new reporting activities that are mandated by the test claim permit.

Finally, the Water Boards argue that some of the reporting is on municipal projects that are undertaken voluntarily by the claimants and do not result in reimbursable costs.[1381] For example, Section K.3.c.4. requires the claimants to report on their own municipal projects, including unpaved roads construction and maintenance, and identify a description and implementation of BMPs and inspection activities on those municipal projects. As previously explained in this Decision, state law does not mandate the claimants to develop or redevelop municipal projects or facilities, or to build or maintain unpaved roads. That decision is left to the discretion of the

*Angeles v. Commission on State Mandate*s (1995) 32 Cal.App.4th 805, 815-818 (*County of Los Angeles II*).

[1378] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 189 (test claim permit, Finding D.1.g.).

[1379] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 439 (Fact Sheet/Technical Report).

[1380] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 260 (test claim permit, Section K.). The test claim permit states, "The San Diego Water Board by prior resolution has delegated all matters that may legally be delegated to its Executive Officer to act on its behalf pursuant to CWC §13223. Therefore, the Executive Officer is authorized to act on the San Diego Water Board's behalf on any matter within this Order unless such delegation is unlawful under CWC §13223 or this Order explicitly states otherwise." Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 199, footnote 4 (test claim permit, Section A.).

[1381] Exhibit C, Water Boards' Comments on the Test Claim, filed September 22, 2017, page 54.

local agency.[1382] The courts have made clear that costs incurred as a downstream result of a local discretionary decision is not legally compelled by state law.[1383]

Moreover, there is no evidence that local agencies are practically compelled, as the only reasonable means necessary to carry out core mandatory functions, to develop or redevelop priority municipal projects.[1384] Nor is there evidence that a failure to develop or redevelop priority municipal projects would subject the claimant to "certain and severe…penalties" such as "double…taxation" or other "draconian" consequences.[1385]

Accordingly, *except* for the reporting on claimants' own municipal projects, the new requirements imposed by Section K.3.c.1.-4. are mandated by the state.

iii. The new annual reporting requirements mandated by section K.3.c.1.-4. constitute a new program or higher level of service.

Article XIII B, section 6 requires reimbursement whenever the Legislature or any state agency mandates a new program or higher level of service that results in costs mandated by the state. To determine whether a program is new or provides a higher level of service in an existing program, the requirements in the test claim statute or executive order are compared with the legal

---

[1382] For example, see Government Code section 23004 (counties may purchase, receive by gift or bequest, and hold land within its limits, or elsewhere when permitted by law; and manage, sell, lease, or otherwise dispose of its property as the interests of its inhabitants require); Government Code sections 37350-37353 (cities may purchase, lease, receive, hold, and enjoy real property, and control and dispose of it for the common benefit; may erect and maintain buildings for municipal purposes; and may acquire property for parking motor vehicles, and for opening and laying out any street; Government Code section 37111 ("When the legislative body deems it necessary that land purchased for park or other purposes be used for construction of public buildings or creation of a civic center, it may adopt an ordinance by a four-fifths vote declaring the necessity and providing for such use"); Streets and Highways Code section 1800 ("The legislative body of any city may do any and all things necessary to lay out, acquire, and construct any section or portion of any street or highway within its jurisdiction as a freeway, and to make any existing street or highway a freeway."); and Streets and Highways Code section 1801 ("The legislative body of any city may close any street or highway within its jurisdiction at or near the point of its intersection with any freeway, or may make provision for carrying such street or highway over, under, or to a connection with the freeway, and may do any and all necessary work on such street or highway.").

[1383] *City of Merced v. State* (1984) 153 Cal.App.3d 777, 782-783; *Department of Finance v. Commission on State Mandates* (*Kern High School Dist.*) (2003) 30 Cal.4th 727, 744-745.

[1384] *Department of Finance v. Commission on State Mandates* (2009) 170 Cal.App.4th 1355, 1368 (*POBRA*).

[1385] *Department of Finance v. Commission on State Mandates* (*Kern High School Dist.)* (2003) 30 Cal.4th 727, 754 citing *City of Sacramento v. State* (1990) 50 Cal.3d 51, 74.

requirements in effect before the test claim statute or executive order.[1386] If the requirements are new, the analysis continues to determine if the requirements constitute a "program" within the meaning of article XIII B, section 6, which is defined as one that carries out the governmental function of providing services to the public, or laws which, to implement a state policy, impose unique requirements on local governments and do not apply generally to all residents and entities in the state.[1387] Only one of these alternatives is required to establish a new program or higher level of service.[1388]

Here, the new requirements mandated by Section K.3.c.1.-4. are expressly directed toward the local agency permittees in their regulatory capacity and, thus, are unique to government, and detail their responsibilities to provide additional information in the JRMP annual report to the Regional Board to ensure compliance with the JRMP components of the test claim permit and water quality standards. "The challenged requirements are not bans or limits on pollution levels, they are mandates to perform specific actions" designed to reduce pollution entering stormwater drainage systems and receiving waters.[1389]

Accordingly, *except* for the reporting on claimants' own municipal projects required by Section K.3.c.3., 4., the new requirements imposed by Section K.3.c.1.-4. of the test claim permit mandate a new program or higher level of service for the following activities:

1. Include in the annual fiscal analysis a narrative description of circumstances resulting in a 25 percent or greater annual change for any budget line items.[1390]
2. Provide in the annual report an updated timeframe for attainment of a desired outcome level in the annual report when an assessment indicates that the desired outcome level has not been achieved at the end of the projected timeframe, but the review of the existing activities and BMPs are adequate, or that the projected timeframe should be extended.[1391]
3. *Except for reporting on the claimants' own municipal projects (which is not eligible for reimbursement)*, providing the following information in the Checklist pursuant to Section K.3.c.3.:

    a. Construction:

1) Number of Active Sites
2) Number of Inactive Sites
3) Number of Sites Inspected
4) Number of Violations

b. New Development:
1) Number of Development Plan Reviews
2) Number of Projects Exempted from Interim/Final Hydromodification Requirements

c. Post Construction Development:
1) Number of Priority Development Projects
2) Number of SUSMP Required Post-Construction BMP Inspections
3) Number of SUSMP Required Post-Construction BMP Violations
4) Number of SUSMP Required Post-Construction BMP Enforcement Actions Taken

d. Illicit Discharges and Connections:
1) Number of IC/ID Eliminations
2) Number of IC/ID Violations

e. MS4 Maintenance:
1) Total Miles of MS4 Inspected

f. Municipal/Commercial/Industrial:
1) Number of Facilities
2) Number of Violations[1392]

4. *Except for reporting on the claimants' own municipal projects (which is not eligible for reimbursement)*, report the following information contained in Table 5 and required to be reported by Section K.3.c.4.:

a. New Development:
1) All revisions to the SSMP, including where applicable: (b) updated procedures for identifying pollutants of concern for each priority development project; (c) updated treatment BMP ranking matrix; (d) updated site design and treatment control BMP design standards.[1393]

[1392] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 296 (test claim permit, Section K.3.c.3., Attachment D.).

2) Brief description of BMPs required at approved priority development projects. Verification that site design, source control, and treatment BMPs were required on all applicable priority development projects.[1394]

3) Name and location of all priority development projects that were granted a waiver from implementing LID BMPs pursuant to Section F.1.d.4 during the reporting period.[1395]

4) Updated watershed-based BMP maintenance tracking database of approved treatment control BMPs and treatment control BMP maintenance within its jurisdiction, including updates to the list of high-priority priority development projects; and verification that the requirements of this Order were met during the reporting period.[1396]

5) Name and brief description of all approved priority development projects required to implement hydrologic control measures in compliance with Section F.1.h., including a brief description of the management measures planned to protect downstream beneficial uses and prevent adverse physical changes to downstream stream channels.[1397]

b. Construction:

1) A description of planned ordinance updates within the next annual reporting period, if applicable.[1398]

2) A description of any changes to procedures used for identifying priorities for inspecting sites and enforcing control measures that consider the nature of the construction activity, topography, and the characteristics of soils and receiving water quality.[1399]

3) Any changes to the designated minimum and enhanced BMPs.[1400]

[1396] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 263 (test claim permit, Section K.3.c.4., Table 5. New Development 5.).

[1397] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 264 (test claim permit, Section K.3.c.4., Table 5. New Development 6.).

[1398] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 264 (test claim permit, Section K.3.c.4., Table 5. Construction 1.).

[1399] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 264 (test claim permit, Section K.3.c.4., Table 5. Construction 2.).

[1400] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 264 (test claim permit, Section K.3.c.4., Table 5. Construction 3.).

4) Include the following information in the summary of the inspection program: (a) date of inspections conducted at each facility; (b) date of enforcement actions by facility; (c) brief description of the effectiveness of each high-level enforcement action at construction sites.[1401]

5) Supporting files must include a record of inspection dates, the results of each inspection, photographs (if any), and a summary of any enforcement actions taken.[1402]

c. Municipal:

1) Updated source inventory.[1403]

2) All changes to the designated municipal BMPs.[1404]

3) Descriptions of any changes to procedures to assure that flood management projects assess the impacts on the water quality of receiving water bodies.[1405]

4) Summary and assessment of BMP retrofits implemented at flood control structures, including: (a) List of projects retrofitted; (b) List and description of structures evaluated for retrofitting; (c) List of structures still needing to be evaluated and the schedule for evaluation.[1406]

5) Include in the summary of the MS4 and MS4 facilities operations and maintenance activities, the (a) Number and types of facilities maintained.[1407]

6) Include (a) types of facilities and (b) summary of the inspection findings in the summary of the municipal structural treatment control operations and maintenance activities.[1408]

[1401] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 264 (test claim permit, Section K.3.c.4., Table 5. Construction 4.).

[1402] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 264 (test claim permit, Section K.3.c.4., Table 5. Construction 4.).

[1403] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 264 (test claim permit, Section K.3.c.4., Table 5. Municipal 1.).

[1404] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 264 (test claim permit, Section K.3.c.4., Table 5. Municipal 2.).

[1406] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 264 (test claim permit, Section K.3.c.4., Table 5. Municipal 4.).

[1407] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 265 (test claim permit, Section K.3.c.4., Table 5. Municipal 5.a.).

[1408] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 265 (test claim permit, Section K.3.c.4., Table 5. Municipal 5.).

7) Include a list of facilities planned for bi-annual inspections and the justification in the summary of the MS4 and MS4 facilities operations and maintenance activities.[1409]

8) Include in the summary of the municipal areas/programs inspection activities: (a) date of inspections conducted at each facility; (b) The BMP violations identified during the inspection by facility; (c) date of enforcement actions by facility.[1410]

9) Description of activities implemented to address sewage infiltration into the MS4.[1411]

10) Description of BMPs and their implementation for unpaved roads construction and maintenance.[1412]

d. Commercial/Industrial:

1) Updated inventory of commercial/industrial sources of discharges.[1413]

2) Include the following information in the summary of the inspection program: (a) date of inspections conducted at each facility or mobile business; (b) The BMP violations identified during the inspection by facility; (c) date of enforcement actions by facility or mobile business; (d) brief description of the effectiveness each high-level enforcement actions at commercial/industrial sites including the follow-up activities for each facility.[1414]

3) All changes to designated minimum and enhanced BMPs.[1415]

e. Residential:

1) All updated minimum BMPs required for residential areas and activities.[1416]

[1409] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 265 (test claim permit, Section K.3.c.4., Table 5. Municipal 6.c.).

[1410] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 265 (test claim permit, Section K.3.c.4., Table 5. Municipal 7.a.-c.).

[1411] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 265 (test claim permit, Section K.3.c.4., Table 5. Municipal 8.).

[1413] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 265 (test claim permit, Section K.3.c.4., Table 5. Commercial/Industrial 1.).

[1414] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 265 (test claim permit, Section K.3.c.4., Table 5. Commercial/Industrial 2.).

[1415] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 265 (test claim permit, Section K.3.c.4., Table 5. Commercial/Industrial 3.).

[1416] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 266 (test claim permit, Section K.3.c.4., Table 5. Residential 1.).

2) Description of efforts to manage runoff and storm water pollution in common interest areas and mobile home parks.[1417]

f. Retrofitting Existing Development:

1) Updated inventory and prioritization of existing development identified as candidates for retrofitting.[1418]

2) Description of efforts to retrofit existing developments during the reporting year.[1419]

3) Description of efforts taken to encourage private landowners to retrofit existing development.[1420]

4) A list of all retrofit projects that have been implemented, including site location, a description of the retrofit project, pollutants expected to be treated, and the tributary acreage of runoff that will be treated.[1421]

5) Any proposed retrofit or regional mitigation projects and time lines for future implementation.[1422]

g. Illicit Discharge Detection and Elimination:

1) A description of instances when field screening and analytical data exceeded action levels, including those instances for which no investigation was conducted.[1423]

[1417] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 266 (test claim permit, Section K.3.c.4., Table 5. Residential 3.).

[1418] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 266 (test claim permit, Section K.3.c.4., Table 5. Retrofitting Existing Development 1.).

[1419] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 266 (test claim permit, Section K.3.c.4., Table 5. Retrofitting Existing Development 2.).

[1420] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 266 (test claim permit, Section K.3.c.4., Table 5. Retrofitting Existing Development 3.).

[1421] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 266 (test claim permit, Section K.3.c.4., Table 5. Retrofitting Existing Development 4.).

[1422] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 266 (test claim permit, Section K.3.c.4., Table 5. Retrofitting Existing Development 5.).

[1423] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 266 (test claim permit, Section K.3.c.4., Table 5. Illicit Discharge Detection and Elimination 5.).

h. Workplans:

1) Updated workplans including priorities, strategy, implementation schedule, and effectiveness evaluation.[1424]

11. Attachment E of the Test Claim Permit, Which Addresses Special Studies in Section II.E.2.-5., Mandates a New Program or Higher Level of Service.

The claimants pled Section II.E.2.-5., of Attachment E, which is the Monitoring and Reporting Program (MRP), and contend Section II.E.2.-5. requires the claimants to perform the following special studies: Sediment Toxicity Study; Trash and Litter Investigation; Agricultural, Federal and Tribal Input Study; and MS4 Receiving Water and Maintenance Study.[1425]

The Commission finds that that Attachment E, Sections II.E.2.-5. mandate a new program or higher level of service within the meaning of article XIII B, section 6 of the California Constitution.

a. Background

i. Federal law requires permittees to provide any information the Director requests for determining compliance or whether modifications to the permit are required.

Federal law requires municipalities to apply for a NPDES permit to discharge any pollutant from an MS4.[1426] NPDES permits must include conditions to achieve water quality standards and objectives.[1427] One such condition is the duty to provide information: "The permittee shall furnish to the Director, within a reasonable time, any information which the Director may request to determine whether cause exists for modifying, revoking and reissuing, or terminating this permit or to determine compliance with this permit."[1428]

ii. The prior permit required the permittees to perform one special study on numeric criteria to control runoff from new developments.

The permittees have been monitoring water quality under a NPDES permit since 1993. The monitoring data indicated several persistent exceedances of water quality objectives for urban runoff-related pollutants. At the time that the prior permit was adopted, the water quality concerns in the Santa Margarita watershed included the Murrieta Creek and the upper Santa

---

[1424] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 266 (test claim permit, Section K.3.c.4., Table 5. Workplans).

[1425] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 22, 75-81, 297-324 (Test Claim narrative; Attachment E.) The claimants did not plead the other special studies addressed in Attachment E, sections II.E.7. and 8. and, thus, this Decision does not address those studies.

[1426] Code of Federal Regulations, title 40, section 122.26(a)(3)(2010); *Arkansas v. Oklahoma* (1992) 503 U.S. 91, 101-102.

[1427] Code of Federal Regulations, title 40, section 122.44(d)(1).

[1428] Code of Federal Regulations, title 40, section 122.42(h).

Margarita River, which were CWA section 303(d) listed for phosphorus and the estuary listed for eutrophication. Other constituents of concern were sedimentation/siltation, iron, manganese and total dissolved solids (TDS). The County of Riverside's water quality concerns were sediment from construction-related erosion and pollution due to urban storm water runoff. Further down the watershed, the County of San Diego's concerns were eutrophication, nitrogen, phosphorus, diazinon, TDS, other toxic substances, and trash.[1429] However, due to inadequate monitoring and reporting, it was not possible to conduct a detailed analysis to establish the sources of the pollutants.[1430]

Thus, the prior permit required the permittees to conduct special studies as directed by the executive officer, in addition to their monitoring requirements. The prior permit explained that "[s]pecial studies are intended to address specific research or management issues that are not addressed by the routine core monitoring program."[1431]

> This monitoring is useful to address unique issues, oftentimes triggered by routine monitoring to help understand results or identify efficient management measures. Special studies are short-term studies with a predefined beginning, middle and end.[1432]

The prior permit included one special study, which required them to develop and implement a study to determine numeric criteria for controlling the volume, velocity, duration, and peak discharge rate of runoff from new developments to minimize erosion of natural stream channels and impacts to instream habitat. As part of the study, the permittees were required to propose numeric criteria and a time-schedule for implementation of the criteria on priority development projects within 365 days of the identification of the criteria and no later than the fourth year annual report or the application for permit renewal. The permittees had the option of using criteria developed in other areas of Southern California if they could demonstrate that such criteria are applicable to and protective of the conditions in the Upper Santa Margarita Watershed. The permittees were required to report the status of the study, implementation, and progress towards the development of numeric criteria in the annual report.[1433]

b. Sections II.E.2-5, of Attachment E to the Test Claim Permit, Which Requires the Claimants to Conduct Four New Special Studies, Mandates a New Program or Higher Level of Service.

The claimants have pled Sections II.E.2.-5., of the Attachment E (the MRP), which requires the copermittees to conduct four special studies. The Fact Sheet explains the basis of the special studies requirements.

[1429] Exhibit X (34), Order R9-2004-0001, Fact Sheet/Technical Report, Table 1, page 16.

[1430] Exhibit X (34), Order R9-2004-0001, Fact Sheet/Technical Report, pages 17-18.

[1431] Exhibit X (35), Order R9-2004-0001, Monitoring and Reporting Program, Section II.A.III., page 8.

[1432] Exhibit X (34), Order R9-2004-0001, Fact Sheet/Technical Report, pages 72-73.

[1433] Exhibit X (35), Order R9-2004-0001, Monitoring and Reporting Program, Section II.A.III., page 8.

Under the prior permit, the copermittees expanded their stormwater programs and were largely in compliance with its requirements.[1434] However, prior to the adoption of the test claim permit, challenges remained:

> Today, storm and nonstorm water discharges from the MS4 continue to be the leading cause of water quality impairment in the San Diego Region. Since 1998, the number of impaired water bodies in the Riverside County portion of the San Diego Region on the CWA section 303(d) List of Water Quality Impaired Segments (303(d) List) has increased with each new list (i.e. new impaired water bodies listed on the 2002, 2006, and 2008 303(d) Lists). The Copermittees' monitoring data exhibits persistent exceedances of water quality objectives in the Santa Margarita watershed. The Santa Margarita watershed also has conditions that are frequently toxic to aquatic life. Bioassessment data from the watersheds further reflects these conditions, finding that macroinvertebrate communities in creeks have widespread Poor to Very Poor Index of Biotic Integrity (IBI) ratings.[1435]

The section 303(d) list included Murrieta Creek listed for phosphorus, nitrogen, iron, and manganese and Upper Santa Margarita River listed for phosphorus. The sources for these constituents had still not been identified. In addition, Temecula Creek was listed for phosphorus, nitrogen, and TDS with no sources identified.[1436] The monitoring annual report for 2006-2007 reported the following constituents of concern: chlorpyrifos, dissolved copper, and dissolved lead which exceeded CTR objectives and fecal coliform, color, iron, manganese, MBAS, nitrogen, pH, phosphorous, total dissolved solids and turbidity which exceeded Basin Plan objectives.[1437]

In addition, trash remains a persistent pollutant which, after leaving the MS4, can accumulate posing a serious threat to the beneficial uses of the receiving waters.[1438] The Basin Plan includes water quality objectives that prohibit both floating materials and suspended and settleable materials. The copermittees documented high volumes of trash coming from the MS4 and in receiving waters. The Regional Board found that high density urban areas are responsible for up to 60 percent of trash entering MS4s. Moreover, trash on or near roadways is not only constantly

[1434] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 374 (Fact Sheet/Technical Report).

[1435] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 374, 186 (Fact Sheet/Technical Report), footnotes omitted; see also (test claim permit, Finding C.9.).

[1436] Exhibit X (37), Santa Margarita River Region, Report of Waste Discharge (ROWD), January 15, 2009, Table 5, page 32.

[1437] Exhibit X (23), Excerpt from the Regional Board's Administrative Record, Volume 1, for Order No. R9-2010-0016, filed September 22, 2017, pages 67, 68, 85, and 86 (Santa Margarita Region Monitoring Annual Report Fiscal Year 2006-2007).

[1438] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 400 (Fact Sheet/Technical Report, Finding C.8.).

present, it is mainly comprised of floatable materials which places receiving waters at risk during storm events.[1439]

i. Section II.E.2.-5., of Attachment E of the test claim permit, imposes new requirements to conduct four special studies to monitor the sediment toxicity of streams; trash and litter as pollutants in receiving waters; the water quality of agricultural, federal, and tribal runoff; and the impact of vegetation removal activities on the water quality of receiving waters.

Thus, Section II.E.2.-5., of Attachment E of the test claim permit, requires the copermittees to conduct four[1440] new special studies in addition to the monitoring requirements.[1441]

Sediment Toxicity Study

For this study, the copermittees must develop and submit to the Regional Board by April 1, 2012, a workplan to investigate the toxicity of sediment in streams and its potential impact on benthic macroinvertebrate Index of Biotic Integrity (IBI) scores. The study must be implemented in conjunction with the stream assessment monitoring in Attachment E. The study must include the following elements:

- At least four stream assessment locations must be sampled, including one reference site and one mass loading site. The selection of sites must be done with consideration of subjectivity of receiving waters to discharges from residential and agricultural land uses.
- At a minimum, sampling must occur once per year at each site for at least two years.
- At a minimum, sediment toxicity analysis must include the measurement of metals, pyrethroids, and organochlorine pesticides. The analysis must include estimates of bioavailability based upon sediment grain size, organic carbon, and receiving water temperature at the sampling site. Acute and chronic toxicity testing must be done using *Hyalella azteca*.
- Results and a discussion must be included in the monitoring annual report including an assessment of the relationship between observed IBI scores and all variables measured.[1442]

[1439] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 400 (Fact Sheet/Technical Report, Discussion of Finding C.8.).

[1440] The test claim permit included a fifth special study but the Intermittent and Ephemeral Stream Perennial Conversion Study was not pled in the Test Claim. The claimants allege that they negotiated with the Regional Board to replace the fifth special study and part of the fourth study with a study on the impacts of LID implementation on downstream flows to Camp Pendleton and potential impacts on beneficial uses. Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 80 (Test Claim narrative).

[1441] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 314-318 (test claim permit, Attachment E, Section II.E.).

[1442] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 314 (test claim permit, Attachment E, Section II.E.2.).

As the Fact Sheet explains:

> This study has been added to the Monitoring and Reporting requirements to assess the quality of stream sediments and possible contamination due to runoff from the MS4. Toxicity tests focusing on aqueous toxicity may not account for the full toxicity of receiving waters if constituents, such as heavy metals or pesticides, are bound to sediments. Southern California studies have shown that stream sediments can exhibit significant levels of toxic metals and pesticides, including pyrethroids. Additionally, the Copermittees have identified the presence of aqueous toxicity at both mass loading stations due to pyrethroid pesticides, but their presence in sediments is unknown.[1443]

Trash and Litter Investigation

For this study, the copermittees must develop and submit to the Regional Board by September 1, 2012, a workplan to assess trash (including litter[1444]) as a pollutant within receiving waters on a watershed based scale. The copermittees must select a lead copermittee. The study must include the following elements:

- The lead copermittee must identify suitable sampling locations within the Santa Margarita HU [Hydrologic Unit].
- Trash at each location must be monitored a minimum of twice during the wet season following a qualified monitoring storm event[1445] and twice during the dry season.
- The lead copermittee must use the "Final Monitoring Workplan for the Assessment of Trash in San Diego County Watersheds" and "A Rapid Trash Assessment Method Applied to Waters of the San Francisco Bay Region" to develop a monitoring protocol.
- Results and discussion must be included in the monitoring annual report and must, at a minimum, include source identification, an evaluation of BMPs for trash reduction and prevention, and a description of any BMPs implemented in response to study results.[1446]

As the Fact Sheet explains:

[1443] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 561 (Fact Sheet/Technical Report), footnotes omitted.

[1444] Government Code section 68055.1(g) defines litter as "all improperly discarded waste material, including, but not limited to, convenience food, beverage, and other product packages or containers constructed of steel, aluminum, glass, paper, plastic, and other natural and synthetic materials, thrown or deposited on the lands and waters of the state, but not including the properly discarded waste of the primary processing of agriculture, mining, logging, sawmilling, or manufacturing."

[1445] A qualified monitoring storm event is defined as a minimum of 0.1 inches of precipitation preceded by 72 hours of dry weather.

[1446] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 315 (test claim permit, Attachment E, Section II.E.3.).

> The objective of the study is to evaluate the quantity, type, and source(s) of trash and litter in receiving waters (see Finding E.12 and Discussion regarding regional efforts). Although trash can impair beneficial uses, the amount and type of trash discharged into receiving waters from the Copermittee(s) MS4 is unknown. Thus, the Copermittees have largely been unable to assess the effectiveness of their BMPs that target trash as a pollutant.[1447]

Agricultural, Federal and Tribal Input Study

For this study, the copermittees must develop and submit to the Regional Board by September 1, 2012, a workplan to investigate the water quality of agricultural, federal, and tribal runoff that is discharged into their MS4. The study must include the following elements:

- The copermittees must identify a representative number of sampling stations within their MS4 that receive discharges of agricultural, federal, and tribal runoff that has not co-mingled with any other source. At least one station from each category must be identified.
- One storm event must be monitored at each sampling location each year for at least two years.
- At a minimum, analysis must include those constituents listed in Table 1[1448] of the MRP. Grab samples may be utilized, though composite samples are preferred. The copermittees must also measure or estimate flow rates and volumes of discharges into the MS4.
- Results and discussion from the study must be included in the monitoring annual report.[1449]

As the Fact Sheet explains:

> The objective of the study is to determine the type, quantity and estimated loading of pollutants in these discharges. In the ROWD, the Copermittees specifically state their concern regarding the quality of storm water which is discharged into their MS4 from such areas, and state that these discharges may affect overall

[1447] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 561 (Fact Sheet/Technical Report).

[1448] Analytical testing on: Conventionals, Nutrients, Hydrocarbons: Total Dissolved Solids, Total Suspended Solids, Turbidity, Total Hardness, pH, Specific Conductance, Temperature, Dissolved Oxygen, Total Phosphorus, Dissolved Phosphorus, Nitrite, Nitrate, Total Kjeldahl Nitrogen, Ammonia, 5-day Biological Oxygen Demand, Chemical Oxygen Demand, Total Organic Carbon, Dissolved Organic Carbon, Methylene Blue Active Substances, Oil and Grease, Sulfate: Pesticides: Diazinon, Chlorpyrifos, Malathion, Carbamates, Pyrethroids; Metals (Total and Dissolved): Arsenic, Cadmium, Total Chromium, Hexavalent Chromium, Copper, Lead, Iron, Manganese, Nickel, Selenium, Zinc, Mercury, Silver, Thallium; Bacteriological (mass loading): E.coli, Fecal Coliform, Enterococcus.

[1449] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 315-316 (test claim permit, Attachment E, Section II.E.4.).

> water quality, primarily in the Murrieta and Temecula Creek watersheds. However, no data, information, or analyses were presented or identified on the level of pollutants in such flows into their MS4.[1450]

MS4 and Receiving Water Maintenance Study

For this study, the copermittees must develop and submit to the Regional Board by April 1, 2012, a workplan to investigate receiving waters that are considered part of the MS4 and that are subject to continual vegetative clearance activities, for example, mowing. The copermittees must assess the effects of the vegetation removal activities and water quality, including, but not limited to, modification of biogeochemical functions, in-stream temperatures, receiving water bed and bank erosion potential, and sediment transport. The study must include the following elements:

- The copermittees must identify suitable sampling locations, including at least one reference that is not subject to maintenance activities.
- At a minimum, the copermittees must monitor pre- and post-maintenance activities for indicator bacteria, turbidity, temperature, dissolved oxygen and nutrients (nitrite, nitrate, total Kjeldahl nitrogen, ammonia and total phosphorous). The copermittees must also measure or estimate flow rates and volumes.
- Results and discussion from the study must be included in the annual monitoring report including the relevance of findings to CWA section 303(d) listed impaired waters.[1451]

As the Fact Sheet explains:

> The objective of the study is to determine if there are short-term or long-term in-stream water quality impacts from maintenance activities and to assess if the activities exacerbate the impairment of receiving waters 303(d) listed as impaired wholly or partially from MS4 discharges. Receiving waters within the Copermittees jurisdiction have been routinely cleared of vegetation by the Copermittees as part of their MS4 maintenance programs without mitigation efforts. The in-stream modification of vegetation may result in changes in water quality and Beneficial Uses from changes in nutrient cycling, the storage of organic matter, infiltration, flow attenuation, temperature and erosion potential. The relative contribution, if any, of maintenance activities to CWA 303(d) water quality impairments in [sic] unknown. The program is also expected to work in conjunction with other permit requirements of the Order. For example, the Copermittees may choose to utilize study results when implementing the HMP, LID, and retrofitting programs.[1452]

[1450] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 561-562 (Fact Sheet/Technical Report), footnotes omitted.

[1451] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 316 (test claim permit, Attachment E, Section II.E.5.).

[1452] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 562 (Fact Sheet/Technical Report), footnotes omitted.

While the inclusion of a special study in a permit is not new, the four special studies included in the test claim permit cover completely different subject matters and are required in addition to the monitoring requirements. The Water Boards admit that the test claim permit "contains new or modified requirements . . ."[1453] and that the focus of these studies is directed at different and higher priority water quality issues.[1454]

Therefore, the Commission finds that the activities described above are new requirements imposed on the claimants.

ii. The new activities in sections II.E.2.-5. of Attachment E of the test claim permit are mandated by the state because the Regional Board exercised discretion when requiring these activities and there is no evidence that the new required activities are the only means by which the federal MEP standard can be met.

The claimants contend that although federal law requires NPDES permittees to conduct a monitoring program and operators of a large or medium MS4 systems to submit an annual report, there is no authority in federal law for the RWQCB to require the special studies set forth in the test claim permit. The claimants conclude that the studies represent the intent of the Regional Board to shift its investigatory responsibility to the claimants and this shifting of state law-based responsibility creates a state mandate.[1455]

The Water Boards contend that the special studies do not mandate new programs or higher levels of service:

> Instead, the Special Studies requirements were targeted at areas of copermittee program deficiencies and were designed to help ensure Copermittees achieve the required federal standard of controlling pollutants in storm water discharges to the MEP or the separate federal requirement of effectively prohibiting non-storm water discharges into the MS4. They primarily are intended to require the Copermittees to collect monitoring data as part of the federally required monitoring program that can be used either to demonstrate that their jurisdictional runoff management programs are meeting the federal standards or that will inform changes needed to improve their programs so that the standards are met. Although they have different substantive focuses than the 2004 Permit special studies, the[y] do not amount to establishment of new programs or mandates to perform higher levels of service.[1456]

[1453] Exhibit C, Water Boards' Comments on the Test Claim, filed September 22, 2017, pages 56-57, citing Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 422 (Fact Sheet/Technical Report, Finding D.1.c.).

[1454] Exhibit C, Water Boards' Comments on the Test Claim, filed September 22, 2017, page 60.

[1455] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 77-78 (Test Claim narrative), citing *Department of Finance v. Commission on State Mandates* (2016) 1 Cal. 5th 749, 771.

[1456] Exhibit C, Water Boards' Comments on the Test Claim, filed September 22, 2017, page 54.

The Water Boards assert that the special studies are necessary for the claimants to reach the MEP standard. The special studies "represent 'prescribed conditions ... on data and information collection' (see 122.26(d)(2))."[1457] Federal law requires the claimants to conduct a comprehensive monitoring program and to report on the identification of water quality improvements or degradation.[1458] The Water Boards assert that the overarching federal basis for the monitoring program, which includes the special studies, is to "assess the condition of receiving waters, monitor pollutants in storm and non-storm water effluent from the MS4, and conduct Special Studies to address conditions of concern."[1459]

The Water Boards further contend that the Regional Board found that the test claim permit "contains new or modified requirements that are necessary to improve Copermittees' efforts to reduce the discharge of pollutants in storm water runoff to the MEP and achieve water quality standards. . . . Other new or modified requirements address program deficiencies that have been noted during audits, report reviews, and other San Diego Water Board compliance assessment activities."[1460] The Regional Board also found, "Each of the components of the MRP is necessary to meet the objectives listed above" which are: assessing compliance with the permit; measuring and improving runoff management programs; assessing the chemical, physical, and biological impacts from MS4 discharges; characterizing storm water discharges; identifying sources of pollutants; prioritizing drainage and sub-drainage areas; detecting and eliminating illicit discharges and illicit connections to the MS4; assessing receiving waters; and providing information to implement BMP improvements.[1461]

The Commission finds that the requirement to conduct the four new special studies is mandated by the state.

In the 2016 decision in *Department of Finance v. Commission on State Mandates*, the California Supreme Court analyzed an NPDES stormwater permit issued by the Los Angeles Regional Water Board to determine whether the conditions (placing trash receptacles at transit stops and inspecting construction and industrial sites) were mandated by the state or by federal law.[1462] The court explained the issue as follows.

> As noted, reimbursement is not required if the statute or executive order imposes "a requirement that is mandated by a federal law or regulation," unless the state

[1462] *Department of Finance v. Commission on State Mandates* (2016) 1 Cal.5th 749.

> mandate imposes costs that exceed the federal mandate. (Gov. Code, § 17556, subd. (c).) The question here is how to apply that exception when federal law requires a local agency to obtain a permit, authorizes the state to issue the permit, and provides the state discretion in determining which conditions are necessary to achieve a general standard established by federal law, and when state law allows the imposition of conditions that exceed the federal standard. Previous decisions of this court and the Courts of Appeal provide guidance.[1463]

After reviewing the prior court decisions in *City of Sacramento v. State of California*, *Hayes v. Commission on State Mandates*, and *County of Los Angeles v. Commission on State Mandates*,[1464] the court identified the following test to determine whether the conditions imposed by the stormwater permit were mandated by the state or the federal government:

> If federal law compels the state to impose, or itself imposes, a requirement, that requirement is a federal mandate. On the other hand, if federal law gives the state discretion whether to impose a particular implementing requirement, and the state exercises its discretion to impose the requirement by virtue of a "true choice," the requirement is not federally mandated.[1465]

The court found that the trash receptacle and inspection requirements at issue in the case were mandated by the state and not by federal law because these requirements were not expressly required by federal law; federal regulations (in 40 C.F.R. § 122.26(d)(2)(iv)) give the Regional Board discretion to determine which specific controls are necessary to meet the MEP standard; and even though the US EPA regulations contemplated some form of inspections "does not mean that federal law required the scope and detail of inspections required by the Permit conditions."[1466] The court also disagreed that the Commission should have deferred to the Regional Board's conclusion that the challenged requirements were federally mandated. That determination is largely a question of law. Had the Regional Board found, when imposing the disputed permit conditions, that those conditions were the *only means* by which the maximum extent practicable standard could be implemented, deference to the board's expertise in reaching that finding would be appropriate."[1467]

The Third District Court of Appeal has also explained that "except where a regional board finds the conditions are the *only means* by which the [federal] 'maximum extent practicable' standard can be met, the State exercises a true choice by determining what controls are necessary to meet

[1464] *Department of Finance v. Commission on State Mandates* (2016) 1 Cal.5th 749, 763-765, citing *City of Sacramento v. State of California* (1990) 50 Cal.3d 51; *Hayes v. Commission on State Mandates* (1992) 11 Cal.App.4th 1564; *County of Los Angeles v. Commission on State Mandates* (1995) 32 Cal.App.4th 805.

[1465] *Department of Finance v. Commission on State Mandates* (2016) 1 Cal.5th 749, 765.

[1466] *Department of Finance v. Commission on State Mandates* (2016) 1 Cal.5th 749, 767-772.

[1467] *Department of Finance v. Commission on State Mandates* (2016) 1 Cal.5th 749, 768.

the standard."[1468] "That the San Diego Regional Board found the permit requirements were 'necessary' to meet the standard establishes only that the San Diego Regional Board exercised its discretion."[1469]

In this case, federal law requires the claimants to have a monitoring program.[1470] The MRP requirements in the test claim permit include a detailed monitoring program for stormwater and non-stormwater discharges with action levels for certain pollutants, as well as the new special studies described above.[1471] Thus, the special studies are required to be conducted in addition to the monitoring. The Water Boards argue that the requirements to conduct the special studies are necessary to meet the federal requirement to reduce the discharge of pollutants in stormwater runoff to the MEP and achieve water quality standards.[1472] Federal law, however, gives the Water Boards discretion to determine what controls are necessary to meet the MEP standard, and does not require any specific activities, and does not require dischargers to conduct special studies. Moreover, there is no evidence in the record that the new required activities are the *only* means by which the federal MEP standard can be met.

Accordingly, the Commission finds that the new activities required by Sections II.E.2.-5. to conduct the four special studies are mandated by the state.

iii. Sections II.E.2.-5., of Attachment E of the test claim permit impose a new program or higher level of service because the requirements are uniquely imposed on local government and provide a governmental service to the public.

Article XIII B, section 6 requires reimbursement whenever the Legislature or any state agency mandates a new program or higher level of service that results in costs mandated by the state. If the requirements are new, the analysis continues to determine if the requirements constitute a "program" within the meaning of article XIII B, section 6, which is defined as one that carries out the governmental function of providing services to the public, or laws which, to implement a state policy, impose unique requirements on local governments and do not apply generally to all

[1468] *Department of Finance v. Commission on State Mandates* (2017) 18 Cal.App.5th 661, 682, citing *Department of Finance v. Commission on State Mandates* (2016) 1 Cal.5th 749, 768, emphasis added.

[1469] *Department of Finance v. Commission on State Mandates* (2017) 18 Cal.App.5th 661, 682.

[1470] Code of Federal Regulations, title 40, section 122.26(d)(2)(iii)(D).

[1471] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 298-311 (test claim permit, Attachment E.).

[1472] Exhibit C, Water Boards' Comments on the Test Claim, filed September 22, 2017, pages 56-57.

residents and entities in the state.[1473] Only one of these alternatives is required to establish a new program or higher level of service.[1474]

Recently, the Second District Court of Appeal found that the trash receptacle and inspection requirements imposed in the NPDES stormwater permit issued by the Los Angeles Regional Water Quality Control Board carried out the governmental function of providing a service to the public by reducing pollution entering stormwater drainage systems and receiving waters and imposed unique requirements on local government and, thus, constituted a new program or higher level of service.[1475]

Similarly here, the new requirements to conduct four special studies are expressly directed toward the local agency copermittees and are therefore uniquely imposed on local government. In addition, the new requirements provide a governmental service to the public by studying specific water quality issues and gathering data on unknown pollutant issues that may be impairing water quality standards.[1476]

Accordingly, the requirements in Sections II.E.2.-5. of Attachment E of the test claim permit mandate a new program or higher level of service within the meaning of article XIII B, section 6 of the California Constitution:

12. Sections F., F.1., F.1.d., F.2., F.3.a.-d., and F.6. of the Test Claim Permit, Which Address Prevention of Discharges, Does Not Impose Any New Requirements and Therefore, Does Not Mandate a New Program or Higher Level of Service.

The claimants pled particular language that appears under several components of Section F. of the test claim permit addressing development, construction, municipal facilities, industrial/commercial facilities, residential areas, retrofitting and education, in Sections F., F.1., F.1.d., F.2., F.3.a.-d., and F.6, which requires the permittees to ensure that non-storm water

[1475] *Department of Finance v. Commission on State Mandates* (2021) 59 Cal.App.5th 546, 556-561.

[1476] The Sediment Toxicity Study assesses "the quality of stream sediments and possible contamination due to runoff from the MS4" because heavy metals and pesticides are not likely to be found by the test claim permit's water monitoring requirements. Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 561, 562 (Fact Sheet/Technical Report), The Trash and Litter Investigation assesses "the quantity, type, and source(s) of trash and litter in receiving waters" because there is no data on trash and litter which can impair the beneficial uses of receiving waters; The Agricultural, Federal and Tribal Input Study assesses "the type, quantity and estimated loading of pollutants in these discharges" because there is no data on the impact these non-copermittee discharges on the MS4; and the MS4 and Receiving Water Maintenance Study determines "if there are short-term or long-term in-stream water quality impacts from maintenance activities and to assess if the activities exacerbate the impairment of receiving waters 303(d) listed as impaired wholly or partially from MS4 discharges."

discharges are effectively prohibited, and that they "prevent runoff discharges from the MS4 from causing or contributing to a violation of water quality standards."[1477]

The claimants contend that this language imposes new requirements to develop and implement the components in Section F. "in a manner that guarantees that those programs will prevent the discharge of pollutants at a level that could cause or contribute to a violation of any water quality standard as well as to prevent illicit discharges to the MS4," and that such requirements go beyond the MEP standard of federal law and constitute a new program or higher level of service.[1478] The claimants further allege that the requirements now subject them to sanctions, including civil penalties and injunctive relief, for the failure to achieve water quality standards.[1479]

The Commission finds that the requirements at issue in Sections F., F.1., F.1.d., F.2., F.3.a.-d., and F.6. of the test claim permit are not new and do not mandate a new program or higher level of service.

a. Background

i. Federal law requires that permits include conditions to achieve water quality standards and objectives and that permittees effectively prohibit non-stormwater discharges into the MS4.

Under federal law, NPDES permits must include conditions to achieve water quality standards and objectives.[1480] The CWA states, "In no event may such a permit to discharge into waters be renewed, reissued, or modified to contain a less stringent effluent limitation if the implementation of such limitation would result in a violation of a water quality standard under section 1313 of this title applicable to such waters"[1481] Federal regulations state that NPDES permits must include "any requirements in addition to or more stringent than promulgated effluent limitations guidelines . . . necessary to . . . [a]chieve water quality standards established under section 303 of the CWA."[1482] Federal law also requires that if a discharge causes, has the reasonable potential to cause, or contributes to an excursion of a numeric or narrative water quality criteria, the Regional Board must develop permit limits as necessary to meet water quality standards.[1483] In addition, permittees are required to take all reasonable steps to

[1477] For example, see Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 208 (test claim permit, Section F.).

[1478] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 83 (Test Claim narrative).

[1479] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 81 (Test Claim narrative).

[1480] Code of Federal Regulations, title 40, section 122.44(d)(1).

[1481] United States Code, title 33, section 1342(o)(3) (Public Law 100-4).

[1482] Code of Federal Regulations, title 40, section 122.44(d)(1).

[1483] Code of Federal Regulations, title 40, section 122.44(d)(1).

minimize or prevent any discharge or disposal in violation of a permit, which has a reasonable likelihood of adversely affecting human health or the environment.[1484]

Federal law also requires that permits adopted by the Regional Board for discharges from MS4s "shall include a requirement to effectively prohibit non-stormwater discharges into the storm sewers."[1485] To "effectively prohibit" non-stormwater discharges requires the implementation of a program to detect and remove illicit discharges, which under federal law shall contain the following:

- A description of a program, including inspections, to implement and enforce an ordinance to prevent illicit non-stormwater discharges to the MS4;[1486]
- A description of procedures to conduct on-going field screening activities during the life of the permit, including areas or locations to be evaluated;[1487]
- A description of procedures to investigate portions of the MS4 that, based on field screening or other information, indicate a reasonable potential for containing illicit discharges or other sources of non-stormwater pollution.[1488]
- A description of procedures to prevent, contain, and respond to spills that may discharge into the MS4;
- A description of a program to promote, publicize, and facilitate public reporting of the presence of illicit discharges or water quality impacts associated with discharges from MS4s;
- A description of educational activities, public information activities, and other activities to facilitate the proper management and disposal of oil and toxic materials; and
- A description of controls to limit infiltration of seepage from municipal sanitary sewers to MS4s where necessary.[1489]

Federal law also requires that a permittee have legal authority established by statute, ordinance, or a series of contracts that enables the permittee to perform the following activities to ensure compliance with water quality standards:

- Control the contribution of pollutants to the MS4 by stormwater discharges associated with industrial activity and the quality of stormwater discharged from sites of industrial activity.
- Prohibit illicit discharges to the MS4.

[1484] Code of Federal Regulations, title 40, section 122.41(d).

[1485] United States Code, title 33, section 1342(p)(3)(B)(ii) (Public Law 100-4).

[1486] Code of Federal Regulations, title 40, section 122.26(d)(2)(iv)(B)(1).

[1487] Code of Federal Regulations, title 40, section 122.26(d)(2)(iv)(B)(2).

[1488] Code of Federal Regulations, title 40, section 122.26(d)(2)(iv)(B)(3).

[1489] Code of Federal Regulations, title 40, section 122.26(d)(2)(iv)(B).

- Control the discharge to the MS4 of spills, dumping, or disposal of materials other than stormwater.
- Control through interagency agreements the contribution of pollutants from one portion of the MS4 to another portion of the MS4.
- Require compliance with conditions in ordinances, permits, contracts or orders.
- Carry out all inspections, surveillance and monitoring procedures necessary to determine compliance and noncompliance with permit conditions, including the prohibition on illicit discharges to the MS4.[1490]

Finally, if a permittee fails to comply with these federal requirements, or otherwise violates the conditions in an NPDES permit, it may be subject to state and federal enforcement actions and private citizen lawsuits for injunctive relief and civil penalties.[1491] Federal regulations further state that "Any permit noncompliance constitutes a violation of the CWA and is grounds for enforcement action."[1492]

ii. The prior permit required the permittees to comply with prohibitions and receiving water limitations; and to establish, maintain, and enforce adequate legal authority to control pollutant discharges into and from their MS4s.

The prior permit required the permittees to comply with the following prohibitions and receiving water limitations:

- Discharges into and from MS4s in a manner causing, or threatening to cause, a condition of pollution, contamination, or nuisance (as defined in California Water Code section 13050), in waters of the state are prohibited.
- Discharges from MS4s that cause or contribute to exceedances of water quality objectives for surface water or groundwater are prohibited.
- Discharges from MS4s containing pollutants which have not been reduced to the MEP are prohibited.
- Discharges from MS4s that cause or contribute to the violation of water quality standards (designated beneficial uses and water quality objectives developed to protect beneficial uses of receiving waters) are prohibited.[1493]

[1490] Code of Federal Regulations, title 40, section 122.26(d)(2).

[1491] United States Code, title 33, sections 1319, 1342(b)(7), 1365(a). See also, Water Code sections 13385 and 13387 (potential criminal penalties).

[1492] Code of Federal Regulations, title 40, section 122.41.

[1493] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 572-573, (Order R9-2004-0001, Section A.1.-3.).

Discharges from MS4s are also subject to the Basin Plan prohibitions listed in Attachment A to the prior permit.[1494]

The prior permit also required the permittees to effectively prohibit all types of non-stormwater discharges into its MS4 unless such discharges are either authorized by a separate NPDES permit or the discharge category is not prohibited under this permit.[1495]

In addition, upon a finding by a permittee or the Regional Board that MS4 discharges are causing or contributing to an exceedance of an applicable water quality standard, the prior permit required the permittee to provide notice and a report to the Regional Board on the current BMPs and additional BMPs that will be implemented to prevent or reduce any pollutants that are causing or contributing to the exceedance of water quality standards. The permittee was also required to revise its Storm Water Management Plan (SWMP) and monitoring program to incorporate the approved modified BMPs that have been or will be implemented, the implementation schedule, and any additional monitoring required.[1496]

The prior permit further required the permittees to "establish, maintain, and enforce adequate legal authority to control pollutant discharges into and from its MS4 through ordinance, statute, permit, contract or similar means."[1497] Specifically, the permittee's legal authority must include the ability to control the contribution of pollutants in discharges of runoff associated with industrial and construction activity to its MS4, prohibit all identified illicit discharges not otherwise allowed; prohibit and eliminate illicit connections to the MS4; control discharges of materials other than stormwater to the MS4; require compliance with the permit, contracts, and the permittee's ordinances; require the use of BMPS; carry out inspections, surveillance, and monitoring; use enforcement mechanisms; and control the contribution of pollutants from one portion of the shared MS4 to another portion of the MS4 through interagency agreements.[1498]

The prior permit requires the permittees to reduce pollutants in urban runoff to the maximum extent practicable and to comply with the permit and all relevant ordinances as part of the SWMP generally and under the following components: development planning, Standard Urban Storm Water Mitigation Plans (SUSMPs) regarding priority development projects, construction, municipal, commercial/industrial, residential, and education.[1499]

[1494] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 572 (Order R9-2004-0001, Section A.1.-3.; Attachment A, Basin Plan Prohibitions).

[1495] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 572 (Order R9-2004-0001, Section B.1.).

[1496] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 573 (Order R9-2004-0001, Section C.2.).

[1497] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 574 (Order R9-2004-0001, Section D.1.).

[1498] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 574-575 (Order R9-2004-0001, Section D.1.).

[1499] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 575, 577-593 (Order R9-2004-0001, Section E.1.).

The Fact Sheet to the prior permit explains that the iterative process (reducing pollutants to the MEP using BMPs) does not shield a permittee from the independent requirement to comply with water quality objectives as follows:

> . . . while implementation of the iterative BMP process is a means to achieve compliance with water quality objectives, it does not shield the discharger from enforcement actions for continued non-compliance with water quality objectives. Consistent with EPA guidance (EPA, 1998a and 1998b) regardless of whether or not an iterative process is being implemented, discharges that cause or contribute to an exceedance of water quality objectives are in violation of Order R9-2004-001.[1500]

iii. Sections F., F.1., F.1.d., F.2., F.3.a.-d., and F.6. of the test claim permit require copermittees to prevent non-stormwater discharges and prevent runoff discharges from the MS4 from causing or contributing to a violation of water quality standards.

The test claim permit, like the prior permit, includes the same prohibitions and receiving water limitations with which the copermittees are required to comply.[1501]

The test claim permit, also like the prior permit, requires the copermittees to effectively prohibit all types of non-stormwater discharges into its MS4 unless such discharges are either authorized by a separate NPDES permit or the discharge category is not prohibited under this permit.[1502]

Section A.3., like the prior permit, provides that, upon a finding by a copermittee or the Regional Board that that MS4 discharges are causing or contributing to an exceedance of an applicable water quality standard, the copermittee must provide notice and a report to the Regional Board on the current BMPs and additional BMPs that will be implemented to prevent or reduce any pollutants that are causing or contributing to the exceedance of water quality standards and an implementation schedule. The copermittee is also required to revise its Jurisdictional Runoff Management Program (JRMP) and monitoring program to incorporate the approved modified BMPs that have been and will be implemented, the implementation schedule, and any additional monitoring required.[1503] As explained by the Fact Sheet:

> The Copermittees must reduce the discharge of storm water pollutants to the MEP and ensure that their MS4 discharges do not cause or contribute to violations of water quality standards. If the Copermittees have reduced storm water pollutant discharges to the MEP, but their discharges are still causing or contributing to violations of water quality standards, the Order provides a clear and detailed

---

[1500] Exhibit X (34), Order R9-2004-0001, Fact Sheet/Technical Report, page 34.

[1501] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 199, 200 (test claim permit, Sections A.1.-3.).

[1502] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 200 (test claim permit, Section B.1.).

[1503] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 199-200 (test claim permit, Section A.3.a.).

process for the Copermittees to follow. This process is often referred to as the "iterative process" and can be found at section A.3. The language of section A.3 is prescribed by the State Water Board and is included in MS4 permits statewide. Section A.3 essentially requires additional BMPs to be implemented until MS4 storm water discharges no longer cause or contribute to a violation of water quality standards.[1504]

The test claim permit, like the prior permit, requires the copermittees to "establish, maintain, and enforce adequate legal authority within its jurisdiction to control pollutant discharges into and from its MS4 through ordinance, statute, permit, contract or similar means."[1505]

The claimants, however, focus on Section F. of test claim permit, which addresses the Jurisdictional Runoff Management Program (JRMP). As expressly stated in Section F., each updated JRMP "must . . . reduce the discharge of storm water pollutants from the MS4 to the MEP, *effectively prohibit non-storm water discharges, and prevent runoff discharges from the MS4 from causing or contributing to a violation of water quality standards*" for the following components of the program: development planning, Standard Stormwater Mitigation Plans (SSMP) regarding priority development projects, construction, municipal, commercial/industrial, residential, retrofitting, and education.[1506] The claimants contend that the requirement to effectively prohibit non-storm water discharges, and to prevent runoff discharges from the MS4 from causing or contributing to a violation of water quality standards is new and results in a reimbursable state-mandated program.[1507] These requirements are stated as follows, with the italicized text alleged by the claimant to create new reimbursable state mandates:

- Each updated JRMP must meet the requirements of Section F. of this Order, reduce the discharge of stormwater pollutants from the MS4 to the MEP, *effectively prohibit non-stormwater discharges, and prevent runoff discharges from the MS4 from causing or contributing to a violation of water quality standards*.[1508]
- Each copermittee must implement a program which meets the requirements of this section and (1) reduces Development Project discharges of storm water pollutants from the MS4 to the MEP; *(2) prevents Development Project discharges from the MS4 from causing or contributing to a violation of water quality standards; (3) prevents illicit discharges into the MS4* and (4) manages increases in runoff discharge rates and

durations from Development Projects that are likely to cause increased erosion of stream beds and banks, silt pollutant generation, or other impacts to beneficial uses and stream habitat due to increased erosive force.[1509]

- The SSMP must meet the requirements of Section F.1.d. of this Order to (1) reduce Priority Development Project discharges of storm water pollutants from the MS4 to the MEP, and *(2) prevent Priority Development Project runoff discharges from the MS4 from causing or contributing to a violation of water quality standards*.[1510]
- Each copermittee must implement a construction program which meets the requirements of this section, *prevents illicit discharges into the MS4*, implements and maintains structural and non-structural BMPs to reduce pollutants in stormwater runoff from construction sites to the MS4, reduces construction site discharges of stormwater pollutants from the MS4 to the MEP, *and prevents construction site discharges from the MS4 from causing or contributing to a violation of water quality standards*.[1511]
- Each copermittee must implement a municipal program for the copermittee's areas and activities that meets the requirements of this section, *prevents illicit discharges into the MS4*, reduces municipal discharges of stormwater pollutants from the MS4 to the MEP, *and prevents municipal discharges from the MS4 from causing or contributing to a violation of water quality standards*.[1512]
- Each copermittee must implement a commercial/industrial program that meets the requirements of this section, *prevents illicit discharges into the MS4*, reduces commercial/industrial discharges of stormwater pollutants from the MS4 to the MEP, *and prevents commercial/industrial discharges from the MS4 from causing or contributing to a violation of water quality standards*.[1513]
- Each copermittee must implement a residential program that meets the requirements of this section, *prevents illicit discharges into the MS4*, reduces residential discharges of stormwater pollutants from the MS4 to the MEP, *and prevents residential discharges from the MS4 from causing or contributing to a violation of water quality standards*.[1514]

[1509] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 208 (test claim permit, Section F.1.).

[1510] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 212 (test claim permit, Section F.1.d.).

[1512] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 234 (test claim permit, Section F.3.a.).

[1513] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 239 (test claim permit, Section F.3.b.).

[1514] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 245 (test claim permit, Section F.3.c.).

- Each copermittee must develop and implement a retrofitting program that meets the requirements of this section. The goals of the existing development retrofitting program are to address the impacts of existing development through retrofit projects that reduce impacts from hydromodification, promote LID, support riparian and aquatic habitat restoration, reduce the discharges of stormwater pollutants from the MS4 to the MEP, and *prevent discharges from the MS4 from causing or contributing to a violation of water quality standards*.[1515]
- Each copermittee must implement education programs to (1) measurably increase the knowledge regarding MS4s, impacts of runoff on receiving waters, and potential BMP solutions for the target audience; and (2) to measurably change the behavior of target communities and thereby reduce pollutants in stormwater discharges and *eliminate prohibited non-stormwater discharges to MS4s and the environment*.[1516]

b. Sections F., F.1., F.1.d., F.2., F.3.a.-d., and F.6. of the Test Claim Permit Are Not New and, Thus, Do Not Mandate a New Program or Higher Level of Service.

i. The arguments raised by the parties

The claimants contend that the italicized language above requires them to develop and implement the components in Section F. "in a manner that guarantees that those programs will prevent the discharge of pollutants at a level that could cause or contribute to a violation of any water quality standard as well as to prevent illicit discharges to the MS4. Such requirements went beyond federal law and regulation, including the MEP standard, and constituted a new and/or higher level of service."[1517] The claimants allege that the requirements now subject them to sanctions, including civil penalties and injunctive relief, for the programs' failure to achieve water quality standards.[1518]

The claimants agree that federal law requires the claimants to ensure that they "effectively prohibit non-stormwater discharges into the storm sewers" and to ensure that discharges of pollutants from MS4s are reduced to the "maximum extent practicable" noting that these are two separate requirements: the prohibition of non-stormwater discharges *into* the MS4 and the reduction of pollutants discharged *from* the MS4 to the MEP.[1519] However, the claimants contend that the test claim permit requirements exceed federal law in two ways:

[1515] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 247 (test claim permit, Section F.3.d.).

[1516] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 252 (test claim permit, Section F.6.).

[1517] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 83 (Test Claim narrative).

[1518] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 81 (Test Claim narrative).

[1519] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 83 (Test Claim narrative, citing United States Code, title 33, section 1342(p)(3)(B)(ii)-(iii)).

> First, by requiring the "prevention" of non-stormwater discharges into the MS4, the Copermittees were required to go beyond merely "effectively prohibiting" such discharges. Second, with respect to ensuring the non-violation of water quality standards without regard to the MEP standard, the RWQCB was requiring a compliance standard not required of municipalities under federal law.[1520]

The claimants also contend that the federal regulations do not require the absolute achievement of water quality standards to comply with a permit, citing federal regulations requiring reduction of the discharge of pollutants from MS4s. The claimants conclude that the "regulatory focus is on reducing pollutants from MS4 discharges, not on ensuring that such discharges do not cause or contribute to a violation of water quality standards."[1521]

In addition, the claimants contend that the Regional Board was not authorized to include such language in the test claim permit stating that the Regional Board relied on Code of Federal Regulations, title 40, section 122.44(d)(1)(i), which requires permits to include limitations which "control all pollutants or pollutant parameters (either conventional, nonconventional, or toxic pollutants) which the Director determines are or may be discharged at a level which will cause, have the reasonable potential to cause, or contribute to an excursion above any State water quality standard, including State narrative criteria for water quality."[1522] The claimants argue that that regulation is inapplicable to MS4 permits relying on the United States Court of Appeals for the Ninth Circuit case *Defenders of Wildlife v. Browner* (9th Cir. 1999) 191 F.3d 1159:

> Under the holding in *Defenders of Wildlife, supra,* this regulation does not apply to MS4 permits, which operate under the MEP standard and not the requirement for strict compliance with water quality standards. Moreover, 40 CFR § 122.44 provides that the "following requirements" (including § 122.44(d)(1)(i)) apply only "when applicable." Under *Defenders of Wildlife,* the requirements of 40 CFR § 122.44(d)(1)(i) are, as a matter of law, not applicable to an MS4 permit such as the 2010 Permit, and do not provide authority to the RWQCB. *See also* 40 CFR § 122.44(k)(2), which authorizes the use of BMPs to "control or abate the discharge of pollutants when . . . authorized under section 402(p) [the provision relating to MS4 permits] of the CWA for the control of storm water discharges."
>
> *See also Tualatin River Keepers, et al. v. Oregon Department of Environmental Quality* (2010) 235 Ore. App. 132*,* where the court considered whether wasteload allocations from adopted TMDLs were required to be enforced as strict numeric effluent limits within a municipal NPDES permit. Petitioners argued that the Oregon Department of Environmental Quality had erred by issuing a permit that did not "specify wasteload allocations in the form of numeric effluent limits." *Id*.

[1520] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 83 (Test Claim narrative), citing *Defenders of Wildlife v. Browner* (9th Cir. 1999) 191 F.3d 1159, 1165.

[1521] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 83-85 (Test Claim narrative).

[1522] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 85-86 (Test Claim narrative).

> at 137. The Oregon court disagreed, finding that under the CWA, best management practices were considered to be a "type of effluent limitation," and that such best management practices were authorized to be used pursuant to the CWA, section 33 U.S.C. § 1342(p) as a means of controlling "storm water discharges." *Id*. at 141-42, citing 33 U.S.C. § 1342(p) and 40 CFR § 122.44(k)(2)-(3). This case demonstrates further that requirements for NPDES permits to meet water quality standards must, in the case of MS4 permits, be addressed through BMPs, not absolute adherence to such standards.[1523]

Moreover, the claimants contend that the requirements are not practicable, as the power to actually reduce the discharge of pollutants in runoff to the level required by the test claim permit is, with the exception of municipal facilities, in the hands of and subject to the actions or inactions of third parties (developers, commercial/industrial site operators or residential homeowners). The claimants acknowledge that they can implement programs to enforce requirements upon those third parties within their jurisdiction, but the claimants cannot guarantee the third parties' compliance as the variability of stormwater and urban runoff discharges makes it nearly impossible to assure compliance with all water quality standards at all times.[1524]

Finally, the claimants contend that nothing in the prior permit required the claimants to ensure that discharges from construction, municipal, industrial, commercial or residential sources would not cause or contribute to a violation of water quality standards nor did the prior permit require the educational component to so assure.[1525]

The Water Boards contend that these provisions do not impose a reimbursable state-mandated program under article XIII B, section 6 of the California Constitution. The Water Boards contend that Sections A.1., A.2., and A.3. in the Prohibitions and Receiving Water Limitations Provisions of the test claim permit implement the same language that the State Water Board directed in a 1999 precedential order[1526] that regional water boards are required to use in all MS4 permits.[1527]

> The precedential "receiving water limitations language" generally requires that municipal storm water discharges shall not cause or contribute to exceedances of water quality objectives in the receiving waters. The language was initially developed by U.S. EPA after it objected to receiving water limitations in two

[1526] Exhibit X (43), State Water Resources Control Board, Order WQ 99-05, https://www.waterboards.ca.gov/board_decisions/adopted_orders/water_quality/1999/wq1999_05.pdf (accessed on March 25, 2022).

[1527] Exhibit C, Water Boards' Comments on the Test Claim, filed September 22, 2017, page 61.

> regional water board permits (including the 1998 MS4 Permit issued to Riverside County Copermittees) that effectively provided a safe harbor from enforcement during iterative process implementation. Since 1999, the State Water Board consistently has expected receiving water limitations in MS4 permits to be complied with through the iterative process of employing successively improved BMPs.[1528]

This receiving water limitations language has been included in all permits issued to the claimants since 1999.[1529]

The Water Boards further contend that other test claimants[1530] have made parallel arguments relying on the United States Court of Appeals for the Ninth Circuit decision in *National Resources Defense Council (NRDC)* v. *County of* Los *Angeles* (2013) 725 F.3d 1194 "for the (incorrect) proposition that the 2013 opinion created a strict liability scheme where none existed previously. Orange County Claimants in that matter therefore asserted that the receiving water limitations language in the San Diego Regional Permit exceeds federal law by newly requiring 'strict liability.'"[1531] The State Water Board explained the impacts of the *NRDC* case in a 2015 Water Quality order addressing the most recent Los Angeles MS4 Permit as follows:

> The lack of a safe harbor in the iterative process of the 2001 Los Angeles Order was again acknowledged in 2011 and 2013, this time by the Ninth Circuit Court of Appeal. In these instances, the Ninth Circuit was considering a citizen suit brought by the Natural Resources Defense Council against the City of Los Angeles and the Los Angeles County Flood Control District for alleged violations of the receiving water limitations of that order. The Ninth Circuit held that, as the receiving water limitations of the 2001 Los Angeles MS4 Order (and accordingly, the precedential language in State Water Board Order WQ 99-05) was drafted, engagement in the iterative process does not excuse liability for violations of water quality standards.[fn] The California Court of Appeal has come to the same conclusion in interpreting similar receiving water limitations provisions in MS4 Orders issued by the San Diego Regional Water Quality Control Board in 2001 and the Santa Ana Regional Water Quality Control Board in 2002[fn].[1532]

[1528] Exhibit C, Water Boards' Comments on the Test Claim, filed September 22, 2017, page 61.

[1529] Exhibit C, Water Boards' Comments on the Test Claim, filed September 22, 2017, page 62.

[1530] *San Diego Region Order No. R9-2015-0100 and Order No. R9-2015-0001, Test Claim 15-TC-02.*

[1531] Exhibit C, Water Boards' Comments on the Test Claim, filed September 22, 2017, page 62.

[1532] Exhibit C, Water Boards' Comments on the Test Claim, filed September 22, 2017, page 62, quoting State Water Board Order WQ 2015-0075, page 223, citing *Natural Resources Defense Council v. County of Los Angeles* (9th Cir. 2011) 673 F.3d. 880, rev'd on other grounds sub nom. *Los Angeles County Flood Control Dist. v. Natural Resources Defense Council* (2013) 133 S.Ct. 710, mod. by *Natural Resources Defense Council v. County of Los Angeles* (9th Cir. 2013) 725 F.3d 1194, cert. den. *Los Angeles County Flood Control Dist. v. Natural Resources Defense Council* (2014) 134 S.Ct. 2135; *Building Industry Assn. of San Diego County* (2004) 124

The decisions of state and federal courts on this issue reflect the Water Boards' long-standing view that the iterative process does not provide a safe harbor to MS4 dischargers. "'When a discharger is shown to be causing or contributing to an exceedance of water quality standards, that discharger is in violation of the permit's receiving water limitations and potentially subject to enforcement by the water boards or through a citizen suit, regardless of whether or not the discharger is actively engaged in the iterative process.'"[1533] The court's conclusion in *NRDC* that receiving water limitations provisions are independent from the provisions establishing the iterative process for purposes of enforcement is not new and is consistent with the Water Boards' historical interpretation.[1534] Also, the receiving water limitations provisions are not a higher level of service as the test claim permit carries forward the language from the prior permit.[1535]

Regarding the requirement to eliminate or prevent unauthorized non-stormwater discharges, the Water Boards contend that this language implements and is required by federal law.

> Under Clean Water Act section 402(p)(3)(B)(ii), permitting agencies must ensure that permits for MS4 discharges include requirements necessary to "effectively prohibit non-stormwater discharges into the storm sewers." While "non-storm water" is not defined in the CWA or federal regulations, the federal regulations define "illicit discharge" as "any discharge to a municipal separate storm sewer that is not composed entirely of storm water and that is not covered by an NPDES permit (other than the NPDES permit for discharges from the municipal separate storm sewer and discharges resulting from firefighting activities)." This definition is the most closely applicable definition of "non-storm water" contained in federal law.[1536]

The implementing federal regulations also address the prevention or elimination of illicit discharges. Specifically, Code of Federal Regulations, title 40, section 122.26(d)(2)(iv)(B) requires that the proposed management program "shall be based on a description of a program, including a schedule, to detect and remove (or require the discharger to the municipal storm sewer to obtain a separate NPDES permit for) illicit discharges and improper disposal into the storm sewer." Also, Code of Federal Regulations, title 40, section 122.26(d)(2)(iv)(B)(1) requires "a program, including inspections, to implement and enforce an ordinance, orders or similar means to prevent illicit discharges to the municipal storm sewer system."[1537]

Cal.App.4th 866; *City of Rancho Cucamonga v. Regional Water Quality Control Bd.* (2006) 135 Cal.App.4th 1377.

[1533] Exhibit C, Water Boards' Comments on the Test Claim, filed September 22, 2017, pages 62-63, quoting State Water Board Order WQ 2015-0075, page 222, footnote 44.

[1534] Exhibit C, Water Boards' Comments on the Test Claim, filed September 22, 2017, page 63.

[1535] Exhibit C, Water Boards' Comments on the Test Claim, filed September 22, 2017, pages 64-65.

[1536] Exhibit C, Water Boards' Comments on the Test Claim, filed September 22, 2017, page 65 quoting Code of Federal Regulations, title 40, section 122.26(b)(2).

[1537] Exhibit C, Water Boards' Comments on the Test Claim, filed September 22, 2017, page 66.

While the Water Boards are not aware of any judicial opinions interpreting "effectively," in general, the requirement to "effectively prohibit" non-stormwater discharges has been interpreted to require either the prohibition of unauthorized non-stormwater flows to the MS4 through detection and removal of illicit discharges or ensuring that operators of non-stormwater systems obtain NPDES permits for those discharges.[1538]

The Water Boards also contend that the requirement to prohibit non-stormwater discharges is neither new nor a higher level of service as similar language was included in the prior two permits. The 1998 permit, as modified in 2000, stated that, with certain listed exceptions, "permittees shall prohibit non-storm water discharges into the MS4." The prior permit, issued in 2004, stated that the claimants "shall effectively prohibit all types of non-storm water discharges into its MS4 unless such discharges are either authorized by a separate NPDES permit; or authorized in accordance with [permit provisions]." The prior permit also required the development and implementation of an illicit discharge detection and elimination program "containing measures to actively seek and eliminate illicit discharges and connections" and that claimants "shall eliminate all illicit discharges, illicit discharge sources, and illicit connections as soon as possible after detection;" and "shall implement and enforce its ordinances, orders, or other legal authority to prevent illicit discharges and connections to its MS4."[1539]

ii. Sections F., F.1., F.1.d., F.2., F.3.a.-d., and F.6. of the test claim permit are not new and do not mandate a new program or higher level of service.

As indicated above, the claimants' contend that the requirements in Section F. of the test claim permit exceed the requirements under federal law in two ways as follows:

> First, by requiring the "prevention" of non-stormwater discharges into the MS4, the Copermittees were required to go beyond merely "effectively prohibiting" such discharges. Second, with respect to ensuring the non-violation of water quality standards without regard to the MEP standard, the RWQCB was requiring a compliance standard not required of municipalities under federal law.[1540]

The Commission disagrees and finds that the provisions in Section F. of the test claim permit that require the claimant's JRMP programs to effectively prohibit non-storm water discharges and prevent runoff discharges from the MS4 from causing or contributing to a violation of water quality standards are *not* new and, thus, do not mandate a new program or higher level of service.

Federal law has long required the claimants "to implement and enforce an ordinance, orders or similar means *to prevent illicit discharges to the municipal separate storm sewer system*"[1541] and

---

[1538] Exhibit C, Water Boards' Comments on the Test Claim, filed September 22, 2017, page 66.

[1539] Exhibit C, Water Boards' Comments on the Test Claim, filed September 22, 2017, pages 66-67 citing Order R9-2004-0001, Sections J., J.5., and J.6.

[1540] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 83 (Test Claim narrative) citing *Defenders of Wildlife v. Browner* (9th Cir. 1999) 191 F.3d 1159, 1165.

[1541] United States Code, title 33, section 1342(p)(3)(B)(ii), emphasis added.

to "effectively *prohibit non-stormwater discharges into the storm sewers*."[1542] Both of these limitations address discharges coming *into* the MS4. The claimants assert that the verb "prevent" is more stringent that "prohibit." However, this is not the case. Black's Law Dictionary defines prohibit as: "To prevent, preclude, or severely hinder."[1543] Merriam-Webster Dictionary defines prohibit as, "to prevent from doing something."[1544] Thus, prevention is part of, and not more stringent than, prohibition.

To "effectively prohibit" non-stormwater discharges requires the implementation of a program to detect and remove illicit discharges, which under the CWA shall contain the following:

- A description of a program, including inspections, to implement and enforce an ordinance to prevent illicit non-stormwater discharges to the MS4;[1545]
- A description of procedures to conduct on-going field screening activities during the life of the permit, including areas or locations to be evaluated;[1546]
- A description of procedures to investigate portions of the MS4 that, based on field screening or other information, indicate a reasonable potential for containing illicit discharges or other sources of non-stormwater pollution.[1547]
- A description of procedures to prevent, contain, and respond to spills that may discharge into the MS4;
- A description of a program to promote, publicize, and facilitate public reporting of the presence of illicit discharges or water quality impacts associated with discharges from MS4s;
- A description of educational activities, public information activities, and other activities to facilitate the proper management and disposal of oil and toxic materials; and
- A description of controls to limit infiltration of seepage from municipal sanitary sewers to MS4s where necessary.[1548]

As explained by the Fact Sheet, these non-stormwater requirements have been in the claimants' permits for the last 20 years:

[1542] Code of Federal Regulations, title 40, section 122.26(d)(2)(iv)(B)(1) (71 FR 33639, June 12, 2006), emphasis added.

[1545] Code of Federal Regulations, title 40, section 122.26(d)(2)(iv)(B)(1).

[1546] Code of Federal Regulations, title 40, section 122.26(d)(2)(iv)(B)(2).

[1547] Code of Federal Regulations, title 40, section 122.26(d)(2)(iv)(B)(3).

[1548] Code of Federal Regulations, title 40, section 122.26(d)(2)(iv)(B).

> For the last 20 years, Riverside County NPDES permits for discharges of storm water have regulated non-storm water discharges from the MS4. These permits required Copermittees (dischargers) to prohibit non-storm water discharges into (thus through and from) their MS4 systems, implement a program to prevent illicit discharges, and monitor to identify illicit discharges and exempted discharges that are a source of pollution. These measures are considered Best Management Practices (BMPs), are required to be included in NPDES permits issued under section 402(p) of the CWA, and are considered by USEPA to be an interim approach to permitting non-storm water discharges from the MS4 in accordance with section 402 of the CWA and CFR 122.44(k).[1549]

Moreover, the requirement to prevent runoff discharges from the MS4 from causing or contributing to a violation of water quality standards is not new. As explained in the background, federal law requires that NPDES permits include conditions to achieve water quality standards and objectives.[1550] And the following receiving water limitations and discharge prohibitions were in the prior permit, and have been in all permits since 1999 when the State Water Resources Control Board issued precedential order 99-05:

- Discharges into and from MS4s in a manner causing, or threatening to cause, a condition of pollution, contamination, or nuisance (as defined in California Water Code section 13050), in waters of the state are prohibited.
- Discharges from MS4s that cause or contribute to exceedances of water quality objectives for surface water or groundwater are prohibited.
- Discharges from MS4s that cause or contribute to the violation of water quality standards (designated beneficial uses and water quality objectives developed to protect beneficial uses of receiving waters) are prohibited.[1551]

The State Water Board explained its ruling in a subsequent order as follows:

> We have directed, in precedential orders, that MS4 permits require discharges to be controlled so as not to cause or contribute to exceedances of water quality standards in receiving waters, [fn. omitted] but have prescribed an iterative process whereby an exceedance of a water quality standard triggers a process of BMP improvements. That iterative process involves reporting of the violation, submission of a report describing proposed improvements to BMPs expected to better meet water quality standards, and implementation of these new BMPs. [FN. omitted.] The current language of the existing receiving waters limitations

---

[1549] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 413 (Fact Sheet/Technical Report).

[1550] United States Code, title 33, section 1311(b)(1)(C); United States Code, title 33, section 1342(o)(3) (Public Law 100-4); Code of Federal Regulations, title 40, sections 122.41(d), 122.44(d)(1).

[1551] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 572-573, (Order R9-2004-0001, Section A.1.-3.).

> provisions was actually developed by USEPA when it vetoed two regional water board MS4 permits that utilized a prior version of the State Water Board's receiving water limitations provisions. [FN. omitted.] In State Water Board Order WQ 99-05, we directed that all regional boards use USEPA's receiving water limitations provisions.
>
> There has been significant confusion within the regulated MS4 community regarding the relationship between the receiving water limitations and the iterative process, in part because the water boards have commonly directed dischargers to achieve compliance with water quality standards by improving control measures through the iterative process. But the iterative process, as established in our precedential orders and as generally written into MS4 permits adopted by the water boards, does not provide a "safe harbor" to MS4 dischargers. When a discharger is shown to be causing or contributing to an exceedance of water quality standards, that discharger is in violation of the permit's receiving water limitations and potentially subject to enforcement by the water boards or through a citizen suit, regardless of whether or not the discharger is actively engaged in the iterative process. [FN. omitted.][1552]

The prior permit further explained that "as operators of the MS4, the Permittees cannot passively receive and discharge pollutants from third parties. By providing free and open access to an MS4 that conveys discharges to waters of the U.S., the operator essentially accepts responsibility for discharges into the MS4 that it does not prohibit or control."[1553]

Furthermore, the position that the receiving water limitations are independent from the provisions that establish the iterative process has been judicially upheld. In *Building Industry Association of San Diego County v. State Water Resources Control Board*,[1554] the Building Industry Association (BIA) challenged a 2001 NPDES stormwater permit issued by the San Diego Regional Water Quality Control Board that expressly prohibited the discharge of pollutants that "cause or contribute to exceedances of receiving water quality objectives," and that "cause or contribute to the violation of water quality standards."[1555] The permit also contained an enforcement provision that required a municipality to report any violations or exceedances of an applicable water quality standard, and describe a process for improvement and prevention of further violations.[1556] The permit in BIA then stated, "Nothing in this section shall

[1552]Exhibit C, Water Boards' Comments on the Test Claim, filed September 22, 2017, State Water Board Order WQ 2015-0075, pages 221-222.

[1553] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 569 (Order R9-2004-0001, Finding 20).

[1554] *Building Industry Association of San Diego County v. State Water Resources Control Board* (2004) 124 Cal.App.4th 866.

[1555] *Building Industry Association of San Diego County v. State Water Resources Control Board* (2004) 124 Cal.App.4th 866, 872, 876-877.

[1556] *Building Industry Association of San Diego County v. State Water Resources Control Board* (2004) 124 Cal.App.4th 866, 877.

prevent the Regional Water Board from enforcing any provision of this Order while the municipality prepares and implements the above report."[1557] BIA, concerned that the permit provisions were too stringent, impossible to satisfy, and would result in all affected municipalities being in immediate violation of the permit and subject to substantial civil penalties because they were not then complying with applicable water quality standards — contended that under federal law, the "maximum extent practicable" standard is the exclusive measure that may be applied to municipal storm sewer discharges. BIA asserted that the Regional Board may not require a municipality to comply with a state water quality standard if the required controls exceed a maximum extent practicable standard.[1558] The court, however, rejected BIA's interpretation, and held that the permit provisions requiring compliance with water quality standards are proper under federal law.[1559]

In *Natural Resources Defense Council, Inc. v. County of Los Angeles*,[1560] the permit prohibited discharges from the MS4 that cause or contribute to the violation of water quality standards and objectives contained in the Basin Plan, the California Toxics Rule, the National Toxics Rule, and other state or federal approved surface water quality plans. The permit further provided that the permittees comply with the discharge prohibitions with monitoring and timely implementation of control measures and other actions to reduce pollutants in their discharges.[1561] Between 2002 and 2008, annual monitoring reports were published, and identified 140 separate exceedances of the water quality standards for aluminum, copper, cyanide, zinc, and fecal coliform bacteria in the Los Angeles and San Gabriel Rivers.[1562] NRDC filed a lawsuit alleging that the permittees violated the CWA, and its causes of actions were based on the following assertions: that the permit incorporated the water quality limits for each receiving water body; that the monitoring stations had recorded pollutant loads in the receiving water bodies that exceed those permitted under the relevant standards; that an exceedance constitutes non-compliance with the permit and, thereby, the CWA; and that the permittees were liable for these exceedances under the CWA.[1563]

[1557] *Building Industry Association of San Diego County v. State Water Resources Control Board* (2004) 124 Cal.App.4th 866, 877.

[1558] *Building Industry Association of San Diego County v. State Water Resources Control Board* (2004) 124 Cal.App.4th 866, 872, 880, 890.

[1559] *Building Industry Association of San Diego County v. State Water Resources Control Board* (2004) 124 Cal.App.4th 866, 880; see also, *Defenders of Wildlife v. Browner* (1999) 191 F.3d 1159, 1166-1167, which also held that the US EPA or the state administrator has the authority to determine that ensuring strict compliance with state water quality standards is necessary to control pollutants.

[1560] *Natural Resources Defense Council, Inc. v. County of Los Angeles* (2013) 725 F.3d 1194.

[1561] *Natural Resources Defense Council, Inc. v. County of Los Angeles* (2013) 725 F.3d 1194, 1199.

[1562] *Natural Resources Defense Council, Inc. v. County of Los Angeles* (2013) 725 F.3d 1194, 1199, 1200.

[1563] *Natural Resources Defense Council, Inc. v. County of Los Angeles* (2013) 725 F.3d 1194, 1199, 1201.

The permittees argued they could not be held liable for violating the permit and, thus, the CWA, based solely on monitoring data because the monitoring was not designed or intended to measure compliance of any permittee, which the court disagreed with based on the plain language of the permit; and the monitoring data cannot parse out precisely whose discharge contributed to any given exceedance because the monitoring stations manage samples downstream and not at the discharge points.[1564] The court disagreed with the permittees, finding that:

> . . . . the data collected at the Monitoring Stations is intended to determine whether the Permittees are in compliance with the Permit. If the District's monitoring data shows that the level of pollutants in federally protected water bodies exceeds those allowed under the Permit, then, as a matter of permit construction, the monitoring data conclusively demonstrates that the County Defendants are not "in compliance" with the Permit conditions. Thus, the County Defendants are liable for Permit violations.[1565]

The court also found that "the Clean Water Act requires every NPDES permittee to monitor its discharges into the navigable waters of the United States in a manner sufficient to determine whether it is in compliance with the relevant NPDES permit."[1566] The court stated that Congress recognized that MS4s often cover many square miles and comprise numerous, geographically scattered sources of pollution including streets, catch basins, gutters, man-made channels, and storm drains, and that for large urban areas, MS4 permitting could not be accomplished on a source-by-source basis. Thus, Congress delegated to the US EPA and the state administrators discretion to issue permits on a jurisdiction-wide basis, instead of requiring separate permits for individual discharge points. Nothing in the MS4 permitting scheme of federal law, however, relieves permittees of the obligation to monitor their compliance with the permit and the CWA.[1567] "Because the results of County Defendants' pollution monitoring conclusively demonstrate that pollution levels in the Los Angeles and San Gabriel Rivers are in excess of those allowed under the Permit, the County Defendants are *liable* for Permit violations as a

[1564] *Natural Resources Defense Council, Inc. v. County of Los Angeles* (2013) 725 F.3d 1194, 1199, 1204-1205.

[1565] *Natural Resources Defense Council, Inc. v. County of Los Angeles* (2013) 725 F.3d 1194, 1199, 1206-1207.

[1566] *Natural Resources Defense Council, Inc. v. County of Los Angeles* (2013) 725 F.3d 1194, 1199, 1207, citing United States Code, title 33, section 1342(a)(2); Code of Federal Regulations, title 40, section 122.44(i)(1); and Code of Federal Regulations, title 40, section 122.26(d)(2)(i)(F).

[1567] *Natural Resources Defense Council, Inc. v. County of Los Angeles* (2013) 725 F.3d 1194, 1199, 1209.

matter of law."[1568] The court remanded the case to the lower courts to determine the appropriate remedy for the county's violations.[1569]

And in *City of Rancho Cucamonga v. Regional Water Quality Control Bd.,* the court noted the following:

> As it did repeatedly below, Rancho Cucamonga maintains the 2002 permit violates section 402(k) of the Clean Water Act (33 U.S.C. § 1342(k)), because the permit does not include "safe harbor" language, providing that, if a permittee is in full compliance with the terms and conditions of its permit, it cannot be found in violation of the Clean Water Act. (U.S. Public Interest v. Atlantic Salmon (1st Cir. 2003) 339 F.3d 23, 26; EPA v. State Water Resources Control Board (1976) 426 U.S. 200, 205 [48 L.Ed.2d 578, 96 S.Ct. 2022].) The trial court found there was no statutory right to a "safe harbor" provision to be included as the term of the permit. We agree.[1570]

Accordingly, Sections F., F.1., F.1.d., F.2., F.3.a.-d., and F.6. of the test claim permit do not mandate a new program or higher level of service to ensure that stormwater runoff not cause or contribute to a violation of a water quality standard and "prevent" illicit discharges into the MS4.

C. <u>Pursuant to Government Code Section 17556(d), There Are No Costs Mandated by the State When the Claimants Have Regulatory Authority to Impose Fees (i.e. for LID, Hydromodification, Retrofitting, BMP Maintenance Tracking, Active/Passive Sediment Treatment, and Annual Reporting Requirements Addressing Development). Although the Remaining New State-Mandated Activities Result in Costs Mandated by the State for the County and Cities From November 10, 2010, to December 31, 2017, There are No Costs Mandated by the State for Riverside County Flood and Water Conservation District Because There Is No Evidence in the Record that the District Was Forced to Spend Their Local "Proceeds of Taxes."</u>

As indicated above, the following activities constitute mandated new programs or higher levels of service:

[1568] *Natural Resources Defense Council, Inc. v. County of Los Angeles* (2013) 725 F.3d 1194, 1199, 1210, emphasis in original.

[1569] *Natural Resources Defense Council, Inc. v. County of Los Angeles* (2013) 725 F.3d 1194, 1199, 1210.

[1570] *City of Rancho Cucamonga v. Regional Water Quality Control Bd.* (2006) 135 Cal.App.4th 1377, 1388.

A. <u>LID, Hydromodification, Retrofitting</u>

1. Administrative and planning activities

   a. Incorporate formalized consideration, such as thorough checklists, ordinances, and/or other means, of LID BMPs into the plan review process for priority development projects.[1571]

   b. Within two years after adoption of the permit, review local codes, policies, and ordinances and identify barriers to the implementation of LID BMPs, and take appropriate actions to remove the barriers.[1572]

   c. Develop a LID BMP waiver program to incorporate into the SSMP.[1573]

   d. Collaborate with other copermittees to develop a Hydromodification Management Plan (HMP) in accordance with sections F.1.h.1. and 2. of the test claim permit to manage increases in runoff discharge rates and durations from all priority development projects. Submit a draft HMP that has been available to public review and comment, to the Regional Board within three years of adoption of the permit. Within 180 days of receiving the Regional Board's comments on the draft HMP, submit a final HMP to the Regional Board that addresses the comments. Within 90 days of receiving a finding of adequacy from the Regional Water Board, incorporate the HMP into the SSMPs so that estimated post-project runoff discharge rates and durations do not exceed pre-development discharge rates and durations.[1574]

   e. *Except as applicable to a claimant's own municipal development (which isnot mandated by the state and does not impose a new program or higher level of service)*, develop a retrofitting program for existing developments (municipal, industrial, commercial, and residential) by identifying and creating an inventory of existing developments for retrofit, evaluating and ranking those projects for retrofit, prioritizing work plans, and encouraging retrofit projects to be designed in accordance with SSMP LID and hydromodification requirements.[1575]

[1571] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 215 (test claim permit, Section F.1.d.4.a.ii.).

[1572] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 215 (test claim permit, Section F.1.d.4.a.iii.).

[1573] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 218 (test claim permit, Section F.1.d.7.c.).

[1574] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 223, 227 (test claim permit, Section F.1.h. and F.1.h.5.).

[1575] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 247-248 (test claim permit, Section F.3.d.1.-4.).

2. Ensure priority development projects (*except for a claimant's own municipal priority development projects, which are not mandated by the state and do not impose a new program or higher level of service*) comply with LID, LID waiver and hydromodification requirements, and track and inspect BMPS for retrofitted projects.[1576]

    a. Require each priority development project listed in Sections F.1.d.1. and 2., *except a claimant's own municipal projects*, to implement LID BMPs as described in Sections F.1.d.4.b., c., and e., which will collectively minimize directly connected impervious areas, limit loss of existing infiltration capacity, and protect areas that provide important water quality benefits necessary to maintain riparian and aquatic biota, and/or are particularly susceptible to erosion and sediment loss, or make a finding of technical infeasibility for each priority development project in accordance with the LID waiver program in Section F.1.d.7.[1577]

    b. Require all priority development projects, *except for a claimant's own municipal projects and smaller restaurants where land development is less than 5,000 square feet*, to implement the approved Hydromodification Plan (HMP).[1578]

    c. *Except for a claimant's own municipal development,* track and inspect any completed retrofitted BMPs in accordance with Section F.1.f. of the test claim permit. *This does not include tracking and inspecting retrofitted BMPs of a claimant's own existing municipal development*.[1579]

B. <u>BMP Maintenance Tracking</u>

Except as applicable to a claimant's own municipal development (which is not mandated by the state and does not impose a new program or higher level of service), the following activities constitute state-mandated new programs or higher levels of service:

1. Develop and maintain a watershed-based database to track and inventory all projects, within its jurisdiction, that have a final approved SSMP with structural post-construction BMPs implemented since July 2005. The database must include information on BMP type; location; watershed; date of construction; the party responsible for maintenance,

---

[1576] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 209-210 (test claim permit). Section F.1.c. requires the following: "For all proposed Development Projects, each Copermittee, during the planning process, and prior to project approval and issuance of local permits, must prescribe the necessary requirements so that Development Project discharges of storm water pollutants from the MS4 will be reduced to the MEP, will not cause or contribute to a violation of water quality standards, and will comply with the Copermittee's ordinances, permits, plans, and requirements, and with this Order."

[1577] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 215 (test claim permit, Section F.1.d.4.).

[1578] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 213, 223 (test claim permit, Sections F.1.d.2.c., F.1.h.).

[1579] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 249 (test claim permit, Section F.3.d.5.).

maintenance verifications, and corrective actions; and whether the site was referred to the local vector control agency.[1580]

2. Verify that the required structural post-construction BMPs on inventoried *residential* projects have been implemented, are maintained, and are operating effectively every five years. Verification can be made through inspections, self-certifications, surveys, or other equally effective approaches.[1581]

3. Annually inspect the required structural post-construction BMPs at high priority *residential* projects.[1582]

4. For all inventoried projects, verifications performed through a means other than direct copermittee inspection, adequate documentation must be submitted to the copermittee to provide assurance that the required maintenance has been completed.[1583]

5. Inspections of the required structural post-construction BMPs at all inventoried projects must note observations of vector conditions and, where conditions are contributing to mosquito production, the copermittee is required to notify the local vector control agency.[1584]

C. Active/Passive Sediment Treatment

1. *Except for the claimants' own municipal construction sites (which is not mandated by the state and does not impose a new program or higher level of service)*, require implementation of AST for sediment at construction sites (or portions thereof) that are determined to be an exceptional threat to water quality.[1585]

D. Watershed Workplan

1. The watershed BMP implementation strategy shall include a map of any implemented and proposed BMPs.[1586]

[1580] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 221 (test claim permit, Section F.1.f.1.).

[1581] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 222 (test claim permit, Section F.1.f.2.b.i.).

[1582] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 222 (test claim permit, Section F.1.f.2.b.ii.).

[1583] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 222 (test claim permit, Section F.1.f.2.b.v.).

[1584] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 222 (test claim permit, Section F.1.f.2.b.vii.).

[1585] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 231 (test claim permit, Section F.2.d.3.).

[1586] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 255 (test claim permit, Section G.1.d.).

2. The copermittees shall pursue efforts to obtain any interagency agreements, or other coordination efforts, with non-copermittee owners of the MS4 (such as Caltrans, Native American tribes, and school districts) to control the contribution of pollutants from one portion of the shared MS4 to another portion of the shared MS4.[1587]
3. The watershed workplan must include the identification of the persons or entities anticipated to be involved during the development and implementation of the Watershed Workplan.[1588]
4. The annual watershed review meetings shall be open to the public and adequately noticed.[1589]
5. Each permittee shall review and modify jurisdictional programs and JRMP annual reports, as necessary, so they are consistent with the updated watershed workplan.[1590]

E. <u>Annual JRMP Report</u>

1. Include in the annual fiscal analysis a narrative description of circumstances resulting in a 25 percent or greater annual change for any budget line items.[1591]
2. Provide in the annual report an updated timeframe for attainment of a desired outcome level in the annual report when an assessment indicates that the desired outcome level has not been achieved at the end of the projected timeframe, but the review of the existing activities and BMPs are adequate, or that the projected timeframe should be extended.[1592]
3. *Except for reporting on the claimants' own municipal projects (which is not eligible for reimbursement)*, providing the following information in the Checklist pursuant to Section K.3.c.3.:
    a. Construction:
        1) Number of Active Sites
        2) Number of Inactive Sites
        3) Number of Sites Inspected

[1587] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 256 (test claim permit, Section G.3.).

[1588] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 256 (test claim permit, Section G.4.).

[1589] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 257 (test claim permit, Section G.5.).

[1590] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 257 (test claim permit, Section G.5.).

[1591] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 262 (test claim permit, Section K.3.c.1.).

[1592] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 262 (test claim permit, Section K.3.c.2.).

4) Number of Violations

b. New Development:

1) Number of Development Plan Reviews

2) Number of Projects Exempted from Interim/Final Hydromodification Requirements

c. Post Construction Development:

1) Number of Priority Development Projects

2) Number of SUSMP Required Post-Construction BMP Inspections

3) Number of SUSMP Required Post-Construction BMP Violations

4) Number of SUSMP Required Post-Construction BMP Enforcement Actions Taken

d. Illicit Discharges and Connections:

1) Number of IC/ID Eliminations

2) Number of IC/ID Violations

e. MS4 Maintenance:

1) Total Miles of MS4 Inspected

f. Municipal/Commercial/Industrial:

1) Number of Facilities

2) Number of Violations[1593]

4. *Except for reporting on the claimants' own municipal projects (which is not eligible for reimbursement)*, report the following information contained in Table 5 and required to be reported by Section K.3.c.4.:

a. New Development:

1) All revisions to the SSMP, including where applicable: (b) updated procedures for identifying pollutants of concern for each priority development project; (c) updated treatment BMP ranking matrix; (d) updated site design and treatment control BMP design standards.[1594]

[1593] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 296 (test claim permit, Section K.3.c.3., Attachment D.).

[1594] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 263 (test claim permit, Section K.3.c.4., Table 5. New Development 2.).

2) Brief description of BMPs required at approved priority development projects. Verification that site design, source control, and treatment BMPs were required on all applicable priority development projects.[1595]

3) Name and location of all priority development projects that were granted a waiver from implementing LID BMPs pursuant to Section F.1.d.4. during the reporting period.[1596]

4) Updated watershed-based BMP maintenance tracking database of approved treatment control BMPs and treatment control BMP maintenance within its jurisdiction, including updates to the list of high-priority priority development projects; and verification that the requirements of this Order were met during the reporting period.[1597]

5) Name and brief description of all approved priority development projects required to implement hydrologic control measures in compliance with Section F.1.h. including a brief description of the management measures planned to protect downstream beneficial uses and prevent adverse physical changes to downstream stream channels.[1598]

b. Construction:

1) A description of planned ordinance updates within the next annual reporting period, if applicable.[1599]

2) A description of any changes to procedures used for identifying priorities for inspecting sites and enforcing control measures that consider the nature of the construction activity, topography, and the characteristics of soils and receiving water quality.[1600]

3) Any changes to the designated minimum and enhanced BMPs.[1601]

[1595] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 263 (test claim permit, Section K.3.c.4., Table 5. New Development 3.).

[1596] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 263 (test claim permit, Section K.3.c.4., Table 5. New Development 4.).

[1597] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 263 (test claim permit, Section K.3.c.4., Table 5. New Development 5.).

[1598] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 264 (test claim permit, Section K.3.c.4., Table 5. New Development 6.).

[1599] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 264 (test claim permit, Section K.3.c.4., Table 5. Construction 1.).

[1600] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 264 (test claim permit, Section K.3.c.4., Table 5. Construction 2.).

[1601] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 264 (test claim permit, Section K.3.c.4., Table 5. Construction 3.).

4) Include the following information in the summary of the inspection program: (a) date of inspections conducted at each facility; (b) date of enforcement actions by facility; (c) brief description of the effectiveness of each high-level enforcement action at construction sites.[1602]

5) Supporting files must include a record of inspection dates, the results of each inspection, photographs (if any), and a summary of any enforcement actions taken.[1603]

c. Municipal (other than a claimant's own development):

1) Updated source inventory.[1604]

2) All changes to the designated municipal BMPs.[1605]

3) Descriptions of any changes to procedures to assure that flood management projects assess the impacts on the water quality of receiving water bodies.[1606]

4) Summary and assessment of BMP retrofits implemented at flood control structures, including: (a) List of projects retrofitted; (b) List and description of structures evaluated for retrofitting; (c) List of structures still needing to be evaluated and the schedule for evaluation.[1607]

5) Include in the summary of the MS4 and MS4 facilities operations and maintenance activities, the (a) Number and types of facilities maintained.[1608]

6) Include (a) types of facilities and (b) summary of the inspection findings in the summary of the municipal structural treatment control operations and maintenance activities.[1609]

[1602] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 264 (test claim permit, Section K.3.c.4., Table 5. Construction 4.).

[1603] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 264 (test claim permit, Section K.3.c.4., Table 5. Construction 4.).

[1604] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 264 (test claim permit, Section K.3.c.4., Table 5. Municipal 1.).

[1605] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 264 (test claim permit, Section K.3.c.4., Table 5. Municipal 2.).

[1606] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 264 (test claim permit, Section K.3.c.4., Table 5. Municipal 3.).

[1607] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 264 (test claim permit, Section K.3.c.4., Table 5. Municipal 4.).

[1608] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 265 (test claim permit, Section K.3.c.4., Table 5. Municipal 5.a.).

[1609] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 265 (test claim permit, Section K.3.c.4., Table 5. Municipal 5.).

7) Include a list of facilities planned for bi-annual inspections and the justification in the summary of the MS4 and MS4 facilities operations and maintenance activities.[1610]

8) Include in the summary of the municipal areas/programs inspection activities: (a) date of inspections conducted at each facility; (b) The BMP violations identified during the inspection by facility; (c) date of enforcement actions by facility.[1611]

9) Description of activities implemented to address sewage infiltration into the MS4.[1612]

10) Description of BMPs and their implementation for unpaved roads construction and maintenance.[1613]

d. Commercial/Industrial:

1) Updated inventory of commercial/industrial sources of discharges.[1614]

2) Include the following information in the summary of the inspection program: (a) date of inspections conducted at each facility or mobile business; (b) The BMP violations identified during the inspection by facility; (c) date of enforcement actions by facility or mobile business; (d) brief description of the effectiveness each high-level enforcement actions at commercial/industrial sites including the follow-up activities for each facility.[1615]

3) All changes to designated minimum and enhanced BMPs.[1616]

e. Residential:

1) All updated minimum BMPs required for residential areas and activities.[1617]

[1610] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 265 (test claim permit, Section K.3.c.4., Table 5. Municipal 6.c.).

[1611] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 265 (test claim permit, Section K.3.c.4., Table 5. Municipal 7.a.-c.).

[1612] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 265 (test claim permit, Section K.3.c.4., Table 5. Municipal 8.).

[1613] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 265 (test claim permit, Section K.3.c.4., Table 5. Municipal 9.).

[1614] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 265 (test claim permit, Section K.3.c.4., Table 5. Commercial/Industrial 1.).

[1615] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 265 (test claim permit, Section K.3.c.4., Table 5. Commercial/Industrial 2.).

[1616] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 265 (test claim permit, Section K.3.c.4., Table 5. Commercial/Industrial 3.).

[1617] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 266 (test claim permit, Section K.3.c.4., Table 5. Residential 1.).

2) Description of efforts to manage runoff and storm water pollution in common interest areas and mobile home parks.[1618]

f. Retrofitting Existing Development:

1) Updated inventory and prioritization of existing development identified as candidates for retrofitting.[1619]

2) Description of efforts to retrofit existing developments during the reporting year.[1620]

3) Description of efforts taken to encourage private landowners to retrofit existing development.[1621]

4) A list of all retrofit projects that have been implemented, including site location, a description of the retrofit project, pollutants expected to be treated, and the tributary acreage of runoff that will be treated.[1622]

5) Any proposed retrofit or regional mitigation projects and time lines for future implementation.[1623]

g. Illicit Discharge Detection and Elimination:

1) A description of instances when field screening and analytical data exceeded action levels, including those instances for which no investigation was conducted.[1624]

[1618] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 266 (test claim permit, Section K.3.c.4., Table 5. Residential 3.).

[1619] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 266 (test claim permit, Section K.3.c.4., Table 5. Retrofitting Existing Development 1.).

[1620] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 266 (test claim permit, Section K.3.c.4., Table 5. Retrofitting Existing Development 2.).

[1621] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 266 (test claim permit, Section K.3.c.4., Table 5. Retrofitting Existing Development 3.).

[1622] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 266 (test claim permit, Section K.3.c.4., Table 5. Retrofitting Existing Development 4.).

[1623] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 266 (test claim permit, Section K.3.c.4., Table 5. Retrofitting Existing Development 5.).

[1624] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 266 (test claim permit, Section K.3.c.4., Table 5. Illicit Discharge Detection and Elimination 5.).

h. Workplans:

1) Updated workplans including priorities, strategy, implementation schedule, and effectiveness evaluation.[1625]

F. Special Studies

1. Sediment Toxicity Study

a. Develop and submit to the Regional Board by April 1, 2012, a workplan to investigate the toxicity of sediment in streams and its potential impact on benthic macroinvertebrate IBI scores. The study must be implemented in conjunction with the stream assessment monitoring in Attachment E. The study must include the following elements:

1) At least four stream assessment locations must be sampled, including one reference site and one mass loading site. The selection of sites must be done with consideration of subjectivity of receiving waters to discharges from residential and agricultural land uses.

2) At a minimum, sampling must occur once per year at each site for at least two years.

3) At a minimum, sediment toxicity analysis must include the measurement of metals, pyrethroids, and organochlorine pesticides. The analysis must include estimates of bioavailability based upon sediment grain size, organic carbon, and receiving water temperature at the sampling site. Acute and chronic toxicity testing must be done using *Hyalella azteca*.

b. Include the results and a discussion in the monitoring annual report including an assessment of the relationship between observed IBI scores and all variables measured.[1626]

2. Trash and Litter Investigation

a. Develop and submit to the Regional Board by September 1, 2012, a workplan to assess trash (including litter) as a pollutant within receiving waters on a watershed based scale. The copermittees must select a lead copermittee. The study must include the following elements:

1) The lead copermittee must identify suitable sampling locations within the Santa Margarita HU.

[1625] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262, 266 (test claim permit, Section K.3.c.4., Table 5. Workplans).

[1626] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 314 (test claim permit, Attachment E, Section II.E.2.).

2) Trash at each location must be monitored a minimum of twice during the wet season following a qualified monitoring storm event[1627] and twice during the dry season.

3) The lead copermittee must use the "Final Monitoring Workplan for the Assessment of Trash in San Diego County Watersheds" and "A Rapid Trash Assessment Method Applied to Waters of the San Francisco Bay Region" to develop a monitoring protocol.

b. Include the results and a discussion in the monitoring annual report and must, at a minimum, include source identification, an evaluation of BMPs for trash reduction and prevention, and a description of any BMPs implemented in response to study results.[1628]

3. Agricultural, Federal and Tribal Input Study

a. Develop and submit to the Regional Board by September 1, 2012, a workplan to investigate the water quality of agricultural, federal, and tribal runoff that is discharged into their MS4. The study must include the following elements:

1) The copermittees must identify a representative number of sampling stations within their MS4 that receive discharges of agricultural, federal, and tribal runoff that has not co-mingled with any other source. At least one station from each category must be identified.

2) One storm event must be monitored at each sampling location each year for at least two years.

3) At a minimum, analysis must include those constituents listed in Table 1 of the MRP. Grab samples may be utilized, though composite samples are preferred. The copermittees must also measure or estimate flow rates and volumes of discharges into the MS4.

b. Include the results and a discussion from the study in the monitoring annual report.[1629]

4. MS4 and Receiving Water Maintenance Study

a. Develop and submit to the Regional Board by April 1, 2012, a workplan to investigate receiving waters that are considered part of the MS4 and that are subject to continual vegetative clearance activities, for example, mowing. The copermittees must assess the effects of the vegetation removal activities and water quality, including, but not limited to, modification of biogeochemical functions, in-stream

[1627] A qualified monitoring storm event is defined as a minimum of 0.1 inches of precipitation preceded by 72 hours of dry weather.

[1628] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 315 (test claim permit, Attachment E, Section II.E.3.).

[1629] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 315-316 (test claim permit, Attachment E, Section II.E.4.).

temperatures, receiving water bed and bank erosion potential, and sediment transport. The study must include the following elements:

1) The copermittees must identify suitable sampling locations, including at least one reference that is not subject to maintenance activities.

2) At a minimum, the copermittees must monitor pre- and post-maintenance activities for indicator bacteria, turbidity, temperature, dissolved oxygen and nutrients (nitrite, nitrate, total Kjeldahl nitrogen, ammonia and total phosphorous). The copermittees must also measure or estimate flow rates and volumes.

b. Include the results and a discussion from the study in the annual monitoring report including the relevance of findings to CWA section 303(d) listed impaired waters.[1630]

The last issue is whether these activities result in increased costs mandated by the state. Government Code section 17514 defines "costs mandated by the state" as any increased costs that a local agency or school district incurs as a result of any statute or executive order that mandates a new program or higher level of service. Government Code section 17564(a) further requires that no claim shall be made nor shall any payment be made unless the claim exceeds $1,000. Increased costs mandated by the state requires a showing of "increased actual expenditures of limited tax proceeds that are counted against the local government's spending limit."[1631]

In addition, a finding of costs mandated by the state means that none of the exceptions in Government Code section 17556 apply to deny the claim. As relevant here, Government Code section 17556(d) states that the Commission shall not find costs mandated by the state when:

> The local agency or school district has the authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service. This subdivision applies regardless of whether the authority to levy charges, fees, or assessments was enacted or adopted prior to or after the date on which the statute or executive order was enacted or issued.

The claimants contend that the activities result in increased costs mandated by the state within the meaning of article XIII B, section 6 and Government Code section 17514. They estimate that, for all requirements set forth in the test claim permit, increased costs of $1,446,317.50 were expended in FY 2010-11 and $2,438,936.90 in FY 2011-12, and an as yet undetermined share of $18,696.29 in FY 2010-11 and $271,720.61 in FY 2011-12. In addition, for the special studies requirement, the statewide estimate of increased costs was $103,789.60 in FY 2012-13.[1632]

Although the claimants agree that some claimants have access to a Riverside County stormwater fund, to fuel tax and community services revenue, to lighting and maintenance revenues and

---

[1630] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 316 (test claim permit, Attachment E, Section II.E.5.).

[1631] *County of Sonoma v. Commission on State Mandates* (2000) 84 Cal.App.4th 1264, 1283; *County of Los Angeles v. Commission on State Mandates* (2003) 110 Cal.App.4th 1176, 1185.

[1632] Exhibit A, Test Claim ,filed November 10, 2011 and revised April 28, 2017, page 87 (Test Claim narrative).

development and business registration fees and the District has access to a Benefit Assessment for stormwater costs, these funding sources do not cover the entire cost of compliance with the provisions set forth in this Test Claim. Additionally, the claimants contend they are subject to the limitations of Proposition 26, which limits their ability to recover costs through fees. Therefore, the claimants conclude that Government Code section 17556(d) does not apply to deny this test claim.[1633]

The Water Boards allege that the test claim permit does not result in increased costs mandated by the state since the claimants have fee authority sufficient as a matter of law to cover the costs of the program and, thus, Government Code section 17556(d) applies to deny this Test Claim. They argue that municipalities can and do assess stormwater fees to fund their programs, and point to case law that holds that practical considerations to assessing fees are not relevant to the inquiry of whether the claimants have fee authority sufficient as a matter of law to fund the costs of the program.[1634]

As explained below, the Commission finds that the new state-mandated activities result in costs mandated by the state for most of the copermittees for some of the activities based on the following findings:

a. The new state-mandated activities do not result in costs mandated by the state for Riverside County Flood and Water Conservation District because there is no evidence in the record that the District was forced to spend its "proceeds of taxes," but instead used assessment revenue and contract funds from the County and cities.

b. The County and cities have regulatory fee authority sufficient as a matter of law to fund the new state-mandated activities required related to LID (Section F.1.d.1., 2., 4., 7.), Hydromodification (Section F.1.h.), Retrofitting (Section F.3.d.1-5.), BMP Maintenance Tracking (Section F.1.f.), Active/Passive Sediment Treatment (Section F.2.d.3.), Annual JRMP Reporting Checklist on Construction, New Development, Post Construction Development, Municipal (other than their own)/Commercial/Industrial (Section K.3.c.3.), and the Annual JRMP Reporting Requirements listed in Table 5 on New Development, Construction, Municipal (other than their own), Commercial/Industrial, Residential, and Retrofitting Existing Development (Section K.3.c.4.), pursuant to Government Code section 17556(d) and, thus, there are no costs mandated by the state for these activities.

c. The County and cities have constitutional and statutory authority to charge property-related fees for the new state-mandated requirements related to the Watershed Workplan (Sections G.1.-5.); the Annual JRMP Reporting requirements to include in the annual fiscal analysis a narrative description of circumstances resulting in a 25 percent or greater annual change for any budget line items (Section K.3.c.1.), and provide in the annual report an updated timeframe for attainment of a desired outcome level when an

[1633] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 88 (Test Claim narrative).

[1634] Exhibit C, Water Boards' Comments on the Test Claim, filed September 22, 2017, pages 18-19, citing *Connell v. Superior Court* (1997) 50 Cal.App.4th 382, 398 and *Clovis Unified School Dist. v. Chiang* (2010) 188 Cal.App.4th 794, 812.

assessment indicates that the desired outcome level has not been achieved at the end of the projected timeframe (Section K.3.c.2.); the Annual JRMP Reporting Checklist on Illicit Discharges and Connections and MS4 Maintenance (Section K.3.c.3.); the Annual JRMP Reporting Requirements listed in Table 5 on Illicit Discharge Detection and Elimination and Updated Workplans (Section K.3.c.4.); and Special Studies (Section II.E.2.-5. of Attachment E.). Based on *Howard Jarvis Taxpayers Association v. City of Salinas* (2002) 98 Cal.App.4th 1351, and consistent with the prior Decision of the Commission in *Discharge of Stormwater Runoff- Order No. R9-2007-0001*, 07-TC-09, which was recently upheld by the Third District Court of Appeal in *Department of Finance v. Commission on State Mandates*,[1635] these fees are subject to the voter approval requirement in article XIII D, section 6(c) from November 10, 2010, the beginning date of the potential period of reimbursement, to December 31, 2017, and, thus, the fee authority is not sufficient as a matter of law during this time period to fund the costs of the mandated activities. Under these limited circumstances, Government Code section 17556(d) does not apply, and there are costs mandated by the state. Any fee revenues received must be identified as offsetting revenue. In addition, reimbursement for this mandate from any source, including but not limited to, service fees collected, federal funds, other state funds, and other funds that are not the claimant's proceeds of taxes shall be identified and deducted from this claim.

Based on *Paradise Irrigation District* case and the Legislature's enactment of Government Code sections 57350 and 57351 (which overturned *Howard Jarvis Taxpayers Association v. City of Salinas* (2002) 98 Cal.App.4th 1351), there are no costs mandated by the state on or after January 1, 2018, to comply with these activities, because claimants have constitutional and statutory authority to charge property-related fees for these costs subject only to the voter protest provisions of article XIII D, which is sufficient as a matter of law to cover the costs of the mandated activities within the meaning of Government Code section 17556(d).

1. The New State-Mandated Activities Do Not Result in Costs Mandated by the State for the Riverside County Flood and Water Conservation District Because There Is No Evidence in the Record That the District Was Forced to Spend Their Local "Proceeds Of Taxes."

Although the record shows the County and cities used proceeds of taxes to comply with the test claim permit and incurred $1,000 in costs,[1636] there is no evidence in the record that the District was forced to spend its local "proceeds of taxes." The reimbursement requirement in article XIII B, section 6 was included because of the tax and spend limitations in articles XIII A and XIII B, and is triggered only when the state forces the expenditure of local proceeds of taxes; section 6 was not intended to reach beyond taxation or to protect nontax sources.

[1635] *Department of Finance v. Commission on State Mandates* (2022) 85 Cal.App.5th 535, 579-581 (review denied March 1, 2023).

[1636] See, for example, Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 106-170 (Declarations from employees of the County of Riverside, and Cities of Murrieta, Temecula, and Wildomar), and the analysis in the next section.

In 1978, the voters adopted Proposition 13, which added article XIII A to the California Constitution. Article XIII A reduced the authority of local government to impose property taxes by providing that "the maximum amount of any ad valorem tax on real property shall not exceed one percent (1%) of the full cash value of such property," and that the one percent tax was to be collected by counties and "apportioned according to law to the districts within the counties…"[1637] In addition to limiting the property tax, section 4 also restricts a local government's ability to impose special taxes by requiring a two-thirds approval by voters.[1638]

Article XIII B was adopted by the voters as Proposition 4, less than 18 months after the addition of article XIII A to the state Constitution, and was billed as "the next logical step to Proposition 13."[1639] While article XIII A is aimed at controlling ad valorem property taxes and the imposition of new special taxes, "the thrust of article XIII B is toward placing certain limitations on the growth of appropriations at both the state and local government level; in particular, article XIII B places limits on the authorization to expend the 'proceeds of taxes.'"[1640] "Proceeds of taxes," in turn, includes "all tax revenues," as well as proceeds from "regulatory licenses, user charges, and user fees to the extent those proceeds *exceed* the costs reasonably borne by that entity in providing the regulation, product, or service," and proceeds from the investment of tax revenues.[1641] And, with respect to local governments, the section reiterates that "proceeds of taxes" includes state subventions other than mandate reimbursement, and, with respect to the State's spending limit, excludes such state subventions.[1642]

Article XIII B does *not* restrict the growth in appropriations financed from nontax sources, such as "user fees based on reasonable costs," and assessments.[1643] And appropriations subject to limitation do not include "[a]ppropriations for debt service."[1644]

Proposition 4 also added article XIII B, section 6, which was specifically "designed to protect the tax revenues of local governments from state mandates that would require the expenditure of

[1642] California Constitution, article XIII B, section 8(c) (added, Nov. 7, 1979; amended by Proposition 111, June 5, 1990).

[1643] *County of Fresno v. State of California* (1991) 53 Cal.3d 482, 487; see also, *County of Placer v. Corin* (1980) 113 Cal.App.3d 443, 451 (finding that revenues from a local special assessment for the construction of public improvements are not "proceeds of taxes" subject to the appropriations limit.).

[1644] California Constitution, article XIII B, section 9 (added, Nov. 7, 1979; amended by Proposition 111, June 5, 1990).

such revenues."[1645] The California Supreme Court, in *County of Fresno v. State of California*,[1646] explained:

> Section 6 was included in article XIII B in recognition that article XIII A of the Constitution severely restricted the taxing powers of local governments. (See *County of Los Angeles I, supra,* 43 Cal.3d at p. 61.) The provision was intended to preclude the state from shifting financial responsibility for carrying out governmental functions onto local entities that were ill equipped to handle the task. (*Ibid.*; see *Lucia Mar Unified School Dist. v. Honig* (1988) 44 Cal.3d 830, 836, fn. 6.) Specifically, it was designed to protect the tax revenues of local governments from state mandates that would require expenditure of such revenues. Thus, although its language broadly declares that the "state shall provide a subvention of funds to reimburse ... local government for the costs [of a state-mandated new] program or higher level of service," read in its textual and historical context section 6 of article XIII B requires subvention only when the costs in question can be recovered *solely from tax revenues*.[1647]

Most recently, the California Supreme Court concluded that articles XIII A and XIII B work "in tandem," for the purpose of precluding "the state from shifting financial responsibility for carrying out governmental functions to local agencies, which are 'ill equipped' to assume increased financial responsibilities *because of the taxing and spending limitations that articles XIII A and XIII B impose*."[1648] Accordingly, reimbursement under article XIII B, section 6 is only required when a mandated new program or higher level of service forces local government to incur "increased actual expenditures of limited tax proceeds that are counted against the local government's spending limit."[1649]

Based on the record and documents publicly available,[1650] there is no evidence that the District used its proceeds of taxes to pay for the new state-mandated activities. The District has instead used assessment revenue to pay for NPDES permit costs and funds received from the County and City claimants pursuant to an Implementation Agreement and, thus, the District has not incurred

"increased actual expenditures of limited tax proceeds that are counted against [the District's] spending limit."[1651]

The District was established by the Legislature in 1945 to provide for the control of the flood and storm waters of the district and to conserve the waters for beneficial and useful purposes.[1652] The District has the power to acquire and purchase property, to incur indebtedness, to cause taxes and assessments to be levied and collected for the purpose of paying any obligation of the district and to carry out any of the purposes of the act, and to make contracts and employ labor and "to do all acts necessary for the full exercise of all powers vested in the district."[1653] The Board of Supervisors for the County of Riverside is the District's governing body.[1654]

The District was designated as the principal permittee for the region's NPDES permits, including the test claim permit,[1655] and has the primary responsibility under the test claim permit to:

1. Serve as liaison between the Copermittees and the San Diego Water Board on general permit issues, and when necessary and appropriate, represent the Copermittees before the San Diego Water Board.
2. Coordinate permit activities among the Copermittees and facilitate collaboration on the development and implementation of programs required under this Order.
3. Coordinate the submittal of the documents and reports required by Section K of the test claim permit and Receiving Waters and MS4 Discharge Monitoring and Reporting Program No. R9-2010-0016 in Attachment E of the test claim permit.[1656]

The District's 2012 JRMP states that the enabling act does not provide the District with land use or police powers. Therefore, the District cannot regulate development of private, industrial, or

commercial facilities, and does not perform inspections.[1657] The District alleges, however, that it hired consultants, and developed and provided training with respect to the regulatory activities required under the LID, hydromodification, retrofitting, and active/passive sediment treatment sections of the permit, and updated the JRMP/Annual Report template to incorporate the new requirements "using funds contributed from each copermittee, including the District, through the Implementation Agreement."[1658] For all other new mandated activities relating to the Watershed Workplan, Annual Report, and Special Studies, the District used "funds contributed from each copermittee, including the District, through the Implementation Agreement."[1659] The District's Declaration further states that in 1991, it established the Santa Margarita Watershed Benefit Assessment to fund its MS4 compliance activities, and that the Benefit Assessment paid for "aspects of the District's compliance with the [test claim] Permit."[1660] There is no mention in the District's Declarations that the District used any of its own tax revenues to pay for costs incurred under the test claim permit.[1661]

The Implementation Agreement identified by the District is described in the District's 2012 JRMP, the first report publicly available after the adoption of the test claim permit, as a cooperative agreement with the County of Riverside and the Cities of Murrieta, Temecula, and Wildomar to contribute funds to implement the following shared costs required by the test claim permit:

a. Joint development of compliance documents required by the test claim permit.

b. Funding of the additional responsibilities of the District as Principal Copermittee (described in Section M of the test claim permit).

c. Regional public education activities.

[1658] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 94-101 (Declaration of Stuart McKibbin, Chief of the Watershed Protection Division of the Riverside County Flood Control and Water Conservation District, dated April 27, 2017).

[1659] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 99-101 (Declaration of Stuart McKibbin, Chief of the Watershed Protection Division of the Riverside County Flood Control and Water Conservation District, dated April 27, 2017).

[1660] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 102-103 (Declaration of Stuart McKibbin, Chief of the Watershed Protection Division of the Riverside County Flood Control and Water Conservation District, dated April 27, 2017).

[1661] See also, Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 104-105, paragraph 5 (Declaration of David Garcia, Project Manager within the Watershed Protection Division of the Riverside County Flood Control and Water Conservation District dated April 27, 2017, which states, "The District was designated the Principal Permittee under the Permit, and in that role, coordinated joint responses to the Permit requirements set forth in the Test Claim, which responses were paid for as shared costs by the Claimants under the Implementation Agreement entered into by and between the Permittees.")

d. Regional training programs for copermittee staff.

e. Water quality monitoring as described in the test claim permit, Attachment E, Sections II.A through II.F, exclusive of source identification efforts that may be required of the District.

f. Joint support for other Regional Programs.[1662]

Individual costs for each copermittee are also incurred for activities, such as implementing BMPs for their own municipal facilities, removing illicit connections and illegal discharges in their jurisdictions, gathering information for the annual JRMP, and for inspections and regulating development.[1663]

The Implementation Agreement for the shared costs is included in the District's 2012 JRMP and states in relevant part the following:

- The District established the Santa Margarita Benefit Assessment Area pursuant to District Ordinance 14 in May 1991 to offset the program and administrative costs associated with the NPDES Program, and the District is willing to use those assessment funds to support the District's role as principal permittee and the regional costs of the test claim permit to the extent that the Benefit Assessment funds are available and can be used.[1664]
- The delegation of responsibilities of the District, as the principal permittee, and the County and cities are defined in the Agreement.[1665]
- The shared costs will be determined by estimating the costs each December for the upcoming fiscal year; estimating the District's internal costs for developing, implementing, and administering the NPDES program; estimating the revenues generated from the Benefit Assessment; determining actual costs of the NPDES program in the prior fiscal year; and determining credits or debits due to the County or Cities based on the difference of actual contributions from the previous fiscal year with the actual contributions for that fiscal year.
    - The District's contribution for the shared costs is calculated as follows:

[1662] Exhibit X (36), Riverside County Flood Control and Water Conservation District's Jurisdictional Runoff Management Program (JRMP), June 30, 2012, pages 11-12.

[1663] Exhibit X (36), Riverside County Flood Control and Water Conservation District's Jurisdictional Runoff Management Program (JRMP), June 30, 2012, page 13, footnote 1; Exhibit X (26), Excerpt from Riverside County Flood Control and Water Conservation District's Jurisdictional Runoff Management Program (JRMP) for Fiscal Year 2014-2015, page 8.

[1664] Exhibit X (36), Riverside County Flood Control and Water Conservation District's Jurisdictional Runoff Management Program (JRMP), June 30, 2012, pages 120-126 (Implementation Agreement).

[1665] Exhibit X (36), Riverside County Flood Control and Water Conservation District's Jurisdictional Runoff Management Program (JRMP), June 30, 2012, page 120 (Implementation Agreement).

District Contribution = Assessment Revenues – internal costs – 20 percent Assessment Revenue (which is kept as a reserve for the NPDES program pursuant to Ordinance 14). If the calculation yields a negative result, then the District shall have no contribution for the upcoming fiscal year, except for internal costs it has incurred.

- The County and cities' contribution for the shared costs is calculated as follows:

  Combined Contribution (which shall not exceed $2,200,000) = Estimated Costs – District Contribution. The pro rata share of County and City costs is based on equally weighted average of population and Benefit Assessment Units within the region, and then adjusted with credits or debits.[1666]

The Santa Margarita Benefit Assessment, discussed above, was established in 1991 pursuant to Ordinance 14 adopted by the District to offset the administrative and program costs associated with the NPDES stormwater program.[1667] The ordinance states in relevant part the following:

> The Board of Supervisors of the District finds that the Benefit Assessment to be annually levied shall be based on the proportional stormwater runoff generated by each lot or parcel within the Benefit Assessment Area. Revenues derived from the Benefit Assessment shall be applied exclusively to pay the District's administrative and program costs associated with the NPDES Permit required for the Benefit Assessment Area and are to be apportioned to the Benefit Assessment Area in which they are collected.[1668]

The assessment appears as a separate item on the county's property tax bill and is collected at the same time and in the same manner as property taxes.[1669] The Benefit Assessment has not increased since 1991.[1670]

[1666] Exhibit X (36), Riverside County Flood Control and Water Conservation District's Jurisdictional Runoff Management Program (JRMP), June 30, 2012, pages 127-129 (Implementation Agreement).

[1667] Exhibit X (9), Engineer's Report to the Board of Supervisors of the Riverside County Flood Control and Water Conservation District on the NPDES Program for the Santa Margarita Benefit Assessment Area, July 2013, pages 4, 24-37 (Ordinance No. 14).

[1668] Exhibit X (9), Engineer's Report to the Board of Supervisors of the Riverside County Flood Control and Water Conservation District on the NPDES Program for the Santa Margarita Benefit Assessment Area, July 2013, page 25 (Ordinance No. 14).

[1669] Exhibit X (9), Engineer's Report to the Board of Supervisors of the Riverside County Flood Control and Water Conservation District on the NPDES Program for the Santa Margarita Benefit Assessment Area, July 2013, page 34 (Ordinance No. 14).

[1670] Exhibit X (36), Riverside County Flood Control and Water Conservation District's Jurisdictional Runoff Management Program (JRMP), June 30, 2012, page 16, Table 3-3 "NPDES Program - Benefit Assessment Ordinance, Last Updated June 4, 1991"; Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 102 (Declaration of Stuart McKibbin, Chief of the Watershed Protection Division of the Riverside County Flood Control and Water

The Report of Waste Discharge (ROWD) dated January 15, 2009, which serves as the application for renewal of the next NPDES permit (the test claim permit), indicates that the District's shared and individual costs to comply with the prior permit were fully paid using Benefit Assessment revenues.[1671]

The JRMP dated June 30, 2012, similarly states that the Benefit Assessment revenues are available and will be used for the following costs under the test claim permit: program management and reporting, annual fee for permit, implementation agreement shared costs, retrofit program, and public education and outreach.[1672]

The JRMP/Annual Report dated October 31, 2015, states that the District will use funds received from the Benefit Assessment and Implementation Agreements to fund these costs under the test claim permit in fiscal year 2015-2016.[1673]

Finally, the District's Annual Budget for fiscal year 2011-2012 and its Comprehensive Annual Financial Report for year ending June 30, 2015, identifies the *NPDES Santa Margarita* fund, which is the special revenue fund used to account for revenues and expenditures related to the National Pollutant Discharge Elimination System (NPDES) in the Santa Margarita assessment area. This fund is funded by the benefit assessment and "intergovernmental" (i.e. from the Implementation Agreement), and is not funded by any property tax revenues.[1674]

Thus, these documents show that the District used funds from the Benefit Assessment and the Implementation Agreement to pay for costs incurred to comply with the test claim permit. These

Conservation District, dated April 27, 2017, "There was no increase in the fees generated by the Benefit Assessment over the course of the Permit.").

[1671] Exhibit X (37), Santa Margarita River Region, Report of Waste Discharge (ROWD), January 15, 2009, pages 1, 16 ("Currently, the Benefit Assessment revenues fund the District's share of the area-wide MS4 Permit program activities and the District's individual compliance activities as a Permittee. Under the Benefit Assessment each parcel is taxed based on the impervious area of each parcel at a set rate established by District Ordinance 14. This rate has not been increased since 1991 due to Proposition 218.").

[1672] Exhibit X (36), Riverside County Flood Control and Water Conservation District's Jurisdictional Runoff Management Program (JRMP), June 30, 2012, page 13. The other costs identified in the 2012 JRMP include those outside the scope of the new state-mandated activities (elimination of illicit connections and illegal discharges, municipal facilities and activities); costs for development planning, which are paid using development fees; and regulatory activities to inspect private, industrial, and commercial facilities, for which the District has no mandated responsibilities.

[1673] Exhibit X (26), Excerpt from Riverside County Flood Control and Water Conservation District's Jurisdictional Runoff Management Program (JRMP) for Fiscal Year 2014-2015, pages 8-9.

[1674] Exhibit X (24), Excerpt from Riverside County Flood Control and Water Conservation District's Annual Budget, Fiscal Year 2011-2012, pages 5, 6; Exhibit X (25), Excerpt from Riverside County Flood Control and Water Conservation District's Comprehensive Annual Financial Report for Year Ending June 30, 2015, pages 7, 9, 18.

funds, however, are not the District's proceeds of taxes and are not counted against the District's appropriations limit.

Assessments are levied for improvements that benefit particular parcels of land, do not raise the general revenues of the District, and are not counted against the District's appropriations limit.[1675] Moreover, the expenditure of assessment revenue is expressly *not* a "cost mandated by the state" under the Government Code.[1676]

In addition, the funds received from the other copermittees under the Implementation Agreement are *not* the District's proceeds of taxes. Although the Implementation Agreement funds may be the proceeds of taxes of the County and cities, the funds are received by the District pursuant to the contract. The Implementation Agreement funds are not levied by or for the District, and are not counted against the District's appropriations limit.[1677] Therefore, reimbursement is not required for the District's expenditure of the Implementation Agreement funds.[1678]

Accordingly, there is no evidence in the record that the District has been forced to spend its local "proceeds of taxes" for the new mandated activities and, thus, the District has not incurred costs mandated by the state. Reimbursement is therefore denied for the Riverside County Flood Control and Water Conservation District.

2. The New State Mandated Activities Result in Costs Mandated by the State Except For Those Activities for Which the County and Cities Have Fee Authority Sufficient to Fund the Cost of the Program.

a. <u>There is substantial evidence in the record of costs mandated by the state for the county and cities.</u>

The County and cities filed declarations showing they have incurred shared costs and individual direct costs exceeding the $1,000 threshold to comply with the test claim permit.[1679] The Test Claim narrative further states that although some claimants have access to a Riverside County stormwater fund,[1680] to fuel tax and community services revenue, to lighting and maintenance

---

[1675] *County of Placer v. Corin* (1980) 113 Cal.App.3d 444, 447-453.

[1676] Government Code section 17556(d), which provides that the Commission shall not find costs mandated by the state when the local agency "has the authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service."

[1677] California Constitution, article XIII B, section 8; *Bell Community Redevelopment Agency v. Woosley* (1985) 169 Cal.App.3d 24, 32.

[1678] *County of Sonoma v. Commission on State Mandates* (2000) 84 Cal.App.4th 1264, 1283; *County of Los Angeles v. Commission on State Mandates* (2003) 110 Cal.App.4th 1176, 1185.

[1679] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 106-170 (Declarations from employees of the County of Riverside, and Cities of Murrieta, Temecula, and Wildomar).

[1680] The Declarations described herein refer to the County Service Area 152 fund as the stormwater fund. According to the Santa Margarita Watershed JRMP and Annual Report for Fiscal Year 2013-2014, the County of Riverside's Economic Development Agency took control of this service area in 2002. "CSAs are an alternative method of providing governmental

revenues and/or development/business registration fees for stormwater costs, these funding sources do not cover the entire cost of the program and the claimants have been forced to use their General Fund revenues.[1681] This statement is consistent with the declarations filed by the County and cities. The County declares that it used gas tax revenues and General Fund revenues, both of which are the County's proceeds of taxes,[1682] to pay for the costs incurred under the test claim permit:

> I am informed and believe that there are no dedicated state, federal or regional funds that are or will be available to pay for any of the new and/or upgraded programs and activities set forth in this Declaration. I am informed and believe that certain of the programs set forth above are funded in part by the proceeds of fuel taxes collected in the County and by community services association revenue. I am further informed and believe that such proceeds are not sufficient to fund all programs set forth in this declaration. I am not aware of any other fee or tax that the County would have the discretion to impose under California law to recover any portion of the cost of these program and activities. I further am informed and believe that the only other available source to pay for these new programs and activities is the County's general fund.[1683]

The City of Murrieta also declares that it had to use General Fund revenues to pay for the costs incurred under the test claim permit as follows:

---

services by the County within unincorporated areas to provide extended services such as sheriff protection, fire protection, local park maintenance services, water and sewer services, ambulance services, streetlight energy services, landscape services and street sweeping. CSA 152 is designated as the mechanism to *provide limited street-sweeping maintenance for MS4 within the service area*." Exhibit X (39), Santa Margarita Watershed JRMP and Annual Report for Fiscal Year 2013-2014, page 5, emphasis added. The Test Claim does not plead any sections of the permit addressing street sweeping and, thus, it is not clear if the claimants used these funds for the new mandated program here.

[1681] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 88 (Test Claim narrative).

[1682] "Gas Tax" revenues, though collected by the state and allocated to the counties by statute, fall within the definition of "proceeds of taxes," since they are a state subvention other than a subvention under section 6. (Streets and Highways Code, section 2101 et seq.; California Constitution, article XIII B, section 8 ["With respect to any local government, 'proceeds of taxes' shall include subventions received from the State, other than pursuant to Section 6…"].)

[1683] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 118, paragraph 6 (Declaration of Steven Horn, Principal Management Analyst and NPDES Stormwater Program Administrator for the County of Riverside, dated April 24, 2017.)

Although the County's Budget for fiscal year 2011-2012 identifies "CSA 152 NPDES" and "NPDES Santa Margarita Assmt" in its reporting of the special districts' budgets, it does not show other sources funds for the County's NPDES program. Exhibit X (7), County of Riverside, Adopted Budget, Fiscal Year 2011-2012, pages 224-225, et seq.

> I am informed and believe that there are no dedicated state or federal funds that are or will be available to pay for any of the new and/or upgraded programs and activities set forth in this Declaration. The City has access to funding obtained through County Service Area 152, which funds, in part, the obligations of the City under the Permit. The City also can collect some inspection fees during the new development process, but not for existing development. I am informed and believe that neither of these funding sources is sufficient to cover the cost of the programs and activities set forth in this Declaration. I am not aware of any other fee or tax that the City would have the discretion to impose under California law to recover any portion of the cost of these program and activities. I further am informed and believe that the only other available source to pay for these new programs and activities is the County's general fund.[1684]

Similar declarations were filed by the cities of Temecula and Wildomar, acknowledging the use of County Service Area funds, Lighting and Landscape Maintenance Funds, and development fees, but also the use of General Fund revenues to pay for the activities identified in the declarations.[1685]

The JRMP reports filed by the County of Riverside and the cities support these declarations and show that the County and cities used general funds to comply with the test claim permit.[1686]

There is no evidence in the record to rebut these documents.

Accordingly, there is substantial evidence in the record that the County and cities used proceeds of taxes to comply with the test claim permit. The analysis must continue, however, to determine whether the exceptions in Government Code section 17556 apply.

[1684] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 130-131, paragraph 6 (Declaration of Bob Moehling, City Engineer for the City of Murrieta, dated April 27, 2017).

[1685] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 144, paragraph 6; page 157, paragraph 6; and page 170, paragraph 6 (Declaration of Patrick A. Thomas, Director of Public Works/City Engineer for the City of Temecula, dated April 25, 2017; Declaration of Daniel A. York, City Manager, Public Works Director and City Engineer for the City of Wildomar, dated April 26, 2017; Declaration of Tim D'Zmura, City Engineer and Director of Public Works for the City of Wildomar, dated November 30, 2011.)

[1686] Exhibit X (8), County of Riverside Jurisdictional Runoff Management Program (JRMP), June 30, 2014, pages 14-15; Exhibit X (2), City of Murrieta Jurisdictional Runoff Management Program (JRMP), June 27, 2012, pages 13-14; Exhibit X (4), City of Temecula Jurisdictional Runoff Management Program (JRMP), June 30, 2012, pages 12-13; Exhibit X (5), City of Wildomar Jurisdictional Runoff Management Program (JRMP), October 31, 2014, pages 34-35.

b. There are no costs mandated by the state pursuant to Government Code section 17556(d) for mandated activities for which there is authority to charge regulatory fees pursuant to article XIII C or property-related fees that are subject only to the voter protest provisions of article XIII D, section 6 of the California Constitution. However, when voter approval is required to impose fees, then Government Code section 17556(d) does not apply.

Government Code section 17556(d) provides that the Commission "shall not find costs mandated by the state, as defined in Section 17514" if the Commission finds that "the local agency or school district has the authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service."

The claimants argue that "it is clear that the costs associated with developing and implementing many programs called for in the 2010 [test claim] Permit are not recoverable through fees."[1687] The claimants conclude,

> A fee or charge that does not fall within the seven exceptions listed in Article XIII C, section 1(e) is automatically deemed a tax, which must be approved by the voters. Any fee that does not fall within one of the exceptions listed in Article XIII C, section 1(e) and that is imposed for a specific purpose, such as funding all or part of a program designed to comply with a municipality's obligation under an MS4 Permit, would constitute a "special tax." Article XIII A, section 4 and Article XIII C, section 2(d) would thus require it to be approved by 2/3 of the voters of the portion of the jurisdiction subject to the fee.[1688]

However, there is no question that local agencies have the authority to charge fees for stormwater programs. Cities and counties have authority under the California Constitution to make and enforce ordinances and resolutions to protect and ensure the general welfare within their jurisdiction, which is commonly referred to as the "police power."[1689] That authority includes the power to impose fees or charges that are directed toward a particular activity or industrial or commercial sector, known as "regulatory fees;" fees or charges based on services or benefits received from government, known as "user fees;" fees or charges imposed as a condition of development of real property, known as "development fees;" and fees or charges (or assessments) levied on all property owners within the jurisdiction, which after Proposition 218 are commonly described as "property-related fees or assessments." In addition, a number of provisions of the Government Code provide express authority to impose or increase regulatory

[1687] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 27 (Test Claim narrative).

[1688] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 28 (Test Claim narrative).

[1689] California Constitution, article XI, section 7. See also, *Marblehead Land Co. v. City of Los Angeles* (1931) 47 F.2d 528, 532.

fees,[1690] fees for development of real property,[1691] and property-based assessments, fees and charges.[1692] Each of these fees or charges is subject to differing limitations pursuant to Propositions 218 and 26.[1693]

"Regulatory," "development," and "user" fees or charges are not subject to voter approval or majority protest. Broadly, these categories of fees are those that are targeted toward certain activities or sectors of industrial or commercial activity, or certain benefits received from the government or burdens created by the activity or the entity, rather than imposed on all property owners as an incident of property ownership.[1694] Such fees may be adopted as an ordinance or resolution in the context of the legislative body's normal business,[1695] subject only to the limitations of article XIII C, section 1(e), which, largely turn on establishing the relationship between the revenues raised and the uses to which they are put, and the amount charged and the benefits received or burdens created by the payor.[1696]

As explained below, the courts have held that there are no costs mandated by the state pursuant to Government Code section 17556(d) when local government has the authority to charge regulatory fees pursuant to article XIII C or property-related fees that are subject only to the voter protest provisions of article XIII D, section 6 of the California Constitution.

[1690] See, for example, Government Code section 37101 ("The legislative body may license, for revenue and regulation, and fix the license tax upon, every kind of lawful business transacted in the city.").

[1691] Government Code section 66001 provides for development fees under the Mitigation Fee Act requiring local entity to identify the purpose of the fee and the uses to which revenues will be put, to determine a reasonable relationship between the fee's use and the type of project or projects on which the fee is imposed.

[1692] See, for example, Health and Safety Code section 5471 (fees for storm drainage maintenance and operation); Government Code sections 38902 (providing for sewer standby charges); 53750 et seq. (Proposition 218 Omnibus Implementation Act, describing procedures for adoption of assessments, fees and charges); 53751 (as amended in 2017, providing that fees for sewer services includes storm sewers).

[1693] California Constitution, articles XIII C and XIII D.

[1694] See *Apartment Assn. of Los Angeles County, Inc. v. City of Los Angeles* (2001) 24 Cal.4th 830, 842.

[1695] See, for example, *City and County of San Francisco v. Boss* (1948) 83 Cal.App.2d 445, 450 ("If revenue is the primary purpose and regulation is merely incidental the imposition is a tax; while if regulation is the primary purpose the mere fact that incidentally a revenue is also obtained does not make the imposition a tax.").

[1696] California Constitution, article XIII C, section 1(e).

i. Case law establishes that the exception to the subvention requirement found in Government Code section 17556(d) is a legal inquiry, not a practical one.

The California Supreme Court upheld the constitutionality of Government Code section 17556(d) in *County of Fresno.*[1697] The court, in holding that the term "costs" in article XIII B, section 6, excludes expenses recoverable from sources other than taxes, stated:

> Section 6 was included in article XIII B in recognition that article XIII A of the Constitution severely restricted the taxing powers of local governments. (See *County of Los Angeles I, supra,* 43 Cal.3d at p. 61.) The provision was intended to preclude the state from shifting financial responsibility for carrying out governmental functions onto local entities that were ill equipped to handle the task. (*Ibid.*; see *Lucia Mar Unified School Dist. v. Honig* (1988) 44 Cal.3d 830, 836, fn. 6 [244 Cal.Rptr. 677, 750 P.2d 318].) Specifically, it was designed to protect the tax revenues of local governments from state mandates that would require expenditure of such revenues. Thus, although its language broadly declares that the "state shall provide a subvention of funds to reimburse ... local government for the costs [of a state-mandated new] program or higher level of service," read in its textual and historical context section 6 of article XIII B requires subvention only when the costs in question can be recovered *solely from tax revenues.*[1698]

Following the logic of *County of Fresno*, the Third District Court of Appeal in *Connell v. Superior Court* held that the Santa Margarita Water District, and other similarly situated districts, had statutory authority to raise rates on water, notwithstanding argument and evidence that the amount by which the district would be forced to raise its rates would render the water unmarketable.[1699] The district acknowledged the existence of fee authority, but argued it was not "sufficient," within the meaning of section 17556(d).[1700] The court held that "[t]he Districts in effect ask us to construe 'authority,' as used in the statute, as a practical ability in light of surrounding economic circumstances. However, this construction cannot be reconciled with the plain language of [section 17556(d)] and would create a vague standard not capable of reasonable adjudication."[1701] The court concluded: "Thus, the economic evidence presented by SMWD to the Board was irrelevant and injected improper factual questions into the inquiry."[1702]

More recently, the Third District Court of Appeal endorsed and followed *Connell* in *Paradise Irrigation District*: "[w]e also reject the Water and Irrigation Districts' claim that, as a matter of practical reality, the majority protest procedure allows water customers to defeat the Districts'

[1697] *County of Fresno v. State of California* (1990) 53 Cal.3d. 482.

[1698] *County of Fresno v. State of California* (1990) 53 Cal.3d. 482, 487.

[1699] *Connell v. Superior Court* (1997) 59 Cal.App.4th 382, 402.

[1700] *Connell v. Superior Court* (1997) 59 Cal.App.4th 382, 398.

[1701] *Connell v. Superior Court* (1997) 59 Cal.App.4th 382, 401.

[1702] *Connell v. Superior Court* (1997) 59 Cal.App.4th 382, 401.

authority to levy fees."[1703] Instead, the court held, "[w]e adhere to our holding in *Connell* that the inquiry into fee authority constitutes an issue of law rather than a question of fact."[1704] Further, the 2021 decision of the Second District Court of Appeal in *Department of Finance v. Commission on State Mandates* found that "[e]ven if we assume that drafting or enforcing a law that imposes fees to pay for inspections would be difficult, the issue is whether the local governments have the authority to impose such a fee, not how easy it would be to do so."[1705]

Accordingly, the rule from these cases is that where the claimant has "authority, i.e., the right or power, to levy fees sufficient to cover the costs" of a state mandated program, reimbursement is not required, notwithstanding other factors that may make the exercise of that authority impractical or undesirable.[1706]

ii. Article XIII C of the California constitution exempts from the definition of "tax" a number of fees, including regulatory fees, so long as such fees meet a threshold of reasonableness and proportionality, and does not render local government's authority to impose fees insufficient as a matter of law within the meaning of Government Code section 17556(d).

Article XI, section 7 of the California Constitution provides: "A county or city may make and enforce within its limits all local, police, sanitary, and other ordinances and regulations not in conflict with general laws."[1707] Interpreting this provision, and its predecessor, the courts have held that a local legislative body with police power "has a wide discretion" and its laws or ordinances "are invested with a strong presumption of validity."[1708] The courts have held that "the power to impose valid regulatory fees does not depend on legislatively authorized taxing power but exists pursuant to the direct grant of police power under article XI, section 7, of the California Constitution."[1709] Accordingly, ordinances or laws regulating legitimate businesses or other activities within a city or county, as well as regulating the development and use of real

County of Trinity* (1980) 108 Cal.App.3d 656, 662 (in which a taxpayer challenged a county ordinance that imposed new and increased fees for county services in processing subdivision, zoning, and other land-use applications that had been adopted without a two-thirds affirmative vote of the county electors.).

property, have generally been upheld.[1710] In addition, "[t]he services for which a regulatory fee may be charged include those that are "'incident to the issuance of [a] license or permit, investigation, inspection, administration, maintenance of a system of supervision and enforcement.'"[1711] The courts also hold that water pollution prevention is a valid exercise of government police power.[1712]

Moreover, as noted above, a number of provisions of the Government Code provide express authority to impose or increase regulatory fees,[1713] and fees for development of real property,[1714] and property-based assessments, fees and charges.[1715]

Thus, there is no dispute that the claimants have authority, both statutory and constitutional (recognized in case law), to impose fees, including regulatory and development fees.[1716] The issue in dispute is only whether Propositions 218 and 26 impose procedural and substantive

---

[1710] See *Ex parte Junqua* (1909) 10 Cal.App. 602 (police power "embraces the right to regulate any class of business, the operation of which, unless regulated, may, in the judgment of the appropriate local authority, interfere with the rights of others…."); *Sullivan v. City of Los Angeles Dept. of Building & Safety* (1953) 116 Cal.App.2d 807 (recognizing broad power to regulate not only nuisances but things or activities that may become nuisances or injurious to public health); *California Building Industry Assn. v. City of San Jose* (2015) 61 Cal.4th 435 (recognizing broad authority of municipality to regulate land use).

[1713] See, for example, Government Code section 37101 ("The legislative body may license, for revenue and regulation, and fix the license tax upon, every kind of lawful business transacted in the city.").

[1714] Government Code section 66001 provides for development fees under the Mitigation Fee Act requiring local entity to identify the purpose of the fee and the uses to which revenues will be put, to determine a reasonable relationship between the fee's use and the type of project or projects on which the fee is imposed.

[1715] See, for example, Government Code sections 38902 (providing for sewer standby charges); 53750 et seq. (Proposition 218 Omnibus Implementation Act, describing procedures for adoption of assessments, fees and charges); 53751 (as amended in 2017, providing that fees for sewer services includes storm sewers).

[1716] See also, *Ayers v. City Council of City of Los Angeles* (1949) 34 Cal.2d 31 (Upholding conditions imposed by the City on subdivision development, in the absence of any clear restriction or limitation on the City's police power); *Associated Home Builders etc. Inc. v. City of Walnut Creek* (1971) 4 Cal.3d 633 (Upholding state statute and local ordinance requiring dedication or in-lieu fees for parks and recreation as a condition of subdividing for residential building).

restrictions that so weaken that authority as to render it insufficient within the meaning of Government Code section 17556(d).

As discussed above, Proposition 13 of 1978 added article XIII A to the California Constitution, with the intent to limit local governments' power to impose or increase *taxes*.[1717] Proposition 13 generally limited the rate of any ad valorem tax on real property to one percent; limited increases in the assessed value of real property to two percent annually absent a change in ownership; and required that any changes in state taxes enacted to increase revenues and special taxes imposed by local government must be approved by a two-thirds vote of the electors.[1718] Proposition 13, however, did not define "special taxes," and a series of judicial decisions tried to define the difference between fees and taxes, and in so doing, diminished Proposition 13's import by allowing local governments to generate revenue without a two-thirds vote.[1719]

In 1996, Proposition 218 added article XIII C to ensure and reiterate voter approval requirements for general and special taxes, because it was not clear whether Proposition 62, which enacted statutory provisions to ensure that all new local taxes be approved by a vote of the local electorate, bound charter jurisdictions.[1720] As added by Proposition 218, article XIII C defined all taxes as general or special, and provided that special districts have no power to impose general taxes; and for any other local government, general taxes require approval by a majority of local voters, and special taxes require a two-thirds majority voter approval.[1721]

Interpreting the newly-reiterated limitation on local taxes, the California Supreme Court in *Sinclair Paint* held that a statute permitting the Department of Health Services to levy fees on manufacturers and other persons contributing to environmental lead contamination, in order to support a program of evaluation and screening of children, imposed bona fide *regulatory fees*, and not, as alleged by plaintiffs, a special tax that would require voter approval under articles XIII A and XIII C.[1722] The Court noted with approval *San Diego Gas & Electric*, in which the air district was permitted to recover costs of its operations, which are not reasonably identifiable with specific industrial polluters, against all monitored polluters according to an emissions-based formula, and those fees were not held to constitute a special tax.[1723] The Court cited with approval the court of appeal's finding that "[a] reasonable way to achieve Proposition 13's goal of tax relief is to shift the costs of controlling stationary sources of pollution from the tax-paying

public to the pollution-causing industries themselves…"[1724] The Court thus held: "In our view, the shifting of costs of providing evaluation, screening, and medically necessary follow-up services for potential child victims of lead poisoning from the public to those persons deemed responsible for that poisoning is likewise a reasonable police power decision."[1725]

In 2010, the voters approved Proposition 26, partly in response to *Sinclair Paint*.[1726] Proposition 26 sought to broaden the definition of "tax," and accordingly narrow the courts' construction of permissible non-tax fees. However, Proposition 26 largely *codifies* the analysis of *Sinclair Paint*, in its articulation of the various types of fees and charges that are *not* deemed "taxes."[1727] Thus, while Proposition 13 led a series of increasing restrictions on the imposition of new taxes, after *Sinclair Paint* and Propositions 218 and 26, local governments have the power, subject to varying limitations, to impose or increase (1) general taxes (with voter approval);[1728] (2) special taxes (with *two-thirds* voter approval);[1729] and (3) levies, charges, or exactions that are not "taxes," pursuant to the exceptions stated in article XIII C, section 1(e), which include:

> (1) A charge imposed for a specific benefit conferred or privilege granted directly to the payor that is not provided to those not charged, and which does not exceed the reasonable costs to the local government of conferring the benefit or granting the privilege.
>
> (2) A charge imposed for a specific government service or product provided directly to the payor that is not provided to those not charged, and which does not exceed the reasonable costs to the local government of providing the service or product.
>
> (3) A charge imposed for the reasonable regulatory costs to a local government for issuing licenses and permits, performing investigations, inspections, and audits, enforcing agricultural marketing orders, and the administrative enforcement and adjudication thereof.
>
> (4) A charge imposed for entrance to or use of local government property, or the purchase, rental, or lease of local government property.
>
> (5) A fine, penalty, or other monetary charge imposed by the judicial branch of government or a local government, as a result of a violation of law.

[1728] California Constitution, article XIII C, section 2.

[1729] California Constitution, article XIII C, section 2.

(6) A charge imposed as a condition of property development.

(7) Assessments and property-related fees imposed in accordance with the provisions of Article XIII D.

The local government bears the burden of proving by a preponderance of the evidence that a levy, charge, or other exaction is not a tax, that the amount is no more than necessary to cover the reasonable costs of the governmental activity, and that the manner in which those costs are allocated to a payor bear a fair or reasonable relationship to the payor's burdens on, or benefits received from, the governmental activity.[1730]

The plain language of article XIII C, section 1(e) thus describes certain categories of fees or exactions that are not taxes, including fees or charges for a benefit conferred or privilege granted,[1731] and fees or charges for a government service or product provided to the payor and not others.[1732] Both of these could be described as "user" fees, or otherwise described as fees for a government service or benefit. In addition, section 1(e) provides for regulatory fees (including those for inspections),[1733] development fees,[1734] and assessments or property-related fees or charges adopted in accordance with article XIII D.[1735] In each case, the local government bears the burden to establish that the fee or charge is not a tax, including that "the amount is no more than necessary to cover the reasonable costs of the governmental activity, and that the manner in which those costs are allocated to a payor bear a fair or reasonable relationship to the payor's burdens on, or benefits received from, the governmental activity."[1736]

However, while the limitations of article XIII C, section 1(e) may be newly expressed in the Constitution (i.e., added in 2010 by Proposition 26), the concepts that regulatory fees must be reasonably related to a legitimate public purpose, and in some way proportional to the activity being regulated, are not at all new. The California Supreme Court described the history of such fees in *United Water Conservation Dist.*, saying, "the language of Proposition 26 is drawn in large part from pre-Proposition 26 case law distinguishing between taxes subject to the requirements of article XIII A, on the one hand, and regulatory and other fees, on the other."[1737] The Court also noted: "*Sinclair Paint*, from which the relevant article XIII C requirements are derived, made clear that the aggregate cost inquiry and the allocation inquiry are two separate

steps in the analysis."[1738] Accordingly, the Court upheld the court of appeal's finding that the conservation charges did not exceed the reasonable cost of the regulatory activity in the aggregate,[1739] but presumed "each requirement to have independent effect,"[1740] and remanded the matter for consideration of the latter issue.

Similarly, in *San Diego County Water Authority*, the First District Court of Appeal upheld non-property-related rates charged for conveying water from the Colorado River based on a two-part test.[1741] The rates were held to satisfy both the express requirements of article XIII C, section 1(e)(2): "a specific service (use of the conveyance system) directly to the payor (a member agency) that is not provided to those not charged and which does not exceed the reasonable costs…of providing the service"; and the more general test of *Sinclair Paint*: "[the volumetric rates] bear a fair and reasonable relationship to the benefits it receives from its use of the conveyance system."[1742]

Notably, developer fees have been interpreted somewhat more loosely with respect to this proportionality test. The plain language of article XIII C, section 1(e)(6) conspicuously omits any language relating to the reasonable costs or burdens of development, although the general caveat at the end of section 1(e) presumably still applies: "that the amount is no more than necessary to cover the reasonable costs of the governmental activity, and that the manner in which those costs are allocated to a payor bear a fair or reasonable relationship to the payor's burdens on, or benefits received from, the governmental activity."[1743] However, the court in *616 Croft Ave., LLC* suggests that as long as a development fee is "reasonably related to the broad general welfare purposes for which the ordinance was enacted,"[1744] the courts will not inquire into the reasonableness of the fee as applied to a particular payor:

> [A]lthough the fee must be reasonable, the inquiry is not about the reasonableness of the individual calculation of fees related to Croft's development's impact on affordable housing. The inquiry is whether the fee schedule *itself* is reasonably related to the overall availability of affordable housing in West Hollywood.[1745]

[1742] *San Diego County Water Authority v. Metropolitan Water Dist. of Southern California* (2017) 12 Cal.App.5th 1124, 1153.

[1743] California Constitution, article XIII C, section 1(e).

[1744] *616 Croft Ave., LLC v. City of West Hollywood* (2016) 3 Cal.App.5th 621, 631.

[1745] *616 Croft Ave., LLC v. City of West Hollywood* (2016) 3 Cal.App.5th 621, 631-632.

The court relied in part on article XIII D, section 1, which states that "[n]othing in this article or Article XIII C shall be construed to…[a]ffect exiting laws relating to the imposition of fees as a condition of property development."[1746]

Accordingly, there is no reason to believe that article XIII C imposes any greater limitation on local governments' authority under their police power to impose reasonable regulatory fees and other fees than existed under prior law. Article XIII C makes clear that the burden is on the local government to establish that the levy is not a tax, that the fee is reasonably related to the costs to government in the aggregate, and that the fee charged to the payors is reasonably related to the benefits received or burdens created by such payors as a part of the rate setting process.[1747] It is not the burden of the state to make this showing on behalf of local government.

Here, the claimants argue the impossibility of imposing or increasing fees,[1748] even as *Sinclair Paint* and *616 Croft Ave.* show that the reasonableness and proportionality tests to which courts have subjected other proposed fees do not present such a hurdle as to effectively divest them of the authority to impose fees. In addition, there is ample evidence that the claimants do in fact impose development fees, regulatory fees, and other fees that they have successfully established as fees, rather than taxes, even after the adoption of Propositions 218 and 26. For example, the cities include fees for inspections and the city of Wildomar also includes fees for business registrations as funding sources to comply with the test claim permit's requirements.[1749] The County's adopted budget for fiscal year 2011-2012 includes revenue generated from building permits of $1,643,939.[1750]

Based on the foregoing, the Commission finds that article XIII C of the California Constitution does not render local government's authority to impose fees insufficient as a matter of law within the meaning of Government Code section 17556.

[1746] *616 Croft Ave., LLC v. City of West Hollywood* (2016) 3 Cal.App.5th 621, 631 ("Because the City has shown the fees are not special taxes under *Terminal Plaza* [*Corp. v. City and County of San Francisco* (1986) 177 Cal.App.3d 892], articles XIII C and XIII D of the California Constitution do not require the City to demonstrate the reasonableness of Croft's individual fee.").

[1750] Exhibit X (7), County of Riverside, Adopted Budget, Fiscal Year 2011-2012, page 75.

iii. The County and Cities have authority to charge regulatory fees sufficient to pay for the new state-mandated requirements related to LID (Section F.1.d.1., 2., 4., 7.), Hydromodification (Section F.1.h.), Retrofitting (Section F.3.d.1-5.), BMP Maintenance Tracking (Section F.1.f.), Active/Passive Sediment Treatment (Section F.2.d.3.), Annual JRMP Reporting Checklist on Construction, New Development, Post Construction Development, Municipal (other than their own)/Commercial/Industrial (Section K.3.c.3.), and the Annual JRMP Reporting Requirements listed in Table 5 on New Development, Construction, Municipal (other than their own), Commercial/Industrial, Residential, and Retrofitting Existing Development (Section K.3.c.4.), which are sufficient as a matter of law to cover the costs of the mandated activities within the meaning of Government Code section 17556(d) and, thus, there are no costs mandated by the state for these activities.

Consistent with the above analysis of article XIII C, section 1(e)(3), the 2021 *Department of Finance* decision of the Second District Court of Appeal addressed NPDES permit requirements issued by the Los Angeles Regional Board to periodically inspect commercial and industrial facilities to ensure compliance with various environmental regulatory requirements.[1751] The court found that the local agencies subject to that permit had the authority under their police powers to charge regulatory fees for the inspection activities:

> We agree with the Commission that, based upon the local governments' constitutional police power and their ability to impose a regulatory fee that (1) does not exceed the reasonable cost of the inspections, (2) is not levied for unrelated revenue purposes, and (3) is fairly allocated among the fee payers, the local governments have such authority.[1752]

Even though the imposition of the fee may be difficult, the court held that local governments have the authority to impose the fee and, thus, reimbursement under article XIII B, section 6 was not required:

> The local governments also argue that a fee that must be no more than necessary to cover the reasonable costs of the inspections "would be difficult to accomplish." They refer to problems that would arise from a general business license fee on all businesses, including those not subject to inspection, and to charging fees for inspections in years in which no inspection would take place. Even if we assume that drafting or enforcing a law that imposes fees to pay for inspections would be difficult, the issue is whether the local governments have the authority to impose such a fee, not how easy it would be to do so. (*Connell v. Superior Court* (1997) 59 Cal.App.4th 382, 401, 69 Cal.Rptr.2d 231.) As

[1751] *Department of Finance v. Commission on State Mandates* (2021) 59 Cal.App.5th 546, 552.

[1752] *Department of Finance v. Commission on State Mandates* (2021) 59 Cal.App.5th 546, 562-563, citing *California Building Industry Assn. v. State Water Resources Control Bd.* (2018) 4 Cal.5th 1032, 1046, which cited *Sinclair Paint Co. v. State Bd. of Equalization* (1997) 15 Cal.4th 866, 881.

> explained above, the police powers provision of the constitution and the judicial authorities we have cited provide that authority.[1753]

In addition, the courts have explained that the scope of a regulatory fee is somewhat flexible, is valid as long as it relates to the overall purpose of the regulatory governmental action.[1754] The Third District Court of Appeal in *California Assn. of Prof. Scientists v. Department of Fish & Game (Professional Scientists)* has identified the following general rules:

> General principles have emerged. Fees charged for the associated costs of regulatory activities are not special taxes under an article XIII A, section 4 analysis if the " ' "fees do not exceed the reasonable cost of providing services necessary to the activity for which the fee is charged and [they] are not levied for unrelated revenue purposes." ' " (Citation omitted.) "A regulatory fee may be imposed under the police power when the fee constitutes an amount necessary to carry out the purposes and provisions of the regulation." (Citation omitted.) "Such costs ... include all those incident to the issuance of the license or permit, investigation, inspection, administration, maintenance of a system of supervision and enforcement." (Citation omitted.) Regulatory fees are valid despite the absence of any perceived "benefit" accruing to the fee payers. (Citation omitted.) Legislators "need only apply sound judgment and consider 'probabilities according to the best honest viewpoint of informed officials' in determining the amount of the regulatory fee." (Citation omitted).[1755]

As indicated by the court in *Professional Scientists,* regulatory fees can include all those costs "incident to the issuance of the license or permit, investigation, inspection, administration, maintenance of a system of supervision and enforcement."[1756] In *United Business Commission v. City of San Diego*, the court explained that regulatory fees include "all the incidental consequences that may be likely to subject the public to cost in consequence of the business licensed" and that the following incidental costs are properly included in a regulatory fee: "inspection of hazards, travel time, office supplies, telephone expenses, overhead, and clerk's time"[1757] And Third District Court of Appeal recently held in *Department of Finance v. Commission on State Mandates* that regulatory fees properly included the costs of creating LID and hydromodification plans, which were "incident to the development permit which permittees

will issue to priority development projects and the administration of permittees' pollution abatement program."[1758]

The Mitigation Fee Act, Government Code section 66000 et seq., also authorizes local agencies to impose development fees if certain requirements are met. As defined by the Act, a development fee is:

> . . . a monetary exaction other than a tax or special assessment, whether established for a broad class of projects by legislation of general applicability or imposed on a specific project on an ad hoc basis, that is charged by a local agency to the applicant in connection with approval of a development project for the purpose of defraying all or a portion of the cost of public facilities related to the development project, but does not include . . . fees for processing applications for governmental regulatory actions or approvals[.][1759]

"[A] fee does not become a 'development fee' simply because it is made in connection with a development project. Rather, approval of the development project must be conditioned on payment of the fee."[1760] A development fee under the Act is one that is imposed to "defray[] all or a portion of the cost of public facilities related to the development project."[1761] "'Public facilities' [broadly] includes public improvements, public services, and community amenities," and, thus, is not limited to capital outlay costs.[1762] The local agency shall determine how there is a reasonable relationship between the amount of the fee and the cost of the public facility or portion of the public facility attributable to the development on which the fee is imposed.[1763] Pollution prevention or abatement provides a public service,[1764] which falls within the Act's definition of a public facility.

For these reasons, the Third District Courts of Appeal upheld the application of Government Code section 17556(d) for LID and Hydromodification planning activities at issue in another stormwater permit issued by the Regional Board, finding that the permittees had fee authority sufficient as a matter of law to cover all costs incurred under those sections of the permit, despite arguments from local government that the fee would not cover writing the LID and Hydromodification Plan standards and that the fee would be imposed on future development and, thus, could not be proportionate to the service provided.[1765]

[1758] *Department of Finance v. Commission on State Mandates* (2022) 85 Cal.App.5th 535, 590 (review denied March 1, 2023).

[1760] *California Building Industry Assn. v. San Joaquin Valley Air Pollution Control Dist.* (2009) 178 Cal.App.4th 120, 130.

[1761] Government Code section 66000(b).

[1762] Government Code section 66000(d).

[1763] Government Code section 66001.

[1764] *Department of Finance v. Commission on State Mandates* (2021) 59 Cal.App.5th 546, 560.

[1765] *Department of Finance v. Commission on State Mandates* (2022) 85 Cal.App.5th 535, 590.

Therefore, the Commission finds that the County and cities have fee authority within the meaning of Government Code section 17556(d) sufficient as a matter of law to cover the cost of the new state-mandated activities related to LID (Section F.1.d.1., 2., 4., 7.), Hydromodification (Section F.1.h.), Retrofitting (Section F.3.d.1-5.), BMP Maintenance Tracking (Section F.1.f.), Active/Passive Sediment Treatment (Section F.2.d.3.), Annual JRMP Reporting Checklist on Construction, New Development, Post Construction Development, Municipal (other than their own)/Commercial/Industrial (Section K.3.c.3.), and the Annual JRMP Reporting Requirements listed in Table 5 on New Development, Construction, Municipal (other than their own), Commercial/Industrial, Residential, and Retrofitting Existing Development (Section K.3.c.4.).

Accordingly, there are no costs mandated by the state for these activities and reimbursement is denied.

iv. The County and cities do not have authority to impose stormwater property-related fees for the new mandated activities related to the Watershed Workplan (Sections G.1.-5.); the Annual JRMP Reporting requirements to include in the annual fiscal analysis a narrative description of circumstances resulting in a 25 percent or greater annual change for any budget line items (Section K.3.c.1.), and provide in the annual report an updated timeframe for attainment of a desired outcome level when an assessment indicates that the desired outcome level has not been achieved at the end of the projected timeframe (Section K.3.c.2.); the Annual JRMP Reporting Checklist on Illicit Discharges and Connections and MS4 Maintenance (Section K.3.c.3.); the Annual JRMP Reporting Requirements listed in Table 5 on Illicit Discharge Detection and Elimination and Updated Workplans (Section K.3.c.4.); and Special Studies (Section II.E.2.-5. of Attachment E.), and therefore there are costs mandated by the state for these activities until the fee authority is no longer subject to the voter approval requirements of article XIII D, section 6(c) after December 31, 2017. However, beginning January 1, 2018, there are no costs mandated by the state because these fees are subject only to the voter protest provisions of Article XIII D, section 6(a) and Government Code section 17556(d) applies.

The remaining new mandated activities are as follows:

Watershed Workplan (G.1.-5.)

1. The watershed BMP implementation strategy shall include a map of any implemented and proposed BMPs.[1766]
2. The copermittees shall pursue efforts to obtain any interagency agreements, or other coordination efforts, with non-copermittee owners of the MS4 (such as Caltrans, Native

[1766] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 255 (test claim permit, Section G.1.d.).

American tribes, and school districts) to control the contribution of pollutants from one portion of the shared MS4 to another portion of the shared MS4.[1767]

3. The watershed workplan must include the identification of the persons or entities anticipated to be involved during the development and implementation of the Watershed Workplan.[1768]
4. The annual watershed review meetings shall be open to the public and adequately noticed.[1769]
5. Each permittee shall review and modify jurisdictional programs and JRMP annual reports, as necessary, so they are consistent with the updated watershed workplan.[1770]

Annual JRMP Report (Sections K.3.c.1.-4)

1. Include in the annual fiscal analysis a narrative description of circumstances resulting in a 25 percent or greater annual change for any budget line items.[1771]
2. Provide in the annual report an updated timeframe for attainment of a desired outcome level in the annual report when an assessment indicates that the desired outcome level has not been achieved at the end of the projected timeframe, but the review of the existing activities and BMPs are adequate, or that the projected timeframe should be extended.[1772]
3. Providing the following information in the Reporting Checklist: Illicit Discharges and Connections (Number of IC/ID Eliminations and Violations), and MS4 Maintenance (Total Miles of MS4 Inspected).[1773]
4. Providing the following information the Annual JRMP Reporting Requirements listed in Table 5: Illicit Discharge Detection and Elimination (A description of instances when field screening and analytical data exceeded action levels, including those instances for

which no investigation was conducted)[1774], and Updated Workplans including priorities, strategy, implementation schedule, and effectiveness evaluation.[1775]

Special Studies (Attachment E, Section II.E.2.-5.) – conducting the four special studies.

The claimants have constitutional police power (Cal. Const., art. XI, § 7) and statutory authority to impose property-related fees for these remaining new state mandated activities.[1776] An example of such a property-related stormwater fee that covers the costs of complying "with applicable local, state, and federal stormwater regulations," which would include the activities here, is the property-related fee adopted in 2014 by the City of San Clemente (which is not a permittee under the test claim permit), and was in effect from February 7, 2014 through June 30, 2020.[1777]

The claimants contend, however, that any fees developed by the claimants to fund compliance with the test claim permit would be a property-related fee that would require a majority vote of the property owners subject to the fee and, thus, claimants do not have sufficient fee authority within the meaning of Government Code section 17556(d).[1778]

The claimants' assertion, implicates article XIII D and the limitations imposed on assessments and property-related fees and charges.

As described below, the County and cities have authority to impose stormwater property-related fees for the remaining new mandated activities identified above, subject to article XIII D, which until January 1, 2018, required voter approval before fees could be charged. Government Code section 17556(d) does not apply to deny a claim when voter approval of the fee is required from November 10, 2010, the beginning date of the potential period of reimbursement, to December 31, 2017. However, beginning January 1, 2018, there are no costs mandated by the state because these fees are subject only to the voter protest provisions of Article XIII D, section 6(a) and Government Code section 17556(d) applies.

Article XIII D, as added by Proposition 218 "imposes certain substantive and procedural restrictions on taxes, assessments, fees, and charges 'assessed by any agency upon any parcel of

property or upon any person as an incident of property ownership.'"[1779] Specifically, assessments and property-related fees are subject to notice and hearing requirements, and must meet a threshold of proportionality with respect to the amount of the exaction and the purposes to which it is put. Section 4, addressing assessments, provides:

> An agency which proposes to levy an assessment shall identify all parcels which will have a special benefit conferred upon them and upon which an assessment will be imposed. The proportionate special benefit derived by each identified parcel shall be determined in relationship to the entirety of the capital cost of a public improvement, the maintenance and operation expenses of a public improvement, or the cost of the property related service being provided. No assessment shall be imposed on any parcel which exceeds the reasonable cost of the proportional special benefit conferred on that parcel. Only special benefits are assessable, and an agency shall separate the general benefits from the special benefits conferred on a parcel. Parcels within a district that are owned or used by any agency, the State of California or the United States shall not be exempt from assessment unless the agency can demonstrate by clear and convincing evidence that those publicly owned parcels in fact receive no special benefit.[1780]

Once the amount of the proposed assessment is identified, notice must be mailed to the record owner of each parcel, stating the amount chargeable to the entire district, to the parcel itself, the reason for the assessment and the basis of the calculation, and the date, time and location of the public hearing on the proposed assessment. The notice must be in the form of a ballot, and at the public hearing the agency "shall consider all protests…and tabulate the ballots." If the majority of the returned ballots oppose the assessment, the agency "shall not impose" the assessment.[1781]

Similarly, section 6 provides for a proportionality requirement with respect to property-related fees and charges:

> A fee or charge shall not be extended, imposed, or increased by any agency unless it meets all of the following requirements:
>
> (1) Revenues derived from the fee or charge shall not exceed the funds required to provide the property related service.
>
> (2) Revenues derived from the fee or charge shall not be used for any purpose other than that for which the fee or charge was imposed.
>
> (3) The amount of a fee or charge imposed upon any parcel or person as an incident of property ownership shall not exceed the proportional cost of the service attributable to the parcel.
>
> (4) No fee or charge may be imposed for a service unless that service is actually used by, or immediately available to, the owner of the property in question. Fees

[1780] California Constitution, article XIII D, section 4(a).

[1781] California Constitution, article XIII D, section 4(c)-(e).

> or charges based on potential or future use of a service are not permitted. Standby charges, whether characterized as charges or assessments, shall be classified as assessments and shall not be imposed without compliance with Section 4.
>
> (5) No fee or charge may be imposed for general governmental services including, but not limited to, police, fire, ambulance or library services, where the service is available to the public at large in substantially the same manner as it is to property owners. Reliance by an agency on any parcel map, including, but not limited to, an assessor's parcel map, may be considered a significant factor in determining whether a fee or charge is imposed as an incident of property ownership for purposes of this article. In any legal action contesting the validity of a fee or charge, the burden shall be on the agency to demonstrate compliance with this article.[1782]

And, section 6 provides for notice and a public hearing similarly to section 4; but, unlike section 4, section 6 does not expressly require the notice to inform parcel owners of their right to protest the proposed fee, nor is the notice required to be in the form of a ballot to be returned.[1783]

Finally, section 6(c) also provides that voter approval is required for property-related fees and charges *other than* for water, sewer, and refuse collection services.[1784] The court in *Howard Jarvis Taxpayers' Assn. v. City of Salinas* (2002) 98 Cal.App.4th 1351 held that "sewer," for purposes of the voter approval exemption does not include storm sewers or storm drainage fees.[1785] That holding has since been the subject of legislative correction, in the form of Government Code sections 53750 and 53751, which were amended in 2017 to expressly overrule *Howard Jarvis Taxpayers' Assn. v. City of Salinas*.[1786] The Commission presumes the validity of Government Code sections 53750 and 53751, as amended, and, as the Third District Court of Appeal recently held, that the amendments, absent a clear and unequivocal statement to the contrary, operate *prospectively* beginning January 1, 2018.[1787] Accordingly, prior to January 1, 2018, storm sewer or storm drainage fees imposed would be subject to the voter approval requirements of article XIII D, section 6(c), but after January 1, 2018, storm sewer or storm drainage fees imposed on property owners are subject only to the majority protest requirement of article XIII D, section 6(a), and the reasonableness and proportionality requirements of section 6(b).

Many of the limitations stated in Proposition 218 are not new, as most special assessment acts under prior law required notice and a public hearing, and many such acts also provided for

majority protest of affected parcel owners to defeat a proposed assessment.[1788] Despite the existence of such limitations before Proposition 218, the court in *County of Placer v. Corin* held that assessments were sufficiently distinct from taxes as to be outside the scope of articles XIII A and XIII B.[1789]

After Proposition 218 came *Apartment Assn. of Los Angeles County, Richmond*, and *Bighorn-Desert View*.[1790] In each of these cases, the California Supreme Court narrowly construed the procedural and substantive limitations of article XIII D. In *Apartment Assn.*, the Court rejected a challenge under article XIII D, section 6 to the city's ordinance imposing fees on residential rental properties, finding that the fees were not "imposed by an agency upon a parcel or upon a person as *an incident of property ownership*…"[1791] The Court held that Proposition 218 imposes restrictions on taxes, assessments, fees, and charges only "when they burden landowners as *landowners*."[1792] The residential rental fee ordinance at issue "imposes a fee on its subjects by virtue of their ownership of a business — i.e., because they are landlords," and, thus, the fee was not subject to the requirements of article XIII D.[1793]

In *Richmond*, the District imposed a "capacity charge" on applicants for *new* water service connections, and thus could not prospectively identify the parcels to which the charge would apply; that is, it could not have complied with the procedural requirements of notice and hearing under article XIII D, section 4. The Court held that the impossibility of compliance with section 4 was one reason to find that the capacity charge was not an assessment, within the meaning of article XIII D.[1794] The Court also found that the charge was to be imposed on applicants for new service, rather than users receiving service through existing connections, and that that distinction is consistent with the overall intent of Proposition 218, to promote taxpayer consent.[1795] Accordingly, the Court concluded: "Because these fees are imposed only on the self-selected group of water service applicants, and not on real property that the District has identified or is able to identify, and because neither fee can ever become a charge on the property itself, we

conclude that neither fee is subject to the restrictions that article XIII D imposes on property assessments and property-related fees."[1796]

In *Bighorn-Desert View*, the Court rejected a local initiative designed to impose a voter approval requirement on all future rate increases for water service,[1797] finding that article XIII D, section 6's express *exemption* from voter approval for sewer, water, and refuse collection "would appear to embody the electorate's intent as to when voter-approval should be required, or not required."[1798] The Court concluded:

> [U]nder section 3 of California Constitution article XIII C, local voters by initiative may reduce a public agency's water rate and other delivery charges, but…[article XIII C, section 3] does not authorize an initiative to impose a requirement of voter preapproval for future rate increases or new charges for water delivery. In other words, by exercising the initiative power voters may decrease a public water agency's fees and charges for water service, but the agency's governing board may then raise other fees or impose new fees without prior approval. Although this power-sharing arrangement has the potential for conflict, we must presume that both sides will act reasonably and in good faith, and that the political process will eventually lead to compromises that are mutually acceptable and both financially and legally sound. (See *DeVita v. County of Napa, supra,* 9 Cal.4th at pp. 792–793, 38 Cal.Rptr.2d 699, 889 P.2d 1019 ["We should not presume ... that the electorate will fail to do the legally proper thing."].) We presume local voters will give appropriate consideration and deference to a governing board's judgments about the rate structure needed to ensure a public water agency's fiscal solvency, and we assume the board, whose members are elected (see Stats. 1969, ch. 1175, § 5, p. 2274, 72B West's Ann. Wat.-Appen., *supra,* ch. 112, p. 190), will give appropriate consideration and deference to the voters' expressed wishes for affordable water service. The notice and hearing requirements of subdivision (a) of section 6 of California Constitution article XIII D will facilitate communications between a public water agency's board and its customers, and the substantive restrictions on property-related charges in subdivision (b) of the same section should allay customers' concerns that the agency's water delivery charges are excessive.[1799]

In 2019, the Third District Court of Appeal issued its decision in *Paradise Irrigation District*, which directly addresses (in the context of water services) the claimants' assertion that cities and counties are without authority to impose new fees in light of the voter protest provisions of

Proposition 218, and that mandate reimbursement is therefore warranted.[1800] In *Paradise Irrigation District*, the Third District Court of Appeal observed:

> This case takes up where *Connell* left off, namely with the question of whether the passage of Proposition 218 undermined water and irrigation districts' authority to levy fees so that they are entitled to subvention for state-mandated regulations requiring water infrastructure upgrades. The Water and Irrigation Districts do not argue this court wrongly decided *Connell, supra,* 59 Cal.App.4th 382, 69 Cal.Rptr.2d, but only that the rule of decision was superseded by Proposition 218. Consequently, we proceed to examine the effect of Proposition 218 on the continuing applicability of *Connell.*[1801]

Ultimately the court preserved and followed the rule of *Connell*, finding, based in large part on a discussion of *Bighorn-Desert View*, that "Proposition 218 implemented a power-sharing arrangement that does not constitute a revocation of the Water and Irrigation Districts' fee authority."[1802] The court held, "[c]onsistent with the California Supreme Court's reasoning in *Bighorn*, we presume local voters will give appropriate consideration and deference to state mandated requirements relating to water conservation measures required by statute."[1803] In addition, the court held "[w]e also reject the Water and Irrigation Districts' claim that, as a matter of practical reality, the majority protest procedure allows water customers to defeat the Districts' authority to levy fees."[1804] However, the court said, "[w]e adhere to our holding in *Connell* that the inquiry into fee authority constitutes an issue of law rather than a question of fact."[1805] The court found that water service fees, being expressly exempt from the voter approval provisions of article XIII D, section 6(c), therefore do not require voter preapproval, as would new taxes.[1806] In addition, the court followed and relied upon *Bighorn-Desert View*'s analysis of a power-sharing relationship between local agencies and their constituents, including the presumption that "local voters will give appropriate consideration and deference to a governing board's judgments about the rate structure needed to ensure a public water agency's fiscal solvency…" and that the notice and hearing requirements of article XIII D, section 6(a)

"will facilitate communications between a public water agency's board and its customers, and the substantive restrictions on property-related charges in subdivision (b) of the same section should allay customers' concerns that the agency's water delivery charges are excessive."[1807] Accordingly, the court found that that power-sharing arrangement "does not undermine the fee authority that the districts have," and the majority protest procedure of article XIII D, section 6(a) "does not divest the Water and Irrigation Districts of their authority to levy fees."[1808] The court noted that statutory protest procedures already existed, and "the possibility of a protest under article XIII D, section 6 does not eviscerate the Water and Irrigation Districts' ability to raise fees to comply with the Water Conservation Act."[1809] Thus, the court found that Government Code section 17556(d) still applies to deny a claim when the fee authority is subject to voter protest under article XIII D, section 6(a).

However, the court *Paradise Irrigation District* did not analyze whether Government Code section 17556(d) applies when voter approval is required in the years before Government Code sections 53750 and 53751 were enacted to make property-related stormwater fees fall within article XIII D's exception to the voter approval requirement. The court noted that,

> In this case, none of the parties argue the costs for upgrading water service that may be required by the Conservation Act are subject to voter approval. Such an argument would be untenable because SB 231 added Government Code section 53751, subdivision (h), to declare that "Proposition 218 exempts sewer and water services from the voter-approval requirement." (Stats. 2017, ch. 536, § 2.)[1810]

Thus, based on the *Paradise Irrigation District* decision and the Legislature's enactment of Government Code sections 57350 and 57351, any costs incurred on or after January 1, 2018, to comply with the following new requirements are denied: new activities related to the Watershed Workplan (Sections G.1.-5.); the Annual JRMP Reporting requirements to include in the annual fiscal analysis a narrative description of circumstances resulting in a 25 percent or greater annual change for any budget line items (Section K.3.c.1.), and provide in the annual report an updated timeframe for attainment of a desired outcome level when an assessment indicates that the desired outcome level has not been achieved at the end of the projected timeframe (Section K.3.c.2.); the Annual JRMP Reporting Checklist on Illicit Discharges and Connections and MS4 Maintenance (Section K.3.c.3.); the Annual JRMP Reporting Requirements listed in Table 5 on Illicit Discharge Detection and Elimination and Updated Workplans (Section K.3.c.4.); and Special Studies (Section II.E.2.-5. of Attachment E.). The claimants have authority to charge property-related fees for these costs subject only to a voter protest under article XIII D on or

[1809] *Paradise Irrigation District v. Commission on State Mandates* (2019) 33 Cal.App.5th 174, 194.

[1810] *Paradise Irrigation District v. Commission on State Mandates* (2019) 33 Cal.App.5th 174, 197.

after January 1, 2018, which is sufficient as a matter of law to cover the costs of the mandated activities within the meaning of Government Code section 17556(d).

However, there remains an issue as to whether Government Code section 17556(d) applies when voter approval is required by article XIII D for any costs incurred for these activities, from November 10, 2010, the beginning date of the potential period of reimbursement, to December 31, 2017 — before Government Code 57350 and 57351 were enacted. The Third District Court of Appeal recently addressed the issue in *Department of Finance v. Commission on State Mandates* and upheld the Commission's findings in *Discharge of Stormwater Runoff*, 07-TC-09, which addressed an NPDES stormwater permit issued by the San Diego Regional Water Quality Control Board.[1811] Although the State filed a petition for review of that decision, the Supreme Court denied review on March 1, 2023.[1812] Thus, the decision of the Third District Court of Appeal is final, and binding on the Commission.

In *Discharge of Stormwater Runoff- Order No. R9-2007-0001*, 07-TC-09, the Commission found that the permit imposed new state-mandated activities relating to the public education program, activities and collaboration required to develop watershed and regional urban runoff management programs, and activities required to comply with the permit's program effectiveness assessment.[1813] The Commission also found that the claimants had the fee authority under their constitutional police powers and several statutory provisions, but that authority was subject to the voter approval requirement of article XIII D, section 6. The Commission found that local agencies do not have sufficient fee authority within the meaning of Government Code section 17556(d) when voter approval of the fee is constitutionally required. The Commission based the finding on several cases, including *Howard Jarvis Taxpayers Association v. City of Salinas* (2002) 98 Cal.App.4th 1351, 1352, 1358-1359, which as stated above, held that a city's charges on developed parcels to fund stormwater management were property-related fees, and were not covered by Proposition 218's voter-approval exemption for "sewer" or "water" services. The Commission also distinguished *Connell v. Superior Court* (1997) 59 Cal.App.4th 382, finding that the voting requirement in Proposition 218 does not impose a mere practical or economic hurdle, as in *Connell*, but a legal and constitutional one. The Commission concluded that without voter approval, the local agency lacks the authority, i.e., the right or power, to levy fees sufficient to cover the costs of the state-mandated program, and approved reimbursement for those activities subject to potential offsetting revenues.[1814]

[1811] *Department of Finance v. Commission on State Mandates* (2022) 85 Cal.App.5th 535, 579-580 (review denied March 1, 2023).

[1814] Commission on State Mandates, Statement of Decision, *Discharge of Stormwater Runoff – Order No. R9-2007-0001*, 07-TC-09, adopted March 26, 2010, pages 102-107, https://csm.ca.gov/decisions/doc14.pdf (accessed on September 7, 2022).

The Third District Court of Appeal agreed, finding as follows:

> Here, a fee for stormwater drainage services is *not* valid unless and until the voters approve it. For property-related fees, article XIII D limits permittees' police power to proposing the fee. Like article XIII C's limitation on local governments' taxing authority, article XIII D provides that "[e]xcept for fees or charges for sewer, water, and refuse collection services, no property related fee or charge shall be imposed or increased unless and until that fee or charge is submitted and approved by a majority vote of the property owners of the property subject to the fee or charge or, at the option of the agency, by a two-thirds vote of the electorate residing in the affected area." (Cal. Const., art. XIII D, § 6, subd. (c).) The State's argument ignores the actual limitation article XIII D imposes on permittees' police power. Permittees expressly have no authority to levy a property-related fee unless and until the voters approve it. There is no power sharing arrangement.
>
> This limitation is crucial to our analysis. The voter approval requirement is a primary reason Section 6 exists and requires subvention. As stated earlier, the purpose of Section 6 "is to preclude the state from shifting financial responsibility for carrying out governmental functions to local agencies, which are 'ill equipped' to assume increased financial responsibilities because of the taxing and spending limitations that articles XIII A and XIII B impose." (*County of San Diego v. State of California* (1997) 15 Cal.4th 68, 81, 61 Cal.Rptr.2d 134, 931 P.2d 312.) And what are those limitations? Voter approval requirements, to name some.
>
> Articles XIII A and XIII B "work in tandem, together restricting California governments' power both to levy and to spend for public purposes." (*City of Sacramento, supra*, 50 Cal.3d at p. 59, fn. 1, 266 Cal.Rptr. 139, 785 P.2d 522.) Article XIII A prevents local governments from levying special taxes without approval by two-thirds of the voters. (Cal. Const., art. XIII A, § 4.) It also prevents local governments from levying an ad valorem tax on real and personal property. (Cal. Const., art. XIII A, § 1.) Article XIII B, adopted as the "next logical step" to article XIII A, limits the growth of appropriations made from the proceeds of taxes. (Cal. Const., art. XIII B, §§ 1, 2, 8; *City Council v. South* (1983) 146 Cal.App.3d 320, 333-334, 194 Cal.Rptr. 110.) And, as stated above, article XIII C extends the voter approval requirement to local government general taxes. (Cal. Const., art. XIII C, § 2, subd. (b).)
>
> Subvention is required under Section 6 because these limits on local governments' taxing and spending authority, especially the voter approval requirements, deprive local governments of the authority to enact taxes to pay for new state mandates. They do not create a power-sharing arrangement with voters. They limit local government's authority to proposing a tax only, a level of authority that does not guarantee resources to pay for a new mandate. Section 6 provides them with those resources.
>
> Article XIII D's voter approval requirement for property-related fees operates to the same effect. Unlike the owner protest procedure at issue in

> *Irrigation Dist.*, the voter approval requirement does not create a power sharing arrangement. It limits a local government's authority to proposing a fee only; again, a level of authority that does not guarantee resources to pay for a state mandate. Section 6 thus requires subvention because of Article XIII D's voter approval requirement. Contrary to the State's argument, *Paradise Irrigation Dist*. does not compel a different result.[1815]

Thus, consistent with this decision, and the prior decision of the Commission in *Discharge of Stormwater Runoff- Order No. R9-2007-0001*, 07-TC-09, the Commission finds that the County and cities have the authority to impose property-related fees requiring voter approval from November 10, 2010, the beginning date of the potential period of reimbursement, to December 31, 2017, for the new state-mandated activities required by the following sections of the test claim permit: the Watershed Workplan (Sections G.1.-5.); the Annual JRMP Reporting requirements to include in the annual fiscal analysis a narrative description of circumstances resulting in a 25 percent or greater annual change for any budget line items (Section K.3.c.1.), and provide in the annual report an updated timeframe for attainment of a desired outcome level when an assessment indicates that the desired outcome level has not been achieved at the end of the projected timeframe (Section K.3.c.2.); the Annual JRMP Reporting Checklist on Illicit Discharges and Connections and MS4 Maintenance (Section K.3.c.3.); the Annual JRMP Reporting Requirements listed in Table 5 on Illicit Discharge Detection and Elimination and Updated Workplans (Section K.3.c.4.); and Special Studies (Section II.E.2.-5. of Attachment E.). Since voter approval is required during this time period, Government Code section 17556(d) does not apply and there are costs mandated by the state for these activities. Any fee revenues received must be identified as offsetting revenue. In addition, reimbursement for this mandate from any source, including but not limited to, service fees collected, federal funds, other state funds, and other funds that are not the claimant's proceeds of taxes shall be identified and deducted from this claim.

Any costs incurred for these activities beginning January 1, 2018, are denied.

V. Conclusion

Based on the foregoing analysis, the Commission partially approves this Test Claim only for the County of Riverside and the city copermittees, and finds that the following activities impose a reimbursable state-mandated program from November 10, 2010, the beginning date of the potential period of reimbursement, to December 31, 2017:

A. Watershed Workplan

1. The watershed BMP implementation strategy shall include a map of any implemented and proposed BMPs. (Section G.1.d.)
2. The copermittees shall pursue efforts to obtain any interagency agreements, or other coordination efforts, with non-copermittee owners of the MS4 (such as Caltrans, Native American tribes, and school districts) to control the contribution of pollutants from one portion of the shared MS4 to another portion of the shared MS4. (Section G.3.)

[1815] *Department of Finance v. Commission on State Mandates* (2022) 85 Cal.App.5th 535, 579-581 (review denied March 1, 2023).

3. The watershed workplan must include the identification of the persons or entities anticipated to be involved during the development and implementation of the Watershed Workplan. (Section G.4.)
4. The annual watershed review meetings shall be open to the public and adequately noticed. (Section G.5.)
5. Each permittee shall review and modify jurisdictional programs and JRMP annual reports, as necessary, so they are consistent with the updated watershed workplan. (Section G.5.)

B. Annual JRMP Report

1. Include in the annual fiscal analysis a narrative description of circumstances resulting in a 25 percent or greater annual change for any budget line items. (Section K.3.c.1.)
2. Provide in the annual report an updated timeframe for attainment of a desired outcome level in the annual report when an assessment indicates that the desired outcome level has not been achieved at the end of the projected timeframe, but the review of the existing activities and BMPs are adequate, or that the projected timeframe should be extended. (Section K.3.c.2.)
3. Providing the following information in the Reporting Checklist: Illicit Discharges and Connections (Number of IC/ID Eliminations and Violations), and MS4 Maintenance (Total Miles of MS4 Inspected). (Section K.3.c.3.)
4. Providing the following information the Annual JRMP Reporting Requirements listed in Table 5: Illicit Discharge Detection and Elimination (A description of instances when field screening and analytical data exceeded action levels, including those instances for which no investigation was conducted), and Updated Workplans including priorities, strategy, implementation schedule, and effectiveness evaluation. (Section K.3.c.4.)

D. Special Studies

1. Sediment Toxicity Study
    a. Develop and submit to the Regional Board by April 1, 2012, a workplan to investigate the toxicity of sediment in streams and its potential impact on benthic macroinvertebrate IBI scores. The study must be implemented in conjunction with the stream assessment monitoring in Attachment E. The study must include the following elements:
        1) At least four stream assessment locations must be sampled, including one reference site and one mass loading site. The selection of sites must be done with consideration of subjectivity of receiving waters to discharges from residential and agricultural land uses.
        2) At a minimum, sampling must occur once per year at each site for at least two years.
        3) At a minimum, sediment toxicity analysis must include the measurement of metals, pyrethroids, and organochlorine pesticides. The analysis must include estimates of bioavailability based upon sediment grain size, organic carbon, and

receiving water temperature at the sampling site. Acute and chronic toxicity testing must be done using *Hyalella azteca*.

b. Include the results and a discussion in the monitoring annual report including an assessment of the relationship between observed IBI scores and all variables measured. (Attachment E., Section II.E.2.)

2. Trash and Litter Investigation

a. Develop and submit to the Regional Board by September 1, 2012, a workplan to assess trash (including litter) as a pollutant within receiving waters on a watershed based scale. The copermittees must select a lead copermittee. The study must include the following elements:

1) The lead copermittee must identify suitable sampling locations within the Santa Margarita HU.

2) Trash at each location must be monitored a minimum of twice during the wet season following a qualified monitoring storm event[1816] and twice during the dry season.

3) The lead copermittee must use the "Final Monitoring Workplan for the Assessment of Trash in San Diego County Watersheds" and "A Rapid Trash Assessment Method Applied to Waters of the San Francisco Bay Region" to develop a monitoring protocol.

b. Include the results and a discussion in the monitoring annual report and must, at a minimum, include source identification, an evaluation of BMPs for trash reduction and prevention, and a description of any BMPs implemented in response to study results. (Attachment E., Section II.E.3.)

3. Agricultural, Federal and Tribal Input Study

a. Develop and submit to the Regional Board by September 1, 2012, a workplan to investigate the water quality of agricultural, federal, and tribal runoff that is discharged into their MS4. The study must include the following elements:

1) The copermittees must identify a representative number of sampling stations within their MS4 that receive discharges of agricultural, federal, and tribal runoff that has not co-mingled with any other source. At least one station from each category must be identified.

2) One storm event must be monitored at each sampling location each year for at least two years.

3) At a minimum, analysis must include those constituents listed in Table 1 of the MRP. Grab samples may be utilized, though composite samples are preferred.

[1816] A qualified monitoring storm event is defined as a minimum of 0.1 inches of precipitation preceded by 72 hours of dry weather.

The copermittees must also measure or estimate flow rates and volumes of discharges into the MS4.

b. Include the results and a discussion from the study in the monitoring annual report. (Attachment E., Section II.E.4.)

4. MS4 and Receiving Water Maintenance Study

a. Develop and submit to the Regional Board by April 1, 2012, a workplan to investigate receiving waters that are considered part of the MS4 and that are subject to continual vegetative clearance activities, for example, mowing. The copermittees must assess the effects of the vegetation removal activities and water quality, including, but not limited to, modification of biogeochemical functions, in-stream temperatures, receiving water bed and bank erosion potential, and sediment transport. The study must include the following elements:

1) The copermittees must identify suitable sampling locations, including at least one reference that is not subject to maintenance activities.

2) At a minimum, the copermittees must monitor pre- and post-maintenance activities for indicator bacteria, turbidity, temperature, dissolved oxygen and nutrients (nitrite, nitrate, total Kjeldahl nitrogen, ammonia and total phosphorous). The copermittees must also measure or estimate flow rates and volumes.

b. Include the results and a discussion from the study in the annual monitoring report including the relevance of findings to CWA section 303(d) listed impaired waters. (Attachment E., Section II.E.5.)

Any fee revenues received must be identified as offsetting revenue. In addition, reimbursement for this mandate from any source, including but not limited to, service fees collected, federal funds, other state funds, and other funds that are not the claimant's proceeds of taxes shall be identified and deducted from this claim.

This Test Claim is denied for the Riverside County Flood Control and Water Conservation District because there is no evidence that the District incurred costs mandated by the state from its proceeds of taxes.

All other activities and sections of the test claim permit and costs pled by the claimants are denied.

DECLARATION OF SERVICE BY EMAIL

I, the undersigned, declare as follows:

I am a resident of the County of Sacramento and I am over the age of 18 years, and not a party to the within action. My place of employment is 980 Ninth Street, Suite 300, Sacramento, California 95814.

On March 13, 2023, I served the:

- **Draft Proposed Decision, Schedule for Comments, and Notice of Hearing issued March 13, 2023**

  California Regional Water Quality Control Board, San Diego Region, Order No. R9-2010-0016, 11-TC-03
  California Regional Water Quality Control Board, San Diego Region, Order No. R9-2010-0016, Sections B.2., C., D., F.1.d.1., 2., 4., 7., F.1.f., F.1.h., F.1.i., F.2.d.3., F.2.e.6.e., F.3.a.10., F.3.b.4.a.ii., F.3.d.1.-5., F.4.d., F.4.e., G.1.-5., K.3.a.-c., Attachment E., Sections II.C. and II.E.2.-5., and Sections F., F.1., F.1.d., F.2., F.3.a.-d., and F.6., Adopted November 10, 2010
  County of Riverside, Riverside County Flood Control and Water Conservation District, and Cities of Murrieta, Temecula, and Wildomar, Claimants

by making it available on the Commission's website and providing notice of how to locate it to the email addresses provided on the attached mailing list.

I declare under penalty of perjury under the laws of the State of California that the foregoing is true and correct, and that this declaration was executed on March 13, 2023 at Sacramento, California.

Jill L. Magee

COMMENTS OF THE STATE WATER RESOURCES CONTROL BOARD AND CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD, SAN DIEGO REGION Draft Proposed Decision, Schedule for Comments, and Notice of Hearing
California Regional Water Quality Control Board, San Diego Region, Order No. R9-2010-0016, 11-TC-03

California Regional Water Quality Control Board, San Diego Region, Order No. R9-2010-0016, Sections B.2., C., D., F.1.d.1., 2., 4., 7., F.1.f., F.1.h., F.1.i.,F.2.d.3., F.2.e.6.e., F.3.a.10., F.3.b.4.a.ii., F.3.d.1.-5., F.4.d., F.4.e., G.1.-5., K.3.a.-c., Attachment E., Sections II.C. and II.E.2.-5., and Sections F., F.1., F.1.d., F.2., F.3.a.-d., and F.6., Adopted November 10, 2010
County of Riverside, Riverside County Flood Control and Water Conservation District, and Cities of Murrieta, Temecula, and Wildomar, Claimants

Dear Ms. Halsey:

By letter dated March 13, 2023, the Commission on State Mandates (Commission) issued a Draft Proposed Decision, Schedule for Comments, and Notice of Hearing in the above test claim matter. The letter established an April 3, 2023, deadline for filing written comments on the Draft Proposed Decision. The Commission granted requests for extension of time and established that written comments on the Draft Proposed Decision are due on May 19, 2023. This matter is scheduled for public hearing at the Commission's July 28, 2023, meeting.

The State Water Resources Control Board (State Water Board) and California Regional Water Quality Control Board, San Diego Region (San Diego Water Board) (collectively, Water Boards) have reviewed the Draft Proposed Decision dated March 13, 2023, for the above-referenced Test Claim. The Water Boards appreciate the careful and thoughtful work of the Commission staff and concur with the conclusions to deny the Test Claim as to most of the challenged provisions in the San Diego Water Board's Order No. R9-2010-0016 (test claim permit).

As a preliminary matter, the Water Boards note that after claimants filed their initial test claim on November 10, 2011, the Commission staff issued a Notice of Incomplete Joint Test Claim Filing on March 18, 2017, identifying, among other items, that the original test claim was "missing a detailed description of increased costs and a statewide estimate of costs as required by Government Code section 17553." (Notice of Incomplete Joint Test Claim Filing, p. 1.) On April 28, 2017, claimants submitted a response, including a revised Narrative Statement and declarations of claimant representatives. On May 8, 2017, the Commission staff issued a Notice of Complete Joint Test Claim Filing, Removal from Inactive Status, Scheduling of Comments, Renaming of Matter, Request for Administrative Record and Notice of Hearing Date. As claimants have already had one opportunity to submit updated cost information in this matter, the Water Boards request an opportunity to review and respond to additional new cost information, if any, claimants submit with their written comments on the Draft Proposed Decision.

The Water Boards respectfully submit the following comments on limited aspects of the Draft Proposed Decision.

I. Comments on Test Claim Permit Provisions

A. Watershed Workplan

Section G.1-5. of the test claim permit address development and implementation of a Watershed Water Quality Workplan. This section of the test claim permit "requires copermittees in a watershed management area to develop a workplan to assess and prioritize the water quality problems within the watershed's receiving waters, identify sources of the highest priority water quality problems, develop a watershed-wide BMP implementation strategy to abate the highest priority water quality problems, and a monitoring strategy to evaluate BMP effectiveness and changing water quality prioritization in the watershed management area." (Draft Proposed Decision, p. 243.)

The Draft Proposed Decision recognizes that the prior permit imposed a requirement that claimants collaborate with other watershed permittees to develop and implement a watershed stormwater management plan and imposed numerous related requirements. The Draft Proposed Decision recommends the Commission partially approve the Test Claim for this Section, finding that most requirements in Section G.1.-5. are not new programs, but the five requirements in Sections G.1.d., G.3, G.4. and G.5, below, are new as compared to the prior permit and mandate a new program or higher level of service:

1. The watershed BMP implementation strategy shall include a map of any implemented and proposed BMPs. (Section G.1.d.)

2. The copermittees shall pursue efforts to obtain any interagency agreements, or other coordination efforts, with non-copermittee owners of

the MS4 (such as Caltrans, Native American tribes, and school districts) to control the contribution of pollutants from one portion of the shared MS4 to another portion of the shared MS4. (Section G.3.)

3. The watershed workplan must include the identification of the persons or entities anticipated to be involved during the development of the Watershed Workplan. (Section G.4.)

4. The annual watershed review meetings shall be open to the public and adequately noticed. (Section G.5.)

5. Each permittee shall review and modify jurisdictional programs and JRMP annual reports, as necessary, so they are consistent with the updated watershed workplan. (Section G.5.)[1]

The Water Boards request the Commission instead find that none of these five requirements in Section G.1.-5. impose a new program or higher level of service. As discussed in the Water Boards' written comments on the Test Claim, in adopting the test claim permit, the San Diego Water Board intended the entirety of Section G.1.-5. as facets of the prior permit's requirements to continue implementation of the watershed water quality program initiated under the prior permit. To the extent the Commission finds any of the above five requirements to be new programs or require higher levels of service, the Commission should find that any costs to implement these requirements are de minimis.

B. Annual JRMP Report

Section K.3.a.-c. of the test claim permit requires annual reporting relating to development and implementation of permittee individual jurisdictional runoff management programs (JRMP.) These provisions require each permittee to prepare an individual JRMP annual report covering implementation of its jurisdictional activities during the past annual reporting period, and specifies the contents of the annual report, which claimants contend includes a new reporting requirement that constitute a reimbursable state-mandated program. The Water Boards concur with the Draft Proposed Decision's finding that Sections K.3.a. and b. do not impose any new activities on claimants and also agree that the state has not mandated any of these requirements as to claimants' own municipal projects.

The Draft Proposed Decision finds that the following test claim permit provisions are new programs or higher levels of service:

1. Include in the annual fiscal analysis a narrative description of circumstances resulting in a 25 percent or greater annual change for any budget line items. (Section K.3.c.1.)

[1] Draft Proposed Decision, pp. 46-47.

2. Provide in the annual report an updated timeframe for attainment of a desired outcome level in the annual report when an assessment indicates that the desired outcome level has not been achieved at the end of the projected timeframe, but the review of the existing activities and BMPs are adequate, or that the projected timeframe should be extended. (Section K.3.c.2.)

3. Providing the following information in the Reporting Checklist: Illicit Discharges and Connections (Number of IC/ID Elimination and Violations), and MS4 Maintenance (Total Miles of MS4 Inspected). (Section K.3.c.3.)

4. Providing the following information the Annual JRMP Reporting Requirements listed on Table 5: Illicit Discharge Detection and Elimination (A description of instances when field screening and analytical data exceeded action levels, including those instances for which no investigation was conducted), and Updated Workplans including priorities, strategy, implementation schedule, and effectiveness evaluation. (Section K.3.c.4.)[2]

The Water Boards request that the Commission find that none of the requirements in Sections K.3.c.1., 2., 3., and 4.[3] listed above impose a new program or higher level of service. As discussed in the Water Boards' written comments on the Test Claim, the prior permit also required preparation of updated JRMPs and reduced the amount of program activity-based reporting as compared to the prior permit. And as reflected in the written comments, the prior permit required extensive and comparably detailed reporting provisions. As the test claim permit largely continued the prior permit's JRMP requirements, these provisions should not be considered new programs or higher levels of service as compared to the prior permit. To the extent the Commission finds that the provisions in Sections K.3.c.1., 2., 3., and 4. impose new programs or higher levels of service, any costs associated with implementation of those provisions are de minimis.

II. Claimants Have Fee Authority for Any Mandated Costs

The Draft Proposed Decision contains extensive discussion of local agency constitutional and statutory authorities to raise fees, including discussion of what has been found to constitute sufficient fee authority as a legal matter within the meaning of Government Code section 17556, subdivision (d).[4] The Water Boards agree with the Draft Proposed Decision's conclusion that claimants have sufficient fee authority as a legal matter based on the reasoning in *Paradise Irrigation District* ((2019) 33 Cal.App.5th 174) and the Legislature's enactment of Government Code sections 57350 and 57351 for costs incurred beginning January 1, 2018. Importantly, however, San Diego Water Board Order No. R9-2015-0100, which superseded the test claim permit as to claimants, became effective January 7, 2016.[5] Accordingly, the Draft Proposed

[2] Draft Proposed Decision, p. 47.
[3] The test claim permit provisions Commission staff would find are new programs or higher levels of service are reproduced in the Draft Proposed Decision at pages 268-290.
[4] See Draft Proposed Decision, pp. 345-379.
[5] See, San Diego Water Board Website, R9-2015-0100.pdf (ca.gov), p. 7.

Decision should be revised to recognize that the scope of the Test Claim period of reimbursement for any mandated costs ends January 6, 2016.

As explained below, the Water Boards *disagree* with the Draft Proposed Decision's conclusion that claimants lack fee authority for costs incurred *prior* to 2018 due to Proposition 218's voter approval provisions.[6] The Water Boards contend that claimants had sufficient fee authority as a legal matter under Government Code section 17556(d) for the entire test claim period and are entitled to no reimbursement. California courts have consistently held that fee authority is purely a question of legal authorization. (*Connell v. Superior Court* (1997) 59, Cal.App.4th 382, 401 [holding that the focus under Government Code section 17556 is whether a local agency has "authority, i.e., the right or power, to levy fees sufficient to cover the costs:]; *Clovis Unified School Dist. v. Chiang* (2010) 188 Cal.App.4th 794, 812.) "[F]actual considerations of practicality" do not defeat a local agency's fee authority. (*Paradise Irrigation Dist. v. Commission on State Mandates* (2019) 33 Cal.App.5th 174, 195.) The Draft Proposed Decision correctly finds that claimants have authority under their police powers to impose fees in connection with challenged permit provisions. Even where Proposition 218 super-imposes a voter approval provision on fees to pay for specific state mandates, the Commission should find claimants' authority nonetheless exists and expenditures for mandates are not reimbursable.

In *Paradise Irrigation, supra,* the court of appeal considered whether the majority protest procedure added by Proposition 218 deprived local agencies of authority to impose fees for water service. (33 Cal.App.5th at p. 182.) California Constitution, Article XIII D, section 6(a), requires a local agency to identify parcels subject to a new fee, calculate the fee amount, and provide notice to affected property owners. (Art. XIII D, § 6, subd. (a)(1).) If a majority of the property owners submit written protests against the fee, the fee may not be imposed. (*Id.,* subd. (a)(2).)

The *Paradise Irrigation* court held that the "majority protest procedures are properly construed as a power-sharing arrangement between the districts and their customers, rather than a deprivation of fee authority." (33 Cal.App.5th at p. 182.) It explained that, when considering how voter powers affect the ability of local governments to impose fees, courts "presume local voters will give appropriate consideration and deference to state mandated requirements . . . ." (*Id.,* at p. 194, citing *Bighorn-Desert View Water Agency v. Verjil* (2006) 39 Cal.4th 205, 220.) "Although this power-sharing arrangement has the potential for conflict, we must presume that both sides will act reasonably and in good faith." (*Id.,* at p. 192.) Further, the fact that, "as a matter of practical reality, the majority protest procedure allows water customers to defeat the District's authority to levy fees" was not dispositive; "the inquiry into fee authority constitutes an issue of law rather than a question of fact." (*Id.,* at p. 195, citing *Connell, supra,* 59 Cal.App.4th at p. 401.)

The *Paradise Irrigation* court did not consider whether a local agency has fee authority as a legal matter where fees or assessments are subject to voter approval requirements. However, the court's reasoning applies with equal force where

[6] Draft Proposed Decision, pp. 377-379.

Proposition 218 requires pre-approval by a majority vote of the affected property owners (or, alternatively, by a two-thirds vote of the electorate). That the governing body of a municipality (e.g., County Board of Supervisors or City Council) and the affected property owners who elected that body share power to impose fees does not mean claimants are deprived of fee authority under Government Code section 17556. And the fact that property owners in claimants' local jurisdictions could theoretically withhold approval—just as a majority of the governing body could theoretically withhold approval to impose a fee—does not undermine claimants' police power; that power exists regardless of what the property owners, or the governing body, might decide about any given fee.

Under Proposition 218, local property owners share the power to impose certain fees with their governing bodies. This more direct governance process does not deprive a local agency of any fee authority, the local agency simply shares that authority with affected property owners or voters. Such property owners or voters are considered part of the legislating body, a body that has legal fee authority required by Government Code section 17556. Whether a fee is subject to voter approval (which may be withheld) or majority protest (which can defeat a fee), there is the same potential practical result that the local agency will be unable to collect the desired fee. Since the same potential outcome can result from either power-sharing mechanism, there is no compelling reason to find fee authority exists in one mechanism but not the other. While voter approval provisions, like voter protest provisions, may complicate the exercise of fee authority, they do not negate it.

Therefore, while the Water Boards agree with the Draft Proposed Decision's reasoning and finding that Claimant Riverside County Flood Control and Water Conservation District is not entitled to any cost reimbursement, the Water Boards also urge the Commission to find that claimants have necessary fee authority for any state mandated costs incurred during the permit term, and are not entitled to any reimbursement.

III. Conclusion

For the above reasons, the Water Boards request the Commission adopt the Draft Proposed Decision with the limited changes requested by the Water Boards.

I declare under penalty of perjury that the foregoing is true and correct to the best of my personal knowledge, information, or belief.

Sincerely,

Catherine George Hagan

Re: Claimants' Comments on Draft Proposed Decision on *California Regional Water Quality Control Board, San Diego Region, Order No. R9-2010-0016, etc.* Test Claim 11-TC-03

Dear Ms. Halsey:

Attached please find the comments of Claimants County of Riverside, the Riverside County Flood Control and Water Conservation District, and the Cities of Murrieta, Temecula and Wildomar on the Draft Proposed Decision issued by Commission staff on the above-referenced Joint Test Claim.

Please let me know if you have any questions. Thank you.

I declare under penalty of perjury that the foregoing, signed on May 19, 2023, is true and correct to the best of my personal knowledge, information, or belief.

David W. Burhenn
Claimant Representative
Address, phone and e-mail set forth above

CLAIMANTS' COMMENTS ON DRAFT PROPOSED DECISION

California Regional Water Quality Control Board, San Diego Region, Order No. R9-2010-0016, Sections B.2, C., D., F.1.d.1., 2., 4.,7., F.1.f., F.1.h., F.1.i., F.2.d.3., F.2.e.6.e., F.2,b.4.a.ii., F.3.d.1-5., F.4.d., F.4.e., G.1.-5., K.3.a.-c., Attachment E., Sections II.C. and II.E.2.-5., and Sections F., F.1. F.1.d., F.2., F.3.A.-d., and F.6. **, 11-TC-03, adopted May 22, 2009**

Claimants County of Riverside, Riverside County Flood Control and Water Conservation District ("District"), and Cities of Murrieta, Temecula and Wildomar ("Claimants") herewith submit their comments on the Draft Proposed Decision ("DPD") issued by staff of the Commission on State Mandates ("Commission") on March 13, 2023 regarding the above-referenced test claim ("Test Claim").

While Claimants agree with the DPD that Claimants are entitled to a subvention of funds for various mandates in Order No. R9-2010-0016 (the "Test Claim Permit") adopted by the California Regional Water Quality Control Board, San Diego Region ("Water Board"), Claimants disagree with other conclusions in the DPD, as set forth in these comments.

Each section of the Test Claim Permit at issue is discussed in the order presented in the DPD.[1] Claimants respectfully submit that the arguments and evidence already submitted in support of the Test Claim and the additional arguments set forth in these comments establish that a subvention of funds is required for elements of the Test Claim Permit at issue in the Test Claim. Claimants also incorporate herein their comments made in the Section 5 Narrative Statement and Rebuttal Comments on the Test Claim.

V. CONCLUSION 41

II. COMMENTS ON "BACKGROUND" SECTION OF DPD: THE 2009 PERMIT CAN AND DOES IMPOSE MANDATES THAT GO BEYOND THE "MEP" STANDARD OF COMPLIANCE

While the "Background" section of the DPD (at 51-72) notes that operators of municipal separate storm sewer systems ("MS4s") covered by a National Pollutant Discharge Elimination System ("NPDES") permit are required to reduce pollutant discharges "to the maximum extent practicable" (DPD at 54), there is no further discussion as to how the Clean Water Act ("CWA") leaves substantial discretion to the states in adopting permit requirements which go beyond CWA requirements.

This feature was noted in *Defenders of Wildlife v. Browner,* 191 F.3d 1159 (9th Cir. 1999), which addressed whether MS4 operators were subject to the same standard of strict compliance with water quality standards mandated for industrial dischargers in 33 U.S.C. § 1311. The Ninth Circuit found that they were not, holding that in adopting 33 U.S.C. §

1342(p)(3)(B) (the subsection relating to municipal discharges), Congress "*replaces* the requirements of § 1311 with the requirement that municipal storm-sewer dischargers 'reduce the discharge of pollutants to the maximum extent practicable . . . .'"[2]

Of relevance to these comments, *Defenders* held that the Environmental Protection Agency ("EPA") Administrator or a state (like California) authorized to carry out the NPDES program pursuant to 33 U.S.C. § 1342(a)(5) has the *discretion* to impose "such other provisions" as the Administrator or the state determines appropriate for the control of such pollutants. As the court held, "[t]hat provision gives the EPA discretion to determine what pollution controls are appropriate."[3]

Thus, California can tailor its MS4 permits to require strict compliance with water quality standards and adopt other MS4 permit requirements that go beyond the MEP standard. The California Supreme Court recognized the dual nature of NPDES permitting in *City of Burbank v. State Water Resources Control Board* (2005) 35 Cal.4th 613, where it held that more stringent permit requirements issued under the authority of California's Porter-Cologne Water Quality Act[4] contained in an NPDES permit were required to be evaluated under state requirements in Water Code §§ 13240 and 13241.[5]

Whether state mandated requirements in MS4 NPDES permits were subject to state constitutional requirements, and in particular article XIII B, section 6 of the California Constitution, was decided in *Department of Finance v. Comm. on State Mandates* (2016) 1 Cal. 5th 749 ("*LA County Permit Appeal I*"). That case held that certain provisions in the 2001 Los Angeles County MS4 permit constituted state mandates eligible for subvention. In so ruling, the Supreme Court expressly rejected an argument raised by the Department of Finance and the water boards that because a provision was in a stormwater NPDES permit, it was "ipso facto, required by federal law."[6]

III. COMMENTS ON DISCUSSION SECTION OF DPD

A. Timely Filing of Test Claim

Claimants concur with the DPD's conclusion that the Test Claim was timely filed.

B. Requirements in Section B.2 Relating to Removal of Formerly Exempt Categories of Non-Stormwater Discharges

By removing certain categories of irrigation-related discharges (landscape irrigation, irrigation water and lawn watering) from an exemption to the prohibition on discharges of non-stormwaters in the previous MS4 permit issued to Claimants by the Water Board, Order No. R9-2004-0001 (the "2004 Permit"), Section B.2 of the Test Claim Permit created a state mandate.

---

[2] 191 F.3d at 1165 (emphasis in original). Thus, the statement in the Background section at 60 that Section 1311 standards apply to all NPDES permits is incorrect.

[3] 191 F.3d at 1166.

[4] Water Code § 13000 *et seq.*

[5] *City of Burbank,* 35 Cal. 4th at 618.

[6] 1 Cal. 5th at 768.

Claimants demonstrated in the Test Claim that, among other things, (1) the 2004 Permit included an exemption for such discharges; (2) federal law provides that unless "such discharges are identified *by the municipality* as sources of pollutants to waters of the United States"[7] it was within the permittees' discretion to allow such discharges to be exempted from prohibition; and (3) no such identification had been made here. Claimants introduced evidence of additional activities required by the removal of the exemption for irrigation-related discharges, including changes to permittees' Coordinated Monitoring Program ("CMP") and revisions to the Jurisdictional Runoff Management Plan ("JRMP"), as well as additional monitoring efforts. *See generally* Section 5 Narrative Statement at 15-19 and Claimants' Rebuttal Comments at 16-18.

The DPD, however, concludes that the elimination of the exemption for the irrigation-related discharges was required under 40 CFR § 122.26(d)(2)(iv)(B)(1) and thus was not a state mandate. DPD at 86-88. The DPD (at 81-82) concludes that Claimants identified the discharges as sources of pollutants to waters of the United States. In fact, that "identification" was language in educational outreach materials intended to prevent such discharges *before* they posed a threat, materials that were not specific to the Santa Margarita watershed. *See* discussion in Section 5 Narrative Statement at 17-18 and Claimants' Rebuttal at 16-18. Claimants thus did not specifically identify irrigation-related discharges in the Santa Margarita watershed as a source of pollutants to waters of the United States. And, the other findings cited by the DPD at 82-84 represent the conclusions either of municipalities in other counties (and watersheds), state agencies, or a MS4 permit issued to another county, none of which represents any determination by the municipalities in question, the Test Claim Permit permittees.[8]

Because the Water Board could impose additional permit requirements beyond those authorized by federal law (*Defenders of Wildlife, supra*), the Board had the discretion to remove the exemption for the irrigation-related discharges. This removal, however, was a state mandate, not a requirement of federal law.

The DPD also concludes that the removal of the exemption was "not a new program or higher level of service" because federal law "has long required that all dischargers, including private industrial dischargers and local governments, effectively prohibit 'all types' of non-stormwater discharges identified as sources of pollutants to waters of the United States." DPD at 88-89.[9] The DPD concludes that requirements associated with addressing irrigation-related

---

[7] 40 CFR § 122.26(d)(2)(iv)(B)(1) (emphasis supplied).

[8] The DPD cites (at 82) the Smarttimer/Edgescape Evaluation Program (SEEP) as rationale for the removal of the exemption. This program, however, did not involve Riverside County municipalities but rather Orange County municipalities, the Metropolitan Water District of Southern California, the Department of Agriculture and south Orange County water districts. *See* Supplemental Fact Sheet, Tentative Order R9-2009-0002, San Diego Water Board, at 12-13. This Tentative Order can be found at https://www.waterboards.ca.gov/sandiego/water_issues/programs/stormwater/docs/oc_permit/updates_4_15_09/R9-2009-0002%20Supplemental%20Fact%20Sheet.pdf. Claimants request that the Commission take administrative notice of this document pursuant to Evidence Code § 452(c) as an "official act of the ... executive .... departments of ... any state of the United States"; Govt. Code § 11515; and Cal. Code Regs., tit. 2, § 1187.5(c).

[9] The DPD also concludes that the removal of the exemption was not a "new" requirement because the 2004 Permit gave both the permittees and the Water Board the discretion to remove the exemption. DPD at 87. But this provision did not remove the exemption; the Test Claim Permit did. The requirements of

discharges "do not change or increase [the] level or quality of service to the public; they simply make the claimants comply with existing federal law to prohibit non-stormwater discharges." DPD at 89.

Claimants disagree. First, "federal requirements" exempted irrigation-related discharges from the "effectively prohibit" non-stormwater discharge requirement *unless* they were identified by the *municipalities* as a source of pollutants to waters of the United States.[10] The 2004 Permit did *not* require Claimants to address these discharges unless, *in the discretion of permittee or the Water Board,* they should be. Test Claim Permit Section B.2 removed that discretion, requiring Claimants to now address such discharges -- a "new" requirement. A "program is 'new' if the local government had not previously been required to institute it." *County of Los Angeles v. Comm. on State Mandates* (2003) 110 Cal.App.4th 1176, 1189; *Lucia Mar Unified School Dist. v. Honig* (1988) 44 Cal.3d 830, 835 ("*Lucia Mar*").

Second, general federal regulatory language does not impose a federal mandate if the regulation leaves the manner of implementation to the discretion of the permittee. *See LA County Permit Appeal I.*[11] Here, the language of the federal regulation left the discretion as to whether to include irrigation-related discharges to the permittees.

In addition, "the application of Section 6 . . . does not turn on whether the underlying obligations to abate pollution remain the same. It applies if any executive order, which each permit is, requires permittees to provide a new program or a higher level of existing services." *Dept. of Finance v. Commission on State Mandates* (2021) 59 Cal.App.5th 546, 559 ("*LA County Permit Appeal II*"). The additional obligations imposed on Claimants by removal of the exemption, such as required changes to the CMP and JRMP and additional monitoring, represented a "higher level of service" to the public, contrary to the conclusion in the DPD. What constitutes a "higher level of service" are "'state mandated increases in the services provided by local agencies in existing programs.'"[12]

The removal of the exemption for irrigation-related discharges in Section B.2 of the Test Claim Permit constitutes a state mandate for which a subvention of funds is required.

C. Requirements in Sections C., F.4.d. and e. and Section II.C. of Attachment E Relating to Non-Stormwater Action Levels

The above-cited Test Claim Permit requirements mandated Claimants to undertake an entirely new program relating to Non-Stormwater Action Levels ("NALs"). As described in the DPD (at 99-103), permittees were required to do the following tasks, among others:

- Monitor at specified locations, including major outfalls, and such other sampling points as identified by the permittees and map those locations on their MS4 map;

---

the Test Claim Permit and the 2004 Permit were different and under *Lucia Mar, supra,* the removal of the exemption in the test Claim permit was a new requirement.

[10] 40 CFR § 122.26(d)(2)(iv)(B)(1).

[11] 1 Cal. 5th at 770.

[12] *LA County Permit Appeal II,* 59 Cal.App.5th at 556 (*quoting County of Los Angeles v. State of California* (1987) 43 Cal. 3d 46, 56).

- Develop and/or update written procedures for effluent analytical monitoring, including the requirement to sample a representative percentage of major outfalls and identified stations within each hydrologic subarea;
- Analyze samples for over 40 constituents, including conventional pollutants, nutrients, hydrocarbons, pesticides, metals and bacteriological pollutants;
- Collaborate to develop and implement a monitoring program to identify sources of pollutants in non-stormwater discharges;
- If the NAL exceedance was the result of an illicit discharge, and permittees determined that the discharges were part of a category of illicit discharges, report their investigation in their Annual Report to the Water Board, along with the steps taken to address the discharges;
- If permittees could not identify the source of the exceedance, perform additional focused monitoring;
- If permittees identified the source of the exceedance as natural, report those findings and documentation of their source investigation in their Annual Report;
- If permittees identified the source of the exceedance as a non-storm water discharge in violation or potential violation of an existing separate NPDES permit, report to the Water Board within three business days, including all pertinent information regarding the discharge and the discharge characteristics.

The DPD concludes that these provisions, which were not in the 2004 Permit, nonetheless do not constitute a "new program" or "higher level of service." DPD at 104-113.

1. The NAL Provisions are Not Federally Mandated

The DPD first concludes that federal law has long required MS4 permittees to effectively prohibit non-stormwater discharges into the MS4 and that the MS4 permit application regulations in 40 CFR § 122.26(d)(2)(B) required permittees to submit a management program "to detect and remove illegal discharges, which includes field screening and monitoring, preparing a map overlay of the monitoring stations and field screening points, procedures to investigate portions of the MS4 that, based on field screening or other information, indicate a reasonable potential for containing illegal discharges or other sources of non-stormwater pollution; removal of the discharge; and reporting the results. These activities are not new." DPD at 107-108.

The DPD does not conclude that federal law mandated the NAL provisions. It cannot because even if a permit provision reflected a requirement of federal law, if "federal law gives the state discretion whether to impose a particular implementing requirement, and the state exercises its discretion to impose the requirement by virtue of a "true choice," the requirement is not federally mandated." *LA County Permit Appeal I,* 1 Cal. 5th at 765. *See also Dept. of Finance v. Comm. on State Mandates* (2017) 18 Cal.App.5th 661, 683 ("*San Diego Permit Appeal I")* (to constitute "a federal mandate for purposes of section 6 . . . the federal law or regulation must 'expressly' or 'explicitly' require the condition contained in the permit.").

Here, the federal requirements cited in the DPD were general in nature and did not specify how permittees were to comply with them. The Water Board, using its independent power to act under California law, had true discretion in how it chose to implement those requirements in the context of an MS4 permit like the Test Claim Permit, and exercised that discretion in imposing the new requirements relating to NALs.

While stopping short of concluding that federal law compelled the NAL requirements, the DPD appears to "bootstrap" the federal illegal discharge requirements to support its conclusion that the NAL requirements are not "new" since these underlying federal requirements had been in place long before the Test Claim Permit.

Claimants disagree. In a recent case, *Dept. of Finance v. Comm. on State Mandates* (2022) 85 Cal.App.5th 535 ("*San Diego Permit Appeal II*"), the Third District Court of Appeal rejected a similar argument made by the state in an appeal of a test claim concerning the 2007 San Diego County MS4 Permit. That case is discussed next below.

2. The NAL Requirements Were "New" and Represented a "Higher Level of Service"

In *San Diego Permit Appeal II*, the state argued, *inter alia,* that various MS4 permit requirements were not "new" because permittees had an underlying obligation, dating from the adoption of the CWA's provisions addressing MS4 discharges, and permittees' first MS4 permit, to "prohibit nonstormwater discharges into their MS4s . . . ."[13]

The Court of Appeal rejected that argument:

> The application of [article XIIIB] Section 6 . . . does not turn on whether the underlying obligations to abate pollution remains the same. It applies if any executive order, which each permit is, requires permittees to provide a new program or a high level of existing services."[14]

The court held that in determining "whether a program imposed by the permit is new, we compare the legal requirements imposed by the new permit with those in effect before the new permit became effective."[15] The court found that this "is so even though the [new] conditions *were designed to satisfy the same standard of performance.*"[16]

Here, the underlying obligations set forth in the CWA and in the cited MS4 permit application regulations have long existed and governed previous MS4 permits. The existence of any longstanding "underlying obligations," however, does not mean that the specific NALs requirements in the Test Claim Permit are not "new." To determine that, the inquiry must focus on whether the NAL requirements in the Test Claim Permit were required in the 2004 Permit. *See San Diego Unified School Dist. v. Comm. on State Mandates* (2004) 33 Cal. 4th 859, 878 (*San Diego Unified"); Lucia Mar, supra.*[17] That comparison shows that the NALs requirements in the Test Claim Permit were not present in the 2004 Permit.

Section II.C.1.a.(1) of the Test Claim Permit Monitoring and Reporting Program (Attachment E to the Test Claim Permit) ("Test Claim Permit MRP") required that permittees "must" sample "at major outfalls" and "[o]ther outfall sampling points . . . identified by the Copermittees as potential high risk sources of polluted effluent or as identified under Section C.4

---

[13] 85 Cal.App.5th at 559.

[14] *Id.*

[15] *Id.*

[16] *Id.* (emphasis supplied).

[17] 44 Cal. 3d at 835.

of the Order." The Test Claim Permit also required permittees to develop monitoring plans "to sample a representative percentage of major outfalls and identified stations within each hydrologic subarea. At a minimum, outfalls that exceed any NALs once during any year must be monitored in the subsequent year."[18]

By comparison, the Monitoring and Reporting Program under the 2004 Permit, No. R9-2004-001 ("2004 Permit MRP") gave permittees the discretion to select "Illicit Discharge Monitoring stations" within their jurisdiction. The 2004 Permit MRP required that permittees "inspect" Illicit Discharge Monitoring stations twice per year. Only if there was the presence of ponded or flowing water was a "field screening" required, and then, only if the field screening indicated a potential illicit discharge, would a sample be required to be collected for analysis. 2004 Permit MRP at 9.

The Test Claim Permit afforded Claimants no such discretion; all sampling stations were required to be monitored and sampled for multiple additional analytes not required under the previous 2004 Permit. In the Test Claim Permit Fact Sheet, the Water Board itself acknowledged that this was an increase in services required of permittees: "The Order requires *an increase* in the number and type of pollutants sampled in non-storm water from major outfalls. . . . This Order requires non-storm water discharges to be sampled for *additional* pollutants . . . ."[19]

The DPD concludes that the outfall monitoring requirement, though not required in the 2004 Permit, was not "new" because federal NPDES regulations required that dischargers must effectively monitor for permit compliance. DPD at 111. However, those regulations did not specify where dischargers must monitor – the Test Claim Permit did, and the outfall monitoring represented a significant increase in the monitoring obligations imposed on permittees. Under *LA County Permit Appeal I, supra,* the general federal NPDES monitoring provisions did not represent a federal mandate. Similarly, those requirements did not mean that the increased sample analysis requirements in the Test Claim Permit were not "new," as the DPD concludes (at 112).

The Test Claim Permit also imposed increased programmatic requirements related to dry weather flows. The 2004 Permit allowed permittees the discretion to establish "numeric criteria" for field screening and analytical monitoring result "that will trigger follow-up investigations to identify the source causing the exceedance of the criteria" and to describe the numeric criteria and follow-up procedures in their Storm Water Management Plans.[20] By contrast, the Test Claim Permit specified a detailed reporting and analytical matrix for permittees. For example, if the permittees believed the source of a NAL exceedance was natural in origin, they were required to "report its findings and documentation of its source investigation" to the Water Board in their Annual Report.[21] There was no similar requirement in the 2004 Permit.

If water quality data or conditions indicated a potential illegal discharge or connection, the Test Claim Permit required permittees to address them "immediately" (for "obvious illicit discharges") and to initiate an investigation within two business days (of receiving dry weather

---

[18] Test Claim Permit, Section C.4.

[19] Test Claim Permit Fact Sheet at 113 (emphasis supplied).

[21] Test Claim Permit, Section C.2.a.

field screening results that exceeded NALs) or within five business days (of receiving analytical laboratory results that exceeded NALS) to identify the source or to document the rationale for why the discharge "does not pose a threat to water quality and does not need further investigation." Such documentation was to be included in the Annual Report.[22] The 2004 Permit required none of these specific investigation and documentation obligations.

Under the Test Claim Permit, if a permittee was unable to identify the source of a NAL exceedance "after taking and documenting reasonable steps to do so," it was required to perform "additional focused sampling."[23] If the results of that sampling indicated a recurring exceedance of NALs from an unidentified source, the permittee was required to "update its programs within a year to address the common contributing sources that may be causing such an exceedance."[24] The permittee's Annual Report was required to include such updates, including where applicable, updates to watershed workplans, retrofitting considerations and program effectiveness work plans.[25] None of these requirements was in the 2004 Permit.

Permittees were also required during any annual reporting period in which one or more NAL exceedances were documented to include "a description of whether and how the observed exceedances did or did not result in a discharge from the MS4 that caused, or threatened to cause or contribute to a condition of pollution, contamination, or nuisance in the receiving waters."[26] This requirement was not in the 2004 Permit.

Thus, based on governing case law, the NALs requirements in the Test Claim permit were in fact "new." And, they represented a "higher level" of service required of Claimants in that they required additional monitoring and analysis, more thorough investigations of exceedances and to address illegal discharges in a more detailed, systemized and prompt manner when compared with the requirements of the 2004 Permit. These additional steps required by the Test Claim Permit represent a "higher level" of service under the test set forth in *LA County Permit Appeal II, supra,* and not, as the DPD concludes (at 113), merely increases in costs to provide the same services.

Claimants are entitled to a subvention of funds with respect to the NALs requirements set forth in the Test Claim.

D. Requirements in Section D Relating to Storm Water Action Levels

Section D of the Test Claim Permit established a new requirement for permittees to take into account Water Board-established Storm Water Action Levels ("SALs") in their monitoring and reporting efforts under the permit.

The requirements of Section D (and referenced companion requirements in Section II.B. of the Test Claim Permit MRP) are set forth in the DPD at 125-128. Briefly summarized, they required permittees to develop a year-round watershed-based wet weather MS4 discharge monitoring program; present an associated draft plan with the rationale, locations, frequency and

---

[25] *Id.*

[26] Test Claim Permit Section C.3.

analyses identified to conduct monitoring at a "representative percentage" of the major outfalls within each hydrologic subarea; conduct source identification monitoring to identify sources of pollutants causing the priority water quality problems within each hydrologic subarea; take SAL exceedances into consideration when adjusting and executing annual work plans; sample for a broad suite of constituents (set forth in MRP Table 4); and, if permittees believed a SAL exceedance was caused by natural sources, demonstrate that the "likely and expected" cause of the exceedance was not "anthropogenic in nature."[27]

None of these requirements was contained in the 2004 Permit, which neither referenced SALs nor required monitoring at MS4 outfalls and which required more limited analysis of sampled stormwater.[28] Nevertheless, the DPD concludes that the requirements of Section D of the Test Claim Permit did not mandate a new program or higher level of service.

As with its analysis of the NALs requirements, the DPD focuses not on the specific requirements of the Test Claim Permit, which under applicable caselaw is the appropriate starting place to determine whether a program is "new," *San Diego Unified, supra; Lucia Mar, supra,* but rather on general, underlying legal requirements that applied to the Test Claim Permit and previous MS4 permits.

The DPD cites federal requirements that NPDES permittees monitor their discharges to determine whether they are meeting water quality standards, as well as other requirements relating to permittee monitoring and reporting arising either from the CWA, its implementing regulations, or the 2004 Permit. DPD at 130-131. The DPD also cites as authority 2004 Permit language requiring permittee discharges to not cause or contribute to the exceedance of water quality standards or receiving water objectives, for permittees to assess compliance with the permit and to suggest additional BMPs if compliance was not being attained, and for permittees to annually evaluate their monitoring and report the findings to the Water Board. DPD at 131.

Thus, the DPD concludes that since federal law or prior permits set forth general underlying requirements regarding stormwater discharges (*e.g.,* requirements to monitor discharges, report exceedances, meet water quality standards, adjust BMPs, etc.), the specific SALs requirements in the Test Claim Permit were not new but "simply makes the claimants comply with existing federal law imposed on *all* dischargers to comply with water quality standards."[29] The DPD concludes further that instead of increasing the level or quality of service to the public, Section D "simply helps the claimants comply with existing law imposed on all discharges to meet water quality standards."[30]

---

[27] *See generally* Test Claim Permit Section D and Section II.B of Test Claim Permit MRP.

[28] As the DPD acknowledges, wet and dry weather monitoring under the 2004 Permit involved only three "Triad" stations which, because they were not at MS4 outfalls, did not constitute a "representative percentage" of the major outfalls within each hydrologic subarea, the requirement in Test Claim Permit Section D. DPD at 119-120. Also, a comparison of the constituents required to be analyzed shows that the requirements in Test Claim Permit MRP Table 4 were more extensive than those in 2004 Permit MRP Table 1.

[29] DPD at 133. Significantly, as with the DPD's analysis of the NAL requirements in the Test Claim Permit, the DPD does not conclude that the SALs were mandated by federal law. Given governing case law, this is correct.

[30] DPD at 136.

Claimants disagree. As *San Diego Permit Appeal II* and other cases have held, when an executive order contains a requirement not found in a previous order, that additional requirement represents a "new" program. *San Diego Permit Appeal II* held that in order to determine "whether a program imposed by the permit is new, we compare the legal requirements imposed by the new permit with those in effect before the new permit became effective."[31] The court found that this "is so even though the [new] conditions *were designed to satisfy the same standard of performance*."[32] Thus, the arguments presented in the DPD (at 132) that the upgraded monitoring requirements in the Test Claim Permit were not "new" because such monitoring was required to monitor permit compliance, an existing standard, conflicts with the holding in *San Diego Permit Appeal II.* Again, the question that must be addressed is, does the requirement in the executive order at issue appear in previous permits? If not, it is "new."

The DPD cites various "standards of performance" contained in federal law/regulations or prior permits to support its conclusion that the SAL requirements are not "new."[33] These citations, however, do not rebut the fact that the above-mentioned specific requirements of Section D are "new" requirements which implement those standards of performance. Under the test laid down in *San Diego Permit Appeal II*, "the application of [article XIII B] Section 6 does not turn on whether the underlying obligation to abate pollution remains the same. It applies if any executive order . . . requires permittees to provide a new program or higher level of service."[34]

The DPD also asserts that Section D of the Test Claim Permit "does not increase the level or quality of service to the public; it simply helps the claimants comply with existing law imposed on all dischargers to meet water quality standards." DPD at 136. This assertion (which, under *Defenders of Wildlife, supra,* is incorrect) nevertheless errs in setting forth the analysis that the Commission is required to make. It can be argued that *any* provision in an MS4 permit is intended to "help" permittees to comply with the CWA, but that does not mean that those provisions, when they impose greater obligations on those permittees, are not state mandates. California appellate courts have decided otherwise. *See LA County Permit Appeal I, San Diego Permit Appeal I, and San Diego Permit Appeal II, supra.*

Implementation of Section D required Claimants to undertake a new program and provide a higher level of service. The DPD itself acknowledges that permittees "were not required to monitor MS4 outfalls under the prior permit."[35] Nor were permittees required under the 2004 Permit to develop a year-round watershed-based wet weather MS4 discharge monitoring program; to present a draft plan with the rationale, locations, frequency and analyses identified; to conduct monitoring at a "representative percentage" of the major outfalls within each hydrologic subarea; to conduct source identification monitoring to identify sources of pollutants causing the priority water quality problems within each hydrologic subarea; to respond to SAL exceedances by taking them into consideration when adjusting and executing annual work plans; to sample for a broader suite of constituents obtained from monitoring; and, if a SAL exceedance

[32] *Id.* (emphasis supplied).

[33] DPD at 133.

[34] 85 Cal.App.5th at 559.

[35] DPD at 128.

was believed to be from natural causes, to demonstrate that the "likely and expected" cause of the exceedance was not "anthropogenic in nature."

These requirements were new to the Test Claim Permit and thus represent "new" programs which trigger article XIII B, section 6 and as to which a subvention of funds is required. These requirements similarly represent the provision of a "higher level of service" to the public through the enhanced monitoring and required responses to exceedances of water quality standards in stormwater.

E. Requirements in Sections F.1.d., F.1.h. and F.3.d. Relating to Low Impact Development, Hydromodification Plans, Best Management Practices for Priority Development Projects and Retrofitting of Existing Development

The DPD concludes that the requirements in Sections F.1.d., F.1.h., and F.3.d. of the Test Claim Permit generally impose state-mandated new programs or higher levels of service, but that Sections F.1.d.1., 2., 4. 7., F.1.h., and F.3.d.1.-5, as they apply to Claimants' own municipal projects, do not. The DPD concludes that such costs were incurred at the discretion of the local agency, are not unique to government, and do not provide a governmental service to the public. DPD at 170-179. Claimants' comments focus on those conclusions.

1. The Low Impact Development (LID), Hydromodification Plan (HMP) and BMPs for Priority Development Projects (PDPs) Impose Mandates on Claimants; Claimants Do Not Have True Discretion as to the Sizing of Municipal Projects that Constitute PDPs

The DPD concludes that, like private developers, local governments construct PDPs at their discretion; thus, the imposition of LID and HMP requirements on such projects is not a state mandate. DPD at 171. Whether these requirements apply depends on the size of the project (specific categories of PDPs, such as automotive repair shops, restaurants and retail gasoline outlets, relate to private PDPs only and were not included in the Test Claim.).[36] Claimants submit, however, that when local governments undertake a PDP, it is because they must build that project in the public interest. Local governments do not have the same ability as a private developer to adjust the size of the project so as to avoid the LID and HMP requirements, since the size of the project must reflect civic requirements and needs.

The DPD cites *City of Merced v. State* (1984) 153 Cal.App.3d 777 and *Dept. of Finance v. Commission on State Mandates* (2003) 30 Cal. 4th 727 *("KHSD")* in support of its position. *City of Merced* involved the question of whether a local government, when it exercised the power of eminent domain, must include the loss of business goodwill as part of the compensation for the taking.[37] The court held that it did, given that the city was not required to exercise its eminent domain powers and by choosing to do so, was liable for resulting costs.[38]

KHSD concerned whether a local school district's being required to comply with notice and agenda requirements in conducting certain public committee meetings was a state mandate. The Court held that since the committees in question were part of separate grant-funded

---

[36] *See* Section 5 Narrative Statement at 27.

[37] 153 Cal.App.3d at 782.

[38] *Id.* at 783.

programs in which the district chose to participate and that such costs were incidental to such programs, the notice and agenda requirements were not a state mandate.

As explained more fully in Claimants' Narrative Statement,[39] *KHSD* is inapposite because in that case, the district chose to accept the grants to fund those meetings. Similarly, *City of Mercer* is inapposite because the city chose to exercise its power of eminent domain. Claimants here did not "choose" to build public projects in the same sense. They must either build such projects to fulfill their civic obligations or they or their constituents could face "certain and severe penalties or consequences" for not providing necessary public services. *San Diego Permit Appeal II, supra.*[40] Thus, the projects are "practically compelled."

The *San Diego Permit Appeal II* court discussed this issue in response to an argument by the state that permittees "chose" to obtain an NPDES permit to discharge stormwater. The court rejected that argument:

> In urbanized cities and counties such as permittees, deciding not to provide a stormwater drainage system is no alternative at all. It is "so far beyond the realm of practical reality that it left permittees "without discretion" not to obtain a permit. Permittees were thus compelled as a practical matter to obtain an NPDES permit and fulfill the permit's conditions.[41]

In *Dept. of Finance v. Comm. on State Mandates* (2009) 170 Cal.App.4th 1358 ("*POBRA*"), the court provided further guidance in setting forth whether a state requirement was "practically compelled," holding that the question was whether the action "is the only reasonable means to carry out [the local agency's] core mandatory functions."[42]

Here, in similarly urbanized areas of Riverside County, the construction of essential infrastructure is the only reasonable means by which core mandatory governmental functions can be carried out and were "compelled as a practical matter" to construct that infrastructure.

2. The LID and HMP Requirements Provide a Service to the Public

The DPD also concludes that the LID and HMP requirements did not impose a new program or higher level of service because the requirements "are not unique to government and do not provide a governmental service to the public." DPD at 176-179. It is not in dispute that those requirements apply to both private and public PDPs. However, the DPD errs in its conclusion that they do not provide a benefit to the public.

The three cases cited in the DPD pre-date the recent decision of the Second District Court of Appeal in *LA County Permit Appeal II, supra.* In that case, the court was presented with the question of whether, *inter alia,* a requirement to place trash receptacles at transit stops represented a "program" compensable under article XIII B, section 6. The court first noted that there were two separate tests to determine the existence of a "program," those of providing

---

[39] Section 5 Narrative Statement at 33-35.

[40] 85 Cal.App.5th at 558.

[41] *Ibid.* (citations omitted).

[42] 170 Cal.App.4th at 1368.

services to the public and those which impose unique requirements on local governments, noting that the "two parts are alternatives; either will trigger the subvention obligation unless an exception applies."[43]

With regard to the trash receptacle requirement, the court held that receptacle placement met the requirement of providing services to the public, noting that even if the placement itself did not result in a higher level of stormwater drainage and flood control, "trash collection is itself a governmental function that provides a service to the public by producing cleaner transit stops, sidewalks, streets, and, ultimately, stormwater drainage systems and receiving waters."[44]

Here, the LID and HMP requirements, which were developed by the permittees in an exercise of their governmental function as operators of a stormwater drainage system, provided benefits to the public through the reduction of runoff carrying potential pollutants and the reduction of high flows that caused erosion. Under the test set forth in *LA County Permit Appeal II,* the LID and HMP requirements constitute a "program."

3. The Retrofitting Requirements in the Test Claim Permit Are Neither Discretionary Nor Apply to Non-Governmental Actors; They are Unique to Claimants

The DPD similarly concludes that the retrofitting requirements in Test Claim Permit Section F.3.d. were either not mandated by the state or were not unique to government and thus do not provide a governmental service to the public. DPD at 171-179.[45] Claimants disagree.

First, Claimants were required to identify and inventory existing municipal, industrial, commercial, and residential areas as candidates for retrofitting using criteria identified by the Water Board; to evaluate and rank those existing developments to prioritize retrofitting based on Water Board required criteria; and, to consider the results of the evaluation in prioritizing work plans for the following year.[46] None of these tasks was "discretionary." The evaluation required was of *existing* projects, not future projects which may be developed. Thus, the argument that the tasks required in Section F.3.d. is not "mandatory" is incorrect.

Second, the inventorying, evaluation and work plan development required in this section were obligations unique to local government – no private parties were required to undertake this work. And, given that the express purpose of the work was to improve the quality of stormwater discharges from existing development, there was a benefit to the public, as the Water Board itself found: "Retrofitting existing development with storm water treatment controls, including LID, is necessary to address storm water discharges from existing development that may cause or

---

[43] 59 Cal.App.5th at 557.

[44] *Id.* at 558-59.

[45] The DPD combines into the same discussion LID/HMP requirements, which in the Test Claim were addressed only as they applied to municipal projects, and retrofitting requirements, which the Test Claim addressed as it applied to all projects. *See* Section 5 Narrative Statement at 45-48. Thus, the argument that the Test Claim intended to address only F.3.d. retrofitting requirements to municipal projects is incorrect.

[46] *See* DPD at 165-66.

contribute to a condition of pollution or a violation of water quality standards."[47] *See LA County Permit Appeal II, supra.*

Additionally, Section F.3.d. required evaluation of *existing* municipal projects, so the work to evaluate, prioritize and report on municipal projects is not the same as the requirements in Section F.1. of the Test Claim Permit, which set forth LID and HMP requirements for *future* development. The retrofitting requirements constituted a new program and/or a higher level of service.

F. Requirements in Section F.1.f. Relating to BMP Maintenance Tracking

Test Claim Permit Section F.1.f. contained requirements relating to the tracking of BMP maintenance. The DPD concludes that some of these requirements were "new" while others were not.

The DPD also concludes that requirements in Section F.1.f applicable to municipal projects were not mandated by the state, and thus are not eligible for a subvention of funds, stating: "Nothing in state statute or case law imposes a legal obligation on local agencies to construct, expand, or improve municipal projects. Nor is there evidence in the record that the claimants would suffer certain and severe penalties such as 'double . . . taxation' or other 'draconian' consequences if they fail to comply with the permit's annual reporting requirements for municipal projects." DPD at 200-201.

Claimants disagree. There *was* a legal obligation imposed here on Claimants – it was the obligation to create a BMP maintenance tracking database for completed development projects, whether they be industrial/commercial, residential *or* municipal. It was the *creation of the database and the other Section F.1.f. requirements* that constituted the legal compulsion on Claimants, not the allegedly discretionary decision to construct a municipal project in the first place. Claimants were legally compelled to perform the requirements in Section F.1.f., and the reference in the DPD (at 201) to "certain and severe penalties," one test for requirements that may be "practically compelled," is irrelevant.

The question of how far "downstream" the applicability of a determination that a requirement was discretionary, not mandated, should extend was raised by the Supreme Court in *San Diego Unified, supra.* There, the Court expressed concern regarding the scope of *City of Merced:*

> [W]e agree with the District and amici curiae that *there is reason to question an extension of the holding of City of Merced so as to preclude reimbursement under article XIII B, section 6 of the state Constitution and Government Code section 17514 whenever an entity makes an initial discretionary decision that in turn triggers mandated costs.* Indeed, it would appear that under a strict application of the language in *City of Merced*, public entities would be denied reimbursement for state-mandated costs in apparent contravention of the intent underlying article XIII B, section 6 of the state Constitution and Government Code section 17514 and contrary to past decisions in which it has been established that reimbursement was in fact proper. For example, as explained above, in *Carmel Valley, supra*, 190 Cal.App.3d 521, an executive order requiring that county

[47] Test Claim Permit Finding 3.3.

> firefighters be provided with protective clothing and safety equipment was found to create a reimbursable state mandate for the added costs of such clothing and equipment. (Id., at pp. 537–538.) The court in *Carmel Valley* apparently did not contemplate that reimbursement would be foreclosed in that setting merely because a local agency possessed discretion concerning how many firefighters it would employ—and hence, in that sense, could control or perhaps even avoid the extra costs to which it would be subjected. Yet, under a strict application of the rule gleaned from *City of Merced, supra,* 153 Cal.App.3d 777, such costs would not be reimbursable for the simple reason that the local agency's decision to employ firefighters involves an exercise of discretion concerning, for example, how many firefighters are needed to be employed, etc. We find it doubtful that the voters who enacted article XIII B, section 6, or the Legislature that adopted Government Code section 17514, intended that result, and hence we are reluctant to endorse, in this case, an application of the rule of *City of Merced* that might lead to such a result.

33 Cal. 4th at 887-88 (emphasis supplied).

Here, the BMP tracking database requirements were unconnected to the original decision to build a municipal project that required those BMPs. The projects were built and the BMPs were installed. Section F.1.f. made the tracking of those BMPs mandatory, not discretionary. Having exercised their alleged discretion to build the project, Claimants had *no* discretion as to whether to include their completed municipal projects in the database and otherwise follow the requirements of Section F.1.f. Extension of the *City of Merced* rule to such requirements is not appropriate.

G. Requirements in Section F.2.d.3. and F.2.e.(6) Relating to Implementation of Active/Passive Sediment Treatment and Review of Monitoring Data at Construction Sites

Section F.2.d.3. of the Test Claim Permit required the installation of Active/Passive Sediment Treatment systems ("AST") at construction sites where the permittees determined that the site posed an exceptional threat to water quality due to high turbidity or suspended sediment levels in the site's effluent. The DPD concluded that this requirement imposed a state-mandated new program or higher level of service (DPD at 209-211), but not for permittee construction sites. DPD at 211-214.

The rationale cited in the DPD is the same as for other construction-related requirements in the Test Claim Permit: the State did not mandate Claimants to build projects that would require the installation of AST systems. In response, Claimants refer to and incorporate their arguments at Section III.E.1, *supra,* which addresses these contentions.

The DPD also concludes that the requirement in Test Claim Permit Section F.2.e.(6) for permittees to review monitoring results at the construction sites where the site monitored its runoff did not impose a new program or higher level of service. DPD at 218-222. The 2004 Permit required that construction sites be inspected, and the DPD concludes that "although the prior permit did not expressly state that reviewing construction site monitoring data results if the site monitors its runoff was required as [art of the inspection], it did expressly require the claimants to conduct inspections for compliance with local stormwater ordinances on construction site and to enforce its ordinances" as necessary to maintain compliance with the

2004 Permit.[48] The DPD further concludes that "the requirement to review monitoring results if the site monitors its runoff simply *clarifies* the existing legal requirement to assess a site's compliance with local ordinances and water quality standards." DPD at 221 (emphasis supplied).

The DPD acknowledges that the 2004 Permit did not require permittees to review water quality monitoring data. The addition of this requirement was a "new" program as well as a higher level of service required of permittees; the argument that this was a mere "clarification" of the predecessor permit's requirements creates an exception that would swallow the rule. Calling any change to requirements of a prior order a "clarification" writes out of the law the requirement that the provisions of the test claim order must be compared with those in the preceding order. *Lucia Mar, supra.* And, the tasks required by the two permits were different – an "inspection" can be conducted entirely visually; the review of monitoring data requires an analysis of the results and comparison to the standards applicable to the receiving water, a task potentially requiring office work. Claimants in fact introduced evidence that additional costs were expended for training of permittee staff. *See* Declarations in Support of Test Claim, Section 5(f).

Finally, the DPD concludes that there was no shift of costs from the state to the local agencies, contending that "[t]he Copermittees enforce their local permits, plans, and ordinances, and the State Water Boards enforce the General Construction Permit." DPD at 222.

The General Construction Permit ("GCP") requires certain construction site operators to monitor stormwater discharges from their sites and to maintain records of the monitoring.[49] The Test Claim Permit made no distinction between monitoring required under local ordinances (if any) and the GCP. The Test Claim Permit thus required permittees to review GCP-mandated records, which is a function reserved to the State Water Board and the regional water boards, which collect an inspection fee from such permittees pursuant to Water Code § 13260(d)((2)(B)(iii).

Requiring permittees to review monitoring data collected as an enforceable requirement in the CGP and charging a fee for such review duplicated the fees assessed by the state for the same service, thus exceeding the reasonable cost of providing services for which the fee is charged and not bear a fair or reasonable relationship to the pertinent burdens or benefits. Similarly, the local fee for investigating GCP monitoring data would duplicate state law, rendering it invalid under the doctrine of preemption. *See O'Connell v. City of Stockton* (2007) 41 Cal. 4th 1061, 1067.[50]

---

[48] DPD at 221, citing 2004 Permit Section G.

[49] *See* State Water Board Order 2009-0009-DWQ, as amended, Section J.

[50] This matter differs from that at issue in *LA County Permit Appeal II,* where the court held that there was no evidence that local governments would replace or supplant inspections by the regional water board. 59 Cal.App.5th at 563. Here, there is such evidence in the requirement to review monitoring data.

H. Requirements in Sections F.1.i. and F.3.a.10 Regarding Construction and Maintenance Requirements for Unpaved Roads

The Test Claim Permit required Claimants to incorporate BMPs to be applied in the construction and maintenance of unpaved roads. The DPD concludes that the decision to construct and maintain unpaved roads is discretionary and thus not mandated by the state and that the unpaved road requirements are not "new." Claimants disagree.

1. The Construction and Maintenance of Unpaved Roads is an Essential Function of Local Government; Claimants were "Practically Compelled" to Maintain Such Roads

The DPD asserts that Claimants "have provided no evidence to support that they have a legal or practical compulsion to construct or maintain unpaved roads." DPD at 230. In reply, Claimants first note that the construction and maintenance of roads, including unpaved roads, is an essential function of local government. For that reason, the decision to build or accept unpaved roads is, like those of other municipal facilities discussed in Sections III.E., III.F., and III.G., *supra,* is different from the discretionary acts described in *City of Merced* and *KHSD.* Claimants hereby reincorporate the arguments presented therein.

Moreover, the maintenance of unpaved municipal roads is "practically compelled" under the test set forth in *San Diego Permit Appeal II.* There, the court found that in some cases, a municipality and its constituents could face "certain and severe penalties or consequences" if the municipality did not undertake certain civic tasks. Here, the failure to maintain unpaved roads would not only put Claimants' residents served by those roads in jeopardy of not being able to leave their homes for work, recreation or emergencies, but also would place any person driving on such unmaintained roads in jeopardy for potential harm to themselves or to others.

Further, as held in *POBRA, supra,* a municipality may be practically compelled to follow statutory or regulatory requirements in carrying out a facially discretionary project if the project was "the only reasonable means to carry out [the claimant's] core mandatory functions."[51] The maintenance of unpaved roads dedicated to municipal use is certainly a core mandatory function of municipal government and maintenance of those roads is the only reasonable means by which such critical infrastructure can continue to be used. Local governments have no option; either the roads are maintained (and unpaved roads in particular, due to their soft surfaces, are susceptible of deterioration) or they become unusable, resulting in a failure of that core function of local government.

As importantly, local governments, such as Claimants here, face legal liability for the consequences of not maintaining unpaved roads. "The County owes a duty to maintain safe roads for all foreseeable uses . . . ." *Williams v. County of Sonoma* (2020) 55 Cal.App.5th 125, 132 (failure to maintain road caused injury to bicyclist). *Williams* cited Govt. Code § 835, which provides in relevant part that "a public entity is liable for injury caused by a dangerous condition of its property." While a plaintiff must establish certain prerequisites to establish liability, the failure to maintain an unpaved road known to require such maintenance would establish either "a negligent or wrongful act or omission of an employee of the public entity within the scope of his

[51] 170 Cal.App.4th at 1368.

employment" which created the dangerous condition (Govt. Code § 835(a)) or the public entity had "actual or constructive notice of the dangerous condition under Section 835.2 a sufficient time prior to the injury to have taken measures to protect against the dangerous condition" (Govt. Code § 835(b)).[52]

The Government Code defines "protect against" to mean in part "repairing, remedying or correcting a dangerous condition." Govt Code § 830(b). Thus, the failure to effect repairs of a dangerous unpaved road can readily establish a failure "to have taken measures to protect against the dangerous condition."

Local governments have been found liable under this statute and a predecessor statute for liability stemming from unsafe road surfaces. *See Williams, supra; Alvarez v. County of Los Angeles* (1955) 132 Cal.App.2d 525, where the court upheld the liability of the county due to negligent maintenance of an unpaved road which caused injuries to a driver and his passenger.

Thus, the failure to maintain unpaved roads accepted by a municipality does, under governing statutes and case law, lead to "certain and severe penalties or consequences" and thus is "practically compelled."

2. The Test Claim Permit Requirements Regarding Unpaved Road Construction and Maintenance Were "New" and Required a Higher Level of Public Service

The unpaved road construction and maintenance requirements in the Test Claim Permit are, moreover, "new." The DPD concludes (at 230-233) that several requirements in the 2004 Permit to implement BMPs for the construction of municipal "facilities and activities" (which were defined to include "roads") and to impose BMPs meant to achieve the MEP standard meant that the requirement for Claimants to include unpaved road BMPs was not new. Citing language in Section F.1.i. that permittees could, instead of implementing BMPs following the permit requirements, implement "alternative BMPs that are equally effective," the DPD concludes that this simply meant that permittees were "to implement effective BMPs after construction," similar to the generic requirements in the 2004 Permit. DPD at 231.

These conclusions disregard the fact that in the 2004 Permit, which must be compared against the Test Claim Permit to determine whether the latter's requirements are "new," *Lucia Mar, supra,* there were no BMP requirements explicitly applicable to roads, much less unpaved roads. Even though the Test Claim Permit allowed permittees to implement "alternative BMPs," those BMPs still had to be shown to be "equally effective" with the specific new requirements in the Test Claim Permit, i.e., that there be practices to minimize road related erosion and sediment transport; sloping the grading of unpaved roads outward; installation of water bars; and, adopting

[52] Govt. Code § 835.2 provides that a public entity has actual notice of a dangerous condition within the meaning of subdivision (b) of Section 835 if it had actual knowledge of the existence of the condition and knew or should have known of its dangerous character. The statute provides further that a public entity has constructive notice of a dangerous condition within the meaning of subdivision (b) of Section 835 if the plaintiff establishes that the condition had existed for such a period of time and was of such an obvious nature that the public entity, in the exercise of due care, should have discovered the condition and its dangerous character.

road and culvert designs that did not impact creek functions or migratory fish passages.[53] *None* of those criteria was contained in the 2004 Permit.

The DPD also cites (at 231-232) requirements in the 2004 Permit for permittees to implement BMPs to reduce pollutants in urban runoff to the MEP from municipal facilities and activities and to require additional BMPs for "facilities and/or activities" (not "roads," as stated in the DPD at 231) that were tributary to waterbodies listed as impaired under CWA Section 303(d). Again, these generic and limited requirements do not support the DPD's contention that the requirements of Section F.1.i. were not "new." The requirement to reduce pollutants in urban runoff to the MEP was a subset of the underlying requirement in the 2004 Permit prohibiting discharges from MS4s "which have not been reduced to the MEP."[54] As discussed in Section III.C.2 above, the presence of such underlying obligations in previous permits does not mean that more specific requirements in a subsequent permit are not "new." And, under the 2004 Permit, permittees were free to design and implement their own BMPs to meet that general standard; under the Test Claim Permit, the BMP types were dictated.

The same issues are posed by the DPD's conclusion that the requirements of Section F.3.a.10. of the Test Claim Permit were not new. The reference to the need for additional control measures for facilities tributary to Section 303(d) impaired waterbodies contained in 2004 Permit Section H.1.c.(2) was far more limited than requirements in the Test Claim Permit, which applied to unpaved roads wherever they may be located, including those "particularly in or adjacent to receiving waters." Section F.3.a.10. The Water Board applied the unpaved road BMP requirements to *all* unpaved roads, not only those which could discharge pollutants into Section 303(d) impaired waters. This section also required permittees to develop specific BMPs to address the maintenance of existing unpaved roads, none of which was required in the 2004 Permit.

Thus, the requirements in the Test Claim Permit were more comprehensive and different than those in the 2004 Permit cited in the DPD, e.g., those applicable only to "facilities" tributary to 303(d) listed waterbodies and adjacent to or discharging to receiving waters with Environmentally Sensitive Areas. Moreover, those 2004 Permit provisions required permittees only to implement unspecified "additional controls" to address such discharges, not the specific BMPs required in the Test Claim Permit. Thus, with respect to both Sections F.1.i. and F.3.a.10., the Test Claim Permit required a "higher level of service" to the public through the governmental activity of public road construction and maintenance.

The DPD concludes its analysis by stating that "the requirements in the test claim permit regarding unpaved roads simply clarify the existing legal requirements to assess a site's compliance with local ordinances and water quality standards." DPD at 233. This conclusion, however, is not supported by the Water Board's own stated rationale for those provisions. Finding D.1.c. of the Test Claim Permit recites, in relevant part:

> This Order contains *new or modified* requirements that are necessary to improve Copermittees' efforts to reduce the discharge of pollutants in storm water runoff to the MEP and to achieve water quality standards. . . . Other requirements, such as for unpaved

[53] Test Claim Permit, Section F.1.i.

[54] *See* 2004 Permit, Section A.3.

roads, are a result of San Diego Water Board's identification of water quality problems through investigations and complaints *during the previous permit period.*"

(Emphasis supplied).

In addition to the reference to "new or modified" requirements, this finding states that the unpaved roads requirements came about as a result of investigations and complaints *"during the previous permit period,"* demonstrating that the specific focus on unpaved road requirements was new to the Test Claim Permit, and not a continuation of existing requirements from the 2004 Permit.

The Test Claim Permit Fact Sheet similarly stated that Section F.1.i. "specifically requires" permittees to implement or require implementation of BMPs for erosion and sediment control after construction of new unpaved roads.[55] In discussing Section F.3.a.10., the Fact Sheet stated that "[t]his requirement is necessary to ensure the Copermittees minimize the discharge of sediment from their unpaved roads used for their maintenance activities."[56]

The record reflects that the Water Board paid particular and new attention to perceived sediment issues from unpaved roads and in response, mandated new and higher levels of service of permittees in the Test Claim Permit.

I. Requirements in Section F.3.b.4.a.ii. Regarding Industrial and Commercial Inspections

Similar to Section F.2.e.(6) of the Test Claim Permit relating to construction sites (discussed in Section III.G. above), Section F.3.b.4.a.ii. required that permittee inspections of commercial and industrial facilities had to include a "[r]eview of facility monitoring data if the site monitors its runoff."

The DPD concludes that this requirement was not "new," claiming that requirements in the 2004 Permit imposed essentially the same standard, and that "the requirement to review monitoring data results if the site monitors its runoff simply clarifies the existing legal requirement to assess a site's compliance with local ordinances." DPD at 241. The DPD cites in support inspection requirements in the 2004 Permit that required permittees to assess industrial and commercial facilities' compliance with local ordinances and permits related to stormwater runoff. DPD at 241.

However, the 2004 Permit's only monitoring requirement for such inspections was that permittees were to conduct "visual observations for non-stormwater discharges, potential illicit connections, and potential discharge of pollutants in stormwater runoff." DPD at 241.[57] Nowhere in the 2004 Permit was there any express requirement that, during inspections of industrial and commercial facilities, permittees were required to review facility monitoring results, as the DPD acknowledges. DPD at 240.

The DPD bridges this gap by arguing that introductory language in the 2004 Permit's inspection requirements, stating that inspections of industrial and commercial facilities "shall

---

[55] Test Claim Permit Fact Sheet at 144.

[56] *Id.* at 153.

[57] Citing 2004 Permit Sections H.2.a., H.2.b. and H.2.d.

include, *but not be limited to*" were not limited to visual observations of the site "but had to include whatever was necessary to ensure that discharges into the MS4 were complying with the claimants' local ordinances enforcing the prohibitions and receiving water limitations of the permit . . . ." DPD at 241.

The DPD's conclusion that the new requirement to review monitoring results simply "clarified" existing legal requirements to assess a site's compliance with local ordinances and water quality standards ignores unfunded mandates jurisprudence, cited above, which requires a comparison of the language of the executive order at issue and its predecessor. *E.g., San Diego Permit Appeal II; Lucia Mar, supra.*

A new program or higher level of service is created when an executive order, such as the Test Claim Permit, *requires* certain actions that previously had only been suggested or encouraged. *Long Beach Unified School Dist. v. State of California ("Long Beach Unified").*[58] Here, the Test Claim Permit required permittees to perform an additional new task not formerly specified.

The DPD apparently concludes that the "but not limited to" language represented an unstated, inherent mandate for permittees to review monitoring results. But to be a "mandate," a requirement must be express. *Long Beach Unified, supra.* The 2004 Permit contained no mandate to review monitoring results; the Test Claim Permit does. Under the 2004 Permit, permittees might, but were not specifically required to, inspect monitoring records. Under the Test Claim Permit, they were mandated to do so.

The DPD also concludes that there "has been no shift of costs from the state to the claimants" because the stormwater discharges from industrial sites "are subject to stormwater regulation under both state and local systems . . . [t]he claimants enforce their local permits, plans, and ordinances, and the Water Boards enforce the General Industrial Permit." DPD at 242.

Industrial and commercial facilities covered by the Industrial General Permit ("IGP")[59] are required to monitor discharges and to maintain records of such monitoring in facility records.[60] The Test Claim Permit made no distinction between monitoring conducted under the auspices of local ordinances (if any) and the IGP. The Test Claim Permit required permittees to review those IGP-required records, which is a function reserved to the State Water Board and the regional water boards, which collect an inspection fee from such permittees pursuant to Water Code § 13260(d)((2)(B)(iii).

Requiring permittees to review monitoring data collected as an enforceable requirement in the IGP and charging a fee for such review duplicated the fees assessed by the state for the same service, thus exceeding the reasonable cost of providing services for which the fee is charged and not bear a fair or reasonable relationship to the pertinent burdens or benefits. Similarly, the local fee for investigating ICP monitoring data would duplicate state law,

[59] State Water Resources Control Board, General Industrial Permit, Order 97-03-DWQ ("1997 IGP"); State Water Resources Control Board, General Industrial Permit, Order 2014-0057-DWQ (effective July 1, 2015) ("2014 IGP"). These versions of the IGP were in effect during the term of the Test Claim Permit.

[60] 1997 IGP at Section B; 2014 IGP at Sections XI; XII.

rendering it invalid under the doctrine of preemption. *See O'Connell v. City of Stockton* (2007) 41 Cal. 4th 1061, 1067.[61]

J. Requirements in Sections G.1.-5. Addressing the Watershed Workplan

The DPD concludes that some requirements in Sections G.1.-5. of the Test Claim Permit relating to watershed workplan requirements are "new" while others reflect requirements in the prior 2004 Permit. These comments focus on the latter conclusion.

Before addressing these watershed workplan requirements, it is useful to review what the Water Board intended in adopting them. The Test Claim Permit Fact Sheet (quoted in the DPD at 248) acknowledged that the Water Board was adopting a new approach. The 2004 Permit required "selection and implementation of watershed activities," but the Water Board found that program to be unsatisfactory. Fact Sheet at 166. The Water Board thus revised those watershed provisions in the Test Claim Permit, requiring permittees to develop a workplan that would now assess receiving waterbody conditions, prioritize the highest water quality problems, implement effective BMPs and measure water quality improvement. In so doing, the Water Board explicitly acknowledged that the "implementation approach has changed." Fact Sheet at 166.

If the Water Board did not intend Claimants to initiate new programs or a higher level of service in Section G, the Board would have continued the requirements in the 2004 Permit. It did not do so. Instead, the Water Board found that the 2004 Permit requirements "were not able to demonstrate improvements to water quality." Fact Sheet at 166. The Water Board therefore revised and supplemented the requirements in the 2004 Permit in Section G of the Test Claim Permit. The Water Board's dissatisfaction with the prior permit's stormwater management program and its revision and supplementation of that program in the Test Claim Permit is evidence that the Board intended a change from the prior permit, *i.e.,* that it intended to require in the permit a new program or higher level of service.

1. Requirements in Section G.1

Test Claim Permit Section G.1. required permittees to develop the components of a Watershed Workplan to characterize the receiving water quality in the watershed, including using specified data sources (Section G.1.a.), to identify and prioritize water quality problems "in terms of constituents by location" in receiving waters (Section G.1.b.), to identify likely sources causing the highest priority water quality problems within the watershed, including additional focused monitoring (Section G.1.c.), to develop a BMP implementation strategy including a schedule for implementation of the BMPs to abate specific receiving water quality problems and a list of criteria to evaluate BMP effectiveness (Section G.1.d.), to develop a monitoring strategy to monitor improvements in water quality from BMPs (Section G.1.e.) and to establish a schedule for development and implementation of the Watershed Workplan strategy (Section G.1.f.).[62] The DPD concludes that "[m]ost of these requirements are *not* new." *Id.* at 250, emphasis in original. Claimants disagree.

---

[61] This matter differs from that at issue in *LA County Permit Appeal II,* where the court held that there was no evidence that local governments would replace or supplant inspections by the regional water board. 59 Cal.App.5th at 563. Here, there is such evidence in the requirement to review monitoring data.

[62] *See* DPD at 249-250.

First, the DPD contends that Section G.1.a.'s requirement to consider "applicable information available from other public and private organizations" in characterizing receiving water quality is not "new," citing Section K.2(c) of the 2004 Permit, which required an assessment of receiving water quality based upon "existing water quality data." A comparison of the two permits refutes this conclusion. The phrase "existing water quality data" is undefined and does not require permittees to resort to "information" obtained from other public and private sources. The DPD concludes that this phrase "does not have any limiting language and thus, includes relevant data from any source" and further that the addition of "public and private organizations" in the Test Claim Permit merely "provides additional detail" to the requirement and did not create a new requirement. DPD at 251. But the 2004 Permit did not require permittees to review "all" existing water quality data nor did the permit provide any guidance as to the source of such data.

Second, Section G.1.b. required permittees to identify *by constituent and location* major water quality problems in the receiving waters. 2004 Permit Section K.2.d. only required permittees to include in their Stormwater Management Plans "[a]n identification and prioritization of major water quality problems in the watershed caused or contributed to by MS4 discharges and the likely source(s) of the problem(s)." The DPD concludes that this did not mean that Section G.1.b. constituted a new requirement, quoting from the 2004 Permit Fact Sheet the statement that the Water Board's intent was identify and mitigate sources of pollutants in urban runoff. DPD at 251. While a Fact Sheet can provide useful information on the Water Board's intent in including a permit provision, it is the operative language in permit directives which governs the conduct of the permittees and constitutes the mandates. No language in the 2004 Permit required permittees to identify by constituent and location problems in the receiving waters. The Test Claim Permit's language thus was new and required an increase in services.[63]

Third, Section G.1.c., which specified particular sources of information that had to be reviewed to identify factors causing the highest water quality problems within the watershed, including performing "additional focused water quality monitoring to identify specific sources within the watershed," reflected new requirements compared to 2004 Section K.2.d. (quoted above) and required that permittees provide a higher level of service. The DPD concludes that because receiving waters limitations provisions in the 2004 Permit (and the Test Claim Permit) prohibited discharges that caused or contributed to the violation of water quality standards, and that permittees were required "to assure compliance with the prohibition by providing notice and a report regarding BMPs," such provisions would in turn "require sufficiently focused water quality monitoring to identify the specific source of the exceedance." DPD at 253.

---

[63] The DPD also cites receiving waters monitoring requirements under the 2004 Permit requiring permittees to monitor at stations for pollutants and toxicity using Toxicity Identification Evaluations and Toxicity Reduction Evaluations, and to implement tributary monitoring. DPD at 252. Taken together, concludes the DPD, this "would yield a quantified water quality problem in terms of constituent by location." *Ibid.* This is not correct. "Toxicity" in the 2004 Permit is defined to mean in part, "Adverse responses of organisms to chemicals or physical agents from mortality to physiological responses such as impaired reproduction or growth anomalies." 2004 Permit, Attachment C, "Definitions," at C-6. Pollutants causing toxicity are only a subset of all constituents, which Section G.1.b. required Claimants to assess in order to identify the highest water quality problems within the watershed, e.g., "TMDLs, receiving waters listed on the CWA section 303(d) list, waters with persistent violations of water quality standards, toxicity, or other impacts to benefici9al uses, and other pertinent conditions."

This conclusion relies on an inference that there would have to be "sufficiently focused" monitoring required by the 2004 Permit to make the explicit monitoring requirements in the Test Claim Permit not "new." Inferences are not mandates. The Test Claim Permit required focused monitoring without reference to any other provision in the permit. The 2004 Permit did not. Under governing mandates law, that means that the requirements of Section G.1.c. are "new." *E.g., San Diego Permit Appeal II, supra.* Moreover, under *San Diego Permit Appeal II*, reliance on underlying obligations that have appeared in multiple permits, such as the receiving water limitations provision cited in the DPD, does not mean that additional mandates intended to implement that underlying provision are not "new" and thus do not trigger article XIII B, section 6.

Fourth, concerning requirements in Sections G.1.d., G.1.e. and G.1.f., the DPD similarly references language in the CWA and federal regulations to argue that those provisions – which required development of a watershed BMP implementation strategy as part of the workplan to attain receiving water quality objectives; a schedule for BMP implementation and identification of criteria used to evaluate BMP effectiveness; development of a strategy to monitor improvements in water quality from implementation of the BMPs, including reviewing data to report on the measured pollutant reduction; and establishment of a schedule for development and implementation of the watershed strategy outlined in the workplan – also were not "new."[64]

None of these requirements is contained in the 2004 Permit. The DPD cites 2004 Permit Sections K.2.l and K.2.m., which generally required permittees to adopt short and long-term strategies for assessing the activities and programs implement as part of the watershed SWMP. But these provisions required none of the specific steps required in Test Claim Permit Sections G.1.d., G.1.e. and G.1.f.

The DPD acknowledges that the Test Claim Permit "clarified that the implementation strategies include the development of BMPs," but finds that this requirement was not "new" because claimants "have long been required" to reduce discharges to the MEP through BMPs. DPD at 254. The DPD again cites the "underlying requirements" applicable to MS4 permits in the CWA as the basis for its conclusion that requirements in the Test Claim Permit that *not* contained in the 2004 Permit, were not "new." As previously discussed, *San Diego Permit Appeal II*[65] held that the presence of continuing underlying obligations in successive MS4 permits does not mean that new ways of implementing those obligations was not a "new" requirement triggering article XIII B, section 6. The 2004 Permit and the Test Claim Permit both were authorized by the requirements of the CWA and implementing regulations; the fact that the latter contained specific additional requirements to implement those statutory requirements means that those additional requirements are "new" and not merely "clarifications."[66]

---

[64] *See* DPD at 253-254.

[65] 85 Cal.App.5th at 559.

[66] In addition, Section G.3. of the Test Claim Permit set forth requirements relating to collaboration with other permittees in development and implementation of the Workplan. While the DPD finds that the requirement in Section G.3. to pursue interagency agreements to be new (DPD at 256) the requirement for "frequent regularly scheduled meetings" is not. DPD at 255. The DPD concludes that collaboration requirements under the 2004 Permit would "mean that the claimants had to meet frequently on these issues." Again, this is an implied requirement, not the express requirement set forth in the Test Claim Permit.

2. Requirements in Section G.4

The DPD concludes that requirement in Section G.4 for permittees to implement a "watershed-specific public participation mechanism within each watershed," a minimum 30-day public review of and opportunity to comment on the Watershed Workplan and a description in the workplan of the public participation mechanisms to be used were not new, with the exception of a requirement relating to the identification of persons and entities anticipated to be involved during the development and implementation of the Watershed Workplan. DPD at 256-257.

While the Water Boards appeared to concede that these requirements were "new" in their comments on the Test Claim (DPD at 256), the DPD disagrees, citing Section E.3 of the 2004 Permit, which provided: "Each permittee shall incorporate a mechanism for public participation during the development and implementation of its SWMP." The more specific requirements of Test Claim Permit Section G.4, however, which require a "watershed-specific public participation," a 30-day public review and comment period and a description in the workplan of the public participation mechanisms to be used are not mirrored in the simple 2004 Permit requirement for permittees to incorporate public participation during development and implementation of the SWMP. This citation does not support a finding that the requirements in Section G.4 are not "new" or provide a higher level of service.

The DPD also cites federal regulations requiring public participation in the comprehensive planning process to reduce discharges to the MEP. DPD at 257. Neither these regulations nor the non-mandatory EPA MS4 Program Evaluation Guidance specify how public participation is to be incorporated into the Watershed Workplan. Under governing caselaw, they do not represent a federal mandate on Claimants. *LA County Permit Appeal I,* 1 Cal. 5th at 756; *San Diego Permit Appeal I,* 18 Cal. App. 5th at 683 (general federal regulatory language does not impose a federal mandate where regulation leaves the manner of implementation to the permittee). Citation of the regulations and Guidance is inapposite.

K. Requirements in Sections K.3.a.-c. Regarding Permittee Annual Reporting

Sections K.3.a.-c. of the Test Claim Permit specify the contents of the Annual Report each permittee was required to submit to the Water Board. A number of those requirements represented new mandates and/or higher levels of service to be performed by Claimants, as discussed below.[67]

1. Section K.3.c.(2)

This section requires that the Annual Report include matters required to be reported pursuant to Section J of the Test Claim Permit, which covers program effectiveness assessments. The DPD concludes that with the exception of one requirement,[68] these requirements were not "new." DPD at 270.

While the 2004 Permit MRP required that permittees include in their annual reports "[p]roposed revisions to the Individual SWMP, including areas in need of improvement based on

[67] Claimants concur with the DPD's conclusions with respect to Sections K.3.a. and K.3.b.

[68] Relating to the requirement to include in the Annual Report an updated timeframe of a desired outcome level. See DPD at 270-271.

the assessment of effectiveness of each program component,"[69] the Test Claim Permit requirements went further, requiring that in responding to a finding in the program assessment that a desired outcome had not been achieved, a workplan was to be prepared, one that was required to contain eight specified elements, none of which was contained in the prior permit or MRP.[70]

This analysis applies to other sections of the 2004 Permit cited to support the conclusion that the Test Claim Permit requirements were not new. 2004 Permit Section C.2.a. merely required that upon a determination by a permittee that MS4 discharges were causing or contributing to an exceedance of a water quality standard, a report was to be submitted to the Water Board describing "additional BMPs that will be implemented to prevent or reduce any pollutants that are causing or contributing to the exceedance of water quality standards." This requirement is in no sense a cognate to the more detailed requirements of Section K.3.c.(2) (preparation of a description of the response to the effectiveness assessment required pursuant to Section J.2) and thus does not refute the conclusion that the former is a new program or higher level of service. *San Diego Unified, supra.* This requirement was also new and one that requiring a higher level of service by Claimants.

2. Section K.3.c.(4)

This section of the Test Claim Permit required that Claimants' Annual Report include information on various program components set forth in Table 5. The DPD (at 274-299) concludes that a number of requirements in the Section were new, but that some were not. In addition, the DPD concludes that the inclusion of information in the Annual Report regarding municipal projects was not eligible for a subvention of funds, because such projects were "discretionary." DPD at 292-293. The following are Claimants' comments on those conclusions.

a. Conclusions Regarding Table 5 Elements

The Test Claim asserted that a number of the requirements in Section K.3.c.(4) went beyond the requirements in the 2004 Permit, including the requirement in the Construction section of Table 5 to provide a "brief description of each high-level enforcement actions at construction sites including the effectiveness of enforcement." (A similar requirement was contained in the Commercial/Industrial section of Table 5). These additional requirement goes beyond the summary requirements in federal regulation and the requirements in the 2004 Permit and is thus a new program and higher level of service. Similarly, the Table 5 requirement under New Development to summarize the effectiveness of enforcement activities went beyond the 2004 Permit's requirement to assess "program effectiveness."

Claimants also take issue with the DPD's conclusion regarding Annual Report elements relating to municipal projects. The DPD concludes that requirements in Section K.3.c.(4) requiring permittees to "report on their own municipal projects, including unpaved road construction and maintenance, and identify a description and implementation of BMPs and inspection activities on those municipal projects" were discretionary, and thus not subject to a requirement for a subvention of funds. DPD at 292-293.

---

[69] 2004 Permit MRP, III.A.1.g.

[70] Test Claim Permit, Section J.2.b.

The DPD, citing *City of Merced* and *KHSD,* concludes that the "courts have made clear that costs incurred as a downstream result of a local discretionary decision is not legally compelled by state law." DPD at 293. Neither case, however, should be read so broadly. In both cases, the ancillary costs found to be within the ambit of the same discretionary, non-mandated act by local government. Thus, in *City of Merced,* the cost (loss of business goodwill) was simply another element of compensation associated with the same governmental act, exercise of the power of eminent domain on property. Similar, in *KHSD,* the cost (of public notice and agenda) was directly related to the discretionary act of holding a public meeting associated as part of a grant program the district had voluntarily entered into.

In those cases, the "downstream" costs were part and parcel of the package of costs incurred in the discretionary activity. That is not true of Section K.3.c.(4). Here, Claimants were mandated to include in their Annual Report a description of programs relating to various categories of projects, including municipal projects. That reporting had nothing to do with the imposition of conditions on the construction or operation of those municipal projects, but merely *the reporting to the Water Board of information concerning such projects.* This was no different than the requirement for Claimants to include information in their Annual Reports about private development projects. The mandate for Claimants here was to *report*, not to *apply conditions* required by the Test Claim Permit on municipal projects. The projects were already built. Whether or not the decision to build them was discretionary on the part of the municipality, the Test Claim Permit's obligation on permittees to report on them was not.[71]

L. Requirements in Section II.E.2.-5. of Attachment E Regarding Special Studies

The DPD concludes, correctly, that four "special studies" required by Section II.E.2.-5. of the Test Claim Permit MRP mandates a new program or higher level of service for Claimants. DPD at 300-311. There is no discussion in the DPD, however, regarding a fifth special study ordered to be conducted.

As set forth in Claimants' Rebuttal Comments, the Water Board ordered Claimants, in lieu of completing a study into intermittent and ephemeral stream conversion into perennial streams as well as performance of monitoring in an MS4 and receiving waters management study, to perform a study on the impacts of LID protections on downstream flows to Camp Pendleton and potential impacts on downstream beneficial uses ("LID Impacts Study"). *See* Rebuttal Comments at 52-53 and Exhibits A and B to Declaration of Claudio M. Padres, P.E., attached thereto.

While the LID Study was not required by the Test Claim Permit, it was required by the Water Board, acting under the powers granted by the Test Claim Permit; in fact in a letter from Water Board Assistant Executive Officer James G. Smith (Exhibit B to Padres Declaration), Mr.

---

[71] Claimants again note that they disagree with the conclusions in the DPD concerning whether the response of Claimants to Test Claim Permit requirements concerning municipal projects are "discretionary." *See* discussions in Sections III.E, III.F, III.G, and III.H, above. Additionally, Claimants reference their argument that certain municipal projects, such as the maintenance of unpaved roads, in fact were "practically compelled" and a core function of municipal government. *See* discussion in Section III.F above; *San Diego Permit Appeal II, supra.*[71]

Smith stated that he would not recommend that the Water Board enforce the requirements in Section II.E.5 and II.E.6 of the Test Claim Permit MRP for Claimants to complete the other two special studies if they conducted the LID Study.

Claimants request that the Commission also award a subvention of funds for the LID Impacts Study.

M. Requirements in Sections F., F.1., F.1.d, F.2., F.3.a.-d., and F.6. of the Test Claim Permit Regarding Prevention of Discharges

Finally, the Test Claim raised the inclusion of new language in Test Claim Permit Sections F., F.1., F.1.d., F.2., F.2.a.-d. and F.6 which required that permittees be "effectively prohibiting" non-stormwater discharges from the MS4, "prevent" illegal discharges into the MS4" and "prevent runoff discharges from the MS4 from causing or contributing to a violation of water quality standards. *See* Section 5 Narrative Statement at 61-63 and the DPD at 317-319 for the specific language at issue.

The DPD concludes that these provisions were not "new," that to "prevent" non-stormwater discharges was no more stringent than to "effectively prohibit" such discharges into the MS4 and that the "effectively prohibit" requirement had been in previous MS4 permits issued to Claimants. DPD at 324-325. The DPD also concludes that discharge prohibition and receiving water limitations language in the 2004 Permit which prohibited, *inter alia,* creation of a nuisance, discharges from MS4s that caused or contributed to exceedances of water quality objectives for surface water or groundwater and discharges from MS4s that caused or contributed to the violation of water quality standards, meant that the specific language in the above-cited provisions was not "new."

However, the Water Board in these Test Claim Permit Section F programmatic requirements was establishing a new program or higher level of service by including these additional specific requirements. For example, the industrial/commercial program in the 2004 Permit required the implementation of BMPs "to reduce the discharge of pollutants in runoff *to the MEP*."[72] The 2004 Permit BMP program programs for residential areas and municipal facilities also were required to reduce pollutants "*to the MEP*."[73] The construction program in the 2004 Permit required the permittees to implement a program "to address construction sites to reduce pollutants in runoff *to the MEP* during all construction phases."[74] (The 2004 Permit contained no provision requiring retrofitting of existing development.) By contrast, the counterpart provisions in the Test Claim Permit required a higher level of pollution control, e.g., requiring that discharges from the MS4 not cause or contribute to violations of water quality standards.[75]

With respect to the CWA requirement that MS4 permittees "effectively prohibit" the discharge of non-stormwater into the MS4, 33 U.S.C. § 1342(p)(3)(B)(ii), the regulatory language refers to programs that are to be implemented over time, not the immediate "prevents illicit discharges into the MS4" language found in the cited Section F provisions. For example,

---

[72] 2004 Permit, Section H.2.c. (emphasis added).

[73] 2004 Permit, Sections H.1.c.(1); H.3.c. (emphasis added).

[74] 2004 Permit, Section G (emphasis added).

[75] *See* Test Claim Permit, Sections F.1 and F.1.d; F.2; F.3.a.; F.3.b.; F.3.c.; F.3.d.; F.6.

regulations regarding the proposed stormwater management program require the description of a program "including a *schedule*, to detect and remove . . . illicit discharges." 40 CFR § 122.26(d)(2)(iv)(B) (emphasis supplied). In the preamble to the final stormwater regulations, the requirement is that *"[u]ltimately*, such non-storm water discharges through a municipal storm sewer must either be removed from the system . . . ." (55 Fed. Reg. 47990, 47995 (November 16, 1990) (emphasis supplied)).

The counterpart provisions in the 2004 Permit also did not contain language requiring the prevention or elimination of such non-stormwater discharges. *See* 2004 Permit, Section F (Development Planning); Section G (Construction); Section H (Existing Development, including H.1 (municipal facilities), H.2 (industrial/commercial facilities) and H.3 (residential)); or Section I (Education). It is those specific counterparts that the Commission must evaluate in determining whether the Section F requirements of the 2010 Permit were a new program or higher level of service than that required under the previous 2004 Permit. *San Diego Unified, supra; Lucia Mar, supra.*

IV. COMMENTS ON FUNDING SOURCES

The DPD concludes that with regard to certain activities it identified as new state-required mandates in the Test Claim Permit, Claimants are not entitled to a subvention of funds under article XIII B, section 6 of the California Constitution. These conclusions are:

1. There is no substantial evidence in the record that the District was required to use "proceeds of taxes" to pay for the requirements at issue in the Test Claim;

2. Claimants had the authority to charge "regulatory fees" sufficient to pay for certain mandates; and

3. Beginning on January 1, 2018, the adoption of new California legislation cut off the ability of Claimants to seek a subvention of funds after that date for mandates fundable through property-related fees, by re-defining the term "sewer" in a statute interpreting terms in the state Constitution to include storm drains, and thereby expanding the categories of projects for which a fee may be imposed without a majority vote of approval.

Each of these conclusions is addressed below.

A. Flood Control District Assessments

Without agreeing to the correctness of the DPD's conclusions regarding the use of benefit assessment funds and "proceeds of taxes," to the extent that the District identifies further evidence relevant to this section of the DPD, it will consider presenting such evidence at the hearing on the Test Claim.

B. Authority to Impose Regulatory Fees

The DPD concludes (at 365-368) that Claimants have fee authority within the meaning of Govt. Code § 17556(d) to obtain funding for certain Test Claim Permit provisions identified in the DPD as constituting new state mandates. Claimants respond to those allegations next below.

1. Non-Applicability of Regulatory Fee Authority to Public Facilities and Activities

Claimants obviously cannot charge fees for their own projects, making it impossible to recover costs through development or other regulatory fees. The DPD concludes that public development projects are "discretionary" and thus not mandated by the state. In response, Claimants have demonstrated in Section III above that such projects are not "discretionary" as being legally or practically compelled. In addition, ancillary requirements associated with public projects, such as reporting, inventorying and others, are mandatory for permittees. *See* discussions at Sections III.E, III.F., III.G. and III.H, above.

Claimants submit that the requirements of the following Test Claim Provisions, as they apply to their public facilities or projects,[76] are eligible for reimbursement:

- Sections F.1.d.1., 2., 4., 7., h., F.3.d.1.-5.
- Section F.1.f.
- Sections F.2.d.3. and F.2.e.(6)(e)
- Sections F.1.i. and F.3.a.10.
- Sections G.1.-5.
- Sections K.3.a.-c.

2. Claimants Lack Regulatory Fee Authority For Numerous Test Claim Permit Provisions

The DPD concludes that with respect to a number of Test Claim Permit provisions, Claimants had regulatory fee authority to charge third parties for the costs of such provisions. However, an examination of the provisions in question rebuts that conclusion.

Article XI, section 7 of the California Constitution provides that a municipality "may make and enforce within its limits all local, police, sanitary, and other ordinances and regulations not in conflict with general laws." Courts have traditionally interpreted this power to authorize "valid regulatory fees."[77] This fee-setting power is, however, limited by California caselaw as well as amendments to the Constitution adopted through the initiative process in Propositions 218 and 26. *LA County Permit Appeal II, supra,* outlines these limitations:

> A regulatory fee is valid "if (1) the amount of the fee does not exceed the reasonable costs of providing the services for which it is charged, (2) the fee is not levied for unrelated revenue purposes, and (3) the amount of the fee bears a reasonable relationship to the burdens created by the fee payers' activities or operations" or the benefits the fee payers receive from the regulatory activity. (*California Building Industry Assn. v. State Water Resources Control Bd.* (2018) 4 Cal.5th 1032, 1046, citing *Sinclair Paint Co. v. State Bd. of Equalization* (1997) 15 Cal.4th 866, 881).[78]

Additional restrictions are contained in Proposition 26 (incorporated into the California Constitution as article XIII C) which provides that any levy, charge or exaction of any kind imposed by a local government is a "tax," except the following:

---

[76] As discussed in Section IV.B.2. next below, Claimants also lack regulatory fee authority to assess fees from private developments or projects for certain of these provisions because they involved reporting or other obligations unrelated to the construction or development of the projects.

[77] *Mills v. County of Trinity* (1980) 108 Cal.App.3d 656, 662.

[78] 59 Cal.App.5th at 562.

> (1) A charge imposed for a specific benefit conferred or privilege granted directly to the payor that is not provided to those not charged, and which does not exceed the reasonable costs to the local government of conferring the benefit or granting the privilege.
>
> (2) A charge imposed for a specific government service or product provided directly to the payor that is not provided to those not charged, and which does not exceed the reasonable costs to the local government of providing the service or product.
>
> (3) A charge imposed for the reasonable regulatory costs to a local government for issuing licenses and permits, performing investigations, inspections, and audits, enforcing agricultural marketing orders, and the administrative enforcement and adjudication thereof.
>
> (4) A charge imposed for entrance to or use of local government property, or the purchase, rental, or lease of local government property.
>
> (5) A fine, penalty, or other monetary charge imposed by the judicial branch of government or a local government, as a result of a violation of law.
>
> (6) A charge imposed as a condition of property development.
>
> (7) Assessments and property-related fees imposed in accordance with the provisions of Article XIII D.

Cal. Const. article XIII C, section 1.

While these constitutional provisions and case law authorizes some regulatory costs, such as those for inspections, to be recovered as fees, that authority is limited by the requirements of the Constitution. It is within that framework that Claimants respond to the conclusions in the DPD concerning their ability to assess regulatory fees on the Test Claim Permit provisions identified in the DPD at 365.

a. Retrofitting Provisions in Section F.3.d.

The DPD concludes, without discussion, that Claimants can assess regulatory fees to pay costs relating to the retrofitting of existing development. But in such a situation, there is no property owner or developer upon which fees can be assessed to pay such costs as identifying and inventorying existing areas of development (Section F.3.d.1.); costs to "evaluate and rank" the inventoried areas to prioritize retrofitting (Section F.3.d.2.); or, costs to consider the results of the evaluation in prioritizing Claimant work plans for the following year.

All of these requirements are unrelated to potential future private development, for which development fees can be obtained, but rather to how Claimants must evaluate *existing* developments.[79] And, as the Test Claim Permit expressly provided, the work required of Claimants was not intended to benefit or burden any particular parcel but to improve water quality generally by addressing "the impacts of existing development through retrofit projects that reduce impacts from hydromodification, promote LID, support riparian and aquatic habitat

[79] In this way, the factual situation can be distinguished from that present in *San Diego Permit Appeal II,* where the question related to how the costs of preparing LID and HMP documentation was to be allocated amongst future development projects. 85 Cal.App.5th at 586-95.

restoration, reduce the discharge of storm water pollutants from the MS4 to the MEP, and prevent discharges from the MS4 from causing or contributing to a violation of water quality standards." Test Claim Permit, Section F.3.d.

Fees for requirements which "redound to the benefit of all" are not recoverable as regulatory fees. *Newhall County Water Dist. v. Castaic Lake Water Agency* (2016) 243 Cal.App.4th 1430, 1451. *Newhall County* held that a charge imposed by a water agency for creating "groundwater management plans" as part of the agency's groundwater management program could not be imposed as a fee. The court reasoned that the charge was "not [for] specific services the Agency provides directly to the [payors], and not to other [non-payors] in the Basin. On the contrary, groundwater management services redound to the benefit of all groundwater extractors in the Basin – not just the [payors]."[80] *See also LA County Permit Appeal II, supra,* holding that placing trash receptacles at transit stops benefitted the "public at large"[81] and that associated costs could not be passed on to any particular person or group.[82]

b. BMP Maintenance Tracking in Section F.1.f.1

Section F.1.f.1 of the Test Claim Permit required permittees to maintain a database of all projects with a structural post-construction BMP implemented since 2005. The creation of the database provided permittees with a way to track such BMPs, and did not itself provide a benefit to the owners/operators of those BMPs. Moreover, the requirement to include BMPs implemented starting in 2005, five years before the effective date of the Test Claim Permit, meant that permittees would have been unable to recover costs of entering those pre-Permit BMPs on the database through the development process, if that were even possible.

c. Annual JRMP Reporting Checklist in Section K.3.c.3.

The DPD concludes that Claimants' cost for the JRMP annual report checklist requirements relating to Construction, New Development, Post Construction Development, Municipal (other than their own)/Commercial/Industrial could be recovered as regulatory fees. Section K.3.c.3. of the Test Claim Permit mandated a reporting requirement intended to inform the Water Board of the status of permittees' program. The checklist served as a statistical tool but provided no benefits to any of the projects which were among the statistics reported. The purpose of the checklist, and the other annual reporting requirements in Test Claim Permit Section K.3.c., was not to administer or facilitate any inspection or other interaction with [property-related] but rather to "maintain records demonstrating that Permit activity requirements have been met, which allows the San Diego Water Board to confirm compliance as needed . . . ." Test Claim Permit Fact Sheet at 175.

d. Annual JRMP Program Component Table 5 in Section K.3.c.4.

A similar analysis to that above applies to the requirement to provide the information specified in Test Claim Permit Table 5 in the JRMP annual report. The DPD concludes that such

---

[80] *Ibid.*

[81] 59 Cal.App.5th at 569.

[82] *See also* Calif. Const. article XIII D, section 6(b)(5), which prohibits fees "for general governmental services . . . where the service is available to the public at large in substantially the same manner as it is to property owners."

costs, as they apply to New Development, Construction, Municipal (other than own), Commercial/Industrial, Residential and Retrofitting Existing Development, could be covered through regulatory fees. DPD at 343. While the informational requirements of Table 5 are more comprehensive than those in the checklist required by Section K.3.c.3., their purpose is no different. It is not to administer or facilitate the interaction between the Claimants and property owners/operators or projects within their jurisdictions, a task which potentially could be funded through regulatory fees, but rather to "maintain records." As such, the costs associated with such activities are not recoverable as regulatory fees.

3. Other Test Claim Permit Requirements As to Which Claimants Lack Regulatory Fee Authority

In Section III of these comments, Claimants have identified additional Test Claim Permit requirements which represented unfunded state mandates. These are:

- Section B.2., removing categories of irrigation-related discharges from the list of exempt non-stormwater discharges.
- Sections C., F.4.d. and e., and Section II.C. of the MRP, relating to NALs.
- Section D, relating to SALs.
- Section F.2.e.(6)(e), referring to the preempted costs of reviewing monitoring data required by the State GCP.
- Section F.3.b .4.a.ii.m referring to the preempted costs of reviewing monitoring data required by the State IGP.

None of the costs of the first three of these requirements could be recovered as regulatory fees, as the provisions constitute property-related fees subject to the majority vote requirement in Calif. Const. article XIII D, section 6(c). Because of that voter approval requirement, the Commission has in past MS4 permit test claims determined that Claimants did not have the authority to charge or assess such fees as a matter of law. This same determination was made in the DPD. DPD at 356. With respect to the last two requirements, please see the final paragraph of Sections III.G and III.I, above.[83]

C. SB 231, Which Claims to "Correct" a Court's Interpretation of article XIII D, section 6 of the California Constitution, Misinterprets Proposition 218 and the Historical Record and Should Not Be Relied Upon by the Commission

Howard Jarvis Taxpayers Assn. v. City of Salinas (2002) 98 Cal.App.4th 1351 *("City of Salinas")* determined that the exclusion from the majority taxpayer vote requirement for property-related fees for "sewer services" in article XIII D, section 6(c) of the California Constitution, did not cover storm sewers or storm drainage fees.[84]

In 2017, fifteen years after *City of Salinas,* the Legislature enacted SB 231, which amended Govt. Code § 53750 to define the term "sewer" (which is contained in Calif. Const. article XIII D, section 6(c)):

---

[83] In addition, to the extent the "Section F" Test Claim Permit requirements discussed in Section III.M above cannot be funded by regulatory fees, they would represent unfunded mandates.

[84] 98 Cal.App.4th at 1358-359.

> "Sewer" includes systems, all real estate, fixtures, and personal property owned, controlled, operated, or managed in connection with or to facilitate sewage collection, treatment, or disposition for sanitary or drainage purposes, including lateral and connecting sewers, interceptors, trunk and outfall lines, sanitary sewage treatment or disposal plants or works, drains, conduits, outlets for surface or storm waters, and any and all other works, property, or structures necessary or convenient for the collection or disposal of sewage, industrial waste, or surface or storm waters. "Sewer system" shall not include a sewer system that merely collects sewage on the property of a single owner.

Govt. Code § 53750(k).

SB 231 also added Govt. Code § 53751, which sets forth findings as to the legislative intent in amending § 53750 to encompass storm sewers and drainage in the definition of "sewer." Section 53751 states that the Legislature intended to overrule *City of Salinas* because that court failed, among other things, to recognize that the term "sewer" had a "broad reach" "encompassing the provision of clean water and then addressing the conveyance and treatment of dirty water, whether that water is rendered unclean by coming into contact with sewage or by flowing over the built-out human environment and becoming urban runoff." Govt. Code § 53751(h).

The Legislature also included a finding that "[n]either the words 'sanitary' nor 'sewerage' are used in Proposition 218, and the common meaning of the term 'sewer services' is not 'sanitary sewerage.' In fact, the phrase 'sanitary sewerage' is uncommon." Govt. Code § 53751(g). SB 231 further cites a series of pre-Proposition 218 statutes and cases which, the legislation asserts, "reject the notion that the term 'sewer' applies only to sanitary sewers and sanitary sewerage." Govt. Code § 53751(i). The DPD concludes that the adoption of SB 231, combined with the decision of the court in *Paradise Irrigation Dist. v. Commission on State Mandates*[85] renders any costs incurred by Claimants after January 1, 2018 (the effective date of SB 231) not eligible for reimbursement. DPD at 379.[86]

1. SB 231 Does Not Apply Retroactively

While not expressly so finding, the DPD implicitly concludes that the amendments to Govt. Code §§ 53750 and 53751 operate *prospectively* from January 1, 2018 and do not have retroactive effect. The Third District Court of Appeal so held in *San Diego Permit Appeal II.*[87]

2. The Plain Language and Structure of Proposition 218 Do Not Support SB 231's Definition of "Sewer" in Govt. Code § 53750

---

[85] (2019) 33 Cal.App.5th 205.

[86] The applicability of *Paradise Irrigation Dist.* to the Test Claim depends on whether SB 231 is valid. If it is not, as Claimants assert, a local government cannot assess a fee without it being subject to a majority vote.

[87] 85 Cal.App.5th at 577.

When it comes to the validity of any statute purporting to interpret the California Constitution, it is undisputed that the final word is left to the courts.[88] For this reason, the ultimate validity of SB 231 is not before the Commission. It would be error, however, for the Commission to cite SB 231 to deny Claimants a subvention of funds for costs expended after January 1, 2018. This is so because in seeking to overrule *City of Salinas,* SB 231 attempts to reinterpret the Constitution in contradiction of the intent of the voters when they adopted Proposition 218. Because the Constitution cannot be modified by a legislative enactment,[89] SB 231 is unconstitutional on its face, and should not be relied upon by the Commission.

SB 231 attempted to re-define the meaning of a Constitutional provision, article XIII D, section 6, through an amendment to the Proposition 218 Omnibus Implementation Act, Govt. Code § 53750 *et seq.* ("Implementation Act"). The Legislature made no attempt to define "sewer" when it adopted the original Act in 1997, nor in subsequent amendments prior to SB 231, which was adopted 21 years after passage of Proposition 218. Notably, the Legislature waited 15 years after the allegedly erroneous holding in *City of Salinas* to enact a "correction."

In Govt. Code § 53751(f), the Legislature found that *City of Salinas* "failed to follow long-standing principles of statutory construction by disregarding the plain meaning of the term "sewer." In so finding, the Legislature itself ignored these principles. In construing voter initiatives, courts are charged with determining the intent of the voters. *Professional Engineers in California Government v. Kempton* ((2007) 40 Cal. 4th 1016, 1037. To ascertain that intent, courts turn first to the initiative's language, giving words their ordinary meaning as understood by "the average voter." *People v. Adelmann* (2018) 4 Cal. 5th 1071, 1080. The initiative must also be construed in the context of the statute as a whole and the scheme of the initiative. *People v. Rizo* (2000) 22 Cal. 4th 681, 685. In addition, if there is ambiguity in the initiative language, ballot summaries and arguments may be considered as well as reference to the contemporaneous construction of the Legislature. *Professional Engineers, supra;*[90] *Los Angeles County Transportation Comm. v. Richmond* (1982) 31 Cal.3d 197, 203.

In construing a statute or initiative, every word must be given meaning. *City of San Jose v. Superior Court* (2017) 2 Cal. 5th 608, 617. If the Legislature (or the voters) use different words in the same sentence, it must be assumed that their intent was that the words have different meanings. *K.C. v. Superior Court* (2018) 24 Cal.App.5th 1001, 1011 n.4.

In the case of Proposition 218, the word "sewer" is used both in article XIII D, section 5 and in article XIII D, section 6. Section 5 exempts from the majority protest requirement in article XIII D, section 4 "[a]ny assessment imposed exclusively to finance the capital costs or maintenance and operation expenses for sidewalks, streets, *sewers*, water, flood control,

---

[88] *Cf. City of San Buenaventura v. United Water Conservation Dist.* (2017 Cal. 5th 1191, 1209 n.6 ("the ultimate constitutional interpretation must rest, of course, with the judiciary."); *see also County of Los Angeles v. Comm'n on State Mandates, supra,* 150 Cal.App.4th at 921 (overruling statute that purported to shield MS4 permits from article XIII B section 6 and holding that a "statute cannot trump the constitution.")

[89] *County of Los Angeles, supra,* 150 Cal.App.4th at 921.

[90] 40 Cal. 4th at 1037.

drainage systems or vector control." Calif. Const. article XIII D, section 5(a) (emphasis added). There, the term "sewer" is set forth separately from "drainage systems," which the Legislature defined as "any system of public improvements that is intended to provide for erosion, control, for landslide abatement, or for *other types of water drainage."* Govt. Code § 53750(d) (emphasis added). Since both "sewer" and "drainage systems" (which refer to systems which drain stormwater, including storm sewers) are contained in the same sentence, it must be presumed that the voters intended that "sewer" mean something other than "public improvements . . . intended to provide for . . . other types of water drainage."

Moreover, the word "sewer," but not the term "drainage systems" appears in article XIII D, section 6. A longstanding principle of statutory construction is that when language is included in one portion of a statute, "its omission from a different portion addressing a similar subject suggests that the omission was purposeful." *E.g., In re Ethan C* (2012) 54 Cal. 4th 610, 638. In *Richmond v. Shasta Community Services Dist.,* the Supreme Court used this tool to analyze article XIII D to determine if a capacity charge and a fire suppression charge imposed by a water district were "property related":

> Several provisions of article XIII D tend to confirm the Legislative Analyst's conclusion that charges for utility services such as electricity and water should be understood as charges imposed "as an incident of property ownership." For example, subdivision (b) of section 3 provides that 'fees for the provision of electrical or gas service shall not be deemed charges or fees imposed as an incident of property ownership' under article XIII D. Under the rule of construction that the expression of some things in a statute implies the exclusion of other things not expressed (*In re Bryce C.* (1995) 12 Cal.4th 226, 231), the expression that electrical and gas service charges are not within the category of property-related fees implies that similar charges for other utility services, such as water and sewer, are property-related fees subject to the restrictions of article XIII D."[91]

A similar analysis of Article XIII D supports the conclusion that the voters' intent was that "sewers" referred to sanitary sewers, not storm drainage systems. As noted above, the municipal infrastructure listed in article XIII D, section 5 includes both "sewers" and "drainage systems." By contrast, article XIII D, section 6(c) refers only to "sewer" in exempting from the majority vote requirement "sewer, water and refuse collection services." Given that another section of the proposition specifically called out "drainage systems" as different from "sewers," the absence of the former term requires that it be presumed that the voters understood "sewer" or "sewer services" in section 6(c) to be limited to sanitary sewers. This was the holding of the Third District Court of Appeal in *San Diego Permit Appeal II.*[92]

The proponents of Proposition 218 also expressed an intent that it "be construed liberally to curb the rise in "excessive" taxes, assessments, and fees exacted by local governments

---

[91] (2004) 32 Cal. 4th 409, 427.

[92] 85 Cal.App.5th at 568.

without taxpayer consent."[93] Any interpretation of the breadth of the meaning of the exception for "sewer services" must therefore take that intent into account and interpret exceptions to limits on the taxing or fee power narrowly.[94]

Thus, the unambiguous, plain meaning of article XIII D, section 6(c) is that the term "sewer" or "sewer services" pertains only to sanitary sewers and not to MS4s. In attempting to expand the facilities and services covered by this term, SB 231 is an invalid modification of Proposition 218 that seeks to override voter intent. SB 231 does not provide authority to bar Claimants from seeking a subvention of funds for costs incurred after January 1, 2018.

While resort to interpretive aids is not required when the meaning of a statutory term is clear, SB 231 justifies its amendment of Govt. Code § 53750 by asserting that "[n]umerous sources predating Proposition 218 reject the notion that the term "sewer" applies only to sanitary sewers and sanitary sewerage." Govt. Code § 53751(i). These include:

(a) Pub. Util. Code § 230.5: This statute is referenced[95] as the source for the "definition of 'sewer' or 'sewer service' that should be used in the Implementation Act. It defines "sewer system" to include both sanitary and storm sewers and appurtenant systems. However, this is an isolated statutory example and is found in a section of the Public Utilities Code dealing with privately owned sewer and water systems regulated by the Public Utilities Commission,[96] and not a "system of public improvements that is intended to provide . . . for other types of water drainage." Govt. Code § 53750(d). Such small systems may well serve both as a sanitary and storm system, but they are not typical of the MS4 systems being regulated by the Test Claim Permit or of the public projects that Proposition 218 was written to address. Moreover, the fact that the statute goes to the effort to define "sewer system" to include both sanitary and storm sewers shows that, without such an explicit definition, the tendency would be to consider only sanitary sewers to fall under the definition of "sewer."

(b) Govt. Code § 23010.3. This statute[97] relates to the authorization for counties to spend money for the construction of certain conveyances, and defines those conveyances as "any sanitary sewer, storm sewer, or drainage improvements . . ." This does not further the arguments made in SB 213, since the statutory language calls out "sanitary sewer," "storm sewer" and "drainage improvements" as separate items, and also contradicts the statement in Govt. Code § 53751(g) that the phrase "sanitary sewerage" is uncommon. The similar phrase "sanitary sewer" is commonly found, as noted below.

(c) The Street Improvement Act of 1913: Govt. Code § 53751(i)(3) references only to the name of this statute, Streets & Highways Code §§ 10000-10706, but cites no section supporting SB 231's interpretation of Proposition 218. Moreover, within this Act, Streets &

[93] *City of Salinas,* 98 Cal. App. 4th at 1357-58.

[94] *Ibid.*

[95] Govt. Code § 53751(i)(1)

[96] *See* Pub. Util. Code § 230.6, defining "sewer system corporation" to include "every corporation or person owning, controlling, operating, or managing any sewer system for compensation within this state."

[97] Cited in Govt. Code § 53751(i)(2).

Highways Code § 10100.7, which allows a municipality to establish an assessment district to pay for the purchase of already constructed utilities, separately defines "water systems" and "sewer systems," with the latter clearly limited to sanitary sewers: "sewer system facilities, including sewers, pipes, conduits, manholes, treatment and disposal plants, connecting sewers and appurtenances for providing sanitary sewer service, or capacity in these facilities . . . ." *Ibid.*

(d) *Los Angeles County Flood Cont. Dist. v. Southern Cal. Edison Co.* (1958) 51 Cal. 2d 331 is cited[98] for the proposition that the California Supreme Court "stated that 'no distinction has been made between sanitary sewers and storm drains or sewers.'" This case involved whether defendant Edison's had to pay to relocate its gas lines to allow construction of District storm drains. In stating that there was no distinction (as to the payment obligation) between sanitary sewers and storm drains or sewers, the Court was not commenting on whether a "sewer" *qua* "sewer" necessarily filled both sanitary and storm functions. And, again, the Court distinguished between "sanitary sewers" and "storm drains or sewers" in the language of the opinion.

(e) *County of Riverside v. Whitlock* (1972) 22 Cal.App.3d 863, *Ramseier v. Oakley Sanitary Dist.* (1961) 197 Cal.App.2d 722, and *Torson v. Fleming* (1928) 91 Cal. App. 168. These cases are cited in Govt. Code § 53751(i)(5) as examples of "[m]any other cases where the term 'sewer' has been used interchangeably to refer to both sanitary and storm sewers." However, the holdings in these cases are more limited. *County of Riverside* refers to "sewer" only in a footnote, which quotes from an Interim Assembly Committee Report discussing public improvements including "streets, storm and sanitary sewers, sidewalks, curbs, etc." (language which does not distinguish between storm and sanitary sewers).[99] However, in another footnote which quoted from Street & Highways Code § 2932 regarding assessments for public improvements, the phrase "sewerage or drainage facilities" is employed, again reflecting a distinction between these functions and assigning the function of sanitary services to "sewerage."[100]

Ramseier involved a dispute over a contract to expand the district's "storm and sanitary sewer system."[101] This was the only reference to "sewers" in the case, and that reference distinguishes between "storm" and "sanitary" sewers. The rationale for citation to *Torson* is unclear, though the case involved a requested extension of a sanitary sewer, and the statutes cited in the case referred, separately, to both "sanitary" and "storm" sewers.[102] While these cases present only limited examples of how the term "storm sewer" or "sanitary sewer" were employed, it is clear that in all, a distinction is drawn between sanitary sewers and storm sewers.

3. There is Significant Evidence that the Legislature and the Courts Considered "Sewers" to be Different from "Storm Drains" Prior to the Adoption of Proposition 218

---

[98] Cited in Govt. Code § 53751(i)(4)

[99] 22 Cal.App.3d at 874 n.9.

[100] 22 Cal.App.3d at 869 n.8.

[101] 197 Cal.App.2d at 723.

[102] 91 Cal. App. at 172.

There are numerous examples in pre-Proposition 218 California statutes and caselaw of the term "sewer" being used to denote sanitary sewers and not storm sewers. For example, Education Code § 81310, in referring to the power of a community college board to convey an easement to a utility, refers to "water, *sewer*, gas, or *storm drain* pipes or ditches, electric or telephone lines, and access roads." (emphasis added). There is no ambiguity in this statute – the "sewer" being referred cannot be a storm sewer, as "storm drain" pipes are specifically referenced.[103]

Another example is Govt. Code § 66452.6, relating to the timing of extensions for subdivision tentative map act approval, and defining "public improvements" to include "traffic controls, streets, roads, highways, freeways, bridges, overcrossings, street interchanges, *flood control or storm drain facilities*, *sewer facilities*, water facilities, and lighting facilities."[104] Again, there is no ambiguity; the Legislature separately defined "flood control or storm drain facilities" from "sewer facilities," with the latter taken on the same meaning ascribed to it in *City of Salinas.*

Similarly, Health & Safety Code § 6520.1 provides that a sanitary district can prohibit a private property owner from connecting "any house, habitation, or structure requiring *sewerage or drainage* disposal service to any privately owned *sewer* or *storm drain* in the district." Again, the Legislature used "sewer" here as a sanitation utility separate and apart from drainage. This practice of defining "sewer" as a sanitary utility distinct from "storm drain" has continued after the adoption of Proposition 218. In Water Code § 8007, effective May 21, 2009, the Legislature made the extension of certain utilities into disadvantaged unincorporated areas subject to the prevailing wage law, and defined those utilities as the city's "water, *sewer, or storm drain* system." (emphasis added).

Cases, too have used the term "sewer" to mean a sanitary sewer handling sewage as opposed to storm drains. For example, in *E.L. White, Inc. v. Huntington Beach* (1978) 21 Cal.3d 497, the Supreme Court used the terms "storm drain" and "sewer" separately in discussing the liability of the city and a contractor for a fatal industrial accident. Also, in *Shea v. Los Angeles* (1935) 6 Cal.App.2d 534, 535-36, the court referred to the "sanitary sewer" and "sewers" in addition to a "storm drain." In *Boynton v. City of Lockport Mun. Sewer Dist.* (1972) 28 Cal.App.3d 91, 93-96, the court discussed whether "sewer rates" were properly assessed by the city, and in that case, the court consistently used the term "sewer" to refer to sanitary sewers handling sewage.

These examples demonstrate that there was no "plain meaning" of "sewer" as a term that encompassed both sanitary and storm sewers. In fact, as the Third District Court of Appeal recently held in *San Diego Permit Appeal II*, the term was understood by the voters to mean solely sanitary sewers.

---

[103] *K.C., supra,* 24 Cal.App.5th at 1011 n.4 (when Legislature uses different words in the same sentence, it is assumed that it intended the words to have different meanings).

[104] Govt. Code § 66452.6(a)(3) (emphasis added).

Thus, there is significant evidence, in the language of the ballot measure itself, in the interpretation courts are required to give to the measure, and in the prevailing legislative and judicial usage of the term "sewer," to find that the voters on Proposition 218 intended the result found by the court in *City of Salinas.* As such, SB 231 is an unconstitutional attempt by the Legislature to rewrite history and should not be relied upon by the Commission to refuse a subvention of funds for the costs of unfunded state mandates in the Test Claim Permit incurred after January 1, 2018.

V. CONCLUSION

In summary, Claimants respectfully request that the Commission consider the arguments set forth in these Comments in their consideration of the Decision to be rendered on the Test Claim. Claimants appreciate this opportunity to provide their comments on the DPD.

I declare under penalty of perjury that the foregoing, signed on May 19, 2023, is true and correct to the best of my personal knowledge, information, or belief.

Executive Director
Commission on State Mandates
980 Ninth Street, Suite 300
Sacramento, CA 95814

Response to Draft Proposed Decision for Test Claim 11-TC-03, California Regional Water Quality Control Board, San Diego Region, Order No. R0-2010-0016

Dear Director Halsey:

The Department of Finance (Finance) has reviewed the draft proposed decision for the San Diego Regional Water Quality Control Board (Regional Water Board), Test Claim 11-TC-03. Finance defers to the California State Water Resources Control Board (State Board) and to the Regional Water Board as to (i) the duration of any reimbursement period; and (ii) those portions of the Test Claim Permit (as defined below) where the draft proposed decision finds potential for reimbursable costs.

Finance agrees with the draft proposed decision's conclusions that the conditions set forth in certain sections of Order No. R9-2010-0016 issued by the Regional Water Board (Test Claim Permit) do not impose a new program or higher level of service within the meaning of article XIIIB, section 6 of the California Constitution. Specifically, Finance notes that the draft proposed decision is correct with respect to its denial of reimbursable costs associated with Section B.2.; Section C.; Sections F.4.d. and e. and Section II.C. of Attachment E; Section D; Sections F.1.d., 2., 4., 7., Sections h. and F.3.d1.-5; Section F.1.f.; Sections F.2.d.3.; Section $.2.e.6.e.;Sections F.1.i. and F.3.a.10.; and Section F.3.b.4.a.ii of the Test Claim Permit.

Finance continues to assert that claimants do have sufficient fee authority that is undiminished by Propositions 218 and 26. Finance relies on the holding in Clovis Unified School Dist. v. Chiang (2010) 188 Cal.App.4th, 794 that, to the extent that local government has authority to charge for program costs, those charges cannot be recovered as a state-mandated cost. Thus, Finance argues that the decision by local government not to take the additional necessary steps (such as submitting a proposed fee to voters) to exercise fee authority does not negate that fee authority but instead evidences an exercise of discretion by local government. This is supported by Paradise Irrigation District v. Commission on State Mandates (2019) 33 Cal.App.5th 174, 244 which found that the majority protest procedure (which Finance contends is one of the additional steps to the exercise of fee authority as described above) does not negate a claimant's fee authority. Further, Finance maintains that Government Code section

17556(d) applies in that there can be no finding of a reimbursable stated-mandated program when the claimants have the authority to impose fees sufficient to pay for the requirements of the Test Claim Permit.

Should the Commission find reimbursable costs in connection with the Test Claim Permit, Finance points to offsetting funds that are not "proceeds of taxes" within the meaning of article XIII B, section 8(c) of the California Constitution and notes that the Commission should take all steps necessary to identify those funds and deduct them from any reimbursable costs. As noted in Department of Finance vs. Commission on State Mandates (2022) 85 Cal.App.5th 535, 560, citing County of Fresno v. State of California et al. 280 Cal.Rptr., 92 at p. 487, article XIII B, section 6 of the California Constitution requires subvention only when the costs in question can be recovered solely from tax revenues.

If you have any questions regarding this letter, please contact Chris Hill, Principal Program Budget Analyst at (916) 445-3274.

Sincerely,

Teresa Calvert

TERESA CALVERT
Program Budget Manager

Re: Notice of Errata Regarding Claimants' Comments on Draft Proposed Decision on *California Regional Water Quality Control Board, San Diego Region, Order No. R9-2010-0016, etc.* Test Claim 11-TC-03

Dear Ms. Halsey:

I am writing as Claimant Representative to advise of errata in the Comments of Claimants County of Riverside, the Riverside County Flood Control and Water Conservation District, and the Cities of Murrieta, Temecula and Wildomar on the Draft Proposed Decision issued by Commission staff on the above-referenced Joint Test Claim.

As indicated in the attached redline pages, in the third full paragraph on page 5 of the Comments, the citation should be to *Dept. of Finance v. Commission on State Mandates* (2022) 85 Cal.App.5th 535, 559. In footnote 12 at the bottom of the page, the full case name is added since it is the first time that the case is cited. On page 7, in the second paragraph, the partial case name is used since the case was previously cited.

Please let me know if you have any questions or if Commission staff require anything additional. Thank you.

I declare under penalty of perjury that the foregoing, signed on August 23, 2023, is true and correct to the best of my personal knowledge, information, or belief.

David W. Burhenn
Claimant Representative
Address, phone and e-mail set forth above

discharges "do not change or increase [the] level or quality of service to the public; they simply make the claimants comply with existing federal law to prohibit non-stormwater discharges." DPD at 89.

Claimants disagree. First, "federal requirements" exempted irrigation-related discharges from the "effectively prohibit" non-stormwater discharge requirement *unless* they were identified by the *municipalities* as a source of pollutants to waters of the United States.[10] The 2004 Permit did *not* require Claimants to address these discharges unless, *in the discretion of permittee or the Water Board*, they should be. Test Claim Permit Section B.2 removed that discretion, requiring Claimants to now address such discharges -- a "new" requirement. A "program is 'new' if the local government had not previously been required to institute it." *County of Los Angeles v. Comm. on State Mandates* (2003) 110 Cal.App.4th 1176, 1189; *Lucia Mar Unified School Dist. v. Honig* (1988) 44 Cal.3d 830, 835 ("*Lucia Mar*").

Second, general federal regulatory language does not impose a federal mandate if the regulation leaves the manner of implementation to the discretion of the permittee. *See LA County Permit Appeal I.*[11] Here, the language of the federal regulation left the discretion as to whether to include irrigation-related discharges to the permittees.

In addition, "the application of Section 6 . . . does not turn on whether the underlying obligations to abate pollution remain the same. It applies if any executive order, which each permit is, requires permittees to provide a new program or a higher level of existing services." *Dept. of Finance v. Commission on State Mandates* (2022~~1~~) 85~~59~~ Cal.App.5th 53~~546~~, 559 ("*San Diego~~LA County~~ Permit Appeal II*"). The additional obligations imposed on Claimants by removal of the exemption, such as required changes to the CMP and JRMP and additional monitoring, represented a "higher level of service" to the public, contrary to the conclusion in the DPD. What constitutes a "higher level of service" are "'state mandated increases in the services provided by local agencies in existing programs.'"[12]

The removal of the exemption for irrigation-related discharges in Section B.2 of the Test Claim Permit constitutes a state mandate for which a subvention of funds is required.

C. Requirements in Sections C., F.4.d. and e. and Section II.C. of Attachment E Relating to Non-Stormwater Action Levels

The above-cited Test Claim Permit requirements mandated Claimants to undertake an entirely new program relating to Non-Stormwater Action Levels ("NALs"). As described in the DPD (at 99-103), permittees were required to do the following tasks, among others:

- Monitor at specified locations, including major outfalls, and such other sampling points as identified by the permittees and map those locations on their MS4 map;

---

the Test Claim Permit and the 2004 Permit were different and under *Lucia Mar, supra,* the removal of the exemption in the test Claim permit was a new requirement.

[10] 40 CFR § 122.26(d)(2)(iv)(B)(1).

[11] 1 Cal. 5th at 770.

[12] *Dept of Finance v. Commission on State Mandates ~~LA County Permit Appeal II,~~* (2021) 59 Cal.App.5th 546,~~at~~ 556 (*"LA County Permit Appeal II"*) (*quoting County of Los Angeles v. State of California* (1987) 43 Cal. 3d 46, 56).

While stopping short of concluding that federal law compelled the NAL requirements, the DPD appears to "bootstrap" the federal illegal discharge requirements to support its conclusion that the NAL requirements are not "new" since these underlying federal requirements had been in place long before the Test Claim Permit.

Claimants disagree. In a recent case, *Dept. of Finance v. Comm. on State Mandates* (2022) 85 Cal.App.5th 535 ("*San Diego Permit Appeal II*"), the Third District Court of Appeal rejected a similar argument made by the state in an appeal of a test claim concerning the 2007 San Diego County MS4 Permit. That case is discussed next below.

2. The NAL Requirements Were "New" and Represented a "Higher Level of Service"

In *San Diego Permit Appeal II*, the state argued, *inter alia,* that various MS4 permit requirements were not "new" because permittees had an underlying obligation, dating from the adoption of the CWA's provisions addressing MS4 discharges, and permittees' first MS4 permit, to "prohibit nonstormwater discharges into their MS4s . . . ."[13]

The Court of Appeal rejected that argument:

> The application of [article XIIIB] Section 6 . . . does not turn on whether the underlying obligations to abate pollution remains the same. It applies if any executive order, which each permit is, requires permittees to provide a new program or a high level of existing services."[14]

The court held that in determining "whether a program imposed by the permit is new, we compare the legal requirements imposed by the new permit with those in effect before the new permit became effective."[15] The court found that this "is so even though the [new] conditions *were designed to satisfy the same standard of performance.*"[16]

Here, the underlying obligations set forth in the CWA and in the cited MS4 permit application regulations have long existed and governed previous MS4 permits. The existence of any longstanding "underlying obligations," however, does not mean that the specific NALs requirements in the Test Claim Permit are not "new." To determine that, the inquiry must focus on whether the NAL requirements in the Test Claim Permit were required in the 2004 Permit. *See San Diego Unified School Dist. v. Comm. on State Mandates* (2004) 33 Cal. 4th 859, 878 (*San Diego Unified"); Lucia Mar, supra.*[17] That comparison shows that the NALs requirements in the Test Claim Permit were not present in the 2004 Permit.

Section II.C.1.a.(1) of the Test Claim Permit Monitoring and Reporting Program (Attachment E to the Test Claim Permit) ("Test Claim Permit MRP") required that permittees "must" sample "at major outfalls" and "[o]ther outfall sampling points . . . identified by the Copermittees as potential high risk sources of polluted effluent or as identified under Section C.4

ORDER NO. R9-2010-0016

JUNE 27, 2012

CERTIFICATION

I certify under penalty of law that this document and all attachments including the Watershed Workplan and Water Quality Management Plan, prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Signed: _____ Date: 6/26/2012

Patrick A. Thomas, PE
Director of Public Works

WLA	Waste Load Allocation
2010 SMR MS4 Permit	Order No. R9-2010-0016

EXECUTIVE SUMMARY

This Jurisdictional Runoff Management Program (JRMP) describes the specific Runoff management programs and activities implemented to comply with the requirements of the Municipal Separate Storm Sewer System (MS4) Permit, Order No. R9-2010-0016, issued to the Riverside County Copermittees in the Santa Margarita Region (SMR) by the San Diego Regional Water Quality Control Board (San Diego Regional Board) on November 10, 2010 (2010 SMR MS4 Permit). This JRMP is the principal document that comprehensively translates the MS4 Permit requirements into actions that the City of Murrieta is implementing to comply with the 2010 SMR MS4 Permit. This JRMP will be reviewed at least annually to incorporate new and revised compliance programs specified in the 2010 SMR MS4 Permit.

This JRMP is based on a SMR-wide template developed jointly by the Copermittees to promote consistency in the compliance programs implemented in the SMR. The JRMP has been customized to describe the City of Murrieta 's compliance procedures and requirements. The terms and acronyms used in this JRMP are defined in the glossary (Appendix A) and defined terms are capitalized.

2.0 Introduction To The City of Murrieta JRMP

2.1 Program Overview

The Clean Water Act of 1987 (CWA) established requirements for discharges of Urban Runoff from MS4s under the National Pollution Discharge Elimination System (NPDES) program. The 2010 SMR MS4 Permit regulates discharges of Runoff from MS4 facilities in the SMR. The Copermittees covered under the MS4 Permit are the County of Riverside, Riverside County Flood Control and Water Conservation District (District) and the cities within the SMR, including the City of Murrieta. Each Copermittee is responsible for compliance with the 2010 SMR MS4 Permit.

This JRMP is a programmatic document developed by the City to describe its specific internal management of the Runoff management program as well as ordinances, plans, policies and procedures necessary to manage Runoff and comply with the 2010 SMR MS4 Permit. This JRMP comprehensively translates the 2010 SMR MS4 Permit requirements into programs and Implementation Plans for the City of Murrieta.

2.2 Description of City of Murrieta MS4 Facilities

The major MS4 facilities owned and operated by the City of Murrieta and regulated under the 2010 SMR MS4 Permit consist of underground storm drains, open channels, retention basins, detention basins, and catch basins. Each year, the City of Murrieta updates a map of the City of Murrieta MS4 facilities with modifications and additions to its major MS4 facilities in the JRMP Annual Report.

Within the jurisdictional boundaries of the City of Murrieta, additional MS4 facilities and discharges may be present that are not owned by the City of Murrieta. These may include MS4 facilities owned/operated by the District, and other non MS4 Copermittee entities, including federal, state, tribal and private entities and discharges otherwise permitted by the San Diego Regional Board or the State Water Resources Control Board (State Board).

Table 2-1 lists the Receiving Waters that may receive discharges from the City of Murrieta's MS4 facilities, and the associated 303(d) listings. It should be noted that the City of Murrieta is not alone responsible for potential or actual water quality problems or 303(d) listings within any of the identified Receiving Waters; however the programs identified within this JRMP are designed to reduce the discharge of Stormwater Pollutants from the MS4 to the MEP, effectively prohibit Non-Stormwater discharges, and prevent Runoff discharges from the City of Murrieta's MS4 from causing or contributing to a violation of Water Quality Standards.

Table 2-1: 303(d) Listed Receiving Waters within and downstream of the City of Murrieta's Jurisdiction

Receiving Water	303(d) Listings
Murrieta Creek	Chlorpyrifos, Copper, Iron, Manganese, Nitrogen, Phosphorus, Toxicity
Warm Springs Creek	Chlorpyrifos, Esherichia Coli, Fecal Coliform, Iron, Manganese, Nitrogen, Phosphorus

3.0 PROGRAM MANAGEMENT

3.1 Departmental Responsibilities

There are multiple City of Murrieta departments with responsibility to implement elements of this JRMP and to meet the requirements of the 2010 MS4 Permit. An organizational chart depicting the departments involved in implementing the NPDES program is provided in Appendix B. Additionally, key personnel (position title) with implementation responsibilities, and a matrix showing each JRMP element, the departments with implementation responsibilities, the specific responsibilities of each department/organizational unit, and the key personnel by position title are also provided in Appendix B.

3.2 Cooperative Activities

3.2.1 Implementation Agreement

The City of Murrieta participates in a cooperative Implementation Agreement with the following Copermittees within the SMR.

- County of Riverside
- Riverside County Flood Control and Water Conservation District
- City of Temecula
- City of Wildomar

Through this agreement, the City of Murrieta and the other listed Copermittees contribute funds to implement various aspects of the 2010 SMR MS4 Permit requirements on a region-wide basis. This approach allows for more consistent compliance with many elements of the 2010 SMR MS4 Permit, implementation of programs, increases cost effectiveness, and provides consistent messages for the public. The regional programs that the City of Murrieta jointly funds and implements regionally through this Implementation Agreement include:

- Joint development of compliance documents required by the 2010 SMR MS4 Permit among the Copermittees
- Funding of the additional responsibilities of the District as Principal Copermittee (Described in Section M of the 2010 SMR MS4 Permit)
- Regional public education activities
- Regional training programs for Copermittee staff
- Water quality monitoring as described in the 2010 SMR MS4 Permit Attachment E, Sections II.A through II.F, exclusive of source identification efforts that may be required of the City of

Murrieta based on an exceedances of an Action Level at a City of Murrieta owned Major MS4 Outfall.

- Joint support for other Regional Programs, including
    - The Compliance Assistance Program (CAP) including Food Service and Hazardous Materials facility inspections
    - Household Hazardous Waste and Antifreeze, Batteries, Oil and Latex Paint (ABOP) collection programs
    - Participation in the California Stormwater Quality Association (CASQA)

Major modifications to the interagency agreements and changes in the cooperative activities are described in Annual Reporting to the Regional Board

3.3 Fiscal Analysis {H.}

City of Murrieta makes capital expenditures and incurs operation and maintenance (O&M) costs to implement this JRMP and to meet the requirements of the 2010 MS4 Permit. Each year the capital expenditures and O&M costs incurred during the reporting period and the budgeted capital expenditures and O&M costs planned for the next fiscal year are provided in the Annual Report. Table 3-1 below describes the sources of funding that the City of Murrieta has available to fund these programs.

Table 3-1. Fiscal Resources

Program Element	Funding Source(s)
Program Management and Reporting	General Fund / CSA 152
Annual Fee for MS4 NPDES Permit	General Fund / CSA 152
Implementation Agreement Shared Cost	General Fund / CSA 152
Elimination of Illicit Connections & Illegal Discharges	General Fund / CSA 152
Municipal Facilities and Activities	General Fund / CSA 152
Development Planning	General Fund / CSA 152
Private Development Construction (Inspections)	General Fund / CSA 152
Industrial and Commercial Sources (Inspections)	General Fund / CSA 152
Retrofit Program	General Fund / CSA 152
Public Education & Outreach	General Fund / CSA 152
Other	General Fund / CSA 152

Table 3-2 below describes limitations on how the City of Murrieta can use the various sources of funding.

Table 3-2. Restrictions on Use of Funding Sources

Source of Funds	Restrictions on Use (if applicable)

Source of Funds	Restrictions on Use (if applicable)
County Service Area 152	Limited and cannot be increased
General Fund	Limited and subject to economy

3.4 Legal Authority {E.}

A certification of the City of Murrieta's adequate legal Authority to comply with 40 CFR 122.26(d)(2)(I)(A-F) and the 2010 MS4 Permit is provided in Appendix B. Table 3-3 lists the ordinances that grant the Authority to implement the requirements of the 2010 MS4 Permit and this JRMP. The Runoff Management and Discharge Controls addressed by these ordinances provide the Authority to:

- Control the contribution of Pollutants in discharges of Runoff associated with industrial and construction activity to its MS4 facilities and control the quality of Runoff from Industrial and Construction Sites. This requirement applies both to Industrial and Construction Sites which have coverage under the statewide Industrial or Construction General Stormwater Permits, as well as to those sites which do not. Grading ordinances must be updated and enforced as necessary to comply with this Order;
- Prohibit all identified Illicit Discharges not otherwise allowed pursuant to Section B.2 of the 2010 SMR MS4 Permit;
- Prohibit and eliminate Illicit Connections to the MS4;
- Control the discharge of spills, dumping, or disposal of materials other than Stormwater into the MS4;
- Require compliance with conditions in City of Murrieta's ordinances, permits, contracts or orders (i.e., hold dischargers to its MS4 facilities accountable for their contributions of Pollutants and flows);
- Utilize enforcement mechanisms to require compliance with City of Murrieta Stormwater Ordinances, permits, contracts, or orders;
- Control the contribution of Pollutants from one portion of the MS4 to another through interagency agreements with other Copermittees;
- Carry out all inspections, surveillance, and monitoring necessary to determine compliance and noncompliance with the Stormwater Ordinance and permits and with the 2010 SMR MS4 Permit, including the prohibition on Illicit Discharges to the MS4. The City of Murrieta has authority to enter, monitor, inspect, take measurements, review and copy records, and require regular reports from Industrial Facilities discharging into its MS4 facilities, including Construction Sites;
- Require the use of BMPs to prevent or reduce the discharge of Pollutants into the MS4 from Stormwater to the MEP;
- Require documentation on the effectiveness of BMPs implemented to reduce the discharge of Stormwater Pollutants to the MS4 to the MEP; and
- Implement and enforce its ordinances within CIA/HOA areas and mobile home parks.

Table 3-3 lists the City of Murrieta's ordinances that provide this legal authority. These ordinances (1) can be viewed at http://www.amlegal.com/library/ca/murrieta.shtml

Table 3-3. Ordinances Providing Legal Authority

Ordinance No.	Ordinance Short Title	Provision(s) of Ordinance and Description of Authorities Granted	Availability of Ordinance (Online URL or front counter)	Date of last update/status (Pending, draft, or adopted)
Chapter 8.36	Stormwater and Urban Runoff Management and Discharge Controls	Prohibit discharge of any pollutant per the NPDES Clean Water Act Section 402, 33 U.S.C. Section 1342 and prohibits discharges of non-stormwater discharges to the MS4	Online and front counter	1st Reading Approved, 2nd Reading is Pending
Chapter 1.26	Administrative Citations	Alternative method of enforcement for minor violations of the municipal code and applicable state codes.	Online and front counter	Adopted
Chapter 1.32	General Penalties	Administer monetary fines for non-compliance with the municipal code	Online and front counter	Adopted
Chapter 8.20	Summary of Abatement of Nuisances	A procedure for the abatement of nuisances in the interest of the public health, safety, and welfare	Online and front counter	Adopted

3.5 Enforcement/Compliance Strategy

As described within this JRMP, the City of Murrieta implements a variety of programs and has established ordinances that are designed to meet the goals of the 2010 SMR MS4 Permit, however the City of Murrieta must necessarily rely on the actions or inactions of independent third parties such as residents and businesses for the protection of water quality. Accordingly, consistent with the 2010 SMR MS4 Permit and pursuant to the legal authorities described in Section 3.4, compliance with the City of Murrieta's ordinances is mandated through implementation of various enforcement mechanisms.

This section describes a program wide Enforcement / Compliance Strategy that serves as guidance to the various City of Murrieta departments in prioritizing and conducting enforcement activities that are consistent with the 2010 MS4 Permit and appropriate to the severity of the violation. Due to the unique nature of mobile businesses, specific enforcement procedures for Mobile Businesses are described in Section 3.5.3.

3.5.1 Prioritize Violations

The City of Murrieta's ordinances cover a wide range of prohibited activities with varying magnitudes of potential impact on the Beneficial Uses of Receiving Waters. For example, discharges of either Hazardous Materials (e.g., solvents and pesticides) or Non-Hazardous Materials (e.g., food Wastes, trash, and debris) into the MS4 are violations of Stormwater Ordinance subject to enforcement. Similarly, an accidental spill into a catch basin inlet and an intentional discharge from an Illicit Connection are both violations. Prioritizing violations is important in focusing the City of Murrieta's finite resources on those violations that may have the greatest potential impact on the quality of Receiving Waters.

Prioritizing violations is based on many factors, including the experience and professional judgment of the City of Murrieta's staff. The factors that are commonly considered in prioritizing violations of the City of Murrieta's Stormwater and Urban Runoff Management and Discharge Controls ordinance and Grading, Erosion and Sediment Control ordinance are presented in Table 3-4.

Table 3-4. Prioritization Factors for Violations

Prioritization Factor	Description
Characteristics of the Potential Pollutant	Based on chemical characteristics and potential to impact Beneficial Uses of Receiving Waters. The more Toxic, hazardous, or detrimental to the Beneficial Uses of the Receiving Waters a Pollutant, is the higher priority the discharge.
Sensitivity of the Affected Receiving Waters	The sensitivity of the affected Receiving Waters should be considered directly proportional to the priority of the violation because, for example, a more sensitive Receiving Water may suffer severe adverse effects from the discharge of a particular Pollutant whereas a less sensitive Receiving Water may suffer no adverse effects from the same Pollutant discharge. It is also important to consider that a Receiving Water may be highly sensitive to one potential Pollutant discharge while, at the same time, completely insensitive to another potential Pollutant. Examples of Receiving Waters that may be particularly sensitive include those with municipal supply or wildlife habitat designated Beneficial Uses.
Proximity of Receiving Waters	The closer a Receiving Water is to the discharge, the less chance there is for dispersion, dilution, or degradation of the potential Pollutant. Therefore, the closer the discharge is to Receiving Waters, the higher priority of the violation.
Magnitude of Discharge (volume and mass)	A larger Illegal Discharge should be of a higher priority than a smaller Illegal Discharge because as the magnitude of the Pollutant discharge increases, the extent of impact of the discharge on the environment increases as well.
Responsiveness of the Discharger in taking corrective actions	A discharger who is responsive and implements a good faith effort to correct a violation is more likely to minimize adverse impacts to surface water quality than a discharger who takes no action to correct a violation. Therefore, the priority of a violation should decrease as the responsiveness of the discharger increases.
Intent of the Discharger	Is the violation accidental or the result of an accident or a deliberate attempt to circumvent regulations?
Frequency of the Violation	Violations of local Stormwater Ordinances and erosion control ordinances that are continuous or reoccurring should be of a higher priority than isolated occurrences of violations. The more frequent a violation, the more likely it is that the discharge will impact surface water quality.
Previous History of Non-Compliance of the Responsible Party	A poor history of non-compliance of a discharger should result in a higher prioritization of subsequent violations as compared to a discharger with a good history of compliance because a history of non-compliance is evidence of a discharger's lack of concern for complying with local Stormwater and erosion control ordinances.

Table 3-5 provides general guidance for categorizing the relative severity of violations based upon the factors and/or circumstances associated with a violation.

Table 3-5. Relative Severity of Violations

Factors Affecting the Severity of Violations	Severity Priority Level		
	High	Medium	Low
Pollutant characteristics	Hazardous Materials (e.g., pesticides and solvents)	Metals, nutrients, sediment, other non-Hazardous Materials	Trash and debris
Sensitivity of Receiving Waters	Drinking water source, wildlife refuge, Illegal Discharges containing Pollutants identified as Impairing the Receiving Water.	Recreational reservoir, riparian habitat	Dry, ephemeral stream
Proximity of Receiving Waters	Adjacent	Several hundred feet away	Several hundred yards away
Discharge magnitude	1000's gallons	100's gallons	10's gallons
Responsiveness of discharger	No action to contain or mitigate discharge	Reactive to control discharge when requested (i.e., cooperative)	Implements spill control plan at own initiative or shows good faith effort to respond
Intent of violation	Intentional	Discharge due to lack of controls or negligence	Implemented and maintained controls that failed (i.e., accident)
Frequency of violation	Continuous	Intermittent	Isolated incident
Previous history of discharger	Enforcement and cleanup historically resisted and more than one previous violation	Enforcement and cleanup performed when threatened and one or less previous violations	Enforcement and cleanup performed when requested and no previous violations

Because violations may not clearly fall into any single priority level described in Table 3-5, the priority assigned by City of Murrieta staff to particular violations may involve a subjective weighting of various factors.

3.5.2 Select Appropriate Enforcement Actions

The City of Murrieta will emphasize and encourage voluntary compliance with its ordinances to the MEP. The enforcement/compliance response should be based on the severity of the violation in consideration of the factors in Table 3-5. The types of enforcement/compliance responses available, depending on the circumstances, and in typical order of increasing severity, are:

- Education and information,
- Verbal warning,
- Written warning,
- Notice of violation or noncompliance,
- Stop work order or cease and desist order,
- Civil citation or injunction,
- Monetary fine

- Bonding
- Administrative fine, and
- Referral to the Environmental Crimes Strike Force for criminal prosecution (infraction or misdemeanor).

3.5.2.1 Administrative Remedies

Education and Information, and Verbal and Written Warnings. Education and information should be provided to dischargers as an element of each enforcement action. Verbal and written warnings may also be provided depending on the circumstances of the condition that is causing or threatening to cause a violation of the City of Murrieta's ordinances. However, unless the condition is an initial violation of the Stormwater Ordinance and consists of a low priority and severity violation, additional enforcement action may be appropriate.

Notice of Noncompliance. The Notice of Noncompliance constitutes a basic request that the property owner or facility operator rectify the condition causing or threatening to cause noncompliance with the City of Murrieta's ordinances. The Notice of Noncompliance is generally issued when one or more of the following circumstances exist:

- The violation or threat is not significant and has been short in duration,
- The responsible party is cooperative and has indicated a willingness to remedy the conditions,
- The violation or threat is an isolated incident, and
- The violation or threat does not affect and will not harm human health or the environment.
- An actual condition of noncompliance exists, but the condition cannot be remedied within a relatively short period of time.
- The owner of the property or facility operator has indicated willingness to come into compliance by meeting milestones established in a reasonable schedule.
- The violation does not pose an immediate threat to human health or the environment.

Stop Work Order or Cease and Desist Order. The Stop Work Order or Cease and Desist Order are appropriate when the immediate action of the owner of property or operator of a facility is necessary to stop an existing discharge, which is occurring in violation of an ordinance. The Cease and Desist Order may also be appropriately issued as a first step in ordering the removal of nuisance conditions, which threaten to cause an unauthorized discharge of Pollutants if exposed to rain or surface water Runoff. The Cease and Desist Order is generally issued when one or more of the following circumstances exist:

- The violation or threat is immediate in nature and may require an emergency spill response or immediate nuisance abatement if left unattended.
- The violation or threat exhibits a potential situation that may harm human health or the environment.
- Contacts with the property owner or facility operator indicate that further Authority of the Copermittee may need to be demonstrated before remedial action is forthcoming.
- Prior Notices of Noncompliance have not obtained a favorable response.

Prior to issuance of any Cease and Desist Order or commencement of other civil or criminal enforcement action against any person, the City of Murrieta should deliver to the person a written Notice of Noncompliance, which states the act or acts constituting the violation and directs that the violation be corrected. The Notice of Noncompliance should provide the person with a reasonable time period to correct the violation before further proceedings are brought against the person. However, a Notice of Noncompliance should not be the first enforcement method used if egregious or unusual circumstances indicate that a stronger enforcement method is appropriate.

3.5.2.2 Criminal Enforcement

Misdemeanors. Criminal enforcement is appropriate when evidence of noncompliance indicates that the violator of the Ordinance has acted willfully with intent to cause, allow continuing or concealing a discharge in violation of the Ordinance.

Infractions. At the discretion of the City of Murrieta's attorneys, misdemeanor acts may be treated as infractions. Factors that the attorney may use in determining whether the misdemeanor is more appropriately treated as an infraction may include the:

- Duration of the violation or threatened violation.
- Compliance history of the person, business or entity.
- Effort made to comply with an established compliance schedule.
- Existence of prior enforcement actions.
- Actual harm to human health or the environment from the violation.

Issuance of Citation. Where criminal enforcement is indicated, the inspector will issue a citation including the:

- Name and address of the violator,
- Provisions of the ordinance violated,
- Time and place of required appearance before a magistrate.

The offending party must sign the citation thereby promising to appear. If the cited party refuses to sign the citation, the inspector may cause the arrest of the discharger, or may refer the matter to the municipal attorney for issuance of a warrant for arrest. Inspectors should be aware that cited parties have the right to demand the immediate review by a magistrate, and such a request must be granted. Inspectors should respond to such a request by referring the request to the City of Murrieta's Police Department.

Referral to Environmental Crimes Strike Force

The Riverside County Environmental Crimes Strike Force is a committee designed to pursue enforcement of serious environmental crimes. Referral of a case to the Environmental Crimes Strike Force would occur after repeated attempts at obtaining compliance have failed. The contact for the Environmental Crimes Task Force is Daniel Workman, Senior Investigator, Riverside County District Attorney Office (951.955.0755 dworkman@rivcodda.org). If Mr. Workman is not available, an Environmental Crimes Investigator can be contacted at 951.955.5430.

3.5.2.3 Appropriate Enforcement/Compliance Responses

Table 3-6 provides an example of appropriate enforcement responses that correspond to the severity of a violation as determined from Table 3-5. Recognizing the unique characteristics of mobile businesses, enforcement actions against such businesses will typically follow the procedure described in Section 3.5.3 below.

Table 3-6. Enforcement Responses for Violations Where Overlapping Authority Exists

Incident Severity Priority Level	Appropriate Enforcement Responses[1]	Lead Enforcement Agency	
		Copermittee	Regional Board Support
High	Referral to Environmental Crimes Strike Force	X	X
	Citation	X	X
	Infraction	X	X
	Misdemeanor	X	X
Medium	Infraction	X	X
	Misdemeanor	X	X
	Stop work order or cease and desist order	X	
	Notice of non-compliance	X	
Low	Notice of non-compliance	X	
	Written warning	X	
	Verbal warning	X	
	Education and information	X	

[1] Education and information should be incorporated into all enforcement responses.

The City of Murrieta takes the lead in initiating enforcement actions related to violations of its Stormwater Ordinance within its jurisdiction, however the Regional Board may be asked to provide support in enforcement actions related to incidents that are or escalate to a high-priority status. State law limits the Authority of the City of Murrieta to assess significant fines and penalties. However, the Regional Board has substantial abilities to assess fines and penalties under state and federal law that can be used to augment local enforcement where superior regulatory Authority and the ability to assess fines and penalties would be beneficial. Additionally, the Regional Board will be responsible for performing all enforcement actions related to compliance with the Statewide General Permits.

3.5.3 Enforcement Strategy for Violations Originating from Mobile Businesses {F.3.b.(3)(ii)}

Predominantly, violations by Mobile Businesses are reported by the public or by City of Murrieta field personnel. Appropriate field personnel are also trained to identify potential Non-Stormwater Discharges and other discharge of Pollutants from Mobile Businesses during the course of their normal duties. Violations originating from Mobile Businesses may be received by the City of Murrieta in the form of complaint calls from the public. For example, the District currently operates, on behalf of the City of Murrieta, a centralized 24-hour hotline (800-506-2556) that may be used by the public to, among other things, report violations into public streets, the MS4 and other water bodies. These calls can be received in English or Spanish and are routed to the appropriate Copermittee departments or contacts. The City of

Murrieta also implements Wet and Dry Weather monitoring programs that may indicate the presence of Non-Stormwater Discharges and other discharges of Pollutants to the MS4.

When put on notice by staff or a third party of a potential violation of City of Murrieta ordinances originating from a Mobile Business that is not already being responded to by another responsible agency (e.g., other Copermittee), the City of Murrieta investigates and take the following actions, as applicable:

- If the reported incident is outside of the City of Murrieta's jurisdiction, referral to the appropriate agency and/or the Regional Board will be made;
- Identify the name and contact information for the Mobile Business;
- The City of Murrieta responds to reported violations originating from a Mobile Business within its jurisdiction within two (2) business days of determining the name and contact information for the Mobile Business;
- Inspections performed in response to a report are documented using the standard complaint reporting forms; and
- When appropriate, samples of Non-Stormwater Discharges originating from Mobile Businesses that enter the MS4 may be collected.

As described in Section 8.5, investigations of Mobile Businesses are performed by the City of Murrieta in response to reports of potential violations originating from Mobile Businesses received from the public, staff and/or other agencies. The City of Murrieta has adopted ordinances prohibiting such discharges and established programs to enforce them.

Where violations that originate from Mobile Businesses are discovered, the City of Murrieta will take appropriate enforcement action. Recognizing the unique characteristics of Mobile Businesses, the typical escalating enforcement protocol includes the following; however steps may be adjusted as appropriate to the nature of the violation:

Initial Violation

1) City of Murrieta staff provides educational materials to the Mobile Business operator informing them of the minimum Source Control and Pollution Prevention BMPs they must implement (refer to Section 8.5.1). This includes a review of applicable BMP fact sheets, and letting the operator know the proper procedures for disposal of Pollutants and Non-Stormwater discharges originating from Mobile Businesses.

2) If applicable, the City of Murrieta will require the Mobile Business owner to obtain a local business license.

3) The City of Murrieta may give notice that the Mobile Business operator shall cease any activity which causes Non-Stormwater Discharge to the MS4 until they implement the minimum BMPs (see below for list of recommended BMPs).

4) If discharge is observed at time of inspection, City of Murrieta staff shall require the Mobile Business operator to immediately contain the discharge and perform any necessary remediation or cleanup from the MS4.

Repeat Violations

For repeat violations by the same operator, the City of Murrieta follows the remainder of the Enforcement Compliance strategy in Section 3.5 which may include, as appropriate, issuing written warnings, Notices of Violation, citations, or referrals to the Regional Board.

3.5.4 Coordination of Enforcement/Compliance Activities

Coordination with other Copermittees and government agencies including the Regional Board is essential for successful implementation of an enforcement/compliance program. The entire MS4 is not controlled by a single federal, tribal, state, local or private entity, nor does any single entity have Authority to take enforcement action for violations occurring outside of its jurisdiction. Further, other governmental agencies may have additional enforcement authorities that are appropriate to the situation. The City of Murrieta coordinates its enforcement activities, as practicable, with the appropriate Copermittees and government and agencies and tribes in accordance with the following guidelines:

3.5.4.1 Identify Lead Agency

- Enforcement will be coordinated when multiple agencies have jurisdiction and an agency has not been able to obtain compliance by the discharger.
- Unless otherwise agreed to in writing, the lead enforcement agency role will be assigned on the basis of the origin of the discharge.
- The Regional Board may be asked to be the lead enforcement agency for higher priority Illegal Discharges in areas of overlapping Authority, such as for discharges to Receiving Waters, and will be the lead enforcement agency for all enforcement actions related to compliance with the State Industrial or Construction General Stormwater Permits.
- Investigation and other relevant information will be shared between the participating agencies in a timely fashion.

3.5.4.2 Lead Enforcement Agency Responsibilities.

The lead enforcement agency will assume the following responsibilities:

- Coordinating activities and assigning responsibilities (e.g., investigations, site visits, etc.) among participating agencies;
- Maintaining communication and information exchange among participating agencies;
- Ensuring that follow-up actions are implemented; and
- Documentation and reporting as required.

3.5.4.3 Coordination with the Regional Board

Under the Porter-Cologne Water Quality Act, the State has provided the Regional Boards with overriding Authority to manage water quality and administer compliance with state and federal water quality law.

This Authority includes the ability to impose more significant fines and other sanctions than the Copermittees. With this Authority, the Regional Board may be more effective in obtaining the cooperation and compliance from those who violate Stormwater regulations. The Regional Board is notified by the City of Murrieta when findings of potential non-compliance with the State's Industrial and Construction General Stormwater Permits have been identified or when the City of Murrieta has been unable to obtain the compliance of a party responsible for violating its Stormwater Ordinance or erosion control ordinance. The list of contact names maintained by the District identifies the appropriate Regional Board staff to contact to initiate coordination of enforcement activities or to notify the Regional Board of potential findings of non-compliance. Where appropriate, notifications of potential non-compliance should be forwarded to the designated Regional Board contact person by the stormwater compliance coordinator.

3.5.4.4 Coordination with Other Agencies

In addition to the Regional Board, the City of Murrieta may also find it useful or necessary to coordinate or report findings of potential non-compliance to other government agencies with jurisdiction over water quality issues including the California Department of Fish and Game and the United States Fish and Wildlife Service. The list of contact names maintained by the District identifies the appropriate staff at these agencies to contact to initiate coordination of enforcement activities or to notify of potential findings of non-compliance. In addition, the City of Murrieta may cooperate with other Copermittees in the Santa Margarita Region in developing and implementing programs for mobile businesses, including sharing of mobile business inventories, BMP requirements, enforcement action information, and education.

3.5.5 Recordkeeping

Enforcement actions taken, and tools such as citations or tickets utilized, and the discharger's return to compliance are tracked in the databases described in the JRMP. Information to be retained by the City of Murrieta regarding their enforcement program includes:

- Documentation of staff training;
- Inspection notes or reports;
- Warning letters, violation notices, etc.;
- Documentation of follow-up actions;
- Contact reports from meetings or conversations with violators, other Copermittees, or other agencies; and
- Copies of notifications of potential non-compliance.

3.6 Receiving Water Limitations {A.3.}

The 2010 SMR MS4 Permit states that discharges from City of Murrieta MS4 that have been found to cause or contribute to the violation of water quality standards (designated beneficial uses, water quality objectives developed to protect beneficial uses, and the State policy with respect to maintaining high quality waters) are prohibited. The City of Murrieta complies with this prohibition through timely

implementation of control measures and other actions as described in this JRMP to reduce pollutants in stormwater discharges in accordance with the 2010 MS4 Permit.

If it is determined that discharges from City of Murrieta MS4 are causing or contributing to exceedances of Water Quality Standards that persist, notwithstanding implementation of the control measures specified in the JRMP, the City of Murrieta will implement the following procedure:

Notification

If the City of Murrieta determines that discharges from its MS4 are causing or contributing to an exceedance within a receiving water of an applicable Receiving Water Quality Standard, within thirty (30) working days, the City of Murrieta's NPDES Coordinator will provide oral or e-mail notification to the Executive Officer, identifying the pertinent information and data supporting the determination, and commit to submitting a full report in accordance with the reporting procedures below.

If the City of Murrieta's NPDES Coordinator is notified by the Executive Officer of a determination by the Regional Board that discharges from the City of Murrieta's MS4 are causing or contributing to an exceedance within a receiving water of an applicable Receiving Water Quality Standard, within ten (10) working days the City of Murrieta's NPDES Coordinator will via e-mail acknowledge such notification, and formally request any pertinent supporting information and data not included in the original notification. Following receipt and validation of all information supporting such a determination, the City of Murrieta will commit to providing a full report in accordance with the reporting procedures below.

Reporting

If the exceedance documented pursuant to the notification above is solely due to discharges to the MS4 from activities or areas outside the City of Murrieta's jurisdiction or control, within ten (10) working days of becoming aware of the situation, the City of Murrieta will provide documentation of these discharges to the Executive Officer. Subsequently, the City of Murrieta will document the situation within the Annual Report.

Otherwise, following the notifications above the City of Murrieta will, within the annual report covering the date of the notification (unless the Executive Officer directs an earlier submittal), provide a report with:

1) A description of the BMPs that are currently being implemented through the JRMP and any additional BMPs that will be implemented to prevent or reduce those Pollutants that are causing or contributing to the exceedance of the applicable Receiving Water Quality Standards. The report may be incorporated in the Annual Report unless the San Diego Regional Board directs an earlier submittal; and

2) An implementation schedule for any new/revised BMPs. If the Executive Officer directs any modifications to the report, within thirty (30) days, the City of Murrieta will submit a revised report.

Update Compliance Programs

Within thirty (30) days following approval by the Executive Officer of the report described above, the City of Murrieta will revise the applicable sections of this JRMP and the monitoring program, to incorporate the approved modified BMPs that have been and will be implemented, the implementation schedule, and any additional monitoring required. The City of Murrieta will implement the revised JRMP and monitoring program in accordance with the approved schedule for implementation of any new/revised BMPs

3.7 Program Reporting, Evaluation, and Revision {K.3}

The City of Murrieta implements the following Annual Reporting, program evaluation, and program revision requirements described in the 2010 SMR MS4 Permit.

3.7.1 Annual Reporting {K.3.a.}

Each year the City of Murrieta prepares a JRMP Annual Report summarizing the implementation of the jurisdictional activities described in the JRMP during the reporting period for submittal to the Regional Board. Each Annual Report must verify and document compliance with the 2010 SMR MS4 Permit. The City of Murrieta retains records in accordance with the Standard Provisions in Attachment B of the 2010 SMR MS4 Permit, available for review, that document compliance with each requirement of the Permit. The City of Murrieta submits the Annual Report including documentation of implementation of the compliance programs utilizing standardized reporting forms. The reporting forms will be amended as needed to facilitate changes in compliance programs or more accurate reporting of compliance programs.

3.7.2 Program Effectiveness Assessment and Reporting {J.}

The City of Murrieta regularly assesses its compliance programs described in the JRMP to identify improvements that will promote the reduction of Pollutants in Runoff to the MEP while also supporting the responsible management and allocation of the public resources available for implementation.

The strategy for assessing the effectiveness of the JRMP is described in Appendix B.

3.7.3 JRMP Revisions {F.}

As part of the Annual Reporting process, the City of Murrieta will review the JRMP to identify the need, if any, for revisions. The City of Murrieta may propose revisions to the JRMP under the following conditions:

- Where needed improvements are identified based on staff experience in implementing the JRMP;
- Upon completion of newly developed program elements;
- In response to Effectiveness Assessments as described in section 3.7.2;
- In response to persistent Action Level exceedances.
- In response to the BMP strategy identified in the Watershed Workplan (see section 3.8)
- As directed by the Executive Officer to reflect regional and watershed-specific requirements and/or Waste Load Allocations (WLAs) developed and approved pursuant to the Total Maximum Daily Load (TMDL) process for Impaired Waterbodies.

- As directed by the Executive Officer where the JRMP must be revised in order to address exceedances of Receiving Water Limitations that have been determined to be contributed to or caused by Runoff.

3.8 Watershed Workplan {G}

The City of Murrieta participates in the development and updating of a Watershed Water Quality Workplan (Watershed Workplan) that is designed to identify, prioritize, address and mitigate the highest priority water quality issues/pollutants in the Upper Santa Margarita Watershed.

This plan is available at: http://rcflood.org/NPDES/SantaMargaritaWS.aspx

4.0 Illicit Discharge Detection and Elimination (IDDE){F.4.}

The City of Murrieta implements the following program to actively detect and eliminate Illicit Discharges and disposal into the MS4, in accordance with Provision F.4. of the 2010 SMR MS4 Permit.

4.1 Overview

4.1.1 Prohibited Discharges

The City of Murrieta, through its legal Authority (Section 3.4), enforcement mechanisms (Section 3.5), and various other programs summarized in Section 4.2 below, effectively prohibits all types of Non-Stormwater discharges into its MS4 facilities unless such discharge is authorized by a separate NPDES permit or specifically allowed under the 2010 SMR MS4 Permit (summarized in Section 4.1.2 below).

4.1.2 Conditionally Allowed Non-Stormwater Discharges {B.2.}

The City of Murrieta is not required to prohibit the discharges categories identified below.

- Diverted stream flows;
- Rising ground waters;
- Uncontaminated groundwater infiltration (as defined in 40 CFR 35.2005 (20)) to MS4s
- Uncontaminated pumped groundwater[1];
- Foundation drains[2];
- Springs;
- Water from crawl space pumps[3];
- Footing drains[4];
- Air conditioning condensation;
- Flows from riparian habitats and wetlands;
- Water line flushing[5& 6]

---

[1] Requires enrollment under Order R9-2008-002. Discharges into the MS4 require authorization from the owner and operator of the MS4.

[2] Requires enrollment under Order R9-2008-002. Discharges into the MS4 require authorization from the owner and operator of the MS4.

[3] Requires enrollment under Order R9-2008-002. Discharges into the MS4 require authorization from the owner and operator of the MS4.

[4] Requires enrollment under Order R9-2008-002. Discharges into the MS4 require authorization from the owner and operator of the MS4.

[5] This exemption does not include fire suppression sprinkler system maintenance and testing discharges. Those discharges may e regulated under Section B.3 of the 2010 SMR MS4 Permit

[6] Requires enrollment under Order R9-2002-0020.

- Discharges from potable water sources not subject to NPDES No. CAG679001, other than water main breaks;
- Individual residential car washing;
- Dechlorinated swimming pool discharges;[7] and
- Emergency fire fighting flows (i.e. flows necessary for the protection of life or property).[8]

4.2 IC/ID Prevention {F.4.}

The programs described in Sections 5 through 9 of this JRMP are designed to prevent IC/IDs from occurring. Additionally, Section 11 of this JRMP describes the public education efforts implemented to ensure that the public is informed of these requirements. Below are some highlights of specific elements of the City of Murrieta's programs that help prevent IC/IDs.

4.2.1 Legal Authority {F.4.a.(1)}

As described in Section 3.4, the City of Murrieta maintains a Stormwater and Urban Runoff Management and Discharge Controls ordinance prohibiting IC/IDs.

4.2.2 Connections to City of Murrieta MS4 Facilities

The City of Murrieta's Public Works Department requires all proposed or detected third party connections to its MS4 facilities to obtain an Encroachment Permit. Through this permit process, the City of Murrieta ensures that the connection is not designed to drain Illegal Discharges into the MS4.

4.2.3 Inspections {F.4.a.(2)}

The inspection programs implemented by the City of Murrieta described in Sections 5 through 9 of this JRMP provide an opportunity to identify Illicit Connections and for inspectors to work with the property owner to remedy problems that may potentially result in an Illegal Discharge. If routine inspections or Dry Weather monitoring indicate Illicit Connections or Illegal Discharges, they will be investigated and eliminated or permitted[9] as described in Sections 4.3 and 4.4.

4.2.4 Maintain MS4 Map {F.4.b.}

An updated map of MS4 facilities owned by the City of Murrieta is maintained and provided to the Regional Board in the Annual JRMP report. The map includes all segments of the MS4 owned, operated, and maintained by the Copermittee, as well as all known locations of inlets that discharge and/or collect Runoff into the MS4 facilities, all known locations of connections with other MS4s (e.g., Caltrans), and all known locations of all the outfalls that discharge Runoff to Receiving Waters from the City of Murrieta's MS4 facilities. The accuracy of the MS4 map has been confirmed during dry weather field screening and analytical monitoring and will be updated at least annually. The MS4 map including any GIS layers will be submitted annually with the updated JRMP. This map is useful in identifying and narrowing down potential source areas in response to an observed IC/ID or Action Level exceedance.

---

[7] Excluding saline swimming pool discharges.

[8] Specifically excluding non-emergency fire fighting flows, i.e. flows from controlled or practice blazes and maintenance activities, and building fire suppression system maintenance discharges, i.e. sprinkler line flushing.

4.2.5 Outfall Monitoring {F.4.d.}

The City of Murrieta conducts dry weather field screening and analytical monitoring of MS4 outfalls and other portions of its MS4 facilities within its jurisdiction to detect IC/IDs as described in Section 13.

4.2.6 Waste Collection Programs

4.2.6.1 Household Hazardous Waste (HHW) Collection and Anti-freeze, Batteries, Oil, and Latex Paint (ABOP) Collection Programs

Through the Implementation Agreement (see Section 3.2) the City of Murrieta participates in the HHW and ABOP collection programs in conjunction with the Riverside County Waste Management Department. Mobile HHW collection events are held at sites in the SMR and are scheduled periodically on weekends from 9:00 a.m. until 2:00 p.m.. Through the Implementation Agreement, the District, on behalf of the City of Murrieta, also supports one permanent ABOP collection site in the SMR, which is located at:

Murrieta Maintenance Yard / Riverside County Transportation Department
25315 Jefferson Avenue, Murrieta, 92562

The site is open Saturdays from 9:00 a.m. until 2:00 p.m. with the exception of holiday weekends. Mobile and permanent site locations may vary over time. Details, site locations, maps and schedules of operation for both the HHW and ABOP collection events are available on the DEH web site at http://www.rivcowm.org/opencms/hhw/pdf/HHWEventFlyerPDFs/91709-MASTERHHWSchedule.pdf or by calling 1-888-722-4234 or 951-358-5055.

Along with materials collected at HHW and ABOP sites, cathode ray tubes can be taken to County landfills for recycling. Used motor oil for recycling may be taken to drop off at certified collection centers throughout Riverside County in addition to the ABOP sites.

4.2.6.2 Conditionally Exempt Small Quantity Generator (CESQG)

The CESQG Program is a Hazardous Waste pick-up disposal service for eligible businesses/non-profit organizations in Riverside County. This program provides an affordable way to legally dispose of limited quantities of Hazardous Waste.

Businesses that generate 27 gallons or 220 pounds of Hazardous Waste or 2.2 pounds of extremely Hazardous Waste per month can participate in the CESQG program. Businesses are required to use a licensed hauler to manifest and transport their Hazardous Waste. The most common participants in the CESQG program are painters, print shops, auto shops, builders, churches, schools, non-profit groups and property managers. An appointment for pickup of Hazardous Waste or further information on the CESQG program can be obtained by calling 1-800-952-5566.

4.3 IC/ID Detection {F.4}

In the mid-1990s, the Riverside County Copermittees conducted reconnaissance surveys to identify IC/IDs to the MS4s. The reconnaissance surveys were limited to underground storm drains of 36-inch diameter or larger and open channels and utilized videotaping. Each undocumented connection to the MS4 was traced to its origin. Although 200 undocumented connections to the underground MS4 facilities

were found County-wide, none of the connections were determined to be Illicit Connections with regard to the MS4 NPDES program. As underground facilities are difficult to access and the Copermittees inspect the construction of new underground MS4 facilities to verify that no Illicit Connections are being made, it has been determined that additional inspections of the underground MS4 facilities are not warranted. However, the City of Murrieta conducts inspections of open channel MS4 facilities to identify Illicit Connections as an element of routine facility maintenance. Illicit Connections identified during these surveys are documented and removed where necessary in order to comply with the 2010 MS4 Permit.

Although the overall programs described in this JRMP are designed to help prevent IC/IDs into the MS4, the following summarizes the specific methods implemented by the City of Murrieta to detect and eliminate potential IC/IDs

4.3.1 MS4 Facility Inspections {F.4.e}

During the regular maintenance as described in Section 5.3herein, MS4 facilities are inspected to identify potential Illicit Connections, and evidence of any Illegal Discharges. This is the most direct method to detect IC/IDs. Appropriate field personnel are trained to identify potential IC/IDs during the course of their normal duties. The City of Murrieta staff is familiar with the existing MS4 and the drainage patterns within its jurisdiction and can take steps to identify the source of what appears to be an IC/ID.

4.3.2 Public IC/ID Reports / Hotline {F.4.c}

Predominantly, Illegal Discharges are reported by the public or by City of Murrieta field personnel. Third-party notifications are a direct source of IC/ID information. The public is encouraged to call the Police Department/Code Enforcement to report observed spills or Illegal Discharges.

Additionally, as described in Section 11, the Riverside County Copermittees maintain a Public Education and Outreach program that includes education regarding IC/IDs. Procedures to educate the public about Illegal Discharges and Pollution Prevention where problems are found are included in this program. The District operates, on behalf of the Copermittees, a centralized 24-hour hotline (1-800-506-2556) that may be used by the public to, among other things, report Illegal Discharges from urban areas into public streets, the MS4 and other water bodies. These calls can be received in English or Spanish and are routed to the appropriate City of Murrieta departments or contacts.

Upon receiving notification from staff or a third-party, the City of Murrieta staff follows the procedures identified in Section 4.4 below.

4.3.3 IC/ID: Construction Site Inspections {F.1.e.(6)(d)}

As described in Section 7 herein, the City of Murrieta implements programs to track and verify that Construction Sites are complying with their ordinances. As part of that program, the City of Murrieta supplements the Illicit Discharge Detection and Elimination (IDDE) program by assuring that appropriate BMPs are being implemented to prevent Illegal Discharges, and that no Illicit Connections occur during the installation phase of new MS4 facilities. Illegal Connections are prohibited by the City of Murrieta and are initially verified during the plan check process. The City of Murrieta verifies conformance with

the approved plans and conducts inspections at Construction Sites. A Stop Work Order is issued if an IC/ID is observed during an inspection, and where applicable City of Murrieta staff will follow the relevant procedures described below. The Stop Work Order will cease after the IC/ID has been removed or eliminated.

4.3.4 IC/ID: Industrial/Commercial Facility Inspections {F.3.b.(4)(vi)}

As described in Section 8, the City of Murrieta implements programs to track and verify that Industrial and Commercial Facilities are complying with the Stormwater Ordinance. At the time of writing the Compliance Assisted Program (CAP) assists the Copermittees IC/ID elimination efforts through the Stormwater Compliance Surveys completed by Department of Environmental Health and Hazardous Materials Management. These surveys list non-compliance issues that require additional attention, including IC/IDs, and the surveys are forwarded to the District. The District forwards the surveys to the City of Murrieta NPDES Coordinator for follow-up visits, if necessary. If IC/IDs are encountered however, the CAP inspector directly contacts the City of Murrieta, who will investigate as described below. However, the City is exploring opting out of the CAP program so the City can cover the 2010 MS4 Permit requirements in the same inspection.

4.3.5 Monitoring Activities {Attachment E, II.C.}

The City of Murrieta, in cooperation with the District, implements a Non-Stormwater Dry Weather Action Level (NAL) monitoring program at the Major Outfalls from its MS4 facilities. This monitoring program is intended, in part, to help identify MS4 Outfalls and sub-drainage areas within the City of Murrieta's jurisdiction that may have Illegal Discharges. The monitoring program is described in the CMP http://rcflood.org/NPDES/Monitoring.aspx. Where an Action Level exceedance is detected at a Major Outfall, the City of Murrieta, Public Works Department conducts source identification efforts as described in Section 4.4.2

4.3.6 Non-Jurisdictional IC/IDs

Where Non-Jurisdictional IC/IDs are identified within the City of Murrieta's jurisdiction, the responsible party is notified of the Regional Board requirements and the Executive Officer is notified of the Non-Jurisdictional IC/ID. The City of Murrieta also implements Wet and Dry Weather monitoring programs that may indicate the presence of IC/IDs as described in Section 13.

4.4 IC/ID Response and Reporting {F.4.}

The 2010 SMR MS4 Permit and the Clean Water Act requires the Copermittees to prohibit, consistent with the MEP standard, Illegal Discharges (including the discharge of spills, leaks, or dumping of any materials other than Stormwater and authorized Non-Stormwater) into the MS4.

The City of Murrieta implements the following procedures to investigate and inspect portions of its MS4 that, based on the results of field screening, analytical monitoring, or other appropriate information, indicate a reasonable potential of containing IC/IDs or other sources of Pollutants in Non-Stormwater.

After receiving a notification of a water pollution problem on the area-wide hotline, Code Enforcement Officer of the Code Enforcement Department investigates and notifies the appropriate NPDES Coordinator of the Public Works Department of the City of Murrieta if there is a problem.

4.4.1 Initial Response Timeframe and Requirements

Based on the information reported, the Code Enforcement will assess if the IC/ID is an Emergency Situation that poses an immediate threat to human health or the environment. Any sewage spill over 1,000 gallons or that could impact water contact recreation, any spill that could impact wildlife, any Hazardous Material spill where residents are evacuated, any spill of reportable quantities of Hazardous Waste (as defined by 40 CFR 117 and 40 CFR 302), or any other spill reportable to the California Emergency Management Agency (Cal-EMA, formerly known as the Office of Emergency Services or OES) is classified as a threat to human health or the environment..

a. If the discharge is a threat to human health or the environment:
    i. Such discharges must be reported immediately by phone to the Cal-EMA at 1-800-852-7550 and should also be reported to the Executive Officer of the Regional Board by telephone: 858-467-2952. If these reports to these agencies have already been submitted by other parties, this reporting need not be repeated by the City of Murrieta.
    ii. Investigation (if the source is not immediately known) and elimination activities (as described below) must occur immediately within 24 hours of being put on notice by staff or a third-party.

b. If there are obvious Illicit Discharges (i.e. color, odor, or significant exceedances of Action Levels (>10x the Action level) investigation as described below must occur within one business day.

c. If Field Screening Data collected as part of the NAL Monitoring program (as described in Section 4.0 of Volume III of the CMP and Section 13.2 of the JRMP) exceeds Action Levels, the City of Murrieta will either:
    i. Initiate an investigation (as described below) to identify the source of the discharge within two (2) business days of receiving the data, or
    ii. Document the rationale for why the discharge does not pose a threat to water quality and does not need further investigation. This documentation will be included in the JRMP Annual Report.

d. If Analytical Laboratory Results collected as part of the NAL Monitoring program (as described in Section 4.0 of Volume III of the CMP and Section 13.2 of the JRMP) exceeds Action Levels at a City of Murrieta outfall, the City of Murrieta will either:
    i. Initiate an investigation (as described below) to identify the source of the discharge within five (5) business days of receiving the data, or
    ii. Document the rationale for why the discharge does not pose a threat to water quality and does not need further investigation. This documentation will be included in the City of Murrieta's JRMP Annual Report.

e. Other reported potential Illicit Discharges that do not meet the criteria identified above will be responded to in a timely manner. Responses to such reports may be prioritized.

4.4.2 Investigation {F.4.e.}

The City of Murrieta takes action to eliminate all detected IC/IDs. The Department and/or Position Title conducts investigations based on the data or reports as described above. The following investigative steps will be taken by the City of Murrieta:

1. If there is no active discharge, standing water, or other evidence of recent discharges (stains) at the reported location, Outfall or NAL exceedance location, reconnaissance is complete at that location and observations are documented in the City of Murrieta's complaint database. If necessary the location may be marked for future additional follow-up.

2. If there are multiple active discharges at the reported location or outfall, staff will:
    a. Observe the flows for any odd odors or discoloration
    b. Take photographs of the discharge and the point of entry to MS4 (if known)
    c. Attempt to trace the flow/flows to its origin

3. If there is an active discharge or evidence of recent Dry Weather flow at the reported location or Outfall, staff will:
    a. Take photographs of the discharge and the point of entry to MS4 (if known)
    b. Attempt to trace the flow/flows to its origin
    c. Collect the following field parameters – pH, temperature, and specific conductivity.
    d. If the field parameters exceed follow-up criteria identified in the CMP, or if there is other visible evidence of an Illegal Discharge (e.g., stains), a continued investigation will be necessary, see Step 4.

4. Where the initial investigation identified in Step 3 indicated a potential Illegal Discharge, the City of Murrieta will perform a source investigation as follows:
    a. If active discharge with flow
        - Trace the source of the discharge as far upstream as possible.
        - Additional field measurements and/or lab analyses may be performed and documented (as outlined above) where there is no other evidence of the IC/ID source.
    b. If no active discharge but evidence of a recent IC/ID is present at time of investigation, trace the source of the discharge as far upstream as possible.

4.4.3 Elimination {F.4.f}

1. If the source is not identified
    a. Attempt to narrow down potential source areas, and make note in the investigation file.
    b. Where appropriate, public education material in area of IC/ID or complaint may be provided.
    c. Location is marked for future follow-up where appropriate. Follow-up visit(s) will confirm if the IC/ID has recurred and an attempt will be made to locate source. If the IC/ID has not recurred or has been eliminated it is noted and complaint/investigation is closed.
    d. If the investigation was initiated in response to an Action Level exceedance:
        i. Additional NAL sampling will occur at the Outfall in subsequent years.

ii. If the results of the additional sampling indicate recurring exceedances of the same NAL(s) with an unidentified source, then the City of Murrieta will provide an evaluation in the JRMP Annual Report of needed changes to the programs described in this JRMP to address the common contributing sources that may be causing such an exceedance. Applicable updates will be made to the Watershed Water Quality Workplan (G. of the 2010 SMR MS4 Permit), Retrofitting Existing Development (F.3.d. of the 2010 SMR MS4 Permit) and Program Effectiveness Assessment and Reporting (J. 2010 SMR MS4 Permit) work plans.

2. If the source is identified, and if:
   a. The source is natural (non-anthropogenically influenced) in origin and in conveyance into the MS4 then the City of Murrieta need not prohibit the discharge;
      i. The City of Murrieta will report its findings and documentation of its source investigation to the Regional Board in the JRMP Annual Report covering the period in which the findings were made.
   b. If the source of the exceedance is an exempted category of Non-Stormwater discharge as described in Section 4.1.2, then the City of Murrieta, Public Works Department will determine if this is an isolated circumstance or if the problem is recurrent to the point that the category of discharges must be addressed through the prohibition of that category of discharge as an Illicit Discharge.
      i. The City of Murrieta will submit its findings including a description of the steps taken to address the discharge and the category of discharge, to the Regional Board for review in the applicable JRMP Annual Report covering the period in which the findings were made. Such description will include relevant updates to existing ordinances or new ordinances, orders, or other legal means of addressing the category of discharge, and the anticipated schedule for doing so. The City of Murrieta must also submit a summary of its findings with the Report of Waste Discharge.
   c. The source is in the jurisdiction of another Copermittee, the appropriate Copermittee is notified, and further action is performed by that Copermittee.
   d. The source is a discharge separately permitted by the Regional Board and/or the State Board that is in violation or potential violation of that permit, then:
      i. If applicable, a copy of the regulatory permit City of Murrieta Department authorizing the discharge will be obtained.
      ii. The Copermittee must report, within three business days, the findings to the San Diego Water Board including all pertinent information regarding the discharger and discharge characteristics.
      iii. The findings of the investigation will be noted in the file and the case will be closed.
      iv. If a permitted discharge is perceived to be a threat to human health or the environment will be reported to the Regional Board/Cal-EPA.
   e. The source is an Illegal Discharge within the jurisdiction of the City of Murrieta:
      i. The source is provided with educational material about IC/IDs, and an attempt is made to have the source resolve the situation immediately.

ii. Where appropriate, Code Enforcement staff will implement enforcement procedures consistent with Section 3.5 of this JRMP.
iii. Follow-up as appropriate to ensure that the IC/ID is eliminated.
iv. Report the findings, including any enforcement action(s) taken, and documentation of the source investigation to the San Diego Water Board in the Annual Report.
v. If the City of Murrieta is unable to eliminate the source of discharge prior to the Annual Report submittal, then the Copermittee must submit, as part of its JRMP Annual Report, its plan and timeframe to eliminate the source of the exceedance.
vi. Those dischargers seeking to continue such a discharge must obtain coverage under a separate NPDES permit prior to continuing any such discharge.

f. The source is part of a HazMat incident, it is reported to the Incident Commander upon arrival. Coordination with the HazMat team takes place and samples are only collected with approval of the Incident Commander as samples may be done in conjunction with future legal action. Under no circumstances is a site entered or field measurements collected if conditions are unsafe.

4.4.4 Clean-up

The City of Murrieta ensures that any Illegal Discharge is cleaned up where necessary and that no further environmental degradation occurs and the responsible party restore the area back to its original state to the MEP.

4.4.5 Sanitary Wastes {F.4.h}

The City of Murrieta implements programs to manage discharges of sewage into its MS4 facilities from various sources including Sanitary Sewer Overflows and private laterals, failing septic systems, and portable toilets.

4.4.5.1 Sanitary Sewer Overflows and Private Laterals

The City of Murrieta cooperates and coordinates with the local sanitation districts as described in Appendix C to swiftly respond to and contain sewage spills that may discharge into its MS4 facilities.

As part of those efforts, the City of Murrieta allows local sanitation districts immediate 24-hour access to its MS4 facilities to address and contain sewage spills. The City of Murrieta also works cooperatively with the local sanitation districts to determine and control the impact of infiltration from leaking sanitary sewer systems on Runoff quality.

4.4.5.2 Failing Septic Systems

The City of Murrieta, in conjunction with the County Department of Environmental Health (DEH), implements preventative and management measures for septic systems within their jurisdiction, as applicable, including:

- Inventory: The City of Murrieta and / or Building Department maintains an inventory of septic systems within its jurisdiction, with updates of new septic systems approved since 2008 available from the DEH;

- Ordinance: The City of Murrieta follows the Riverside County ordinance that regulates discharges from failing septic systems.
- Enforcement: Enforcement against failing septic systems is performed by Riverside County Department of Environment Health. And as necessary, in accordance with the enforcement procedures referenced in Section 3.5 of this JRMP.

4.4.5.3 Portable Sanitary Services (Portable Toilets)

Further, the Copermittees have added the base of operations for portable toilet suppliers to their Industrial/Commercial Facility inspection lists and prioritized them according to their threat to water quality. The City of Murrieta implements management measures for portable toilet use within their jurisdiction, including:

- Ordinance: The City of Murrieta follows the Riverside County ordinance that regulates portable toilets (Ordinance Number;
- Enforcement: Enforcement against ordinance violations by improper use or deployment of Portable Toilets is performed by Code Enforcement as necessary, in accordance with the enforcement procedures referenced in Section 3.5 of this JRMP; and

5.0 MUNICIPAL AREAS AND ACTIVITIES {F.3.A}

The City of Murrieta implements the following Municipal program to meet the requirements of provision F.3.a of the 2010 SMR MS4 Permit, prevent Illicit Discharges into the MS4, reduce municipal discharges of Stormwater Pollutants from the MS4 to the MEP, and prevent municipal discharges from the MS4 from causing or contributing to a violation of Water Quality Standards.

5.1 Planning City of Murrieta Facilities {F.1}

The City of Murrieta implements the applicable processes and procedures described in Section 6 of this JRMP in the planning and design of City of Murrieta projects. This includes, where applicable, the development of a Project-Specific WQMP. Depending on the type of project, the following procedures are implemented by the City of Murrieta to ensure that the planning and design of its public agency Priority Development Projects comply with the requirements of the 2010 SMR MS4 Permit:

All City of Murrieta projects will complete a "WQMP Applicability Checklist" (Found in the SMR WQMP) to determine if a WQMP is required.

5.1.1 Public Works Priority Development Projects {F.1.d}

- If the project meets the definition of Priority Development Project as discussed in Section 6.6.3, a Project-Specific WQMP will be prepared consistent with the requirements of the SMR WQMP;
- The Preliminary Project-Specific WQMP, whether developed in-house or by a contractor, will be forwarded to the Public Works Department for a thorough review of all items required in the SMR WQMP. The reviewer will use the City of Murrieta "WQMP Review checklist" to determine if the Project-Specific WQMP is complete. The Public Works Department will approve the final Project-Specific WQMP.
- Prior to initiating grading or construction activities, the City of Murrieta, Public Works Department will ensure that the construction plans for its Priority Development Projects incorporate the BMPs described in the approved final Project-Specific WQMP. Appendix B includes the Position/Title of the reviewers under the respective departments responsible for implementing these reviews and approvals.
- The O&M Plan described in the Project-Specific WQMP will be integrated into the FPPP (see Section 5.3.4.1).

5.1.2 Public Works Transportation Projects {F.1.i}

The Public Works Department will required a Project-Specific WQMP as described in Section 5.1.1 above for City of Murrieta Transportation Projects that qualify as a Priority Development Project, or design the project to comply with the Transportation Project Guidance is included as Exhibit D to the SMR WQMP.

5.1.3 Public Works Unpaved Roads {F.1.i.}

Public Works projects that construct Unpaved Roads must follow the BMP guidance described in Section 6.6.7 of this JRMP.

5.1.4 Design of Flood Control Projects {F.3.a.(4)(a)}

During the design of flood control projects, the City of Murrieta Public Works Department assesses the potential impacts of the project on Receiving Water quality. As they are not Development Projects intended for human use or occupation, typically no additional Runoff or Pollutants will be expected to be discharged into Receiving Waters as a result of the construction of flood control projects.

5.1.5 Other Public Works Projects

Other Public Works Projects will comply with Section 6.6.6.

5.2 City of Murrieta Construction Activities {F.2.}

The City of Murrieta implements the applicable requirements of Section 7 of this JRMP in the construction of City of Murrieta projects. This includes, where applicable, compliance with the latest version of the Construction General Permit. As described in Section 5.1 above, the City of Murrieta prepares a WQMP for all applicable Public Works Priority Development Projects, which also meets the post-construction requirements in the Construction General Stormwater Permit.

City of Murrieta construction projects one acre or larger or which are part of a construction project one acre or larger must comply with the Construction General Stormwater Permit. Prior to commencement of construction activities, the City of Murrieta Public Works department files Permit Registration Documents by using the State Board's Storm Water Multiple Application and Report Tracking System (SMARTS) and submitting a Notice of Intent (NOI) fee. Upon completion of the construction project, the City of Murrieta files a Notice of Termination (NOT) and other project close-out documentation via the State Board SMARTS. The SMARTS can be accessed at:

https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.jsp

During construction closeout the City of Murrieta will assure satisfactory completion of the requirements in a project-specific WQMP by:

- Verifying that Structural Stormwater BMPs have been constructed and installed in conformance with approved plans and specifications;
- Assuming responsibility for the long-term funding and implementation, operation, maintenance, repair, and/or replacement of BMPs;
- Confirming that procedures are in place to implement all Non-Structural BMPs;
- Verifying that public agency Industrial Facilities that are subject to California's General Permit for Stormwater Discharges Associated with Industrial Activities as defined by Standard Industrial Classification (SIC) code obtain coverage and provide a copy of the NOI submitted to the State Board and/or a copy of the notification of the issuance of a Waste Discharge Identification (WDID) Number.

Where applicable, the operation and maintenance procedures for the Treatment Control BMPs included in the project-specific WQMP will be incorporated into a municipal Facility Pollution Prevention Plan (FPPP), as described in Section 5.3.4.1. For City of Murrieta projects, upon completion of construction when contract close-out occurs the responsibility for implementation, operation, and maintenance of

BMPs will transfer from the contractor to the appropriate department and become part of the City of Murrieta's program for operation and maintenance of City of Murrieta's facilities, described in Section 5.3 below.

5.3 Operation and Maintenance of City of Murrieta Areas and Activities {F.3.a.}

The City of Murrieta implements the following measures to ensure that their Municipal Areas and Activities meet the requirements of Section F.3a. of the 2010 SMR MS4 Permit, reduce City of Murrieta discharges of Stormwater Pollutants from its MS4 facilities to the MEP, and prevents discharges from its MS4 facilities from causing or contributing to a violation of Water Quality Standards. This section describes the program implemented by the City of Murrieta for the operation, maintenance and inspection of their Municipal Areas and Activities.

5.3.1 Source Identification / Inventory {F.3.a.(1)}

The City of Murrieta maintains an inventory of its Municipal Areas and Activities that have the potential to generate Pollutants. This inventory is maintained by the Public Works Department and a copy is included with each JRMP Annual Report to the Regional Board. Linear facilities, such as roads, streets and highways, do not need to be individually inventoried. The City of Murrieta's MS4 Facilities are shown on an MS4 map which is updated and provided in each Annual Report.

This inventory includes the name, address (if applicable), and a description of the area/activity; which Pollutants are potentially generated by the area/activity; whether the area/activity is adjacent to an Environmentally Sensitive Area (ESA); and identification of whether the area/activity is tributary to and within the same hydrologic subarea as a CWA Section 303(d) water body segment and generates Pollutants for which the water body segment is Impaired.

5.3.2 Typical Minimum BMPs {F.3.a.(2)(b)

Based on the areas and activities inventoried and the Pollutants of Concern identified, a list of potential minimum Source Control / Pollution Prevention BMPs was developed and appropriate minimum BMPs applicable to specific facilities or activities are identified per 5.3.3. and 5.3.4. below. The BMPs listed are both effective and widely accepted. The City of Murrieta staff consults other sources of BMP information and considers implementation of additional methods and measures as appropriate. Appropriate BMPs for each Municipal Area are incorporated into the FPPPs, as applicable. In addition, minimum BMPs for the City of Murrieta's mobile activities are also incorporated into the FPPPs for the Municipal Facilities that serve as the base of operation for these activities.

5.3.3 BMPs for City of Murrieta Activities

The Municipal Activities conducted by the City of Murrieta include:

- Fertilizer application;
- Pesticide and/or herbicide application;
- Graffiti removal;

- Power washing;
- Landscape maintenance;
- Swimming pool maintenance;
- Operation of corporation yards (vehicle and equipment maintenance, storage, etc.);
- Pavement sawing;
- Road, sidewalk, and parking lot maintenance;
- Painting;
- Vehicle and equipment fueling;
- Vehicle and equipment cleaning;
- Vehicle and equipment repair;
- Outdoor loading/unloading of materials;
- Outdoor liquid container storage;
- Outdoor storage of raw materials;
- Waste handling and disposal;
- Building and grounds maintenance;
- Grading;
- Construction;

Where the above listed activities take place at an inventoried Municipal Facility, the FPPP applicable to that facility will described the specific BMPs deployed. Also, mobile activities based out of the Municipal Facility and the BMPs that are used in performing those mobile activities are also described in the FPPP.

5.3.3.1 Special Event BMPs {F.3.a.(2)(c)}

The City of Murrieta also designates BMPs for special events that the City of Murrieta holds that are expected to generate significant trash and litter. Controls considered, as applicable to each event, include:

- Temporary screens on catch basins and storm drain inlets;
- Temporary fencing to prevent windblown trash from entering adjacent water bodies and MS4 channels;
- Proper management of trash and litter;
- Catch basin cleaning following the special event and prior to an anticipated rain event;
- Street sweeping of roads, streets, highways and parking facilities following the special event; and
- Other equivalent controls.

5.3.3.2 Fire BMPs {B.3.a.}

In coordination with the Riverside County Fire Agencies, the Riverside County Permittees developed a list of appropriate BMPs to be implemented to reduce Pollutants from fire training activities, fire hydrant testing or flushing and BMPs feasible for emergency fire fighting flows. These BMPs and the strategy for providing training and updating the list of BMPs are described in Appendix C.

5.3.4 BMPs for City of Murrieta Areas

5.3.4.1 Facility Pollution Prevention Plans (FPPP) {F.3.a.(2)}

An FPPP is maintained for that covers each Municipal Facility. Each FPPP is designed to identify the minimum Pollution Prevention Methods and BMPs applicable to each Facility and the mobile activities based out of each Facility. The FPPP is typically maintained onsite at each individual facility, however, for facilities (e.g., parks, trails) that do not maintain onsite staff, maintenance equipment or materials, a copy of the FPPP for the applicable category of Municipal Activity is maintained at the centralized maintenance facility (e.g., corporate yard) corresponding to the operations category or where the maintenance contracts are administered (i.e., City of Murrieta main office). The inventory of Municipal Facilities identifies the location of the FPPP for each facility, and staff responsible for implementation and update of the FPPP. Each FPPP also includes a Facility Inspection Form that is used to record inspection findings.

For any City of Murrieta facilities that are tributary to and within the same hydrologic unit as a 303(d) listed waterbody and/or within, adjacent to, or discharging directly to an ESA, the FPPP includes any enhanced measures deemed necessary to mitigate Pollutants shown to be generated by the site, for which the water body segment is Impaired. As TMDLs are developed and/or action level exceedances are detected, the BMPs implemented at these facilities may be revisited to ensure that all appropriate enhanced measures deemed necessary by the Copermittee are implemented.

For other City of Murrieta owned areas that do not have an FPPP (such as vacant land), appropriate BMPs including those identified in the remaining Subsections of 5.3.4. are implemented on an as-needed basis as problems are identified.

5.3.4.2 BMP Implementation for Management of Pesticides, Herbicides, and Fertilizers {F.3.a.(3)}

The City of Murrieta implements BMPs to reduce the contribution of Stormwater Pollutants to the MEP associated with the application, storage, and disposal of pesticides, herbicides and fertilizers from its municipal areas and activities to MS4 facilities and Receiving Waters. Such BMPs are described in the FPPP applicable to the facility and generally include:

(a) Educational activities, permits, certifications and other measures for municipal applicators and distributors;

(b) Integrated Pest Management (IPM.) measures that rely on non-chemical solutions where possible;

(c) The use of native vegetation where consistent with the facility's intended use and landscaping plan;

(d) Schedules for irrigation and chemical application such that they are not applied in advance of anticipated rain events or during rain events ; and

(e) The collection and proper disposal of unused pesticides, herbicides, and fertilizers.

5.3.4.3 BMP Implementation for Flood Control Structures {F.3.a.(4)}

(a) The City of Murrieta implements procedures to assure that new flood management projects assess the impacts on the water quality of Receiving Waters. See Section 5.1.4.

(b) The City of Murrieta includes water quality protection measures, where feasible, when retrofitting existing flood control structural devices.

(c) The City of Murrieta evaluates its existing flood control structures as part of ongoing routine maintenance. For any structures that are found to be causing or contributing to a condition of Pollution, the City of Murrieta implements measures to reduce or eliminate the structure's effect on Pollution, and evaluates the feasibility of retrofitting the structural flood control device. The inventory and evaluation is completed by and submitted to the Regional Board in each JRMP Annual Report.

5.3.4.4 BMP Implementation for Sweeping of Municipal Areas {F.3.a.(5)}

Where municipal area sweeping is implemented as a BMP for City of Murrieta owned and maintained roads, streets, highways, and parking facilities, the City of Murrieta designs and implements the program based on the following criteria:

(a) Roads, streets, highways, and parking facilities identified as consistently generating the highest volumes of trash and/or debris must be swept at least two times per month.

(b) Roads, streets, highways, and parking facilities identified as consistently generating moderate volumes of trash and/or debris are swept at least monthly.

(c) Roads, streets, highways, and parking facilities identified as generating low volumes of trash and/or debris must be swept as necessary, but no less than annually.

5.3.4.5 Copermittee Maintained Unpaved Roads Maintenance {F.3.a.(10)}

(a) The City of Murrieta implements or requires implementation of BMPs for Erosion and sediment control measures, and to minimize potential impacts on streams and wetlands during their maintenance activities on City of Murrieta maintained unpaved roads, particularly in or adjacent to Receiving Waters. Such BMPs may include, as applicable to the maintenance activity:

- minimize soil disturbance
- Minimize maintenance during the rainy season
- Compact lose sediment

- Hauls lose sediment away if it cannot be compacted
- Minimize concentration of flows
- Temporary diversion of run-on flow

(b) The City of Murrieta maintains as necessary its unpaved roads adjacent to streams and riparian habitat to reduce Erosion and sediment transport.

(c) Re-grading of unpaved roads during maintenance is sloped outward where consistent with road engineering safety standards or alternative equally effective BMPs are implemented to minimize Erosion and Sedimentation from unpaved roads; and

(d) Through maintenance of unpaved roads, the City of Murrieta examines the feasibility of replacing existing culverts or design of new culverts or bridge crossings to reduce Erosion and maintain natural stream geomorphology.

5.3.5 Operation and Maintenance of MS4 Facilities and Treatment Controls {F.3.a.(6)}

The City of Murrieta's open channels, catch basins, storm drain inlets, and retention/detention basins are inspected, cleaned, and maintained as described below. Wastes and materials removed are disposed of per applicable laws and appropriate BMPs are deployed as necessary to minimize impacts to the Receiving Waters to the MEP. During the annual inspection and maintenance of MS4 facilities, the City of Murrieta inspects for visual evidence of Illegal Discharges, litter and/or debris accumulation, and other maintenance issues.

(a) Treatment Controls: The City of Murrieta Public Works Maintenance department implements a schedule of inspection and maintenance activities to verify proper operation of all its municipal Structural Treatment Controls BMPs designed to reduce Stormwater Pollutant discharges to or from its MS4 facilities.

For Structural Treatment Control BMPs integrated into a City of Murrieta owned Municipal Facility, the BMPs are integrated and identified within the applicable FPPP (see Section 5.3.4.1), and are inspected as described in Section 5.4 below:

(b) MS4 Facilities: The City of Murrieta implements a schedule of maintenance activities for its MS4 facilities (including but not limited to catch basins, storm drain inlets, detention basins, etc). The maintenance activities include:

i. Inspection and removal of accumulated Waste at least annually between May 1st and September 30th of each year for all MS4 facilities;

ii. Additional facility cleaning as necessary between October 1st and April 30th of each year;

iii. Following two years of inspections, any MS4 facility that requires inspection and cleaning less than annually may be inspected as needed, but not less than every other year;

iv. Open channels and basins are cleaned of observed anthropogenic litter in a timely manner;

v. Maintenance activities within open channels must not adversely impact Beneficial Uses;

vi. Record keeping of the maintenance and cleaning activities including the overall quantity of waste removed;

vii. Proper disposal of Waste removed pursuant to applicable laws; and

viii. Measures to eliminate Waste discharges during MS4 maintenance and cleaning activities.

(c) Low Priority MS4 Facilities: Following two years of inspections, any MS4 facility that requires inspection and cleaning less than annually may be inspected as needed, but not less than every other year. MS4 facilities that have met these criteria and will be inspected every other year are identified below

- 'None identified at this time

5.3.5.1 Flood Control Structure Evaluations {F.3.a.(4)(c)}

The City of Murrieta's Public Works Department evaluates its existing flood control structures as part of the ongoing routine maintenance described above, to identify structures that are causing or contributing to a condition of Pollution. For any such structures, where feasible the City implements measures to reduce or eliminate the structure's effect on Pollution, and evaluates the feasibility of retrofitting the structural flood control device. The inventory and evaluation findings are submitted to the San Diego Regional Board in each JRMP Annual Report.

5.3.5.2 Infiltration From Sanitary Sewer to MS4/Provide Preventive Maintenance {F.3.a.(7)}

The City of Murrieta does not own nor operate a municipal sanitary sewer system, however the City of Murrieta does cooperate with Eastern Municipal, Rancho California, Western Municipal, and Elsinore Valley water districts for responding to and addressing any observed infiltration into the City of Murrieta 's MS4 facilities. In addition, the City of Murrieta implements the following controls to limit infiltration of seepage from sanitary sewers to MS4 facilities where necessary:

i. Adequate plan checking for Construction and Development Projects;

ii. Incident response training for its employees that may identify sanitary sewer spills;

iii. Code enforcement inspections;

iv. MS4 maintenance and inspections;

v. Interagency coordination with sewer agencies; and

vi. Proper education of its staff and contractors conducting field operations on the MS4.

5.4 Inspection of Copermittee Areas and Activities {F.3.A.(8)}

The City of Murrieta inspects the following high priority Copermittee Areas and Activities annually:

i. Roads, streets, highways, and parking facilities

ii. Flood management projects and flood control devices not otherwise inspected per Section F.3.a.(6)(b) of the 2010 SMR MS4 Permit

iii. Areas and activities tributary to and within the same hydrologic subarea as a CWA Section 303(d) Impaired water body segment, where an area or activity generates Pollutants for which the water body segment is Impaired

iv. Areas and activities within or adjacent to or discharging directly to Receiving Waters within ESAs

v. Municipal Facilities:

[a] Corporate yards including maintenance and storage yards for materials, waste, equipment and vehicles;
[b] City Hall;
[c] Library;
[d] Senior Center;
[e] Police Station;
[f] Fire Stations; and
[g] Household hazardous waste collection facility

vi. Parks and recreation facilities

vii. Special event venues following special events (festivals, sporting events, etc.)

viii. Power washing activities

ix. All City of Murrieta WQMP projects with Structural post-construction BMPs, including verification that the Structural post-construction BMPs on those projects have been appropriately maintained consistent with the WQMP and/or the FPPP. {F.1.f.(2)(b)(iii)}

x. Other municipal areas and activities that the City of Murrieta determines may contribute a significant Pollutant load to the MS4

(a) Inspections of the City of Murrieta's MS4 facilities are performed concurrently with the maintenance schedule described in Section 5.3.5 above.

(b) Other Municipal Areas and Activities are inspected as needed and in response to water quality data, valid public complaints, and findings from City of Murrieta or contract staff.

(c) Based upon site inspection findings, the City of Murrieta implements all follow-up actions necessary to comply with this Order.

5.5 Enforcement of Municipal Areas and Activities {F.3.a.(9)}

The City of Murrieta enforces its Stormwater Ordinance(s) for all its Municipal Areas and Activities as necessary to maintain compliance with the 2010 SMR MS4 Permit.

6.0 DEVELOPMENT PLANNING {F.1.}

The City of Murrieta implements the following programs related to the planning and permitting of Development Projects[11] within the City's jurisdiction. This program is designed to:

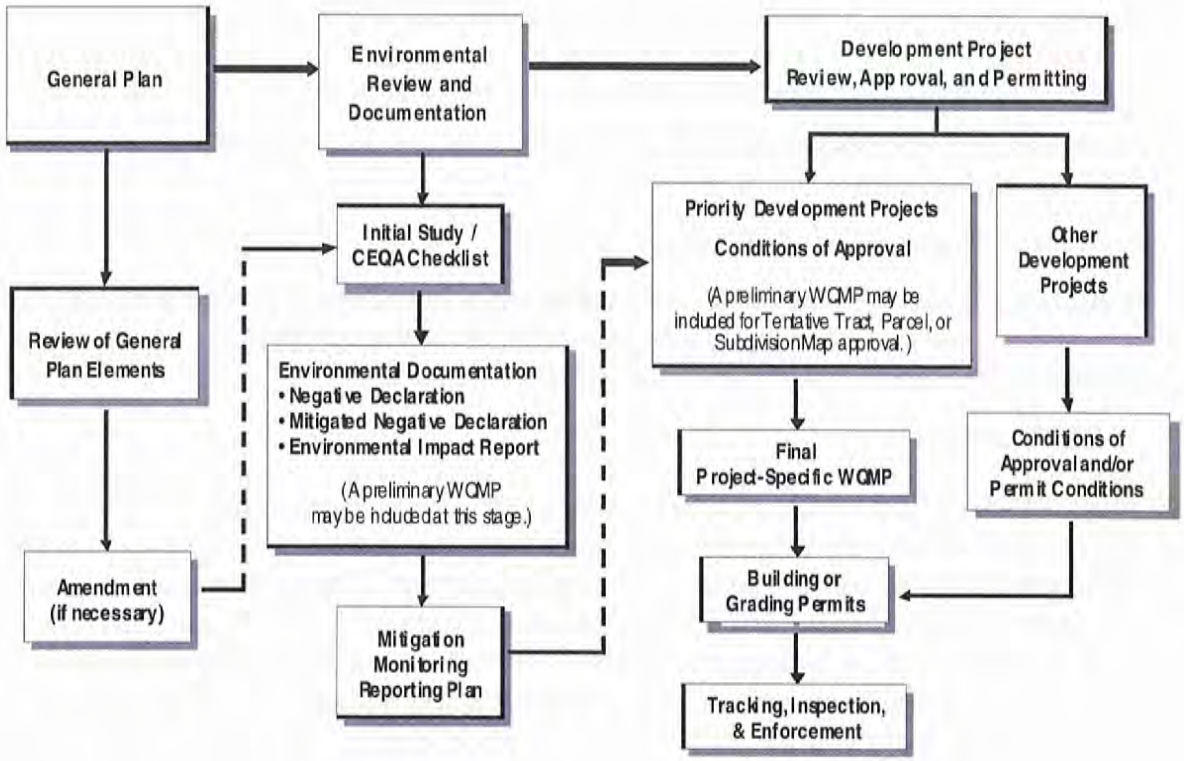
- Reduce Development Project discharges of Stormwater Pollutants to the MS4 to the MEP;
- Prevent Development Project discharges to the MS4 from causing or contributing to a violation of Water Quality Standards;
- Prevent Illicit Discharges into the MS4; and
- Manage increases in Runoff discharge rates and durations from Development Projects that are likely to cause increased erosion of stream beds and banks, silt Pollutant generation, or other impacts to Beneficial Uses and stream habitat due to increased erosive force.

6.1 INTRODUCTION

This program element links the City of Murrieta General Plan, the environmental review process, and the development approval and permitting processes to the later phases of detailed design, construction and operation. A General Plan specifies policies that guide development. The environmental review process examines potential impacts from proposed development with respect to the General Plan policies and many environmental issues, including water quality, and includes consideration of mitigation measures to reduce any identified significant impacts. The development approval and permitting processes carries forth project-specific requirements in the form of conditions of approval, design specifications, tracking, inspection, and enforcement actions. Figure 6-1 is a generalized flow diagram that depicts the relationship of the General Plan, environmental review process and development planning and permit process, as well as the project design, construction, and operation phases.

[11] Construction, rehabilitation, redevelopment, or reconstruction of any public or private residential project, industrial, commercial, or any other projects.

Figure 6-1. Relationship between General Plan, Environmental Review Process and Development Approval & Permitting Process



6.2 GENERAL PLAN {F.1.a.}

The City of Murrieta has reviewed its General Plan to ensure that it includes water quality and watershed protection principles and policies as appropriate to allow the City of Murrieta to direct land-use decisions and to require implementation of consistent water quality protection measures for all Development, Redevelopment, and Retrofit projects.

The General Plan allows the City of Murrieta to implement the Water Quality & Watershed Protection Principles & Policies described below. The specific requirements for Development, Redevelopment and Retrofit projects are implemented through the programs described in Sections 6.3 through 6.9.

- Minimize the amount of impervious surfaces and directly connected impervious surfaces in areas of Development and Redevelopment and, where feasible, slow Runoff and maximize on-site infiltration of Runoff.

- Implement Pollution Prevention methods supplemented by Pollutant Source Control and Treatment Control BMPs. Use small collection strategies located at, or as close as

possible to, the source (i.e., the point where water initially meets the ground) to minimize the transport of Runoff and Pollutants offsite and into an MS4.

- Preserve, and where possible, create or restore areas that provide important water quality benefits, such as riparian corridors, wetlands, and buffer zones; and encourage land acquisition of such areas.

- Limit disturbances of natural water bodies and natural drainage systems caused by development including roads, highways, and bridges.

- Prior to making land use decisions, utilize methods available to estimate increases in Pollutant loads and flows resulting from projected future development; require incorporation of BMPs to mitigate the projected increases in Pollutant loads and flows.

- Avoid development of areas that are particularly susceptible to Erosion and sediment loss; or establish development guidance that identifies these areas and protects them from Erosion and sediment loss.

- Reduce Pollutants associated with vehicles and increasing traffic resulting from development.

- Post-development Runoff from a site must not contain Pollutant loads that cause or contribute to an exceedance of Receiving Water Quality Objectives and which have not been reduced to the MEP.

Some of the preceding concepts are addressed as part of the WQMP process or through the conditioning of a project in the development review process, rather than as explicit elements of the General Plan.

Further, the City of Murrieta has incorporated the Multi Species Habitat Conservation Plan (MSHCP) into their General Plan. As of June 2012, approximately 136 square miles, or 25% of the Santa Margarita Region, has been successfully conserved as part of the Copermittees implementation of the MSHCP, including significant lands adjacent to or encompassing Receiving Waters, and addresses many of the water quality and watershed protection concepts identified in the 2010 SMR MS4 Permit. Additionally, through the continued implementation of the MSHCP, much of the remaining non-urbanized area will ultimately be conserved, totaling approximately 43% of the Santa Margarita Region. The MSHCP also finds that the Copermittees' General Plans, zoning ordinances, and policies include measures capable of implementing the following planning concepts, which are consistent with the 2010 SMR MS4 Permit considerations such as:

- Measures to ensure that the quality and quantity of Runoff discharged to MSHCP conservation areas is not altered in any adverse way when compared to existing drainage conditions;
- Measures to avoid discharge of untreated surface Runoff from developed and paved areas into MSHCP conservation areas; and
- Measures to require MS4s to be designed to prevent the release of toxins, chemicals, petroleum products, exotic plant materials or other elements that might degrade or harm biological resources or ecosystem processes within MSHCP conservation areas.

6.3 ENVIRONMENTAL REVIEW PROCESS {F.1.b.}

The City of Murrieta prescribes the necessary requirements so that proposed Development Project discharges of Stormwater Pollutants from its MS4 facilities will be reduced to the MEP, and will comply with City ordinances, permits, plans, and requirements, and with the 2010 SMR MS4 Permit.

In addition, the City of Murrieta has reviewed its CEQA processes to ensure that Runoff management is properly considered and addressed. When acting as CEQA Lead Agency for a proposed Development Project at the earliest possible time in the process, the City of Murrieta identifies the resources under the jurisdiction of the Regional Board which may be affected by the project, including the potential need for a CWA §401 water quality certification, NPDES permit, or Waste Discharge Requirements. The City of Murrieta coordinates project review with Regional Board staff pursuant to the requirements of CEQA. Upon request by Regional Board staff, this coordination may include the timely provision of the proposed project applicant's identity and contact information for facilitation of consultation meetings.

6.3.1 Project Application Form

A Project Application Form is used by the City of Murrieta requiring the applicant to describe or include the following information in the project application:

- WQMP Applicability Checklist;
- Submittal of preliminary Project-Specific WQMP, if applicable; and
- Where a Project-Specific WQMP is not applicable, descriptions of how the proposed project will incorporate the measures described in Section 6.6.6. {F.1.c.}

The City of Murrieta Project Application Form is included in Appendix D, "Application for Land Use and Development"

6.3.2 LID Barriers Review {F.1.d.(4)(a)}

The City of MurrietaPublic Works Department has reviewed its local codes, policies and ordinances and identified the potential barriers to the implementation of LID BMPs in Table 6-1. This table also identifies the steps required to remove those barriers, where feasible, by the end of the 2010 SMR MS4 Permit term (i.e., by November 10, 2015):

Table 6-1 Potential barriers to LID BMPs

Reference	LID BMP	Potential Barriers identified	Steps required to remove barriers
F.1.c.(2)(a)	Conserve natural areas, including existing trees, other native vegetation, and soils	None – projects must comply with the 2010 MS4 Permit	None

Reference	LID BMP	Potential Barriers identified	Steps required to remove barriers
F.1.c.(2)(b)	Construct streets, sidewalks, or parking lot aisles to the minimum widths necessary, provided that public safety is not compromised	None – projects must comply with the 2010 MS4 Permit	None
F.1.c.(2)(c)	Minimize the impervious footprint of the project	None – projects must comply with the 2010 MS4 Permit	None
F.1.c.(2)(d)	Minimize soil compaction to landscaped areas	None – projects must comply with the 2010 MS4 Permit	None
F.1.c.(2)(e)	Minimize disturbances to natural drainages	None – projects must comply with the 2010 MS4 Permit	None
F.1.c.(2)(f)	Disconnect impervious surfaces through distributed pervious areas	None – projects must comply with the 2010 MS4 Permit	None
F.1.d.(4)(b)(i)	Maintain or restore natural storage reservoirs and drainage corridors (including depressions, areas of permeable soils, swales, and Ephemeral and Intermittent streams)	None – projects must comply with the 2010 MS4 Permit	None
F.1.d.(4)(b)(ii)	Construct pervious areas to effectively receive and infiltrate, retain and/or treat Runoff from impervious areas, and to minimize soil compaction in these areas	None – projects must comply with the 2010 MS4 Permit	None

Reference	LID BMP	Potential Barriers identified	Steps required to remove barriers
F.1.d.(4)(b)(iii)	Construct low-traffic areas with permeable surfaces, where appropriate soil conditions exist	None – projects must comply with the 2010 MS4 Permit	None
F.1.d.(4)(c)(i)	Structural Infiltration BMPs	None – projects must comply with the 2010 MS4 Permit	None
F.1.d.(4)(c)(i)	Structural Harvest and Use BMPs	None – projects must comply with the 2010 MS4 Permit	None
F.1.d.(4)(c)(ii)	Structural Bioretention BMPs	None – projects must comply with the 2010 MS4 Permit	None
F.1.d.(4)(c)(ii)	Other structural LID BMPs (such as vegetated extended detention basins)	None – projects must comply with the 2010 MS4 Permit	None

The City of Murrieta will update the above table as necessary through the implementation of their development planning activities, whether through identification of additional barriers, or as any identified barriers are removed. Any changes to the above table will be conducted and reported in the City of Murrieta's JRMP Annual Report.

6.4 WATER QUALITY MANAGEMENT PLAN {F.1.d}

The City of Murrieta, in collaboration with the other SMR Copermittees, has developed a WQMP for the Santa Margarita Region of Riverside County, which describes the process for application of required LID Principles (Site Design), Source Control BMPs, LID BMPs, and Treatment Control BMPs, on Priority Development Projects to ensure that the land use approval and permitting process will:

- Reduce Priority Development Project discharges of Stormwater Pollutants from the MS4 to the MEP, and
- Prevent Priority Development Project Runoff discharges to the MS4 from causing or contributing to a violation of Water Quality Standards.

The SMR WQMP and a Project-Specific WQMP are provided on the following website at: http://www.murrieta.org/cityhall/pwe/water.asp

6.5 Hydromodification Management Plan {F.1.h.}

An updated Hydromodification Management Plan (HMP) is being developed by the Copermittees to manage increases in Runoff discharge rates and duration from Priority Development Projects. The objectives of the HMP are:

- Estimated proposed project Runoff discharge rates and durations do not exceed the pre-project discharge rates and durations.
- For proposed projects on an already developed site, the estimated proposed project Runoff discharge rates and durations do not exceed the pre-project discharge rates and durations, where the pre-project discharge rates and durations are that of the pre-development, naturally occurring condition.

Upon completion of the HMP in 2013, the HMP will be incorporated into the SMR WQMP. Until that HMP is developed and approved by the Regional Board, the interim Hydromodification requirements described in the SMR WQMP are in effect.

6.6 Development Project Review, Approval, and Permitting {F.1.D.}

6.6.1 Process Overview

The City of Murrieta, during the planning process, and prior to project approval and issuance of local permits, prescribes the necessary requirements so that Development Project discharges of Stormwater Pollutants from the MS4 will be reduced to the MEP, will not cause or contribute to a violation of Water Quality Standards, and will comply with City ordinances, permits, plans, and requirements, and with the 2010 SMR MS4 Permit.

All Development Projects that are submitted to the City of Murrieta for discretionary approval or permitting are required to fill out a Project Application Form. Based on the results of that checklist, each project is categorized as either a "Priority Development Project" or as an "Other Development Project." The requirements for Other Development Projects are described in Section 6.6.6.

The City Planning Department coordinates the land use case processing, which includes compliance with CEQA procedures, general plan conformity, ordinance consistency, and public health and safety requirements. The City Planning Department works closely with many other departments to ensure proper review of these issues. Together, these departments review proposed Development Projects for applicability and compliance with WQMP requirements.

6.6.2 Identification of Development Projects Requiring a Project-Specific WQMP {F1.d(1) & (2)}

The Project Application Form includes a WQMP Applicability Checklist as discussed in Section 6.3.1.

In reviewing project applications, the City reviews the WQMP Applicability Checklist and the other information provided in the project application to verify the applicant's determination as a *Priority Development Project* or an *Other Development Project*. If the applicant incorrectly certified that the proposed project did not require a Project-Specific WQMP, the City will notify the project applicant and

effectively place a hold on the project application until a preliminary Project-Specific WQMP is submitted.

If a Project-Specific WQMP is required, the City will require that a preliminary Project-Specific WQMP be included with the project application packet. The Planning Department will then forward copies of the project application, including the Project-Specific WQMP, to Public Works Department for review and as applicable issuance of conditions of approval.

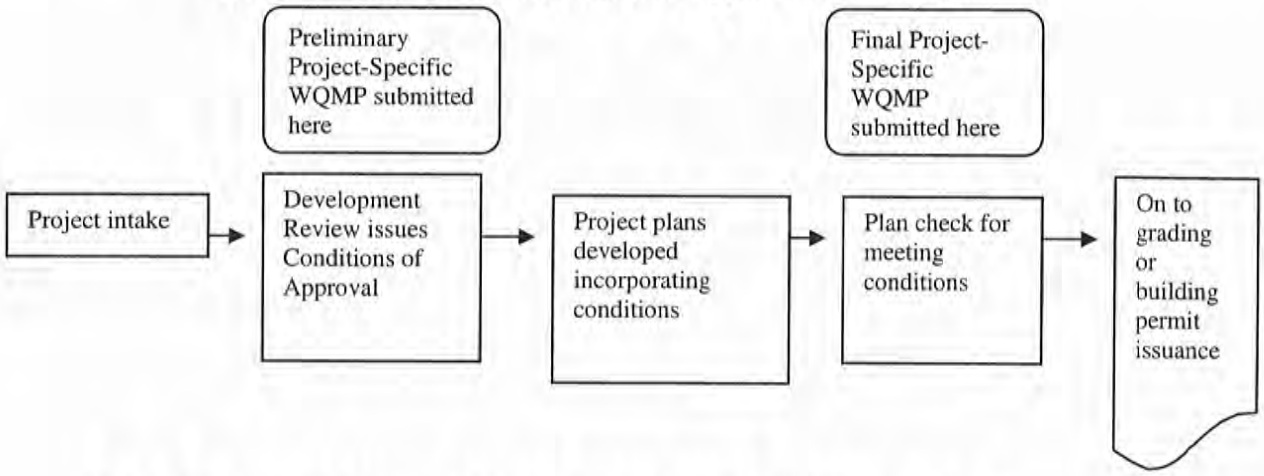
6.6.3 Conditions of Approval {F.1.c}

The development review process applies standard conditions of approval to ensure that the requirements of the 2010 SMR MS4 Permit are met. City of Murrieta Department has developed standardized Engineering conditions of approval that may be used and are provided in Appendix D.

6.6.4 Review of Preliminary Project-Specific WQMPs

The Planning and Public Works Departments requires preliminary Project-Specific WQMPs to be submitted with the project application for all Priority Development Projects. The level of detail in the preliminary Project-Specific WQMP must be consistent with the level of detail for the overall project design at the time project approval is sought. Prior to issuance of grading or building permits, the project applicant must submit the final Project-Specific WQMP for review and approval. The Public Works Department uses a Checklist for Project Specific WQMP to facilitate thorough and consistent reviews of preliminary and final project-specific WQMPs. The Checklist for Project Specific WQMP is an exhibit to the SMR WQMP. Figure 6-2 shows a typical review and approval process.

Figure 6-2. Flowchart of Project Review, Approval & Permitting Process



6.6.5 Review and Approval of Final Project-Specific WQMPs {F.1.d.(9)(a)}

Based on the Conditions of Approval and prior to approval of a final Project-Specific WQMP, the Public Works Department will ensure that:

- The final Project-Specific WQMP is prepared and is consistent with the requirements of the SMR WQMP;

- LID BMPs have been incorporated into the site to the extent feasible; or if the project proponent has acceptably demonstrated that LID BMPs are technically infeasible for the project, the Public Works Department will document within the project file a finding of technical infeasibility;
- The entity or entities responsible for BMP implementation and maintenance have been identified; and
- The mechanism for BMP funding is identified.

The Public Works Department will ensure all requirements have been addressed prior to approval of a final Project-Specific WQMP.

6.6.6 Requirements for Other Development Projects [F.1.c]

The City requires other Development Projects to incorporate LID Principles (Site Design) and Source Control BMPs, where applicable and feasible, into project plans through conditions of approval or building/grading permit conditions. LID BMPs and Treatment Control BMPs may be required on a case-by-case basis for Other Development Projects that directly discharge Runoff to Receiving Waters listed as Impaired on California's CWA Section 303(d) List of Water Quality Limited Segments.

Discharges from other approved Development Projects are subject to the following management measures:

(1) Source control BMPs that reduce Stormwater Pollutants of Concern in Runoff; prevent Illicit Discharges into the MS4; prevent irrigation runoff; storm drain system stenciling or signage; properly design outdoor material storage areas; properly design outdoor work areas; and properly design trash storage areas.

(2) The following LID BMPs listed below must be implemented at all Development Projects where applicable and feasible.

(a) Conserve natural areas, including existing trees, other vegetation, and soils;
(b) Construct streets, sidewalks, or parking lot aisles to the minimum widths necessary, provided that public safety is not compromised;
(c) Minimize the impervious footprint of the project;
(d) Minimize soil compaction of landscaped areas;
(e) Minimize disturbances to natural drainages (e.g., natural swales, topographic depressions, etc.); and
(f) Disconnect impervious surfaces through distributed pervious areas.

(3) Buffer zones for natural water bodies, where technically feasible. Where buffer zones are technically infeasible, require project proponent to implement other buffers such as trees, access restrictions, etc.

(4) Other measures necessary so that grading or other construction activities meet the provisions specified in Section 7.0 of this JRMP.

(5) Submittal of documentation of a mechanism under which ongoing long-term maintenance of all structural post-construction BMPs will be conducted.

(6) Infiltration and Groundwater Protection

To protect groundwater quality, restrictions are applied to the use of Treatment Control BMPs that are designed to primarily function as large, centralized infiltration devices (such as large infiltration trenches and infiltration basins). Such restrictions are designed so that the use of such infiltration Treatment Control BMPs does not cause or contribute to an exceedance of groundwater quality objectives. At a minimum, each Treatment Control BMP designed to primarily function as a centralized infiltration device is required to meet the restrictions below, unless the Development Project demonstrates that a restriction is not necessary to protect groundwater quality.

1. Infiltration BMPs must not be used for areas of industrial or light industrial activity, and other high threat to water quality land uses and activities as designated by each Copermittee unless first treated or filtered to remove Pollutants prior to infiltration.
2. The seasonal high groundwater mark must be at least 10 feet below the invert of the Infiltration BMP.
3. Infiltration BMPs must be located a minimum of 100 feet horizontally from any water supply wells.
4. No part of a Infiltration BMP should be within a 2:1 (horizontal:vertical) influence line extending from any septic leach line.
5. Infiltration BMPs must not be located in soils that, according to a licensed Geotechnical Engineer, do not have adequate physical and chemical characteristics (such as appropriate cation exchange capacity, organic content, clay content, and infiltration rate) for the protection of groundwater.

(7) Where feasible, landscaping with native or low water species shall be preferred in areas that drain to the MS4 or to Waters of the U.S.

(8) Rain water harvesting and water reuse, where feasible, must be encouraged as part of the site design and construction to reduce Pollutants in Stormwater discharges to the MEP.

Additionally, where an Other Development Project proposes a new Unpaved Road, the applicant must incorporate the following, or alternative BMPs that are equally effective:

- Identify practices that will minimize road related Erosion and sediment transport;
- Grade Unpaved Roads to slope outward where consistent with road engineering safety standards;
- Incorporate installation of water bars as appropriate; and
- Provide Unpaved Road and culvert designs that do not impact creek functions.

6.6.7 Unpaved Roads Development {F.1.i}

The City of Murrieta implements or requires the implementation of erosion and sediment control BMPs after construction of new Unpaved Roads. Such BMPs are required for Priority Development Projects in the SMR WQMP and for Other Development Projects as discussed in Section 6.6.6 above.

6.6.8 Plan Check: Issuance of Grading or Building Permits

6.6.8.1 Plan Check for Priority Development Projects

The Planning and Public Works Departments review the relevant CEQA documentation (including the Mitigation Monitoring and Reporting Program, if applicable), the conditions of approval, and the final

approved Project-Specific WQMP as part of the plan check process. Once a Priority Development Project reaches the plan check phase, the project applicant should have an approved final Project-Specific WQMP in conformance with the SMR WQMP.

Construction plans submitted by the project applicant for plan check are reviewed to verify that they properly incorporate all Site Design, Structural LID and/or Treatment Control BMPs identified in the approved final Project-specific WQMP. The designs of Structural Source Control BMPs, LID BMPs, and Treatment Control BMPs are reviewed to verify inclusion of control measures necessary to effectively minimize the creation of Nuisance or Pollution associated with vectors, such as mosquitoes, rodents, flies, etc. The design review during plan check also verifies that Structural BMPs provide adequate access for ongoing maintenance of the BMP after construction. The construction plans are also reviewed for consistency with the BMP design criteria and guidance provided in the SMR WQMP.

6.6.8.2 Plan Check for Other Development Projects

For Other Development Projects, the Public Works Department reviews the construction plans submitted for a grading or building permit to ensure that the plans incorporate all applicable and appropriate Site Design, Source Control and LID BMPs as described in Section 6.6.6.

6.6.8.3 Standard Notes for Plans

Prior to the issuance of a grading or building permit, the City of Murrieta Department requires standard notes to be added to the plan set to address Pollution Prevention during the construction phase of a project. Standardized notes are discussed below:

1. In Case of Emergency, Call: (provide name, work and home phone numbers)
2. Equipment and workers for emergency work shall be made available at all times during the rainy season. Necessary materials shall be available on site and stockpiled at convenient locations to facilitate rapid construction of temporary devices when rain is imminent.
3. Devices shall not be moved or modified without the approval of the engineering department.
4. All removable protective devices shown shall be in place at the end of each working day when the 5-day rain probability forecast exceeds 40%.
5. After a rainstorm, all silt and debris shall be removed from check berms and desilting basins, and the basins pumped dry.
6. Graded areas around the tract perimeter must drain away from the face of slope at the conclusion of each working day.
7. The contractor shall be responsible and shall take necessary precautions to prevent public trespass onto areas where impounded water creates a hazardous condition.
8. Gravel bag layout shall be installed as shown per plan or as directed by the City inspector.

6.7 FIELD VERIFICATION OF BMPS & PERMIT CLOSEOUT{F.1.E.}

6.7.1 Release of Conditions of Approval

The end of the construction phase is typically accompanied by the close out of permits and issuance of certificates of use and/or occupancy. The Engineering Department uses this juncture to assure satisfactory completion of all requirements in a Project-Specific WQMP and/or the conditions of approval by verifying that the following items, as applicable, have been completed - prior to granting occupancy:

- All Site Design, LID, structural Source Control, and Treatment Control BMPs have been constructed and installed in conformance with approved plans and specifications and functional in accordance with the approved Project-Specific WQMP (if applicable); and that they include control measures to effectively minimize the creation of Nuisance or Pollution associated with vectors, such as mosquitoes, rodents, flies, etc.;
- A mechanism or agreement acceptable to the Public Works Department has been executed for the long-term funding, implementation, operation, maintenance, repair, and where necessary, the replacement of BMPs;
- The owner/operator is prepared to implement all Non-Structural BMPs, and to implement, operate, and maintain all Site Design, LID, structural Source Control, and Treatment Control BMPs;
- An adequate number of copies of the Project-Specific WQMP, if applicable, are available onsite; and
- An Industrial Facility subject to the Industrial General Permit as defined by Standard Industrial Classification (SIC) code has obtained coverage by providing a copy of the NOI with associated WDID number or other proof of filing submitted via the SMARTS to the State Board. Where such an Industrial Facility is identified but coverage cannot be verified, theCity of Murrieta notifies the San Diego Regional Board and the owner/operator that the facility may be required to obtain coverage under the Industrial General Permit.

6.7.2 Maintenance Responsibility

The responsibility for implementation, operation, and maintenance of BMPs may be with a private entity or by the City under various arrangements and with various funding sources. The responsibility to provide for the long-term implementation, operation, and maintenance of BMPs associated with Priority Development Projects or Other Development Projects may:

- Remain with a private entity (property owner, home owners association, etc.) for private improvements; or
- Be transferred to a public entity (e.g., a city, county, special district, etc.) through dedication of the property provide a funding source has been created; or

If a property owner or a private entity retains or assumes responsibility for implementation, operation, and maintenance of BMPs, the Permittees require an agreement that can take the form of:

- A Restrictive Covenant recorded with the County Recorder;

- A Homeowners Association or Property Owners Association Covenants, Codes, and Restrictions that are actively enforced and funded ;
- The formation of, or annexation to, a maintenance district or assessment district; or
- Other instrument sufficient to guarantee long-term implementation, operation, maintenance, and funding of BMPs.

6.8 Structural Post-Construction BMP Database and Maintenance Verification {F.1.F}

The Public Works Department implements a program to verify the maintenance and effectiveness of post construction Structural BMPs constructed pursuant to an approved final Project-Specific WQMP.

6.8.1 Inventory of WQMP Projects {F.1.f.(1)}

The City of Murrieta maintains a watershed-based database to track and inventory all Priority Development Projects constructed within City jurisdiction that have a final approved Project-Specific WQMP (WQMP Projects) and the post-construction Structural BMPs implemented therein since July 2005. This database does not track nor inventory LID BMPs implemented on a lot by lot basis at single family residential houses – such as rain barrels.

This database includes the following information:

- WQMP Project Name
- Map number
- Priority for Maintenance Verifications (see Section 6.8.2)
- Watershed where project is located
- Types of BMPs and location(s)
- Date of construction or date of initial verification/certification
- Party responsible for maintenance
- Dates of maintenance verifications
- Findings of maintenance verifications
- Corrective actions identified during maintenance verification, including whether the site was referred to the local vector control agency or department.

6.8.2 Designation of High Priority Projects for Maintenance Verification {F.1.f.(2)(a)}

The City of Murrieta designates each WQMP project as either High or Standard Priority based on the following considerations:

- BMP size,
- Recommended maintenance frequency,

- Likelihood of operational and maintenance issues,
- Location,
- Receiving Water quality,
- Compliance record,
- Land use, and
- Other pertinent factors

At a minimum, High Priority projects include those projects that have been identified by the Copermittee as a facility that:

- Generates Pollutants (prior to treatment) within the tributary area of and within the same hydrologic subarea as a 303(d) listed waterbody Impaired for that Pollutant; or
- Generates Pollutants within the tributary area for and within the same hydrologic subarea as an observed Action Level exceedance of that Pollutant.

6.8.3 Maintenance Verification of Structural Post-Construction BMPs {F.1.f.(2)(b)}

The City of Murrieta verifies that the required post-construction Structural BMPs on the inventoried WQMP Projects have been implemented, are maintained, and are operating effectively through inspections, self-certifications, surveys, or other equally effective approaches with the following conditions:

6.8.3.1 WQMP Structural BMP Inspection Schedule

Table 6-2 WQMP Structural BMP Inspection Schedule

WQMP Project Priority	Verification frequency
Standard	Once every 5 years
High	Annually

In addition to the above table, all City of Murrieta owned projects with post-construction Structural BMPs must be inspected annually as described in Section 5.4.

6.8.3.2 Verification Methods

The City of Murrieta conducts direct inspections of WQMP Projects to comply with the BMP verification requirements. The Public Works Department first reviews the approved final Project-Specific WQMP, and verifies that all post-construction Structural BMPs identified in the WQMP are implemented and have been appropriately maintained in accordance with the O&M Plan identified in the Project-Specific WQMP. A standardized inspection / verification form may be utilized and is provided in Appendix E.

And/or

The Public Works Department has established a program for third party verifications and/or self certifications that WQMP projects can utilize. Adequate documentation must be submitted to the Public Works Department to provide assurance that the required maintenance has been completed. These third party verifications / self certifications are required to complete the standardized inspection / verification form provided in Appendix E.

6.8.4 Post Construction BMP Recordation {F.1.d.(9)(b)}

The City of Murrieta has established a mechanism to ensure that appropriate easements and ownerships are properly recorded in public records and the information is conveyed to all appropriate parties when there is a change in project or site ownership.

6.9 Enforcement for Development {F.1.g}

The legal Authority and enforcement policies and procedures of City of Murrieta are described in Section 3 of this JRMP. The City of Murrieta conducts appropriate follow-up measures to ensure the Treatment Control BMPs continue to reduce Stormwater Pollutants as originally designed. These measures include re-inspections, and where necessary enforcement (as described in Section 3.5).

7.0 PRIVATE DEVELOPMENT CONSTRUCTION ACTIVITY {F.2.}

The City of Murrieta implements the following program that is designed to meet the requirements of provision F.2. of the 2010 SMR MS4 Permit, require implementation and maintenance of Structural and Non-Structural BMPs to reduce Pollutants in Stormwater Runoff from Construction Sites to the MS4, reduce Construction Site discharges of Stormwater Pollutants from the MS4 to the MEP, and prevent Construction Site discharges from the MS4 from causing or contributing to a violation of Water Quality Standards.

7.1 Source Identification / Inventory {F.2.b}

The City of Murrieta's maintains an updated watershed-based inventory database of Construction Sites within its jurisdiction. This inventory is provided in each Annual Report. Construction Sites are any project, including projects requiring coverage under the General Construction Permit, that involves soil disturbing activities including, but not limited to, clearing, grading, disturbances to ground such as stockpiling, and excavation. Construction Sites are included in the inventory regardless of whether the Construction Site is subject to the Construction General Stormwater Permit or other individual construction Stormwater NPDES permits. This database is updated with new projects added when the project is issued a building or grading permit or when the pre-construction meeting has occurred. Projects may be removed from the database when construction is completed and the project's building or grading permit is closed. The City of Murrieta Construction Site database includes the following project information:

- Facility/Project name,
- Facility/Project address,
- Tract number(s) or Assessor Parcel Number (APN),
- Watershed / Sub watershed,
- Project priority,
- Date of inspections performed at each site,
- Site size,
- WDID #,
- Grading Permit #,
- Developer's information,
- Site contact information, and
- Enforcement actions taken.

7.2 Construction Site Planning and Project Approval Process {F.2.c}

The City of Murrieta incorporates consideration of potential water quality impacts prior to approval and issuance of construction and grading permits.

Prior to issuance of Building / Grading Permits, the City of Murrieta:

- Requires implementation of the applicable designated BMPs (Section 7.3) and other measures that are selected so that Illicit Discharges into the MS4 are prevented, Stormwater Pollutants discharged from the Construction Site will be reduced to the MEP, and construction activity discharges from the MS4 are prevented from causing or contributing to a violation of Water Quality Standards.

- Ensures that the project proponent's Runoff management plan (or equivalent Construction Site BMP plan) is required to comply, and reviewed by the Public Works Department to verify compliance with the local grading ordinance, other applicable local ordinances, and the 2010 SMR MS4 Permit. This construction site BMP plan does not need to be reviewed to ensure that it complies with the Construction General Permit,.

- Verifies that project proponents subject to the Construction General Permit have existing coverage. Where coverage under the Construction General Permit appears to apply, the City of Murrieta verifies coverage on the State Board's web page at:

  http://www.swrcb.ca.gov/water_issues/programs/stormwater/databases.shtml#const_db

  For such projects, the Regional and/or the State Board are responsible for conducting inspections and verifying compliance with the Construction General Permit. The City of Murrieta's review of the project's Runoff management plan, as well as the City of Murrieta's inspections conducted as described in Section 7.4 below, are to ensure compliance with the City of Murrieta's ordinances and the 2010 MS4 Permit.

- Categorizes the project as a high, medium, or low threat to water quality for the purposes of inspection, as described in Section 7.4.

7.3 Construction Site BMPs {F.2.d}

The City of Murrieta has designated a minimum set of BMPs and other measures to be implemented at all Construction Sites, as applicable to the site and the activities thereon. The City of Murrieta requires implementation of the designated minimum BMPs and any additional measures necessary to comply with the 2010 SMR MS4 Permit at each Construction Site within its jurisdiction year round. BMP implementation requirements, however, can vary based on Rainy and Dry Seasons. Dry Season BMP implementation must plan for and address unseasonal rain events that may occur during the Dry Season (May 1 through September 30).

7.3.1 Minimum Erosion and Sediment Control Practices {F.2.d(1)(b)}

- Erosion prevention. Erosion prevention is to be used as the most important measure for keeping sediment on site during construction;
- Sediment controls. Sediment controls are to be used as a supplement to erosion prevention for keeping sediment on-site during construction;
- Slope stabilization must be used on all active slopes during rain events regardless of the season and on all inactive slopes during the Rainy Season and during rain events in the Dry Season;
- Permanent revegetation or landscaping as early as feasible; and
- Erosion and sediment controls must be required during the construction of Unpaved Roads.

7.3.2 Minimum Management Measures {F.2.D(1)(a)}

BMP Name	Stormwater BMP Handbook Portal: Construction	Caltrans Construction Site BMP Manual	MS4 Permit Requirement Reference F.2.d.(1):
Stabilize Exposed Soils (one or more or the methods below will be used as needed)			
Chemical Stabilization (Soil Binders)	EC-5	SS-5	(a): (iv), (vii) (viii) (b): (i)
Polyacrylamide	SE-11		(a): (iv), (vii) (viii) b): (i)
Mulching			
Hydraulic Mulch	EC-3	SS-3	(a): (iv), (vii) (viii) b): (i)
Straw Mulch	EC-6	SS-6	(a): (iv), (vii) b): (i),
Wood Mulching	EC-8	SS-8	(a): (iv), (vii) b): (i)
Permanent Seeding			(a): (iv), (vii) b): (i) (iv)
Sodding			(a): (iv), (vii), (viii) b): (i) (iv)
Soil Roughening			
Temporary Seeding/Hydroseeding	EC-4	SS-4	(a): (iv), (vii) (viii) b): (i)
Protect Steep Slopes			
Earth Dikes/Drainage Swales/Lined Ditches	EC-9	SS-9	b): (i), (iii)
Fiber Roll	SE-5	SC-5	b): (i) (iii)
Geotextiles	EC-7	SS-7	b): (i) (iii)
Gradient Terraces			b): (i) (iii)
Soil Retention			b): (i) (iii)
Straw Bale Barrier	SE-9	SC-9	b): (i) (iii)
Temporary Slope Drain	EC-11	SS-11	b): (i) (iii)
Protect Waterways			
Check Dams	SE-4	SC-4	
Outlet Protection/Velocity Dissipation Devices	EC-10	SS-10	(a): (xii) b): (i)
Stream bank Stabilization	EC-12	SS-12	(a): (xii)
Temporary Stream Crossings	NS-4	NS-4	b): (i)
Vegetated Buffer			

Phase Construction			
Construction Sequencing (Scheduling)	EC-1	SS-1	(a): (ii), (iii), (iv), (v), (vi), vii b): (i)
Dust Control (Wind Erosion Control)	WE-1	WE-1	(a): (iv), (viii)
Preserve Site Condition			
Entrance/Outlet Tire Wash	TC-3	TC-3	(a): (ix),
Preservation of Existing Vegetation	EC-2	SS-2	(iii) (iv), (xii) b): (i)
Stabilized Construction Entrance/Exit	TC-1	TC-1	(a): (ix)
Stabilized Construction Roadway	TC-2	TC-2	(a): (ix) b): (i) (iv)
Scheduling			(a): (ii) (iii), (iv), (v), (vi), vii b): (i)
Waste Management			
Waste Handling and Disposal	SC-34		(a): (i), (xi.), (x), (xi)
Pollution Prevention			
Spill prevention, Control and Cleanup	SC-11		(a): (i.), (x)

The City of Murrieta requires project proponents to submit a SWPPP/Erosion Control Plan that identifies each of the BMPs used during the construction phase and their deployment at the Construction Site. The SWPPP:

- Establishes limitations of grading to a maximum disturbed area as determined by City of Murrieta before either temporary or permanent erosion controls are implemented to prevent Stormwater Pollution.

  This maximum area is established by the City on a case-by-case basis depending on the specifics of each project, and documented in the grading permit documents.

Since BMP technology is constantly changing, the City of Murrieta may consider other BMPs of equivalent or better performance on a case-by-case basis.

7.3.3 Enhanced BMPs {F.2.d.(2)}

The City of Murrieta requires implementation of enhanced measures to address the threat to water quality posed by all Construction Sites tributary to CWA Section 303(d) water body segments Impaired for sediment or turbidity. Currently there are no CWA Section 303(d) water body segments Impaired for sediment or turbidity that the City MS4 facilities discharge into. Where necessary, the City of Murrieta also requires implementation of enhanced measures for Construction Sites within, or adjacent to, or discharging directly to Receiving Waters within an ESA (as defined in Attachment C of the 2010 SMR MS4 Permit).

7.3.4 Active/Passive Sediment Treatment (AST) {F.2.d.(3)}:

The City of Murrieta requires implementation of AST for sediment at Construction Sites (or portions thereof) that the City determines to be an exceptional threat to water quality. In evaluating the threat to water quality, the following factors are to be considered by the City of Murrieta:

(a) Soil erosion potential or soil type;

(b) The site's slopes;

(c) Project size and type;

(d) Sensitivity of Receiving Water bodies;

(e) Proximity to Receiving Water bodies;

(f) Non-Stormwater discharges;

(g) Ineffectiveness of other BMPs;

(h) Proximity and sensitivity of aquatic threatened and endangered species of concern;

(i) Known effects of AST chemicals; and

(j) Any other relevant factors.

As defined in the MS4 Permit, AST is a treatment mechanism that uses mechanical, electrical or chemical means to flocculate or coagulate suspended sediment for removal from runoff from construction sites prior to discharge. Such measures are highly expensive and are expected only to

be required in cases where there is an exceptional threat and/or demonstrable impacts to receiving water quality and all other available BMPs have been ineffective for the site.

7.4 Construction Site Inspection {F.2.E}

The City of Murrieta conducts Construction Site inspections for compliance with its ordinances (grading, stormwater, etc.), permits (construction, grading, etc.), and the 2010 SMR MS4 Permit. When conducting inspections of Construction Sites the City of Murrieta utilizes the inspection form provided in Appendix E. Priorities for inspecting Construction Sites must consider the nature and size of the construction activity, topography, and the characteristics of soils and Receiving Water quality. City of Murrieta inspectors inspect the inventoried Construction Sites according to the schedule below.

7.4.1 Rainy Season[12] Inspection Frequency

Table 7-1: Construction Site Inspection Frequency

Priority	Supporting Criteria [a]	Rainy Season Inspection Frequency
High	• Sites that disturb an area greater than 30 acres with rough grading or with active, unstabilized slopes occurring during the Rainy Season • Sites disturbing an area greater than one (1) acre within the same hydrologic subarea and tributary to Receiving Waters with CWA Section 303(d) listed waters for sediment or turbidity Impairments or within, directly adjacent to, or discharging directly to a Receiving Water within an ESA. • Other sites determined by the City of Murrieta as a significant threat to water quality, considering the following factors: o Soil erosion potential (e.g. Hillside sites) o Project size and type o Sensitivity of and proximity to Receiving Waters (particularly ESAs since no Receiving Waters are 303(d) listed for sediment or turbidity) o History or presence of Illegal Non-Stormwater Discharges o Known past record of non-compliance by the operators of the Construction Site o Any other relevant factors.	Every Two Weeks
Medium	Project Size Sites disturbing an area of one acre or more.	Monthly
Low	Project Size Sites disturbing less than 1 acre.	As needed

[12] The Rainy Season – (aka Wet Season) is the period of time from October 1 forward to April 30 when the Santa Margarita Region experiences the most rainfall.

7.4.2 Dry Season Inspection Frequency

The City of Murrieta inspects all Construction Sites as needed during the Dry Season. Sites meeting the criteria in Section F.2.e.(1) of the 2010 SMR MS4 Permit are inspected at least once in August or September each year.

7.4.3 Re-inspections

Based upon site inspection findings, the City of Murrieta implements all follow-up actions (i.e., re-inspection, enforcement) necessary to comply with the 2010 SMR MS4 Permit. Re-inspection frequencies are determined by the City of Murrieta based upon the severity of deficiencies, the nature of the construction activity, and the characteristics of soils and Receiving Water quality.

7.4.4 Conducting Inspections

At a minimum, the following items are addressed by City of Murrieta staff during Construction Site inspections:

- Check for coverage under the Construction General Permit NOI and/or WDID No. during initial inspections;
- Assessment of compliance with City of Murrieta ordinances and permits related to Runoff, including the implementation and maintenance of designated minimum BMPs;
- Assessment of BMP effectiveness;
- Visual observations for Non-Stormwater discharges, potential Illicit Connections, and potential discharge of Pollutants in Stormwater Runoff;
- Review of site monitoring data results, if the site monitors its Runoff;
- Education and outreach on Stormwater Pollution prevention, as needed; and
- Creation of a written or electronic inspection report.

The City of Murrieta tracks the number of inspections for each inventoried Construction Site within its jurisdiction throughout the reporting period to verify that each site is inspected at the minimum frequencies required. The Construction Site inspection form is included in Appendix E.

7.5 Enforcement {F.2.f }

The City of Murrieta has developed and implements an escalating enforcement process (Section 3.5) that is designed to achieve prompt corrective actions at Construction Sites for non-compliance with the City of Murrieta's permits, requirements and Ordinances.

The City of Murrieta responds to construction complaints received from third-parties and to ensure the San Diego Regional Board that corrective actions have been implemented, if warranted.

7.6 Reporting of Non-Compliant Construction Sites {F.2.g}

The City of Murrieta will notify the San Diego Regional Board when the City of Murrieta issues high level enforcement (as defined in Section 3.5) to a Construction Site that poses a significant threat to water quality in its jurisdiction as a result of violations of its Stormwater Ordinances.

In addition, the City of Murrieta annually notifies the San Diego Regional Board, prior to the commencement of the Rainy Season (October 1st), of all Construction Sites with alleged violations that pose a significant threat to water quality. Information may be provided as part of the JRMP Annual Report if submitted prior to the Rainy Season. Information provided must include, but not be limited to, the following:

(a) WDID number if enrolled under the Construction General Permit

(b) Site location, including address

(c) Current violations or suspected violations

8.0 INDUSTRIAL AND COMMERCIAL SOURCES {F.1.B.}

The City of Murrieta implements the following Industrial and Commercial Program which has been designed to help prevent Illicit Discharges into the MS4, reduce industrial and commercial discharges of Stormwater Pollutants into and from the MS4 to the MEP, and prevent Industrial and Commercial Facility discharges to the MS4 from causing or contributing to a violation of Water Quality Standards in Receiving Waters. The City of Murrieta will continue to review the effectiveness of the Industrial and Commercial Facility inspection program annually and make additional program modifications as necessary.

8.1 Industrial/Commercial Source Identification & Inventory {F.1.b.(1)(a)}

The City of Murrieta developed and maintains an updated inventory/database of Industrial and Commercial Facilities within its jurisdiction that could contribute a significant Pollutant load to the MS4, as identified by the 2010 SMR MS4 Permit. Facilities are included in this inventory regardless of whether the facility is subject to the Industrial General Permit, or other individual NPDES permits issued by the State Board or the San Diego Regional Board. This inventory/database is maintained by the Public Works Department and an electronic copy is included as an attachment to each Annual Report.

The Public Works Department regularly updates the inventory/database using information obtained during facility inspections or from any of the following sources: conditional use permits, plot plans, building permits, business licenses, occupancy permits, Hazardous Materials permits, and Hazardous Waste generator permits are approved for the development of a new Industrial Facility. Additional facilities are identified through the CAP and as compliance surveys and inspections are completed and Industrial Facilities are identified.

8.1.1 Facility Categories

The Industrial and Commercial Facilities inventory/database includes the following categories of potential sources:

Industrial Sites/Sources

- Industrial Facilities, as defined at 40 CFR § 122.26(b)(14), including those subject to the General Industrial Permit or other individual NPDES permit;
- Operating and closed landfills;
- Facilities subject to SARA Title III; and
- Hazardous Waste treatment, disposal, storage and recovery facilities.

Commercial Sites/Sources

- Automobile repair, maintenance, fueling, or cleaning;
- Airplane repair, maintenance, fueling, or cleaning;
- Boat repair, maintenance, fueling, or cleaning;

- Equipment repair, maintenance, fueling, or cleaning;
- Automobile and other vehicle body repair or painting;
- Mobile automobile or other vehicle washing;
- Automobile (or other vehicle) parking lots and storage facilities;
- Retail or wholesale fueling;
- Pest control services;
- Eating or drinking establishments, including such retail establishments with food markets;
- Mobile carpet, drape or furniture cleaning;
- Cement mixing or cutting;
- Masonry;
- Painting and coating;
- Botanical or zoological gardens and exhibits;
- Landscaping;
- Nurseries and greenhouses;
- Golf courses, parks and other recreational areas/facilities;
- Cemeteries;
- Pool and fountain cleaning;
- Marinas;
- Portable sanitary services;
- Building material retailers and storage;
- Animal boarding facilities and kennels;
- Mobile pet services;
- Power washing services;
- Plumbing services; and
- Other sites and sources as identified by the Copermittee as having a history of un-authorized discharges to the MS4.

ESAs and 303(d) Listed Waterbodies

All other Industrial or Commercial Sites / sources tributary to and within the same hydrologic subarea as a CWA Section 303(d) Impaired water body segment, where the City of Murrieta has determined that the site/source generates Pollutants for which the water body segment is Impaired. All other Commercial or Industrial Sites/sources within or directly adjacent to or discharging directly to Receiving Waters within ESAs (as defined in Attachment C of the 2010 SMR MS4 Permit) or that the City of Murrieta has

determined generate Pollutants tributary to and within the same hydrologic subarea as an observed exceedance of an Action Level of those Pollutants.

All other Industrial or Commercial Sites/sources that the City of Murrieta determines may contribute a significant Pollutant load to the MS4.

8.1.2 Inventory Information

The information for each facility in the Industrial and Commercial Facility Database includes the following information:

- Name of facility;
- Address;
  - Mailing address (if different)
- Pollutants potentially generated by the facility;
- Identification of whether the facility is tributary to a CWA §303(d) water body segment and generates Pollutants for which the water body segment is Impaired;
- A narrative description including SIC codes which best reflects the principal products or services provided by the facility.
- Location reference (such as, geographic coordinates, cross streets, etc.)
- Facility Category (per Section 8.1.1)
- Hydrologic Unit Code
- Facility contact
- Facility contact phone number
- WDID number associated with the Industrial General Permit (if any)
- Other NPDES permit or Waste Discharge Requirements
- Site size

8.1.3 Facilities that pose a high threat to water quality

The City of Murrieta identifies those facilities that pose a high threat to Receiving Water quality.

All inventoried sites are inspected at least once during a five year period. In evaluating threat to water quality, the 2010 SMR MS4 Permit identifies the following factors that are to be considered:

(i) Type of activity (SIC code);

(ii) Materials used at the facility;

(iii) Wastes generated;

(iv) Pollutant discharge potential, including whether the facility generates a Pollutant that exceeds an Action Level;

(v) Non-Stormwater discharges;

(vi) Size of facility;

(vii) Proximity to Receiving Water bodies;

(viii) Sensitivity of Receiving Water bodies;

(ix) Whether the facility is subject to the General Industrial Permit or an individual NPDES permit;

(x) Whether the facility has filed a No Exposure Certification/Notice of Non-Applicability;

(xi) Facility design; total area of the site, portion of the site where industrial or commercial activities occur, and area of the site exposed to rainfall and Runoff;

(xiii) The facility's compliance history; and

(xiv) Any other relevant factors.

Primarily, the designation of Industrial and Commercial Facilities that are a high threat to Receiving Water quality will be assessed using the monitoring described in the CMP, through the Watershed Water Quality Workplan assessments. As described in the Santa Margarita Watershed Water Quality Workplan, where an MS4 Outfall Action Level exceedance is detected in a Receiving Water with chronic exceedances of Basin Plan Objectives for the same Pollutant, the City of Murrieta will evaluate appropriate response actions to address that Action Level exceedance. Where the appropriate response action is identified as enhanced or focused industrial or commercial inspections, all facilities in the inventory that are tributary to that outfall and are known to generate Pollutants associated with the Action Level exceedance (per the inventoried information about the facility) will be designated as high priority facilities. Further prioritization among inventoried industrial and commercial facilities may be performed by the City of Murrieta using the remaining factors identified above.

8.2 General BMP Implementation

8.2.1 Pollution Prevention BMPs {F.1.b.(2)(a)}

The City of Murrieta has designated the following set of minimum Pollution Prevention BMPs for the Industrial and Commercial Facilities within its jurisdiction to reduce the discharge of Pollutants to the MEP:

- Good Housekeeping
- Proper Materials Handling and Storage
- Proper Waste Handling

- Preventive Maintenance
- Spill Prevention and Response Procedures (where applicable)
- Facility Personnel Training

Through the process of conducting inspections of Industrial and Commercial Facilities, the inspectors make the facilities aware of these minimum BMPs and additional BMPs (when appropriate) and of the City of Murrieta's applicable ordinance(s).

8.2.2 Minimum BMPs {F.1.b.(2)(b)}

The City of Murrieta has also designated the following minimum set of BMPs for all applicable inventoried Industrial and Commercial Sites/sources within its jurisdiction that are specific to facility types and Pollutant-generating activities. During the inspection of inventoried Industrial and Commercial facilities, the following minimum BMPs are verified as applicable to the facility. Where applicable, CASQA BMP Fact sheets are noted:

Item #	Minimum BMP	CASQA BMP Fact Sheet
1	Hazardous Waste/Materials storage areas are clean, no signs of leakage, and protected from rainfall and Runoff;	SC-34
2	Trash bin areas are clean, the bin lids are closed, the bins are not filled with liquid, and no signs of leakage from the trash bins	SC-34
3	Aboveground tanks have been properly maintained including no signs of leakage, and secondary containment in good condition	SC-11, SC-31, SC-33
4	Onsite storm drain inlets are protected from inappropriate Non-Stormwater discharges	SC-44
5	Oil/water separators are connected to sanitary sewer	NA
6	Wash water from wash pads (steam cleaning or high pressure cleaning) is directed to the sanitary sewer and does not discharge to the MS4	SC-10
7	Mop bucket wash water is discharged to sanitary sewer via clarifier	SC-10
8	Parking lot areas are free of trash, debris, and fluids other than water	SC-43
9	Facility has coverage under the Industrial General Permit, if appropriate	NA
Item #	**Minimum BMP**	**CASQA BMP Fact Sheet**
10	Oil and grease Wastes are not discharged onto a parking lot, street or adjacent catch basin	SC-10
11	Trash bin areas are clean, the bin lids are closed, the bins are not filled with liquid, and the bins have not been washed out into the MS4	SC-43
12	Floor mats, filters and garbage containers are not washed in adjacent parking lots, alleys, sidewalks, or streets and no wash water is discharged to MS4s	SC-10

Item #	Minimum BMP	CASQA BMP Fact Sheet
13	Parking lot areas are cleaned by sweeping, not by hosing down, and the facility operator uses dry methods for spill cleanup	SC-43

The City of Murrieta will continue to regularly review and update these designated BMPs for adequacy and subsequently submit any updates in the JRMP Annual Report.

8.2.3 Enhanced BMPs for ESAs and 303(d) Impairments {F.1.b.(2)(c)}

The City of Murrieta designates enhanced measures as necessary for inventoried Industrial and Commercial Sites/sources that:

- Are tributary to and within the same hydrologic subarea as CWA Section 303(d) Impaired water body segments (where the City of Murrieta has determined that the site/source generates Pollutants for which the water body segment is Impaired).
- Are within or directly adjacent to or discharging directly to Receiving Waters within ESAs.

8.2.4 BMP Implementation {F.1.b.(2)(d)}

The City of Murrieta requires the implementation of the designated minimum and enhanced BMPs and any additional measures necessary based on inspections, incident responses, and water quality data to comply with the 2010 SMR MS4 Permit at each Industrial and Commercial Site/source within its jurisdiction. To ensure that the designated BMPs are implemented by the facility owner/operator, the City of Murrieta implements the following programmatic BMPs:

- Maintain and update Inventory of facilities (Section 8.1)
- Designates appropriate BMPs to be implemented by each facility (Section 8.2)
- Conducts inspections (Section 8.4)
- Enforces City ordinances (Section 3.5)

8.3 Mobile Businesses Program {F.1.b.(3)}

The City of Murrieta has developed and is implementing a program to reduce the discharge of Stormwater Pollutants from Mobile Businesses to the MEP and to prohibit Non-Stormwater discharges pursuant to Section B of the 2010 SMR MS4 Permit. The City of Murrieta maintains as part of its commercial source inventory a listing of Mobile Businesses known to operate within its jurisdiction that conduct services listed above in Section 8.1.

8.3.1 Minimum BMPs for Mobile Businesses {F.1.b.(3)(i)}

Based on the activities associated with the Mobile Businesses identified in the City of Murrieta's jurisdiction, the following list of potential Source Control BMPs was developed for each of the categories of Mobile Businesses:

Power Washing Activities

- Direct discharge to landscape areas, prevent discharge from leaving site, contain wash water and dispose into sanitary sewer or landscape area

Mobile carpet, drape or furniture cleaning

- Direct discharge to landscape areas, prevent discharge from leaving site, discharge wash water to sanitary sewer, use of environmentally safe products

Mobile equipment repair, maintenance, fueling or cleaning

- contain runoff and vacuum all liquids and debris

Pest control services

- Do not apply pesticide within 24-hours of forecasted rain above 50% chance, try to minimize use, and use products according to their instructions

Cement mixing or cutting

- contain runoff and vacuum all liquids and debris

Masonry

- contain pollutants onsite, cover materials, wash out in landscape areas

Mobile painting and coating

- contain pollutants onsite, cover materials, wash out in landscape areas

Landscaping

- contain fertilizers onsite, cover materials, blow debris back onto landscape areas and not into street

Pool and Fountain Cleaning

- discharge to sanitary sewer or landscape areas, remove chlorine and other pollutants before discharge into MS4

Portable Sanitary Services

- contain runoff and vacuum all liquids and debris

Mobile Pet Services

- disposal of hair and other solids in proper waste containers, dispose of waste water into sanitary sewer

Power Washing Services

- Direct discharge to landscape areas, prevent discharge from leaving site, contain wash water and vacuum all liquids and debris

Plumbing Services

- proper disposal of waste, good house keeping

8.3.2 Notification and Response {F.1.b.(3)(iii)}

Each Copermittee notifies all Mobile Businesses based within, or discovered operating within their jurisdiction concerning the minimum Source Control and Pollution Prevention BMPs that they must implement when conducting their activities. The City of Murrieta identifies Mobile Businesses based within, or operating within their jurisdictions by the following methods:

When put on notice by staff or a third-party of a potential violation originating from a Mobile Business that is not already being responded to by another responsible agency (e.g., other Copermittee), the City of Murrieta investigates and take the actions as described in Section 3.5.3.

8.3.3 Database {F.1.b.(3)(a)}

The Copermittees maintain a list of known Mobile Businesses and their bases of operation in the Industrial/Commercial Facility Database described in Section 8.1. The database will assist in identifying the information necessary for the Copermittees to take enforcement action.

8.4 Industrial and Commercial Facility Inspections {F.3.b.}

The City of Murrieta conducts Industrial and Commercial site inspections for compliance with its ordinances, permits, and the 2010 MS4 Permit.

8.4.1 Inspection Frequencies {F.1.B.(4)(B)

At a minimum all sites determined by the City of Murrieta to pose a high threat to water quality (Section 8.1.3) are inspected annually. All other inventoried sites are inspected at least once during a five year period.

8.4.2 Inspection Procedures {F.3.b.(4)}

When conducting facility/business inspections, at a minimum, the following are addressed:

- Review of BMP implementation plans not including Project-Specific WQMPs required pursuant to Section F.1.d of the 2010 SMR MS4 Permit, if the site uses or is required to use such a plan;
- Review of facility monitoring data, if the site monitors its Runoff;
- Check for coverage under the General Industrial Permit NOI and/or WDID, if applicable;
- Assessment of compliance with City of Murrieta ordinances and City of Murrieta issued permits related to Runoff;

- Assessment of the implementation, maintenance and effectiveness of the designated minimum and/or enhanced BMPs;
- Visual observations for Non-Stormwater discharges, potential Illicit Connections, and potential discharge of Pollutants in Stormwater Runoff; and
- Education and training on Stormwater Pollution prevention, as conditions warrant.

8.4.3 Inspection Program Approach

The City of Murrieta ensures that all inventoried facilities are inspected pursuant to the frequencies and procedures identified in Sections 8.4.1 and 8.4.2, respectively. These requirements are met through a combination of approaches as described below.

8.4.3.1 Compliance Assistance Program (CAP)

The City will conduct the business inspections program similar to the County's Department of Environmental Health implements the CAP for oversight and inspection of Industrial and Commercial Facilities. This is the baseline inspection program for the SMR.

The CAP involves a detailed Stormwater compliance survey for facilities that must secure a Hazardous Materials permit for storing, handling or generating such materials and for retail food facilities. Many types of Industrial and Commercial Facilities are inspected by the County's Department of Environmental Health Hazardous Materials Management staff including those that conduct automobile mechanical repair, maintenance, fueling, or cleaning operations, automobile or other vehicle body repair or painting operations, and painting or coating operations.

Blank copies of the forms used by the County's Department of Environmental Health when conducting these stormwater compliance surveys are included in Appendix F. Completed survey forms are forwarded to the District and the appropriate Copermittee. The respective jurisdiction's representative identifies those surveys that indicate non-compliance to initiate a follow-up inspection.

The CAP includes educational outreach to the inspected facilities and completion of a detailed Stormwater compliance survey. In conducting a facility inspection, if it appears that the facility may be required to have coverage under the Industrial General Permit and the facility operator indicated that a NOI or SWPPP is not onsite, the inspector provides the facility operator with an informational sheet on the requirements of the Industrial General Permit and makes a note on the compliance survey that the NOI or SWPPP was not available onsite. The City of Murrieta also verifies the SIC codes of each Industrial facility to ensure that the Industrial General Permit is obtained where necessary.

8.4.3.2 Third Party Certifications {F.1.d(4)(c)}

The City of Murrieta may in the future propose to develop and implement a third party certification program subject to San Diego Regional Board Executive Officer acceptance. This program would verify Industrial and Commercial Site/source compliance with the City of Murrieta's ordinances, permits, and this Order. To the extent that third party certifications are conducted to fulfill the requirements of Section F.3.b.(4) of the 2010 SMR MS4 Permit, the City of Murrieta will retain responsibility for compliance with the 2010 SMR MS4 Permit and will be responsible for conducting and documenting quality assurance and quality control of the third-party certifications.

If the City of Murrieta proposes a third party certification program it will include the following:

(i) A description of the procedures and measures for quality assurance and quality control;

(ii) A listing of sites/sources that may and may not participate in the program;

(iii) The representative percentage of certifications that would qualify to satisfy the inspection requirements in Section F.3.b(4)(c) of the 2010 SMR MS4 Permit;

(iv) Photo documentation of potential stormwater violations identified during the third party inspection;

(v) Reporting to the City of Murrieta of identified significant potential violations, including imminent or observed Illegal Discharges, within 24 hours of the third party inspection;

(vi) Reporting to the City of Murrieta of all findings within one week of the inspection being conducted; and

(vii) City of Murrieta follow-up and/or enforcement actions for identified potential Stormwater violations within two business days of the potential violation report receipt.

Based upon site inspection findings, the City of Murrieta will implement all follow-up actions and enforcement necessary to comply with the 2010 SMR MS4 Permit.

8.4.4 Regional Board Inspections {F.1.d.(4)(c)}

To the extent that the San Diego Regional Board has conducted an inspection of an Industrial Site during a particular year, the requirement for the responsible Copermittee to inspect this facility during the same year is deemed satisfied.

8.4.5 Tracking Inspections

The City of Murrieta tracks the number of inspections for the inventoried Industrial and Commercial Sites/sources throughout the reporting period to verify that the sites/sources are inspected at the minimum frequencies listed in the 2010 SMR MS4 Permit.

8.4.6 Enforcement of Industrial and Commercial Sites/Sources

The City of Murrieta enforces its Stormwater Ordinance for all Industrial and Commercial Sites/sources as necessary to maintain compliance with the 2010 SMR MS4 Permit. The Enforcement/Compliance Strategy is described in Section 3.5 of this JRMP.

8.4.7 Reporting of Non-Compliant Sites {F.1.d(6)}

The City of Murrieta provides annual notification to the San Diego Regional Board, prior to the commencement of the Wet Season, of any unresolved high level enforcement action (as defined in the City of Murrietas' JRMP) that poses a significant threat to water quality in its jurisdiction as a result of violations of the Stormwater Ordinance.

9.0 RESIDENTIAL SOURCES {F.c}

The City of Murrieta implements the following residential program, which has been designed to meet the requirements of Section F.3.c. of the 2010 SMR MS4 Permit, help prevent Illicit Discharges into the MS4, reduce residential discharges of Stormwater Pollutants from the MS4 to the MEP, and prevent residential discharges from the MS4 from causing or contributing to a violation of Water Quality Standards.

9.1 Program Approach

The City of Murrieta actively encourages the use of Pollution Prevention methods by residents, particularly for those high priority residential areas and activities described above. The following describes the programs implemented by the City of Murrieta:

- Training City Personnel who have regular contact with residential areas (e.g., park maintenance personnel, street sweepers, code enforcement officers, etc.) to serve as informal inspectors performing field reviews. The training programs are further described in Section 12.
- Participation in County-wide Public Education Efforts including (as further described in Section 11.
    - Maintenance of brochures on various topics pertinent to the high priority residential activities described in Section 11.
    - Maintenance of a public education website
    - Issuance of quarterly e-newsletters
    - Outreach at Community events
    - Outreach at Home Improvement stores
    - Elementary School assembly presentations
    - Maintenance of a "1-800" hotline for reporting of complaints or illegal discharges

9.2 High Priority Residential Areas and Activities {F.3.c.(1)}

The 2010 SMR MS4 Permit identifies the following residential activities as posing a high threat to water quality:

- Automobile repair, maintenance, washing and parking.
- Home and garden care activities and product use (pesticides and fertilizers);
- Disposal of trash, pet waste, green waste, and household hazardous waste (e.g., paints, cleaning products);
- Any residential areas tributary to and within the same hydrologic subarea as a CWA Section 303(d) Impaired water body, where the residence generates Pollutants for which the water body is Impaired; and

- Any residential areas within or directly adjacent to or discharging directly to Receiving Waters within an ESA.

9.3 Designated BMPs {F.3.c.(2)(b)}

The City of Murrieta has designated a set of minimum BMPs for high-threat-to-water-quality residential areas and activities within their jurisdiction to reduce the discharge of Pollutants to the MEP. The minimum BMPs, all of which are Pollution Prevention BMPs, are:

Table 9-1: Designated Residential BMPs

	Area or Activity	Designated BMPs	Reference Material
A	Residential: Automobile repair, maintenance, washing and parking	• Collect and properly dispose of automotive fluids and other waste • Clean up spills using dry cleanup methods where possible • Store Hazardous Materials away from rain and Runoff • Avoid hosing down parking areas • Prevent all leaks and/or spills from entering the street or MS4	**Brochures (See Section 11):** • Automotive Maintenance and Car Care Brochure • Outdoor Cleaning **CASQA BMP Fact Sheets:** • SC-20 • SC-21 • SC-22 • SC-43
B	Home and garden care activities and product use (pesticides, herbicides and fertilizers)	• Prevent irrigation runoff • Store and apply pesticides, fertilizers and other chemicals in accordance with their labeling • Avoid applying pesticides, herbicides and fertilizers before forecasted rain	**Brochures (See Section 11):** • Landscape and Garden • 10 Ways to Save Water Outdoors **CASQA BMP Fact Sheets:** • SC-73 • SD-10 • SD-12

C	Disposal of trash, pet waste, green waste, and Household Hazardous Waste (e.g., paints, cleaning products)	• Properly dispose of pet waste • Collect green waste and never blow such waste into the street, gutter or MS4 • Never dispose of Waste in a street, gutter or MS4 • Take Household Hazardous Waste to a designated collection center	• **Brochures (See Section 11):** • After the Storm • What's the Scoop • Tips for Horse Care • Landscape and Garden • Pools, Spas and Fountains **HHW and ABOP Collection Events** http://www.rivcowm.org/opencms/hhw/index.html **Videos:** • Animal Care • Household Hazardous Waste • Managing your Lawn and Garden • Outdoor Activities

The residential activities described in Table 9-1 above are assumed to occur with equal likelihood in all residential areas within the City of Murrieta's jurisdiction. The implementation of the residential program and the minimum BMPs designated above is therefore designed to address these activities on a City wide basis. This includes addressing Pollutants from Residential areas that may be tributary to and potentially impacting a CWA Section 303(d) Impaired water body, and for addressing residential discharges into ESAs.

The above list of residential areas and activities and associated BMPs may be updated by the City of Murrieta in response to the Santa Margarita Watershed Water Quality Workplan assessments.

The City of Murrieta requires implementation of the minimum BMPs and any additional measures necessary to comply with the Prohibitions and Receiving Water Limitations and restrictions on Non-Stormwater discharges as specified in the 2010 SMR MS4 Permit.

9.4 Hazardous Waste BMPs {F.3.c.(2)(c)}

The City of Murrieta participates in regional activities to facilitate the proper collection and management of used oil, Toxic and Hazardous materials, and other household Wastes. This includes assisting in the distribution of information regarding the dates and locations of temporary and permanent HHW and ABOP collection events and facilities, financial support of HHW and ABOP collection facilities and events, and curbside or special collection sites managed by the Copermittees or private entities, such as solid waste haulers.

9.5 Common Interest Areas, Home Owner Associations and Mobile Home Parks {F.3.c.(4)}

The City of Murrieta requires implementation of effective management measures in CIAs, HOAs and mobile home parks (MHPs) to ensure that Runoff within and from these areas meets the objectives of the

2010 SMR MS4 Permit. The designated BMPs for residential CIAs, HOAs, and MHPs are as described in Section 9.3. Additional BMPs may be required based on a review of pertinent factors, including:

- Maintenance duties and procedures typically used by CIA/HOA maintenance associations within its jurisdiction;
- Whether streets and storm drains are publicly or privately owned within the CIA/HOA or MHP;
- Whether the CIA/HOA or MHP has been identified as a high priority residential area based on an evaluation of the site potential to generate Pollutants contributing to a 303(d) listed waterbody or an observed Action Level exceedance; and
- Other activities conducted or authorized by the HOA that may pose a significant risk to inland Receiving Waters.

Additional BMPs that may be applicable to CIAs, HOAs, and/or MHPs (in addition to those referenced in Section 9.3) are:

Table 9-2: Additional BMPs for CIAs, HOAs, and MHPs

	Area or Activity	Designated BMPs	Reference Material
A	Outdoor Cleaning Activities	• Clean up spills using dry cleanup methods where possible • Avoid hosing down parking areas • Prevent all wash water, leaks and/or spills from entering the street or MS4	**Brochures (See Section 11):** • Outdoor Cleaning **CASQA BMP Fact Sheets:** • SC-43
B	Community Pools / Fountains	• Properly maintain community pools and/or fountains to avoid Illegal Discharges • Properly store all chemicals and equipment used in maintaining the pools/fountains	• **Brochures (See Section 11):** • Pools, Spas and Fountains **CASQA BMP Fact Sheets:** • SC-72
C	Community streets, roads and parking lots	• Sweep streets/roads as necessary to prevent accumulated trash or debris from entering the MS4 • Schedule repairs for Dry Weather, and protect nearby storm drain inlets for repairs that must occur during the Wet Season	**CASQA BMP Fact Sheets:** • SC-43 • SC-70

D	Community-owned MS4	• Regularly inspect and remove litter and/or other debris from inlets- before the Wet Season • If there is evidence of Illegal Discharges or dumping, attempt to find and eliminate the source. Refer to the local code enforcement agency if necessary. • Post no-dumping signs in areas where trash or other illegal dumping accumulates	**CASQA BMP Fact Sheets:** • SC-10 • SC-74

9.6 Enforcement {F.3.c.(3)}

If during an inspection in response to a complaint, a Code Enforcement inspector observes that a residence or a CIA/HOA/MHP is non-compliant with the City of Murrieta Stormwater Ordinance, (including the prohibition of non-exempt Non-Stormwater discharges), City of Murrieta or Code Enforcement department begins enforcement procedures. Procedures for enforcement of the Stormwater Ordinance is described in Section 3.5 and the process for elimination of IC/IDs is described in Section 4.

10.0 RETROFITTING EXISTING DEVELOPMENT{F.3.D.}

The goals of the Existing Development Retrofitting program are to address the impacts of existing development through retrofit projects that reduce impacts from Hydromodification, promote LID, support riparian and aquatic habitat restoration, reduce the discharges of Stormwater Pollutants from the MS4 to the MEP, and prevent discharges from the MS4 from causing or contributing to a violation of Water Quality Standards. Where feasible, at the discretion of the City of Murrieta, the Existing Development Retrofitting Program may be coordinated with flood control projects and other infrastructure improvement programs.

To facilitate consistent implementation of the Existing Retrofit Program in the Santa Margarita Region, the Copermittees prepared the Santa Margarita Region Retrofit Program Study, which is available at http://rcflood.org/NPDES/SantaMargaritaWS.aspx. The components of this Retrofit Program Study represent an adaptive approach to meeting the Retrofit requirements of the MS4 Permit.

The Retrofit Program itself consists of a multi-step process to identify and ultimately prioritize the actions and efforts that are best suited to addressing specific water quality issues in the Santa Margarita Region. The steps in this Retrofit Program enable the Copermittees first to identify water quality, watershed, infrastructure, or other issues or Conditions of Concern; second to develop context for the issues; and finally to use a series of tools, called the "Retrofit Program Framework," to identify the best strategy or strategies to address them, up to and including Retrofit projects. The tools can be applied and re-combined as the Copermittees' programs evolve and develop, to identify Retrofit project needs, priorities, and opportunities, and to select and design appropriate Structural or Non-Structural BMPs that may provide the most cost-effective reduction measures for Pollutants or Conditions of Concern.

10.1 Identification of Conditions of Concern

The potential issues which may trigger a Retrofit evaluation are listed in Table 10-1 below, and correspond to the "Problem or Condition (NAL/SAL Exceedance)" column headings in the BMP Menu, (Appendix B of the Retrofit Program Study).

Table 10-1: Observations Potentially Triggering a Retrofit Program Framework Analysis

Irrigation Runoff	
Hydrologic modification/channel instability	
Illicit Connection/Discharge	
Action Level Exceedances or TMDLs related to:	
Metals	Pesticides
Organics	Nutrients
Oil & grease	Bacteria
Sediment	

10.2 Source Assessment & Identification

When the City of Murrieta identifies a problem identified in Table 10-1, Step 2 of the Retrofit Program Framework identifies that the City of Murrieta conduct source identification in an attempt to determine the source and/or areas of development that may potentially be retrofit. To aid in the source identification, the Retrofit Program Study provides land use maps as well as information about Pollutants associated with those land uses, and factors that can be used to help guide a Copermittee to narrow down potential sources.

The procedures for source identification are described in Section 4.4.2 of this JRMP.

One possible outcome of the source assessment could be identification of a single point source. Under this scenario, the City of Murrieta would implement JRMP enforcement programs to eliminate the source of the issue. The other possible outcome is that there is not an identifiable point source of the issue. In this instance, Step 3 of the Retrofit Program Framework is to assess the current JRMP program implementation relative to the Pollutant or condition of concern, its likely source, the land use and management setting, and the Copermittees responsibilities and initiatives that may or should be able to address the issue. The purpose of this step is to assess whether the problem or condition may be mitigated through more effective or aggressive implementation of its existing authorities and programs in the JRMP, or if supplemental actions – such as Retrofit projects (Non-Structural and/or Structural) – may be required. The results of this evaluation may reveal that the existing JRMP program implementation could be enhanced to address the issue; in that case any deficiencies or needed improvements in City of Murrieta programs would be addressed and reported in the JRMP Annual Report.

If the JRMP programs are being adequately implemented the City of Murrieta can use Steps 4 and 5 of the Retrofit Program Framework, to evaluate structural and non-structural Retrofit BMPs. An early step in the evaluation would be to asses if Non-Structural Retrofit BMPs would be an appropriate solution. In instances where a Non Structural Retrofit BMP is not a feasible option to address the identified problem and where the Watershed Workplan has identified the problem as a Priority 1 issue, City of Murrieta can use the BMP menu to evaluate Structural BMPs.

10.3 Identification of Candidate Areas for Retrofitting *(F.3.d.1.)*

Existing areas of development (i.e., municipal, industrial, commercial, residential) within the City of Murrieta have been identified and inventoried as candidates for Retrofitting in the Santa Margarita Region Retrofit Program Study. Potential Retrofitting candidates include but are not limited to:

1. Areas of development that generate Pollutants of Concern to a TMDL or an ESA;
2. Receiving Waters that are channelized or otherwise hardened;
3. Areas of development tributary to Receiving Waters that are channelized or otherwise hardened;
4. Areas of development tributary to Receiving Waters that are significantly eroded; and

5. Areas of development tributary to an Area of Special Biological Significance (ASBS) or SWQPA.

The potential retrofitting candidate areas are identified in Figure 20 of the Santa Margarita Region Retrofit Program Study. When a specific problem has been identified per the Retrofit Program Framework, this initial inventory will be tailored to identify and prioritize focused areas of development as necessary during the source identification process described in Section 10.4.

10.4 Prioritization of Candidate Areas for Retrofitting *{F.3.d.2.}*

The inventoried areas of existing development that are tributary to the identified Condition of Concern will be evaluated and ranked as part of Step 4 and/or Step 5 of the Retrofit Program Framework, as necessary, to prioritize Retrofit projects. Criteria for evaluation include, but are not limited to:

1. Feasibility;
2. Cost effectiveness;
3. Pollutant removal effectiveness, including reducing Pollutants exceeding Action Levels;
4. Tributary area potentially treated;
5. Maintenance requirements;
6. Landowner cooperation;
7. Neighborhood acceptance;
8. Aesthetic qualities;
9. Efficacy at addressing concern; and
10. Potential improvements on public health and safety.

A prioritized inventory of existing areas of development identified as candidates for retrofitting will be developed and provided in the JRMP Annual Report, as applicable in response to steps 4 and 5 of the Retrofit Program Framework.

10.5 Incorporation into Watershed Workplan *{F.3.d.3.}*

The City of Murrieta will consider the results of the Retrofit Program Framework, when applicable, in prioritizing Watershed Work Plans for the following year in accordance with Section G.1 of the 2010 SMR MS4 Permit and in assessing the JRMP program effectiveness in accordance with Section J of the Permit.

Evaluation of Retrofit BMP options will consider program jurisdiction (e.g., regulated construction sites vs. agricultural operations with waivers), evaluation of whether Non-Structural Retrofit BMP approaches are sufficient to address the problem, and, if necessary, evaluation of sites and BMPs for structural

Retrofit projects. As noted above, the methodology in the Retrofit Program Framework prioritizes the use of Non-Structural BMPs, which can be implemented far more quickly and often at a much lower cost.

Structural BMPs are assessed where the identified issue is identified as a priority 1 issue in the Watershed Workplan, and the Non-Structural BMPs are insufficient to address the problem. Highly feasible projects expected to benefit water quality will be given a high priority to implement Source Control and Treatment Control BMPs. Where Structural BMPs are proposed and where feasible, the Retrofit projects may be designed in accordance with the WQMP requirements within Sections F.1.d.(3) through F.1.d.(8) and the Hydromodification requirements in Section F.1.h. of the 2010 SMR MS4 Permit.

10.6 Encouraging Private Retrofitting Projects *{F.3.d.4.}*

The City of Murrieta will cooperate with private landowners to encourage site specific Retrofitting projects, where identified as necessary to address a pollutant or condition of concern pursuant to steps 4 and 5 of the Retrofit Program Framework, or where deemed appropriate by the City of Murrieta as part of enforcement measures where a source is found. The following practices will be considered in cooperating and encouraging private landowners to Retrofit their existing development, which are included in the BMP Menu, (Appendix B of the Retrofit Program Study):

1. Demonstration Retrofit projects; Retrofits on public land and easements that treat Runoff from private developments;
2. Education and outreach;
3. Subsidies for Retrofit projects;
4. Requiring Retrofit projects as enforcement, mitigation or ordinance compliance;
5. Public and private partnerships; and
6. Fees for existing discharges to the MS4 and reduction of fees for Retrofit implementation.

10.7 Tracking Retrofit BMPs *{F.3.d.(5)}*

The known completed Retrofit BMPs will be maintained in the watershed-based database established to track and inventory post-construction Structural BMPs in accordance with Section F.1.f. of the 2010 SMR MS4 Permit. Retrofit BMPs on publicly owned properties will be inspected to verify that they are operating effectively and have been adequately maintained per Section F.1.f of the 2010 SMR MS4 Permit. Privately owned Retrofit BMPs will be inspected as needed.

10.8 Regional Mitigation Projects *{F.3.d.(6)}*

Where constraints on Retrofitting preclude effective BMP deployment on existing developments at locations critical to protect Receiving Waters pursuant to Step 5 of the Retrofit Program Framework, a regional mitigation project may be proposed to improve water quality. Such regional projects may include but are not limited to:

1. Regional water quality treatment BMPs;

2. Urban creek or wetlands restoration and preservation;
3. Daylighting and restoring underground creeks;
4. Localized rainfall storage and reuse to the extent such projects are fully protective of downstream water rights;
5. Hydromodification projects; and
6. Removal of invasive plant species.

11.0 PUBLIC EDUCATION COMPONENT{F.6.}

Developing programs to increase public awareness and to involve the public can be an effective method for controlling Pollution associated with Runoff. Emphasizing the relevant impact of Runoff to target audiences increases the likelihood that the messages will be noticed and that the audience will support and participate in program implementation. The Riverside County Permittees have developed a County-wide Public Education and Outreach Program that is implemented by the District.

To leverage Copermittee resources, the Public Education and Outreach Program may partner with other entities including Riverside County's Waste Management Department, Western Riverside Council of Governments, and other County-wide Stormwater public education programs in Southern California, the Riverside-Corona Resource Conservation District, and others to promote conservation, Pollution Prevention and environmental awareness. The public education program may also expand outreach opportunities by collaborating with entities such as Riverside County's Agricultural Commissioner and University California Cooperative Extension to promote proper use of pesticides and herbicides to specific target groups such as pesticide applicators and home gardeners.

The Public Education and Outreach Program maintains an Internet website that provides information to residents and businesses about Stormwater management and offers Stormwater Pollution Prevention activities. The website also provides a materials order form for educational materials, and has a tracking mechanism for the number of queries. The website address is http://rcflood.org/stormwater/.

11.1 Target Audiences

The City of Murrieta ensures that appropriate education and outreach is available to the following target audiences:

- Copermittee departments and personnel
- New Development / Redevelopment Project Applicants, Developers, Contractors, property owners, and other responsible parties
- Construction Site owners and operators
- Commercial Facility owners and operators
- Industrial Facility owners and operators
- Residential community and general public

11.2 Education of Public Audiences

11.2.1 General Education

The City of Murrieta, through the Implementation Agreement described in Section 3.2.1, coordinates with the other Copermittees to develop and implement County-wide educational activities through the regional 'Only Rain Down the Storm Drain' program implemented by the District. Where necessary those regional

activities are supplemented by the City of Murrieta with additional localized educational / outreach activities.

In general, these education programs educate each target audience on the following topics, as appropriate and applicable to the target audience's potential Stormwater and Non-Stormwater discharges to the MS4:

(a) Applicable water quality laws, regulations, permits, and requirements;

(b) BMPs;

(c) General Runoff concepts;

(d) Existing water quality, including local water quality conditions, Impaired waterbodies and ESAs; and

(e) Other topics, as determined by the Copermittee(s), such as public reporting mechanisms, water conservation, LID techniques, and public health and vector issues associated with Runoff.

In addition, the City of Murrieta implements educational activities, public information activities, and other appropriate activities to facilitate the proper management and disposal of used oil and toxic materials.

11.2.2 Target Audience Topics

The City of Murrieta ensures that their education program provides the following information

New Development / Redevelopment and Construction Sites {F.6.b.(2)}

As early in the planning and development process as possible and all through the permitting and construction process, the City of Murrieta notifies parties responsible for the construction project about the importance of educating all construction workers in the field about Stormwater issues and BMPs, in addition to the general topics under Section F.6.a.(1) of the 2010 SMR MS4 Permit.

Commercial and Industrial Sites / Sources {F.6.b.(3)}

At least once during the five-year period of this Order, the City of Murrieta will notify the owner/operator of each of its inventoried commercial and industrial site/source of the BMP requirements applicable to the site/source.

Residential and General Public {F.6.b.(4)}

The City of Murrieta, through the implementation agreement, collaborates with the other Copermittees to fund the development and implementation of the regional 'Only Rain Down the Storm Drain' public education program. One of the goals of this program is to educate residential and general public target communities on potential Pollutant generating activities (e.g., car washing, mobile operations, yard maintenance) and Pollutant generating products (e.g., pesticides, fertilizers, household chemicals). The target audiences of the residential and general public education programs include underserved target

audiences (e.g., disadvantaged communities), residents and managers of CIA/HOA areas, and owners and residents of MHPs.

11.2.1 Methods

The Table 11-1 describes the public education and outreach methods that target public audiences:

Table 11-1: Public Education Education/Outreach Methods

Target Audience	JRMP Program Areas Addressed	Education / Outreach Methods
New Development / Redevelopment Project Applicants, Developers, Contractors, Property Owners, and other Responsible Parties	• F.1 • F.6.a • F.6.b.(2)	**Training** • Regional SMR WQMP Launch Training (upon approval of revised SMR WQMP) • Regional HMP Launch Training (upon approval of HMP) **Guidance Documents** • SMR WQMP and HMP Guidance • Regional LID BMP Design Handbook (http://rcflood.org/npdes/lidbmp.aspx) • CASQA Low Impact Development Manual for Southern California (https://www.casqa.org/LID/tabid/240/Default.aspx) • CASQA Stormwater BMP Handbooks (http://www.cabmphandbooks.com/) **Applications / Forms** • Project Application form • WQMP Applicability Checklist • **Electronic Outreach** • Regional Quarterly E-newsletters • Website **Other** • Regional Quarterly E-newsletters

12.0 CITY OF MURRIETA STAFF TRAINING {F.6.}

The City of Murrieta's education program ensures that City of Murrieta staff and contractors (and Planning Boards and Elected Officials, if applicable) responsible for implementing the requirements of the 2010 SMR MS4 Permit have an understanding of the following topics as applicable to their responsibilities.

(i) Applicable water quality laws and regulations;

(ii) The potential effects and impacts that Copermittee departments and personnel activities related to their job duties can have on water quality);

(iii) Plan review policies and procedures to verify consistent application;

(iv) Methods of minimizing impacts to receiving water quality resulting from development, construction, and other potential Pollutant generating activities;

(v) Proper implementation of erosion and sediment control, Source Control, Treatment Control, and other BMPs to minimize the impacts to Receiving Water quality resulting from development, construction, and other potential Pollutant generating activities;

(vi) Applicable recordkeeping and tracking mechanisms; and

(vii) Inspection and enforcement procedures, BMP implementation, and review of monitoring data

12.1 Methods

The following table describes the educational activities conducted that target City of Murrieta staff:

Table 12-1: City of Murrieta **Staff Education/Outreach Methods**

Target Audience	JRMP Program Area Addressed	Education / Outreach Methods
Management	All	• Staff Meetings • Regional City Manager coordination meetings • other
NPDES Coordinator	All	• SMR Technical Advisory Committee (TAC) Meetings • SMR Copermittee staff meetings • Regional NPDES training (all applicable modules) • others

Target Audience	JRMP Program Area Addressed	Education / Outreach Methods
Development Planning Staff	• F.1. • F.6.a. • F.6.b.(1)	• Regional WQMP Training • HMP Training (to be developed upon approval of HMP) • Copermittee staff training • others
Construction Site Approval, Inspection and Enforcement	• F.2. • F.4. • F.6.a. • F.6.b.(1)	• Regional Construction Inspection Training • Copermittee staff training • others
Municipal Maintenance	• F.3.a. • F.4. • F.6.a. • F.6.b.(1)	• Regional Municipal Maintenance Training • Pesticide applicator certification • Copermittee staff training • others
Code Enforcement	• F.3.b. • F.4. • F.6.a. • F.6.b.(1)	• Regional Commercial / Industrial Inspection Training • Copermittee staff training • others

12.2 Frequency {F.6.b.(1)(b)(2)}

The City of Murrieta trains its staff responsible for oversight and conducting storm water compliance inspections and enforcement of construction activities (e.g. construction, building, code enforcement, grading review staffs, inspectors, and other responsible construction staff) annually prior to the rainy season.

The City of Murrieta trains its staff responsible for conducting stormwater compliance inspections and enforcement of Industrial and Commercial Facilities at least once a year.

13.0 MONITORING PROGRAM {N.}

13.1 Overview

The District, through the Implementation Agreement (Section 3.2.1), implements the Santa Margarita Monitoring Plan on behalf of the City of Murrieta. The Monitoring Plan, available at: http://rcflood.org/NPDES/Monitoring.aspx, addresses the City of Murrieta's responsibilities in the Receiving Waters, MS4 Discharge and Reporting Program No. R9-2010-0016 (MRP, Attachment E to the 2010 SMR MS4 Permit).

Additionally, the City of Murrieta conducts source identification monitoring as required per Section II.B.2. and II.C.2. of the MRP, in response to an exceedance of an Action Level.

The Major MS4 Outfalls will be tested in accordance to the 2010 SMR MS4 Permit. A list will be created and tracked as part of the monitoring program.

13.2 Non-Stormwater Dry Weather Action Levels {C.}

The District will notify the City of Murrieta of exceedances of Analytical results (either laboratory or field screening) that exceed the NALs presented in Table 3 of the 2010 SMR MS4 Permit. In response to such an exceedance, the City of Murrieta will investigate and seek to identify the source of the exceedance in a timely manner following the procedures described in Section 4.4.2 and 4.4.3. However, if the City of Murrieta identifies a number of NAL exceedances that prevents it from adequately conducting source investigations at all sites in a timely manner, then the City of Murrieta will submit a prioritization plan and timeline that identifies the timeframe and planned actions to investigate and report its findings on all of the exceedances to the Regional Board.

The 2010 MS4 Permit notes that neither the absence of exceedances of NALs nor compliance with required actions following observed exceedances, excuses any non-compliance with the requirement to effectively prohibit all types of unauthorized Non-Stormwater discharges into the MS4 or any non-compliance with the prohibitions in the MS4 Permit.

During any Annual Reporting period in which one or more exceedances of NALs have been documented the City of Murrieta will report a description of whether and how the observed exceedances did or did not result in a discharge from the MS4 that caused, or threatened to cause or contribute to a condition of Pollution, Contamination, or Nuisance in the Receiving Waters.

13.3 Stormwater Action Levels {D.}

The District implements the Wet Weather MS4 Discharge Monitoring program and annually evaluates the data compared to the Stormwater Action Levels (SALs) identified in Table 4 of the 2010 SMR MS4 Permit. At each monitoring station, a running average of 20% or greater of exceedances of any discharge of stormwater from the MS4 to Waters of the U.S. that exceed the SALs for each of the Pollutants listed in Table 4 (below) in Receiving Waters receiving discharges from the City of Murrieta's MS4 facilities requires the City of Murrieta to affirmatively augment and implement all necessary stormwater controls and measures described in this JRMP to reduce the discharge of the associated class of Pollutants(s) to the

MEP. The City of Murrieta will utilize the exceedance information when adjusting and executing its annual work plans. The magnitude, frequency, and number of constituents exceeding the SAL(s), in addition to Receiving Water quality data and other information, will be considered when prioritizing and reacting to SAL exceedances in an iterative manner.

Glossary

Name	Definition
2010 SMR MS4 Permit	Order R9-2010-0016, an NPDES MS4 Permit issued by the San Diego Regional Board.
Action Level	See Non-Stormwater Action Levels and Stormwater Action Levels
Beneficial Use	The uses of water necessary for the survival or well being of man, plants and wildlife. These uses of water serve to promote the tangible and intangible economic, social and environmental goals. "Beneficial Uses" of the waters of the State that may be protected include, but are not limited to, domestic; municipal; agricultural and industrial supply; power generation; recreation; aesthetic enjoyment; navigation; and preservation and enhancement of fish, wildlife, and other aquatic resources or preserves. Existing Beneficial Uses are uses that were attained in the surface or groundwater on or after November 28, 1975; and potential Beneficial Uses are uses that would probably develop in future years through the implementation of various control measures. "Beneficial Uses" are equivalent to "Designated Uses" under Federal law. [California Water Code Section 13050(f)].
Best Management Practice (BMP)	Any procedure or device designed to minimize the quantity of Pollutants that enter the MS4 or to control stormwater flow. See Chapter Two.
Bioretention BMP	A type of LID Retention BMP that is designed to capture the Design Capture Volume and absorb that volume entirely into a biologically active soil media. Water retained in this soil media is then evapotranspired by plants in the BMP, or slowly allowed to infiltrate into the underlying soils. This BMP inherently maximizes both Infiltration and Evapotranspiration of Runoff based on the actual limitations of the soil and environment.
Biotreatment BMP	A type of **LID BMP** that can be used in certain circumstances when LID Retention BMPs are not feasible. These BMPs provide similar functions and benefits as LID Bioretention BMPs, such as inclusion of natural biological processes and maximizing opportunities for Infiltration and Evapotranspiration, however, they are not designed to retain the Design Capture Volume in an engineered soil media. Examples of Biotreatment BMPs include extended detention basins, bioswales and constructed wetlands.
California Stormwater Quality Association (CASQA)	Publisher of the California Stormwater Best Management Practices Handbooks, available at www.cabmphandbooks.com
Cease and Desist Order	See Stop Work Order
CEQA	California Environmental Quality Act
Citation	An official summons to appear (as before a court)
Condition of Concern	Conditions that may affect the designated Beneficial Uses of a Receiving Water

Glossary

Name	Definition
Condition(s) of Approval (COA)	Requirements a Copermittee may adopt for a project in connection with a discretionary action (e.g., approval of a subdivision map or issuance of a use permit). COAs may specify features required to be incorporated into the final plans for the project and may also specify uses, activities, and operational measures that must be observed over the life of the project.
Construction Site	Any project, including projects requiring coverage under the General Construction Permit, that involves soil disturbing activities including, but not limited to clearing, grading, disturbances to ground such as stockpiling, and excavation.
Copermittee	District, County and Cities of Murrieta, Temecula and Wildomar. The terms *'local Copermittee'* and *'your Copermittee'* refers to the Copermittee that has jurisdiction over the proposed **Priority Development Project**.
CWA	The Federal Clean Water Act
Design Capture Volume (VBMP)	The volume of runoff from the **Design Storm**. This is design sizing standard for LID BMPs, as well as for conventional Treatment Control BMPs whose design is based on treating a particular volume of runoff.
Design Flow Rate (QBMP)	The flow rate resulting from an hourly rainfall intensity of 0.2 inch per hour. The Design Flow Rate will depend on the types of post-development surfaces on the site. Flow-based BMP designs can only be used when implementing conventional Treatment Control BMPs.
Design Storm	The 85th percentile 24-hour storm depth, based on local historical rainfall records. See Exhibit A of the SMR WQMP.
Development Project	Any project that proposes construction, rehabilitation, redevelopment, or reconstruction of any public or private residential, industrial or commercial facility, or any other projects designed for post-construction human activity or occupation.
Directly Connected	Any impervious surface which drains into a catch basin, area drain, or other conveyance structure (such as a street) without first directing the flow across pervious areas (e.g., lawns).
Discretionary Approval	A project which requires the exercise of judgment or deliberation by the public agency or body when they decide to approve or disapprove a particular activity. Discretionary approvals are distinguished from situations where the public agency or body merely has to determine whether there has been conformity with applicable statutes, ordinances or regulations. **Check with the Copermittee to determine if a particular action is considered Discretionary.**
Drainage Management Area (DMA)	Individual, discrete drainage areas that typically follow grade breaks and roof ridge lines

Glossary

Name	Definition
Drawdown Time	The time required for a detention or retention BMP to drain and return to the dry-weather condition. For detention BMPs, Drawdown Time is a function of basin volume and outlet orifice size. For infiltration BMPs, Drawdown Time is a function of basin volume and infiltration rate. For Harvest and use BMPs, Drawdown Time is a function of the cistern volume and the demand for use of captured stormwater.
Dry Season	May 1st through September 30th
Dry Weather	Weather is considered dry if the preceding 72 hours has been without precipitation.
DU	Dwelling Unit
EIATIA	Effective Impervious Area To Irrigated Area that would be required to achieve the minimum 40% long-term retention of runoff when harvesting stormwater runoff for outdoor irrigation. See Section 2 of the SMR WQMP.
EIR	Environmental Impact Report
Emergency Situation	IC/IDs that pose an immediate threat to human health or the environment. Any sewage spill over 1,000 gallons or that could impact water recreation, any spill that could impact wildlife, any Hazardous Material spill where residents are evacuated, any spill of reportable quantities of Hazardous Waste (as defined by 40 CFR 117 and 40 CFR 302), or any other spill reportable to the California Emergency Management Agency (Cal-EMA, formerly known as the Office of Emergency Services or OES) is classified as a threat to human health or the environment.
Ephemeral	Water bodies, or segments thereof, that contain water only for a short period following precipitation events.
Erosion	When land is diminished or worn away due to wind, water or glacial ice. Often the eroded debris (silt or sediment) becomes a Pollutant via Stormwater Runoff. Erosion occurs naturally but can be intensified by land clearing activities such as farming, development, road building and timber harvesting.
ESA	Environmentally Sensitive Area. At minimum, as defined in the 2010 MS4 Permit, all Receiving Waters are considered ESAs.
Evapotranspiration	The process of transferring moisture from the earth to the atmosphere by evaporation of water and transpiration from plants.
Facility Pollution Prevention Plan (FPPP)	A plan that the Copermittee maintains that describes the BMPs that are implemented at their municipal facilities to reduce stormwater pollution to the MEP and prohibit illegal discharges.
Final Project-Specific WQMP	A fully completed version of the Water Quality Management Plan that must be submitted and approved prior to recordation of the final map, parcel map or issuance of building permit. See also Preliminary Project-Specific WQMP.

Glossary

Name	Definition
General Plan	Document that specifies policies that guide development.
Harvest and Use BMPs	Stormwater BMPs that capture stormwater runoff in a vault or cistern, and stores that water for later use, such as for irrigation.
Hazardous Materials	Any substance that poses a threat to human health or the environment due to its toxicity, corrosiveness, ignitability, explosive nature or chemical reactivity. These also include materials named by the USEPA in 40 CFR 116 to be reported if a designated quantity of the material is spilled into the Waters of the U.S. or emitted into the environment.
Hazardous Waste	As defined by 40 CFR 117 and 40 CFR 302
Head	In hydraulics, energy represented as a difference in elevation. In slow-flowing open systems, such as most stormwater BMPs, this is the difference in water surface elevation, e.g., between an inlet and outlet.
Hydrograph	Runoff flow rate graphed as a function of time.
Hydrologic Soil Group (HSG)	Classification of soils by the NRCS into A, B, C and D groups according to infiltration characteristics.
Hydromodification	The change in the natural watershed hydrologic processes and runoff characteristics (i.e., interception, infiltration, overland flow, interflow and groundwater flow) caused by urbanization or other land use changes that result in increased stream flows and sediment transport.
Hydromodification Management Plan (HMP)	A Plan that, once developed by the Copermittees, will specify requirements that must be implemented so that projects will not cause Hydromodification.
Illegal Discharge	Defined in 40 CFR 122.26(b)(2) as any discharge to the MS4 that is not composed entirely of stormwater, except discharges pursuant to an NPDES permit, discharges that are identified in Section 4.1.2 of the JRMP, and other discharges authorized by the Executive Officer of the Regional Board.
Illicit Connection	Any unauthorized connection to the MS4 that conveys an Illicit Discharge
Impairment	Describes a condition where a waterbody is presumed by the Regional Board to not be supporting its Beneficial Uses, based on exceedances of certain water quality objectives..
Impervious Area	
Impervious surface	Any surface in the landscape that cannot effectively absorb or infiltrate urban runoff; for example, conventionally paved: sidewalks, rooftops, roads and parking areas.
Implementation Agreement	An agreement among the Copermittees that establishes the responsibilities of each Copermittee and a procedure for funding the shared costs.

Glossary

Name	Definition
Industrial Facility	Industrial Facilities, as defined at 40 CFR § 122.26(b)(14), including: those subject to the General Industrial Permit or other individual NPDES permit; Operating and closed landfills; Facilities subject to SARA Title III; and Hazardous waste treatment, disposal, storage and recovery facilities.
Infiltration BMPs	A type of LID Retention BMP where the primary treatment mechanism is through seepage of runoff into a site's underlying soil.
Infiltration Rate	Rate at which water can be added to a soil without creating runoff (in/hr).
Infraction	Violation
Integrated Pest Management (IPM)	A decision-making process for managing pests that combines biological, cultural, mechanical, physical and chemical tools, and other management practices to control pests in a safe, cost effective and environmentally sound manner that contributes to the protection of public health
Intermittent	Waterbodies, or segments thereof, that contain water for extended periods during the year, but not at all times.
JRMP	Jurisdictional Runoff Management Plan
JRMP Annual Report	Report summarizing a Copermittee's compliance information to be submitted annually to the Regional Board on or before each October 31st of each year, beginning on October 31, 2013. The reporting period for these JRMP Annual Reports must be the previous fiscal year.
LID BMPs	LID BMPs include schedules of activities, prohibitions of practices, maintenance procedures, and other management practices to prevent or reduce the Pollution of Waters of the United states through Stormwater management and land development strategies that emphasize conservation and the use of on-site natural features integrated with engineered, small-scale hydrologic controls to more closely reflect pre-development hydrologic functions. LID BMPs include retention practices that do not allow Runoff, suchas infiltration, rain water harvesting and reuse, and evapotranspiration. LID BMPs also include flow-through practices such as biofiltration that may have some discharge of Stormwater following Pollutant reduction.
LID Principles	LID Principles are Site Design concepts that help prevent or minimize the causes (or drivers) of project impacts, and help mimic the pre-development hydrology. Implementing LID Principles will help minimize the need for specific Stormwater BMPs on a project.

Glossary

Name	Definition
LID Retention BMP	A type of Stormwater BMP that is designed to store the Design Capture Volume, and avoid any discharge to downstream systems in storms up to the Design Storm. For the purposes of this WQMP, LID Retention BMPs include Infiltration BMPs, Harvest and Use BMPs, Pervious Pavement BMPs and Bioretention BMPs. See also Other LID BMPs
Low Impact Development (LID)	A stormwater management and land development strategy that emphasizes conservation and the use of onsite natural features integrated with engineered, small-scale hydrologic controls to more closely reflect pre-development hydrologic functions.
Major Outfall	Outfalls owned by a Copermittee with a pipe diameter of 36 inches or greater or drainage areas draining 50 acres or more. See also **Outfall.**
Maximum Extent Practicable (MEP)	Standard, established by the 1987 amendments to the Clean Water Act, for the reduction of Pollutant discharges from MS4s.
Misdemeanor	A crime less serious than a felony.
Mobile Business	Businesses that conduct services listed in section 8.1.1 but do not operate out of a fixed location.
Municipal Facility	A facility owned by a Copermittee
Municipal Separate Storm Sewer System (MS4)	A conveyance or system of conveyances (including roads with drainage systems, municipal streets, catch basins, curbs, gutters, ditches, manmade channels or storm drains) as defined in 40 CFR 122.26(b)(8).
National Pollutant Discharge Elimination System (NPDES)	As part of the 1972 Clean Water Act, Congress established the NPDES permitting system to regulate the discharge of Pollutants from municipal sanitary sewers and industries. The NPDES was expanded in 1987 to incorporate permits for discharges from MS4s as well (aka MS4 Permits).
Non-Hazardous Materials	For example, food wastes, trash and debris
Non-Jurisdictional IC/ID	An IC/ID originating from a property over which the Copermittee has no applicable jurisdictional authority such as a special district (e.g., school, water, wastewater), federal, state, or tribal property.
Non-Stormwater	All discharges to and from an MS4 that do not originate from precipitation events (i.e., all discharges from an MS4 other than Stormwater). Non-Stormwater includes Illicit Discharges, non-prohibited discharges, and NPDES permitted discharges.

Glossary

Name	Definition
Non-Stormwater Action Levels	This Order includes action levels for pollutants in non-stormwater, dry weather discharges from the MS4. The non-stormwater action levels are designed to ensure that the Order's requirement to effectively prohibit all types of unauthorized discharges of non-stormwater into the MS4 is being complied with. Non-stormwater action levels in the Order are based upon numeric or narrative water quality objectives and criteria as defined in the Basin Plan, the State Water Board's Water Quality Control Plan for Ocean Waters of California (Ocean Plan), and the State Policy for Implementation of Toxics Standards for Inland Surface Waters, Enclosed Bays and Estuaries of California (State Implementation Policy or SIP). An exceedance of an action level requires specified responsive action by the Copermittees. This Order describes what actions the Copermittees must take when an exceedance of an action level is observed. Exceedances of non-stormwater action levels do not alone constitute a violation of this Order but could indicate non-compliance with the requirement to effectively prohibit all types of unauthorized non-stormwater discharges into the MS4 or other prohibitions established in this Order. Failure to undertake required source investigation and elimination action following an
Non-Structural BMPs	See LID Principles
Notice of Noncompliance	The Notice of Noncompliance constitutes a basic request that the property owner or facility operator rectify the condition causing or threatening to cause noncompliance
NRCS	Natural Resources Conservation Service
O&M	Operation and Maintenance. All BMPs implemented as part of a WQMP must continue to be operational and must be maintained throughout the life of the project.
Operational Source Control BMPs	Source Control programs or activities implemented by a site operator to prevent pollution. Examples include regular sweeping of parking lots and other 'housekeeping' efforts.
Other Development Projects	All Discretionary Development Projects that are not categorized as Priority Development Projects.
Other LID BMPs	Stormwater BMPs that incorporate features that provide for natural biological processes while maximizing opportunities for Infiltration and Evapotranspiration. These are distinguished from **LID Retention BMPs**, with the latter being BMPs that, in addition to the above features, are also designed to retain stormwater runoff.
Outfall	Means a Point Source as defined by 40 CFR 122.2.a, the point where a municipal separate storm sewer discharges to Waters of the U.S. and does not include open conveyances connecting two municipal separate storm sewers, pipes, tunnels or other conveyances which connect segments of the same stream or other Waters of the U.S. and are used to convey waters of the U.S. [40 CFR 122.26(b)(9)].
Permanent Source Control BMP	A type of source control BMP that is a structural part of the site, such as roofs and berms over and around trash and recycling areas.

Glossary

Name	Definition
Permeable or Pervious or Porous Pavements	Pavements for roadways, sidewalks, or plazas that are designed to infiltrate runoff *through* the pavement. Types of Permeable Pavements include pervious concrete, pervious asphalt, porous pavers and granular materials.
Pollutant	Any agent that may cause or contribute to the degradation of water quality such that a condition of Pollution or Contamination is created or aggravated.
Pollutant of Concern	Pollutants for which water bodies are listed as impaired under CWA Section 303(d), pollutants associated with the land use type of a development, and/or pollutants commonly associated with runoff.
Pollution Prevention BMP	Practices that reduce or eliminate the generation of Pollutants.
Pre-Development	Conditions that would exist naturally.
Preliminary Project-Specific WQMP	A preliminary project-specific WQMP is commonly required to be submitted with an application for entitlements and development approvals and must be approved by the Copermittee before any approvals or entitlements will be granted.
Priority Development Project	Development Projects that meet the categories and criteria identified in Table 1-1 (see 2010 SMR MS4 Permit, item F.1.d.).
Priority Pollutant of Concern	Pollutants that are associated with a proposed project and are listed as impaired under CWA Section 303(d).
Project-Specific WQMP	A plan specifying and documenting permanent LID Principles and Stormwater BMPs to control post-construction Pollutants and stormwater runoff for the life of the project, and to maintain Stormwater BMPs for the life of the project. Copermittees may require a preliminary Project-Specific WQMP submittal, to be followed by a final Project-Specific WQMP.
Proprietary Stormwater BMPs	Products designed and marketed by private businesses for treatment of stormwater.
Rainy Season	October 1st through April 30th
Rational Method	A method of calculating runoff flows based on rainfall intensity, tributary area, and a coefficient representing the proportion of rainfall that runs off. In the Rational Method Q=C*I*A as further described in Section 2 of the WQMP.
Receiving Water	Any water body that is identified in the San Diego Basin Plan. The San Diego Basin Plan is available from the San Diego Regional Board's website at www.waterboards.ca.gov/sandiego.

Glossary

Name	Definition
Redevelopment	A Development Project that involves the creation, addition and/or replacement of impervious surface on an already developed site. Examples include the expansion of a building footprint, road widening, the addition to or replacement of a structure, and creation or addition of impervious surfaces. Replacement of impervious surfaces includes any activity that is not part of a routine maintenance activity where impervious material(s) are removed, exposing underlying soil during construction. Redevelopment does not include trenching and resurfacing associated with utility work; resurfacing existing roadways; new sidewalk construction, pedestrian ramps, or bikelane on existing roads; and routine replacement of damaged pavement, such as pothole repair.
Regional Water Quality Control Board (or Regional Board)	Regional Boards are responsible for implementing Pollution control provisions of the CWA and California Water Code within their jurisdiction. There are nine Regional Boards in California. The Regional Boards issued the 2010 MS4 Permit to the Copermittees on November 10, 2010.
Retrofit	Programs and projects to address the impacts of existing development through reducing the impacts from hydromodification, promote LID, support riparian and aquatic habitat restoration, reduce the discharges of Stormwater Pollutants from the MS4 to the MEP, and prevent discharges from the MS4 from causing or contributing to a violation of Water Quality Standards.
Runoff	All flows in a stormwater conveyance system that consists of the following components: (1) stormwater (wet weather flows) and (2) non-stormwater including dry weather flows.
Runoff Management Plan	A site-specific plan identifying BMPs to manage the quality and quantity of runoff from a project site.
Santa Margarita Region (SMR)	The portion of Riverside County covered by Order R9-2010-0016, an NPDES MS4 Permit issued by the Santa Diego Regional Board.
Sedimentation	The action or process of forming or depositing sediment.
Self-treating area	Natural or landscaped area (as described in Section 3.3 of the WQMP) that drains offsite without comingling with developed portions of the site.
Site Design	See **LID Principles**.
Source Control BMP	A facility or procedure to prevent Pollutants from coming into contact with rainfall and/or runoff.
Stop Work Order or Cease and Desist Order	As used in the JRMP, an order from a Copermittee to stop a particular activity.
Stormwater	Per 40 CFR 122.26(b)(13), means stormwater runoff, snowmelt runoff, and surface runoff and drainage. Surface runoff and drainage pertains to runoff and drainage resulting from precipitation events.

Glossary

Name	Definition
Stormwater Action Level	SALs were computed as the 90th percentile of the data set, utilizing the statistical based population approach, one of three approaches recommended by the State Water Board's Storm Water Panel in its report 'The Feasibility of Numerical Effluent Limits Applicable to Discharges of Storm Water Associated with Municipal, Industrial and Construction Activities (June 2006)". SALs are identified in Section D of the 2010 SMR MS4 Permit. Copermittees must implement a timely, comprehensive, cost-effective stormwater pollution control program to reduce the discharge of pollutants in stormwater from the permitted areas so as not to exceed the SALs. Exceedance of SALs may indicate inadequacy of programmatic measures and BMPs required in this Order.
Stormwater Ordinance	The ordinance or set of ordinances that are consistent with the Legal Authorities described in section 3.4 of this JRMP.
Stormwater Pollutant	A Pollutant associated with Stormwater.
Stormwater Pollution Prevention Plan (SWPPP)	A plan providing for temporary measures to control sediment and other Pollutants *during* construction. In contrast with the WQMP which is a plan to reduce pollutant in runoff during the post-construction use and life of the project.
Structural Stormwater BMPs	Structural Post-Construction BMPs that are designed to address stormwater runoff impacts from the completed site, and throughout the use and life of the project.. Stormwater BMPs consist of LID Principles, LID BMPs, Conventional Treatment BMPs, Hydromodification BMPs, and Permanent Source Control BMPs.
Total Maximum Daily Load (TMDL)	A TMDL is the maximum amount of a Pollutant that can be discharged into a waterbody from all sources (point and non-point) and still maintain Water Quality Standards. Under CWA Section 303(d), TMDLs must be developed for all waterbodies that do not meet Water Quality Standards after application of technology-based controls.
Toxicity	Adverse responses of organisms to chemicals or physical agents ranging from mortality to physiological responses such as impaired reproduction or growth anomalies.
Treatment Control BMP	Any engineered system designed to remove pollutants by simple gravity settling of particulate pollutants, filtration, biological uptake, media absorption or any other physical, biological or chemical process.
TUTIA	Toilet Users To Impervious Area ratio, that would be required to achieve the minimum 40% long-term retention of runoff when harvesting stormwater runoff for toilet use. See Chapter 2 of the WQMP.
Unpaved Road	A long, narrow stretch without pavement used for traveling by motor passenger vehicles between two or more points. Unpaved roads are generally constructed of dirt, gravel, aggregate or macadam and may be improved or unimproved.

Glossary

Name	Definition
Waste	As defined in CWC Section 13050(d), "waste includes sewage and any and all other waste substances, liquid, solid, gaseous, or radioactive, associated with human habitation, or of human or animal origin, or from any producing, manufacturing, or processing operation, including waste placed within containers of whatever nature prior to, and for purposes of, disposal."
Waste Discharge Requirements	As defined in Section 13374 of the California Water Code, the term "Waste Discharge Requirements" is the equivalent of the term "permits" as used in the Federal Water Pollution Control Act, as amended. The Regional Board usually reserves reference to the term "permit" to Waste Discharge Requirements for discharges to surface Waters of the U.S.
Water Quality Management Plan (WQMP, or SMR WQMP)	Referred to as a Standard Stormwater Mitigation Plan (SSMP) in the 2010 SMR MS4 Permit. This is a plan to reduce the discharge of pollutants to the MEP from the post-construction use and life of a project.
Water Quality Objectives	Numerical or narrative limits on constituents or characteristics of water designated to protect designated beneficial uses of the water. [California Water Code Section 13050 (h)]. California's water quality objectives are established by the State and Regional Water Boards in the Water Quality Control Plans. Numeric or narrative limits for pollutants or characteristics of water designed to protect the beneficial uses of the water. In other words, a water quality objective is the maximum concentration of a pollutant that can exist in a receiving water and still generally ensure that the beneficial uses of the receiving water remain protected (i.e., not impaired). Since water quality objectives are designed specifically to protect the beneficial uses, when the objectives are violated the beneficial uses are, by definition, no longer protected and become impaired. This is a fundamental concept under the Porter Cologne Act. Equally fundamental is Porter Cologne's definition of pollution. A condition of pollution exists when the water quality needed to support designated beneficial uses has become unreasonably affected or impaired; in other words, when the water quality objectives have been violated. These underlying definitions (regarding beneficial use protection) are
Water Quality Standards	The beneficial uses (e.g., swimming, fishing, municipal drinking water supply, etc.) of water and the Water Quality Objectives necessary to protect those uses.

Glossary

Name	Definition
Waters of the U.S.	As defined in the 40 CFR 122.2, the Waters of the U.S. are defined as: "(a) All waters, which are currently used, were used in the past, or may be susceptible to use in interstate or foreign commerce, including all waters which are subject to the ebb and flow of the tide; (b) All interstate waters, including interstate "wetlands;" (c) All other waters such as intrastate lakes, rivers, streams (including intermittent streams), mudflats, sandflats, "wetlands," sloughs, prairie potholes, wet meadows, playa lakes, or natural ponds the use, degradation or destruction of which would affect or could affect interstate or foreign commerce including any such waters: (1) Which are or could be used by interstate or foreign travelers for recreational or other purposes; (2) From which fish or shellfish are or could be taken and sold in interstate or foreign commerce; or (3) Which are used or could be used for industrial purposes by industries in interstate commerce; (d) All impoundments of waters otherwise defined as waters of the United States under this definition: (e) Tributaries of waters identified in paragraphs (a) through (d) of this definition; (f) The territorial seas; and (g) "Wetlands" adjacent to waters (other than waters that are themselves wetlands) identified in paragraphs (a) through (f) of this
Wet Season	October 1st to April 30th
Wet Weather	Weather is considered wet if precipitation measuring over 0.10 inches has been received during the preceding 72 hours.

APPENDIX B

Permittee Departmental Responsibilities

There are multiple departments with responsibility to implement elements of the JRMP and to meet the requirements of the 2010 MS4 Permit. An organizational chart depicting the departments and key personnel (positions title) with implementation responsibilities is shown below. Additionally, Table 3-1 is a matrix showing each JRMP element, the departments with implementation responsibilities, the specific responsibilities of each department/organizational unit, and the key personnel by position title.

City of Murrieta Organizational Chart

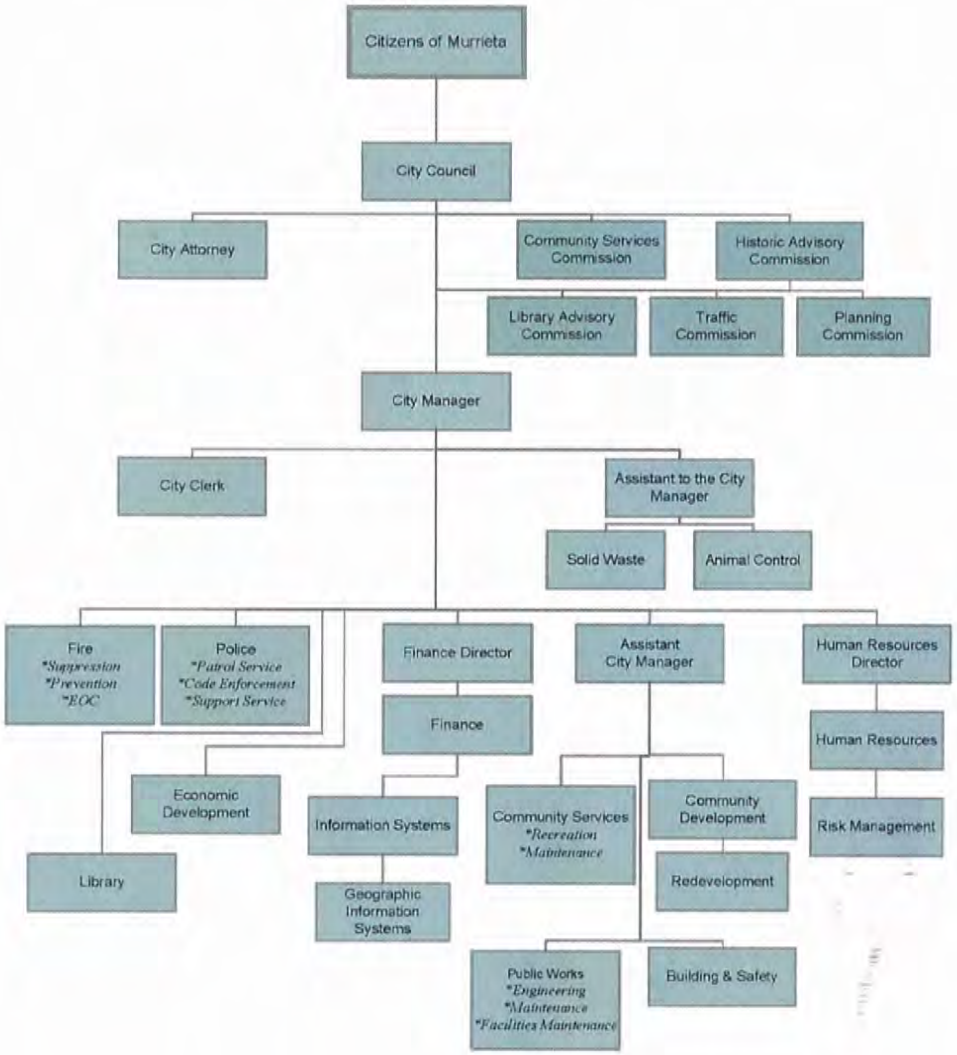

Table B-1. JRMP Departmental Responsibilities

Program Element	JRMP Section {Permit reference}	Primary Responsible Department	Responsible Staff Title
3.0 Program Management	3.1 – Departmental Responsibilities – Maintain matrix	Public Works Department	NPDES Coordinator

Dear Messrs. Thomas, Oviedo and Allison:

SUBJECT: DESIGNATIONS OF SAN DIEGO WATER BOARD AND SANTA ANA WATER BOARD FOR PURPOSES OF REGULATION OF MUNICIPAL SEPARATE STORM SEWER SYSTEMS - CITIES OF MENIFEE, MURRIETA AND WILDOMAR, RIVERSIDE COUNTY

This letter constitutes the California Regional Water Quality Control Board, San Diego Region's (San Diego Water Board, San Diego Regional Board, or Region 9) written agreement pursuant to Water Code section 13228, subdivision (a) to designate the Santa Ana Regional Water Quality Control Board (Santa Ana Water Board or Region 8) as the regulator of the City of Menifee within Region 9's geographic jurisdiction for municipal separate storm sewer system (MS4) permit purposes[1], and further constitutes the San Diego Water Board's written agreement to accept designation from the Santa Ana Water Board to regulate the Cities of Murrieta and Wildomar, including those portions of each city that fall within Region 8's geographic jurisdiction, for MS4 permit purposes.[2] As discussed below, this agreement is subject to several important limitations recognized by the Cities.

[1] The San Diego Water Board intends to consider the adoption of a new MS4 permit (Tentative Order No. R9-2010-0016) that would regulate the relevant portions of Murrieta and Wildomar on October 13, 2010.

[2] Until the new San Diego Water Board MS4 permit is adopted, including regulation of the Cities of Murrieta and Wildomar for MS4 purposes regardless of geographic boundaries, portions of Murrieta and Wildomar remain regulated in part by Order No. R8-2010-0033. Murrieta and Wildomar would become regulated by the San Diego Water Board, with certain limitations described below, when the San Diego Water Board adopts tentative Order No. R9-2010-0016, scheduled for consideration on October 13, 2010.

Background

The Cities each lay partially within both the San Diego and Santa Ana Water Boards' geographic jurisdictional boundaries. Portions of the Cities are currently regulated by the Santa Ana Water Board under Order No. R8-2010-0033 for MS4 discharges. Because the Cities of Wildomar and Menifee were incorporated after 2004, the San Diego Water Board's existing MS4 permit, Order No. R9-2004-001, regulates portions of Murrieta, but does not regulate Wildomar or Menifee. On July 20, 21 and 22, 2010, Murrieta, Wildomar and Menifee, respectively, submitted letters addressed jointly to the Executive Officers of the San Diego Water Board and the Santa Ana Water Board requesting that they each be regulated by one MS4 permit, pursuant to Water Code section 13228. (The Cities' letters, which include maps provided by the Cities depicting their respective geographic locations, are attached to this letter as Exhibits 1-3.) Murrieta and Wildomar requested that the Santa Ana Water Board designate the San Diego Water Board as the regulator for all portions of their respective cities, including those portions within Region 8's geographic boundary, for their MS4-related discharges. Likewise, the City of Menifee requested that the San Diego Water Board designate the Santa Ana Water Board as the regulator for all portions of Menifee, including those portions of the city that fall within Region 9's jurisdictional boundary, for matters pertaining to MS4 discharges. As the basis for their requests, the Cities cite the desire to reduce the complexities associated with being regulated by two separate MS4 permits and a desire to increase effectiveness and efficiencies in using city resources to benefit water quality. As described below, each city recognizes appropriate and important limitations to this agreement.

Limitations on San Diego Water Board Designation Agreement

As explained in their respective letters, each city recognizes the following common limitations to this agreement: (1) the requested designation applies only to MS4 permitting so that each city is subject to a single MS4 permit; (2) the Cities of Murrieta and Wildomar recognize that other waste discharge requirements (WDRs) or orders issued and/or enforced by the San Diego Water Board remain wholly under the San Diego Water Board's jurisdiction; likewise, the City of Menifee recognizes that WDRs and/or other orders issued or enforced by the Santa Ana Water Board remain wholly under the Santa Ana Water Board's jurisdiction; and (3) each Water Board retains the authority to enforce provisions of the MS4 permit issued to each city[3] but compliance

---

The Santa Ana Water Board may amend its order to remove Murrieta and Wildomar after the San Diego Water Board's adoption of Tentative Order No. R9-2010-0016, but this designation becomes effective upon the San Diego water Board's action.

[3] Primary enforcement responsibility lies with the permitting Water Board.

will be determined based upon the MS4 permit in which a particular city is regulated as a co-permittee (see Wat. Code § 13228, subd. (b)).

The Cities also expressly acknowledged the following reciprocal limitation concerning Total Maximum Daily Loads (TMDLs). Murrieta and Wildomar understand and agree that "[a]ny TMDLs and associated MS4 permit requirements issued by the Santa Ana Regional Board, which include [Murrieta and Wildomar] as responsible part[ies], will be incorporated into the MS4 permit issued by the San Diego Regional Board by reference, including reference to any associated provisions, findings or elements of the fact sheet." (City of Murrieta, Letter to Kurt Berchtold and David Gibson, July 20, 2010, p. 2; City of Wildomar, Letter to Kurt Berchtold and David Gibson, July 21, 2010, p. 2.) Similarly, the City of Menifee understands that "[a]ny TMDLs and associated MS4 permit requirements issued by the San Diego Regional Board, which include the City of Menifee as a responsible party, will be incorporated into the MS4 permit issued by the Santa Ana Regional Board by reference, including reference to any associated provisions, findings or elements of the fact sheet." (City of Menifee, Letter to Kurt Berchtold and David Gibson, July 22, 2010, p. 2.)

The Cities further recognize they will be subject to different processes for submitting Permit Registration Documents (PRDs) for municipal construction projects subject to the State Water Resources Control Board's (State Water Board's) Construction General Storm Water Permit. Under the Santa Ana Water Board's MS4 permit, Order No. R8-2010-0033, PRDs for municipal construction projects are submitted to the State Water Board through the Stormwater Multi-Application Reporting and Tracking System (SMARTS) without the filing fee. The City of Menifee will follow the process set forth by the Santa Ana Water Board under Order No. R8-2010-0033 for construction PRDs for all municipal construction projects within the City of Menifee. In contrast, the San Diego Water Board's existing (R9-2004-0001) and proposed (R9-2010-0016) MS4 permits include no similar process. Therefore, the Cities of Murrieta and Wildomar will submit PRDs[4] in accordance with the manner prescribed in State Water Board's Construction General Storm Water Permit, including appropriate fees.

Similarly, Region 8 MS4 requirements do not require separate coverage under the General Industrial Storm Water Permit (97-03-DWQ) for municipal yards. As such, the City of Menifee need not get coverage under the State Water Board's General Industrial Storm Water Permit for its corporate yards. Murrieta and Wildomar shall get coverage under the General Industrial Storm Water Permit for all their corporate yards.

Complaints received for discharges flowing from municipal, construction, industrial, and commercial sites to MS4s within the Cities of Murrieta and Wildomar will be forwarded to the San Diego Water Board for review. Complaints regarding discharges from

[4] In the form of a Notice of Intent (NOI).

municipal, construction, industrial, and commercial sites to MS4s within the City of Menifee will be referred to the Santa Ana Water Board for review.

Each Water Board remains responsible for overseeing construction and industrial sites under the statewide General Permits for Construction and Industrial Activities (State Water Board Orders No. 2009-0009 DWQ and No. 97-03 DWQ, respectively) based on the Water Board's geographic jurisdictional boundary. The Santa Ana Water Board shall notify the San Diego Water Board of any non-compliance found during routine inspections of sites within the Santa Ana Water Board boundary that discharge into the MS4s for the Cities of Murrieta and Wildomar. The San Diego Water Board shall notify the Santa Ana Water Board of any non-compliance found during routine inspections of sites within the San Diego Water Board boundary that discharge into the City of Menifee's MS4.

For de minimus types of discharges listed in the Region 8 MS4 Permit, the City of Menifee does not have to get separate coverage under Region 8's General De Minimus Permit (R8-2009-0003). De minimus types of discharges to Region 8's jurisdiction from the Cities of Wildomar and Murrieta shall be regulated under Region 8's General De Minimus Permit, R8-2009-0003.

Finally, the City of Murrieta notes that its annual report under the San Diego MS4 permit will include the 375 acres currently within the Santa Ana watershed. While not noted by the Cities of Wildomar and Menifee, the San Diego Water Board expects that the annual report filed by each city would be a single report covering the entire geographic area of the city, regardless of geographic jurisdiction, using the format prescribed in its respective permit and submitted to the appropriate regulating board.

For the reasons outlined above, the San Diego Water Board agrees to the Cities' regulatory designation requests and notes that tentative Order No. R9-2010-0016 will be revised to reflect this agreement. This agreement shall become effective with the adoption of tentative Order No. R9-2010-0016. The San Diego Water Board does not anticipate the need, but reserves the right, to modify or terminate this agreement in the future, upon sufficient notice, and for good cause.

Respectfully,

DAVID W. GIBSON
Executive Officer

Dear Messrs. Thomas, Oviedo and Allison:

DESIGNATIONS OF SAN DIEGO REGIONAL WATER QUALITY CONTROL BOARD AND SANTA ANA REGIONAL WATER QUALITY CONTROL BOARD FOR PURPOSES OF REGULATION OF MUNICIPAL SEPARATE STORM SEWER SYSTEMS - CITIES OF MENIFEE, MURRIETA AND WILDOMAR, RIVERSIDE COUNTY

This letter constitutes the Santa Ana Regional Water Quality Control Board's (Santa Ana Water Board's or Region 8's) written agreement pursuant to Water Code section 13228, subdivision (a), to designate the San Diego Regional Water Quality Control Board (San Diego Water Board or Region 9) as the regulator of the Cities of Murrieta and Wildomar, including those portions of each city that fall within Region 8's geographic jurisdiction, for municipal separate storm sewer system (MS4) permit purposes[1], and further constitutes the Santa Ana Water Board's written agreement to accept designation from the San Diego Water Board to regulate the City of Menifee within Region 9's geographic jurisdiction for MS4 permit purposes under Order No. R8-2010-0033.[2]

[1] At the time this letter was signed, the San Diego Water Board intended to consider the adoption of a new MS4 permit (Tentative Order No. R9-2010-0016) that would regulate the relevant portions of Murrieta and Wildomar.

[2] Until the new San Diego Water Board MS4 permit is adopted, including regulation of the Cities of Murrieta and Wildomar for MS4 purposes regardless of geographic boundaries, portions of Murrieta and Wildomar remain regulated in part by Order No. R8-2010-0033. Murrieta and Wildomar would become regulated by the San Diego Water Board, with certain limitations described below, when the San Diego Water Board adopts tentative Order No. R9-2010-0016, scheduled for consideration on October 13, 2010.

As discussed below, this agreement is subject to several important limitations recognized by the Cities of Menifee, Wildomar, and Murrieta (collectively, the Cities).

Background

The Cities each lay partially within both the San Diego and Santa Ana Water Boards' geographic jurisdictional boundaries. Portions of the Cities are currently regulated by the Santa Ana Water Board under Order No. R8-2010-0033 for MS4 discharges. Because the Cities of Wildomar and Menifee were incorporated after 2004, the San Diego Water Board's existing MS4 permit, Order No. R9-2004-0001, only regulates portions of Murrieta. On July 20, 21 and 22, 2010, Murrieta, Wildomar and Menifee, respectively, submitted letters addressed jointly to the Executive Officers of the San Diego Water Board and the Santa Ana Water Board requesting that they each be regulated by one MS4 permit, pursuant to Water Code section 13228. (The Cities' letters, which include maps provided by the Cities depicting their respective geographic locations, are attached to this letter as Exhibits 1-3.) Murrieta and Wildomar requested that the Santa Ana Water Board designate the San Diego Water Board as the regulator for all portions of their respective cities, including those portions within Region 8's geographic boundary, for their MS4-related discharges. Likewise, the City of Menifee requested that the San Diego Water Board designate the Santa Ana Water Board as the regulator for all portions of Menifee, including those portions of the city that fall within Region 9's jurisdictional boundary, for matters pertaining to MS4 discharges. As the basis for their requests, the Cities cite the desire to reduce the complexities associated with being regulated by two separate MS4 permits and a desire to increase effectiveness and efficiencies in using city resources to benefit water quality. As described below, each city recognizes appropriate and important limitations to this agreement.

Limitations on the Santa Ana Water Board Designation Agreement

As explained in their respective letters, each city recognizes the following common limitations to this agreement: (1) the requested designation applies only to MS4 permitting so that each city is subject to a single MS4 permit; (2) the Cities of Murrieta and Wildomar recognize that other waste discharge requirements (WDRs) or orders issued and/or enforced by the San Diego Water Board remain wholly under the San Diego Water Board's jurisdiction; likewise, the City of Menifee recognizes that WDRs and/or other orders issued or enforced by the Santa Ana Water Board remain wholly under the Santa Ana Water Board's jurisdiction; and (3) each Water Board retains the authority to enforce provisions of the MS4 permit issued to each city but compliance will

---

The Santa Ana Water Board intends to amend Order No. R8-2010-033 to remove Murrieta and Wildomar after the San Diego Water Board's adoption of Tentative Order No. R9-2010-0016. This designation becomes effective upon the San Diego Water Board's action.

be determined based upon the MS4 permit in which a particular city is a named as a co-permittee (see Wat. Code § 13228, subd. (b)).

The Cities also expressly acknowledged the following reciprocal limitation concerning Total Maximum Daily Loads (TMDLs). Murrieta and Wildomar understand and agree that "[a]ny TMDLs and associated MS4 permit requirements issued by the Santa Ana Regional Board, which include [Murrieta and Wildomar] as responsible part[ies], will be incorporated into the MS4 permit issued by the San Diego Regional Board by reference, including reference to any associated provisions, findings or elements of the fact sheet." (City of Murrieta, Letter to Kurt Berchtold and David Gibson, July 20, 2010, p. 2; City of Wildomar, Letter to Kurt Berchtold and David Gibson, July 21, 2010, p. 2.) Similarly, the City of Menifee understands that "[a]ny TMDLs and associated MS4 permit requirements issued by the San Diego Regional Board, which include the City of Menifee as a responsible party, will be incorporated into the MS4 permit issued by the Santa Ana Regional Board by reference, including reference to any associated provisions, findings or elements of the fact sheet." (City of Menifee, Letter to Kurt Berchtold and David Gibson, July 22, 2010, p. 2.)

The Cities further recognize they will be subject to different processes for submitting Permit Registration Documents (PRDs) for municipal construction projects subject to the State Water Resources Control Board's (State Water Board's) Construction General Storm Water Permit. Under the Santa Ana Water Board's MS4 permit, Order No. R8-2010-0033, PRDs for municipal construction projects are submitted to the State Water Board through the Stormwater Multi-Application Reporting and Tracking System (SMARTS) without the filing fee. The City of Menifee will follow the process set forth by the Santa Ana Water Board under Order No. R8-2010-0033 for construction PRDs for all municipal construction projects within the City of Menifee. In contrast, the San Diego Water Board's existing (R9-2004-0001) and proposed (R9-2010-0016) MS4 permits include no similar process. Therefore, the Cities of Murrieta and Wildomar will submit PRDs[3] in accordance with the manner prescribed in State Water Board's Construction General Storm Water Permit, including appropriate fees.

Similarly, Region 8 MS4 requirements do not require separate coverage under the General Industrial Storm Water Permit (97-03-DWQ) for corporate yards. As such, the City of Menifee need not obtain coverage under the State Water Board's General Industrial Storm Water Permit for its corporate yards. Murrieta and Wildomar shall get coverage under the General Industrial Storm Water Permit for <u>all</u> their corporate yards.

Complaints received for discharges flowing from municipal, construction, industrial, and commercial sites to MS4s within the Cities of Murrieta and Wildomar will be forwarded to the San Diego Water Board for review. Complaints regarding discharges from municipal, construction, industrial, and commercial sites to MS4s within the City of

[3] The PRDs include a Notice of Intent (NOI).

Menifee will be referred to the Santa Ana Water Board for review. Each Water Board remains responsible for overseeing construction and industrial sites under the statewide General Permits for Construction and Industrial Activities (State Water Board Orders No. 2009-0009 DWQ and No. 97-03 DWQ, respectively) based on the Water Board's geographic jurisdictional boundary. The Santa Ana Water Board shall notify the San Diego Water Board of any non-compliance found during routine inspections of sites within the Santa Ana Water Board boundary that discharge into the MS4s for the Cities of Murrieta and Wildomar. The San Diego Water Board shall notify the Santa Ana Water Board of any non-compliance found during routine inspections of sites within the San Diego Water Board boundary that discharge into the City of Menifee's MS4.

For de minimus types of discharges listed in the Region 8 MS4 Permit, the City of Menifee does not have to obtain separate coverage under Region 8's General De Minimus Permit (R8-2009-0003). De minimus types of discharges to Region 8's jurisdiction from the Cities of Wildomar and Murrieta shall be regulated under Region 8's General De Minimus Permit, R8-2009-0003.

Finally, the City of Murrieta notes that its annual report under the San Diego MS4 permit will include the 375 acres currently within the Santa Ana watershed. While not noted by the Cities of Wildomar and Menifee, the Santa Ana Water Board expects that the annual report filed by each city would be a single report covering the entire geographic area of the city, regardless of geographic jurisdiction, using the format prescribed in its respective permit and submitted to the appropriate regulating board.

For the reasons outlined above, the Santa Ana Water Board agrees to the Cities' regulatory designation requests and notes that Order No. R8-2010-0033 will be revised to reflect this agreement. This agreement shall become effective with the adoption of tentative Order No. R9-2010-0016.

The Santa Ana Water Board does not anticipate the need, but reserves the right, to modify or terminate this agreement in the future, upon sufficient notice, and for good cause.

Respectfully,

Kurt V. Berchtold
Executive Officer

Enclosure

cc: David Gibson, Executive Officer, San Diego Regional Water Quality Control Board
Jason Uhley, Riverside County Flood Control and Water Conservation District

AGREEMENT

National Pollutant Discharge Elimination System
Stormwater Discharge Permit
Implementation Agreement
San Diego Region

(Santa Margarita Drainage Area)

This Implementation Agreement ("Agreement"), entered into by the RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT (the "DISTRICT"), the COUNTY OF RIVERSIDE (the "COUNTY"), and the CITIES OF MURRIETA, TEMECULA and WILDOMAR (the "CITIES"), collectively referred to as "COPERMITTEES" and sometimes also referred to as "Parties", individually each as "Party", establishes the responsibilities of each Party concerning the implementation of and compliance with the National Pollutant Discharge Elimination System ("NPDES") Municipal Separate Storm Sewer System ("MS4") Discharge Permit issued by the California Regional Water Quality Control Board – San Diego Region (CRWQCB-SDR) pursuant to Order No. R9-2010-0016 (the "NPDES Permit").

RECITALS

WHEREAS, Congress in 1987 added Section 402(p) to the Federal Clean Water Act ("CWA") (33 U.S.C.§1342(p)); and

WHEREAS, Section 402(p) of the CWA requires certain municipalities to obtain NPDES Permits in order to discharge stormwater from MS4s to waters of the United States; and

WHEREAS, Section 402(p) of the CWA requires operators of certain industrial facilities to obtain NPDES permits for stormwater discharges associated with designated industrial activities, including construction activities; and

WHEREAS, Section 402(p) further requires the United States Environmental Protection Agency ("EPA") to promulgate regulations for NPDES permit applications; and

WHEREAS, EPA adopted such regulations in November 1990; and

WHEREAS, EPA delegated authority to the California State Water Resources Control Board ("SWRCB") to administer the NPDES permit process within the boundaries of the State of California; and

DEC 06 2011 3.4

WHEREAS, SWRCB has in turn delegated its NPDES permitting authority to the California Regional Water Quality Control Boards to administer the NPDES permit process within the boundaries of their respective regions; and

WHEREAS, the jurisdiction of the CRWQCB-SDR includes that portion of Riverside County known as the Santa Margarita Region; and

WHEREAS, DISTRICT was created to provide for, among other things, the control of flood and stormwaters within the County of Riverside and is empowered to investigate, examine, measure, analyze, study and inspect matters pertaining to flood and stormwaters; and

WHEREAS, on January 15, 2009, DISTRICT, COUNTY and CITIES submitted a Report of Waste Discharge as an application to renew NPDES Permit No. CAS0108766; and

WHEREAS, the application for renewal of the NPDES Permit was submitted in accordance with the provisions of the previous NPDES permit (Order No. R9-2004-001) which expired on July 14, 2009; and

WHEREAS, on November 10, 2010, the CRWQCB-SDR adopted Order No. R9-2010-0016 to serve as Waste Discharge Requirements in accordance with Section 13263(a) of the California Water Code and as an NPDES permit pursuant to Section 402(p) of the CWA; and

WHEREAS, the NPDES Permit meets or exceeds the requirements of Section 402(p)(3)(B) of the CWA; and

WHEREAS, the NPDES Permit designates the DISTRICT, COUNTY and CITIES as COPERMITTEES; and

WHEREAS, the NPDES Permit requires designation of a "Principal Copermittee", and DISTRICT, COUNTY and CITIES have agreed that DISTRICT will serve as Principal Copermittee for the term of the NPDES Permit; and

WHEREAS, the Parties believe that cooperation between COPERMITTEES in the administration and implementation of the NPDES Permit is in the best interest of COPERMITTEES; and

WHEREAS, the NPDES Permit provides that the COPERMITTEES collaborate

in the development and implementation of various requirements of the NPDES Permit; and

WHEREAS, DISTRICT is willing to utilize its staff to coordinate the activities of COPERMITTEES to facilitate compliance with the NPDES Permit and CWA requirements; and

WHEREAS, DISTRICT established the Santa Margarita Watershed Benefit Assessment Area (the "BENEFIT ASSESSMENT") pursuant to District Ordinance 14 on May 14, 1991 to offset the DISTRICT'S program and administrative costs associated with the development, implementation and management of the Federally-mandated NPDES Program and DISTRICT is willing to use BENEFIT ASSESSMENT funds to support the DISTRICT's role as Principal Permittee and to support regional program costs to the extent that BENEFIT ASSESSMENT funds are available and can be used for regional programs; and

WHEREAS, COPERMITTEES are to perform and/or execute certain activities prescribed in the NPDES Permit that will benefit all COPERMITTEES.

NOW, THEREFORE, the Parties do mutually agree as follows:

1. Incorporation of the NPDES Permit. The NPDES Permit is hereby incorporated by reference in its entirety and made a part of this Agreement as Exhibit "A".

2. Delegation of Responsibilities. The responsibilities of each of the COPERMITTEES under the NPDES Permit are reiterated below in subsections 2.a. and 2.b. Additional delegated responsibilities of the Parties under this Agreement to implement and/or comply with the NPDES Permit are set forth below in subsections 2.c. through 2.h.:

a. DISTRICT shall:

(1) Comply with Section M (Principal Copermittee Responsibilities), including coordinating the development of updates and reports on programs required under the NPDES Permit that are jointly required of each COPERMITTEE, including the Watershed Water Quality Workplan ("Watershed Workplan"), Standard Storm Water Mitigation Plan ("SSMP"), Hydromodification Management Plan ("HMP"), a model Jurisdictional Runoff

Management Plan ("JRMP"), the Receiving Waters and MS4 Discharge Monitoring and Reporting Program No. R9-2010-0016, and any other reports prepared by the DISTRICT on behalf of the COPERMITTEES as required by Sections K.1 and K.2 of the NPDES Permit. DISTRICT will provide COUNTY and CITIES an opportunity to participate in the development and review of, and comment on, such programs, plans and reports prior to submittal to the CRWQCB-SDR.

(2) Comply with Sections A through P (Prohibitions and Receiving Water Limitations, Non-Stormwater Discharges, Non-Stormwater Dry Weather Action Levels, Stormwater Action Levels, Legal Authority, JRMP, Watershed Workplan, Fiscal Analysis, Total Maximum Daily Loads ("TMDLs"), Program Effectiveness Assessment & Reporting, Reporting, Modifications of Programs, Receiving Waters and MS4 Discharge Monitoring and Reporting Program, Standard Provisions, Reporting Requirements and Notifications, as well as Additional Provisions, respectively), as they pertain to pollutant discharges from DISTRICT owned and operated MS4 which are generated directly from or by DISTRICT facilities and operations, at no cost to COUNTY and CITIES.

b. COUNTY and CITIES, at no cost to DISTRICT, shall, for land area within their individual jurisdictions:

(1) Comply with Sections A through P (Prohibitions and Receiving Water Limitations, Non-Stormwater Discharges,

Non-Stormwater Dry Weather Action Levels, Stormwater Action Levels, Legal Authority, JRMP, Watershed Workplan, Fiscal Analysis, TMDLs, Program Effectiveness Assessment and Reporting, Reporting, Modifications of Programs, Receiving Waters and MS4 Discharge Monitoring and Reporting Program, Standard Provisions, Reporting Requirements and Notifications, as well as Additional Provisions, respectively), as they pertain to pollutant discharges from COUNTY/CITY owned and operated MS4, which are generated by jurisdictional land uses, facilities, and operations of the respective COUNTY and CITIES.

(2) Demonstrate compliance with NPDES Permit requirements through timely implementation of the JRMPs; any COPERMITTEE-specific elements of the Watershed Workplan and Monitoring and Reporting Program; and any approved modifications, revisions or amendments thereto.

(3) Provide to DISTRICT (on DISTRICT-provided forms) information needed to satisfy the reporting requirements as described in Sections G, N, and Provision III of Attachment E, or to respond to information requests from the CRWQCB-SDR. COUNTY and CITIES shall specifically:

(a) Submit data necessary to prepare updates to the Watershed Workplan to the DISTRICT no later than August 31st of each year.

(b) Submit any monitoring and sampling data individually collected pursuant to the MS4 Permit, to the DISTRICT at least quarterly as necessary for

DISTRICT to track and prepare reports under the Monitoring and Reporting Program. All applicable monitoring and sampling data individually collected within each fiscal year must be received by DISTRICT no later than August 15th of each year, for inclusion in the monitoring annual report that will be prepared and submitted by the District, pursuant to Section 2.e. herein.

(c) Provide one completed bound hard copy, and two electronic copies (PDF preferred) on CD or DVD, of the completed JRMP annual report to the DISTRICT no later than October 15th of each year.

(d) Provide information on existing MS4 facilities, "major outfalls" (as defined in the NPDES Permit) and/or other data as it pertains to facilities of COUNTY or CITIES when requested by DISTRICT.

c. Public Education Program. On behalf of COPERMITTEES, DISTRICT shall conduct public education activities on a regional basis that focus on reducing pollution of urban runoff within the Santa Margarita Region, including, as appropriate, developing and disseminating broadcast, online and/or print outreach and advertising, developing brochures, and attending public events. DISTRICT shall also develop and implement mechanisms to determine the effectiveness of the regional public education program. The COUNTY and CITIES shall be individually responsible for developing and implementing any supplemental public education programs that may be necessary to target

individual communities or stakeholders within their respective jurisdictions, pursuant to Section F.6. of the NPDES Permit.

d. COPERMITTEE Training Program. On behalf of COPERMITTEES, and as requested by the COPERMITTEES, DISTRICT shall develop and conduct regional training sessions for COPERMITTEE personnel, covering the aspects of the programs developed by DISTRICT pursuant to Section 2.a.(1) of this AGREEMENT that are regionally uniform among COPERMITTEES. The COUNTY and CITIES shall be individually responsible for developing and implementing and reporting upon any supplemental training that may be necessary to ensure that their personnel are trained adequately regarding local policies and procedures for implementing the requirements of the NPDES Permit, pursuant to section F.6. of the NPDES Permit.

e. Monitoring Program. On behalf of the COPERMITTEES, DISTRICT shall perform sampling of surface water and urban runoff in accordance with the provisions of the NPDES Permit Monitoring and Reporting Program ("MRP"), Attachment E Provisions II.A and II.D-II.F, and prepare and submit Monitoring Reports in accordance with Provision III of Attachment E. The location of the sampling sites shall be determined by COPERMITTEES, subject to approval by CRWQCB-SDR. For Provision II.B. and II.C of the MRP, DISTRICT will coordinate with COPERMITTEES in developing a plan for identifying the list of outfalls to be sampled each year in accordance with the NPDES Permit, and COPERMITTEES shall be individually responsible for conducting outfall sampling, source identifications, and enforcement as necessary for their outfalls. The COPERMITTEES

may, subject to Section 3 herein, request the DISTRICT to conduct the initial outfall sampling required in Provisions II.B. and II.C. on behalf of the COPERMITTEES, however, all source identifications (including any follow-up sampling) and enforcement that may be required will remain the individual responsibility of the respective COPERMITTEES. The DISTRICT shall also enter into a contract with a local lab to provide analysis of water quality samples collected under the MRP. The contract shall be used strictly for water quality samples collected to comply with Provision II of the MRP. DISTRICT shall prepare and submit Monitoring Reports, as required by Provision III of Attachment E, based on data collected by the DISTRICT on behalf of the COPERMITTEES, and data provided to the DISTRICT by the COPERMITTEES in accordance with Section 2.b.(3)(b) of this Agreement.

f. Consultant Services. In the event DISTRICT requires the services of a consultant(s) to assist in performing duties conducted on behalf of the COPERMITTEES pursuant to Section 2 of this Agreement, the cost of said consultant(s) services shall be shared by COPERMITTEES in accordance with the cost sharing provisions set forth in Section 3 of this Agreement. COUNTY and CITIES shall be notified in writing of DISTRICTS request for proposals from one or more consultants, selection of a consultant, consultant's fee, contract timetable and payment schedule, and be allowed the opportunity to participate in decisions related to consultant's services. All consultant agreements are contingent upon the consulting firm's ability to meet DISTRICT standards and requirements, and where applicable approval by the DISTRICT's

Board of Supervisors.

g. Support for Regional Programs. The COPERMITTEES shall jointly provide funding for certain regional efforts that benefit the Santa Margarita Region, including but not limited to: County Environmental Health's Compliance Assistance Program; the County Fire Department's Hazardous Materials Team; County Environmental Health's Household Hazardous Waste and Antifreeze, Batteries, Oil and Paint collection program; the DISTRICT'S membership with the California Stormwater Quality Association on behalf of COPERMITTEES; the DISTRICT'S administration of Principal Permittee duties, and other NPDES support activities as described in this Agreement, or as needed and agreed to by the COPERMITTEES. Where these programs are implemented countywide in support of other NPDES permit regions, the DISTRICT shall estimate the portion of the total cost of these regional programs that benefits the Santa Margarita Region.

h. Regulation and Enforcement. COUNTY and CITIES shall be responsible for the regulation and enforcement of local ordinances and regulations within their respective jurisdictions to ensure compliance with the NPDES Permit, and to prevent pollutants originating from within their respective jurisdictions from being discharged into the jurisdiction of another Party in a manner which could cause that Party to violate the NPDES Permit. This includes the exercise of police powers and land use controls and the enforcement of ordinances that COUNTY or CITIES presently have adopted or may adopt in the future.

3. Shared Costs. Costs for services to be performed in accordance with Sections 2.c., 2.d., 2.e. and 2.f. of this Agreement shall be shared by the Parties in accordance with the procedure specified below. In December of each year of this Agreement the DISTRICT shall:

a. Estimate the costs of services specified in Sections 2.c., 2.d., 2.e. of this Agreement and 2.f. for the upcoming fiscal year ("ESTIMATED COSTS");

b. Estimate the DISTRICT'S internal costs for developing, implementing and administering the NPDES program in the Santa Margarita Region as specified in 2.a. ("INTERNAL COSTS");

c. Estimate the revenues expected from the BENEFIT ASSESSMENT program ("ASSESSMENT REVENUES");

d. Determine actual costs for NPDES programs administered in the previous fiscal year; and

e. Determine Credits or Debits ("CREDITS" or "DEBITS") due COUNTY and CITIES based on the difference of the actual contributions from the previous fiscal year with the actual contributions provided by the COUNTY and CITIES for that fiscal year.

By February 1st of each year of this Agreement, the DISTRICT, CITIES and COUNTY, through a NPDES representative assigned by the General Manager-Chief Engineer, City Managers, and County Executive Office, respectively, shall approve, by majority vote, ESTIMATED COSTS for the upcoming fiscal year.

3.1 DISTRICT Contribution

The DISTRICT contribution ("DISTRICT CONTRIBUTION") to programs specified in Sections 2.c., 2.d., 2.e., and 2.f. for the upcoming fiscal year shall be determined using the following formula:

DISTRICT CONTRIBUTION = ASSESSMENT REVENUES -

INTERNAL COSTS - 20% ASSESSMENT REVENUE. [1]

If the calculation yields a negative result, the DISTRICT shall have no contribution for the upcoming fiscal year other than the INTERNAL COSTS it has incurred.

3.2 COUNTY and CITIES Contribution

The total shared COUNTY and CITIES contribution (the "COMBINED CONTRIBUTION") shall be determined using the following formula:

COMBINED CONTRIBUTION = ESTIMATED COSTS - DISTRICT CONTRIBUTION.

The COUNTY'S and individual CITIES' respective pro rata share of the COMBINED CONTRIBUTION ("INDIVIDUAL CONTRIBUTION") shall be determined on the basis of an equally weighted average of population and Benefit Assessment Units within the Santa Margarita Region of Riverside County. More specifically, such percentage contribution shall be calculated as the equally weighted average of:

(a) The population of COUNTY or individual CITIES within the Santa Margarita Region, divided by the total population of the COUNTY and CITIES in the Santa Margarita Region and;

(b) The calculated number of Benefit Assessment Units ("BAU") for COUNTY or individual CITIES, divided by the total BAU for COUNTY and individual CITIES.

The INDIVIDUAL CONTRIBUTION shall be further adjusted by any CREDITS or DEBITS due from the previous fiscal year.

The population of CITIES shall be determined by the latest California State Department of Finance population figures issued in May of each year. COUNTY population shall be based on the most current Tax Rate Area ("TRA") information best fitting the Santa Margarita Region.

The BAU count of COUNTY and CITIES shall be estimated by comparing the most current TRA information best fitting the Santa Margarita Region with the Assessment

[1] District retains 20% of assessment revenue as a reserve for District's administrative and program costs associated with the NPDES Permit pursuant to RCFC&WCD Ordinance No. 14.

Rolls from the current fiscal year's BENEFIT ASSESSMENT Engineer's Report.

COUNTY and CITIES may generate credits toward payments due by providing labor or services in lieu of cash payments. DISTRICT shall determine value of labor or services based on ESTIMATED COSTS for the fiscal year.

DISTRICT shall invoice COUNTY and CITIES for INDIVIDUAL CONTRIBUTION at the beginning of each fiscal year and said invoice shall be due and payable by COUNTY and CITIES within 60 days of receipt of invoice from DISTRICT. The COMBINED CONTRIBUTION for COUNTY and CITIES shall not exceed $2,200,000 (two million, two hundred thousand dollars) annually under this Agreement.

4. Term of the Agreement. The term of this Agreement shall commence on the date of execution by the duly authorized representative of at least three of the five COPERMITTEES. The term of this Agreement shall extend for up to eighteen (18) months beyond the period of time in which the term of the NPDES Permit remains in valid force and effect, unless terminated prior to that date by agreement by all the Parties or withdrawal of all of the Parties in accordance with the terms of this Agreement.

5. Additional Parties. Any City which incorporates after the date of issuance of the NPDES Permit and/or after the commencement of this Agreement ("Prospective City") may file a written request with DISTRICT asking to be added as a Party. Upon receipt of such a request, DISTRICT shall solicit the approval or denial of the Parties. If a majority of the Parties, each having one, co-equal vote, approves the addition of the Prospective City, this Agreement shall be amended to reflect the addition, and the Prospective City shall thereafter become a Party under this Agreement. Upon execution of the Amended Agreement, the Prospective City shall be responsible for the shared costs discussed in Section 3 of this Agreement for the then-current budget year and any subsequent budget year.

6. Withdrawal from the Agreement. Any Party shall be eligible to withdraw from this Agreement after first giving 60 days written notice to the DISTRICT and the CRWQCB-SDR. The withdrawing Party shall agree in such notice to apply with the CRWQCB-SDR for a separate NPDES permit and to comply with all of the requirements established by

CRWQCB-SDR. In addition, withdrawal shall constitute forfeiture of all of the withdrawing Party's already-paid share of the costs allocated pursuant to Section 3. The withdrawing Party shall be responsible for any lawfully assessed penalties as a consequence of its withdrawal. In addition, the withdrawing Party shall remain liable as an Indemnitor Party after the effective date of its withdrawal as described in Section 7 below. The cost allocations to the remaining Parties shall be recalculated in the following budget year.

7. Mutual Indemnification. Each Party (hereafter "Indemnitor Party") shall indemnify, defend and hold harmless any other Party, together with that Party's employees, officers, managers, governing board members, counsel, representatives and agents (collectively "Indemnitee Parties"), from and against any and all damages, liabilities, losses, demands, lawsuits, orders, actions, causes of action, penalties, judgments, claims, costs and expenses (including reasonable attorneys' fees, including through all appeals) arising from or related to any violation of the NPDES Permit or this Agreement (collectively "Losses") to the extent caused by (i) by the acts or omissions of the Indemnitor Party and its employees, agents and representatives, (ii) discharges from the Indemnitor Party's jurisdictional area or facilities, and/or (iii) discharges from any MS4 owned or operated by the Indemnitor Party. The obligations of the Indemnitor Party set forth in this Section 7 are non-exclusive and are in addition to, and do not replace or modify, any other rights of action, whether at law or in equity, that any Party may have against another Party. Nothing in this Agreement shall limit the ability of any Party to seek any relief, legal or equitable, against any non-Party. The obligations set forth in this Section 7 shall survive the termination of this Agreement as to all such acts, omissions or discharges as described in subparts (i) through (iii) hereinabove that occurred, or are alleged to have occurred, while a Party during the term of the Agreement up until such time that it is terminated.

8. Amendments to the Agreement. Except as provided in Section 5, this Agreement may only be amended by consent of all Parties. No amendment to this Agreement shall be effective unless it is in writing and signed by the duly authorized representatives of all Parties.

9. Authorized Signatories. The General Manager-Chief Engineer of DISTRICT, the Chief Executive Officer of COUNTY and the City Managers of CITIES (or their designees) shall be authorized to execute all documents and take all other procedural steps necessary to file for and obtain an NPDES permit(s) or amendments thereto.

10. Notices. All notices shall be deemed duly given when delivered by hand; or three (3) days after deposit in the U.S. Mail, postage prepaid. Notice to the Parties shall be sent to the publically advertised mailing address for the Party.

11. Governing Law and Severability. This Agreement shall be governed and construed in accordance with the laws of the State of California. If any provision or provisions of this Agreement shall be determined to be invalid, illegal or unenforceable, the validity, legality and enforceability of the remaining provisions shall not in any way be affected or impaired hereby.

12. Consent to Waiver and Breach. No term or provision hereof shall be deemed waived and no breach excused, unless the waiver or breach is consented to in writing, and signed by the Party or Parties affected. Consent by any Party to a waiver or breach by other Party shall not constitute consent to any different or subsequent waiver or breach.

13. Entire Agreement. This Agreement and the exhibits attached hereto constitute the entire agreement between the Parties with respect to the subject matter therein; all prior agreements, representations, statements, negotiations and undertakings are superseded hereby.

14. Execution in Counterparts. This Agreement may be executed and delivered in any number of counterparts or copies (counterparts) by the Parties. As each Party has signed and delivered at least one counterpart to the other Parties, each counterpart shall be deemed an original and, taken together, shall constitute one and the same Agreement, which shall be binding and effective as to the Parties.

15. Non-Waiver of Objections. The entry into, and the performance of this Agreement by the Parties shall not constitute, nor be construed as, any waiver of the COPERMITTEES' objection to any provisions of the NPDES Permit including, without

limitation, any provisions identified in the Petition for Review filed by the COPERMITTEES with the SWRCB, or that provisions of the NPDES Permit constitute an unfunded State mandate without subvention of State funds.

ORDINANCE NO. _____ - 12

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF MURRIETA, CALIFORNIA, AMENDING CHAPTER 8.36 OF THE MURRIETA MUNICIPAL CODE TO ENACT CHANGES TO THE CITY'S REGULATIONS OF DISCHARGES TO ITS STORM DRAIN SYSTEM MANDATED BY ORDER R9-2010-0016 OF THE CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD, SAN DIEGO REGION

WHEREAS, the federal Clean Water Act ("CWA") was amended in 1987 to address stormwater runoff from municipal and industrial dischargers. One requirement of the amendment was that many municipalities throughout the United States were obligated to obtain National Pollutant Discharge Elimination System ("NPDES") permits for discharges of stormwater runoff; and

WHEREAS, In response to the CWA, the San Diego Regional Board (Regional Board) issued a municipal stormwater first term permit, Order No. 90-46, in July 1990 that applied to the City's municipal separate storm sewer system ("MS4") discharges; and

WHEREAS, the City previously adopted ordinances, codified at chapter 8.36 of the City's Municipal Code, to enact requirements for the enforcement of three previous NPDES permits issued by the Regional Board that were applicable to the City; and

WHERES, on November 10, 2010, the Regional Board adopted the fourth term permit, Order R9-2010-0016 regulating discharges from the MS4's draining the County of Riverside, the Cities of Murrieta, Temecula, Wildomar, and the Riverside County Flood Control and Water Conservation District within the San Diego Region ("NPDES Permit"); and

WHEREAS, the NPDES Permit mandates that the City update its laws to ensure to implement and enforce each of the NPDES permit requirements; and

WHEREAS, substantial changes to the current regulations codified at chapter 8.36 are required to reflect all of the requirements of the NPDES Permit,

NOW, THEREFORE, the City Council of Murrieta, California does amend chapter 8.36 of its Municipal Code and does ordain as follows:

SECTION 1. AMENDMENTS TO CHAPTER 8.36.

Current chapter 8.36 of the Murrieta Municipal Code is hereby deleted in its entirety and hereby amended to read as follows:

Article 1. General Provisions

8.36.100 Title.

This chapter shall be known as the "City of Murrieta Stormwater and Runoff Management and Discharge Controls Ordinance" and may be so cited.

8.36.110 Purpose and intent.

The Purpose of this chapter is to implement the Federal Water Pollution Control Act (the "Clean Water Act" or "CWA"), 33 U.S.C. Sections 1251—1387, and the California Water Code by prohibiting the discharge of any pollutant to navigable waters of the United States from a point source unless the discharge is authorized by a permit issued pursuant to the National Pollutant Discharge Elimination System ("NPDES") required by CWA Section 402, 33 U.S.C. Section 1342, and prohibits non-stormwater discharges into the municipal separate storm sewer system ("MS4").

8.36.120 Administration.

The chapter shall be administered for the City of Murrieta by the city engineer or his or her designee.

8.36.130 Definitions.

A. The terms as used in this chapter or in any resolution or standard adopted by the city council pursuant to this chapter, shall have the following meanings:

"Authorized inspector" shall mean the city engineer and all persons designated by him or her and under his or her instruction and supervision, who are assigned to investigate compliance with, detect violations of, and/or take actions pursuant to this chapter.

"Best Management Practices" or "BMPs" shall mean, as defined in 40 C.F.R. 122.2, schedules of activities, prohibitions of practices, maintenance procedures, and other management practices to prevent or reduce the pollution of waters of the United States. BMPs also include site design, source control, treatment requirements, operating procedures and practices to control plant site runoff, spillage or leaks, sludge or waste disposal, or drainage from raw material storage.

"City engineer" shall mean the director of public works/city engineer of the City of Murrieta or his or her designee.

"Co-NPDES permittee" shall mean the County of Riverside, the Riverside County Flood Control and Water Conservation District and the City of Temecula, City of Wildomar and City of Murrieta which are responsible for compliance with the terms of the NPDES permit.

"CWA" shall mean the Clean Water Act.

"Discharge" shall mean any release, spill, leak, flow, escape, leaching (including subsurface migration or deposition to groundwater), dumping or disposal of any liquid, semi-solid or solid substance.

"Discharge exception" shall mean those activities not restricted or prohibited by this chapter or exempted in the NPDES permit or a subsequent NPDES permit.

"Discharger" shall mean any person, any property owner, or any occupant of any unit, building, premises or lot within the city, who either discharges or causes to discharge any of the substances listed under "discharge," above, either directly or indirectly into the city's storm drain system.

"Existing Development and Operations," shall mean existing fixed or mobile industrial and commercial business facilities and non-commercial facilities that are not residential in nature (such as not-for-profit entities,) facilities in the City operated by other governmental entities, common interest areas, homeowners' associations, and property management organizations.

"Illicit connection" shall mean any physical connection to the storm drain system that conveys an illicit discharge.

"Illegal discharge" shall mean any discharge to the storm drain system that is not composed entirely of stormwater runoff except discharges made pursuant to a NPDES permit and discharges resulting from fire fighting activities (40 C.F.R. 122.26(b)(2)).

"Invoice for costs" shall mean the actual costs and expenses of the city, including but not limited to administrative overhead, salaries and other expenses recoverable under California law, incurred during any inspection conducted pursuant to this chapter or where a notice of noncompliance, administrative compliance order or other enforcement option under this chapter is utilized to ensure compliance with this chapter or the NPDES permit.

"JRMP" or "jurisdictional runoff management plan" shall mean a written description of the specific jurisdictional runoff management measures and programs that the city will implement to comply with the NPDES permit and to ensure that stormwater pollutant discharges in runoff are reduced to the MEP and do not cause or contribute to a violation of water quality standards.

"Maximum extent practicable" ("MEP") shall mean the technology-based standard established by Congress in CWA section 402(p)(3)(B)(iii) for stormwater that operators of MS4s must meet as contained within the most-current NPDES permit. Technology-based standards establish the level of pollutant reductions that dischargers must achieve, typically by treatment or by a combination of source control and treatment

control BMPs. MEP generally emphasizes pollution prevention and source control BMPs primarily (as the first line of defense) in combination with treatment methods serving as a backup (additional line of defense). MEP considers economics and is generally, but not necessarily, less stringent than best available technology economically achievable. A definition for MEP is not provided either in the statute or in the regulations. Instead the definition of MEP is dynamic and will be defined by the following process over time: municipalities propose their definition of MEP by way of their runoff management programs. Their total collective and individual activities conducted pursuant to the runoff management programs becomes their proposal for MEP as it applies both to their overall effort, as well as to specific activities (e.g., MEP for street sweeping, or MEP for MS4 maintenance). In the absence of a proposal acceptable to the Regional Board, the Regional Board defines MEP.

"Modifications to existing development" shall mean the creation or addition of impervious surfaces or the making of improvements to an existing structure on an already developed site; replacement of impervious surfaces that are not part of a routine maintenance activity; and land-disturbing activities related to structural or impervious surfaces. Modifications to existing development does not include trenching and resurfacing associated with utility work; resurfacing existing roadways; new sidewalk construction, pedestrian ramps, or bikelane on existing roads; and routine replacement of damaged pavement, such as pothole repair. This definition is consistent with the term "redevelopment" as referenced in the NPDES permit.

"New development" shall mean all public and private residential (whether single-family, multi-unit or planned unit development), industrial, commercial, retail, and other non-residential construction projects, or grading for future construction, for which a land use approval, grading permit, building permit or nonresidential plumbing permit is required.

"Non-Stormwater" shall mean all discharges to and from a MS4 that do not originate from precipitation events (i.e., all discharges from a MS4 other than Stormwater). Non-Stormwater includes illicit discharges, non-prohibited discharges, and NPDES permitted discharges.

"NPDES" or "National Pollution Discharge Elimination System" shall mean the national program for issuing, modifying, revoking and reissuing, terminating, monitoring and enforcing NPDES permits, and imposing and enforcing pretreatment requirements, under Sections 307, 318, 402, and 405 of the CWA.

"NPDES permit" shall mean any NPDES permit setting waste discharge requirements for discharges from the MS4s draining the County of Riverside, the incorporated cities of Riverside County, and the Riverside County Flood Control and Water Conservation District within the San Diego Region and which also includes the City of Murrieta.

"Owner or operator" shall mean the owner or operator of any facility or activity subject to regulation under the NPDES permit.

"Permittee" shall mean any person, property owner, contractor, or authorized agent to whom a NPDES permit is issued pursuant to this chapter.

"Person" shall mean an individual, association, partnership, corporation, municipality, state or federal agency, or any agent or employee thereof (40 C.F.R. 122.2).

"Pollutant" shall mean anything that causes the deterioration of water quality such that it impairs subsequent and/or competing uses of the water. Pollutants may include but are not limited to paints, oil and other automotive fluids, soil, rubbish, trash, garbage, debris, refuse, waste, fecal coliform, fecal streptococcus, enterococcus, heavy metals, hazardous waste, chemicals, fresh concrete, yard waste from commercial landscaping operations, animal waste, materials that result from the process of constructing a building or structure, nauseous or offensive matter of any kind.

"Prohibited discharge" shall mean any discharge which contains any pollutant, from public or private property to: (i) the storm drain system; (ii) any upstream flow, which is tributary to the storm drain system; (iii) any groundwater, river, stream, creek, wash or dry weather arroyo, wetlands area, or marsh; or (iv) which is otherwise prohibited by the NPDES permit. The term "prohibited discharge" shall not include discharges allowable under the discharge exception.

"Receiving waters" shall mean the waters of the United States. This applies to natural drainage channels, active or not, including all tributaries leading to streams, creeks, rivers, and other water bodies.

"Regional board" or "SDRWQCB" shall mean the San Diego Regional Water Quality Control Board which has jurisdiction over the city.

"Runoff" shall mean all flows in a stormwater conveyance system, including the city's storm drain system, that consists of the following components: (1) stormwater (wet weather flows) and (2) non-stormwater including dry weather flows.

"Site" shall mean the real property on which activities subject to this chapter may occur.

"State Board" or "SWRCB" shall mean the State Water Resources Control Board.

"State general NPDES permit" shall mean either the State General Industrial Stormwater NPDES permit or the State General Construction NPDES permit, as the same may be amended from time to time, and the terms and requirements of either or both NPDES permits. In the event the Environmental Protection Agency (EPA) revokes the in-lieu NPDES permitting authority of the state board, then the term state general

NPDES permit shall also refer to any EPA-administered stormwater control program for industrial activities, construction activities, or any other type of activity that is subsequently regulated through a state general NPDES permit.

"Storm drain system" or "MS4" (municipal separate storm sewer system) shall mean any facility within the city limits by which stormwater may be conveyed to waters of the United States. "Storm drain system" includes but is not limited to any roads with drainage systems, streets, gutters, catch basins, natural and artificial channels, ditches, aqueducts, storm drains, inlets, conduit, lined diversion structures, streams, creeks, or other drainage structures within the city limits, which is a part of or tributary to the county-wide stormwater runoff system and owned, operated, maintained or controlled by the City, the County of Riverside, the Riverside County Water Conservation and Flood Control District or any co-NPDES permittee, and used for the purpose of collecting, storing, transporting, or disposing of stormwater.

"Stormwater" shall mean stormwater runoff, snowmelt runoff and surface runoff and drainage. Surface runoff and drainage pertains to runoff and drainage resulting from precipitation events.

"WQMP" means a water quality management plan and is also known as the standard stormwater mitigation plan ("SSMP"); it shall be prepared by a professional civil engineer licensed in the State of California

B. To the extent any defined term in this chapter conflicts with the meaning of the same term in the NPDES permit, the definition provided by the NPDES permit shall govern.

C. This chapter is to be construed and interpreted to be consistent with the NPDES permit. The NPDES permit shall be used to further construe any term or requirement contained in this chapter.

8.36.140 Jurisdictional runoff management program.

The city engineer shall adopt a specific jurisdictional runoff management program ("JRMP") to comply with the NPDES permit and ensure that stormwater pollutant discharges in runoff are reduced to the MEP and do not cause or contribute to a violation of water quality standards. The city engineer shall have the authority to change, update or revise the JRMP as necessary in order to implement the provisions of this chapter and the NPDES permit and all revisions thereto arising from time to time.

8.36.150 Regulatory consistency.

This chapter shall be construed to assure consistency with the requirements of the Clean Water Act and any amendments thereof, and all applicable implementing regulations, and any existing or future NPDES permit and any amendments or revisions thereto or re-issuance thereof. If there is any conflict between the NPDES permit and

this chapter or between the NPDES permit and any city policy adopted pursuant to the chapter, the NPDES permit shall apply.

8.36.160 Compliance disclaimer.

Full compliance by any person or entity with the provisions of this chapter shall not preclude the need to comply with other local, state or federal statutory or regulatory requirements, which may be required for the control of the discharge of pollutants into Runoff and/or the protection of stormwater and non-stormwater runoff quality.

8.36.170 City cooperation.

The city intends to cooperate with other agencies with jurisdiction over regulated discharges to its MS4 to ensure that the regulatory purposes underlying the NPDES permit promulgated pursuant to the Clean Water Act (33 U.S.C. 1251 et. seq.) are met.

8.36.180 Contracting for services.

The city may, to the extent authorized by law, elect to contract for the services of any public agency or private enterprise to carry out the planning approvals, inspections, permits and enforcement authorized by this chapter.

Article 2. Prohibited Discharges and Illicit Connections

8.36.200 Prohibited discharges.

All discharges to the city's MS4 prohibited pursuant to the NPDES permit are prohibited.

8.36.210 Prohibited illicit connections.

Any connection to the city's MS4 deemed to be an "illicit connection" pursuant to the NPDES permit is prohibited. The prohibition against illicit connections shall apply regardless of whether the connection was established prior to the date on which this chapter was enacted.

Article 3. Control of Discharges and Runoff

8.36.300 New development projects and modifications to existing development.

A. General Requirements. New development or modifications to existing development shall be designed to control discharges and pollutants in runoff pursuant to the requirements of the NPDES permit. The city engineer shall approve the WQMP and BMPs that may be implemented to achieve compliance with the NPDES permit and shall approve the manner of implementation.

B. Construction Discharge and Runoff Compliance. All individual grading and building project permits shall conform to the State General Construction NPDES permit requirements and implement measures, including adherence to their stormwater pollution prevention plan, to ensure that all pollutants from the site will be either eliminated or reduced to the maximum extent practicable, and will not cause or contribute to an exceedance of water quality objectives as described in the San Diego Regional Water Quality Control Board Basin Plan. All grading and building activities will be in compliance with the Grading, Erosion and Sediment Control Ordinance at chapter 15.52 of this Code; the Grading Manual; other applicable ordinances; federal, state, and local permits; and other applicable requirements.

8.36.310 Permit requirements for all construction and for industrial/ commercial activities.

A. State-issued Permits. Each person associated with any individual NPDES permit (whether or not the NPDES permit) or State general construction NPDES permit shall comply with all the requirements of such permits. Each person identified in these permits shall comply with and undertake all activities required by such permits. The city engineer may require any person to which such a permit has been issued to provide proof of compliance, in a form acceptable to the city engineer or his or her designated representative, prior to the issuance of any grading, building or occupancy permit, or any other type of permit or license issued by the city.

B. City-issued Permits. An application for any of the following permits or approvals shall demonstrate how the requirements of this chapter will be met, and the permit or approval shall not be issued unless the city engineer determines that the application complies with the requirements of this chapter:

1. Commercial development plan
2. Residential development plan
3. Industrial development plan
4. Grading plan
5. Building permit
6. Improvement plan
7. Conditional use permit
8. Temporary use permit
9. Tentative map modifications
10. Map modifications

C. Permit Suspensions or Revocations. The city engineer may suspend or revoke any permit issued by the city when it is determined that:

1. The permittee has violated any term, condition, or requirement of the permit or any applicable provision of this chapter;

2. The circumstances have changed so that it is no longer appropriate to accept the discharge;

3. The permittee fails to comply with any schedule for compliance issued pursuant to this chapter; or

4. Any regulatory agency, including the EPA, the State Board or a regional water quality control board having jurisdiction over the discharge, notifies the city that the discharge should be terminated.

D. Permit Modifications. The city engineer may modify any permit when it is determined that:

1. Federal or state law requirements have changed in a manner that necessitates a change in the permit;

2. The permittee's discharge or the circumstances under which the discharge occurs have changed; or

3. A change to the permit is necessary to ensure compliance with the objectives of this chapter or to protect the quality of receiving waters.

E. Compliance with the terms, conditions and requirements of a permit issued by the city shall not relieve the permittee from compliance with all federal, state and local laws, regulations, the NPDES permit and local permit requirements, applicable to the activity for which the permit is issued.

8.36.320 Water quality management plan.

A. All new development or modifications to existing development projects that meet the specified categories listed in the NPDES permit shall prepare a preliminary WQMP. The permittee shall submit the preliminary WQMP during the planning application submittal process and a final WQMP during final engineering.

B. The city engineer or his or her designated representative shall review all required WQMPs and impose terms, conditions and requirements on the projects in accordance with this chapter prior to the city's issuance of permits (grading and building), discretionary land use approvals or recordation of maps. The city engineer shall approve all final WQMPs and evidence of this approval shall be submitted prior to the issuance of permits, discretionary land use approvals or recordation of maps.

C. The city engineer shall require that the WQMP, or components within the WQMP, be recorded with the county recorder's office. The signature of the property owner, or successor in interest, shall be sufficient for the recording of the plan or any revised plan. A signature on behalf of the city shall not be required for recordation.

D. New development projects or a modification to existing development which do not require a WQMP, will be required to implement minimum BMPs designated by the city according to conditions and requirements established by the city engineer which must be consistent with the NPDES permit.

E. A WQMP shall be required if the city engineer determines one is required by the NPDES permit.

F. Contents of a WQMP shall comply with the Riverside County WQMP Guidance and Template for the Santa Margarita Region. The BMPs identified in the WQMP shall include site design, source controls and treatment controls consistent with the NPDES permit.

G. The costs and expenses of the city incurred in the review, approval, or revision of any water quality management plan are assessed to the property owner or responsible party and are due and payable to the city. The city engineer or his or her designee may elect to require a deposit of estimated costs and expenses, and the actual costs and expenses shall be deducted from the deposit, and the balance, if any, refunded to the property owner or responsible party.

8.36.330 Expiration of, adherence to and continuation of WQMPs.

A. Expiration of final WQMPs.

1. Approved plans for a WQMP shall expire 12 months following the date of approval unless project construction has begun and may be returned to the applicant or may be destroyed by the city engineer without additional notice to the applicant.

2. The city engineer may extend the time for action by the applicant upon an approved plan for a WQMP for a period not exceeding twelve months upon written request by the applicant showing that circumstances beyond the reasonable control of the applicant have prevented action from being taken.

3. If a final WQMP issued pursuant to this chapter has expired without first being extended by the city engineer, in order to renew the WQMP, the applicant shall resubmit the plans and pay the most current plan review fee.

B. Adherence to WQMP Requirements. All new development and modifications to existing development projects shall adhere to the terms, conditions and requirements of the approved final WQMP.

C. Continuation of Terms, Conditions and Requirements for New Development and Modifications to Existing Development Projects. All terms, conditions and requirements which the city planning and public works departments have initially imposed pursuant to this chapter shall remain in effect upon the transfer of the property. Any owner of the property, or any successors, or assigns, shall be in violation of this chapter if they fail to implement and/or adhere to the terms, conditions and requirements imposed on the property pursuant to this chapter.

8.36.340 Jurisdictional runoff management plan.

All new development and modifications to existing development projects shall be undertaken and implemented in a manner that is consistent with the JRMP and NPDES permit. Any conditions and requirements established by the city's planning and public works departments which are related to the reduction or elimination of pollutants in runoff from the project site, shall be fulfilled by the permitted person.

Article 4. Existing Development and Litter Control

8.36.400 Existing development and operations.

A. General Requirements. In a manner consistent with the NPDES permit, existing development and operations (whether fixed or mobile) shall prevent pollutants from entering runoff and shall control runoff so as to prevent any deterioration of water quality that would impair subsequent or competing uses of the water.

B. Existing Development and Operations. Each person in charge of day-to-day operations of an existing development and operations facility in the city shall implement minimum BMPs as necessary to comply with the NPDES permit. For those existing development and operations that are tributary to impaired water bodies and/or are directly adjacent to or discharging directly to receiving waters, BMPs shall include additional controls as required by the NPDES permit.

C. Common Interest Areas, Homeowners' Associations, Property Management Organizations and Mobil Home Parks. Each person who owns, operates, or is in charge of day-to-day activities of common interest areas on private property in the city shall ensure that runoff from within common interest areas, including private roads, drainage facilities, and other components of the stormwater conveyance system, meets the objectives of the NPDES permit and this chapter.

8.36.410 Litter control.

A. No person shall dump, dispose, or stockpile any waste material, including but not limited to common household rubbish or garbage of any kind (whether generated or accumulated at a residence, business or other location), upon any public or private property, whether occupied, open or vacant, including but not limited to, any street, sidewalk, alley, right-of-way, open area or point of entry to the storm drain system, except in trash containers with closed lids, or at a lawfully established waste disposal facility.

B. Any person who owns or occupies a property on which a prohibited disposal of waste materials occurs shall ensure that all such waste materials are properly collected and disposed of within a reasonable period of time.

C. Any person who either owns or occupies property and who fails to comply with the requirements of this chapter may be charged with creating a nuisance upon the property.

Article 5. Inspections and Enforcement

8.36.500 Inspections.

A. Right to Inspect. Prior to commencing any regular monitoring inspection as herein below authorized, the authorized inspector shall obtain either the consent of the owner or occupant of the private property or shall obtain an administrative inspection warrant or criminal search warrant.

B. Entry to Inspect. The authorized inspector may enter private property to investigate the source of any discharge to any public street, inlet, gutter, storm drain, or the storm drain system located within the jurisdiction of the city.

C. Exigent Conditions. If the city engineer has reasonable cause to believe that non-storwater runoff is actively discharging from the property onto any public street, inlet, gutter, or any other storm drain system, the city engineer shall have the right to immediately enter and inspect said property, regardless of whether said property is occupied or unoccupied, and regardless of whether formal permission to inspect said property has been obtained in order to protect the public health, safety and welfare from imminent harm.

D. Compliance Assessments. The authorized inspector may inspect private property for the purpose of verifying compliance with this chapter, including but not limited to (1) identifying products produced, processes conducted, chemicals used, and materials stored on or contained within the property; (2) identifying point(s) of discharge of all wastewater, process water systems, pollutants and prohibited runoff; (3) investigating the natural slope at the location, including drainage patterns and manmade conveyance systems; (4) establishing the location of all points of discharge from the private property, whether by surface runoff or through a storm drain system; (5) locating any illicit connection or the source of prohibited discharge; (6) evaluating compliance with any BMP or WQMP; (7) evaluating compliance with any permit issued pursuant to this chapter; and (8) investigating the condition of any legal nonconforming connection.

E. New BMPs. When a BMP is installed on private property as part of a project that requires a city permit or business license, in order to comply with this chapter, the property owner, occupant or operator shall provide the city access for inspection of BMPs to ensure that the BMP is working properly. This includes the right to enter the property without prior notice, as needed, when the city has a reasonable basis to believe that the BMP is not working properly, to enter for any follow-up

inspections, or to enter when necessary for abatement of a nuisance or correction of a violation of this chapter.

F. Portable Equipment. For purposes of verifying compliance with this chapter, the authorized inspector may inspect any vehicle, truck, trailer, tank truck or other mobile equipment.

G. Records Review. The authorized inspector may inspect all records of the owner or occupant of private property relating to chemicals or processes presently or previously occurring on site, including material and/or chemical inventories, facilities maps, or schematics and diagrams, material safety data sheets, hazardous waste manifests, business plans, pollution prevention plans, state general permits, stormwater pollution prevention plans, monitoring program plans, and any other record(s) relating to illicit connections, prohibited discharges, a legal nonconforming connection, operations or maintenance records related to compliance with a final WQMP or any other source of contribution or potential contribution of pollutants to the storm drain system.

H. Sample and Test. The authorized inspector may inspect, sample, and test any area runoff, soils area (including groundwater testing), process discharge, materials within any waste storage area (including any container contents), and/or treatment system discharge for the purpose of determining the potential for contribution of pollutants to the storm drain system. The authorized inspector may investigate the integrity of all storm drain and sanitary sewer systems, any legal nonconforming connection, or other pipelines on the property using appropriate tests, including but not limited to smoke and dye tests or video surveys. The authorized inspector may take photographs or video tape, make measurements or drawings, and create any other record reasonably necessary to document conditions on the property.

I. Monitoring. The authorized inspector may erect and maintain monitoring devices for the purpose of measuring any discharge or potential source of discharge to the storm drain system.

J. Test Results. Upon submission of a written request by the owner or occupant of the property subject to inspection, the city engineer shall provide copies of all monitoring and test results conducted at the owner or occupant's property.

K. Cost Recovery. When any city inspection, monitoring, laboratory testing or other action undertaken to enforce the provisions of this chapter or the NPDES permit or to comply with the requirements of the same, the city engineer shall collect a fee from the inspected or monitored person in an amount not greater than the costs to the city of the inspection and monitoring in an amount to be established by the city council for the recovery of such costs generally.

8.36.510 Violation.

It shall be unlawful for any person to conduct any work or business, or cause the same to be done, contrary to or in violation of any of the provisions of this chapter, the NPDES permit, state or federal laws.

8.36.520 Liability.

A. Liability for any prohibited discharge or runoff or illicit connection prohibited by this chapter or the NPDES permit shall be the responsibility of the person(s) causing or responsible for the discharge, and such persons shall defend, indemnify and hold harmless the city in any administrative or judicial enforcement action relating to such discharge.

B. A civil or administrative violation of this chapter shall occur, regardless of a person's negligence or their intent to construct, maintain, operate or utilize an illicit connection or to cause, allow or facilitate any prohibited discharge into the city's MS4.

8.36.530 City-issued permits, enforcement.

A. Construction and Occupancy Permits.

1. The issuance of a grading or building permit, performance of permit inspections, or issuance of a certificate of occupancy may be withheld, revoked or suspended on property on which a violation of the provisions of this chapter exist, including work not performed in accordance with the approved plans, until such violation(s) has been corrected to the satisfaction of the city engineer.

2. Any permit applicant or holder may appeal a determination of the city engineer made pursuant to this subsection pursuant to procedures for appeal established elsewhere in this Code applicable to the specific permit(s) at issue. A permittee may request a temporary variance to continue to discharge pending issuance of a final decision through the appeal process.

B. Business Licenses. Violations of this chapter may be grounds for the suspension or revocation of a city business license in accordance with chapter 5.04 of this Code.

8.36.540 Violation a nuisance.

Any condition in violation of the prohibitions of this chapter, including but not limited to the maintenance or use of any illicit connection or the occurrence of any prohibited discharge, shall constitute a threat to the public health, safety, and welfare, and is declared and deemed a nuisance pursuant to Government Code section 38771.

8.36.550 Enforcement of violations.

A. Violations. Violations of the provisions of this chapter shall be prosecuted pursuant to any or all of the following provisions of this code:

1. Chapter 1.26, administrative citations. The city's authorized inspector shall be deemed an enforcement officer as that term is defined at Code section 1.26.020 for the purpose of enforcing any provision of this chapter or the

NPDES permit and he or she may also utilize any of the administrative citation procedures set forth at chapter 1.26;

2. Chapter 1.32, general penalties;

3. Chapter 1.32, specifically, as a misdemeanor and any violation of this chapter or the NPDES permit shall constitute a misdemeanor; or

4. Chapter 8.20, for the summary abatement of nuisances.

B. Notwithstanding any notice provisions contained at chapters 1.26, 1.32 or 8.20, where the owner or occupant of any private property cannot be located after the reasonable efforts of the authorized inspector, any notice required to enforce any provision of this chapter shall be deemed delivered after posting on the property for a period of ten business days.

C. Emergency Abatement.

1. In the event that the city manager, city engineer or a designee of either determines that any violation of the provisions of this chapter or the NPDES permit constitutes an imminent danger to public safety or the environment, the city manager, or his or her designee, may enter the property from which the violation emanates and abate the condition as public nuisance, and restore any affected property prior to notice to or consent from the owner or occupant thereof and without judicial warrant by following the applicable procedures set forth at chapter 8.20 of this Code.

2. An imminent danger created by a violation of this chapter or the NPDES permit may be subject to an immediate order by the city engineer or his or her designee to immediately cease such conduct. The city attorney is authorized to immediately seek a court order to enforce an order of the city engineer issued pursuant to this sub-section, according to the procedures provided at chapter 1.32 of this code. The city shall be entitled to recover the costs incurred enforcing the city engineer's order including any reasonable and necessary legal fees.

3. An imminent danger includes, but is not limited to, exigent circumstances created by the dispersal of pollutants, where the same presents a significant and immediate threat to the public safety or the environment.

4. Notwithstanding the authority of the city to conduct an emergency abatement action or order immediate cessation of a violation of this chapter or NPDES permit, an administrative hearing and right to appeal pursuant to chapter 1.26 of this code will be available after an emergency abatement or order to immediately cease violation has occurred.

D. Recovery of Costs.

1. Administrative enforcement costs. The authorized inspector may deliver to the owner or occupant of any private property or any responsible party, or any

other person who becomes subject to a notice of noncompliance with this chapter or administrative order, an invoice for costs. An invoice for costs is delivered and is appealable in accordance with the notice provisions established by chapter 1.26 for notice of an administrative citation. An invoice for costs is immediately due and payable to the city for the actual costs incurred by the city in issuing and enforcing any notice or order.

2. Abatement costs. In addition to any right provided by chapter 8.20, in order to recover the costs incurred by the city to abate a violation of this chapter or the NPDES permit, the city is entitled to recover the city's abatement costs, including its reasonably-incurred attorneys fees, from the owner or occupant of any private property or any responsible party, or any other person who becomes subject to a city abatement. The city may recover such costs through any means authorized for cost recovery contained in this code, including chapter 1.32.

E. Nonexclusive Remedies. Each and every remedy available for the enforcement of this chapter shall be nonexclusive, and it is within the discretion of the authorized inspector or enforcing attorney to seek cumulative remedies, except that multiple monetary fines or penalties are not available for any single violation of this chapter. The remedies available to the city pursuant to the provisions of this chapter shall not limit the right of the city to seek any other remedy that may be available by law.

F. Procedures and Right of Appeal. The procedures and right to appeal any action to enforce this chapter or the NPDES permit shall be governed by the specific chapter of this code pursuant to which the city undertakes its enforcement action.

8.36.560 Administrative compliance order.

A. Administrative Compliance Order. In addition to anything provided at chapter 1.26, the authorized inspector may issue an administrative compliance order which may be issued to any of the following:

1. Any owner or occupant of any private property requiring abatement of conditions on the property that cause or may cause a prohibited discharge or an illicit connection in violation of this chapter or the NPDES permit;

2. The owner of private property or a responsible party subject to the requirements of any WQMP to ensure implementation of and adherence to the terms, conditions and requirements of the plan; or

3. Any person responsible for an illicit connection or prohibited discharge pursuant to this chapter or the NPDES permit.

B. Contents. The administrative compliance order may include any terms and requirements necessary to remedy any violation of this chapter or the NPDES permit, including but not limited to,

1. Specific steps and time schedules for compliance as reasonably necessary to prevent threatened or future unauthorized discharges, including but not limited to the threat of a prohibited discharge from any pond, pit, well, surface impoundment, holding, or storage area;

2. Specific steps and time schedules for compliance as reasonably necessary to discontinue any illicit connection;

3. Specific requirements for containment, cleanup, removal, storage, installation of overhead covering, or proper disposal of any pollutant having the potential to contact stormwater runoff;

4. Any other terms or requirements reasonably calculated to achieve full compliance with the terms, conditions, and requirements of any WQMP; and

5. Any other terms or requirements reasonably calculated to prevent continued or threatened violations of this chapter, including, but not limited to, requirements for compliance with best management practices guidance documents promulgated by any federal, state, or regional agency.

C. Applicable Procedures. Notice, enforcement and appeal of an administrative compliance order pursuant to this chapter shall occur pursuant to the procedures established at chapter 1.26 of this Code for administrative citations, generally.

SECTION 2. SEVERABILITY.

If any provision of this Ordinance or the application thereof to any person or circumstance is held invalid, such invalidity shall not affect other provisions or applications, and to this end the provisions of this Ordinance are declared to be severable.

SECTION 3. EFFECTIVE DATE.

This Ordinance shall take effect and be enforced thirty (30) days following its adoption.

SECTION 4. NOTICE OF ADOPTION.

The City Clerk shall certify to the adoption of this Ordinance and shall publish a summary of this Ordinance and post a certified copy of the full Ordinance in the office of the City Clerk at least five (5) days prior to the adoption of the proposed Ordinance; and within fifteen (15) days after adoption of the Ordinance, the City Clerk shall publish a summary of the Ordinance with the names of the council members voting for and against the Ordinance.

ADOPTED by the City Council and signed by the Mayor and attested by the City Clerk this __ day of July, 2012.

PASSED, APPROVED AND ADOPTED this ___ day of July, 2012.

_____

City Clerk

David W. Gibson, Executive Officer
California Regional Water Quality Control Board
San Diego Region
9174 Sky Park Court, Suite 100
San Diego, CA 92123·4340

Re: Legal Authority of the City of Murrieta to Implement and Enforce the Requirements of 40 CFR 122.26(d)(2)(i)(A-F) and RWQCB Order R9-2010-0016

Dear Mr. Gibson:

The City of Murrieta (the "City"), by and through its City Attorney, hereby submits the following certification, pursuant to Section E.2 of Order No. R9-2010-0016,[NPDES Permit No. CASO108766], issued by the California Regional Water Quality Control Board, San Diego Region ("RWQCB") on November 10, 2010 and entitled "Waste Discharge Requirements for Discharges from the Municipal Separate Storm Sewer Systems (MS4s) Draining the County of Riverside, the Incorporated Cities of Riverside County, and the Riverside County Flood Control and Water Conservation District within the San Diego Region." (the "Permit").

The City is one of the co-permittees under the Permit. Section E.2 of the Permit requires the City to provide the RWQCB with a statement by its legal counsel, certifying that the City has adequate legal authority to implement and enforce each of the current requirements set forth in 40 CFR 122.26(d)(2)(i)(A-F) and the Permit. The purpose of this letter is to comply with Section E.2 of the Permit. It is our opinion that the City has the necessary legal authority to implement, comply with and enforce the requirements of the Permit and 40 CFR 122.26(d)(20(i)(A-F) to the extent permitted by State and Federal law and subject to the limitations on municipal action under the California and United States Constitutions.

1. Citation of Runoff Related Ordinances

Presently, the City has in force Chapter 8.36 of its municipal code, entitled "City of Murrieta Stormwater and Urban Runoff Management and Discharge Controls Ordinance" regulating runoff in the City. At the date this letter is written, the chapter applies and enforces the standards of the previous NPDES permit.

On June 19, 2012, the City Council approved the first reading of a replacement for chapter 8.36 entitled, "City of Murrieta Stormwater and Runoff Management and Discharge Controls Ordinance" ("new chapter 8.36") which implements the requirements necessary to enforce the current Permit. Upon second reading, which will take place as soon as legally allowed pursuant to California law, it is anticipated that new chapter 8.36

will be adopted by the City Council. This letter describes the City's ordinances related to the Permit that will be in place when new chapter 8.36 is legally in force.

Additional provisions regarding runoff contained within the City's ordinances are found at: (1) Chapter 15.52, Grading, Erosion and Sediment Control; (2) chapter 15.54, Encroachment Permits Generally; and (3) chapter 16.108, Improvements, section 070, Erosion Control and Grading. These provisions are currently in force and do not require updating to mandate compliance with the current Permit.

2. Local administrative and legal enforcement procedures

The local administrative and legal procedures available to the City to mandate compliance with the City's runoff related ordinances in new chapter 8.36 are located at article 5, Inspections and Enforcement and also reference and incorporate enforcement provisions with the City's Municipal Code located at chapter 1.26, administrative citation; chapter 1.32, general penalties; and chapter 8.20, for summary abatement of nuisances. Enforcement actions may be completed either administratively or they may be commenced and completed in the judicial system as the City deems most appropriate for the control of runoff consistent with the Permit.

3. Runoff ordinance adoption procedure

City staff in coordination with the office of City Attorney draft and propose ordinances to the City related to runoff. They are the presented to the City Council for consideration and adoption pursuant to the requirements of California law. After proper public notice and any required public participation, Counsel considers proposed runoff ordinances, makes any changes it deems appropriate, and then approves a first reading of an ordinance. California law requires a second reading of all ordinances before they can be adopted by the Council, a process which occurs for runoff ordinances.

Once adopted, the City's ordinances become effective pursuant to California law. Facial challenges to the City's ordinances, as specified by California law, must be taken pursuant to writ in a court of law. Challenges to the City's runoff ordinances as applied in a particular circumstance must be addressed in the first instance administratively pursuant to the City's Municipal Code with an ultimate challenge available to a court of law should the challenging party property exhaust administrative remedies.

To the best of our ability, on behalf of the City of Murrieta, the above information has intended to address all of the requirements of section E.2 of the Permit. If you require additional information, please contact our offices.

Appendix B-5

Performance Evaluation Assessment

Compliance with Section J.1

Section J.1 of the 2010 SMR MS4 Permit requires each Copermittee to annually assess and report upon the effectiveness of the JRMP and Watershed Workplan implementation to (1) reduce the discharge of Storm Water Pollutants from its MS4 facilities to the MEP; (2) prohibit Non-Stormwater discharges; and (3) prevent runoff discharges from the MS4 from causing or contributing to a violation of Water Quality Standards. With submittal of the Report of Waste Discharge, the Copermittees will determine whether their program implementation is resulting in the protection and/or improvement of water quality through an integrated assessment.

Overview

The purpose of the overall program assessment is to ensure that the Copermittee's programs continue to be effective at managing the effects of Runoff on Receiving Water quality as required under section J.1 of the 2010 SMR MS4 Permit. To achieve this objective, the Copermittees have developed an overall program effectiveness assessment strategy. The overall program effectiveness assessment is an iterative process as depicted in Figure 1.

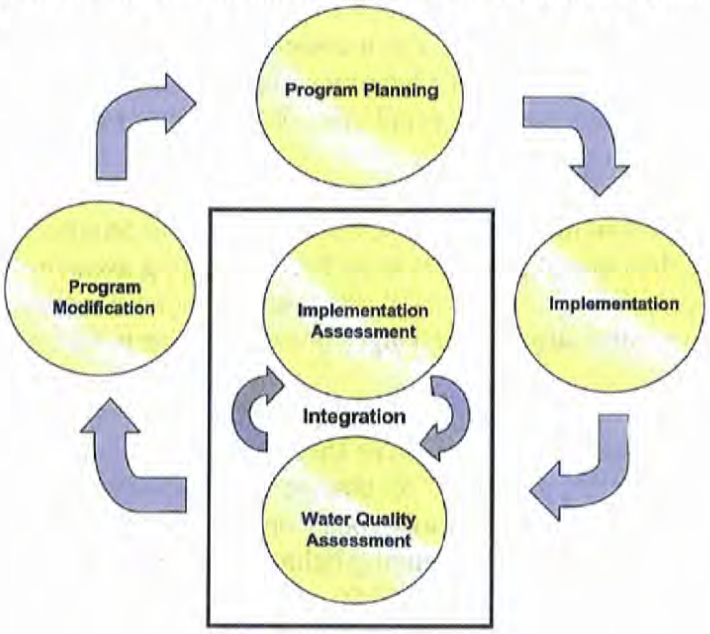

Figure 1

Measurable metrics that will be collected annually. These metrics generally involve: Confirmation of activities, Tabulation of data, Surveys of the public, results from Inspections or site visits, Quantification, and information from the Monitoring program.

CASQA Outcome Levels for each metric; to indicate how each metric can demonstrate the effectiveness of the Permittee's programs (as described below). Data collected through program implementation will be used to assess Level 1 – 4/5 outcomes. The results from the monitoring program will be used to identify water quality trends to evaluate Level 5 & 6 Outcomes

Assessment Intervals at which the Copermittees will evaluate the measurable metrics to determine the applicable CASQA Outcome Levels.

Timeframes in which the Copermittees expect to be able to achieve the desired CASQA Outcome Level. If a desired outcome is not attained within the specified timeframe, the Copermittee(s) will re-assess the BMP to identify any improvements that may be needed to improve their ability to detect and attain the outcome.

CASQA Outcome Levels

CASQA has established six effectiveness assessment levels which are described below. Generally lower level outcomes must be achieved before the higher level outcomes can be expected.

Level 1 – Documenting activities. Level 1 Outcomes provide the program managers with direct feedback on whether the control measures are being developed and implemented as planned and on schedule. Level 1 Outcomes are assumed to be beneficial to water quality and reflect program implementation and are not indicators of the impact of implementation on the environment.

Level 2 – Raising awareness. Level 2 Outcomes provide program managers with feedback on how effective the control measures have been in raising awareness and changing attitudes of target audiences. Level 2 Outcomes are assumed to be beneficial to the environment as increased awareness and attitudinal changes provide the basis for behavioral change.

Level 3 – Changing behavior. By building on Level 2, Level 3 Outcomes provide program managers with feedback on how effective the program elements and control measures have been in motivating target audiences to change their behaviors and implement appropriate BMPs. At Level 3, control measures focus on providing information and incentives for target audiences to take action by changing behavior and implementing recommended BMPs. Both quantitative (i.e., statistically valid) and qualitative methods are used to measure behavior changes. Methods used to measure behavior changes include those used for Level 2 Outcomes as well as direct observation via site visits. Level 3 Outcomes may take the form of a percent and/or change in the percentage of the target audience demonstrating that a behavior change has occurred such as an increase in number of BMPs implemented and maintained at construction sites.

Level 4 – Reducing loads from sources. Level 4 Outcomes provide program managers with feedback regarding reductions in the amounts of pollutants associated with specific sources

resulting from the implementation or enhancement of a BMP. If a large enough portion of the target audience is moved to take action (Level 3), loads into the MS4 are prevented. At Level 4, programs collect data to allow estimation of loads from Pollutant sources that are prevented from being either generated or discharged into the MS4.

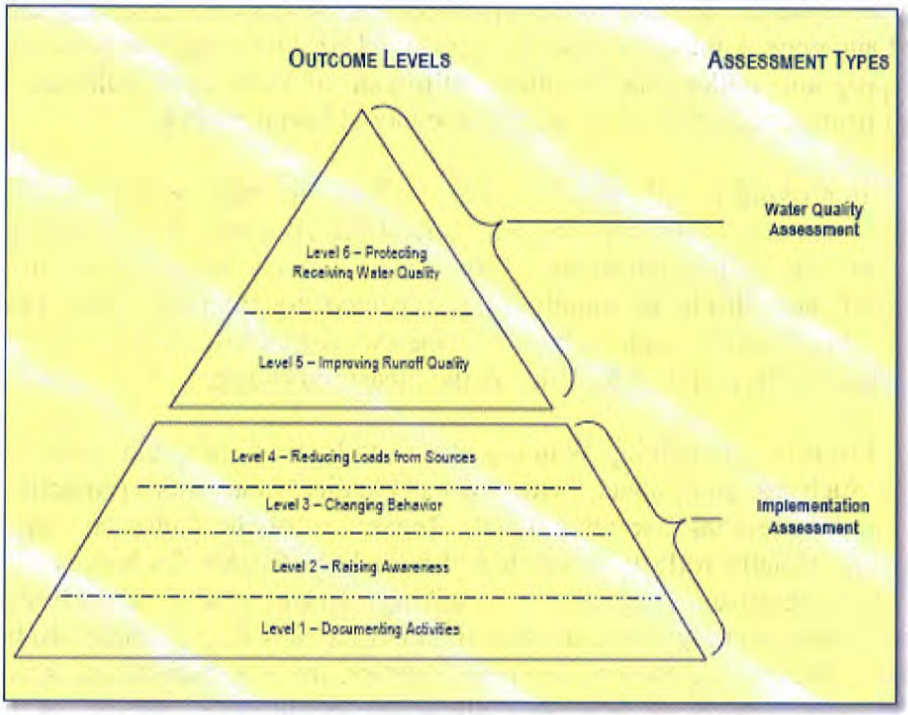
Level 5 – Improving runoff quality. Level 5 Outcomes may be measured as reductions in one or more specific Pollutants, and may reflect effectiveness at a variety of scales ranging from site-specific to programmatic. Over time, as loads are prevented from entering the MS4, runoff and discharge quality are expected to improve. At Level 5, baseline measurements of runoff quality should be measured to allow comparison. Multi-year data sets are needed to have any confidence in the measured change.

Level 6 – Protecting Receiving Water quality. At Level 6, program managers will focus on Outcomes such as compliance with Water Quality Standards, protection of biological integrity, and Beneficial Use attainment. Regardless of the Outcomes targeted, Receiving Water quality usually reflects more than the quality of MS4 discharges. Other influences may have a significant impact on Receiving Water quality, including sanitary sewer overflows, rising groundwater, agricultural and other Non-Point Source discharges. Changes in Receiving Waters and the environment resulting from stormwater programs may only be seen over long periods of time that allow the cumulative impacts of multiple control measures and program elements to result in measurable change in water quality.

Categories of Assessments

The program elements addressed in the overall program effectiveness assessment can generally be broken down into two categories, implementation assessments, and water quality assessments, as shown in the figure below:

Appendix B-5



Assessment Strategy

JRMP Implementation Assessments

The Copermittees have identified implementation assessment metrics for each compliance program area which can potentially demonstrate multiple outcome levels, as summarized below:

JRMP Program	Table #	Potential Outcome Levels					
		1	2	3	4	5	6
IC/ID	1	X		X	X	X	
Permittee Facilities	2	X	X	X	X		
Development Planning	3	X		X		X	
Construction	4	X		X			
Industrial / Commercial	5	X		X			
Residential	6			X	X		
Retrofit	7	X			X	X	
Public Education	8	X	X	X	X		

The specific metrics and associated CASQA Effectiveness Metrics are shown in Tables 1-8 of the Performance Evaluation Assessment.

Water Quality Assessments

In addition to the implementation assessments identified above, data from the Monitoring program will be used to perform Water Quality Assessments, as summarized below:

Monitoring Program Element	Potential Outcome Levels					
	1	2	3	4	5	6
Outfalls – Dry Weather				X	X	
Outfalls – Wet Weather				X	X	
Outfalls – High Priority Inland Aquatic Habitat				X	X	
Receiving Waters - Stream Assessment Monitoring				X	X	X
Receiving Waters – MLS Dry Weather				X	X	X
Receiving Waters – MLS Dry Weather				X	X	X

The specific metrics and associated CASQA Effectiveness Metrics for the Monitoring Program Element are shown in Table 9 of the Performance Evaluation Assessment. The revised Santa Margarita Monitoring Program (Volume III of the CMP) describes the monitoring program that will collect the necessary data.

The specific metrics and associated CASQA Effectiveness Metrics for the Watershed Workplan Program Element are shown in Table 10 of the Performance Evaluation Assessment. The Watershed Workplan is discussed in section 3.8 of the JRMP.

Reporting of Effectiveness Assessments

The continued implementation of the BMPs required in the 2010 SMR MS4 Permit are anticipated to result in incremental, but overall improvement in the metrics that may or may not be discernible within the term of the 2010 SMR MS4 Permit, however this assessment program is intended to be an iterative process that can transcend MS4 Permit terms, to ensure that improvements are made consistent with the MEP standard.

Beginning with the FY 2012-2013 Annual Reports, a summary of the Implementation Assessments will be provided within each JRMP Annual Report, and a summary of the Water Quality Assessments will be provided within each Monitoring Annual Report.

These effectiveness summaries will include:

a. The data collected for each of the measurable metrics identified in tables 1-10.

b. A determination of the applicable CASQA outcome level(s) for each metric, upon completion or the applicable assessment interval.

c. Responses to effectiveness assessments: Where the assessments indicate that the desired outcome level has not been achieved at the end of the projected timeframe, the Copermittee(s) will review its(their) applicable activities and BMPs to identify any modifications and improvements needed to maximize effectiveness, as necessary to comply with the 2010 SMR MS4 Permit. If the Copermittee(s) determines that the existing activities/BMPs are adequate, or that the projected timeframe should be

extended, justification and an updated timeframe for attainment of the outcome level will be provided in the Annual Report.

d. A work plan and schedule to address any program modifications and improvements in response to the findings of the assessments will be developed and implemented. The work plan and schedule will be provided and updated with the applicable Annual Report. The work plans will include, at a minimum, the following:

1) The problems and priorities identified during the assessment;
2) A list of Priority Pollutants and known or suspected sources;
3) A brief description of the strategy employed to reduce, eliminate or mitigate the negative impacts;
4) A description and schedule for new and/or modified BMPs. The schedule will include dates for significant milestones;
5) A description of how the selected activities will address an identified high priority problem. This will include a description of the expected effectiveness and benefits of the new and/or modified BMPs;
6) A description of implementation effectiveness metrics;
7) A description of how efficacy results will be used to modify priorities and implementation; and
8) A review of past activities implemented, progress in meeting Water Quality Standards, and planned program adjustments.

Table 10: Watershed Workplan

BEST MANAGEMENT PRACTICES Plan for FIRE FIGHTING ACTIVITIES

Initially Prepared in Consultation with the Following Fire Fighting Agencies:

City of Corona Fire Department
City of Hemet Fire Department
City of Norco Fire Department
City of Riverside Fire Department
County of Riverside Fire Department/CDF
Idyllwild Fire Protection District
Murrieta Fire Protection District

Revised in compliance with
Order No. R9-2010-0016 (NPDES No. CAS0108766)
Covering the Santa Margarita Region

June 2012

INTENT

The purpose of this plan is to identify Best Management Practices (BMPs) used by fire fighting agencies for Runoff management in the Santa Margarita Region of Riverside County. Section B.3 of the 2010 SMR MS Permit adopted by the San Diego Regional Water Quality Control Board (Regional Board) requires each Copermittee to develop and implement a program to address Pollutants from non-emergency fire fighting flows (i.e., flows from controlled or practice blazes and maintenance activities) identified as significant sources of Pollutants to Waters of the U.S.

The Riverside County MS4 Permittees in cooperation with the Riverside County Fire Agencies have developed fire department activity procedures to provide guidance to Fire Prevention and Firefighting personnel for management of Runoff. Guidance is provided in the form of recommended BMPs that are incorporated as part of the individual Jurisdictional Runoff Management Plans (JRMP), and as applicable into Facility Pollution Prevention Plans.

When followed, implementation of the BMPs will minimize discharges of Runoff to the municipal separate storm sewer system (MS4) associated with non-emergency fire fighting activities.

PROHIBITIONS

Building fire suppression system maintenance discharges (e.g., sprinkler line flushing) and vehicle washing contain Waste. Therefore, the Copermittees are required to prohibit such discharges as Illegal Discharges through ordinance, order, or similar means.

PROCEDURE

Fire Prevention Activities

1. Fire Sprinkler Acceptance and Testing BMPs

   - As noted above, discharges associated with fire suppression systems are prohibited. Such discharges must not be allowed to reach any MS4, Receiving Water, or other conveyance such as a street with curb and gutter.
   - Flows from fire sprinkler acceptance and testing must be contained onsite and/or direct the water flows to landscaped or green areas whenever possible and safe to do so without causing damage or erosion.
   - When practicable, divert sprinkler system flushing flows to the sanitary sewer, with the permission of the local sewer agency.
   - Conduct fire sprinkler testing on non-rainy days.

2. Fire Hydrant Testing BMPs

   - Obtain coverage under Order R9-2002-0020 (link) and implement any compliance requirements specified therein. The following are general guidelines that may need to be complied with:
     - Conduct on non-rainy days.
     - Conduct flows for the shortest duration possible.
     - Use a water diffuser as necessary.
     - Remove debris from the affected curb and gutter before initiating flushing.
     - Direct water flows to landscaped or green areas whenever possible and safe to do so without causin damage or erosion.

Non-emergency Firefighting Activities

1. Discharges Associated With Fire Training Activities

Training activities, which simulate emergency responses, must be performed in a manner that reduces or prevents discharges to the MS4 to the maximum extent practicable. In addition, when the elimination of discharges into the MS4 is unavoidable (i.e. equipment failures), measures will be implemented to minimize impacts to water quality:

- Live and simulated fire training should be conducted, where feasible, in facilities where Runoff controls protecting the MS4 have been engineered and built into the facility.
- When conducting Maximum Capability Training (MCT) exercises, potable water sources may be used when Runoff cannot be contained.
- Direct water flows to landscaped or green belt areas whenever possible.
- Survey the area prior to the training exercise to ensure that debris will not enter the MS4 as a result of the flows generated during the drill.
- When practicable, divert flows to the sanitary sewer with the permission of the local sewer agency.
- Use fog streams or straight streams for short durations when practicable.
- Use lower gallon per minute (GPM) nozzle settings.
- Prevent discharge of foam or other additives to the MS4. If training activities involve the use of foam, block off all potentially affected storm drain inlets with plastic sheeting and sandbags or temporary berms.

2. Discharges Associated With Post-Emergency Fire Fighting Activities

The post-emergency rehabilitation and maintenance of response equipment must be performed in a manner that avoids unnecessary discharges to the MS4.

3. Discharges Associated with Activities Conducted at Fire Facilities

Specific BMPs to be implemented at Copermittee owned Fire Facilities are identified in the Facility Pollution Prevention Plan (FPPP) as described in the JRMP. The following are general BMPs that can be considered for incorporation into the FPPP as determined appropriate and applicable by the Copermittee.

A. Vehicles and Equipment Washing and Cleaning

The following BMPs should be considered in order to prevent or reduce the discharge of Pollutants to the MS4 from vehicle and equipment washing and cleaning:

- Use methods of cleaning vehicles that employ the minimal use of water, such as wet chamois or non-water rinses, when applicable.
- Limit the use of all cleaning agents and when feasible only use water.
- Remove debris from any area or facility used for washing and/or cleaning vehicles.
- Prevent Runoff from vehicle and equipment washing and cleaning from entering the MS4 by employing one of the following BMPs.

  a. Direct water flows to landscaped or green areas or contain the water onsite and allow it to evaporate and infiltrate whenever safe to do so without causing damage or erosion.
  b. Use designated wash areas (preferably covered and bermed) to contain and/or divert the wash

water to the sanitary sewer either through the use of "wet-vac" or through a plumbed sanitary sewer connection.

c. Use self-contained water recycling systems.
d. Use off-site commercial washing and steam cleaning facilities.

- Prohibit all steam cleaning discharges from entering the MS4. Direct all steam cleaning discharges to the sanitary sewer.

B. Vehicle Fueling

The following BMPs should be considered in order to prevent or reduce the discharge of Pollutants to the MS4 when fueling fire fighting apparatus:

- Protect the fueling area from Stormwater by installing a canopy.
- Pave fueling area surfaces with Portland cement concrete (or other equivalent smooth impervious surface).
- Keep perimeter drains clear of debris at all times.
- Where a perimeter drain is not installed, install a berm or grade area to prevent run-on of Stormwater and spilled liquids.
- Use a dead-end sump to collect spills or install an oil-water separator.
- Utilize vapor recovery nozzles to help control drips as well as air pollution. Discourage "topping-off" of fuel tanks.
- Maintain a spill control kit at the site. Use absorbent materials on small spills and general cleaning rather than hosing down an area. Remove the absorbent materials promptly and dispose as hazardous waste.
- Keep site Facility Pollution Prevention Plan (FPPP) current.

C. Vehicles and Equipment Maintenance and Repair

The following BMPs must be implemented in order to prevent or reduce the discharge of Pollutants to the MS4 from vehicle and equipment maintenance and repair:

- Conduct vehicle and equipment maintenance in areas where precautions have been taken to prevent the entry of spills into the MS4.
- Use dry cleaning methods in maintenance and repair areas when practical.

D. Hose Washing and Cleaning

- Design future facilities used for washing and/or cleaning fire hoses to prevent wash water or other debris from entering the MS4.
- Direct water flows to landscaped or green areas or contain the water onsite and allowing it to percolate through plant material, the landscape, or to evaporate completely, whenever safe to do so without causing damage or erosion.
- Use designated wash areas (preferably covered and bermed) to contain and/or divert the wash water to the sanitary sewer either through the use of a "wet-vac" or through a plumbed sanitary sewer connection.
- Prevent wash water containing detergents, degreasers, or other contaminants from entering the MS4.
- When cleaning the wash area prevent discharge from entering the MS4. Utilize wet mop cleanin methods in small areas, when feasible.
- Use methods of cleaning fire hoses that employ the minimal use of water, such as high-pressure spray

washers, when applicable.

E. Facility Maintenance

he following BMPs should be considered in order to prevent or reduce the discharge of Pollutants to the MS4 during facility maintenance:

- Use dry cleaning methods, such as sweeping, to clean impervious areas such as apparatus floors, driveways, patios, and walkways. Place sweepings and debris in receptacles for solid waste disposal.
- Maintain landscaped areas as required, limiting the introduction of leaves and landscape waste into the MS4.
- Monitor and maintain irrigation systems to prevent Runoff.
- Maintain and repair structures in order to prevent the release of water, soils, or waste to the MS4.

F. Solid Waste and Hazardous Materials Storage Areas

The following BMPs should be considered in order to prevent or reduce the discharge of Pollutants to the MS4 from solid waste and in hazardous materials storage areas:

- Provide a canopy or roof for solid waste and hazardous materials storage areas.
- Provide secondary containment (i.e. a metal or plastic pan with a raised edge) for hazardous materials storage areas.
- Ensure waste containers and dumpsters are properly secured and sealed. Provide lids for all trash and solid waste receptacles. Keep lids closed to prevent contact with rainfall and to ensure containment of waste within the storage area.

Emergency Fire Fighting Activities

An "emergency" exists from alarm notification until, in the opinion of the incident commander, the emergency has concluded. Discharges occurring during emergency fire fighting activities (i.e. flows necessary for the protection of life and property) do not require BMPs and are not prohibited under the 2010 SMR MS4 Permit.

IMPLEMENTATION STRATEGY

Education, Training, and Outreach

1. Stormwater NPDES Training

Copermittee Fire department personnel should receive annual education and training to increase staff awareness and understanding of Stormwater Pollution issues, BMPs, and their compliance obligations.

2. Best Management Practices (BMPs) Update

The Copermittees in the Santa Margarita Region will continue to work cooperatively with fire departments to identify, update, and provide guidance on the implementation BMPs, as appropriate, to reduce contaminants in discharges related to fire department agency activities to the maximum extent practicable.

GLOSSARY

With exception of the following, terms used in this document are defined in the JRMP Glossary,:

Maximum Capability Training (MCT)
The MCT involves training exercises in which high water flows are generated to ensure operational readiness. Examples may include: Probation preparation and testing, and organized exercises that prepare or test the abilities of long term employees. Water flows into the storm drain are permissible when using potable water sources (hydrants or water tanks) and debris from the effected curb and gutter have been previously removed.

Unified Sanitary Sewer Spill Response Procedure

1.0 Background

On November 10, 2010, the California Regional Water Quality Control Board – San Diego Region (Regional Board) issued an area-wide Municipal Separate Storm Sewer System (MS4) National Pollutant Discharge Elimination System (NPDES) Permit (2010 MS4 Permit) to the Riverside County Flood Control and Water Conservation District (District), the County of Riverside (County), and the incorporated cities of Riverside County within the San Diego Region (collectively, Copermittees).

The 2010 MS4 Permit requires the Copermittees to control the discharge of Pollutants into and from the MS4s to Waters of the United States, including from Sewage Spills. The Copermittees however do not own nor operate any portion of the sanitary sewer system nor associated treatment facilities. Sewering agencies that own or operate sanitary sewer collection systems greater than one mile in length are regulated under State Water Resources Control Board Water Quality Order No. 2006-0003 and the accompanying amendment to its monitoring and reporting program (WQ 2008-0002-EXEC). This order, known as the Statewide General Waste Discharge Requirements for Sanitary Sewer Systems (Sanitary Sewer Order) serves, among other purposes, to prevent and minimize Potential Pollutants from sanitary sewer overflows (SSOs) originating from these sewer collection systems from entering surface waters. Copermittees that own or operate applicable sanitary sewer collection systems are required to obtain coverage under the Sanitary Sewer Order.

The Regional Board has found that effluent from SSOs that may enter the MS4 can ultimately have a negative impact on Beneficial Uses of Receiving Waters. The Copermittees have developed this Sanitary Sewer Spill Response Procedure to prevent, respond to, contain and clean up sewage from SSOs that have or could impact the MS4.

2.0 Purpose

The local Sewering agenciesare required to provide notification, documentation, spill response and reporting of SSOs from their sanitary sewer collection systems pursuant to established federal and state regulations (including the Sanitary Sewer Order), and individual NPDES permits. This Sanitary Sewer Spill Response Procedure provides a mechanism to ensure effective coordination between those sewering agencies and the Copermittees in the event that an SSO threatens to impact, or impacts, the MS4. This procedure will:

- Enhance communication between the Copermittees, sewering agencies and the Regional Board;
- Clarify and streamline interagency SSO response procedures; and
- Provide additional protection of Receiving Waters.

3.0 SSO Response Procedure

Upon determination by a sewering agency or Copermittee, persons in charge, contractor or field crew that an SSO has occurred that may impact the MS4, the following notification, reporting, response, and sampling procedures will be implemented.

3.1 Notifications

3.1.1 Notification Requirements Applicable to Sewering Agencies:

In compliance with the Sanitary Sewer Order, the following notification requirements are applicable to sanitary sewer collection systems and other facilities owned or operated by sewering agencies:

- For any discharges of sewage that result in a discharge to a drainage channel or surface water, the sewering agency will as soon as possible, but not later than two (2) hours after becoming aware of the discharge, notify the OES, the County Department of Environmental Health, and the Regional Board.
- As soon as possible, but no later than twenty-four (24) hours after becoming aware of a discharge to a drainage channel or a surface water, the sewering agency will submit to the Regional Board a certification that the OES and the County Department of Environmental Health have been notified of the discharge.

The sewering agency with jurisdiction for the spill will provide notification immediately (within 24 hours of becoming aware of the circumstances) for all discharges that endanger human health or the environment as follows:

- By phone to the OES at 800-582-7550 and to the Regional Board at 858-467-2952
- At a minimum:
  - Any sewage spill greater than 1,000 gallons
  - Any sewage spill that could impact water contact recreation
  - Any discharge of sewage into or on any Waters of the State (reportable to OES[1])

In addition, the sewering agency will notify the Highway Patrol of SSOs affecting a State Highway in accordance with OES guidance[2].

2 "California Hazardous Material Spill/Release Notification Guidance." April 2006. California Office of Emergency Services. Page 6. http://www.oes.ca.gov/

Other spill incidents, including any unauthorized discharges that are not reportable to the OES, are reported to the Regional Board's Executive Officer as part of the Annual Report as described in Section 3.3.

3.1.2 Notification Requirements Applicable to Copermittees Not Owning or Operating a Sanitary Sewer Collection System

Should a Copermittee discover an SSO or determine that sewage is entering the MS4, the Copermittee shall immediately notify the appropriate sewering agency.

1. Where the sewering agency determines that the SSO originates from its sewer collection system or facilities, the sewering agency will follow the notification procedures described in Section 3.1.1 and established reporting procedures. No further notification or reporting is required by the Copermittee.
2. Where the sewering agency determines that the SSO originates from a private lateral or private property, the sewering agency will contact the property owner for clean up responsibility and will contact the Copermittee with jurisdiction of the spill. For more information on private property SSOs, see Section 6.0. The Copermittee with jurisdiction for the spill will provide notification immediately (within 24 hours of becoming aware of the circumstances) for all discharges that endanger human health or the environment as follows:
   - By phone to the OES at 800-582-7550 and to the Regional Board at 858-467-2952
   - At a minimum:
     - Any sewage spill greater than 1,000 gallons
     - Any sewage spill that could impact water contact recreation
     - Any discharge of sewage into or on any Waters of the State (reportable to OES[3])
   - In addition, the Copermittee with jurisdiction for the spill will notify the Highway Patrol of SSOs affecting a State Highway in accordance with OES guidance[4].

Should a Copermittee discover discharges of sewage in an area not served by a sewering agency, the Copermittee with jurisdiction for the spill will follow the procedures in sections 3.5 and 4.4.5 of the JRMP as applicable.

Other spill incidents, including any unauthorized discharges that are not reportable to the OES, are reported to the Regional Board's Executive Officer as part of the Annual Report as described in Section 3.3.

"California Hazardous Material Spill/Release Notification Guidance." April 2006. California Office of Emergency Services. Page 6. http://www.oes.ca.gov/

3.1.3 Agency Contact Information

To identify sewering agency with jurisdiction in the spill area, **see Attachment A**. A list of the current contact phone numbers for various agencies is provided below:

CONTACT:	PHONE NUMBER:
County Department of Environmental Health / Environmental Resources Management	951-955-8980
Governor's Office of Emergency Services (OES)	800-852-7550
Copermittee Staff (whose MS4 may be affected by spill)	**See Attachment B**
Regional Water Quality Control Board: San Diego Region	858-467-2952
Riverside County Flood Control and Water Conservation District	951-955-1200
Sewering agency with jurisdiction in spill area	**See Attachment A**
California Highway Patrol (if highway affected by spill)	**911**

3.2 Minimum Information for Notification

Copermittee staff providing notice should make reasonable attempts to reach sewering agency contacts during and after normal working hours. In cases where sewering agency contacts are not available, messages shall be left. The following minimum information should be conveyed by Copermittee staff as appropriate:

- Identity of caller
- Location, date and time of SSO, status of the SSO (actual or threatened release)
- Quantity of sewage released (estimate of flow or volume)
- Need for public safety or traffic control measures
- Cause of the SSO, if known
- Description of immediate measures taken to contain/mitigate SSO
- Estimate of additional containment and/or clean-up options
- Determination if sewage was discharged to MS4 or areas otherwise impacting the MS4 **(Refer to Attachment A)**
- Determination if SSO reached a state highway

A copy of a sample SSO reporting form is included in **Attachment C**.

3.3 Reporting Requirements

Each Sewering agency is responsible for filing all SSO reports as required under federal and state law for discharges from their sanitary sewer systems, including any applicable NPDES or other permits. Sewering agencies are required to report any discharges to the Department of Environmental Health immediately, per the requirements of Health and Safety Codes Section 5411.5.

Copermittees shall additionally follow specific reporting requirements as described in Section 4 of the JRMP.

The Person in Charge at the responsible sewering agency must CC: the final SSO Report provided to the Regional Board to the affected Copermittees via hard copy or electronic means.

3.4 Response Requirements

Responsible sewering agencies will lead response to SSOs and will assume Person in Charge responsibilities in most cases. Person in Charge of spill response:

- Will take all immediate measures necessary to contain release or potential release of sewage and prevent/minimize impacts to water quality and the MS4.

  May cut locks, open manholes, or otherwise enter MS4 as necessary to contain and clean up SSOs.

- Will contact the maintenance/public works department of the appropriate Copermittee as necessary, and as soon as possible, to notify them of actions within their MS4. Contact numbers are included in **Attachment B**. If necessary, Copermittee staff will support spill response by providing MS4 maps or other support if available.

- Will coordinate with Copermittee staff as necessary to ensure that the clean up adequately remedies impacts of the sewage released to the MS4. It should be noted that the Regional Board prefers that MS4 facilities not be sanitized with disinfectant where not immediately impacting public health (i.e. no chlorine shall be used when discharge is within 1,500 feet of a waterway).

- Will coordinate with local fire, police, and traffic departments as necessary to ensure the safety of the response effort, and to manage traffic and local residents.

4.0 Training Requirements

Sewering Agencies and Copermittee staff will ensure that training for this procedure is incorporated into appropriate training programs related to SSO response.

5.0 Detection Involving Infiltration into MS4

In the event that Copermittees encounter evidence of potential sewage infiltration into the MS4 due to water quality monitoring or field observation, the Copermittees will notify the relevant sewering agency (**see Attachment A**) to coordinate a response.

6.0 Private Property SSOs

Sewering agencies and their contractors will respond to all SSOs within their service area. If a private property is the source of an SSO, agencies and their contractors shall assist in the control and containment to ensure that the sewage does not enter the MS4. If the SSO was a result of a private lateral, the private property owner will be informed of the blockage, and will be responsible to remove the blockage. If the SSO was a result of the sewer trunk line blockage, the response crew will correct the problem.

Glossary

Note: With the exception of the following, most terms used in this document are defined in the Glossary to the JRMP.

Sanitary Sewer Overflow (SSO) - A sanitary sewer overflow is any overflow, spill, release, discharge or diversion of wastewater from a sanitary sewer system. SSOs include:

(i) Overflows or releases of wastewater that reach Waters of the U.S.;
(ii) Overflows or releases of wastewater that do not reach Waters of the U.S.; and
(iii) Wastewater backups into buildings and on private property that are caused by blockages or flow conditions in a sanitary sewer, other than a building lateral. Wastewater backups into buildings caused by a blockage or other malfunction of a building lateral that is privately owned is an SSO when sewage is discharged off private property into streets, stormdrains, or Waters of the U.S.

Sanitary Sewer System - Any system of pipes, pump stations, sewer lines, or other conveyances upstream of a wastewater treatment plant headworks used to collect and convey sewage to a treatment facility. Temporary storage and conveyance facilities (such as vaults, temporary piping, construction trenches, wet wells, impoundments, tanks, highlines, etc.) are considered to be part of the sanitary sewer system, and discharges into these temporary storage facilities are not SSOs.

Sewage - The waste and wastewater produced by residential and commercial establishments and discharged into sewers.

Waters of the State – Any water, surface or underground, including saline waters within the boundaries of the State.

SANITARY SEWER OVERFLOW REPORT FORM

This report is: ☐ Preliminary ☐ Final ☐ Revised Final

Sanitary Sewer Overflow Sequential Tracking Number: _____

Reported to: _____
(Enter Fax #, Voicemail #, or Name of Regional Board Staff)

Date Reported: ____/____/_____ (MM/DD/YY)

SANITARY SEWER OVERFLOW REPORT FORM

Sanitary Sewer Overflow Correction - - Description of all Preventative and Corrective Measures Taken or Planned:

_____

Was there measurable precipitation during 72-hour period prior to the overflow?

☐ Yes ☐ No

Initial and Secondary Receiving Waters:

Did the sanitary sewer overflow enter a storm drain?

☐ Yes ☐ No

Did the sanitary sewer overflow reach surface waters other than a storm drain?

☐ Yes ☐ No

Name or description of secondary receiving waters. (If none, state such)

_____

If the sanitary sewer overflow did not reach surface waters, describe the final destination of sewage.

_____

Notification:

Was the local health services agency notified?

☐ Yes ☐ No

If the overflow was over 1,000 gallons, was the Office of Emergency Services (OES) notified?

☐ Yes ☐ No ☐ Not applicable

Affected Area Posting:

Were signs posted to warn of contamination?

☐ Yes ☐ No

Location of Posting (if Posted): _____

How many days were the warning signs posted?: _____

Remarks:

_____

ACKNOWLEDGMENT OF DEPOSIT BASED PROCESSING OF APPLICATIONS

The signature below acknowledges that the City operates on the basis of full cost recovery for the processing of Planning projects. Deposits made at the time of application may not be sufficient for the processing of the application and additional deposits may be required to cover the cost of reviewing the project. If at any time deposits are insufficient to cover the processing of the application, processing will be stopped until sufficient additional funds are deposited with the City. Lack of sufficient funds on deposit will suspend any required processing time frames.

All signatures must be originals ("wet-signed"). Photocopies of signatures are **not** acceptable.

_____ _____
PRINTED NAME OF APPLICANT SIGNATURE OF APPLICANT

OWNER CERTIFICATION

I CERTIFY UNDER THE PENALTY OF THE LAWS OF THE STATE OF CALIFORNIA THAT I AM THE PROPERTY OWNER OF THE PROPERTY THAT IS THE SUBJECT MATTER OF THIS APPLICATION AND I AM AUTHORIZING AND DO HEREBY CONSENT TO THE FILING OF THIS APPLICATION AND ACKNOWLEDGE THAT THE FINAL APPROVAL BY THE CITY OF MURRIETA, IF ANY, MAY RESULT IN RESTRICTIONS, LIMITATIONS AND CONSTRUCTION OBLIGATIONS BEING IMPOSED ON THIS REAL PROPERTY.

All signatures must be originals ("wet-signed"). Photocopies of signatures are **not** acceptable.

PRINTED NAME OF OWNER	SIGNATURE OF OWNER
PRINTED NAME OF OWNER	SIGNATURE OF OWNER

Written authorization from the legal property owner is required. An authorized agent for the owner must attach a notarized letter of authorization from the legal property owner.

If the property is owned by more than one person, attach a separate page that references the application case number and lists the names, mailing addresses, and phone numbers of all persons having an interest in the real property or properties involved in this application.

☐ See attached sheet(s) for other property owner's signatures.

FILING INSTRUCTIONS FOR LAND USE APPLICATION

The following instructions are intended to provide the necessary information and procedures to facilitate the processing of a Land Use application. Your cooperation with these instructions will insure that your application can be processed in the most expeditious manner possible.

THE LAND USE AND DEVELOPMENT FILING PACKAGE MUST CONSIST OF THE FOLLOWING:

PLEASE NOTE: If you are applying for a use which is completely interior, requiring no revisions to the exterior grounds, building architecture, parking or landscaping, you may not need to provide Grading, Landscaping, or Exterior Elevation plans. Please contact the Planning Department to verify submittal requirements.

INITIAL SUBMITTAL:

1. One complete and signed application form.

2. One complete and signed Depositor Application (if a depositor ID has not been previously established). To download this form, go to http://www.murrieta.org/uploads/forms/finance/Depositor%20Application.pdf.

3. The appropriate deposit fee for the application type or types.
   To view the Fee Schedule, go to
   http://www.murrieta.org/uploads/forms/planning/08-09%20fees.pdf

   This is a deposit based application and is billed on a time worked basis. Additional funds may/will be requested to cover costs of public hearings, staff reports, etc.

4. Complete the "Environmental Setting" section of this application.

5. Other information including technical studies/reports such as biological surveys and delineations studies and/or a cultural resource assessment will be required as determined by the completed "Environmental Setting" section of this application.

6. One 8 ½" x 11" photocopy of a U.S. Geological Survey Quadrangle Map at a 2400 to 1 scale delineating the site's boundaries (Note: each photocopy must not have been enlarged or reduced, have a North arrow, scale, quadrangle name, and Section/Township/Range location of the site.) The site must be clearly identified on the map.

   For easy access to U.S.G.S. maps, go to:
   http://www.usgs.gov/ or http://www.terraserver.com/?tid=151.

7. $60.00 processing fee payable to "UC Regents" for cultural resources review.

8. Two (2) copies of the Preliminary Title Report (must be prepared within the last 6 months).

9. One copy of the current legal description for each property involved as recorded in the Office of the County Recorder. A copy of a grant deed of each property involved will suffice.

10. If any of the properties involved do not abut a public street, a copy of appropriate documentation of legal access (e.g. recorded easement) for said property shall be provided.

11. Ten (10) full size (24"x 36") copies of the following exhibits. The exhibit must include the information described in the "Land Use and Development Matrix" section of this application.
    a. Site plan.
    b. Conceptual grading plan.
    c. Conceptual landscape plan.

    All exhibits must be folded no larger than 8 ½" x 11".

12. Four (4) full-size (24"x 36") copies and six (6) reduced (11"x 17") of building floor plans and elevations (if any buildings or structures exist and are to remain, or are proposed.) The exhibits shall also include the information described the "Land Use and Development Matrix" section of this application. All exhibits

must be folded no larger than 8 ½" x 11."

13. One (1) copy of reduced (11" x 17") of the following exhibits.
    a. Site plan
    b. Conceptual grading plan
    c. Conceptual landscaping plan

    All exhibits must be folded no larger than 8 ½"x 11"

14. One (1) copy of 24" x 36" and one copy of reduced (11"x 17") colored elevations.

15. One (1) 8 ½"x 11" color and material board including samples of all proposed colors and materials.

16. Complete the "Water Quality Management Plan (WQMP) Information" section of this application.

17. If determined by the completed WQMP Checklist for either the Santa Ana River or Santa Margarita River region to be required, two (2) completed copies of the Project Specific Preliminary WQMP and the "Summary of Project-Specific Water Quality Management Plan Requirements" section of this application.

18. Complete the "Hazardous Waste Disclosure Statement" section of this application.

19. For applications pertaining to a particular use (Conditional Use Permit), provide a detailed description of the operational characteristics of the business including, but not limited to, hours of operation, activities performed onsite, estimated customer base and employees.

20. Other information that may include biological surveys, delineations study, cultural resource assessment or other items.

21. Three (3) copies of a traffic assessment report signed by a registered Traffic Engineer report shall be submitted to the City. The report shall follow the criteria outlined by the City's Engineering Department.

22. One (1) recent (less than one-year old) aerial photograph of the entire Project Site with the boundary of the site delineated.

23. A minimum of three (3) ground-level panoramic photographs (color prints) clearly showing the whole project site. Include a location map identifying the position from which the photo was taken and the approximate area of coverage of each photograph.

PRIOR TO SCHEDULING A PUBLIC HEARING:

1. Project Plans - Twelve (12) copies of:
    a. Site plan (full size 24" x 36")
    b. Conceptual grading plan (full size 24" x 36")
    c. Conceptual landscape plans (full size 24" x 36")
    d. Building plans (floor plans, roof plans, elevations, appropriate detail and/or sections) (2 copies full size 24" x 36" and 10 copies reduced 11" x 17")
    e. Colored elevations (10 full size 24" x 36" and 2 reduced 11" x 17")

    The exhibits shall also include the information described in the Land Use and Development Matrix. All exhibits must be folded no larger than 8 ½" x 11."

2. 1 set of ALL plans reduced to 8 1/2" x 11" size.

3. Digital images of the aerial photograph, Site Plan, Building Elevations & Building Floor Plans, the U.S.G.S. Map, and the panoramic photographs of the site in a format acceptable to the Planning Department (e.g. TIFF, GIF, JPEG, PDF).

4. In order to facilitate mailing of public hearing notices to affected properties a complete noticing package is required. The required radius is 500 feet from the exterior boundaries of the property for which the application is filed. The Director may require additional noticing if determined necessary or desirable or to comply with the "expanded notice" requirements of the Development Code. **Please Note**: Property owner noticing requirements may vary based on the location of the proposed project site.
    a. An assessor's Parcel Map(s) illustrating the required radius as measured from the exterior boundaries of the subject site, Include all parcels within the radius and all those that touch the radius line. Preferred scale of the map is 1-200 feet, 300 feet, or 400 feet.

b. If more than one (1) Assessor's Parcel Map is required to show all of the affected parcels then an index map must be included. The index map must show the entire area affected on ONE SHEET. The required radius boundary line must be drawn on the map and be clearly visible (Preferably in red line). Index map(s) from the Riverside County Tax Assessor's Office may be used for this purpose.

c. Two (2) sets of gummed or adhesive labels with the name, address and assessor's parcel number for every parcel within the required radius. These labels must be based on the latest equalized tax roll from the Riverside County Tax Assessor's Office.

d. Include mailing labels for the property owner, applicant, and representative.

e. A Signed certification letter from the person(s) preparing the list certifying that the information contained therein is accurate and is from the latest Riverside County Tax Assessor's Rolls. A sample "Public Noticing Certified Property Owner's List Affidavit" is included at the back of this application.
Information to prepare the above may be obtained from the Riverside County Tax Assessor's Office. Also, local Title Companies offer this service.

5. Additional deposit, if necessary. There shall be no outstanding fee balance prior to scheduling a hearing.

LAND USE AND DEVELOPMENT MATRIX

The following table lists the minimum information required on the site plan, grading plan, and landscape plan exhibits. IF ANY REQUIRED INFORMATION IS NOT APPLICABLE TO A SPECIFIC PROJECT, A SIGNED LETTER SHALL BE PROVIDED EXPLAINING WHY THE INFORMATION IS NOT NECESSARY. All exhibits must be clearly drawn and legible.

Note: Additional information may be required during review of the proposed land use application, including information not specifically required by this checklist.

			compatibility and trellis detail.
X	X	X	28. Path of travel for ADA from public right-of-way, building to building and trash enclosure.
SITE PLAN:			
X	X	X	1. Names, addresses and phone numbers of utility purveyors and school district(s) including providers of water, sewer, gas, electricity, telephone, and cable television.
X	X	X	2. Names, locations, right-of-way widths, and improvements of adjacent existing and proposed streets and the approximate grades of proposed and existing streets and approximate street centerline radii of curbs. If private streets are proposed, they shall be noted on the tentative map.
X	X	X	3. Typical street improvement cross-section and City standard #.
X	X	X	4. Table indicating area and density calculations with percentage breakdowns, including total area involved, total building area divided by uses, (if applicable), total parking or paved area, total landscaped area, total recreation, and/or open space area. Identify proposed parking spaces.
X	X	X	5. Labeled common areas, open space, and recreational areas, with location, dimensions, acreage, any known proposed uses, and name of proposed owner(s) or entity (ies) who will maintain these areas.
X	X	X	6. Labeled landscaped areas with dimensions and spacing of proposed planters.
X	X	X	7. Square footage calculations per floor and total for each building shown, and per dwelling unit, as applicable.
X	X	X	8. Shaded path of travel for Fire/Emergency access.
CONCEPTUAL GRADING:			
X	X	X	1. Names of utility purveyors and school district(s) including providers of water, sewer, gas, electricity, telephone, and cable television.
X	X	X	2. Location, widths, and improvements of existing and proposed public utility, easements, transmission lines, power and telephone poles, and underground utilities on or abutting the property.
X	X	X	3. Names, locations, right-of-way widths, and improvements of adjacent existing and proposed streets and the approximate grades of proposed and existing streets and approximate street centerline radii of curbs. If private streets are proposed, they shall be notes on the tentative map.
X	X	X	4. List and accurately show all easements of record (by map or instrument number).
X	X	X	5. Streets, alleys, and right-of-ways providing legal access to the property.
X	X	X	6. Typical street improvement cross-section.
X	X	X	7. Existing topography of the property, with the source(s) of the contour lines identified. The contour lines shall extend 300 feet beyond the exterior boundaries of the subject property when adjacent property is unimproved or vacant. When adjacent property is improved or not vacant, contour lines shall extend beyond the exterior boundaries of the subject property a distance sufficient to determine compatibility with adjacent property. Maximum contour interval should be five feet. Flood Control District and Transportation department base maps are acceptable sources of information. Topography from U.S.G.S. maps may be used only when more detailed information is not available. Additional topography may be required if deemed necessary.
X	X	X	8. Preliminary grading including all cut/fill, slopes to scale with setbacks from structures and property lines, the elevations of all individual building pads, the elevations at the perimeter of the subject property, conceptual drainage facilities (including the location of terraces, terrace drains, down drains, brow ditches, V-ditches, and lot to lot drainage facilities), existing topography, and the relationship to adjoining land an development, and any existing grading.
X	X	X	9. Spot Elevations (proposed finished elevations) sufficient to demonstrate that streets, driveways, parking lots, and drainage grades meet minimum requirements. Spot elevations may be necessary at street intersections, end, and cul-de-sacs; beginning and end of all driveways, parking lot outer limits, entrance and end points, and at all grade breaks.
X	X	X	10. When subsurface septic sewage disposal is intended, include and identify the primary sewage disposal system and its 100% expansion area. Identify any proposed cuts and/or fills in the areas of the sewage disposal systems, the elevation of the individual building pads such that there will be gravity feed to the sewage disposal system, and statement signed and with seal, as to the appropriateness of the grading plan with regard to the soils percolation engineer's report. Said statement may be attached to the grading plan or placed upon a blue line copy of the grading plan.
X	X	X	11. Note whether or not land is subject to liquefaction or other geologic hazard, or is within a Special Studies Zone.

C U P	D P	R P	CUP = Conditional Use Permit DP = Development Plan RP = Revised Permit
X	X	X	12. Note whether or not land is subject to overflow, inundation, or flood hazard.
X	X	X	13. FEMA mapped floodplains and floodways including zone designation.
X	X	X	14. Drainage Plan. The Conceptual Grading plan shall include a conceptual drainage plan showing how all on-site and off-site storm water will be conveyed through the property. The exhibit shall clearly label points of concentration where flows enter or exit the site and indicate the amount of runoff (cubic feet per second – CFS) and the tributary drainage area (acres) at these points. The drainage plan shall acknowledge offsite construction required to collect flows and to discharge them to an adequate outlet. The exhibit shall also clearly label all watercourses, channels, culverts, brow ditches, or other flood control facilities passing through the site and indicate whether they are proposed or existing. Additionally, all facilities shall be labeled with name, owner, maintenance entity, capacity, grades, and dimensions. All easements or right of way shall be shown and their widths indicated. Where calculated flow rates or hydraulic capacities are supplied or where flood control facilities are proposed, the exhibit shall be signed and sealed by a registered civil engineer. In cases where it is not feasible to show the required detail on the exhibit or where offsite improvements or analysis are required, the applicant may submit two (2) copies of a drainage report as a supplement to the exhibit.
X	X	X	15. Centerline curve radii and typical sections of all open channels.
X	X	X	16. Setback dimensions of existing structures and paved areas.
X	X	X	17. Location and amount of flammable/combustible liquids and waste oil both above and below ground.
X	X	X	18. Constrained areas including but not limited to, the following resources and hazards; Slopes in excess of 25%, biologically sensitive areas, archeologically sensitive areas, flood hazard areas, ridgelines, hilltops, and geologically hazardous areas. Within constrained areas, proposed pad locations and driveways must be shown.
X	X	X	19. To show compliance with the Water Quality Management Plan, water quality features or a note describing the site's water quality features shall be shown.
CONCEPTUAL LANDSCAPING:			
X	X	X	1. It is highly recommended that plans be prepared by a licensed landscape architect in the state of California.
X	X	X	2. Location, widths, and improvements of existing and proposed public utility, easements, transmission lines, power and telephone poles, and underground utilities on or abutting the property.
X	X	X	3. List and accurately show all easements of record (by map or instrument number).
X	X	X	4. Table indicating area and density calculations with percentage breakdowns, including total area involved, total building area divided by uses, (if applicable), total parking or paved area, total landscaped area, total recreation, and/or open space area. Identify proposed parking spaces.
X	X	X	5. Labeled common areas, open space, and recreational areas, with location, dimensions, acreage, any known proposed uses, and name of proposed owner(s) or entity (ies) who will maintain these areas. Show/Identify Murrieta Community Services Department (MCSD) areas of landscaping.
X	X	X	6. Labeled landscaped areas with dimensions and spacing of proposed planters. Ensure that all planting areas contain 5 feet of planted area, excluding curbs and adjacent concrete step-out where applicable next to parking stalls.
X	X	X	7. Irrigation and landscaping plans, including size, plant species, spacing proposed, planters and irrigation systems. Incorporate drip irrigation, smart irrigation controller, and plant materials with low-water requirements (hydro-zoned).
X	X	X	8. Identify the square footage of landscape: a. Overall b. Within the right-of-way c. Within bumper overhang
X	X	X	9. Label existing trees to be preserved and/or removed under 16.42 Tree Preservation. Provide detailed information regarding site constraints and protection for all trees to be preserved in place or moved.
X	X	X	10. Indicate that the landscape plans shall comply with all applicable codes of the Murrieta Municipal code – Titles 16.27 and 16.28 and other codes required (16.42).
X	X	X	11. To show compliance with the Water Quality Management Plan, water quality features or a note describing the site's water quality features shall be shown.
ELEVATIONS/FLOOR PLANS:			

C U P	D P	R P	CUP = Conditional Use Permit DP = Development Plan RP = Revised Permit
X	X	X	Dimensioned elevations, including details of proposed materials for elevations, type of construction and occupancy classification per the current Uniform Building Code and floor plans for each building. (Attach to site plan). Architectural elevations shall include scaled drawings of all sides of all buildings with dimensions indicating proposed and existing heights and any proposed or existing wall signs, HVAC equipment, solar equipment or other equipment mounted on exterior walls or roof. Roof plans must include the height of the parapet, roof height, highest roof deck height and lowest parapet height. Also indicate the height of the tallest equipment. Conceptual sign locations, colors & materials should be identified. No landscaping, figures, or other presentation decorations shall be illustrated on the building elevations.

Additional copies of this application may be obtained from the Planning Department's Web Page at http://www.murrieta.org/dev/planning/index.asp.

ENVIRONMENTAL SETTING

Approximate Gross Acreage/Net Acreage: _____

General location (nearby or cross streets): North of _____, South of _____, East of _____, West of _____.

Precisely describe the existing use and condition of the site: _____

Existing zoning of adjacent parcels: _____

Precisely describe existing uses adjacent to the site: _____

MSHCP Number (if applicable): _____
Two (2) copies of an MSHCP consistency analyses and appropriate focused surveys are required if the site is in an MSHCP cell.

Describe the plant cover found on the site, including the number and type of all trees: _____

NOTE: EXPLAIN ANY "YES" RESPONSES IN AN ATTACHMENT.

Is the site on filled land, slopes in excess of 10% or located in a canyon? If yes, a geological and/or soils investigation is to accompany this application. Yes ☐ No ☐

Has the site been surveyed for historical, paleontological, or archaeological resources? If yes, a copy of the survey is to accompany this application. Yes ☐ No ☐

Does the site contain any unique natural, ecological or scenic resources? Yes ☐ No ☐

Do any drainage swales or channels border or cross the site? Yes ☐ No ☐

Has a traffic study been prepared? If yes, a copy of the study is to accompany this application. Yes ☐ No ☐

Is the site in a flood plain? Yes ☐ No ☐
If "Yes", a copy of a drainage plan is to accompany this application.

Have any special studies or reports, such as a traffic study, biological report, archaeological report, geological or geotechnical reports, been prepared for the subject property? Yes ☐ No ☐
If yes, indicate the type of report(s) and provide a copy: _____

RESIDENTIAL PROJECTS:

Number and type of dwelling units proposed: _____

Density of the proposed project (# of units per net acreage): _____

Type and size of households expected: _____

Will any multi-story units be located adjacent to a highway or freeway? _____
If yes, a noise study is to accompany this application.

COMMERCIAL, INDUSTRIAL AND INSTITUTIONAL PROJECTS:

Indicate specific type of use proposed: _____

List the gross square footage by each type of use: _____

List the gross square footage and number of floors for each building: _____

Estimate employment by shift: _____

Identify any planned outdoor activities: _____

What percentage of the project site will be covered by:
Paving _____ % Building _____ % Landscaping _____ %

ALL PROJECTS

The maximum height of structures _____

Describe the amount and type of off-street parking proposed _____

Describe how drainage will be accommodated _____

Identify any off-site construction (public or private) required to support this project _____

Preliminary grading plans estimate _____ cubic yards of cut and _____ yards of fill.

Will the proposal result in cut or fill slopes steeper than 2:1 or higher than 10 feet?
Yes ☐ No ☐

Does the project need to import or export dirt? Yes ☐ No ☐

Import _____ Export_____ Neither _____

What is the anticipated source/destination of the import/export?

What is the anticipated route of travel for transport of the soil material?

How many anticipated truckloads? _____ Truck loads.

What is the square footage of usable pad area? (area excluding all slopes) _____sq. ft.

Give time estimated dates for the following:

A. Rough Grading _____
B. Final Grading _____
C. Start Construction _____
D. Complete Construction _____
E. Describe any Project Phasing _____

List all other permits or public agency approvals required of this project _____

NOTE: EXPLAIN ANY "YES" RESPONSES IN ATTACHMENTS:

DURING CONSTRUCTION, WILL THE PROJECT:

A. Emit dust, ash, smoke, fumes or odors? Yes ☐ No ☐

B. Alter existing drainage patterns? Yes ☐ No ☐

C. Create a substantial demand for energy or water? Yes ☐ No ☐

D. Discharge water of poor quality? Yes ☐ No ☐

E. Increase noise levels on site or for adjoining areas? Yes ☐ No ☐

F. Generate abnormally large amounts of solid waste or litter? Yes ☐ No ☐

G. Use, produce, store, or dispose of potentially hazardous materials such as toxic or radioactive substances, flammables or explosives? Yes ☐ No ☐

H. Require unusually high demands for services such as police, fire, sewer, schools, water, public, recreation, etc.? Yes ☐ No ☐

I. Displace any residential occupants? Yes ☐ No ☐

Is water service available at the project site?: Yes ☐ No ☐

If "No", how far must the water line(s) be extended to provide service?
(No. of feet/miles) _____

Is sewer service available at the project site?: Yes ☐ No ☐

If "No", how far must the sewer line(s) be extended to provide service?
(No. of feet/miles) _____

Is a reclaimed water service available at this site? Yes ☐ No ☐

If "No", how far must reclaimed water line(s) be extended to provide service (# of feet) _____

WATER QUALITY MANAGEMENT PLAN (WQMP) INFORMATION

To comply with the WQMP, a developer may be required to submit a "Project Specific" WQMP. This report is intended to, a) identify potential post-project pollutants and hydrologic impacts associated with the development; b) identify proposed mitigation measures (Best Management Practices – BMPs.) for identified impacts including site design, source control and treatment control post-development BMPs; and c) identify sustain able funding and maintenance mechanisms for the aforementioned BMPs. A template for this report is included as an appendix to the WQMP. Projects requiring Project Specific WQMPs will also need to include a PRELIMINARY Project Specific WQMP along with the application package. The format of the PRELIMINARY report would mimic the format/template of the final report but would be at a much lesser level of detail. For example, points a, b & c above would be covered, rough calculations supporting sizing would be included, and footprint/locations for the BMPs would be identified on the tentative exhibit. Detailed drawings will not be required.

Murrieta

CHECKLIST FOR IDENTIFYING PROJECTS REQUIRING A PROJECT-SPECIFIC WQMP WITHIN THE SANTA MARGARITA REGION

Applicant Name: _____ **Phone # :** _____

Project Location: _____

Case # : _____ **Tract # :** _____ - _____ **APN :** _____

	Does the proposed project incorporate any of the following items?	YES	NO
1	**Modification to Existing Development (Significant Redevelopment) -** this category includes the addition, creation or replacement of 5,000 sq. ft. or more of impervious surface on an already developed site. This category includes: (a) The expansion of a building footprint or addition or replacement of a structure; (b) Replacement of impervious surface that is not part of routine maintenance activities; and **Note:** Where modification to existing development results in an increase of less than 50% of the impervious surface of a previously existing development, and the existing development was not subject to WQMP requirements, WQMP requirements shall apply only to the addition, and not to the entire development. Otherwise the entire development must be treated.		
2	**New Development** - that creates 10,000 sf or more of impervious surfaces (collectively over the entire site) including commercial, residential, and public projects, on public and private lands.		
3	**Automotive Repair Shops** - as a facility that is categorized in any one of the SIC codes: 5013, 5014, 5541, 7532-7534, or 7536-7539		
4	**One Acre Threshold** - post-construction pollutant-generating new Development Projects that result in the disturbance of one acre or more of land by July 1, 2012.		
5	**Restaurants** - this category includes all eating and drinking establishments where the land area for development is greater than 5,000 sq. ft. **Note:** Restaurants with land area less than 5,000 sq. ft. shall meet modified WQMP requirements that except for structural treatment BMP and peak flow criteria.		
6	**Hillside development** - this category includes any developments that create more than 5,000 sq. ft. of impervious surface located in an area with known erosive soil conditions, and where the project will require grading on natural slopes of 25% or greater.		
7	**Environmentally sensitive areas (ESAs)** - this category includes all development located within or directly adjacent to or discharging directly to an ESA which either creates 2,500 sq. ft. of impervious surface or increases 10% or more of its naturally occurring condition. **Note:** "Directly adjacent" means situated within 200 feet of the ESA. "Discharging directly to" means outflow from a drainage conveyance system that is composed entirely of flows from the subject development or redevelopment site, and not commingled with flows from adjacent lands.		
8	**Parking lots** - this category includes projects that create 5,000 sq. ft. of impervious surface for temporary parking or storage of motor vehicles. This category includes parking lots associated with any of the developments listed above.		
9	**Streets, roads, highways & freeways** - this category includes projects that create 5,000 sq. ft. or more of impervious surface for transportation of motor vehicles.		
10	**Retail gasoline outlets (RGOs) -** this category applies if either the RGO is 5,000 sq. ft or more or with a projected average daily traffic (ADT) of 100 or more vehicles per day.		

A project-specific WQMP is required if the answer to any of the above questions is "YES."

WQMP Template can be found at http://www.murrieta.org/Public Works/Water Quality

HAZARDOUS WASTE SITE DISCLOSURE STATEMENT

Government Code Section 65962.5 requires the applicant for any development project to consult specified state-prepared lists of hazardous waste sites and submit a signed statement to the local agency indicating whether the project is located on or near an identified site. Under the statute, no application shall be accepted as complete without the signed statement.

To search the hazardous waste list go to www.geotracker.swrcb.ca.gov.

I (we) certify that I (we) have investigated our project with respect to its location on or near an identified hazardous waste site and that my (our) answers are true and correct to the best of my (our) knowledge. My (our) investigation has shown that:

☐ The project is not located on or near an identified hazardous waste site.

☐ The project is located on or near an identified hazardous waste site.
Please list the location of the hazardous waste site(s) on an attached sheet.

Owner/Representative (1) _____ Date _____

Owner/Representative (2) _____ Date _____

CERTIFIED PROPERTY OWNER'S LIST AFFIDAVIT

STATE OF CALIFORNIA
COUNTY OF RIVERSIDE
CITY OF MURRIETA

I,_____, HEREBY CERTIFY THAT THE ATTACHED LIST CONTAINS THE NAMES AND ADDRESSS OF ALL PERSONS TO WHOM ALL PROPERTY IS ASSESSED AS THEY APPEAR ON ALL THE LATEST AVAILBABLE ASSESSMENT ROLL OF THE COUNTY OF RIVERSIDE WITHIN THE AREA DESCRIBED AND FOR A DISTANCE OF 500 FEET FROM THE EXTERIOR BOUNDARIES.

I/WE CERTIFY (OR DECLARE UNDER PENALTY OF PERFJURY UNDER THE LAWS OF THE STATE OF CALIFORNIA) THAT THE FOREGOING IS TRUE AND CORRECT.

DATE:_____ SIGNED:_____

CITY OF MURRIETA
MEMORANDUM

TO: , Project Planner

FROM: Civil Engineer Associate

DATE: Current Date

SUBJECT: **<BOILER PLATE> Engineering Conditions of Approval**

DEPARTMENT OF PUBLIC WORKS

The Department of Public Works recommends the following Conditions of Approval for this project. Unless stated otherwise, all conditions shall be completed by the Subdivider at no cost to the City.

General Requirements

1. It is understood that the Tentative Map / Development Plan correctly shows all existing and proposed easements, traveled ways, grading, drainage courses, and that the omission may require the map or plans associated with this application to be resubmitted for further consideration.

2. A grading permit for either rough or precise grading shall be obtained from the Department of Public Works prior to commencement of any construction outside of the City-maintained road right-of-way.

3. An encroachment permit shall be obtained from the Department of Public Works prior to commencement of any construction within an existing City right-of-way or easement.

4. Subdivider shall coordinate with adjacent property owners affected by grading, street, utility and drainage improvements necessary for the onsite, frontage, and offsite improvements. Subdivider shall be solely responsible for acquisition of any necessary easements and agreements prior to grading permit or improvement approval whichever comes first. If necessary, the agreements shall address maintenance, erosion control, and be notarized in a format acceptable to the City Engineer.

5. All improvement plans, grading plans, landscape and irrigation plans shall be coordinated for consistency with adjacent projects and existing improvements contiguous to the site and shall be submitted on standard 24" x 36" City-formatted mylars.

6. All designs shall conform to the City of Murrieta Municipal Code, Development Code, Standard Drawings, and Circulation Element.

7. Prior to approval of any grading plan, improvement plan, or final map; submit clearances from all applicable agencies, and pay all outstanding plan check and processing fees.

PRIOR TO ISSUANCE OF ANY GRADING PERMIT, UNLESS OTHER TIMING IS INDICATED, THE SUBDIVIDER SHALL COMPLETE THE FOLLOWING OR HAVE PLANS SUBMITTED AND APPROVED, IMPROVEMENT AGREEMENTS EXECUTED AND SECURITIES POSTED:

8. Pay to City all County of Riverside Development Impact Fees applicable at time of grading permit issuance or as otherwise approved by ordinance. In the event these fees have been previously paid, the Subdivider shall provide proof of payment. Said fees are included , but not limited to the following:

- Riverside County Area Drainage Fee
- Kangaroo Rat Fee
- MSHCP Fee

9. Obtain written clearance, as deemed necessary by the Public Works Department, from the following agencies:
   a. San Diego Regional Water Quality Control Board
   b. Department of Fish & Game
   c. U. S. Army Corps of Engineers
   d. Planning Department
   e. Engineering Department
   f. Community Services Department
   g. Sewer and Water District(s)
   h. The Gas Company
   i. Southern California Edison Company
   j. Phone and CATV

10. A Grading Plan shall be prepared by a registered Civil Engineer in accordance with City standards and approved by the Department of Public Works prior to commencement of any grading. The plan shall incorporate adequate erosion control measures to protect the site and adjoining properties from damage due to erosion.

11. Prior to commencing of any clearing, grading in excess of 50 cubic yards, or paving in excess of 3,000 square feet, the Subdivider shall obtain a grading permit and approval prior to issuance of a building permit.

12. A comprehensive Geologic and Geotechnical Report shall be prepared by a registered Civil or Soils Engineer and submitted to the Engineering Department with the initial grading plan check. The report shall address in situ soils conditions, identify any geotechnical hazards for the site, provide recommendations for the construction of engineered structures, preliminary pavement sections, slope stability, identify and located faults, and confirm the buildings have sufficient setback from the fault but not be limited to just these items. All recommended measures identified in the report shall be incorporated into the project design. The report may be subject to a third-party review at the discretion of the City Engineer if located in a Geologic Special Study Zone.

13. A haul permit is required prior to hauling dirt or construction debris onto or off the site. Submit a proposed haul route plan and comply with all conditions and requirements the City Engineer may impose to the hauling operation.

14. Process a Conditional Letter of Map Revision (CLOMR) prior to rough grading plan approval, if a portion of this site resides in a FEMA special flood hazard area. The rough grading plan shall clearly demonstrate that any building finished floor elevations shall be 1' minimum above the 100-year Base Flood Elevation. Provide FEMA Elevation Certificate(s) for all lots within one hundred feet of the 100-year flood plain after grading has been completed. The floodway and floodplain boundary lines shall be shown on the Precise Grading Plan.

15. If blasting of rock is required, the Subdivider shall pull a blasting permit with the Riverside County Sheriff's Department for approval and notify the City of Murrieta Police and Fire Departments prior to blasting.

NOI, SWPPP, WQMP

16. Prior to issuance of a grading permit or other construction activities, the Subdivider shall provide the following to City staff:

    a. A copy of the Notice of Intent (NOI) and waste Discharge Identification (WDID) number from the State Water Resources Control Board.

    b. An adequate Storm Water Pollution Plan (SWPPP) shall be available to State and City Inspectors at the job site prior to commencing construction. The Subdivider shall be responsible for implementation, monitoring, operation and maintenance of the SWPPP until all improvements have been accepted by the City or construction is complete, whichever is later. A Notice of Termination (NOT) can then be filed with the State Water Resources Control Board. Grading during the wet season should identify additional BMP's for rain events that may occur as necessary for compliance with the Santa Margarita Region MS4 Permit.

    c. A Final project-specific Water Quality Management Plan (WQMP) shall be submitted to the City for approval with the grading plan check application and approved by the Engineering Department prior to issuance of a grading permit. It shall incorporate, but not be limited to, the following: site design BMP's, applicable source control BMP's, treatment control BMP's, long term operation and maintenance requirements, inspection and maintenance checklist; record a restrictive covenant to ensure operation, maintenance, funding, and transfer of requirements. The post-construction best management practices (BMPs) outlined in the approved Final project-specific WQMP shall be incorporated in the improvement plans.

17. A copy of the Final project-specific WQMP shall be kept onsite at all times. The Subdivider shall make the occupants, tenants, staff, employees, and contractors aware of this document and educate them on the contents.

18. The Subdivider, assigns, or heirs shall allow the City to enter the premises to conduct periodic inspections to ensure that the WQMP is being implemented, maintained, and to review the inspection and maintenance records.

19. The Subdivider shall record a restrictive covenant or create some other acceptable mechanism, subject to the approval of the City Engineer, to ensure the ongoing operation, maintenance, and funding of the Final project-specific WQMP.

20. All grading activities shall minimize dust through compliance with AQMD Rule 403 which requires watering during earth moving operations.

21. All open or undeveloped land shall be maintained to prevent wind and or water erosion of such land. All disturbed undeveloped land shall either be planted with interim landscaping or stabilized with such other erosion control measures.

22. Post security and enter into an agreement guaranteeing the grading and erosion control improvements in conformance with applicable City Standards and subject to approval by the

Department of Public Works.

23. Ensure that the Drainage Study and WQMP measures address the proposed commingled flows from the adjacent property, unless procedures are incorporated to otherwise convey and properly dispose of the flows without commingling.

DRAINAGE

24. Provide a hydrologic and hydraulic study prepared by a registered Civil Engineer which identifies storm water runoff quantities from the site and upstream of the site. The study shall show all existing or proposed offsite public or private drainage facilities intended to discharge this runoff. The study shall include a capacity analysis verifying the adequacy of the facilities. Runoff from the development or partial phase of development of the property shall not exceed the existing natural discharge quantities with respect to the following criteria:

    A. Detention shall not be required for developments of less than one acre if the development uses volume based water quality measures.

    B. For projects less than 10 acres, including those less than one acre NOT using volume based water quality measures shall analyze and mitigate the difference in developed and undeveloped runoff for a 10-year storm. A simplified hydrograph method shall be used that simulates the hydrograph with a triangle. The Rational method flow rate shall be the top value of the triangle and the base width shall be two times the time of concentration (Tc). The difference in area between the developed condition triangle and the existing condition triangle represents the required storage volume. Both triangles shall use time of concentration from the developed condition. Based upon the storage volume head, the outlet structure shall have an outlet flow no larger than the existing flow rate.

    C. Projects that are 10 acres or greater shall analyze for the 1,3,6 and 24-hour duration for the 2,5 and 10-year frequency storms.

    The design of detention basins shall provide for the detention of nuisance flow. Development shall detain the year and duration incremental storm runoff developed and or increased by means of on-site detention. Detention techniques shall include, but not be limited to: Parking lot detention or on-site detention basin or other methods approved by the City Engineer. Evidence of a maintenance mechanism shall be provided for the basins. If project discharges/connects to an off-site detention basin, provide permission to drain/connect correspondence from the owner of basin or system. Off-site detention basins require a Declaration of Dedication. All detention measures shall have positive drainage with a minimum 48hr draw-down time and be empty within 72 hours. Standing water is not permitted.

25. Hydromodification – the project shall conform to the current requirements of the San Diego MS4 permit Order No. R9-2010-0016.

26. Subdivider shall prepare a Storm Drain Improvement Plan shall be prepared by a registered Civil Engineer in accordance with City standards and approved by the Department of Public Works.

27. Street storm flows shall not exceed top of curb for the 10-year storm event and must be contained within the street right-of-way for the 100-year storm event.

28. Alteration to the existing drainage pattern, concentration or diverting flows is not allowed unless letters of permission from the downstream property owners are obtained and adequate drainage improvements are constructed. This includes but is not limited to improving existing facilities, securing drainage easements, notarized letter of permission or agreement, and a maintenance mechanism put in place for any private drainage facilities. A manhole shall be constructed at right of way line where private storm drain facilities connect to the public storm drain facilities.

29. Accept and properly dispose of all offsite drainage flowing onto or through the site.

30. If possible, all drainage shall be conveyed onto public property. Drainage flowing cross lot is not permitted.

31. Record a statement on the final map that each parcel accepts drainage flows from the adjoining parcels as shown on the approved tentative map.

32. If alterations to the flood plain are proposed, the Subdivider shall obtain a CLOMR from FEMA acknowledging that the proposed alterations to the flood plain meet FEMA criteria. A LOMR is required prior to occupancy.

33. If required, environmental maintenance permit(s) in favor of the City shall be obtained by the Subdivider prior to City acceptance of soft bottom drainage facilities.

STREET IMPROVEMENTS

34. Subdivider shall design and guarantee construction of the following public improvements to the current City of Murrieta Circulation Element and corresponding City standards unless otherwise noted:

    A. Design, dedicate rights of way and improve existing Jefferson Avenue to half 110 foot right of way per modified Arterial Highway City Std. 101 and Circulation Element with raised landscape median and a 14 foot right turn pocket onto Sycamore Street. Access to the project driveway and Sycamore Street shall be limited to right in and right out. Improvements including but not limited to: paving, curb and gutter; sidewalk adjacent to ROW; street lights; drainage facilities; signing and striping; utilities (including sewer and water); raised landscaped median with all improvements subject to the approval of the City Engineer.

    B. Design, dedicate rights of way and improve existing Village Parkway to the full half width (22 feet centerline to curb on a 33 foot wide ROW) per Collector Street City Std. 105. Improvements including but not limited to: paving, curb and gutter; sidewalk adjacent to ROW; street lights; drainage facilities; signing and striping; utilities (including but not limited to water and sewer); with all improvements subject to the approval of the City Engineer.

    C. Design, dedicate rights of way and improve Sycamore Street to the full half width + 12 foot (8 foot graded shoulder and 34 feet edge of pavement to curb on a 33 foot wide ROW) per Collector City Std. 105. Improvements including but not limited to: full width paving, curb and gutter; sidewalk adjacent to ROW; street lights; drainage

facilities; signing and striping with left turn lane; utilities (including but not limited to water and sewer); with all improvements subject to the approval of the City Engineer.

35. Subdivider shall prepare a Street Improvement Plan shall be prepared by a registered Civil Engineer in accordance with City standards. The centerline profile shall extend a minimum of 300 feet beyond the project boundaries showing grade and alignment.

36. Subdivider shall prepare a Signing and Striping plan, shall be designed by a registered Civil or Traffic Engineer and be included with the street improvement plans for the project.

37. All street improvement design shall provide adequate right-of-way and transitions to existing improvements.

38. Subdivider shall prepare a construction area Traffic Control Plan, if required by the Traffic Engineer, shall be prepared by a registered Civil or Traffic Engineer in accordance with City standards and approved by the Department of Public Works for work. The Traffic Control Plan shall address street closures, detour or other disruption to traffic circulation as required by the Department of Public Works.

39. Extend full width improvements on Village Parkway offsite to join existing street improvements at Station 27+38.50.

40. Corner property line cut off for vehicular sight distance and installation of pedestrian and traffic control facilities shall be provided at all street intersections and entrances in accordance with City Standards No. 206 and 214.

41. Private Roads shall be designed to meet City standards except when allowed by the City engineer. The private access easement providing the main vehicular access to each created parcel shall be dedicated on the parcel map as a separate lettered lot.

42. Bring any existing access ramps adjacent to and fronting the project to current ADA requirements. However, when work is required in an intersection that involves or impacts existing access ramps, those ramps in that intersection shall be retrofitted to comply with current A.D.A. requirements

SEWER AND WATER

43. Verify capacity of proposed sewer and water systems and provide approval by the governing Sewer and Water District that the proposed sewer and water system is compliant with the District's master plan.

44. Subdivider shall design and guarantee the construction of all sewer and water improvements necessary to serve this project. Private sewer forcemains are not allowed in the public right of way unless otherwise approved by the City Engineer.

FINAL MAP

45. Subdivider shall submit a final map prepared in accordance to the City of Murrieta

Development Code and Subdivision Map Act. The final map shall be prepared by a licensed land surveyor or registered civil engineer.

46. Prior to approval of the final map, unless other timing is indicated, the Subdivider shall complete all improvement plans, submit and obtain approval, post securities and execute agreements.

47. Easements, when required for roadway slopes, landscape easements, drainage facilities, utilities, etc., both onsite and offsite shall be shown on the final map. All offers of dedication and conveyances shall be submitted for review and recorded as directed by the Department of Public Works. On-site drainage facilities located outside of road right-of-way shall be contained within private drainage easements as determined to be necessary. A note shall be added to the final map stating, "*Drainage easements shall be kept free of buildings and obstructions.*" The Subdivider shall incur all costs associated with the formation of a suitable maintenance district for all associated slope and drainage easements, including landscaping and access.

48. All easements and/or right-of-way dedications shall be offered for dedication to the public or other appropriate agency and shall continue in force until the City accepts or abandons such offers. All dedications shall be free from all encumbrances as approved by the Department of Public Works.

49. Relinquish and waive abutter's right of access to and from (insert street names) excepting those areas as shown on the approved tentative map.

50. An easement for a joint use driveway shall be provided prior to approval of the final map or issuance of building permit, whichever occurs first. The easement shall provide access to lot/parcel #'s and be noted on the final map.

51. Record a 28' wide minimum (unless otherwise approved by the Fire Department) easement on the final map that provides emergency vehicles and reciprocal access with the purpose of looping all the parcels to the access points on Clinton Keith Road and Private Driveway.

52. CC&R's, if required, shall be submitted with the Final Map for first plan check review.

53. Any proposed vacations or abandonments of existing public right of way or easements shall be shown on the final map.

54. If the subdivider chooses to defer the improvements, subdivider shall prepare a cost estimate and execute a Deferred Improvement Agreement. The cost estimate shall include the all costs, plan preparation, plan check fees, permit fees, bonding and construction costs, etc.

55. Street Names – a minimum of three street names shall be submitted for each street shown on an exhibit of the project. The street names should be listed in the order of preference for each street and shall be submitted to the Community Development Director. Is this more of a Planning condition? I have also seen Cities have you submit a list, they approve the list and the Subdivider can apply them to any streets. I prefer this method better because fewer names are required.

56. All existing street and property monuments within or abutting this project site shall be preserved. If monuments are damaged or destroyed, the Subdivider shall retain a qualified

licensed land surveyor or civil engineer to reset those monuments per City Standards and file the necessary information with the County Recorder's office as required by California Business and Professions Code Section 8771. If damaged, existing monuments that are no longer relevant as a result of the parcel merger / lot line adjustment do not have to be replaced. Existing monuments that are damaged and no longer relevant do not have to be replaced.

57. Submittal of the final map for first plan check review must include two copies of the CC&R's. The City Attorney shall approve the CC&R's prior to approval of the final map by the City Council. The CC&R's shall include language to notify the property owners and occupants of the requirements to implement the approved project-specific WQMP.

58. Provide one hard copy and electronic copy of the final map. The electronic copy shall be in an AutoCAD format to the satisfaction of the City's GIS Department.

UTILITIES

59. Subdivider shall install all existing and proposed utility systems including gas, electric (under 33kv), telephone, water, sewer, and cable TV shall be installed underground, with easements provided as required, and designed and constructed in accordance with City Codes and the utility provider.

60. Subdivider shall install all dry and wet utilities prior to the placement of final cap or lift of asphalt pavement to avoid new street improvements from being marred by saw cuts, pot holes, equipment, etc.

PRIOR TO ISSUANCE OF BUILDING PERMITS

61. All easements, agreements of improvements, offsite construction, and dedication for required rights-of-way shall be approved by the Engineering Department.

62. A Letter or Map Revision (LOMR) is required if, a Conditional Letter of Map Revision (CLOMR) was issued. A Letter of Map revision (LOMR) from FEMA shall be submitted to the City along with FEMA Elevation Certificates for all lots within one hundred feet of the 100-year flood plan.

63. The building pad shall be certified by a registered Civil Engineer for location and elevation, and the Soils Engineer shall issue a Final Soils Report addressing compaction and site conditions.

64. Subdivider shall pay to the City the applicable Development Impact Fees as required by and in accordance with City Ordinance 196-98.

65. Subdivider shall pay to the City the Western Riverside County Transportation Uniform Mitigation Fee (TUMF) based on the applicable rates at time of permit.

PRIOR TO ISSUANCE OF CERTIFICATE OF OCCUPANCY

66. Secure coverage under the General Construction Permit, Regional Water Quality Control

Board (for Industrial facilities)

67. Final grading of the subject property shall be completed in accordance with the California Building Code, the approved grading plan, the conditions of the grading permit, City Grading Manual and accepted grading construction practices. The final grading shall be in substantial conformance with the approved Development Plan.

68. All improvements, required by the Public Works Department, shall be constructed and completed per the approved plans and City standards to the satisfaction of the City Engineer.

69. All sewer and water improvements shall be constructed and completed in accordance with the Sewer and Water District standards.

70. Final Map shall be recorded.

71. All existing and proposed utility lines have been installed underground with easements provided. Relocate overhead electrical utility lines that are 33kv or higher.

72. Demonstrate that all treatment control BMP's described in the Final project-specific WQMP have been constructed and installed in conformance with the approved plans and specifications and the Subdivider is prepared to implement all non-structural BMP's described in the approved Final project-specific WQMP.

73. Subdivider shall prepare and provide an as-built project specific WQMP (approved final WQMP updated to include any changes made during construction) and demonstrate that an adequate number of copies are available for the future owners / occupants.

74. Subdivider shall provide a copy of these free brochures in the new homeowner booklet: "Guidelines for Maintaining Your Swimming Pool, Jacuzzi, and Garden Fountain; Outdoor Cleaning Activities and Professional Mobile Service Providers; and What's the Scoop".
    a. Cleaning Activities and Professional Mobile Service Providers; and What's the Scoop". Include a copy of the link to the City's website "Trash & Recycling" page that includes information that can help improve the quality of storm water runoff by providing basic information to the new homeowner. www.murrieta.org/services/waste/wastemgmtdata.asp
    b. Inform the homeowners that Waste Management will pick up bulk items twice per year as part of the trash service the homeowners pay for.
    c. Inform the homeowners that household hazardous waste products such as used motor oil, paint batteries, fertilizers, pesticides, etc can be dropped off at the County of Riverside facility located at 25315 Jefferson Avenue, Murrieta, Ca 92562. Hours are only from 9am to 2pm on Saturdays and closed on holiday weekends. Provide this contact phone number of (951) 486-3200 & link: http://www.rivcowm.org/HHW_Schedule.htm#_Regional_Permanent_HHW

75. Provide one set of Mylars and electronic copy of "As-Built" drawings of the grading, improvement plans, hydrology map and final map (if applicable). The electronic copy shall be in an AutoCAD format to the satisfaction of the City's GIS Department. File format is AutoCAD DWG or DXF – version 2007 or less. Coordinate system is NAD 1983 State plane California Zone V1 FIPS 0406 Feet.

76. Obtain written clearance, as deemed necessary by the Public Works Department, from the following agencies:
    a. Planning Department
    b. Engineering Department (a LOMR if, a CLOMR was required and provide Elevation Certificates)
    c. Building Department
    d. Fire Department
    e. Community Services Department
    f. Sewer and Water District(s)
    g. Utility Companies

HAZARDOUS WASTE/ HAZARDOUS MATERIALS FACILITY STORM WATER COMPLIANCE SURVEY FORM

FACILITY DBA	TELEPHONE	DATE
ADDRESS	CITY, ZIP	
MAILING ADDRESS (if different from site address)	MAILING CITY, ZIP	
CONTACT	FACILITY#	SIC CODE

Compliance Areas	YES	NO	N/A
***OUTSIDE AREAS (Free of staining & debris; provides good housekeeping; maintained in a manner to prevent runoff.)**		**Requires follow up**	
1. CHEMICAL STORAGE * The outside storage area is kept secure to minimize the possibility of a release. Chemicals / materials are protected from precipitation / stormwater runoff and the containers show no signs of leaking.			
2. DUMPSTER * Lid closed. No liquids are leaking from dumpster; surrounding area is free of trash.			
3. ABOVEGROUND TANKS * No ground staining, no spillage observed and no discharge to storm drain. Tanks are maintained to minimize the possibility of a release (secondary containment).			
4. ONSITE STORM DRAIN* Protected from accidental discharge other than stormwater.			
5. POWER WASH OR STEAM CLEAN* (discharge to sewer) Drains to oil/water separator connected to a sanitary sewer and not a septic system or storm drain. Steam cleaning not discharged to parking lot, storm drain or soil.			
6. PARKING LOT / DRIVEWAY* Free of excess trash, chemical staining or liquids other than water.			
7. OTHER* Non-storm water discharge (i.e. non-hazardous process discharge).			
8. MOP WATER TO SANITARY SEWER VIA CLARIFIER. Mop water is not dumped to the soil, parking lot, gutter, street, or other areas susceptible to storm water runoff and discharge to the storm drain.			
9. STORM WATER EDUCATIONAL BROCHURES GIVEN TO FACILITY OR POSTERS DISPLAYED FOR EMPLOYEES. If no, what informational material should be sent to the facility?			
10. IF A SWPPP IS REQUIRED, WAS IT AVAILABLE FOR REVIEW? See storm water handout for industrial facilities.			
11. NOTICE OF INTENT. Has the site obtained necessary permit coverage under the General Industrial Permit, if appropriate?

Riverside County Flood Control
& Water Conservation District
Ph: (951) 955-1200

13.34.010 - Purpose.

The purpose of the clean ocean fee program is to provide for: (1) improving the quality of storm and surface water; (2) the planning, permitting, design, construction, operation, maintenance, regulation, inspection, improvement and replacement of the City's storm drainage facilities and management and administration thereof; and (3) complying with applicable local, State, and Federal storm water regulations. In order to properly fund such services and facilities, the City Council has determined that it is necessary to impose on developed property and undeveloped, graded property a clean ocean fee (the "fee"). The City Council finds that the fee, as established below, is reasonably related to the costs of providing the services and facilities for which the fee is charged.

(Ord. 1454 § 1 (part), 2007)

13.34.020 - Definitions.

For purposes of this chapter, the following terms shall have the ascribed meanings:

"Assessee" shall mean the person obligated to pay the fee.

"City" shall mean the City of San Clemente.

"Developed parcel" shall mean any lot or parcel of land which has been altered from its natural state by the construction, creation, or addition of impervious area, except public streets and highways and appurtenant improvements thereto, such as curbs and sidewalks.

"Engineer" shall mean the Utilities Director of the City of San Clemente or his or her designee.

"Equivalent drainage residential unit (DRU)" shall mean the basic unit for the computation of the fee, and is based upon the average amount of impervious area of a single-family residential parcel.

"Impervious area" shall mean any part of any parcel that has been modified by the action of any person in a manner which reduces the land's natural ability to absorb and hold storm and surface water. This includes the grading of the property and/or creation of any hard surface area which either prevents or retards the entry of water into the soil mantle, and/or the hardening of an existing surface which causes water to flow at an increased rate. By way of example, common impervious areas include, but are not limited to, rooftops, walkways, patios, driveways, parking lots or storage areas, concrete or asphalt paving, gravel, roads, or any cleared, graded, paved, graveled or compacted surface or paved earthen materials, or areas covered with surfaces which similarly impede the natural infiltration of surface water into the soil mantle.

"Multi-family residential property" shall mean all residentially zoned, developed parcels containing two (2) or more dwelling units. This includes apartments, condominiums, timeshares, hotels and motels.

"Nonresidential property" shall mean all developed parcels zoned or used for commercial, industrial, retail, governmental or institutional uses.

"Parcel" shall mean the smallest separately segregated lot, unit or plot of land having an identified owner, boundaries and surface area which is documented for property tax purposes and given an Assessors' parcel number by the Orange County Assessor.

"Single-family residential property" shall include all developed parcels with one (1) single-family detached housing unit.

"Storm and surface water" shall mean water occurring on the surface of the land from precipitation, and surface or subterranean water from any source, regardless of whether such water is falling or flowing onto land in question.

"Storm and surface water control facilities" shall mean all manmade structures or natural watercourse facility improvements, developments, properties or interest therein, which are or have been made, constructed or acquired for the collection and conveyance of storm and surface water runoff to improve the quality of controlling or protecting life or property from any storm, flood or surplus waters.

"Storm drainage facilities" shall mean the storm and surface water drainage systems comprised of storm and surface water control facilities and any other natural features which store, control, treat and/or convey storm and surface water. Storm drainage facilities shall include all natural and manmade elements used to convey storm water from the first point of impact with the surface of the earth to a suitable receiving body of water or location internal or external to the boundaries of the City. Storm drainage facilities include all pipes, appurtenant features, culverts, streets, curbs, gutters, pumping stations, channels, streams, ditches, wetlands, detention/retention basins, ponds and other storm and surface water conveyance and treatment facilities, whether public or private.

"Undeveloped, graded parcel" shall mean parcels which have been altered, in whole or in part, through a process of clearing, grading or earth moving and compaction so as to alter the perviousness of the parcel, thereby increasing storm and surface water runoff.

"Undeveloped parcel" shall mean any parcel which has not been altered from its natural state either by grading, or the construction, creation or addition of impervious area, or has been restored to its natural state of perviousness through planting or landscaping, as determined by the Engineer.

(Ord. 1454 § 1 (part), 2007; Ord. No. 1648 , § 7, 12-5-2017)

13.34.030 - Fee—Imposition.

There is imposed on each and every developed parcel and each and every undeveloped, graded parcel within the City and the owner and occupiers thereof, jointly and severally, the City of San Clemente clean ocean fee (the "fee"). The fee is found to be reasonably related to the cost of providing storm drainage

facility services for the parcels assessed the fee. The fee is reasonable and is necessary to pay for: (1) improving the quality of storm and surface water; (2) the planning, permitting, design, construction, operation, maintenance, regulation, inspection, improvement and replacement of the City's storm drainage facilities; and (3) complying with applicable local, State, and Federal stormwater regulations. The fee will take effect on February 7, 2014 and will expire on June 30, 2020.

(Ord. 1454 § 1 (part), 2007)

(Ord. No. 1577, § 2, 1-7-2014)

13.34.040 - Fee—Calculation.

The fee shall be based upon the applicable parcel's contribution of storm and surface water runoff into the City's storm drainage facilities, as expressed in drainage residential units ("DRU") or portions thereof. The fee ("DRU Value") is established at five dollars and ten cents ($5.10) per DRU per month for parcels on private streets and six dollars and twenty-three cents ($6.23) per DRU per month for parcels on public streets. The City's Street Assessment District database shall be used to determine whether a street is classified as a private or public street. The following schedule is hereby established for parcels in the City:

Parcel Type		Monthly fee (DRU Value ×___)	Monthly fee (dollar amount)
Single-Family Residential	Private street	1 DRU	$5.10
	Public street	1 DRU	$6.23
Multi-Family Residential	Private street	0.8 DRU per residential unit	$4.08 per residential unit
	Public street	0.8 DRU per residential unit	$4.98 per residential unit
Non-Residential	Private street	10 DRU per acre or fraction thereof	$51.00 per acre or fraction thereof
	Public street	10 DRU per acre or fraction thereof	$62.30 per acre or fraction thereof

Undeveloped, Graded	Private street	0.5 DRU plus 0.1 DRU per acre or fraction thereof over 2 acres	$2.55 plus $0.51 per acre or fraction thereof over 2 acres
	Public street	0.5 DRU plus 0.1 DRU per acre or fraction thereof over 2 acres	$3.12 plus $0.62 per acre or fraction thereof over 2 acres

(Ord. 1454 § 1 (part), 2007)

(Ord. No. 1577, § 3, 1-7-2014)

13.34.050 - Fee—Payment.

The fee shall be billed for all assessable parcels within the City as either a separate charge on the City's utility bill or as a separate bill for those parcels within the City which do not currently receive City utility service. The amount billed shall become a personal obligation of the person listed as the utility customer or, for parcels not currently receiving City utility service, a personal obligation of the record owner of the parcel as shown on the latest Assessor's tax roll. The fee shall be due and payable on the date the bill is prepared, and shall be considered delinquent if payment is not received within thirty (30) days of the date the payment is due and payable. The City shall impose a ten (10) percent nonpayment penalty on all delinquent accounts. An additional one and one-half (1 ½) percent penalty shall be imposed for each additional thirty (30) day period the amount remains unpaid. If the bill is not paid within sixty (60) days of the date the payment is deemed delinquent, the amount owing shall constitute a lien against the parcel receiving the service, and the City shall include a statement on the bill notifying the assessee of the lien as provided for in Health and Safety Code Section 5473.11. The lien shall remain in effect for three (3) years unless extended, and shall be released upon payment of the delinquent amount plus all penalties associated therewith. The City may, in addition to or instead of the methods of fee collection described above, contract with other public or private utilities for collection in conjunction with their utility bills or the County of Orange Tax Assessor for collection on the tax rolls.

(Ord. 1454 § 1 (part), 2007)

13.34.060 - Appeal.

Any assessee affected by any decision, action or determination made by the Engineer interpreting or implementing the provisions of this chapter or any permit issued herein, may file an appeal of the decision with the Engineer within ten (10) days of the issuance of the decision, setting forth in detail the facts supporting the assessee's appeal. Such facts may include, but not be limited to, evidence that the parcel maintains its own storm drainage facility and does not contribute storm and surface water to the City's storm drainage facilities. The appeal shall be heard by the Utilities Director or his or her designee within thirty (30) days of receipt of the appeal request. The Utilities Director shall render a decision on the appeal within fifteen (15) days of concluding the appeal hearing.

(Ord. 1454 § 1 (part), 2007; Ord. No. 1648 , § 7, 12-5-2017)

13.34.070 - Use of fees.

The revenue generated from the fee shall, upon receipt, be placed in the clean ocean fee account. The revenue generated from the fee shall be used for the purposes specified in this chapter, and all costs related thereto.

(Ord. 1454 § 1 (part), 2007)

CITY OF TEMECULA
JURISDICTIONAL RUNOFF MANAGEMENT PROGRAM
SANTA MARGARITA REGION

ORDER NO. R9-2010-0016

ACRONYMS AND ABBREVIATIONS

ABOP	Anti-freeze, Batteries, Oil, and Latex Paint
ASB	Area of Special Biological Significance
AST	Active/Passive Sediment Treatment
BMP	Best Management Practice
Cal-EMA	California Emergency Management Agency
Cal-EPA	California Environmental Protection Agency
CAP	Compliance Assistance Program
CASQA	California Stormwater Quality Association
CEQA	California Environmental Quality Act
CESQG	Conditionally Exempt Small Quantity Generator
CIA	Common Interest Area
CIEP	Compliance Inspection and Enforcement Program
CMP	Consolidated Monitoring Program
Copermittees	District, County, and Cities of Murrieta, Temecula and Wildomar

Construction General Permit	NPDES General Permit for Stormwater Discharges Associated with Construction and Land Disturbance Activities
CUPA	Certified Unified Program Agency
CWA	Clean Water Act
DEH	County Department of Environmental Health
District	Riverside County Flood Control and Water Conservation District
ESA	Environmentally Sensitive Area
FPPP	Facility Pollution Prevention Plan
HHW	Household Hazardous Waste
HMP	Hydromodification Management Plan
HOA	Homeowners Association
IC/ID	Illicit Connection/Illegal Discharge
IDDE	Illicit Discharge Detection and Elimination
Industrial General Permit	NPDES General Permit for Stormwater Discharges Associated with Industrial Activities
IPM	Integrated Pest Management
JRMP	Jurisdictional Runoff Management Plan
LID	Low Impact Development
MEP	Maximum Extent Practicable
MHP	Mobile Home Park
MSHCP	Multi Species Habitat Conservation Plan
MS4	Municipal Separate Storm Sewer System
NAL	Non-Stormwater Dry Weather Action Levels
NOI	Notice of Intent
NOT	Notice of Termination
NPDES	National Pollutant Discharge Elimination System
O&M	Operation & Maintenance
SAL	Stormwater Action Level
San Diego Regional Board	San Diego Regional Water Quality Control Board
SCAG	Southern California Association of Governments
SIC	Standard Industrial Classification
SMARTS	Stormwater Multiple Application and Report Tracking System
SMR	Santa Margarita Region
State Board	State Water Resources Control Board
SWPPP	Stormwater Pollution Prevention Plan
SWQPA	State Water Quality Protected Area
TMDL	Total Maximum Daily Load
WDID	Waste Discharge Identification
WQMP	Water Quality Management Plan for the Santa Margarita Region of Riverside County
WQMP Projects	Priority Development Projects with a final approved Project-Specific WQMP
WLA	Waste Load Allocation
2010 SMR MS4 Permit	Order No. R9-2010-0016

EXECUTIVE SUMMARY

This Jurisdictional Runoff Management Program (JRMP) plan describes the City if Temecula's specific runoff management (water quality) programs and activities implemented to comply with the requirements of the Municipal Separate Storm Sewer System (MS4) Permit, Order No. R9-2010-0016, issued to the Riverside County Copermittees in the Santa Margarita Region (SMR) by the San Diego Regional Water Quality Control Board (San Diego Regional Board) on November 10, 2010 (2010 SMR MS4 Permit). This JRMP is the principal document that comprehensively translates the MS4 Permit requirements into actions that the City of Temecula is implementing to comply with the 2010 SMR MS4 Permit. This JRMP will be reviewed at least annually to incorporate new and revised compliance programs specified in the 2010 SMR MS4 Permit.

This JRMP is based on a SMR-wide template developed jointly by the Copermittees to promote consistency in the compliance programs implemented in the SMR. The JRMP has been customized to describe the City of Temecula 's compliance procedures and requirements. The terms and acronyms used in this JRMP are defined in the glossary (Appendix A) and defined terms are capitalized.

2.0 INTRODUCTION TO THE CITY OF TEMECULA JRMP

2.1 Program Overview

The Clean Water Act of 1987 (CWA) established requirements for discharges of Urban Runoff from MS4s under the National Pollution Discharge Elimination System (NPDES) program. The 2010 SMR MS4 Permit regulates discharges of runoff from MS4 facilities in the SMR. The Copermittees covered under the MS4 Permit are the County of Riverside, Riverside County Flood Control and Water Conservation District (District) and the cities within the SMR, including the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla (City). Each Copermittee is responsible for compliance with the 2010 SMR MS4 Permit.

This JRMP is a programmatic document developed by the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla to describe its specific internal management of its water quality program as well as ordinances, plans, policies and procedures necessary to manage runoff and comply with the 2010 SMR MS4 Permit. This JRMP comprehensively translates the 2010 SMR MS4 Permit requirements into programs and Implementation Plans for the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla.

2.2 Description of City of Temecula MS4 Facilities

The major MS4 facilities owned and operated by the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla and regulated under the 2010 SMR MS4 Permit consist of underground storm drains, improved open channels, and detention basins. Each year, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla updates a map of its MS4 facilities with modifications and additions to its major MS4 facilities in the JRMP Annual Report.

Within the jurisdictional boundaries of the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla, additional MS4 facilities and discharges may be present that are not owned by the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla. These may include MS4 facilities owned/operated by the District, and other non MS4 Copermittee entities, including federal, state, tribal and private entities and discharges otherwise permitted by the San Diego Regional Board or the State Water Resources Control Board (State Board).

Table 2-1 lists the Receiving Waters that may receive discharges from the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla's MS4 facilities, and the associated 303(d) listings. It should be noted that the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla is not alone responsible for potential or actual water quality problems or 303(d) listings within any of the identified Receiving Waters; however the programs identified within this JRMP are designed to reduce the discharge of Stormwater Pollutants from the MS4 to the MEP, effectively prohibit Non-Stormwater discharges, and prevent Runoff discharges from the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla's MS4 from causing or contributing to a violation of Water Quality Standards.

Table 2-1: 303(d) Listed Receiving Waters within and downstream of the City of Temecula's Jurisdiction

Receiving Water	303(d) Listings
Empire	Not Listed
Long Canyon	Chlorpyrifos, Fecal Coliform, Iron, Manganese
Murrieta	Chlorpyrifos, Copper, Iron, Manganese, Nitrogen, Phosphorus, Toxicity
Pechanga	Not Listed
Redhawk	Chlorpyrifos, Copper, Diazinon, Escherichia coli (E. coli), Fecal Coliform, Iron, Manganese, Nitrogen, Phosphorus, Total Dissolved Solids
Santa Gertrudis	Chlorpyrifos, Copper, Escherichia coli (E. coli), Fecal Coliform, Iron, Manganese, Phosphorus
Temecula	Chlorpyrifos, Copper, Phosphorus, Total Dissolved Solids, Toxicity

3.0 PROGRAM MANAGEMENT

3.1 Departmental Responsibilities

There are multiple 11B58BCity 3B73B21Bof Tem163Becu50B80Bla departments that share responsibility to implement elements of this JRMP and to meet the requirements of the 2010 MS4 Permit. An organizational chart depicting the departments involved in implementing the NPDES program is provided in Appendix B. Additionally, key personnel (position titles) with implementation responsibilities, and a matrix showing each JRMP element, the departments with implementation responsibilities, the specific responsibilities of each department/organizational unit, and the key personnel by position title are also provided in Appendix B.

3.2 Cooperative Activities

3.2.1 Implementation Agreement

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla participates in a cooperative Implementation Agreement with the following Copermittees within the SMR.

- County of Riverside
- Riverside County Flood Control and Water Conservation District
- City of Murrieta
- City of Wildomar

Through this agreement, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla and the other listed Copermittees contribute funds to implement various aspects of the 2010 SMR MS4 Permit requirements on a region-wide basis. This approach allows for more consistent compliance with many elements of the 2010 SMR MS4 Permit, implementation of programs, increases cost effectiveness, and provides consistent messages for the public. The regional programs that the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla jointly funds and implements regionally through this Implementation Agreement include:

- Joint development of compliance documents required by the 2010 SMR MS4 Permit among the Copermittees
- Funding of the additional responsibilities of the District as Principal Copermittee (Described in Section M of the 2010 SMR MS4 Permit)
- Regional public education activities
- Regional training programs for Copermittee staff

- Water quality monitoring as described in the 2010 SMR MS4 Permit Attachment E, Sections II.A through II.F, exclusive of source identification efforts that may be required of the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla based on any exceedances of an Action Level at a 11B58BCity 3B73B21Bof Tem163Becu50B80Bla owned Major MS4 Outfall.

- Joint support for other Regional Programs, including

    - The Compliance Assistance Program (CAP) including Food Services and Hazardous Materials facilities inspections

    - Household Hazardous Waste and Antifreeze, Batteries, Oil and Latex Paint (ABOP) collection programs

    - Participation in the California Stormwater Quality Association (CASQA)

Major modifications to the interagency agreements and changes in the cooperative activities are described in Annual Reporting to the Regional Board

3.3 Fiscal Analysis {H.}

11B58BCity 3B73B21Bof Tem163Becu50B80Bla makes capital expenditures and incurs operation and maintenance (O&M) costs to implement this JRMP and to meet the requirements of the 2010 MS4 Permit. Each year the capital expenditures and O&M costs incurred during the reporting period and the budgeted capital expenditures and O&M costs planned for the next fiscal year are provided in the Annual Report. Table 3-1 below describes the sources of funding that the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla has available to fund these programs.

Table 3-1. Fiscal Resources

Program Element	Funding Source(s)
Program Management and Reporting	City's General fund
Annual Fee for MS4 NPDES Permit	City's General fund
Implementation Agreement Shared Cost	City's General fund
Elimination of Illicit Connections & Illegal Discharges	City's General Fund
Municipal Facilities and Activities	City's General Fund
Development Planning	Fees
Private Development Construction (Inspections)	Fees
Industrial and Commercial Sources (Inspections)	City's General Fund
Retrofit Program	City's General Fund
Public Education & Outreach	City's General fund
Other	City's General fund

Table 3-2 below describes limitations on how the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla can use the various sources of funding.

Table 3-2. Restrictions on Use of Funding Sources

Source of Funds	Restrictions on Use (if applicable)
County Service Area 152	City is not a participant
General Fund	Fund is distributed to all departments based on departmental needs
Fees	User Fee analysis based on industry standards

3.4 Legal Authority {E.}

A certification of the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla's adequate legal Authority to comply with 40 CFR 122.26(d)(2)(I)(A-F) and the 2010 MS4 Permit is provided in Appendix B. Table 3-3 lists the ordinances that grant the Authority to implement the requirements of the 2010 MS4 Permit and this JRMP. Water quality management and discharge controls addressed by these ordinances provide the authority to:

- Control the contribution of Pollutants in discharges of Runoff associated with industrial and construction activity to its MS4 facilities and control the quality of Runoff from Industrial and Construction Sites. This requirement applies both to Industrial and Construction Sites which have coverage under the statewide Industrial or Construction General Stormwater Permits, as well as to those sites which do not. Grading ordinances must be updated and enforced as necessary to comply with this Order;
- Prohibit all identified Illicit Discharges not otherwise allowed pursuant to Section B.2 of the 2010 SMR MS4 Permit;
- Prohibit and eliminate Illicit Connections to the MS4;
- Control the discharge of spills, dumping, or disposal of materials other than Stormwater into the MS4;
- Require compliance with conditions in 11B58BCity 3B73B21Bof Tem163Becu50B80Bla's ordinances, permits, contracts or orders (i.e., hold dischargers to its MS4 facilities accountable for their contributions of Pollutants and flows);
- Utilize enforcement mechanisms to require compliance with 11B58BCity 3B73B21Bof Tem163Becu50B80Bla water quality Ordinances, permits, contracts, or orders;
- Control the contribution of Pollutants from one portion of the MS4 to another through interagency agreements with other Copermittees;
- Carry out all inspections, surveillance, and monitoring necessary to determine compliance and noncompliance with the water quality ordinances and permits and with the 2010 SMR MS4 Permit, including the prohibition on Illicit Discharges to the MS4. The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla has authority to enter, monitor, inspect, take measurements, review and copy

records, and require regular reports from Industrial Facilities discharging into its MS4 facilities, including Construction Sites;

- Require the use of BMPs to prevent or reduce the discharge of Pollutants into the MS4 from Stormwater to the MEP;
- Require documentation on the effectiveness of BMPs implemented to reduce the discharge of Stormwater Pollutants to the MS4 to the MEP; and
- Implement and enforce its ordinances within CIA/HOA areas and mobile home parks.

Table 3-3 lists the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla's ordinances that provide this legal authority. These ordinances (1) can be viewed at

http://www.qcode.us/codes/temecula/

or

http://www.cityoftemecula.org/Temecula/Government/CityClerk/MunicipalCode.htm.

Table 3-3. Ordinances Providing Legal Authority

Ordinance No.	Ordinance Short Title	Provision(s) of Ordinance and Description of Authorities Granted	Availability of Ordinance (Online URL or front counter)

3.5 Enforcement/Compliance Strategy

As described within this JRMP, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla implements a variety of programs and has established ordinances that are designed to meet the goals of the 2010 SMR MS4 Permit, however the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla must necessarily rely on the actions or inactions of independent third parties such as residents and businesses for the protection of water quality. Accordingly, consistent with the 2010 SMR MS4 Permit and pursuant to the legal authorities described in Section 3.4, compliance with the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla's ordinances is mandated through implementation of various enforcement mechanisms.

This section describes a program wide Enforcement / Compliance Strategy that serves as guidance to the various 11B58BCity 3B73B21Bof Tem163Becu50B80Bla departments in prioritizing and conducting enforcement activities that are consistent with the 2010 MS4 Permit and appropriate to the severity of the violation. Due to the unique nature of mobile businesses, specific enforcement procedures for Mobile Businesses are described in Section 3.5.3.

3.5.1 Prioritize Violations

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla's ordinances cover a wide range of prohibited activities with varying magnitudes of potential impacts on the Beneficial Uses of Receiving Waters. For example, discharges of either Hazardous Materials (e.g., solvents and pesticides) or Non-Hazardous Materials (e.g., food Wastes, trash, and debris) into the MS4 are violations of the City's Ordinance and are subject to enforcement. Similarly, an accidental spill into a catch basin inlet and an intentional discharge from an Illicit Connection are both violations. Prioritizing violations is important in focusing the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla's finite resources on those violations that may have the greatest potential impact on the quality of Receiving Waters.

Prioritizing violations is based on many factors, including the experience and professional judgment of the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla's staff. The factors that are commonly considered in prioritizing violations of the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla's water quality ordinances are presented in Table 3-4.

Table 3-4. Prioritization Factors for Violations

Prioritization Factor	Description
Characteristics of the Potential Pollutant	Based on chemical characteristics and potential to impact Beneficial Uses of Receiving Waters. The more Toxic, hazardous, or detrimental to the Beneficial Uses of the Receiving Waters a Pollutant, is the higher priority the discharge.
Sensitivity of the Affected Receiving Waters	The sensitivity of the affected Receiving Waters should be considered directly proportional to the priority of the violation because, for example, a more sensitive Receiving Water may suffer severe adverse effects from the discharge of a particular Pollutant whereas a less sensitive Receiving Water may suffer no adverse effects from the same Pollutant discharge. It is also important to consider that a Receiving Water may be highly sensitive to one potential Pollutant discharge while, at the same time, completely insensitive to another potential Pollutant. Examples of Receiving Waters that may be particularly sensitive include those with municipal supply or wildlife habitat designated Beneficial Uses.
Proximity of Receiving Waters	The closer a Receiving Water is to the discharge, the less chance there is for dispersion, dilution, or degradation of the potential Pollutant. Therefore, the closer the discharge is to Receiving Waters, the higher priority of the violation.
Magnitude of Discharge (volume and mass)	A larger Illegal Discharge should be of a higher priority than a smaller Illegal Discharge because as the magnitude of the Pollutant discharge increases, the extent of impact of the discharge on the environment increases as well.
Responsiveness of the Discharger in taking corrective actions	A discharger who is responsive and implements a good faith effort to correct a violation is more likely to minimize adverse impacts to surface water quality than a discharger who takes no action to correct a violation. Therefore, the priority of a violation should decrease as the responsiveness of the discharger increases.
Intent of the Discharger	Is the violation accidental or the result of an accident or a deliberate attempt to circumvent regulations?
Frequency of the Violation	Violations of local water quality ordinances and that are continuous or reoccurring should be of a higher priority than isolated occurrences of violations. The more frequent a violation, the more likely it is that the discharge will impact surface water quality.
Previous History of Non-Compliance of the Responsible Party	A poor history of non-compliance of a discharger should result in a higher prioritization of subsequent violations as compared to a discharger with a good history of compliance because a history of non-compliance is evidence of a discharger's lack of concern for complying with local Stormwater and erosion control ordinances.

Table 3-5 provides general guidance for categorizing the relative severity of violations based upon the factors and/or circumstances associated with a violation.

Table 3-5. Relative Severity of Violations

Factors Affecting the Severity of Violations	Severity Priority Level		
	High	Medium	Low
Pollutant characteristics	Hazardous Materials (e.g., pesticides and solvents)	Metals, nutrients, sediment, other non-Hazardous Materials	Trash and debris
Sensitivity of Receiving Waters	Drinking water source, wildlife refuge, Illegal Discharges containing Pollutants identified as Impairing the Receiving Water.	Recreational reservoir, riparian habitat	Dry, ephemeral stream
Proximity of Receiving Waters	Adjacent	Several hundred feet away	Several hundred yards away
Discharge magnitude	1000's gallons	100's gallons	10's gallons
Responsiveness of discharger	No action to contain or mitigate discharge	Reactive to control discharge when requested (i.e., cooperative)	Implements spill control plan at own initiative or shows good faith effort to respond
Intent of violation	Intentional	Discharge due to lack of controls or negligence	Implemented and maintained controls that failed (i.e., accident)
Frequency of violation	Continuous	Intermittent	Isolated incident
Previous history of discharger	Enforcement and cleanup historically resisted and more than one previous violation	Enforcement and cleanup performed when threatened and one or less previous violations	Enforcement and cleanup performed when requested and no previous violations

Because violations may not clearly fall into any single priority level described in Table 3-5, the priority assigned by 11B58BCity 3B73B21Bof Tem163Becu50B80Bla staff to particular violations may involve a subjective weighting of various factors.

3.5.2 Select Appropriate Enforcement Actions

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla will emphasize and encourage voluntary compliance with its ordinances to the MEP. The enforcement/compliance response should be based on the severity of the violation in consideration of the factors in Table 3-5. The types of enforcement/compliance responses available, depending on the circumstances, and in typical order of increasing severity, are:

- Education and information,
- Verbal warning,
- Written warning,
- Notice of violation or noncompliance,
- Stop work order or cease and desist order,
- Civil citation or injunction,

- Bonding
- Administrative fine, and
- Referral to the Environmental Crimes Strike Force for criminal prosecution (infraction or misdemeanor).

3.5.2.1 Administrative Remedies

Education and Information, and Verbal and Written Warnings. Education and information should be provided to dischargers as an element of each enforcement action. Verbal and written warnings may also be provided depending on the circumstances of the condition that is causing or threatening to cause a violation of the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla's ordinances. However, unless the condition is an initial violation of the water quality ordinances and consists of a low priority and severity violation, additional enforcement action may be appropriate.

Notice of Noncompliance. The Notice of Noncompliance constitutes a basic request that the property owner or facility operator rectify the condition causing or threatening to cause noncompliance with the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla's ordinances. The Notice of Noncompliance is generally issued when one or more of the following circumstances exist:

- The violation or threat is not significant and has been short in duration,
- The responsible party is cooperative and has indicated a willingness to remedy the conditions,
- The violation or threat is an isolated incident, and
- The violation or threat does not affect and will not harm human health or the environment.
- An actual condition of noncompliance exists, but the condition cannot be remedied within a relatively short period of time.
- The owner of the property or facility operator has indicated willingness to come into compliance by meeting milestones established in a reasonable schedule.
- The violation does not pose an immediate threat to human health or the environment.

Stop Work Order or Cease and Desist Order. The Stop Work Order or Cease and Desist Order are appropriate when the immediate action of the owner of property or operator of a facility is necessary to stop an existing discharge, which is occurring in violation of an ordinance. The Cease and Desist Order may also be appropriately issued as a first step in ordering the removal of nuisance conditions, which threaten to cause an unauthorized discharge of Pollutants if exposed to rain or surface water Runoff. The Cease and Desist Order is generally issued when one or more of the following circumstances exist:

- The violation or threat is immediate in nature and may require an emergency spill response or immediate nuisance abatement if left unattended.
- The violation or threat exhibits a potential situation that may harm human health or the environment.
- Contacts with the property owner or facility operator indicate that further Authority of the Copermittee may need to be demonstrated before remedial action is forthcoming.

- Prior Notices of Noncompliance have not obtained a favorable response.

Prior to issuance of any Cease and Desist Order or commencement of other civil or criminal enforcement action against any person, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla should deliver to the person a written Notice of Noncompliance, which states the act or acts constituting the violation and directs that the violation be corrected. The Notice of Noncompliance should provide the person with a reasonable time period to correct the violation before further proceedings are brought against the person. However, a Notice of Noncompliance should not be the first enforcement method used if egregious or unusual circumstances indicate that a stronger enforcement method is appropriate.

3.5.2.2 Criminal Enforcement

Misdemeanors. Criminal enforcement is appropriate when evidence of noncompliance indicates that the violator of the Ordinance has acted willfully with intent to cause, allow continuing or concealing a discharge in violation of the Ordinance.

Infractions. At the discretion of the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla's attorneys, misdemeanor acts may be treated as infractions. Factors that the attorney may use in determining whether the misdemeanor is more appropriately treated as an infraction may include the:

- Duration of the violation or threatened violation.
- Compliance history of the person, business or entity.
- Effort made to comply with an established compliance schedule.
- Existence of prior enforcement actions.
- Actual harm to human health or the environment from the violation.

Issuance of Citation. Where criminal enforcement is indicated, the inspector will issue a citation including the:

- Name and address of the violator,
- Provisions of the ordinance violated,
- Time and place of required appearance before a magistrate.

The offending party must sign the citation thereby promising to appear. If the cited party refuses to sign the citation, the inspector may cause the arrest of the discharger, or may refer the matter to the municipal attorney for issuance of a warrant for arrest. Inspectors should be aware that cited parties have the right to demand the immediate review by a magistrate, and such a request must be granted. Inspectors should respond to such a request by referring the request to the City of Temecula's Police Department.

Referral to Environmental Crimes Strike Force. The Riverside County Environmental Crimes Strike Force is a committee designed to pursue enforcement of serious environmental crimes. Referral of a case to the Environmental Crimes Strike Force would occur after repeated attempts at obtaining compliance have failed. The contact for the Environmental Crimes Task Force is Daniel Workman, Senior Investigator, Riverside County District Attorney Office (951.955.0755 dworkman@rivcodda.org). If Mr. Workman is not available, an Environmental Crimes Investigator can be contacted at 951.955.5430.

3.5.2.3 Appropriate Enforcement/Compliance Responses

Table 3-6 provides an example of appropriate enforcement responses that correspond to the severity of a violation as determined from Table 3-5. Recognizing the unique characteristics of mobile businesses, enforcement actions against such businesses will typically follow the procedure described in Section 3.5.3 below.

Table 3-6. Enforcement Responses for Violations Where Overlapping Authority Exists

Incident Severity Priority Level	Appropriate Enforcement Responses[1]	Lead Enforcement Agency	
		Copermittee	Regional Board Support
High	Referral to Environmental Crimes Strike Force	X	X
	Citation	X	X
	Infraction	X	X
	Misdemeanor	X	X
Medium	Infraction	X	X
	Misdemeanor	X	X
	Stop work order or cease and desist order	X	
	Notice of non-compliance	X	
Low	Notice of non-compliance	X	
	Written warning	X	
	Verbal warning	X	
	Education and information	X	

[1] Education and information should be incorporated into all enforcement responses.

The 11B58BCity 3B21Bof Tem163Becu50B80Bla takes the lead in initiating enforcement actions related to violations of its water quality ordinances within its jurisdiction, however the Regional Board may be asked to provide support in enforcement actions related to incidents that are or escalate to a high-priority status. State law limits the Authority of the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla to assess significant fines and penalties. However, the Regional Board has substantial abilities to assess fines and penalties under state and federal law that can be used to augment local enforcement where superior regulatory Authority and the ability to assess fines and penalties would be beneficial. Additionally, the Regional Board will be responsible for performing all enforcement actions related to compliance with the Statewide General Permits.

3.5.3 Enforcement Strategy for Violations Originating from Mobile Businesses {F.3.b.(3)(ii)}

Predominantly, violations by Mobile Businesses are reported by the public or by 11B58BCity 3B73B21Bof Tem163Becu50B80Bla field personnel. Appropriate field personnel are also trained to identify potential Non-Stormwater Discharges and other discharge of Pollutants from Mobile Businesses during the course of their normal duties. Violations originating from Mobile Businesses may be received by the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla in the form of complaint calls from the public. For example, the District currently operates, on behalf of the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla, a centralized 24-hour hotline (800-506-2556) that may be used by the public to, among other things, report violations into public streets, the MS4 and other waterbodies. These calls can be received in English or Spanish and are routed to the appropriate Copermittee departments or contacts. The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla also implements Wet and Dry Weather monitoring programs that may indicate the presence of Non-Stormwater Discharges and other discharges of Pollutants to the MS4.

When put on notice by staff or a third party of a potential violation of 11B58BCity 3B73B21Bof Tem163Becu50B80Bla ordinances originating from a Mobile Business that is not already being responded to by another responsible agency (e.g., other Copermittee), the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla investigates and takes the following actions, as applicable:

- If the reported incident is outside of the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla's jurisdiction, referral to the appropriate agency and/or the Regional Board will be made;
- Identify the name and contact information for the Mobile Business;
- The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla responds to reported violations originating from a Mobile Business within its jurisdiction within two (2) business days of determining the name and contact information for the Mobile Business;
- Inspections performed in response to a report are documented using the standard complaint reporting forms; and
- When appropriate, samples of Non-Stormwater Discharges originating from Mobile Businesses that enter the MS4 may be collected.

As described in Section 8.5, investigations of Mobile Businesses are performed by the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla in response to reports of potential violations originating from Mobile Businesses received from the public, staff and/or other agencies. The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla has adopted ordinances prohibiting such discharges and established programs to enforce them.

Where violations that originate from Mobile Businesses are discovered, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla will take appropriate enforcement action. Recognizing the unique characteristics of Mobile Businesses, the typical escalating enforcement protocol includes the following; however steps may be adjusted as appropriate to the nature of the violation:

Initial Violation

1) 11B58BCity 3B73B21Bof Tem163Becu50B80Bla staff provides educational materials to the Mobile Business operator informing them of the minimum Source Control and Pollution Prevention BMPs they must implement (refer to Section 8.5.1). This includes a review of applicable BMP fact sheets, and letting the operator know the proper procedures for disposal of Pollutants and Non-Stormwater discharges originating from Mobile Businesses.

2) If applicable, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla will require the Mobile Business owner to obtain a local business license.

3) The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla may give notice that the Mobile Business operator shall cease any activity which causes Non-Stormwater Discharge to the MS4 until they implement the minimum BMPs (see below for list of recommended BMPs).

4) If discharge is observed at time of inspection, 11B58BCity 3B73B21Bof Tem163Becu50B80Bla staff shall require the Mobile Business operator to immediately contain the discharge and perform any necessary remediation or cleanup from the MS4.

Repeat Violations

For repeat violations by the same operator, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla follows the remainder of the Enforcement Compliance strategy in Section 3.5 which may include, as appropriate, issuing written warnings, Notices of Violation, citations, or referrals to the Regional Board.

3.5.4 Coordination of Enforcement/Compliance Activities

Coordination with other Copermittees and government agencies including the Regional Board is essential for successful implementation of an enforcement/compliance program. The entire MS4 is not controlled by a single federal, tribal, state, local or private entity, nor does any single entity have Authority to take enforcement action for violations occurring outside of its jurisdiction. Further, other governmental agencies may have additional enforcement authorities that are appropriate to the situation. The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla coordinates its enforcement activities, as practicable, with the appropriate Copermittees and government and agencies and tribes in accordance with the following guidelines:

3.5.4.1 Identify Lead Agency

- Enforcement will be coordinated when multiple agencies have jurisdiction and an agency has not been able to obtain compliance by the discharger.
- Unless otherwise agreed to in writing, the lead enforcement agency role will be assigned on the basis of the origin of the discharge.
- The Regional Board may be asked to be the lead enforcement agency for higher priority Illegal Discharges in areas of overlapping Authority, such as for discharges to Receiving Waters, and will be the lead enforcement agency for all enforcement actions related to compliance with the State Industrial or Construction General Stormwater Permits.
- Investigation and other relevant information will be shared between the participating agencies in a timely fashion.

3.5.4.2 Lead Enforcement Agency Responsibilities.

The lead enforcement agency will assume the following responsibilities:

- Coordinating activities and assigning responsibilities (e.g., investigations, site visits, etc.) among participating agencies;
- Maintaining communication and information exchange among participating agencies;
- Ensuring that follow-up actions are implemented; and
- Documentation and reporting as required.

3.5.4.3 Coordination with the Regional Board

Under the Porter-Cologne Water Quality Act, the State has provided the Regional Boards with overriding Authority to manage water quality and administer compliance with state and federal water quality law. This Authority includes the ability to impose more significant fines and other sanctions than the Copermittees. With this Authority, the Regional Board may be more effective in obtaining the cooperation and compliance from those who violate Stormwater regulations. The Regional Board is notified by the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla when findings of potential non-compliance with the State's Industrial and Construction General Stormwater Permits have been identified or when the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla has been unable to obtain the compliance of a party responsible for violating its water quality ordinances. The list of contact names maintained by the District identifies the appropriate Regional Board staff to contact to initiate coordination of enforcement activities or to notify the Regional Board of potential findings of non-compliance. Where appropriate, notifications of potential non-compliance should be forwarded to the designated Regional Board contact person by the stormwater compliance coordinator.

3.5.4.4 Coordination with Other Agencies

In addition to the Regional Board, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla may also find it useful or necessary to coordinate or report findings of potential non-compliance to other government agencies with jurisdiction over water quality issues including the California Department of Fish and Game, the United States Fish and Wildlife Service, and the Army Corp of Engineers. The list of contact names maintained by the District identifies the appropriate staff at these agencies to contact to initiate coordination of enforcement activities or to notify of potential findings of non-compliance. In addition, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla may cooperate with other Copermittees in the Santa Margarita Region in developing and implementing programs for mobile businesses, including sharing of mobile business inventories, BMP requirements, enforcement action information, and education.

3.5.5 Recordkeeping

Enforcement actions taken, and tools such as citations or tickets utilized, and the discharger's return to compliance are tracked in the databases described in the JRMP. Information to be retained by the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla regarding their enforcement program includes:

- Documentation of staff training;
- Inspection notes or reports;

- Warning letters, violation notices, etc.;
- Documentation of follow-up actions;
- Contact reports from meetings or conversations with violators, other Copermittees, or other agencies; and
- Copies of notifications of potential non-compliance.

3.6 Receiving Water Limitations {A.3.}

The 2010 SMR MS4 Permit states that discharges from the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla MS4s that have been found to cause or contribute to the violation of water quality standards (designated beneficial uses, water quality objectives developed to protect beneficial uses, and the State policy with respect to maintaining high quality waters) are prohibited. The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla complies with this prohibition through timely implementation of control measures and other actions as described in this JRMP to reduce pollutants in stormwater discharges in accordance with the 2010 MS4 Permit.

If it is determined that discharges from the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla MS4s are causing or contributing to exceedances of Water Quality Standards that persist, notwithstanding implementation of the control measures specified in the JRMP, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla will implement the following procedure:

Notification

If the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla determines that discharges from its MS4 are causing or contributing to an exceedance within a receiving water of an applicable Receiving Water Quality Standard, the City of Temecula's NPDES representative will provide oral or e-mail notification to the Regional Board's Executive Officer within thirty (30) working days, identifying the pertinent information and data supporting the determination, and commit to submitting a full report in accordance with the reporting procedures below.

If the City of Temecula's NPDES representative is notified by the Executive Officer of a determination by the Regional Board that discharges from the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla's MS4 are causing or contributing to an exceedance within a receiving water of an applicable Receiving Water Quality Standard, within ten (10) working days, the City of Temecula's NPDES representative will via e-mail acknowledge such notification, and formally request any pertinent supporting information and data not included in the original notification. Following receipt and validation of all information supporting such a determination, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla will commit to providing a full report in accordance with the reporting procedures below.

Reporting

If the exceedance documented pursuant to the notification above is solely due to discharges to the MS4 from activities or areas outside the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla's jurisdiction or control, within ten (10) working days of becoming aware of the situation, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla will provide documentation of these discharges to the Executive Officer.

Subsequently, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla will document the situation within the Annual Report.

Otherwise, following the notifications above, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla will, within the annual report covering the date of the notification (unless the Executive Officer directs an earlier submittal), provide a report with:

1) A description of the BMPs that are currently being implemented through the JRMP and any additional BMPs that will be implemented to prevent or reduce those Pollutants that are causing or contributing to the exceedance of the applicable Receiving Water Quality Standards. The report may be incorporated in the Annual Report unless the San Diego Regional Board directs an earlier submittal; and

2) An implementation schedule for any new/revised BMPs. If the Executive Officer directs any modifications to the report, within thirty (30) days, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla will submit a revised report.

Update Compliance Programs

Within thirty (30) days following approval by the Executive Officer of the report described above, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla will revise the applicable sections of this JRMP and the monitoring program, to incorporate the approved modified BMPs that have been and will be implemented, the implementation schedule, and any additional monitoring required. The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla will implement the revised JRMP and monitoring program in accordance with the approved schedule for implementation of any new/revised BMPs

3.7 Program Reporting, Evaluation, and Revision {K.3}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla implements the following Annual Reporting, program evaluation, and program revision requirements described in the 2010 SMR MS4 Permit.

3.7.1 Annual Reporting {K.3.a.}

Each year the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla prepares a JRMP Annual Report summarizing the implementation of the jurisdictional activities described in the JRMP during the reporting period for submittal to the Regional Board. Each Annual Report must verify and document compliance with the 2010 SMR MS4 Permit. The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla retains records in accordance with the Standard Provisions in Attachment B of the 2010 SMR MS4 Permit, available for review, that document compliance with each requirement of the Permit. The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla submits the Annual Report including documentation of implementation of the compliance programs utilizing standardized reporting forms. The reporting forms will be amended as needed to facilitate changes in compliance programs or more accurate reporting of compliance programs.

3.7.2 Program Effectiveness Assessment and Reporting {J.}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla regularly assesses its compliance programs described in the JRMP to identify improvements that will promote the reduction of Pollutants in Runoff

to the MEP while also supporting the responsible management and allocation of the public resources available for implementation.

The strategy for assessing the effectiveness of the JRMP is described in Appendix B.

3.7.3 JRMP Revisions {F.}

As part of the Annual Reporting process, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla will review the JRMP to identify the need, if any, for revisions. The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla may propose revisions to the JRMP under the following conditions:

- Where needed improvements are identified based on staff experience in implementing the JRMP;
- Upon completion of newly developed program elements;
- In response to Effectiveness Assessments as described in section 3.7.2;
- In response to persistent Action Level exceedances.
- In response to the BMP strategy identified in the Watershed Workplan (see section 3.8)
- As directed by the Executive Officer to reflect regional and watershed-specific requirements and/or Waste Load Allocations (WLAs) developed and approved pursuant to the Total Maximum Daily Load (TMDL) process for Impaired Waterbodies.
- As directed by the Executive Officer where the JRMP must be revised in order to address exceedances of Receiving Water Limitations that have been determined to be contributed to or caused by Runoff.

3.8 Watershed Workplan {G}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla participates in the development and updating of a Watershed Water Quality Workplan (Watershed Workplan) that is designed to identify, prioritize, address and mitigate the highest priority water quality issues/pollutants in the Upper Santa Margarita Watershed.

This plan is available at: http://rcflood.org/NPDES/SantaMargaritaWS.aspx

4.0 ILLICIT DISCHARGE DETECTION AND ELIMINATION (IDDE){F.4.}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla implements the following program to actively detect and eliminate Illicit Discharges and disposal into the MS4, in accordance with Provision F.4. of the 2010 SMR MS4 Permit.

4.1 Overview

4.1.1 Prohibited Discharges

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla, through its legal Authority (Section 3.4), enforcement mechanisms (Section 3.5), and various other programs summarized in Section 4.2 below, effectively prohibits all types of Non-Stormwater discharges into its MS4 facilities unless such discharge is authorized by a separate NPDES permit or specifically allowed under the 2010 SMR MS4 Permit (summarized in Section 4.1.2 below).

4.1.2 Conditionally Allowed Non-Stormwater Discharges {B.2.}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla is not required to prohibit the discharges categories identified below.

- Diverted stream flows;
- Rising ground waters;
- Uncontaminated groundwater infiltration (as defined in 40 CFR 35.2005 (20)) to MS4s
- Uncontaminated pumped groundwater[1];
- Foundation drains[2];
- Springs;
- Water from crawl space pumps[3];
- Footing drains[4];
- Air conditioning condensation;
- Flows from riparian habitats and wetlands;
- Water line flushing[5& 6]

---

[1] Requires enrollment under Order R9-2008-002. Discharges into the MS4 require authorization from the owner and operator of the MS4.

[2] Requires enrollment under Order R9-2008-002. Discharges into the MS4 require authorization from the owner and operator of the MS4.

[3] Requires enrollment under Order R9-2008-002. Discharges into the MS4 require authorization from the owner and operator of the MS4.

[4] Requires enrollment under Order R9-2008-002. Discharges into the MS4 require authorization from the owner and operator of the MS4.

- Discharges from potable water sources not subject to NPDES No. CAG679001, other than water main breaks;
- Individual residential car washing;
- Dechlorinated swimming pool discharges;[7] and
- Emergency fire fighting flows (i.e. flows necessary for the protection of life or property).[8]

4.2 IC/ID Prevention {F.4.}

The programs described in Sections 5 through 9 of this JRMP are designed to prevent IC/IDs from occurring. Additionally, Section 11 of this JRMP describes the public education efforts implemented to ensure that the public is informed of these requirements. Below are some highlights of specific elements of the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla's programs that help prevent IC/IDs.

4.2.1 Legal Authority {F.4.a.(1)}

As described in Section 3.4, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla maintains water quality ordinances prohibiting IC/IDs.

4.2.2 Connections to City of Temecula MS4 Facilities

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla requires all proposed or detected third party connections to its MS4 facilities to obtain a Grading and/or Encroachment permit. Through this permitting process, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla ensures that the connection is not designed to drain Illegal Discharges into the MS4.

4.2.3 Inspections {F.4.a.(2)}

The inspection programs implemented by the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla described in Sections 5 through 9 of this JRMP provide an opportunity to identify Illicit Connections and for inspectors to work with the property owner to remedy problems that may potentially result in an Illegal Discharge. If routine inspections or Dry Weather monitoring indicate Illicit Connections or Illegal Discharges, they will be investigated and eliminated or permitted[9] as described in Sections 4.3 and 4.4.

4.2.4 Maintain MS4 Map {F.4.b.}

An updated map of MS4 facilities owned by the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla is maintained and provided to the Regional Board in the Watershed Annual JRMP report. The map includes all segments of the MS4 owned, operated, and maintained by the Copermittee, as well as all known

---

[5] This exemption does not include fire suppression sprinkler system maintenance and testing discharges. Those discharges may be regulated under Section B.3 of the 2010 SMR MS4 Permit

[6] Requires enrollment under Order R9-2002-0020.

[7] Excluding saline swimming pool discharges.

[8] Specifically excluding non-emergency fire fighting flows, i.e. flows from controlled or practice blazes and maintenance activities, and building fire suppression system maintenance discharges, i.e. sprinkler line flushing.

locations of inlets that discharge and/or collect Runoff into the MS4 facilities, all known locations of connections with other MS4s (e.g., Caltrans), and all known locations of all the outfalls that discharge Runoff to Receiving Waters from the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla's MS4 facilities. The accuracy of the MS4 map has been confirmed during dry weather field screening and analytical monitoring and will be updated at least annually. The MS4 map including any GIS layers will be submitted annually with the updated JRMP. This map is useful in identifying and narrowing down potential source areas in response to an observed IC/ID or Action Level exceedance

4.2.5 Outfall Monitoring {F.4.d.}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla conducts dry weather field screening and analytical monitoring of MS4 outfalls and other portions of its MS4 facilities within its jurisdiction to detect IC/IDs as described in Section 13.

4.2.6 Waste Collection Programs

4.2.6.1 Household Hazardous Waste (HHW) Collection and Anti-freeze, Batteries, Oil, and Latex Paint (ABOP) Collection Programs

Through the Implementation Agreement (see Section 3.2) the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla participates in the HHW and ABOP collection programs in conjunction with the Riverside County Waste Management Department. Mobile HHW collection events are held at sites in the SMR and are scheduled periodically on weekends from 9:00 a.m. until 2:00 p.m.. Through the Implementation Agreement, the District, on behalf of the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla, also supports one permanent ABOP collection site in the SMR, which is located at:

Murrieta Maintenance Yard / Riverside County Transportation Department
25315 Jefferson Avenue, Murrieta, 92562

The site is open Saturdays from 9:00 a.m. until 2:00 p.m. with the exception of holiday weekends. Mobile and permanent site locations may vary over time. Details, site locations, maps and schedules of operation for both the HHW and ABOP collection events are available on the DEH web site at http://www.rivcowm.org/opencms/hhw/pdf/HHWEventFlyerPDFs/91709-MASTERHHWSchedule.pdf or by calling 1-888-722-4234 or 951-358-5055.

Along with materials collected at HHW and ABOP sites, cathode ray tubes can be taken to County landfills for recycling. Used motor oil for recycling may be taken to drop off at certified collection centers throughout Riverside County in addition to the ABOP sites.

4.2.6.2 Conditionally Exempt Small Quantity Generator (CESQG)

The CESQG Program is a Hazardous Waste pick-up disposal service for eligible businesses/non-profit organizations in Riverside County. This program provides an affordable way to legally dispose of limited quantities of Hazardous Waste.

Businesses that generate 27 gallons or 220 pounds of Hazardous Waste or 2.2 pounds of extremely Hazardous Waste per month can participate in the CESQG program. Businesses are required to use a licensed hauler to manifest and transport their Hazardous Waste. The most common participants in the CESQG program are painters, print shops, auto shops, builders, churches, schools, non-profit groups and property managers. An appointment for pickup of Hazardous Waste or further information on the CESQG program can be obtained by calling 1-800-952-5566.

4.3 IC/ID Detection {F.4}

In the mid-1990s, the Riverside County Copermittees conducted reconnaissance surveys to identify IC/IDs to the MS4s. The reconnaissance surveys were limited to underground storm drains of 36-inch diameter or larger and open channels and utilized videotaping. Each undocumented connection to the MS4 was traced to its origin. Although 200 undocumented connections to the underground MS4 facilities were found County-wide, none of the connections were determined to be Illicit Connections with regard to the MS4 NPDES program. As underground facilities are difficult to access and the Copermittees inspect the construction of new underground MS4 facilities to verify that no Illicit Connections are being made, it has been determined that additional inspections of the underground MS4 facilities are not warranted. However, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla conducts inspections of its MS4 facilities to identify Illicit Connections as an element of routine facility maintenance. Illicit Connections identified during these surveys are documented and removed where necessary in order to comply with the 2010 MS4 Permit.

Although the overall programs described in this JRMP are designed to help prevent IC/IDs into the MS4, the following summarizes the specific methods implemented by the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla to detect and eliminate potential IC/IDs

4.3.1 MS4 Facility Inspections {F.4.e}

During the regular maintenance as described in Section 5.3herein, MS4 facilities are inspected to identify potential Illicit Connections, and evidence of any Illegal Discharges. This is the most direct method to detect IC/IDs. Appropriate field personnel are trained to identify potential IC/IDs during the course of their normal duties. The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla staff is familiar with the existing MS4 and the drainage patterns within its jurisdiction and can take steps to identify the source of what appears to be an IC/ID.

4.3.2 Public IC/ID Reports / Hotline {F.4.c}

Predominantly, Illegal Discharges are reported by the public or by 11B58BCity 3B73B21Bof Tem163Becu50B80Bla field personnel. Third-party notifications are a direct source of IC/ID information. The public is encouraged to call the Police Department/Code Enforcement to report observed spills or Illegal Discharges.

Additionally, as described in Section 11, the Riverside County Copermittees maintain a Public Education and Outreach program that includes education regarding IC/IDs. Procedures to educate the public about Illegal Discharges and Pollution Prevention where problems are found are included in this program. The District operates, on behalf of the Copermittees, a centralized 24-hour hotline (1-800-506-2556) that may be used by the public to, among other things, report Illegal Discharges from urban areas into public

streets, the MS4 and other waterbodies. These calls can be received in English or Spanish and are routed to the appropriate 11B58BCity 3B73B21Bof Tem163Becu50B80Bla departments or contacts.

Upon receiving notification from staff or a third-party, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla staff follows the procedures identified in Section 4.4 below.

4.3.3 IC/ID: Construction Site Inspections {F.1.e.(6)(d)}

As described in Section 7 herein, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla implements programs to track and verify that Construction Sites are complying with their ordinances. As part of that program, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla supplements the Illicit Discharge Detection and Elimination (IDDE) program by assuring that appropriate BMPs are being implemented to prevent Illegal Discharges, and that no Illicit Connections occur during the installation phase of new MS4 facilities. Illegal Connections are prohibited by the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla and are initially verified during the plan check process. The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla verifies conformance with the approved plans and conducts inspections at Construction Sites. Enforcement actions will be immediately enacted if an IC/ID is observed during an inspection, and where applicable 11B58BCity 3B73B21Bof Tem163Becu50B80Bla staff will follow the relevant procedures described below. Enforcement action will cease after the IC/ID has been removed or eliminated.

4.3.4 IC/ID: Industrial/Commercial Facility Inspections {F.3.b.(4)(vi)}

As described in Section 8, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla implements programs to track and verify that Industrial and Commercial facilities are complying with the water quality ordinances. The County's CAP assists the Copermittee's IC/ID elimination efforts through the Stormwater Compliance Surveys completed by Department of Environmental Health (Food Services) and Hazardous Materials Management (Haz Mat). These surveys list non-compliance issues that require additional attention, including IC/IDs, and the surveys are forwarded to the District. The District forwards the surveys to the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla NPDES Coordinator for follow-up visits, if necessary. If IC/IDs are encountered however, the CAP inspector directly contacts the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla, who will investigate as described below.

4.3.5 Monitoring Activities {Attachment E, II.C.}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla, in cooperation with the District, implements a Non-Stormwater Dry Weather Action Level (NAL) monitoring program at the Major Outfalls from its MS4 facilities. This monitoring program is intended, in part, to help identify MS4 Outfalls and sub-drainage areas within the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla's jurisdiction that may have Illegal Discharges. The monitoring program is described in the CMP http://rcflood.org/NPDES/Monitoring.aspx. Where an Action Level exceedance is detected at a Major Outfall, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla conducts source identification efforts as described in Section 4.4.2

4.3.6 Non-Jurisdictional IC/IDs

Where Non-Jurisdictional IC/IDs are identified within the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla's jurisdiction, the responsible party is notified of the Regional Board requirements

and the Executive Officer is notified of the Non-Jurisdictional IC/ID. The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla also implements Wet and Dry Weather monitoring programs that may indicate the presence of IC/IDs as described in Section 13.

4.4 IC/ID Response and Reporting {F.4.}

The 2010 SMR MS4 Permit and the Clean Water Act requires the Copermittees to prohibit, consistent with the MEP standard, Illegal Discharges (including the discharge of spills, leaks, or dumping of any materials other than Stormwater and authorized Non-Stormwater) into the MS4.

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla implements the following procedures to investigate and inspect portions of its MS4 that, based on the results of field screening, analytical monitoring, or other appropriate information, indicate a reasonable potential of containing IC/IDs or other sources of Pollutants in Non-Stormwater:

After the City of Temecula receives a notification of a water pollution problem from the area-wide hotline, the City's NPDES representative investigates the problem as follows:

4.4.1 Initial Response Timeframe and Requirements

Based on the information reported, the City's NPDES representative will assess if the IC/ID is an Emergency Situation that poses an immediate threat to human health or the environment. Any sewage spill over 1,000 gallons or that could impact water contact recreation, any spill that could impact wildlife, any Hazardous Material spill where residents are evacuated, any spill of reportable quantities of Hazardous Waste (as defined by 40 CFR 117 and 40 CFR 302), or any other spill reportable to the California Emergency Management Agency (Cal-EMA, formerly known as the Office of Emergency Services or OES) is classified as a threat to human health or the environment..

a. If the discharge is a threat to human health or the environment:

    i. Such discharges must be reported immediately by phone to the Cal-EMA at 1-800-852-7550 and should also be reported to the Executive Officer of the Regional Board by telephone: 858-467-2952. If these reports to these agencies have already been submitted by other parties, this reporting need not be repeated by the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla.

    ii. Investigation (if the source is not immediately known) and elimination activities (as described below) must occur immediately within 24 hours of being put on notice by staff or a third-party.

b. If there are obvious Illicit Discharges (i.e. color, odor, or significant exceedances of Action Levels >10x the Action Level), investigation as described below must occur within one business day.

c. If Field Screening Data collected as part of the NAL Monitoring program (as described in Section 4.0 of Volume III of the CMP and Section 13.2 of the JRMP) exceeds Action Levels, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla will either:

   i. Initiate an investigation (as described below) to identify the source of the discharge within two (2) business days of receiving the data, or

   ii. Document the rationale for why the discharge does not pose a threat to water quality and does not need further investigation. This documentation will be included in the JRMP Annual Report.

d. If Analytical Laboratory Results collected as part of the NAL Monitoring program (as described in Section 4.0 of Volume III of the CMP and Section 13.2 of the JRMP) exceeds Action Levels at a 11B58BCity 3B73B21Bof Tem163Becu50B80Bla outfall, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla will either:

   i. Initiate an investigation (as described below) to identify the source of the discharge within five (5) business days of receiving the data, or

   ii. Document the rationale for why the discharge does not pose a threat to water quality and does not need further investigation. This documentation will be included in the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla's JRMP Annual Report.

e. Other reported potential Illicit Discharges that do not meet the criteria identified above will be responded to in a timely manner. Responses to such reports may be prioritized.

4.4.2 Investigation {F.4.e.}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla takes action to eliminate all detected IC/IDs and conducts investigations based on the data or reports as described above. The following investigative steps will be taken by the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla:

1. If there is no active discharge, standing water, or other evidence of recent discharges (stains) at the reported location, Outfall or NAL exceedance location, reconnaissance is complete at that location and observations are documented on the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla's inspection forms and/or the City's Service Order Request (SOR) database. If necessary the location may be marked for future additional follow-up.

2. If there are multiple active discharges at the reported location or outfall, staff will:
   a. Observe the flows for any odd odors or discoloration
   b. If necessary, gather information such as photographs of the discharge and at the point of entry to MS4 (if known)
   c. Attempt to trace the flow/flows to its origin

3. If there is an active discharge or evidence of recent Dry Weather flow at the reported location or Outfall, staff will:
    a. Take photographs of the discharge and the point of entry to MS4 (if known)
    b. Attempt to trace the flow/flows to its origin
    c. Collect the following field parameters – pH, temperature, and specific conductivity.
    d. If the field parameters exceed follow-up criteria identified in the CMP, or if there is other visible evidence of an Illegal Discharge (e.g., stains), a continued investigation will be necessary, see Step 4.

4. Where the initial investigation identified in Step 3 indicated a potential Illegal Discharge, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla will perform a source investigation as follows:
    a. If active discharge with flow
        - Trace the source of the discharge as far upstream as possible.
        - Additional field measurements and/or lab analyses may be performed and documented (as outlined above) where there is no other evidence of the IC/ID source.
    b. If no active discharge but evidence of a recent IC/ID is present at time of investigation, trace the source of the discharge as far upstream as possible.

4.4.3 Elimination {F.4.f}

1. If the source is not identified
    a. Attempt to narrow down potential source areas, and make note in the investigation file.
    b. Where appropriate, public education material in area of IC/ID or complaint may be provided.
    c. Location is marked for future follow-up where appropriate. Follow-up visit(s) will confirm if the IC/ID has recurred and an attempt will be made to locate source. If the IC/ID has not recurred or has been eliminated it is noted and complaint/investigation is closed.
    d. If the investigation was initiated in response to an Action Level exceedance:
        i. Additional NAL sampling will occur at the Outfall in subsequent years.
        ii. If the results of the additional sampling indicate recurring exceedances of the same NAL(s) with an unidentified source, then the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla will provide an evaluation in the JRMP Annual Report of needed changes to the programs described in this JRMP to address the common contributing sources that may be causing such an exceedance. Applicable updates will be made to the Watershed Water Quality Workplan (G. of the 2010 SMR MS4 Permit), Retrofitting Existing Development (F.3.d. of the 2010 SMR MS4 Permit) and Program Effectiveness Assessment and Reporting (J. 2010 SMR MS4 Permit) work plans.

2. If the source is identified, and if:
    a. The source is natural (non-anthropogenically influenced) in origin and in conveyance into the MS4 then the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla need not prohibit the discharge;

i. The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla will report its findings and documentation of its source investigation to the Regional Board in the JRMP Annual Report covering the period in which the findings were made.

b. If the source of the exceedance is an exempted category of Non-Stormwater discharge as described in Section 4.1.2, then the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla will determine if this is an isolated circumstance or if the problem is recurrent to the point that the category of discharges must be addressed through the prohibition of that category of discharge as an Illicit Discharge.

   i. The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla will submit its findings including a description of the steps taken to address the discharge and the category of discharge, to the Regional Board for review in the applicable JRMP Annual Report covering the period in which the findings were made. Such description will include relevant updates to existing ordinances or new ordinances, orders, or other legal means of addressing the category of discharge, and the anticipated schedule for doing so. The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla must also submit a summary of its findings with the Report of Waste Discharge.

c. The source is in the jurisdiction of another Copermittee, the appropriate Copermittee is notified, and further action is performed by that Copermittee.

d. The source is a discharge separately permitted by the Regional Board and/or the State Board that is in violation or in potential violation of that permit, then
   i. If applicable, a copy of the regulatory permit will be obtained.
   ii. The Copermittee must report, within three business days, the findings to the San Diego Regional Board including all pertinent information regarding the discharger and discharge characteristics.
   iii. The findings of the investigation will be noted and the case will be closed.
   iv. If a permitted discharge is perceived to be a threat to human health or the environment, it will be reported to the Regional Board/Cal-EPA.

e. The source is an Illegal Discharge within the jurisdiction of the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla:
   i. The source is provided with educational material about IC/IDs, and an attempt is made to have the source resolve the situation immediately.
   ii. Where appropriate, City staff will implement enforcement procedures consistent with Section 3.5 of this JRMP.
   iii. Follow-up as appropriate to ensure that the IC/ID is eliminated.
   iv. Report the findings, including any enforcement action(s) taken, and documentation of the source investigation to the San Diego Regional Board in the Annual Report.

v. If the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla is unable to eliminate the source of discharge prior to the Annual Report submittal, then the Copermittee must submit, as part of its JRMP Annual Report, its plan and timeframe to eliminate the source of the exceedance.

vi. Those dischargers seeking to continue such a discharge must obtain coverage under a separate NPDES permit prior to continuing any such discharge.

f. The source is part of a HazMat incident, it is reported to the Incident Commander upon arrival. Coordination with the HazMat team takes place and samples are only collected with approval of the Incident Commander as samples may be done in conjunction with future legal action. Under no circumstances is a site entered or field measurements collected if conditions are unsafe.

4.4.4 Clean-up

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla ensures that any Illegal Discharge is cleaned up where necessary and that no further environmental degradation occurs and the responsible party(ies) restore the area as close to its original state to the MEP.

4.4.5 Sanitary Wastes {F.4.h}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla implements programs to manage discharges of sewage into its MS4 facilities from various sources including Sanitary Sewer Overflows and private laterals, failing septic systems, and portable toilets.

4.4.5.1 Sanitary Sewer Overflows and Private Laterals

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla cooperates and coordinates with the local sanitation districts as described in Appendix C to swiftly respond to and contain sewage spills that may discharge into its MS4 facilities.

As part of those efforts, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla allows local sanitation districts immediate 24-hour access to its MS4 facilities to address and contain sewage spills originating from their sewage lines. The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla does not own or operate sewer facilities but works cooperatively with the local sanitation districts to determine and control the impact of infiltration from leaking sanitary sewer systems on runoff quality.

4.4.5.2 Failing Septic Systems

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla does not permit nor regulate septic systems. Septic systems are permitted through the County Department of Environmental Health (DEH). DEH implements preventative and management measures for septic systems within the City of Temecula.

- Ordinance: The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla follows the Riverside County's ordinance that regulates discharges from failing septic systems
- Enforcement: Enforcement against failing septic systems is performed by Riverside County as necessary, in accordance with the enforcement procedures referenced in Section 3.5 of this JRMP.

4.4.5.3 Portable Sanitary Services (Portable Toilets)

Further, the Copermittees have added the Base-of-Operations for portable toilet suppliers to their Industrial/Commercial Facility inspection lists and prioritized them according to their threat to water quality. The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla implements management measures for portable toilet use within their jurisdiction, including:

- Ordinance: The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla regulates discharges from portable toilets through its water quality ordinances;
- Enforcement: Enforcement against ordinance violations by improper use or deployment of Portable Toilets is performed as necessary, in accordance with the enforcement procedures referenced in Section 3.5 of this JRMP.

5.0 MUNICIPAL AREAS AND ACTIVITIES {F.3.A}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla implements the following Municipal program to meet the requirements of provision F.3.a of the 2010 SMR MS4 Permit, prevent Illicit Discharges into the MS4, reduce municipal discharges of Stormwater Pollutants from the MS4 to the MEP, and prevent municipal discharges from the MS4 from causing or contributing to a violation of Water Quality Standards.

5.1 Planning 11B58BCity 3B73B21Bof Tem163Becu50B80Bla Facilities {F.1}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla implements the applicable processes and procedures described in Section 6 of this JRMP in the planning and design of 11B58BCity 3B73B21Bof Tem163Becu50B80Bla projects. This includes, where applicable, the development of a Project-Specific WQMP. Depending on the type of project, the following procedures are implemented by the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla to ensure that the planning and design of its public agency Priority Development Projects comply with the requirements of the 2010 SMR MS4 Permit:

All 11B58BCity 3B73B21Bof Tem163Becu50B80Bla projects will complete a "WQMP Initial Applicability Checklist" (Found in the SMR WQMP) to determine if a WQMP is required.

5.1.1 Public Works Priority Development Projects {F.1.d}

- If the project meets the definition of Priority Development Project as discussed in Section 6.6.3, the City or it's contractor will prepare a Project-Specific WQMP, consistent with the requirements of the SMR WQMP;
- The Conceptual Project-Specific WQMP, whether developed in-house or by a contractor, will be thoroughly reviewed for all items required in the SMR WQMP. The reviewer will use the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla "WQMP Review checklist" to determine if the Project-Specific WQMP is complete and will approve the final Project-Specific WQMP.
- Prior to initiating grading or construction activities, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla will ensure that the construction plans for its Priority Development Projects incorporate the BMPs described in the approved final Project-Specific WQMP. Appendix B includes the Position/Title of the reviewers under the respective departments responsible for implementing these reviews and approvals.
- The O&M Plan described in the Project-Specific WQMP may also be integrated into a municipal Facility Pollution Prevention Plan (FPPP), if applicable.

5.1.2 Public Works Transportation Projects {F.1.i}

The City of Temecula will either prepare a Project-Specific WQMP as described in Section 5.1.1 above for its Transportation Projects that qualify as a Priority Development Project, or design the project to comply with the Transportation Project Guidance included as Exhibit D to the SMR WQMP.

5.1.3 Public Works Unpaved Roads {F.1.i.}

Public Works projects that construct Unpaved Roads must follow the BMP guidance described in Section 6.6.7 of this JRMP.

5.1.4 Design of Flood Control Projects {F.3.a.(4)(a)}

During the design of flood control projects, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla assesses the potential impacts of the project on Receiving Water quality. As they are not Development Projects intended for human use or occupation, typically no additional Runoff or Pollutants will be expected to be discharged into Receiving Waters as a result of the construction of flood control projects.

5.1.5 Other Public Works Projects

Other Public Works Projects will comply with Section 6.6.6.

5.2 11B58BCity 3B73B21Bof Tem163Becu50B80Bla Construction Activities {F.2.}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla implements the applicable requirements of Section 7 of this JRMP in the construction of its projects. This includes, where applicable, compliance with the latest version of the Construction General Permit. As described in Section 5.1 above, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla prepares a WQMP for all applicable Public Works Priority Development Projects, which also meets the post-construction requirements in the Construction General Stormwater Permit.

11B58BCity 3B73B21Bof Tem163Becu50B80Bla construction projects that are one acre or larger, or which are part of a construction project of one acre or larger, must comply with the Construction General Stormwater Permit. Prior to commencement of construction activities, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla files Permit Registration Documents by using the State Board's Storm Water Multiple Application and Report Tracking System (SMARTS) and submitting a Notice of Intent (NOI) fee. Upon completion of the construction project, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla files a Notice of Termination (NOT) and other project close-out documentation via the State Board SMARTS. The SMARTS can be accessed at:

https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.jsp

During construction closeout the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla will assure satisfactory completion of the requirements in a project-specific WQMP by:

- Verifying that Structural Stormwater BMPs have been constructed and installed in conformance with approved plans and specifications;
- Assuming responsibility for the long-term funding and implementation, operation, maintenance, repair, and/or replacement of BMPs;
- Confirming that procedures are in place to implement all Non-Structural BMPs;

- Verifying that public agency Industrial Facilities that are subject to California's General Permit for Stormwater Discharges Associated with Industrial Activities as defined by Standard Industrial Classification (SIC) code obtain coverage and provide a copy of the NOI submitted to the State Board and/or a copy of the notification of the issuance of a Waste Discharge Identification (WDID) Number.

Where applicable, the operation and maintenance procedures for the Treatment Control BMPs included in the project-specific WQMP may be incorporated into a municipal FPPP, if applicable. For 11B58BCity 3B73B21Bof Tem163Becu50B80Bla projects, upon completion of construction when contract close-out occurs the responsibility for implementation, operation, and maintenance of BMPs will transfer from the contractor to the appropriate department and become part of the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla's program for operation and maintenance of its facilities, described in Section 5.3 below.

5.3 Operation and Maintenance of City of Temecula Areas and Activities {F.3.a.}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla implements the following measures to ensure that their Municipal Areas and Activities meet the requirements of Section F.3a. of the 2010 SMR MS4 Permit, reduce discharges of Stormwater Pollutants from its MS4 facilities to the MEP, and prevents discharges from its MS4 facilities from causing or contributing to a violation of Water Quality Standards. This section describes the program implemented by the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla for the operation, maintenance and inspection of their Municipal Areas and Activities.

5.3.1 Source Identification / Inventory {F.3.a.(1)}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla maintains an inventory of its Municipal Areas and Activities that have the potential to generate pollutants. This inventory is maintained by the City's NPDES Program of the Public Works Department and a copy is included with each JRMP Annual Report to the Regional Board. Linear facilities, such as roads, streets and highways, do not need to be individually inventoried. The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla's MS4 Facilities are shown on an MS4 map which is updated and provided in each Annual Report.

This inventory includes the name, address (if applicable), and a description of the area/activity; which pollutants are potentially generated by the area/activity; whether the area/activity is adjacent to an Environmentally Sensitive Area (ESA); and identification of whether the area/activity is tributary to and within the same hydrologic subarea as a CWA Section 303(d) water body segment and generates Pollutants for which the water body segment is Impaired.

5.3.2 Typical Minimum BMPs {F.3.a.(2)(b)

Based on the areas and activities inventoried, such as those listed in 5.3.3, and any Pollutants of Concern identified, a list of potential minimum source control pollution prevention BMPs was generated for each facility or activity category. BMPs for each category are incorporated into category-specific source-control BMP booklets (FPPPs). These source control BMPs were taken directly from the California Stormwater Quality Association (CASQA) BMP Handbook for Municipal Facilities. In addition,

minimum BMPs for mobile activities that serve as the base of operation for these activities are also included.

5.3.3 BMPs for 11B58BCity 3B73B21Bof Tem163Becu50B80Bla Activities

Examples of Municipal Activities conducted by the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla include:

- Graffiti removal;
- Herbicide application;
- Power washing;
- Landscape maintenance;
- Swimming pool maintenance;
- Operation of corporate yard (vehicle, equipment, material storage);
- Road, sidewalk, and parking lot maintenance;
- Painting;
- Fertilizer application;
- Vehicle and non-motorized equipment cleaning;
- Outdoor loading/unloading of materials;
- Non-hazardous waste handling and disposal;
- Building and grounds maintenance;
- Grading;
- Construction.

Where the above listed activities take place at an inventoried Municipal Facility, the category-specific source-control BMP booklet (FPPP) applicable to that facility category will describe the specific BMPs deployed. BMPs that are used when performing the routine activities identified above are provided below {F.3.a.(2)} Also, mobile activities based out of the Municipal Facility and the BMPs that are used in performing those mobile activities are also included in the FPPP.

5.3.3.1 Special Event BMPs {F.3.a.(2)(c)}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla also designates BMPs for special events that are expected to generate significant trash and litter. Controls considered, and as applicable to each event, include:

- Temporary screens on catch basins and storm drain inlets;
- Temporary fencing to prevent windblown trash from entering adjacent water bodies and MS4 channels;

- Proper management of trash and litter;
- Catch basin cleaning following the special event and prior to an anticipated rain event;
- Street sweeping of roads, streets, highways and parking facilities following the special event; and
- Other equivalent controls.

5.3.3.2 Fire BMPs {B.3.a.}

In coordination with the Riverside County Fire Agencies, the Riverside County Permittees developed a list of appropriate BMPs to be implemented to reduce Pollutants from fire training activities, fire hydrant testing or flushing and BMPs feasible for emergency fire fighting flows. These BMPs and the strategy for providing training and updating the list of BMPs are described in Appendix C.

5.3.4 BMPs for 11B58BCity 3B73B21Bof Tem163Becu50B80Bla Areas

5.3.4.1 Facility Pollution Prevention Plans (FPPP) {F.3.a.(2)}

An FPPP is maintained for each municipal facility category. Each FPPP is designed to identify the minimum Pollution Prevention Methods and BMPs applicable to each facility category and the mobile activities based out of each facility. FPPPs are typically maintained at each individual facility, however, for facilities (e.g., parks, trails) that do not maintain onsite staff, maintenance equipment or materials, a the FPPP will be maintained at the centralized maintenance facility (e.g., corporate yard) corresponding to the category or where the maintenance contracts are administered (i.e., 11B58BCity 3B73B21Bof Tem163Becu50B80Bla main office). The FPPP also identifies staff responsible for implementation and updating the FPPP. Each FPPP may also include a Facility Inspection Form that is used to record inspection findings, if applicable.

For any facilities that are tributary to and within the same hydrologic unit as a 303(d) listed waterbody and/or within, adjacent to, or discharging directly to an ESA, the FPPP includes any enhanced measures deemed necessary to mitigate pollutants shown to be generated by the site, for which the water body segment is impaired. As TMDLs are developed and/or action level exceedances are detected, the BMPs implemented at these facilities may be revisited to ensure that all appropriate enhanced measures deemed necessary by the Copermittee are implemented.

For other areas that do not have an FPPP (such as vacant land), appropriate BMPs including those identified in the remaining subsections of 5.3.4. are implemented on an as-needed basis as problems are identified.

5.3.4.2 BMP Implementation for Management of Herbicides and Fertilizers {F.3.a.(3)}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla implements BMPs to reduce the contribution of stormwater pollutants to the MEP associated with the application, storage, and disposal of herbicides and fertilizers from its municipal areas and activities to MS4 facilities and Receiving Waters. Such BMPs generally include:

(a) Educational activities, permits, certifications and other measures for municipal applicators and distributors;

b) Integrated Pest Management (IPM) measures that rely on non-chemical solutions where possible;

(c) The use of native vegetation where consistent with the facility's intended use and landscaping plan;

(d) Schedules for irrigation and chemical application such that they are not applied in advance of anticipated rain events or during rain events ; and

(e) The collection and proper disposal of unused herbicides and fertilizers.

5.3.4.3 BMP Implementation for Flood Control Structures {F.3.a.(4)}

(a) The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla implements procedures to assure that new flood management projects assess the impacts on the water quality of Receiving Waters. See Section 5.1.4.

(b) The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla includes water quality protection measures, where feasible, when retrofitting existing flood control structural devices.

(c) The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla evaluates its existing flood control structures as part of ongoing routine maintenance. For any structures that are found to be causing or contributing to a condition of Pollution, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla implements measures to reduce or eliminate the structure's effect on pollution, and evaluates the feasibility of retrofitting the structural flood control device. The inventory and evaluation is completed by and submitted to the Regional Board in each JRMP Annual Report.

5.3.4.4 BMP Implementation for Sweeping of Municipal Areas {F.3.a.(5)}

Where municipal area sweeping is implemented as a BMP for 11B58BCity 3B73B21Bof Tem163Becu50B80Bla owned and maintained roads, streets, highways, and parking facilities, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla designs and implements the program based on the following criteria:

(a) Roads, streets, highways, and parking facilities identified as consistently generating the highest volumes of trash and/or debris must be swept at least two times per month.

(b) Roads, streets, highways, and parking facilities identified as consistently generating moderate volumes of trash and/or debris must be swept at least monthly.

(c) Roads, streets, highways, and parking facilities identified as generating low volumes of trash and/or debris must be swept as necessary, but no less than annually.

5.3.4.5 Copermittee Maintained Unpaved Roads Maintenance {F.3.a.(10)}

(a) Although the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla does not own any unpaved roads, the City requires implementation of BMPs on privately-owned unpaved roads for erosion and sediment control measures to minimize potential impacts to streams, riparian habitat, and wetlands, particularly in or adjacent to Receiving Waters. Such BMPs may include, as applicable to the maintenance activity:

- Identify practices that will minimize road related erosion and sediment transport;
- Grade Unpaved Roads to slope outward where consistent with road engineering safety standards;
- Incorporate installation of water bars as appropriate; and
- Provide Unpaved Road and culvert designs that do not impact creek functions.

(b) The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla may examine the feasibility of replacing existing culverts or designing new culverts or other types of crossings to reduce erosion and maintain natural stream geomorphology.

5.3.5 Operation and Maintenance of MS4 Facilities and Treatment Controls {F.3.a.(6)}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla's improved open channels, catch basins, storm drain inlets, and detention basins are inspected, cleaned, and maintained as described below. Wastes and materials removed are disposed of per applicable laws and appropriate BMPs are deployed as necessary to minimize impacts to the Receiving Waters to the MEP. During annual inspections and maintenance of MS4 facilities, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla inspects for visual evidence of illegal discharges, litter and/or debris accumulation, and other maintenance issues.

(a) Treatment Controls: The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla implements an annual schedule of inspection and maintenance activities to verify proper operation of all of its municipal Structural Treatment Control BMPs designed to reduce stormwater pollutant discharges to or from its MS4 facilities. The BMPs are listed on an electronic database and inspected as described in Section 5.4 below.

(b) MS4 Facilities: The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla implements an annual schedule of inspection and maintenance activities for its MS4 facilities (including but not limited to catch basins, storm drain inlets, detention basins, etc). The maintenance activities include:

i. Inspection and removal of accumulated Waste at least annually between May 1st and September 30th of each year for all MS4 facilities;

ii. Additional facility cleaning as necessary between October 1st and April 30th of each year;

iii. Following two years of inspections, any MS4 facility that requires inspection and cleaning less than annually may be inspected as needed, but not less than every other year;

iv. Improved open channels and detention basins are cleaned of observed anthropogenic litter in a timely manner;

v. Maintenance activities within improved open channels must not adversely impact Beneficial Uses;

vi. Record keeping of the maintenance and cleaning activities including the overall quantity of waste removed;

vii. Proper disposal of waste removed pursuant to applicable laws; and

viii. Measures to eliminate waste discharges during MS4 maintenance and cleaning activities.

(c) Low Priority MS4 Facilities: Following two years of inspections, any MS4 facility that requires inspection and cleaning less than annually may be inspected as needed, but not less than every other year.

5.3.5.1 Flood Control Structure Evaluations {F.3.a.(4)(c)}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla's evaluates its existing flood control structures as part of the ongoing routine maintenance described above, to identify structures that are causing or contributing to a condition of pollution. For any such structures, where feasible the City implements measures to reduce or eliminate the structure's effect on pollution, and evaluates the feasibility of retrofitting the structural flood control device. The inventory and evaluation findings are submitted to the San Diego Regional Board in each JRMP Annual Report.

5.3.5.2 Infiltration From Sanitary Sewer to MS4/Provide Preventive Maintenance {F.3.a.(7)}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla does not own nor operate a municipal sanitary sewer system. However, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla does cooperate with Rancho California Water District, Eastern Municipal Water District, and Western Municipal Water District for responding to and addressing any observed infiltration into the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla 's MS4 facilities. In addition, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla implements the following controls to limit infiltration of seepage from sanitary sewers to MS4 facilities where necessary:

i. Adequate plan checking for construction of development projects;

ii. Incident response training for employees to identify sanitary sewer spills;

iii. Code enforcement inspections;

iv. MS4 maintenance and inspections;

v. Interagency coordination with sewer agencies; and

vi. Proper education of staff and contractors conducting field operations on the MS4.

5.4 Inspection of Copermittee Areas and Activities {F.3.A.(8)}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla inspects the following high priority Copermittee Areas and Activities annually:

i. Roads, streets, highways, and parking facilities

ii. Flood management projects and flood control devices not otherwise inspected per Section F.3.a.(6)(b) of the 2010 SMR MS4 Permit

iii. Areas and activities tributary to and within the same hydrologic subarea as a CWA Section 303(d) Impaired water body segment, where an area or activity generates Pollutants for which the water body segment is Impaired

iv. Areas and activities within or adjacent to or discharging directly to Receiving Waters within ESAs

v. Municipal Facilities:

[a] City Hall;
[b] Corporate yard;
[c] Library;
[d] Senior Center;
[e] Fire Stations;
[f] Swimming Pools;
[g] Public parking lots.

vi. Parks and recreation facilities

vii. Special event venues (festivals, concerts, open-air markets, etc.)

viii. Power washing activities

ix. All 11B58BCity 3B73B21Bof Tem163Becu50B80Bla WQMP projects with Structural post-construction BMPs, including verification that the Structural post-construction BMPs on those projects have been appropriately maintained consistent with the WQMP. {F.1.f.(2)(b)(iii)}

x. Other municipal areas and activities that the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla determines may contribute a significant pollutant load to the MS4

(a) Inspections of the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla's MS4 facilities are performed concurrently with the maintenance schedule described in Section 5.3.5 above.

(b) Other Municipal Areas and Activities are inspected as needed and in response to water quality data, valid public complaints, and findings from 11B58BCity 3B73B21Bof Tem163Becu50B80Bla or contract staff.

(c) Based upon site inspection findings, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla implements all follow-up actions necessary to comply with this Order.

5.5 Enforcement of Municipal Areas and Activities {F.3.a.(9)}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla enforces its water quality ordinances for all its Municipal Areas and Activities as necessary to maintain compliance with the 2010 SMR MS4 Permit.

6.0 DEVELOPMENT PLANNING {F.1.}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla implements the following programs related to the planning and permitting of Development Projects[10] within the City's jurisdiction. This program is designed to:

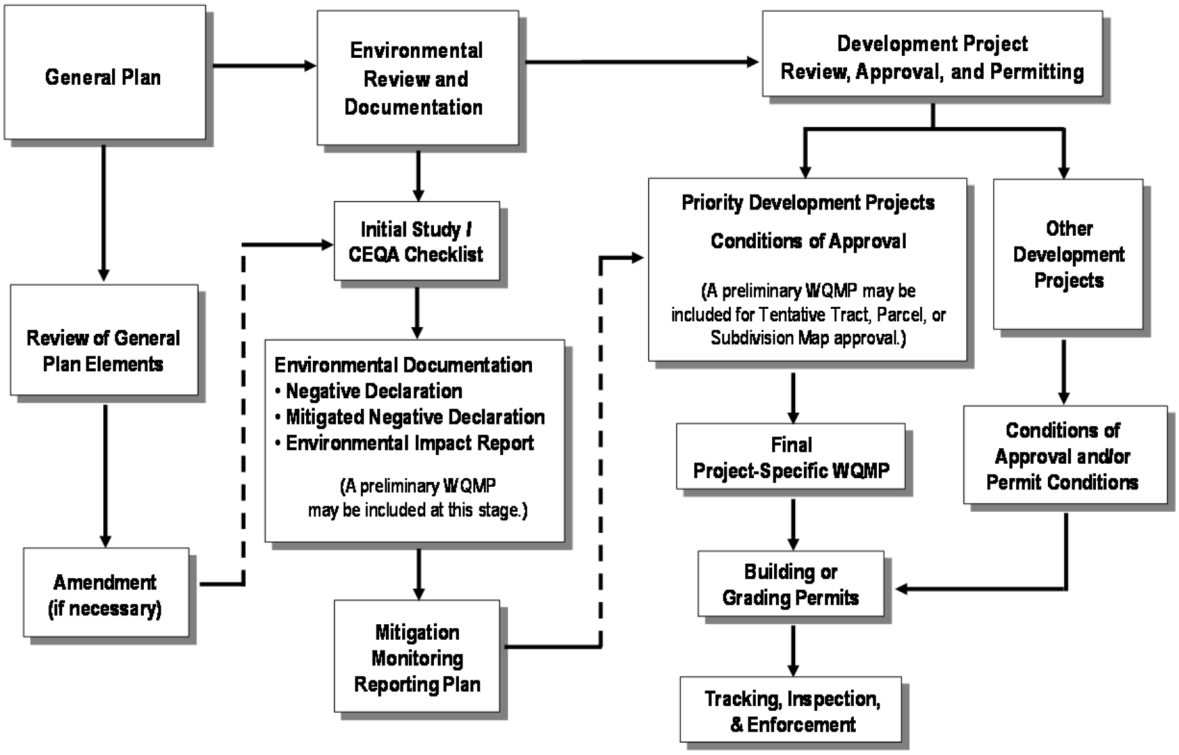
- Reduce Development Project discharges of stormwater pollutants from the MS4 to the MEP;
- Prevent Development Project discharges from the MS4 from causing or contributing to a violation of Water Quality Standards;
- Prevent Illicit Discharges into the MS4; and
- Manage increases in runoff discharge rates and durations from Development Projects that are likely to cause increased erosion of stream beds and banks, silt pollutant generation, or other impacts to Beneficial Uses and stream habitat due to increased erosive force.

6.1 Introduction

This program element links the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla's General Plan, the environmental review process, and the development approval and permitting processes to the later phases of detailed design, construction, and operation. A General Plan specifies policies that guide development. The environmental review process examines potential impacts from proposed development with respect to the General Plan policies and many environmental issues, including water quality, and includes consideration of mitigation measures to reduce any identified significant impacts. The development approval and permitting processes carries forth project-specific requirements in the form of conditions of approval, design specifications, tracking, inspection, and enforcement actions. Figure 6-1 is a generalized flow diagram that depicts the relationship of the General Plan, environmental review process and development planning and permit process, as well as the project design, construction, and operation phases.

[10] Construction, rehabilitation, redevelopment, or reconstruction of any public or private residential project, industrial, commercial, or any other projects.

Figure 6-1. Relationship between General Plan, Environmental Review Process and Development Approval & Permitting Process



6.2 General Plan {F.1.a.}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla has reviewed its General Plan to ensure that it includes water quality and watershed protection principles and policies as appropriate to allow the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla to direct land-use decisions and to require implementation of consistent water quality protection measures for all Development, Redevelopment, and Retrofit projects.

The General Plan allows the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla to implement the Water Quality & Watershed Protection Principles & Policies described below. These concepts are addressed as part of the WQMP process during the development review process, rather than as explicit elements of the General Plan.

- Minimize the amount of impervious surfaces and directly connected impervious surfaces in areas of Development and Redevelopment and, where feasible, slow runoff and maximize on-site infiltration of runoff.

- Implement Pollution Prevention methods supplemented by Pollutant Source Control and Treatment Control BMPs. Use small collection strategies located at, or as close as possible to, the source (i.e., the point where water initially meets the ground) to minimize the transport of Runoff and Pollutants offsite and into an MS4.

- Preserve, and where possible, create or restore areas that provide important water quality benefits, such as riparian corridors, wetlands, and buffer zones; and encourage land acquisition of such areas.

- Limit disturbances of natural water bodies and natural drainage systems caused by development including roads, highways, and bridges.

- Prior to making land use decisions, utilize methods available to estimate increases in pollutant loads and flows resulting from projected future development; require incorporation of BMPs to mitigate the projected increases in pollutant loads and flows.

- Avoid development of areas that are particularly susceptible to erosion and sediment loss; or establish development guidance that identifies these areas and protects them from erosion and sediment loss.

- Reduce pollutants associated with vehicles and increasing traffic resulting from development.

- Post-development runoff from a site must not contain pollutant loads that cause or contribute to an exceedance of Receiving Water Quality Objectives and which have not been reduced to the MEP.

Further, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla has incorporated the Multi Species Habitat Conservation Plan (MSHCP) into their General Plan. As of June 2012, approximately 136 square miles, or 25% of the Santa Margarita Region, has been successfully conserved as part of the Copermittee's implementation of the MSHCP, including significant lands adjacent to or encompassing Receiving Waters, and addresses many of the water quality and watershed protection concepts identified in the 2010 SMR MS4 Permit. Additionally, through the continued implementation of the MSHCP, much of the remaining non-urbanized area will ultimately be conserved, totaling approximately 43% of the Santa Margarita Region. The MSHCP also finds that the Copermittees' General Plans, zoning ordinances, and policies include measures capable of implementing the following planning concepts, which are consistent with the 2010 SMR MS4 Permit considerations such as:

- Measures to ensure that the quality and quantity of runoff discharged to MSHCP conservation areas is not altered in any adverse way when compared to existing drainage conditions;
- Measures to avoid discharge of untreated surface runoff from developed and paved areas into MSHCP conservation areas; and
- Measures to require MS4s to be designed to prevent the release of toxins, chemicals, petroleum products, exotic plant materials or other elements that might degrade or harm biological resources or ecosystem processes within MSHCP conservation areas.

6.3 Environmental Review Process {F.1.b.}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla prescribes the necessary requirements so that proposed Development Project discharges of stormwater pollutants from its MS4 facilities will be reduced to the MEP, and will comply with the City's ordinances, permits, plans, and requirements, and with the 2010 SMR MS4 Permit.

In addition, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla has reviewed its CEQA processes to ensure that water quality is properly considered and addressed. When acting as CEQA Lead Agency for a proposed Development Project at the earliest possible time in the process, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla identifies the resources under the jurisdiction of the Regional Board which may be affected by the project, including the potential need for a CWA §401 water quality certification, NPDES permit, or Waste Discharge Requirements. The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla coordinates project review with Regional Board staff pursuant to the requirements of CEQA. Upon request by Regional Board staff, this coordination may include the timely provision of the proposed project applicant's identity and contact information for facilitation of consultation meetings.

6.3.1 Project Application Form

A Project Application Form is used by the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla requiring the applicant to describe or include the following information in the project application:

- WQMP Initial Applicability Checklist;
- Submittal of a conceptual Project-Specific WQMP, if applicable; and
- Where a Project-Specific WQMP is not applicable, the proposed project must show how it will incorporate measures described in Section 6.6.6. {F.1.c.}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla's Project Application Form is included in Appendix D.

6.3.2 LID Barriers Review {F.1.d.(4)(a)}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla has reviewed its local codes, policies and ordinances and identified the potential barriers to the implementation of LID BMPs in Table 6-1. This table also identifies the steps required to remove those barriers, where feasible, by the end of the 2010 SMR MS4 Permit term (i.e., by November 10, 2015):

Table 6-1 Potential Barriers to LID BMPs

Reference	LID BMP	Potential Barriers identified	Steps required to remove barriers
F.1.c.(2)(a)	Conserve natural areas, including existing trees, other native vegetation, and soils	Lot size, usable space, subsurface soil conditions, hydrologic conditions, utility easements, topography	None
F.1.c.(2)(b)	Construct streets, sidewalks, or parking lot aisles to the minimum widths necessary, provided that public safety is not compromised	None – projects must comply with the 2010 MS4 Permit	None
F.1.c.(2)(c)	Minimize the impervious footprint of the project	Lot size, usable space, subsurface soil conditions, hydrologic conditions, utility easements, topography	None
F.1.c.(2)(d)	Minimize soil compaction to landscaped areas	None – projects must comply with the 2010 MS4 Permit	None
F.1.c.(2)(e)	Minimize disturbances to natural drainages	Lot size, usable space, subsurface soil conditions, hydrologic conditions, utility easements, topography	None
F.1.c.(2)(f)	Disconnect impervious surfaces through distributed pervious areas	Lot size, usable space, subsurface soil conditions, hydrologic conditions, utility easements, topography	None
F.1.d.(4)(b)(i)	Maintain or restore natural storage reservoirs and drainage corridors (including depressions, areas of permeable soils, swales, and Ephemeral and Intermittent streams)	Lot size, usable space, subsurface soil conditions, hydrologic conditions, utility easements, topography	None

Reference	LID BMP	Potential Barriers identified	Steps required to remove barriers
F.1.d.(4)(b)(ii)	Construct pervious areas to effectively receive and infiltrate, retain and/or treat Runoff from impervious areas, and to minimize soil compaction in these areas	None – projects must comply with the 2010 MS4 Permit	None
F.1.d.(4)(b)(iii)	Construct low-traffic areas with permeable surfaces, where appropriate soil conditions exist	None – projects must comply with the 2010 MS4 Permit	None
F.1.d.(4)(c)(i)	Structural Infiltration BMPs	Lot size, usable space, subsurface soil conditions, hydrologic conditions, utility easements, topography	None
F.1.d.(4)(c)(i)	Structural Harvest and Use BMPs	Lot size, usable space, subsurface soil conditions, hydrologic conditions, utility easements, topography	None
F.1.d.(4)(c)(ii)	Structural Bioretention BMPs	Lot size, usable space, subsurface soil conditions, hydrologic conditions, utility easements, topography	None
F.1.d.(4)(c)(ii)	Other structural LID BMPs (such as vegetated extended detention basins)	Lot size, usable space, subsurface soil conditions, hydrologic conditions, utility easements, topography	None

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla will update the above table as necessary through the implementation of the development planning activities, whether through identification of additional barriers, or as any identified barriers are removed. Any changes to the above table will be conducted and reported in the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla's JRMP Annual Report.

6.4 Water Quality Management Plan {F.1.d}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla, in collaboration with the other SMR Copermittees, has developed a WQMP for the Santa Margarita Region of Riverside County, which describes the process for application of required LID Principles (Site Design), Source Control BMPs, LID BMPs, and Treatment Control BMPs, on Priority Development Projects to ensure that the land use approval and permitting process will:

- Reduce Priority Development Project discharges of stormwater pollutants from the MS4 to the MEP, and
- Prevent Priority Development Project Runoff discharges from the MS4 from causing or contributing to a violation of Water Quality Standards.

The SMR WQMP Guidelines and a Project-Specific WQMP template are provided on the City's website at: http://www.cityoftemecula.org/Temecula/Government/PublicWorks/WQMPandNPDES/WQMP.htm

6.5 Hydromodification Management Plan {F.1.h.}

An updated Hydromodification Management Plan (HMP) is being developed by the Copermittees to manage increases in runoff discharge rates and duration from Priority Development Projects. The objectives of the HMP are:

- Ensure that the estimated proposed project runoff discharge rates and durations do not exceed the pre-project discharge rates and durations.
- For proposed projects on an already developed site, ensure that the estimated proposed project runoff discharge rates and durations do not exceed the pre-project discharge rates and durations, where the pre-project discharge rates and durations are that of the pre-development, naturally occurring condition.

Upon completion of the HMP in 2013, the HMP will be incorporated into the SMR WQMP. Until the HMP is developed and approved by the Regional Board, the interim Hydromodification requirements described in the SMR WQMP guidelines are in effect.

6.6 Development Project Review, Approval, and Permitting {F.1.d.}

6.6.1 Process Overview

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla, during the planning process, and prior to project approval and issuance of local permits, prescribes the necessary requirements so that Development Project discharges of stormwater pollutants from the MS4 will be reduced to the MEP, will not cause or contribute to a violation of Water Quality Standards, and will comply with the City's ordinances, permits, plans, and requirements, and with the 2010 SMR MS4 Permit.

All Development Projects that are submitted to the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla for discretionary approval or permitting are required to fill out a WQMP Initial Applicability Checklist. Based on the results of that checklist, each project is categorized as either a "Priority Development Project" or as an "Other Development Project." Since July 2005 the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla has required a project applicant to prepare a project-specific WQMP for all Priority Development Projects. The requirements for Other Development Projects are described in Section 6.6.6.

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla's Planning Department coordinates the land use case processing, which includes compliance with CEQA procedures, general plan conformity, ordinance consistency, and public health and safety requirements. The Planning Department works closely with

many other departments, such as Public Works, Building and Safety, Fire, etc. to ensure proper review of these issues during the Development Review process. Together, these departments assist in ensuring that Development Projects comply with WQMP requirements.

6.6.2 Identification of Development Projects Requiring a Project-Specific WQMP {F1.d(1) & (2)}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla's Project Application Form includes a WQMP Initial Applicability Checklist as discussed in Section 6.3.1.

In reviewing project applications, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla's Public Works Department reviews the WQMP Initial Applicability Checklist and other information provided in the project application to verify the applicant's determination as a *Priority Development Project* or an *Other Development Project*. If the applicant incorrectly certifies that the proposed project did not require a Project-Specific WQMP, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla will notify the project applicant and effectively place a hold on the project application until a conceptual Project-Specific WQMP is submitted.

If a Project-Specific WQMP is required, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla Planning Department will verify that a conceptual Project-Specific WQMP is included with the project application packet. The Planning Department will then forward the Project-Specific WQMP, to the Public Works Department for review and, as applicable, issuance of conditions of approval.

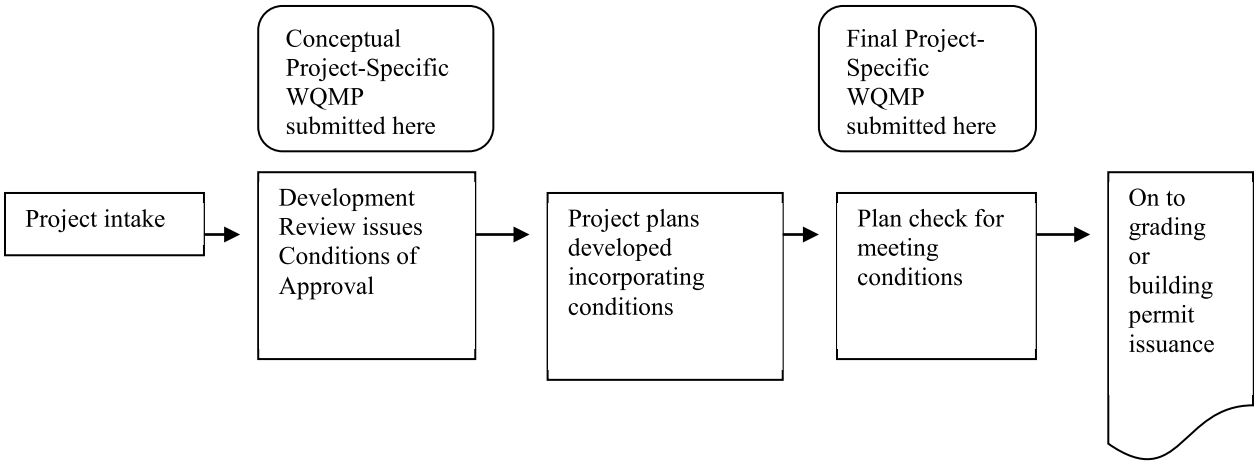
6.6.3 Conditions of Approval {F.1.c}

The City's Development Review Committee (DRC) applies standard conditions of approval to ensure that the requirements of the 2010 SMR MS4 Permit are met. Public Works' Standard Conditions of Approval addressing WQMP requirements are provided in Appendix D.

6.6.4 Review of Conceptual Project-Specific WQMPs

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla requires conceptual Project-Specific WQMPs to be submitted with the project application for all Priority Development Projects. The level of detail in the conceptual Project-Specific WQMP must be consistent with the level of detail for the overall project design at the time project approval is sought. Prior to issuance of grading or building permits, the project applicant must submit the Final Project-Specific WQMP for review and approval. The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla's uses checklists to facilitate thorough and consistent reviews of conceptual and final project-specific WQMPs. An example checklist is an exhibit to the SMR WQMP. Figure 6-2 shows a typical review and approval process.

Figure 6-2. Flowchart of Project Review, Approval & Permitting Process



6.6.5 Review and Approval of Final Project-Specific WQMPs {F.1.d.(9)(a)}

Based on the Conditions of Approval and prior to approval of a Final Project-Specific WQMP, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla's Public Works Department will ensure that:

- The Final Project-Specific WQMP is prepared and is consistent with the requirements of the SMR WQMP;
- LID BMPs have been incorporated into the site to the extent feasible; or if the project proponent has acceptably demonstrated that LID BMPs are technically infeasible for the project, the Public Works Department will document within the project file a finding of technical infeasibility;
- The entity or entities responsible for BMP implementation and maintenance have been identified; and
- The mechanism for BMP funding is identified.

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla will ensure all requirements have been addressed prior to approval of a Final Project-Specific WQMP.

6.6.6 Approval Process Criteria and Requirements for Other Development Projects [F.1.c]

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla requires Other Development Projects to incorporate LID Principles (Site Design) and Source Control BMPs, where applicable and feasible, into project plans through conditions of approval or building/grading permit conditions. LID BMPs and Treatment Control BMPs may be required on a case-by-case basis for Other Development Projects that directly discharge Runoff to Receiving Waters listed as Impaired on California's CWA Section 303(d) List of Water Quality Limited Segments.

Discharges from other approved Development Projects are subject to the following management measures:

(1) Source control BMPs that reduce Stormwater Pollutants of Concern in Runoff; prevent Illicit Discharges into the MS4; prevent irrigation runoff; storm drain system stenciling or signage; properly design outdoor material storage areas; properly design outdoor work areas; and properly design trash storage areas.

(2) The following LID BMPs listed below must be implemented at all Development Projects where applicable and feasible.

(a) Conserve natural areas, including existing trees, other vegetation, and soils;
(b) Construct streets, sidewalks, or parking lot aisles to the minimum widths necessary, provided that public safety is not compromised;
(c) Minimize the impervious footprint of the project;
(d) Minimize soil compaction of landscaped areas;
(e) Minimize disturbances to natural drainages (e.g., natural swales, topographic depressions, etc.); and
(f) Disconnect impervious surfaces through distributed pervious areas.

(3) Buffer zones for natural water bodies, where technically feasible. Where buffer zones are technically infeasible, require project proponent to implement other buffers such as trees, access restrictions, etc.

(4) Other measures necessary so that grading or other construction activities meet the provisions specified in Section 7.0 of this JRMP.

(5) Submittal of documentation of a mechanism under which ongoing long-term maintenance of all structural post-construction BMPs will be conducted.

(6) Infiltration and Groundwater Protection

To protect groundwater quality, restrictions are applied to the use of Treatment Control BMPs that are designed to primarily function as large, centralized infiltration devices (such as large infiltration trenches and infiltration basins). Such restrictions are designed so that the use of such infiltration Treatment Control BMPs does not cause or contribute to an exceedance of groundwater quality objectives. At a minimum, each Treatment Control BMP designed to primarily function as a centralized infiltration device is required to meet the restrictions below, unless the Development Project demonstrates that a restriction is not necessary to protect groundwater quality.

(a) Infiltration BMPs must not be used for areas of industrial or light industrial activity, and other high threat to water quality land uses and activities as designated by each Copermittee unless first treated or filtered to remove Pollutants prior to infiltration.
(b) The seasonal high groundwater mark must be at least 10 feet below the invert of the Infiltration BMP.
(c) Infiltration BMPs must be located a minimum of 100 feet horizontally from any water supply wells.
(d) No part of an Infiltration BMP should be within a 2:1 (horizontal:vertical) influence line extending from any septic leach line.
(e) Infiltration BMPs must not be located in soils that, according to a licensed Geotechnical Engineer, do not have adequate physical and chemical characteristics (such as appropriate cation exchange capacity, organic content, clay content, and infiltration rate) for the protection of groundwater.

(7) Where feasible, landscaping with native or low water species shall be preferred in areas that drain to the MS4 or to Waters of the U.S.

(8) Rain water harvesting and water reuse, where feasible, must be encouraged as part of the site design and construction to reduce Pollutants in Stormwater discharges to the MEP.

Additionally, where an Other Development Project proposes a new Unpaved Road, the applicant must incorporate the following, or alternative, BMPs that are equally effective:

- Identify practices that will minimize road related erosion and sediment transport;
- Grade Unpaved Roads to slope outward where consistent with road engineering safety standards;
- Incorporate installation of water bars as appropriate; and
- Provide Unpaved Road and culvert designs that do not impact creek functions.

6.6.7 Unpaved Roads Development {F.1.i}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla does not own unpaved roads. However, implementation of erosion and sediment control BMPs after construction of new private unpaved roads is required. Such BMPs are required for Priority Development Projects in the SMR WQMP, and for Other Development Projects as discussed in Section 6.6.6 above.

6.6.8 Plan Check: Issuance of Grading or Building Permits

6.6.8.1 Plan Check for Priority Development Projects

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla reviews the relevant CEQA documentation (including the Mitigation Monitoring and Reporting Program, if applicable), the conditions of approval, and the approved Final Project-Specific WQMP as part of the plan check process.

Construction plans submitted by the project applicant for plan check are reviewed to verify that they also properly incorporate all Site Design, Structural LID and/or Treatment Control BMPs identified in the final version of the Project-specific WQMP. The designs of Structural Source Control BMPs, LID BMPs, and Treatment Control BMPs are reviewed to verify inclusion of control measures necessary to effectively minimize the creation of nuisance or pollution associated with vectors, such as mosquitoes, rodents, flies, etc. The design review during plan check also verifies that Structural BMPs provide adequate access for ongoing maintenance of the BMP after construction.

6.6.8.2 Plan Check for Other Development Projects

For Other Development Projects, the Public Works Department reviews the construction plans submitted for a grading or building permit to ensure that the plans incorporate all applicable and appropriate Site Design, Source Control and LID BMPs as described in Section 6.6.6.

6.6.8.3 Standard Notes for Plans

Prior to the issuance of a grading or building permit, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla's Public Works Department requires standard erosion and sediment control notes to be added to the plan set to address Pollution Prevention during the construction phase of a project. Standard Erosion and Sediment Control notes are included in Appendix E.

6.7 Field Verification of BMPs & Permit Closeout{F.1.e.}

6.7.1 Release of Conditions of Approval

The end of the construction phase is typically accompanied by the close out of permits and issuance of certificates of use and/or occupancy. The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla uses this juncture to assure satisfactory completion of all requirements in a Project-Specific WQMP and/or the conditions of approval by verifying that the following items, as applicable, have been completed - prior to granting occupancy:

- All Site Design, LID, structural Source Control, and Treatment Control BMPs have been constructed and installed in conformance with approved plans and specifications and functional in accordance with the approved Project-Specific WQMP (if applicable); and that they include control measures to effectively minimize the creation of Nuisance or Pollution associated with vectors, such as mosquitoes, rodents, flies, etc.;
- A mechanism or agreement acceptable to the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla has been executed for the long-term funding, implementation, operation, maintenance, repair, and where necessary, the replacement of BMPs;
- The owner/operator is prepared to implement all Non-Structural BMPs, and to implement, operate, and maintain all Site Design, LID, structural Source Control, and Treatment Control BMPs;
- An adequate number of copies of the Project-Specific WQMP, if applicable, are available onsite; and
- An Industrial Facility subject to the Industrial General Permit as defined by Standard Industrial Classification (SIC) code has obtained coverage by providing a copy of the NOI with associated WDID number or other proof of filing submitted via the SMARTS to the State Board. Where such an Industrial Facility is identified but coverage cannot be verified, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla notifies the San Diego Regional Board and the owner/operator that the facility may be required to obtain coverage under the Industrial General Permit.

6.7.2 Maintenance Responsibility

The responsibility to provide for the long-term implementation, operation, and maintenance of BMPs associated with Priority Development Projects or Other Development Projects may:

- Remain with a private entity (property owner, home owners association, etc.); or
- Be transferred to a public entity (e.g., a city, county, special district, etc.) through dedication of the property; or
- Be transferred to a public entity, or another private party through a contract.

Following satisfactory inspection, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla may accept Structural BMPs within public right-of-ways, and may accept Structural BMPs on land dedicated to public ownership. Upon acceptance of the BMPs, responsibility for operation and maintenance of Structural BMPs will transfer from the developer or contractor to the appropriate entity, including the funding mechanism identified in the approved final Project-Specific WQMP for Priority Development

Projects or the conditions of approval or building/grading permit conditions for Other Development Projects.

If a property owner or a private entity retains or assumes responsibility for implementation, operation, and maintenance of BMPs, the City requires an agreement that can take the form of:

- A Covenant and Agreement recorded with the County Recorder;
- A Homeowners Association or Property Owners Association Covenants, Codes, and Restrictions;
- The formation of, or annexation to, a maintenance district or assessment district; or
- Other instrument sufficient to guarantee long-term implementation, operation, and maintenance of BMPs.

6.8 Structural Post-Construction BMP Database and Maintenance Verification {F.1.f}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla implements a program to verify the maintenance and effectiveness of post construction Structural BMPs constructed pursuant to an approved Final Project-Specific WQMP.

6.8.1 Inventory of WQMP Projects {F.1.f.(1)}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla maintains a watershed-based database to track and inventory all Priority Development Projects constructed within the City's jurisdiction that have an approved Final Project-Specific WQMP and have had post-construction Structural BMPs implemented since July 2005. This database does not track nor inventory LID BMPs implemented on a lot by lot basis at single family residential houses – such as rain barrels.

This database includes the following information:

- Project Name
- Priority for Maintenance Verifications (see Section 6.8.2)
- Type of project (residential, commercial, industrial, multi-use)
- Location of the project
- Watershed where project is located
- Types of BMPs and location(s)
- Date of construction or date of initial verification/certification
- Party responsible for maintenance
- Dates of maintenance verifications
- Findings of maintenance verifications

- Corrective actions identified during maintenance verification, including whether the site was referred to the local vector control agency or department.

6.8.2 Designation of High Priority Projects for Maintenance Verification {F.1.f.(2)(a)}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla designates each WQMP project as either High or Standard Priority based on the following considerations:

- BMP size,
- Recommended maintenance frequency,
- Likelihood of operational and maintenance issues,
- Location,
- Receiving Water quality,
- Compliance record,
- Land use, and
- Other pertinent factors

At a minimum, High Priority projects include those projects that have been identified by the Copermittee as a facility that:

- Generates Pollutants (prior to treatment) within the tributary area of and within the same hydrologic subarea as a 303(d) listed waterbody Impaired for that Pollutant; or
- Generates Pollutants within the tributary area for and within the same hydrologic subarea as an observed Action Level exceedance of that Pollutant.

6.8.3 Maintenance Verification of Structural Post-Construction BMPs {F.1.f.(2)(b)}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla verifies that the required post-construction Structural BMPs on the inventoried WQMP Projects have been implemented, are maintained, and are operating effectively through inspections, self-certifications, surveys, or other equally effective approaches with the following conditions:

6.8.3.1 WQMP Structural BMP Inspection Schedule

Table 6-2 WQMP Structural BMP Inspection Schedule

WQMP Project Priority	Verification frequency
Standard	Once every 5 years
High	Annually

In addition to the above table, all 11B58BCity 3B73B21Bof Tem163Becu50B80Bla-owned projects with post-construction Structural BMPs must be inspected annually as described in Section 5.4.

6.8.3.2 Verification Methods

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla Public Works Department conducts direct inspections of WQMP Projects to comply with the BMP verification requirements. The Public Works Department first reviews the approved Final Project-Specific WQMP, and verifies that all post-construction Structural BMPs identified in the WQMP are implemented and have been appropriately maintained in accordance with the O&M Plan identified in the Project-Specific WQMP. A standardized inspection / verification form is used to document the inspection.

6.8.4 Post Construction BMP Recordation {F.1.d.(9)(b)}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla's Public Works Department established a mechanism through a single-party Operation and Maintenance Agreement (O&M Agreement) to ensure that appropriate easements and ownerships are properly recorded in public records and the information is conveyed to all appropriate parties when there is a change in project or site ownership.

6.9 Enforcement for Development {F.1.g}

The legal Authority and enforcement policies and procedures of the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla are described in Section 3 of this JRMP. The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla conducts appropriate follow-up measures to ensure that the Treatment Control BMPs continue to reduce stormwater pollutants as originally designed. These measures include re-inspections, and, where necessary, enforcement (as described in Section 3.5).

7.0 PRIVATE DEVELOPMENT CONSTRUCTION ACTIVITY {F.2.}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla implements the following program that is designed to meet the requirements of provision F.2. of the 2010 SMR MS4 Permit, require implementation and maintenance of Structural and Non-Structural BMPs to reduce pollutants in stormwater runoff from construction sites to the MS4, reduce construction site discharges of stormwater pollutants from the MS4 to the MEP, and prevent construction site discharges from the MS4 from causing or contributing to a violation of Water Quality Standards.

7.1 Source Identification / Inventory {F.2.b}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla's Public Works Department maintains an updated watershed-based inventory database of construction sites within its jurisdiction. This inventory is provided in each Annual Report. Construction sites are any project, including projects requiring coverage under the General Construction Permit, that involves soil disturbing activities including, but not limited to, clearing, grading, disturbances to ground such as stockpiling, and excavation. Construction sites are included in the inventory regardless of whether the construction site is subject to the Construction General Stormwater Permit or other individual construction stormwater NPDES permits. This database is updated when new projects are issued a grading permit. Projects may be removed from the database when construction is completed and the project's grading permit is closed. The database includes the following project information:

- Project Identification (i.e. name, tract number, assessor parcel #, grading permit #, etc),
- Project location,
- Watershed / Subwatershed
- Project type,
- Project priority,
- Date of inspections performed at each site,
- WDID # (if applicable),
- Enforcement actions taken.

7.2 Construction Site Planning and Project Approval Process {F.2.c}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla incorporates consideration of potential water quality impacts prior to approval and issuance of construction and grading permits.

Prior to issuance of Grading Permits, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla:

- Requires implementation of the applicable designated BMPs (Section 7.3) and other measures that are selected so that Illicit Discharges into the MS4 are prevented, stormwater pollutants

discharged from the Construction Site will be reduced to the MEP, and construction activity discharges from the MS4 are prevented from causing or contributing to a violation of Water Quality Standards.

- Ensures that the project proponent's Erosion and Sediment Control Plan (ESC Plan) is required to comply, and reviewed by the Public Works Department to verify compliance with the local grading ordinance, other applicable local ordinances, and the 2010 SMR MS4 Permit,

- Verifies that the project proponent is subject to the Construction General Permit and has existing coverage. Where coverage under the Construction General Permit appears to apply, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla verifies coverage on the State Board's web page at:

  http://www.swrcb.ca.gov/water_issues/programs/stormwater/databases.shtml#const_db

  For such projects, the Regional and/or the State Board are responsible for conducting inspections and verifying compliance with the Construction General Permit. The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla's review of the project's ESC Plan, as well as the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla's inspections conducted as described in Section 7.4 below, are to ensure compliance with the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla's ordinances and the 2010 MS4 Permit.

- Categorizes the project according to risk level for the purposes of inspection, as described in Section 7.4.

7.3 Construction Site BMPs {F.2.d}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla has designated a minimum set of BMPs and other measures to be implemented at all Construction Sites, as applicable to the site and to the activities thereon. The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla requires implementation of the designated minimum BMPs and any additional measures necessary to comply with the 2010 SMR MS4 Permit at each Construction Site within its jurisdiction year round. Appendix E includes Temecula's annual letter to project owners, developers, project managers, field superintendents, and contractors that lists many of these minimum BMPs. BMP implementation requirements, however, can vary based on Rainy and Dry Seasons. Dry Season BMP implementation must plan for and address unseasonal rain events that may occur during the Dry Season (May 1 through September 30).

7.3.1 Minimum Erosion and Sediment Control Practices {F.2.d(1)(b)}

- Erosion prevention. Erosion prevention is to be used as the most important measure for keeping sediment on site during construction;

- Sediment controls. Sediment controls are to be used as a supplement to erosion prevention for keeping sediment on-site during construction;

- Slope stabilization must be used on all active slopes during rain events regardless of the season and on all inactive slopes during the Rainy Season and during rain events in the Dry Season;

- Permanent revegetation or landscaping as early as feasible; and

- Erosion and sediment controls must be required during the construction of Unpaved Roads.

7.3.2 Minimum Management Measures {F.2.D(1)(a)}

BMP Name	Stormwater BMP Handbook Portal: Construction	Caltrans Construction Site BMP Manual	MS4 Permit Requirement Reference F.2.d.(1):
Stabilize Exposed Soils (one or more or the methods below will be used as needed)			
Chemical Stabilization (Soil Binders)	EC-5	SS-5	(a): (iv), (vii) (viii) (b): (i)
Polyacrylamide	SE-11		(a): (iv), (vii) (viii) b): (i)
Mulching

Entrance/Outlet Tire Wash	TC-3	TC-3	(a): (ix),
Preservation of Existing Vegetation	EC-2	SS-2	(iii) (iv), (xii) b): (i)
Stabilized Construction Entrance/Exit	TC-1	TC-1	(a): (ix)
Stabilized Construction Roadway	TC-2	TC-2	(a): (ix) b): (i) (iv)
Scheduling			(a): (ii) (iii), (iv), (v), (vi), vii b): (i)
Waste Management			
Waste Handling and Disposal	SC-34		(a): (i), (xi.), (x), (xi)
Pollution Prevention			
Spill prevention, Control and Cleanup	SC-11		(a): (i.), (x)

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla requires project proponents to submit for review an Erosion and Sediment Control Plan appropriate to project type/size that identifies each of the BMPs used during the construction phase and their deployment at the Construction Site. This plan:

- Establishes limitations of grading to a maximum disturbed area as determined by 11B58BCity 3B73B21Bof Tem163Becu50B80Bla before either temporary or permanent erosion controls are implemented to prevent stormwater pollution.

  This maximum area is established by the City on a case-by-case basis depending on the specifics of each project, and documented in the grading permit documents.

  The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla has the option of allowing a temporary increase in the size of disturbed soil areas beyond the maximum if the individual site is in compliance with the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla's ordinances and the site has adequate control practices implemented to prevent stormwater pollution;

- Requires preservation of natural hydrologic features where feasible;

- Preservation of riparian buffers and corridors where feasible;

- Evaluation and maintenance of all BMPs, until removed; and

- Retention, reduction, and proper management of all Stormwater Pollutant discharges on site to the MEP standard.

Since BMP technology is constantly changing, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla may consider other BMPs of equivalent or better performance on a case-by-case basis.

7.3.3 Enhanced BMPs {F.2.d.(2)}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla requires implementation of enhanced measures to address the threat to water quality posed by all Construction Sites tributary to CWA Section 303(d) water body segments Impaired for sediment or turbidity. Currently there are no CWA Section 303(d) water body segments Impaired for sediment or turbidity that the City's MS4 facilities discharge into. Where necessary, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla also requires implementation of enhanced measures for Construction Sites within, or adjacent to, or discharging directly to Receiving Waters within an ESA (as defined in Attachment C of the 2010 SMR MS4 Permit).

7.3.4 Active/Passive Sediment Treatment (AST) {F.2.d.(3)}:

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla requires implementation of ASTs for sediment at Construction Sites (or portions thereof) that the City determines to be an exceptional threat to water quality. In evaluating the threat to water quality, the following factors are to be considered by the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla:

(a) Soil erosion potential or soil type;

(b) The site's slopes;

(c) Project size and type;

(d) Sensitivity of Receiving Water bodies;

(e) Proximity to Receiving Water bodies;

(f) Non-Stormwater discharges;

(g) Ineffectiveness of other BMPs;

(h) Proximity and sensitivity of aquatic threatened and endangered species of concern;

(i) Known effects of AST chemicals; and

(j) Any other relevant factors.

As defined in the MS4 Permit, AST is a treatment mechanism that uses mechanical, electrical or chemical means to flocculate or coagulate suspended sediment for removal from runoff from construction sites prior to discharge. Such measures are highly expensive and are expected only to be required in cases where there is an exceptional threat and/or demonstrable impacts to receiving water quality and all other available BMPs have been ineffective for the site.

7.4 Construction Site Inspection {F.2.E}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla conducts Construction Site inspections for compliance with its ordinances (grading, stormwater, etc.), permits (construction, grading, etc.), and the 2010 SMR MS4 Permit. When conducting inspections of Construction Sites the 11B58BCity

3B73B21Bof Tem163Becu50B80Bla utilizes the inspection form provided in Appendix E. Priorities for inspecting Construction Sites must consider the nature and size of the construction activity, topography, and the characteristics of soils and Receiving Water quality. 11B58BCity 3B73B21Bof Tem163Becu50B80Bla construction inspectors inspect the inventoried Construction Sites according to the schedule below.

7.4.1 Rainy Season[11] Inspection Frequency

Table 7-1: Construction Site Inspection Frequency

Priority	Supporting Criteria [(a)]	Rainy Season Inspection Frequency
High	• Sites that disturb an area greater than 30 acres with rough grading or with active, unstabilized slopes occurring during the Rainy Season • Sites disturbing an area greater than one (1) acre within the same hydrologic subarea and tributary to Receiving Waters with CWA Section 303(d) listed waters for sediment or turbidity Impairments or within, directly adjacent to, or discharging directly to a Receiving Water within an ESA. • Other sites determined by the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla as a significant threat to water quality, considering the following factors: o Soil erosion potential (e.g. Hillside sites) o Project size and type o Sensitivity of and proximity to Receiving Waters (particularly ESAs since no Receiving Waters are 303(d) listed for sediment or turbidity) o History or presence of Illegal Non-Stormwater Discharges o Known past record of non-compliance by the operators of the Construction Site o Any other relevant factors.	Every Two Weeks
Medium	Project Size Sites disturbing an area of one acre or more.	Monthly
Low	Project Size Sites disturbing less than 1 acre.	As needed

7.4.2 Dry Season Inspection Frequency

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla inspects all Construction Sites as needed during the Dry Season. Sites meeting the criteria in Section F.2.e.(1) of the 2010 SMR MS4 Permit are inspected at least once in August or September each year.

[11] The Rainy Season – (aka Wet Season) is the period of time from October 1 forward to April 30 when the Santa Margarita Region experiences the most rainfall.

7.4.3 Re-inspections

Based upon site inspection findings, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla implements all follow-up actions (i.e., re-inspection, enforcement) necessary to comply with the 2010 SMR MS4 Permit. Re-inspection frequencies are determined by the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla based upon the severity of deficiencies, the nature of the construction activity, and the characteristics of soils and Receiving Water quality.

7.4.4 Conducting Inspections

At a minimum, the following items are addressed by 11B58BCity 3B73B21Bof Tem163Becu50B80Bla staff during Construction Site inspections:

- Check for coverage under the Construction General Permit NOI and/or WDID No. during initial inspections;
- Assessment of compliance with 11B58BCity 3B73B21Bof Tem163Becu50B80Bla ordinances and permits related to Runoff, including the implementation and maintenance of designated minimum BMPs;
- Assessment of BMP effectiveness;
- Visual observations for Non-Stormwater discharges, potential Illicit Connections, and potential discharge of Pollutants in Stormwater Runoff;
- Review of site monitoring data results, if the site monitors its Runoff;
- Education and outreach on Stormwater Pollution prevention, as needed; and
- Creation of a written or electronic inspection report.

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla's Public Works inspectors track the number of inspections for each inventoried Construction Site within its jurisdiction throughout the reporting period to verify that each site is inspected at the minimum frequencies required. The Construction Site inspection form is included in Appendix E.

7.5 Enforcement {F.2.f }

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla has developed and implements an escalating enforcement process (Section 3.5) that is designed to achieve prompt corrective actions at Construction Sites for non-compliance with the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla's permits, requirements and Ordinances.

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla responds to construction complaints received from third-parties and to ensure the San Diego Regional Board that corrective actions have been implemented, if warranted.

7.6 Reporting of Non-Compliant Construction Sites {F.2.g}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla will notify the San Diego Regional Board when the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla issues high level enforcement (as defined in Section 3.5) to a Construction Site that poses a significant threat to water quality in its jurisdiction as a result of violations of its water quality ordinances.

In addition, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla annually notifies the San Diego Regional Board, prior to the commencement of the Rainy Season (October 1st), of all Construction Sites with alleged violations that pose a significant threat to water quality. Information may be provided as part of the JRMP Annual Report if submitted prior to the Rainy Season. Information provided must include, but not be limited to, the following:

(a) WDID number if enrolled under the Construction General Permit

(b) Site location, including address

(c) Current violations or suspected violations

8.0 INDUSTRIAL AND COMMERCIAL SOURCES {F.1.B.}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla implements the following Industrial and Commercial Program which has been designed to help prevent Illicit Discharges into the MS4, reduce industrial and commercial discharges of stormwater pollutants into and from the MS4 to the MEP, and prevent Industrial and Commercial Facility discharges to the MS4 from causing or contributing to a violation of Water Quality Standards in Receiving Waters. The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla will continue to review the effectiveness of the Industrial and Commercial Facility inspection program annually and make additional program modifications as necessary.

8.1 Industrial/Commercial Source Identification & Inventory {F.1.b.(1)(a)}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla developed and maintains an updated inventory/database of Industrial and Commercial Facilities within its jurisdiction that could contribute a significant pollutant load to the MS4, as identified by the 2010 SMR MS4 Permit. Facilities are included in this inventory regardless of whether the facility is subject to the Industrial General Permit, or other individual NPDES permits issued by the State Board or the San Diego Regional Board. An electronic copy of this inventory is maintained by the Public Works Department.

The Public Works Department regularly updates the inventory/database using information obtained during facility inspections or from any of the following sources: conditional use permits, plot plans, building permits, business licenses, occupancy permits, etc.

8.1.1 Facility Categories

As listed in the 2010 SMR MS4 Permit, the Industrial and Commercial Facilities inventory/database must include the following categories of potential sources:

Industrial Sites/Sources

- Industrial Facilities, as defined at 40 CFR § 122.26(b)(14), including those subject to the General Industrial Permit or other individual NPDES permit;
- Operating and closed landfills;
- Facilities subject to SARA Title III; and
- Hazardous Waste treatment, disposal, storage and recovery facilities.

Commercial Sites/Sources

- Automobile repair, maintenance, fueling, or cleaning;
- Airplane repair, maintenance, fueling, or cleaning;
- Boat repair, maintenance, fueling, or cleaning;
- Equipment repair, maintenance, fueling, or cleaning;
- Automobile and other vehicle body repair or painting;

- Mobile automobile or other vehicle washing;
- Automobile (or other vehicle) parking lots and storage facilities;
- Retail or wholesale fueling;
- Pest control services;
- Eating or drinking establishments, including such retail establishments with food markets;
- Mobile carpet, drape or furniture cleaning;
- Cement mixing or cutting;
- Masonry;
- Painting and coating;
- Botanical or zoological gardens and exhibits;
- Landscaping;
- Nurseries and greenhouses;
- Golf courses, parks and other recreational areas/facilities;
- Cemeteries;
- Pool and fountain cleaning;
- Marinas;
- Portable sanitary services;
- Building material retailers and storage;
- Animal boarding facilities and kennels;
- Mobile pet services;
- Power washing services;
- Plumbing services; and
- Other sites and sources as identified by the Copermittee as having a history of un-authorized discharges to the MS4.

ESAs and 303(d) Listed Waterbodies

All other Industrial or Commercial sites/sources tributary to and within the same hydrologic subarea as a CWA Section 303(d) Impaired water body segment, where the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla has determined that the site/source generates Pollutants for which the water body segment is Impaired. All other Commercial or Industrial Sites/sources within or directly adjacent to or discharging directly to Receiving Waters within ESAs (as defined in Attachment C of the 2010 SMR MS4 Permit) or that the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla has determined generate Pollutants tributary to and within the same hydrologic subarea as an observed exceedance of an Action Level of those Pollutants.

All other Industrial or Commercial Sites/sources that the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla determines may contribute a significant Pollutant load to the MS4.

8.1.2 Inventory Information

The information for each facility in the Industrial and Commercial Facility Database includes the following information:

- Name of facility;
- Street Address;
- Pollutants potentially generated by the facility;
- Identification of whether the facility is tributary to a CWA §303(d) water body segment and generates Pollutants for which the water body segment is Impaired;
- A narrative description including SIC codes which best reflects the principal products or services provided by the facility.
- Facility Category (per Section 8.1.1)
- Facility contact
- Facility contact phone number
- WDID number associated with the Industrial General Permit (if any)
- Other NPDES permit or Waste Discharge Requirements

This database will assist in identifying information necessary for the copermittees to take enforcement actions, if required.

8.1.3 Facilities that pose a high threat to water quality

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla identifies those facilities that pose a high threat to Receiving Water quality.

All inventoried sites are inspected at least once during a five year period. In evaluating threat to water quality, the 2010 SMR MS4 Permit identifies the following factors that are to be considered:

(i) Type of activity (SIC code);

(ii) Materials used at the facility;

(iii) Wastes generated;

(iv) Pollutant discharge potential, including whether the facility generates a Pollutant that exceeds an Action Level;

(v) Non-Stormwater discharges;

(vi) Size of facility;

(vii) Proximity to Receiving Water bodies;

(viii) Sensitivity of Receiving Water bodies;

(ix) Whether the facility is subject to the General Industrial Permit or an individual NPDES permit;

(x) Whether the facility has filed a No Exposure Certification/Notice of Non-Applicability;

(xi) Facility design; total area of the site, portion of the site where industrial or commercial activities occur, and area of the site exposed to rainfall and Runoff;

(xiii) The facility's compliance history; and

(xiv) Any other relevant factors.

Primarily, the designation of Industrial and Commercial Facilities that are a high threat to Receiving Water quality will be assessed using the monitoring described in the CMP, through the Watershed Water Quality Workplan assessments. As described in the Santa Margarita Watershed Water Quality Workplan, where an MS4 Outfall Action Level exceedance is detected in a Receiving Water with chronic exceedances of Basin Plan Objectives for the same Pollutant, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla will evaluate appropriate response actions to address that Action Level exceedance. Where the appropriate response action is identified as enhanced or focused industrial or commercial inspections, all facilities in the inventory that are tributary to that outfall and are known to generate Pollutants associated with the Action Level exceedance (per the inventoried information about the facility) will be designated as high priority facilities. Further prioritization among inventoried industrial and commercial facilities may be performed by the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla using the remaining factors identified above.

8.2 General BMP Implementation

8.2.1 Pollution Prevention BMPs {F.1.b.(2)(a)}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla has designated the following set of minimum Pollution Prevention BMPs for the Industrial and Commercial Facilities within its jurisdiction to reduce the discharge of pollutants to the MEP:

- Good Housekeeping
- Proper Materials Handling and Storage
- Proper Waste Handling
- Preventive Maintenance
- Spill Prevention and Response Procedures (where applicable)
- Facility Personnel Training

Through the process of conducting inspections of Industrial and Commercial Facilities, the inspectors make the facilities aware of these minimum BMPs and additional BMPs (when appropriate) and of the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla's applicable ordinance(s).

8.2.2 Minimum BMPs {F.1.b.(2)(b)}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla has also designated the following minimum set of BMPs for all applicable inventoried Industrial and Commercial sites/sources within its jurisdiction that are specific to facility types and pollutant-generating activities. During the inspection of inventoried Industrial and Commercial facilities, the following minimum BMPs are verified as applicable to the facility. Where applicable, CASQA BMP Fact sheets are noted:

Item #	Minimum BMP	CASQA BMP Fact Sheet
1	Hazardous Waste/Materials storage areas are clean, no signs of leakage, and protected from rainfall and Runoff;	SC-34
2	Trash bin areas are clean, the bin lids are closed, the bins are not filled with liquid, and no signs of leakage from the trash bins	SC-34
3	Aboveground tanks have been properly maintained including no signs of leakage, and secondary containment in good condition	SC-11, SC-31, SC-33
4	Onsite storm drain inlets are protected from inappropriate Non-Stormwater discharges	SC-44
5	Oil/water separators are connected to sanitary sewer	NA
6	Wash water from wash pads (steam cleaning or high pressure cleaning) is directed to the sanitary sewer and does not discharge to the MS4	SC-10
7	Mop bucket wash water is discharged to sanitary sewer via clarifier	SC-10
8	Parking lot areas are free of trash, debris, and fluids other than water	SC-43
9	Facility has coverage under the Industrial General Permit, if appropriate	NA

Item #	Minimum BMP	CASQA BMP Fact Sheet
10	Oil and grease Wastes are not discharged onto a parking lot, street or adjacent catch basin	SC-10
11	Trash bin areas are clean, the bin lids are closed, the bins are not filled with liquid, and the bins have not been washed out into the MS4	SC-43
12	Floor mats, filters and garbage containers are not washed in adjacent parking lots, alleys, sidewalks, or streets and no wash water is discharged to MS4s	SC-10
13	Parking lot areas are cleaned by sweeping, not by hosing down, and the facility operator uses dry methods for spill cleanup	SC-43

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla will continue to regularly review and update these designated BMPs for adequacy and subsequently submit any updates in the JRMP Annual Report.

8.2.3 Enhanced BMPs for ESAs and 303(d) Impairments {F.1.b.(2)(c)}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla designates enhanced measures as necessary for inventoried Industrial and Commercial sites/sources that:

- Are tributary to and within the same hydrologic subarea as CWA Section 303(d) Impaired water body segments (where the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla has determined that the site/source generates pollutants for which the water body segment is impaired).
- Are within or directly adjacent to or discharging directly to Receiving Waters within ESAs.

8.2.4 BMP Implementation {F.1.b.(2)(d)}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla requires the implementation of the designated minimum and enhanced BMPs and any additional measures necessary based on inspections, incident responses, and water quality data to comply with the 2010 SMR MS4 Permit at each Industrial and Commercial Site/source within its jurisdiction. To ensure that the designated BMPs are implemented by the facility owner/operator, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla implements the following programmatic BMPs:

- Maintain and update Inventory of facilities (Section 8.1)
- Designates appropriate BMPs to be implemented by each facility (Section 8.2)
- Conducts inspections (Section 8.4)
- Enforces City ordinances (Section 3.5)

8.3 Mobile Businesses Program {F.1.b.(3)}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla has developed and is implementing a program to reduce the discharge of Stormwater Pollutants from Mobile Businesses to the MEP and to prohibit Non-Stormwater discharges pursuant to Section B of the 2010 SMR MS4 Permit. The 11B58BCity

3B73B21Bof Tem163Becu50B80Bla maintains as part of its commercial source inventory a listing of Mobile Businesses known to operate within its jurisdiction that conduct services listed above in Section 8.1.

8.3.1 Minimum BMPs for Mobile Businesses {F.1.b.(3)(i)}

Based on the activities associated with the Mobile Businesses identified in the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla's jurisdiction, the following list of potential Source Control BMPs was developed for each of the categories of Mobile Businesses:

Power Washing Activities

- Direct discharge to landscape areas, prevent discharge from leaving site, contain wash water and dispose into sanitary sewer or landscape area

Mobile carpet, drape or furniture cleaning

- Direct discharge to landscape areas, prevent discharge from leaving site, discharge wash water to sanitary sewer, use of environmentally safe products

Mobile equipment repair, maintenance, fueling or cleaning

- contain runoff and vacuum all liquids and debris

Pest control services

- Do not apply pesticide within 24-hours of forecasted rain above 50% chance, try to minimize use, and use products according to their instructions

Cement mixing or cutting

- contain runoff and vacuum all liquids and debris

Masonry

- contain pollutants onsite, cover materials, wash out in landscape areas

Mobile painting and coating

- contain pollutants onsite, cover materials, wash out in landscape areas

Landscaping

- contain fertilizers onsite, cover materials, blow debris back onto landscape areas and not into street

Pool and Fountain Cleaning

- discharge to sanitary sewer or landscape areas, remove chlorine and other pollutants before discharge into MS4

Portable Sanitary Services

- contain runoff and vacuum all liquids and debris

Mobile Pet Services

- disposal of hair and other solids in proper waste containers, dispose of waste water into sanitary sewer

Power Washing Services

- Direct discharge to landscape areas, prevent discharge from leaving site, contain wash water and vacuum all liquids and debris

Plumbing Services

- proper disposal of waste, good house keeping

8.3.2 Notification and Response {F.1.b.(3)(iii)}

Each Copermittee notifies all Mobile Businesses based within, or discovered operating within their jurisdiction concerning the minimum Source Control and Pollution Prevention BMPs that they must implement when conducting their activities. The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla identifies Mobile Businesses based within, or operating within their jurisdictions based on the City's business license list, word of mouth by other mobile operators, and direct contact when the City comes across an active mobile operator.

When put on notice by staff or a third-party of a potential violation originating from a Mobile Business that is not already being responded to by another responsible agency (e.g., other Copermittee), the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla investigates and take the actions as described in Section 3.5.3.

8.3.3 Database {F.1.b.(3)(a)}

The copermittees include Mobile Businesses and their bases of operation in the Industrial/Commercial Facility Database described in Section 8.1. This database will assist in identifying information necessary for the copermittees to take enforcement action, if required.

8.4 Industrial and Commercial Facility Inspections {F.3.b.}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla conducts Industrial and Commercial site inspections for compliance with its ordinances, permits, and the 2010 MS4 Permit.

8.4.1 Inspection Frequencies {F.1.B.(4)(B)

At a minimum, all sites determined by the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla to pose a high threat to water quality (Section 8.1.3) are inspected annually. All other inventoried sites are inspected at least once during a five year period.

8.4.2 Inspection Procedures {F.3.b.(4)}

When conducting facility/business inspections, at a minimum, the following are addressed:

- Review of BMP implementation plans not including Project-Specific WQMPs required pursuant to Section F.1.d of the 2010 SMR MS4 Permit, if the site uses or is required to use such a plan;
- Review of facility monitoring data, if the site monitors its runoff;
- Check for coverage under the General Industrial Permit NOI and/or WDID, if applicable;
- Assessment of compliance with 11B58BCity 3B73B21Bof Tem163Becu50B80Bla ordinances and 11B58BCity 3B73B21Bof Tem163Becu50B80Bla issued permits related to runoff;
- Assessment of the implementation, maintenance and effectiveness of the designated minimum and/or enhanced BMPs;
- Visual observations for Non-Stormwater discharges, potential Illicit Connections, and potential discharge of pollutants in stormwater runoff; and
- Education and training on stormwater pollution prevention, as conditions warrant.

8.4.3 Inspection Program Approach

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla ensures that all inventoried facilities are inspected pursuant to the frequencies and procedures identified in Sections 8.4.1 and 8.4.2, respectively. These requirements are met through a combination of approaches as described below.

8.4.3.1 Compliance Assistance Program

The County's Department of Environmental Health implements the CAP for oversight and inspection of Industrial and Commercial Facilities within the County's jurisdiction. Until recently, this program served as the baseline inspection program for the City of Temecula.

The CAP involves a detailed stormwater compliance survey for facilities that must secure a Hazardous Materials permit for storing, handling or generating such materials and for retail food facilities. Many types of Industrial and Commercial Facilities are inspected by the County's Department of Environmental Health Hazardous Materials Management staff including those that conduct automobile mechanical repair, maintenance, fueling, or cleaning operations, automobile or other vehicle body repair or painting operations, and painting or coating operations.

Blank copies of the forms used by the County's Department of Environmental Health when conducting these stormwater compliance surveys are included in Appendix F. Completed survey forms are forwarded to the District and the appropriate Copermittee. The respective jurisdiction's representative identifies those surveys that indicate non-compliance to initiate a follow-up inspection.

The CAP includes educational outreach to the inspected facilities and completion of a detailed stormwater compliance survey. In conducting a facility inspection, if it appears that the facility may be required to have coverage under the Industrial General Permit and the facility operator indicated that a NOI or SWPPP is not onsite, the inspector provides the facility operator with an informational sheet on the requirements of the Industrial General Permit and makes a note on the compliance survey that the NOI or SWPPP was not available onsite. The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla also verifies the SIC codes of each Industrial facility to ensure that the Industrial General Permit is obtained where necessary.

8.4.3.2 Third Party Certifications {F.1.d(4)(c)}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla may in the future propose to develop and implement a third party certification program subject to San Diego Regional Board Executive Officer acceptance. This program would verify Industrial and Commercial Site/source compliance with the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla's ordinances, permits, and this Order. To the extent that third party certifications are conducted to fulfill the requirements of Section F.3.b.(4) of the 2010 SMR MS4 Permit, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla will retain responsibility for compliance with the 2010 SMR MS4 Permit and will be responsible for conducting and documenting quality assurance and quality control of the third-party certifications.

If the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla proposes a third party certification program it will include the following:

(i) A description of the procedures and measures for quality assurance and quality control;

(ii) A listing of sites/sources that may and may not participate in the program;

(iii) The representative percentage of certifications that would qualify to satisfy the inspection requirements in Section F.3.b(4)(c) of the 2010 SMR MS4 Permit;

(iv) Photo documentation of potential stormwater violations identified during the third party inspection;

(v) Reporting to the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla of identified significant potential violations, including imminent or observed Illegal Discharges, within 24 hours of the third party inspection;

(vi) Reporting to the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla of all findings within one week of the inspection being conducted; and

(vii) 11B58BCity 3B73B21Bof Tem163Becu50B80Bla follow-up and/or enforcement actions for identified potential Stormwater violations within two business days of the potential violation report receipt.

Based upon site inspection findings, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla will implement all follow-up actions and enforcement necessary to comply with the 2010 SMR MS4 Permit.

8.4.4 Regional Board Inspections {F.1.d.(4)(c)}

To the extent that the San Diego Regional Board has conducted an inspection of an Industrial Site during a particular year, the requirement for the responsible Copermittee to inspect this facility during the same year is deemed satisfied.

8.4.5 Tracking Inspections

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla tracks the number of inspections for the inventoried Industrial and Commercial Sites/sources throughout the reporting period to verify that the sites/sources are inspected at the minimum frequencies listed in the 2010 SMR MS4 Permit.

8.4.6 Enforcement of Industrial and Commercial Sites/Sources

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla enforces its water quality ordinance for all Industrial and Commercial Sites/sources as necessary to maintain compliance with the 2010 SMR MS4 Permit. The Enforcement/Compliance Strategy is described in Section 3.5 of this JRMP.

8.4.7 Reporting of Non-Compliant Sites {F.1.d(6)}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla provides annual notification to the San Diego Regional Board, prior to the commencement of the Wet Season, of any unresolved high level enforcement action (as defined in the 11B58BCity 3B73B21Bof Tem163Becu50B80BlaCity's' JRMP) that poses a significant threat to water quality in its jurisdiction as a result of violations of the water quality ordinances.

9.0 RESIDENTIAL SOURCES {F.c}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla implements the following residential program, which has been designed to meet the requirements of Section F.3.c. of the 2010 SMR MS4 Permit, help prevent Illicit Discharges into the MS4, reduce residential discharges of Stormwater Pollutants from the MS4 to the MEP, and prevent residential discharges from the MS4 from causing or contributing to a violation of Water Quality Standards.

9.1 Program Approach

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla actively encourages the use of pollution prevention methods by residents, particularly for those high priority residential areas and activities described above. The following describes the programs implemented by the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla:Training City Personnel who have regular contact with residential areas (e.g., park maintenance personnel, street sweepers, code enforcement officers, etc.) to serve as informal inspectors performing field reviews. The training programs are further described in Section 12.

- Participation in County-wide Public Education Efforts including (as further described in Section 11.
  - Maintenance of brochures on various topics pertinent to the high priority residential activities described in Section 11.
  - Maintenance of a public education website
  - Issuance of quarterly e-newsletters
  - Outreach at Community events
  - Outreach at Home Improvement stores
  - Elementary School assembly presentations
  - Maintenance of a "1-800" hotline for reporting of complaints or illegal discharges

9.2 High Priority Residential Areas and Activities {F.3.c.(1)}

The 2010 SMR MS4 Permit identifies the following residential activities as posing a high threat to water quality:

- Automobile repair, maintenance, washing and parking.
- Home and garden care activities and product use (pesticides and fertilizers);
- Disposal of trash, pet waste, green waste, and household hazardous waste (e.g., paints, cleaning products);
- Any residential areas tributary to and within the same hydrologic subarea as a CWA Section 303(d) Impaired water body, where the residence generates Pollutants for which the water body is Impaired; and
- Any residential areas within or directly adjacent to or discharging directly to Receiving Waters within an ESA.

9.3 Designated BMPs {F.3.c.(2)(b)}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla has designated a set of minimum BMPs for high-threat-to-water-quality residential areas and activities within their jurisdiction to reduce the discharge of Pollutants to the MEP. The minimum BMPs, all of which are Pollution Prevention BMPs, are:

Table 9-1: Designated Residential BMPs

Area or Activity		Designated BMPs	Reference Material
A	Residential: Automobile repair, maintenance, washing and parking	• Collect and properly dispose of automotive fluids and other waste • Clean up spills using dry cleanup methods where possible • Store Hazardous Materials away from rain and Runoff • Avoid hosing down parking areas • Prevent all leaks and/or spills from entering the street or MS4	**Brochures (See Section 11):** • Automotive Maintenance and Car Care Brochure • Outdoor Cleaning **CASQA BMP Fact Sheets:** • SC-20 • SC-21 • SC-22 • SC-43
B	Home and garden care activities and product use (pesticides, herbicides and fertilizers)	• Prevent irrigation runoff • Store and apply pesticides, fertilizers and other chemicals in accordance with their labeling • Avoid applying pesticides, herbicides and fertilizers before forecasted rain	**Brochures (See Section 11):** • Landscape and Garden • 10 Ways to Save Water Outdoors **CASQA BMP Fact Sheets:** • SC-73 • SD-10 • SD-12

C	Disposal of trash, pet waste, green waste, and Household Hazardous Waste (e.g., paints, cleaning products)	• Properly dispose of pet waste • Collect green waste and never blow such waste into the street, gutter or MS4 • Never dispose of Waste in a street, gutter or MS4 • Take Household Hazardous Waste to a designated collection center	• **Brochures (See Section 11):** • After the Storm • What's the Scoop • Tips for Horse Care • Landscape and Garden • Pools, Spas and Fountains **HHW and ABOP Collection Events** http://www.rivcowm.org/opencms/hhw/index.html **Videos:** • Animal Care • Household Hazardous Waste • Managing your Lawn and Garden • Outdoor Activities

The residential activities described in Table 9-1 above are assumed to occur with equal likelihood in all residential areas within the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla's jurisdiction. The implementation of the residential program and the minimum BMPs designated above is therefore designed to address these activities on a City-wide basis. This includes addressing pollutants from residential areas that may be tributary to and potentially impacting a CWA Section 303(d) Impaired water body, and for addressing residential discharges into ESAs.

The above list of residential areas and activities and associated BMPs may be updated by the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla in response to the Santa Margarita Watershed Water Quality Workplan assessments.

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla requires implementation of the minimum BMPs and any additional measures necessary to comply with the Prohibitions and Receiving Water Limitations and restrictions on Non-Stormwater discharges as specified in the 2010 SMR MS4 Permit.

9.4 Hazardous Waste BMPs {F.3.c.(2)(c)}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla participates in regional activities to facilitate the proper collection and management of used oil, Toxic and Hazardous materials, and other household Wastes. This includes assisting in the distribution of information regarding the dates and locations of temporary and permanent HHW and ABOP collection events and facilities, financial support of HHW and ABOP collection facilities and events, and curbside or special collection sites managed by the Copermittees or private entities, such as solid waste haulers.

9.5 Common Interest Areas, Home Owner Associations and Mobile Home Parks {F.3.c.(4)}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla requires implementation of effective management measures in CIAs, HOAs and mobile home parks (MHPs) to ensure that runoff within and from these areas meets the objectives of the 2010 SMR MS4 Permit. The designated BMPs for residential CIAs, HOAs, and MHPs are as described in Section 9.3. Additional BMPs may be required based on a review of pertinent factors, including:

- Maintenance duties and procedures typically used by CIA/HOA maintenance associations within its jurisdiction;
- Whether streets and storm drains are publicly or privately owned within the CIA/HOA or MHP;
- Whether the CIA/HOA or MHP has been identified as a high priority residential area based on an evaluation of the site potential to generate Pollutants contributing to a 303(d) listed waterbody or an observed Action Level exceedance; and
- Other activities conducted or authorized by the HOA that may pose a significant risk to inland Receiving Waters.

Additional BMPs that may be applicable to CIAs, HOAs, and/or MHPs (in addition to those referenced in Section 9.3) are:

Table 9-2: Additional BMPs for CIAs, HOAs, and MHPs

	Area or Activity	Designated BMPs	Reference Material
A	Outdoor Cleaning Activities	• Clean up spills using dry cleanup methods where possible • Avoid hosing down parking areas • Prevent all wash water, leaks and/or spills from entering the street or MS4	**Brochures (See Section 11):** • Outdoor Cleaning **CASQA BMP Fact Sheets:** • SC-43
B	Community Pools / Fountains	• Properly maintain community pools and/or fountains to avoid Illegal Discharges • Properly store all chemicals and equipment used in maintaining the pools/fountains	• **Brochures (See Section 11):** • Pools, Spas and Fountains **CASQA BMP Fact Sheets:** • SC-72
C	Community streets, roads and parking lots	• Sweep streets/roads as necessary to prevent accumulated trash or debris from entering the MS4 • Schedule repairs for Dry Weather, and protect nearby storm drain inlets for repairs that must occur during the Wet Season	**CASQA BMP Fact Sheets:** • SC-43 • SC-70

D	Community-owned MS4	• Regularly inspect and remove litter and/or other debris from inlets- before the Wet Season • If there is evidence of Illegal Discharges or dumping, attempt to find and eliminate the source. Refer to the local code enforcement agency if necessary. • Post no-dumping signs in areas where trash or other illegal dumping accumulates	**CASQA BMP Fact Sheets:** • SC-10 • SC-74

9.6 Enforcement {F.3.c.(3)}

If during an inspection in response to a complaint, the City observes that a residence or a CIA/HOA/MHP is non-compliant with the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla's water quality ordinances, (including the prohibition of non-exempt Non-Stormwater discharges), the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla begins enforcement procedures. Procedures for enforcement of the water quality ordinances is described in Section 3.5 and the process for elimination of IC/IDs is described in Section 4.

10.0 RETROFITTING EXISTING DEVELOPMENT{F.3.D.}

The goals of the Existing Development Retrofitting Program are to address the impacts of existing development through retrofit projects that reduce impacts from Hydromodification, promote LID, support riparian and aquatic habitat restoration, reduce the discharges of stormwater pollutants from the MS4 to the MEP, and prevent discharges from the MS4 from causing or contributing to a violation of Water Quality Standards. Where feasible, at the discretion of the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla, the Existing Development Retrofitting Program may be coordinated with flood control projects and other infrastructure improvement programs.

To facilitate consistent implementation of the Existing Retrofit Program in the Santa Margarita Region, the Copermittees prepared the Santa Margarita Region Retrofit Program Study, which is available at http://rcflood.org/NPDES/SantaMargaritaWS.aspx. The components of this Retrofit Program Study represent an adaptive approach to meeting the Retrofit requirements of the MS4 Permit.

The Retrofit Program itself consists of a multi-step process to identify and ultimately prioritize the actions and efforts that are best suited to addressing specific water quality issues in the Santa Margarita Region. The steps in this Retrofit Program enable the Copermittees first to identify water quality, watershed, infrastructure, or other issues or Conditions of Concern; second to develop context for the issues; and finally to use a series of tools, called the "Retrofit Program Framework," to identify the best strategy or strategies to address them, up to and including Retrofit projects. The tools can be applied and re-combined as the Copermittees' programs evolve and develop, to identify Retrofit project needs, priorities, and opportunities, and to select and design appropriate Structural or Non-Structural BMPs that may provide the most cost-effective reduction measures for Pollutants or Conditions of Concern.

10.1 Identification of Conditions of Concern

The potential issues which may trigger a Retrofit evaluation are listed in Table 10-1 below, and correspond to the "Problem or Condition (NAL/SAL Exceedance)" column headings in the BMP Menu, (Appendix B of the Retrofit Program Study).

Table 10-1: Observations Potentially Triggering a Retrofit Program Framework Analysis

Irrigation Runoff	
Hydrologic modification/channel instability	
Illicit Connection/Discharge	
Action Level Exceedances or TMDLs related to:	
Metals	Pesticides
Organics	Nutrients
Oil & grease	Bacteria
Sediment	

10.2 Source Assessment & Identification

When the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla identifies a problem identified in Table 10-1, Step 2 of the Retrofit Program Framework identifies that the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla conduct source identification in an attempt to determine the source and/or areas of development that may potentially be retrofitted. To aid in the source identification, the Retrofit Program Study provides land use maps as well as information about pollutants associated with those land uses, and factors that can be used to help guide a Copermittee to narrow down potential sources.

The procedures for source identification are described in Section 4.4.2 of this JRMP.

One possible outcome of the source assessment could be identification of a single point source. Under this scenario, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla would implement JRMP enforcement programs to eliminate the source of the issue. The other possible outcome is that there is not an identifiable point source of the issue. In this instance, Step 3 of the Retrofit Program Framework is to assess the current JRMP program implementation relative to the Pollutant or condition of concern, its likely source, the land use and management setting, and the Copermittee's responsibilities and initiatives that may or should be able to address the issue. The purpose of this step is to assess whether the problem or condition may be mitigated through more effective or aggressive implementation of its existing authorities and programs in the JRMP, or if supplemental actions – such as Retrofit projects (Non-Structural and/or Structural) – may be required. The results of this evaluation may reveal that the existing JRMP program implementation could be enhanced to address the issue; in that case any deficiencies or needed improvements in 11B58BCity 3B73B21Bof Tem163Becu50B80Bla programs would be addressed and reported in the JRMP Annual Report.

If the JRMP programs are being adequately implemented the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla can use Steps 4 and 5 of the Retrofit Program Framework, to evaluate structural and non-structural Retrofit BMPs. An early step in the evaluation would be to asses if Non-Structural Retrofit BMPs would be an appropriate solution. In instances where a Non Structural Retrofit BMP is not a feasible option to address the identified problem and where the Watershed Workplan has identified the problem as a Priority 1 issue, 11B58BCity 3B73B21Bof Tem163Becu50B80Bla can use the BMP menu to evaluate Structural BMPs.

10.3 Identification of Candidate Areas for Retrofitting *{F.3.d.1.}*

Existing areas of development (i.e., municipal, industrial, commercial, residential) within the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla have been identified and inventoried as candidates for Retrofitting in the Santa Margarita Region Retrofit Program Study. Potential Retrofitting candidates include but are not limited to:

1. Areas of development that generate Pollutants of Concern to a TMDL or an ESA;

2. Receiving Waters that are channelized or otherwise hardened;

3. Areas of development tributary to Receiving Waters that are channelized or otherwise hardened;

4. Areas of development tributary to Receiving Waters that are significantly eroded; and

5. Areas of development tributary to an Area of Special Biological Significance (ASBS) or SWQPA.

The potential retrofitting candidate areas are identified in Figure 20 of the Santa Margarita Region Retrofit Program Study. When a specific problem has been identified per the Retrofit Program Framework, this initial inventory will be tailored to identify and prioritize focused areas of development as necessary during the source identification process described in Section 10.4.

10.4 Prioritization of Candidate Areas for Retrofitting *{F.3.d.2.}*

The inventoried areas of existing development that are tributary to the identified Condition of Concern will be evaluated and ranked as part of Step 4 and/or Step 5 of the Retrofit Program Framework, as necessary, to prioritize Retrofit projects. Criteria for evaluation include, but are not limited to:

1. Feasibility;

2. Cost effectiveness;

3. Pollutant removal effectiveness, including reducing Pollutants exceeding Action Levels;

4. Tributary area potentially treated;

5. Maintenance requirements;

6. Landowner cooperation;

7. Neighborhood acceptance;

8. Aesthetic qualities;

9. Efficacy at addressing concern; and

10. Potential improvements on public health and safety.

A prioritized inventory of existing areas of development identified as candidates for retrofitting will be developed and provided in the JRMP Annual Report, as applicable in response to steps 4 and 5 of the Retrofit Program Framework.

10.5 Incorporation into Watershed Workplan *{F.3.d.3.}*

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla will consider the results of the Retrofit Program Framework, when applicable, in prioritizing Watershed Work Plans for the following year in accordance with Section G.1 of the 2010 SMR MS4 Permit and in assessing the JRMP program effectiveness in accordance with Section J of the Permit.

Evaluation of Retrofit BMP options will consider program jurisdiction (e.g., regulated construction sites vs. agricultural operations with waivers), evaluation of whether Non-Structural Retrofit BMP approaches are sufficient to address the problem, and, if necessary, evaluation of sites and BMPs for structural Retrofit projects. As noted above, the methodology in the Retrofit Program Framework prioritizes the use of Non-Structural BMPs, which can be implemented far more quickly and often at a much lower cost.

Structural BMPs are assessed where the identified issue is identified as a priority 1 issue in the Watershed Workplan, and the Non-Structural BMPs are insufficient to address the problem. Highly feasible projects expected to benefit water quality will be given a high priority to implement Source Control and Treatment Control BMPs. Where Structural BMPs are proposed and where feasible, the Retrofit projects may be designed in accordance with the WQMP requirements within Sections F.1.d.(3) through F.1.d.(8) and the Hydromodification requirements in Section F.1.h. of the 2010 SMR MS4 Permit.

10.6 Encouraging Private Retrofitting Projects *{F.3.d.4.}*

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla will cooperate with private landowners to encourage site specific Retrofitting projects, where identified as necessary to address a pollutant or condition of concern pursuant to steps 4 and 5 of the Retrofit Program Framework, or where deemed appropriate by the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla as part of enforcement measures where a source is found. The following practices will be considered in cooperating and encouraging private landowners to retrofit their existing development, which are included in the BMP Menu, (Appendix B of the Retrofit Program Study). Such practices may include but are not limited to:

1. Education and outreach;
2. Requiring Retrofit projects as enforcement, mitigation or ordinance compliance when a source of discharge is found;
3. Fees for existing discharges to the MS4 and reduction of these fees for Retrofit implementation;
4. Subsidies for Retrofit projects;
5. Public and private partnerships; and
6. Demonstration Retrofit projects on public land and easements.

10.7 Tracking Retrofit BMPs *{F.3.d.(5)}*

The known completed Retrofit BMPs will be maintained in the watershed-based database established to track and inventory post-construction Structural BMPs in accordance with Section F.1.f. of the 2010 SMR MS4 Permit. Retrofit BMPs on publicly owned properties will be inspected to verify that they are operating effectively and have been adequately maintained per Section F.1.f of the 2010 SMR MS4 Permit. Privately owned Retrofit BMPs will be inspected as needed.

10.8 Regional Mitigation Projects *{F.3.d.(6)}*

Where constraints on Retrofitting preclude effective BMP deployment on existing developments at locations critical to protect Receiving Waters pursuant to Step 5 of the Retrofit Program Framework, a

regional mitigation project may be proposed to improve water quality. Such regional projects may include but are not limited to:

1. Regional water quality treatment BMPs;
2. Urban creek or wetlands restoration and preservation;
3. Daylighting and restoring underground creeks;
4. Localized rainfall storage and reuse to the extent such projects are fully protective of downstream water rights;
5. Hydromodification projects; and
6. Removal of invasive plant species.

11.0 PUBLIC EDUCATION COMPONENT{F.6.}

Developing programs to increase public awareness and to involve the public can be an effective method for controlling pollution associated with runoff. Emphasizing the relevant impact of runoff to target audiences increases the likelihood that the messages will be noticed and that the audience will support and participate in program implementation. The Riverside County Permittees have developed a County-wide Public Education and Outreach Program that is implemented by the District.

To leverage Copermittee resources, the Public Education and Outreach Program may partner with other entities including Riverside County's Waste Management Department, Western Riverside Council of Governments, other County-wide stormwater public education programs in Southern California, the Riverside-Corona Resource Conservation District, and others to promote conservation, pollution prevention and environmental awareness. The public education program may also expand outreach opportunities by collaborating with entities such as Riverside County's Agricultural Commissioner and University California Cooperative Extension to promote proper use of pesticides and herbicides to specific target groups such as pesticide applicators and home gardeners.

The Public Education and Outreach Program maintains an Internet website that provides information to residents and businesses about stormwater management and offers stormwater pollution prevention activities. The website also provides a materials order form for educational materials, and has a tracking mechanism for the number of queries. The website address is http://rcflood.org/stormwater/.

11.1 Target Audiences

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla ensures that appropriate education and outreach is available to the following target audiences:

- Copermittee departments and personnel
- New Development / Redevelopment Project Applicants, Developers, Contractors, property owners, and other responsible parties
- Construction Site owners and operators
- Commercial Facility owners and operators
- Industrial Facility owners and operators
- Residential community and general public

11.2 Education of Public Audiences

11.2.1 General Education

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla, through the Implementation Agreement described in Section 3.2.1, coordinates with the other Copermittees to develop and implement County-wide educational activities through the regional 'Only Rain Down the Storm Drain' program implemented

by the District. Where necessary those regional activities are supplemented by the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla with additional localized educational / outreach activities.

In general, these education programs educate each target audience on the following topics, as appropriate and applicable to the target audience's potential Stormwater and Non-Stormwater discharges to the MS4:

(a) Applicable water quality laws, regulations, permits, and requirements;

(b) BMPs;

(c) General runoff concepts;

(d) Existing water quality, including local water quality conditions, Impaired waterbodies and ESAs; and

(e) Other topics, as determined by the Copermittee(s), such as public reporting mechanisms, water conservation, LID techniques, and public health and vector issues associated with Runoff.

In addition, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla implements educational activities, public information activities, and other appropriate activities to facilitate the proper management and disposal of used oil and toxic materials.

11.2.2 Target Audience Topics

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla ensures that their education program provides the following information:

New Development / Redevelopment and Construction Sites {F.6.b.(2)}

As early in the planning and development process as possible, and all through the permitting and construction process, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla notifies parties responsible for the construction project about the importance of educating all construction workers in the field about stormwater issues and BMPs, in addition to the general topics under Section F.6.a.(1) of the 2010 SMR MS4 Permit.

Commercial and Industrial Sites / Sources {F.6.b.(3)}

Through the inspection program, the owner/operator of each inventoried commercial and industrial site/source will be notified of the BMP requirements applicable to the site/source at least once during the five-year period of this Order.

Residential and General Public {F.6.b.(4)}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla, through the Implementation Agreement, collaborates with the other Copermittees to fund the development and implementation of the regional 'Only Rain Down the Storm Drain' public education program. One of the goals of this program is to educate residential and general public target communities on potential Pollutant generating activities (e.g.,

car washing, mobile operations, yard maintenance) and pollutant generating products (e.g., herbicides, fertilizers, household chemicals). The target audiences of the residential and general public education programs includes underserved target audiences (e.g., disadvantaged communities), residents and managers of CIA/HOA areas, and owners and residents of MHPs.

11.2.1 Methods

The Table 11-1 describes the public education and outreach methods that target public audiences:

Table 11-1: Public Education Education/Outreach Methods

Target Audience	JRMP Program Areas Addressed	Education / Outreach Methods
New Development / Redevelopment Project Applicants, Developers, Contractors, Property Owners, and other Responsible Parties	• F.1 • F.6.a • F.6.b.(2)	**Training** • Regional SMR WQMP Training (upon approval of revised SMR WQMP) • Regional HMP Training (upon approval of HMP) **Guidance Documents** • SMR WQMP and HMP Guidance • Regional LID BMP Design Handbook (http://rcflood.org/npdes/lidbmp.aspx) • CASQA Low Impact Development Manual for Southern California (https://www.casqa.org/LID/tabid/240/Default.aspx) • CASQA Stormwater BMP Handbooks (http://www.cabmphandbooks.com/) **Applications / Forms** • Project Application form • WQMP Initial Applicability Checklist **Electronic Outreach** • Regional Quarterly E-newsletters • Website **Other** • Regional Quarterly E-newsletters

Target Audience	JRMP Program Areas Addressed	Education / Outreach Methods
Construction Site Owners and Operators	• F.2. • F.6.a. • F.6.b.(2)	**Applications / Forms** • Grading Permit Application form • Construction Checklist (a sample is provided in WQMP Chapter 5) **Printed Material** • After the Storm • General Construction site supervision • Outdoor Cleaning Activities • Construction Poster **Electronic Outreach** • Regional Quarterly E-newsletters • Website
Commercial / Industrial Owners and Operators	• F.3.b. • F.6.a. • F.6.b.(3)	**Applications / Forms** • Business Registration form **Direct Outreach** • Business Partnerships with garden centers / nurseries, paint stores, hardware stores, home improvement stores, and pet facilities, including training for store staff on specific stormwater / BMP issues **Printed Material** • After the Storm • Did you know your facility may need a stormwater permit? • Automotive Maintenance and Car Care • Outdoor Cleaning Activities • Food Service Industry • Industrial / Commercial Facilities • Landscape and Garden • Pools, Spas and Fountains **Electronic Outreach** • Regional Quarterly E-newsletters • E-blasts to mobile service providers • Website

Target Audience	JRMP Program Areas Addressed	Education / Outreach Methods

12.0 11B58BCITY 3B73B21BOF TEM163BECU50B80BLA STAFF TRAINING{F.6.}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla's education program ensures that 11B58BCity 3B73B21Bof Tem163Becu50B80Bla staff and contractors (and Planning Boards and Elected Officials, if applicable) responsible for implementing the requirements of the 2010 SMR MS4 Permit have an understanding of the following topics as applicable to their responsibilities.

(i) Applicable water quality laws and regulations;

(ii) The potential effects and impacts that Copermittee departments and personnel activities related to their job duties can have on water quality);

(iii) Plan review policies and procedures to verify consistent application;

(iv) Methods of minimizing impacts to receiving water quality resulting from development, construction, and other potential Pollutant generating activities;

(v) Proper implementation of erosion and sediment control, Source Control, Treatment Control, and other BMPs to minimize the impacts to Receiving Water quality resulting from development, construction, and other potential Pollutant generating activities;

(vi) Applicable recordkeeping and tracking mechanisms; and

(vii) Inspection and enforcement procedures, BMP implementation, and review of monitoring data

12.1 Methods

The following table describes the educational activities conducted that target 11B58BCity 3B73B21Bof Tem163Becu50B80Bla staff:

Table 12-1: City of Temecula **Staff Education/Outreach Methods**

Target Audience	JRMP Program Area Addressed	Education / Outreach Methods
Management	All	• Staff Meetings
NPDES Program Staff	All	• SMR Technical Advisory Committee (TAC) Meetings • Regional NPDES training (all applicable modules)

Target Audience	JRMP Program Area Addressed	Education / Outreach Methods
Development Planning Staff	• F.1. • F.6.a. • F.6.b.(1)	• Regional WQMP Training • Regional HMP Training (to be developed upon approval of HMP) • Copermittee staff training
Construction Site Approval, Inspection and Enforcement	• F.2. • F.4. • F.6.a. • F.6.b.(1)	• Regional Construction Inspection Training • Copermittee staff training
Municipal Maintenance	• F.3.a. • F.4. • F.6.a. • F.6.b.(1)	• Regional Municipal Maintenance Training • Copermittee staff training
Code Enforcement	• F.3.b. • F.4. • F.6.a. • F.6.b.(1)	• Regional Commercial / Industrial Inspection Training • Copermittee staff training

12.2 Frequency {F.6.b.(1)(b)(2)}

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla trains staff responsible for oversight and conducting storm water compliance inspections and enforcement of construction activities (e.g. construction, building, code enforcement, grading review staff, inspectors, and other responsible construction staff) annually.

The 11B58BCity 3B73B21Bof Tem163Becu50B80Bla also provides annual training to staff responsible for conducting stormwater compliance inspections and enforcement of Industrial and Commercial Facilities.

13.0 MONITORING PROGRAM {N.}

13.1 Overview

The District, through the Implementation Agreement (Section 3.2.1), implements the Santa Margarita Monitoring Plan on behalf of the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla. The Monitoring Plan, available at: http://rcflood.org/NPDES/Monitoring.aspx, addresses the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla's responsibilities in the Receiving Waters, MS4 Discharge and Reporting Program No. R9-2010-0016 (MRP, Attachment E to the 2010 SMR MS4 Permit). Additionally, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla conducts source identification monitoring as required per Section II.B.2. and II.C.2. of the MRP, in response to an exceedance of an Action Level. The Major MS4 Outfalls will be tested in accordance with the 2010 SMR MS4 Permit. A list will be created and tracked as part of the monitoring program.

13.2 Non-Stormwater Dry Weather Action Levels {C.}

The District will notify the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla of exceedances of Analytical results (either laboratory or field screening) that exceed the NALs presented in Table 3 of the 2010 SMR MS4 Permit. In response to such an exceedance, the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla will investigate and seek to identify the source of the exceedance in a timely manner following the procedures described in Section 4.4.2 and 4.4.3. However, if the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla identifies a number of NAL exceedances that prevents it from adequately conducting source investigations at all sites in a timely manner, then the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla will submit a prioritization plan and timeline that identifies the timeframe and planned actions to investigate and report its findings on all of the exceedances to the Regional Board.

The 2010 MS4 Permit notes that neither the absence of exceedances of NALs nor compliance with required actions following observed exceedances, excuses any non-compliance with the requirement to effectively prohibit all types of unauthorized Non-Stormwater discharges into the MS4 or any non-compliance with the prohibitions in the MS4 Permit. During any Annual Reporting period in which one or more exceedances of NALs have been documented the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla will report a description of whether and how the observed exceedances did or did not result in a discharge from the MS4 that caused, or threatened to cause or contribute to a condition of Pollution, Contamination, or Nuisance in the Receiving Waters.

13.3 Stormwater Action Levels {D.}

The District implements the Wet Weather MS4 Discharge Monitoring program and annually evaluates the data compared to the Stormwater Action Levels (SALs) identified in Table 4 of the 2010 SMR MS4 Permit. At each monitoring station, a running average of 20% or greater of exceedances of any discharge of stormwater from the MS4 to Waters of the U.S. that exceed the SALs for each of the Pollutants listed in Table 4 (below) in Receiving Waters receiving discharges from the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla's MS4 facilities requires the 11B58BCity 3B73B21Bof Tem163Becu50B80Bla to affirmatively augment and implement all necessary stormwater controls and measures described in this JRMP to reduce the discharge of the associated class of Pollutants(s) to the MEP. The 11B58BCity

3B73B21Bof Tem163Becu50B80Bla will utilize the exceedance information when adjusting and executing its annual work plans. The magnitude, frequency, and number of constituents exceeding the SAL(s), in addition to Receiving Water quality data and other information, will be considered when prioritizing and reacting to SAL exceedances in an iterative manner.

Glossary

Name	Definition
2010 SMR MS4 Permit	Order R9-2010-0016, an NPDES MS4 Permit issued by the San Diego Regional Board.
Action Level	See Non-Stormwater Action Levels and Stormwater Action Levels
Beneficial Use	The uses of water necessary for the survival or well being of man, plants and wildlife. These uses of water serve to promote the tangible and intangible economic, social and environmental goals. "Beneficial Uses" of the waters of the State that may be protected include, but are not limited to, domestic; municipal; agricultural and industrial supply; power generation; recreation; aesthetic enjoyment; navigation; and preservation and enhancement of fish, wildlife, and other aquatic resources or preserves. Existing Beneficial Uses are uses that were attained in the surface or groundwater on or after November 28, 1975; and potential Beneficial Uses are uses that would probably develop in future years through the implementation of various control measures. "Beneficial Uses" are equivalent to "Designated Uses" under Federal law. [California Water Code Section 13050(f)].
Best Management Practice (BMP)	Any procedure or device designed to minimize the quantity of Pollutants that enter the MS4 or to control stormwater flow. See Chapter Two.
Bioretention BMP	A type of LID Retention BMP that is designed to capture the Design Capture Volume and absorb that volume entirely into a biologically active soil media. Water retained in this soil media is then evapotranspired by plants in the BMP, or slowly allowed to infiltrate into the underlying soils. This BMP inherently maximizes both Infiltration and Evapotranspiration of Runoff based on the actual limitations of the soil and environment.
Biotreatment BMP	A type of **LID BMP** that can be used in certain circumstances when LID Retention BMPs are not feasible. These BMPs provide similar functions and benefits as LID Bioretention BMPs, such as inclusion of natural biological processes and maximizing opportunities for Infiltration and Evapotranspiration, however, they are not designed to retain the Design Capture Volume in an engineered soil media. Examples of Biotreatment BMPs include extended detention basins, bioswales and constructed wetlands.
California Stormwater Quality Association (CASQA)	Publisher of the California Stormwater Best Management Practices Handbooks, available at www.cabmphandbooks.com
Cease and Desist Order	See Stop Work Order
CEQA	California Environmental Quality Act
Citation	An official summons to appear (as before a court)
Condition of Concern	Conditions that may affect the designated Beneficial Uses of a Receiving Water

Glossary

Name	Definition
Condition(s) of Approval (COA)	Requirements a Copermittee may adopt for a project in connection with a discretionary action (e.g., approval of a subdivision map or issuance of a use permit). COAs may specify features required to be incorporated into the final plans for the project and may also specify uses, activities, and operational measures that must be observed over the life of the project.
Construction Site	Any project, including projects requiring coverage under the General Construction Permit, that involves soil disturbing activities including, but not limited to clearing, grading, disturbances to ground such as stockpiling, and excavation.
Copermittee	District, County and Cities of Murrieta, Temecula and Wildomar. The terms *'local Copermittee'* and *'your Copermittee'* refers to the Copermittee that has jurisdiction over the proposed **Priority Development Project**.
CWA	The Federal Clean Water Act
Design Capture Volume (VBMP)	The volume of runoff from the **Design Storm**. This is design sizing standard for LID BMPs, as well as for conventional Treatment Control BMPs whose design is based on treating a particular volume of runoff.
Design Flow Rate (QBMP)	The flow rate resulting from an hourly rainfall intensity of 0.2 inch per hour. The Design Flow Rate will depend on the types of post-development surfaces on the site. Flow-based BMP designs can only be used when implementing conventional Treatment Control BMPs.
Design Storm	The 85th percentile 24-hour storm depth, based on local historical rainfall records. See Exhibit A of the SMR WQMP.
Development Project	Any project that proposes construction, rehabilitation, redevelopment, or reconstruction of any public or private residential, industrial or commercial facility, or any other projects designed for post-construction human activity or occupation.
Directly Connected	Any impervious surface which drains into a catch basin, area drain, or other conveyance structure (such as a street) without first directing the flow across pervious areas (e.g., lawns).
Discretionary Approval	A project which requires the exercise of judgment or deliberation by the public agency or body when they decide to approve or disapprove a particular activity. Discretionary approvals are distinguished from situations where the public agency or body merely has to determine whether there has been conformity with applicable statutes, ordinances or regulations. **Check with the Copermittee to determine if a particular action is considered Discretionary.**
Drainage Management Area (DMA)	Individual, discrete drainage areas that typically follow grade breaks and roof ridge lines

Glossary

Name	Definition
Drawdown Time	The time required for a detention or retention BMP to drain and return to the dry-weather condition. For detention BMPs, Drawdown Time is a function of basin volume and outlet orifice size. For infiltration BMPs, Drawdown Time is a function of basin volume and infiltration rate. For Harvest and use BMPs, Drawdown Time is a function of the cistern volume and the demand for use of captured stormwater.
Dry Season	May 1st through September 30th
Dry Weather	Weather is considered dry if the preceding 72 hours has been without precipitation.
DU	Dwelling Unit
EIATIA	Effective Impervious Area To Irrigated Area that would be required to achieve the minimum 40% long-term retention of runoff when harvesting stormwater runoff for outdoor irrigation. See Section 2 of the SMR WQMP.
EIR	Environmental Impact Report
Emergency Situation	IC/IDs that pose an immediate threat to human health or the environment. Any sewage spill over 1,000 gallons or that could impact water recreation, any spill that could impact wildlife, any Hazardous Material spill where residents are evacuated, any spill of reportable quantities of Hazardous Waste (as defined by 40 CFR 117 and 40 CFR 302), or any other spill reportable to the California Emergency Management Agency (Cal-EMA, formerly known as the Office of Emergency Services or OES) is classified as a threat to human health or the environment.
Ephemeral	Water bodies, or segments thereof, that contain water only for a short period following precipitation events.
Erosion	When land is diminished or worn away due to wind, water or glacial ice. Often the eroded debris (silt or sediment) becomes a Pollutant via Stormwater Runoff. Erosion occurs naturally but can be intensified by land clearing activities such as farming, development, road building and timber harvesting.
ESA	Environmentally Sensitive Area. At minimum, as defined in the 2010 MS4 Permit, all Receiving Waters are considered ESAs.
Evapotranspiration	The process of transferring moisture from the earth to the atmosphere by evaporation of water and transpiration from plants.
Facility Pollution Prevention Plan (FPPP)	A plan that the Copermittee maintains that describes the BMPs that are implemented at their municipal facilities to reduce stormwater pollution to the MEP and prohibit illegal discharges.
Final Project-Specific WQMP	A fully completed version of the Water Quality Management Plan that must be submitted and approved prior to recordation of the final map, parcel map or issuance of building permit. See also Preliminary Project-Specific WQMP.

Glossary

Name	Definition
General Plan	Document that specifies policies that guide development.
Harvest and Use BMPs	Stormwater BMPs that capture stormwater runoff in a vault or cistern, and stores that water for later use, such as for irrigation.
Hazardous Materials	Any substance that poses a threat to human health or the environment due to its toxicity, corrosiveness, ignitability, explosive nature or chemical reactivity. These also include materials named by the USEPA in 40 CFR 116 to be reported if a designated quantity of the material is spilled into the Waters of the U.S. or emitted into the environment.
Hazardous Waste	As defined by 40 CFR 117 and 40 CFR 302
Head	In hydraulics, energy represented as a difference in elevation. In slow-flowing open systems, such as most stormwater BMPs, this is the difference in water surface elevation, e.g., between an inlet and outlet.
Hydrograph	Runoff flow rate graphed as a function of time.
Hydrologic Soil Group (HSG)	Classification of soils by the NRCS into A, B, C and D groups according to infiltration characteristics.
Hydromodification	The change in the natural watershed hydrologic processes and runoff characteristics (i.e., interception, infiltration, overland flow, interflow and groundwater flow) caused by urbanization or other land use changes that result in increased stream flows and sediment transport.
Hydromodification Management Plan (HMP)	A Plan that, once developed by the Copermittees, will specify requirements that must be implemented so that projects will not cause Hydromodification.
Illegal Discharge	Defined in 40 CFR 122.26(b)(2) as any discharge to the MS4 that is not composed entirely of stormwater, except discharges pursuant to an NPDES permit, discharges that are identified in Section 4.1.2 of the JRMP, and other discharges authorized by the Executive Officer of the Regional Board.
Illicit Connection	Any unauthorized connection to the MS4 that conveys an Illicit Discharge
Impairment	Describes a condition where a waterbody is presumed by the Regional Board to not be supporting its Beneficial Uses, based on exceedances of certain water quality objectives..
Impervious Area	
Impervious surface	Any surface in the landscape that cannot effectively absorb or infiltrate urban runoff; for example, conventionally paved: sidewalks, rooftops, roads and parking areas.
Implementation Agreement	An agreement among the Copermittees that establishes the responsibilities of each Copermittee and a procedure for funding the shared costs.

Glossary

Name	Definition
Industrial Facility	Industrial Facilities, as defined at 40 CFR § 122.26(b)(14), including: those subject to the General Industrial Permit or other individual NPDES permit; Operating and closed landfills; Facilities subject to SARA Title III; and Hazardous waste treatment, disposal, storage and recovery facilities.
Infiltration BMPs	A type of LID Retention BMP where the primary treatment mechanism is through seepage of runoff into a site's underlying soil.
Infiltration Rate	Rate at which water can be added to a soil without creating runoff (in/hr).
Infraction	Violation
Integrated Pest Management (IPM)	A decision-making process for managing pests that combines biological, cultural, mechanical, physical and chemical tools, and other management practices to control pests in a safe, cost effective and environmentally sound manner that contributes to the protection of public health
Intermittent	Waterbodies, or segments thereof, that contain water for extended periods during the year, but not at all times.
JRMP	Jurisdictional Runoff Management Plan
JRMP Annual Report	Report summarizing a Copermittee's compliance information to be submitted annually to the Regional Board on or before each October 31st of each year, beginning on October 31, 2013. The reporting period for these JRMP Annual Reports must be the previous fiscal year.
LID BMPs	LID BMPs include schedules of activities, prohibitions of practices, maintenance procedures, and other management practices to prevent or reduce the Pollution of Waters of the United states through Stormwater management and land development strategies that emphasize conservation and the use of on-site natural features integrated with engineered, small-scale hydrologic controls to more closely reflect pre-development hydrologic functions. LID BMPs include retention practices that do not allow Runoff, suchas infiltration, rain water harvesting and reuse, and evapotranspiration. LID BMPs also include flow-through practices such as biofiltration that may have some discharge of Stormwater following Pollutant reduction.
LID Principles	LID Principles are Site Design concepts that help prevent or minimize the causes (or drivers) of project impacts, and help mimic the pre-development hydrology. Implementing LID Principles will help minimize the need for specific Stormwater BMPs on a project.

Glossary

Name	Definition
LID Retention BMP	A type of Stormwater BMP that is designed to store the Design Capture Volume, and avoid any discharge to downstream systems in storms up to the Design Storm. For the purposes of this WQMP, LID Retention BMPs include Infiltration BMPs, Harvest and Use BMPs, Pervious Pavement BMPs and Bioretention BMPs. See also Other LID BMPs
Low Impact Development (LID)	A stormwater management and land development strategy that emphasizes conservation and the use of onsite natural features integrated with engineered, small-scale hydrologic controls to more closely reflect pre-development hydrologic functions.
Major Outfall	Outfalls owned by a Copermittee with a pipe diameter of 36 inches or greater or drainage areas draining 50 acres or more. See also **Outfall.**
Maximum Extent Practicable (MEP)	Standard, established by the 1987 amendments to the Clean Water Act, for the reduction of Pollutant discharges from MS4s.
Misdemeanor	A crime less serious than a felony.
Mobile Business	Businesses that conduct services listed in section 8.1.1 but do not operate out of a fixed location.
Municipal Facility	A facility owned by a Copermittee
Municipal Separate Storm Sewer System (MS4)	A conveyance or system of conveyances (including roads with drainage systems, municipal streets, catch basins, curbs, gutters, ditches, manmade channels or storm drains) as defined in 40 CFR 122.26(b)(8).
National Pollutant Discharge Elimination System (NPDES)	As part of the 1972 Clean Water Act, Congress established the NPDES permitting system to regulate the discharge of Pollutants from municipal sanitary sewers and industries. The NPDES was expanded in 1987 to incorporate permits for discharges from MS4s as well (aka MS4 Permits).
Non-Hazardous Materials	For example, food wastes, trash and debris
Non-Jurisdictional IC/ID	An IC/ID originating from a property over which the Copermittee has no applicable jurisdictional authority such as a special district (e.g., school, water, wastewater), federal, state, or tribal property.
Non-Stormwater	All discharges to and from an MS4 that do not originate from precipitation events (i.e., all discharges from an MS4 other than Stormwater). Non-Stormwater includes Illicit Discharges, non-prohibited discharges, and NPDES permitted discharges.

Glossary

Name	Definition
Non-Stormwater Action Levels	This Order includes action levels for pollutants in non-stormwater, dry weather discharges from the MS4. The non-stormwater action levels are designed to ensure that the Order's requirement to effectively prohibit all types of unauthorized discharges of non-stormwater into the MS4 is being complied with. Non-stormwater action levels in the Order are based upon numeric or narrative water quality objectives and criteria as defined in the Basin Plan, the State Water Board's Water Quality Control Plan for Ocean Waters of California (Ocean Plan), and the State Policy for Implementation of Toxics Standards for Inland Surface Waters, Enclosed Bays and Estuaries of California (State Implementation Policy or SIP). An exceedance of an action level requires specified responsive action by the Copermittees. This Order describes what actions the Copermittees must take when an exceedance of an action level is observed. Exceedances of non-stormwater action levels do not alone constitute a violation of this Order but could indicate non-compliance with the requirement to effectively prohibit all types of unauthorized non-stormwater discharges into the MS4 or other prohibitions established in this Order. Failure to undertake required source investigation and elimination action following an exceedance of a non-stormwater action level (NAL or action level) is a violation of this Order. The San Diego Water Board recognizes that use of action levels will not necessarily result in detection of all unauthorized sources of non-stormwater discharges because there may be some discharges in which pollutants do not exceed established action levels. However, establishing NALs at levels appropriate to protect water quality standards is expected to lead to the identification of significant sources of pollutants in dry weather non-stormwater discharges.
Non-Structural BMPs	See LID Principles
Notice of Noncompliance	The Notice of Noncompliance constitutes a basic request that the property owner or facility operator rectify the condition causing or threatening to cause noncompliance
NRCS	Natural Resources Conservation Service
O&M	Operation and Maintenance. All BMPs implemented as part of a WQMP must continue to be operational and must be maintained throughout the life of the project.
Operational Source Control BMPs	Source Control programs or activities implemented by a site operator to prevent pollution. Examples include regular sweeping of parking lots and other 'housekeeping' efforts.
Other Development Projects	All Discretionary Development Projects that are not categorized as Priority Development Projects.

Glossary

Name	Definition
Other LID BMPs	Stormwater BMPs that incorporate features that provide for natural biological processes while maximizing opportunities for Infiltration and Evapotranspiration. These are distinguished from **LID Retention BMPs**, with the latter being BMPs that, in addition to the above features, are also designed to retain stormwater runoff.
Outfall	Means a Point Source as defined by 40 CFR 122.2.a, the point where a municipal separate storm sewer discharges to Waters of the U.S. and does not include open conveyances connecting two municipal separate storm sewers, pipes, tunnels or other conveyances which connect segments of the same stream or other Waters of the U.S. and are used to convey waters of the U.S. [40 CFR 122.26(b)(9)].
Permanent Source Control BMP	A type of source control BMP that is a structural part of the site, such as roofs and berms over and around trash and recycling areas.
Permeable or Pervious or Porous Pavements	Pavements for roadways, sidewalks, or plazas that are designed to infiltrate runoff *through* the pavement. Types of Permeable Pavements include pervious concrete, pervious asphalt, porous pavers and granular materials.
Pollutant	Any agent that may cause or contribute to the degradation of water quality such that a condition of Pollution or Contamination is created or aggravated.
Pollutant of Concern	Pollutants for which water bodies are listed as impaired under CWA Section 303(d), pollutants associated with the land use type of a development, and/or pollutants commonly associated with runoff.
Pollution Prevention BMP	Practices that reduce or eliminate the generation of Pollutants.
Pre-Development	Conditions that would exist naturally.
Preliminary Project-Specific WQMP	A preliminary project-specific WQMP is commonly required to be submitted with an application for entitlements and development approvals and must be approved by the Copermittee before any approvals or entitlements will be granted.
Priority Development Project	Development Projects that meet the categories and criteria identified in Table 1-1 (see 2010 SMR MS4 Permit, item F.1.d.).
Priority Pollutant of Concern	Pollutants that are associated with a proposed project and are listed as impaired under CWA Section 303(d).
Project-Specific WQMP	A plan specifying and documenting permanent LID Principles and Stormwater BMPs to control post-construction Pollutants and stormwater runoff for the life of the project, and to maintain Stormwater BMPs for the life of the project. Copermittees may require a preliminary Project-Specific WQMP submittal, to be followed by a final Project-Specific WQMP.
Proprietary Stormwater BMPs	Products designed and marketed by private businesses for treatment of stormwater.
Rainy Season	October 1st through April 30th

Glossary

Name	Definition
Rational Method	A method of calculating runoff flows based on rainfall intensity, tributary area, and a coefficient representing the proportion of rainfall that runs off. In the Rational Method Q=C*I*A as further described in Section 2 of the WQMP.
Receiving Water	Any water body that is identified in the San Diego Basin Plan. The San Diego Basin Plan is available from the San Diego Regional Board's website at www.waterboards.ca.gov/sandiego.
Redevelopment	A Development Project that involves the creation, addition and/or replacement of impervious surface on an already developed site. Examples include the expansion of a building footprint, road widening, the addition to or replacement of a structure, and creation or addition of impervious surfaces. Replacement of impervious surfaces includes any activity that is not part of a routine maintenance activity where impervious material(s) are removed, exposing underlying soil during construction. Redevelopment does not include trenching and resurfacing associated with utility work; resurfacing existing roadways; new sidewalk construction, pedestrian ramps, or bikelane on existing roads; and routine replacement of damaged pavement, such as pothole repair.
Regional Water Quality Control Board (or Regional Board)	Regional Boards are responsible for implementing Pollution control provisions of the CWA and California Water Code within their jurisdiction. There are nine Regional Boards in California. The Regional Boards issued the 2010 MS4 Permit to the Copermittees on November 10, 2010.
Retrofit	Programs and projects to address the impacts of existing development through reducing the impacts from hydromodification, promote LID, support riparian and aquatic habitat restoration, reduce the discharges of Stormwater Pollutants from the MS4 to the MEP, and prevent discharges from the MS4 from causing or contributing to a violation of Water Quality Standards.
Runoff	All flows in a stormwater conveyance system that consists of the following components: (1) stormwater (wet weather flows) and (2) non-stormwater including dry weather flows.
Runoff Management Plan	A site-specific plan identifying BMPs to manage the quality and quantity of runoff from a project site.
Santa Margarita Region (SMR)	The portion of Riverside County covered by Order R9-2010-0016, an NPDES MS4 Permit issued by the Santa Diego Regional Board.
Sedimentation	The action or process of forming or depositing sediment.
Self-treating area	Natural or landscaped area (as described in Section 3.3 of the WQMP) that drains offsite without comingling with developed portions of the site.
Site Design	See **LID Principles**.

Glossary

Name	Definition
Source Control BMP	A facility or procedure to prevent Pollutants from coming into contact with rainfall and/or runoff.
Stop Work Order or Cease and Desist Order	As used in the JRMP, an order from a Copermittee to stop a particular activity.
Stormwater	Per 40 CFR 122.26(b)(13), means stormwater runoff, snowmelt runoff, and surface runoff and drainage. Surface runoff and drainage pertains to runoff and drainage resulting from precipitation events.
Stormwater Action Level	SALs were computed as the 90th percentile of the data set, utilizing the statistical based population approach, one of three approaches recommended by the State Water Board's Storm Water Panel in its report 'The Feasibility of Numerical Effluent Limits Applicable to Discharges of Storm Water Associated with Municipal, Industrial and Construction Activities (June 2006)". SALs are identified in Section D of the 2010 SMR MS4 Permit. Copermittees must implement a timely, comprehensive, cost-effective stormwater pollution control program to reduce the discharge of pollutants in stormwater from the permitted areas so as not to exceed the SALs. Exceedance of SALs may indicate inadequacy of programmatic measures and BMPs required in this Order.
Stormwater Ordinance	The ordinance or set of ordinances that are consistent with the Legal Authorities described in section 3.4 of this JRMP.
Stormwater Pollutant	A Pollutant associated with Stormwater.
Stormwater Pollution Prevention Plan (SWPPP)	A plan providing for temporary measures to control sediment and other Pollutants *during* construction. In contrast with the WQMP which is a plan to reduce pollutant in runoff during the post-construction use and life of the project.
Structural Stormwater BMPs	Structural Post-Construction BMPs that are designed to address stormwater runoff impacts from the completed site, and throughout the use and life of the project.. Stormwater BMPs consist of LID Principles, LID BMPs, Conventional Treatment BMPs, Hydromodification BMPs, and Permanent Source Control BMPs.
Total Maximum Daily Load (TMDL)	A TMDL is the maximum amount of a Pollutant that can be discharged into a waterbody from all sources (point and non-point) and still maintain Water Quality Standards. Under CWA Section 303(d), TMDLs must be developed for all waterbodies that do not meet Water Quality Standards after application of technology-based controls.
Toxicity	Adverse responses of organisms to chemicals or physical agents ranging from mortality to physiological responses such as impaired reproduction or growth anomalies.
Treatment Control BMP	Any engineered system designed to remove pollutants by simple gravity settling of particulate pollutants, filtration, biological uptake, media absorption or any other physical, biological or chemical process.

Glossary

Name	Definition
TUTIA	Toilet Users To Impervious Area ratio, that would be required to achieve the minimum 40% long-term retention of runoff when harvesting stormwater runoff for toilet use. See Chapter 2 of the WQMP.
Unpaved Road	A long, narrow stretch without pavement used for traveling by motor passenger vehicles between two or more points. Unpaved roads are generally constructed of dirt, gravel, aggregate or macadam and may be improved or unimproved.
Waste	As defined in CWC Section 13050(d), "waste includes sewage and any and all other waste substances, liquid, solid, gaseous, or radioactive, associated with human habitation, or of human or animal origin, or from any producing, manufacturing, or processing operation, including waste placed within containers of whatever nature prior to, and for purposes of, disposal."
Waste Discharge Requirements	As defined in Section 13374 of the California Water Code, the term "Waste Discharge Requirements" is the equivalent of the term "permits" as used in the Federal Water Pollution Control Act, as amended. The Regional Board usually reserves reference to the term "permit" to Waste Discharge Requirements for discharges to surface Waters of the U.S.
Water Quality Management Plan (WQMP, or SMR WQMP)	Referred to as a Standard Stormwater Mitigation Plan (SSMP) in the 2010 SMR MS4 Permit. This is a plan to reduce the discharge of pollutants to the MEP from the post-construction use and life of a project.

Glossary

Name	Definition
Water Quality Objectives	Numerical or narrative limits on constituents or characteristics of water designated to protect designated beneficial uses of the water. [California Water Code Section 13050 (h)]. California's water quality objectives are established by the State and Regional Water Boards in the Water Quality Control Plans. Numeric or narrative limits for pollutants or characteristics of water designed to protect the beneficial uses of the water. In other words, a water quality objective is the maximum concentration of a pollutant that can exist in a receiving water and still generally ensure that the beneficial uses of the receiving water remain protected (i.e., not impaired). Since water quality objectives are designed specifically to protect the beneficial uses, when the objectives are violated the beneficial uses are, by definition, no longer protected and become impaired. This is a fundamental concept under the Porter Cologne Act. Equally fundamental is Porter Cologne's definition of pollution. A condition of pollution exists when the water quality needed to support designated beneficial uses has become unreasonably affected or impaired; in other words, when the water quality objectives have been violated. These underlying definitions (regarding beneficial use protection) are the reasons why all waste discharge requirements implementing the Federal NPDES regulations require compliance with water quality objectives. (Water quality objectives are also called water quality criteria in the CWA.)
Water Quality Standards	The beneficial uses (e.g., swimming, fishing, municipal drinking water supply, etc.) of water and the Water Quality Objectives necessary to protect those uses.

Glossary

Name	Definition
Waters of the U.S.	As defined in the 40 CFR 122.2, the Waters of the U.S. are defined as: "(a) All waters, which are currently used, were used in the past, or may be susceptible to use in interstate or foreign commerce, including all waters which are subject to the ebb and flow of the tide; (b) All interstate waters, including interstate "wetlands;" (c) All other waters such as intrastate lakes, rivers, streams (including intermittent streams), mudflats, sandflats, "wetlands," sloughs, prairie potholes, wet meadows, playa lakes, or natural ponds the use, degradation or destruction of which would affect or could affect interstate or foreign commerce including any such waters: (1) Which are or could be used by interstate or foreign travelers for recreational or other purposes; (2) From which fish or shellfish are or could be taken and sold in interstate or foreign commerce; or (3) Which are used or could be used for industrial purposes by industries in interstate commerce; (d) All impoundments of waters otherwise defined as waters of the United States under this definition: (e) Tributaries of waters identified in paragraphs (a) through (d) of this definition; (f) The territorial seas; and (g) "Wetlands" adjacent to waters (other than waters that are themselves wetlands) identified in paragraphs (a) through (f) of this definition. Waters of the United States do not include prior converted cropland. Notwithstanding the determination of an area's status as prior converted cropland by any other federal agency, for the purposes of the Clean Water
Wet Season	October 1st to April 30th
Wet Weather	Weather is considered wet if precipitation measuring over 0.10 inches has been received during the preceding 72 hours.

Table B-1. JRMP Departmental Responsibilities

Program Element	JRMP Section {Permit reference}	Primary Responsible Department	Responsible Staff (Name or Title as appropriate)
3.0 Program Management	3.1 – Departmental Responsibilities – Maintain matrix	Public Works Department	NPDES Engineer
	3.2 – Cooperative Activities	Public Works Department	NPDES Engineer
	3.3 – Fiscal Analysis {H}	Public Works Department	NPDES Engineer

AGREEMENT

National Pollutant Discharge Elimination System
Stormwater Discharge Permit
Implementation Agreement
San Diego Region

(Santa Margarita Drainage Area)

This Implementation Agreement ("Agreement"), entered into by the RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT (the "DISTRICT"), the COUNTY OF RIVERSIDE (the "COUNTY"), and the CITIES OF MURRIETA, TEMECULA and WILDOMAR (the "CITIES"), collectively referred to as "COPERMITTEES" and sometimes also referred to as "Parties", individually each as "Party", establishes the responsibilities of each Party concerning the implementation of and compliance with the National Pollutant Discharge Elimination System ("NPDES") Municipal Separate Storm Sewer System ("MS4") Discharge Permit issued by the California Regional Water Quality Control Board – San Diego Region (CRWQCB-SDR) pursuant to Order No. R9-2010-0016 (the "NPDES Permit").

RECITALS

WHEREAS, Congress in 1987 added Section 402(p) to the Federal Clean Water Act ("CWA") (33 U.S.C.§1342(p)); and

WHEREAS, Section 402(p) of the CWA requires certain municipalities to obtain NPDES Permits in order to discharge stormwater from MS4s to waters of the United States; and

WHEREAS, Section 402(p) of the CWA requires operators of certain industrial facilities to obtain NPDES permits for stormwater discharges associated with designated industrial activities, including construction activities; and

WHEREAS, Section 402(p) further requires the United States Environmental Protection Agency ("EPA") to promulgate regulations for NPDES permit applications; and

WHEREAS, EPA adopted such regulations in November 1990; and

WHEREAS, EPA delegated authority to the California State Water Resources Control Board ("SWRCB") to administer the NPDES permit process within the boundaries of the State of California; and

WHEREAS, SWRCB has in turn delegated its NPDES permitting authority to the California Regional Water Quality Control Boards to administer the NPDES permit process within the boundaries of their respective regions; and

WHEREAS, the jurisdiction of the CRWQCB-SDR includes that portion of Riverside County known as the Santa Margarita Region; and

WHEREAS, DISTRICT was created to provide for, among other things, the control of flood and stormwaters within the County of Riverside and is empowered to investigate, examine, measure, analyze, study and inspect matters pertaining to flood and stormwaters; and

WHEREAS, on January 15, 2009, DISTRICT, COUNTY and CITIES submitted a Report of Waste Discharge as an application to renew NPDES Permit No. CAS0108766; and

WHEREAS, the application for renewal of the NPDES Permit was submitted in accordance with the provisions of the previous NPDES permit (Order No. R9-2004-001) which expired on July 14, 2009; and

WHEREAS, on November 10, 2010, the CRWQCB-SDR adopted Order No. R9-2010-0016 to serve as Waste Discharge Requirements in accordance with Section 13263(a) of the California Water Code and as an NPDES permit pursuant to Section 402(p) of the CWA; and

WHEREAS, the NPDES Permit meets or exceeds the requirements of Section 402(p)(3)(B) of the CWA; and

WHEREAS, the NPDES Permit designates the DISTRICT, COUNTY and CITIES as COPERMITTEES; and

WHEREAS, the NPDES Permit requires designation of a "Principal Copermittee", and DISTRICT, COUNTY and CITIES have agreed that DISTRICT will serve as Principal Copermittee for the term of the NPDES Permit; and

WHEREAS, the Parties believe that cooperation between COPERMITTEES in the administration and implementation of the NPDES Permit is in the best interest of COPERMITTEES; and

WHEREAS, the NPDES Permit provides that the COPERMITTEES collaborate

in the development and implementation of various requirements of the NPDES Permit; and

WHEREAS, DISTRICT is willing to utilize its staff to coordinate the activities of COPERMITTEES to facilitate compliance with the NPDES Permit and CWA requirements; and

WHEREAS, DISTRICT established the Santa Margarita Watershed Benefit Assessment Area (the "BENEFIT ASSESSMENT") pursuant to District Ordinance 14 on May 14, 1991 to offset the DISTRICT'S program and administrative costs associated with the development, implementation and management of the Federally-mandated NPDES Program and DISTRICT is willing to use BENEFIT ASSESSMENT funds to support the DISTRICT's role as Principal Permittee and to support regional program costs to the extent that BENEFIT ASSESSMENT funds are available and can be used for regional programs; and

WHEREAS, COPERMITTEES are to perform and/or execute certain activities prescribed in the NPDES Permit that will benefit all COPERMITTEES.

NOW, THEREFORE, the Parties do mutually agree as follows:

1. Incorporation of the NPDES Permit. The NPDES Permit is hereby incorporated by reference in its entirety and made a part of this Agreement as Exhibit "A".

2. Delegation of Responsibilities. The responsibilities of each of the COPERMITTEES under the NPDES Permit are reiterated below in subsections 2.a. and 2.b. Additional delegated responsibilities of the Parties under this Agreement to implement and/or comply with the NPDES Permit are set forth below in subsections 2.c. through 2.h.:

a. DISTRICT shall:

(1) Comply with Section M (Principal Copermittee Responsibilities), including coordinating the development of updates and reports on programs required under the NPDES Permit that are jointly required of each COPERMITTEE, including the Watershed Water Quality Workplan ("Watershed Workplan"), Standard Storm Water Mitigation Plan ("SSMP"), Hydromodification Management Plan ("HMP"), a model Jurisdictional Runoff

Management Plan ("JRMP"), the Receiving Waters and MS4 Discharge Monitoring and Reporting Program No. R9-2010-0016, and any other reports prepared by the DISTRICT on behalf of the COPERMITTEES as required by Sections K.1 and K.2 of the NPDES Permit. DISTRICT will provide COUNTY and CITIES an opportunity to participate in the development and review of, and comment on, such programs, plans and reports prior to submittal to the CRWQCB-SDR.

(2) Comply with Sections A through P (Prohibitions and Receiving Water Limitations, Non-Stormwater Discharges, Non-Stormwater Dry Weather Action Levels, Stormwater Action Levels, Legal Authority, JRMP, Watershed Workplan, Fiscal Analysis, Total Maximum Daily Loads ("TMDLs"), Program Effectiveness Assessment and Reporting, Reporting, Modifications of Programs, Receiving Waters and MS4 Discharge Monitoring and Reporting Program, Standard Provisions, Reporting Requirements and Notifications, as well as Additional Provisions, respectively), as they pertain to pollutant discharges from DISTRICT owned and operated MS4 which are generated directly from or by DISTRICT facilities and operations, at no cost to COUNTY and CITIES.

b. COUNTY and CITIES, at no cost to DISTRICT, shall, for land area within their individual jurisdictions:

(1) Comply with Sections A through P (Prohibitions and Receiving Water Limitations, Non-Stormwater Discharges,

Non-Stormwater Dry Weather Action Levels, Stormwater Action Levels, Legal Authority, JRMP, Watershed Workplan, Fiscal Analysis, TMDLs, Program Effectiveness Assessment and Reporting, Reporting, Modifications of Programs, Receiving Waters and MS4 Discharge Monitoring and Reporting Program, Standard Provisions, Reporting Requirements and Notifications, as well as Additional Provisions, respectively), as they pertain to pollutant discharges from COUNTY/CITY owned and operated MS4, which are generated by jurisdictional land uses, facilities, and operations of the respective COUNTY and CITIES.

(2) Demonstrate compliance with NPDES Permit requirements through timely implementation of the JRMPs; any COPERMITTEE-specific elements of the Watershed Workplan and Monitoring and Reporting Program; and any approved modifications, revisions or amendments thereto.

(3) Provide to DISTRICT (on DISTRICT-provided forms) information needed to satisfy the reporting requirements as described in Sections G, N, and Provision III of Attachment E, or to respond to information requests from the CRWQCB-SDR. COUNTY and CITIES shall specifically:

(a) Submit data necessary to prepare updates to the Watershed Workplan to the DISTRICT no later than August 31st of each year.

(b) Submit any monitoring and sampling data individually collected pursuant to the MS4 Permit, to the DISTRICT at least quarterly as necessary for

DISTRICT to track and prepare reports under the Monitoring and Reporting Program. All applicable monitoring and sampling data individually collected within each fiscal year must be received by DISTRICT no later than August 15th of each year, for inclusion in the monitoring annual report that will be prepared and submitted by the District, pursuant to Section 2.e. herein.

(c) Provide one completed bound hard copy, and two electronic copies (PDF preferred) on CD or DVD, of the completed JRMP annual report to the DISTRICT no later than October 15th of each year.

(d) Provide information on existing MS4 facilities, "major outfalls" (as defined in the NPDES Permit) and/or other data as it pertains to facilities of the COUNTY or CITIES when requested by DISTRICT.

c. Public Education Program. On behalf of COPERMITTEES, DISTRICT shall conduct public education activities on a regional basis that focus on reducing pollution of urban runoff within the Santa Margarita Region, including, as appropriate, developing and disseminating broadcast, online and/or print outreach and advertising, developing brochures, and attending public events. DISTRICT shall also develop and implement mechanisms to determine the effectiveness of the regional public education program. The COUNTY and CITIES shall be individually responsible for developing and implementing any supplemental public education programs that may be necessary to target

individual communities or stakeholders within their respective jurisdictions, pursuant to Section F.6. of the NPDES Permit.

d. COPERMITTEE Training Program. On behalf of COPERMITTEES, and as requested by the COPERMITTEES, DISTRICT shall develop and conduct regional training sessions for COPERMITTEE personnel, covering the aspects of the programs developed by DISTRICT pursuant to Section 2.a.(1) of this AGREEMENT that are regionally uniform among COPERMITTEES. The COUNTY and CITIES shall be individually responsible for developing and implementing and reporting upon any supplemental training that may be necessary to ensure that their personnel are trained adequately regarding local policies and procedures for implementing the requirements of the NPDES Permit, pursuant to section F.6. of the NPDES Permit.

e. Monitoring Program. On behalf of the COPERMITTEES, DISTRICT shall perform sampling of surface water and urban runoff in accordance with the provisions of the NPDES Permit Monitoring and Reporting Program ("MRP"), Attachment E Provisions II.A and II.D-II.F, and prepare and submit Monitoring Reports in accordance with Provision III of Attachment E. The location of the sampling sites shall be determined by COPERMITTEES, subject to approval by CRWQCB-SDR. For Provision II.B. and II.C of the MRP, DISTRICT will coordinate with COPERMITTEES in developing a plan for identifying the list of outfalls to be sampled each year in accordance with the NPDES Permit, and COPERMITTEES shall be individually responsible for conducting outfall sampling, source identifications, and enforcement as necessary for their outfalls. The COPERMITTEES

may, subject to Section 3 herein, request the DISTRICT to conduct the initial outfall sampling required in Provisions II.B. and II.C. on behalf of the COPERMITTEES, however, all source identifications (including any follow-up sampling) and enforcement that may be required will remain the individual responsibility of the respective COPERMITTEES. The DISTRICT shall also enter into a contract with a local lab to provide analysis of water quality samples collected under the MRP. The contract shall be used strictly for water quality samples collected to comply with Provision II of the MRP. DISTRICT shall prepare and submit Monitoring Reports, as required by Provision III of Attachment E, based on data collected by the DISTRICT on behalf of the COPERMITTEES, and data provided to the DISTRICT by the COPERMITTEES in accordance with Section 2.b.(3)(b) of this Agreement.

f. Consultant Services. In the event DISTRICT requires the services of a consultant(s) to assist in performing duties conducted on behalf of the COPERMITTEES pursuant to Section 2 of this Agreement, the cost of said consultant(s) services shall be shared by COPERMITTEES in accordance with the cost sharing provisions set forth in Section 3 of this Agreement. COUNTY and CITIES shall be notified in writing of DISTRICTS request for proposals from one or more consultants, selection of a consultant, consultant's fee, contract timetable and payment schedule, and be allowed the opportunity to participate in decisions related to consultant's services. All consultant agreements are contingent upon the consulting firm's ability to meet DISTRICT standards and requirements, and where applicable approval by the DISTRICT'S

Board of Supervisors.

g. Support for Regional Programs. The COPERMITTEES shall jointly provide funding for certain regional efforts that benefit the Santa Margarita Region, including but not limited to: County Environmental Health's Compliance Assistance Program; the County Fire Department's Hazardous Materials Team; County Environmental Health's Household Hazardous Waste and Antifreeze, Batteries, Oil and Paint collection program; the DISTRICT'S membership with the California Stormwater Quality Association on behalf of COPERMITTEES; the DISTRICT'S administration of Principal Permittee duties, and other NPDES support activities as described in this Agreement, or as needed and agreed to by the COPERMITTEES. Where these programs are implemented countywide in support of other NPDES permit regions, the DISTRICT shall estimate the portion of the total cost of these regional programs that benefits the Santa Margarita Region.

h. Regulation and Enforcement. COUNTY and CITIES shall be responsible for the regulation and enforcement of local ordinances and regulations within their respective jurisdictions to ensure compliance with the NPDES Permit, and to prevent pollutants originating from within their respective jurisdictions from being discharged into the jurisdiction of another Party in a manner which could cause that Party to violate the NPDES Permit. This includes the exercise of police powers and land use controls and the enforcement of ordinances that COUNTY or CITIES presently have adopted or may adopt in the future.

3. Shared Costs. Costs for services to be performed in accordance with Sections 2.c., 2.d., 2.e. and 2.f. of this Agreement shall be shared by the Parties in accordance with the procedure specified below. In December of each year of this Agreement the DISTRICT shall:

a. Estimate the costs of services specified in Sections 2.c., 2.d., 2.e. of this Agreement and 2.f. for the upcoming fiscal year ("ESTIMATED COSTS");

b. Estimate the DISTRICT'S internal costs for developing, implementing and administering the NPDES program in the Santa Margarita Region as specified in 2.a. ("INTERNAL COSTS");

c. Estimate the revenues expected from the BENEFIT ASSESSMENT program ("ASSESSMENT REVENUES");

d. Determine actual costs for NPDES programs administered in the previous fiscal year; and

e. Determine Credits or Debits ("CREDITS" or "DEBITS") due to COUNTY and CITIES based on the difference of the actual contributions from the previous fiscal year with the actual contributions provided by the COUNTY and CITIES for that fiscal year.

By February 1st of each year of this Agreement, the DISTRICT, CITIES and COUNTY, through a NPDES representative assigned by the General Manager-Chief Engineer, City Managers, and County Executive Office, respectively, shall approve, by majority vote, ESTIMATED COSTS for the upcoming fiscal year.

3.1 DISTRICT Contribution

The DISTRICT contribution ("DISTRICT CONTRIBUTION") to programs specified in Sections 2.c., 2.d., 2.e., and 2.f. for the upcoming fiscal year shall be determined using the following formula:

DISTRICT CONTRIBUTION = ASSESSMENT REVENUES -

INTERNAL COSTS - 20% ASSESSMENT REVENUE. [1]

If the calculation yields a negative result, the DISTRICT shall have no contribution for the upcoming fiscal year other than the INTERNAL COSTS it has incurred.

3.2 COUNTY and CITIES Contribution

The total shared COUNTY and CITIES contribution (the "COMBINED CONTRIBUTION") shall be determined using the following formula:

COMBINED CONTRIBUTION = ESTIMATED COSTS - DISTRICT CONTRIBUTION.

The COUNTY'S and individual CITIES' respective pro rata share of the COMBINED CONTRIBUTION ("INDIVIDUAL CONTRIBUTION") shall be determined on the basis of an equally weighted average of population and Benefit Assessment Units within the Santa Margarita Region of Riverside County. More specifically, such percentage contribution shall be calculated as the equally weighted average of:

(a) The population of COUNTY or individual CITIES within the Santa Margarita Region, divided by the total population of the COUNTY and CITIES in the Santa Margarita Region and;

(b) The calculated number of Benefit Assessment Units ("BAU") for COUNTY or individual CITIES, divided by the total BAU for COUNTY and individual CITIES.

The INDIVIDUAL CONTRIBUTION shall be further adjusted by any CREDITS or DEBITS due from the previous fiscal year.

The population of CITIES shall be determined by the latest California State Department of Finance population figures issued in May of each year. COUNTY population shall be based on the most current Tax Rate Area ("TRA") information best fitting the Santa Margarita Region.

The BAU count of COUNTY and CITIES shall be estimated by comparing the most current TRA information best fitting the Santa Margarita Region with the Assessment

[1] District retains 20% of assessment revenue as a reserve for District's administrative and program costs associated with the NPDES Permit pursuant to RCFC&WCD Ordinance No. 14.

Rolls from the current fiscal year's BENEFIT ASSESSMENT Engineer's Report.

COUNTY and CITIES may generate credits toward payments due by providing labor or services in lieu of cash payments. DISTRICT shall determine value of labor or services based on ESTIMATED COSTS for the fiscal year.

DISTRICT shall invoice COUNTY and CITIES for INDIVIDUAL CONTRIBUTION at the beginning of each fiscal year and said invoice shall be due and payable by COUNTY and CITIES within 60 days of receipt of invoice from DISTRICT. The COMBINED CONTRIBUTION for COUNTY and CITIES shall not exceed $2,200,000 (two million, two hundred thousand dollars) annually under this Agreement.

4. Term of the Agreement. The term of this Agreement shall commence on the date of execution by the duly authorized representative of at least three of the five COPERMITTEES. The term of this Agreement shall extend for up to eighteen (18) months beyond the period of time in which the term of the NPDES Permit remains in valid force and effect, unless terminated prior to that date by agreement by all the Parties or withdrawal of all of the Parties in accordance with the terms of this Agreement.

5. Additional Parties. Any City which incorporates after the date of issuance of the NPDES Permit and/or after the commencement of this Agreement ("Prospective City") may file a written request with DISTRICT asking to be added as a Party. Upon receipt of such a request, DISTRICT shall solicit the approval or denial of the Parties. If a majority of the Parties, each having one, co-equal vote, approves the addition of the Prospective City, this Agreement shall be amended to reflect the addition, and the Prospective City shall thereafter become a Party under this Agreement. Upon execution of the Amended Agreement, the Prospective City shall be responsible for the shared costs discussed in Section 3 of this Agreement for the then-current budget year and any subsequent budget year.

6. Withdrawal from the Agreement. Any Party shall be eligible to withdraw from this Agreement after first giving 60 days written notice to the DISTRICT and the CRWQCB-SDR. The withdrawing Party shall agree in such notice to apply with the CRWQCB-SDR for a separate NPDES permit and to comply with all of the requirements established by

CRWQCB-SDR. In addition, withdrawal shall constitute forfeiture of all of the withdrawing Party's already-paid share of the costs allocated pursuant to Section 3. The withdrawing Party shall be responsible for any lawfully assessed penalties as a consequence of its withdrawal. In addition, the withdrawing Party shall remain liable as an Indemnitor Party after the effective date of its withdrawal as described in Section 7 below. The cost allocations to the remaining Parties shall be recalculated in the following budget year.

7. Mutual Indemnification. Each Party (hereafter "Indemnitor Party") shall indemnify, defend and hold harmless any other Party, together with that Party's employees, officers, managers, governing board members, counsel, representatives and agents (collectively "Indemnitee Parties"), from and against any and all damages, liabilities, losses, demands, lawsuits, orders, actions, causes of action, penalties, judgments, claims, costs and expenses (including reasonable attorneys' fees, including through all appeals) arising from or related to any violation of the NPDES Permit or this Agreement (collectively "Losses") to the extent caused by (i) by the acts or omissions of the Indemnitor Party and its employees, agents and representatives, (ii) discharges from the Indemnitor Party's jurisdictional area or facilities, and/or (iii) discharges from any MS4 owned or operated by the Indemnitor Party. The obligations of the Indemnitor Party set forth in this Section 7 are non-exclusive and are in addition to, and do not replace or modify, any other rights of action, whether at law or in equity, that any Party may have against another Party. Nothing in this Agreement shall limit the ability of any Party to seek any relief, legal or equitable, against any non-Party. The obligations set forth in this Section 7 shall survive the termination of this Agreement as to all such acts, omissions or discharges as described in subparts (i) through (iii) hereinabove that occurred, or are alleged to have occurred, while a Party during the term of the Agreement up until such time that it is terminated.

8. Amendments to the Agreement. Except as provided in Section 5, this Agreement may only be amended by consent of all Parties. No amendment to this Agreement shall be effective unless it is in writing and signed by the duly authorized representatives of all Parties.

9. Authorized Signatories. The General Manager-Chief Engineer of DISTRICT, the Chief Executive Officer of COUNTY and the City Managers of CITIES (or their designees) shall be authorized to execute all documents and take all other procedural steps necessary to file for and obtain an NPDES permit(s) or amendments thereto.

10. Notices. All notices shall be deemed duly given when delivered by hand; or three (3) days after deposit in the U.S. Mail, postage prepaid. Notice to the Parties shall be sent to the publically advertised mailing address for the Party.

11. Governing Law and Severability. This Agreement shall be governed and construed in accordance with the laws of the State of California. If any provision or provisions of this Agreement shall be determined to be invalid, illegal or unenforceable, the validity, legality and enforceability of the remaining provisions shall not in any way be affected or impaired hereby.

12. Consent to Waiver and Breach. No term or provision hereof shall be deemed waived and no breach excused, unless the waiver or breach is consented to in writing, and signed by the Party or Parties affected. Consent by any Party to a waiver or breach by any other Party shall not constitute consent to any different or subsequent waiver or breach.

13. Entire Agreement. This Agreement and the exhibits attached hereto constitute the entire agreement between the Parties with respect to the subject matter therein; all prior agreements, representations, statements, negotiations and undertakings are superseded hereby.

14. Execution in Counterparts. This Agreement may be executed and delivered in any number of counterparts or copies (counterparts) by the Parties. As each Party has signed and delivered at least one counterpart to the other Parties, each counterpart shall be deemed an original and, taken together, shall constitute one and the same Agreement, which shall be binding and effective as to the Parties.

15. Non-Waiver of Objections. The entry into, and the performance of this Agreement by the Parties shall not constitute, nor be construed as, any waiver of the COPERMITTEES' objection to any provisions of the NPDES Permit including, without

limitation, any provisions identified in the Petition for Review filed by the COPERMITTEES with the SWRCB, or that provisions of the NPDES Permit constitute an unfunded State mandate without subvention of State funds.

ORDINANCE NO. 04-04

AN ORDINANCE OF THE CITY OF TEMECULA, CALIFORNIA, ADDING TITLE 18 TO THE TEMECULA MUNICIPAL CODE PERTAINING TO GRADING, EROSION AND SEDIMENT CONTROL, AND AUTHORIZING THE DIRECTOR OF PUBLIC WORKS/CITY ENGINEER TO PREPARE A GRADING MANUAL SETTING FORTH THE ADMINISTRATIVE PROCEDURES AND TECHNICAL REQUIREMENTS NECESSARY TO IMPLEMENT THIS ORDINANCE

The City Council of the City of Temecula, does ordain as follows:

Section 1: Growth and development have created permanent changes to the City's landscape and its natural resources. Open space and naturally vegetated areas have been permanently altered through clearing and grading activities associated with construction and land development. Loss of ground cover, coupled with grading, excavation, and compaction of the land contributes to decreased groundwater infiltration, increased storm water flow, erosion and increased sediment runoff into streams and other water bodies. Controlling erosion and sedimentation represents a vital component of protecting the water quality of our watercourses, water bodies and wetlands.

Section 2: Grading and land clearing activities also impact the City's aesthetic value and community character. Establishing minimum standards and requirements relating to land grading, clearing, excavations and fills, and procedures by which these standards and requirements may be enforced, will help to ensure soil is not stripped and removed from lands in the City, leaving them unsightly and susceptible to erosion, subsidence, faulty drainage and sediment deposition.

Section 3: It is desirable to adopt regulations for grading private property that will help to ensure that future grading, clearing and development of land within the City occurs in the manner most compatible with surrounding areas, and is paramount to protecting life, limb and property, and promoting and enhancing the general public welfare and a superior community environment.

Section 4: The Temecula Municipal Code is hereby amended by adding Title 18, consisting of Articles 1 through 11, and the various Chapters and Sections within each Article, to read as follows:

Section 5: The provisions of Title 18, Articles 1 through 11, shall apply to all grading permits issued on or after the effective date of this Ordinance.

Section 6: The City Council authorizes and directs the Director of Public Works/City Engineer to prepare and utilize a manual of standards setting forth the administrative procedures and technical requirements necessary to implement the provisions of this Ordinance. Such rules, procedures, and requirements shall be entitled "Administrative and Technical Procedures Manual for Grading, Erosion, and Sediment Control" in substantially the form set forth in Exhibit A.

Section 7: If any provision of this Ordinance or the application thereof to any person or circumstance is held invalid, such invalidity shall not affect other provisions or application, and to this end, the provisions of this Ordinance are declared to be severable.

Section 8: The potential grading and land clearing activities regulated by this Ordinance represent components of the adopted General Plan that has already received the appropriate review when the General Plan was approved. Based on this fact, the City Council hereby finds that the adoption of this Ordinance is exempt from further review pursuant to CEQA Guideline Sections 15162(a) and 15061(b)(3) of the CEQA Guidelines. Section 15162 states that when an EIR has been certified for a project, no additional environmental review is required unless there is substantial evidence that the project has changed. The Final EIR for the City General Plan was certified on November 9, 1993.

Section 9: The City Clerk shall certify the Ordinance and cause it to be published as required by law. This Ordinance shall take effect on the 30th day after adoption pursuant to state law.

PASSED, APPROVED AND ADOPTED, by the City Council of the City of Temecula on the 11th day of May, 2004.

Michael S. Naggar, Mayor

ORDINANCE NO. 08-09

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF TEMECULA AMENDING PORTIONS OF TITLE 18 OF THE TEMECULA MUNICIPAL CODE FOR GRADING, EROSION, AND SEDIMENT CONTROL TO PROVIDE CONSISTENCY WITH THE ADOPTION OF THE 2007 EDITION OF THE CALIFORNIA BUILDING CODE INCLUDING APPENDIX 'J' AND TO MAKE OTHER MINOR CLARIFICATIONS AND CORRECTIONS

THE CITY COUNCIL OF THE CITY OF TEMECULA, DOES HEREBY ORDAIN AS FOLLOWS:

[CHANGES INCORPORATED INTO ORDINANCE]

Section 75. Environmental Finding. The proposed amendments to Title 18 of the Temecula Municipal Code are determined to be minor clarifications or typographical corrections of the Code. Based on this fact, the City Council hereby finds that the adoption of this Title is exempt from further review pursuant to CEQA Guideline Section 15061(b)(3) of the CEQA Guidelines, because it can be seen with certainty that there is no possibility that the proposed Title may have a significant effect on the environment.

Section 76: If any provision of this Title or the application thereof to any person or circumstance is held invalid, such invalidity shall not affect other provisions or application, and to this end, the provisions of this Title are declared to be severable.

Section 77: The City Clerk shall certify the Title and cause it to be published as required by law. This Title shall take effect on the 30th day after adoption pursuant to state law.

PASSED, APPROVED, AND ADOPTED by the City Council of the City of Temecula this 26th day of August, 2008.

TITLE 18
CITY OF TEMECULA
GRADING, EROSION AND SEDIMENT CONTROL ORDINANCE

Chapter 18.01
ARTICLE 1. GENERAL PROVISIONS

Sections:

18.01.020	**Title**
18.01.040	**Grading Manual**
18.01.060	**Purpose**
18.01.080	**Scope**

18.01.020 Title

The Ordinance codified in these chapters shall be known as the "City of Temecula Grading, Erosion, and Sediment Control Ordinance" and will be referred to herein as "this Ordinance."

18.01.040 Grading Manual

The City Engineer shall formulate a manual setting forth the administrative procedures and technical requirements necessary to implement the provisions of this Ordinance. Such rules, procedures, and requirements shall be entitled "The City of Temecula Administrative and Technical Procedures Manual for Grading, Erosion and Sediment Control" ("Grading Manual"). The City Engineer shall have the authority to change, update or revise the Grading Manual as necessary in order to implement the provisions of this Ordinance and all revisions thereto arising from time to time.

In the event of any conflict between the Grading Manual and this Ordinance, the more restrictive provisions shall govern. The provisions of the Grading Manual shall, to the extent they are made conditions of a permit by the City Engineer, be binding upon the permittee and those claiming under said permittee.

18.01.060 Purpose

This Ordinance is enacted for the purpose of regulating grading activity on property within the city limits of the City to safeguard life, limb, health, property and public welfare; to avoid discharges of pollutants such as sediment, hazardous materials, wastes and debris from entering public or private storm water conveyance facilities and surface waters; and to ensure that the intended use of a graded site within the city limits is consistent with the City's General Plan, any specific plans adopted thereto and all applicable City ordinances and zoning regulations.

18.01.080 Scope

This Ordinance sets forth rules and regulations, which reflect the minimum acceptable methods or actions to control land disturbances, landfill, soil storage, pollution and erosion and sedimentation resulting from construction, grading, excavation and land clearing activities. This Ordinance establishes procedures for issuance, administration and enforcement of permits for such activities. Any such grading activities within the city limits of the City shall conform to the provisions of this Ordinance and the Grading Manual and other applicable provisions of the Temecula Municipal Code and the California Building Code, as adopted and amended by the City, together with all other conditions of approval.

In the event that a particular topic is not covered in either this Ordinance or the Grading Manual, the applicable provisions of the Temecula Municipal Code or the California Building Code, as adopted and amended by the City, shall govern. If a conflict arises between the Temecula Municipal Code or the California Building Code, the more restrictive provision shall govern, unless otherwise approved by the City Engineer.

Chapter 18.03

ARTICLE 2. PERMITS

Sections:

18.03.020 Permits Required
18.03.040 Permit Exemptions

18.03.020 Permits Required

No person shall conduct any grading, stockpiling, excavating, paving, earth moving, filling, clearing, disking, brushing or grubbing on natural or existing grade or perform work that is preparatory to grading, without first having obtained a permit in accordance with this Ordinance, except as specified in Section 18.03.040, of this Ordinance and without having obtained coverage under the State Water Resources Control Board (SWRCB) National Pollution Discharge Elimination System (NPDES) permit for construction activity (if applicable).

18.03.040 Permit Exemptions

Grading permits are not required for:

A. An excavation below the existing finished grade for re-compaction within the building zone (within five feet (5') of footings) or for basements and footings for a building, mobile home, retaining wall, septic system, well or structure authorized by a building permit. This shall not exempt any fill made with the material from such excavation or exempt any excavation having an unsupported height greater than two feet (2') after the completion of such structure. Regardless of exemption, the Public Works Department shall be notified of activity.

B. Cemetery graves;

C. Refuse disposal sites controlled by other statutorily authorized regulations or agencies;

D. Earthwork or construction controlled by the federal, state, county or city governments, or by a local agency as defined by Government Code Section 53090 through 53095 (special districts). This exemption, however, shall apply only when the grading activity takes place on the property, or dedicated rights-of-way or easements of the above agencies;

E. Excavation and backfill for installation of underground utilities by public utilities or companies operating under the authority of a franchise or public right-of-way permit;

F. Mining, quarrying, excavating, processing stockpiling of rock, sand, gravel, aggregate or clay for commercial purposes where established and provided for by a conditional use permit, provided such operations do not affect the lateral support of any adjacent or adjoining properties, or alter the direction of, or contribute to, sedimentation to natural watercourses.

G. Exploratory excavations under the direction of civil engineers, geotechnical engineers, engineering geologists, and/or archaeologists or paleontologists, or pursuant to a well permit, provided all excavations are properly backfilled or otherwise restored. All such elevations and trenches are subject to the applicable sections of Title 8 of the State Orders, Division of Industrial Safety and the following:

1. When such work involves removal of any native vegetation, it shall be accompanied by an administrative clearing permit in accordance with Section 18.09.120 (C), "Administrative Clearing Permit" of this Ordinance. Any access roadways or pads constructed for this work shall only be constructed as approved in the administrative clearing permit and shall be restored as required in the permit.

H. An excavation not intended to support structures or mobile homes and which (a) is less than two feet (2') in vertical depth or (b) does not create a cut slope greater than three feet (3') in vertical height and steeper than two horizontal to one vertical (2:1). This exemption shall not apply when finish grading is proposed, subsequent to a permit authorizing rough grading in accordance with Section 18.09.120(A), "Types of Grading Permits" of this Ordinance.

I. A fill less than one foot (1') in vertical depth, placed on natural terrain with a slope flatter than five horizontal to one vertical (5:1), or less than three feet (3') in depth, not intended to support structures or mobile homes, which does not exceed fifty (50) cubic yards on any site and does not obstruct a drainage course. This exemption shall not apply when finish grading is proposed, subsequent to a permit authorizing rough grading in accordance with Section 18.09.120(A), "Types of Grading Permits" of this Ordinance.

J. The construction or maintenance of roads or facilities for the generation, storage or transmissions of water including floodwaters or electrical energy by public agencies or their agents. Work may be subject to Water Quality Management Plan (WQMP) requirements. A WQMP project includes the construction or reconstruction of 5,000 square feet of impervious surface in a parking lot, street, road or highway.

K. The maintenance of private roads by private individuals or their agents, but not the construction or widening of such roads.

L. Clearing and brushing when directed by the Fire Chief to mitigate a potential fire hazard in accordance with Title 8, Chapter 8.16, "Hazardous Vegetation," of the Temecula Municipal Code with the concurrence of the Director of Planning that such clearing and brushing will not cause significant damage to any habitat of any rare, endangered or protected species of wildlife or endanger any archaeological or historical resources, open space areas with biological significance, or transition areas between land to be cleared for fire fuel mitigation and permanent open space.

M. Clearing and brushing, expressly for the following purposes:

1. Routine landscaping and maintenance of already landscaped areas and the removal of dead or diseased trees or shrubs.
2. Clearing which conforms to the location, extent and purpose authorized explicitly by a construction permit pursuant to a discretionary land use permit or a discretionary development permit. An Administrative Clearing Permit, in accordance with Section 18.09.120(C) of this Ordinance, shall be required for any purpose that is not specifically addressed by the construction permit.

N. Repaving, resurfacing and maintenance of existing private roads and parking lots and the preparation necessary for that work, provided no grading beyond the limits of other exemptions is performed.

O. Minor maintenance and alterations to natural drainage areas that do not:

1. Obstruct or redirect drainage from adjacent properties, nor
2. Divert the outflow of drainage from the existing or natural discharge point of the property, nor
3. Concentrate or accelerate the flow of drainage as it leaves the property, nor
4. Create ponding, siltation or erosion in or of the streambed, nor
5. Disturb wetlands

Note: The above listed exemptions do not apply to clearing, grubbing, brushing, disking or grading when:

1. Work will occur in, or physically impact, designated or dedicated open space or environmentally sensitive areas designated in the General Plan, or the finally adopted plan of any public agency or governmental office with jurisdiction over the site, or shown on any approved Specific Plan; or
2. Work will occur in any waterway or wetland, stream, river, channel, pond, lake, marsh, bog, lagoon, vernal pool or riparian habitat, except as provided in exemption "P", below; or
3. Work will occur in any floodway or floodplain as shown on the Federal Emergency Management Agency (FEMA) Flood Plain Maps, or on City revised maps except as provided in subsection "P", below.

Chapter 18.06

ARTICLE 3. GRADING APPLICATION REQUIREMENTS

Sections:

18.06.020	**Grading Application**
18.06.040	**Plans and Specifications**
18.06.060	**Geotechnical (Soils) Reports**
18.06.080	**Seismicity Reports**
18.06.100	**Dust Control and Prevention Plan**
18.06.120	**Haul Route Plan**
18.06.140	**Erosion and Sediment Control Plan**
18.06.160	**Expiration and Renewal of Grading Application Submittals**

18.06.020 Grading Application

To obtain a grading permit, the applicant shall first file an application in writing on a form furnished by the City Engineer for that purpose.

18.06.040 Plans and Specifications

A. Each application for a grading permit shall be accompanied by plans and specifications, soils engineering and geotechnical reports, hydrology/hydraulic reports, erosion and sediment control plans, proof of coverage under the State General Permit for construction activities and all other information required by the City Engineer as in the Grading Manual, and payment of the appropriate fees. In addition, a conceptual Water Quality Management Plan (WQMP) must be accepted by the City Engineer prior to issuance of final conditions of approval. A final WQMP must be accepted by the City Engineer prior to issuance of a grading permit.

B. Plans and specifications for grading projects requiring permits as defined in Section 18.03.020, "Permits Required" of this Ordinance shall be prepared and signed by the engineer of record. This requirement may be extended to any project when, in the opinion of the City Engineer, drainage or geologic factors may warrant a need for civil engineering design and control.

C. Grading plans and specifications shall be prepared in accordance with the Grading Manual.

18.06.060 Geotechnical (Soils) Reports

A. **Surface and Subsurface Conditions.** The City Engineer shall require a geotechnical report to correlate surface and subsurface conditions with the proposed grading plan. The results of the investigation shall be presented in a report in conformance with the requirements of this Ordinance and the Grading Manual.

B. **Supplemental Reports/Data.** The City Engineer shall require such supplemental reports and data, as he deems necessary, upon his review of the site and the reports and other data submitted. Such required data may include tests for soil fertility and agricultural suitability to be performed at the conclusion of rough grading by a recognized agronomic soil-testing laboratory, with written analysis and recommendation, to be utilized during any required re-vegetation.

C. **Waiver of Geotechnical Report Requirements.** For a specific project, the City Engineer may determine that the geological and geotechnical conditions at the site are such that public safety is adequately protected and no mitigation is required. This finding shall be based on a report presenting evaluations of site in the immediate vicinity having similar geologic and geotechnical characteristics. The report shall be prepared by a certified engineering geologist or registered civil engineer, having competence in the field of seismic hazard evaluation and mitigation. The City Engineer shall provide a written commentary that addresses the report conclusions as justification for waiving the requirement of a geotechnical report for the project. All such waivers shall be recorded with the county recorder and a separate copy, together with the report and commentary, shall be filed with the State Geologist within 30 days of the waiver, in accordance with Public Resources Code Section 2697(a).

18.06.080 Seismicity Reports - Alquist-Priolo Earthquake Fault Zoning Act

A seismicity report shall be required as a condition for issuance of a grading permit for all grading applications associated with subdivisions (tracts); all grading projects that propose development with occupancy category II, III, IV structures as shown in table 1604A.5 of the California Building Code; and all real estate development that lies within an earthquake fault zone. Said reports shall comply with the requirements of the Alquist-Priolo Earthquake Fault Zoning Act (Public Resources Code, Section 2621, et seq.) and as specified in the Grading Manual.

18.06.100 Dust Control and Prevention Plan

Dust control and prevention procedures shall be employed while construction activity occurs to minimize wind borne particles. At minimum, all grading operations, land clearing, loading, stockpiling, landscaping, vehicular track-out and haul routes shall comply with South Coast Air Quality Management District (SCAQMD) Rule 403 (Fugitive Dust Emissions) and the Grading Manual.

18.06.120 Haul Route Plan

Where soil or construction materials are moved on public roadways from or to the site of a grading operation, a haul route plan shall be approved by the City Engineer in accordance with the Grading Manual. Deviation from the designated haul route shall constitute a violation of the conditions of the permit issued under this Ordinance. Vehicular track-out shall be controlled, as directed by the City Engineer, to prevent sediment deposition outside of the project site boundaries.

18.06.140 Erosion and Sediment Control Plan

All grading plans, regardless of the date of submittal, shall include an erosion and sediment control plan designed to limit erosion and sediment discharges of all disturbed portions of the property and to minimize the transport of soil onto adjacent properties or into storm water conveyance systems in accordance with the provisions of Chapter 18.15 of this Ordinance and the Grading Manual.

18.06.160 Expiration and Renewal of Grading Application Submittals

A. Applications for which no permit is issued within 180 days (6 months) following the date of application shall expire, and plans submitted for checking may thereafter be returned to the applicant or may be destroyed by the City Engineer without additional notice to the applicant.

B. The City Engineer may extend the time for action by the applicant for a period not exceeding 180 days (6 months) upon written request by the applicant showing that circumstances beyond the reasonable control of the applicant have prevented action from being taken.

C. In order to renew action for an application after expiration, the applicant shall resubmit grading submittal package and pay the most current plan check fee.

D. Plan check fees shall be forfeited for all expired permits.

Chapter 18.09

ARTICLE 4. GRADING PERMIT REQUIREMENTS

Sections:

18.09.020	**Permit Issuance – Terms and Conditions**
18.09.040	**Responsibility of Permittee**
18.09.060	**Contractor Qualifications**
18.09.080	**Right of Entry**
18.09.100	**Tentative Subdivision or Conditional Use Permit Required**
18.09.120	**Types of Permits**
18.09.140	**Protection of Adjoining Property**
18.09.160	**Protection of Utilities**
18.09.180	**Maintenance of Protective Devices**
18.09.200	**Time of Operations**
18.09.220	**Debris on Public Streets**
18.09.240	**Disposal of Materials**
18.09.260	**Expiration and Renewal of Issued Permits**
18.09.280	**Denial of Permit**

18.09.020 Permit Issuance – Terms and Conditions

A. Upon receipt and approval of the required application, fees, plans, reports, and other requirements of this Ordinance, the City Engineer may issue a permit, subject to any terms and conditions deemed necessary to ensure conformance with the provisions of this Ordinance and the Grading Manual.

B. The City Engineer shall have the discretion to impose or modify conditions as necessary to prevent a possible nuisance or hazard, or to eliminate a nuisance or hazard, to persons or to public or private property in accordance with Section 18.27.060, "Hazardous Conditions" of this Ordinance.

C. The issuance of a permit shall constitute an authorization to do only that work which is described or illustrated on the application for the permit, or on the plans and specifications attached to the permit and approved by the City Engineer. A separate permit shall be required for each (noncontiguous) grading project.

18.09.040 Responsibility of Permittee

It shall be the responsibility of the permittee to be knowledgeable of the conditions and/or restrictions placed on the permit as outlined in the applicable sections of this Ordinance, the Grading Manual, and as contained on the approved grading plans and geotechnical reports. The permittee shall also be responsible for maintaining a copy of the permit and approved plans at the work site, and implementing the applicable requirements of the City's Standard Grading Notes, as identified in the Grading Manual.

18.09.060 Contractor Qualifications

All persons performing work pursuant to this Ordinance shall have all valid licenses and insurance required by the State of California and by the City of Temecula.

18.09.080 Right of Entry

As a prerequisite for issuance of any grading permit, the owner, contractor or authorized agent of the site to be graded acknowledges and grants permission to the City for right of entry into the site for inspection, emergency work or correction of grading not performed in compliance with the terms and conditions of the permit. The owner, contractor or authorized agent shall agree to indemnify the City for any claims or damages, which may result from the City's entry onto the property including any corrective or emergency action taken pursuant to such right of entry.

18.09.100 Tentative Subdivision or Conditional Use Permit Required

Under either of the following circumstances, a permit shall not be issued unless and until a tentative map or a conditional use permit has been approved by the City:

A. If the purpose of the proposed grading or clearing is to prepare the land for a subdivision or for some use for which a conditional use permit is required; or

B. Notwithstanding the purpose of the proposed grading or clearing as stated in the application, if the City Engineer finds that the purpose of the proposed grading or clearing is to prepare the land for subdivision or for some use for which a conditional use permit is required.

18.09.120 Types of Permits

A. **Mass, Rough or Precise Grading.** The City Engineer may issue a mass, rough or precise grading permit for grading work upon completion of an application in accordance with the Grading Manual. The issuance of building permits shall be determined as follows:

1. Building permits may be issued for a site graded under a precise grading permit or plan upon completion and approval of the rough grade inspection as specified in the Grading Manual.
2. Building permits shall not be issued for a site graded under a rough grading permit unless a precise grading permit or plan has been issued.

B. **Stockpiling.** Upon approval by the Planning Commission, a stockpile permit may be issued for the stockpile of soil materials on a lot or parcel provided that the soil materials shall be removed from the site or compacted and graded thereon under a subsequently issued mass, rough or precise grading permit within six (6) months of issuance of a stockpile permit, unless modified by the Planning Commission, in accordance with the Grading Manual.

C. **Administrative Clearing.** No person shall commence any clearing and grubbing operation without first obtaining a grading or administrative clearing permit in accordance with the Grading Manual.

D. **Borrow Sites.** A grading and/or administrative clearing permit shall not be issued when, in the opinion of the City Engineer, a significant amount of borrow or waste material is to be removed from a grading site for commercial purposes unless a Conditional Use Permit in accordance with Chapter 17.04, "Permits" of the Temecula Municipal Code has been issued for the operation of a borrow pit on the grading site.

E. **Paving.** No person shall construct concrete or bituminous pavement surfacing on natural or existing grade in excess of five-thousand (5,000) square feet for any commercial, industrial, multi-residential or other parking lot, without a valid grading permit for such paving (this excludes Single Family Residence). Maintenance and repaving of existing paved sections shall be exempt from this requirement.

F. **Watercourse Alteration.** No person shall alter an existing watercourse, channel, or revetment by excavating, or placing fill, rock protection or structural improvements therein without an applicable state agency approval and a grading permit unless (i) the requirement for a grading permit is waived by the City Engineer, or (ii) the grading is performed as interim protection in an emergency to prevent flooding, or (iii) a separate improvement plan for such alteration is approved by applicable state agencies and the City Engineer.

G. **Rock Blasting.** No rock blasting shall be permitted until a pre-blast survey of the surrounding property is conducted to the satisfaction of the City Engineer. During rock blasting, seismic recordings shall be taken for all blasts at locations and levels approved by the City Engineer. All blasting shall conform to the requirements of the City Engineer, as specified in the Grading Manual.

18.09.140 Protection of Adjoining Property

Each adjacent owner is entitled to the lateral and subjacent support that his land receives from the adjoining land, subject to the right of the property owner of the adjoining land to make proper and usual excavations on the same for purposes of construction or improvement, as follows:

A. Any person causing an excavation to be made to a depth of ten feet (10') or more below the grade and within ten feet (10') of the property line(s) shall protect the excavation so that the soil of adjoining property will not cave in or settle. The person making or causing the excavation to be made shall provide written notification to the adjoining property owner(s) no less than ten (10) days before such excavation is to be made, stating the depth for which such excavation is to be made and when the excavation will begin.

B. If at any time it appears that the excavation is of greater depth than are the walls or foundation of an adjoining building or other structure, and the distance from the edge of the excavation to an adjoining building or other structure is less than the depth of the excavation, the person causing the excavation shall notify the owner of the adjoining building or other structure no less than ten (10) days before such excavation is to be made to protect the same from any damage, or to brace or extend the foundations of the noted building or other structure from possible damage from the excavation.

C. Excavations shall meet all State and Federal regulations including, but not limited to, any trench greater than five feet (5') deep, obtaining CAL OSHA permits.

D. No grading shall be approved which, in the opinion of the City Engineer, physically prevents the use of existing legal access to any parcel.

18.09.160 Protection of Utilities

A. During grading operations, the permittee shall be responsible for the prevention of damage to public utilities or services and for confining grading activities to the area permitted on the approved plans. This responsibility applies within the limits of grading or clearing and along any routes of travel of equipment.

B. Before starting any excavation work, the permittee shall be responsible to contact Underground Service Alert of Southern California and coordinate the proposed excavation with all interested utility companies, districts and agencies.

18.09.180 Maintenance of Protective Devices

The owner or agent in control of such property on which a grading activity has occurred pursuant to a permit granted under the provisions of this division, shall maintain in good condition and repair all structures, planting and other protective devices as per the approved plans or required by the permit. Any facilities dedicated for public use and accepted by a public agency are exempt.

18.09.200 Time of Operations

A. Time of any grading, clearing and equipment operations pursuant to this Ordinance shall be consistent with City Ordinance No. 94-25. Grading operations within one-quarter (1/4) mile of an occupied residence shall not be conducted between the hours of 6:30 p.m. and 6:30 a.m., Monday through Friday; or between the hours of 6:30 p.m. and 7:00 a.m. on Saturdays. Further, no such activity shall be undertaken on Sunday or any nationally recognized holiday. The City Engineer may extend the hours permitted for grading or equipment operations if the City Engineer determines that such operations are not detrimental to the health, safety or welfare of the inhabitants of nearby structures. Permitted hours of operation may be shortened by the City Engineer's findings of a previously unforeseen effect on the health, safety or welfare of the surrounding community.

B. Public Works projects of any Federal, State or local entity or emergency work by public utilities are exempt from the provisions of this Ordinance. Residents working on their property are exempt from the prohibition of construction activities on Sundays and holidays but shall comply with the hourly restrictions set forth for Saturday when working on Sundays and holidays.

18.09.220 Debris on Public and Private Streets

This Ordinance forbids the throwing, leaving, maintaining, keeping, placing, dumping, depositing or spilling soil materials on public and private streets or any portion of the public right-of-way. The permittee shall be responsible

for the complete removal and cleanup of such materials from the street or any portion of the public right-of-way. If the permittee fails to immediately remove said spillage or deposit from the street and/or public right-of-way, and it is necessary for the City to cause such removal to be made, the cost of such removal work shall be the responsibility of the permittee. The City may use the grading deposit in accordance with Section 18.24.120, "Grading and Erosion Control Securities" of this Ordinance for this purpose without notice to the owner. An additional cash deposit may be required prior to resumption of grading activities to insure the cleanup of public streets.

18.09.240 Disposal of Materials

The disposal of all waste and recycling materials removed as part of any grading project shall be in compliance with the City's Solid Waste Franchise Agreement, as specified within the provisions of the Temecula Municipal Code, Title 8, Chapter 8.20, "Waste Management," and the Grading Manual.

18.09.260 Expiration and Renewal of Issued Permits

A. A grading permit shall be valid for a period of six (6) months from the date of issuance.

B. The time limitation for all grading permits is also subject to the following provisions:

1. **Change of ownership.** A permit issued in accordance with these requirements shall terminate upon a change of ownership if the work for which said grading permit was issued has not been completed. In such instances, a new permit shall be required for the completion of the work.
    a. If the time limitations of paragraph (A) of this section are not applicable, and no changes have been made to the plans and specifications last submitted to the City Engineer, no charge shall be made for the issuance of a new permit.
    b. If changes have been made to the plans and specifications last submitted to the City Engineer, fees based on the valuation of the additional or new work, such as additional earthwork and necessary plan checking, shall be charged to the permit applicant.
    c. New securities and/or deposits shall be submitted by the new owner in accordance with Section 18.24.100, "Grading, Erosion and Sediment Control Securities" of this Ordinance.
2. **Permit Extensions.** The City Engineer may extend the time limit on permits by one (1) or more successive periods of up to 180 days (6 months) upon written request by the applicant showing to the satisfaction of the City Engineer that circumstances beyond the control of the applicant have prevented, delayed or extended the time required to complete the grading operations.
3. **Weather-related delays.** The City Engineer may require that grading operations and project designs be modified if delays occur which incur weather-related problems not considered at the time the permit was originally issued.

C. As a condition of the extension of any time period, the City Engineer may require the payment of additional permit, plan checking, inspection, and/or soils review fees required to cover the administration of the extensions and/or increased costs to the City and to bring the project into conformance with any fee schedule in effect at the time of extension.

18.09.280 Denial of Permit

A. **Hazardous Conditions.** A permit shall not be issued in any case where the City Engineer determines that the work as proposed by the applicant will:

1. Expose any property to landslide or geologic hazard;
2. Adversely interfere with existing drainage courses or patterns;
3. Cause erosion and/or flooding, which could result in the depositing of mud, silt or debris on any other property or public or private street;
4. Create any hazard to person or property; or
5. Damage or endanger any environmentally sensitive species and habitats, rocks and/or archaeological artifacts.

B. **General Conditions.** A permit shall not be issued if any of the following apply:
   1. If the submittal is incomplete;
   2. If the plan as submitted does not comply with the provisions of this Ordinance;
   3. If the required security is not posted;
   4. If the application contains false information.

C. **Other.** The City Engineer shall deny the issuance of a permit if any of the following apply:
   1. If prohibited by a duly elected moratorium, court order, injunction, or other legal order;
   2. If the applicant or owner has failed to comply with the provisions of this Ordinance; or
   3. If the work proposed is not consistent with the City's General Plan, or any element thereof, or any specific plan, conditional use permit, land use ordinance or regulation, zoning ordinance or regulation or permit, or approved subdivision map.

Chapter 18.12

ARTICLE 5. GRADING DESIGN STANDARDS

Sections:

18.12.020	**Cuts**
18.12.040	**Fills**
18.12.060	**Setbacks**
18.12.080	**Terraces and Terrace Drains**
18.12.100	**Subsurface Drainage**
18.12.120	**Pad Grading**
18.12.140	**Asphalt Concrete Pavement**
18.12.160	**Disabled Access**

18.12.020 Cuts

Unless otherwise recommended by the geotechnical engineer or the engineering geology reports, or both, and approved by the City Engineer, cuts slopes shall be no steeper than two horizontal to one vertical (2:1). All cuts and excavations shall conform to the provisions of this Ordinance and the Grading Manual.

Exception: In the absence of an approved geotechnical engineering report, these provisions may be waived by the City Engineer for minor cuts not intended to support structures.

A. A cut surface may be at a slope of 1.5 horizontal to 1 vertical (67%) provided that all the following are met:
   1. It is not intended to support structures or sur-charges;
   2. It is adequately protected against erosion;
   3. It is no more than eight feet (8') in height;
   4. It is approved by the City Engineer;

B. A cut surface in bedrock shall be permitted to be at a slope of one horizontal and one vertical (100%).

18.12.040 Fills

Unless otherwise recommended by the geotechnical engineer or the engineering geology reports, or both, and approved by the City Engineer, fills shall be in accordance with the Grading Manual.

Exception: In the absence of an approved geotechnical engineering report, these provisions may be waived by the City Engineer for minor fills not intended to support structures.

18.12.060 Setbacks

All setbacks and other restrictions specified in the Grading Manual, pursuant to the recommendation of a civil or geotechnical engineer, and approved by the City Engineer, are to prevent damage to adjacent properties from erosion or to provide access for slope and drainage structure maintenance. Retaining walls may be used to reduce the required setbacks when approved by the City Engineer.

18.12.080 Terraces and Terrace Drains

Drainage facilities and terraces shall be in accordance with the Grading Manual unless otherwise approved by the City Engineer.

18.12.100 Subsurface Drainage

A. Cut and fill slopes shall be provided with subsurface drainage as necessary for stability and as recommended by the geotechnical engineer and/or engineering geologist.

B. All canyons and buttress fills shall be provided with sub drains approved by the City Engineer.

18.12.120 Pad Grading

Storm water runoff from lots or adjacent properties shall not be carried over cut or fill slopes steeper than five horizontal to one vertical (5:1). Such runoff shall be in accordance with the Grading Manual.

18.12.140 Asphalt Concrete Pavement

Asphalt concrete pavement for surfacing of parking lots, private streets, driveways or other similar uses shall be in accordance with the Grading Manual unless otherwise approved by the City Engineer.

18.12.160 Disabled Access

All site development and precise grading shall be designed to provide access to all entrances and exterior ground-floor exits and to normal paths of travel in accordance with California Disabled Access Regulations (California Code of Regulations, Title 24, Part 2).

Chapter 18.15

ARTICLE 6. EROSION AND SEDIMENT CONTROL

Sections:

18.15.020	Construction Runoff Compliance
18.15.040	Erosion and Sediment Control Plans Required
18.15.060	Erosion and Sediment Control Systems
18.15.080	Temporary Site Vegetation
18.15.100	Erosion and Sediment Control Maintenance
18.15.120	Erosion and Sediment Control – Agricultural
18.15.140	Additional NPDES Requirements

18.15.020 Construction Runoff Compliance

A. All individual construction and grading projects shall implement measures to ensure that pollutants are not discharged from the site, will be reduced to the Maximum Extent Practicable (MEP) and will not cause or contribute to an exceedance of water quality objectives in the local natural watercourses. All construction and grading activities will be in compliance with applicable ordinances, permits and other federal, state and local requirements.

B. The permittee shall adhere to the following requirements:

1. Develop and implement an erosion and sediment control plan to manage storm water and non-storm water discharges from the site at all times in accordance with the Grading Manual. Projects disturbing, exposing or stockpiling one (1) acre or more of soil are also required to have coverage under the State General Construction Permit and generate a Storm Water Pollution Prevention Plan (SWPPP) per the State General Construction Permit;
2. Conduct phased grading operations and minimize grading activities during the rainy season. Coincide grading with dry weather periods to the extent feasible. Implement additional "Best Management Practices" (BMP's) for all rain events;
3. Install a combination of erosion and sediment control measures to effectively prevent erosion and retain sediment on-site throughout the duration of all construction activities.
4. Minimize exposure time of disturbed soil areas;
5. Temporarily stabilize and re-seed disturbed soil areas as rapidly as possible;
6. Permanently re-vegetate or landscape as early as feasible;
7. Stabilize all slopes;
8. The permittee shall abide by all of the provisions set forth in the State Water Resource Control Board (SWRCB) NPDES General Permit for construction activity. The City must be provided with a Waste Discharge Identification (WDID) number issued by the SWRCB prior to an issuance of a grading permit.
9. Implement the applicable requirements of the City's Standard Erosion and Sediment Control Notes, as identified in the Grading Manual.

Note: The above requirements are applicable to all construction sites regardless of whether the construction site is subject to the State General Construction Permit or other individual National Pollutant Discharge Elimination System (NPDES) permit.

18.15.040 Erosion and Sediment Control Plans Required

A. No grading activity will be allowed on any single grading site under permit unless the City Engineer has approved an erosion and sediment control plan.

B. All grading plans, regardless of the date of submittal, shall include an erosion and sediment control plan designed to limit erosion of all disturbed portions of the property and to minimize the transport of soil onto downgrade perimeters, private and public storm water conveyance systems, environmentally sensitive areas and adjacent properties in accordance with the provisions of this Chapter and the Grading Manual.

C. All erosion and sediment control BMP's outlined on the erosion and sediment control plan will be shown on the SWPPP, if applicable, and implemented prior to October 1st of each year.

18.15.060 Erosion and Sediment Control Systems

A. The permittee shall be responsible for the control of erosion and sediment discharge on and from all disturbed areas of grading until issuance of certificate of occupancy at which time the BMP's of the WQMP shall be in place.

B. No grading work shall be allowed on any site when the City Engineer determines that erosion, mudflow or sediment discharge may adversely affect downstream properties, drainage courses, storm drains, streets, easements, or public or private facilities or improvements unless an approved erosion and sediment control system has been implemented on the site. If the City determines that it is necessary for the City to cause erosion and sediment control measures to be installed or cleanup to be done, the permittee shall pay all of the City's direct and indirect costs including extra inspection, supervision and reasonable overhead charges in accordance with Section 18.24.100, "Cost Recovery Fees" of this Ordinance.

C. All protective devices shown on the erosion and sediment control plan and in the SWPPP, if applicable, shall be in place within seven (7) days prior to any forecasted rain. If the permittee does not install or

maintain erosion and sediment controls, the City Engineer may order City crews to do the work or may issue contracts for such work and charge the cost of this work along with reasonable overhead charges to the cash deposits or other instruments implemented for this work without further notification to the owner. No additional work on the project except erosion and sediment control work shall be performed until the full amount drawn from the cash deposit, in accordance with Section 18.24.120, "Grading, Erosion and Sediment Control Securities" of this Ordinance is restored by the permittee.

D. "Best Management Practices" (BMP's) shall be implemented on a continual basis during construction activities. The following minimum criteria shall be met:

1. An effective combination of erosion and sediment controls shall be implemented within seven (7) working days of clearing or inactivity in construction.
2. Soil stockpiles must be stabilized with a combination of erosion and sediment controls and have a daily maintenance frequency or as directed by the City Engineer.
3. Waterway and watercourse protection shall include, but not be limited to, stabilization of the channel before, during and after in-channel work.
4. Additional erosion and sediment control materials shall be stockpiled at various locations throughout the site for immediate implementation within seven (7) days of a forecasted rain. The developer/contractor shall make available equipment and workers for emergency work to protect the site.

E. Cut and fill slopes shall be protected to control against erosion and sediment discharge.

F. Permittee shall implement BMP's year round. Additional site specific BMP's shall also be implemented, as necessary, to comply with this Ordinance which may be more stringent than those required under the General Construction Permit.

G. Permittee shall implement additional controls for construction sites tributary to Clean Water Act (CWA) section 303(d) water bodies impaired for sediment. Each Permittee shall implement additional controls for construction sites within, adjacent, or discharging directly to receiving waters within environmentally sensitive areas.

H. Permittee shall conduct construction site inspection for compliance with this Ordinance and all applicable permits.

18.15.080 Temporary Site Vegetation

Temporary site vegetation shall be required, as determined by the City Engineer, on any disturbed soil areas of the site for prolonged periods of grading inactivity or expiration of a grading permit in accordance with Section 18.09.260, "Expiration and Renewal of Issued Permits" of this Ordinance. Temporary vegetation shall not negate any City requirement or condition of approval to install permanent landscaping.

18.15.100 Erosion and Sediment Control Maintenance

A. Prior to and after each rainstorm, all on-site and off-site flow-lines, storm water conveyance systems, check dams, chevrons, silt fences and desilting basins shall be free of sediment, construction materials, waste, miscellaneous debris and deteriorated erosion and sediment controls at all times.

B. Prior to and after each rainstorm, the erosion and sediment control system shall be evaluated and revised and repaired as necessary.

C. The permittee shall be responsible for and shall take necessary precautions to prevent public trespass onto areas where impounded water, due to erosion and sediment control devices, creates a hazardous condition. Signage indicating "ponded water – do not enter" shall be posted.

D. The permittee shall be responsible for continual maintenance of the devices during all construction activities.

E. In the event the City Engineer must cause emergency work to be done, he or she may revoke the grading permit. The permit shall not be renewed until an approved erosion and sediment control system has been installed and the owner has paid any applicable fees.

F. If any grading or clearing subject to Section 18.03.020 "Permits Required" of this Ordinance has commenced on private property without a valid grading permit, the property owner will be required to stop work, prepare and implement an erosion and sediment control plan which has been approved by the City and obtain a valid grading permit.

18.15.120 Erosion and Sediment Control – Agricultural

A. **Resource Conservation Plans.** For all lands used for agricultural purposes within the City of Temecula, the property owner shall cause to be prepared a resource conservation plan, utilizing the best management practices for the prevention of erosion and sedimentation. The resource conservation plan shall be prepared by the USDA Soil Conservation Services or a registered agricultural engineer consultant.

B. **Implementation of Resource Conservation Plans.** The resource conservation plans to be prepared for best management practices implementation is to be prioritized based upon the soil conservation service "soil erosion hazard map" with those areas of high erosion hazard receiving top priority. Resource conservation plans for agricultural areas shall be submitted for review and filing by the City after acceptance by the Regional Water Quality Control Board

C. **Annual Report.** The property owner of agricultural land shall be responsible for the preparation and submittal to the City Engineer an annual report setting forth their progress in the preparation of resource conservation plans and best management practices implementation. Progress reports may be required more frequently if deemed necessary by the City Engineer.

18.15.140 Additional NPDES Requirements

A. **General Requirements.** All grading activities subject to the regulations of this Ordinance shall be designed and conducted to minimize runoff of all pollutants onto public or private properties and into waters of the United States as required by this section and City Municipal Code, Title 8, Chapter 8.28, Storm Water/Urban Runoff Management and Discharge Control.

B. **Responsibility.** It shall be the permittee's responsibility to obtain coverage under the SWRCB General Construction Permit, submit a Notice of Intent (NOI) and appropriate fee to the SWRCB, complete all site-specific Storm Water Pollution Prevention Plans (SWPPP), monitoring and reporting program plans, reports, certifications, and other information required by the permit and or requested by the Regional Water Quality Control Board (RWQCB), United States Environmental Protection Agency (USEPA), or the City Engineer. The permittee shall update all plans as construction activities are modified from their original schedule and/or progress as originally planned. The permittee shall also maintain all erosion and sediment control measures at the site throughout the duration of the project as required by the permit. All of the information noted above shall be maintained on-site during construction and shall be presented upon demand by the SWRCB and/or City of Temecula inspectors. NPDES requirements will remain in effect until Notice of Termination (NOT) requirements are fulfilled.

Chapter 18.18

ARTICLE 7. GRADING INSPECTION

Sections:

18.18.020	**Inspections Required**
18.18.040	**Grading Requirements**
18.18.060	**Transfer of Responsibility**
18.18.080	**Notification of Noncompliance**
18.18.100	**Special Inspections**
18.18.120	**Stopping and Correction of Work**

18.18.020 Inspections Required

All grading operations for which a permit is issued pursuant to the provisions of this Ordinance shall be subject to inspection by the City Engineer or his or her representative.

18.18.040 Grading Requirements

A. **Civil Engineer.** It shall be the responsibility of the civil engineer who prepared the grading plans to incorporate the applicable recommendations from the geotechnical engineering and geology reports and to incorporate any City Engineer approved alternatives into the grading plan.

1. The civil engineer shall be responsible for establishing line and grade for the grading and drainage improvements and shall act as the coordinating agent in the event the need arises for liaison between the other professionals, the contractor and the City Engineer.
2. The civil engineer shall be responsible for the preparation of plan revisions to be approved by the City Engineer prior to implementing the change in the field.
3. Prior to issuance of building permits for any given lot or lots, the civil engineer shall be responsible for submitting a pad certification letter stating line and grade as evidence that the grading activity has been completed within standard tolerances in accordance with the approved plans and that all embankments and cut slopes and pad sizes are as shown on the approved plans.

B. **Geotechnical Engineer.** The geotechnical engineer's area of responsibility shall include, but not be limited to, performing the preliminary geotechnical engineering investigation and report, determining the suitability of soils during grading, providing compaction inspection and testing, and preparing the final geotechnical engineering report.

C. **Engineering Geologist.** The engineering geologist's area of responsibility shall include, but not limited to, professional inspection and approval of the stability of cut slopes with respect to geological matters, and the need for sub-drains or other groundwater drainage devices. He shall report his findings to the geotechnical engineer for engineering analysis.

D. **Landscape Architect.** The landscape architect shall incorporate applicable recommendations from the geotechnical engineering reports into the landscape and irrigation plans. The landscape architect shall also prepare plan revisions to be approved by the City Engineer prior to implementing the change in the field.

1. All ground cover shall provide one-hundred percent (100%) coverage within nine (9) months of planting, or additional landscaping shall be required in order to meet this standard.

18.18.060 Transfer of Responsibility

If the civil engineer of record, the geotechnical engineer, the engineering geologist, or the grading contractor of record is changed during the course of the work, the project shall be stopped until:

A. The permittee submits a letter of notification verifying the change of the responsible professional; and

B. The new responsible professional submits in writing that he has reviewed all prior reports and/or plans (specified by date and title) and work performed by the responsible professional party, and that he concurs with the findings, conclusions and recommendations, and is satisfied with the work performed. He or she must state that they assume all responsibility within his or her purview as of a specified date. All exceptions shall be justified to the satisfaction of the City Engineer.

Exception: Where clearly indicated that the firm, not the individual engineer and/or geologist, is the contracting party, the designated engineer or geologist may be reassigned and another engineer and/or geologist within the firm may assume responsibility.

18.18.080 Notification of Noncompliance

If, in the course of fulfilling their responsibility under this division, the engineer of record, the geotechnical engineer, the engineering geologist, or the testing agency finds that the work is not being performed in accordance with approved plans, specifications, or this Ordinance, the discrepancies shall be reported immediately in writing to the grading contractor, the permittee and the City Engineer. Recommendations for corrective measures shall be submitted for approval to the City Engineer.

18.18.100 Special Inspections

The City Engineer may establish special inspection requirements in accordance with Chapter 17, Section 1704, "Special Inspections", of the California Building Code, amended, for special cases involving grading or paving related operations. Special cases may apply to work where, in the opinion of the City Engineer, it is necessary to supplement the resources or expertise available for inspection.

18.18.120 Stopping and Correction of Work

A. The provisions of Appendix Chapter 1, Administration, Section 114, "Stop Orders", of the California Building Code shall apply to all grading work. Whenever the City Engineer or his or her representative determines that any work does not comply with the terms and conditions of the permit, or that that the work is being done improperly or in a hazardous manner, he or she may order the work stopped by notice in writing served on any persons engaged in doing or causing such work to be done, and any such persons shall stop conducting such work until authorized by the City Engineer to proceed with the work.

B. Whenever any work on which inspections are required is covered or concealed by additional work without first having been inspected, the City Engineer may require that such work be exposed for examination. Such work may be subject to additional inspection fees in accordance with Section 18.24.040(D), "Grading Permit and Inspection Fee" of this Ordinance.

C. If the city inspector finds the soil or other conditions not as stated in the approved plans and geotechnical reports or in additional information which was required for issuance of the grading permit, he may issue a stop work order until a revised grading plan has been approved by the City Engineer.

D. If, during the course of any clearing, grubbing or grading operations, discovery is made of items of archaeological or paleontological interest, the permittee shall immediately cease operation in the area of discovery and notify the city inspector. Discoveries that may be encountered include, but are not limited to, dwelling sites, stone implements or other artifacts, animal bones, and fossils. The permittee shall obtain the services of a qualified archeologist or paleontologist to investigate the site and assess the significance of the find. Under no circumstances shall anyone remove or disturb any artifacts or remains. Work shall be resumed in the area of discovery at the direction of the City Engineer.

E. Work may resume and the stop order shall be rescinded upon the City Engineer's determination that conditions have changed, corrections have been made, or the causes or actions which required a stop order have been remedied or alleviated to his or her satisfaction.

Chapter 18.21

ARTICLE 8. COMPLETION OF WORK

Sections:

18.21.020 Final Reports
18.21.040 Notification of Completion

18.21.020 Final Reports

Upon final completion of the rough grading work, the City Engineer may require the written approvals, reports, plans and supplements specified in the Grading Manual.

18.21.040 Notification of Completion

The permittee or his agent shall notify the City Engineer when the grading operation is ready for final inspection. Final approval shall not be given until all work, including installation of all drainage facilities and their protective devices, and all erosion and sediment control measures, including landscaping and its irrigation system, have been completed in accordance with the approved grading plan, and the required reports have been submitted. Where landscape planting for erosion and sediment control has been installed, final clearance (i.e. release of security deposits) shall not be granted until the planting has been established. The establishment of such erosion and sediment control plantings shall be certified by a licensed Landscape Architect and approved by the City Engineer.

Chapter 18.24

ARTICLE 9. GRADING FEES AND SECURITIES

Sections:

18.24.020 Grading, Erosion and Sediment Control Plan Checking Fee
18.24.040 Grading Permit and Inspection Fee
18.24.060 Review of Geotechnical Reports Fee
18.24.080 Refunds
18.24.100 Cost Recovery Fees
18.24.120 Grading, Erosion and Sediment Control Securities

18.24.020 Grading, Erosion and Sediment Control Plan Checking Fee

Before accepting an application and a set of plans and specifications for review, the City Engineer shall collect all plan-checking fees. Separate permits and fees shall apply to retaining walls or major drainage structures. All applicants submitting plans as required by this Ordinance shall pay all plan check fees and/or deposits as required by this Ordinance and by City Council resolution establishing applicable fees and deposits.

18.24.040 Grading Permit and Inspection Fee

A. All applicants requesting a mass, rough, precise, stockpile or administrative clearing permit as required by this Ordinance shall pay all fees and/or deposits as required by this Ordinance and by City Council resolution establishing applicable fees and deposits.

B. The fee for a grading permit authorizing additional work under a valid permit shall be the difference between the fee paid for the original permit and the fee shown for the entire project as indicated in the City's fee schedule.

C. A separate permit shall be required for each separate (noncontiguous) site. One permit may cover both an excavation and a fill on the same site.

D. Failure to pay fees and obtain a permit before commencing work shall be deemed a violation of this Ordinance, except where it can be proven to the satisfaction of the City Engineer that an emergency existed

that made it impractical to first obtain the permit. A violation shall result in an assessment of double permit fees for work done prior to permit issuance. Payment of a double fee shall not relieve any person from fully complying with the requirements of this Ordinance.

18.24.060 Review of Geotechnical Reports Fee

Before accepting a geotechnical (soils) report for review, the City Engineer shall collect a report review fee. A separate fee will be charged for each individual report submitted for review. The amount shall be as set forth by City Council resolution.

18.24.080 Refunds

After submittal and commencement of processing by the City, no fee collected pursuant to this division, shall be refunded in whole or in part, except as provided as follows:

A. Inspection fees may be refunded, less any City expenses incurred, including a reasonable overhead charge, at any time prior to the start of the work authorized by the permit, upon the applicant's written request, provided the grading application has expired or has been withdrawn.

B. No refund shall be made if the applicant or permittee has any outstanding debts owed to the City, or if corrective work remains to be done on the grading work itself.

C. No refund shall be made pursuant to this section if a request for refund is submitted to the City more than one (1) year from the date of payment of the fee as to which a refund is claimed.

18.24.100 Cost Recovery Fees

If the City Engineer performs emergency work relating to grading and erosion and sediment control on private property, he shall charge the property owner all direct and indirect costs that are necessary to complete the work to his satisfaction. Any costs assessed against the property owner under this section may be appealed to the City Council in accordance with Section 18.27.100, "Appeals" of this Ordinance.

18.24.120 Grading, Erosion and Sediment Control Securities

A. **Security required.** A grading permit shall not be issued unless the permittee first posts a security with the City comprised of a cash deposit, letter of credit, or a combination cash deposit and a corporate surety bond issued by a surety authorized to do business in the State of California, as specified in the Grading Manual. The security amount is required to assure that the work, if not completed in accordance with the approved plans and specifications, will be corrected to eliminate any deficiency or hazard created by the work or its lack of maintenance, as follows:

1. A cash deposit, in accordance with the Grading Manual, may be required by the City Engineer to ensure the elimination of hazardous conditions, the emergency maintenance of erosion and sediment control systems and to ensure the removal of stockpiles.
2. On developments where progressive individual grading projects or several concurrent projects are being constructed by one owner, a continuing (blanket) bond or other approved security that covers all such projects may be accepted in an amount determined by the City Engineer.

B. **Failure to Complete the Work.** In the event of failure to complete the work and failure to comply with all of the conditions and terms of the permit, the City Engineer may order work required by the permit to be completed or put in a safe condition to his satisfaction. The surety executing such bond, deposit, instrument of credit, or letter of credit shall continue to be firmly bound under a continuing obligation for the payment of all necessary costs and expenses that may be incurred or expended in causing any and all such required work to be done.

C. **Default in Performance Conditions.** Whenever the City Engineer finds or determines that a default has occurred in the performance of any requirement of a condition of a permit issued under the provisions of this Ordinance, written notice thereof shall be given to the principal and to the surety named on the bond. Such notice shall specify the work to be done, the estimated cost thereof and the period of time deemed by

the City Engineer to be reasonably necessary for the completion of such work. After receipt of such notice, the surety shall, within the time specified, cause or require the work to be performed, or failing therein, shall pay the estimated cost of doing the work as set forth in the notice. The surety shall pay the City for actual costs in accordance with Section 18.24.100, "Cost Recovery Fees" of this Ordinance.

Chapter 18.27

ARTICLE 10. ORGANIZATION AND ENFORCEMENT

Sections:

18.27.020	**Powers and Duties of the City Engineer**
18.27.040	**Violations and Penalties**
18.27.060	**Hazardous Conditions**
18.27.080	**Public Nuisance**
18.27.100	**Appeals**

18.27.020 Powers and Duties of the City Engineer

The provisions of Appendix Chapter 1, Administration, Section 104, Duties and Powers of Building Official, of the California Building Code shall apply to the City Engineer and his or her representative for all grading construction and earthwork to be done as required by any conditions of a permit issued pursuant to this Ordinance.

18.27.040 Violations and Penalties

A. It shall be unlawful for any person, firm or corporation to do grading work in the City of Temecula, or cause the same to be done, contrary to or in violation of any of the provisions of this Ordinance or State or Federal Law.

B. The issuance of a building permit, performance of building permit inspections, or issuance of a certificate of occupancy may be withheld on property on which a violation of the provisions of this Ordinance exist, including work not performed in accordance with the approved plans, until such violation(s) has been corrected to the satisfaction of the City Engineer.

C. Any person, firm, or corporation violating any of the provisions of this Ordinance shall be deemed guilty of a misdemeanor. Each such person, firm or corporation shall be deemed guilty of a separate offense for each and every day or portion thereof during which any violations of any provisions of this Ordinance are permitted, continued or committed by such person, firm or corporation and shall be punishable as provided for in Chapter 1.20, "General Penalty" of the Temecula Municipal Code.

18.27.060 Hazardous Conditions

A. Hazardous conditions exist when the state of any natural ground, natural slopes, excavation, fill or drainage devices are situated on private property in such a manner that they are a hazard to life or limb, or a danger to public safety, or endangers the safety, usability, or stability of adjacent property, structures or public facilities.

B. The City Engineer or their designee (including City Code Enforcement) may examine, or cause to be examined, every condition reported as hazardous as set forth in subsection (A) of this section.

C. Upon confirmation of a hazardous condition, the City Engineer or their designee (including City Code Enforcement) shall provide written notification to the permittee, owner or agent in control of property with confirmed hazardous condition, requiring mitigation of said hazardous condition and stipulation of an acceptable time frame for compliance.

D. The permittee, owner or agent in control of the property shall comply with any demand for corrective work or repairs as required. In the event that corrective action is not completed within the period specified in writing, the City may exercise any available recourse for correction of said hazardous condition in accordance with Title 8, Chapter 8.12, of the Municipal Code.

18.27.080 Public Nuisance

For purposes of this Ordinance, the following shall constitute a public nuisance:

A. Any grading or other work conducted without a permit where it is required by this Ordinance.

B. Any grading or other work done in violation of any of the conditions imposed thereon by a permit issued pursuant to this Ordinance.

C. Any grading or other work, which fails to be done as required by any conditions of a permit, issued pursuant to this Ordinance.

D. The existence of a hazardous condition as defined in Section 18.27.060, of this Ordinance upon the determination by the City Engineer that such condition exists.

18.27.100 Appeals

A. The applicant, permittee, or any person(s) not satisfied with the decision by the City Engineer in regards to issuance of a grading permit or the performance of the permitted work, may file a written appeal to the City Clerk for a hearing before the City Council.

B. Any such appeal must be made within three (3) calendar days following the decision.

C. The City Council will set a hearing to consider the appeal at the earliest possible regularly scheduled City Council meeting.

D. The City Council, after receiving and considering all testimony and pertinent documents, may:
   1. Uphold the City Engineer's decision; or
   2. Approve the appeal; or
   3. Modify the City Engineer's decision, consistent with the requirements of this Ordinance.

Chapter 18.33

ARTICLE 11. DEFINITIONS OF TERMS

Whenever, in this Ordinance and the Grading Manual, or in any resolution or standard adopted by City Council pursuant to this Ordinance, the following terms are used, they shall have the meaning ascribed to them in this section, unless it is apparent that some other meaning is intended:

"**Administrative Clearing Permit**" means a permit that authorizes the clearing, brushing, or grubbing of a portion of land beyond that scope exempted from the permit process by this Ordinance.

"**As-Graded**" means the site configuration upon completion of grading. This includes all horizontal and vertical dimensions and relationships and all physical features installed, reconstructed, eliminated, or altered by the grading operations as shown on the record drawings prepared by the engineer of work.

"**Accessibility**" is the combination of various elements in a building, facility, site or area, or portion thereof which allows access, circulation and the full use of the building and facilities by persons with disabilities in conformance with the Chapter 11B of the California Building Code.

"**Accessible Route of Travel**" means the continuous unobstructed path connecting all accessible elements and spaces in an accessible building or facility that can be negotiated by a person with a severe disability using a wheelchair and that is also safe for and usable by persons with other disabilities, and that also is consistent with the definition of "Path of Travel" in this section. Interior accessible routes may include parking access aisles, curb ramps, crosswalks at vehicular ways, walks, sidewalks, ramps and lifts. An accessible route does not include stairs, steps or escalators.

"**Accessibility**" means the combination of various elements in a building or area, which allows access, circulation, and the full use of the building and facilities by handicapped persons.

"**Applicant**" means any person, corporation, partnership association of any type, public agency or any other legal entity who submits an application for a grading permit pursuant to this Ordinance.

"**Approval**" means that the proposed work or completed work conforms to the requirements of this Ordinance, in the opinion of the City Engineer.

"**ASTM Standards**" means the American Society for Testing Materials, which develops standardized test methods, specifications, practices, guides, classifications and terminology in such subject areas as metals, paints, construction, consumer products and many others.

"**Base**" means a layer of specified material of planned thickness placed immediately below the pavement or surfacing.

"**Bedrock**" means in-place solid rock.

"**Bench**" means a relatively level step excavated into soil materials on which fill is to be placed.

"**BMP's**" means the management practices, operating procedures, and devices implemented to prevent or reduce the discharge of pollutants directly or indirectly to public or private storm water conveyance systems.

"**Borrow**" means soil material acquired from an off-site location for use in grading on a site.

"**Buttress Fill**" means an engineered fill designed to stabilize an adverse geologic condition (landslide, adverse bedding, etc.).

"**Certify" or "Certification**" means a signed written statement that the specific inspections and/or tests required to be performed on real property have been performed and that the works comply with the applicable requirements of this Chapter, the plans, and the permit.

"**City Engineer**" means the City Engineer of the City of Temecula or his or her duly delegated representative.

"**Civil Engineer**" means a professional engineer registered in the State of California to practice in the field of civil engineering.

"**Clearing, Brushing and Grubbing**" means the removal or disturbance of vegetation (grass, brush, trees, and similar plant types), weed abatement, manmade structures, environmentally sensitive species and habitats, rocks, archaeological artifacts and sites, or other environmentally sensitive features by any means for purposes of development or compliance with laws, rules or regulations. For purposes of this chapter, references to "clearing" means clearing, brushing and grubbing individually and separately.

"**Compaction**" means the densification of a fill by mechanical or other acceptable means.

"**Construction Site**" means any project requiring a local grading or building permit, including projects requiring coverage under the General Construction Permit.

"**Contour Grading**" means grading that creates or results in land surfaces that reflect the pre-graded natural terrain or that simulates natural terrain (i.e. rounded, non-planer surfaces and rounded, non-angular intersections between surfaces).

"**Crib Wall**" means a crib type wall as described in the most recent publication of "Standard Plans", Department of Transportation, State of California.

"**Cross-Lot Drainage**" means any drainage course created through grading or excavation that crosses on to another lot either within or outside the subdivision or construction site.

"**Curb Ramp**" means a sloping pedestrian way, intended for pedestrian traffic, which provides access between a walk or sidewalk to a surface located above or below an adjacent curb face.

"**Cut**" see definition for "Excavation."

"**Dry Season**" means May 1st thru September 30th of each year.

"**Engineer of Record**" means the professional engineer holding a current registration in the State of California who supervised the design and signed the grading plan accepted by the City Engineer.

"**Erosion**" means the wearing away of the ground surface as a result of the movement of wind, water or ice.

"**Erosion Control**" means anything that keeps soil in place.

"**Erosion and Sediment Control Plan**" is a plan prepared under the direction of and signed by a civil engineer competent in the preparation of such plans and knowledgeable about current erosion and sediment control methods. Said plan shall be submitted to the City and shall provide for protection of exposed soils and desiltation of runoff at frequent intervals prior to discharging from a site or to a storm water conveyance system (natural watercourses, streets, flow-lines, inlets, outlets, etc.).

"**Erosion and Sediment Control System**" means combination of erosion and sediment controls (including effective planting and the maintenance thereof) to protect the project site, adjacent private property, watercourses, public facilities, graded improvements, existing natural features, archaeological artifacts, and to relieve waters of suspended sediments or debris prior to discharge from the site.

"**Excavation**" or "Cut" means an act by which soil, sand, gravel, or rock is cut into, dug, quarried, uncovered, removed, or relocated, and shall include the conditions resulting there from.

"**Expansive Soils**" is any soil with an expansion index greater than twenty (20), as determined by the Expansive Index Tests of the California Building Code.

"**Fault**" means a fracture in the earth's crust along which movement has occurred. A fault, as defined by the California Division of Mines and Geology, is considered active if the movement has occurred within the last eleven thousand years (Holocene geologic time).

"**Fill**" means a deposit of soil, sand, gravel, rock, or other material placed by artificial means.

"**Flow-line**" means v-ditches, brow-ditches, terrace drains, ribbon gutters, curb gutters, etc.

"**Fugitive Dust**" means the particulate matter entrained in the ambient air as a result of man-made fugitive dust sources as determined by South Coast Air Quality Management District Rule 403.

"**General Construction Permit**" means the permit issued by the SWRCB to regulate discharges from construction activity.

"**Geohydrology**" means all groundwater information, water-well usage rate requirement, seepage elevations, pollution evaluations, projected usage rate considerations, evaluations of impact on existing and future users, and long term projections appropriate to site development.

"**Geologic Hazard**" means any geologic feature capable of producing structural damage or physical injury. Geologic hazards include:

A. Landslides and potential slope instabilities resulting from bedding faults, weak clay stone beds, and over steepened slopes.

B. Deposits potentially subject to liquefaction, seismically induced settlement, severe ground shaking, surface rupture, debris flows, or rock falls resulting from fault activity.

C. Deposits subject to seepage conditions or high-ground water table.

"**Geotechnical Engineering Report**" means a geotechnical report prepared under the responsible supervision of a geotechnical engineer and approved by the City Engineer or his representative, which includes:

A. Preliminary information concerning engineering properties of soil and rock on a site prior to grading, present, historical, and future groundwater levels, analysis for both gross and surficial slope stability, fill settlement, liquefaction potential, alluvium deposits, describing locations of these materials and providing recommendations for preparation of the site for its intended use.

B. A grading report which includes information on site preparation, compaction of fills placed, providing recommendations for structural design and approving the site for its intended use.

"**Grade**" means the vertical elevation of the ground surface.

A. **"Existing grade"** means the grade prior to grading.

B. **"Finish grade"** means the final grade of the site, which conforms precisely to the City-approved plans, approved construction changes or record drawings.

C. **"Natural grade (or natural ground)"** means the ground surface unaltered by artificial means.

D. **"Rough grade"** means the stage at which the work is in to precise conformance with the approved plan and when all excavations for drainage structures and retaining walls are complete.

"**Grading,**" means any process of excavation or filling or combination thereof.

"**Greenbook Standards,**" means the most recent publication of the Standard Specifications for Public Works Construction, which provides specifications that, have general applicability to public works projects.

"**Hillside Site,**" means a site where the existing grade is 20 percent (%) or greater and which may be adversely affected by drainage and/or stability conditions within or from outside the site, or which may cause an adverse affect on adjacent property.

"**Key**" means a compacted fill placed in a trench excavated in earth material beneath the toe of a slope.

"**Keyway**" means an excavated trench into competent earth material beneath the toe of the proposed fill slope.

"**Landslide**" means a perceptible down slope movement of rock, soil, or artificial fill ranging in speed from moderately slow (slump) to very rapid (avalanche).

"**Maximum Extent Practicable (MEP)**" means the standard established by Congress in the Clean Waters Act that operators of MS4 permits must meet. To achieve the MEP standard, Best Management Practices must be implemented that are technically feasible (i.e. are likely to be effective) in combination with treatment methods serving as a backup.

"**Mined Lands**" includes the surface, subsurface, and groundwaters of an area in which surface mining operations will be, are being, or have been conducted. This includes private ways and roads appurtenant to any such area, land excavations, mining waste, and areas in which structures, facilities, equipment, machines, tools, or other related materials or property are located.

"**Municipal Separate Storm Sewer System/MS4 (Permit)**" means the certification/regulation requirements that the City must meet to allow storm water discharges into the Waters of the State.

"**Natural Terrain**" means the lay of the land prior to any grading or other artificial landform modification.

"**National Pollutant Discharge Elimination System (NPDES)**" means the permitting and program requirements established by the Federal Clean Water Act and administered by the Environmental Protection Agency to regulate the discharge of pollutants to waters of the United States.

"**Owner**" means a person who owns a site upon which is located grading, clearing, mining, quarrying, and/or commercial extraction operations that are being conducted or may be conducted.

"**Path of Travel**" means a passage that may consist of walks and sidewalks, curb ramps and pedestrian ramps, lobbies and corridors, elevators, other improved areas, or a necessary combination thereof, that provides free and unobstructed access to and egress from a particular area or location for pedestrians and/or wheelchair users. A "path of travel" includes a continuous, unobstructed way of pedestrian passage by means of exited, and which connects a particular area with an exterior approach (including sidewalks, streets and parking areas), an entrance to the facility and other parts of the facility. In existing buildings, when alterations, structural repairs or additions are made, the term "path of travel" also includes the sanitary facilities, telephones, drinking fountains and signs serving the altered area.

"**Permit**" means the authorization issued pursuant to this Ordinance, together with the application for the same, the conditions upon which it was issued, and any plans, specifications, reports, and approved modifications thereto.

"**Permittee**" means any person, property owner, contractor or authorized agent to whom a permit is issued pursuant to this Ordinance.

"**Person**" means any individual, firm, association, corporation, organization, or partnership or any city, county, district, the State or any department or agency thereof. (14 Cal. Code of Regulations, Sec. 3501)

"**Pollutant**" means any agent that may cause or contribute to the degradation of water quality. The term may include, but is not limited to, dredged spoil, rock, sand, silt, solid and liquid waste, oil, fuels, construction related materials, debris and other contaminates.

"**Precise Conformance**", for purposes of this Ordinance, means:

A. Pad elevations within plus or minus four-tenths (0.4) of a foot (1') of planned elevation or approved construction change:

B. Street subgrade within plus or minus four hundredths (0.04) of a foot (1') of planned elevation or approved construction change;

C. Slope grades within plus or minus 1/2 foot (0.5') of planned elevation or approved construction change;

D. Rock slopes (rip-rap armoring) and horizontal locations within two feet (2') of planned elevation and location or approved construction change;

E. Drainage gradient to within two-tenths (0.2) of one percent (1%) of planned slope or approved construction change;

F. Structures within the tolerances specified in the latest adopted version of the "Standard Specifications for Public Works Construction" (Green Book).

"**Precise Grading Permit**" means a permit that is issued on the basis of approved plans that show the precise locations of structures, finished elevations, drainage details and all on-site improvements on a given property.

"**Priority Development Projects**" means new development and redevelopment projects, as indicated in the City's MS4 permit requirements.

"**Private Roads**" are roads that have been dedicated to the public, but not accepted for public use or that have been retained as "Private" for private use by the owners or may simply be a road created by private use or easement.

"**Quarrying**"' means the process of removing or extracting stone, rock, or similar materials from an open excavation for financial gain.

"**Rainy Season**" means October 1st thru April 30th of the next calendar year.

"**Record Drawings**" means plans prepared by the engineer of work subsequent to the completion of all work on the approved plans and approved changes thereon depicting the as-graded condition.

"**Regional Water Quality Control Board" (RWQCB)** means the State's Regional Regulatory Agency responsible for protecting waters of the State.

"**Retaining Wall**" means a wall designed to resist the lateral displacement of soil or other materials.

"**Rough Grading Permit**" means a permit that is issued on the basis of approved plans that show finished elevations, interim building pad elevations and drainage.

"**Sediment Control**" means anything that captures soil particles after being displaced.

"**Site**" means the real property on which activities subject to this Ordinance may occur.

"**Slope**" means an inclined ground surface of fill, excavation or natural terrain, the inclination of which is expressed as a ratio of horizontal distance to vertical distance.

"**Slope Revegetation**" means the planting of graded slopes with native and/or naturalizing plant species, which, after an initial establishment period, usually requiring irrigation, will survive with normal precipitation.

"Slope Stability" shall be defined as follows:

A. **"Gross stability"** means the factor of safety against failure of slope material located below a surface approximately three to four feet deep, measured from and perpendicular to the slope face.

B. **"Surficial stability"** means the factor of safety against failure of the outer three to four feet of slope material measured from and perpendicular to the slope face.

"Soil" means any rock, natural soil, or fill, and/or any combination thereof.

"South Coast Air Quality Management District" (SCAQMD) means the regulatory authority for all or portions of Los Angeles, Orange, San Bernardino and Riverside Counties that oversees air pollution emissions from stationary sources, including fugitive dust sources generated by construction activity.

"State Water Resources Control Board" (SWRCB) means the regulatory authority that develops statewide water protection policies, establishes water quality standards, and guides the nine Regional Water Quality Control Boards throughout the state.

"Stockpile" means a temporary uncompacted fill or embankment placed by artificial means, which is designated or intended to be moved, or relocated at a later date.

"Stop Work Order" means an order issued by a City official who requires that specific activity or all activity on a work site be stopped.

"Storm Water" means surface runoff and drainage associated with storm events.

"Storm Water Conveyance System" means any natural watercourses, curbs, gutters, streets, flow-lines, inlets, outlets, etc., either public or private, leading to waters of the State.

"Storm Water Pollution Prevention Plan" (SWPPP) means a document which meets the requirements set in the State's NPDES General permits for Construction and Industrial activities. The SWPPP must describe the BMP's to be implemented to meet the requirements of the General Permits and this Ordinance.

"Sub-base" means a layer of specified material of planned thickness between a base and the subgrade.

"Sub-grade" means the soil prepared to support structures, or that portion of the roadbed on which pavement, surfacing, base or sub-base, or layer of other material is placed.

"Terrace" means a relatively level step constructed in the face of a graded slope surface for drainage and maintenance purposes.

"Topsoil" means soil which is within the uppermost horizon of a soil profile, and which contains organic matter, nutrients, and microorganisms necessary for plant growth.

"Ultimate Right-of-Way" means the right-of-way shown as ultimate on an adopted precise plan of highway alignment, or a street right-of-way shown within the boundary of a recorded tract map, or a recorded parcel map. The latest adopted or recorded document in the above cases shall take precedence. If none of these exist, the Ultimate Right-of-Way shall be considered to be the right-of-way required by the highway classification as shown on the Master Plan of Arterial Highways. In all other instances, the Ultimate Right-of-Way shall be considered to be the existing right-of-way.

"Water Quality Management Plan (WQMP)" means a plan submitted in connection with an application for a City permit or other City approval, identifying the measures that will be used to mitigate the impacts of urban runoff from development projects.

"Watercourse" means a permanent or intermittent stream or other body of water, either natural or improved, which gathers or carries surface water.

"Watershed" means the geographical area which drains to a specified point on a water course, usually a confluence of streams or rivers (also know as a drainage area, catchment, or river basin.

"Waters of the State" means any water, surface or underground, under the jurisdiction of the State.

Section 5: The provisions of Title 18, Articles 1 through 11, shall apply to all grading permits issued on or after the effective date of this Title.

Section 6: The City Council authorizes and directs the City Engineer to prepare and utilize a manual of standards setting forth the administrative procedures and technical requirements necessary to implement the provisions of this Ordinance. Such rules, procedures, and requirements shall be entitled "Administrative and Technical Procedures Manual for Grading, Erosion, and Sediment Control" in substantially the form set forth in Exhibit A.

Section 7: If any provision of this Ordinance or the application thereof to any person or circumstance is held invalid, such invalidity shall not affect other provisions or application, and to this end, the provisions of this Ordinance are declared to be severable.

Section 8: The potential grading and land clearing activities regulated by this Ordinance represent components of the adopted General Plan that has already received the appropriate review when the General Plan was approved. Based on this fact, the City Council hereby finds that the adoption of this Ordinance is exempt from further review pursuant to CEQA Guideline Sections 15162(a) and 15061(b)(3) of the CEQA Guidelines. Section 15162 states that when an EIR has been certified for a project, no additional environmental review is required unless there is substantial evidence that the project has changed. The Final EIR for the City General Plan was certified on November 9, 1993.

Section 9: The City Clerk shall certify the Ordinance and cause it to be published as required by law. This Ordinance shall take effect on the 30th day after adoption pursuant to state law.

PASSED, APPROVED AND ADOPTED, by the City Council of the City of Temecula on the 20th day of April 2004.

Re: Legal Authority of the City of Temecula to Implement and Enforce the Requirements of 40 CFR 122.26(d)(2)(i)(A-F) and RWQCB Order R9-2010-0016

Dear Mr. Gibson:

The City of Temecula (the "City"), by and through its City Attorney, hereby submits the following certification, pursuant to Section E.2 of Order No. R9-2010-0016, [NPDES Permit No. CAS0108766], issued by the California Regional Water Quality Control Board, San Diego Region ("RWQCB") on November 10, 2010 and entitled "Waste Discharge Requirements for Discharges from the Municipal Separate Storm Sewer Systems (MS4s) Draining the County of Riverside, the Incorporated Cities of Riverside County, and the Riverside County Flood Control and Water Conservation District Within the San Diego Region " (the "Permit").

The City is one of the co-permittees under the Permit. Section E.2 of the Permit requires the City to provide the RWQCB with a statement by its legal counsel, certifying that the City has taken necessary steps to obtain and maintain full legal authority to implement and enforce each of the current requirements set forth in 40 CFR 122.26(d)(2)(i)(A-F) and the Permit. The purpose of this letter is to describe the City's compliance with Section E.2 of the Permit. As discussed in further detail herein, it is our opinion that the City has the necessary legal authority to implement the Permit and to control and prohibit discharges of pollutants into the Municipal Separate Storm Sewer System ("MS4"). This Statement is being submitted on behalf of the City to comply with the requirements of Section E.2 of the Permit. However, this Statement is not, nor should it be construed as, a waiver of any rights that the City may have relating to the Permit.

1. Legal Authority Statement

In our opinion, the City has adequate legal authority to comply with the legal requirements imposed upon the City under the Permit, consistent with the requirements set forth in the U.S. Environmental Protection Agency's regulations promulgated under the Clean Water Act, and, specifically, 40 CFR 122.26(d)(2)(i)(A-F), and to the extent permitted by State and Federal law and subject to the limitations on municipal action under the California and United States Constitutions, except as noted herein:

The Co-Permittees, including the City, have agreed that the Riverside County Flood Control and Water Conservation District ("District") is to serve as the Principal Permittee under this Permit. This statement assumes the District also has adequate legal authority to comply with the requirements imposed on it as the Principal Permittee by the Permit, and that the Principal Permittee will exercise its legal authority as appropriate to comply with the Permit.

2. Status of Implementation

The City has adequate legal authority, as envisioned by the Clean Water Act and applicable regulations, to implement the requirements of the Permit by the mandated dates to the extent permitted by California and Federal law and subject to the limitations on municipal action under the constitutions of California and the United States.

3. Ordinances

The City has adopted ordinances related to the regulation of urban runoff to control and prohibit discharges of pollutants into the MS4 and to comply with the requirements of the Permit applicable to the City, as well as, to the extent applicable, 40 C.F.R. § 122.26 (D)(2)(i)(A)-(F). The City's Water Quality Ordinance (Chapter 8.28 of Municipal Code) is the principal City ordinance addressing the control of urban runoff.

A. Enforceability

The City, as a general law city, has broad general police powers under the Constitution of the State of California to enact legislation for health and public welfare of the community to the extent not preempted by Federal or State law. In addition, the City adopted ordinances for the purpose of ensuring that it has adequate

legal authority to implement and enforce its storm water control program. The City has the authority under the Constitution and statutes of the State of California to enact and enforce these ordinances, and these ordinances were duly enacted. These ordinances contain specific enforcement provisions under the generally applicable enforcement provisions of the Temecula Municipal Code.

B. Implementation

Some of the City's ordinances are implemented through permit programs and others are implemented as regulatory programs. Under each ordinance, one or more City departments or department directors are authorized and directed in each ordinance to take the actions contemplated by the ordinance (*e.g.*, to consider evidence and make findings, to issue or deny permits, to impose conditions on projects, to inspect, to take enforcement action, etc.).

The City's Water Quality Ordinance (Chapter 8.28 of Municipal Code) is the principal City ordinance addressing the control of urban runoff. This ordinance is regulatory, and applies to specified new and existing residential and business communities and associated facilities and activities, as well as new development and redevelopment, and all other specified new and existing facilities and activities that threaten to discharge pollutants within the boundaries of the City and within its regulatory jurisdiction, whether or not a City permit or approval is required. The City's Water Quality Ordinance also contains discharge prohibitions and requirements for the implementation of best management practices ("BMPs") and other requirements necessary to implement the Permit.

Other City departments require compliance with the City's Water Quality Ordinance as a condition for issuance of relevant City permits. City departments may also impose specific conditions of approval consistent with the City's Water Quality Ordinance. All City environmental ordinances are also implemented, in part, through the application of the CEQA process to proposed projects.

Although City ordinances are not subject to appeals, they are subject to a public notice and comment process prior to enactment. Enacted City ordinances can be challenged by, among other things, the timely filing of a writ of mandate in Superior Court. The referendum and initiative process can also be used to change or repeal enacted ordinances. The imposition of administrative penalties and fines under these ordinances (where applicable) can be appealed to the courts. Trial court decisions to impose civil penalties or to grant injunctive or other relief can also be appealed.

4. Administrative and Legal Procedures

In addition to the above authority, the City has in place various legal and administrative procedures to assist in enforcing the various urban runoff related Ordinances, including the following:

A. Administrative Remedies

- General Penalties (Chapter 1.20 of the Temecula Municipal Code; Temecula Municipal Code Sections 8.28.310, 8.28.320 and 8.28.410)
- Administrative Penalties and Citations (Chapter 1.21 of the Temecula Municipal Code)

B. Nuisance Remedies

- Public nuisance under State law
- City Nuisance abatement procedures (Chapter 8.12 of the Temecula Municipal Code)

C. Criminal Remedies

- Misdemeanor citations/prosecution (explicitly authorized for grading violations in Temecula Municipal Code Section 18.27.040 and stormwater violations in Temecula Municipal Code Section 1.20.010)

D. Equitable Remedies

- Injunctive relief under State law and the Temecula Municipal Code
- Declaratory relief under State law

E. Other Civil Remedies

- Federal law claims (*e.g.*, Clean Water Act and Resource Conservation and Recovery Act Citizen Suits)

- Remedies under the California Government Code

Please contact me if you have any questions regarding the foregoing or if you need any additional information regarding the City's legal authority to enforce the Permit.

Very truly yours,

for

Peter M. Thorson
City Attorney

cc: Greg Butler, City of Temecula

Performance Evaluation Assessment

Compliance with Section J.1

Section J.1 of the 2010 SMR MS4 Permit requires each Copermittee to annually assess and report upon the effectiveness of the JRMP and Watershed Workplan implementation to (1) reduce the discharge of Storm Water Pollutants from its MS4 facilities to the MEP; (2) prohibit Non-Stormwater discharges; and (3) prevent runoff discharges from the MS4 from causing or contributing to a violation of Water Quality Standards. With submittal of the Report of Waste Discharge, the Copermittees will determine whether their program implementation is resulting in the protection and/or improvement of water quality through an integrated assessment.

Overview

The purpose of the overall program assessment is to ensure that the Copermittee's programs continue to be effective at managing the effects of Runoff on Receiving Water quality as required under section J.1 of the 2010 SMR MS4 Permit. To achieve this objective, the Copermittees have developed an overall program effectiveness assessment strategy. The overall program effectiveness assessment is an iterative process as depicted in Figure 1.

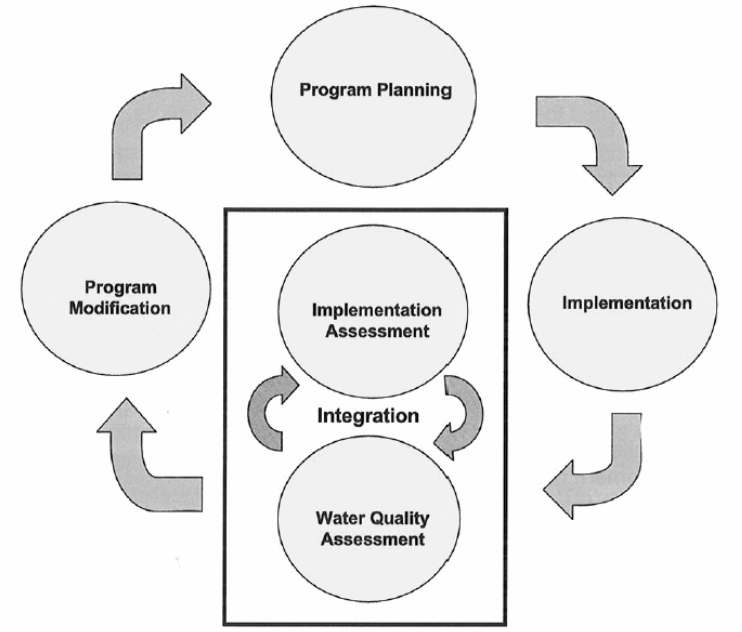

Figure 1

Measurable metrics that will be collected annually. These metrics generally involve: Confirmation of activities, Tabulation of data, Surveys of the public, results from Inspections or site visits, Quantification, and information from the Monitoring program.

CASQA Outcome Levels for each metric; to indicate how each metric can demonstrate the effectiveness of the Permittee's programs (as described below). Data collected through program implementation will be used to assess Level 1 – 4/5 outcomes. The results from the monitoring program will be used to identify water quality trends to evaluate Level 5 & 6 Outcomes

Assessment Intervals at which the Copermittees will evaluate the measurable metrics to determine the applicable CASQA Outcome Levels.

Timeframes in which the Copermittees expect to be able to achieve the desired CASQA Outcome Level. If a desired outcome is not attained within the specified timeframe, the Copermittee(s) will re-assess the BMP to identify any improvements that may be needed to improve their ability to detect and attain the outcome.

CASQA Outcome Levels

CASQA has established six effectiveness assessment levels which are described below. Generally lower level outcomes must be achieved before the higher level outcomes can be expected.

Level 1 – Documenting activities. Level 1 Outcomes provide the program managers with direct feedback on whether the control measures are being developed and implemented as planned and on schedule. Level 1 Outcomes are assumed to be beneficial to water quality and reflect program implementation and are not indicators of the impact of implementation on the environment.

Level 2 – Raising awareness. Level 2 Outcomes provide program managers with feedback on how effective the control measures have been in raising awareness and changing attitudes of target audiences. Level 2 Outcomes are assumed to be beneficial to the environment as increased awareness and attitudinal changes provide the basis for behavioral change.

Level 3 – Changing behavior. By building on Level 2, Level 3 Outcomes provide program managers with feedback on how effective the program elements and control measures have been in motivating target audiences to change their behaviors and implement appropriate BMPs. At Level 3, control measures focus on providing information and incentives for target audiences to take action by changing behavior and implementing recommended BMPs. Both quantitative (i.e., statistically valid) and qualitative methods are used to measure behavior changes. Methods used to measure behavior changes include those used for Level 2 Outcomes as well as direct observation via site visits. Level 3 Outcomes may take the form of a percent and/or change in the percentage of the target audience demonstrating that a behavior change has occurred such as an increase in number of BMPs implemented and maintained at construction sites.

Level 4 – Reducing loads from sources. Level 4 Outcomes provide program managers with feedback regarding reductions in the amounts of pollutants associated with specific sources

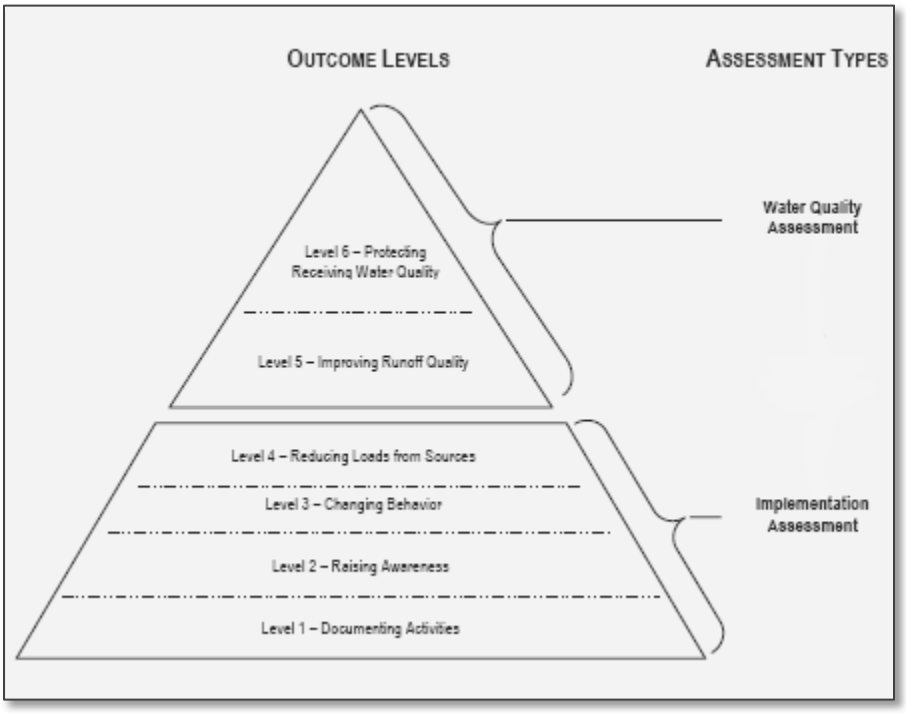
resulting from the implementation or enhancement of a BMP. If a large enough portion of the target audience is moved to take action (Level 3), loads into the MS4 are prevented. At Level 4, programs collect data to allow estimation of loads from Pollutant sources that are prevented from being either generated or discharged into the MS4.

Level 5 – Improving runoff quality. Level 5 Outcomes may be measured as reductions in one or more specific Pollutants, and may reflect effectiveness at a variety of scales ranging from site-specific to programmatic. Over time, as loads are prevented from entering the MS4, runoff and discharge quality are expected to improve. At Level 5, baseline measurements of runoff quality should be measured to allow comparison. Multi-year data sets are needed to have any confidence in the measured change.

Level 6 – Protecting Receiving Water quality. At Level 6, program managers will focus on Outcomes such as compliance with Water Quality Standards, protection of biological integrity, and Beneficial Use attainment. Regardless of the Outcomes targeted, Receiving Water quality usually reflects more than the quality of MS4 discharges. Other influences may have a significant impact on Receiving Water quality, including sanitary sewer overflows, rising groundwater, agricultural and other Non-Point Source discharges. Changes in Receiving Waters and the environment resulting from stormwater programs may only be seen over long periods of time that allow the cumulative impacts of multiple control measures and program elements to result in measurable change in water quality.

Categories of Assessments

The program elements addressed in the overall program effectiveness assessment can generally be broken down into two categories, implementation assessments, and water quality assessments, as shown in the figure below:



Assessment Strategy

JRMP Implementation Assessments

The Copermittees have identified implementation assessment metrics for each compliance program area which can potentially demonstrate multiple outcome levels, as summarized below:

JRMP Program	Table #	Potential Outcome Levels					
		1	2	3	4	5	6
IC/ID	1	X		X	X	X	
Permittee Facilities	2	X	X	X	X		
Development Planning	3	X		X		X	
Construction	4	X		X			
Industrial / Commercial	5	X		X			
Residential	6			X	X		
Retrofit	7	X			X	X	
Public Education	8	X	X	X	X		

The specific metrics and associated CASQA Effectiveness Metrics are shown in Tables 1-8 of the Performance Evaluation Assessment.

Water Quality Assessments

In addition to the implementation assessments identified above, data from the Monitoring program will be used to perform Water Quality Assessments, as summarized below:

Monitoring Program Element	Potential Outcome Levels					
	1	2	3	4	5	6
Outfalls – Dry Weather				X	X	
Outfalls – Wet Weather				X	X	
Outfalls – High Priority Inland Aquatic Habitat				X	X	
Receiving Waters - Stream Assessment Monitoring				X	X	X
Receiving Waters – MLS Dry Weather				X	X	X
Receiving Waters – MLS Dry Weather				X	X	X

The specific metrics and associated CASQA Effectiveness Metrics for the Monitoring Program Element are shown in Table 9 of the Performance Evaluation Assessment. The revised Santa Margarita Monitoring Program (Volume III of the CMP) describes the monitoring program that will collect the necessary data.

The specific metrics and associated CASQA Effectiveness Metrics for the Watershed Workplan Program Element are shown in Table 10 of the Performance Evaluation Assessment. The Watershed Workplan is discussed in section 3.8 of the JRMP.

Reporting of Effectiveness Assessments

The continued implementation of the BMPs required in the 2010 SMR MS4 Permit are anticipated to result in incremental, but overall improvement in the metrics that may or may not be discernible within the term of the 2010 SMR MS4 Permit, however this assessment program is intended to be an iterative process that can transcend MS4 Permit terms, to ensure that improvements are made consistent with the MEP standard.

Beginning with the FY 2012-2013 Annual Reports, a summary of the Implementation Assessments will be provided within each JRMP Annual Report, and a summary of the Water Quality Assessments will be provided within each Monitoring Annual Report.

These effectiveness summaries will include:

a. The data collected for each of the measurable metrics identified in tables 1-10.

b. A determination of the applicable CASQA outcome level(s) for each metric, upon completion or the applicable assessment interval.

c. Responses to effectiveness assessments: Where the assessments indicate that the desired outcome level has not been achieved at the end of the projected timeframe, the Copermittee(s) will review its(their) applicable activities and BMPs to identify any modifications and improvements needed to maximize effectiveness, as necessary to comply with the 2010 SMR MS4 Permit. If the Copermittee(s) determines that the existing activities/BMPs are adequate, or that the projected timeframe should be

extended, justification and an updated timeframe for attainment of the outcome level will be provided in the Annual Report.

d. A work plan and schedule to address any program modifications and improvements in response to the findings of the assessments will be developed and implemented. The work plan and schedule will be provided and updated with the applicable Annual Report. The work plans will include, at a minimum, the following:

1) The problems and priorities identified during the assessment;
2) A list of Priority Pollutants and known or suspected sources;
3) A brief description of the strategy employed to reduce, eliminate or mitigate the negative impacts;
4) A description and schedule for new and/or modified BMPs. The schedule will include dates for significant milestones;
5) A description of how the selected activities will address an identified high priority problem. This will include a description of the expected effectiveness and benefits of the new and/or modified BMPs;
6) A description of implementation effectiveness metrics;
7) A description of how efficacy results will be used to modify priorities and implementation; and
8) A review of past activities implemented, progress in meeting Water Quality Standards, and planned program adjustments.

BEST MANAGEMENT PRACTICES Plan for FIRE FIGHTING ACTIVITIES

Initially Prepared in Consultation with the Following Fire Fighting Agencies:

City of Corona Fire Department
City of Hemet Fire Department
City of Norco Fire Department
City of Riverside Fire Department
County of Riverside Fire Department/CDF
Idyllwild Fire Protection District
Murrieta Fire Protection District

Revised in compliance with
Order No. R9-2010-0016 (NPDES No. CAS0108766)
Covering the Santa Margarita Region

June 2012

INTENT

The purpose of this plan is to identify Best Management Practices (BMPs) used by fire fighting agencies for Runoff management in the Santa Margarita Region of Riverside County. Section B.3 of the 2010 SMR MS4 Permit adopted by the San Diego Regional Water Quality Control Board (Regional Board) requires each Copermittee to develop and implement a program to address Pollutants from non-emergency fire fighting flows (i.e., flows from controlled or practice blazes and maintenance activities) identified as significant sources of Pollutants to Waters of the U.S.

The Riverside County MS4 Permittees in cooperation with the Riverside County Fire Agencies have developed fire department activity procedures to provide guidance to Fire Prevention and Firefighting personnel for management of Runoff. Guidance is provided in the form of recommended BMPs that are incorporated as part of the individual Jurisdictional Runoff Management Plans (JRMP), and as applicable into Facility Pollution Prevention Plans.

When followed, implementation of the BMPs will minimize discharges of Runoff to the municipal separate storm sewer system (MS4) associated with non-emergency fire fighting activities.

PROHIBITIONS

Building fire suppression system maintenance discharges (e.g., sprinkler line flushing) and vehicle washing contain Waste. Therefore, the Copermittees are required to prohibit such discharges as Illegal Discharges through ordinance, order, or similar means.

PROCEDURE

Fire Prevention Activities

1. Fire Sprinkler Acceptance and Testing BMPs

   - As noted above, discharges associated with fire suppression systems are prohibited. Such discharges must not be allowed to reach any MS4, Receiving Water, or other conveyance such as a street with curb and gutter.
   - Flows from fire sprinkler acceptance and testing must be contained onsite and/or direct the water flows to landscaped or green areas whenever possible and safe to do so without causing damage or erosion.
   - When practicable, divert sprinkler system flushing flows to the sanitary sewer, with the permission of the local sewer agency.
   - Conduct fire sprinkler testing on non-rainy days.

2. Fire Hydrant Testing BMPs

   - Obtain coverage under Order R9-2002-0020 (link) and implement any compliance requirements specified therein. The following are general guidelines that may need to be complied with:
     - Conduct on non-rainy days.
     - Conduct flows for the shortest duration possible.
     - Use a water diffuser as necessary.
     - Remove debris from the affected curb and gutter before initiating flushing.
     - Direct water flows to landscaped or green areas whenever possible and safe to do so without causing damage or erosion.

Non-emergency Firefighting Activities

1. Discharges Associated With Fire Training Activities

Training activities, which simulate emergency responses, must be performed in a manner that reduces or prevents discharges to the MS4 to the maximum extent practicable. In addition, when the elimination of discharges into the MS4 is unavoidable (i.e. equipment failures), measures will be implemented to minimize impacts to water quality:

- Live and simulated fire training should be conducted, where feasible, in facilities where Runoff controls protecting the MS4 have been engineered and built into the facility.
- When conducting Maximum Capability Training (MCT) exercises, potable water sources may be used when Runoff cannot be contained.
- Direct water flows to landscaped or green belt areas whenever possible.
- Survey the area prior to the training exercise to ensure that debris will not enter the MS4 as a result of the flows generated during the drill.
- When practicable, divert flows to the sanitary sewer with the permission of the local sewer agency.
- Use fog streams or straight streams for short durations when practicable.
- Use lower gallon per minute (GPM) nozzle settings.
- Prevent discharge of foam or other additives to the MS4. If training activities involve the use of foam, block off all potentially affected storm drain inlets with plastic sheeting and sandbags or temporary berms.

2. Discharges Associated With Post-Emergency Fire Fighting Activities

The post-emergency rehabilitation and maintenance of response equipment must be performed in a manner that avoids unnecessary discharges to the MS4.

3. Discharges Associated with Activities Conducted at Fire Facilities

Specific BMPs to be implemented at Copermittee owned Fire Facilities are identified in the Facility Pollution Prevention Plan (FPPP) as described in the JRMP. The following are general BMPs that can be considered for incorporation into the FPPP as determined appropriate and applicable by the Copermittee.

A. Vehicles and Equipment Washing and Cleaning

The following BMPs should be considered in order to prevent or reduce the discharge of Pollutants to the MS4 from vehicle and equipment washing and cleaning:

- Use methods of cleaning vehicles that employ the minimal use of water, such as wet chamois or non-water rinses, when applicable.
- Limit the use of all cleaning agents and when feasible only use water.
- Remove debris from any area or facility used for washing and/or cleaning vehicles.
- Prevent Runoff from vehicle and equipment washing and cleaning from entering the MS4 by employing one of the following BMPs.

  a. Direct water flows to landscaped or green areas or contain the water onsite and allow it to evaporate and infiltrate whenever safe to do so without causing damage or erosion.
  b. Use designated wash areas (preferably covered and bermed) to contain and/or divert the wash

water to the sanitary sewer either through the use of "wet-vac" or through a plumbed sanitary sewer connection.

c. Use self-contained water recycling systems.
d. Use off-site commercial washing and steam cleaning facilities.

- Prohibit all steam cleaning discharges from entering the MS4. Direct all steam cleaning discharges to the sanitary sewer.

B. Vehicle Fueling

The following BMPs should be considered in order to prevent or reduce the discharge of Pollutants to the MS4 when fueling fire fighting apparatus:

- Protect the fueling area from Stormwater by installing a canopy.
- Pave fueling area surfaces with Portland cement concrete (or other equivalent smooth impervious surface).
- Keep perimeter drains clear of debris at all times.
- Where a perimeter drain is not installed, install a berm or grade area to prevent run-on of Stormwater and spilled liquids.
- Use a dead-end sump to collect spills or install an oil-water separator.
- Utilize vapor recovery nozzles to help control drips as well as air pollution. Discourage "topping-off" of fuel tanks.
- Maintain a spill control kit at the site. Use absorbent materials on small spills and general cleaning rather than hosing down an area. Remove the absorbent materials promptly and dispose as hazardous waste.
- Keep site Facility Pollution Prevention Plan (FPPP) current.

C. Vehicles and Equipment Maintenance and Repair

The following BMPs must be implemented in order to prevent or reduce the discharge of Pollutants to the MS4 from vehicle and equipment maintenance and repair:

- Conduct vehicle and equipment maintenance in areas where precautions have been taken to prevent the entry of spills into the MS4.
- Use dry cleaning methods in maintenance and repair areas when practical.

D. Hose Washing and Cleaning

- Design future facilities used for washing and/or cleaning fire hoses to prevent wash water or other debris from entering the MS4.
- Direct water flows to landscaped or green areas or contain the water onsite and allowing it to percolate through plant material, the landscape, or to evaporate completely, whenever safe to do so without causing damage or erosion.
- Use designated wash areas (preferably covered and bermed) to contain and/or divert the wash water to the sanitary sewer either through the use of a "wet-vac" or through a plumbed sanitary sewer connection.
- Prevent wash water containing detergents, degreasers, or other contaminants from entering the MS4.
- When cleaning the wash area prevent discharge from entering the MS4. Utilize wet mop cleaning methods in small areas, when feasible.
- Use methods of cleaning fire hoses that employ the minimal use of water, such as high-pressure spray

washers, when applicable.

E. Facility Maintenance

The following BMPs should be considered in order to prevent or reduce the discharge of Pollutants to the MS4 during facility maintenance:

- Use dry cleaning methods, such as sweeping, to clean impervious areas such as apparatus floors, driveways, patios, and walkways. Place sweepings and debris in receptacles for solid waste disposal.
- Maintain landscaped areas as required, limiting the introduction of leaves and landscape waste into the MS4.
- Monitor and maintain irrigation systems to prevent Runoff.
- Maintain and repair structures in order to prevent the release of water, soils, or waste to the MS4.

F. Solid Waste and Hazardous Materials Storage Areas

The following BMPs should be considered in order to prevent or reduce the discharge of Pollutants to the MS4 from solid waste and in hazardous materials storage areas:

- Provide a canopy or roof for solid waste and hazardous materials storage areas.
- Provide secondary containment (i.e. a metal or plastic pan with a raised edge) for hazardous materials storage areas.
- Ensure waste containers and dumpsters are properly secured and sealed. Provide lids for all trash and solid waste receptacles. Keep lids closed to prevent contact with rainfall and to ensure containment of waste within the storage area.

Emergency Fire Fighting Activities

An "emergency" exists from alarm notification until, in the opinion of the incident commander, the emergency has concluded. Discharges occurring during emergency fire fighting activities (i.e. flows necessary for the protection of life and property) do not require BMPs and are not prohibited under the 2010 SMR MS4 Permit.

IMPLEMENTATION STRATEGY

Education, Training, and Outreach

1. Stormwater NPDES Training

Copermittee Fire department personnel should receive annual education and training to increase staff awareness and understanding of Stormwater Pollution issues, BMPs, and their compliance obligations.

2. Best Management Practices (BMPs) Update

The Copermittees in the Santa Margarita Region will continue to work cooperatively with fire departments to identify, update, and provide guidance on the implementation BMPs, as appropriate, to reduce contaminants in discharges related to fire department agency activities to the maximum extent practicable.

GLOSSARY

With exception of the following, terms used in this document are defined in the JRMP Glossary,:

Maximum Capability Training (MCT)
The MCT involves training exercises in which high water flows are generated to ensure operational readiness. Examples may include: Probation preparation and testing, and organized exercises that prepare or test the abilities of long term employees. Water flows into the storm drain are permissible when using potable water sources (hydrants or water tanks) and debris from the effected curb and gutter have been previously removed.

Unified Sanitary Sewer Spill Response Procedure

1.0 Background

On November 10, 2010, the California Regional Water Quality Control Board – San Diego Region (Regional Board) issued an area-wide Municipal Separate Storm Sewer System (MS4) National Pollutant Discharge Elimination System (NPDES) Permit (2010 MS4 Permit) to the Riverside County Flood Control and Water Conservation District (District), the County of Riverside (County), and the incorporated cities of Riverside County within the San Diego Region (collectively, Copermittees).

The 2010 MS4 Permit requires the Copermittees to control the discharge of Pollutants into and from the MS4s to Waters of the United States, including from Sewage Spills. The Copermittees however do not own nor operate any portion of the sanitary sewer system nor associated treatment facilities. Sewering agencies that own or operate sanitary sewer collection systems greater than one mile in length are regulated under State Water Resources Control Board Water Quality Order No. 2006-0003 and the accompanying amendment to its monitoring and reporting program (WQ 2008-0002-EXEC). This order, known as the Statewide General Waste Discharge Requirements for Sanitary Sewer Systems (Sanitary Sewer Order) serves, among other purposes, to prevent and minimize Potential Pollutants from sanitary sewer overflows (SSOs) originating from these sewer collection systems from entering surface waters. Copermittees that own or operate applicable sanitary sewer collection systems are required to obtain coverage under the Sanitary Sewer Order.

The Regional Board has found that effluent from SSOs that may enter the MS4 can ultimately have a negative impact on Beneficial Uses of Receiving Waters. The Copermittees have developed this Sanitary Sewer Spill Response Procedure to prevent, respond to, contain and clean up sewage from SSOs that have or could impact the MS4.

2.0 Purpose

The local Sewering agenciesare required to provide notification, documentation, spill response and reporting of SSOs from their sanitary sewer collection systems pursuant to established federal and state regulations (including the Sanitary Sewer Order), and individual NPDES permits. This Sanitary Sewer Spill Response Procedure provides a mechanism to ensure effective coordination between those sewering agencies and the Copermittees in the event that an SSO threatens to impact, or impacts, the MS4. This procedure will:

- Enhance communication between the Copermittees, sewering agencies and the Regional Board;
- Clarify and streamline interagency SSO response procedures; and
- Provide additional protection of Receiving Waters.

3.0 SSO Response Procedure

Upon determination by a sewering agency or Copermittee, persons in charge, contractor or field crew that an SSO has occurred that may impact the MS4, the following notification, reporting, response, and sampling procedures will be implemented.

3.1 Notifications

3.1.1 Notification Requirements Applicable to Sewering Agencies:

In compliance with the Sanitary Sewer Order, the following notification requirements are applicable to sanitary sewer collection systems and other facilities owned or operated by sewering agencies:

- For any discharges of sewage that result in a discharge to a drainage channel or surface water, the sewering agency will as soon as possible, but not later than two (2) hours after becoming aware of the discharge, notify the OES, the County Department of Environmental Health, and the Regional Board.
- As soon as possible, but no later than twenty-four (24) hours after becoming aware of a discharge to a drainage channel or a surface water, the sewering agency will submit to the Regional Board a certification that the OES and the County Department of Environmental Health have been notified of the discharge.

The sewering agency with jurisdiction for the spill will provide notification immediately (within 24 hours of becoming aware of the circumstances) for all discharges that endanger human health or the environment as follows:

- By phone to the OES at 800-582-7550 and to the Regional Board at 858-467-2952
- At a minimum:
  - Any sewage spill greater than 1,000 gallons
  - Any sewage spill that could impact water contact recreation
  - Any discharge of sewage into or on any Waters of the State (reportable to OES[1])

In addition, the sewering agency will notify the Highway Patrol of SSOs affecting a State Highway in accordance with OES guidance[2].

1 "California Hazardous Material Spill/Release Notification Guidance." April 2006. California Office of Emergency Services. Page 4. http://www.oes.ca.gov/

2 "California Hazardous Material Spill/Release Notification Guidance." April 2006. California Office of Emergency Services. Page 6. http://www.oes.ca.gov/

Other spill incidents, including any unauthorized discharges that are not reportable to the OES, are reported to the Regional Board's Executive Officer as part of the Annual Report as described in Section 3.3.

3.1.2 Notification Requirements Applicable to Copermittees Not Owning or Operating a Sanitary Sewer Collection System

Should a Copermittee discover an SSO or determine that sewage is entering the MS4, the Copermittee shall immediately notify the appropriate sewering agency.

1. Where the sewering agency determines that the SSO originates from its sewer collection system or facilities, the sewering agency will follow the notification procedures described in Section 3.1.1 and established reporting procedures. No further notification or reporting is required by the Copermittee.
2. Where the sewering agency determines that the SSO originates from a private lateral or private property, the sewering agency will contact the property owner for clean up responsibility and will contact the Copermittee with jurisdiction of the spill. For more information on private property SSOs, see Section 6.0. The Copermittee with jurisdiction for the spill will provide notification immediately (within 24 hours of becoming aware of the circumstances) for all discharges that endanger human health or the environment as follows:
    - By phone to the OES at 800-582-7550 and to the Regional Board at 858-467-2952
    - At a minimum:
        - Any sewage spill greater than 1,000 gallons
        - Any sewage spill that could impact water contact recreation
        - Any discharge of sewage into or on any Waters of the State (reportable to OES[3])
    - In addition, the Copermittee with jurisdiction for the spill will notify the Highway Patrol of SSOs affecting a State Highway in accordance with OES guidance[4].

Should a Copermittee discover discharges of sewage in an area not served by a sewering agency, the Copermittee with jurisdiction for the spill will follow the procedures in sections 3.5 and 4.4.5 of the JRMP as applicable.

Other spill incidents, including any unauthorized discharges that are not reportable to the OES, are reported to the Regional Board's Executive Officer as part of the Annual Report as described in Section 3.3.

3.1.3 Agency Contact Information

To identify sewering agency with jurisdiction in the spill area, **see Attachment A**. A list of the current contact phone numbers for various agencies is provided below:

CONTACT:	**PHONE NUMBER:**
County Department of Environmental Health / Environmental Resources Management	951-955-8980
Governor's Office of Emergency Services (OES)	800-852-7550
Copermittee Staff (whose MS4 may be affected by spill)	**See Attachment B**
Regional Water Quality Control Board: San Diego Region	858-467-2952
Riverside County Flood Control and Water Conservation District	951-955-1200
Sewering agency with jurisdiction in spill area	**See Attachment A**
California Highway Patrol (if highway affected by spill)	**911**

3.2 Minimum Information for Notification

Copermittee staff providing notice should make reasonable attempts to reach sewering agency contacts during and after normal working hours. In cases where sewering agency contacts are not available, messages shall be left. The following minimum information should be conveyed by Copermittee staff as appropriate:

- Identity of caller
- Location, date and time of SSO, status of the SSO (actual or threatened release)
- Quantity of sewage released (estimate of flow or volume)
- Need for public safety or traffic control measures
- Cause of the SSO, if known
- Description of immediate measures taken to contain/mitigate SSO
- Estimate of additional containment and/or clean-up options
- Determination if sewage was discharged to MS4 or areas otherwise impacting the MS4 **(Refer to Attachment A)**
- Determination if SSO reached a state highway

A copy of a sample SSO reporting form is included in **Attachment C**.

3.3 Reporting Requirements

Each Sewering agency is responsible for filing all SSO reports as required under federal and state law for discharges from their sanitary sewer systems, including any applicable NPDES or other permits. Sewering agencies are required to report any discharges to the Department of Environmental Health immediately, per the requirements of Health and Safety Codes Section 5411.5.

Copermittees shall additionally follow specific reporting requirements as described in Section 4 of the JRMP.

The Person in Charge at the responsible sewering agency must CC: the final SSO Report provided to the Regional Board to the affected Copermittees via hard copy or electronic means.

3.4 Response Requirements

Responsible sewering agencies will lead response to SSOs and will assume Person in Charge responsibilities in most cases. Person in Charge of spill response:

- Will take all immediate measures necessary to contain release or potential release of sewage and prevent/minimize impacts to water quality and the MS4.

- May cut locks, open manholes, or otherwise enter MS4 as necessary to contain and clean up SSOs.

- Will contact the maintenance/public works department of the appropriate Copermittee as necessary, and as soon as possible, to notify them of actions within their MS4. Contact numbers are included in **Attachment B**. If necessary, Copermittee staff will support spill response by providing MS4 maps or other support if available.

- Will coordinate with Copermittee staff as necessary to ensure that the clean up adequately remedies impacts of the sewage released to the MS4. It should be noted that the Regional Board prefers that MS4 facilities not be sanitized with disinfectant where not immediately impacting public health (i.e. no chlorine shall be used when discharge is within 1,500 feet of a waterway).

- Will coordinate with local fire, police, and traffic departments as necessary to ensure the safety of the response effort, and to manage traffic and local residents.

4.0 Training Requirements

Sewering Agencies and Copermittee staff will ensure that training for this procedure is incorporated into appropriate training programs related to SSO response.

5.0 Detection Involving Infiltration into MS4

In the event that Copermittees encounter evidence of potential sewage infiltration into the MS4 due to water quality monitoring or field observation, the Copermittees will notify the relevant sewering agency (**see Attachment A**) to coordinate a response.

6.0 Private Property SSOs

Sewering agencies and their contractors will respond to all SSOs within their service area. If a private property is the source of an SSO, agencies and their contractors shall assist in the control and containment to ensure that the sewage does not enter the MS4. If the SSO was a result of a private lateral, the private property owner will be informed of the blockage, and will be responsible to remove the blockage. If the SSO was a result of the sewer trunk line blockage, the response crew will correct the problem.

Glossary

Note: With the exception of the following, most terms used in this document are defined in the Glossary to the JRMP.

Sanitary Sewer Overflow (SSO) - A sanitary sewer overflow is any overflow, spill, release, discharge or diversion of wastewater from a sanitary sewer system. SSOs include:

(i) Overflows or releases of wastewater that reach Waters of the U.S.;
(ii) Overflows or releases of wastewater that do not reach Waters of the U.S.; and
(iii) Wastewater backups into buildings and on private property that are caused by blockages or flow conditions in a sanitary sewer, other than a building lateral. Wastewater backups into buildings caused by a blockage or other malfunction of a building lateral that is privately owned is an SSO when sewage is discharged off private property into streets, stormdrains, or Waters of the U.S.

Sanitary Sewer System - Any system of pipes, pump stations, sewer lines, or other conveyances upstream of a wastewater treatment plant headworks used to collect and convey sewage to a treatment facility. Temporary storage and conveyance facilities (such as vaults, temporary piping, construction trenches, wet wells, impoundments, tanks, highlines, etc.) are considered to be part of the sanitary sewer system, and discharges into these temporary storage facilities are not SSOs.

Sewage - The waste and wastewater produced by residential and commercial establishments and discharged into sewers.

Waters of the State – Any water, surface or underground, including saline waters within the boundaries of the State.

Sample SSO Reporting Form

SANITARY SEWER OVERFLOW REPORT FORM

This report is: ☐ Preliminary ☐ Final ☐ Revised Final

Sanitary Sewer Overflow Sequential Tracking Number: _____

Reported to: _____
(Enter Fax #, Voicemail #, or Name of Regional Board Staff)

Date Reported: ____/____/_____ (MM/DD/YY)

SANITARY SEWER OVERFLOW REPORT FORM

Sanitary Sewer Overflow Correction - - Description of all Preventative and Corrective Measures Taken or Planned:

_____

Was there measurable precipitation during 72-hour period prior to the overflow?

☐ Yes ☐ No

Initial and Secondary Receiving Waters:

Did the sanitary sewer overflow enter a storm drain?

☐ Yes ☐ No

Did the sanitary sewer overflow reach surface waters other than a storm drain?

☐ Yes ☐ No

Name or description of secondary receiving waters. (If none, state such)

_____

If the sanitary sewer overflow did not reach surface waters, describe the final destination of sewage.

_____

Notification:

Was the local health services agency notified?

☐ Yes ☐ No

If the overflow was over 1,000 gallons, was the Office of Emergency Services (OES) notified?

☐ Yes ☐ No ☐ Not applicable

Affected Area Posting:

Were signs posted to warn of contamination?

☐ Yes ☐ No

Location of Posting (if Posted): _____

How many days were the warning signs posted?: _____

Remarks:

_____

INITIAL STUDY

City of Temecula P.O. Box 9033, Temecula, CA 92589-9033 Environmental Checklist	
Project Title	
Lead Agency Name and Address	City of Temecula P.O. Box 9033, Temecula, CA 92589-9033
Contact Person and Phone Number	(951)
Project Location	
Project Sponsor's Name and Address	
General Plan Designation	
Zoning	
Description of Project	(Describe the whole action involved, including but not limited to later phases of the project, and any secondary, support, or off-site features necessary for its implementation. Attach additional sheets if necessary)
Surrounding Land Uses and Setting	(Briefly describe the project's surroundings)
Other public agencies whose approval is required	(E.g. permits, financing approval, or participation agreement)

Environmental Factors Potentially Affected			
The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.			
	Aesthetics		Mineral Resources
	Agriculture and Forestry Resources		Noise
	Air Quality		Population and Housing
	Biological Resources		Public Services
	Greenhouse Gas Emissions		Recreation
	Cultural Resources		Transportation and Traffic
	Geology and Soils		Utilities and Service Systems
	Hazards and Hazardous Materials		Mandatory Findings of Significance
	Hydrology and Water Quality		None
	Land Use and Planning		

Determination
(To be completed by the lead agency)

On the basis of this initial evaluation:

	I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.
	I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.
	I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.
	I find that the proposed project MAY have a “potentially significant impact” or “potentially significant unless mitigated” impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.
	I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

Signature _____ Date _____

Printed Name _____ For _____

1. AESTHETICS. Would the project:

	Issues and Supporting Information Sources	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a	Have a substantial adverse effect on a scenic vista?				
b	Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?				
c	Substantially degrade the existing visual character or quality of the site and its surroundings?				
d	Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?				

Comments:

1.a.
1.b.
1.c.
1.d.

2. AGRICULTURE AND FOREST RESOURCES. In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment Project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:

	Issues and Supporting Information Sources	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a	Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?				
b	Conflict with existing zoning for agricultural use, or a Williamson Act contract?				
c	Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g)?				
d	Result in the loss of forest land or conversion of forest land to non-forest use				
e	Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?				

Comments:

2.a.
2.b.
2.c.
2.d.
2.e.

3. AIR QUALITY. Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the project:

	Issues and Supporting Information Sources	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a	Conflict with or obstruct implementation of the applicable air quality plan?				
b	Violate any air quality standard or contribute substantially to an existing or projected air quality violation?				
c	Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)?				
d	Expose sensitive receptors to substantial pollutant concentrations?				
e	Create objectionable odors affecting a substantial number of people?				

Comments:

3.a.
3.b.
3.c.
3.d.
3.e.

4. BIOLOGICAL RESOURCES. Would the project?					
Issues and Supporting Information Sources		Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a	Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?				
b	Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or US Fish and Wildlife Service?
