4.8.1 The permittee shall update the impervious surface analysis of floodplains six months after the approval of the revised Flood Insurance Rate Maps by the Federal Emergency Management Agency.

4.8.2 The permittee shall assess potential impacts on the water quality and the ability of the receiving water to support beneficial uses for all flood management projects. Evaluate the feasibility of retrofitting existing flood control devices to provide additional pollutant and volume removal from stormwater. Report results of such assessment, mapping program, and feasibility studies in the Annual Report (Part 6.2 herein).

4.8.3 The permittee shall review all development proposed in flood plain areas to ensure that the impacts on the water quality of receiving water bodies have been properly addressed. Information regarding impervious surface area located in the flood plains shall be used (in conjunction with other environmental indicators) as a planning tool. The permittee shall collect data on the percentage of impervious surface area located in flood plain boundaries for all proposed development beginning six months after the effective date of this permit. The permittee shall collect similar data for existing development in flood plain areas, in accordance with the mapping program and other activities designed to improve water quality. Critical unmapped areas shall be prioritized by the permittee with an emphasis on developed and developing acreage. Reports of this work shall be summarized in the Annual Report.

4.9 Public Education and Public Participation

The permittee shall continue to implement a public education program including but not limited to an education program aimed at residents, businesses, industries, elected officials, policy makers, planning staff and other employees of the permittee. The purpose of education is to reduce or eliminate behaviors and practices that cause or contribute to adverse stormwater impacts. Education initiatives may be developed locally or regionally.

4.9.1 Education and Outreach.

4.9.1.1 The permittee shall continue to implement its education and outreach program for the area served by the MS4 that was established during the previous permit cycle. The outreach program shall be designed to achieve measurable improvements in the target audience's understanding of stormwater pollution and steps they can take to reduce their impacts.

4.9.1.2 The permittee shall assess current education and outreach efforts and identify areas where additional outreach and education are needed. Audiences and subject areas to be considered include:

a. General public

1) General impacts of stormwater flows into surface waters
2) Impacts from impervious surfaces
3) Source control practices and environmental stewardship actions and opportunities in the areas of pet waste, vehicle maintenance, landscaping, and rain water reuse.

4) A household hazardous waste educational and outreach program to control illicit discharges to the MS4 as required herein
5) Information and education on proper management and disposal of used oil, other automotive fluids, and household chemicals
6) Businesses, including home-based and mobile businesses
7) Management practices for use and storage of automotive chemicals, hazardous cleaning supplies, carwash soaps and other hazardous materials
8) Impacts of illicit discharges and how to report them including information for industries about stormwater permitting and pollution prevention plans and the requirement that they develop structural and non-structural control systems

b. Homeowners, landscapers and property managers

1) Use of low or no phosphorus fertilizers, alternatives to fertilizers, alternative landscaping requiring no fertilizers
2) Landscape designs to reduce runoff and pollutant loadings
3) Car washing alternatives with the objective of eliminating phosphorus detergent discharges
4) Yard care techniques that protect water quality
5) Management practices for use and storage of pesticides and fertilizers
6) Management practices for carpet cleaning and auto repair and maintenance
7) Runoff Reduction techniques, including site design, on-site retention, pervious paving, retention of forests and mature trees
8) Stormwater pond maintenance

c. Engineers, contractors, developers, review staff and land use planners

1) Technical standards for construction site sediment and erosion control
2) Runoff Reduction techniques, including site design, on-site reduction, pervious pavement, alternative parking lot design, retention of forests and mature trees
3) Stormwater treatment and flow control controls
4) Impacts of increased stormwater flows into receiving water bodies

4.9.2 Measurement of Impacts.

The permittee shall continue to measure the understanding and adoption of selected targeted behaviors among the targeted audiences. The resulting measurements shall be used to direct education and outreach resources most effectively, as well as to evaluate changes in adoption of the targeted behaviors.

4.9.3 Recordkeeping.

The permittee shall track and maintain records of public education and outreach activities.

4.9.4 Public Involvement and Participation.

The permittee shall continue to include ongoing opportunities for public involvement through advisory councils, watershed associations and/or committees, participation in developing updates to the stormwater fee system, stewardship programs, environmental activities or other similar activities. The permittee shall facilitate opportunities for direct action, educational, and volunteer programs such as riparian planting, volunteer monitoring programs, storm drain marking or stream clean up programs.

4.9.4.1 The permittee shall continue to create opportunities for the public to participate in the decision making processes involving the implementation and update of the permittee's SWMP. In particular, the permittee shall provide meaningful opportunity for the public to participate in the development of the permittee's Consolidated TMDL Implementation Plan. The permittee shall continue to implement its process for consideration of public comments on their SWMP.

4.9.4.2 The permittee shall continue to establish a method of routine communication to groups such as watershed associations and environmental organizations that are located in the same watershed(s) as the permittee, or organizations that conduct environmental stewardship projects located in the same watershed(s) or in close proximity to the permittee. This is to make these groups aware of opportunities for their direct involvement and assistance in stormwater activities that are in their watershed.

4.9.4.3 The permittee shall make all draft and approved MS4 documents required under this permit available to the public for comment. The current draft and approved SWMP and the MS4 annual reports deliverable documents required under this permit shall be posted on the permittee's website.

4.9.4.4 The permittee shall continue to develop public educational and participation materials in cooperation and coordination with other agencies and organizations in the District with similar responsibilities and objectives. Progress reports on public education shall be included in the Annual Report. An explanation shall be provided as to how this effort will reduce pollution loadings to meet the requirements of this permit.

4.9.4.5 The permittee shall periodically, and at least annually, update its website.

4.10 Total Maximum Daily Load (TMDL) Wasteload Allocation (WLA) Planning and Implementation

4.10.1 Anacostia River Watershed Trash TMDL Implementation

The permittee shall attain removal of 103,188 pounds of trash annually, as determined in the Anacostia River Watershed Trash TMDL, as a specific single-year measure by the fifth year of this permit term.

Reductions must be made through a combination of the following approaches:

1. Direct removal from waterbodies, e.g., stream clean-ups, skimmers
2. Direct removal from the MS4, e.g., catch basin clean-out, trash racks
3. Direct removal prior to entry to the MS4, e.g., street sweeping
4. Prevention through additional disposal alternatives, e.g., public trash/recycling collection
5. Prevention through waste reduction practices, regulations and/or incentives, e.g., bag fees

At the end of the first year the permittee must submit the trash reduction calculation methodology with Annual Report to EPA for review and approval. The methodology should accurately account for trash prevention/removal methods beyond those already established when the TMDL was approved, which may mean crediting a percentage of certain approaches. The calculation methodology must be consistent with assumptions for weights and other characteristics of trash, as described in the 2010 Anacostia River Watershed Trash TMDL.

Annual reports must include the trash prevention/removal approaches utilized, as well as the overall total weight (in pounds) of trash captured for each type of approach.

The requirements of this Section, and related elements as appropriate, shall be included in the Consolidated TMDL Implementation Plan (Section 4.10.3).

4.10.2 Hickey Run TMDL Implementation

The permittee shall implement and complete the proposed replacement/rehabilitation, inspection and enforcement, and public education aspects of the strategy for Hickey Run as described in the updated Plan to satisfy the requirements of the oil and grease wasteload allocations for Hickey Run. If monitoring or other assessment determine it to be necessary, the permittee shall install or implement appropriate controls to address oil & grease in Hickey Run no later than the end of this permit term. As appropriate, any requirement of this Section not completed prior to finalization of the Consolidated TMDL Implementation Plan (Section 4.10.3) shall be included in that Plan.

4.10.3 Consolidated TMDL Implementation Plan

For all TMDL wasteload allocations assigned to District MS4 discharges, the permittee shall develop, public notice and submit to EPA for review and approval a consolidated TMDL Implementation Plan within 30 months of the effective date of this permit provision. This Plan shall include, at a minimum, the following TMDLs and any subsequent updates:

1. TMDL for Biochemical Oxygen Demand (BOD) in the Upper and Lower Anacostia River (2001)
2. TMDL for Fecal Coliform Bacteria in the Upper and Lower Anacostia River (2003)
3. TMDL for Organics and Metals in the Anacostia River and Tributaries (2003)
4. TMDL for Fecal Coliform Bacteria in Kingman Lake (2003)
5. TMDL for Total Suspended Solids, Oil and Grease and Biochemical Oxygen Demand in Kingman Lake (2003)

6. TMDL for Fecal Coliform Bacteria in Rock Creek (2004)
7. TMDL for Organics and Metals in the Tributaries to Rock Creek (2004)
8. TMDL for Fecal Coliform Bacteria in the Upper, Middle and Lower Potomac River and Tributaries (2004)
9. TMDL for Organics, Metals and Bacteria in Oxon Run (2004)
10. TMDL for Organics in the Tidal Basin and Washington Ship Channel (2004)
11. TMDL for Sediment/Total Suspended Solids for the Anacostia River Basin in Maryland and the District (2007) [pending resolution of court vacature, Anacostia Riverkeeper, Inc. v. Jackson, No. 09-cv-97 (RCL)]
12. TMDL for PCBs for Tidal Portions of the Potomac and Anacostia Rivers in the District of Columbia, Maryland and Virginia (2007)
13. TMDL for Nutrients/Biochemical Oxygen Demand for the Anacostia River Basin in Maryland and the District (2008)
14. TMDL for Trash for the Anacostia River Watershed, Montgomery and Prince George's Counties, Maryland and the District of Columbia (2010)
15. TMDL for Nitrogen, Phosphorus and Sediment for the Chesapeake Bay Watershed (2010)

This Plan shall place particular emphasis on the pollutants in Table 4, but shall also evaluate other pollutants of concern for which relevant WLAs exist. EPA will incorporate elements of the Consolidate TMDL Implementation Plan as enforceable permit provisions, including milestones and final dates for attainment of applicable WLAs. The permittee shall fully implement the Plan upon EPA approval. This Plan shall preempt any existing TMDL implementation plans for the relevant WLAs. To account for any new or revised TMDL established or approved by EPA with wasteload allocations assigned to District MS4 discharges, the permittee shall submit an updated Consolidated TMDL Implementation Plan annually, as necessary. Such updates will account for any actions taken in the 12-month period preceding the date 6 months before the revision is due. If necessary, the first such update will be due 18 months after the submittal of the initial Plan, with subsequent updates due on the anniversary of the submittal date.

The Plan shall include:

1. A specified schedule for attainment of WLAs that includes final attainment dates and, where applicable, interim milestones and numeric benchmarks.
   a. Numeric benchmarks will specify annual pollutant load reductions and the extent of control actions to achieve these numeric benchmarks.
   b. Interim milestones will be included where final attainment of applicable WLAs requires more than five years. Milestone intervals will be as frequent as possible but will in no case be greater than five (5) years.
2. Demonstration using modeling of how each applicable WLA will be attained using the chosen controls, by the date for ultimate attainment.
3. An associated narrative providing an explanation for the schedules and controls included in the Plan.

4. Unless and until an applicable TMDL is no longer in effect (e.g., withdrawn, reissued or the water delisted), the Plan must include the elements in 1-3 above for each TMDL as approved or established.
5. The current version of the Plan will be posted on the permittee's website.

4.10.4 Adjustments to TMDL Implementation Strategies

If evaluation data, as outlined in the monitoring strategy being developed per Part 5.1, indicate insufficient progress towards attaining any WLA covered in 4.10.1, 4.10.2 or 4.10.3, the permittee shall make the appropriate adjustements within six (6) months to address the insufficient progress and document those adjustments in the Consolidated TMDL Implementation Plan. The Plan modification shall include a reasonable assurance demonstration of the additional controls to achieve the incorporated milestones. Annual reports must include a description of progress as evaluated against all implementation objectives, milestones and benchmarks, as relevant, outlined in Part 4.10.

4.11 Additional Pollutant Sources

For any additional pollutant sources not addressed in sections 4.1 through 4.9, the permittee shall continue to compile pertinent information on known or potential pollution sources, including significant changes in:

1. land use activities,
2. population estimates,
3. runoff characteristics,
4. major structural controls,
5. landfills,
6. publicly owned lands, and
7. industries impacting the MS4.

For purposes of this section, “significant changes” are changes that have the potential to revise, enhance, modify or otherwise affect the physical, legal, institutional, or administrative characteristics of the above-listed potential pollution sources. This information shall be submitted in each of the Annual Reports submitted to EPA pursuant to the procedures in Part 6.2 herein. For the Stormwater Model, analysis of data for these pollution sources shall be reported according to Part 7 herein.

The permittee shall implement controls to minimize and prevent discharges of pollutants from additional pollutant sources, including but not limited to Bacteria (*E. coli*), Total Nitrogen, Total Phosphorus, Total Suspended Solids, Cadmium, Copper, Lead, Zinc, and Trash, to receiving waters. Controls shall be designed to prevent and restrict priority pollutants from coming into contact with stormwater, *e.g.*, restricting the use of lawn fertilizers rather than end-of-pipe treatment. These strategies shall include program priorities and a schedule of activities to address those priorities and an outline of which agencies will be responsible for implementing those strategies. The strategies used to reduce or eliminate these pollutants shall be documented in updates to the Stormwater Management Program Plan.

5. MONITORING AND ASSESSMENT OF CONTROLS

5.1 Revised monitoring program

5.1.1 Design of the Revised Monitoring Program

Within 30 months of the effective date of Part 4.10.3 of this permit the permittee shall develop, public notice and submit to EPA for review and approval a revised monitoring program. The permittee shall fully implement the program upon EPA approval. The revised monitoring program shall meet the following objectives:

1. Make wet weather loading estimates of the parameters in Table 4 from the MS4 to receiving waters. Number of samples, sampling frequencies and number and locations of sampling stations must be adequate to ensure data are statistically significant and interpretable.

2. Evaluate the health of the receiving waters, to include biological and physical indicators such as macroinvertebrates and geomorphologic factors. Number of samples, frequencies and locations must be adequate to ensure data are statistically significant and interpretable for long-term trend purposes (not variation among individual years or seasons).

3. Include any additional necessary monitoring for purposes of source identification and wasteload allocation tracking. This strategy must align with the Consolidated TMDL Implementation Plan required in Part 4.10.3 For all pollutants in Table 4 monitoring must be adequate to determine if relevant WLAs are being attained within specified timeframes in order to make modifications to relevant management programs, as necessary.

Table 4
Monitoring Parameters

Parameter
E. coli
Total nitrogen
Total phosphorus
Total Suspended Solids
Cadmium
Copper
Lead
Zinc
Trash

4. All chemical analyses shall be performed in accordance with analytical methods approved under 40 C.F.R. Part 136. When there is not an approved analytical method, the applicant may use any suitable method as described in Section 5.7 herein, but must provide a description of the method.

5.1.2 Utilization of the Revised Monitoring Program

The permittee must use the information to evaluate the quality of the stormwater program and the health of the receiving waters at a minimum to include:

1. The permittee shall estimate annual cumulative pollutant loadings for pollutants listed in Table 4. Pollutant loadings and, as appropriate, event mean concentrations, will be reported in DMRs and annual reports on TMDL implementation for pollutants listed in Table 4 in discharges from the monitoring stations in Table 5.

2. The permittee shall perform the following activities at least once during the permit term, but no later than the fourth year of this permit:

    a. Identify and prioritize additional efforts needed to address water quality exceedances, and receiving stream impairments and threats;

    b. Identify water quality improvements or degradation

Upon approval of the Revised Monitoring Program by EPA Region III, or 2 years from the effective date of this permit, whichever comes first, the permittee shall begin implementation of the Revised Monitoring Program.

5.2 Interim Monitoring

Until such time as EPA has approved the Revised Monitoring Program, the permittee shall implement the following monitoring program:

5.2.1 Wet Weather Discharge Monitoring

The permittee shall monitor for the parameters identified in Table 4 herein, at the locations listed in Table 5 herein. Monitoring frequency for chemical/physical parameters shall be taken by at least three times per year at a minimum. This does not include a geomorphologic assessment and/or physical habitat assessment. The permittee shall conduct sampling as provided in 40 C.F.R. § 122.21(g)(7).

The permittee shall monitor and provide an annual Discharge Monitoring Report for the period of interim monitoring.

TABLE 5
Monitoring Stations

A. Anacostia River Sub Watershed Monitoring Sites
1. Gallatin Street & 14th Street N.E. across from the intersection of 14th St. and Gallatin St. in an outfall (MS-2)
2. Anacostia High School/Anacostia Recreation Center – Corner of 17th St and Minnesota Ave SE
B. Rock Creek Subwatershed Monitoring Sites
1. Walter Reed -- Fort Stevens Drive -- 16th Street and Fort Stevens Road, N.W. at an outfall (MS-6)
2. Soapstone Creek -- Connecticut Avenue and Ablemarle Street N.W. at an outfall (MS-5)
C. Potomac River Subwatershed Monitoring Sites
1. Battery Kemble Creek-49th and Hawthorne Streets, N.W. at an outfall (MS-4)
2. Oxon Run-Mississippi Avenue and 15th Street, S.E. into Oxon Run via an outfall (MS-1)

The permittee may revise this list of sites in accordance with its revised monitoring program in Section 5.1 herein. Otherwise, changes to the above MS4 monitoring stations and/or sites for any reason shall be considered a major modification to the permit subject to the reopener clause.

During the interim monitoring period for the pollutants listed in Table 4, demonstration of compliance will be calculated using the procedures identified in the SWMP, the approved Anacostia River TMDL Implementation Plan, and/or other appropriate modeling tools and data on management practices efficiencies. The annual report will provide all monitoring data, and a brief synthesis of whether the data indicate that relevant wasteload allocations and other relevant targets are being achieved.

5.2.2 Storm Event Data

In addition to the parameters listed above, the permittee shall continue to maintain records of the date and duration (in hours) of the storm events sampled; rainfall measurements or estimates (in inches) of the storm event which generated the sampled runoff; the duration (in hours) between the storm event sampled and the end of the previous measurable (greater than 0.1 inch rainfall) storm event; and a calculated flow estimate of the total volume (in gallons) and nature of the discharge sampled.

5.2.3 Sample Type, Collection, and Analysis

The following requirements apply only to samples collected for Part 5.2.1, Representative Monitoring.

1. For discharges from holding ponds or other impoundments with a retention period greater than 24 hours, (estimated by dividing the volume of the detention pond by the estimated volume of water discharged during the 24 hours previous to the time that the sample is collected) a minimum of one sample shall be taken for pollutants listed in Table 4 including temperature, DO, pH and specific conductivity. For all parameters, data shall be reported for the entire event of the discharge pursuant to 40 C.F.R. § 122.26(d)(2)(iii).

2. All such samples shall be collected from the discharge resulting from a storm event that is greater than 0.1 inches in magnitude and that occurs at least 72 hours from the previously measurable (greater than 0.1 inch rainfall) storm event. Samples may be taken with a continuous sampler or as a combination of a minimum of three sample aliquots taken in each hour of discharge for the entire discharge, with each aliquot being separated by a minimum period of fifteen minutes.

3. Analysis and collection of samples shall be done in accordance with the most recent EPA approved laboratory methods and procedures specified at 40 C.F.R. Part 136 and its subsequent amendments.

5.2.4 Sampling Waiver

When a discharger is unable to collect samples due to adverse climatic conditions, the discharger must submit in lieu of sampling data a description of why samples could not be collected, including available documentation of the event.

Adverse climatic conditions which may prohibit the collection of samples includes weather conditions that create dangerous conditions for personnel (such as local flooding, high winds, hurricane, tornadoes, electrical storms, etc.).

5.3 Dry Weather Monitoring

5.3.1 Dry Weather Screening Program

The permittee shall continue with ongoing efforts to detect the presence of illicit connections and improper discharges to the MS4 pursuant to the District SWMP. The permittee shall perform the following: (1) continue to screen known problem sewersheds within the District based on past screening activities; (2) continue to inventory all MS4 outfalls in the District and inspect all outfalls by the end of the permit term; and (3) ensure that the dry weather screening program has addressed all watersheds within the permit term. The screening shall be

sufficient to estimate the frequency and volume of dry weather discharges and their environmental impact.

5.3.2 Screening Procedures

Screening may be developed and/or modified based on experience gained during actual field screening activities. The permittee shall establish a protocol which requires screening to ensure that such procedures are occurring, but such protocol need not conform to the procedures published at 40 C.F.R. § 122.26(d)(1)(iv)(D). The permittee shall describe the protocol actually used in each Annual Report with a justification for its use. The procedures described in the SWMP shall be used as guidance.

5.3.3 Follow-up on Dry Weather Screening Results

The permittee shall continue to implement its enforcement program for locating and ensuring elimination of all suspected sources of illicit connections and improper disposal identified during dry weather screening activities. The permittee shall report the results of such implementation in each Annual Report.

5.4. Area and/or Source Identification Program

The permittee shall continue to implement a program to identify, investigate, and address areas and/or sources within its jurisdiction that may be contributing excessive levels of pollutants to the MS4 and receiving waters, including but not limited to those pollutants identified in Table 4 herein.

5.5 Flow Measurements

The permittee shall continue to select and use appropriate flow measurement devices and methods consistent with accepted scientific practices to ensure the accuracy and reliability of measurements of the volume of monitored discharges. The devices shall be installed, calibrated, and maintained to insure that the accuracy of the measurements is consistent with the accepted capability of that type of device.

5.6 Monitoring and Analysis Procedures

5.6.1 Monitoring must be conducted according to laboratory and test procedures approved under 40 C.F.R. Part 136 and subsequent amendments, unless other test procedures have been specified in the permit.

5.6.2 The permittee is authorized to use a more current or sensitive (i.e., lower) detection method than the one identified in 40 C.F.R. Part 136 exists for a particular parameter, including but not limited to PCBs (Method 1668B) and mercury (Method 1631E). If used, the permittee shall report using the more current and/or more sensitive method for compliance reporting and monitoring purposes.

5.6.3 EPA reserves the right to modify the permit in order to require a more sensitive method for measuring compliance with any pollutant contamination levels, consistent with 40 CFR, Part 136, should it become necessary.

5.7 Reporting of Monitoring Results

The permittee shall continue to report monitoring results annually in a Discharge Monitoring Report. If NetDMR (http://www.epa.gov/netdmr/) is unavailable to any of the following then the original and one copy of the Report are to be submitted at the following addresses:

NPDES Permits Branch
U.S. EPA Region III (3WP41)
Water Protection Division
1650 Arch Street
Philadelphia, PA 19103-2029

National Marine Fisheries Service/Northeast Region
Protected Resource Division
55 Great Republic Drive
Gloucester, Massachusetts 01930-2276

Monitoring results obtained during the previous year shall be summarized and reported in the Annual Report.

5.8 Additional Monitoring by the Permittee

If the permittee monitors (for the purposes of this permit) any pollutant more frequently than required by this permit, using laboratory and test procedures approved under 40 C.F.R. Part 136 and subsequent amendments or as specified in this permit, the results of this monitoring shall be included in the calculation and reporting of the data submitted in the annual Discharge Monitoring Report. Such frequency shall also be indicated.

5.9 Retention of Monitoring Information

The permittee shall continue to retain records of all monitoring information, including all calibration and maintenance records and all original strip chart recordings for continuous monitoring instrumentation for a period of at least five(5) years from the date of the sample, measurement or report. This period may be extended by request of EPA at any time.

5.10 Record Content

Records of monitoring information shall include:

1. The date, exact location, time and methods of sampling or measurements;
2. The individual(s) who performed the sampling or measurements;

3. The date(s) analyses were performed;
4. The individual(s) who performed the analyses;
5. The analytical techniques or methods used; and
6. The results of such analyses.

6. REPORTING REQUIREMENTS

The permittee shall comply with the reporting requirements identified in this section, including but not limited to the deliverables identified in Table 6 below.

TABLE 6
Reporting Requirements

Submittal	Deadline
Discharge Monitoring Report	Each year on the anniversary of the effective date of the permit (AEDOP)
Annual Report	Each year on the AEDOP.
MS4 Permit Application	Six months prior to the permit expiration date.

6.1 Discharge Monitoring Reports

The permittee shall provide discharge monitoring reports per Part 5.7 of this permit on the quality of stormwater discharges from the MS4 for all analytical chemical monitoring stipulated in Part 5 of this permit.

6.2 Annual Reporting

The permittee shall submit an Annual Report to EPA on or by the effective yearly date of the permit for the duration of the permitting cycle. At the same time the Annual Report it submitted to EPA it shall also be posted on the permittee's website at an easily accessible location. If the annual report is subsequently modified per EPA approval (part 6.2.3 of this permit) the updated report shall be posted on the permittee's website.

6.2.1 Annual Report.

The Annual Report shall follow the format of the permit as written, address each permit requirement, and also include the following elements:

a. A review of the status of program implementation and compliance (or non-compliance) with all provisions and schedules of compliance contained in this

permit, including documentation as to compliance with performance standards and other provisions and deliverables contained in Section 4 herein;

b. A review of monitoring data and any trends in estimated cumulative annual pollutant loadings, including TMDL WLAs and TMDL implementation activities;

c. An assessment of the effectiveness of controls established by the SWMP;

d. An assessment of the projected cost of SWMP implementation for the upcoming year (or longer) and a description of the permittee's budget for existing stormwater programs, including: (i) an overview of the permittee's financial resources and budget, (ii) overall indebtedness and assets, (iii) sources for funds for stormwater programs; and (iv) a demonstration of adequate fiscal capacity to meet the requirements of this permit, subject to the (a) the federal Anti-Deficiency Act, 31 U.S.C. §§ 1341, 1342, 1349, 1351, (b) the District of Columbia Anti-Deficiency Act, D.C. Official Code §§ 47-355.01-355.08 (2001), (c) D.C. Official Code § 47-105 (2001), and (d) D.C. Official Code § 1-204.46 (2006 Supp.), as the foregoing statutes may be amended from time to time;

e. A summary describing the number and nature of enforcement actions, inspections, and public education programs and installation of control systems;

f. Identification of water quality improvements or degradation through application of a measurable performance standard as stated throughout this permit;

g. Results of storm and water quality modeling and its use in planning installation of control systems and maintenance and other activities;

h. An assessment of any SWMP modifications needed to meet the requirements of this permit;

i. Revisions, if necessary, to the assessments of controls and the fiscal analysis reported in the permit application under 40 C.F.R. § 122.26(d)(2)(iv) and (v);

j. Methodology to assess the effects of the Stormwater Management Program (SWMP);

k. Annual expenditures and budget for the year following each annual report;

l. A summary of commitments for the next year and evaluation of the commitments from the previous year;

m. A summary of the monitoring data for stormwater and ambient sampling that is collected in the previous year and the plan, including identification of monitoring locations, to collect additional data for the next year;

n. The amount of impervious cover within the District, and within the three major watersheds in the District (Anacostia, Potomac and Rock Creek);

o. The percentage of effective impervious cover reduced annually, including but not limited to the number and square footage of green roofs installed in the District, including the square footage of drainage managed by practices that meet the performance standard in 4.1.1; and

p. An analysis of the work to be performed in the next successive year, including performance measures for those tasks. In the following year, progress with those performance measures shall be part of the Annual Report. The basis for each of the performance standards, which will be used as tools for evaluating environmental results and determining the success of each MS4 activity, shall be described incorporating an integrated program approach that considers all programs and projects which have a direct as well as an indirect affect on

stormwater management quantity and quality within the District. The report shall also provide an update of the fiscal analysis for each year of the permit as required by 40 C.F.R. § 122.26(d)(2)(vi).

6.2.2 Annual Report Meeting

Within 12 months of the effective date of this permit the permittee shall convene an annual report meeting with EPA to present annual progress and plans for the following year. In conjunction with this meeting the annual written report may consist of presentation materials summarizing all required elements of the annual report rather than a lengthy written report, as long as all required elements are included. Following this first annual reporting meeting EPA and the permittee shall determine if the meeting and associated presentation materials constitute an effective reporting mechanism. With the agreement of both EPA and the permittee the annual reporting meeting and the use of summarized presentation materials in lieu of a lengthy written report may be extended for the remainder of the permit term.

6.2.3 Annual Report Revisions

Each Annual Report may be revised with written approval by EPA. The revised Report will become effective after its approval.

6.2.4 Signature and Certification

The permittee shall sign and certify the Annual Report in accordance with 40 C.F.R §122.22(b), and include a statement or resolution that the permittee's governing body or agency (or delegated representative) has reviewed or been appraised of the content of such submissions. The permittee shall provide a description of the procedure used to meet the above requirement.

6.2.5 EPA Approval

In reviewing any submittal identified in Table 1 or 6, EPA may approve or disapprove each submittal. If EPA disapproves any submittal, EPA shall provide comments to the permittee. The permittee shall address such comments in writing within thirty (30) days of receipt of the disapproval from EPA. If EPA determines that the permittee has not adequately addressed the disapproval/comments, EPA may revise that submittal or portions of that submittal. Such revision by EPA is effective thirty (30) days from receipt by the permittee. Once approved by EPA, or in the event of EPA disapproval, as revised by EPA, each submission shall be an enforceable element of this permit.

6.3 MS4 Permit Application

The permittee develop a permit Application based on the findings presented in each of the Annual SWMP Reports submitted during the permitting cycle to be submitted six months prior to the expiration date of the permit. The permit application shall define the next iterative set of objectives for the program and provide an analysis to demonstrate that these objectives will be achieved in the subsequent permit term.

7. STORMWATER MODEL

The permittee shall continue to update and report all progress made in developing a Stormwater Model and Geographical Information System (GIS) to EPA on an annual basis as an attachment to each Annual Report required herein.

On an annual basis, the permittee shall report on pollutant load reductions throughout the area covered by this permit using the statistical model developed by DDOE or other appropriate model. In the annual update, the permittee shall include, at a minimum, other applicable components which are not only limited to those activities identified in Section 6 herein, but which are necessary to demonstrate the effectiveness of the permittee's Stormwater Management Program toward implementing a sustainable strategy for reducing stormwater pollution runoff to the impaired waters of the District of Columbia.

Assess performance of stormwater on-site retention projects through monitoring, modeling and/or estimating storm retention capacity to determine the volume of stormwater removed from the MS4 in a typical year of rainfall as a result of implementing stormwater controls. This provision does not require all practices to be individually monitored, only that a reasonable evaluation strategy must provide estimates of overall volume reductions by sewershed.

8. STANDARD PERMIT CONDITIONS FOR NPDES PERMITS

8.1 Duty to Comply

The permittee must comply with all conditions of this permit. Any permit noncompliance constitutes a violation of the Clean Water Act and may result in an enforcement action; permit termination, revocation and reissuance, or modification; and denial of a permit renewal application.

8.2 Inspection and Entry

The permittee shall allow EPA, or an authorized representative, and/or the permittee's contractor(s)/subcontractor(s), upon the presentation of credentials and other documents as may be required by law, to:

1. Enter upon the permittee's premises at reasonable times where a regulated facility or activity is located or conducted, or where records must be kept under the conditions of this permit;

2. Have access to and copy, at reasonable times, any records that must be maintained under the conditions of this permit;

3. Inspect at reasonable times any facilities, equipment (including monitoring and control equipment), processes, or operations regulated or required under this permit; and

4. Sample or monitor at reasonable times, for the purpose of assuring permit compliance or as otherwise authorized by the Clean Water Act, any substances or parameters at any location.

8.3 Civil and Criminal Penalties for Violations of Permit Conditions

Nothing in this permit shall be construed to relieve the permittee from civil or criminal penalties for noncompliance.

The Clean Water Act provides that any person who violates Sections 301, 302, 306, 307, 308, 318, or 405 of the Clean Water Act, or any permit condition or limitation implementing such section, or any requirement imposed in an approved pretreatment program and any person who violates any Order issued by EPA under Section 301(a) of the Act, shall be subject to a civil penalty not to exceed $25,000 per day for each violation, Pursuant to the Civil Monetary Penalty Inflation Adjustment Rule, EPA has raised the statutory maximum penalty for such violations to $37,500 per day for each such violation. 74 Fed. Reg. 626 (Jan. 7, 2009). The Clean Water Act also provides for an action for appropriate relief including a permanent or temporary injunction.

Any person who negligently violates Section 301, 302, 305, 307, 308, 318, or 405 of the Clean Water Act, any permit condition or limitation implementation any such section, shall be punished by a criminal fine of not less than $5,000 nor more than $50,000 per day of such violation, or by imprisonment for not more than 3 years, or by both. Any person who knowingly violates any permit condition or limitation implementing Section 301, 302, 305, 307, 308, 318, or 405 of the Clean Water Act, and who knows at the time that he thereby places another person in imminent danger of death or serious bodily injury, shall, upon conviction, be subject to a fine of not more than $250,000, or by imprisonment of not more than 15 years, or by both.

8.4 Duty to Mitigate

The permittee shall take all reasonable steps to minimize or correct any adverse impact on the environment resulting from noncompliance with this permit.

In the event that the permittee or permitting authority determines that discharges are causing or contributing to a violation of applicable WQS, the permittee shall take corrective action to eliminate the WQS exceedance or correct the issues and/or problems by requiring the party or parties responsible for the alleged violation(s) comply with Part I.C.1 (Limitations to Coverage) of this permit. The methods used to correct the WQS exceedances shall be documented in subsequent annual reports and in revisions to the Stormwater Management Program Plan.

8.5 Permit Actions

This permit may be modified, revoked and reissued, or terminated for cause including, but not limited to, the following:

1. Violation of any terms or conditions of this permit;

2. Obtaining this permit by misrepresentation or failure to disclose fully all relevant facts;

3. A change in any condition that requires either a temporary or permanent reduction or elimination of the authorized discharge;

4. Information newly acquired by the Agency, including but not limited to the results of the studies, planning, or monitoring described and/or required by this permit;

5. Material and substantial facility modifications, additions, and/or expansions;

6. Any anticipated change in the facility discharge, including any new significant industrial discharge or changes in the quantity or quality of existing industrial discharges that will result in new or increased discharges of pollutants; or

7. A determination that the permitted activity endangers human health or the environment and that it can only be regulated to acceptable levels by permit modification or termination.

The effluent limitations expressed in this permit are based on compliance with the District of Columbia's water quality standards in accordance with the Clean Water Act. In the event of a revision of the District of Columbia's water quality standards, this document may be modified by EPA to reflect this revision.

The filing of a request by the permittee for a permit modification, revocation and reissuance, or termination, or a notification of planned changes or anticipated noncompliance, does not stay any permit condition. When a permit is modified, only conditions subject to modification are reopened.

8.6 Retention of Records

The permittee shall continue to retain records of all documents pertinent to this permit not otherwise required herein, including but not limited copies of all reports required by this permit, and records of all data used to complete the application for this permit, for a period of at least five (5) years from the expiration date of this permit. This period may be extended by request of EPA at any time.

8.7 Signatory Requirements

All Discharge Monitoring Reports, plans, annual reports, certifications or information either submitted to EPA or that this permit requires be maintained by the permittee shall be signed by either a principal executive officer or ranking elected official, or a duly authorized representative of that person. A person is a duly authorized representative only if: (i) the authorization is made in writing by a person described above and submitted to EPA; and (ii) the authorization specifies either an individual or a position having responsibility for the overall operation of the regulated facility or activity, such as the position of manager, operator, superintendent, or position of equivalent responsibility or an individual or position having overall responsibility for environmental matters for an agency. (A duly authorized representative may thus be either a named individual or any individual occupying a named position).

If an authorization is no longer accurate because a different individual or position has responsibility for the overall operation of the facility, a new notice satisfying the requirements of this paragraph must be submitted to EPA prior or together with any reports, information, or applications to be signed by an authorized representative.

8.8 Oil and Hazardous Substance Liability

Nothing in this permit shall be construed to preclude the institution of any legal action or relieve the permittee from any responsibilities, liabilities, or penalties to which the permittee is or may be subject under Section 311 of the Act, 33 U.S.C. § 1321.

8.9 District Laws, Regulations and Ordinances

Nothing in this permit shall be construed to preclude the institution of any legal action or relieve the permittee from any responsibilities, liabilities, or penalties established pursuant to any applicable District law, regulation or ordinance identified in the SWMP. In the case of "exemptions and waivers" under District law, regulation or ordinance, Federal law and regulation shall be controlling.

8.10 Property Rights

The issuance of this permit does not convey any property rights of any sort, or any exclusive privileges, nor does it authorize any injury to private property or any invasion of personal rights, nor any infringement of Federal, State or local laws or regulations.

8.11 Severability

The provisions of this permit are severable, and if any provisions of this permit, or the application of any provision of this permit to any circumstances is held invalid, the application of such provision to other circumstances, and the remainder of this permit, shall not be affected thereby.

8.12 Transfer of Permit

In the event of any change in ownership or control of facilities from which the authorized discharge emanates, the permit may be transferred to another person if:

1. The current permittee notifies the EPA, in writing of the proposed transfer at least 30 days in advance of the proposed transfer date;

2. The notice includes a written agreement between the existing and new permittee containing a specific date for transfer of permit responsibility, coverage, and liability between them; and

3. The EPA does not notify the current permittee and the new permittee of intent to modify, revoke and reissue, or terminate the permit and require that a new application be submitted.

8.13 Construction Authorization

This permit does not authorize or approve the construction of any onshore or offshore physical structures or facilities or the undertaking of any work in any navigable waters.

8.14 Historic Preservation

During the design stage of any project by the Government of the District of Columbia within the scope of this permit that may include ground disturbance, new and existing or retrofit construction, or demolition of a structure, the permittee shall notify the Historic Preservation liaison and provide the liaison planning documents for the proposed undertaking. The documents shall include project location; scope of work or conditions; photograph of the area/areas to be impacted and the methods and techniques for accomplishing the undertaking. Depending on the complexity of the undertaking, sketches, plans and specifications shall also be submitted for review. The documentation will enable the liaison to assess the applicability of compliance procedures associated with Section 106 of the National Historic Preservation Act. Among the steps in the process are included:

1. The determination of the presence or absence of significant historic properties (architectural, historic or prehistoric). This can include the evaluation of standing structures and the determination of the need for an archaeological survey of the project area.

2. The evaluation of these properties in terms of their eligibility for nomination to the National Register of Historic Places.

3. The determination of the effect that the proposed undertaking will have on these properties.

4. The development of mitigating measures in conjunction with any anticipated effects.

All such evaluations and determinations will be presented to the permittee for its concurrence.

If an alternate Historic Preservation procedure is approved by EPA in writing during the term of this permit, the alternate procedure will become effective after its approval.

8.15 Endangered Species

The U.S. Fish and Wildlife Service (FWS) has indicated that Hay's Spring Amphipod, a Federally listed endangered species, occurs at several locations in the District of Columbia. The National Oceanic and Atmospheric Administration National Marine Fisheries Service (NOAA Fisheries) has indicated that the endangered shortnose sturgeon occurs in the Potomac River drainage and may occur within the District of Columbia. The FWS and NOAA Fisheries indicate that at the present time there is no evidence that the ongoing stormwater discharges covered by this permit are adversely affecting these Federally-listed species. Stormwater discharges, construction, or any other activity that adversely affects a Federally-listed endangered or threatened species are not authorized under the terms and conditions of this permit.

The monitoring required by this permit will allow further evaluation of potential effects on these threatened and endangered species once monitoring data has been collected and analyzed. EPA requires that the permittee submit to NOAA Fisheries, at the same time it submits to EPA, the Annual Outfall Discharge Monitoring Report of the monitoring data which will be used by EPA and NOAA Fisheries to further assess effects on endangered or threatened species. If this data indicates that it is appropriate, requirements of this NPDES permit may be modified to prevent adverse impacts on habitats of endangered and threatened species.

The above-referenced Report of monitoring data is required under this permit to be sent on an annual basis to:

The United States Environmental Protection Agency
Region III (3WP41)
Water Protection Division
1650 Arch Street
Philadelphia, Pennsylvania 19103-2029

National Marine Fisheries Service/Northeast Region
Protected Resource Division
55 Great Republic Drive
Gloucester, Massachusetts 01930-2276

8.16 Toxic Pollutants

If a toxic effluent standard or prohibition (including any schedule of compliance specified in such effluent standard or prohibition) is established under section 307(a) of the Act, 33 U.S.C. § 1317(a), for a toxic pollutant which is present in the discharge and such standard or prohibition

is more stringent than any limitation for such pollutant in this permit, the permittee shall comply with such standard or prohibition even if the permit has not yet been modified to comply with the requirement.

8.17 Bypass

8.17.1 Bypass not exceeding limitations. In accordance with 40 C.F.R. § 122.41(m), the permittee may allow any bypass to occur which does not cause effluent limitations to be exceeded, but only if it also is for essential maintenance to assure efficient operation.

8.17.2 Notice

1. Anticipated bypass. If the permittee knows in advance of the need for a bypass, it must submit prior notice at least ten days before the date of the bypass. See 40 C.F.R. § 122.41(m)(3)(i).

2. Unanticipated bypass. The permittee must submit notice of an unanticipated bypass as required by 40 C.F.R. § 122.41(l)6) (24-hour notice). See 40 C.F.R. § 122.41(m)(3)(ii).

8.17.3 Prohibition of bypass. See 40 C.F.R. § 122.41(m)(4).

1. Bypass is prohibited, and EPA may take enforcement action against the permittee for bypass, unless:

    a. Bypass was unavoidable to prevent loss of life, personal injury, or severe property damage as defined herein;

    b. There were no feasible alternatives to the bypass, such as the use of auxiliary treatment facilities, retention of untreated wastes, or maintenance during normal periods of equipment downtime. This condition is not satisfied if adequate back-up equipment should have been installed in the exercise of reasonable engineering judgment to prevent a bypass which occurred during normal periods of equipment downtime or preventive maintenance; and

    c. The permittee submitted notices as required herein.

2. EPA may approve an anticipated bypass, after considering its adverse effects, if EPA determines that it will meet the three conditions listed above.

8.18 Upset

Effect of an upset: An upset constitutes an affirmative defense to an action brought for noncompliance with such technology-based permit effluent limitations if the requirements of 40 C.F.R. § 122.41(n) are met.

8.19 Reopener Clause for Permits

The permit shall be modified or revoked and reissued, including but not limited to, for any of the following reasons:

1. To incorporate any applicable effluent standard or limitation issued or approved under Sections 301, 304, or 307 of the Clean Water Act, and any other applicable provision, such as provided for in the Chesapeake Bay Agreements based on water quality considerations, and if the effluent standard or limitation so issued or approved:

   a. Contains different conditions or is otherwise more stringent than any effluent limitation in the permit; or

   b. Controls any pollutant not limited in the permit. The permit, as modified or reissued under this paragraph, shall also contain any other requirements of the Act then applicable; or

2. To incorporate additional controls that are necessary to ensure that the permit effluent limits are consistent with any applicable TMDL WLA allocated to the discharge of pollutants from the MS4 or to incorporate milestones and schedules of a TMDL Implementation Plan; or

3. As specified in 40 C.F.R. §§ 122.44(c), 122.62, 122.63, 122.64, and 124.5.

8.20 Duty to Reapply

If the permittee wishes to continue an activity regulated by this permit after the expiration date of this permit, it must apply for and obtain a new permit. The application shall be submitted at least 180 days before the expiration date of this permit. EPA may grant permission to submit an application less than 180 days in advance but no longer than the permit expiration date. In the event that a timely and complete reapplication has been submitted and EPA is unable through no fault of he permittee, to issue a new permit before the expiration date of this permit, the terms and conditions of this permit are automatically continued and remain fully effective and enforceable.

9. PERMIT DEFINITIONS

Terms that are not defined herein shall have the meaning accorded them under section 502 of the Clean Water Act, 33 U.S.C. §§ 1251 *et seq.*, or its implementing regulations, 40 C.F.R. Part 122.

"Annual Report" refers to the consolidated Annual Report that the permittee is required to submit annually.

"Benchmark" as used in this permit is a quantifiable goal or target to be used to assess progress toward "milestones" (see separate definition) and WLAs, such as a numeric goal for BMP implementation. If a benchmark is not met, the permittee should take appropriate corrective action to improve progress toward meeting milestones or other objectives. Benchmarks are intended as an adaptive management aid and generally are not considered to be enforceable.

"Bypass" means the intentional diversion of waste streams from any portion of a treatment facility. See 40 C.F.R. § 122.41(m)(1)(i).

"CWA" means Clean Water Act (formerly referred to as the Federal Water Pollution Control Act or Federal Water Pollution Control Act Amendments of 1972) Pub.L. 92-500, as amended Pub. L. 95-217, Pub. L. 95-576, Pub. L. (6-483 and Pub. L. 97-117, 33 U.S.C. §§ 1251 *et seq.*

"Development" is the undertaking of any activity that disturbs a surface area greater than or equal to 5,000 square feet, including new development projects and redevelopment projects. For purposes of Parts 4.1.1 through 4.1.4 of the permit the requirements apply to discharges from sites for which design or construction commenced after 18 months from the effective date of this permit or as required by District of Columbia law, whichever is sooner. The permittee may exempt development projects receiving site plan approval prior to this date from these requirements.

"Director" means the Regional Administrator of USEPA Region 3 or an authorized representative.

"Discharge" for the purpose of this permit, unless indicated otherwise, refers to discharges from the Municipal Separate Storm Sewer System (MS4).

"Discharge Monitoring Report", "DMR" or "Outfall Discharge Monitoring Report" includes the monitoring and assessment of controls identified in Section 5 herein.

"EPA" means USEPA Region 3.

"Green Roof" is a low-maintenance roof system that stores rainwater where the water is taken up by plants and/or transpired into the air.

"Green Technology Practices" means stormwater management practices that are used to mimic pre-development site hydrology by using site design techniques that retain stormwater on-site through infiltration, evapotranspiration, harvest and use.

"Guidance" means assistance in achieving a particular outcome or objective.

"Illicit connection" means any man-made conveyance connecting an illicit discharge directly to a municipal separate storm sewer.

"Illicit discharge" means any discharge to a municipal separate storm sewer that is not composed entirely of stormwater except discharges pursuant to an NPDES permit (other than the NPDES permit for discharges from the municipal separate storm sewer) and discharges resulting from fire fighting activities, pursuant to 40 C.F.R. § 122.26(b)(2).

“Impaired Water” (or “Water Quality Impaired Water” or “Water Quality Limited Segment”): A water is impaired for purposes of this permit if it has been identified by the District or EPA pursuant to Section 303(d) of the Clean Water Act as not meeting applicable State water quality standards (these waters are called “water quality limited segments” under 40 C.F.R. 30.2(j)). Impaired waters include both waters with approved or established TMDLs, and those for which a TMDL has not yet been approved or established.

"Landfill" means an area of land or an excavation in which wastes are placed for permanent disposal, and which is not a land application unit (i.e., an area where wastes are applied onto or incorporated into the soil surface [excluding manure spreading operations] for treatment or disposal), surface impoundment, injection well, or waste pile.

"Large or Medium municipal separate storm sewer system" means all municipal separate storm sewers that are either: (1) located in an incorporated place (city) with a population of 100,000 or more as determined by the latest Decennial Census by the Bureau of Census (these cities are listed in Appendices F and G of 40 C.F.R. Part 122); or (2) located in the counties with unincorporated urbanized populations of 100,000 or more, except municipal separate storm sewers that are located in the incorporated places, townships or towns within such counties (these counties are listed in Appendices H and I of 40 C.F.R. Part 122); or (3) owned or operated by a municipality other than those described in paragraph (i) or (ii) and that are designated by the Director as part of the large or medium municipal separate storm sewer system.

"Milestone" as used in this permit is an interim step toward attainment of a WLA that upon incorporation into the permit will become an enforceable limit or requirement to be achieved by a stated date. A milestone should be expressed in numeric terms, i.e. as a volume reduction, pollutant load, specified implementation action or set of actions or other objective metric, when possible and appropriate.

"MS4" refers to either a Large or Medium Municipal Separate Storm Sewer System.

"Municipal Separate Storm Sewer" means a conveyance, or system of conveyances (including roads with drainage systems, municipal streets, catch basins, curbs, gutters, ditches, man-made channels, or storm drains): (1) owned or operated by a State, city, town, borough, county, parish, district, association, or other public body (created by or pursuant to State Law) having jurisdiction over disposal of sewage, industrial wastes, stormwater, or other wastes; (2) Designed or used to collect or convey stormwater (including storm drains, pipes, ditches, etc.); (3) not a combined sewer; and (4) not part of a Publicly-Owned Treatment Works as defined at 40 C.F.R. § 122.2.

“Offset” means a unit of measurement, either used as monetary or non-monetary compensation, as a substitute or replacement for mitigation of a stormwater control practice that has been determined to be impracticable to implement.

“Performance measure” means for purposes of this permit, a minimum set of criteria for evaluating progress toward meeting a standard of performance.

“Performance standard” means for purposes of this permit, a cumulative measure or provision for attainment of an outcome or objective.

"Permittee" refers to the Government of the District of Columbia.

"Point Source" means any discernible, confined, and discrete conveyance, including but not limited to, any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, landfill leachate collection system, vessel or other floating craft from which pollutants are or may be discharged. This term does not include return flows from irrigated agriculture or agricultural stormwater runoff.

“Pollutant of concern” means a pollutant in an MS4 discharge that may cause or contribute to the violation of a water quality criterion for that pollutant downstream from the discharge.

“Pre-Development Condition” means the combination of runoff, infiltration and evapotranspiration rates, volumes, durations and temperatures that typically existed on the site with natural soils and vegetation before human-induced land disturbance occurred. In the context of requirements in this permit the environmental objective is a stable, natural hydrologic site condition that protects or restores to the degree relevant for that site, stable hydrology in the receiving water, which will not necessarily be the hydrologic regime of that receiving water prior to any human disturbance in the watershed.

“Retention” means the use of soils, vegetation, water harvesting and other mechanisms and practices to retain a target volume of stormwater on a given site through the functions of: pore space and surface ponding storage; infiltration; reuse, and/or evapotranspiration.

“Retrofit” means improvement in a previously developed area that results in reduced stormwater discharge volumes and pollutant loads and/or improvement in water quality over current conditions.

“Stormwater” means the flow of surface water which results from, and which occurs immediately following, a rainfall event, snow melt runoff, and surface runoff and drainage.

“Stormwater management” means (1) for quantitative control, a system of vegetative or structural measures, or both, which reduces the increased volume and rate of surface runoff caused by man-made changes to the land; and (2) for qualitative control, a system of vegetative, structural, and other measures which reduce or eliminate pollutants which might otherwise be carried by surface runoff.

"SWMP" is an acronym for Stormwater Management Program. For purposes of this permit, the term includes all stormwater activities described in the District's SWMP Plan updated February 19, 2009, or any subsequent update, and all other strategies, plans, documents, reports, studies, agreements and related correspondences developed and used pursuant to the requirements of this permit.

"Severe property damage" means substantial physical damage to property, damage to the treatment facilities which causes them to become inoperable, or substantial and permanent loss of natural resources which can reasonably be expected to occur in the absence of a bypass. Severe property damage does not mean economic loss caused by delays in production. See 40 C.F.R. § 122.41(m)(1)(ii).

"Total Maximum Daily Load (TMDL) Units" means for purposes of this permit, the sum of individual waste load allocations (WLAs) and natural background. Unless specifically permitted otherwise in an EPA-approved TMDL report covered under the permit, TMDLs are expressed in terms of mass per time, toxicity or other appropriate measure such as pollutant pounds of a total average annual load.

"TMDL Implementation Plan" means for purposes of this permit, a plan and subsequent revisions/updates to that plan that are designed to demonstrate how to achieve compliance with applicable waste load allocations as set forth in the permit requirements described in Section 4.10.3.

"Stormwater Management Program (SWMP)" is a modified and improved SWMP based on the existing SWMP and on information in each of the Annual Reports/Discharge Monitoring Reports. The purpose of the SWMP is to describe the list of activities that need to be done to meet the requirements of the Clean Water Act, an explanation as to why these activities will meet the Clean Water Act requirements, and a schedule for those activities.

"Upset" means an exceptional incident in which there is unintentional and temporary noncompliance with technology based permit effluent limitations because of factors beyond reasonable control. An upset does not include noncompliance to the extent caused by operational error, improperly designed treatment facilities, inadequate treatment facilities, lack of preventive maintenance, or careless or improper operation. See 40 C.F.R. § 122.41(n)(1).

"Waste pile" means any non-containerized accumulation of solid, nonflowing waste.

"Water quality standards" refers to the District of Columbia's Surface and Ground Water Quality Standards codified at Code of District of Columbia Regulations §§ 21-1100 *et seq.*, which are effective on the date of issuance of the permit and any subsequent amendments which may be adopted during the life of this permit.

"Waters of the United States" is defined at 40 C.F.R. § 122.2.

Exhibit 5

Boston, MA – Boston Water and Sewer Commission MS4 Permit
(Permit No. MAS010001)

This page intentionally left blank

AUTHORIZATION TO DISCHARGE UNDER THE
NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM

In compliance with the provisions of the federal Clean Water Act, as amended, 33 U.S.C. §§1251 et seq., and the Massachusetts Clean Waters Act, as amended, Mass. Gen. Laws. ch. 21, §§26-53, the

Boston Water and Sewer Commission

is authorized to discharge from all of its new or existing separate storm sewers: **195 identified Separate Storm Sewer Outfalls and associated receiving waters are Listed in Attachment A** to receiving waters named: **Belle Island Inlet, Boston Harbor, Boston Inner Harbor, Brook Farm Brook, Bussey Brook, Canterbury Brook, Chandler's Pond, Charles River, Chelsea River, Cow Island Pond, Dorchester Bay, Fort Point Channel, Goldsmith Brook, Jamaica Pond, Little Mystic Channel, Mill Pond, Millers River, Mother Brook, Muddy River, Mystic River, Neponset River, Old Harbor, Patten's Cove, Reserved Channel, Sprague Pond, Stony Brook, Turtle Pond and unnamed wetlands, brooks and streams.**

in accordance with effluent limitations, monitoring requirements and other conditions set forth herein.

This permit shall become effective 30 days from date of signature.

This permit and the authorization to discharge expire at midnight, five years from the effective date.

This permit consists **of 20** pages and **Attachment A** in Part I including monitoring requirements, etc., and 35 pages in Part II including General Conditions and Definitions.

Signed this 29 day of September, 1999

Director
Office of Ecosystem Protection
Environmental Protection Agency
Region I
Boston, MA

Director, Division of
Watershed Management
Department of Environmental Protection
Commonwealth of Massachusetts
Boston, MA

PART I. MUNICIPAL SEPARATE STORM SEWER SYSTEM

A. DISCHARGES THROUGH THE MUNICIPAL SEPARATE STORM SEWER SYSTEM AUTHORIZED UNDER THIS PERMIT

1. Permit Area. This permit covers all areas within the corporate boundary of the City of Boston or otherwise contributing to new or existing separate storm sewers owned or operated by the Boston Water and Sewer Commission, the "permittee".

2. Authorized Discharges. This permit authorizes all storm water discharges to waters of the United States from all existing or new separate storm sewer outfalls owned or operated by the permittee (existing outfalls are identified in Attachment A). This permit also authorizes the discharge of storm water commingled with flows contributed by wastewater or storm water associated with industrial activity provided such discharges are authorized under separate NPDES permits and are in compliance with applicable Federal, State and Boston Water and Sewer Commission regulations (Regulations Regarding the Use of Sanitary and Combined Sewers and Storm Drains of the Boston Water and Sewer Commission). The permittee shall provide a notification to EPA and MA DEP of all new separate storm sewer outfalls as they are activated and of all existing outfalls which are de-activated. The annual report (Part I.E.) will reflect all of the changes to the number of outfalls throughout the year.

3. Limitations on Coverage. Discharges of non-storm water or storm water associated with industrial activity through outfalls listed at Attachment A are not authorized under this permit except where such discharges are:

   a. authorized by a separate NPDES permit; or

   b. identified by and in compliance with Part I.B.2.g.2 of this permit.

B. STORM WATER POLLUTION PREVENTION & MANAGEMENT PROGRAMS

The permittee is required to develop and implement a storm water pollution prevention and management program designed to reduce, to the maximum extent practicable the discharge of pollutants from the Municipal Separate Storm Sewer System. The permittee may implement Storm Water Management Program (SWMP) elements through participation with other public agencies or private entities in cooperative efforts satisfying the requirements of this permit in lieu of creating duplicate program elements. Either cumulatively, or separately, the permittee's storm water pollution prevention and management programs shall satisfy the requirements of Part I.B.1-7. below for all portions of the Municipal Separate Storm Sewer System (MS4) authorized to discharge under this permit and shall reduce the discharge of pollutants to the maximum extent practicable. The storm water pollution prevention and management program requirements of this Part shall be implemented through the SWMP submitted as part of the permit application and revised as necessary.

1. POLLUTION PREVENTION REQUIREMENTS The permittee shall develop and implement the following pollution prevention measures as they relate to discharges to the separate storm sewer:

a. Development The permittee shall assist and coordinate with the appropriate municipal agencies with jurisdiction over land use to ensure that municipal approval of all new development and significant redevelopment projects within the City of Boston which discharge to the MS4 is conditioned on due consideration of water quality impacts. The permittee shall cooperate with appropriate municipal agencies to ensure that development activities conform to applicable state and local regulations, guidance and policies relative to storm water discharges to separate storm sewers. Such requirements shall limit increases in the discharge of pollutants in storm water as a result of new development, and reduce the discharge of pollutants in storm water as a result of redevelopment.

b. Used Motor Vehicle Fluids The permittee shall coordinate with appropriate municipal agencies or private entities to assist in the implementation of a program to collect used motor vehicle fluids (including, at a minimum, oil and antifreeze) for recycle, reuse, or proper disposal. Such program shall be readily available to all residents of the City of Boston and publicized and promoted at least annually.

c. Household Hazardous Waste (HHW) The permittee shall coordinate with appropriate municipal agencies or private entities to assist in the implementation of a program to collect household hazardous waste materials (including paint, solvents, pesticides, herbicides, and other hazardous materials) for recycle, reuse, or proper disposal and promote proper handling and disposal. Such program shall be readily available to all private residents. This program shall be publicized and promoted at least annually.

2. STORM WATER MANAGEMENT PROGRAM REQUIREMENTS: The permittee shall continue to implement the Storm Water Management Program (SWMP) which it described in its May 17, 1993 storm water permit application and updated June 1995 and June 1998 in accordance with Section 402(p)(3)(B) of the Clean Water Act (CWA or "the Act"). This SWMP outlined in the permit application, including all updates, is approvable upon issuance of this permit.

In accordance with Part I.E. Annual Report, no later than **March 1, 2000** the permittee shall describe all the updates which it has conducted and all additional measures it will take to satisfy the requirements of this permit and the goals of the storm water management program. The Controls and activities identified in the SWMP shall clearly identify goals, a description of the controls or activities, and a description of the roles and responsibilities of other entities' areas of applicability on a system, jurisdiction, or specific area basis. The permittee will specifically address its roles and activities as they relate to portions of the SWMP which are not under its direct control (e.g. street sweeping, HHW collection, development, redevelopment). The permit may be modified to designate the agencies that administer these programs as co-permittees or require a separate permit. These entities would then be responsible for applicable permit conditions and requirements. The SWMP, and all approved updates, are hereby incorporated by reference and shall be implemented in a manner consistent with the following requirements:

a. Statutory Requirements: The SWMP shall include controls necessary to reduce the discharge of pollutants from the Municipal Separate Storm Sewer System to the Maximum Extent Practicable (MEP). Controls may consist of a combination of best management practices, control techniques, system design and engineering methods, and such other provisions as the permittee, Director or the State determines appropriate. The various components of the SWMP, taken as a whole (rather than individually), shall be sufficient to meet this standard. The SWMP shall be updated as necessary to ensure conformance with the requirements of CWA § 402(p)(3)(B). The permittee shall select measures or controls to satisfy the following water quality prohibitions:

No discharge of toxics in toxic amounts.

No discharge of pollutants in quantities that would cause a violation of State water quality standards.

No discharge of either a visible oil sheen, foam, or floating solids, in other than trace amounts.

b. Structural Controls: The permittee shall operate and maintain all storm water structural controls which it owns or operates in a manner so as to reduce the discharge of pollutants to the MEP.

c. Areas of New Development and Significant Redevelopment: The permittee shall continue to implement its site plan review process and ensure compliance with its existing regulations. The permittee shall also coordinate with appropriate municipal agencies to assist in the development, implementation, and enforcement of controls to minimize the discharge of pollutants to the separate storm sewer system from areas of new development and significant re-development during and after construction. The permittee shall assist appropriate municipal agencies to ensure that development activities conform to applicable state and local regulations, guidance and policies relative to storm water discharges to separate storm sewers.

d. Roadways: The permittee shall coordinate with appropriate agencies to assist in the implementation of measures to ensure that roadways and highways are operated and maintained in a manner so as to minimize the discharge of pollutants to the separate storm sewer system (including those related to deicing or sanding activities).

e. Flood Control Projects: The permittee shall ensure that any flood management projects within its direct control are completed after consideration of impacts on the water quality of receiving waters. The permittee shall also evaluate the feasibility of retro-fitting existing structural flood control devices it owns or operates to provide additional pollutant removal from storm water.

f. Pesticide, Herbicide, and Fertilizer Application: The permittee shall cooperate with appropriate municipal agencies to evaluate existing measures to reduce the discharge of pollutants related to the application of pesticides, herbicides, and fertilizers applied by municipal or public agency employees or contractors to public right of ways, parks, and other municipal facilities. The permittee shall evaluate the necessity to implement controls to reduce discharge of pollutants related to the application and distribution of pesticides, herbicides, and fertilizers by commercial and wholesale distributors and applicators. The permittee shall require controls, within its authority, as necessary.

g. Illicit Discharges and Improper Disposal: The permittee shall continue to implement its program to detect and remove illicit discharges (or require the discharger to the MS4 to remove or obtain a separate NPDES permit for the discharge) and improper disposal into the separate storm sewer.

1. The permittee shall effectively prohibit non-storm water discharges to the Municipal Separate Storm Sewer System, other than those authorized under this permit or a separate NPDES permit.

2. Unless identified by either the permittee, the Director, or the State as significant sources of pollutants to waters of the United States, the following non-storm water discharges are authorized to enter the MS4. As necessary, the permittee may incorporate appropriate control measures in the SWMP to ensure these discharges are not significant sources of pollutants to waters of the United States.

(a) water line flushing;
(b) landscape irrigation;
(c) diverted stream flows;
(d) rising ground waters;
(e) uncontaminated ground water infiltration (as defined at 40 CFR 35.2005(20)) to separate storm sewers;

(f) uncontaminated pumped ground water;
(g) discharges from potable water sources;
(h) foundation drains;
(i) uncontaminated air conditioning or compressor condensate;
(j) irrigation water;
(k) uncontaminated springs;
(l) water from crawl space pumps;
(m) footing drains;
(n) lawn watering;
(o) non-commercial car washing;
(p) flows from riparian habitats and wetlands;
(q) swimming pool discharges which have been dechlorinated;
(r) street wash waters;
(s) discharges or flows from emergency fire fighting activities;
(t) fire hydrant flushing; and
(u) building washdown water which does not contain detergents.

3. The permittee shall prevent unpermitted discharges of dry and wet weather overflows from sanitary sewers into the MS4. The permittee shall implement a program to identify and limit the infiltration of seepage from sanitary sewers into the MS4.

4. The permittee shall prohibit the discharge or disposal of used motor vehicle fluids, household hazardous wastes, grass clippings, leaf litter, and animal wastes into separate storm sewers. The permittee must demonstrate that the prohibition is publicized at least annually, and that the information is available for non-English speaking residents of the City.

5. The permittee shall require the elimination of illicit connections as expeditiously as possible and the immediate cessation of improper disposal practices upon identification of responsible parties. The permittee shall describe its procedure for identification and elimination of illicit discharges. This information shall be included in the annual report required under Part I.E. below. Where elimination of an illicit connection within sixty (60) days is not possible, the permittee shall establish a schedule for the expeditious removal of the discharge. In the interim, the permittee shall take all reasonable and prudent measures to minimize the discharge of pollutants to the MS4.

h. Spill Prevention and Response: The permittee shall cooperate with appropriate federal, state, and municipal agencies in the development and implementation of a program to prevent, contain, and respond to spills that may discharge into or through the MS4. The spill response program may include a combination of spill response actions by the permittee (and/or other public or private entities), and requirements for private entities through the permittee's sewer use regulations. Except as explicitly authorized, materials from spills may not be discharged to Waters of the United States.

i. Industrial & High Risk Runoff: In cooperation with the DEP and EPA, the permittee shall implement a program to identify, monitor, and control pollutants in storm water discharges to the MS4 from municipal landfills; hazardous waste treatment, storage, disposal and recovery facilities and facilities that are subject to EPCRA Title III, Section 313; and any other industrial or commercial discharge the permittee determines is contributing a substantial pollutant loading to the MS4. The program shall include:

1. priorities and procedures for inspections and establishing and implementing control measures for such discharges;

2. a monitoring (or self-monitoring) program for facilities identified under this section, including the collection of quantitative data on the following constituents:

(a) any pollutants for which the discharger may monitor or which are limited in an existing NPDES permit for an identified facility;

(b) any information on discharges required under 40 CFR 122.21(g)(7)(iii) and (iv);

(c) any pollutant the permittee has a reasonable expectation is discharged in substantial quantity from the facility to the separate storm sewer system.

Data collected by the industrial facility to satisfy the monitoring requirements of an NPDES or State discharge permit may be used to satisfy this requirement. The permittee may require the industrial facility to conduct self-monitoring to satisfy this requirement.

j. Construction Site Runoff: The permittee shall continue to implement its site plan review process and ensure compliance with its existing regulations. The permittee shall also cooperate with appropriate municipal agencies in the development and implementation of a program to reduce the discharge of pollutants from construction sites to the MS4, including:

1. requirements for the use and maintenance of appropriate structural and non-structural best management practices to reduce pollutants discharged to the MS4 during the time construction is underway;

2. procedures for site planning which incorporate considerations for potential short term and long term water quality impacts and measures to minimize these impacts;

3. prioritized inspection of construction sites and enforcement of control measures as required by the permittee;

4. providing assistance to appropriate municipal agencies in the development of education and training measures for construction site operators; and

5. providing assistance to appropriate municipal agencies in the development of a notification to appropriate building permit applicants of their potential responsibilities under the NPDES permitting program for construction site runoff.

k. Public Education: The permittee, in coordination with other appropriate municipal agencies, shall implement a public education program including, but not limited to:

1. A program to promote, publicize, and facilitate public reporting of the presence of illicit discharges or improper disposal of materials (e.g. industrial and commercial wastes, trash, used motor vehicle fluids, leaf litter, grass clippings, animal wastes, etc.) into the MS4 (e.g. curb inlet stenciling, citizen "streamwatch" groups, "hotlines" for reporting dumping, outreach materials included in billings, advertising on public access/government cable channels, etc.);

2. a program to promote, publicize, and facilitate the proper management and disposal of used oil, vehicle fluids and lubricants, and household hazardous wastes;

3. a program to promote, publicize, and facilitate the proper use, application, and disposal of pesticides, herbicides, and fertilizers;

4. where applicable and feasible, the permittee should publicize those best management practices (including but not limited to the use of reformulated or redesigned products, substitution of less toxic materials, and improvements in housekeeping) developed by municipal agencies or environmental organizations that facilitate better use, application, and/or disposal of materials identified in k.1 - k.3 of this section.

3. DEADLINES FOR PROGRAM COMPLIANCE: Except as provided in PART II, and Part I.B.7. the permittee shall continue to implement its Storm Water Management Program.

4. ROLES AND RESPONSIBILITIES OF PERMITTEE: The Storm Water Management Program shall clearly identify the roles and responsibilities of the permittee and appropriate municipal agencies impacting its efforts to comply with this permit.

5. LEGAL AUTHORITY: The permittee has demonstrated and shall maintain legal authority to control discharges to and from those portions of the MS4 which it owns or operates. This legal authority may be a combination of statute, regulation, permit, contract, or an order to:

a. Control the contribution of pollutants to the MS4 by storm water discharges associated with industrial activity and the quality of storm water discharged from sites of industrial activity;

b. Prohibit illicit discharges to the MS4;

c. As necessary, control the discharge of spills and the dumping or disposal of materials other than storm water (e.g. industrial and commercial wastes, trash, used motor vehicle fluids, leaf litter, grass clippings, animal wastes, etc.) into the MS4;

d. Control through interagency or inter-jurisdictional agreements the contribution of pollutants from one portion of the MS4 to another;

e. Require compliance with conditions in regulations, permits, contracts or orders; and

f. Carry out all inspection, surveillance and monitoring procedures necessary to determine compliance with permit conditions.

6. STORM WATER MANAGEMENT PROGRAM RESOURCES The permittee shall provide adequate finances, staff, equipment, and support capabilities to implement its SWMP.

7. STORM WATER MANAGEMENT PROGRAM REVIEW AND MODIFICATION

a. Demonstration Project: Within **180** days of the effective date of the permit, the permittee shall submit a plan to assess the effectiveness of existing non-structural BMPs. This plan shall identify a drainage area or sub-area which has undergone an investigation for illicit connections and is believed to be reasonably free of sanitary sewer influence. The plan shall clearly specify activities to be conducted, responsible parties and method of assessment. The project shall commence within one year of the effective date of the permit and continue for at least one year. Within **90** days of project completion the permittee shall submit a report which identifies measures undertaken and effectiveness of those measures.

b. Program Review: The permittee shall participate in an annual review of its current SWMP in conjunction with preparation of the annual report required under Part I.E. This annual review shall include:

1. A review of the status of program implementation and compliance with program elements and other permit conditions as necessary;

2. An assessment of the effectiveness of controls established by the SWMP;

3. A review of monitoring data and any trends in estimated cumulative annual pollutant loadings;

4. An assessment of any SWMP modifications needed to comply with the CWA §402(p)(3)(B)(iii) requirement to reduce the discharge of pollutants to the maximum extent practicable (MEP).

5. An assessment of staff and funding levels adequate to comply with the permit conditions.

c. Program Modification: The permittee may modify the SWMP in accordance with the following procedures:

1. The approved SWMP shall not be modified by the permittee(s) without the prior approval of the Director, unless in accordance with items c.2. or c.3. below.

2. Modifications adding (but not subtracting or replacing) components, controls, or requirements to the approved SWMP may be made by the permittee at any time upon written notification to the Director.

3. Modifications replacing or eliminating an ineffective or infeasible BMP specifically identified in the SWMP with an alternative BMP may be requested at any time. Unless the Director comments on or denies the request within 60 days from submittal, the permittee shall implement the modification and proposed schedule. Such requests must include the following:

(a) an analysis of why the BMP is ineffective or infeasible (including cost considerations),

(b) expectations on the effectiveness of the replacement BMP and proposed schedule for implementation, and

(c) an analysis of why the replacement of the BMP is expected to achieve the goals of the BMP to be replaced,

(d) in the case of an elimination of the BMP, an analysis of why the elimination is not expected to cause or contribute to a water quality impact.

4. Modification requests and/or notifications must be made in writing and signed in accordance with Part II.D.2.

d. Modifications required by the Permitting Authority: The Director or the State may require the permittee to modify the SWMP as needed to:

1. Address impacts on receiving water quality caused, or contributed to, by discharges from the MS4;

2. Include more stringent requirements necessary to comply with new State or Federal statutory or regulatory requirements; or

3. Include such other conditions deemed necessary by the Director to comply with the goals and requirements of the Clean Water Act.

Modifications required by the Director shall be made in writing and set forth a time schedule for the permittee to develop the modification(s).

C. WET WEATHER MONITORING AND REPORTING REQUIREMENTS

1. Storm Event Discharges. The permittee shall implement a wet-weather monitoring program for the MS4 to provide data necessary to assess the effectiveness and adequacy of control measures implemented under the SWMP; estimate annual cumulative pollutant loadings from the MS4; estimate event mean concentrations and seasonal pollutants in discharges from all outfalls; identify and prioritize portions of the MS4 requiring additional controls, and identify water quality improvements or degradation. Improvement in the quality of discharges from the MS4 will be assessed based on the monitoring information required by this section, along with any additional pertinent information. There have been no numeric effluent limits established for this permit. Further monitoring or effluent limits may be established to ensure compliance with the goals of the Clean Water Act, appropriate Water Quality Standards, or applicable technology based requirements.

a. Representative Monitoring: Within **90** days after the effective date of this permit, the permittee shall submit a proposed sampling plan. The permittee shall monitor a minimum of five (5) representative drainage areas to characterize the quality of storm water discharges from the MS4. The proposed sampling plan shall consider monitoring each site three (3) times a year for a period of at least two years. All five sites shall be completed within the five year permit term and may be done partially or consecutively. The permittee shall choose locations representing the different land uses or is representative of drainage areas served by the MS4. The permittee may submit an alternative plan for sampling frequency only subject to the approval of EPA and DEP. At a minimum, the monitoring program shall analyze for the following parameters: pH, Temperature, Dissolved Oxygen, Total Suspended Solids, BOD5, COD, Fecal Coliform, Total Nitrogen, Nitrate/Nitrite, Ammonia (as N), Total Phosphorous, Ortho-Phosphate, Oil and Grease, Total Petroleum Hydrocarbons, Surfactants, Fluoride, Copper, and Zinc. Unless commented on or denied by the Director within **60** days after its submittal, the proposed sampling plan shall be deemed approved. This monitoring program shall commence no later than **180** days from the effective date of the permit unless otherwise specified by EPA and DEP. Subsequent monitoring locations and parameters for the remainder of the permit term shall be determined based upon the results of these sampling locations and other water quality information available to EPA, DEP and the permittee.

b. Receiving Water Quality Monitoring. The permittee shall monitor a minimum of four (4) receiving waters three (3) times a year throughout the permit term to characterize the water quality impacts of storm water discharges from the MS4. Sampling shall be conducted during a storm event that is greater than 0.1 inches in magnitude and that occurs at least 72 hours from the previously measurable (0.1 inch) storm event. Within **90** days after the effective date of this permit, the permittee shall submit its proposed sampling plan. At a minimum, the monitoring program shall analyze for the following parameters: pH, Temperature, Dissolved Oxygen, Total Suspended Solids, BOD5, COD, Fecal Coliform, Total Nitrogen, Nitrate/Nitrite, Ammonia (as N), Total Phosphorous, Ortho-Phosphate, Oil and Grease, Total Petroleum Hydrocarbons, Surfactants, Fluoride, Copper, and Zinc. Unless commented on or denied by the Director within **60** days after its submittal, the proposed sampling plan shall be deemed approved. This monitoring program shall commence no later than six months after the effective date of the permit.

c. Alternate Representative Monitoring: Monitoring locations may be substituted for just cause during the term of the permit. Requests for alternate monitoring locations by the permittee shall be made to the Director in writing and include the rationale for the requested monitoring station relocation. Unless commented on or denied by the Director, use of an alternate monitoring location may commence sixty (60) days from the date of the request.

2. Storm Event Data: For Part I.C.1.a Data shall be collected to estimate pollutant loadings and event mean concentrations for each parameter sampled. The permittee shall maintain records of the date and duration (hours) of the storm event sampled; rainfall measurements or estimates (inches) of the storm event which generated the sampled runoff; the duration (hours) between the storm event sampled and the end of the previous measurable (greater than 0.1 inch rainfall) storm event; and the total estimated volume (in gallons) of the discharge sampled. If manual sampling is employed, the permittee shall record physical observations of the discharge such as color and smell; and visible water quality impacts such as floatables, oil sheen, or evidence of sedimentation in the vicinity of the outfall (e.g. sandbars).

3. Sample Type, Collection, and Analysis: The following requirements apply to samples collected pursuant to Part I.C.1.a.

a. For discharges from holding ponds or other impoundments with a retention period greater than 24 hours, (estimated by dividing the volume of the detention pond by the estimated volume of water discharged during the 24 hours previous to the time that the sample is collected) a minimum of one grab sample may be taken.

b. Grab samples shall be used for the analysis of pH, temperature, cyanide, total phenols, residual chlorine, oil & grease, fecal coliform, and fecal streptococcus. For all other parameters, data shall be reported for flow weighted composite samples of the entire event or, at a minimum, the first three hours of discharge.

c. All such samples shall be collected from the discharge resulting from a storm event that is greater than 0.1 inches in magnitude and that occurs at least 72 hours from the previously measurable (greater than 0.1 inch rainfall) storm event. Composite samples may be taken with a continuous sampler or as a combination of a minimum of three sample aliquots taken in each hour of discharge for the entire discharge or for the first three hours of the discharge, with each aliquot being separated by a minimum period of fifteen minutes.

d. Analysis and collection of samples shall be conducted in accordance with the methods specified at 40 CFR Part 136. Where an approved Part 136 method does not exist, any available method may be used.

4. Sampling Waiver. When the permittee is unable to collect samples required by Part I.C.1.a due to adverse climatic conditions, the discharger must submit, in lieu of sampling data, a description of why samples could not be collected, including available documentation of the event. Adverse climatic conditions which may prohibit the collection of samples include weather conditions that create dangerous conditions for personnel (such as local flooding, high winds, hurricane, tornadoes, electrical storms, etc.) or otherwise make the collection of a sample impracticable (drought, extended frozen conditions, etc.).

5. Sampling Results. The permittee shall record the results of sampling and assessment of the data in a report and submit results with its Annual Report.

6. Wet Weather Screening: The permittee shall develop and implement a program to identify, investigate, and address areas within their jurisdiction that may be contributing excessive levels of pollutants to the MS4 as a result of rainfall or snow melt. Screening shall be conducted at anytime precipitation causes a flow from the storm sewer. At a minimum the wet weather screening program:

a. shall screen all major outfalls at least once during the permit term;

b. shall record the structural integrity of the outfall (if visible); physical observations of the discharge (if visible) such as color and smell; and visible water quality impacts such as floatables, oil sheen, or evidence of sedimentation in the vicinity of the outfall (e.g. sandbars).

c. shall summarize the results of the program in its Annual Report.

d. The permittee may submit an alternate wet weather screening pilot program on a watershed or sub-watershed basis. The pilot project concept must be submitted to EPA and DEP within 90 days of the effective date of the permit. The permittee shall identify reasons it believes that a system wide screening program would not be effective. The pilot project may be conducted in conjunction with Receiving Water Quality Monitoring (C.1.b.), but not Representative Monitoring(C.1.a.)

D. DRY WEATHER DISCHARGES

1. Dry Weather Screening Program: At least once during the permit term, the permittee shall inspect all major outfalls, or nearest upstream location not subject to tidal influence or backflow, during dry weather to identify those outfalls with dry weather flow. Dry weather screening shall be conducted when there has been no greater than 0.10 inches of precipitation in the 72 hours prior to screening. The permittee shall record the structural integrity of the outfall (if visible). If flow is observed, the permittee shall record physical observations such as color, visible sheen, turbidity, floatables, smell, and an estimate of flow. If sewage is suspected, the permittee shall develop a schedule for follow-up activities to eliminate the source as soon as is practicable. The permittee shall summarize the results in its Annual Report

2. Screening Procedures: Screening methodology need not conform to the protocol at 40 CFR §122.26(d)(1)(iv)(D) or sample and collection methods of 40 CFR §136.

3. Follow-up on Dry Weather Screening Results: Follow-up activities shall be prioritized on the basis of:

   a. magnitude and nature of the suspected discharge;

   b. sensitivity of the receiving water; and

   c. other factors the permittee deems appropriate.

4. The permittee shall summarize the results of dry weather screening and submit with its Annual Report.

E. ANNUAL REPORT:

The permittee shall prepare and submit an annual report to be submitted by no later than **March 1, 2000** and annually thereafter. The report shall include the following separate sections, with an overview for the entire MS4:

1. The status of implementing the storm water management program(s);

2. Proposed changes to the storm water management program(s);

3. Revisions, if necessary, to the assessments of controls and the fiscal analysis reported in the permit application under 40 CFR 122.26(d)(2)(iv) and (d)(2)(v);

4. A summary of the data, including monitoring or screening data, that is accumulated throughout the reporting year;

5. A revised list of all current separate storm sewer outfalls and their locations, reflecting changes of the previous year.

6. Annual expenditures for the reporting period, with a breakdown of the major elements of the storm water management program, and the budget for the year following each annual report as well as an assessment of adequacy of staffing and equipment;

7. A summary describing the number and nature of enforcement actions, inspections, and public education programs;

8. Identification of water quality improvements or degradation attributable to the permittee;

9. An analysis of the effectiveness and removal efficiencies of structural controls owned or operated by the permittee (such as the off-line particle separator in Fenwood Road); and,

10. An update on the illicit connection program to include the total number of identified connections with an estimate of flow for each, total number of connections found in the reporting period to include how they were found (i.e. citizen complaint, routine inspection), number of connections corrected in the reporting period to include total estimated flow, and the costs of such repairs to include how the repairs were financed (i.e. by the permittee, costs provided to the permittee by the responsible party, repairs effected and financed by the responsible party). As an attachment to the report, the permittee should submit any existing tracking system information.

F. CERTIFICATION AND SIGNATURE OF REPORTS

All reports required by the permit and other information requested by the Director shall be signed and certified in accordance with the General Conditions-Part II of this permit.

G. REPORT SUBMISSION

1. Original signed copies of all notifications and reports required herein, shall be submitted to the Director at the following address:

U.S. Environmental Protection Agency
NPDES PROGRAMS (SPA)
P.O. Box 8127
Boston, MA 02114

2. Signed copies of all notifications and reports shall be submitted to the State at:

Massachusetts Department of Environmental Protection
1 Winter Street
Boston, MA 02108
Attn: Mr. Steve Lipman

and

Massachusetts Department of Environmental Protection
Metro Boston/Northeast Regional Office
205A Lowell Street
Wilmington, MA 01887
Attn: Mr. Sabin Lord

H. RETENTION OF RECORDS

The permittee shall retain all records of all monitoring information, copies of all reports required by this permit and records of all other data required by or used to demonstrate compliance with this permit, until at least three years after coverage under this permit terminates. This period may be modified by alternative provisions of this permit or extended by request of the Director at any time. The permittee shall retain the latest approved version of the SWMP developed in accordance with Part I of this permit until at least three years after coverage under this permit terminates.

I. STATE PERMIT CONDITIONS

1. This Discharge Permit is issued jointly by the U. S. Environmental Protection Agency (EPA) and the Massachusetts Department of Environmental Protection under Federal and State law, respectively. As such, all the terms and conditions of this permit are hereby incorporated into and constitute a discharge permit issued by the Commissioner of the Massachusetts DEP pursuant to M.G.L. Chap. 21, §43.

2. Each Agency shall have the independent right to enforce the terms and conditions of this Permit. Any modification, suspension or revocation of this Permit shall be effective only with respect to the Agency taking such action, and shall not affect the validity or status of this Permit as issued by the other Agency, unless and until each Agency has concurred in writing with such modification, suspension or revocation. In the event any portion of this Permit is declared, invalid, illegal or otherwise issued in violation of State law such permit shall remain in full force and effect under Federal law as an NPDES Permit issued by the U.S. Environmental Protection Agency. In the event this Permit is declared invalid, illegal or otherwise issued in violation of Federal law, this Permit shall remain in full force and effect under State law as a Permit issued by the Commonwealth of Massachusetts.

FACT SHEET

DRAFT NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM (NPDES) PERMIT TO DISCHARGE TO WATERS OF THE UNITED STATES.

NPDES PERMIT NO.: MAS010001

NAME AND ADDRESS OF APPLICANT:

Boston Water and Sewer Commission
425 Summer Street
Boston, Massachusetts 02210

NAME AND ADDRESS OF FACILITIES WHERE DISCHARGES OCCUR:

195 Storm water Outfalls listed in Permit Attachment A

RECEIVING WATERS:

Belle Isle Inlet, Boston Harbor, Boston Inner Harbor, Brook Farm Brook, Bussey Brook, Canterbury Brook, Chandler Pond, Charles River, Chelsea River, Dorchester Bay, Fort Point Channel, Goldsmith Brook, Jamaica Pond, Little Mystic Channel, Mill Pond, Millers River, Mother Brook, Muddy River, Mystic River, Neponset River, Old Harbor, Patten's Cove, Reserved Channel, Sprague Pond, Stony Brook, Turtle Pond, and unnamed wetlands, brooks and streams .

CLASSIFICATION: **Class SB and B**

I. Proposed Action, Type of Facility and Discharge Location.

The Boston Water and Sewer Commission(BWSC), the permittee, is empowered to promulgate rules and regulations regarding the use of its common sewers, including its sanitary sewers, combined sewers and storm drains. BWSC applied for its Municipal Separate Storm Sewer System(MS4) permit, which will discharge storm water from 195 identified separate storm sewer outfalls to receiving waters listed in Attachment A.

1. Discharge Characteristics

At the time of this draft, BWSC operates 195 identified separate storm sewer outfalls. Locations, size, and receiving waters for these outfalls are identified in Attachment A. Storm water discharge sampling results from five representative outfalls are shown on Table 3-21 of the permit application (Part II) dated May 17, 1993 and are included as Attachment B. A discussion of the results of sampling can be found in Part II Chapter 3 of the application.

2. Limitations and Conditions.

Permit conditions and all other requirements described herein may be found in Part I of the draft permit. No numeric effluent limitations have been established for this draft permit.

3. Permit Basis and Explanation of Permit Conditions.

As authorized by Section 402(p) of the Act, this permit is being proposed on a system-wide basis. This permit covers all areas under the jurisdiction of BWSC or otherwise contributing to discharges from municipal separate storm sewers owned or operated by the permittee.

a. Statutory basis for permit conditions. The conditions established by this permit are based on Section §402(p)(3)(B) of the Act which mandates that a permit for discharges from MS4s must: effectively prohibit the discharge of non-storm water to the MS4 and require controls to reduce pollutants in discharges from the MS4 to the maximum extent practicable including best management practices, control techniques, and system design and engineering methods, and such other provisions determined to be appropriate. MS4s are required to achieve compliance with Water Quality Standards. Section 301(b)(1)(C) of the Act, requires that NPDES permits include limitations, including those necessary to meet water quality standards. The intent of the permit conditions is to meet the statutory mandate of the Act.

EPA has determined that under the provisions of 40 CFR 122.44(k) the permit will include Best Management Practices (BMPs). A comprehensive Storm Water Management Program (SWMP) includes BMPs to demonstrate compliance with the maximum extent practicable standard. Section 402(p)(3)(B)(iii) of the Act clearly includes structural controls as a component of the maximum extent practicable requirement as necessary to achieve compliance with Water Quality Standards.

EPA encourages the permittee to explore opportunities for pollution prevention measures, while reserving the more costly structural controls for higher priority watersheds, or where pollution prevention measures prove unfeasible or ineffective in achieving water quality goals and standards.

b. Regulatory basis for permit conditions. As a result of the statutory requirements of the Act the EPA promulgated the MS4 Permit application regulations, 40 CFR 122.26(d). These regulations describe in detail the permit application requirements for operators of MS4s. The information in the application (Parts 1 and 2) and supplemental information provided in June 1995 and June 1998 was used to develop the draft permit conditions.

4. Discharges Authorized By This Permit.

a. Storm water. This permit authorizes all existing or new storm water point source discharges to waters of the United States from the MS4.

b. Non-storm water. This permit authorizes the discharge of storm water commingled with flows contributed by wastewater, or Storm Water Associated with Industrial Activity, provided such discharges are authorized by separate NPDES permits and in compliance with the permittee's regulations regarding the use of storm drains. Nothing in this draft permit conveys a right to discharge to the permittee's system without the permittee's authorization. In addition, certain types of non-storm waters identified in the draft permit at Part I.B.2.g. are authorized if appropriately addressed in the permittee's Storm Water Management Program.

The following demonstrates the difference between the Act's statutory requirements for discharges from municipal storm sewers and industrial sites:

i. Section 402(p)(3)(B) of the Act requires an effective prohibition on non-storm water discharges to a MS4 and controls to reduce the discharge of pollutants from the MS4 to the Maximum Extent Practicable (MEP).

ii. Section 402(p)(3)(A) of the Act requires compliance with treatment technology (BAT/BCT) and Section 301 water quality requirements on discharges of Storm Water Associated with Industrial Activity.

The Act requires Storm Water Associated with Industrial Activity discharging to the MS4 to be covered by a separate NPDES permit. However, the permittee is responsible for the quality of the ultimate discharge, and has a vested interest in locating uncontrolled and unpermitted discharges to the system.

c. Spills. This permit does not authorize discharges of material resulting from a spill. If discharges from a spill are unavoidable to prevent imminent threat to human life, personal injury, or severe property damage, the permittee has the responsibility to take (or insure the party responsible for the spill takes) reasonable and prudent measures to minimize the impact of discharges on human health and the environment.

5. Receiving Stream Segments and Discharge Locations.

The permittee discharges to the receiving waters listed in Attachment A, which are classified according to the Massachusetts Surface Water Quality Standards as Class B, B_{CSO}, SB, and SB_{CSO} water bodies. Despite variance conditions and CSO designation, storm water discharges shall achieve compliance with Class B and SB standards. Class B and SB waters shall be of such quality that they are suitable for the designated uses of protection and propagation of fish, other aquatic life and wildlife; and for primary and secondary contact recreation. Notwithstanding specific conditions of this permit, the discharges must not lower the quality of any classified water body below such classification, or lower the existing quality of any water body if the existing quality is higher than the classification, except in accordance with Massachusetts' Antidegradation Statutes and Regulations.

6. SWMP.

The following prohibitions apply to discharges from MS4s and were considered in review of the current management programs which the permittee is operating. In implementing the SWMP, the permittee is required to select measures or activities intended to achieve the following prohibitions.

No discharge of toxics in toxic amounts. The discharge of toxics in toxic amounts is prohibited (Section 101(a)(3) of the Act).

No discharge of pollutants in quantities that would cause a violation of State water quality standards. Section 301(b)(1)(C) of the Act and 40 CFR 122.44(d) require that NPDES permits include "...any more stringent limitations, including those necessary to meet water quality standards, treatment standards, or schedule of compliance, established pursuant to State law or regulations..." Implementation of the SWMP is reasonably expected to provide for protection of State water quality standards.

No discharge of non-storm water from the municipal separate storm sewer system, except in accordance with Part II.B.2. Permits issued to MS4s are specifically required by Section 402(p)(3)(B) of the Act to "...include a requirement to effectively prohibit non-storm water discharges into the storm sewers..." The regulations (40 CFR 122.26(d)(2)(iv)(B)(1)) allow the permittee to accept certain non-storm water discharges where they have not been identified as significant sources of pollutants. Any discharge allowed by the permittee and authorized by a separate NPDES permit is not subject to the prohibition on non-storm water discharges.

No numeric effluent limitations are proposed in the draft permit. In accordance with 40 CFR §122.44(k), the EPA has required a series of Best Management Practices, in the form of a comprehensive SWMP, in lieu of numeric limitations.

7. Storm Water Management Program.

BWSC provided updates to its SWMP in June 1995 and June 1998. The current SWMP addresses all required elements. Some of the elements of the SWMP are wholly or in part the responsibility of the City of Boston rather than BWSC. The permit requires the permittee to cooperate with appropriate municipal agencies to assure that the goals of the SWMP are achieved by building upon existing programs and procedures which address activities impacting storm water discharges to the MS4.

EPA has requested permit application information from the City of Boston. This information will be used to develop permit conditions for the City to implement the SWMP measures which are under its control. This will be effected through a permit modification identifying the City as a co-permittee and specifying its responsibilities or through the issuance of a separate permit to the City.

Table A identifies the required elements of the SWMP, the regulatory cite, and the relevant draft permit condition.

Table A - Storm Water Management Program Elements

Required Program Element	Permit Parts	Regulatory References (40 CFR 122.26...)
Structural Controls	I.B.2.b	(d)(2)(iv)(A)(1)
Areas of new development & significant redevelopment	I.B.2.c	(d)(2)(iv)(A)(2)
Roadways	I.B.2.d	(d)(2)(iv)(A)(3)
Flood Control Projects	I.B.2.e	(d)(2)(iv)(A)(4)
Pesticides, Herbicides, & Fertilizers Application	I.B.2.f	(d)(2)(iv)(A)(6)
Illicit Discharges and Improper Disposal	I.B.2.g	(d)(2)(iv)(B)(1)-(3), (iv)(B)(7)
Spill Prevention and Response	I.B.2.h	(d)(2)(iv)(B)(4)
Industrial and High Risk Runoff	I.B.2.i	(d)(2)(iv)(C), (iv)(A)(5)
Construction Site Runoff	I.B.2.j	(d)(2)(iv)(D)
Public Education	I.B.2.k	(d)(2)(iv)(A)(6), (iv)(B)(5), (iv)(B)(6)
Monitoring Program	I.C	(d)(2)(iv)(B)(2), (iii), (iv)(A), (iv)(C)(2)

Attachment C provides a discussion of the permit condition and the permittee's existing SWMP.

8. Legal Authority. BWSC has demonstrated its authority to promulgate regulations regarding the use of its common sewers, including its sanitary sewers, combined sewers and storm drains. Regulations Governing the Use of Sanitary and Combined Sewers and Storm Drains of the Boston Water and Sewer Commission were adopted January 15, 1998 and effective February 27, 1998.

9. Resources. Part I.B.6 of the permit requires the permittee to provide adequate support capabilities to implement its activities under the SWMP. Compliance with this requirement will be demonstrated by the permittee's ability to fully implement the SWMP, monitoring programs, and other permit requirements. The permit does not require specific funding or staffing levels, thus providing the permittee with the ability, and incentive, to adopt the most efficient and cost effective methods to comply with the permit requirements. The draft permit also requires an Annual Report (Part I.E.) which includes an evaluation of resources to implement the plan.

10. Monitoring and Reporting.

a. Monitoring. The BWSC sampled five locations which were selected to provide representative data on the quality and quantity of discharges from the MS4 as a whole. Parameters sampled included conventional, non-conventional, organic toxics, and other toxic pollutants. The EPA reviewed this information during the permitting process. Monitoring data is intended to be used by the BWSC to assist in its determination of appropriate storm water management practices. EPA used the data to identify the minimum parameters for sampling under Part I.C of the permit.

The BWSC is required (40 CFR §122.26(d)((2)(iii)(C) and (D)) to monitor the MS4 to provide data necessary to assess the effectiveness and adequacy of SWMP control measures; estimate annual cumulative pollutant loadings from the MS4; estimate event mean concentrations and seasonal pollutants in discharges from major outfalls; identify and prioritize portions of the MS4 requiring additional controls, and identify water quality improvements or degradation. The BWSC is responsible for conducting any additional monitoring necessary to accurately characterize the quality and quantity of pollutants discharged from the MS4.

EPA will make future permitting decisions based on the monitoring data collected during the permit term and available water quality information. Where the required permit term monitoring proves insufficient to show pollutant reductions, the EPA may require more stringent Best Management Practices, or where necessary to protect water quality, establish numeric effluent limitations.

1. Representative monitoring: The monitoring of the discharge of representative outfalls during actual storm events will provide information on the quality of runoff from the MS4, a basis for estimating annual pollutant loadings, and a mechanism to evaluate reductions in pollutants discharged from the MS4. Results from the monitoring program will be submitted annually with the annual report.

2. Requirements: The BWSC shall monitor representative discharges to characterize the quality of storm water discharges from the MS4. Within **90** days after the effective date of this permit, the BWSC will submit its proposed sampling plan. The BWSC shall choose five locations representing the different land uses or drainage areas representative of the system, with a focus on what it considers priority areas, such as an outfall in the vicinity of a public beach or a shellfish bed. This submittal shall also include any related monitoring which the BWSC has done since its MS4 permit application was submitted. Unless commented on or denied by the Director within **60** days after its submittal, the proposed sampling plan shall be deemed approved.

3. Parameters: The EPA established minimum permit parameter monitoring requirements based on the information available regarding storm water discharges and potential impacts of these discharges. The basic parameter list allows satisfaction of the regulatory requirement [40 CFR §122.26(d)(2)(iii)] to provide estimates of pollutant loadings for each major outfall.

4. Frequency: The frequency of annual monitoring is based on monitoring at least one representative storm event three times a year. The plan should consider sampling events in the spring, summer, and fall (excluding January to March). Monitoring frequency is based on permit year, not a calendar year. The first complete calendar year monitoring could be less than the stated frequency.

5. Receiving Water Quality Monitoring: The draft permit is conditioned to include four sampling stations to assess the impact of storm water discharges from the MS4 to receiving waters. The permittee shall submit a plan to sample four locations three times a year for the permit term within 90 days of the effective date of the permit. The minimum parameters for analysis are consistent with the representative monitoring requirements.

b. Screening. The draft permit requires two screening programs. Part I.C.6 requires the permittee to develop a Wet Weather Screening Program. This screening shall record physical observations of wet weather flows from all major outfalls at least once during the permit term. The program will identify discharges which may be contributing to water quality impairments short of analytical monitoring. Part I.D. requires a dry weather screening program.

c. Reporting. The permittee is required (40 CFR §122.42(c)(1)) to contribute to the preparation of an annual system-wide report including the status of implementing the SWMP; proposed changes to the SWMP; revisions, if necessary, to the assessments of controls and the fiscal analysis reported in the permit application; a summary of the data, including monitoring data, that is accumulated throughout the reporting year; annual expenditures and the budget for the year following each annual report; a summary describing the number and nature of enforcement actions, inspections, and public education programs; and identification of water quality improvements or degradation. Part I.E. of the draft permit requires the permittee to do annual evaluations on the effectiveness of the SWMP, and institute or propose modifications necessary to meet the overall permit standard of reducing the discharge of pollutants to the maximum extent practicable. In order to allow the orderly collection of budgetary and monitoring data it was determined to establish the annual report due date relative to the permittee's annual fiscal year. BWSC's fiscal year ends on **December 31** and the annual report is due on **March 1** each year commencing March 1, 1999.

11. Permit Modifications.

a. Reopener Clause. The EPA may reopen and require modifications to the permit (including the SWMP) based on the following factors: changes in the State's Water Quality Management Plan and State or Federal requirements; adding co-permittee(s); SWMP changes impacting compliance with permit requirements; other modifications deemed necessary by the EPA to adhere to the requirements of the Clean Water Act. Co-permittees may be incorporated into this permit or separate permits may be required as necessary to achieve the goals of the SWMP. Implementation of the SWMP is expected to result in the protection of water quality. The draft permit contains a reopener clause should new information indicate that the discharges from the MS4 are causing, or are significantly contributing to, a violation of the State's water quality standards.

b. SWMP Changes. The SWMP is intended to be a tool to achieve the maximum extent practicable and water quality standards. Therefore, minor changes and adjustments to the various SWMP elements are expected and encouraged where necessary. Changes may be necessary to more successfully adhere to the goals of the permit. Part I.B.7.c of the draft permit describes the allowable procedure for the permittee to make changes to the SWMP. Any changes requested by a permittee shall be reviewed by the EPA and DEP. The EPA and DEP have 60 days to respond to the permittee and inform the permittee if the suggested changes will impact or change the SWMP's compliance with a permit requirement.

c. Additions. The EPA intends to allow the permittee to annex lands, activate new outfalls, deactivate existing outfalls, and accept the transfer of operational authority over portions of the MS4 without mandating a permit modification. Implementation of appropriate SWMP elements for these additions (annexed land or transferred authority) is required. Upon notification of the additions in the Annual Report, the EPA shall review the information to determine if a modification to the permit is necessary based on changed circumstances.

The remaining conditions of the permit are based on the NPDES regulations, 40 CFR Parts 122 though 125, and consist primarily of management requirements common to all permits.

II. State Certification Requirements.

EPA may not issue a permit unless the State Water Pollution Control Agency with jurisdiction over the receiving waters certifies that the effluent limitations contained in the permit are stringent enough to assure that the discharge will not cause the receiving water to violate State Water Quality Standards. The staff of the Massachusetts Department of Environmental Protection has reviewed the draft permit and advised EPA that the limitations are adequate to protect water quality. EPA has requested permit certification by the State and expects that the draft permit will be certified.

III. Comment Period, Hearing Requests and Procedures for Final Decisions.

All persons, including applicants, who believe any condition of the draft permit is inappropriate must raise all issues and submit all available arguments and all supporting material for their arguments in full by the close of the public comment period, to the U.S. EPA, Planning and Administration (SPA), P.O. Box 8127, Boston, MA 02114. Any person, prior to such date, may submit a request in writing for a public hearing to consider the draft permit to EPA and the State Agency. Such requests shall state the nature of the issues proposed to be raised in the hearing. A public hearing may be held after at least thirty days public notice whenever the Regional Administrator finds that response to this notice indicates significant public interest. In reaching a final decision on the draft permit the Regional Administrator will respond to all significant comments and make those responses available to the public at EPA's Boston Office.

Following the close of the comment period, and after a public hearing, if such hearing is held, the Regional Administrator will issue a final permit decision and forward a copy of the final decision to the applicant and to each person who has submitted written comments or requested notice. Within 30 days following the notice of the final permit decision any interested person any submit a request for a formal hearing to reconsider or contest the final decision. Requests for formal hearings must satisfy the requirements of 40 CFR §124.74, 48 Fed. Reg. 14279-14280 (April 1, 1983).

IV. EPA Contact

Additional information concerning the draft permit may be obtained between the hours of 9:00 a.m. and 5:00 p.m., Monday through Friday, excluding holidays from:

Jay Brolin
U.S. Environmental Protection Agency
John F. Kennedy Federal Building
Office of Ecosystem Protection (CMA)

Linda M. Murphy, Director
Office of Ecosystem Protection
U.S. Environmental Protection Agency

Attachment C

Structural Controls: The permittee shall operate the separate storm sewer system and any storm water structural controls in a manner to reduce the discharge of pollutants to the Maximum Extent Practicable. The permittee's existing SWMP includes operation and maintenance procedures to include an inspection schedule of storm water structural controls adequate to satisfy the permit condition.

Areas of New Development and Significant Redevelopment: The permittee has no authority over land use issues. The draft permit is conditioned to require the permittee to coordinate with the appropriate municipal agencies as it relates to discharges to the MS4. The permittee has its own site plan review process relating to new or modified connections for water, sewer, and drains and has the authority to require controls on discharges to the storm drain system during and after construction.

Roadways: The permittee has no authority to ensure that public streets, roads, and highways are operated and maintained in a manner to minimize discharge of pollutants, including those pollutants related to deicing or sanding activities. The draft permit is conditioned to require the permittee to coordinate with appropriate municipal agencies as it relates to discharge to the MS4.

Pesticide, Herbicide, and Fertilizer Application: The permittee shall coordinate with appropriate municipal agencies to evaluate existing measures to reduce the discharge of pollutants related to the storage and application of pesticides, herbicides, and fertilizers applied to public property.

Non-Storm Water discharges: Non-storm water discharges shall be effectively prohibited. However, the permittee may allow certain non-storm water discharges as listed in 122.26(d)(2)(iv)(B)(1) and Part I.B.2 of the draft permit. The permittee has identified allowable non-storm water discharges in its regulations.

The permittee shall implement controls to prevent discharges of dry and wet weather overflows from sanitary sewers into the MS4. The permittee shall also control the infiltration of seepage from sanitary sewers into the MS4. This is presently accomplished through the permittee's illicit connection program and it's Inflow/Infiltration program.

The discharge or disposal of used motor vehicle fluids, household hazardous wastes, grass clippings, leaf litter, and animal wastes into the MS4 is prohibited in accordance with the permittee's regulations. The permittee shall coordinate with appropriate

regulations. The permittee shall coordinate with appropriate public and private agencies to ensure continued implementation of programs to collect used motor vehicle fluids (at a minimum, oil and antifreeze) for recycle, reuse, or proper disposal and to collect household hazardous waste materials (including paint, solvents, pesticides, herbicides, and other hazardous materials) for recycle, reuse, or proper disposal. The City of Boston has an existing program.

Illicit Discharges and Improper Disposal: The BWSC shall continue to implement its program to locate and eliminate illicit discharges and improper disposal into the MS4. This program shall include dry weather screening activities to locate portions of the MS4 with suspected illicit discharges and improper disposal. Follow-up activities to eliminate illicit discharges and improper disposal may be prioritized on the basis of magnitude and nature of the suspected discharge; sensitivity of the receiving water; and/or other relevant factors. This program shall establish priorities and schedules for screening the entire MS4 at least once every five years. At present the permittee has on-going programs in Brighton (BOS 032) discharges to the Charles River, discharges to Brookline's Village and Tannery Brook drainage systems, and discharges through Dedham to Mother Brook. Facility inspections may be carried out in conjunction with other programs (e.g. pretreatment inspections of industrial users, health inspections, fire inspections, etc.).

The BWSC shall eliminate illicit discharges as expeditiously as possible and require the immediate termination of improper disposal practices upon identification of responsible parties. Where elimination of an illicit discharge within sixty (60) days is not possible, the BWSC shall establish an expeditious schedule for removal of the discharge. In the interim, the BWSC shall take all reasonable and prudent measures to minimize the discharge of pollutants to the MS4.

Spill Prevention and Response: The permittee shall coordinate with appropriate municipal agencies to implement a program to prevent, contain, and respond to spills that may discharge into the MS4. The existing spill response program in the City includes a combination of spill response actions by the permittee, municipal agencies and private entities. The permittee's regulations include legal requirements for public and private entities within the permittee's jurisdiction.

Industrial & High Risk Runoff: The permittee shall coordinate with EPA and DEP to develop a program to identify and control pollutants in storm water discharges to the MS4 from municipal landfills; other treatment, storage, or disposal facilities for municipal waste (e.g. transfer stations, incinerators, etc.);

hazardous waste treatment, storage, disposal and recovery facilities and facilities that are subject to EPCRA Title III, Section 313; and any other industrial or commercial discharge which the permittee determine is contributing a substantial pollutant loading to the MS4 shall be implemented. The program shall include inspections, a monitoring program and a list of industrial storm water sources discharging to the MS4 which shall be maintained and updated as necessary. This requirement is not meant to cover all such discharges, but is intended to prioritize those discharges from this group which are believed to be contributing pollutants to the MS4 and to identify those dischargers which may require NPDES permit coverage or are not in compliance with existing permits.

Construction Site Runoff: The permittee shall coordinate with appropriate municipal agencies to implement a program to reduce the discharge of pollutants from construction sites to the separate storm sewer. This program shall include: requirements for the use and maintenance of appropriate structural and non-structural control measures to reduce pollutants discharged to the MS4 from construction sites; inspection of construction sites and enforcement of control measure requirements required by the permittee; appropriate education and training measures for construction site operators; and notification of appropriate building permit applicants of their potential responsibilities under the NPDES permitting program for construction site runoff and any post-construction permitting.

Public Education: The permittee shall coordinate with appropriate municipal agencies to implement a public education program with the following elements: (a) a program to promote, publicize, and facilitate public reporting of the presence of illicit discharges or improper disposal of materials into the MS4; (b) a program to promote, publicize, and facilitate the proper management and disposal of used oil and household hazardous wastes; and (c) a program to promote, publicize, and facilitate the proper use, application, and disposal of pesticides, herbicides, and fertilizers.

Exhibit **6**

Worcester, MA – Department of Public Works MS4 Permit
(Permit No. MAS010002)

This page intentionally left blank

AUTHORIZATION TO DISCHARGE UNDER THE
NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM

In compliance with the provisions of the federal Clean Water Act, as amended, 33 U.S.C. §§1251 et seq., and the Massachusetts Clean Waters Act, as amended, Mass. Gen. Laws. ch. 21, §§26-53, the

City of Worcester
Department of Public Works

and is authorized to discharge from all new or existing separate storm sewers: **existing Separate Storm Sewer Outfalls which are listed in Attachment A (93 major outfalls) and all other known outfalls (170 minor outfalls)**

to receiving waters (in the BLACKSTONE RIVER BASIN) named: **Beaver Brook, Blackstone River, Broad Meadow Brook, Coal Mine Brook, Coes Pond, Curtis Pond, Fitzgerald Brook, Indian Lake, Kendrick Brook, Kettle Brook, Lake Quinsigamond, Leesville Pond, Middle River, Mill Brook, Mill Brook Tributary, Tatnuck Brook, Patch Reservoir, Poor Farm Brook, Smiths Pond, Weasel Brook and Williams Millpond** in accordance with effluent limitations, monitoring requirements and other conditions set forth herein.

This permit shall become effective thirty (30) days after the date of signature.

This permit and the authorization to discharge expire at midnight, five years from the effective date.

This permit consists of **21** pages and **Attachment A** in Part I including wet and dry weather monitoring requirements, etc., and 35 pages in Part II including General Conditions and Definitions.

Signed this 30 day of September, 1998

Director
Office of Ecosystem Protection
Environmental Protection Agency
Region I
Boston, MA

Director, Division of
Watershed Management
Department of Environmental
Protection
Commonwealth of Massachusetts
Boston, MA

PART I. MUNICIPAL SEPARATE STORM SEWER SYSTEM

A. DISCHARGES THROUGH THE MUNICIPAL SEPARATE STORM SEWER SYSTEM AUTHORIZED UNDER THIS PERMIT

1. Permit Area. This permit covers all areas within the corporate boundary of the City of Worcester served by, or otherwise contributing to discharges from new or existing separate storm sewers owned or operated by the Department of Public Works, the "permittee".

2. Authorized Discharges. This permit authorizes all storm water discharges to waters of the United States from all existing or new outfalls owned or operated by the permittee (existing outfalls are identified in Attachment A). This permit also authorizes the discharge of storm water commingled with flows contributed by process wastewater, non-process wastewater, or storm water associated with industrial activity provided such discharges are authorized under separate NPDES permits and in compliance with applicable Federal, State and local regulations.

   Storm water discharges related to industrial activity which are not under the jurisdiction of the storm water program are authorized. The permittee shall provide in the annual report (Part I.E.) to EPA and MA DEP a review of all new separate storm sewer outfalls that are activated and of all existing outfalls which are de-activated.

3. Limitations on Coverage. The following discharges are not authorized by this permit:

   a. Discharges of non-storm water or storm water associated with industrial activity through outfalls listed in Attachment A are not authorized under this permit except where such discharges are:

      I. authorized by a separate NPDES permit; or

      ii. identified by and in compliance with Part B.2.g of this permit.

B. STORM WATER POLLUTION PREVENTION & MANAGEMENT PROGRAMS

The permittee is required to continue to develop, implement and revise as necessary, a storm water pollution prevention and management program designed to reduce, to the maximum extent practicable, the discharge of pollutants from the Municipal Separate Storm Sewer System (MS4). The permittee may implement Storm Water Management Program (SWMP) elements through participation with other public agencies or private entities in cooperative efforts satisfying the requirements of this permit in lieu of creating duplicate program elements. Either cumulatively, or separately, the permittee's storm water pollution prevention and management programs shall satisfy the requirements of Part I.B.1-7. below for all portions of the MS4.

1. POLLUTION PREVENTION REQUIREMENTS The permittee shall develop and implement the following pollution prevention measures:

a. Development The permittee, in cooperation with the agency with jurisdiction over land use, shall include requirements to consider water quality impacts of new development and significant re-development. The permittee shall ensure that development activities conform to applicable state and local regulations, guidance and policies relative to the discharge of storm water into the MS4. The goals of these requirements shall be to limit increases in the discharge of pollutants into the MS4 from new development and to reduce the discharge of pollutants into the MS4 from existing sources due to re-development.

b. Used Motor Vehicle Fluids The permittee shall describe educational activities, public information activities and other appropriate activities to facilitate the proper management, including recycling, reuse and disposal, of used motor vehicle fluids. The permittee shall coordinate with appropriate public agencies or private agencies where necessary. Such activities shall be readily available to all private residents and be publicized and promoted on a regular basis (at least annually).

c. Household Hazardous Waste (HHW) The permittee shall coordinate with the appropriate public agency or private entities to ensure the implementation of a program to collect household hazardous waste materials (including paint, solvents, pesticides, herbicides, and other hazardous materials) for recycle, reuse, or proper disposal. Such program shall be readily

available to all private residents and be publicized and promoted on a regular basis (at least annually).

2. STORM WATER MANAGEMENT PROGRAM REQUIREMENTS: The permittee shall continue to implement the current elements of its' Storm Water Management Program (SWMP) which was described in the May 11, 1993 Part II application in accordance with Section 402(p)(3)(B) of the Clean Water Act (CWA or "the Act"), including any updates.

The current SWMP does not adequately address all the required elements described on Pages 5-11 below. The EPA sent a letter to the City of Worcester on June 6, 1997 specifying which portions of the current SWMP needed more description, effort, or clarification. The items included were the illicit connection program, a discussion of the City's indebtedness and funding for storm water programs, geographic mapping, reevaluation of wet weather sampling locations, construction area oversight, and public education. The City submitted a letter addressing these concerns on March 25, 1998. Although most issues were discussed, there is still some detail and proposed effort that is insufficient.

In particular, the sampling plan proposes grab samples at five different outfalls, three times per year. In order to get a sense of any trend and how parameter concentrations change over time during storm events, the permittee must conduct composite sampling or a series of grab samples for the summer sampling event at each of the five outfalls, as described later. In Section C. below, this permit includes minimum expectations for outfall monitoring and instream monitoring during wet weather. Instream monitoring could provide information on both the pollutant concentration peaks as well as the pollutant loading increases that occur as a result of storm events.

More detail and effort is needed for the catch basin cleaning and inspection program, as shown on Page 6. This last issue was not raised in the letter of June 6, 1997, but this program was found to be deficient upon further review.

Within **120** days after the effective date of this permit, the permittee shall submit a written description of all additional measures it will take, relative to items mentioned above, to satisfy the requirements of this permit and the goals of the proposed SWMP. **This submittal will include the entire SWMP effort, including all the original items as included in Worcester's Part II application.** This

shall be submitted to the EPA the MA DEP at the addresses in Section G. Unless disapproved by EPA or the MA DEP within 60 days after its submittal, the SWMP shall be deemed approved. The permittee shall respond to all written comments by EPA and the MA DEP and shall make all changes to the SWMP required for its approval. As noted later, compliance with the SWMP shall occur no later than 180 days after the effective date of the permit or no later than EPA and DEP's approval of the SWMP. This SWMP shall be displayed at a convenient location accessible to the public.

The Controls and activities identified in the SWMP shall clearly identify goals, a description of the controls or activities, and a description of the roles and responsibilities of other entities' areas of applicability on a system, jurisdiction, or specific area basis.

The permittee will specifically address how it will have input on any portions of the SWMP which may not be under its direct control (i.e. Mass Highway Department's maintenance of interstate highway) and how it will cooperate with such entities to achieve the goals of the SWMP.

If, during the life of this permit, EPA and the DEP determine that the permittee cannot substantively operate these programs to effectively reduce pollutants to the MS4, then the permit may be modified to designate one or more agencies that administer these programs as co-permittees. These entities would then be responsible for applicable permit conditions and requirements. Alternatively, one or more entities may be required to apply for and obtain an individual storm water permit for their discharges. The SWMP, and all approved updates, are hereby incorporated by reference and shall be implemented in a manner consistent with the following requirements:

a. Statutory Requirements: SWMPs shall include controls necessary to reduce the discharge of pollutants from the MS4 to the Maximum Extent Practicable,"MEP". Controls may consist of a combination of best management practices, control techniques, system design and engineering methods, and such other provisions as the permittee, the Director or the State determines appropriate. The various components of the SWMP, taken as a whole (rather than individually), shall be sufficient to meet this "MEP" standard. The SWMPs shall be updated as necessary to ensure conformance with the requirements of CWA § 402(p)(3)(B). In implementing the SWMP, the permittee

is required to select measures or activities intended to meet these requirements:

No discharge of toxics in toxic amounts.

No discharge of pollutants in quantities that would cause a violation of State water quality standards.

No discharge of either a visible oil sheen, foam, or floating solids, in other than trace amounts, at any time.

No discharge of suspended or settleable solids in concentrations or combinations that would impair the uses of the class of receiving waters.

b. Structural Controls: The permittee shall operate and maintain any storm water structural controls, for which it is the owner or operator, in a manner so as to reduce the discharge of pollutants to the MEP. Each catch basin shall be cleaned at least every other year as described in the SWMP.

The cleaning program must include the recording and inputting of all activities in an automated database for all catch basins, including the date of cleaning, the location of each catch basin, and an estimate of how full the catch basin was when it was cleaned. For those catch basins which are found to be more than approximately 50% full, a follow up inspection will be conducted within 3 - 6 months and cleaning schedules modified as appropriate.

During the life of this permit, the permittee shall conduct a structural control demonstration. Within 180 days after the effective date of the permit, the permittee shall submit a demonstration proposal and schedule to the EPA and MA DEP. Unless disapproved by the EPA or the MA DEP within 30 days after its submittal, the proposed demonstration project shall be deemed approved.

The permittee can reference the MA DEP document titled, Stormwater Management, Volume 1: Stormwater Policy Handbook and Stormwater Management, Volume II: Stormwater BMP Handbook. This provides an overview of storm water controls, including ranges of removal for typical storm water pollutants. This proposal shall measure the removal efficiency of a particular structural control in the MS4 area for several pollutants with influent and effluent sampling during the life of this permit.

c. Areas of New Development and Significant Redevelopment: The permittee and/or cooperating agencies shall develop, implement, and enforce controls to minimize the discharge of pollutants to the separate storm sewer system from areas of new development and significant re-development during and after construction. The permittee and/or cooperating agencies shall ensure development activities conform to applicable state and local regulations, guidance and policies. The permittee and/or cooperating agencies shall consider water quantity and water quality impacts related to development and significant redevelopment. The permittee and/or cooperating agencies shall conform to the policy of the MA DEP titled **Performance Standards and Guidelines for Stormwater Management in Massachusetts.**

d. Roadways: The permittee shall coordinate with appropriate agencies to implement measures to ensure that roadways and highways are operated and maintained in a manner so as to minimize the discharge of pollutants to the separate storm sewer system (including discharges related to deicing and sanding activities and snow removal and disposal).

The permittee shall conduct an investigation of the drainage from roadways that are owned or operated by other entities, primarily the Massachusetts Highway Department. Within 180 days after the effective date of the permit, **the permittee shall report to the EPA and the MA DEP, which of these roadway drainage systems are connected to the MS4.** The SWMP will also include a description of how the permittee will coordinate with such entities to assure that discharges to the MS4 through such drainage meets the requirements of the permit.

e. Flood Control Projects: The permittee shall ensure any flood management projects consider impacts on the water quality of receiving waters. The permittee shall also evaluate the feasibility of retro-fitting existing structural flood control devices to provide additional pollutant removal from storm water.

f. Pesticide, Herbicide, and Fertilizer Application: The permittee shall implement measures to reduce the discharge of pollutants to the MS4 related to the application and storage of pesticides, herbicides, and fertilizers applied by municipal or public agency employees or contractors to public right of ways, parks, and other municipal facilities. The permittee, in cooperation with the entity with jurisdiction over land use (e.g. Parks Department), shall implement

controls to reduce discharge of pollutants to the MS4 related to the application and distribution of pesticides, herbicides, and fertilizers by commercial and wholesale distributors and applicators and its own employees.

g. Authorized Non-Storm Water Discharges: Unless identified by either the permittee, the EPA, or the State as significant sources of pollutants to waters of the United States, the following non-storm water discharges are authorized to enter the MS4. As necessary, the permittee shall incorporate appropriate control measures in the SWMP to insure that these discharges are not significant sources of pollutants to waters of the United States.

(a) water line flushing;
(b) landscape irrigation;
(c) diverted stream flows;
(d) rising ground waters;
(e) uncontaminated ground water infiltration (as defined at 40 CFR 35.2005(20)) to separate storm sewers;
(f) uncontaminated pumped ground water;
(g) discharges from potable water sources;
(h) foundation drains;
(I) uncontaminated air conditioning or compressor condensate;
(j) irrigation water;
(k) uncontaminated springs;
(l) water from crawl space pumps;
(m) footing drains;
(n) lawn watering;
(o) non-commercial car washing;
(p) flows from riparian habitats and wetlands;
(q) swimming pool discharges which have been dechlorinated;
(r) street wash waters; and
(s) discharges or flows from emergency fire fighting activities.
(t) fire hydrant flushing
(u) building washdown water which does not contain detergents

h. Illicit Discharges and Improper Disposal: The permittee shall continue to implement its ongoing program to detect and remove (or require the discharger to the MS4 to remove or obtain a separate NPDES permit for) illicit discharges and improper disposal into the separate storm sewer.

1. The permittee shall effectively prohibit unpermitted, industrial storm water discharges which are required to have a federal storm water permit, to the MS4.

2. The permittee shall prohibit unpermitted discharges of dry and wet weather overflows from sanitary sewers into the MS4. The permittee shall identify and limit the infiltration of seepage from sanitary sewers into the MS4.

3. The permittee shall prohibit the discharge or disposal of used motor vehicle fluids, household hazardous wastes, grass clippings, leaf litter, and animal wastes into separate storm sewers. Public education programs for proper disposal of these materials shall be included in the SWMP and publicized at least annually and shall include material for non-English speaking residents.

4. The permittee shall require the elimination of illicit connections as expeditiously as possible and the immediate cessation of improper disposal practices upon identification of responsible parties. The permittee shall describe its procedure for the identification, costing and elimination of illicit discharges. This information shall be included in the annual report required under Part I.E. below. Where elimination of an illicit connection within thirty (30) days is not possible, the permittee shall establish a schedule for the expeditious removal of the discharge. In the interim, the permittee shall take all reasonable and prudent measures to minimize the discharge of pollutants to the MS4.

i. Spill Prevention and Response: The permittee shall implement procedures to prevent, contain, and respond to spills that may discharge into the MS4. The spill response procedures may include a combination of spill response actions by the permittee (and/or other public or private entities), and requirements for private entities through the permittee's sewer use ordinances. The discharges of materials resulting from spills is prohibited.

j. Industrial & High Risk Runoff: The permittee shall implement a program to identify, monitor, and control pollutants in storm water discharges to the MS4 from municipal landfills; hazardous waste treatment,

storage, disposal and recovery facilities and facilities that are subject to EPCRA Title III, Section 313; and any other industrial or commercial discharge the permittee determines is contributing a substantial pollutant loading to the MS4. A list of these facilities which discharge to the MS4 shall be maintained and updated as necessary. This shall include industrial activities which are listed at 40 CFR §122.26(b)(14), which are required to obtain federal storm water permit coverage. The program shall include:

1. priorities and procedures for inspections and establishing and implementing control measures for such discharges;

2. a monitoring (or self-monitoring) program for facilities identified under this section, including the collection of quantitative data on the following constituents:

(a) any pollutants which the discharger may monitor for or are limited to in an existing NPDES permit for an identified facility;

(b) any information on discharges required under 40 CFR 122.21(g)(7)(iii) and (iv).

(c) any pollutant the permittee has a reasonable expectation is discharged in substantial quantity from the facility to the separate storm sewer system

Data collected by the industrial facility to satisfy the monitoring requirements of an NPDES or State discharge permit may be used to satisfy this requirement. The permittee may require the industrial facility to conduct self-monitoring to satisfy this requirement.

3. Alternative Certification: In lieu of monitoring, the permittee may accept a certification from a facility stating that raw and waste materials, final and intermediate products, by-products, material handling equipment or activities, and/or loading/unloading operations are not expected to be exposed to storm water for the certification period. The permittee shall still reserve the right to conduct and shall consider conducting site inspections for these facilities during the life of this permit.

k. Construction Site Runoff: The permittee shall implement a program to reduce the discharge of pollutants from construction sites into the MS4, including:

1. requirements for the use and maintenance of appropriate structural and non-structural best management practices to reduce pollutants discharged to the MS4 during the time construction is underway;

2. procedures for site planning which incorporate considerations for potential short term and long term water quality impacts to the MS4 and minimizes these impacts;

3. prioritized inspections of construction sites and enforcement of control measures;

4. appropriate education and training measures for construction site operators;

5. notification to appropriate building permit applicants of their potential responsibilities under the NPDES permitting program for construction site runoff.

l. Public Education: The permittee shall implement a public education program including, but not limited to the following items. Cooperation should be sought with city and state agencies where necessary. This program shall also include material for non-English speaking residents.

1. A program to promote, publicize, and facilitate public reporting of the presence of illicit discharges or improper disposal of materials (e.g. floatables, industrial and commercial wastes, trash, used motor vehicle fluids, leaf litter, grass clippings, animal wastes, etc.) into the MS4 (e.g. curb inlet stenciling, citizen "streamwatch" groups, "hotlines" for reporting dumping, outreach materials included in billings, public access/government cable channels, etc.);

2. a program to promote, publicize, and facilitate the proper management and disposal of used oil and household hazardous wastes;

3. a program to promote, publicize, and facilitate the proper use, application, and disposal of

pesticides, herbicides, and fertilizers by the public and commercial and private applicators and distributors;

4. where applicable and feasible, the permittee should publicize those best management practices (including but not limited to the use of reformulated or redesigned products, substitution of less toxic materials, and improvements in housekeeping) used by the permittee that facilitate better use, application, and/or disposal of materials identified in 1.1 and 1.2 above.

2. Deadlines for Program Compliance. Except as provided in PART II, and Part I.B.7. compliance with the storm water management program shall be required within **180** days from the effective date of the permit.

3. Roles and Responsibilities of Permittee: The Storm Water Management Program shall clearly identify the roles and responsibilities of the permittee and any party impacting its efforts to comply with this permit.

4. Legal Authority: The permittee and/or cooperating agencies shall ensure that they have and maintain legal authority to control discharges to and from those portions of the MS4 which it owns or operates. This legal authority may be a combination of statute, ordinance, permit, contract, or an order to:

a. Control the contribution of pollutants to the MS4 by storm water discharges associated with industrial activity and the quality of storm water discharged from sites of industrial activity;

b. Prohibit illicit discharges to the MS4;

c. Control the discharge of spills and the dumping or disposal of materials other than storm water (e.g. industrial and commercial wastes, trash, used motor vehicle fluids, leaf litter, grass clippings, animal wastes, etc.) into the MS4;

d. Control through interagency or inter-jurisdictional agreements the contribution of pollutants from one portion of the MS4 to another;

e. Require compliance with conditions in ordinances, permits, contracts or orders; and

f. Carry out all inspection, surveillance and monitoring procedures necessary to determine compliance with permit conditions.

5. Storm Water Management Program Resources The permittee shall provide adequate finances, staff, equipment, and support capabilities to implement its SWMP.

6. Storm Water Management Program Review and Modification

a. Program Review: The permittee shall participate in an annual review of its current or modified SWMP in conjunction with preparation of the annual report required under Part I.E. This annual review shall include:

1. A review of the status of program implementation and compliance with program elements and other permit conditions as necessary;

2. An assessment of the effectiveness of controls established by the SWMP;

3. A review of monitoring data and any trends in estimated cumulative annual pollutant loadings;

4. An assessment of any SWMP modifications needed to comply with the CWA §402(p)(3)(B)(iii) requirement to reduce the discharge of pollutants to the maximum extent practicable (MEP).

5. An annual public informational meeting held within two months of submittal of the Annual report.

b. Program Modification: The permittee may modify the SWMP in accordance with the following procedures:

1. The approved SWMP shall not be modified by the permittee(s) without the prior approval of the Director, unless in accordance with items 2. or 3. below.

2. Modifications adding (but not subtracting or replacing) components, controls, or requirements to the approved SWMP may be made by the permittee at any time upon written notification to the Director.

3. Modifications replacing an ineffective or unfeasible BMP specifically identified in the SWMP with an alternative BMP may be requested at any time. Unless denied by the Director, the modification shall be deemed approved and shall be implemented by the permittee 60 days from submittal of the request. Such requests must include the following:

(a) an analysis of why the BMP is ineffective or infeasible (including cost prohibitive),

(b) expectations on the effectiveness of the replacement BMP, and

(c) an analysis of why the replacement BMP is expected to achieve the goals of the BMP to be replaced.

4. Modification requests and/or notifications must be made in writing and signed in accordance with Part I.F.

c. Modifications required by the Permitting Authority: The permitting authority may require the permittee to modify the SWMP as needed to:

1. Address impacts on receiving water quality caused or contributed to by discharges from the MS4;

2. Include more stringent requirements necessary to comply with new State or Federal statutory or regulatory requirements; or

3. Include such other conditions deemed necessary by the Director to comply with the goals and requirements of the Clean Water Act.

Modifications requested by the Director shall be made in writing and set forth a time schedule for the permittee to develop the modification(s).

C. WET WEATHER MONITORING AND REPORTING REQUIREMENTS

1. Storm Event Discharges. The permittee shall implement a wet weather monitoring program for the MS4 to provide data necessary to assess the effectiveness and adequacy of control measures implemented under the SWMP; estimate annual cumulative pollutant loadings from the MS4; estimate event mean concentrations and seasonal pollutants in discharges from all major outfalls; identify and prioritize portions of the MS4 requiring additional controls, and identify water quality improvements or degradation.

The permittee is responsible for conducting any additional monitoring necessary to accurately characterize the quality and quantity of pollutants discharged from the MS4. Improvement in the quality of discharges from the MS4 will be assessed based on the

necessary monitoring information required by this section, along with any additional monitoring which is made available. There have been no effluent limits established for this draft permit. Numeric effluent limits may be established in the next permit to control impacts on water quality, to improve aesthetics, or for other reasons as necessary.

a. Representative Monitoring: The permittee shall monitor representative outfalls, internal sampling stations, and/or instream monitoring locations to characterize the quality of storm water discharges from the MS4. Within **90** days after the effective date of this permit, the permittee will submit its proposed sampling plan to the EPA and MA DEP for review. The permittee shall choose locations representing different land uses, with a focus on what it considers priority areas, such as an outfall in the vicinity of a public beach. The plan shall outline the parameters to be sampled, the frequency of sampling and reporting of results. This submittal shall also include any related monitoring which the permittee has done since its MS4 permit application was originally submitted. Unless disapproved by the EPA or MA DEP within **30** days after its submittal, the proposed sampling plan shall be deemed approved.

The sampling locations which the permittee submitted in its letter of March 25, 1998 to EPA appear to be adequate. These locations shall be monitored at least three times per year (spring, summer and fall) for all the parameters suggested, including cadmium and replacing oil & grease with Total Petroleum Hydrocarbons (TPH). The summer sampling event shall consist of composite samples, which shall be composed of, at a minimum, samples taken at hours 0 (pre-runoff), 4, 8, 12, 16 and 20. These samples shall be flow composited.

Instream sampling: This sampling is required as a supplement to the outfall monitoring as follows:

1) The mouth of the Mill Brook Conduit shall be grab sampled for fecal coliform during the spring and summer sampling seasons;

2) the high zinc load that was found during the Blackstone River Initiative (BRI) sampling from the Mill Brook conduit shall be investigated. Findings shall be reported in the annual report;

3) the two instream locations to be sampled are:

   a. Sampling station 00 from the BRI study; and

   b. A station downstream of where Beaver Brook and Tatnuck Brook completely mix, but above the Kettle Brook confluence

These two stations will be monitored during the spring and summer sampling events. The sampling parameters will be identical to those of the outfall sampling, with the addition of flow at station 00. Similar to the outfall monitoring, the summer sampling event shall

be conducted with composite samples. At station 00, flow can be determined from measuring the distance from a fixed point on the bridge to the water surface. The EPA will provide information on the relationship between this stage measurement and stream flows. The second sampling station can be flow composited using flow data derived from Station 00. For all instream sampling events, sampling shall be conducted during wet weather.

b. Alternate representative monitoring locations may be substituted for just cause during the term of the permit. Requests for approval of alternate monitoring locations shall be made to the Director in writing and include the rationale for the requested monitoring station relocation. Unless disapproved by the Director, use of an alternate monitoring location may commence thirty (30) days from the date of the request.

2. Storm Event Data: For Part I.C.1.a - Representative Monitoring only - quantitative data shall be collected to estimate pollutant loadings and event mean concentrations for each parameter sampled. In addition to the parameters which are to be sampled for in the sampling plan to be submitted, the permittee shall maintain records of the date and duration (in hours) of the storm event(s) sampled; rainfall measurements or estimates (in inches) of the storm event which generated the sampled runoff; the duration (in hours) between the storm event sampled and the end of the previous measurable (greater than 0.1 inch rainfall) storm event; an estimate of the total volume (in gallons) of the discharge sampled and a description of the presence and extent of floatable debris, oils, scum, foam, solids or grease in any storm water discharges or in the receiving waters.

3. Sample Type, Collection, and Analysis: The following requirements apply only to samples collected for Part C.1.a - Representative Monitoring.

a. For discharges from holding ponds or other impoundments with a retention period greater than 24 hours, (estimated by dividing the volume of the detention pond by the estimated volume of water

discharged during the 24 hours previous to the time that the sample is collected) a minimum of one grab sample may be taken.

b. Grab samples taken during the first two hours of discharge shall be used for the analysis of pH, temperature, Total Petroleum Hydrocarbons (TPH), fecal coliform and residual chlorine. For all other parameters, data shall be reported for flow weighted composite samples as described on Page 15.

c. All such samples shall be collected from the discharge resulting from a storm event that is greater than 0.25 inches in magnitude and that occurs at least 72 hours from the previously measurable (greater than 0.1 inch rainfall) storm event. Composite samples may be taken with a continuous sampler or as a combination of a minimum of three sample aliquots taken in each hour of discharge for the entire discharge or for the first three hours of the discharge, with each aliquot being separated by a minimum period of fifteen minutes.

d. Analysis and collection of samples shall be conducted in accordance with the methods specified at 40 CFR Part 136. Where an approved Part 136 method does not exist, any available method may be used.

4. Sampling Waiver. When a discharger is unable to collect samples required by Part I.C.1.a (Representative Monitoring) due to adverse climatic conditions, the discharger must submit in lieu of sampling data a description of why samples could not be collected, including available documentation of the event. Adverse climatic conditions which may prohibit the collection of samples include weather conditions that create dangerous conditions for personnel (such as local flooding, high winds, hurricane, tornadoes, electrical storms,etc.) or otherwise make the collection of a sample impracticable (drought, extended frozen conditions, etc.).

5. Wet Weather Screening Program: The permittee shall implement a program to identify, investigate, and address areas within their jurisdiction that may be contributing excessive levels of pollutants to the MS4. The wet weather screening program:

   a. Shall screen the MS4, in accordance with the procedures specified in the SWMP, at least once during the permit term.

   b. Shall specify the sampling and non-sampling techniques (such as observations or quantitative methods), to be used for initial screening and follow-up purposes. For samples collected for screening purposes only, sample collection and analysis need not conform to the requirements of 40 CFR Part 136 and are not subject to the requirements of Paragraphs 1, 2, and 3 above.

D. DRY WEATHER DISCHARGES

1. Dry Weather Screening Program: The permittee shall continue ongoing efforts to detect the presence of illicit connections and improper discharges to the MS4. All major outfalls identified in the Part I application and all other areas (but not necessarily all outfalls) of the MS4 must be screened at least once during the permit term. A schedule of inspections shall be identified to support activities undertaken in accordance with Part I.B.2.g. and may be in conjunction with any activities undertaken in accordance with Part I.C.. The schedule of inspections shall be included in the annual report Part I.E.

2. Screening Procedures: Screening methodology may be developed and/or modified based on experience gained during actual field screening activities and need not conform to the protocol at 40 CFR §122.26(d)(1)(iv)(D).

3. Follow-up on Dry Weather Screening Results: The permittee shall implement a program to locate and eliminate suspected sources of illicit connections and improper disposal identified during dry weather screening activities. Follow-up activities shall be prioritized on the basis of:

   a. magnitude and nature of the suspected discharge;

   b. sensitivity of the receiving water; and

   c. other relevant factors.

E. ANNUAL REPORT:

The permittee shall prepare an annual system-wide report to be submitted no later than April 1, 2000 and annually thereafter. The report shall include the following separate sections, with an overview for the entire MS4:

1. The status of implementing the storm water management program(s) (status of compliance with any schedules established under this permit shall be included in this section);

2. Proposed changes to the storm water management program(s);

3. Revisions, if necessary, to the assessments of controls and the fiscal analysis reported in the permit application under 40 CFR 122.26(d)(2)(iv) and (d)(2)(v);

4. An evaluation of all the authorized non-storm water discharges at Part I.B.2.g. and whether it was determined that any controls or restrictions are necessary for any of these and descriptions of such;

5. A summary of the data, including monitoring data, that is accumulated throughout the reporting year; a portion of this data shall be compared to National Urban Runoff Program (NURP) values, as was done in the Part II application and to ambient water quality criteria.

6. A revised list of all current separate storm sewer outfalls and their locations, reflecting changes of the previous year and justification for any new outfalls.

7. Annual expenditures for the reporting period, with a breakdown of the major elements of the storm water management program, and the budget for the year following each annual report;

8. A summary describing the number and nature of enforcement actions, inspections, and public education programs;

9. Identification of water quality improvements or degradation; and,

10. Update on the illicit connection program to include the total number of identified connections with an estimate of flow for each, total number of connections found in the reporting period to include how they were found (i.e. citizen complaint, routine inspection), number of connections corrected in the reporting period to include total estimated flow, and the financing required for such to include how the repairs were financed (i.e. by the permittee, costs provided to the permittee by the responsible party, repairs effected and financed by the responsible party). As an attachment to the report, the permittee should submit any existing tracking system information. Also include updates to schedules and a summary of activities conducted under Parts I.C. and I.D.

F. CERTIFICATION AND SIGNATURE OF REPORTS

All reports required by the permit and other information requested by the Director shall be signed and certified in accordance with the General Conditions - Part II of this permit.

G. REPORT SUBMISSION

1. All original, signed notifications and reports required herein, shall be submitted to the Director at the following address:

U.S. Environmental Protection Agency
Water Technical Unit (SEW)
P.O. Box 8127
Boston, MA 02114
Attn: George Papadopoulos, Permit Writer

2. Signed copies of all other notifications and reports shall be submitted to the State at:

Massachusetts Department of Environmental Protection
Division of Watershed Management
Watershed Planning and Permitting Section
627 Main Street
Worcester, Massachusetts 01608

H. RETENTION OF RECORDS

The permittee shall retain all records of all monitoring information, copies of all reports required by this permit and records of all other data required by or used to demonstrate compliance with this permit, until at least three years after coverage under this permit terminates. This period may be modified by alternative provisions of this permit or extended by request of the Director at any time. The permittee shall retain the latest approved version of the SWMP developed in accordance with Part I of this permit until at least three years after coverage under this permit terminates.

I. STATE PERMIT CONDITIONS

1. This Discharge Permit is issued jointly by the U. S. Environmental Protection Agency (EPA) and the Massachusetts Department of Environmental Protection under Federal and State law, respectively. As such, all the terms and conditions of this permit are hereby incorporated into and constitute a discharge permit issued by the Commissioner of the Massachusetts DEP pursuant to M.G.L. Chap. 21, §43.

2. Each Agency shall have the independent right to enforce the terms and conditions of this Permit. Any modification, suspension or revocation of this Permit shall be effective only with respect to the Agency taking such action, and shall not affect the validity or status of this Permit as issued by the other Agency, unless and until each Agency has concurred in writing with such modification, suspension or revocation. In the event any portion of this Permit is declared, invalid, illegal or otherwise issued in violation of State law such permit shall remain in full force and effect under Federal law as an NPDES Permit issued by the U.S. Environmental Protection Agency. In the event this Permit is declared invalid, illegal or otherwise issued in violation of Federal law, this Permit shall remain in full force and effect under State law as a Permit issued by the Commonwealth of Massachusetts.

Case Summary

Overview

HOLDINGS: [1]-In a case in which plaintiffs challenged a city's imposition of a 1 percent surcharge on an electric utility's gross receipts from the sale of electricity within the city, the Supreme Court held that to constitute a valid franchise fee under Proposition 218, the amount of the franchise fee must bear a reasonable relationship to the value of the property interests transferred; [2]-Liberally construed, the first amended complaint and the stipulated facts adequately alleged the basis for a claim that the surcharge bore no reasonable relationship to the value of the franchise, and was therefore a tax requiring voter approval under Proposition 218; accordingly, the trial court erred in granting judgment on the pleadings to the city; [3]-However, the facts on which plaintiffs relied in seeking summary adjudication did not establish their claim that the surcharge was a tax.

Outcome

Judgment of court of appeal affirmed in part and reversed in part; case remanded with directions.

LexisNexis® Headnotes

Governments > Local Governments > Finance

HN1[] **Local Governments, Finance**

A charge imposed in exchange for franchise rights is a valid fee rather than a tax only if the amount of the charge is reasonably related to the value of the franchise.

Governments > Local Governments > Finance

Tax Law > State & Local Taxes > Real Property Taxes > Assessment & Valuation

Governments > State & Territorial Governments > Finance

Governments > State & Territorial Governments > Legislatures

HN2[] Local Governments, Finance

State voters have imposed various limitations upon the authority of state and local governments to impose taxes and fees. Proposition 13, which was adopted in 1978, set the assessed value of real property as the full cash value on the owner's 1975-1976 tax bill, limited increases in the assessed value to 2 percent per year unless there was a change in ownership, and limited the rate of taxation on real property to 1 percent of its assessed value. Cal. Const., art. XIII A, §§ 1, 2. In addition, to prevent tax savings related to real property from being offset by increases in state and local taxes, Proposition 13 required approval by two-thirds of the members of the legislature in order to increase state taxes, and required approval by two-thirds of the local electors of a city, county, or special district in order for such a local entity to impose special taxes. Cal. Const., art. XIII A, §§ 3, 4.

Governments > Local Governments > Finance

HN3[] Local Governments, Finance

The term "special taxes" in Cal. Const., art. XIII A, § 4, means taxes which are levied for a specific purpose. In addition, a "special tax" does not include any fee which does not exceed the reasonable cost of providing the service or regulatory activity for which the fee is charged and which is not levied for general revenue purposes. Gov. Code, § 50076.

Governments > Local Governments > Finance

HN4[] Local Governments, Finance

Proposition 62, which added a new article to the California Government Code, Gov. Code, §§ 53720-53730, requires that all new local taxes be approved by a vote of the local electorate.

Governments > Local Governments > Charters

Governments > Local Governments > Finance

HN5[] Local Governments, Charters

Proposition 218 amended the California Constitution to add voter approval requirements for general and special taxes, thereby binding charter jurisdictions. Cal. Const., art. XIII C, §§ 1, 2.

Evidence > Burdens of Proof > Allocation

Governments > Local Governments > Finance

Tax Law > State & Local Taxes > Real Property Taxes > Assessment & Valuation

HN6[] Burdens of Proof, Allocation

Proposition 13 was not intended to limit traditional benefit assessments. It requires an agency proposing an assessment on property to determine the proportionate special benefit to be derived by each parcel subject to the assessment; to support the assessment with an engineer's report; to give written notice to each parcel owner of the amount of the proposed assessment and the basis of the calculation; and to provide each owner with a ballot to vote in favor of or against the proposed assessment. It also requires the agency to hold a public hearing, and bars imposition of the assessment if a majority of parcel owners within the assessment area submit ballots in opposition to the assessment, with each ballot weighted based on the proposed financial obligation of the affected parcel.

In the event legal action is brought contesting an assessment, the agency has the burden to establish that the burdened properties receive a special benefit and the assessment is proportional to the benefits conferred. Cal. Const., art. XIII D, §§ 2, subd. (b).

Constitutional Law > State Constitutional Operation

Evidence > Burdens of Proof > Allocation

Governments > Local Governments > Finance

Tax Law > State & Local Taxes > Real Property Taxes > Assessment & Valuation

HN7[] Constitutional Law, State Constitutional Operation

Proposition 26 amended the California Constitution to provide that for purposes of article XIII C, which addresses voter approval of local taxes, "tax" means any levy, charge, or exaction of any kind imposed by a local government, Cal. Const., art. XIII C, § 1, subd. (e), except (1) a charge imposed for a specific benefit or privilege received only by those charged, which does not exceed its reasonable cost, (2) a charge for a specific government service or product provided directly to the payor and not provided to those not charged, which does not exceed its reasonable cost, (3) charges for reasonable regulatory costs related to the issuance of licenses, permits, investigations, inspections, and audits, and the enforcement of agricultural marketing orders, (4) charges for access to or use, purchase, rental, or lease of local government property, (5) fines for violations of law, (6) charges imposed as a condition of developing property, and (7) property-related assessments and fees as allowed under article XIII D. The local government bears the burden of establishing the exceptions. Cal. Const., art. XIII C, § 1, subd. (e).

Governments > Local Governments > Finance

Tax Law > State & Local Taxes > Real Property Taxes > Assessment & Valuation

HN8[] Local Governments, Finance

If an assessment for improvements provides a special benefit to the assessed properties, then the assessed property owners should pay for the benefit they receive. But if the assessment exceeds the actual cost of the improvement, the exaction is a tax and not an assessment. With respect to costs, Proposition 13's goal of providing effective property tax relief is promoted rather than subverted by shifting costs to those who generate the costs. However, if the charges exceed the reasonable cost of the activity on which they are based, the charges are levied for unrelated revenue purposes, and are therefore taxes.

Governments > Local Governments > Finance

HN9[] Local Governments, Finance

Restricting allowable fees to the reasonable cost or value of the activity with which the charges are associated serves Proposition 13's purpose of limiting taxes. If a state or local governmental agency were allowed to impose charges in excess of the special benefit received by the payor or the cost associated with the payor's activities, the imposition of fees would become a vehicle for generating revenue independent of the purpose of the fees. Therefore, to the extent charges exceed the rationale underlying the charges, they are taxes.

Governments > Public Improvements > Bridges & Roads

Governments > Local Governments > Finance

HN10[] Public Improvements, Bridges & Roads

A franchise to use public streets or rights-of-way is a form of property, and a franchise fee is the purchase price of the franchise. Historically, franchise fees have not been considered taxes. Nothing in Proposition 218 reflects an intent to change the historical characterization of franchise fees, or to limit the authority of government to sell or lease its property and spend the compensation received for whatever purposes it chooses. Cal. Const., arts. XIII A, § 3, subd. (b)(4), XIII C. This understanding that restrictions on taxation do not encompass amounts paid in exchange for property interests is confirmed by Proposition 26, the purpose of which was to reinforce the voter approval requirements set forth in Propositions 13 and 218. Although Proposition 26 strengthened restrictions on taxation by expansively defining "tax" as any levy, charge, or exaction of any kind imposed by a local government, Cal. Const., art. XIII C, § 1, subd. (e), it provided an exception for a charge imposed for entrance to or use of local government property, or the purchase, rental, or lease of local government property. Art. XIII C, § 1, subd. (e)(4).

Governments > Public Improvements > Bridges & Roads

Governments > Local Governments > Finance

HN11[] **Public Improvements, Bridges & Roads**

The Broughton Act's provision that a franchise fee be based on the receipts from the use, operation, or possession of the franchise results in a complicated calculation of franchise fees. Usually, some portion of a utility's rights-of-way are on private property or property outside the jurisdiction of the city or county granting the franchise, and the utility's gross receipts attributable to a particular franchise must be reduced in proportion to the utility's rights-of-way that are not within the franchise agreement. In addition, because gross receipts arise from all of a utility's operative property, such as equipment and warehouses, the portion of gross receipts attributable to property other than the franchise must be excluded from the calculation of the franchise fee. Finally, if a utility also provides service under a constitutional franchise - for example, where it provides artificial light under a constitutional franchise in the same area in which it provides electricity under a franchise agreement entered pursuant to the Broughton Act - the franchise fee applies only to the gross receipts from the provision of services under the nonconstitutional franchise.

Energy & Utilities Law > Regulators > Public Utility Commissions > Authorities & Powers

Energy & Utilities Law > Utility Companies > Rates

HN12[] **Public Utility Commissions, Authorities & Powers**

The California Public Utilities Commission sets the rates of a publicly regulated utility to permit the utility to recover its costs and expenses in providing its service, and to receive a fair return on the value of the property it uses in providing its service. Among a utility's costs and expenses are government fees and taxes.

Energy & Utilities Law > Regulators > Public Utility Commissions > Authorities & Powers

Energy & Utilities Law > Utility Companies > Rates

HN13[] **Public Utility Commissions, Authorities & Powers**

The California Public Utilities Commission has established a procedure by which utilities may obtain approval to impose disproportionate charges on ratepayers within the jurisdiction that imposed the charges. When a local government imposes

taxes or fees which in the aggregate significantly exceed the average aggregate of taxes or fees imposed by the other local governmental entities within the public utility's service territory, a utility may file an advice letter seeking approval to charge local government fee surcharges. Such surcharges shall be included as a separate item or items to bills rendered to applicable customers. Each surcharge shall be identified as being derived from the local governmental entity responsible for it.

HN15[] **Local Governments, Finance**

The provisions of Proposition 218 shall be liberally construed to effectuate its purposes of limiting local government revenue and enhancing taxpayer consent.

Governments > Public Improvements > Bridges & Roads

Governments > Local Governments > Finance

HN16[] **Public Improvements, Bridges & Roads**

Sums paid for the right to use a jurisdiction's rights-of-way are fees rather than taxes. But to constitute compensation for the value received, the fees must reflect a reasonable estimate of the value of the franchise.

Governments > Local Governments > Finance

HN17[] **Local Governments, Finance**

In general, taxes are imposed for revenue purposes, rather than in return for a specific benefit conferred or privilege granted. In determining whether a charge is a tax or a fee, a court looks to whether the primary purpose of a charge was to generate revenue. In contrast, a fee paid for an interest in government property is compensation for the use or purchase of a government asset rather than compensation for a cost. Consequently, the revenue generated by the fee is available for whatever purposes the government chooses rather than tied to a public cost. The aspect of the transaction that distinguishes the charge from a tax is the receipt of value in exchange for the payment.

Governments > Local Governments > Finance

HN18[] **Local Governments, Finance**

A franchise fee must be based on the value of the franchise conveyed in order to come within the rationale for its imposition without approval of the voters. Its value may be based on bona fide negotiations concerning the property's value, as well as other indicia of worth. Consistent with the principles that govern other fees, to constitute a valid franchise fee under Proposition 218, the amount of the franchise fee must bear a reasonable relationship to the value of the property interests transferred.

Civil Procedure > Appeals > Standards of Review > De Novo Review

Civil Procedure > ... > Pleadings > Complaints > Requirements for Complaint

Civil Procedure > Judgments > Pretrial Judgments > Judgment on Pleadings

HN19[↓] **Standards of Review, De Novo Review**

A motion for judgment on the pleadings presents the question of whether the plaintiff's complaint states facts sufficient to constitute a cause of action against the defendant. The trial court generally considers only the allegations of the complaint, but may also consider matters that are subject to judicial notice. Moreover, the allegations must be liberally construed with a view to attaining substantial justice among the parties. The court's primary task is to determine whether the facts alleged provide the basis for a cause of action against defendants under any theory. An appellate court independently reviews a trial court's order on such a motion.

Headnotes/Syllabus

Summary

[*248] CALIFORNIA OFFICIAL REPORTS SUMMARY

Plaintiffs filed a class action complaint challenging a city's imposition of a 1 percent surcharge on an electric utility's gross receipts from the sale of electricity within the city. The utility transferred the revenues from the surcharge to the city. The city contended this separate charge was the fee paid by the utility for the privilege of using city property in connection with the delivery of electricity. The superior court granted the city's motion for judgment on the pleadings, concluding that the surcharge was not a tax and therefore was not subject to the voter approval requirements of Prop. 218. (Superior Court of Santa Barbara County, No. 1383959, Thomas Pearce Anderle, Judge.) The Court of Appeal, Second Dist., Div. Six, No. B253474, reversed the trial court's judgment, holding that the surcharge was a tax, and therefore required approval under Prop. 218.

The Supreme Court affirmed the judgment of the Court of Appeal to the extent it reversed the trial court's grant of the city's motion for judgment on the pleadings, reversed the judgment to the extent the Court of Appeal directed the trial court to grant plaintiffs' motion for summary adjudication, and remanded the case with directions. The court held that to constitute a valid franchise fee under Prop. 218, the amount of the franchise fee must bear a reasonable relationship to the value of the property interests transferred. Liberally construed, the first amended complaint and the stipulated facts adequately alleged the basis for a claim that the surcharge bore no reasonable relationship to the value of the franchise, and was therefore a tax requiring voter approval under Prop. 218. Accordingly, the trial court erred in granting judgment on the pleadings to the city. However, the facts on which plaintiffs relied in seeking summary adjudication did not establish their claim that the surcharge was a tax. (Opinion by Cantil-Sakauye, C. J., with Werdegar, Corrigan, Liu, Cuéllar, and Krueger, JJ., concurring. Dissenting opinion by Chin, J. (see p. 274).)

Headnotes

CALIFORNIA OFFICIAL REPORTS HEADNOTES

CA(1)[↓] **(1)**

Municipalities § 96—Franchise Fee—Tax—Reasonable Relationship—Value of Franchise.

A charge imposed in exchange for franchise rights is a valid fee rather than a tax only if the amount of the charge is reasonably related to the value of the franchise.

CA(2)[↓] **(2)**

Taxation § 1—Constitutional Limitations—Voter Approval—Special Taxes.

State voters have imposed various limitations upon the authority of state and local governments to impose taxes and fees. Prop. 13, which was adopted in 1978, set the assessed value of real property as the full cash value on the owner's 1975–1976 tax bill, limited increases in the assessed value to 2 percent per year unless there was a change in ownership, and limited the rate of taxation on real property to 1 percent of its assessed value (Cal. Const., art. XIII A, §§ 1, 2). In addition, to prevent tax savings related to real property from being offset by increases in state and local taxes, Prop. 13 required approval by two-thirds of the members of the Legislature in order to increase state taxes, and required approval by two-thirds of the local electors of a city, county, or special district in order for such a local entity to impose special taxes (Cal. Const., art. XIII A, §§ 3, 4).

CA(3)[] **(3)**

Municipalities § 34—Fiscal Affairs—Special Taxes—Reasonable Cost.

The term "special taxes" in Cal. Const., art. XIII A, § 4, means taxes which are levied for a specific purpose. In addition, a "special tax" does not include any fee which does not exceed the reasonable cost of providing the service or regulatory activity for which the fee is charged and which is not levied for general revenue purposes (Gov. Code, § 50076).

CA(4)[] **(4)**

Municipalities § 34—Fiscal Affairs—New Taxes—Voter Approval.

Prop. 62 requires that all new local taxes be approved by a vote of the local electorate.

CA(5)[] **(5)**

Municipalities § 34—Fiscal Affairs—General and Special Taxes—Voter Approval—Charter Jurisdictions.

Prop. 218 amended the California Constitution to add voter approval requirements for general and special taxes, thereby binding charter jurisdictions (Cal. Const., art. XIII C, §§ 1, 2).

CA(6)[] **(6)**

Taxation § 1—Assessment on Property—Special Benefit.

Prop. 13 was not intended to limit traditional benefit assessments. It requires an agency proposing an assessment on property to determine the proportionate special benefit to be derived by each parcel subject to the **[*250]** assessment; to support the assessment with an engineer's report; to give written notice to each parcel owner of the amount of the proposed assessment and the basis of the calculation; and to provide each owner with a ballot to vote in favor of or against the proposed assessment. It also requires the agency to hold a public hearing, and bars imposition of the assessment if a majority of parcel owners within the assessment area submit ballots in opposition to the assessment, with each ballot weighted based on the proposed financial obligation of the affected parcel. In the event legal action is brought contesting an assessment, the agency has the burden to establish that the burdened properties receive a special benefit and the assessment is proportional to the benefits conferred (Cal. Const., art. XIII D, §§ 2, subd. (b), 4).

CA(7)[] **(7)**

Municipalities § 34—Fiscal Affairs—Local Taxes—Voter Approval—Specific Benefit—Reasonable Cost.

Prop. 26 amended the California Constitution to

provide that for purposes of article XIII C, which addresses voter approval of local taxes, "tax" means any levy, charge, or exaction of any kind imposed by a local government (Cal. Const., art. XIII C, § 1, subd. (e)), except (1) a charge imposed for a specific benefit or privilege received only by those charged, which does not exceed its reasonable cost, (2) a charge for a specific government service or product provided directly to the payor and not provided to those not charged, which does not exceed its reasonable cost, (3) charges for reasonable regulatory costs related to the issuance of licenses, permits, investigations, inspections, and audits, and the enforcement of agricultural marketing orders, (4) charges for access to or use, purchase, rental, or lease of local government property, (5) fines for violations of law, (6) charges imposed as a condition of developing property, and (7) property-related assessments and fees as allowed under article XIII D. The local government bears the burden of establishing the exceptions (Cal. Const., art. XIII C, § 1, subd. (e)).

CA(8)[] **(8)**

Taxation § 1—Assessment on Property—Special Benefit—Reasonable Cost.

If an assessment for improvements provides a special benefit to the assessed properties, then the assessed property owners should pay for the benefit they receive. But if the assessment exceeds the actual cost of the improvement, the exaction is a tax and not an assessment. With respect to costs, Prop. 13's goal of providing effective property tax relief is promoted rather than subverted by shifting costs to those who generate the costs. However, if the charges exceed the reasonable cost of the activity on which they are based, the charges are levied for unrelated revenue purposes, and are therefore taxes.

CA(9)[] **(9)**

Taxation § 1—Special Benefit—Reasonable Cost—Payor's Activities.

Restricting allowable fees to the reasonable cost or value of the activity **[*251]** with which the charges are associated serves Prop. 13's purpose of limiting taxes. If a state or local governmental agency were allowed to impose charges in excess of the special benefit received by the payor or the cost associated with the payor's activities, the imposition of fees would become a vehicle for generating revenue independent of the purpose of the fees. Therefore, to the extent charges exceed the rationale underlying the charges, they are taxes.

CA(10)[] **(10)**

Municipalities § 96—Franchise Fee—Use of Rights-of-way.

A franchise to use public streets or rights-of-way is a form of property, and a franchise fee is the purchase price of the franchise. Historically, franchise fees have not been considered taxes. Nothing in Prop. 218 reflects an intent to change the historical characterization of franchise fees, or to limit the authority of government to sell or lease its property and spend the compensation received for whatever purposes it chooses (Cal. Const., arts. XIII A, § 3, subd. (b)(4), XIII C). This understanding that restrictions on taxation do not encompass amounts paid in exchange for property interests is confirmed by Prop. 26, the purpose of which was to reinforce the voter approval requirements set forth in Props. 13 and 218. Although Prop. 26 strengthened restrictions on taxation by expansively defining "tax" as any levy, charge, or exaction of any kind imposed by a local government (Cal. Const., art. XIII C, § 1, subd. (e)), it provided an exception for a charge imposed for entrance to or use of local government property, or the purchase, rental, or lease of local government property (Art. XIII C, § 1, subd. (e)(4)).

CA(11)[] **(11)**

Municipalities § 96—Franchise Fee—Calculation—Gross Receipts.

The Broughton Act's (Pub. Util. Code, § 6001 et seq.) provision that a franchise fee be based on the receipts from the use, operation, or possession of the franchise results in a complicated calculation of franchise fees. Usually, some portion of a utility's rights-of-way are on private property or property outside the jurisdiction of the city or county granting the franchise, and the utility's gross receipts attributable to a particular franchise must be reduced in proportion to the utility's rights-of-way that are not within the franchise agreement. In addition, because gross receipts arise from all of a utility's operative property, such as equipment and warehouses, the portion of gross receipts attributable to property other than the franchise must be excluded from the calculation of the franchise fee. Finally, if a utility also provides service under a constitutional franchise—for example, where it provides artificial light under a constitutional franchise in the same area in which it provides electricity under a franchise agreement entered pursuant to the Broughton Act—the franchise fee applies only to the gross receipts from the provision of services under the nonconstitutional franchise.

CA(12)[] **(12)**

Public Utilities § 9—Public Utilities Commission—Rates—Costs and Expenses.

The Public Utilities Commission sets the rates of a publicly regulated utility to permit the utility to recover its costs and expenses in providing its service, and to receive a fair return on the value of the property it uses in providing its service. Among a utility's costs and expenses are government fees and taxes.

CA(13)[] **(13)**

Public Utilities § 9—Public Utilities Commission—Rates—Surcharge.

The Public Utilities Commission has established a procedure by which utilities may obtain approval to impose disproportionate charges on ratepayers within the jurisdiction that imposed the charges. When a local government imposes taxes or fees which in the aggregate significantly exceed the average aggregate of taxes or fees imposed by the other local governmental entities within the public utility's service territory, a utility may file an advice letter seeking approval to charge local government fee surcharges. Such surcharges must be included as a separate item or items to bills rendered to applicable customers. Each surcharge must be identified as being derived from the local governmental entity responsible for it.

CA(14)[] **(14)**

Municipalities § 34—Fiscal Affairs—Taxes—Proposition 218—Liberal Construction.

The provisions of Prop. 218 must be liberally construed to effectuate its purposes of limiting local government revenue and enhancing taxpayer consent.

CA(15)[] **(15)**

Municipalities § 96—Franchise Fee—Use of Rights-of-way—Value of Franchise.

Sums paid for the right to use a jurisdiction's rights-of-way are fees rather than taxes. But to constitute compensation for the value received, the fees must reflect a reasonable estimate of the value of the franchise.

CA(16)[] **(16)**

Municipalities § 34—Fiscal Affairs—Taxes—Revenue Purposes—Fee.

In general, taxes are imposed for revenue purposes, rather than in return for a specific benefit conferred or privilege granted. In determining whether a charge is a tax or a fee, a court looks to whether the

primary purpose of a charge was to generate revenue. In contrast, a fee paid for an interest in government property is compensation for the use or purchase of a government asset rather than compensation for a cost. Consequently, the revenue generated by the fee is available for whatever purposes the government chooses rather than tied to a public cost. The aspect of the transaction that distinguishes the charge from a tax is the receipt of value in exchange for the payment.

CA(17)[] **(17)**

Municipalities § 96—Franchise Fee—Tax—Voter Approval—Reasonable Relationship—Value of Franchise.

A franchise fee must be based on the value of the franchise conveyed in order to come within the rationale for its imposition without approval of the voters. Its value may be based on bona fide negotiations concerning the property's value, as well as other indicia of worth. Consistent with the principles that govern other fees, to constitute a valid franchise fee under Prop. 218, the amount of the franchise fee must bear a reasonable relationship to the value of the property interests transferred.

CA(18)[] **(18)**

Municipalities § 34—Fiscal Affairs—Tax—Surcharge—Sale of Electricity—Reasonable Relationship—Value of Franchise—Voter Approval.

In a case in which plaintiffs challenged a city's imposition of a 1 percent surcharge on an electric utility's gross receipts from the sale of electricity within the city, the first amended complaint and the stipulated facts adequately alleged the basis for a claim that the surcharge bore no reasonable relationship to the value of the franchise, and was therefore a tax requiring voter approval under Prop. 218. Accordingly, the trial court erred in granting judgment on the pleadings to the city.

Opinion by: Cantil-Sakauye

Opinion

[*254]

[212] [***862] CANTIL-SAKAUYE, C. J.**—Pursuant to an agreement between Southern California Edison (SCE) and defendant City of Santa Barbara (the City), SCE includes on its electricity **[****2]** bills to customers within the City a separate charge equal to 1 percent of SCE's gross receipts from the sale of electricity within the City, and transfers the revenues to the City. The City contends this separate charge, together with

another charge equal to 1 percent of SCE's gross receipts that SCE includes in its electricity rates, is the fee paid by SCE for the privilege of using City property in connection with the delivery of electricity. Plaintiffs Rolland **[**213]** Jacks and Rove Enterprises, Inc., contend the 1 percent charge that is separately stated on electricity bills is not compensation for the privilege of using City property, but is instead a tax imposed without voter approval, in violation of Proposition 218. (Cal. Const., art. XIII C, § 2, added by Prop. 218.)

As we explain below, the right to use public streets or rights-of-way is a property interest, and Proposition 218 does not limit the authority of government to sell or lease its property and spend the compensation it receives for whatever purposes it chooses. Therefore, charges that constitute compensation for the use of government property are not subject to Proposition 218's voter approval requirements. To constitute compensation for a property **[****3]** interest, however, the amount of the charge must bear a reasonable relationship to the value of the property interest; to the extent the charge exceeds any reasonable value of the interest, it is a tax and therefore requires voter approval.

The litigation below did not address whether the charges bear a reasonable relationship to the value of the property interests. Therefore, we affirm the judgment of the Court of Appeal to the extent it reversed the trial court's grant of the City's motion for judgment on the pleadings, but we reverse the Court of Appeal's order that the trial court grant summary adjudication to plaintiffs.

[***863] I. FACTS

The parties stipulated to the following facts in the trial court. Beginning in 1959, the City and SCE entered into a series of franchise agreements granting SCE the privilege to construct and use equipment along, over, and under the City's streets to distribute electricity. [1] At issue in this case is an agreement **[*255]** the City and SCE began negotiating in 1994, when their 1984 agreement was about to expire. The 1984 agreement required SCE to pay to the City a fee equal to 1 percent of the gross annual receipts from SCE's sale of electricity within the City in **[****4]** exchange for the franchise granted by the City. During the course of extended negotiations regarding a new agreement, the City and SCE extended the terms of the 1984 agreement five times, from September 1995 to December 1999.

In the negotiations for a long-term agreement, the City pursued a fee equal to 2 percent of SCE's gross annual receipts from the sale of electricity within the City. At some point in the negotiations, SCE proposed that it would remit to the City as a franchise fee 2 percent of its gross receipts if the Public Utilities Commission (PUC) consented to SCE's inclusion of the additional 1 percent as a surcharge on its bills to customers. Based on SCE's proposal, the City and SCE tentatively agreed to a 30-year agreement that included the provisions for payment of 2 percent of gross receipts. Following notice and a hearing, the City Council of Santa Barbara adopted the agreement as City Ordinance No. 5135 on December 7, 1999, with a term beginning on January 1, 2000 (the 1999 agreement). The ordinance was not submitted to the voters for their approval.

The 1999 agreement divides its 30-year period into two terms. The first two years **[****5]** were the "initial term," during which SCE was required to pay the City an "initial term fee" equal to 1 percent of its gross receipts from the sale of electricity

[1] A franchise is a privilege granted by the government to a particular individual or entity rather than to all as a common right. A utility franchise is a privilege to use public streets or rights-of-way in connection with the utility's provision of services to residents within the governmental entity's jurisdiction. (***Spring Valley W. W. v. Schottler* (1882) 62 Cal. 69, 106–108**; ***Santa Barbara County Taxpayer Assn. v. Board of Supervisors* (1989) 209 Cal.App.3d 940, 949 [257 Cal.Rptr. 615]** (*Santa Barbara County Taxpayer Assn.*); 12 McQuillin, The Law of Municipal Corporations (3d ed. 2017) § 34.2, p. 15.)

within the City. The subsequent 28 years are the "extension term," during which SCE is to pay the additional 1 percent charge on its gross receipts, denominated the "recovery portion," for a total "extension term fee" of 2 percent of SCE's gross receipts from the sale of electricity within the City. At issue in this case is the recovery portion, which we, like the parties, refer to as the surcharge.

[214]** The agreement required SCE to apply to the PUC by April 1, 2001, for approval to include the surcharge on its bills to ratepayers within the City, and to use its best efforts to obtain PUC approval by April 1, 2002. Approval was to be sought in accordance with the PUC's "Re Guidelines for the Equitable Treatment of Revenue-Producing Mechanisms Imposed by Local Government Entities on Public Utilities." (*Investigation on the Commission's Own Motion To Establish Guidelines for the Equitable Treatment of Revenue-producing Mechanisms Imposed by Local Government Entities on Public Utilities* (1989) 32 Cal.P.U.C.2d 60, 63 **[****6]** (*PUC Investigation*).) The agreement further provided that, in **[***864]** the event the PUC did not give its approval by the end of the initial term, either party could terminate the agreement. Thereafter, **[*256]** the City agreed to delay the time within which SCE was required to seek approval from the PUC, but SCE eventually obtained PUC approval, and began billing its customers within the City for the full extension term fee in November 2005.

The agreement provided that half of the revenues generated by the surcharge were to be allocated to the City's general fund and half to a City undergrounding projects fund. In November 2009, however, the City Council decided to reallocate the revenues from the surcharge, directing that all of the funds be placed in the City's general fund without any limitation on the use of these funds.

In 2011, plaintiffs filed a class action complaint challenging the surcharge. In their first amended complaint, they alleged the surcharge was an illegal tax under Proposition 218, which requires voter approval for all local taxes. (Cal. Const., art. XIII C.) Plaintiffs sought refunds of the charges collected, as well as declaratory relief and injunctive relief requiring the City to discontinue collection **[****7]** of the surcharge.

On cross-motions for summary adjudication and the City's motion for summary judgment, the trial court ruled that a franchise fee is not a tax under Proposition 218. Its ruling was based largely on *Santa Barbara County Taxpayer Assn., supra*, 209 Cal.App.3d 940, which held that franchise fees are not "proceeds of taxes" for purposes of calculating limits on state and local appropriations under article XIII B of the California Constitution. Notwithstanding this ruling, the trial court denied the motions, based on its view that Proposition 26, which was approved by the voters in 2010, retroactively altered the definition of a tax under Proposition 218 to encompass franchise fees. Therefore, the court concluded, the City had failed to establish that the surcharge did not violate Proposition 218 during the period *after* Proposition 26 was adopted in 2010.

Thereafter, the City moved for judgment on the pleadings, contending that Proposition 26 does not apply retroactively to the surcharge. The trial court agreed, citing *Brooktrails Township Community Services Dist. v. Board of Supervisors of Mendocino County* (2013) 218 Cal.App.4th 195 [159 Cal. Rptr. 3d 424], which held that Proposition 26 does not apply retroactively. Based on its earlier conclusion that the surcharge, as a franchise fee, was not a tax under Proposition 218 (see *Santa Barbara County Taxpayer Assn., supra*, 209 Cal.App.3d 940), and its additional conclusion that a franchise fee, as negotiated compensation, need **[****8]** not be based on the government's costs, the trial court ruled that the surcharge was not subject to the voter approval requirements of Proposition 218. Therefore, it granted the City's motion for judgment on the pleadings.
[*257]

The Court of Appeal reversed the judgment. It

looked to our opinion in *Sinclair Paint Co. v. State Bd. of Equalization* (1997) 15 Cal.4th 866 [64 Cal. Rptr. 2d 447, 937 P.2d 1350] (*Sinclair Paint*), which considered whether a charge imposed by the state on those engaged in the stream of commerce of lead-containing products was a tax or a fee under Proposition 13, an earlier voter initiative that requires voter approval of various taxes. (Cal. Const., art. XIII A.) Noting that our analysis in *Sinclair Paint* focused on whether the primary **[***865]** purpose of the charge was to raise revenue or to regulate those charged, the Court of Appeal considered whether the primary purpose of the surcharge is to raise revenue or to compensate the City for allowing SCE to use its streets **[**215]** and rights-of-way. Based on its conclusion that the surcharge's "primary purpose is for the City to raise revenue from electricity users for general spending purposes rather than for SCE to obtain the right-of-way to provide electricity," the Court of Appeal held that the surcharge is a tax, and therefore requires voter approval under **[****9]** Proposition 218. (Cal. Const., art. XIII C, § 2, subd. (b).)

We granted review to address whether the surcharge is a tax subject to Proposition 218's voter approval requirement, or a fee that may be imposed by the City without voter consent.

II. DISCUSSION

CA(1)[↑] **(1)** Over the past four decades, California voters have repeatedly expanded voter approval requirements for the imposition of taxes and assessments. These voter initiatives have not, however, required voter approval of certain charges related to a special benefit received by the payor or certain costs associated with an activity of the payor. Whether the surcharge required voter approval hinges on whether it is a valid charge under the principles that exclude certain charges from voter approval requirements. Our evaluation of this issue begins with a review of four voter initiatives that require voter approval of taxes, and the legal principles underlying the exclusion of certain charges from the initiatives' requirements. We then describe the historical characteristics of franchise fees, the Legislature's history of regulating the calculation of franchise fees, and the PUC's requirements concerning the imposition of franchise fees that exceed the average charges imposed by other **[****10]** local governments in the utility's service area. Finally, we analyze whether the surcharge is a valid franchise fee or a tax, and we hold that HN1[↑] a charge imposed in exchange for franchise rights is a valid fee rather than a tax only if the amount of the charge is reasonably related to the value of the franchise. **[*258]**

A. *Restrictions on Taxes and Other Charges*

1. *Voter Initiatives*

CA(2)[↑] **(2)** Beginning in 1978, HN2[↑] state voters have imposed various limitations upon the authority of state and local governments to impose taxes and fees. Proposition 13, which was adopted that year, set the assessed value of real property as the "full cash value" on the owner's 1975–1976 tax bill, limited increases in the assessed value to 2 percent per year unless there was a change in ownership, and limited the rate of taxation on real property to 1 percent of its assessed value. (Cal. Const., art. XIII A, §§ 1, 2.) In addition, to prevent tax savings related to real property from being offset by increases in state and local taxes, Proposition 13 required approval by two-thirds of the members of the Legislature in order to increase state taxes, and required approval by two-thirds of the local electors of a city, county, or special district in order for such **[****11]** a local entity to impose special taxes. (Cal. Const., art. XIII A, §§ 3, 4; *Sinclair Paint, supra*, 15 Cal.4th at p. 872; *Amador Valley Joint Union High Sch. Dist. v. State Bd. of Equalization* (1978) 22 Cal.3d 208, 231 [149 Cal. Rptr. 239, 583 P.2d 1281] (*Amador Valley*).)

CA(3)[↑] **(3)** Proposition 13 did not define "special taxes," but this court addressed the initiative's **[***866]** restrictions on such taxes in

two early cases. In *Los Angeles County Transportation Com. v. Richmond* (1982) 31 Cal.3d 197 [182 Cal. Rptr. 324, 643 P.2d 941], we held that the requirement that "special districts" obtain two-thirds voter approval for special taxes applied only to those special districts empowered to levy property taxes. (*Id.* at p. 207.) In *City and County of San Francisco v. Farrell* (1982) 32 Cal.3d 47 [184 Cal. Rptr. 713, 648 P.2d 935] (*Farrell*), "we construe[d] HN3[↑] the term 'special taxes' in section 4 [of article XIII A] to mean taxes which are levied for a specific purpose." (*Id.* at p. 57.) In addition, the Legislature provided that "'special tax' shall not include any fee which does not exceed the reasonable cost of providing the service or regulatory activity for which the fee is charged and which is not levied for general revenue purposes." (Gov. Code, § 50076.)

CA(4)[↑] **(4)** Thereafter, in 1986, the voters approved HN4[↑] Proposition 62, which "added a new article to the Government Code (§§ 53720–53730) requiring **[**216]** that all new local taxes be approved by a vote of the local electorate." (*Santa Clara County Local Transportation Authority v. Guardino* (1995) 11 Cal.4th 220, 231 [45 Cal. Rptr. 2d 207, 902 P.2d 225], fn. omitted.) The initiative embraced the definition of special taxes set forth in *Farrell*, *supra*, 32 Cal.3d 47 (Gov. Code, § 53721; see *Guardino*, at p. 232), but applied its voter approval requirements to any district rather than only to special districts, and defined "district" **[****12]** broadly. (Gov. Code, § 53720, subd. (b) ["'district' means an agency of the state, formed ... for the local performance of governmental **[*259]** or proprietary functions within limited boundaries"].) By the time Proposition 62 was proposed, courts as well as the Legislature had recognized that various fees were not taxes for purposes of Proposition 13 (see *Beaumont Investors v. Beaumont-Cherry Valley Water Dist.* (1985) 165 Cal.App.3d 227 [211 Cal. Rptr. 567]; *Mills v. County of Trinity* (1980) 108 Cal.App.3d 656 [166 Cal. Rptr. 674]), but Proposition 62 was silent with respect to the imposition of fees.

CA(5)[↑] **(5)** Next, in 1996, state voters approved Proposition 218, known as the "Right to Vote on Taxes Act." (*Apartment Assn. of Los Angeles County, Inc. v. City of Los Angeles* (2001) 24 Cal.4th 830, 835 [102 Cal. Rptr. 2d 719, 14 P.3d 930] (*Apartment Assn.*).) Proposition 218 addressed two principal concerns. First, it was not clear whether Proposition 62, which enacted statutory provisions, bound charter jurisdictions. [2] (*Howard Jarvis Taxpayers Assn. v. City of San Diego* (2004) 120 Cal.App.4th 374, 390–391 [15 Cal. Rptr. 3d 457].) Therefore, HN5[↑] Proposition 218 amended the Constitution to add voter approval requirements for general and special taxes, thereby binding charter jurisdictions. (Cal. Const., art. XIII C, §§ 1, 2.)

CA(6)[↑] **(6)** Second, HN6[↑] Proposition 13 was "not intended to limit 'traditional' benefit assessments." (*Knox v. City of Orland* (1992) 4 Cal.4th 132, 141 [14 Cal. Rptr. 2d 159, 841 P.2d 144] (*Knox*) [upholding property-based assessments for public landscaping and lighting improvements].) Proposition 218 **[***867]** was adopted in part to address *Knox*'s holding. (*Greene v. Marin County Flood Control & Water Conservation Dist.* (2010) 49 Cal.4th 277, 284 [109 Cal. Rptr. 3d 620, 231 P.3d 350].) It requires an agency proposing an assessment on property to determine the proportionate special **[****13]** benefit to be derived by each parcel subject to the assessment; to support the assessment with an engineer's report; to give written notice to each parcel owner of the amount of the proposed assessment and the basis of the calculation; and to provide each owner with a ballot to vote in favor of or against the proposed assessment. It also requires the agency to hold a public hearing, and bars imposition of the assessment if a majority of parcel

---

[2] "For its own government, a county or city may adopt a charter by majority vote of its electors voting on the question." (Cal. Const., art. XI, § 3, subd. (a).) County charters "supersede ... all laws inconsistent therewith" (*ibid.*), and city charters supersede all inconsistent laws "with respect to municipal affairs." (*Id.*, § 5, subd. (a); see ***Johnson v. Bradley* (1992) 4 Cal.4th 389, 394–400 [14 Cal. Rptr. 2d 470, 841 P.2d 990]**.)

owners within the assessment area submit ballots in opposition to the assessment, with each ballot weighted based on the proposed financial obligation of the affected parcel. In the event legal action is brought contesting an assessment, the agency has the burden to establish that the burdened properties receive a **[*260]** special benefit and the assessment is proportional to the benefits conferred. (Cal. Const., art. XIII D, §§ 2, subd. (b), 4; see *Apartment Assn., supra*, 24 Cal.4th 830.) [3]

[217]** CA(7)[↑] **(7)** Most recently, in 2010, after the charge at issue in this case was adopted, state voters approved Proposition 26. HN7[↑] That measure amended the Constitution to provide that for purposes of article XIII C, which addresses voter approval of local taxes, " 'tax' means any levy, charge, or exaction of any kind imposed by a local government" (Cal. Const., art. XIII C, § 1, subd. (e)), *except **[****14]*** (1) a charge imposed for a specific benefit or privilege received only by those charged, which does not exceed its reasonable cost, (2) a charge for a specific government service or product provided directly to the payor and not provided to those not charged, which does not exceed its reasonable cost, (3) charges for reasonable regulatory costs related to the issuance of licenses, permits, investigations, inspections, and audits, and the enforcement of agricultural marketing orders, (4) charges for access to or use, purchase, rental, or lease of local government property, (5) fines for violations of law, (6) charges imposed as a condition of developing property, and (7) property-related assessments and fees as allowed under article XIII D. The local government bears the burden of establishing the exceptions. (Cal. Const., art. XIII C, § 1, subd. (e).) [4]

2. *Characteristics of Valid Fees*

As noted above, following the enactment of Proposition 13, the Legislature and courts viewed various fees as outside the **[***868]** scope of the initiative. (Gov. Code, § 50076; *Evans v. City of San Jose* (1992) 3 Cal.App.4th 728, 736–737 [4 Cal. Rptr. 2d 601] (*Evans*), and cases cited therein.) In *Sinclair Paint, supra*, 15 Cal.4th 866, we summarized three categories of charges that are fees rather than taxes, and therefore are not subject to the voter approval requirements of Proposition **[****15]** 13. First, special assessments may be imposed "in amounts reasonably reflecting the value of the benefits conferred by improvements." (*Sinclair Paint*, at p. 874.) Second, development fees, which are **[*261]** charged for building permits and other privileges, are not considered taxes "if the amount of the fees bears a reasonable relation to the development's probable costs to the community and benefits to the developer." (*Id.* at p. 875.) Third, regulatory fees are imposed under the police power to pay for the reasonable cost of regulatory activities. (*Id.* at pp. 875–876.)

CA(8)[↑] **(8)** The commonality among these categories of charges is the relationship between the charge imposed and a benefit or cost related to the payor. With respect to charges for benefits received, we explained in *Knox, supra*, 4 Cal.4th 132, that HN8[↑] "if an assessment for ... improvements provides a special benefit to the assessed properties, then the assessed property owners should pay for the benefit they receive." (*Id.* at p. 142; see *Evans, supra*, 3 Cal.App.4th at p. 738 [when a "discrete group is specially benefitted

[3] Proposition 218 also imposed restrictions on the imposition of fees and charges for property-related services, such as sewer and water services, but provided that "fees for the provision of electrical or gas service shall not be deemed charges or fees imposed as an incident of property ownership." (Cal. Const., art. XIII D, § 3, subd. (b); *id.*, § 6; see ***Silicon Valley Taxpayers' Assn., Inc. v. Santa Clara County Open Space Authority* (2008) 44 Cal.4th 431, 443 [79 Cal. Rptr. 3d 312, 187 P.3d 37]**.) Based on its conclusion that the charges imposed by the 1999 agreement are compensation for the franchise rights conveyed to SCE, the trial court further concluded the charges are for the provision of electrical service, and therefore are not imposed as an incident of property ownership. Plaintiffs do not contend on appeal that the surcharge is a property-related fee.

[4] Plaintiffs and the City both view Proposition 26 as confirming their view of the law before Proposition 26 was enacted, but no party contends that it applies to the charges in this case, which were imposed prior to the enactment of Proposition 26.

... [, t]he public should not be required to finance an expenditure through taxation which benefits only a small segment of the population"].) But "if the assessment exceeds the actual cost of the improvement, the exaction is a **[****16]** tax and not an assessment." (*Knox*, at p. 142, fn. 15.) With respect to costs, we explained in *Sinclair Paint, supra*, 15 Cal.4th 866, 879, that Proposition 13's goal of providing effective property tax relief is promoted rather than subverted by shifting costs to those who generate the costs. (See *San Diego Gas & Electric Co. v. San Diego County Air Pollution Control Dist.* (1988) 203 Cal.App.3d 1132, 1148 [250 Cal. Rptr. 420].) However, if the charges exceed the reasonable cost of the activity on which they are based, the charges are levied for unrelated revenue purposes, and are therefore taxes. (*Sinclair Paint*, at pp. 874, 881.)

CA(9)[↑] **(9)** In sum, HN9[↑] restricting allowable fees to the reasonable cost or value of the activity with which the charges are associated serves **[**218]** Proposition 13's purpose of limiting taxes. (See *Amador Valley, supra*, 22 Cal.3d at p. 231 [Prop. 13's restrictions on real property taxes "could be withdrawn or depleted by additional or increased state or local levies of other than property taxes"].) If a state or local governmental agency were allowed to impose charges in excess of the special benefit received by the payor or the cost associated with the payor's activities, the imposition of fees would become a vehicle for generating revenue independent of the purpose of the fees. Therefore, to the extent charges exceed the rationale underlying the charges, they are taxes.

Although *Sinclair Paint, supra*, 15 Cal.4th 866, focused on restrictions imposed by Proposition 13, its analysis **[****17]** of the characteristics of fees that may be imposed without voter approval remains sound. According **[***869]** to Proposition 218's findings and declarations, "Proposition 13 was intended to provide effective tax relief and to require voter approval of tax increases. However, local governments have subjected taxpayers to *excessive* tax, assessment, fee **[*262]** and charge increases that ... frustrate the purposes of voter approval for tax increases ... ." (Prop. 218, § 2, reprinted at Historical Notes, 2B West's Ann. Cal. Const. (2013) foll. art. XIII C, § 1, p. 363, italics added.) As relevant here, this finding reflects a concern with excessive fees, not fees in general. In addition, although Proposition 218 imposed additional restrictions on the imposition of assessments, that initiative did not impose additional restrictions on other fees. (Cal. Const., arts. XIII C, §§ 1, 2, XIII D, § 4.) Finally, *Sinclair Paint*'s understanding of fees as charges reasonably related to specific costs or benefits is reflected in Proposition 26, which exempted from its expansive definition of tax (1) charges imposed for a specific benefit or privilege which do not exceed its reasonable cost, (2) charges for a specific government service or product provided which do not exceed **[****18]** its reasonable cost, and (3) charges for reasonable regulatory costs related to specified regulatory activities. [5] (Cal. Const., art. XIII C, § 1, subd. (e).)

To determine how franchise fees fit within these principles, we next consider the nature of franchise fees. We also describe the regulatory framework related to their calculation and imposition.

B. *Franchise Fees*

1. *Nature of Franchise Fees*

HN10[↑] CA(10)[↑] **(10)** A franchise to use public streets or rights-of-way is a form of property (*Stockton Gas etc. Co. v. San Joaquin Co.* (1905) 148 Cal. 313, 319 [83 P. 54]), and a franchise fee is the purchase price of the franchise. (*City & Co. of S. F. v. Market St. Ry. Co.* (1937) 9 Cal.2d 743, 749 [73 P.2d 234].) Historically, franchise fees have not been considered taxes. (See *County of Tulare v. City of Dinuba* (1922) 188 Cal. 664, 670 [206 P.

[5] Proposition 26's description of valid charges based on regulatory costs does not mirror our discussion of such costs in ***Sinclair Paint, supra*, 15 Cal.4th 866**. (See Cal. Const., art. XIII C, § 1, subd. (e)(3).) We express no opinion on the breadth of the regulatory costs that Proposition 26 allows to be imposed without voter approval.

983] [franchise fee based on gross receipts of utility is not a tax]; *City & Co. of S. F. v. Market St. Ry. Co.*, *supra*, 9 Cal.2d at p. 749 [payments for franchises are not taxes]; *Santa Barbara County Taxpayer Assn., supra*, 209 Cal.App.3d 940, 949–950 [franchise fees are not proceeds of taxes].) Nothing in Proposition 218 reflects an intent to change the historical characterization of franchise fees, or to limit the authority of government to sell or lease its property and spend the compensation received for whatever purposes it chooses. (See Cal. Const., arts. XIII A, § 3, subd. (b)(4), XIII C.)

This understanding that restrictions on taxation do not encompass amounts paid in exchange for property interests is confirmed by Proposition 26, the **[*263]** purpose of which was to *reinforce* the voter approval requirements set forth in **[****19]** Propositions 13 and 218. (Prop. 26, § 1, subd. (f), Historical Notes, reprinted at 2B West's Ann. Cal. Const., *supra*, foll. art. XIII A, § 3, p. 297 ["'to ensure the effectiveness of these constitutional limitations, [Proposition 26] defines a "tax" ... so that neither the Legislature nor local governments can circumvent these restrictions on **[**219]** increasing taxes by simply defining new or expanded taxes as "fees"'"].) Although Proposition 26 **[***870]** strengthened restrictions on taxation by expansively defining "tax" as "any levy, charge, or exaction of any kind imposed by a local government" (Cal. Const., art. XIII C, § 1, subd. (e)), it provided an exception for "[a] charge imposed for entrance to or use of local government property, or the purchase, rental, or lease of local government property." (*Id.*, subd. (e)(4).) [6]

2. *Laws Governing the Calculation of Franchise Fees*

The Legislature has taken several approaches to the issue of the amount of compensation to be paid to local jurisdictions in exchange for rights-of-way over the jurisdictions' land relating to the provision of services such as electricity. As described more fully below, it initially barred the imposition of franchise fees due to perceived abuses by local governments. Thereafter, it authorized local agencies to grant franchises, **[****20]** and established two formulas with which to calculate franchise fees. These formulas do not bind charter jurisdictions, such as the City, but they provide helpful background to the PUC's regulation of charges imposed on ratepayers.

The California Constitution as adopted in 1879 provided that "[i]n any city where there are no public works owned and controlled by the municipality for the supplying the same with water or artificial light, any individual, or any company duly incorporated for such purpose ... , shall ... have the privilege of using the public streets and thoroughfares thereof, and of laying down pipes and conduits therein, and connections therewith, so far as may be necessary for introducing into and supplying such city and its inhabitants either with gaslight or other illuminating light, or with fresh water for domestic and all other purposes, upon the condition that the municipal government shall have the right to regulate the charges thereof." (Cal. Const., former art. XI, § 19.) The provision was intended to prevent a municipality from creating a monopoly within its jurisdiction by imposing burdens on parties who wanted to compete with an existing private utility. Although **[****21]** cities could not impose franchise fees on these "constitutional franchises," they were authorized to tax a franchise on the basis that a franchise constitutes real property within the city. (*Stockton Gas etc. Co. v. San Joaquin [*264] Co., supra*, 148 Cal. at pp. 315–321; *City of Santa Cruz v. Pacific Gas & Electric Co.* (2000) 82 Cal.App.4th 1167 [1171, 99 Cal. Rptr. 2d 198].) In 1911, this constitutional provision was replaced with a provision that authorized the private establishment of public works for providing services such as light, water, and power "upon such conditions and under such regulations as the municipality may prescribe under its organic law." (Sen. Const. Amend. No.

[6] We are concerned only with the validity of the surcharge under Proposition 218. Proposition 26's exception from its definition of "tax" with respect to local government property is not before us. (See Cal. Const., art. XIII C, § 1, subd. (e)(4).)

49, Stats. 1911 (1911 Reg. Sess.) res. ch. 67, p. 2180.) The constitutional amendment did not impair rights under existing constitutional franchises. (*Russell v. Sebastian* (1914) 233 U.S. 195, 210 [58 L.Ed. 912, 34 S.Ct. 517].)

In the meantime, in 1905, the Legislature enacted the Broughton Act (Pub. Util. Code, § 6001 et seq.), which authorized cities and counties to enter franchise agreements for the provision of electricity and various other services not encompassed by the constitutional restrictions **[***871]** on franchise fees. (Stats. 1905, ch. 578, p. 777; *County of Alameda v. Pacific Gas & Electric Co.* (1997) 51 Cal.App.4th 1691, 1694–1695 [60 Cal. Rptr. 2d 187] (*County of Alameda*).) The legislation provided that when an application for a franchise was received by a city or county, the governing body was to advertise for bids and award the franchise to the highest bidder. The successful bidder was **[****22]** required to pay, in addition to the amount bid, 2 percent of the gross annual receipts from the "use, operation or possession" of the franchise after the first five years of the term of the franchise agreement had passed. (Stats. 1905, ch. 578, §§ 2–3, pp. 777–778.)

HN11[↑] CA(11)[↑] **(11)** The Broughton Act's provision that the fee be based on the receipts from the use, operation or possession of the franchise results in a complicated calculation of franchise **[**220]** fees. Usually, some portion of a utility's rights-of-way are on private property or property outside the jurisdiction of the city or county granting the franchise, and the utility's gross receipts attributable to a particular franchise must be reduced in proportion to the utility's rights-of-way that are not within the franchise agreement. (*County of Tulare v. City of Dinuba, supra*, 188 Cal. at pp. 673–676.) In addition, because gross receipts arise from all of a utility's operative property, such as equipment and warehouses, the portion of gross receipts attributable to property other than the franchise must be excluded from the calculation of the franchise fee. (*County of L. A. v. Southern etc. Gas Co.* (1954) 42 Cal.2d 129, 133–134 [266 P.2d 27].) Finally, if a utility also provides service under a constitutional franchise—for example, where it provides artificial light under a constitutional franchise **[****23]** in the same area in which it provides electricity under a franchise agreement entered pursuant to the Broughton Act—the franchise fee applies only to the gross receipts from the provision of services under the nonconstitutional franchise. (*Oakland v. Great Western Power Co.* (1921) 186 Cal. 570, 578–583 [200 P. 395].)

[*265]

In 1937, apparently due in part to the complexity involved in calculating franchise fees under the Broughton Act, the Legislature enacted an alternative scheme by which cities could grant franchises for the transmission of electricity and gas. [7] (Stats. 1937, ch. 650, p. 1781; see Pub. Util. Code, § 6201 et seq. (1937 Act); *County of Alameda, supra*, 51 Cal.App.4th at pp. 1695–1696.) Instead of a bidding process, the 1937 Act requires only a public hearing before the local government that will decide whether to grant an application for a franchise, at which objections to the granting of the franchise may be made. (Pub. Util. Code, §§ 6232–6234.) In addition, although the 1937 Act reiterates the Broughton Act formula for calculating franchise fees, it also provides an alternative formula: "this payment shall be not less than 1 percent of the applicant's gross annual receipts derived from the sale within the limits of the municipality of the utility service for which the franchise is awarded." (Pub. Util. Code, § 6231, subd. (c).) [8] According to a review of that year's

[7] In 1971, the Legislature amended the act to provide that "municipality includes counties." (Pub. Util. Code, § 6201.5.) In addition, the Act has been extended to franchises for the transmission of oil and oil products, and the transmission of water. (Pub. Util Code, § 6202.)

[8] The 1937 Act includes a second alternative formula if the franchise is "complementary to a franchise derived under" the California Constitution. In that circumstance, the alternative payment is "one-half of 1 percent of the applicant's gross annual receipts from the sale of electricity within the limits of the municipality under both the electric franchises." (Pub. Util. Code, § 6231, subd. (c).)

legislation, the new franchise **[****24] [***872]** system was "expected to bring more adequate returns to cities, while lessening disputes concerning amounts to be paid." (David, *The Work of the 1937 California Legislature: Municipal Matters* (1937–1938) 11 S.Cal. L.Rev. 97, 107.)

As noted above, these statutory provisions do not bind jurisdictions governed by a charter, such as the City, but charter jurisdictions are free to follow the procedures set forth in the 1937 Act. (Pub. Util. Code, § 6205.) [9] However, the 1937 Act's provisions "relating to the payment of a percentage of gross receipts shall not be construed as a declaration of legislative judgment as to the proper compensation to be paid a chartered municipality for the right to exercise franchise privileges therein." (Pub. Util. Code, § 6205.) We explain below that although a charter jurisdiction's franchise fees are not limited by these statutory formulas, the PUC has concluded that it is not fair or reasonable to allow a utility to recoup from all of its utility customers charges imposed by a jurisdiction whose charges exceed the average amount of charges imposed by other local governments. Therefore, the PUC has established a procedure by which a utility may **[**221]** obtain approval **[*266]** to impose a surcharge on the bills of only those customers within the particular **[****25]** jurisdiction that imposes higher-than-average charges.

3. *PUC Scrutiny of Utility Charges*

HN12[↑] CA(12)[↑] **(12)** The PUC sets the rates of a publicly regulated utility to permit the utility to recover its costs and expenses in providing its service, and to receive a fair return on the value of the property it uses in providing its service. (*Southern Cal. Gas Co. v. Public Utilities Com.* (1979) 23 Cal.3d 470, 474–476 [153 Cal. Rptr. 10, 591 P.2d 34].) Among a utility's costs and expenses are government fees and taxes. Historically, "fees and taxes imposed upon the utility itself by the various governmental entities within the utility's service territory ... tended to average out, with the total derived from each taxing jurisdiction tending to be approximately equal. Therefore, rather than impose a special billing procedure upon utilities to account for the small differences historically involved, the [PUC] ... permitted a utility to simply average them and allowed them to be 'buried' in the rate structure applicable to the entire system." (*PUC Investigation, supra*, 32 Cal.P.U.C.2d at p. 63.) As voters restricted the taxing authority of local governments, however, some local jurisdictions increased the charges they imposed in connection with the provision of utility services. "As the number and increasing amounts of these local revenue-producing mechanisms **[****26]** began to multiply, the [PUC] became concerned that averaging these costs among all ratepayers would create inequities among ratepayers." (*Ibid.*)

CA(13)[↑] **(13)** In response to this concern, HN13[↑] the PUC established a procedure by which utilities may obtain approval to impose disproportionate charges on ratepayers within the jurisdiction that imposed the charges. **[***873]** (*PUC Investigation, supra*, 32 Cal.P.U.C.2d at pp. 62, 69.) When a local government imposes taxes or fees "which in the aggregate significantly exceed the average aggregate of taxes or fees imposed by the other local governmental entities within the public utility's service territory," a utility may file an advice letter seeking approval to charge "local government fee surcharges." (*Id.* at p. 73.) Such surcharges "shall be included as a separate item or items to bills rendered to applicable customers. Each surcharge shall be identified as being derived from the local governmental entity responsible for it." (*Ibid.*)

The purpose of the PUC's procedure concerning local government fee surcharges is to ensure that utility rates are just, reasonable, and

[9] The trial court ruled that as a charter jurisdiction, the City is not subject to general laws concerning franchises. (See ***Southern Pacific Pipe Lines, Inc. v. City of Long Beach* (1988) 204 Cal.App.3d 660, 667–670 [251 Cal. Rptr. 411]** [except where the nature of the utility services reflects a matter of statewide concern, the granting of franchises is a municipal affair].) Plaintiffs do not challenge that conclusion.

nondiscriminatory. (*PUC Investigation, supra*, 32 Cal.P.U.C.2d at p. 69; see Pub. Util. Code, §§ 451 [all public utility charges shall be just and reasonable], 453 [no public utility shall discriminate], 728 [if PUC **[****27]** finds rates are unreasonable or discriminatory, it shall order just and reasonable rates].) "Basic rates ... are those designed to recoup a utility's costs incurred to serve all its customers." **[*267]** (*PUC Investigation, supra*, 32 Cal.P.U.C.2d at p. 69.) If disproportionate taxes and fees are incorporated into all customers' basic rates, "some of these ratepayers would be subsidizing others but are not themselves benefiting from such increased taxes or fees." (*Ibid.*)

The PUC's decision does not concern the validity of any charges imposed by local government. The PUC explained that it "[did] not dispute or seek to dispute the authority or right of any local governmental entity to impose or levy any form of tax or fee upon utility customers or the utility itself, which that local entity, as a matter of general or judicial decision, has jurisdiction to impose, levy, or increase. Any issue relating to such local authority is a matter for the Superior Court, not this Commission." (*PUC Investigation, supra*, 32 Cal.P.U.C.2d at p. 69.)

C. *Validity of the Surcharge*

1. *Relationship Between Franchise Rights and Franchise Fees*

CA(14)[↑] **(14)** Plaintiffs contend the surcharge is a tax rather than a fee under Proposition 218, and therefore requires voter approval. HN14[↑] Whether a charge is a tax or a fee **[****28]** "is a question of law for the appellate courts to decide on independent review of the facts." (*Sinclair Paint, supra*, 15 Cal.4th at p. 874.) In resolving this issue, HN15[↑] the provisions of Proposition 218 "shall be liberally construed to effectuate **[**222]** its purposes of limiting local government revenue and enhancing taxpayer consent." (Prop. 218, § 5, reprinted at Historical Notes, *supra*, 2B West's Ann. Cal. Const., foll. Art. XIII C, § 1, at p. 363; see *Silicon Valley Taxpayers' Assn., Inc. v. Santa Clara County Open Space Authority, supra*, 44 Cal.4th at pp. 446, 448 [express purpose of Prop. 218 was to limit methods of exacting revenue from taxpayers; its provisions are to be liberally construed].)

CA(15)[↑] **(15)** As explained earlier, a franchise is a form of property, and a franchise fee is the price paid for the franchise. Moreover, historically, franchise fees have not been considered taxes, and nothing in Proposition 218 reflects an intention to treat amounts paid in exchange for property interests as taxes. Finally, like the receipt by a discrete group of a special benefit from the government, the receipt of an **[***874]** interest in public property justifies the imposition of a charge on the recipient to compensate the public for the value received. Therefore, HN16[↑] sums paid for the right to use a jurisdiction's rights-of-way are fees rather than taxes. But as explained below, to constitute compensation for the value **[****29]** received, the fees must reflect a reasonable estimate of the value of the franchise.

Each of the categories of valid fees we recognized in *Sinclair Paint, supra*, 15 Cal.4th 866, was restricted to an amount that had a reasonable relationship **[*268]** to the benefit or cost on which it was based. We observed that special assessments were allowed "in amounts reasonably reflecting the value of the benefits conferred" (*id.* at p. 874), development fees were allowed "if the amount of the fees bears a reasonable relation to the development's probable costs to the community and benefits to the developer" (*id.* at p. 875), and regulatory fees were allowed where the fees reflected bear a "reasonable relationship to the social or economic 'burdens' that [the payor's] operations generated" (*id.* at p. 876; see *Pennell v. City of San Jose* (1986) 42 Cal.3d 365, 375 [228 Cal. Rptr. 726, 721 P.2d 1111]). To the extent fees exceed a reasonable amount in relation to the benefits or costs underlying their imposition, they are taxes. (*Sinclair Paint*, at p. 881; *Knox, supra*, 4 Cal.4th at p. 142, fn. 15.)

CA(16)[↑] **(16)** In the course of our analysis, we observed that, HN17[↑] "[i]n general, taxes are imposed for revenue purposes, rather than in return for a specific benefit conferred or privilege granted," and we looked to whether the primary purpose of a charge was to generate revenue. (*Sinclair Paint, supra*, 15 Cal.4th at p. 874; see *id.* at pp. 879–880.) The issue of whether the funds generated by the types of fees **[****30]** considered in *Sinclair Paint* were used primarily for revenue purposes was relevant because the fees were related to an expenditure by the government or a cost borne by the public. More particularly, in connection with special assessments, the government seeks to recoup the costs of the program that results in a special benefit to particular properties, and in connection with development fees and regulatory fees, the government seeks to offset costs borne by the government or the public as a result of the payee's activities.

In contrast, a fee paid for an interest in government property is compensation for the use or purchase of a government *asset* rather than compensation for a cost. Consequently, the revenue generated by the fee is available for whatever purposes the government chooses rather than tied to a public cost. The aspect of the transaction that distinguishes the charge from a tax is the receipt of value in exchange for the payment. (See *Sinclair Paint*, 15 Cal.4th at p. 874 [contrasting taxes from charges imposed in return for a special benefit or privilege]; 9 Witkin, Summary of Cal. Law (10th ed. 2005) Taxation, § 1, p. 25 ["in taxation, ... no compensation is given to the taxpayer except by way of governmental **[****31]** protection and other general benefits"].)

Plaintiffs observe, however, that SCE customers pay the surcharge, but SCE receives the franchise rights; therefore, they contend, the ratepayers do not receive any value in exchange for their **[***875]** payment of the **[**223]** charge. As noted above, publicly regulated utilities are allowed to recover their costs and expenses by passing them on to their ratepayers. Among the charges included in the rates charged to customers within the City is the initial 1 percent of **[*269]** gross receipts paid in exchange for franchise rights, yet plaintiffs do not contend that this initial 1 percent is a tax because ratepayers do not receive the franchise rights. The fact that the surcharge is placed on customers' bills pursuant to the franchise agreement rather than a unilateral decision by SCE does not alter the substance of the surcharge; like the initial 1 percent charge, it is a payment made in exchange for a property interest that is needed to provide electricity to City residents. [10] Because a publicly regulated utility is a conduit through which government charges are ultimately imposed on ratepayers, we would be placing form over substance if we precluded the City from establishing **[****32]** that the surcharge bears a reasonable relationship to the value of the property interest it conveyed to SCE because the City expressed in its ordinance what was implicit—that once the PUC gave its approval, SCE would place the surcharge on the bills of customers within the City.

Although *Sinclair Paint*'s consideration of the purposes to which revenues will be put is not relevant in the context of transfers of public property interests, its broader focus on the relationship between a charge and the rationale underlying the charge provides guidance in evaluating whether the surcharge is a tax. Just as the amount of fees imposed to compensate for the expense of providing government services or the cost to the public associated with a payer's activities must bear a reasonable relationship to the costs and benefits that justify their imposition, fees imposed in exchange for a property interest must bear a reasonable relationship to the value received

[10] As explained above, the division of the charge into two parts, with one included in the rates paid by customers and the other separately stated on the bill, was driven by the PUC's effort to ensure that a local government's higher-than-average charges are not unfairly imposed on ratepayers outside of the local government's jurisdiction; this division of the charges is unrelated to the character or validity of the charges.

from the government. To the extent a franchise fee exceeds any reasonable value of the franchise, the excessive portion of the fee does not come within the rationale that justifies the imposition of fees without voter approval. Therefore, the **[****33]** excessive portion is a tax. If this were not the rule, franchise fees would become a vehicle for generating revenue independent of the purpose of the fees. In light of the PUC's investigation of local governments' attempts to produce revenue through charges imposed on public utilities, this concern is more than merely speculative. (See *PUC Investigation, supra*, 32 Cal.P.U.C.2d 60.)

We recognize that determining the value of a franchise may present difficulties. Unlike the cost of providing a government improvement or program, which may be calculated based on the expense of the personnel and materials used to perform the service or regulation, the value of property may vary greatly, depending on market forces and negotiations. Where a utility has an incentive to negotiate a lower fee, the negotiated fee may reflect the **[*270]** value of the franchise rights, just as the negotiated rent paid by the lessor of a publicly owned building reflects its market value, despite the fact that a different lessor might have negotiated a different rental rate. In the absence of bona fide negotiations, **[***876]** however, or in addition to such negotiations, an agency may look to other indicia of value to establish a reasonable value of franchise rights. [11]

CA(17)[↑] **(17)** In **[****34]** sum, HN18[↑] a franchise fee must be based on the value of the franchise conveyed in order to come within the rationale for its imposition without approval of the voters. Its value may be based on bona fide negotiations concerning the property's value, as well as other indicia of worth. Consistent with the principles that govern other fees, we hold that to constitute a valid franchise fee under Proposition 218, the amount of the franchise fee must bear a reasonable relationship to the value of the property interests transferred. **[**224]** (See *Sinclair Paint, supra*, 15 Cal.4th at pp. 874–876.)

2. *The City's Alternative Theories To Support the Surcharge*

We find the City's remaining arguments in defense of the surcharge to be without merit.

The City contends that the surcharge is not a tax imposed on ratepayers because it is a burden SCE voluntarily assumed. The terms of the 1999 agreement belie the contention that SCE assumed a burden to pay the surcharge. The 1999 agreement states that SCE "shall collect" the surcharge from all SCE customers within the City, and the collection shall be based on electricity consumption. Arguably, these provisions are ambiguous as to whether the mandatory language imposes a duty to collect the surcharge, or imposes a **[****35]** duty, *if* it collects the surcharge, to apply it to all customers within the City based on consumption. However, the next paragraph of the 1999 agreement refers to "[t]he conditions precedent to *the obligation of* [*SCE*] *under this Section 5 to levy, collect, and deliver* to City the [surcharge]." In addition, the parties stipulated that "[t]he SCE assessments, collections and remittance of the [surcharge] were required by Santa Barbara Ordinance 5135." Finally, as noted above, public utilities are allowed to pass along to their customers expenses the utilities incur in producing their services, and SCE could terminate the 1999 agreement if the PUC did not agree to the inclusion of the surcharge on customers' bills. Thus, it does not appear that SCE assumed any burden to pay the surcharge from its assets.

We also reject the City's contention that imposition of the surcharge on customers is the result of a decision by SCE and the PUC. As discussed **[*271]** above, the purpose of the PUC's involvement in the process was to ensure that higher-than-average fees were not imposed on customers who reside outside the City. The fact that

[11] The parties' briefs do not consider the means by which franchise rights might be valued. We leave this issue to be addressed by expert opinion and subsequent case law.

the 1999 agreement required SCE to seek the approval of the PUC to include the charge on **[****36]** customers' bills, and allowed either party to terminate the agreement if the PUC's approval was not obtained, reflects that SCE was not willing to assume the burden of paying the surcharge, and that both parties to the agreement understood that the charge would be collected from ratepayers. These conclusions are confirmed by the parties' negotiations, which reflect that SCE was willing only to collect the charge from its customers and remit the revenue to the City. Finally, the City stipulated that the parties reached their **[***877]** agreement on the condition that the surcharge would become payable only if SCE obtained the PUC's consent to include the surcharge as a customer surcharge. In sum, the City and SCE agreed that SCE would impose the surcharge on customers and remit the revenues to the City.

In a similar vein, the City contends we should look to a revenue measure's legal incidence—who is required to pay the revenues—rather than its economic incidence—who bears the economic burden of the measure. The City's contention is based on its view that SCE bears the legal incidence of the charges and, therefore, the charges are not a tax on the ratepayers. In support of its theory, the City **[****37]** cites case law holding that nonresidents do not have taxpayer standing under Code of Civil Procedure section 526a to challenge a jurisdiction's actions based on their payment of taxes within the jurisdiction. (See *Cornelius v. Los Angeles County etc. Authority* (1996) 49 Cal.App.4th 1761, 1777–1778 [57 Cal. Rptr. 2d 618] [plaintiff who did not live in Los Angeles County was denied taxpayer standing to challenge a county affirmative action program based in part on payment of sales and gasoline taxes in Los Angeles County]; *Torres v. City of Yorba Linda* (1993) 13 Cal.App.4th 1035, 1048 [17 Cal. Rptr. 2d 400] [plaintiffs who did not live within a city were denied taxpayer standing to challenge a redevelopment plan based on the payment of sales taxes in the city].) These cases would support an argument that individuals who live outside the City do not have taxpayer standing to challenge the surcharge, but they do not provide guidance concerning what constitutes a tax under various voter initiatives restricting taxation.

In any event, all that the City ultimately contends in this regard is that the **[**225]** economic incidence of a charge does not determine whether it is a tax. We agree. Valid fees do not become taxes simply because their cost is passed on to the ratepayers. As our discussion above reflects, the determination of whether a charge that is nominally a franchise fee constitutes a tax depends on whether it is **[****38]** reasonably related to the value of the franchise rights.
[*272]

Finally, the City asserts that the negotiated value of the franchise is entitled to deference because the City's adoption of the 1999 agreement was a legislative act and because charter jurisdictions have broad discretion to enter franchise agreements. (See Gov. Code, § 50335 [the legislative body of a local agency may grant utility easements "upon such terms and conditions as the parties thereto may agree"].) The record does not adequately disclose the negotiations that occurred with respect to the value of the franchise, and we are therefore unable to evaluate what deference, if any, might be due.

III. THE JUDGMENT OF THE COURT OF APPEAL

As noted above, the Court of Appeal concluded that the surcharge's primary purpose was to raise revenue for general spending purposes rather than to compensate the City for the rights-of-way. Therefore, it held, the surcharge is a tax, and requires voter approval under Proposition 218. Based on these conclusions, it reversed the trial court's grant of the City's motion for judgment on the pleadings, and "directed the trial court to grant [plaintiffs'] motion for summary adjudication because the City imposed the **[****39]** 1% surcharge without complying with Proposition

218." As explained below, we agree that the judgment on the pleadings must be reversed, **[***878]** but we conclude that plaintiffs did not establish a right to summary adjudication.

HN19[↑] A motion for judgment on the pleadings presents the question of whether "the plaintiff's complaint state[s] facts sufficient to constitute a cause of action against the defendant." (*Smiley v. Citibank* (1995) 11 Cal.4th 138, 145 [44 Cal. Rptr. 2d 441, 900 P.2d 690].) The trial court generally considers only the allegations of the complaint, but may also consider matters that are subject to judicial notice. (*Id.* at p. 146.) "'Moreover, the allegations must be liberally construed with a view to attaining substantial justice among the parties.' [Citation.] 'Our primary task is to determine whether the facts alleged provide the basis for a cause of action against defendants under any theory.'" (*Alliance Mortgage Co. v. Rothwell* (1995) 10 Cal.4th 1226, 1232 [44 Cal. Rptr. 2d 352, 900 P.2d 601].) "An appellate court independently reviews a trial court's order on such a motion." (*Smiley, supra*, at p. 146.)

CA(18)[↑] **(18)** The first amended complaint alleges that the surcharge is not a franchise fee, but is instead a tax that requires voter approval under Proposition 218. In addition, with the parties' consent, the trial court took judicial notice of the written stipulation of facts submitted in connection **[****40]** with the motions for summary adjudication and summary judgment, and a second stipulation of facts submitted in connection with the City's motion for judgment on the pleadings. As described above, the stipulated facts reflect that the City and SCE agreed to double the amount to be paid for the privilege of using the rights-of-way and to pass these charges on to the **[*273]** ratepayers, but they do not address the relationship, if any, between the surcharge and the value of the franchise. Liberally construed, the first amended complaint and the stipulated facts adequately allege the basis for a claim that the surcharge bears no reasonable relationship to the value of the franchise, and is therefore a tax requiring voter approval under Proposition 218. Accordingly, the trial court erred in granting judgment on the pleadings to the City.

Next we consider the Court of Appeal's direction to the trial court to grant plaintiffs' motion for summary adjudication. A plaintiff moving for summary adjudication with respect to a claim must establish each element of the claim. The burden then shifts to the defendant to demonstrate a triable issue of fact exists as to the claim. (Code Civ. Proc., § 437c, subd. (p)(1).) Like a ruling on a motion **[****41]** for judgment on the pleadings, a ruling on a motion for summary adjudication is reviewed de novo. (*Kendall v. Walker* (2009) **[**226]** 181 Cal.App.4th 584, 591 [104 Cal. Rptr. 3d 262].)

Plaintiffs sought summary adjudication of the allegation that the surcharge is a tax. (Code Civ. Proc., § 437c, subd. (f).) They asserted that the tests set forth in *Sinclair Paint, supra*, 15 Cal.4th 866, remain good law, but like the Court of Appeal, they drew from *Sinclair Paint* the principle that if the primary purpose of a charge is to raise revenue, the charge is a tax. Plaintiffs also challenged the surcharge on the ground that it was not based on a determination that there was a reasonable relationship between the charge and any costs borne by the City. In response, the City noted that *Sinclair Paint, supra*, 15 Cal.4th 866, **[***879]** addressed the distinction between regulatory fees and taxes. The City relied instead on *Santa Barbara County Taxpayer Assn., supra*, 209 Cal.App.3d 940, which held that franchise fees are not "proceeds of taxes" for purposes of calculating limits on state and local appropriations under article XIII B of the California Constitution. The trial court concluded that "[b]ecause the measure of compensation [for a franchise] is a matter of contractual negotiation, the amount of the franchise fee need not be based on costs."

Although plaintiffs' allegations and the stipulated facts adequately allege the basis for a contention that the surcharge bears no reasonable relationship

to the value **[****42]** of the franchise, plaintiffs' motion for summary adjudication did not *establish* this contention. As explained in our discussion of franchise fees, cities are free to sell or lease their property, and the fact that a franchise fee is collected for the purpose of generating revenue does not establish that the compensation paid for the property interests is a tax. In addition, in contrast to fees imposed for the purpose of recouping the costs of government services or programs, which are limited to the reasonable costs of the services or programs, franchise fees are not based on the costs incurred in affording a **[*274]** utility access to rights-of-way. Therefore, the facts on which plaintiffs relied in seeking summary adjudication did not establish their claim that the surcharge is a tax.

IV. DISPOSITION

We affirm the judgment of the Court of Appeal to the extent it reversed the trial court's judgment, and we reverse the judgment to the extent it directed the trial court to grant plaintiffs' motion for summary adjudication. The case is remanded to the Court of Appeal with directions to remand the matter to the trial court for further proceedings consistent with this opinion.

Cantil-Sakauye, C. J., **[****43]** Werdegar, J., Corrigan, J., Liu, J., Cuéllar, J., and Kruger, J., concurred.

Dissent by: Chin

Dissent

CHIN, J., Dissenting.—Since 1970, the City of Santa Barbara (the City) has imposed "a tax" on those using electricity in the City. Since 1977, the amount of the tax has been "six percent (6%) of the charges made for" energy use. (Santa Barbara Mun. Code, § 4.24.030.) In 1999, the City, in order to raise revenues for general governmental purposes, passed an ordinance—City Ordinance No. 5135 (the Ordinance)—separately requiring those receiving electricity within the City from Southern California Edison (SCE) to pay *an additional* 1 percent of the amount of their electrical bill. I conclude that this additional charge constitutes a tax that the City imposed in violation of the voter approval requirements of article XIII C of the California Constitution, as adopted by the voters at the November 5, 1996 General Election through passage of Proposition 218 (Proposition 218). The City's arguments to the contrary are unpersuasive.

The majority agrees that most of the City's arguments fail, but it largely agrees **[***880]** with the City that the charge is a "valid franchise fee ... rather than a tax." (Maj. **[**227]** opn., *ante*, at p. 257.) Putting its own gloss on the City's argument—a gloss the City expressly **[****44]** rejects—the majority concludes that the charge is a valid franchise fee to the extent it "bear[s] a reasonable relationship to," as alternatively phrased, "the value of the property interests transferred" (maj. opn., *ante*, at p. 270), "the value of the franchise conveyed" (*ibid.*), or "the value of the franchise rights" (*id.* at p. 271).

There is a fundamental problem with this approach: The electricity users upon whom the City imposes the charge, and who actually pay it, do not receive the franchise, any franchise rights, or any property interests. The Ordinance grants those valuable rights and interests *only to SCE*, the electricity supplier. Because the Ordinance requires SCE's customers to pay for rights and interests the City has granted to SCE, the charge does not **[*275]** constitute a "franchise fee" for purposes of the rule that "franchise fees [are not] considered taxes." (Maj. opn., *ante*, at p. 262.) In reality, it is just an increase in the City's user tax, which the City *calls* a franchise fee. It thus constitutes *precisely* what the voters adopted article XIII C of the California Constitution to preclude: a "tax increase[] disguised via euphemistic relabeling as 'fees,' 'charges,' or 'assessments.'" (*Apartment Assn. of Los Angeles County, Inc. v. City of Los Angeles* (2001) 24 Cal.4th 830, 839 [102 Cal. Rptr. 2d 719, 14 P.3d

930].) Consistent with our *duty*, as established **[****45]** by the voters themselves, to "liberally construe[]" article XIII C of the California Constitution "to effectuate [the] purpose[] of limiting local government revenue and enhancing taxpayer consent" (Prop. 218, § 5, reprinted at 1 Stats. 1996, p. A-299), I conclude that the charge is invalid because the City imposed it on SCE's customers without voter approval.

The majority cites no support for its conclusion that a charge imposed on and paid by someone who is granted nothing in return is not tax as to that person so long as *someone else* receives franchise rights for the payment. Indeed, as I explain below, the majority's analysis is inconsistent with our case law. And the line the majority draws between a valid franchise fee and a tax—whether the amount of the charge to a utility's customers bears a reasonable relationship to the value the entity receives—is problematic in many ways and renders long-standing statutory provisions regarding utility franchises vulnerable to constitutional challenge. For all of these reasons, I dissent.

I. Factual and Legal Background

In 1887, SCE's predecessor, the Santa Barbara Electric Company, began supplying electricity in the City. In 1959, the City, pursuant to an agreement with SCE, adopted Ordinance **[****46]** No. 2728 granting SCE a 25-year franchise to use public property to transmit and distribute electricity. The ordinance required SCE to pay the City 2 percent of its "gross annual receipts ... arising from the use, operation or possession of [the] franchise," with a minimum payment of one-half percent of SCE's "gross annual receipts derived ... from the sale of electricity within the [City's] limits ... under both" the franchise being granted by the ordinance and SCE's separate and preexisting "constitutional franchise." The ordinance specified that the City was granting the franchise "under and in accordance with the provisions of **[***881]** [the] Franchise Act of 1937." [1]

In 1985, after the 1959 franchise expired, the City, pursuant to another agreement with SCE, adopted Ordinance No. 4312 granting SCE a 10-year **[*276]** franchise to use public property to transmit and distribute electricity. "[A]s compensation," the ordinance required SCE to pay to the City 2 percent of its "annual gross receipts ... arising from the use, operation or possession of th[e] franchise," with a minimum payment of 1 percent of SCE's "annual gross receipts derived ... from the sale of electricity within the limits of [the] **[****47]** City under both" the franchise being granted by the ordinance and SCE's separate and preexisting "constitutional franchise." **[**228]** The 1985 ordinance also required SCE to "collect for [the] City any utility users tax imposed by [the] City." This provision reflected the City's imposition in 1970 of "a tax" on "every person in" the City using electricity in the City. (Santa Barbara Ord. No. 3436.) The amount of the tax was initially three percent "of the charges made for" use of electricity. (*Ibid.*) In 1977, the City doubled the tax to 6 percent. (Santa Barbara Ord. No. 3927, amending Santa Barbara Mun. Code, § 4.24.030; see Santa Barbara Ord. No. 4289 (1984), amending Santa Barbara Mun. Code, tit. 4.)

The year after the City doubled its electricity users tax, California voters passed Proposition 13. As the majority notes, Proposition 13 amended our Constitution to limit increases in the assessed value of real property to 2 percent per year (absent a change in ownership) and to limit the rate of taxation on real property to 1 percent of its assessed value. (Maj. opn., *ante*, at p. 258.) In order to prevent these tax savings from being offset by increases in state and local taxes, Proposition 13 also amended **[****48]** our Constitution to require approval by two-thirds of the local electors of a

[1] Charter cities are not required to apply the Franchise Act of 1937 (the 1937 Act) (Pub. Util. Code, § 6201 et seq.), but may voluntarily follow its provisions. (Pub. Util. Code, § 6205; all further unlabeled statutory references are to the Public Utilities Code.)

city, county, or special district in order for such a local entity to impose or raise special taxes. (Maj. opn., *ante*, at p. 258.) Since the voters enacted these limits on the City's taxing powers, the City has not *formally* increased the percentage of its electricity users tax.

However, in 1999, the City informally and effectively increased this tax by passing the Ordinance, which codified a new franchise agreement with SCE and required users of electricity within the City to pay an additional 1 percent of their electrical bill. According to the parties' stipulated facts, this charge began as a proposal from "City staff," "[d]uring the negotiations for the new franchise agreement," to "increase[] [the] annual 'franchise fee'" from 1 percent of SCE's gross receipts for electricity sold within the City—the amount under the expiring agreement—to 2 percent. "City staff" proposed the increase in order "to raise additional revenues for the City for general City governmental purposes." "After a period of negotiations," SCE said it would agree "to remit to the City a two percent ... franchise fee provided that the City **[****49]** agreed that the increase in the franchise fee would be payable to the City only if the California Public Utilities Commission ... consented to SCE's request that it be allowed to include the additional 1% amount as a customer surcharge on the bills of SCE to its customers in the City." City **[***882]** staff and SCE **[*277]** reached agreement "[o]n that basis" and the City Council later adopted the tentative agreement as Ordinance No. 5135 (Dec. 7, 1999).

The Ordinance granted SCE a franchise to use public property to construct and operate an electric transmission system. It provided for an: "'Initial Term'" of three years—January 1, 2000, through December 31, 2002—and set the payment for that term at 1 percent of SCE's "Gross Annual Receipts." (Ord., §§ 3.A, 5.) The Ordinance also provided for an "'Extension Term'" beginning 60 days after the Public Utilities Commission (PUC) approved an "Extension Term Fee" and ending December 31, 2029. (Ord., § 3.B.) The total Extension Term Fee was 2 percent of SCE's Gross Annual Receipts, and comprised two elements: (1) the 1 percent Initial Term Fee; and (2) a 1 percent "Recovery Portion." (Ord., § 5.B.) Like the City's electricity users tax, the Recovery Portion **[****50]** was to be collected from "all electric utility customers served by [SCE] within the boundaries of the City" and was "based on consumption or use of electricity." (*Ibid.*) SCE's "obligation" was "to levy" the Recovery Portion on its customers, "collect" this payment from its customers, and "deliver" the collected amount "to [the] City." (Ord., § 5.C.) In other words, according to the parties' stipulated facts, the Ordinance "obligate[d]" all persons in the City receiving electricity from SCE "to pay" the Recovery Portion, and "require[d] [SCE] to collect" the Recovery Portion "from" its City customers "and remit [it] to" the City. The Ordinance made PUC approval of the Extension Term Fee a "condition[] precedent to" SCE's "obligation ... to levy, collect, and deliver to [the] City the Recovery Portion." [2] **[**229]** If that approval was not obtained by the end of the Initial Term—December 31, 2002—the franchise would "continue on a year to year basis at the Initial Term Fee"—1 percent of gross revenues—until terminated by either party upon written notice.

In April 2001, the City and **[****51]** SCE agreed to delay for up to two years the filing with the PUC of a request for approval of the Extension Term Fee. In December 2004, almost three years later, the City directed SCE to submit the request. During that period, the only compensation SCE paid the

[2] A utility may, "at its discretion," request permission from the PUC to set forth separate charges on certain of their customers' bills when a local governmental entity imposes upon the utility "[f]ranchise, general business license, or special taxes and/or fees ... [that] in the aggregate significantly exceed the average aggregate of taxes or fees imposed by the other local governmental entities within the public utility's service territory." (*Re Guidelines for the Equitable Treatment of Revenue-Producing Mechanisms Imposed by Local Government Entities on Public Utilities* (1989) 32 Cal.P.U.C.2d 60, 73.)

City for the franchise was the Initial Term Fee. SCE eventually submitted the request on March 30, 2005, asking for approval "to bill and collect from its customers within the City ... a 1.0% electric franchise surcharge to be remitted to the City by SCE as a pass-through fee, pursuant to SCE's new franchise agreement with the City." The request explained that the new franchise **[*278]** agreement "expressly provides for the additional amount to be surcharged to SCE's customers within the City," and requires PUC approval "in order for SCE to bill and collect the additional franchise surcharge for the City." The request also explained that, upon the PUC's approval, SCE would "bill and collect the surcharge revenues and pass through the revenues directly to the City." **[***883]** On April 20, 2005, the PUC granted SCE's request.

In November 2005, SCE began billing the Recovery Portion to, and collecting it from, customers in the City, and remitting **[****52]** those revenues in their entirety to the City. At first, the City apportioned the revenues in accordance with the Ordinance, i.e., half to the City's general fund and half to a City undergrounding projects fund. In November 2009, the City directed that all revenues from the Recovery Portion be placed in its general fund without any limitation on use.

II. Discussion

Plaintiffs Rolland Jacks and Rove Enterprises, Inc., claim that the City, by imposing the Recovery Portion through adoption of the Ordinance, violated article XIII C of the California Constitution. As here relevant, article XIII C provides that "local government[s]" may not "impose ... any general tax ... until that tax is submitted to the electorate and approved by a majority vote" (Cal. Const., art. XIII C, § 2, subd. (b)), and may not "impose ... any special tax ... until that tax is submitted to the electorate and approved by a two-thirds vote" (*id.*, § 2, subd. (d)). Plaintiffs argue that the Recovery Portion is a tax within the meaning of these provisions and that the City violated article XIII C by imposing it without voter approval.

In opposition to this argument, the City focuses heavily on the word "impose" in California Constitution, article XIII C's provisions, asserting that the Recovery Portion was not "imposed" *by the City* on anyone. According **[****53]** to the City, the Recovery Portion is, as to SCE, a "voluntary" payment to which SCE, a "sophisticated, commercial entit[y] with substantial market power," "willingly agreed" in order "to obtain use of valuable public rights of way in its for-profit business." As to SCE's customers, SCE and/or the PUC "imposed" the Recovery Portion, and the City "played no part in" the decisions of those entities.

The majority correctly rejects these arguments, explaining that the terms of the agreement and the Ordinance require that the Recovery Portion "be collected from" SCE's customers and impose on SCE only an obligation "to collect the charge from its customers and remit the revenue to the City." (Maj. opn., *ante*, at p. 271.) Indeed, the City's arguments necessarily fail in light of its stipulation that "[p]ursuant to City Ordinance [No.] 5135, all **[*279]** persons in the City receiving electricity from SCE *are obligated to pay* the 1% Recovery Portion." (Italics added.)

In a related argument, the City asserts that the Recovery Portion is not "imposed" **[**230]** on SCE's customers because its "legal incidence"—i.e., the "legal duty to pay it"—"is on SCE." According to the City, that SCE's customers in fact "ultimately bear[]" the Recovery **[****54]** Portion's "economic burden" is irrelevant because, under the law, "whether a charge is a tax is determined by its legal incidence."

The City is correct to focus on the Recovery Portion's legal incidence, but its argument fails because, under the Ordinance, both the legal incidence and the economic burden of the Recovery Portion fall on SCE's customers, not on SCE. The rule in California is that where the government *mandates* payment of a charge by one party, and imposes a duty on some other party to collect the

payment and remit it to the government, the legal incidence of the charge falls, not on the party **[***884]** collecting the payment—who acts merely as the government's collection agent or conduit—but on the party from whom the payment is, by law, collected. (*Western States Bankcard Assn. v. City and County of San Francisco* (1977) 19 Cal.3d 208, 217 [137 Cal. Rptr. 183, 561 P.2d 273] (*Western States*) [tax ordinances lacked "mandatory pass-on provisions" that would "shift the legal incidence of the tax"]; *Bunker Hill Associates v. City of Los Angeles* (1982) 137 Cal.App.3d 79, 87 [186 Cal. Rptr. 719] ["'the legal incidence of a tax does not necessarily fall on the party who acts as conduit by forwarding collected taxes to the state,'" and charge imposed on tenants, that lessors were legally required to collect and transmit to the government, was not a tax on lessors]; *Occidental Life Ins. Co. v. State Bd. of Equalization* (1982) 135 Cal.App.3d 845, 850 [185 Cal. Rptr. 779] (*Occidental Life*) [whether "'pass **[****55]** on'" of charge is "mandatory" is "legally significant" in determining who bears the charge's "legal incidence"].) Consistent with this rule, in *City of Modesto v. Modesto Irrigation Dist.* (1973) 34 Cal.App.3d 504, 506 [110 Cal. Rptr. 111], the court held that a monthly charge imposed by the City of Modesto for use of water, gas, electricity, and telephone service, "paid by the service user (the consumer), but ... collected by the service supplier," was "a tax against the utility user, not the utility supplier."

Under these principles, the legal incidence of the Recovery Portion falls on SCE's customers, not, as the City asserts, on SCE. As noted above, the City has stipulated that SCE's customers "are obligated to pay" the Recovery Portion "[p]ursuant to City Ordinance [No.] 5135," and that SCE's duty under the Ordinance is "to collect" the Recovery Portion "from all SCE electricity users in the City and remit those funds to the City." The terms of the Ordinance and the representations in SCE's application for PUC approval, **[*280]** as set forth above, fully support this stipulation. On this record, it is clear that the Ordinance mandates payment of the Recovery Portion by SCE's customers and makes SCE the City's collection agent and conduit regarding this payment. Accordingly, the legal incidence **[****56]** of the Recovery Portion is on SCE's customers.

The City's final argument is that the Recovery Portion is a "franchise fee"—i.e., "a bargained-for price for use of the City's rights of way in SCE's search for profits"—and that under California case law, a franchise fee "is not a tax." The majority essentially agrees with the City. "Historically," the majority begins, "franchise fees have not been considered" by California courts to be "taxes," and "[n]othing in Proposition 218 reflects an intent to change" this rule. (Maj. opn., *ante*, at p. 262.) Putting its own gloss on the City's argument, the majority then concludes that the Recovery Portion is a "franchise fee" and not a tax insofar as its amount "is reasonably related to the value of the franchise." (Maj. opn., *ante*, at p. 257.) "To the extent [it] exceeds any reasonable value of the franchise," it "is a tax" rather than a "franchise fee," because "the excessive portion ... does not come within the rationale that justifies the imposition of fees without voter approval." (*Id.* at p. 269.)

Whether a charge constitutes a "tax" for purposes of the Constitution "is a question of law for the appellate courts to decide on independent review of the facts." **[****57]** (*Sinclair Paint Co. v. State Bd. of Equalization* (1997) 15 Cal.4th 866, 874 [64 Cal. Rptr. 2d 447, 937 P.2d 1350].) **[***885]** In answering this question, we **[**231]** should not, as the majority appears to do, rely on the circumstance that the charge is "nominally a franchise fee." (Maj. opn., *ante*, at p. 271.) In determining whether a charge is a tax, courts "are not bound by what the parties may have called the liability" (*Bank of America v. State Bd. of Equal.* (1962) 209 Cal.App.2d 780, 801 [26 Cal. Rptr. 348] (*Bank of America*)), and are "not to be guided by labels" (*Beamer v. Franchise Tax Board* (1977) 19 Cal.3d 467, 475 [138 Cal. Rptr. 199, 563 P.2d 238]) or "bare legislative assertion" (*Flynn v. San Francisco*

(1941) 18 Cal.2d 210, 215 [115 P.2d 3]). Instead, their "task is to determine the[] true nature" of the charge (*Beamer v. Franchise Tax Board*, *supra*, at p. 475), based on "'its incidents'" and "'the natural and legal effect of the language employed in'" the enactment (*Ainsworth v. Bryant* (1949) 34 Cal.2d 465, 473 [211 P.2d 564]). This general principle is especially applicable here for two reasons: (1) Proposition 218's "main concern" was "perhaps" the "euphemistic relabeling" of taxes "as 'fees,' 'charges,' or 'assessments'" (*Apartment Assn. of Los Angeles County, Inc. v. City of Los Angeles*, *supra*, 24 Cal.4th at p. 839), and (2) Proposition 218 expressly required courts to "liberally construe[]" article XIII C "to effectuate its purposes of limiting local government revenue and enhancing taxpayer consent" (Prop. 218, § 5, reprinted at 1 Stats. 1996, p. A-299).
[*281]

Given the City's argument, the question here is whether the Recovery Portion, in light of its incidents, constitutes the type of charge we have declared **[****58]** to be a franchise fee instead of a tax. One of our earliest decisions to discuss this type of charge is *County of Tulare v. City of Dinuba* (1922) 188 Cal. 664 [206 P. 983] (*Tulare*). There, we held that the annual payment imposed by the Broughton Act (§ 6001 et seq.) on the successful bidder for a franchise to provide electricity—2 percent of gross annual receipts from the use, operation or possession of the franchise—is "neither a tax nor a license." (*Tulare*, at p. 670.) Instead, it is a "charge" that "the holder of the franchise undertakes to pay as part of the consideration for the privilege of using the avenues and highways occupied by the public utility .... [¶] It is purely a matter of contract. ... [I]t is a matter of option with the applicant whether he will accept the franchise on those terms. His obligation to pay is not imposed by law but by his acceptance of the franchise." (*Ibid.*)

Tulare makes clear that the Recovery Portion, irrespective of its relationship to the value of the franchise SCE received, is not a franchise fee for purposes of the rule that a franchise fee is not a tax. As explained above, the Recovery Portion is not a charge that "the holder of the franchise"—SCE—"undert[ook] to pay." (*Tulare*, *supra*, 188 Cal. at p. 670.) Indeed, as the majority correctly states, the terms **[****59]** of the Ordinance "belie" this characterization, establishing instead that SCE did not "assume[] a burden to pay" the Recovery Portion. (Maj. opn., *ante*, at p. 270.) And the City's factual stipulation that the Ordinance "obligated" SCE's customers "to pay" the Recovery Portion conclusively establishes that *their* "obligation to pay" the Recovery Portion was, in fact, "imposed by law," not by *their* "acceptance of the franchise." (*Tulare*, at p. 670.) Indeed, SCE's customers did not receive a franchise, which, as the majority explains, "is a privilege granted by the **[***886]** government to a particular individual or entity rather than to all as a common right." (Maj. opn., *ante*, at p. 254, fn. 1.) The Ordinance granted them no legal right to make any use of the City's property or to conduct a franchise for supplying electricity. In short, the Recovery Portion simply lacks the incidents of a franchise fee for purposes of the rule that franchise fees are not taxes. "To call it a fee" rather than a tax is simply "a transparent evasion." (*Fatjo v. Pfister* (1897) 117 Cal. 83, 85 [48 P. 1012].)

Although the majority recognizes the principles underlying the rule that franchise fees are not taxes, it fails to apply them. The majority observes that "a franchise fee is the **[****60]** purchase price of the franchise" (maj. opn., *ante*, at p. 262), but it does not explain how the Recovery Portion, which the City has imposed on **[**232]** someone *other than the purchaser* of the franchise, meets this test. The majority explains that "sums paid for the right to use a jurisdiction's rights-of-way are fees rather than taxes" because "the receipt of an interest in public property justifies the imposition of a charge *on the recipient* to compensate the public for the value received." (*Id.* at p. 267, italics added.) **[*282]** But the Recovery Portion is not imposed "on the recipient" of the interest in public property. (*Ibid.*) The majority explains that

"restrictions on taxation do not encompass amounts *paid in exchange for* property interests" (*id.* at p. 262, italics added), and that what "distinguishes" a valid charge "from a tax is the receipt of value *in exchange for the payment*" (*id.* at p. 268, italics added). But SCE's customers do not receive any property interest or value "in exchange for" paying the Recovery Portion. (*Ibid.*) In short, the Recovery Portion lacks the "historical characteristics of franchise fees" that the majority identifies from our decisions. (*Id.* at p. 257.) It therefore **[****61]** does not, to use the majority's own words, "come within the rationale that justifies" (*id.* at p. 269) the rule that franchise fees are not taxes.

According to the majority, in determining whether the Recovery Portion is a franchise fee rather than a tax, it is irrelevant that SCE's customers "pay the surcharge" while "SCE receives the franchise rights," that SCE's customers "do not receive any value in exchange for their payment," and that the City is requiring SCE's customers "to compensate the City for *the utility's* use of public property." (See maj. opn., *ante*, at pp. 268–269, italics added.) The stated basis for this view is that "publicly regulated utilities are allowed to recover their costs and expenses by passing them on to their ratepayers," and are therefore merely "conduit[s] through which government charges are ultimately imposed on ratepayers." (*Ibid.*) Given this circumstance, the majority reasons, it makes no difference that the Recovery Portion is an obligation the City imposes directly on SCE's customers, instead of a contractual obligation of SCE that SCE "unilateral[ly]" decides to pass on to its customers. (*Id.* at p. 269.) The City, the majority asserts, should not be "precluded" from showing that the Recovery Portion **[****62]** bears a reasonable relationship to the value of the property interest it conveyed to SCE merely because the Ordinance *expressly mandates* what would have been "implicit" had SCE agreed to pay the Recovery Portion itself—"that once the PUC gave its approval, **[***887]** SCE would place the surcharge on the bills of customers within the City." (*Ibid.*)

For a number of reasons, I disagree. First, the majority's view is inconsistent with our case law, which, as explained above, establishes that a franchise fee—as distinguished from a tax—is a "charge [that] *the holder of the franchise undertakes to pay*," i.e., an "obligation to pay" that is "purely a matter of contract" and that is "imposed" on the payor "not ... by law but by *his* acceptance of the franchise." (*Tulare*, *supra*, 188 Cal. at p. 670, italics added.) As also explained above, the Recovery Portion is *not* a charge that "the holder of the franchise undert[ook] to pay," and it *is* imposed by the City on SCE's customers "by law" instead of by *their* "acceptance of [any] franchise." (*Ibid.*) The majority cites no authority for its conclusion that a **[*283]** charge imposed by law on one person to pay for *someone else's* right to use public property in a business is a franchise fee rather than a tax. **[****63]** [3]

[233]** Second, the majority fails to explain why SCE's purported unfettered ability to pass on to customers charges it contractually agrees to pay means that whether the charge is a tax *on its customers* depends on the value of the franchise *to SCE*. Had SCE contractually agreed to pay the Recovery Portion itself, it could *not* assert that the charge was a tax to the extent it exceeds the value of the franchise rights. As we have explained, because a municipality's power to permit utilities to

[3] According to the majority, by adding a definition of "tax" to California Constitution, article XIII C and excepting from that definition "'[a] charge imposed for entrance to or use of local government property, or the purchase, rental, or lease of local government property,'" Proposition 26, approved by voters at the November 2, 2010 General Election, "confirmed" that "restrictions on taxation do not encompass amounts paid in exchange for property interests." (Maj. opn., *ante*, at p. 263.) As the majority elsewhere acknowledges, Proposition 26 is not at issue here because "no party contends that it applies to the charges in this case." (Maj. opn., *ante*, at p. 260, fn. 4.) Moreover, nothing in Proposition 26 indicates that a charge imposed on one party for *someone else's* use of government property comes within the exception the majority quotes. To the extent the majority's analysis suggests otherwise, it is dictum. Nor does anything in Proposition 26 support the majority's rule that payments for the privilege to use public property *are* taxes to the extent they exceed "the value of the franchise conveyed." (Maj. opn., *ante*, at p. 270.)

use public property "on such terms as are satisfactory to it" includes the power to "'require the payment of such compensation as seems proper,'" courts do not "question whether or not the amount charged is a reasonable charge." (*Sunset Tel. and Tel. Co. v. Pasadena* (1911) 161 Cal. 265, 285 [118 P. 796] (*Sunset*).) And if, as the majority asserts, the utility in this scenario is merely "a conduit through which government charges are ultimately imposed on ratepayers" (maj. opn., *ante*, at p. 269), then there is no logical reason why the value of the benefit *to the utility* would be the proper measure of whether the charge is a tax *as to the utility's customers*. Nor is there any logical reason for making this the test where, as here, a municipality imposes **[****64]** the charge directly on those customers.

Indeed, the majority's conclusion in this regard is inconsistent with its own discussion of the very case law on which it principally relies. As the majority explains, our prior decisions identify "categories of charges" that constitute valid "fees rather **[***888]** than taxes" for purposes of applying Proposition 13. (Maj. opn., *ante*, at p. 260.) "The commonality among these categories," the majority states, "is the relationship between the charge imposed and a benefit ... *to the payor*." (*Id.* at p. 261, italics added.) For example, the majority observes, "we [have] explained ... that 'if an assessment for ... improvements provides a special benefit to the assessed properties, then the assessed property owners should pay for the benefit *they receive*.'" (*Ibid.*, italics added.) Under these cases, the majority states, a purported fee is a tax for **[*284]** purposes of Proposition 13 to the extent it exceeds "the special benefit received *by the payor*." (Maj. opn., *ante*, at p. 261, italics added.)

A closer look at our assessment decisions reveals that a nexus between the benefit conferred and the person *paying the charge* is a prerequisite to concluding that the charge is not a tax. As we explained **[****65]** over 100 years ago, "the compensating benefit to the property owner" on whom the government imposes a charge for an improvement "is the warrant, and the sole warrant, for" finding that the charge is a valid assessment rather than a tax. (*Spring Street Co. v. City of Los Angeles* (1915) 170 Cal. 24, 30 [148 P. 217].) Thus, "if we are not able to say that the owner for the specific charge imposed is compensated by the increased value of the property, then most manifestly we have a special tax." (*Ibid.*) In other words, an assessment levied upon property owners "without regard to the benefit actually accruing *to them* by means of the improvement, is a tax." (*Creighton v. Manson* (1865) 27 Cal. 613, 627, italics added.) The majority purports to reaffirm and follow these decisions insofar as they set forth "the characteristics of fees that may be imposed without voter approval" (maj. opn., *ante*, at p. 261), but it then eliminates the *principal* characteristic it itself identifies: "the relationship between the charge imposed and a benefit ... *to the payor*" (*ibid.*, italics added). [4]

The charge the majority here says is a valid fee differs in another significant respect **[**234]** from the charges we have previously held to be permissible fees instead of taxes: the **[****66]** measure of what is permissible. As the majority observes, as to all of the charges for benefits we have dealt with in prior cases, we have held that they are "taxes" to the extent they "exceed the reasonable *cost* of the activity on which they are based." (Maj. opn., *ante*, at p. 261, italics added.) This is true even of property assessments; although a given property may be assessed based on the proportionate share of the benefit it receives from a government improvement, the assessment is a valid fee rather than a tax only to the extent it does not exceed the proportionate *cost* of the improvement

[4] The majority's analysis is likewise out of step with decisions from other jurisdictions holding that, to constitute a valid fee instead of a tax, a charge must be "based on a special benefit conferred *on the person paying the fee*." (*Home Builders Assn. v. West Des Moines* (Iowa 2002) 644 N.W.2d 339, 347, italics added; see *American Council of Life Insurers v. DC Health* (D.C. Cir. 2016) 815 F.3d 17, 19 [whether charge is a fee or a tax depends on whether there is a "match between the sum paid and the ... benefit provided, *as seen from the payers' perspective*" (italics added)].)

to the government. (*Knox v. City of Orland* (1992) 4 Cal.4th 132, 142, fn. 15 [14 Cal. Rptr. 2d 159, 841 P.2d 144].) In other words, "an assessment **[***889]** is not measured by the precise amount of special benefits enjoyed by the assessed property," but "reflects costs allocated according to relative benefit received." (*Town of Tiburon v. Bonander* (2009) 180 **[*285]** Cal.App.4th 1057, 1081 [103 Cal. Rptr. 3d 485].) Thus, "an assessment exceeding the cost of the improvement, so as to furnish revenue to the city" constitutes a tax. (*City of Los Angeles v. Offner* (1961) 55 Cal.2d 103, 109 [10 Cal. Rptr. 470, 358 P.2d 926].) Consistent with these common law principles, Proposition 218 amended the state Constitution to provide that "[n]o assessment shall be imposed on any parcel which exceeds the reasonable cost of the proportional special benefit conferred on that parcel." (Cal. Const., art. XIII D, § 4, subd. (a).) Thus, **[****67]** were a city, in order to raise revenue for general purposes, to impose a charge to recover the amount by which the benefit conferred by a government improvement exceeds the cost, the charge would be a tax.

The majority here affords different treatment to the general revenue-raising measure at issue. It holds that cost is irrelevant, and that a charge labeled a "franchise fee" becomes a tax as to a utility's customers only to the extent the charge exceeds "the value" to the utility of "the property interests transferred" (maj. opn., *ante*, at p. 270), "the value of the franchise conveyed" (*ibid.*), or "the value of the franchise rights" (*id.* at pp. 270–271). Contrary to the majority's analysis, our prior decisions clearly do *not* provide support for the line the majority draws between a valid fee and a tax, or for its conclusion that the method the City used here to raise money for general purposes is, uniquely, not a tax. And because there is no existing authority for the majority's newly minted approach, the majority is incorrect that focusing on the fact the Recovery Portion is directly imposed by the City on SCE's customers "preclude[s]" the City from doing something it otherwise could, i.e., proving the charge **[****68]** is a fee rather than a tax by "establishing that [it] bears a reasonable relationship to the value of the property interest it conveyed to SCE." (*Id.* at p. 269.)

Third, there is no factual or legal basis for the majority's assumption that a utility, through price increases, *necessarily* can and will pass on to its customers charges it is legally required to pay. With respect to the sales tax, we have observed that a retailer "may choose simply to absorb the sales tax" imposed by statute instead of passing it on to its customers. (*Loeffler v. Target Corp.* (2014) 58 Cal.4th 1081, 1103 [171 Cal. Rptr. 3d 189, 324 P.3d 50].) A utility could make a similar business decision with respect to higher payments it has become contractually obligated to pay in exchange for its right to operate; it could, for reasons related to the marketplace, simply decline to pass the increase on to its customers.

Moreover, in order to pass charges on to customers through a price increase, a utility would have to apply for and obtain approval from the PUC. Under our Constitution, the PUC has both the power and the duty to "fix rates" for California public utilities (Cal. Const., art. XII, § 6), such that the **[*286]** charges they demand for service are "just and reasonable" (§ 451; see *Southern California Edison Co. v. Peevey* (2003) 31 Cal.4th 781, 792 [3 Cal. Rptr. 3d 703, 74 P.3d 795]). This constitutional power, we have observed, **[****69]** includes the "power to prevent a utility from passing on to the ratepayers unreasonable costs for materials and services." (*Pac. Tel. & Tel. Co. v. Public Utilities Com.* (1950) 34 Cal.2d 822, 826 [215 P.2d 441] (*Pac. Tel.*).) **[***890]** We have also **[**235]** observed that where "the safeguards provided by arms-length bargaining are absent," the PUC, in exercising its constitutional power, has "been vigilant to protect the rate-payers from excessive rates reflecting excessive payments." (*Ibid.*)

In one especially relevant example of its exercise of this power, the PUC disallowed, for purposes of a requested rate increase, contractual payments a utility made to its controlling parent company for

various services. (*Pac. Tel.*, *supra*, 34 Cal.2d at p. 825.) The contract between the two entities specified that the amount of the payment was 1 percent of the utility's gross receipts. (*Ibid.*) In disallowing these payments as a basis for a rate increase, the PUC reasoned that the utility "exercise[d] no real, untrammeled and independent judgment in its negotiations" with its parent company and that "arms-length bargaining" between the two entities was "not, in fact, engaged in, although ... in some instances" they had "made [an attempt] to simulate the same." (Dec. No. 42529 (1949) 48 Cal.P.U.C. 461, 470.) The PUC further reasoned that the formula for the amount **[****70]** of the payments—a "percentage of gross revenues"—was "a false measuring rod": it was "totally unrealistic and [bore] no rational relationship to the reasonable cost of services rendered, reflect[ed] no causal or proximate connection or relationship between payments made thereunder and reasonable value of the services rendered and [was] neither supported by law, logic nor elementary common sense." (*Id.* at p. 472.) The utility's "payment of these excessive amounts," the PUC concluded, did not support the utility's request for a rate increase. (*Ibid.*)

Nothing would preclude the PUC from finding, for similar reasons, that it would not be just and reasonable for a utility, having agreed to pay a city double what it had paid for many years as compensation for using public property, to raise its rates in order to recoup from customers the doubled cost to which it agreed. Nor would anything preclude the PUC from finding that where the utility's duty to pay the increase was expressly made contingent on the utility's ability to recoup the expense from its customers, the increase was not "based on bona fide negotiations." (Maj. opn., *ante*, at p. 270.) Indeed, the majority rightly questions whether "the negotiations" **[****71]** here, which placed responsibility for paying the Recovery Portion on SCE's ratepayers and imposed no financial responsibility for that charge on SCE, reasonably reflect "the value" of what SCE received from the City. (*Id.* at p. 271.) And where the payment is set as a percentage of a utility's gross annual receipts, the PUC could also find that the formula is "a false measuring rod," i.e., it "bears **[*287]** no rational relationship to" the value of what the utility is receiving. (Dec. No. 42529, *supra*, 48 Cal.P.U.C. at p. 472.) In short, had SCE agreed to pay the Recovery Portion and then applied for a rate increase to pass on the charge to its customers, the PUC could have "disallow[ed] expenditures that it [found] unreasonable, thus insuring that any excessive costs [would] be met from [SCE's] profits. The effect of the payments on rates and services [would have been] no greater than in any other case where the [PUC] and management disagree on the reasonableness of an expenditure, and the management concludes that it is good business judgment to make such payments from its profits despite the fact that it cannot recoup them from its rate payers." (*Pac. Tel.*, *supra*, 34 Cal.2d at p. 832.) **[***891]** The majority ignores this precedent in assuming that **[****72]** a utility, through rate increases, necessarily can pass on to its customers any and all charges it has agreed to pay.

Indeed, the facts in the record indicate that SCE and the City did not share the majority's assumption. As the majority explains, the record shows "that SCE was not willing to assume the burden of paying" the additional 1 percent the City demanded, and "was willing only to collect the charge from its customers and remit the revenue to the City." (Maj. opn., *ante*, at p. 271.) It is for this reason that the agreement and the Ordinance provided that "the charge would be collected from ratepayers" and "would become payable only if SCE obtained the PUC's consent to include the surcharge as a customer surcharge." (Maj. opn., *ante*, at p. 271.) Moreover, as explained **[**236]** above, although the agreement required SCE to *obtain* PUC approval by December 31, 2002, SCE and the City agreed not even to *apply* for PUC approval until over two years later, in March 2005. According to a letter from the City to SCE, the delay was "[b]ased" in part "upon the tremendous uncertainty associated with the end of the [California] deregulation transition period ... and the volatility and

uncertainty of rates." Were it true, as the **[****73]** majority assumes, that SCE necessarily could have passed on the Recovery Portion to its customers, there would have been no reason for SCE to have refused legal responsibility for the proposed charge, for SCE and the City to have made the Recovery Portion contingent on "the PUC's consent to include the surcharge as a customer surcharge" (maj. opn., *ante*, at p. 271), or for SCE and the City to have delayed submission of the application for PUC approval. In other words, as plaintiffs assert, the facts in the record indicate that, unlike the majority, SCE and the City did not consider the PUC to be "a mere rubber stamp of financial burdens" SCE and the City "might try to impose upon utility users."

Fourth, the majority's approach, in addition to being inconsistent with our case law, is fundamentally inconsistent with Proposition 218's purpose. The majority, partially quoting the first two sentences of Proposition 218's findings and declarations, suggests that the voters were "concern[ed] with excessive fees, not fees in general." (Maj. opn., *ante*, at p. 262.) But the **[*288]** majority ignores the very next sentence of the findings and declarations: "This measure protects taxpayers by limiting the methods by **[****74]** which local governments exact revenue from taxpayers without their consent." (Prop. 218, § 2, reprinted at 1 Stats. 1996, p. A-295.) Proposition 218 expressly provided that article XIII C "shall be liberally construed to effectuate" this goal, i.e., "limiting local government revenue and enhancing taxpayer consent." (Prop. 218, § 5, reprinted at Historical Notes, 2B West's Ann. Cal. Const. (2013), foll. Art. XIII C, § 1, at p. 363.) The majority also ignores the ballot arguments in favor of Proposition 218, which (1) warned that "politicians [had] created a loophole in the law that allows them to raise taxes without voter approval by calling taxes 'assessments' and 'fees,'" and (2) stated that "Proposition 218 guarantees your right to vote on local tax increases—even when they are called something else, like 'assessments' or 'fees' and imposed on homeowners." (Ballot Pamp., Gen. Elec. (Nov. 5, 1996) argument in favor of Prop. 218, p. 76.) The record here shows that the City imposed the Recovery Portion on SCE's customers in order to raise revenue for **[***892]** general governmental purposes. The charge clearly constitutes one of the "'revenue-producing mechanisms'" that, as the majority explains, local governments **[****75]** adopted because "voters restricted [their] taxing authority." (Maj. opn., *ante*, at p. 266.) By holding that the City may raise revenue from SCE's consumers by calling the charge a franchise fee, even though those paying the fee receive no franchise, the majority sanctions this obvious evasion of Proposition 218 and allows the City to use the utility as a middleman for what is a tax disguised as a fee, in derogation of Proposition 218's express purpose and liberal construction clause.

Fifth, the majority's concern about the *possible* treatment of charges passed on to ratepayers by a utility's "unilateral decision" does not justify its refusal to recognize the significance under our case law of the fact that SCE's customers do not receive franchise rights in exchange for paying the Recovery Portion, and its focus instead on the value of those rights to an entity that is not paying for them. (Maj. opn., *ante*, at p. 269.) Initially, the facts of this case do not present that scenario, and holding here that the Recovery Portion is a tax rather than a franchise fee because SCE's customers receive no franchise rights in return for their payment would not preclude ratepayers from arguing *in a* ***[****76]*** *future case* that we should *expand* California Constitution, article XIII C's reach to franchise charges that a utility, having contractually agreed to pay, unilaterally decides to pass on to its customers. The majority's concern about this scenario does not justify its *contraction* of article XIII C so as to make it inapplicable where it clearly does and should apply: direct **[**237]** government imposition of a charge on those who receive nothing in return.

In any event, the majority's analysis is contrary to decades of California case law establishing that, for

purposes of determining whether a charge is a tax or a fee as to the payor, charges passed on to the payor by the unilateral **[*289]** and discretionary decision of some third party are, in fact, different from charges legally imposed on the payor by the government. (E.g. *Western States*, *supra*, 19 Cal.3d at pp. 217–218; *Western L. Co. v. State Bd. of Equalization* (1938) 11 Cal.2d 156, 162–164 [78 P.2d 731] (*Western L.*).) The majority simply ignores these cases in reasoning that the two types of charges must be treated the same. (Maj. opn., *ante*, at p. 269.)

Indeed, the effect of the majority's approach is to allow claims that this long-standing and unbroken line of precedent precludes. Under that precedent, a charge that is not imposed by the government on the payor—either directly or by inclusion of a **[****77]** *mandatory* pass-on provision—and that is passed on to the payor by the unilateral and discretionary decision of some third party, is not a tax, even if it is "implicit" (maj. opn., *ante*, at p. 269) that the third party on whom the charge is imposed will pass it on to the payor. Notably, in *Howard Jarvis Taxpayers Assn. v. City of Fresno* (2005) 127 Cal.App.4th 914, 927 [26 Cal. Rptr. 3d 153], the court applied this principle to hold that a charge the City of Fresno had imposed on a utility, and that the utility had passed on to its customers, was not "a tax *on utilities consumers*" within the meaning of California Constitution article XIII C. The court explained that "[a]n exaction imposed on any particular ratepayer in an amount established in the discretion of the utility … is not an exercise of the city's taxing power." (*Howard Jarvis*, at p. 927.) **[***893]** Applying this principle, it held that the charge at issue was "not a tax upon consumers of utilities" because the legislation establishing it placed "the 'levy' directly upon the utility" and did "not require[]" the utility "to recover the … fee from ratepayers in any particular manner." (*Ibid.*) [5]

Courts applying the federal Constitution's prohibition on state taxation of the federal government have used the same analysis specifically with respect to so-called utility **[****78]** franchise fees. In *U.S. v. City of Leavenworth, Kan.* (D.Kan. 1977) 443 F.Supp. 274, 280–281, a city ordinance provided that an electrical **[*290]** utility would pay, as a franchise fee, "'three percent (3%) of its gross revenue from the sale of electric energy to all customers within city limits, and the utility in turn billed its customers 'a three percent franchise fee.' The United States, as a purchaser of electricity from the utility, argued that the fee it had been charged constituted 'an impermissible tax upon the federal government.' (*Id.* at p. 281.) The court rejected the argument because the ordinance imposed '[l]egal liability for payment of the exaction' on the utility and 'contain[ed] no provisions for collection directly from' the utility's customers and 'no requirement that [the utility] pass on to' its customers 'all or any part of the financial burden of the franchise fee.'" (*Id.* at p. 282.)

Following this decision, in *U.S. v. State of Md.* (D.Md. 1979) 471 F.Supp. 1030, 1032, another federal court rejected the claim of **[**238]** the United States, again as a purchaser of electricity, that an environmental surcharge the State of Maryland had imposed was a constitutionally invalid tax on the federal government. Although agreeing that the surcharge was a tax—i.e., "an 'enforced contribution to provide for the support of

[5] See ***Western States*, *supra*, 19 Cal.3d at page 217** (charge imposed on nonprofit corporation providing services to banks, that was "recoup[ed]" from banks "by raising" fees, was not a tax on the banks because local ordinance imposing the charge did not "requir[e]" that it "be passed on" to customers); ***Western L.*, *supra*, 11 Cal.2d at page 163** (state sales tax is not a tax on consumers even though retailers pass it on to consumers, because tax statute laid "the tax solely on the retailer"); ***Occidental Life*, *supra*, 135 Cal.App.3d at page 849** (sales tax on retailer is a tax on purchasers from whom retailer recoups the charge only if it "'*must*,'" "'by its terms,'" "'be passed on to the purchaser'"); ***Rio Grande Oil Co. v. Los Angeles* (1935) 6 Cal.App.2d 200, 201 [44 P.2d 451]** (charge on sale of gasoline is a tax as to the seller, but not as to the consumer, even though statute allows sellers to add the charge to the sale process and "'in effect collect the tax from the consumer'"); see also ***Bank of America*, *supra*, 209 Cal.App.2d at pages 792–793** (bank's statutory liability for use tax on checks it sold to customers, which by statute was imposed upon the purchaser rather than the seller, was not a tax on the bank).

[the] government'" (*id.* at p. 1036)—the court **[****79]** denied relief because the surcharge was not a tax *on the federal government* (*id.* at pp. 1037–1041). By statute, the court first reasoned, the surcharge was "directly imposed on the electric companies" and was their "'direct obligation.'" (*Id.* at p. 1038.) As to whether the surcharge was a tax on customers of the electric companies, the determinative factor, the court explained, was whether the law "*required* [the companies] to pass [the charge] on to their customers for payment." (*Ibid.*, italics added.) The surcharge was not a tax on the federal government, the court then held, because the utilities, although "[authorized] ... to pass [it] on to their customers" (*id.* at p. 1039), were "not required" by law to do so (*id.* at p. 1038.) Notably, in reaching this conclusion, the **[***894]** court both followed the Kansas franchise fee decision discussed above and distinguished a Minnesota decision holding that "a franchise fee imposed" upon a gas company by a city *was* an unconstitutional tax "as applied to purchases of natural gas by an agency of the United States ... because the city *required* the utility to add the franchise tax to its rates." (*Id.* at p. 1040, italics added.)

This long-standing and consistent precedent from both California and elsewhere no doubt explains why, as the majority **[****80]** notes, "plaintiffs do not contend" in this case that the Initial Term Fee "is a tax" that was imposed in violation of the state Constitution. (Maj. opn., *ante*, at p. 269.) However, under the majority's holding that charges passed on by utilities are the same, for tax purposes, as charges imposed directly on ratepayers, plaintiffs now can, and surely will, make this argument. Indeed, the majority expressly states that the differences between the Initial Term Fee and the Recovery **[*291]** Portion are "unrelated to the character or validity" of these charges. (Maj. opn., *ante*, at p. 269, fn. 10.) Thus, plaintiffs may now allege that even the Initial Term Fee is a tax because it is passed on to them through SCE's rates and it exceeds the value of the franchise rights SCE received. [6]

In the same way, the majority's holding renders both the Broughton Act and the 1937 Act vulnerable to constitutional challenge. Notwithstanding our holding almost 100 years ago that the fees utilities must pay under the Broughton Act are *not* taxes under the state Constitution (*Tulare*, *supra*, 188 Cal. at p. 670), under the majority's holding, both these payments and similar payments required by the 1937 Act are invalid taxes to the extent **[****81]** they are passed on by utilities to customers through rates and they exceed the value of the franchise rights conveyed. Notably, nothing suggests that these statutorily established charges reflect the value of a franchise. Moreover, the majority's holding that the Constitution *requires* courts to determine the value of a franchise would seem to render the 1937 Act unconstitutional insofar as it provides that "[n]o franchise granted under this chapter shall ever be given any value before any court ... in any proceeding of any character in excess of the cost to the grantee of the necessary publication and any other sum paid by it to the municipality therefor at the time of acquisition." (§ 6263.)

Finally, as a practical matter, the majority's approach is problematic in a number of ways. The majority mentions one: the inherent "difficulties" in "determining the value of a franchise." (Maj. opn., *ante*, at p. 269.) The majority references several factors it says may bear on value: "market forces" and **[**239]** "bona fide negotiations." (*Id.* at pp. 269–270.) It suggests there may be "other indicia of value" (*id.* at p. 270), but it declines to offer any

[6] According to the majority, the Ordinance's treatment of the Recovery Portion "was driven by the PUC's effort to ensure that a local government's higher-than-average charges are not unfairly imposed on ratepayers outside of the local government's jurisdiction." (Maj. opn., *ante*, at p. 269, fn. 10.) As far as the record discloses, this is true only in the sense that the separate billing procedure the PUC permits, but does not require, utilities to employ enabled the City *to use SCE* to collect the additional 1 percent—which is a disguised tax—only from the City's taxpayers, and not from those who do not pay taxes to the City.

guidance as to what those other indicia might be, instead "leav[ing] th[e] issue to be ad **[***895]** dressed **[****82]** by expert opinion and subsequent case law" (*id.* at p. 270, fn. 11). But as we noted over 100 years ago, "[t]here are few subjects on which witnesses are more likely to differ than that of the value of property, and few are more difficult of satisfactory determination." (*O'Hara v. Wattson* (1916) 172 Cal. 525, 528 [157 P. 608].) We also long ago recognized that "the value of franchises may be as various as the objects for which they exist, and the methods by which they are employed, and may change with every moment of time." (*San Jose Gas Co. v. January* (1881) 57 Cal. 614, 616.) There are also uncertainties **[*292]** regarding the other side of the majority's equation, i.e., the amount of the payment. As we have recognized, a utility's annual receipts are "a most indefinite," "elusive," and "uncertain quantity" that is "dependent upon many conditions." (*Thompson v. Board of Supervisors* (1896) 111 Cal. 553, 558 [44 P. 230].) Moreover, the total compensation the Ordinance requires for granting the franchise is *2* percent of SCE's "Gross Annual Receipts." Given the majority's view that all costs are necessarily passed along to customers, this entire 2 percent—not just the one percent Recovery Portion—will have to be considered in determining the amount of the charge and whether it bears a "reasonable relationship" to "value." (Maj. opn., *ante*, at p. 254.) And even were it possible to determine **[****83]** with any certainty the value of the franchise and the amount of the charge, the majority fails to explain what constitutes a "reasonable relationship" between these amounts. (*Ibid.*) Presumably, exact correspondence is unnecessary, but what is necessary, the majority does not say. As we have explained, "the question whether a contract" that impacts a utility's rates and services "is reasonable is one on which, except in clear cases, there is bound to be conflicting evidence and considerable leeway for conflicting opinions." (*Pac. Tel.*, *supra*, 34 Cal.2d at p. 828.)

Perhaps to justify its failure to offer any real guidance on this admittedly "difficult[]" issue (maj. opn., *ante*, at p. 269), the majority notes that "[t]he parties' briefs do not consider the means by which franchise rights might be valued." (*Id.* at p. 270, fn. 11.) But there is a simple explanation for this silence: Neither party has suggested that the value of the franchise should even be a consideration in determining whether the Recovery Portion is a tax or a fee. On the contrary, upon the court's inquiry at oral argument, the City expressly disclaimed this approach. It asserted that, as to fees voluntarily negotiated for the use of government property, courts should not be concerned **[****84]** about whether the fee is reasonably related to the benefits, and should not second-guess what a utility is willing to pay for its use of public property. Nor, the City argued, are courts well positioned to second-guess the economic decisions of other branches of government. The City also noted, like the majority, the inherent difficulties of making this kind of determination, asking rhetorically, "what's the fair and rational rate of a parking meter," or "to rent a duck boat on the lake at the county fairgrounds," or "to rent a meeting room at the community center?" Bringing the question back to the facts of this case, the City rightly asked, "What are the limits of [a municipality's] ability to monetize its rights of way?" Instead, the City urges us to follow "well settled" law by focusing on the "legal incidence" of the Recovery Portion, "i.e., who has a legal duty to pay it." This test, the City asserts, is "logical" **[***896]** and "predictable," is "within the competence of courts to distinguish fees from taxes," and "better serves the needs of courts and the society they serve."

[*293]

I agree with the City. Indeed, regarding the City's comment about monetizing its rights of way, we have explained, **[****85]** as noted above, that a municipality's power to permit utilities to use public property "on such terms as are satisfactory to it" includes the power to "'require the payment of such compensation as seems proper,'" and that courts therefore do not "question whether or not the amount charged is a reasonable charge." (*Sunset*,

supra, 161 Cal. at p. 285.) It is for these reasons, among others, **[**240]** that I focus my analysis, as our precedent directs, on the legal incidence of the Recovery Portion, and do not endorse a vague, unprecedented, unworkable, and standardless test that requires courts to determine the extent to which a charge "bear[s] a reasonable relationship to the value of the property interests transferred" (maj. opn., *ante*, at p. 270), "the value of the franchise conveyed" (*ibid.*), or "the value of the franchise rights" (*id.* at p. 271).

There are myriad other ways in which the majority's approach—determining whether the amount of the charge bears a reasonable relationship to the value of the franchise conveyed—is problematic. It essentially requires courts to determine the adequacy of consideration, in contravention of the well-established "'general contract principle that courts should *not* inquire into the adequacy of consideration.'" **[****86]** (*Foley v. Interactive Data Corp.* (1988) 47 Cal.3d 654, 679 [254 Cal. Rptr. 211, 765 P.2d 373], italics added; see *Whelan v. Swain* (1901) 132 Cal. 389, 391 [64 P. 560] ["'The law does not weigh the *quantum* of the consideration'"].) The majority's approach also essentially transfers responsibility for determining the reasonableness of a utility's rates from the PUC to the courts, thus usurping the PUC's *constitutional* power and duty to "fix [utility] rates" (Cal. Const., art. XII, § 6) and supplanting the PUC's far superior ability, relative to courts, to review the reasonableness of rates (*Hansen v. City of San Buenaventura* (1986) 42 Cal.3d 1172, 1183 [233 Cal. Rptr. 22, 729 P.2d 186] ["judicial review of rates is not comparable to regulation by the P.U.C."]; *County of Inyo v. Public Utilities Com.* (1980) 26 Cal.3d 154, 159–160 [161 Cal. Rptr. 172, 604 P.2d 566] ["PUC maintains an expert, independent staff to investigate rate requests" and "renders an independent decision on each record that it examines," whereas courts "must limit ... review to the rates established by the involved utility and must depend upon the expert testimony presented by the parties"]; *Sale v. Railroad Commission* (1940) 15 Cal.2d 612, 617–618 [104 P.2d 38]).

Given these difficulties and the lack of authority for the majority's approach, I disagree with the majority's conclusion that the Recovery Portion is not a tax unless it exceeds the reasonable value of the franchise. Instead, based on long-standing precedent, the purpose of Proposition 218 to limit local government revenue and enhance taxpayer consent, and the command **[*294]** that we liberally **[****87]** construe California Constitution, article XIII C to effectuate this purpose, I conclude that the Recovery Portion is a tax that the City may not impose without voter approval. I therefore dissent.

Case Summary

Procedural Posture

Plaintiff cities sought review of a judgment of the Court of Appeal of California, Second Appellate District, Division Three, holding that Cal. Water Code §§ 13241 and 13263 required a regional water control quality board to take into account economic considerations when it adopted water quality standards in a basin plan but not when the board set specific pollutant restrictions in wastewater discharge permits intended to satisfy those standards.

Overview

The cities owned three treatment plants that discharged wastewater under National Pollutant Discharge Elimination System permits issued by the regional board. The court held that whether the regional board should have complied with Cal. Water Code §§ 13263 and 13241 of California's Porter-Cologne Water Quality Control Act, Cal. Water Code § 13000 et seq., by taking into account "economic considerations," such as the costs the permit holder would incur to comply with the numeric pollutant restrictions set out in the permits depended on whether those restrictions met or exceeded the requirements of the federal Clean Water Act, 33 U.S.C.S. § 1251 et seq. To comport

with the principles of federal supremacy, California law could not authorize California's regional boards to allow the discharge of pollutants into the navigable waters of the United States in concentrations that would exceed the mandates of federal law. The federal Clean Water Act did not prohibit a state, when imposing effluent limitations that were more stringent than required by federal law, from taking into account the economic effects of doing so.

Outcome

The court affirmed the judgment of the court of appeal, reinstating the wastewater discharge permits to the extent that the specified numeric limitations on chemical pollutants were necessary to satisfy federal Clean Water Act requirements for treated wastewater. The court remanded for further proceedings to determine whether the pollutant limitations in the permits met or exceeded federal standards.

Environmental Law > Water Quality > General Overview

HN3[] **Clean Water Act, Water Quality Standards**

The Clean Water Act, 33 U.S.C.S. § 1251 et seq., provides for two sets of water quality measures. Effluent limitations are promulgated by the Environmental Protection Agency and restrict the quantities, rates, and concentrations of specified substances which are discharged from point sources. 33 U.S.C.S. §§ 1311, 1314. Water quality

standards are, in general, promulgated by the states and establish the desired condition of a waterway. 33 U.S.C.S. § 1313. These standards supplement effluent limitations so that numerous point sources, despite individual compliance with effluent limitations, may be further regulated to prevent water quality from falling below acceptable levels.

Governments > Legislation > Interpretation

HN9[] Legislation, Interpretation

When construing any statute, the reviewing court's task is to determine the legislature's intent when it enacted the statute so that the court may adopt the construction that best effectuates the purpose of the law. In doing this, the court looks to the statutory language, which ordinarily is the most reliable indicator of legislative intent.

Environmental Law > ... > Enforcement > Discharge Permits > Effluent Limitations

Environmental Law > Water Quality > General Overview

HN10[] Discharge Permits, Effluent Limitations

Cal. Water Code § 13263 directs regional boards, when issuing wastewater discharge permits, to take into account various factors including those set out in Cal. Water Code § 13241. Listed among the § 13241 factors is economic considerations. Cal. Water Code § 13241(d).

Environmental Law > ... > Enforcement > Discharge Permits > Effluent Limitations

Environmental Law > Water Quality > General Overview

HN11[] Discharge Permits, Effluent Limitations

Cal. Water Code § 13377 specifies that wastewater discharge permits issued by California's regional boards must meet the federal standards set by federal law. In effect, § 13377 forbids a regional board's consideration of any economic hardship on the part of the permit holder if doing so would result in the dilution of the requirements set by Congress in the Clean Water Act. That act prohibits the discharge of pollutants into the navigable waters of the United States unless there is compliance with federal law, 33 U.S.C.S. § 1311(a), and publicly operated wastewater treatment plants must comply with the act's clean water standards, regardless of cost. 33 U.S.C.S. §§ 1311(a), (b)(1)(B), (C), 1342(a)(1), (3).

Constitutional Law > Supremacy Clause > General Overview

Environmental Law > Water Quality > General Overview

HN12[] Constitutional Law, Supremacy Clause

Because Cal. Water Code § 13263 cannot authorize what federal law forbids, it cannot authorize a regional board, when issuing a wastewater discharge permit, to use compliance costs to justify pollutant restrictions that do not comply with federal clean water standards. Such a construction of § 13263 would not only be inconsistent with federal law, it would also be inconsistent with the Legislature's declaration in Cal. Water Code § 13377 that all discharged wastewater must satisfy federal standards. Moreover, under the federal Constitution's Supremacy Clause, U.S. Const. art. VI, cl. 2, a state law that conflicts with federal law is without effect. To comport with the principles of federal supremacy, California law cannot authorize the state's regional boards to allow the discharge of pollutants into the navigable waters of the United States in concentrations that would exceed the

mandates of federal law.

Environmental Law > ... > Enforcement > Discharge Permits > Effluent Limitations

Environmental Law > Water Quality > General Overview

Environmental Law > ... > Clean Water Act > Enforcement > General Overview

HN13[] Discharge Permits, Effluent Limitations

The federal Clean Water Act, 33 U.S.C.S. § 1251 et seq., reserves to the states significant aspects of water quality policy, 33 U.S.C.S. § 1251(b), and it specifically grants the states authority to "enforce any effluent limitation" that is not "less stringent" than the federal standard, 33 U.S.C.S. § 1370. It does not prescribe or restrict the factors that a state may consider when exercising this reserved authority, and thus it does not prohibit a state-when imposing effluent limitations that are more stringent than required by federal law-from taking into account the economic effects of doing so.

Headnotes/Syllabus

Summary

CALIFORNIA OFFICIAL REPORTS SUMMARY

The trial court ruled that California law required a regional water quality control board to weigh the economic burden on a wastewater treatment facility against the expected environmental benefits of reducing pollutants in the wastewater discharge. The cities owned three treatment plants that discharged wastewater under National Pollutant Discharge Elimination System permits issued by the regional board. (Superior Court of Los Angeles County, Nos. BS060960 and BS060957, Dzintra I. Janavs, Judge.) The Court of Appeal, Second Dist., Div. Three, Nos. B150912, B151175 and B152562, concluded that Wat. Code, §§ 13241 and 13263, required a regional board to take into account "economic considerations" when it adopted water quality standards in a basin plan but not when the regional board set specific pollutant restrictions in wastewater discharge permits intended to satisfy those standards.

The Supreme Court affirmed the judgment of the Court of Appeal, reinstating the wastewater discharge permits in part and remanding for further proceedings. The court held that whether the regional board should have complied with Wat. Code, §§ 13263 and 13241, of California's Porter-Cologne Water Quality Control Act, Wat. Code, § 13000 et seq., by taking into account "economic considerations," such as the costs the permit holder would incur to comply with the numeric pollutant restrictions set out in the permits, depended on whether those restrictions met or exceeded the requirements of the federal Clean Water Act, 33 U.S.C. § 1251 et seq. To comport with the principles of federal supremacy, California law could not authorize California's regional boards to allow the discharge of pollutants into the navigable waters of the United States in concentrations that would exceed the mandates of federal law. The federal Clean Water Act did not prohibit a state, when imposing effluent limitations that were more stringent than required by **[*614]** federal law, from taking into account the economic effects of doing so. (Opinion by Kennard, J., with George, C. J., Baxter, Werdegar, Chin, and Moreno, JJ., concurring. Concurring opinion by Brown, J. (see p. 629).)

Headnotes

CALIFORNIA OFFICIAL REPORTS HEADNOTES

Classified to California Digest of Official Reports

CA(1)[] (1)

Pollution and Conservation Laws § 5—Water—"Basin Plans."

Whereas the State Water Resources Control Board establishes statewide policy for water quality control, Wat. Code, § 13140, the regional boards formulate and adopt water quality control plans for all areas within a region, Wat. Code, § 13240. Under Wat. Code, § 13050, subd. (j), the regional boards' water quality plans, called "basin plans," must address the beneficial uses to be protected as well as water quality objectives, and they must establish a program of implementation. Basin plans must be consistent with state policy for water quality control under Wat. Code, § 13240.

CA(2)[] (2)

Pollution and Conservation Laws § 5—Water—Federal and State Standards.

Under 33 U.S.C. § 1370, of the federal Clean Water Act, 33 U.S.C. § 1251 et seq., each state is free to enforce its own water quality laws so long as its effluent limitations are not less stringent than those set out in the Clean Water Act.

CA(3)[] (3)

Pollution and Conservation Laws § 5—Water—Federal and State Standards.

The Clean Water Act, 33 U.S.C. § 1251 et seq., provides for two sets of water quality measures. Pursuant to 33 U.S.C. §§ 1311 and 1314, effluent limitations are promulgated by the Environmental Protection Agency and restrict the quantities, rates, and concentrations of specified substances which are discharged from point sources. Water quality standards are, in general, promulgated by the states and establish the desired condition of a waterway under 33 U.S.C. § 1313. These standards supplement effluent limitations so that numerous point sources, despite individual compliance with effluent limitations, may be further regulated to prevent water quality from falling below acceptable levels.

CA(4)[] (4)

Pollution and Conservation Laws § 5—Water—Federal and State Standards.

The Environmental Protection Agency (EPA) provides states with substantial guidance in the drafting of water quality standards. Moreover, the Clean Water Act, 33 U.S.C. § 1251 et seq., requires, inter alia, that state authorities periodically review water quality **[*615]** standards and secure the EPA's approval of any revisions in the standards. If the EPA recommends changes to the standards and the state fails to comply with that recommendation, 33 U.S.C. § 1313(c), authorizes the EPA to promulgate water quality standards for the state.

CA(5)[] (5)

Pollution and Conservation Laws § 5—Water—National Pollutant Discharge Elimination System.

Part of the federal Clean Water Act, 33 U.S.C. § 1251 et seq., is the National Pollutant Discharge Elimination System (NPDES), the primary means for enforcing effluent limitations and standards under the Clean Water Act. Title 33 U.S.C. § 1342(a), (b), of the NPDES sets out the conditions under which the federal Environmental Protection Agency or a state with an approved water quality control program can issue permits for the discharge of pollutants in wastewater. Under California law, Wat. Code, § 13374, wastewater discharge requirements established by the regional boards are the equivalent of the NPDES permits required by federal law.

CA(6)[] (6)

Statutes § 21—Construction—Legislative Intent.

When construing any statute, the reviewing court's task is to determine the Legislature's intent when it enacted the statute so that the court may adopt the construction that best effectuates the purpose of the law. In doing this, the court looks to the statutory language, which ordinarily is the most reliable indicator of legislative intent.

CA(7)[⬇] (7)

Pollution and Conservation Laws § 5—Water—Wastewater Discharge Permits—Economic Considerations.

Wat. Code, § 13263, directs regional boards, when issuing wastewater discharge permits, to take into account various factors, including those set out in Wat. Code, § 13241. Listed among the § 13241 factors is economic considerations, in § 13241, subd. (d).

CA(8)[⬇] (8)

Pollution and Conservation Laws § 5—Water—Wastewater Discharge Permits—Economic Considerations.

Wat. Code, § 13377, specifies that wastewater discharge permits issued by California's regional boards must meet the federal standards set by federal law. In effect, § 13377 forbids a regional board's consideration of any economic hardship on the part of the permit holder if doing so would result in the dilution of the requirements set by Congress in the Clean Water Act. That act prohibits the discharge of pollutants into the navigable waters of **[*616]** the United States unless there is compliance with federal law (33 U.S.C. § 1311(a)), and publicly operated wastewater treatment plants must comply with the act's clean water standards under 33 U.S.C. §§ 1311(a), (b)(1)(B) and (C), 1342(a)(1) and (3), regardless of cost.

CA(9)[⬇] (9)

Pollution and Conservation Laws § 5—Water—Wastewater Discharge Permits—Economic Considerations.

Because Wat. Code, § 13263, cannot authorize what federal law forbids, it cannot authorize a regional board, when issuing a wastewater discharge permit, to use compliance costs to justify pollutant restrictions that do not comply with federal clean water standards. Such a construction of § 13263 would not only be inconsistent with federal law, it would also be inconsistent with the Legislature's declaration in Wat. Code, § 13377, that all discharged wastewater must satisfy federal standards. Moreover, under the federal Constitution's supremacy clause, U.S. Const., art. VI, a state law that conflicts with federal law is without effect. To comport with the principles of federal supremacy, California law cannot authorize the state's regional boards to allow the discharge of pollutants into the navigable waters of the United States in concentrations that would exceed the mandates of federal law.

CA(10)[⬇] (10)

Pollution and Conservation Laws § 5—Water—Federal and State Standards.

The federal Clean Water Act, 33 U.S.C. § 1251 et seq., reserves to the states significant aspects of water quality policy under 33 U.S.C. § 1251(b), and it specifically grants the states authority to enforce any effluent limitation that is not less stringent than the federal standard under 33 U.S.C. § 1370. It does not prescribe or restrict the factors that a state may consider when exercising this reserved authority, and thus it does not prohibit a state—when imposing effluent limitations that are more stringent than required by federal law—from taking into account the economic effects of doing so. Thus, a regional board, when issuing a wastewater discharge permit, may not consider economic factors to justify imposing pollutant restrictions that

are less stringent than the applicable federal standards require. When, however, a regional board is considering whether to make the pollutant restrictions in a wastewater discharge permit more stringent than federal law requires, California law allows the board to take into account economic factors, including the wastewater discharger's cost of compliance.

[4 Witkin, Summary of Cal. Law (9th ed. 1987) Real Property, §§ 68, 69.]

Counsel: Bill Lockyer, Attorney General, Manuel M. Medeiros, State Solicitor General, Richard M. Frank and Tom Greene, Chief Assistant Attorneys General, Mary E. Hackenbracht, Assistant Attorney General, Marilyn H. Levin and Gregory J. Newmark, Deputy Attorneys General, for Defendants and Appellants.

David S. Beckman and Dan L. Gildor for Natural Resources Defense Counsel, Butte Environmental Council, California Coastkeeper Alliance, CalTrout, Clean Water Action, Clean Water Fund, Coalition on the Environment and Jewish Life of Southern California, Coast Action Group, Defend the Bay, Ecological Rights Foundation, Environment in the Public Interest, Environmental Defense Center, Heal the Bay, Los Angeles Interfaith Environment Council, Ocean Conservancy, Orange County Coastkeeper, San Diego Baykeeper, Santa Barbara Channelkeeper, Santa Monica Baykeeper, Southern California Watershed Alliance, Ventura Coastkeeper, Waterkeeper Alliance, Waterkeepers Northern California, Westside Aquatics, Inc., and Wishtoyo Foundation as Amici Curiae on behalf of Defendants and Appellants.

Downey, Brand, Seymour & Rohwer, Downey Brand, Melissa A. Thorme, Jeffrey S. Galvin, Nicole E. Granquist and Cassandra M. Ferrannini for Plaintiffs and Appellants.

Dennis A. Barlow, City Attorney, and Carolyn A. Barnes, Assistant City Attorney, for Defendant and Appellant City of Burbank.

Rockard J. Delgadillo, City Attorney, and Christopher M. Westhoff, Assistant City Attorney, for Plaintiff and Appellant City of Los Angeles.

Judges: Kennard, J., with George, C. J., Baxter, Werdegar, Chin, and Moreno, JJ., concurring. Concurring opinion by Brown, J.

Opinion by: KENNARD **[**864]**

Opinion

KENNARD, J.—Federal law establishes national water quality standards but allows the states to enforce their own water quality laws so long as they comply with federal standards. Operating within this federal-state framework, California's nine Regional Water Quality Control Boards establish water quality policy. They also issue permits for the discharge of treated wastewater; these permits specify the maximum allowable concentration of chemical **[****4]** pollutants in the discharged wastewater.

The question here is this: When a regional board issues a permit to a wastewater treatment facility, must the board take into account the facility's costs of complying with the board's restrictions on pollutants in the wastewater to be discharged? The trial court ruled that California law required a regional board to weigh the economic burden on the facility against the expected environmental benefits of reducing pollutants in the wastewater discharge. The Court of Appeal disagreed. On petitions by the municipal operators of three wastewater treatment facilities, we granted review.

We reach the following conclusions: Because both California law and federal law require regional boards to comply with federal clean water standards, and because the supremacy clause of the United States Constitution requires state law to yield to federal law, a regional board, when issuing a wastewater discharge permit, may not consider economic factors to justify imposing pollutant restrictions that are *less stringent* than the applicable federal standards require. When, however, a regional board is considering whether to make the pollutant restrictions in **[****5]** a wastewater discharge permit *more stringent* than federal law requires, California law allows the board to take into account economic **[**865]** factors, including the wastewater discharger's cost of compliance. We remand this case for further proceedings to determine whether the pollutant limitations in the permits challenged here meet or exceed federal standards.

[*619] I. Statutory Background

The quality of our nation's waters is governed by a "complex statutory and regulatory scheme ... that implicates both federal and state administrative responsibilities." (*PUD No. 1 of Jefferson County v. Washington Department of Ecology* (1994) 511 U.S. 700, 704 [128 L. Ed. 2d 716, 114 S. Ct. 1900].) We first discuss California law, then federal law.

A. California Law

In California, the controlling law is the Porter-Cologne Water Quality Control Act (Porter-Cologne Act), which was enacted in 1969. (Wat. Code, § 13000 et seq., added by Stats. 1969, ch. 482, § 18, p. 1051.) [1] Its goal is "to attain the highest water **[***307]** quality which is reasonable, considering all demands being made and to be made on those waters and the total values involved, beneficial and **[****6]** detrimental, economic and social, tangible and intangible." (§ 13000.) The task of accomplishing this belongs to the State Water Resources Control Board (State Board) and the nine Regional Water Quality Control Boards; together the State Board and the regional boards comprise "the principal state agencies with primary responsibility for the coordination and control of water quality." (§ 13001.) As relevant here, one of those regional boards oversees the Los Angeles region (the Los Angeles Regional Board). [2]

---

[1] Further undesignated statutory references are to the Water Code.

[2] The Los Angeles water region "comprises all basins draining into the Pacific Ocean between the southeasterly boundary, located in the westerly part of Ventura County, of the watershed of Rincon Creek and a line which coincides with the southeasterly boundary of Los Angeles County from the ocean to San Antonio Peak and follows thence the divide between San Gabriel River and Lytle Creek drainages to the divide between Sheep Creek and San Gabriel River

[****7] CA(1)[↑] (1) HN1[↑] Whereas the State Board establishes statewide policy for water quality control (§ 13140), the regional boards "formulate and adopt water quality control plans for all areas within [a] region" (§ 13240). The regional boards' water quality plans, called "basin plans," must address the beneficial uses to be protected as well as water quality objectives, and they must establish a program of implementation. (§ 13050, subd. (j).) Basin plans must be consistent with "state policy for water quality control." (§ 13240.)

B. Federal Law

In 1972, Congress enacted amendments (Pub.L. No. 92-500 (Oct. 18, 1972) 86 Stat. 816) to the Federal Water Pollution Control Act (33 U.S.C. § 1251 et seq.), which, as amended in 1977, is commonly known as the Clean [*620] Water Act. The Clean Water Act is a "comprehensive water quality statute designed to 'restore and maintain the chemical, physical, and biological integrity of the Nation's waters.' " (*PUD No. 1 of Jefferson County v. Washington Dept. of Ecology, supra*, 511 U.S. at p. 704, quoting 33 U.S.C. § 1251(a).) The act's national goal was to eliminate by the year 1985 [****8] "the discharge of pollutants into the navigable waters" of the United States. (33 U.S.C. § 1251(a)(1).) To accomplish this goal, the act established "effluent limitations," which are restrictions on the "quantities, rates, and concentrations of chemical, physical, biological, and other constituents"; these effluent limitations allow the discharge of pollutants only when the water has been satisfactorily treated to conform with federal water quality standards. (33 U.S.C. §§ 1311, 1362(11).)

CA(2)[↑] (2) HN2[↑] Under the federal Clean Water Act, each state is free to enforce its own water quality laws so long as its effluent limitations are not "less stringent" than those set out in the Clean Water Act. (33 U.S.C. § 1370.) This led the California Legislature in 1972 to amend the state's Porter-Cologne Act "to ensure consistency with the requirements for state programs implementing the Federal Water Pollution Control Act." (§ 13372.)

[**866] CA(3)[↑] (3) Roughly a dozen years ago, the United States Supreme Court, in *Arkansas v. Oklahoma* (1992) 503 U.S. 91 [117 L. Ed. 2d 239, 112 S. Ct. 1046], described the distinct roles of the state and federal agencies [****9] in enforcing water quality: "The Clean Water Act anticipates a partnership between the States and the Federal Government, animated by a shared objective: 'to restore and maintain the chemical, physical, and biological integrity of the Nation's waters.' 33 U.S.C. § 1251(a). Toward [***308] this end, HN3[↑] [the Clean Water Act] provides for two sets of water quality measures. 'Effluent limitations' are promulgated by the [Environmental Protection Agency (EPA)] and restrict the quantities, rates, and concentrations of specified substances which are discharged from point sources.[3] See §§ 1311, 1314. '[W]ater quality standards' are, in general, promulgated by the States and establish the desired condition of a waterway. See § 1313. These standards supplement effluent limitations 'so that numerous point sources, despite individual compliance with effluent limitations, may be further regulated to prevent water quality from falling below acceptable levels.' *EPA v. California ex rel. State Water Resources Control Bd.*, 426 U.S. 200, 205, n. 12 [48 L. Ed. 2d 578, 96 S. Ct. 2022, 2025, n. 12] (1976).

[****10] [*621] CA(4)[↑] (4) "HN5[↑] The EPA provides States with substantial guidance in the drafting of water quality standards. See generally 40 CFR pt. 131 (1991) (setting forth model water quality standards). Moreover, [the Clean Water Act] requires, *inter alia*, that state authorities periodically review water quality

drainages." (§ 13200, subd. (d).)

[3] A "HN4[↑] point source" is "any discernible, confined and discrete conveyance" and includes "any pipe, ditch, channel ... from which pollutants ... may be discharged." (33 U.S.C. § 1362 (14).)

standards and secure the EPA's approval of any revisions in the standards. If the EPA recommends changes to the standards and the State fails to comply with that recommendation, the Act authorizes the EPA to promulgate water quality standards for the State. 33 U.S.C. § 1313(c)." (*Arkansas v. Oklahoma, supra,* 503 U.S. at p. 101.)

CA(5)[↑] **(5)** HN6[↑] Part of the federal Clean Water Act is the National Pollutant Discharge Elimination System (NPDES), "[t]he primary means" for enforcing effluent limitations and standards under the Clean Water Act. (*Arkansas v. Oklahoma, supra,* 503 U.S. at p. 101.) The NPDES sets out the conditions under which the federal EPA or a state with an approved water quality control program can issue permits for the discharge of pollutants in wastewater. (33 U.S.C. § 1342(a) & (b).) In California, wastewater **[****11]** discharge requirements established by the regional boards are the equivalent of the NPDES permits required by federal law. (§ 13374.)

With this federal and state statutory framework in mind, we now turn to the facts of this case.

II. Factual Background

This case involves three publicly owned treatment plants that discharge wastewater under NPDES permits issued by the Los Angeles Regional Board.

The City of Los Angeles owns and operates the Donald C. Tillman Water Reclamation Plant (Tillman Plant), which serves the San Fernando Valley. The City of Los Angeles also owns and operates the Los Angeles-Glendale Water Reclamation Plant (Los Angeles-Glendale Plant), which processes wastewater from areas within the City of Los Angeles and the independent cities of Glendale and Burbank. Both the Tillman Plant and the Los Angeles-Glendale Plant discharge wastewater directly into the Los Angeles River, now a concrete-lined flood control channel that runs through the City of Los Angeles, ending at the Pacific Ocean. The State Board and the Los Angeles Regional Board consider the Los Angeles River to be a navigable water of the United States for purposes of the federal Clean Water **[****12]** Act.

The third plant, the Burbank Water Reclamation Plant (Burbank Plant), is owned and operated by the City of Bur **[***309]** bank, serving residents and businesses within that city. The Burbank Plant discharges wastewater into the Burbank Western Wash, which drains into the Los Angeles River.

[*622] All three plants, which together process hundreds of millions of gallons of sewage **[**867]** each day, are tertiary treatment facilities; that is, the treated wastewater they release is processed sufficiently to be safe not only for use in watering food crops, parks, and playgrounds, but also for human body contact during recreational water activities such as swimming.

In 1998, the Los Angeles Regional Board issued renewed NPDES permits to the three wastewater treatment facilities under a basin plan it had adopted four years earlier for the Los Angeles River and its estuary. That 1994 basin plan contained general narrative criteria pertaining to the existing and potential future beneficial uses and water quality objectives for the river and estuary. [4] The narrative criteria included municipal and domestic water supply, swimming and other recreational water uses, and fresh water habitat. The plan further provided: **[****13]** "All waters shall be maintained free of toxic substances in concentrations that are toxic to, or that produce detrimental physiological responses in human, plant, animal, or aquatic life." The 1998 permits sought to reduce these narrative criteria to specific numeric requirements setting daily maximum limitations for more than 30 pollutants present in

[4] This opinion uses the terms "narrative criteria" or descriptions, and "numeric criteria" or effluent limitations. Narrative criteria are broad statements of desirable water quality goals in a water quality plan. For example, "no toxic pollutants in toxic amounts" would be a narrative description. This contrasts with numeric criteria, which detail specific pollutant concentrations, such as parts per million of a particular substance.

the treated wastewater, measured in milligrams or micrograms per liter of effluent. [5]

[**14]** The Cities of Los Angeles and Burbank (Cities) filed appeals with the State Board, contending that achievement of the numeric requirements would be too costly when considered in light of the potential benefit to water quality, and that the pollutant restrictions in the NPDES permits were unnecessary to meet the narrative criteria described in the basin plan. The State Board summarily denied the Cities' appeals.

Thereafter, the Cities filed petitions for writs of administrative mandate in the superior court. They alleged, among other things, that the Los Angeles Regional Board failed to comply with sections 13241 and 13263, part of California's Porter-Cologne Act, because it did not consider the economic burden on the Cities in having to reduce substantially the pollutant content of their discharged wastewater. They also alleged that compliance with the pollutant restrictions set out in the NPDES permits issued by the regional **[*623]** board would greatly increase their costs of treating the wastewater to be discharged into the Los Angeles River. According to the City of Los Angeles, its compliance costs would exceed $ 50 million annually, representing more than 40 percent of its entire budget **[****15]** for operating its four wastewater treatment plants and its sewer system; the City of Burbank estimated its added costs at over $ 9 million annually, a nearly 100 percent increase above its $ 9.7 million annual budget for wastewater treatment.

[*310]** The State Board and the Los Angeles Regional Board responded that sections 13241 and 13263 do not require consideration of costs of compliance when a regional board issues a NPDES permit that restricts the pollutant content of discharged wastewater.

The trial court stayed the contested pollutant restrictions for each of the three wastewater treatment plants. It then ruled that sections 13241 and 13263 of California's Porter-Cologne Act required a regional board to consider costs of compliance not only when it adopts a basin or water quality plan but also when, as here, it issues an NPDES permit setting the allowable pollutant content of a treatment plant's discharged wastewater. The court found no evidence that the Los Angeles Regional Board had considered economic factors at either stage. Accordingly, the trial court granted the Cities' petitions for writs of mandate, and it ordered the Los Angeles Regional Board to vacate the contested restrictions **[****16]** on pollutants in the wastewater discharge permits issued to the three municipal plants here and to conduct hearings **[**868]** to consider the Cities' costs of compliance before the board's issuance of new permits. The Los Angeles Regional Board and the State Board filed appeals in both the Los Angeles and Burbank cases. [6]

The Court of Appeal, after consolidating the cases, reversed the trial court. It concluded that sections 13241 and 13263 require a regional board to take into account "economic **[****17]** considerations" when it adopts water quality standards in a basin plan but not when, as here, the regional board sets specific pollutant restrictions in wastewater discharge permits intended to satisfy those standards. We granted the Cities' petition for review.

[*624] III. Discussion

[5] For example, the permits for the Tillman and Los Angeles-Glendale Plants limited the amount of fluoride in the discharged wastewater to 2 milligrams per liter and the amount of mercury to 2.1 micrograms per liter.

[6] Unchallenged on appeal and thus not affected by our decision are the trial court's rulings that (1) the Los Angeles Regional Board failed to show how it derived from the narrative criteria in the governing basin plan the specific numeric pollutant limitations included in the permits; (2) the administrative record failed to support the specific effluent limitations; (3) the permits improperly imposed daily maximum limits rather than weekly or monthly averages; and (4) the permits improperly specified the manner of compliance.

A. Relevant State Statutes

The California statute governing the issuance of *wastewater permits* by a regional board is section 13263, which was enacted in 1969 as part of the Porter-Cologne Act. (See *ante*, at p. 619.) Section 13263 provides in relevant part: "HN7[↑] *The regional board*, after any necessary hearing, *shall prescribe requirements as to the nature of any proposed discharge* [of wastewater]. *The requirements* shall implement any relevant water quality control plans that have been adopted, and *shall take into consideration* the beneficial uses to be protected, the water quality objectives reasonably required for that purpose, other waste discharges, the need to prevent nuisance, and *the provisions of Section 13241*." (§ 13263, subd. (a), italics added.)

Section 13241 states: "HN8[↑] Each regional board shall establish such water quality objectives in water quality control **[****18]** plans as in its judgment will ensure the reasonable protection of beneficial uses and the prevention of nuisance; however, it is recognized that it may be possible for the quality of water to be changed to some degree without unreasonably affecting beneficial uses. Factors to be considered by a regional board in establishing water quality objectives shall include, but not necessarily be limited to, all of the following:

[*311]** "(a) Past, present, and probable future beneficial uses of water.

"(b) Environmental characteristics of the hydrographic unit under consideration, including the quality of water available thereto.

"(c) Water quality conditions that could reasonably be achieved through the coordinated control of all factors which affect water quality in the area.

"(d) *Economic considerations*.

"(e) The need for developing housing within the region.

"(f) The need to develop and use recycled water." (Italics added.)

The Cities here argue that section 13263's express reference to section 13241 requires the Los Angeles Regional Board to consider section 13241's listed factors, notably "[e]conomic considerations," before issuing NPDES permits requiring specific pollutant reductions **[****19]** in discharged effluent or treated wastewater.

[*625] Thus, at issue is language in section 13263 stating that when a regional board "prescribe[s] requirements as to the nature of any proposed discharge" of treated wastewater it must "take into consideration" certain factors including "the provisions of Section 13241." According to the Cities, this statutory language requires that a regional board make an independent evaluation of the section 13241 factors, including "economic considerations," before restricting the pollutant content in an NPDES permit. This was the view expressed in the trial court's ruling. The Court of Appeal rejected that view. It held that a regional board need consider the section 13241 factors only when it adopts a basin or water quality plan, but not when, as in this case, it issues a wastewater discharge **[**869]** permit that sets specific numeric limitations on the various chemical pollutants in the wastewater to be discharged. As explained below, the Court of Appeal was partly correct.

B. Statutory Construction

CA(6)[↑] **(6)** HN9[↑] When construing any statute, our task is to determine the Legislature's intent when it enacted the statute "so that we may adopt the construction that **[****20]** best effectuates the purpose of the law." (*Hassan v. Mercy American River Hospital* (2003) 31 Cal.4th 709, 715 [3 Cal. Rptr. 3d 623, 74 P.3d 726]; see *Esberg v. Union Oil Co.* (2002) 28 Cal.4th 262, 268 [121 Cal. Rptr. 2d 203, 47 P.3d 1069].) In doing this, we look to the statutory language, which ordinarily is "the most reliable indicator of

legislative intent." (*Hassan, supra,* at p. 715.)

CA(7)[↑] **(7)** As mentioned earlier, our Legislature's 1969 enactment of the Porter-Cologne Act, which sought to ensure the high quality of water in this state, predated the 1972 enactment by Congress of the precursor to the federal Clean Water Act. Included in California's original Porter-Cologne Act were sections 13263 and 13241. HN10[↑] Section 13263 directs regional boards, when issuing wastewater discharge permits, to take into account various factors, including those set out in section 13241. Listed among the section 13241 factors is "[e]conomic considerations." (§ 13241, subd. (d).) The plain language of sections 13263 and 13241 indicates the Legislature's intent in 1969, when these statutes were enacted, that a regional board consider the cost of compliance when setting effluent limitations in a wastewater discharge permit.

Our **[****21]** construction of sections 13263 and 13241 does not end with their plain statutory language, however. We must also analyze them in the context of the statutory scheme of which they are a part. (*State Farm Mutual Automobile Ins. Co. v. Garamendi* (2004) 32 Cal.4th 1029, 1043 [12 **[***312]** Cal. Rptr. 3d 343, 88 P.3d 71].) Like sections 13263 and 13241, section 13377 is part of the Porter-Cologne Act. But unlike the former two statutes, section 13377 was **[*626]** not enacted until 1972, shortly after Congress, through adoption of the Federal Water Pollution Control Act Amendments, established a comprehensive water quality policy for the nation.

CA(8)[↑] **(8)** HN11[↑] Section 13377 specifies that wastewater discharge permits issued by California's regional boards must meet the federal standards set by federal law. In effect, section 13377 forbids a regional board's consideration of any economic hardship on the part of the permit holder if doing so would result in the dilution of the requirements set by Congress in the Clean Water Act. That act prohibits the discharge of pollutants into the navigable waters of the United States unless there is compliance with federal law (33 U.S.C. § 1311(a)), and publicly operated wastewater **[****22]** treatment plants such as those before us here must comply with the act's clean water standards, regardless of cost (see *id.,* §§ 1311(a), (b)(1)(B) & (C), 1342(a)(1) & (3)). HN12[↑] CA(9)[↑] **(9)** Because section 13263 cannot authorize what federal law forbids, it cannot authorize a regional board, when issuing a wastewater discharge permit, to use compliance costs to justify pollutant restrictions that do not comply with federal clean water standards. [7] **[****24]** Such a construction of section 13263 would not only be inconsistent with federal law, it would also be inconsistent with the Legislature's **[**870]** declaration in section 13377 that all discharged wastewater must satisfy federal standards. [8] This was also the conclusion of the Court of Appeal. Moreover, under the federal Constitution's supremacy clause (art. VI), a state law that conflicts with federal law is " 'without

---

[7] The concurring opinion misconstrues both state and federal clean water law when it describes the issue here as "whether the Clean Water Act prevents or prohibits the regional water board from considering economic factors to justify pollutant restrictions *that meet the clean water standards in more cost-effective and economically efficient ways.*" (Conc. opn. of Brown, J., *post,* at p. 629, some italics added.) This case has nothing to do with meeting federal standards in more cost effective and economically efficient ways. State law, as we have said, allows a regional board to consider a permit holder's compliance cost to *relax* pollutant concentrations, as measured by numeric standards, for pollutants in a wastewater discharge permit. (§§ 13241 & 13263.) Federal law, by contrast, as stated above in the text, "prohibits the discharge of pollutants into the navigable waters of the United States unless there is compliance with federal law (33 U.S.C. § 1311(a)), and publicly operated wastewater treatment plants such as those before us here must comply with the [federal] act's *clean water standards, regardless of cost* (see *id.*, §§ 1311(a), (b)(1)(B) & (C), 1342(a)(1) & (3))." (Italics added.)

[8] As amended in 1978, section 13377 provides for the issuance of waste discharge permits that comply with federal clean water law "together with any more stringent effluent standards or limitations necessary to implement water quality control plans, or for the protection of beneficial uses, or to prevent nuisance." We do not here decide how this provision would affect the cost-consideration requirements of sections 13241 and 13263 when more stringent effluent standards or limitations in a permit are justified for some reason independent of compliance with federal law.

effect.' " (*Cipollone v. Liggett Group, Inc.* (1992) 505 U.S. 504, 516 [120 L. Ed. 2d 407, 112 S. Ct. 2608]; see *Dowhal v. SmithKline Beecham Consumer Healthcare* (2004) 32 Cal.4th 910, 923 [12 Cal. Rptr. 3d 262, 88 P.3d 1].) To comport with the principles of federal supremacy, California law cannot authorize this **[*627]** state's regional boards to allow the discharge of pollutants **[****23]** into the navigable waters of the United States in concentrations that would exceed the mandates of federal law.

[*313]** Thus, in this case, whether the Los Angeles Regional Board should have complied with sections 13263 and 13241 of California's Porter-Cologne Act by taking into account "economic considerations," such as the costs the permit holder will incur to comply with the numeric pollutant restrictions set out in the permits, depends on whether those restrictions meet or exceed the requirements of the federal Clean Water Act. We therefore remand this matter for the trial court to resolve that issue.

C. Other Contentions

The Cities **[****25]** argue that requiring a regional board at the wastewater discharge permit stage to consider the permit holder's cost of complying with the board's restrictions on pollutant content in the water is consistent with federal law. In support, the Cities point to certain provisions of the federal Clean Water Act. They cite section 1251(a)(2) of title 33 United States Code, which sets, as a national goal "*wherever attainable,*" an interim goal for water quality that protects fish and wildlife, and section 1313(c)(2)(A) of the same title, which requires consideration, among other things, of waters' "*use and value* for navigation" when revising or adopting a "water quality standard." (Italics added.) These two federal statutes, however, pertain not to permits for wastewater discharge, at issue here, but to establishing water quality standards, not at issue here. Nothing in the federal Clean Water Act suggests that a state is free to disregard or to weaken the federal requirements for clean water when an NPDES permit holder alleges that compliance with those requirements will be too costly.

CA(10)[↑] **(10)** At oral argument, counsel for amicus curiae National Resources Defense Council, which argued on **[****26]** behalf of California's State Board and regional water boards, asserted that the federal Clean Water Act incorporates state water policy into federal law, and that therefore a regional board's consideration of economic factors to justify greater pollutant concentration in discharged wastewater would conflict with the federal act even if the specified pollutant restrictions were not less stringent than those required under federal law. We are not persuaded. HN13[↑] The federal Clean Water Act reserves to the states significant aspects of water quality policy (33 U.S.C. § 1251(b)), and it specifically grants the states authority to "enforce any effluent limitation" that is not "*less stringent*" than the federal standard (33 U.S.C. § 1370, italics added). It does not prescribe or restrict the factors that a state may consider when exercising this reserved authority, and thus it does not prohibit **[*628]** a state—when imposing effluent limitations that are *more stringent* than required by federal law—from taking into account the economic effects of doing so.

Also at oral argument, counsel for the Cities asserted that if the three municipal wastewater treatment facilities ceased **[****27]** releasing their treated wastewater into the concrete channel that makes up the Los Angeles River, it would (other than during the rainy season) contain no water at all, and thus would not be a "navigable water" of the **[**871]** United States subject to the Clean Water Act. (See *Solid Waste Agency v. United States Army Corps of Engineers* (2001) 531 U.S. 159, 172 [148 L. Ed. 2d 576, 121 S. Ct. 675] ["The term 'navigable' has at least the import of showing us what Congress had in mind as its authority for enacting the CWA: its traditional jurisdiction over waters that were or had been navigable in fact or

which could reasonably be so made."].) It is unclear when the Cities first raised this issue. The Court of Appeal did not discuss it in its opinion, and the Cities did not seek rehearing on this ground. (See Cal. Rules of Court, rule **[***314]** 28(c)(2).) Concluding that the issue is outside our grant of review, we do not address it.

Conclusion

Through the federal Clean Water Act, Congress has regulated the release of pollutants into our national waterways. The states are free to manage their own water quality programs so long as they do not compromise the federal clean **[****28]** water standards. When enacted in 1972, the goal of the Federal Water Pollution Control Act Amendments was to *eliminate* by the year 1985 the discharge of pollutants into the nation's navigable waters. In furtherance of that goal, the Los Angeles Regional Board indicated in its 1994 basin plan on water quality the intent, insofar as possible, to remove from the water in the Los Angeles River toxic substances in amounts harmful to humans, plants, and aquatic life. What is not clear from the record before us is whether, in limiting the chemical pollutant content of wastewater to be discharged by the Tillman, Los Angeles-Glendale, and Burbank wastewater treatment facilities, the Los Angeles Regional Board acted only to implement requirements of the federal Clean Water Act or instead imposed pollutant limitations that exceeded the federal requirements. This is an issue of fact to be resolved by the trial court.

Disposition

We affirm the judgment of the Court of Appeal reinstating the wastewater discharge permits to the extent that the specified numeric limitations on chemical pollutants are necessary to satisfy federal Clean Water Act requirements for treated wastewater. **[****29]** The Court of Appeal is directed to remand this **[*629]** matter to the trial court to decide whether any numeric limitations, as described in the permits, are "more stringent" than required under federal law and thus should have been subject to "economic considerations" by the Los Angeles Regional Board before inclusion in the permits.

George, C. J., Baxter, J., Werdegar, J., Chin, J., and Moreno, J., concurred.

Concur by: BROWN

Concur

BROWN, J., Concurring.—I write separately to express my frustration with the apparent inability of the government officials involved here to answer a simple question: How do the federal clean water standards (which, as near as I can determine, are the state standards) prevent the state from considering economic factors? The majority concludes that because "the supremacy clause of the United States Constitution requires state law to yield to federal law, a regional board, when issuing a wastewater discharge permit, may not consider economic factors to justify imposing pollutant restrictions that are *less stringent* than the applicable federal standards require." (Maj. opn., *ante*, at p. 618.) That seems a pretty self-evident proposition, but not a useful one. **[****30]** The real question, in my view, is whether the Clean Water Act prevents or prohibits the regional water board from considering economic factors to justify pollutant restrictions that *meet* the clean water standards in more cost-effective and economically efficient ways. I can see no reason why a federal law—which purports to be an example of cooperative federalism—would decree such a result. I do not think the majority's reasoning is at fault here. Rather, the agencies involved seemed to have worked hard to make this simple question impenetrably obscure.

A brief review of the statutory framework at issue is necessary to understand my concerns. **[***315]**

[872] I. Federal Law**

"In 1972, Congress enacted the Federal Water Pollution Control Act (33 U.S.C. § 1251 et seq.), commonly known as the Clean Water Act (CWA) [Citation.] ... [¶] Generally, the CWA 'prohibits the discharge of any pollutant except in compliance with one of several statutory exceptions. [Citation.]' ... The most important of those exceptions is pollution discharge under a valid NPDES [National Pollution Discharge Elimination System] permit, which can be issued either by the Environmental **[****31]** Protection Agency (EPA), or by an EPA-approved state permit program such as California's. [Citations.] NPDES permits are valid for five years. [Citation.] [¶] Under the CWA's NPDES permit system, the states are required to develop *water quality standards*. [Citations.] A water quality standard 'establish[es] the desired condition of a waterway.? [Citation.] A water quality standard for any **[*630]** given waterway, or 'water body,' has two components: (1) the designated beneficial uses of the water body and (2) the *water quality criteria* sufficient to protect those uses. [Citations.] [¶] Water quality criteria can be either *narrative* or *numeric*. [Citation.]" (*Communities for a Better Environment v. State Water Resources Control Bd.* (2003) 109 Cal.App.4th 1089, 1092–1093 [1 Cal. Rptr. 3d 76].)

With respect to satisfying water quality standards, "a polluter must comply with *effluent limitations*. The CWA defines an effluent limitation as 'any restriction established by a State or the [EPA] Administrator on quantities, rates, and concentrations of chemical, physical, biological, and other constituents which are discharged from point sources into navigable waters, **[****32]** the waters of the contiguous zone, or the ocean, including schedules of compliance.' [Citation.] 'Effluent limitations are a means of *achieving* water quality standards.' [Citation.] [¶] NPDES permits establish effluent limitations for the polluter. [Citations.] CWA's NPDES permit system provides for a two-step process for the establishing of effluent limitations. First, the polluter must comply with *technology-based effluent limitations*, which are limitations based on the best available or practical technology for the reduction of water pollution. [Citations.] [¶] Second, the polluter must also comply with more stringent *water quality-based effluent limitations* (WQBEL's) where applicable. In the CWA, Congress 'supplemented the "technology-based" effluent limitations with "water quality-based" limitations "so that numerous point sources, despite individual compliance with effluent limitations, may be further regulated to prevent water quality from falling below acceptable levels." ' [Citation.] [¶] The CWA makes WQBEL's applicable to a given polluter whenever WQBEL's are 'necessary to meet water quality standards, treatment standards, or schedules of compliance, **[****33]** established pursuant to any State law or regulations ... .' [Citations.] Generally, NPDES permits must conform to state water quality laws insofar as the state laws impose more stringent pollution controls than the CWA. [Citations.] Simply put, WQBEL's implement water quality standards." (*Communities for a Better Environment v. State Water Resources Control Bd.*, *supra*, 109 Cal.App.4th at pp. 1093–1094, fns. omitted.)

This case involves water quality-based effluent limitations. As set forth above, "[u]nder the CWA, states have the primary role in promulgating water quality standards." (*Piney Run Preservation Ass'n v. Commrs. of Carroll Co.* (4th Cir. 2001) 268 F.3d 255, 265, fn. 9.) "Under the CWA, the water quality standards referred to in section 301 [see 33 U.S.C. § 1311] are primarily the states' handiwork." **[***316]** (*American Paper Institute, Inc. v. U.S. Envtl. Protection Agency* (D.C. Cir. 1993) 302 U.S. App. D.C. 80 [996 F.2d 346, 349] (*American Paper*).) In fact, upon the 1972 passage of the CWA, "[s]tate water quality standards in effect at the time ... were deemed to be the initial water **[****34]** quality benchmarks for CWA purposes ... . The states were to revisit and, if **[*631]** necessary, revise those initial standards at least once every three years." (*American Paper*, at

p. 349.) Therefore, "once a water quality standard has been promulgated, section 301 of the CWA requires all NPDES permits for point sources to incorporate discharge limitations necessary to satisfy that standard." (*American Paper*, at p. 350.) Accordingly, it appears that in most instances, **[**873]** state water quality standards are identical to the federal requirements for NPDES permits.

II. State Law

In California, pursuant to the Porter-Cologne Water Quality Control Act (Wat. Code, § 13000 et seq.; Stats. 1969, ch. 482, § 18, p. 1051; hereafter Porter-Cologne Act), the regional water quality control boards establish water quality standards—and therefore federal requirements for NPDES permits—through the adoption of water quality control plans (basin plans). The basin plans establish water quality objectives using enumerated factors—including economic factors—set forth in Water Code section 13241.

In addition, as one court observed: "The Porter-Cologne **[****35]** Act ... established nine regional boards to prepare water quality plans (known as basin plans) and issue permits governing the discharge of waste. (Wat. Code, §§ 13100, 13140, 13200, 13201, 13240, 13241, 13243.) The Porter-Cologne Act identified these permits as 'waste discharge requirements,' and provided that the waste discharge requirements must mandate compliance with the applicable regional water quality control plan. (Wat. Code, §§ 13263, subd. (a), 13377, 13374.) [¶] Shortly after Congress enacted the Clean Water Act in 1972, the California Legislature added Chapter 5.5 to the Porter-Cologne Act, for the purpose of adopting the necessary federal requirements to ensure it would obtain EPA approval to issue NPDES permits. (Wat. Code, § 13370, subd. (c).) As part of these amendments, the Legislature provided that the state and regional water boards 'shall, as required or authorized by the [Clean Water Act], issue **[****36]** waste discharge requirements ... which apply and ensure compliance with all applicable provisions [of the Clean Water Act], together with any more stringent effluent standards or limitations necessary to implement water quality control plans, or for the protection of beneficial uses, or to prevent nuisance.' (Wat. Code, § 13377.) Water Code section 13374 provides that '[t]he term "waste discharge requirements" as referred to in this division is the equivalent of the term "permits" as used in the [Clean Water Act].' [¶] California subsequently obtained the required approval to issue NPDES permits. [Citation.] Thus, the waste discharge requirements issued by the regional water boards ordinarily also serve as NPDES permits under federal law. (Wat. Code, § 13374.)" (*Building Industry Assn. of San Diego County v. State Water Resources Control Bd.* (2004) 124 Cal.App.4th 866, 875 [22 Cal. Rptr. 3d 128].)

[*632] Applying this federal-state statutory scheme, it appears that throughout this entire process, the Cities of Burbank and Los Angeles (Cities) were unable to have economic factors considered because the Los **[****37]** Angeles Regional Water Quality Control Board (Board)—the body responsible to enforce the statutory framework—failed to comply with its statutory mandate.

[*317]** For example, as the trial court found, the Board did not consider costs of compliance when it initially established its basin plan, and hence the water quality standards. The Board thus failed to abide by the statutory requirement set forth in Water Code section 13241 in establishing its basin plan. Moreover, the Cities claim that the initial narrative standards were so vague as to make a serious economic analysis impracticable. Because the Board does not allow the Cities to raise their economic factors in the permit approval stage, they are effectively precluded from doing so. As a result, the Board appears to be playing a game of "gotcha" by allowing the Cities to raise economic considerations when it is not practical, but precluding them when they have the ability to do

so.

Moreover, the Board acknowledges that it has neglected other statutory provisions that might have provided an additional opportunity to air these concerns. As set forth above, pursuant to the CWA, "[t]he states were to revisit **[****38]** and, if necessary, revise those initial standards at least once every three years—a process commonly known as triennial review. [Citation.] Triennial reviews consist of public hearings in which current water quality standards are examined to assure that they 'protect the public health or welfare, enhance the quality of water and serve the purposes' of the Act. [Citation.] Additionally, the CWA directs **[**874]** states to consider a variety of competing policy concerns during these reviews, including a waterway's 'use and value for public water supplies, propagation of fish and wildlife, recreational purposes, and agricultural, industrial, and other purposes.' " (*American Paper, supra*, 996 F.2d at p. 349.)

According to the Cities, "[t]he last time that the narrative water quality objective for toxicity contained in the Basin Plan was reviewed and modified was 1994." The Board does not deny this claim. Accordingly, the Board has failed its duty to allow public discussion—including economic considerations—at the required intervals when making its determination of proper water quality standards.

What is unclear is why this process should be viewed as a contest. State **[****39]** and local agencies are presumably on the same side. The costs will be paid by taxpayers and the Board should have as much interest as any other agency in fiscally responsible environmental solutions.

[*633] Our decision today arguably allows the Board to continue to shirk its statutory duties. The majority holds that when read together, Water Code sections 13241, 13263, and 13377 do not allow the Board to consider economic factors when issuing NPDES permits to satisfy federal CWA requirements. (Maj. opn., *ante*, at pp. 625–627.) The majority then bifurcates the issue when it orders the Court of Appeal "to remand this matter to the trial court to decide whether any numeric limitations, as described in the permits, are 'more stringent' than required under federal law and thus should have been subject to 'economic considerations' by the Los Angeles Regional Board before inclusion in the permits." (*Id.* at pp. 628–629.)

The majority overlooks the feedback loop established by the CWA, under which federal standards are linked to state-established water quality standards, including narrative water quality criteria. (See 33 U.S.C. § 1311 **[****40]** (b)(1)(C); 40 C.F.R. § 122.44(d)(1) (2004).) Under the CWA, NPDES permit requirements include the state narrative criteria, which are incorporated into the Board's basin plan under the description "no toxins in toxic amounts." As far as I can determine, NPDES permits **[***318]** designed to achieve this narrative criteria (as well as designated beneficial uses) will usually implement the state's basin plan, while satisfying federal requirements as well.

If federal water quality standards are typically identical to state standards, it will be a rare instance that a state exceeds its own requirements and economic factors are taken into consideration. [1] In light of the Board's initial failure to consider costs of compliance and its repeated failure to conduct required triennial reviews, the result here is an unseemly bureaucratic bait-and-switch that we should not endorse. The likely outcome of the majority's decision is that the Cities will be economically burdened to meet standards imposed on them in a highly questionable manner. [2] In these

---

[1] (But see *In the Matter of the Petition of City and County of San Francisco, San Francisco Baykeeper et al.* (Order No. WQ 95-4, Sept. 21, 1995) 1995 WL 576920.)

[2] Indeed, given the fact that "water quality standards" in this case are composed of broadly worded components (i.e., a narrative criteria and "designated beneficial uses of the water body"), the Board possessed a high degree of discretion in setting NPDES permit requirements. Based on the Board's past performance, a proper exercise of this discretion is uncertain.

times of tight fiscal budgets, it is difficult to imagine imposing additional financial burdens on municipalities without at least **[****41]** allowing them to present alternative views.

Based on the facts of this case, our opinion today appears to largely retain the status quo for the Board. If the Board can actually demonstrate that only the precise limitations at issue here, implemented in only one way, will achieve the desired water standards, perhaps its obduracy is justified. That case has yet to be made.

[*634] Accordingly, I cannot conclude that the majority's decision is wrong. The analysis **[**875]** may provide a **[****42]** reasonable accommodation of conflicting provisions. However, since the Board's actions "make me wanna holler and throw up both my hands," [3] I write separately to set forth my concerns and concur in the judgment—*dubitante*. [4]

The petitions of all appellants and respondent for a rehearing were denied June 29, 2005. Brown, J., did not participate therein.

Div. of Occupational Safety & Health v. State Bd. of Control

Court of Appeal of California, Third Appellate District

February 19, 1987

No. C000006

Reporter

189 Cal. App. 3d 794 *; 234 Cal. Rptr. 661 **; 1987 Cal. App. LEXIS 1410 ***; 1987 OSHD (CCH) P27,921

DIVISION OF OCCUPATIONAL SAFETY AND HEALTH, Plaintiff and Respondent, v. STATE BOARD OF CONTROL, Defendant and Respondent; ARCADE FIRE DISTRICT, Real Party in Interest and Appellant

Subsequent History: [***1] A Petition for a Rehearing was Denied March 17, 1987.

Prior History: Superior Court of Sacramento County, No. 299306, Roger K. Warren, Judge.

Disposition: The order granting the Division's petition for a writ of mandate is affirmed.

Core Terms

regulation, costs, executive order, reimbursable, mandated, occupational safety, levels, costs mandated, local agency, requires, standby, atmosphere, implements, increases, costs incurred, federal mandate, state-mandated, firefighting, subdivisions, federal government, state regulation, confined space, increased cost, respiratory, interprets, Appeals, service level, local fire, companies, districts

Case Summary

Procedural Posture

Defendant board found that Cal. Admin. Code, tit. 8, § 5144 (g), which imposed higher safety standards, created a reimbursable state mandated cost; therefore defendant approved appellant fire district's reimbursement claim. Plaintiff division sought review of defendant's decision by mandamus and the Superior Court of Sacramento County (California), granted the writ. Appellant then filed a writ of mandamus challenging the trial court's decision.

Overview

Appellant fire district filed a claim with defendant board asserting that Cal. Admin. Code, tit. 8, § 5144 (g) (Regulation), imposed additional manpower requirements upon it and other local fire protection districts and therefore it was entitled to state reimbursement under former Cal. Rev. & Tax. Code § 2231. Defendant board held that the Regulation created a reimbursable state mandated cost and approved appellant's reimbursement claim. Plaintiff division sought review of defendant's decision, by mandamus and the trial court granted its request. Appellant petitioned the court for a peremptory writ of mandate directing defendant's decision to be set aside. On appeal, the court applied the substantial evidence standard of review and affirmed the trial court's decision. The court held that since plaintiff was not required to promulgate the Regulation in order to comply with federal law, the exemption for federally mandated costs did apply. The court further found that the regulation did not mandate an increase in appellant's fire protection costs, and therefore the trial court did not err when it directed defendant to vacate its decision.

Outcome

The court affirmed the trial court's decision granting defendant board's petition for a writ mandamus. The court held that the regulation, which raised safety requirements, did not create a reimbursable interest, because the regulation did

not mandate an increase in appellant's fire protection costs.

Transportation Law > Private Vehicles > Safety Standards > Seat Belts

HN9[] Labor & Employment Law, Occupational Safety & Health

Regulation 5182 provides: (b) An approved safety belt with a life line attached or other approved device shall be used by employees wearing respiratory equipment within tanks, vessels, or confined spaces. At least one employee shall stand by on the outside while employees are inside, ready to give assistance in case of emergency. If entry is through a top opening, at least one additional employee, who may have other duties, shall be within sight and call of the stand-by employee. (c) When conditions require the wearing of respiratory equipment in a confined space, at least two men equipped with approved respiratory equipment, exclusive of the employees that may be necessary to operate blowers and perform stand-by duties, shall be on the job. One or more of the employees so equipped may be within the confined space at the same time, provided, however, that this shall not apply to tanks of less than 12 feet in diameter, when entrance is through a side manhole. Headnotes/Syllabus

Summary
CALIFORNIA OFFICIAL REPORTS SUMMARY

The trial court granted the petition of the State Division of Occupational Safety and Health challenging a decision of the State Board of Control approving the claim of a local fire control district for reimbursement, under Rev. & Tax. Code, § 2207 (state reimbursement of state-mandated local costs), for expenses incurred in maintaining additional firefighters on duty at fires requiring the use of artificial breathing devices pursuant to a regulation delineating standby and rescue procedures. The district construed the regulation as requiring, in addition to the "buddy system" pairs of firefighters with respirators it employed as a standard firefighting practice, a third standby firefighter prepared to undertake rescue of the others, if necessary. The division took the position that the regulation merely passed on nonreimbursable standards mandated by the federal government. (Superior Court of Sacramento County, No. 299306, Roger K. Warren, Judge.)

The Court of Appeal affirmed, holding that Rev. & Tax. Code, § 2207, subd. (f), which did not become effective until after the fiscal years for which reimbursement was sought, was not intended to be retroactive and could not support the claim. Turning to Rev. & Tax. Code, § 2207, subd. (c), which was in effect during those fiscal years, the court deferred to the division's interpretation of the regulation, concluding that, so construed, it did not require the district to increase its respirator-equipped manpower; rather, it contemplated that one firefighter so equipped be maintained on standby, whether two "buddies" or a single firefighter entered the hazardous atmospheres to which the regulation applied. Thus, the court held that the district sought reimbursement for its own interpretation that the "buddy system" was a minimum standard to which the standby requirement had been added, not an express state mandate that three firefighters be deployed at every hazardous-atmosphere fire. (Opinion by Puglia, P. J., with Regan and Sparks, JJ., concurring.)

HEADNOTES

Classified to California Digest of Official Reports, 3d Series

CA(1)[] **(1)**

Mandamus and Prohibition § 74—Mandamus—Review—Administrative Regulation.

--The interpretation of an administrative regulation, like the interpretation of a statute, is a question of law ultimately to be resolved by the courts. Where the substantial evidence test applies, the superior court exercises an essentially appellate function in determining whether the administrative findings are supported by substantial evidence and the proceedings are free from legal error. The scope of the Court of Appeal's review is coextensive with that of the superior court.

CA(2)[] **(2)**

Fires and Fire Districts § 2—Statutes and Ordinances—Occupational Safety and Health—Reimbursement of State-mandated Local Costs.

--The 1974 legislative finding of federal mandate underlying the state Occupational Safety and Health Act (Lab. Code, § 6300 et seq.) has been superseded by former Rev. & Tax. Code, § 2253, subds. (b) and (c), as amended, and does not in and of itself preclude an administrative finding that there is no federal mandate preventing reimbursement to a local fire district for state-mandated costs.

CA(3a)[] **(3a)** CA(3b)[] **(3b)**

Fires and Fire Districts § 2—Statutes and Ordinances—Health and Safety Regulations—State-mandated Local Costs—Federally Mandated Costs.

--Because the state was not required to promulgate a health and safety regulation requiring certain manpower and equipment minimums for firefighting in hazardous atmospheres in order to comply with federal law, the exception for federally mandated costs, to the requirement that the state reimburse local agencies for costs incurred by compliance with state-mandated standards, did not apply to a local fire district's claim for reimbursement for the costs of compliance with the state regulation.

CA(4)[] **(4)**

Labor § 6**—Regulation of Working Conditions—Occupational Safety and Health Regulations—Federal Preemption.**

--Under § 667 of the federal Occupational Safety and Health Act (OSHA) (29 U.S.C. § 651 et seq.), California is preempted from regulating matters covered by the federal OSHA standards unless the state has adopted a federally approved plan. The federal law does not, however, confer federal power upon a state that has adopted such a plan. It merely removes federal preemption so that the state may exercise its own sovereign powers over occupational safety and health. There is no indication in the language of the act that a state with an approved plan may not establish more stringent standards than those developed by the federal OSHA, or grant to its own occupational safety and health agency more extensive jurisdiction than that enjoyed by the federal OSHA.

CA(5)[] **(5)**

State of California § 11—Fiscal Matters—Reimbursement of Local Governments—Reimbursement for Increased Program Levels.

--State regulations that do not increase program levels above those required prior to January 1, 1973, do not result in "costs mandated by the state" within the meaning of Rev. & Tax. Code, § 2207, subd. (c), which requires that the state reimburse

local governments for costs incurred in meeting state mandates.

CA(6)[] (6)

State of California § 11—Fiscal Matters—Reimbursement of Local Governments for State-mandated Costs—Statute—Construction—Retroactivity of Amendments.

--The 1980 amendment to Rev. & Tax. Code, § 2207 (reimbursement of local agency for "costs mandated by the state"), was substantive in nature, rather than procedural or remedial, since it significantly expanded the situations in which a claimant could seek reimbursement for such costs. Nothing in the legislative history of the 1980 amendment expressed a legislative intent that the amendment's provisions be applied retroactively. A statute affecting substantive rights is presumed not to have retrospective application unless the courts can clearly discern from the express language of the statute or extrinsic interpretive aids that the Legislature intended otherwise.

CA(7)[] (7)

State of California § 11—Fiscal Matters—Reimbursement of Local Governments—State-mandated Costs—Retroactivity.

-- Rev. & Tax. Code, § 2207, subd. (f), which provides for state reimbursement of local governmental agencies for costs incurred as a result of enactments after January 1, 1973, that remove options previously available to such agencies, thereby increasing program or service levels, or that prohibit specific activities with the result that such agencies use more costly alternatives, applies prospectively only to costs incurred by local agencies after its effective date, by Jan. 1, 1981. The statute cannot support a claim for reimbursement arising before its effective date.

CA(8)[] (8)

Statutes § 31—Construction—Language—Words and Phrases—Singular and Plural.

--As a general rule of construction, words used in the singular include the plural and vice versa.

CA(9)[] (9)

Statutes § 44—Construction—Aids—Contemporaneous Administrative Construction—Ambiguous Statutes.

--In view of inherent ambiguities in a regulation of the state Division of Occupational Safety and Health (Division) delineating firefighting manpower and equipment safety and health standards, the interpretation given the regulation by the Division, which is charged with its enforcement, was entitled to great weight. Thus, it was proper to defer to that agency's interpretation that the regulation requires the presence of only two persons using respiratory equipment in work places involving hazardous atmospheres, not withstanding that the State Board of Control, in ruling on a claim of reimbursement, had adopted a different interpretation.

CA(10)[] (10)

Fires and Fire Districts § 2—Statutes and Ordinances—Hazardous Atmospheres Regulations—Standby Regulation—State-mandated Costs.

--Increased local program levels, such as would be reimbursable by the state under Rev. & Tax. Code, § 2207, subd. (c), were not mandated by the adoption of hazardous atmospheres firefighting regulations by the Division of Occupational Safety and Health. Although division inspectors previously gave firefighting agencies the impression that three-person teams equipped with respirators would be required, rather than the standard-practice two-person teams, the practice of

continuing to use the two-person teams while adding a third to stand by was a choice made by local fire districts. The regulation did not expressly require three-person teams, and no agency had been cited for failure to use them. Verbal exchanges between regulators and the agencies do not rise to the level of a legislative mandate or official policy.

Counsel: Ross & Scott, William D. Ross and Diana P. Scott for Real Party in Interest and Appellant.

Michael D. Mason and A. Margaret Cloudt for Plaintiff and Respondent.

John K. Van de Kamp, Attorney General, N. Eugene Hill, Assistant Attorney General, Jeffrey J. Fuller and Faith J. Geoghegan, Deputy Attorneys General, for Defendant and Respondent.

Judges: Opinion by Puglia, P. J., with Regan and Sparks, JJ., concurring.

Opinion by: PUGLIA

Opinion

[*797] [663]** In this appeal we consider whether a safety regulation promulgated by the Division of Occupational Safety and Health (Division) of the Department of Industrial Relations mandates increased costs to local **[*798]** government such that they are reimbursable under the provisions of Revenue and Taxation Code section 2201 et seq. [1] With respect to the period of time in issue, we conclude that the regulation does not create reimbursable state-mandated costs.

[*2]** On October 8, 1980, Arcade Fire District (Arcade) filed a test claim with the State Board of Control (Board) asserting that title 8, section 5144, subdivision (g), of the California Administrative Code (hereafter referred to as Regulation) imposed additional manpower requirements upon it and other local fire protection districts beyond service levels required prior to January 1, 1973. [2] A local governmental agency (§ 2211), Arcade sought state reimbursement under former section 2231. (Repealed Stats. 1986, ch. 879, § 23; see now Gov. Code, § 17561.) Arcade claimed it incurred additional manpower costs during **[**664]** fiscal years 1978-1979 and 1979-1980 as a result of Regulation 5144, subdivision (g), and that these costs were mandated by the state within the meaning of section 2207.

[*3]** HN1[↑]

Section 2207 defines reimbursable "'Costs mandated by the state.'" They include "any increased costs which a local agency is required to incur as a result of . . . (c) Any executive order issued after January 1, 1973, which (i) implements or interprets a state statute and (ii), by such implementation or interpretation, increases program levels above the levels required prior to January 1, 1973." An "'executive order'" includes a regulation issued by a state agency such as the Division (§ 2209, subd. (c)). Specifically excluded from the definition of "'[costs] mandated by the State'" are "'[costs] mandated by the federal government'" as defined in section 2206 and former section 2253.2, subdivision (b)(3) (repealed Stats. 1986, ch. 879, § 41; see now Gov. Code, § 17556, subd. (c)).

Regulation 5144, subdivision (g), was first adopted by the Division effective August 11, 1974. As amended effective October 14, 1978, the regulation provides: "In atmospheres immediately hazardous to life or health, at least two persons equipped with approved respiratory equipment shall be on the job. Communications shall be maintained between both or all individuals present. Standby persons, **[***4]** at least one of which shall be in a location which **[*799]** will not be affected by any likely incidents, shall be present with suitable rescue

[1] All references to sections or former sections of an unspecified code are to the Revenue and Taxation Code.

[2] In 1985, administrative jurisdiction to hear and decide claims for reimbursement of state-mandated costs was transferred from the State Board of Control to the newly created Commission on State Mandates. (Gov. Code, § 17500 et seq.)

equipment including self-contained breathing apparatus." [3]

At the administrative hearing, Arcade established that it has always adhered to a practice, known as the "buddy system," whereby two firefighters enter a burning structure together. Arcade also presented evidence that the buddy system is considered essential to the safety of both firefighters and the public and is practiced by firefighting agencies nationwide. Prior to the 1974 effective date of Regulation 5144, subdivision (g), Arcade was unaware of any standby requirement and used only two-person teams in its engine companies. After its effective date, Arcade interpreted the regulation to mandate a minimum firefighting team **[***5]** of at least three persons equipped with respiratory equipment, one of whom was required to stand by outside a burning structure while the other two operated together under the "buddy system." In support of this interpretation, Arcade presented evidence that Division inspectors had previously informed local fire protection districts that Regulation 5144, subdivision (g), requires a minimum of three fire fighters at the scene.

In opposition to Arcade's claim, the Division maintained that any costs incurred as a result of Regulation 5144, subdivision (g), were federally mandated because the state regulation merely implemented a federal regulation under the 1979 Federal Occupational Safety and Health Act. (29 U.S.C. § 651 et seq.) Even if a state mandate were involved, the Division contended, Arcade's interpretation of the regulation was erroneous. In the Division's view, HN2[↑] Regulation 5144, subdivision (g), requires only two persons to be on the job when atmospheres immediately hazardous to life or health are encountered -- one person to stand by in a location unaffected by likely incidents and the other to encounter the dangerous atmosphere itself. While the Division would certainly **[***6]** encourage the use of three-person teams at the option of local fire districts, it takes the position that additional manpower is neither mandated by the express language of the regulation nor, as a matter of official policy, a firefighting standard which the Division seeks to enforce.

The Board found the regulation created a reimbursable state-mandated cost and approved Arcade's claim. The Board apparently concluded the regulation did not "explicitly require three-person companies" but considered its effect nonetheless "was to remove the previously existing option of public fire departments to deploy two-person **[**665]** companies," and that this requirement "exceeded federal and prior state safety regulations."

[*800] The Division sought mandamus to review the Board's ruling. (See former § 2253.5 repealed Stats. 1986, ch. 879, § 44; see now Gov. Code, § 17559; Code Civ. Proc., § 1094.5.) The superior court found the Board had abused discretion in allowing Arcade's claim and issued a peremptory writ of mandate directing the Board to set aside its decision.

Arcade appeals from the order granting the Division mandamus relief. In challenging the court's conclusion that **[***7]** Regulation 5144, subdivision (g), did not create state-mandated costs, Arcade contends the court (1) applied the wrong standard of review, (2) improperly considered new evidence and legal issues which were not presented at the administrative hearing, and (3) erred in ruling that section 2207, subdivision (f), did not apply.

I

Preliminarily, we set forth the applicable standard of review. HN3[↑] In an administrative mandamus proceeding, we are bound by the Board's findings on all issues of fact within its jurisdiction which are supported by substantial evidence on the record. (See former § 2253.5; Gov. Code, § 17559.) CA(1)[↑] **(1)** The interpretation of an administrative regulation, however, like the

[3] The 1978 amendment deleted from the last sentence the concluding clause "in accordance with Section 5182, Confined Spaces," which had been included in the original version in 1974.

interpretation of a statute, is a question of law ultimately to be resolved by the courts. (*Carmona* v. *Division of Industrial Safety* (1975) 13 Cal.3d 303, 310 [118 Cal.Rptr. 473, 530 P.2d 161]; *Skyline Homes, Inc.* v. *Occupational Safety & Health Appeals Bd.* (1981) 120 Cal.App.3d 663, 669 [174 Cal.Rptr. 665]; see also *People* ex rel. *Fund American Companies* v. *California Ins. Co.* (1974) 43 Cal.App.3d 423, 431 [117 Cal.Rptr. 623].)

HN4[↑] Where the substantial evidence test applies, **[***8]** the superior court exercises an essentially appellate function in determining whether the administrative findings are supported by substantial evidence and the proceedings free from legal error; the scope of our appellate review is coextensive with that of the superior court. (*Bank of America* v. *State Water Resources Control Bd.* (1974) 42 Cal.App.3d 198, 207 [116 Cal.Rptr. 770]; *City of Sacramento* v. *State of California* (1984) 156 Cal.App.3d 182, 190 [203 Cal.Rptr. 258], disapproved on other grounds in *County of Los Angeles* v. *State of California* (1987) 43 Cal.3d 46, 58, fn. 10 [233 Cal.Rptr. 38].; see also *Swaby* v. *Unemployment Ins. Appeals Bd.* (1978) 85 Cal.App.3d 264, 269 [149 Cal.Rptr. 336].) We therefore focus our review on the administrative proceedings, declining to consider specific claims of error committed by the superior court.

We shall also consider, as a preliminary matter, whether a federal mandate or an equally or more restrictive pre-1973 state regulation exists which would **[*801]** bar Arcade's claim for reimbursement. (See §§ 2206; 2207, subds. (c), (f); former § 2253.2, subd. (b)(3).) Although these legal theories may **[***9]** not have been thoroughly developed by the Division in the administrative proceedings, we are not foreclosed from addressing them on appeal. (See *City of Merced* v. *State of California* (1984) 153 Cal.App.3d 777, 781 [200 Cal.Rptr. 642]; *Frink* v. *Prod* (1982) 31 Cal.3d 166, 170-171 [181 Cal.Rptr. 893, 643 P.2d 476].) Such consideration will not involve receipt of evidence not before the Board. The Board found Regulation 5144, subdivision (g), exceeded the requirements of both federal and pre-1973 state safety regulations. Our review necessarily requires that we take judicial notice of any statutes and published administrative regulations which impact upon the contentions of the parties. (See Evid. Code, § 451, subds. (a), (b); Gov. Code, § 11343.6; 44 U.S.C. § 1507.) In any event, Arcade is not prejudiced by our consideration of these issues on appeal because, as will appear, we reject the Division's arguments that a federal mandate or a pre-1973 state regulation bars Arcade's claim.

II

CA(2)[↑] **(2)** The California Occupational Safety and Health Act (state OSHA; Lab. Code, **[**666]** § 6300 et seq.), from which the Division derives its regulatory authority, was enacted **[***10]** in 1973 (Stats. 1973, ch. 993, §§ 39-107) as a state plan under the Federal Occupational Safety and Health Act of 1970 (federal OSHA; see 29 U.S.C. § 667). In 1974, an uncodified amendment to state OSHA was enacted which provided: "Notwithstanding Section 2231 of the Revenue and Taxation Code [providing for reimbursement to local governments for state-mandated costs], there shall be no reimbursement pursuant to this section . . . because the Legislature finds that this act and any executive regulations or safety orders issued pursuant thereto merely implement federal law and regulations." (Stats. 1974, ch. 1284, § 36, adding § 106 to ch. 993 of the Stats. of 1973.) [4] However, this legislative disclaimer of any reimbursable mandate with respect to state OSHA and regulations thereunder is not controlling here. Former section 2253, subdivisions (b) and (c) as amended (Stats. 1978, ch. 794, § 6; repealed Stats. 1986, ch. 879, § 40), permitted reimbursement claims for costs incurred after January 1, 1978, under an executive order or a bill chaptered after January 1, 1973, even though the bill or executive order contained a

[4] Chapter 993 of Statutes 1973 already had a section 106 as part of the original enactment. The original section 106 disclaimed any obligation to reimburse local costs incurred in complying with state OSHA "because the cost of implementing this act is minimal on a statewide basis in relation to the effect on local tax rates." (P. 1954.)

provision making inoperative former section 2231. Thus **[***11]** the legislative finding of federal mandate underlying **[*802]** state OSHA (Stats. 1974, ch. 1284, § 36) has been superseded and does not in and of itself preclude a finding such as the Board made here that there is no federal mandate preventing reimbursement of Arcade.

CA(3a)[↑] **(3a)** Having disposed of the express legislative declaration on the subject, we next consider whether state OSHA, under authority of which Regulation 5144, subdivision (g), was promulgated, in fact did no more than impose costs mandated by federal law.

HN5[↑] As defined by section 2206, "'[costs] mandated by the federal government'" include "any increased costs mandated . . . upon a local agency . . . after January **[***12]** 1, 1973, in order to comply with the requirements of federal statute or regulation." Although an executive order implementing a federal law may result in federally mandated costs in this general definitional sense, former section 2253.2, subdivision (b)(3), as amended in 1978 (see now Gov. Code, § 17556, subd. (c)), provided that state reimbursement is available to a claimant if the executive order mandates costs which "exceed the mandate" of federal law or regulation. (Stats. 1978, ch. 794, § 10, eff. Sept. 18, 1978.) [5]

[*13]** We accept for purposes of discussion the Division's assertion that Regulation 5144, subdivision (g), simply mandates a safety standard patterned after and commensurate with a regulation promulgated under federal OSHA. Also governing the use of respirators, HN6[↑] 29 Code of Federal Regulations, section 1910.134(e)(3) (1986) reads in pertinent part: ". . . (i) In areas where the wearer, with failure of the respirator, could **[**667]** be overcome by a toxic or oxygen-deficient atmosphere, at least one additional man shall be present. Communications . . . shall be maintained between both or all individuals present. Planning shall be such that one individual will be unaffected by any likely incident and have the proper rescue equipment to be able to assist the other(s) in case of emergency. [para.] (ii) When self-contained apparatus or hose **[*803]** masks with blowers are used in atmospheres immediately dangerous to life or health, standby men must be present with suitable rescue equipment."

The federal regulation, unlike the state regulation in issue, has no applicability to local fire departments such as Arcade. HN7[↑] By definition, regulated employers under federal OSHA do not include **[***14]** the political subdivisions of a state. (29 U.S.C. § 652(5); 29 C.F.R. § 1910.2(c).) [6] On the other hand, the state OSHA broadly defines the "places of employment" over which the Division exercises safety jurisdiction to include public agency employers within the state. (Lab. Code, § 6303, subd. (a); see also *United Air Lines, Inc.* v. *Occupational Safety & Health Appeals Bd.* (1982) 32 Cal.3d 762, 767 [187 Cal.Rptr. 387, 654 P.2d 157].)

HN8[↑] Where a state chooses to adopt its own occupational safety and health plan, the federal OSHA requires as a condition for approval of the

---

[5] Effective January 1, 1981, section 2206 was amended to limit the definition of "costs mandated by the federal government" to increased costs mandated *specifically* by the federal government upon a local agency and to exclude from that definition those costs which result from programs or services "implemented at the option of the state, . . ." (Stats. 1980, ch. 1256, § 3.) Correspondingly, subdivision (d) was added to section 2207 to include within the definition of "costs mandated by the state" any increased costs a local agency is required to incur as a result of a post-1973 executive order which implements or interprets a federal or state regulation and by such implementation or interpretation "increases program or service levels above the levels required by such federal statute or regulation." (Stats. 1980, ch. 1256, § 4; see also Gov. Code, § 17513, which excludes from "'[costs] mandated by the federal government'" "programs or services which may be implemented at the option of the state, ...") While these amendments are supportive of the conclusion we reach, we assume for present purposes they have no retrospective operation with respect to costs incurred by Arcade during fiscal years 1978-1979 and 1979-1980.

[6] Indeed, to our knowledge the federal government did not assert safety jurisdiction over "private fire brigades until federal regulations on the subject were first published in September 1980. (See 29 C.F.R. § 1910.156(a)(2) and (f)(1)(i); 45 Fed. Reg. 60706, amended May 1, 1981, 46 Fed. Reg. 24557.)

plan that the state establish and maintain a comprehensive program which extends, to the extent permitted by state law, "to all **[***15]** employees of public agencies of the State and its political subdivisions." (29 U.S.C. § 667(c)(6); 29 C.F.R. § 1902.3(j).) A state plan, if approved, must also provide for the development and enforcement of safety standards "at least as effective" as the standards promulgated under federal OSHA. (29 U.S.C. § 667(c)(2).) However, these conditions for approval do not render costs incurred by a local agency as a result of a state safety regulation federally mandated costs within the meaning of former section 2253.2, subdivision (b)(3). Clearly, the initial decision to establish locally a federally approved plan is an option which the state exercises freely. In no sense is the state *compelled* to enter a compact with the federal government to extend jurisdiction over occupational safety to local government employers in exchange for the removal of federal preemption. (29 U.S.C. § 667(b).) (Accord, *City of Sacramento* v. *State of California, supra*, 156 Cal.App.3d at pp. 194-199.)

CA(4)[↑] **(4)** In *United Air Lines, Inc.* v. *Occupational Safety & Health Appeals Bd., supra*, 32 Cal.3d 762, the court expressed this principle as follows: "Under the [29 United States Code] section [***16] 667 scheme, California is preempted from regulating matters covered by Fed/OSHA [Federal Occupational Safety and Health Administration] standards unless the state has adopted a federally approved plan. The section does not, however, confer federal power on a state -- like California -- that has adopted such a plan; it merely removes federal preemption so that the state may exercise its own sovereign powers **[*804]** over occupational safety and health. (See, e.g., *American Federation of Labor*, etc. v. *Marshall* (D.C.Cir. 1978) 570 F.2d 1030, 1033; *Green Mt. Power* v. *Com'r of Labor and Industry* (1978) 136 Vt. 15 [383 A.2d 1046, 1051]. See also 29 U.S.C. § 651(b)(11).) There is no indication in the language of the act that a state with an approved plan may not establish more stringent standards than those developed by Fed/OSHA (see *Skyline Homes, Inc.* v. *Occupational Safety & Health Appeals Bd.* (1981) 120 Cal.App.3d 663, 671 . . .) or grant to its own occupational safety and health agency more extensive jurisdiction than that enjoyed by Fed/OSHA." (*United Air Lines, Inc.*, supra, 32 Cal.3d at pp. 772-773.) CA(3b)[↑] **(3b)** Thus since Division was not required to promulgate **[***17]** **[**668]** Reguation 5144, subdivision (g), to comply with federal law, the exemption for federally mandated costs does not apply.

III

CA(5)[↑] **(5)** State regulations which do not *increase* program levels above the levels required prior to January 1, 1973, do not result in "costs mandated by the state" within the meaning of section 2207, subdivision (c). The Division submits that former Regulation 5182, which existed prior to 1973, provided standby personnel requirements which were equal to, if not more stringent than, those set forth in Regulation 5144, subdivision (g). A comparison of the two regulations, however, convinces us that former Regulation 5182 was limited to employees working within tanks, vessels, and similar "confined spaces" and was never intended more broadly to encompass fire fighters working in burning structures.

Subdivision (c) of former Regulation 5182 expressly required at least two persons on the job in addition to the standby employee when conditions necessitated the wearing of respiratory equipment in a confined space. [7] It was not replaced until

---

[7] As pertinent here, former HN9[↑] Regulation 5182 provided: ". . . (b) An approved safety belt with a life line attached or other approved device shall be used by employees wearing respiratory equipment within tanks, vessels, or confined spaces . . . At least one employee shall stand by on the outside while employees are inside, ready to give assistance in case of emergency. If entry is through a top opening, at least one additional employee, who may have other duties, shall be within sight and call of the stand-by employee. [para.] (c) When conditions require the wearing of respiratory equipment in a confined space, at least two men equipped with approved respiratory equipment, exclusive of the employees that may be necessary to operate blowers and perform stand-by duties,

1978, when new article 108 (Regulations 5156-5159, Cal. Admin. Code, tit. 8), entitled "Confined Spaces," was added. **[***18]** (Cal. Admin. Notice Register, tit. 8, Register 78, No. 37.) We do not agree with the Division that Regulation 5182 covered fire fighters (see *Carmona* v. **[*805]** *Division of Industrial Safety, supra*, 13 Cal.3d at p. 310). Moreover, we note that the Division's reading of the regulation would undermine, if not invalidate, its alternative position that it has always required only a minimum two-person, firefighting team. Thus if Regulation 5144, subdivision (g), properly interpreted, requires a minimum of three persons as contended by Arcade, it does increase program levels above those required prior to January 1, 1973. Before we address that issue directly, we consider the rationale of the Board's decision.

[*19]** IV

The Board's approval of Arcade's claim was based on the conclusion that, although Regulation 5144, subdivision (g), did not expressly require three-person engine companies, its effect was to remove a previous option of local fire districts to use only two person companies. In so concluding, the Board apparently relied on the definition of "'[costs] mandated by the state'" as expressed in subdivision (f) rather than subdivision (c) of section 2207. Under subdivision (f), costs are mandated and reimbursable when they result from "Any . . . executive order issued after January 1, 1973, which . . . *removes an option previously available to local agencies* and thereby increases program or service levels . . . ." (Italics added.)

Because subdivision (f) did not become effective until January 1, 1981 (Stats. 1980, ch. 1256, § 4), the Division contends the Board could not retroactively apply the removal-of-an-option criterion to Arcade's October 1980 reimbursement claim for costs incurred during fiscal years 1978-1979 and 1979-1980. We agree.

CA(6)[↑] **(6)** We observe first that the amendment which added subdivisions (d) through (h) to section 2207 significantly expanded the situations in **[***20]** which a claimant could seek reimbursement for "'[costs] mandated by the state.'" (See *County of Los Angeles* v. **[**669]** *State of California* (1984) 153 Cal.App.3d 568, 572 [200 Cal.Rptr. 394].) Before 1981, the entire spectrum of state-mandated costs was confined to those defined in subdivisions (a) through (c) of section 2207. [8] As

shall be on the job. One or more of the employees so equipped may be within the confined space at the same time, provided, however, that this shall not apply to tanks of less than 12 feet in diameter, when entrance is through a side manhole." (Cal. Admin. Notice Register, tit. 8, Register 72, No. 6, dated Feb. 5, 1972.)

[8] HN10[↑] As amended, section 2207 now reads in full: "'Costs mandated by the state' means any increased costs which a local agency is required to incur as a result of the following:

"(a) Any law enacted after January 1, 1973, which mandates a new program or an increased level of service of an existing program;

"(b) Any executive order issued after January 1, 1973, which mandates a new program;

"(c) Any executive order issued after January 1, 1973, which (i) implements or interprets a state statute and (ii), by such implementation or interpretation, increases program levels above the levels required prior to January 1, 1973.

"(d) Any statute enacted after January 1, 1973, or executive order issued after January 1, 1973, which implements or interprets a federal statute or regulation and, by such implementation or interpretation, increases program or service levels required by such federal statute or regulation.

"(e) Any statute enacted after January 1, 1973, or executive order issued after January 1, 1973, which implements or interprets a statute or amendment adopted or enacted pursuant to the approval of a statewide ballot measure by the voters and, by such implementation or interpretation, increases program or service levels above the levels required by such ballot measure.

"(f) Any statute enacted after January 1, 1973, or executive order issued after January 1, 1973, which (i) removes an option previously available to local agencies and thereby increases program or service levels or (ii) prohibits a specific activity which results in the local agencies using a more costly alternative to provide a mandated program or service.

"(g) Any statute enacted after January 1, 1973, or executive order issued after January 1, 1973, which requires that an existing program or service be provided in a shorter time period and thereby increases the costs of such program or service.

"(h) Any statute enacted after January 1, 1973, or executive order issued after January 1, 1973, which adds new requirements to an existing optional program or service and thereby increases the cost of

the 1980 amendment necessarily increased the state's liability for **[*806]** locally incurred costs, it must be construed as substantive rather than procedural or remedial in nature. (See *Alta Loma School Dist.* v. *San Bernardino County Com. on School Dist. Reorganization* (1981) 124 Cal.App.3d 542, 553 [177 Cal.Rptr. 506].) A statute affecting substantive rights is presumed not to have retrospective application unless the courts can clearly discern from the express language of the statute or extrinsic interpretive aids that the Legislature intended otherwise. (*In re Marriage of Bouquet* (1976) 16 Cal.3d 583, 587 [128 Cal.Rptr. 427, 546 P.2d 1371]; *Thompson* v. *Modesto City High School Dist.* (1977) 19 Cal.3d 620, 625, fn. 3 [139 Cal.Rptr. 603, 566 P.2d 237]; *Alta Loma School Dist., supra*, at p. 553.)

[*21]** Although all of the new subdivisions added by the 1980 amendment to section 2207 expressly deal with executive orders issued after January 1, 1973, nothing has been brought to our attention which would indicate the Legislature intended retroactive operation of the expanded definition to resulting costs *incurred* before the 1981 effective date of the amendment. When section 2207 was originally enacted in 1975, the Legislature provided that subdivisions (a) through (c) were "declaratory of existing law." (Stats. 1975, ch. 486, § 18.6.) However, the 1980 amendment adding subdivisions (d) through (h) conspicuously omits any such statement or other indication of retrospective application. CA(7)[↑] **(7)** Moreover, other related statutory provisions make it clear that the Legislature intended strictly to limit the time period within which a reimbursement claim may be brought for costs incurred during a prior fiscal year. (Former § 2218.5, see now Gov. Code, § 17560; former § 2231, subd. (d)(2), see now Gov. Code, § 17561, subd. **[*807]** (d)(2); former § 2253; former § 2253.8, repealed Stats. 1986, ch. 879, § 45, see now Gov. Code, § 17557.) Hence, we presume that subdivision (f) of section **[***22]** 2207 applies prospectively only to costs incurred by local agencies after its effective date, January 1, 1981, and not before. (Accord, *City of Sacramento* v. *State of California, supra*, 156 Cal.App.3d at p. 194, disapproved on other **[**670]** grounds in *County of Los Angeles* v. *State of California, supra*, 43 Cal.3d at p. 58, fn. 10.) Subdivision (f) therefore is not available to support Arcade's claim.

V

The remaining issue is whether Arcade incurred state-mandated costs within the meaning of subdivision (c) of section 2207. It will be recalled that under subdivision (c) of section 2207, reimbursable costs mandated by the state include "any increased costs which a local agency is required to incur as a result of . . . (c) Any executive order issued after January 1, 1973, which (i) implements or interprets a state statute and (ii), by such implementation or interpretation, increases program levels above the levels required prior to January 1, 1973."

As recognized by the Board, the problem resides in the ambiguity of Regulation 5144, subdivision (g). No one contests the regulation's applicability to the occupation of fire fighting. CA(8)[↑] **(8)** (See fn. 9) But depending on the significance **[***23]** ascribed to certain of its language, e.g., "*In* atmospheres," "on the job," "Communications . . . between *both* or all" (italics added) and "standby persons," the regulation is reasonably susceptible to alternative interpretations: (1) at least two persons must *enter* a dangerous atmosphere, (i.e., to be "on the job" one must be "*in*" the atmosphere) while a third remains outside, (2) at least two persons must stand by (i.e., "standby persons") while others(s) perform a job in a dangerous atmosphere, [9] or (3) a total of two persons -- one active and one standing by -- is all that is required when working in a

such program or service if the local agencies have no reasonable alternatives other than to continue the optional program."

[9] Notwithstanding the use of the plural ("standby persons"), a general rule of construction is that words used in the singular include the plural and vice versa. (See Lab. Code, § 13; Civ. Code, § 14.) Arcade does not contend the regulation requires more than one standby person.

dangerous atmosphere.

CA(9)[↑] **(9)** In view of these inherent ambiguities, the interpretation given the regulation by the Division **[***24]** as the administrative agency charged with its enforcement is entitled to great weight. (*People* v. *French* (1978) 77 Cal.App.3d 511, 521 [143 Cal.Rptr. 782]; see also *Pacific Legal Foundation* v. *Unemployment Ins. Appeals Bd.* (1981) 29 Cal.3d 101 111 [172 Cal.Rptr. 194, 624 P.2d 244]; *Carmona* v. *Division of Industrial Safety, supra*, 13 Cal.3d at p. 310.) We shall defer to the Division's interpretation that the **[*808]** intended meaning of the regulation, when considered generally and in the abstract, is to require the presence of only two persons using respiratory equipment in workplaces involving hazardous atmospheres. Such deference does not undercut the authority vested in the Board to determine the existence of state-mandated costs under section 2201 et seq. In the exercise of that authority the Board also owes a duty of deference to the administrative agency's interpretation of its regulation. The Board is not licensed to impress its own interpretation upon an administrative regulation in derogation of the reasonable construction of the responsible agency.

CA(10)[↑] **(10)** In this regard, Arcade contends that substantial evidence supports the conclusion that the **[***25]** practical consequence of Regulation 5144, subdivision (g), is to mandate an increase in firefighting manpower from two to three persons. Viewing as we must the evidence at the hearing in a light most favorable to Arcade, we accept as true the proposition that fire fighting agencies universally consider the two-person "buddy" system essential to the safety of the workers. We also accept as true that Division inspectors previously gave firefighting agencies the impression that three-person teams are a necessary safeguard.

It does not follow, however, that the regulation in question *mandates* an increase in "program levels above the levels *required* prior to January 1, 1973" as defined by section 2207, subdivision (c). (Italics added.) Although founded on safety reasons, the continued practice of using two fire fighters to enter a burning structure **[**671]** while adding a third to meet the requirement of a standby was a choice which rested with the local fire districts. As the Board recognized, the regulation does not expressly require three-person teams nor has the Division issued a citation for failure to use the additional manpower. Verbal exchanges between Division **[***26]** personnel and the fire districts do not rise to the level of a legislative mandate or official policy. Failing proof that it is impossible to fight fires without the use of "buddies," Arcade cannot inject its own safety standards into a state regulation and say it is a "requirement" of the state.

We conclude that Regulation 5144, subdivision (g), did not mandate an increase in Arcade's fire protection costs for the 1978-1979 and 1979-1980 fiscal years. Accordingly, there was no error in the superior court's order directing the Board to vacate its decision allowing Arcade's claim.

The order granting the Division's petition for a writ of mandate is affirmed.

CLERK, U.S. DISTRICT COURT
ALEXANDRIA, VIRGINIA

IN THE UNITED STATES DISTRICT COURT
FOR THE EASTERN DISTRICT OF VIRGINIA
Alexandria Division

VIRGINIA DEPARTMENT OF TRANSPORTATION, ET AL, Plaintiffs, -v- UNITED STATES ENVIRONMENTAL PROTECTION AGENCY, ET AL, Defendants.	Civil Action No. 1:12-CV-775

Memorandum Opinion

Before the Court is the Plaintiffs' motion for judgment on the pleadings under Federal Rule of Civil Procedure 12(c). The Defendants opposed the motion, and the Plaintiffs replied. The Court heard oral arguments on December 14, 2012 and now issues this memorandum opinion and accompanying order granting the Plaintiffs' motion.

Background

The Clean Water Act, 33 U.S.C. § 1251 et seq., establishes the basic structure for regulating discharge of pollutants into the waters of the United States, and provides certain mechanisms to improve and maintain the quality of surface waters.

One such mechanism is the requirement that states identify "designated uses" for each body of water within their borders, as well as "water quality criteria" sufficient to support those uses. 33 U.S.C. § 1313(c)(2)(A). The Environmental Protection Agency ("EPA") evaluates the uses and criteria developed by the states, and either approves them or else proposes and

promulgates its own set of standards. § 1313(c)(3).

Once the standards are in place, each state is required to maintain a list—also subject to approval or modification by EPA—of its waterbodies that are "impaired" because they do not meet their respective water quality criteria. 33 U.S.C. § 1313(d)(1)(A). For each waterbody on the impaired list, the state is required to establish a set of total maximum daily loads ("TMDLs") sufficient to bring the body back into compliance with its water quality criteria. § 1313(d)(1)(C). Each TMDL establishes the maximum amount of a pollutant that may be added to the waterbody daily from all sources (runoff, point sources, etc.). EPA is required to publish a list of pollutants suitable for maximum daily load measurement, § 1314(a)(2)(D), and it has determined that *all* pollutants are suitable for TMDLs, *see* Total Maximum Daily Loads Under Clean Water Act, 43 Fed. Reg. 60,662. Therefore, any pollutant that falls within the relatively broad definition of "pollutant" set forth in § 1362(6) may be regulated via TMDL. EPA can approve or modify as it sees fit TMDLs proposed by the states. § 1313(d)(2).

Here the state in question is Virginia, and the waterbody is a 25-mile long tributary of the Potomac River, located in Fairfax County, called Accotink Creek. The creek has been the subject of litigation in the past that is not relevant to this matter except the result: EPA was required to set TMDLs for Accotink Creek once Virginia failed to do so by a certain date. Specifically, the creek had been identified as having "benthic impairments," which is to say the community of organisms that live on or near the bottom of the creek were not as numerous or healthy as they should be. EPA was to set appropriate TMDLs to improve the health of the benthic community in Accotink Creek.

On April 18, 2011, EPA established a TMDL for Accotink Creek which limited the flow rate of stormwater into Accotink Creek to 681.8 ft^3/acre-day. The TMDL was designed to

regulate the amount of sediment in the Accotink, because EPA believed sediment was a primary cause of the benthic impairment. Both parties agree that sediment is a pollutant, and that stormwater is not. EPA refers to stormwater flow rate as a "surrogate" for sediment.

The Plaintiffs are now challenging the TMDL on multiple grounds, but presently before the Court is a single issue: Does the Clean Water Act authorize the EPA to regulate the level of a pollutant in Accotink Creek by establishing a TMDL for the flow of a nonpollutant into the creek?

Analysis

I. Standard of Review

Count I of the complaint, at issue here, is brought under the Administrative Procedures Act. *See* Comp. ¶ 169. The APA "confines judicial review of executive branch decisions to the administrative record of proceedings before the pertinent agency." *Shipbuilders Council of Am. V. U.S. Dept. of Homeland Sec.*, 770 F. Supp. 2d 793, 802 (E.D. Va. 2011). As such, the district court "sits as an appellate tribunal," and APA claims can be resolved equally well in the context of Rule 12 or Rule 56. *Univ. Med. Ctr. Of S. Nev. V. Shalala*, 173 F.3d 438, 441 n. 3 (D.C. Cir. 1999).

Because Count I presents a question of statutory interpretation, the Court reviews EPA's decision using the two-step analysis set forth in *Chevron, U.S.A., Inc. v. NRDC, Inc.*, 467 U.S. 837 (1984). For a given question of statutory interpretation, the first step under *Chevron* is to determine whether Congress addressed the "precise question at issue." 467 U.S. at 842. "If the intent of Congress is clear, that is the end of the matter . . . ." *Id.* If the Court cannot find that Congress has squarely addressed the question, the Court must move to Chevron's second step. In

the second step of statutory construction under *Chevron*, the Court must determine whether the agency's interpretation of the statute is "permissible." *Id.* at 843. The agency's construction is permissible if it is reasonable, but it need not be what the Court considers the *best* or *most reasonable* construction. *See id.* at 845. The Court is not to simply impose its own construction on the statute, but instead it gives deference to any reasonable statutory construction by the agency. *Id.* at 843.

II. Chevron Step One

Whether statutory ambiguity exists so that the issue cannot be settled at *Chevron's* first step is for the Court to decide, and the Court "owe[s] the agency no deference on the existence of ambiguity." *Am. Bar Ass'n v. FTC*, 430 F.3d 457, 468 (D.C. Cir. 2005). The Court begins the inquiry by "employing traditional tools of statutory construction." *Chevron*, 467 U.S. at 843 n.9. As always, the analysis begins with the text of the statute. *Nat'l Elec. Mfrs. Ass'n v. U.S. Dept't of Energy*, 654 F.3d 496, 504 (4th Cir. 2011).

The text of the statute that requires states to establish their own TMDLs, 33 U.S.C. § 1313(d)(1)(C), is:

> Each State shall establish for the waters identified in paragraph (1)(A) of this subsection, and in accordance with the priority ranking, **the total maximum daily load, for those pollutants which the Administrator identifies** under section 1314(a)(2) of this title as suitable for such calculation. Such load shall be established at a level necessary to implement the applicable water quality standards with seasonal variations and a margin of safety which takes into account any lack of knowledge concerning the relationship between effluent limitations and water quality. (emphasis added)

The next subsection, § 1313(d)(2), grants EPA the authority to set TMDLs when the state

has not done so adequately. "Pollutant" is a statutorily defined term. 33 U.S.C. § 1362(6).

The Court sees no ambiguity in the wording of this statute. EPA is charged with establishing TMDLs for the appropriate pollutants; that does not give them authority to regulate nonpollutants. The parties agree that sediment is a pollutant under 33 U.S.C. § 1362(6), and stormwater is not. Then how does EPA claim jurisdiction over setting TMDLs for stormwater?

EPA frames the stormwater TMDL as a surrogate. EPA's research apparently indicates that the "[sediment] load in Accotink Creek is a function of the amount of stormwater runoff generated within the watershed." Def. Opp. at 8. And EPA believes that framing the TMDL in terms of stormwater flow rate is superior to simply expressing it in terms of maximum sediment load.

The DC Circuit has considered and rejected a similar attempt by EPA to take liberties with the way Congress intended it to express its TMDLs. In *Friends of the Earth, Inc. v. Env. Protection Agency*, EPA had promulgated TMDLs for the Anacostia River that expressed the maximum load of certain pollutants in terms of annual and seasonal amounts. 446 F.3d 140, 143 (D.C. Cir. 2006). The court found that expressing a TMDL in terms of annual or seasonal maximums was not allowed, because the statute granted authority only for daily loads. *Id.* at 148. The court reached its conclusion even though EPA apparently made a strong argument that expressing TMDLs in terms of annual or seasonal loads was an effective and reasonable approach. *See id.* Presumably a daily load could have been derived by simply dividing the annual load by 365, yet the court still required expression in the terms dictated by Congress.

Here too, EPA hopes to express a TMDL in terms other than those contemplated by the statute, arguing that such an expression is the most effective method. But, as *Friends of the Earth* illustrates, EPA may not regulate something over which it has no statutorily granted power—

annual loads or nonpollutants—as a proxy for something over which it *is* granted power—daily loads or pollutants.

EPA's argument that its surrogate approach should be allowed because the statute does not specifically forbid it fails. EPA is not explicitly forbidden from establishing total maximum *annual* loads any more than they are explicitly barred from establishing TMDLs for nonpollutants. The question is whether the statute grants the agency the authority it is claiming, not whether the statute explicitly withholds that authority. And in this case, as in *Friends of the Earth*, the statute simply does not grant EPA the authority it claims.

The dicta in *Weyerhaeuser Co. v. Costle* is not as helpful to EPA's case as it would like. 590 F.2d 1011, 1022 n.6 (D.C. Cir. 1978). It is true that the court said in a footnote "[i]t is well recognized that EPA can use pollution parameters that are not harmful in themselves, but act as indicators of harm." *Id.* But in that case, the non-harmful pollution parameters the EPA sought to regulate were components of the effluent commonly discharged from paper mills, *id.* at 1022, making them effluents themselves. And power to regulate effluents is expressly granted to the EPA in the relevant statutory section. *See* 33 U.S.C. § 1314(b).

EPA would like to create the impression that Congress has given it loose rein to determine exactly what it could and could not regulate. On page 16 of its opposition to this motion, EPA points out that "Congress authorized EPA to determine which pollutants were suitable for TMDL calculation and measurement." (Internal quotes removed). While this may be true, EPA glosses over the fact that 33 U.S.C. § 1314(a)(2)(D) only gives EPA the power to regulate pollutants as that term is defined—by Congress—elsewhere in the statute. And, as discussed above, sediment is a pollutant for these purposes, but stormwater is not.

In a similar vein, EPA regulations which imply that the agency has discretion to set the

TMDL as it sees fit do not bear on the question now before the Court. EPA has promulgated a regulation allowing TMDLs to be "expressed in terms of either mass per time, toxicity, or other appropriate measure," 40 C.F.R. § 130.2(i), and another that allows TMDLs to be expressed as a "property of pollution," 50 Fed. Reg. 1774, 1776 (Jan. 11, 1985). But, EPA citing these regulations to demonstrate that the surrogate TMDL approach is permissible is mere bootstrapping. To the extent the regulations allow EPA to set TMDLs for nonpollutants, they exceed the statutory authority of EPA.

The plain language of the statute trumps all, but legislative history also supports Plaintiffs' argument. Congress's intent to limit EPA's discretion in this context is evidenced by the committee record cited by Plaintiffs, which has also been used by the Ninth Circuit, in which Senator Randolph, Chairman of the Senate committee that amended the act in 1972, explained, "We have written into law precise standards and definite guidelines on how the environment should be protected. We have done more than just provide broad directives [for] administrators to follow." Pl. Mot. 7, *citing Nw. Envtl. Def. Ctr. v. Brown*, 640 F.3d 1063, 1072 (9th Cir. 2011). Congress created a statutory scheme that included a precise definition of the word "pollutant," and then gave EPA authority to set TMDLs for those pollutants. Senator Randolph's comments strongly imply that Congress did not intend anything more or less than what is written in the statute.

The Court considers the language of 33 U.S.C. § 1313(d)(1)(C) to be unambiguous. Congress has spoken directly on the question at issue, and its answer is that EPA's authority does not extend to establishing TMDLs for nonpollutants as surrogates for pollutants. The legislative history of the CWA is consistent with this reading. Therefore, this Court finds EPA's interpretation of § 1313 and the related provisions to be impermissibly broad based on analysis

under the first step of *Chevron* analysis.

III. Chevron Step Two

Because the Court considers Congress's intent to be clear and unambiguously expressed by the language of the statute, it need not move to the second step of *Chevron* analysis. But the Court notes that there is substantial reason to believe EPA's motives go beyond "permissible gap-filling."

Page 9 of EPA's opposition says, "stormwater flow rates as a surrogate would more effectively address the process by which sediment impairs aquatic life in Accontink Creek." If the sediment levels in Accotink Creek have become dangerously high, what better way to address the problem than by limiting the amount of sediment permitted in the creek? If sediment level is truly "a function of" the amount of stormwater runoff, as EPA claims, then the TMDL could just as easily be expressed in terms of sediment load.

In fact, the Board of Supervisors of Fairfax County argued at the December 14th hearing (without objection from EPA) that EPA has approved 3,700 TMDLs for sediment nationwide, and in Virginia has addressed 111 benthic impairments with TMDLs. None of them regulated the flow rate of stormwater. By comparison, EPA has tried out its novel approach of regulating sediment via flow in only four instances nationwide, and all four attempts were challenged in court. One has settled, the other three are still pending.

The Court suspects that the decision to regulate stormwater flow as a surrogate for sediment load would not constitute a permissible construction of § 1313(d)(1)(C), even given the deference due at *Chevron's* second step. This is especially likely because EPA is attempting to increase the extent of its own authority via flow TMDLs, which courts must examine carefully.

See Brown & Williamson Tobacco Corp. v. Food & Drug Admin., 153 F.3d 155, 161-62 (4th Cir. 1998). EPA's attempt to set TMDLs for nonpollutants probably goes beyond "permissible gap-filling" and is instead an impermissible construction of the statute.

Conclusion

The language of § 1313(d)(1)(C) is clear. EPA is authorized to set TMDLs to regulate pollutants, and pollutants are carefully defined. Stormwater runoff is not a pollutant, so EPA is not authorized to regulate it via TMDL. Claiming that the stormwater maximum load is a surrogate for sediment, which is a pollutant and therefore regulable, does not bring stormwater within the ambit of EPA's TMDL authority. Whatever reason EPA has for thinking that a stormwater flow rate TMDL is a better way of limiting sediment load than a sediment load TMDL, EPA cannot be allowed to exceed its clearly limited statutory authority. For these reasons, the Plaintiffs' motion for Rule 12(c) judgment on the pleadings on Count I of their complaint is granted.

TAB 2

§ 1311. Effluent limitations

(a) Illegality of pollutant discharges except in compliance with law. Except as in compliance with this section and sections 302, 306, 307, 318, 402, and 404 of this Act [33 USCS §§ 1312, 1316, 1317, 1328, 1342, 1344], the discharge of any pollutant by any person shall be unlawful.

(b) Timetable for achievement of objectives. In order to carry out the objective of this Act there shall be achieved--

(1) (A) not later than July 1, 1977, effluent limitations for point sources, other than publicly owned treatment works, (i) which shall require the application of the best practicable control technology currently available as defined by the Administrator pursuant to section 304(b) of this Act [33 USCS § 1314(b)], or (ii) in the case of a discharge into a publicly owned treatment works which meets the requirements of subparagraph (B) of this paragraph, which shall require compliance with any applicable pretreatment requirements and any requirements under section 307 of this Act [33 USCS § 1317]; and

(B) for publicly owned treatment works in existence on July 1, 1977, or approved pursuant to section 203 of this Act [33 USCS § 1283] prior to June 30, 1974 (for which construction must be completed within four years of approval), effluent limitations based upon secondary treatment as defined by the Administrator pursuant to section 304(d)(1) of this Act [33 USCS § 1314(d)(1)]; or,

(C) not later than July 1, 1977, any more stringent limitation, including those necessary to meet water quality standards, treatment standards, or schedules of compliance, established pursuant to any State law or regulations (under authority preserved by section 510 [33 USCS § 1370]) or any other Federal law or regulation, or required to implement any applicable water quality standard established pursuant to this Act.

(2) (A) for pollutants identified in subparagraphs (C), (D), and (F) of this paragraph, effluent limitations for categories and classes of point sources, other than publicly owned treatment works, which (i) shall require application of the best available technology economically achievable for such category or class, which will result in reasonable further progress toward the national goal of eliminating the discharge of all pollutants, as determined in accordance with regulations issued by the Administrator pursuant to section 304(b)(2) of this Act [33 USCS § 1314(b)(2)], which such effluent limitations shall require the elimination of discharges of all pollutants if the Administrator finds, on the basis of information available to him (including information developed pursuant to section 315 [33 USCS § 1325]), that such

elimination is technologically and economically achievable for a category or class of point sources as determined in accordance with regulations issued by the Administrator pursuant to section 304(b)(2) of this Act [33 USCS § 1314(b)(2)], or (ii) in the case of the introduction of a pollutant into a publicly owned treatment works which meets the requirements of subparagraph (B) of this paragraph, shall require compliance with any applicable pretreatment requirements and any other requirement under section 307 of this Act [33 USCS § 1317];

(B) [Repealed]

(C) with respect to all toxic pollutants referred to in table 1 of Committee Print Numbered 95-30 of the Committee on Public Works and Transportation of the House of Representatives compliance with effluent limitations in accordance with subparagraph (A) of this paragraph as expeditiously as practicable but in no case later than three years after the date such limitations are promulgated under section 304(b) [33 USCS § 1314(b)], and in no case later than March 31, 1989;

(D) for all toxic pollutants listed under paragraph (1) of subsection (a) of section 307 of this Act [33 USCS § 1317] which are not referred to in subparagraph (C) of this paragraph compliance with effluent limitations in accordance with subparagraph (A) of this paragraph as expeditiously as practicable, but in no case later than three years after the date such limitations are promulgated under section 304(b) [33 USCS § 1314(b)], and in no case later than March 31, 1989;

(E) as expeditiously as practicable but in no case later than three years after the date such limitations are promulgated under section 304(b) [33 USCS § 1314(b)], and in no case later than March 31, 1989, compliance with effluent limitations for categories and classes of point sources, other than publicly owned treatment works, which in the case of pollutants identified pursuant to section 304(a)(4) of this Act [33 USCS § 1314(a)(4)] shall require application of the best conventional pollutant control technology as determined in accordance with regulations issued by the Administrator pursuant to section 304(b)(4) of this Act [33 USCS § 1314(b)(4)]; and

(F) for all pollutants (other than those subject to subparagraphs (C), (D), or (E) of this paragraph) compliance with effluent limitations in accordance with subparagraph (A) of this paragraph as expeditiously as practicable but in no case later than 3 years after the date such limitations are established, and in no case later than March 31, 1989.

(3) (A) for effluent limitations under paragraph (1)(A)(i) of this subsection promulgated after January 1, 1982, and requiring a level of control substantially greater or based on fundamentally different control technology than under permits for an industrial category issued before such date, compliance as expeditiously as practicable but in no case later than three years after the date such limitations are promulgated under section 304(b) [33 USCS § 1314(b)], and in no case later than March 31, 1989; and

(B) for any effluent limitation in accordance with paragraph (1)(A)(i), (2)(A)(i), or (2)(E) of this subsection established only on the basis of section 402(a)(1) [33 USCS § 1342(a)(1)] in a permit issued after enactment of the Water Quality Act of 1987 [enacted Feb. 4, 1987], compliance as expeditiously as practicable but in no case later than three years after the date such limitations are established, and in no case later than March 31, 1989.

(c) Modification of timetable. The Administrator may modify the requirements of subsection (b)(2)(A) of this section with respect to any point source for which a permit application is filed after July 1, 1977, upon a showing by the owner or operator of such point source satisfactory to the Administrator that such modified requirements (1) will represent the maximum use of technology within the economic capability of the owner or operator; and (2) will result in reasonable further progress toward the elimination of the discharge of pollutants.

(d) Review and revision of effluent limitations. Any effluent limitation required by paragraph (2) of subsection (b) of this section shall be reviewed at least every five years and, if appropriate, revised pursuant to the procedure established under such paragraph.

(e) All point discharge source application of effluent limitations. Effluent limitations established pursuant to this section or section 302 of this Act [33 USCS § 1312] shall be applied to all point sources of discharge of pollutants in accordance with the provisions of this Act [33 USCS §§ 1251 et seq.].

(f) Illegality of discharge of radiological, chemical, or biological warfare agents, high-level radioactive waste or medical waste. Notwithstanding any other provisions of this Act [33 USCS §§ 1251 et seq.] it shall be unlawful to discharge any radiological, chemical, or biological warfare agent, any high-level radioactive waste, or any medical waste, into the navigable waters.

(g) Modifications for certain nonconventional pollutants.

(1) General authority. The Administrator, with the concurrence of the State, may modify the requirements of subsection (b)(2)(A) of this section with respect to the discharge from any point source of ammonia, chlorine, color, iron, and total phenols (4AAP) (when determined by the Administrator to be a pollutant covered by subsection (b)(2)(F)) and any other pollutant which the Administrator lists under paragraph (4) of this subsection.

(2) Requirements for granting modifications. A modification under this subsection shall be granted only upon a showing by the owner or operator of a point source satisfactory to the Administrator that--

(A) such modified requirements will result at a minimum in compliance with the requirements of subsection (b)(1)(A) or (C) of this section, whichever is applicable;

(B) such modified requirements will not result in any additional requirements on any other point or nonpoint source; and

(C) such modification will not interfere with the attainment or maintenance of that water quality which shall assure protection of public water supplies, and the protection and propagation of a balanced population of shellfish, fish, and wildlife, and allow recreational activities, in and on the water and such modification will not result in the discharge of pollutants in quantities which may reasonably be anticipated to pose an unacceptable risk to human health or the environment because of bioaccumulation, persistency in the environment, acute toxicity, chronic toxicity (including carcinogenicity, mutagenicity or teratogenicity), or synergistic propensities.

(3) Limitation on authority to apply for subsection (c) modification. If an owner or operator of a point source applies for a modification under this subsection with respect to the discharge of any pollutant, such owner or operator shall be eligible to apply for modification under

subsection (c) of this section with respect to such pollutant only during the same time period as he is eligible to apply for a modification under this subsection.

(4) Procedures for listing additional pollutants.

(A) General authority. Up on petition of any person, the Administrator may add any pollutant to the list of pollutants for which modification under this section is authorized (except for pollutants identified pursuant to section 304(a)(4) of this Act [33 USCS § 1314(a)(4)], toxic pollutants subject to section 307(a) of this Act [33 USCS § 1317(a)], and the thermal component of discharges) in accordance with the provisions of this paragraph.

(B) Requirements for listing.

(i) Sufficient information. The person petitioning for listing of an additional pollutant under this subsection shall submit to the Administrator sufficient information to make the determinations required by this subparagraph.

(ii) Toxic criteria determination. The Administrator shall determine whether or not the pollutant meets the criteria for listing as a toxic pollutant under section 307(a) of this Act [33 USCS § 1317(a)].

(iii) Listing as toxic pollutant. If the Administrator determines that the pollutant meets the criteria for listing as a toxic pollutant under section 307(a) [33 USCS § 1317(a)], the Administrator shall list the pollutant as a toxic pollutant under section 307(a) [33 USCS § 1317(a)].

(iv) Nonconventional criteria determination. If the Administrator determines that the pollutant does not meet the criteria for listing as a toxic pollutant under such section and determines that adequate test methods and sufficient data are available to make the determinations required by paragraph (2) of this subsection with respect to the pollutant, the Administrator shall add the pollutant to the list of pollutants specified in paragraph (1) of this subsection for which modifications are authorized under this subsection.

(C) Requirements for filing of petitions. A petition for listing of a pollutant under this paragraph--

(i) must be filed not later than 270 days after the date of promulgation of an applicable effluent guideline under section 304 [33 USCS § 1314];

(ii) may be filed before promulgation of such guideline; and

(iii) may be filed with an application for a modification under paragraph (1) with respect to the discharge of such pollutant.

(D) Deadline for approval of petition. A decision to add a pollutant to the list of pollutants for which modifications under this subsection are authorized must be made within 270 days after the date of promulgation of an applicable effluent guideline under section 304 [33 USCS § 1314].

(E) Burden of proof. The burden of proof for making the determinations under subparagraph (B) shall be on the petitioner.

(5) Removal of pollutants. The Administrator may remove any pollutant from the list of pollutants for which modifications are authorized under this subsection if the Administrator determines that adequate test methods and sufficient data are no longer available for determining whether or not modifications may be granted with respect to such pollutant under paragraph (2) of this subsection.

(h) Modification of secondary treatment requirements. The Administrator, with the concurrence of the State, may issue a permit under section 402 [33 USCS § 1342] which modifies the requirements of subsection (b)(1)(B) of this section with respect to the discharge of any pollutant from a publicly owned treatment works into marine waters, if the applicant demonstrates to the satisfaction of the Administrator that--

(1) there is an applicable water quality standard specific to the pollutant for which the modification is requested, which has been identified under section 304(a)(6) of this Act [33 USCS § 1314(a)(6)];

(2) the discharge of pollutants in accordance with such modified requirements will not interfere, alone or in combination with pollutants from other sources, with the attainment or maintenance of that water quality which assures protection of public water supplies and the protection and propagation of a balanced, indigenous population of shellfish, fish and wildlife, and allows recreational activities, in and on the water;

(3) the applicant has established a system for monitoring the impact of such discharge on a representative sample of aquatic biota, to the extent practicable, and the scope of such monitoring is limited to include only those scientific investigations which are necessary to study the effects of the proposed discharge;

(4) such modified requirements will not result in any additional requirements on any other point or nonpoint source;

(5) all applicable pretreatment requirements for sources introducing waste into such treatment works will be enforced;

(6) in the case of any treatment works serving a population of 50,000 or more, with respect to any toxic pollutant introduced into such works by an industrial discharger for which pollutant there is no applicable pretreatment requirement in effect, sources introducing waste into such works are in compliance with all applicable pretreatment requirements, the applicant will enforce such requirements, and the applicant has in effect a pretreatment program which, in combination with the treatment of discharges from such works, removes the same amount of such pollutant as would be removed if such works were to apply secondary treatment to discharges and if such works had no pretreatment program with respect to such pollutant;

(7) to the extent practicable, the applicant has established a schedule of activities designed to eliminate the entrance of toxic pollutants from nonindustrial sources into such treatment works;

(8) there will be no new or substantially increased discharges from the point source of the pollutant to which the modification applies above that volume of discharge specified in the permit;

(9) the applicant at the time such modification becomes effective will be discharging effluent which has received at least primary or equivalent treatment and which meets the criteria

established under section 304(a)(1) of this Act [33 USCS § 1314(a)(1)] after initial mixing in the waters surrounding or adjacent to the point at which such effluent is discharged.

For the purposes of this subsection the phrase "the discharge of any pollutant into marine waters" refers to a discharge into deep waters of the territorial sea or the waters of the contiguous zone, or into saline estuarine waters where there is strong tidal movement and other hydrological and geological characteristics which the Administrator determines necessary to allow compliance with paragraph (2) of this subsection, and section 101(a)(2) of this Act [33 USCS § 1251(a)(2)]. For the purposes of paragraph (9), "primary or equivalent treatment" means treatment by screening, sedimentation, and skimming adequate to remove at least 30 percent of the biological oxygen demanding material and of the suspended solids in the treatment works influent, and disinfection, where appropriate. A municipality which applies secondary treatment shall be eligible to receive a permit pursuant to this subsection which modifies the requirements of subsection (b)(1)(B) of this section with respect to the discharge of any pollutant from any treatment works owned by such municipality into marine waters. No permit issued under this subsection shall authorize the discharge of sewage sludge into marine waters. In order for a permit to be issued under this subsection for the discharge of a pollutant into marine waters, such marine waters must exhibit characteristics assuring that water providing dilution does not contain significant amounts of previously discharged effluent from such treatment works. No permit issued under this subsection shall authorize the discharge of any pollutant into saline estuarine waters which at the time of application do not support a balanced indigenous population of shellfish, fish and wildlife, or allow recreation in and on the waters or which exhibit ambient water quality below applicable water quality standards adopted for the protection of public water supplies, shellfish, fish and wildlife or recreational activities or such other standards necessary to assure support and protection of such uses. The prohibition contained in the preceding sentence shall apply without regard to the presence or absence of a causal relationship between such characteristics and the applicant's current or proposed discharge. Notwithstanding any other provisions of this subsection, no permit may be issued under this subsection for discharge of a pollutant into the New York Bight Apex consisting of the ocean waters of the Atlantic Ocean westward of 73 degrees 30 minutes west longitude and northward of 40 degrees 10 minutes north latitude.

(i) Municipal time extensions.

(1) Where construction is required in order for a planned or existing publicly owned treatment works to achieve limitations under subsection (b)(1)(B) or (b)(1)(C) of this section, but (A) construction cannot be completed within the time required in such subsection, or (B) the United States has failed to make financial assistance under this Act [33 USCS §§ 1251 et seq.] available in time to achieve such limitations by the time specified in such subsection, the owner or operator of such treatment works may request the Administrator (or if appropriate the State) to issue a permit pursuant to section 402 of this Act [33 USCS § 1342] or to modify a permit issued pursuant to that section to extend such time for compliance. Any such request shall be filed with the Administrator (or if appropriate the State) within 180 days after the date of enactment of the Water Quality Act of 1987 [enacted Feb. 7, 1987]. The Administrator (or if appropriate the State) may grant such request and issue or modify such a permit, which shall contain a schedule of compliance for the publicly owned treatment works based on the earliest date by which such financial assistance will be available from the United States and construction can be completed, but in no event later than July 1, 1988, and shall contain such

other terms and conditions, including those necessary to carry out subsections (b) through (g) of section 201 of this Act [33 USCS § 1281(b)-(g)], section 307 of this Act [33 USCS § 1317], and such interim effluent limitations applicable to that treatment works as the Administrator determines are necessary to carry out the provisions of this Act [33 USCS §§ 1251 et seq.].

(2) (A) Where a point source (other than a publicly owned treatment works) will not achieve the requirements of subsections (b)(1)(A) and (b)(1)(C) of this section and--

(i) if a permit issued prior to July 1, 1977, to such point source is based upon a discharge into a publicly owned treatment works; or

(ii) if such point source (other than a publicly owned treatment works) had before July 1, 1977, a contract (enforceable against such point source) to discharge into a publicly owned treatment works; or

(iii) if either an application made before July 1, 1977, for a construction grant under this Act [33 USCS §§ 1251 et seq.] for a publicly owned treatment works, or engineering or architectural plans or working drawings made before July 1, 1977, for a publicly owned treatment works, show that such point source was to discharge into such publicly owned treatment works,

and such publicly owned treatment works is presently unable to accept such discharge without construction, and in the case of a discharge to an existing publicly owned treatment works, such treatment works has an extension pursuant to paragraph (1) of this subsection, the owner or operator of such point source may request the Administrator (or if appropriate the State) to issue or modify such a permit pursuant to such section 402 [33 USCS § 1342] to extend such time for compliance. Any such request shall be filed with the Administrator (or if appropriate the State) within 180 days after the date of enactment of this subsection [enacted Dec. 27, 1977] or the filing of a request by the appropriate publicly owned treatment works under paragraph (1) of this subsection, whichever is later. If the Administrator (or if appropriate the State) finds that the owner or operator of such point source has acted in good faith, he may grant such request and issue or modify such a permit, which shall contain a schedule of compliance for the point source to achieve the requirements of subsections (b)(1)(A) and (C) of this section and shall contain such other terms and conditions, including pretreatment and interim effluent limitations and water conservation requirements applicable to that point source, as the Administrator determines are necessary to carry out the provisions of this Act [33 USCS §§ 1251 et seq.].

(B) No time modification granted by the Administrator (or if appropriate the State) pursuant to paragraph (2)(A) of this subsection shall extend beyond the earliest date practicable for compliance or beyond the date of any extension granted to the appropriate publicly owned treatment works pursuant to paragraph (1) of this subsection, but in no event shall it extend beyond July 1, 1988; and no such time modification shall be granted unless (i) the publicly owned treatment works will be in operation and available to the point source before July 1, 1988, and will meet the requirements of subsections (b)(1)(B) and (C) of this section after receiving the discharge from that point source; and (ii) the point source and the publicly owned treatment works have entered into an enforceable contract requiring the point source to discharge into the publicly owned treatment works, the owner or operator of such point

source to pay the costs required under section 204 of this Act [33 USCS § 1284], and the publicly owned treatment works to accept the discharge from the point source; and (iii) the permit for such point source requires that point source to meet all requirements under section 307(a) and (b) [33 USCS § 1317(a), (b)] during the period of such time modification.

(j) Modification procedures.

(1) Any application filed under this section for a modification of the provisions of--

(A) subsection (b)(1)(B) under subsection (h) of this section shall be filed not later that [than] the 365th day which begins after the date of enactment of the Municipal Wastewater Treatment Construction Grant Amendments of 1981 [enacted Dec. 29, 1981], except that a publicly owned treatment works which prior to December 31, 1982, had a contractual arrangement to use a portion of the capacity of an ocean outfall operated by another publicly owned treatment works which has applied for or received modification under subsection (h), may apply for a modification of subsection (h) in its own right not later than 30 days after the date of the enactment of the Water Quality Act of 1987 [enacted Feb. 7, 1987], and except as provided in paragraph (5);

(B) subsection (b)(2)(A) as it applies to pollutants identified in subsection (b)(2)(F) shall be filed not later than 270 days after the date of promulgation of an applicable effluent guideline under section 304 [33 USCS § 1314] or not later than 270 days after the date of enactment of the Clean Water Act of 1977 [enacted Dec. 27, 1977], whichever is later.

(2) Subject to paragraph (3) of this section, any application for a modification filed under subsection (g) of this section shall not operate to stay any requirement under this Act [33 USCS §§ 1251 et seq.], unless in the judgment of the Administrator such a stay or the modification sought will not result in the discharge of pollutants in quantities which may reasonably be anticipated to pose an unacceptable risk to human health or the environment because of bioaccumulation, persistency in the environment, acute toxicity, chronic toxicity (including carcinogenicity, mutagenicity, or teratogenicity), or synergistic propensities, and that there is a substantial likelihood that the applicant will succeed on the merits of such application. In the case of an application filed under subsection (g) of this section, the Administrator may condition any stay granted under this paragraph on requiring the filing of a bond or other appropriate security to assure timely compliance with the requirements from which a modification is sought.

(3) Compliance requirements under subsection (g).

(A) Effect of filing. An application for a modification under subsection (g) and a petition for listing of a pollutant as a pollutant for which modifications are authorized under such subsection shall not stay the requirement that the person seeking such modification or listing comply with effluent limitations under this Act [33 USCS §§ 1251 et seq.] for all pollutants not the subject of such application or petition.

(B) Effect of disapproval. Disapproval of an application for a modification under subsection (g) shall not stay the requirement that the person seeking such modification comply with all applicable effluent limitations under this Act [33 USCS §§ 1251 et seq.].

(4) Deadline for subsection (g) decision. An application for a modification with respect to a pollutant filed under subsection (g) must be approved or disapproved not later than 365 days after the date of such filing; except that in any case in which a petition for listing such pollutant as a pollutant for which modifications are authorized under such subsection is approved, such application must be approved or disapproved not later than 365 days after the date of approval of such petition.

(5) Extension of application deadline.

(A) In general. In the 180-day period beginning on the date of the enactment of this paragraph [enacted Oct. 31, 1994], the city of San Diego, California, may apply for a modification pursuant to subsection (h) of the requirements of subsection (b)(1)(B) with respect to biological oxygen demand and total suspended solids in the effluent discharged into marine waters.

(B) Application. An application under this paragraph shall include a commitment by the applicant to implement a waste water reclamation program that, at a minimum, will--

(i) achieve a system capacity of 45,000,000 gallons of reclaimed waste water per day by January 1, 2010; and

(ii) result in a reduction in the quantity of suspended solids discharged by the applicant into the marine environment during the period of the modification.

(C) Additional conditions. The Administrator may not grant a modification pursuant to an application submitted under this paragraph unless the Administrator determines that such modification will result in removal of not less than 58 percent of the biological oxygen demand (on an annual average) and not less than 80 percent of total suspended solids (on a monthly average) in the discharge to which the application applies. A

(D) Preliminary decision deadline. The Administrator shall announce a preliminary decision on an application submitted under this paragraph not later than 1 year after the date the application is submitted.

(k) Innovative technology. In the case of any facility subject to a permit under section 402 [33 USCS § 1342] which proposes to comply with the requirements of subsection (b)(2)(A) or (b)(2)(E) of this section by replacing existing production capacity with an innovative production process which will result in an effluent reduction significantly greater than that required by the limitation otherwise applicable to such facility and moves toward the national goal of eliminating the discharge of all pollutants, or with the installation of an innovative control technique that has a substantial likelihood for enabling the facility to comply with the applicable effluent limitation by achieving a significantly greater effluent reduction than that required by the applicable effluent limitation and moves toward the national goal of eliminating the discharge of all pollutants, or by achieving the required reduction with an innovative system that has the potential for significantly lower costs than the systems which have been determined by the Administrator to be economically achievable, the Administrator (or the State with an approved program under section 402 [33 USCS § 1342], in consultation with the Administrator) may establish a date for compliance under subsection (b)(2)(A) or (b)(2)(E) of this section no later than two years after the date for compliance with such effluent limitation which would otherwise be applicable under such

subsection, if it is also determined that such innovative system has the potential for industry-wide application.

(l) Toxic pollutants. Other than as provided in subsection (n) of this section, the Administrator may not modify any requirement of this section as it applies to any specific pollutant which is on the toxic pollutant list under section 307(a)(1) of this Act [33 USCS § 1317(a)(1)].

(m) Modification of effluent limitation requirements for point sources.

(1) The Administrator, with the concurrence of the State, may issue a permit under section 402 [33 USCS § 1342] which modifies the requirements of subsections (b)(1)(A) and (b)(2)(E) of this section, and of section 403 [33 USCS § 1343], with respect to effluent limitations to the extent such limitations relate to biochemical oxygen demand and pH from discharges by an industrial discharger in such State into deep waters of the territorial seas, if the applicant demonstrates and the Administrator finds that--

(A) the facility for which modification is sought is covered at the time of the enactment of this subsection [enacted Jan. 8, 1983] by National Pollutant Discharge Elimination System permit number CA0005894 or CA0005282;

(B) the energy and environmental costs of meeting such requirements of subsections (b)(1)(A) and (b)(2)(E) and section 403 [33 USCS § 1343] exceed by an unreasonable amount the benefits to be obtained, including the objectives of this Act [33 USCS §§ 1251 et seq.];

(C) the applicant has established a system for monitoring the impact of such discharges on a representative sample of aquatic biota;

(D) such modified requirements will not result in any additional requirements on any other point or nonpoint source;

(E) there will be no new or substantially increased discharges from the point source of the pollutant to which the modification applies above that volume of discharge specified in the permit;

(F) the discharge is into waters where there is strong tidal movement and other hydrological and geological characteristics which are necessary to allow compliance with this subsection and section 101(a)(2) of this Act [33 USCS § 1251(a)(2)];

(G) the applicant accepts as a condition to the permit a contractural [contractual] obligation to use funds in the amount required (but not less than $ 250,000 per year for ten years) for research and development of water pollution control technology, including but not limited to closed cycle technology;

(H) the facts and circumstances present a unique situation which, if relief is granted, will not establish a precedent or the relaxation of the requirements of this Act [33 USCS §§ 1251 et seq.] applicable to similarly situated discharges; and

(I) no owner or operator of a facility comparable to that of the applicant situated in the United States has demonstrated that it would be put at a competitive disadvantage to the applicant (or the parent company or any subsidiary thereof) as a result of the issuance of a permit under this subsection.

(2) The effluent limitations established under a permit issued under paragraph (1) shall be sufficient to implement the applicable State water quality standards, to assure the protection of public water supplies and protection and propagation of a balanced, indigenous population of shellfish, fish, fauna, wildlife, and other aquatic organisms, and to allow recreational activities in and on the water. In setting such limitations, the Administrator shall take into account any seasonal variations and the need for an adequate margin of safety, considering the lack of essential knowledge concerning the relationship between effluent limitations and water quality and the lack of essential knowledge of the effects of discharges on beneficial uses of the receiving waters.

(3) A permit under this subsection may be issued for a period not to exceed five years, and such a permit may be renewed for one additional period not to exceed five years upon a demonstration by the applicant and a finding by the Administrator at the time of application for any such renewal that the provisions of this subsection are met.

(4) The Administrator may terminate a permit issued under this subsection if the Administrator determines that there has been a decline in ambient water quality of the receiving waters during the period of the permit even if a direct cause and effect relationship cannot be shown: *Provided,* That if the effluent from a source with a permit issued under this subsection is contributing to a decline in ambient water quality of the receiving waters, the Administrator shall terminate such permit.

(n) Fundamentally different factors.

(1) General rule. The Administrator, with the concurrence of the State, may establish an alternative requirement under subsection (b)(2) or section 307(b) [33 USCS § 1317(b)] for a facility that modifies the requirements of national effluent limitation guidelines or categorical pretreatment standards that would otherwise be applicable to such facility, if the owner or operator of such facility demonstrates to the satisfaction of the Administrator that--

(A) the facility is fundamentally different with respect to the factors (other than cost) specified in section 304(b) or 304(g) and considered by the Administrator in establishing such national effluent limitation guidelines or categorical pretreatment standards;

(B) the application--

(i) is based solely on information and supporting data submitted to the Administrator during the rule-making for establishment of the applicable national effluent limitation guidelines or categorical pretreatment standard specifically raising the factors that are fundamentally different for such facility; or

(ii) is based on information and supporting data referred to in clause (i) and information and supporting data the applicant did not have a reasonable opportunity to submit during such rulemaking;

(C) the alternative requirement is no less stringent than justified by the fundamental difference; and

(D) the alternative requirement will not result in a nonwater quality environmental impact which is markedly more adverse than the impact considered by the Administrator in establishing such national effluent limitation guideline or categorical pretreatment standard.

(2) Time limit for applications. An application for an alternative requirement which modifies the requirements of an effluent limitation or pretreatment standard under this subsection must be submitted to the Administrator within 180 days after the date on which such limitation or standard is established or revised, as the case may be.

(3) Time limit for decision. The Administrator shall approve or deny by final agency action an application submitted under this subsection within 180 days after the date such application is filed with the Administrator.

(4) Submission of information. The Administrator may allow an applicant under this subsection to submit information and supporting data until the earlier of the date the application is approved or denied or the last day that the Administrator has to approve or deny such application.

(5) Treatment of pending applications. For the purposes of this subsection, an application for an alternative requirement based on fundamentally different factors which is pending on the date of the enactment of this subsection [enacted Feb. 7, 1987] shall be treated as having been submitted to the Administrator on the 180th day following such date of enactment [enacted Feb. 7, 1987]. The applicant may amend the application to take into account the provisions of this subsection.

(6) Effect of submission of application. An application for an alternative requirement under this subsection shall not stay the applicant's obligation to comply with the effluent limitation guideline or categorical pretreatment standard which is the subject of the application.

(7) Effect of denial. If an application for an alternative requirement which modifies the requirements of an effluent limitation or pretreatment standard under this subsection is denied by the Administrator, the applicant must comply with such limitation or standard as established or revised, as the case may be.

(8) Reports. By January 1, 1997, and January 1 of every odd-numbered year thereafter, the Administrator shall submit to the Committee on Environment and Public Works of the Senate and the Committee on Transportation and Infrastructure of the House of Representatives a report on the status of applications for alternative requirements which modify the requirements of effluent limitations under section 301 or 304 of this Act [33 USCS § 1311 or 1314] or any national categorical pretreatment standard under section 307(b) of this Act [33 USCS § 1317(b)] filed before, on, or after such date of enactment [enacted Feb. 7, 1987].

(o) Application fees. The Administrator shall prescribe and collect from each applicant fees reflecting the reasonable administrative costs incurred in reviewing and processing applications for modifications submitted to the Administrator pursuant to subsections (c), (g), (i), (k), (m), and (n) of section 301, section 304(d)(4), and section 316(a) of this Act [33 USCS §§ 1311(c), (g), (i), (k), (m), (n), 1314(d)(4), 1316(a)]. All amounts collected by the Administrator under this subsection shall be deposited into a special fund of the Treasury entitled "Water Permits and Related Services" which shall thereafter be available for appropriation to carry out activities of the Environmental Protection Agency for which such fees were collected.

(p) Modified permit for coal remining operations.

(1) In general. Subject to paragraphs (2) through (4) of this subsection, the Administrator, or the State in any case which the State has an approved permit program under section 402(b) [33 USCS § 1342(b)], may issue a permit under section 402 [33 USCS § 1342] which modifies the

requirements of subsection (b)(2)(A) of this section with respect to the pH level of any pre-existing discharge, and with respect to pre-existing discharges of iron and manganese from the remined area of any coal remining operation or with respect to the pH level or level of iron or manganese in any pre-existing discharge affected by the remaining operation. Such modified requirements shall apply the best available technology economically achievable on a case-by-case basis, using best professional judgment, to set specific numerical effluent limitations in each permit.

(2) Limitations. The Administrator or the State may only issue a permit pursuant to paragraph (1) if the applicant demonstrates to the satisfaction of the Administrator or the State, as the case may be, that the coal remining operation will result in the potential for improved water quality from the remining operation but in no event shall such a permit allow the pH level of any discharge, and in no event shall such a permit allow the discharges of iron and manganese, to exceed the levels being discharged from the remined area before the coal remining operation begins. No discharge from, or affected by, the remining operation shall exceed State water quality standards established under section 303 of this Act [33 USCS § 1313].

(3) Definitions. For purposes of this subsection--

(A) Coal remining operation. The term "coal remining operation" means a coal mining operation which begins after the date of the enactment of this subsection [enacted Feb. 4, 1987] at a site on which coal mining was conducted before the effective date of the Surface Mining Control and Reclamation Act of 1977.

(B) Remined area. The term "remined area" means only that area of any coal remining operation on which coal mining was conducted before the effective date of the Surface Mining Control and Reclamation Act of 1977.

(C) Pre-existing discharge. The term "pre-existing discharge" means any discharge at the time of permit application under this subsection.

(4) Applicability of strip mining laws. Nothing in this subsection shall affect the application of the Surface Mining Control and Reclamation Act of 1977 to any coal remining operation, including the application of such Act to suspended solids.

History

(June 30, 1948, ch 758, Title III, § 301, as added Oct. 18, 1972, P.L. 92-500, § 2, 86 Stat. 844; Dec. 27, 1977, P.L. 95-217, §§ 42-47, 53(c), 91 Stat. 1582-1586, 1590; Dec. 29, 1981, P.L. 97-117, §§ 21(a) in part, (b), 22(a)-(d), 95 Stat. 1631, 1632; Jan. 8, 1983, P.L. 97-440, 96 Stat. 2289; Feb. 4, 1987, P.L. 100-4, Title III, §§ 301(a)-(e), 302(a)-(d), 303(a), (b)(1), (c)-(f), 304(a), 305, 306(a), (b), 307, 101 Stat. 29; Nov. 18, 1988, P.L. 100-688, Title III, Subtitle B, § 3202(b), 102 Stat. 4154; Oct. 31, 1994, P.L. 103-431, § 2, 108 Stat. 4396; Dec. 21, 1995, P.L. 104-66, Title II, Subtitle B, § 2021(b), 109 Stat. 727.)

§ 1362. Definitions

Except as otherwise specifically provided, when used in this Act [33 USCS §§ 1251 et seq.]:

(1) The term "State water pollution control agency" means the State agency designated by the Governor having responsibility for enforcing State laws relating to the abatement of pollution.

(2) The term "interstate agency" means an agency of two or more States established by or pursuant to an agreement or compact approved by the Congress, or any other agency of two or more States, having substantial powers or duties pertaining to the control of pollution as determined and approved by the Administrator.

(3) The term "State" means a State, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, American Samoa, the Commonwealth of the Northern Mariana Islands, and the Trust Territory of the Pacific Islands.

(4) The term "municipality" means a city, town, borough, county, parish, district, association, or other public body created by or pursuant to State law and having jurisdiction over disposal of sewage, industrial wastes, or other wastes, or an Indian tribe or an authorized Indian tribal organization, or a designated and approved management agency under section 208 of this Act [33 USCS § 1288].

(5) The term "person" means an individual, corporation, partnership, association, State, municipality, commission, or political subdivision of a state, or any interstate body.

(6) The term "pollutant" means dredged spoil, solid waste, incinerator residue, sewage, garbage, sewage sludge, munitions, chemical wastes, biological materials, radioactive materials, heat, wrecked or discarded equipment, rock, sand, cellar dirt and industrial, municipal, and agricultural waste discharged into water. This term does not mean (A) " sewage from vessels or a discharge incidental to the normal operation of a vessel of the Armed Forces" within the meaning of section 312 of this Act [33 USCS § 1322]; or (B) water, gas, or other material which is injected into a well to facilitate production of oil or gas, or water derived in association with oil or gas production and disposed of in a well, if the well used either to facilitate production or for disposal purposes is approved by authority of the State in which the well is located, and if such State determines that such injection or disposal will not result in the degradation of ground or surface water resources.

(7) The term "navigable waters" means the waters of the United States, including the territorial seas.

(8) The term "territorial seas" means the belt of the seas measured from the line of ordinary low water along that portion of the coast which is in direct contact with the open sea and the line marking the seaward limit of inland waters, and extending seaward a distance of three miles.

(9) The term "contiguous zone" means the entire zone established or to be established by the United States under article 24 of the Convention of the Territorial Sea and the Contiguous Zone [15 UST § 1606].

(10) The term "ocean" means any portion of the high seas beyond the contiguous zone.

(11) The term "effluent limitation" means any restriction established by a State or the Administrator on quantities, rates, and concentrations of chemical, physical, biological, and other constituents which are discharged from point sources into navigable waters, the waters of the contiguous zone, or the ocean, including schedules of compliance.

(12) The term "discharge of a pollutant" and the term "discharge of pollutants" each means (A) any addition of any pollutant to navigable waters from any point source, (B) any addition of any pollutant to the waters of the contiguous zone or the ocean from any point source other than a vessel or other floating craft.

(13) The term "toxic pollutant" means those pollutants, or combinations of pollutants, including disease-causing agents, which after discharge and upon exposure, ingestion, inhalation or assimilation into any organism, either directly from the environment or indirectly by ingestion through food chains, will, on the basis of information available to the Administrator, cause death, disease, behavioral abnormalities, cancer, genetic mutations, physiological malfunctions (including malfunctions in reproduction) or physical deformations, in such organisms or their offspring.

(14) The term "point source" means any discernible, confined and discrete conveyance, including but not limited to any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, or vessel or other floating craft, from which pollutants are or may be discharged. This term does not include agricultural stormwater discharges and return flows from irrigated agriculture.

(15) The term "biological monitoring" shall mean the determination of the effects on aquatic life, including accumulation of pollutants in tissue, in receiving waters due to the discharge of pollutants (A) by techniques and procedures, including sampling of organisms representative of appropriate levels of the food chain appropriate to the volume and the physical, chemical, and biological characteristics of the effluent, and (B) at appropriate frequencies and locations.

(16) The term "discharge" when used without qualification includes a discharge of a pollutant, and a discharge of pollutants.

(17) The term "schedule of compliance" means a schedule of remedial measures including an enforceable sequence of actions or operations leading to compliance with an effluent limitation, other limitation, prohibition, or standard.

(18) The term "industrial user" means those industries identified in the Standard Industrial Classification Manual, Bureau of the Budget, 1967, as amended and supplemented, under the category "Division D--Manufacturing" and such other classes of significant waste producers as, by regulation, the Administrator deems appropriate.

(19) The term "pollution" means the man-made or man-induced alteration of the chemical, physical, biological, and radiological integrity of water.

(20) The term "medical waste" means isolation wastes; infectious agents; human blood and blood products; pathological wastes; sharps; body parts; contaminated bedding; surgical wastes and potentially contaminated laboratory wastes; dialysis wastes; and such additional medical items as the Administrator shall prescribe by regulation.

(21) Coastal recreation waters.

(A) In general. The term "coastal recreation waters" means--

(i) the Great Lakes; and

(ii) marine coastal waters (including coastal estuaries) that are designated under section 303(c) [33 USCS § 1313(c)] by a State for use for swimming, bathing, surfing, or similar water contact activities.

(B) Exclusions. The term "coastal recreation waters" does not include--

(i) inland waters; or

(ii) waters upstream of the mouth of a river or stream having an unimpaired natural connection with the open sea.

(22) Floatable material.

(A) In general. The term "floatable material" means any foreign matter that may float or remain suspended in the water column.

(B) Inclusions. The term "floatable material" includes--

(i) plastic;

(ii) aluminum cans;

(iii) wood products;

(iv) bottles; and

(v) paper products.

(23) Pathogen indicator. The term "pathogen indicator" means a substance that indicates the potential for human infectious disease.

(24) Oil and gas exploration and production. The term "oil and gas exploration, production, processing, or treatment operations or transmission facilities" means all field activities or operations associated with exploration, production, processing, or treatment operations, or transmission facilities, including activities necessary to prepare a site for drilling and for the movement and placement of drilling equipment, whether or not such field activities or operations may be considered to be construction activities.

(25) Recreational vessel.

(A) In general. The term "recreational vessel" means any vessel that is--

(i) manufactured or used primarily for pleasure; or

(ii) leased, rented, or chartered to a person for the pleasure of that person.

(B) Exclusion. The term "recreational vessel" does not include a vessel that is subject to Coast Guard inspection and that--

(i) is engaged in commercial use; or

(ii) carries paying passengers.

(26) Treatment works. The term "treatment works" has the meaning given the term in section 212 [33 USCS § 1292].

History

(June 30, 1948, ch 758, Title V, § 502, as added Oct. 18, 1972,P.L. 92-500, § 2, 86 Stat. 886; Dec. 27, 1977, P.L. 95-217, § 33(b), 91 Stat. 1577; Feb. 4, 1987, P.L. 100-4, Title V, §§ 502(a), 503, 101 Stat. 75; Nov. 18, 1988, P.L. 100-688, Title III, Subtitle B, § 3202(a), 102 Stat. 4154; Feb. 10, 1996, P.L. 104-106, Div A, Title III, Subtitle C, § 325(c)(3), 110 Stat. 259; Oct. 10, 2000, P.L. 106-284, § 5, 114 Stat. 875; Aug. 8, 2005, P.L. 109-58, Title III, Subtitle C, § 323, 119 Stat. 694; July 30, 2008, P.L. 110-288, § 3, 122 Stat. 2650.)

End of Document

This document is current through the December 11, 2017 issue of the Federal Register. Pursuant to 82 FR 8346 ("Regulatory Freeze Pending Review"), certain regulations will be delayed pending further review. See Publisher's Note under affected rules. Title 3 is current through December 4, 2017.

§ 122.21 Application for a permit (applicable to State programs, see § 123.25).

(a) Duty to apply.

(1) Any person who discharges or proposes to discharge pollutants or who owns or operates a "sludge-only facility" whose sewage sludge use or disposal practice is regulated by part 503 of this chapter, and who does not have an effective permit, except persons covered by general permits under § 122.28, excluded under § 122.3, or a user of a privately owned treatment works unless the Director requires otherwise under § 122.44(m), must submit a complete application to the Director in accordance with this section and part 124 of this chapter. The requirements for concentrated animal feeding operations are described in § 122.23(d).

(2) Application Forms: (i) All applicants for EPA-issued permits must submit applications on EPA permit application forms. More than one application form may be required from a facility depending on the number and types of discharges or outfalls found there. Application forms may be obtained by contacting the EPA water resource center at (202) 260-7786 or Water Resource Center, U.S. EPA, Mail Code 4100, 1200 Pennsylvania Ave., NW., Washington, DC 20460 or at the EPA Internet site www.epa.gov/owm pdes.htm. Applications for EPA-issued permits must be submitted as follows:

(A) All applicants, other than POTWs and TWTDS, must submit Form 1.

(B) Applicants for new and existing POTWs must submit the information contained in paragraph (j) of this section using Form 2A or other form provided by the director.

(C) Applicants for concentrated animal feeding operations or aquatic animal production facilities must submit Form 2B.

(D) Applicants for existing industrial facilities (including manufacturing facilities, commercial facilities, mining activities, and silvicultural activities), must submit Form 2C.

(E) Applicants for new industrial facilities that discharge process wastewater must submit Form 2D.

(F) Applicants for new and existing industrial facilities that discharge only nonprocess wastewater must submit Form 2E.

(G) Applicants for new and existing facilities whose discharge is composed entirely of storm water associated with industrial activity must submit Form 2F, unless exempted by § 122.26(c)(1)(ii). If the discharge is composed of storm water and non-storm water, the applicant must also submit, Forms 2C, 2D, and/or 2E, as appropriate (in addition to Form 2F).

(H) Applicants for new and existing TWTDS, subject to paragraph (c)(2)(i) of this section must submit the application information required by paragraph (q) of this section, using Form 2S or other form provided by the director.

(ii) The application information required by paragraph (a)(2)(i) of this section may be electronically submitted if such method of submittal is approved by EPA or the Director.

(iii) Applicants can obtain copies of these forms by contacting the Water Management Divisions (or equivalent division which contains the NPDES permitting function) of the EPA Regional Offices. The Regional Offices' addresses can be found at § 1.7 of this chapter.

(iv) Applicants for State-issued permits must use State forms which must require at a minimum the information listed in the appropriate paragraphs of this section.

(b) Who applies? When a facility or activity is owned by one person but is operated by another person, it is the operator's duty to obtain a permit.

(c) Time to apply.

(1) Any person proposing a new discharge, shall submit an application at least 180 days before the date on which the discharge is to commence, unless permission for a later date has been granted by the Director. Facilities proposing a new discharge of storm water associated with industrial activity shall submit an application 180 days before that facility commences industrial activity which may result in a discharge of storm water associated with that industrial activity. Facilities described under § 122.26(b)(14)(x) or (b)(15)(i) shall submit applications at least 90 days before the date on which construction is to commence. Different submittal dates may be required under the terms of applicable general permits. Persons proposing a new discharge are encouraged to submit their applications well in advance of the 90 or 180 day requirements to avoid delay. See also paragraph (k) of this section and § 122.26(c)(1)(i)(G) and (c)(1)(ii).

(2) Permits under section 405(f) of CWA. All TWTDS whose sewage sludge use or disposal practices are regulated by part 503 of this chapter must submit permit applications according to the applicable schedule in paragraphs (c)(2)(i) or (ii) of this section.

(i)A TWTDS with a currently effective NPDES permit must submit a permit application at the time of its next NPDES permit renewal application. Such information must be submitted in accordance with paragraph (d) of this section.

(ii) Any other TWTDS not addressed under paragraphs (c)(2)(i) of this section must submit the information listed in paragraphs (c)(2)(ii)(A) through (E) of this section to the Director within 1 year after publication of a standard applicable to its sewage sludge use or disposal practice(s), using Form 2S or another form provided by the Director. The Director will determine when such TWTDS must submit a full permit application.

(A) The TWTDS's name, mailing address, location, and status as federal, State, private, public or other entity;

(B) The applicant's name, address, telephone number, and ownership status;

(C)A description of the sewage sludge use or disposal practices. Unless the sewage sludge meets the requirements of paragraph (q)(8)(iv) of this section, the description must include the name and address of any facility where sewage sludge is sent for treatment or disposal, and the location of any land application sites;

(D) Annual amount of sewage sludge generated, treated, used or disposed (estimated dry weight basis); and

(E) The most recent data the TWTDS may have on the quality of the sewage sludge.

(iii) Notwithstanding paragraphs (c)(2)(i) or (ii) of this section, the Director may require permit applications from any TWTDS at any time if the Director determines that a permit is necessary to protect public health and the environment from any potential adverse effects that may occur from toxic pollutants in sewage sludge.

(iv) Any TWTDS that commences operations after promulgation of an applicable "standard for sewage sludge use or disposal" must submit an application to the Director at least 180 days prior to the date proposed for commencing operations.

(d) Duty to reapply.

(1) Any POTW with a currently effective permit shall submit a new application at least 180 days before the expiration date of the existing permit, unless permission for a later date has been granted by the Director. (The Director shall not grant permission for applications to be submitted later than the expiration date of the existing permit.)

(2) All other permittees with currently effective permits shall submit a new application 180 days before the existing permit expires, except that:

(i) The Regional Administrator may grant permission to submit an application later than the deadline for submission otherwise applicable, but no later than the permit expiration date; and

(3)[Reserved]

(e) Completeness.

(1) The Director shall not issue a permit before receiving a complete application for a permit except for NPDES general permits. An application for a permit is complete when the Director receives an application form and any supplemental information which are completed to his or her satisfaction. The completeness of any application for a permit shall be judged independently of the status of any other permit application or permit for the same facility or activity. For EPA administered NPDES programs, an application which is reviewed under § 124.3 of this chapter is complete when the Director receives either a complete application or the information listed in a notice of deficiency.

(2)A permit application shall not be considered complete if a permitting authority has waived application requirements under paragraphs (j) or (q) of this section and EPA has disapproved the waiver application. If a waiver request has been submitted to EPA more than 210 days

prior to permit expiration and EPA has not disapproved the waiver application 181 days prior to permit expiration, the permit application lacking the information subject to the waiver application shall be considered complete.

(3) Except as specified in 122.21(e)(3)(ii), a permit application shall not be considered complete unless all required quantitative data are collected in accordance with sufficiently sensitive analytical methods approved under 40 CFR part 136 or required under 40 CFR chapter I, subchapter N or O.

(i) For the purposes of this requirement, a method approved under 40 CFR part 136 or required under 40 CFR chapter I, subchapter N or O is "sufficiently sensitive" when:

(A) The method minimum level (ML) is at or below the level of the applicable water quality criterion for the measured pollutant or pollutant parameter; or

(B) The method ML is above the applicable water quality criterion, but the amount of the pollutant or pollutant parameter in a facility's discharge is high enough that the method detects and quantifies the level of the pollutant or pollutant parameter in the discharge; or

(C) The method has the lowest ML of the analytical methods approved under 40 CFR part 136 or required under 40 CFR chapter I, subchapter N or O for the measured pollutant or pollutant parameter.

Note to paragraph (e)(3)(i): Consistent with 40 CFR part 136, applicants have the option of providing matrix or sample specific minimum levels rather than the published levels. Further, where an applicant can demonstrate that, despite a good faith effort to use a method that would otherwise meet the definition of "sufficiently sensitive", the analytical results are not consistent with the QA/QC specifications for that method, then the Director may determine that the method is not performing adequately and the applicant should select a different method from the remaining EPA-approved methods that is sufficiently sensitive consistent with 40 CFR 122.21(e)(3)(i). Where no other EPA-approved methods exist, the applicant should select a method consistent with 40 CFR 122.21(e)(3)(ii).

(ii) When there is no analytical method that has been approved under 40 CFR part 136, required under 40 CFR chapter I, subchapter N or O, and is not otherwise required by the Director, the applicant may use any suitable method but shall provide a description of the method. When selecting a suitable method, other factors such as a method's precision, accuracy, or resolution, may be considered when assessing the performance of the method.

(f) Information requirements. All applicants for NPDES permits, other than POTWs and other TWTDS, must provide the following information to the Director, using the application form provided by the Director. Additional information required of applicants is set forth in paragraphs (g) through (k) of this section.

(1) The activities conducted by the applicant which require it to obtain an NPDES permit.

(2) Name, mailing address, and location of the facility for which the application is submitted.

(3) Up to four SIC codes which best reflect the principal products or services provided by the facility.

(4) The operator's name, address, telephone number, ownership status, and status as Federal, State, private, public, or other entity.

(5) Whether the facility is located on Indian lands.

(6)A listing of all permits or construction approvals received or applied for under any of the following programs:

(i) Hazardous Waste Management program under RCRA.

(ii)UIC program under SDWA.

(iii)NPDES program under CWA.

(iv) Prevention of Significant Deterioration (PSD) program under the Clean Air Act.

(v) Nonattainment program under the Clean Air Act.

(vi) National Emission Standards for Hazardous Pollutants (NESHAPS) preconstruction approval under the Clean Air Act.

(vii) Ocean dumping permits under the Marine Protection Research and Sanctuaries Act.

(viii) Dredge or fill permits under section 404 of CWA.

(ix) Other relevant environmental permits, including State permits.

(7)A topographic map (or other map if a topographic map is unavailable) extending one mile beyond the property boundaries of the source, depicting the facility and each of its intake and discharge structures; each of its hazardous waste treatment, storage, or disposal facilities; each well where fluids from the facility are injected underground; and those wells, springs, other surface water bodies, and drinking water wells listed in public records or otherwise known to the applicant in the map area.

(8)A brief description of the nature of the business.

(g) Application requirements for existing manufacturing, commercial, mining, and silvicultural dischargers. Existing manufacturing, commercial mining, and silvicultural dischargers applying for NPDES permits, except for those facilities subject to the requirements of § 122.21(h), shall provide the following information to the Director, using application forms provided by the Director.

(1) Outfall location. The latitude and longitude to the nearest 15 seconds and the name of the receiving water.

(2) Line drawing. A line drawing of the water flow through the facility with a water balance, showing operations contributing wastewater to the effluent and treatment units. Similar processes, operations, or production areas may be indicated as a single unit, labeled to correspond to the more detailed identification under paragraph (g)(3) of this section. The water balance must show approximate average flows at intake and discharge points and between units, including treatment units. If a water balance cannot be determined (for example, for certain mining activities), the applicant may provide instead a pictorial description of the nature and amount of any sources of water and any collection and treatment measures.

(3) Average flows and treatment. A narrative identification of each type of process, operation, or production area which contributes wastewater to the effluent for each outfall, including process wastewater, cooling water, and stormwater runoff; the average flow which each

process contributes; and a description of the treatment the wastewater receives, including the ultimate disposal of any solid or fluid wastes other than by discharge. Processes, operations, or production areas may be described in general terms (for example, "dye-making reactor", "distillation tower"). For a privately owned treatment works, this information shall include the identity of each user of the treatment works. The average flow of point sources composed of storm water may be estimated. The basis for the rainfall event and the method of estimation must be indicated.

(4) Intermittent flows. If any of the discharges described in paragraph (g)(3) of this section are intermittent or seasonal, a description of the frequency, duration and flow rate of each discharge occurrence (except for stormwater runoff, spillage or leaks).

(5) Maximum production. If an effluent guideline promulgated under section 304 of CWA applies to the applicant and is expressed in terms of production (or other measure of operation), a reasonable measure of the applicant's actual production reported in the units used in the applicable effluent guideline. The reported measure must reflect the actual production of the facility as required by § 122.45(b)(2).

(6) Improvements. If the applicant is subject to any present requirements or compliance schedules for construction, upgrading or operation of waste treatment equipment, an identification of the abatement requirement, a description of the abatement project, and a listing of the required and projected final compliance dates.

(7) Effluent characteristics.

(i) Information on the discharge of pollutants specified in this paragraph (g)(7) (except information on storm water discharges which is to be provided as specified in § 122.26). When "quantitative data" for a pollutant are required, the applicant must collect a sample of effluent and analyze it for the pollutant in accordance with analytical methods approved under Part 136 of this chapter unless use of another method is required for the pollutant under 40 CFR subchapters N or O. When no analytical method is approved under Part 136 or required under subchapters N or O, the applicant may use any suitable method but must provide a description of the method. When an applicant has two or more outfalls with substantially identical effluents, the Director may allow the applicant to test only one outfall and report that quantitative data as applying to the substantially identical outfall. The requirements in paragraphs (g)(7)(vi) and (vii) of this section state that an applicant must provide quantitative data for certain pollutants known or believed to be present do not apply to pollutants present in a discharge solely as the result of their presence in intake water; however, an applicant must report such pollutants as present. When paragraph (g)(7) of this section requires analysis of pH, temperature, cyanide, total phenols, residual chlorine, oil and grease, fecal coliform (including E. coli), and Enterococci (previously known as fecal streptococcus at § 122.26 (d)(2)(iii)(A)(3)), or volatile organics, grab samples must be collected for those pollutants. For all other pollutants, a 24-hour composite sample, using a minimum of four (4) grab samples, must be used unless specified otherwise at 40 CFR Part 136. However, a minimum of one grab sample may be taken for effluents from holding ponds or other impoundments with a retention period greater than 24 hours. In addition, for discharges other than storm water discharges, the Director may waive composite sampling for any outfall for which the applicant demonstrates that the use of an automatic sampler is infeasible and that the minimum of

four (4) grab samples will be a representative sample of the effluent being discharged. Results of analyses of individual grab samples for any parameter may be averaged to obtain the daily average. Grab samples that are not required to be analyzed immediately (see Table II at 40 CFR 136.3 (e)) may be composited in the laboratory, provided that container, preservation, and holding time requirements are met (see Table II at 40 CFR 136.3 (e)) and that sample integrity is not compromised by compositing.

(ii) Storm water discharges. For storm water discharges, all samples shall be collected from the discharge resulting from a storm event that is greater than 0.1 inch and at least 72 hours from the previously measurable (greater than 0.1 inch rainfall) storm event. Where feasible, the variance in the duration of the event and the total rainfall of the event should not exceed 50 percent from the average or median rainfall event in that area. For all applicants, a flow-weighted composite shall be taken for either the entire discharge or for the first three hours of the discharge. The flow-weighted composite sample for a storm water discharge may be taken with a continuous sampler or as a combination of a minimum of three sample aliquots taken in each hour of discharge for the entire discharge or for the first three hours of the discharge, with each aliquot being separated by a minimum period of fifteen minutes (applicants submitting permit applications for storm water discharges under § 122.26(d) may collect flow-weighted composite samples using different protocols with respect to the time duration between the collection of sample aliquots, subject to the approval of the Director). However, a minimum of one grab sample may be taken for storm water discharges from holding ponds or other impoundments with a retention period greater than 24 hours. For a flow-weighted composite sample, only one analysis of the composite of aliquots is required. For storm water discharge samples taken from discharges associated with industrial activities, quantitative data must be reported for the grab sample taken during the first thirty minutes (or as soon thereafter as practicable) of the discharge for all pollutants specified in § 122.26(c)(1). For all storm water permit applicants taking flow-weighted composites, quantitative data must be reported for all pollutants specified in § 122.26 except pH, temperature, cyanide, total phenols, residual chlorine, oil and grease, fecal coliform, and fecal streptococcus. The Director may allow or establish appropriate site-specific sampling procedures or requirements, including sampling locations, the season in which the sampling takes place, the minimum duration between the previous measurable storm event and the storm event sampled, the minimum or maximum level of precipitation required for an appropriate storm event, the form of precipitation sampled (snow melt or rain fall), protocols for collecting samples under part 136 of this chapter, and additional time for submitting data on a case-by-case basis. An applicant is expected to "know or have reason to believe" that a pollutant is present in an effluent based on an evaluation of the expected use, production, or storage of the pollutant, or on any previous analyses for the pollutant. (For example, any pesticide manufactured by a facility may be expected to be present in contaminated storm water runoff from the facility.)

(iii) Reporting requirements. Every applicant must report quantitative data for every outfall for the following pollutants:

Biochemical Oxygen Demand (BOD5)

Chemical Oxygen Demand

Total Organic Carbon

Total Suspended Solids

Ammonia (as N)

Temperature (both winter and summer)

pH

(iv) The Director may waive the reporting requirements for individual point sources or for a particular industry category for one or more of the pollutants listed in paragraph (g)(7)(iii) of this section if the applicant has demonstrated that such a waiver is appropriate because information adequate to support issuance of a permit can be obtained with less stringent requirements.

(v) Each applicant with processes in one or more primary industry category (see appendix A of this part) contributing to a discharge must report quantitative data for the following pollutants in each outfall containing process wastewater:

(A) The organic toxic pollutants in the fractions designated in table I of appendix D of this part for the applicant's industrial category or categories unless the applicant qualifies as a small business under paragraph (g)(8) of this section. Table II of appendix D of this part lists the organic toxic pollutants in each fraction. The fractions result from the sample preparation required by the analytical procedure which uses gas chromatography/mass spectrometry. A determination that an applicant falls within a particular industrial category for the purposes of selecting fractions for testing is not conclusive as to the applicant's inclusion in that category for any other purposes. See Notes 2, 3, and 4 of this section.

(B) The pollutants listed in table III of appendix D of this part (the toxic metals, cyanide, and total phenols).

(vi)

(A) Each applicant must indicate whether it knows or has reason to believe that any of the pollutants in table IV of appendix D of this part (certain conventional and nonconventional pollutants) is discharged from each outfall. If an applicable effluent limitations guideline either directly limits the pollutant or, by its express terms, indirectly limits the pollutant through limitations on an indicator, the applicant must report quantitative data. For every pollutant discharged which is not so limited in an effluent limitations guideline, the applicant must either report quantitative data or briefly describe the reasons the pollutant is expected to be discharged.

(B) Each applicant must indicate whether it knows or has reason to believe that any of the pollutants listed in table II or table III of appendix D of this part (the toxic pollutants and total phenols) for which quantitative data are not otherwise required under paragraph (g)(7)(v) of this section are discharged from each outfall. For every pollutant expected to be discharged in concentrations of 10 ppb or greater the applicant must report quantitative data. For acrolein, acrylonitrile, 2,4 dinitrophenol, and 2-methyl-4, 6 dinitrophenol, where any of these four pollutants are expected to be discharged in concentrations of 100 ppb or greater the applicant must report quantitative data. For every pollutant expected to be discharged in concentrations less

than 10 ppb, or in the case of acrolein, acrylonitrile, 2,4 dinitrophenol, and 2-methyl-4, 6 dinitrophenol, in concentrations less than 100 ppb, the applicant must either submit quantitative data or briefly describe the reasons the pollutant is expected to be discharged. An applicant qualifying as a small business under paragraph (g)(8) of this section is not required to analyze for pollutants listed in table II of appendix D of this part (the organic toxic pollutants).

(vii) Each applicant must indicate whether it knows or has reason to believe that any of the pollutants in table V of appendix D of this part (certain hazardous substances and asbestos) are discharged from each outfall. For every pollutant expected to be discharged, the applicant must briefly describe the reasons the pollutant is expected to be discharged, and report any quantitative data it has for any pollutant.

(viii) Each applicant must report qualitative data, generated using a screening procedure not calibrated with analytical standards, for 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD) if it:

(A) Uses or manufactures 2,4,5-trichlorophenoxy acetic acid (2,4,5,-T); 2-(2,4,5-trichlorophenoxy) propanoic acid (Silvex, 2,4,5,-TP); 2-(2,4,5-trichlorophenoxy) ethyl, 2,2-dichloropropionate (Erbon); O,O-dimethyl O-(2,4,5-trichlorophenyl) phosphorothioate (Ronnel); 2,4,5-trichlorophenol (TCP); or hexachlorophene (HCP); or

(B) Knows or has reason to believe that TCDD is or may be present in an effluent.

(8) Small business exemption. An application which qualifies as a small business under one of the following criteria is exempt from the requirements in paragraph (g)(7)(v)(A) or (g)(7)(vi)(A) of this section to submit quantitative data for the pollutants listed in table II of appendix D of this part (the organic toxic pollutants):

(i) For coal mines, a probable total annual production of less than 100,000 tons per year.

(ii) For all other applicants, gross total annual sales averaging less than $ 100,000 per year (in second quarter 1980 dollars).

(9) Used or manufactured toxics. A listing of any toxic pollutant which the applicant currently uses or manufactures as an intermediate or final product or byproduct. The Director may waive or modify this requirement for any applicant if the applicant demonstrates that it would be unduly burdensome to identify each toxic pollutant and the Director has adequate information to issue the permit.

(10)[Reserved]

(11) Biological toxicity tests. An identification of any biological toxicity tests which the applicant knows or has reason to believe have been made within the last 3 years on any of the applicant's discharges or on a receiving water in relation to a discharge.

(12) Contract analyses. If a contract laboratory or consulting firm performed any of the analyses required by paragraph (g)(7) of this section, the identity of each laboratory or firm and the analyses performed.

(13) Additional information. In addition to the information reported on the application form, applicants shall provide to the Director, at his or her request, such other information as the Director may reasonably require to assess the discharges of the facility and to determine

whether to issue an NPDES permit. The additional information may include additional quantitative data and bioassays to assess the relative toxicity of discharges to aquatic life and requirements to determine the cause of the toxicity.

(h) Application requirements for manufacturing, commercial, mining and silvicultural facilities which discharge only non-process wastewater. Except for stormwater discharges, all manufacturing, commercial, mining and silvicultural dischargers applying for NPDES permits which discharge only non-process wastewater not regulated by an effluent limitations guideline or new source performance standard shall provide the following information to the Director, using application forms provided by the Director:

(1) Outfall location. Outfall number, latitude and longitude to the nearest 15 seconds, and the name of the receiving water.

(2) Discharge date (for new dischargers). Date of expected commencement of discharge.

(3) Type of waste. An identification of the general type of waste discharged, or expected to be discharged upon commencement of operations, including sanitary wastes, restaurant or cafeteria wastes, or noncontact cooling water. An identification of cooling water additives (if any) that are used or expected to be used upon commencement of operations, along with their composition if existing composition is available.

(4) Effluent characteristics. (i) Quantitative data for the pollutants or parameters listed below, unless testing is waived by the Director. The quantitative data may be data collected over the past 365 days, if they remain representative of current operations, and must include maximum daily value, average daily value, and number of measurements taken. The applicant must collect and analyze samples in accordance with 40 CFR Part 136. When analysis of pH, temperature, residual chlorine, oil and grease, or fecal coliform (including E. coli), and Enterococci (previously known as fecal streptococcus) and volatile organics is required in paragraphs (h)(4)(i)(A) through (K) of this section, grab samples must be collected for those pollutants. For all other pollutants, a 24-hour composite sample, using a minimum of four (4) grab samples, must be used unless specified otherwise at 40 CFR Part 136. For a composite sample, only one analysis of the composite of aliquots is required. New dischargers must include estimates for the pollutants or parameters listed below instead of actual sampling data, along with the source of each estimate. All levels must be reported or estimated as concentration and as total mass, except for flow, pH, and temperature.

(A) Biochemical Oxygen Demand (BOD[5]).

(B) Total Suspended Solids (TSS).

(C) Fecal Coliform (if believed present or if sanitary waste is or will be discharged).

(D) Total Residual Chlorine (if chlorine is used).

(E) Oil and Grease.

(F) Chemical Oxygen Demand (COD) (if non-contact cooling water is or will be discharged).

(G) Total Organic Carbon (TOC) (if non-contact cooling water is or will be discharged).

(H) Ammonia (as N).

(I) Discharge Flow.

(J)pH.

(K) Temperature (Winter and Summer).

(ii) The Director may waive the testing and reporting requirements for any of the pollutants or flow listed in paragraph (h)(4)(i) of this section if the applicant submits a request for such a waiver before or with his application which demonstrates that information adequate to support issuance of a permit can be obtained through less stringent requirements.

(iii) If the applicant is a new discharger, he must complete and submit Item IV of Form 2e (see § 122.21(h)(4)) by providing quantitative data in accordance with that section no later than two years after commencement of discharge. However, the applicant need not complete those portions of Item IV requiring tests which he has already performed and reported under the discharge monitoring requirements of his NPDES permit.

(iv) The requirements of parts i and iii of this section that an applicant must provide quantitative data or estimates of certain pollutants do not apply to pollutants present in a discharge solely as a result of their presence in intake water. However, an applicant must report such pollutants as present. Net credit may be provided for the presence of pollutants in intake water if the requirements of § 122.45(g) are met.

(5) Flow. A description of the frequency of flow and duration of any seasonal or intermittent discharge (except for stormwater runoff, leaks, or spills).

(6) Treatment system. A brief description of any system used or to be used.

(7) Optional information. Any additional information the applicant wishes to be considered, such as influent data for the purpose of obtaining "net" credits pursuant to § 122.45(g).

(8) Certification. Signature of certifying official under § 122.22.

(i) Application requirements for new and existing concentrated animal feeding operations and aquatic animal production facilities. New and existing concentrated animal feeding operations (defined in § 122.23) and concentrated aquatic animal production facilities (defined in § 122.24) shall provide the following information to the Director, using the application form provided by the Director:

(1) For concentrated animal feeding operations:

(i) The name of the owner or operator;

(ii) The facility location and mailing addresses;

(iii) Latitude and longitude of the production area (entrance to production area);

(iv)A topographic map of the geographic area in which the CAFO is located showing the specific location of the production area, in lieu of the requirements of paragraph (f)(7) of this section;

(v) Specific information about the number and type of animals, whether in open confinement or housed under roof (beef cattle, broilers, layers, swine weighing 55 pounds or more, swine weighing less than 55 pounds, mature dairy cows, dairy heifers, veal calves, sheep and lambs, horses, ducks, turkeys, other);

(vi) The type of containment and storage (anaerobic lagoon, roofed storage shed, storage ponds, underfloor pits, above ground storage tanks, below ground storage tanks, concrete pad, impervious soil pad, other) and total capacity for manure, litter, and process wastewater storage(tons/gallons);

(vii) The total number of acres under control of the applicant available for land application of manure, litter, or process wastewater;

(viii) Estimated amounts of manure, litter, and process wastewater generated per year (tons/gallons);

(ix) Estimated amounts of manure, litter and process wastewater transferred to other persons per year (tons/gallons); and

(x)A nutrient management plan that at a minimum satisfies the requirements specified in § 122.42(e), including, for all CAFOs subject to 40 CFR part 412, subpart C or subpart D, the requirements of 40 CFR 412.4(c), as applicable.

(2) For concentrated aquatic animal production facilities:

(i) The maximum daily and average monthly flow from each outfall.

(ii) The number of ponds, raceways, and similar structures.

(iii) The name of the receiving water and the source of intake water.

(iv) For each species of aquatic animals, the total yearly and maximum harvestable weight.

(v) The calendar month of maximum feeding and the total mass of food fed during that month.

(j) Application requirements for new and existing POTWs. Unless otherwise indicated, all POTWs and other dischargers designated by the Director must provide, at a minimum, the information in this paragraph to the Director, using Form 2A or another application form provided by the Director. Permit applicants must submit all information available at the time of permit application. The information may be provided by referencing information previously submitted to the Director. The Director may waive any requirement of this paragraph if he or she has access to substantially identical information. The Director may also waive any requirement of this paragraph that is not of material concern for a specific permit, if approved by the Regional Administrator. The waiver request to the Regional Administrator must include the State's justification for the waiver. A Regional Administrator's disapproval of a State's proposed waiver does not constitute final Agency action, but does provide notice to the State and permit applicant(s) that EPA may object to any State-issued permit issued in the absence of the required information.

(1) Basic application information. All applicants must provide the following information:

(i) Facility information. Name, mailing address, and location of the facility for which the application is submitted;

(ii) Applicant information. Name, mailing address, and telephone number of the applicant, and indication as to whether the applicant is the facility's owner, operator, or both;

(iii) Existing environmental permits. Identification of all environmental permits or construction approvals received or applied for (including dates) under any of the following programs:

(A) Hazardous Waste Management program under the Resource Conservation and Recovery Act (RCRA), Subpart C;

(B) Underground Injection Control program under the Safe Drinking Water Act (SDWA);

(C)NPDES program under Clean Water Act (CWA);

(D) Prevention of Significant Deterioration (PSD) program under the Clean Air Act;

(E) Nonattainment program under the Clean Air Act;

(F) National Emission Standards for Hazardous Air Pollutants (NESHAPS) preconstruction approval under the Clean Air Act;

(G) Ocean dumping permits under the Marine Protection Research and Sanctuaries Act;

(H) Dredge or fill permits under section 404 of the CWA; and

(I) Other relevant environmental permits, including State permits;

(iv) Population. The name and population of each municipal entity served by the facility, including unincorporated connector districts. Indicate whether each municipal entity owns or maintains the collection system and whether the collection system is separate sanitary or combined storm and sanitary, if known;

(v) Indian country. Information concerning whether the facility is located in Indian country and whether the facility discharges to a receiving stream that flows through Indian country;

(vi) Flow rate. The facility's design flow rate (the wastewater flow rate the plant was built to handle), annual average daily flow rate, and maximum daily flow rate for each of the previous 3 years;

(vii) Collection system. Identification of type(s) of collection system(s) used by the treatment works (i.e., separate sanitary sewers or combined storm and sanitary sewers) and an estimate of the percent of sewer line that each type comprises; and

(viii) Outfalls and other discharge or disposal methods. The following information for outfalls to waters of the United States and other discharge or disposal methods:

(A) For effluent discharges to waters of the United States, the total number and types of outfalls (e.g, treated effluent, combined sewer overflows, bypasses, constructed emergency overflows);

(B) For wastewater discharged to surface impoundments:

(1) The location of each surface impoundment;

(2) The average daily volume discharged to each surface impoundment; and

(3) Whether the discharge is continuous or intermittent;

(C) For wastewater applied to the land:

(1) The location of each land application site;

(2) The size of each land application site, in acres;

(3) The average daily volume applied to each land application site, in gallons per day; and

(4) Whether land application is continuous or intermittent;

(D) For effluent sent to another facility for treatment prior to discharge:

(1) The means by which the effluent is transported;

(2) The name, mailing address, contact person, and phone number of the organization transporting the discharge, if the transport is provided by a party other than the applicant;

(3) The name, mailing address, contact person, phone number, and NPDES permit number (if any) of the receiving facility; and

(4) The average daily flow rate from this facility into the receiving facility, in millions of gallons per day; and

(E) For wastewater disposed of in a manner not included in paragraphs (j)(1)(viii)(A) through (D) of this section (e.g., underground percolation, underground injection):

(1)A description of the disposal method, including the location and size of each disposal site, if applicable;

(2) The annual average daily volume disposed of by this method, in gallons per day; and

(3) Whether disposal through this method is continuous or intermittent;

(2) Additional Information. All applicants with a design flow greater than or equal to 0.1 mgd must provide the following information:

(i) Inflow and infiltration. The current average daily volume of inflow and infiltration, in gallons per day, and steps the facility is taking to minimize inflow and infiltration;

(ii) Topographic map. A topographic map (or other map if a topographic map is unavailable) extending at least one mile beyond property boundaries of the treatment plant, including all unit processes, and showing:

(A) Treatment plant area and unit processes;

(B) The major pipes or other structures through which wastewater enters the treatment plant and the pipes or other structures through which treated wastewater is discharged from the treatment plant. Include outfalls from bypass piping, if applicable;

(C) Each well where fluids from the treatment plant are injected underground;

(D) Wells, springs, and other surface water bodies listed in public records or otherwise known to the applicant within 1/4 mile of the treatment works' property boundaries;

(E) Sewage sludge management facilities (including on-site treatment, storage, and disposal sites); and

(F) Location at which waste classified as hazardous under RCRA enters the treatment plant by truck, rail, or dedicated pipe;

(iii) Process flow diagram or schematic.

(A)A diagram showing the processes of the treatment plant, including all bypass piping and all backup power sources or redundancy in the system. This includes a water balance showing all treatment units, including disinfection, and showing daily average flow rates at influent and discharge points, and approximate daily flow rates between treatment units; and

(B)A narrative description of the diagram; and

(iv) Scheduled improvements, schedules of implementation. The following information regarding scheduled improvements:

(A) The outfall number of each outfall affected;

(B)A narrative description of each required improvement;

(C) Scheduled or actual dates of completion for the following:

(1) Commencement of construction;

(2) Completion of construction;

(3) Commencement of discharge; and

(4) Attainment of operational level;

(D)A description of permits and clearances concerning other Federal and/or State requirements;

(3) Information on effluent discharges. Each applicant must provide the following information for each outfall, including bypass points, through which effluent is discharged, as applicable:

(i) Description of outfall. The following information about each outfall:

(A) Outfall number;

(B) State, county, and city or town in which outfall is located;

(C) Latitude and longitude, to the nearest second;

(D) Distance from shore and depth below surface;

(E) Average daily flow rate, in million gallons per day;

(F) The following information for each outfall with a seasonal or periodic discharge:

(1) Number of times per year the discharge occurs;

(2) Duration of each discharge;

(3) Flow of each discharge; and

(4) Months in which discharge occurs; and

(G) Whether the outfall is equipped with a diffuser and the type (e.g., high-rate) of diffuser used;

(ii) Description of receiving waters. The following information (if known) for each outfall through which effluent is discharged to waters of the United States:

(A) Name of receiving water;

(B) Name of watershed/river/stream system and United States Soil Conservation Service 14-digit watershed code;

(C) Name of State Management/River Basin and United States Geological Survey 8-digit hydrologic cataloging unit code; and

(D) Critical flow of receiving stream and total hardness of receiving stream at critical low flow (if applicable);

(iii) Description of treatment. The following information describing the treatment provided for discharges from each outfall to waters of the United States:

(A) The highest level of treatment (e.g., primary, equivalent to secondary, secondary, advanced, other) that is provided for the discharge for each outfall and:

(1) Design biochemical oxygen demand (BOD[5] or CBOD[5]) removal (percent);

(2) Design suspended solids (SS) removal (percent); and, where applicable,

(3) Design phosphorus (P) removal (percent);

(4) Design nitrogen (N) removal (percent); and

(5) Any other removals that an advanced treatment system is designed to achieve.

(B)A description of the type of disinfection used, and whether the treatment plant dechlorinates (if disinfection is accomplished through chlorination);

(4) Effluent monitoring for specific parameters.

(i) As provided in paragraphs (j)(4)(ii) through (x) of this section, all applicants must submit to the Director effluent monitoring information for samples taken from each outfall through which effluent is discharged to waters of the United States, except for CSOs. The Director may allow applicants to submit sampling data for only one outfall on a case-by-case basis, where the applicant has two or more outfalls with substantially identical effluent. The Director may also allow applicants to composite samples from one or more outfalls that discharge into the same mixing zone;

(ii) All applicants must sample and analyze for the pollutants listed in Appendix J, Table 1A of this part;

(iii) All applicants with a design flow greater than or equal to 0.1 mgd must sample and analyze for the pollutants listed in Appendix J, Table 1 of this part. Facilities that do not use chlorine for disinfection, do not use chlorine elsewhere in the treatment process, and have no reasonable potential to discharge chlorine in their effluent may delete chlorine from Table 1;

(iv) The following applicants must sample and analyze for the pollutants listed in Appendix J, Table 2 of this part, and for any other pollutants for which the State or EPA have established water quality standards applicable to the receiving waters:

(A) All POTWs with a design flow rate equal to or greater than one million gallons per day;

(B) All POTWs with approved pretreatment programs or POTWs required to develop a pretreatment program;

(C) Other POTWs, as required by the Director;

(v) The Director should require sampling for additional pollutants, as appropriate, on a case-by-case basis;

(vi) Applicants must provide data from a minimum of three samples taken within four and one-half years prior to the date of the permit application. Samples must be representative of the seasonal variation in the discharge from each outfall. Existing data may be used, if available, in lieu of sampling done solely for the purpose of this application. The Director should require additional samples, as appropriate, on a case-by-case basis.

(vii) All existing data for pollutants specified in paragraphs (j)(4)(ii) through (v) of this section that is collected within four and one-half years of the application must be included in the pollutant data summary submitted by the applicant. If, however, the applicant samples for a specific pollutant on a monthly or more frequent basis, it is only necessary, for such pollutant, to summarize all data collected within one year of the application.

(viii) Applicants must collect samples of effluent and analyze such samples for pollutants in accordance with analytical methods approved under 40 CFR Part 136 unless an alternative is specified in the existing NPDES permit. When analysis of pH, temperature, cyanide, total phenols, residual chlorine, oil and grease, fecal coliform (including E. coli), or volatile organics is required in paragraphs (j)(4)(ii) through (iv) of this section, grab samples must be collected for those pollutants. For all other pollutants, 24-hour composite samples must be used. For a composite sample, only one analysis of the composite of aliquots is required.

(ix) The effluent monitoring data provided must include at least the following information for each parameter:

(A) Maximum daily discharge, expressed as concentration or mass, based upon actual sample values;

(B) Average daily discharge for all samples, expressed as concentration or mass, and the number of samples used to obtain this value;

(C) The analytical method used; and

(D) The threshold level (i.e., method detection limit, minimum level, or other designated method endpoints) for the analytical method used.

(x) Unless otherwise required by the Director, metals must be reported as total recoverable.

(5) Effluent monitoring for whole effluent toxicity.

(i) All applicants must provide an identification of any whole effluent toxicity tests conducted during the four and one-half years prior to the date of the application on any of the applicant's discharges or on any receiving water near the discharge.

(ii) As provided in paragraphs (j)(5)(iii)-(ix) of this section, the following applicants must submit to the Director the results of valid whole effluent toxicity tests for acute or chronic toxicity for samples taken from each outfall through which effluent is discharged to surface waters, except for combined sewer overflows:

(A) All POTWs with design flow rates greater than or equal to one million gallons per day;

(B) All POTWs with approved pretreatment programs or POTWs required to develop a pretreatment program;

(C) Other POTWs, as required by the Director, based on consideration of the following factors:

(1) The variability of the pollutants or pollutant parameters in the POTW effluent (based on chemical-specific information, the type of treatment plant, and types of industrial contributors);

(2) The ratio of effluent flow to receiving stream flow;

(3) Existing controls on point or non-point sources, including total maximum daily load calculations for the receiving stream segment and the relative contribution of the POTW;

(4) Receiving stream characteristics, including possible or known water quality impairment, and whether the POTW discharges to a coastal water, one of the Great Lakes, or a water designated as an outstanding natural resource water; or

(5) Other considerations (including, but not limited to, the history of toxic impacts and compliance problems at the POTW) that the Director determines could cause or contribute to adverse water quality impacts.

(iii) Where the POTW has two or more outfalls with substantially identical effluent discharging to the same receiving stream segment, the Director may allow applicants to submit whole effluent toxicity data for only one outfall on a case-by-case basis. The Director may also allow applicants to composite samples from one or more outfalls that discharge into the same mixing zone.

(iv) Each applicant required to perform whole effluent toxicity testing pursuant to paragraph (j)(5)(ii) of this section must provide:

(A) Results of a minimum of four quarterly tests for a year, from the year preceding the permit application; or

(B) Results from four tests performed at least annually in the four and one half year period prior to the application, provided the results show no appreciable toxicity using a safety factor determined by the permitting authority.

(v) Applicants must conduct tests with multiple species (no less than two species; e.g., fish, invertebrate, plant), and test for acute or chronic toxicity, depending on the range of receiving water dilution. EPA recommends that applicants conduct acute or chronic testing based on the following dilutions:

(A) Acute toxicity testing if the dilution of the effluent is greater than 1000:1 at the edge of the mixing zone;

(B) Acute or chronic toxicity testing if the dilution of the effluent is between 100:1 and 1000:1 at the edge of the mixing zone. Acute testing may be more appropriate at the higher end of this range (1000:1), and chronic testing may be more appropriate at the lower end of this range (100:1); and

(C) Chronic testing if the dilution of the effluent is less than 100:1 at the edge of the mixing zone.

(vi) Each applicant required to perform whole effluent toxicity testing pursuant to paragraph (j)(5)(ii) of this section must provide the number of chronic or acute whole effluent toxicity tests that have been conducted since the last permit reissuance.

(vii) Applicants must provide the results using the form provided by the Director, or test summaries if available and comprehensive, for each whole effluent toxicity test conducted pursuant to paragraph (j)(5)(ii) of this section for which such information has not been reported previously to the Director.

(viii) Whole effluent toxicity testing conducted pursuant to paragraph (j)(5)(ii) of this section must be conducted using methods approved under 40 CFR part 136. West coast facilities in Washington, Oregon, California, Alaska, Hawaii, and the Pacific Territories are exempted from 40 CFR part 136 chronic methods and must use alternative guidance as directed by the permitting authority.

(ix) For whole effluent toxicity data submitted to the Director within four and one-half years prior to the date of the application, applicants must provide the dates on which the data were submitted and a summary of the results.

(x) Each POTW required to perform whole effluent toxicity testing pursuant to paragraph (j)(5)(ii) of this section must provide any information on the cause of toxicity and written details of any toxicity reduction evaluation conducted, if any whole effluent toxicity test conducted within the past four and one-half years revealed toxicity.

(6) Industrial discharges. Applicants must submit the following information about industrial discharges to the POTW:

(i) Number of significant industrial users (SIUs) and categorical industrial users (CIUs) discharging to the POTW; and

(ii)POTWs with one or more SIUs shall provide the following information for each SIU, as defined at 40 CFR 403.3(v), that discharges to the POTW:

(A) Name and mailing address;

(B) Description of all industrial processes that affect or contribute to the SIU's discharge;

(C) Principal products and raw materials of the SIU that affect or contribute to the SIU's discharge;

(D) Average daily volume of wastewater discharged, indicating the amount attributable to process flow and non-process flow;

(E) Whether the SIU is subject to local limits;

(F) Whether the SIU is subject to categorical standards, and if so, under which category(ies) and subcategory(ies); and

(G) Whether any problems at the POTW (e.g., upsets, pass through, interference) have been attributed to the SIU in the past four and one-half years.

(iii) The information required in paragraphs (j)(6)(i) and (ii) of this section may be waived by the Director for POTWs with pretreatment programs if the applicant has submitted either of the following that contain information substantially identical to that required in paragraphs (j)(6)(i) and (ii) of this section.

(A) An annual report submitted within one year of the application; or

(B)A pretreatment program;

(7) Discharges from hazardous waste generators and from waste cleanup or remediation sites. POTWs receiving Resource Conservation and Recovery Act (RCRA), Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), or RCRA Corrective Action wastes or wastes generated at another type of cleanup or remediation site must provide the following information:

(i) If the POTW receives, or has been notified that it will receive, by truck, rail, or dedicated pipe any wastes that are regulated as RCRA hazardous wastes pursuant to 40 CFR part 261, the applicant must report the following:

(A) The method by which the waste is received (i.e., whether by truck, rail, or dedicated pipe); and

(B) The hazardous waste number and amount received annually of each hazardous waste;

(ii) If the POTW receives, or has been notified that it will receive, wastewaters that originate from remedial activities, including those undertaken pursuant to CERCLA and sections 3004(u) or 3008(h) of RCRA, the applicant must report the following:

(A) The identity and description of the site(s) or facility(ies) at which the wastewater originates;

(B) The identities of the wastewater's hazardous constituents, as listed in Appendix VIII of part 261 of this chapter; if known; and

(C) The extent of treatment, if any, the wastewater receives or will receive before entering the POTW;

(iii) Applicants are exempt from the requirements of paragraph (j)(7)(ii) of this section if they receive no more than fifteen kilograms per month of hazardous wastes, unless the wastes are acute hazardous wastes as specified in 40 CFR 261.30(d) and 261.33(e).

(8) Combined sewer overflows. Each applicant with combined sewer systems must provide the following information:

(i) Combined sewer system information. The following information regarding the combined sewer system:

(A) System map. A map indicating the location of the following:

(1) All CSO discharge points;

(2) Sensitive use areas potentially affected by CSOs (e.g., beaches, drinking water supplies, shellfish beds, sensitive aquatic ecosystems, and outstanding national resource waters); and

(3) Waters supporting threatened and endangered species potentially affected by CSOs; and

(B) System diagram. A diagram of the combined sewer collection system that includes the following information:

(1) The location of major sewer trunk lines, both combined and separate sanitary;

(2) The locations of points where separate sanitary sewers feed into the combined sewer system;

(3) In-line and off-line storage structures;

(4) The locations of flow-regulating devices; and

(5) The locations of pump stations;

(ii) Information on CSO outfalls. The following information for each CSO discharge point covered by the permit application:

(A) Description of outfall. The following information on each outfall:

(1) Outfall number;

(2) State, county, and city or town in which outfall is located;

(3) Latitude and longitude, to the nearest second; and

(4) Distance from shore and depth below surface;

(5) Whether the applicant monitored any of the following in the past year for this CSO:

(i) Rainfall;

(ii)CSO flow volume;

(iii)CSO pollutant concentrations;

(iv) Receiving water quality;

(v)CSO frequency; and

(6) The number of storm events monitored in the past year;

(B)CSO events. The following information about CSO overflows from each outfall:

(1) The number of events in the past year;

(2) The average duration per event, if available;

(3) The average volume per CSO event, if available; and

(4) The minimum rainfall that caused a CSO event, if available, in the last year;

(C) Description of receiving waters. The following information about receiving waters:

(1) Name of receiving water;

(2) Name of watershed/stream system and the United States Soil Conservation Service watershed (14-digit) code (if known); and

(3) Name of State Management/River Basin and the United States Geological Survey hydrologic cataloging unit (8-digit) code (if known); and

(D)CSO operations. A description of any known water quality impacts on the receiving water caused by the CSO (e.g., permanent or intermittent beach closings, permanent or intermittent shellfish bed closings, fish kills, fish advisories, other recreational loss, or exceedance of any applicable State water quality standard);

(9) Contractors. All applicants must provide the name, mailing address, telephone number, and responsibilities of all contractors responsible for any operational or maintenance aspects of the facility; and

(10) Signature. All applications must be signed by a certifying official in compliance with § 122.22.

(k) Application requirements for new sources and new discharges. New manufacturing, commercial, mining and silvicultural dischargers applying for NPDES permits (except for new discharges of facilities subject to the requirements of paragraph (h) of this section or new discharges of storm water associated with industrial activity which are subject to the requirements of § 122.26(c)(1) and this section (except as provided by § 122.26(c)(1)(ii)) shall provide the following information to the Director, using the application forms provided by the Director:

(1) Expected outfall location. The latitude and longitude to the nearest 15 seconds and the name of the receiving water.

(2) Discharge dates. The expected date of commencement of discharge.

(3) Flows, sources of pollution, and treatment technologies --

(i) Expected treatment of wastewater. Description of the treatment that the wastewater will receive, along with all operations contributing wastewater to the effluent, average flow contributed by each operation, and the ultimate disposal of any solid or liquid wastes not discharged.

(ii) Line drawing. A line drawing of the water flow through the facility with a water balance as described in § 122.21(g)(2).

(iii) Intermittent flows. If any of the expected discharges will be intermittent or seasonal, a description of the frequency, duration and maximum daily flow rate of each discharge occurrence (except for stormwater runoff, spillage, or leaks).

(4) Production. If a new source performance standard promulgated under section 306 of CWA or an effluent limitation guideline applies to the applicant and is expressed in terms of production (or other measure of operation), a reasonable measure of the applicant's expected actual production reported in the units used in the applicable effluent guideline or new source performance standard as required by § 122.45(b)(2) for each of the first three years. Alternative estimates may also be submitted if production is likely to vary.

(5) Effluent characteristics. The requirements in paragraphs (h)(4)(i), (ii), and (iii) of this section that an applicant must provide estimates of certain pollutants expected to be present do not apply to pollutants present in a discharge solely as a result of their presence in intake water; however, an applicant must report such pollutants as present. Net credits may be provided for the presence of pollutants in intake water if the requirements of § 122.45(g) are

met. All levels (except for discharge flow, temperature, and pH) must be estimated as concentration and as total mass.

(i) Each applicant must report estimated daily maximum, daily average, and source of information for each outfall for the following pollutants or parameters. The Director may waive the reporting requirements for any of these pollutants and parameters if the applicant submits a request for such a waiver before or with his application which demonstrates that information adequate to support issuance of the permit can be obtained through less stringent reporting requirements.

(A) Biochemical Oxygen Demand (BOD).

(B) Chemical Oxygen Demand (COD).

(C) Total Organic Carbon (TOC).

(D) Total Suspended Solids (TSS).

(E) Flow.

(F) Ammonia (as N).

(G) Temperature (winter and summer).

(H)pH.

(ii) Each applicant must report estimated daily maximum, daily average, and source of information for each outfall for the following pollutants, if the applicant knows or has reason to believe they will be present or if they are limited by an effluent limitation guideline or new source performance standard either directly or indirectly through limitations on an indicator pollutant: all pollutants in table IV of appendix D of part 122 (certain conventional and nonconventional pollutants).

(iii) Each applicant must report estimated daily maximum, daily average and source of information for the following pollutants if he knows or has reason to believe that they will be present in the discharges from any outfall:

(A) The pollutants listed in table III of appendix D (the toxic metals, in the discharge from any outfall: Total cyanide, and total phenols);

(B) The organic toxic pollutants in table II of appendix D (except bis (chloromethyl) ether, dichlorofluoromethane and trichlorofluoromethane). This requirement is waived for applicants with expected gross sales of less than $ 100,000 per year for the next three years, and for coal mines with expected average production of less than 100,000 tons of coal per year.

(iv) The applicant is required to report that 2,3,7,8 Tetrachlorodibenzo-P-Dioxin (TCDD) may be discharged if he uses or manufactures one of the following compounds, or if he knows or has reason to believe that TCDD will or may be present in an effluent:

(A)2,4,5-trichlorophenoxy acetic acid (2,4,5-T) (CAS #93-76-5);

(B)

2-(2,4,5-trichlorophenoxy) propanoic acid (Silvex, 2,4,5-TP) (CAS #93-72-1);

(C)

2-(2,4,5-trichlorophenoxy) ethyl 2,2-dichloropropionate (Erbon) (CAS #136-25-4);

(D)0,0-dimethyl 0-(2,4,5-trichlorophenyl) phosphorothioate (Ronnel) (CAS #299-84-3);

(E)2,4,5-trichlorophenol (TCP) (CAS #95-95-4); or

(F) Hexachlorophene (HCP) (CAS #70-30-4);

(v) Each applicant must report any pollutants listed in table V of appendix D (certain hazardous substances) if he believes they will be present in any outfall (no quantitative estimates are required unless they are already available).

(vi) No later than two years after the commencement of discharge from the proposed facility, the applicant is required to complete and submit Items V and VI of NPDES application Form 2c (see § 122.21(g)). However, the applicant need not complete those portions of Item V requiring tests which he has already performed and reported under the discharge monitoring requirements of his NPDES permit.

(6) Engineering Report. Each applicant must report the existence of any technical evaluation concerning his wastewater treatment, along with the name and location of similar plants of which he has knowledge.

(7) Other information. Any optional information the permittee wishes to have considered.

(8) Certification. Signature of certifying official under § 122.22.

(l) Special provisions for applications from new sources.

(1) The owner or operator of any facility which may be a new source (as defined in § 122.2) and which is located in a State without an approved NPDES program must comply with the provisions of this paragraph (l)(1).

(2)

(i) Before beginning any on-site construction as defined in § 122.29, the owner or operator of any facility which may be a new source must submit information to the Regional Administrator so that he or she can determine if the facility is a new source. The Regional Administrator may request any additional information needed to determine whether the facility is a new source.

(ii) The Regional Administrator shall make an initial determination whether the facility is a new source within 30 days of receiving all necessary information under paragraph (l)(2)(i) of this section.

(3) The Regional Administrator shall issue a public notice in accordance with § 124.10 of this chapter of the new source determination under paragraph (l)(2) of this section. If the Regional Administrator has determined that the facility is a new source, the notice shall state that the applicant must comply with the environmental review requirements of 40 CFR 6.600 through 6.607.

(4) Any interested party may challenge the Regional Administrator's initial new source determination by requesting review of the determination under § 124.19 of this chapter within

30 days of the public notice of the initial determination. If all interested parties agree, the Environmental Appeals Board may defer review until after a final permit decision is made, and consolidate review of the determination with any review of the permit decision.

(m) Variance requests by non-POTWs. A discharger which is not a publicly owned treatment works (POTW) may request a variance from otherwise applicable effluent limitations under any of the following statutory or regulatory provisions within the times specified in this paragraph:

(1) Fundamentally different factors. (i) A request for a variance based on the presence of "fundamentally different factors" from those on which the effluent limitations guideline was based shall be filed as follows:

(A) For a request from best practicable control technology currently available (BPT), by the close of the public comment period under § 124.10.

(B) For a request from best available technology economically achievable (BAT) and/or best conventional pollutant control technology (BCT), by no later than:

(1) July 3, 1989, for a request based on an effluent limitation guideline promulgated before February 4, 1987, to the extent July 3, 1989 is not later than that provided under previously promulgated regulations; or

(2)180 days after the date on which an effluent limitation guideline is published in the FEDERAL REGISTER for a request based on an effluent limitation guideline promulgated on or after February 4, 1987.

(ii) The request shall explain how the requirements of the applicable regulatory and/or statutory criteria have been met.

(2) Non-conventional pollutants. A request for a variance from the BAT requirements for CWA section 301(b)(2)(F) pollutants (commonly called "non-conventional" pollutants) pursuant to section 301(c) of CWA because of the economic capability of the owner or operator, or pursuant to section 301(g) of the CWA (provided however that a § 301(g) variance may only be requested for ammonia; chlorine; color; iron; total phenols (4AAP) (when determined by the Administrator to be a pollutant covered by section 301(b)(2)(F)) and any other pollutant which the Administrator lists under section 301(g)(4) of the CWA) must be made as follows:

(i) For those requests for a variance from an effluent limitation based upon an effluent limitation guideline by:

(A) Submitting an initial request to the Regional Administrator, as well as to the State Director if applicable, stating the name of the discharger, the permit number, the outfall number(s), the applicable effluent guideline, and whether the discharger is requesting a section 301(c) or section 301(g) modification or both. This request must have been filed not later than:

(1) September 25, 1978, for a pollutant which is controlled by a BAT effluent limitation guideline promulgated before December 27, 1977; or

(2)270 days after promulgation of an applicable effluent limitation guideline for guidelines promulgated after December 27, 1977; and

(B) Submitting a completed request no later than the close of the public comment period under § 124.10 demonstrating that the requirements of § 124.13 and the applicable requirements of part 125 have been met. Notwithstanding this provision, the complete application for a request under section 301(g) shall be filed 180 days before EPA must make a decision (unless the Regional Division Director establishes a shorter or longer period).

(ii) For those requests for a variance from effluent limitations not based on effluent limitation guidelines, the request need only comply with paragraph (m)(2)(i)(B) of this section and need not be preceded by an initial request under paragraph (m)(2)(i)(A) of this section.

(3)-(4) [Reserved]

(5) Water quality related effluent limitations. A modification under section 302(b)(2) of requirements under section 302(a) for achieving water quality related effluent limitations may be requested no later than the close of the public comment period under § 124.10 on the permit from which the modification is sought.

(6) Thermal discharges. A variance under CWA section 316(a) for the thermal component of any discharge must be filed with a timely application for a permit under this section, except that if thermal effluent limitations are established under CWA section 402(a)(1) or are based on water quality standards the request for a variance may be filed by the close of the public comment period under § 124.10. A copy of the request as required under 40 CFR part 125, subpart H, shall be sent simultaneously to the appropriate State or interstate certifying agency as required under 40 CFR part 125. (See § 124.65 for special procedures for section 316(a) thermal variances.)

(n) Variance requests by POTWs. A discharger which is a publicly owned treatment works (POTW) may request a variance from otherwise applicable effluent limitations under any of the following statutory provisions as specified in this paragraph:

(1) Discharges into marine waters. A request for a modification under CWA section 301(h) of requirements of CWA section 301(b)(1)(B) for discharges into marine waters must be filed in accordance with the requirements of 40 CFR part 125, subpart G.

(2)[Reserved]

(3) Water quality based effluent limitation. A modification under CWA section 302(b)(2) of the requirements under section 302(a) for achieving water quality based effluent limitations shall be requested no later than the close of the public comment period under § 124.10 on the permit from which the modification is sought.

(o) Expedited variance procedures and time extensions.

(1) Notwithstanding the time requirements in paragraphs (m) and (n) of this section, the Director may notify a permit applicant before a draft permit is issued under § 124.6 that the draft permit will likely contain limitations which are eligible for variances. In the notice the Director may require the applicant as a condition of consideration of any potential variance request to submit a request explaining how the requirements of part 125 applicable to the variance have been met and may require its submission within a specified reasonable time after receipt of the notice. The notice may be sent before the permit application has been submitted.

The draft or final permit may contain the alternative limitations which may become effective upon final grant of the variance.

(2)A discharger who cannot file a timely complete request required under paragraph (m)(2)(i)(B) or (m)(2)(ii) of this section may request an extension. The extension may be granted or denied at the discretion of the Director. Extensions shall be no more than 6 months in duration.

(p) Recordkeeping. Except for information required by paragraph (d)(3)(ii) of this section, which shall be retained for a period of at least five years from the date the application is signed (or longer as required by 40 CFR part 503), applicants shall keep records of all data used to complete permit applications and any supplemental information submitted under this section for a period of at least 3 years from the date the application is signed.

(q) Sewage sludge management. All TWTDS subject to paragraph (c)(2)(i) of this section must provide the information in this paragraph to the Director, using Form 2S or another application form approved by the Director. New applicants must submit all information available at the time of permit application. The information may be provided by referencing information previously submitted to the Director. The Director may waive any requirement of this paragraph if he or she has access to substantially identical information. The Director may also waive any requirement of this paragraph that is not of material concern for a specific permit, if approved by the Regional Administrator. The waiver request to the Regional Administrator must include the State's justification for the waiver. A Regional Administrator's disapproval of a State's proposed waiver does not constitute final Agency action, but does provide notice to the State and permit applicant(s) that EPA may object to any State-issued permit issued in the absence of the required information.

(1) Facility information. All applicants must submit the following information:

(i) The name, mailing address, and location of the TWTDS for which the application is submitted;

(ii) Whether the facility is a Class I Sludge Management Facility;

(iii) The design flow rate (in million gallons per day);

(iv) The total population served; and

(v) The TWTDS's status as Federal, State, private, public, or other entity;

(2) Applicant information. All applicants must submit the following information:

(i) The name, mailing address, and telephone number of the applicant; and

(ii) Indication whether the applicant is the owner, operator, or both;

(3) Permit information. All applicants must submit the facility's NPDES permit number, if applicable, and a listing of all other Federal, State, and local permits or construction approvals received or applied for under any of the following programs:

(i) Hazardous Waste Management program under the Resource Conservation and Recovery Act (RCRA);

(ii)UIC program under the Safe Drinking Water Act (SDWA);

(iii)NPDES program under the Clean Water Act (CWA);

(iv) Prevention of Significant Deterioration (PSD) program under the Clean Air Act;

(v) Nonattainment program under the Clean Air Act;

(vi) National Emission Standards for Hazardous Air Pollutants (NESHAPS) preconstruction approval under the Clean Air Act;

(vii) Dredge or fill permits under section 404 of CWA;

(viii) Other relevant environmental permits, including State or local permits;

(4) Indian country. All applicants must identify any generation, treatment, storage, land application, or disposal of sewage sludge that occurs in Indian country;

(5) Topographic map. All applicants must submit a topographic map (or other map if a topographic map is unavailable) extending one mile beyond property boundaries of the facility and showing the following information:

(i) All sewage sludge management facilities, including on-site treatment, storage, and disposal sites; and

(ii) Wells, springs, and other surface water bodies that are within 1/4 mile of the property boundaries and listed in public records or otherwise known to the applicant;

(6) Sewage sludge handling. All applicants must submit a line drawing and/or a narrative description that identifies all sewage sludge management practices employed during the term of the permit, including all units used for collecting, dewatering, storing, or treating sewage sludge, the destination(s) of all liquids and solids leaving each such unit, and all processes used for pathogen reduction and vector attraction reduction;

(7) Sewage sludge quality. The applicant must submit sewage sludge monitoring data for the pollutants for which limits in sewage sludge have been established in 40 CFR part 503 for the applicant's use or disposal practices on the date of permit application.

(i) The Director may require sampling for additional pollutants, as appropriate, on a case-by-case basis;

(ii) Applicants must provide data from a minimum of three samples taken within four and one-half years prior to the date of the permit application. Samples must be representative of the sewage sludge and should be taken at least one month apart. Existing data may be used in lieu of sampling done solely for the purpose of this application;

(iii) Applicants must collect and analyze samples in accordance with analytical methods approved under SW-846 unless an alternative has been specified in an existing sewage sludge permit;

(iv) The monitoring data provided must include at least the following information for each parameter:

(A) Average monthly concentration for all samples (mg/kg dry weight), based upon actual sample values;

(B) The analytical method used; and

(C) The method detection level.

(8) Preparation of sewage sludge. If the applicant is a "person who prepares" sewage sludge, as defined at 40 CFR 503.9(r), the applicant must provide the following information:

(i) If the applicant's facility generates sewage sludge, the total dry metric tons per 365-day period generated at the facility;

(ii) If the applicant's facility receives sewage sludge from another facility, the following information for each facility from which sewage sludge is received:

(A) The name, mailing address, and location of the other facility;

(B) The total dry metric tons per 365-day period received from the other facility; and

(C)A description of any treatment processes occurring at the other facility, including blending activities and treatment to reduce pathogens or vector attraction characteristics;

(iii) If the applicant's facility changes the quality of sewage sludge through blending, treatment, or other activities, the following information:

(A) Whether the Class A pathogen reduction requirements in 40 CFR 503.32(a) or the Class B pathogen reduction requirements in 40 CFR 503.32(b) are met, and a description of any treatment processes used to reduce pathogens in sewage sludge;

(B) Whether any of the vector attraction reduction options of 40 CFR 503.33(b)(1) through (b)(8) are met, and a description of any treatment processes used to reduce vector attraction properties in sewage sludge; and

(C)A description of any other blending, treatment, or other activities that change the quality of sewage sludge;

(iv) If sewage sludge from the applicant's facility meets the ceiling concentrations in 40 CFR 503.13(b)(1), the pollutant concentrations in § 503.13(b)(3), the Class A pathogen requirements in § 503.32(a), and one of the vector attraction reduction requirements in § 503.33(b)(1) through (b)(8), and if the sewage sludge is applied to the land, the applicant must provide the total dry metric tons per 365-day period of sewage sludge subject to this paragraph that is applied to the land;

(v) If sewage sludge from the applicant's facility is sold or given away in a bag or other container for application to the land, and the sewage sludge is not subject to paragraph (q)(8)(iv) of this section, the applicant must provide the following information:

(A) The total dry metric tons per 365-day period of sewage sludge subject to this paragraph that is sold or given away in a bag or other container for application to the land; and

(B)A copy of all labels or notices that accompany the sewage sludge being sold or given away;

(vi) If sewage sludge from the applicant's facility is provided to another "person who prepares," as defined at 40 CFR 503.9(r), and the sewage sludge is not subject to paragraph (q)(8)(iv) of this section, the applicant must provide the following information for each facility receiving the sewage sludge:

(A) The name and mailing address of the receiving facility;

(B) The total dry metric tons per 365-day period of sewage sludge subject to this paragraph that the applicant provides to the receiving facility;

(C)A description of any treatment processes occurring at the receiving facility, including blending activities and treatment to reduce pathogens or vector attraction characteristic;

(D)A copy of the notice and necessary information that the applicant is required to provide the receiving facility under 40 CFR 503.12(g); and

(E) If the receiving facility places sewage sludge in bags or containers for sale or give-away to application to the land, a copy of any labels or notices that accompany the sewage sludge;

(9) Land application of bulk sewage sludge. If sewage sludge from the applicant's facility is applied to the land in bulk form, and is not subject to paragraphs (q)(8)(iv), (v), or (vi) of this section, the applicant must provide the following information:

(i) The total dry metric tons per 365-day period of sewage sludge subject to this paragraph that is applied to the land;

(ii) If any land application sites are located in States other than the State where the sewage sludge is prepared, a description of how the applicant will notify the permitting authority for the State(s) where the land application sites are located;

(iii) The following information for each land application site that has been identified at the time of permit application:

(A) The name (if any), and location for the land application site;

(B) The site's latitude and longitude to the nearest second, and method of determination;

(C)A topographic map (or other map if a topographic map is unavailable) that shows the site's location;

(D) The name, mailing address, and telephone number of the site owner, if different from the applicant;

(E) The name, mailing address, and telephone number of the person who applies sewage sludge to the site, if different from the applicant;

(F) Whether the site is agricultural land, forest, a public contact site, or a reclamation site, as such site types are defined under 40 CFR 503.11;

(G) The type of vegetation grown on the site, if known, and the nitrogen requirement for this vegetation;

(H) Whether either of the vector attraction reduction options of 40 CFR 503.33(b)(9) or (b)(10) is met at the site, and a description of any procedures employed at the time of use to reduce vector attraction properties in sewage sludge; and

(I) Other information that describes how the site will be managed, as specified by the permitting authority.

(iv) The following information for each land application site that has been identified at the time of permit application, if the applicant intends to apply bulk sewage sludge subject to the cumulative pollutant loading rates in 40 CFR 503.13(b)(2) to the site:

(A) Whether the applicant has contacted the permitting authority in the State where the bulk sewage sludge subject to § 503.13(b)(2) will be applied, to ascertain whether bulk sewage sludge subject to § 503.13(b)(2) has been applied to the site on or since July 20, 1993, and if so, the name of the permitting authority and the name and phone number of a contact person at the permitting authority;

(B) Identification of facilities other than the applicant's facility that have sent, or are sending, sewage sludge subject to the cumulative pollutant loading rates in § 503.13(b)(2) to the site since July 20, 1993, if, based on the inquiry in paragraph (q)(iv)(A), bulk sewage sludge subject to cumulative pollutant loading rates in § 503.13(b)(2) has been applied to the site since July 20, 1993;

(v) If not all land application sites have been identified at the time of permit application, the applicant must submit a land application plan that, at a minimum:

(A) Describes the geographical area covered by the plan;

(B) Identifies the site selection criteria;

(C) Describes how the site(s) will be managed;

(D) Provides for advance notice to the permit authority of specific land application sites and reasonable time for the permit authority to object prior to land application of the sewage sludge; and

(E) Provides for advance public notice of land application sites in the manner prescribed by State and local law. When State or local law does not require advance public notice, it must be provided in a manner reasonably calculated to apprize the general public of the planned land application.

(10) Surface disposal. If sewage sludge from the applicant's facility is placed on a surface disposal site, the applicant must provide the following information:

(i) The total dry metric tons of sewage sludge from the applicant's facility that is placed on surface disposal sites per 365-day period;

(ii) The following information for each surface disposal site receiving sewage sludge from the applicant's facility that the applicant does not own or operate:

(A) The site name or number, contact person, mailing address, and telephone number for the surface disposal site; and

(B) The total dry metric tons from the applicant's facility per 365-day period placed on the surface disposal site;

(iii) The following information for each active sewage sludge unit at each surface disposal site that the applicant owns or operates:

(A) The name or number and the location of the active sewage sludge unit;

(B) The unit's latitude and longitude to the nearest second, and method of determination;

(C) If not already provided, a topographic map (or other map if a topographic map is unavailable) that shows the unit's location;

(D) The total dry metric tons placed on the active sewage sludge unit per 365-day period;

(E) The total dry metric tons placed on the active sewage sludge unit over the life of the unit;

(F)A description of any liner for the active sewage sludge unit, including whether it has a maximum permeability of 1 x 10<-7> cm/sec;

(G)A description of any leachate collection system for the active sewage sludge unit, including the method used for leachate disposal, and any Federal, State, and local permit number(s) for leachate disposal;

(H) If the active sewage sludge unit is less than 150 meters from the property line of the surface disposal site, the actual distance from the unit boundary to the site property line;

(I) The remaining capacity (dry metric tons) for the active sewage sludge unit;

(J) The date on which the active sewage sludge unit is expected to close, if such a date has been identified;

(K) The following information for any other facility that sends sewage sludge to the active sewage sludge unit:

(1) The name, contact person, and mailing address of the facility; and

(2) Available information regarding the quality of the sewage sludge received from the facility, including any treatment at the facility to reduce pathogens or vector attraction characteristics;

(L) Whether any of the vector attraction reduction options of 40 CFR 503.33(b)(9) through (b)(11) is met at the active sewage sludge unit, and a description of any procedures employed at the time of disposal to reduce vector attraction properties in sewage sludge;

(M) The following information, as applicable to any ground-water monitoring occurring at the active sewage sludge unit:

(1)A description of any ground-water monitoring occurring at the active sewage sludge unit;

(2) Any available ground-water monitoring data, with a description of the well locations and approximate depth to ground water;

(3)A copy of any ground-water monitoring plan that has been prepared for the active sewage sludge unit;

(4)A copy of any certification that has been obtained from a qualified ground-water scientist that the aquifer has not been contaminated; and

(N) If site-specific pollutant limits are being sought for the sewage sludge placed on this active sewage sludge unit, information to support such a request;

(11) Incineration. If sewage sludge from the applicant's facility is fired in a sewage sludge incinerator, the applicant must provide the following information:

(i) The total dry metric tons of sewage sludge from the applicant's facility that is fired in sewage sludge incinerators per 365-day period;

(ii) The following information for each sewage sludge incinerator firing the applicant's sewage sludge that the applicant does not own or operate:

(A) The name and/or number, contact person, mailing address, and telephone number of the sewage sludge incinerator; and

(B) The total dry metric tons from the applicant's facility per 365-day period fired in the sewage sludge incinerator;

(iii) The following information for each sewage sludge incinerator that the applicant owns or operates:

(A) The name and/or number and the location of the sewage sludge incinerator;

(B) The incinerator's latitude and longitude to the nearest second, and method of determination;

(C) The total dry metric tons per 365-day period fired in the sewage sludge incinerator;

(D) Information, test data, and documentation of ongoing operating parameters indicating that compliance with the National Emission Standard for Beryllium in 40 CFR part 61 will be achieved;

(E) Information, test data, and documentation of ongoing operating parameters indicating that compliance with the National Emission Standard for Mercury in 40 CFR part 61 will be achieved;

(F) The dispersion factor for the sewage sludge incinerator, as well as modeling results and supporting documentation;

(G) The control efficiency for parameters regulated in 40 CFR 503.43, as well as performance test results and supporting documentation;

(H) Information used to calculate the risk specific concentration (RSC) for chromium, including the results of incinerator stack tests for hexavalent and total chromium concentrations, if the applicant is requesting a chromium limit based on a site-specific RSC value;

(I) Whether the applicant monitors total hydrocarbons (THC) or Carbon Monoxide (CO) in the exit gas for the sewage sludge incinerator;

(J) The type of sewage sludge incinerator;

(K) The maximum performance test combustion temperature, as obtained during the performance test of the sewage sludge incinerator to determine pollutant control efficiencies;

(L) The following information on the sewage sludge feed rate used during the performance test:

(1) Sewage sludge feed rate in dry metric tons per day;

(2) Identification of whether the feed rate submitted is average use or maximum design; and

(3)A description of how the feed rate was calculated;

(M) The incinerator stack height in meters for each stack, including identification of whether actual or creditable stack height was used;

(N) The operating parameters for the sewage sludge incinerator air pollution control device(s), as obtained during the performance test of the sewage sludge incinerator to determine pollutant control efficiencies;

(O) Identification of the monitoring equipment in place, including (but not limited to) equipment to monitor the following:

(1) Total hydrocarbons or Carbon Monoxide;

(2) Percent oxygen;

(3) Percent moisture; and

(4) Combustion temperature; and

(P)A list of all air pollution control equipment used with this sewage sludge incinerator;

(12) Disposal in a municipal solid waste landfill. If sewage sludge from the applicant's facility is sent to a municipal solid waste landfill (MSWLF), the applicant must provide the following information for each MSWLF to which sewage sludge is sent:

(i) The name, contact person, mailing address, location, and all applicable permit numbers of the MSWLF;

(ii) The total dry metric tons per 365-day period sent from this facility to the MSWLF;

(iii)A determination of whether the sewage sludge meets applicable requirements for disposal of sewage sludge in a MSWLF, including the results of the paint filter liquids test and any additional requirements that apply on a site-specific basis; and

(iv) Information, if known, indicating whether the MSWLF complies with criteria set forth in 40 CFR part 258;

(13) Contractors. All applicants must provide the name, mailing address, telephone number, and responsibilities of all contractors responsible for any operational or maintenance aspects of the facility related to sewage sludge generation, treatment, use, or disposal;

(14) Other information. At the request of the permitting authority, the applicant must provide any other information necessary to determine the appropriate standards for permitting under 40 CFR part 503, and must provide any other information necessary to assess the sewage sludge use and disposal practices, determine whether to issue a permit, or identify appropriate permit requirements; and

(15) Signature. All applications must be signed by a certifying official in compliance with § 122.22.

[Note 1: At 46 FR 2046, Jan. 8, 1981, the Environmental Protection Agency suspended until further notice § 122.21(g)(7)(v)(A) and the corresponding portions of Item V-C of the NPDES application Form 2C as they apply to coal mines. This suspension continues in effect.]

[Note 2: At 46 FR 22585, Apr. 20, 1981, the Environmental Protection Agency suspended until further notice § 122.21(g)(7)(v)(A) and the corresponding portions of Item V-C of the NPDES application Form 2C as they apply to:

a.Testing and reporting for all four organic fractions in the Greige Mills Subcategory of the Textile Mills industry (subpart C -- Low water use processing of 40 CFR part 410), and testing and reporting for the pesticide fraction in all other subcategories of this industrial category.

b.Testing and reporting for the volatile, base eutral and pesticide fractions in the Base and Precious Metals Subcategory of the Ore Mining and Dressing industry (subpart B of 40 CFR part 440), and testing and reporting for all four fractions in all other subcategories of this industrial category.

c.Testing and reporting for all four GC/MS fractions in the Porcelain Enameling industry.

This revision continues that suspension.] n1

[Note 3: At 46 FR 35090, July 1, 1981, the Environmental Protection Agency suspended until further notice § 122.21(g)(7)(v)(A) and the corresponding portions of Item V-C of the NPDES application Form 2C as they apply to:

a.Testing and reporting for the pesticide fraction in the Tall Oil Rosin Subcategory (subpart D) and Rosin-Based Derivatives Subcategory (subpart F) of the Gum and Wood Chemicals industry (40 CFR part 454), and testing and reporting for the pesticide and base-neutral fractions in all other subcategories of this industrial category.

b.Testing and reporting for the pesticide fraction in the Leather Tanning and Finishing, Paint and Ink Formulation, and Photographic Supplies industrial categories.

c.Testing and reporting for the acid, base eutral and pesticide fractions in the Petroleum Refining industrial category.

d.Testing and reporting for the pesticide fraction in the Papergrade Sulfite subcategories (subparts J and U) of the Pulp and Paper industry (40 CFR part 430); testing and reporting for the base eutral and pesticide fractions in the following subcategories: Deink (subpart Q), Dissolving Kraft (subpart F), and Paperboard from Waste Paper (subpart E); testing and reporting for the volatile, base eutral and pesticide fractions in the following subcategories: BCT Bleached Kraft (subpart H), Semi-Chemical (subparts B and C), and Nonintegrated-Fine Papers (subpart R); and testing and reporting for the acid, base eutral, and pesticide fractions in the following subcategories: Fine Bleached Kraft (subpart I), Dissolving Sulfite Pulp (subpart K), Groundwood-Fine Papers (subpart O), Market Bleached Kraft (subpart G), Tissue from Wastepaper (subpart T), and Nonintegrated-Tissue Papers (subpart S).

e.Testing and reporting for the base eutral fraction in the Once-Through Cooling Water, Fly Ash and Bottom Ash Transport Water process wastestreams of the Steam Electric Power Plant industrial category.

This revision continues that suspension.] n1

n1 EDITORIAL NOTE: The words "This revision" refer to the document published at 48 FR 14153, Apr. 1, 1983.

(r) Application requirements for facilities with cooling water intake structures -- (1)(i) New facilities with new or modified cooling water intake structures. New facilities (other than offshore oil and gas extraction facilities) with cooling water intake structures as defined in part 125, subpart I of this chapter, must submit to the Director for review the information required under paragraphs (r)(2) (except (r)(2)(iv)), (3), and (4) (except (r)(4)(ix), (x), (xi), and (xii)) of this section and § 125.86 of this chapter as part of the permit application. New offshore oil and gas extraction facilities with cooling water intake structures as defined in part 125, subpart N, of this chapter that are fixed facilities must submit to the Director for review the information required under paragraphs (r)(2) (except (r)(2)(iv)), (3), and (4) (except (r)(4)(ix), (x), (xi), and (xii)) of this section and § 125.136 of this chapter as part of their permit application.

(ii) Existing facilities. (A) All existing facilities. The owner or operator of an existing facility defined at 40 CFR 125.92(k) must submit to the Director for review the information required under paragraphs (r)(2) and (3) of this section and applicable provisions of paragraphs (r)(4), (5), (6), (7), and (8) of this section.

(B) Existing facilities greater than 125 mgd AIF. In addition, the owner or operator of an existing facility that withdraws greater than 125 mgd actual intake flow (AIF), as defined at 40 CFR 125.92 (a), of water for cooling purposes must also submit to the Director for review the information required under paragraphs (r)(9), (10), (11), (12), and (13) of this section. If the owner or operator of an existing facility intends to comply with the BTA (best technology available) standards for entrainment using a closed-cycle recirculating system as defined at 40 CFR 125.92(c), the Director may reduce or waive some or all of the information required under paragraphs (r)(9) through (13) of this section.

(C) Additional information. The owner or operator of an existing facility must also submit such additional information as the Director determines is necessary pursuant to 40 CFR 125.98(i).

(D) New units at existing facilities. The owner or operator of a new unit at an existing facility, as defined at 40 CFR 125.92(u), must submit or update any information previously provided to the Director by submitting the information required under paragraphs (r)(2), (3), (5), (8), and (14) of this section and applicable provisions of paragraphs (r)(4), (6), and (7) of this section. Requests for and approvals of alternative requirements sought under 40 CFR 125.94(e)(2) or 125.98(b)(7) must be submitted with the permit application.

(E) New units at existing facilities not previously subject to Part 125. The owner or operator of a new unit as defined at 40 CFR 125.92(u) at an existing facility not previously subject to part 125 of this chapter that increases the total capacity of the existing facility to more than 2 mgd DIF must submit the information required under paragraphs (r)(2), (3), (5), and (8) of this section and applicable provisions of paragraphs (r)(4), (6), and (7) of this section at the time of the permit application for the new unit. Requests for alternative

requirements under 40 CFR 125.94(e)(2) or 125.98(b)(7) must be submitted with the permit application. If the total capacity of the facility will increase to more than 125 mgd AIF, the owner or operator must also submit the information required in paragraphs (r)(9) through (13) of this section. If the owner or operator of an existing facility intends to comply with the BTA (best technology available) standards for entrainment using a closed-cycle recirculating system as defined at 40 CFR 125.92(c), the Director may reduce or waive some or all of the information required under paragraphs (r)(9) through (13) of this section.

(F) If the owner or operator of an existing facility plans to retire the facility before the current permit expires, then the requirements of paragraphs (r)(1)(ii)(A), (B), (C), (D), and (E) of this section do not apply.

(G) If the owner or operator of an existing facility plans to retire the facility after the current permit expires but within one permit cycle, then the Director may waive the requirements of paragraphs (r)(7), (9), (10), (11), (12), and (13) of this section pending a signed certification statement from the owner or operator of the facility specifying the last operating date of the facility.

(H) All facilities. The owner or operator of any existing facility or new unit at any existing facility must also submit with its permit application all information received as a result of any communication with a Field Office of the Fish and Wildlife Service and/or Regional Office of the National Marine Fisheries Service.

(2) Source water physical data. These include:

(i)A narrative description and scaled drawings showing the physical configuration of all source water bodies used by your facility, including areal dimensions, depths, salinity and temperature regimes, and other documentation that supports your determination of the water body type where each cooling water intake structure is located;

(ii) Identification and characterization of the source waterbody's hydrological and geomorphological features, as well as the methods you used to conduct any physical studies to determine your intake's area of influence within the waterbody and the results of such studies;

(iii) Locational maps; and

(iv) For new offshore oil and gas facilities that are not fixed facilities, a narrative description and/or locational maps providing information on predicted locations within the waterbody during the permit term in sufficient detail for the Director to determine the appropriateness of additional impingement requirements under § 125.134(b)(4).

(3) Cooling water intake structure data. These include:

(i)A narrative description of the configuration of each of your cooling water intake structures and where it is located in the water body and in the water column;

(ii) Latitude and longitude in degrees, minutes, and seconds for each of your cooling water intake structures;

(iii)A narrative description of the operation of each of your cooling water intake structures, including design intake flows, daily hours of operation, number of days of the year in operation and seasonal changes, if applicable;

(iv)A flow distribution and water balance diagram that includes all sources of water to the facility, recirculating flows, and discharges; and

(v) Engineering drawings of the cooling water intake structure.

(4) Source water baseline biological characterization data. This information is required to characterize the biological community in the vicinity of the cooling water intake structure and to characterize the operation of the cooling water intake structures. The Director may also use this information in subsequent permit renewal proceedings to determine if your Design and Construction Technology Plan as required in § 125.86(b)(4) or § 125.136(b)(3) of this chapter should be revised. This supporting information must include existing data (if they are available). However, you may supplement the data using newly conducted field studies if you choose to do so. The information you submit must include:

(i)A list of the data in paragraphs (r)(4)(ii) through (vi) of this section that are not available and efforts made to identify sources of the data;

(ii)A list of species (or relevant taxa) for all life stages and their relative abundance in the vicinity of the cooling water intake structure;

(iii) Identification of the species and life stages that would be most susceptible to impingement and entrainment. Species evaluated should include the forage base as well as those most important in terms of significance to commercial and recreational fisheries;

(iv) Identification and evaluation of the primary period of reproduction, larval recruitment, and period of peak abundance for relevant taxa;

(v) Data representative of the seasonal and daily activities (e.g., feeding and water column migration) of biological organisms in the vicinity of the cooling water intake structure;

(vi) Identification of all threatened, endangered, and other protected species that might be susceptible to impingement and entrainment at your cooling water intake structures;

(vii) Documentation of any public participation or consultation with Federal or State agencies undertaken in development of the plan; and

(viii) If you supplement the information requested in paragraph (r)(4)(i) of this section with data collected using field studies, supporting documentation for the Source Water Baseline Biological Characterization must include a description of all methods and quality assurance procedures for sampling, and data analysis including a description of the study area; taxonomic identification of sampled and evaluated biological assemblages (including all life stages of fish and shellfish); and sampling and data analysis methods. The sampling and/or data analysis methods you use must be appropriate for a quantitative survey and based on consideration of

methods used in other biological studies performed within the same source water body. The study area should include, at a minimum, the area of influence of the cooling water intake structure.

(ix) In the case of the owner or operator of an existing facility or new unit at an existing facility, the Source Water Baseline Biological Characterization Data is the information in paragraphs (r)(4)(i) through (xii) of this section.

(x) For the owner or operator of an existing facility, identification of protective measures and stabilization activities that have been implemented, and a description of how these measures and activities affected the baseline water condition in the vicinity of the intake.

(xi) For the owner or operator of an existing facility, a list of fragile species, as defined at 40 CFR 125.92(m), at the facility. The applicant need only identify those species not already identified as fragile at 40 CFR 125.92(m). New units at an existing facility are not required to resubmit this information if the cooling water withdrawals for the operation of the new unit are from an existing intake.

(xii) For the owner or operator of an existing facility that has obtained incidental take exemption or authorization for its cooling water intake structure(s) from the U.S. Fish and Wildlife Service or the National Marine Fisheries Service, any information submitted in order to obtain that exemption or authorization may be used to satisfy the permit application information requirement of paragraph 40 CFR 125.95(f) if included in the application.

(5) Cooling Water System Data. The owner or operator of an existing facility must submit the following information for each cooling water intake structure used or intended to be used:

(i)A narrative description of the operation of the cooling water system and its relationship to cooling water intake structures; the proportion of the design intake flow that is used in the system; the number of days of the year the cooling water system is in operation and seasonal changes in the operation of the system, if applicable; the proportion of design intake flow for contact cooling, non-contact cooling, and process uses; a distribution of water reuse to include cooling water reused as process water, process water reused for cooling, and the use of gray water for cooling; a description of reductions in total water withdrawals including cooling water intake flow reductions already achieved through minimized process water withdrawals; a description of any cooling water that is used in a manufacturing process either before or after it is used for cooling, including other recycled process water flows; the proportion of the source waterbody withdrawn (on a monthly basis);

(ii) Design and engineering calculations prepared by a qualified professional and supporting data to support the description required by paragraph (r)(5)(i) of this section; and

(iii) Description of existing impingement and entrainment technologies or operational measures and a summary of their performance, including but not

limited to reductions in impingement mortality and entrainment due to intake location and reductions in total water withdrawals and usage.

(6) Chosen Method(s) of Compliance with Impingement Mortality Standard. The owner or operator of the facility must identify the chosen compliance method for the entire facility; alternatively, the applicant must identify the chosen compliance method for each cooling water intake structure at its facility. The applicant must identify any intake structure for which a BTA determination for Impingement Mortality under 40 CFR 125.94 (c)(11) or (12) is requested. In addition, the owner or operator that chooses to comply via 40 CFR 125.94 (c)(5) or (6) must also submit an impingement technology performance optimization study as described below:

(i) If the applicant chooses to comply with 40 CFR 125.94(c)(5), subject to the flexibility for timing provided in 40 CFR 125.95(a)(2), the impingement technology performance optimization study must include two years of biological data collection measuring the reduction in impingement mortality achieved by the modified traveling screens as defined at 40 CFR 125.92(s) and demonstrating that the operation has been optimized to minimize impingement mortality. A complete description of the modified traveling screens and associated equipment must be included, including, for example, type of mesh, mesh slot size, pressure sprays and fish return mechanisms. A description of any biological data collection and data collection approach used in measuring impingement mortality must be included:

(A) Collecting data no less frequently than monthly. The Director may establish more frequent data collection;

(B) Biological data collection representative of the impingement and the impingement mortality at the intakes subject to this provision;

(C)A taxonomic identification to the lowest taxon possible of all organisms collected;

(D) The method in which naturally moribund organisms are identified and taken into account;

(E) The method in which mortality due to holding times is taken into account;

(F) If the facility entraps fish or shellfish, a count of entrapment, as defined at 40 CFR 125.92(j), as impingement mortality; and

(G) The percent impingement mortality reflecting optimized operation of the modified traveling screen and all supporting calculations.

(ii) If the applicant chooses to comply with 40 CFR 125.94(c)(6), the impingement technology performance optimization study must include biological data measuring the reduction in impingement mortality achieved by operation of the system of technologies, operational measures and best management practices, and demonstrating that operation of the system has been optimized to minimize impingement mortality. This system of technologies, operational measures and best management practices may include flow reductions, seasonal operation, unit closure, credit for intake location, and behavioral deterrent systems. The applicant must document how each system element contributes to the system's performance.

The applicant must include a minimum of two years of biological data measuring the reduction in impingement mortality achieved by the system. The applicant must also include a description of any sampling or data collection approach used in measuring the rate of impingement, impingement mortality, or flow reductions.

(A) Rate of Impingement. If the demonstration relies in part on a credit for reductions in the rate of impingement in the system, the applicant must provide an estimate of those reductions to be used as credit towards reducing impingement mortality, and any relevant supporting documentation, including previously collected biological data, performance reviews, and previously conducted performance studies not already submitted to the Director. The submission of studies more than 10 years old must include an explanation of why the data are still relevant and representative of conditions at the facility and explain how the data should be interpreted using the definitions of impingement and entrapment at 40 CFR 125.92(n) and (j), respectively. The estimated reductions in rate of impingement must be based on a comparison of the system to a once-through cooling system with a traveling screen whose point of withdrawal from the surface water source is located at the shoreline of the source waterbody. For impoundments that are waters of the United States in whole or in part, the facility's rate of impingement must be measured at a location within the cooling water intake system that the Director deems appropriate. In addition, the applicant must include two years of biological data collection demonstrating the rate of impingement resulting from the system. For this demonstration, the applicant must collect data no less frequently than monthly. The Director may establish more frequent data collection.

(B) Impingement Mortality. If the demonstration relies in part on a credit for reductions in impingement mortality already obtained at the facility, the applicant must include two years of biological data collection demonstrating the level of impingement mortality the system is capable of achieving. The applicant must submit any relevant supporting documentation, including previously collected biological data, performance reviews, and previously conducted performance studies not already submitted to the Director. The applicant must provide a description of any sampling or data collection approach used in measuring impingement mortality. In addition, for this demonstration the applicant must:

(1) Collect data no less frequently than monthly. The Director may establish more frequent data collection;

(2) Conduct biological data collection that is representative of the impingement and the impingement mortality at an intake subject to this provision. In addition, the applicant must describe how the location of the cooling water intake structure in the waterbody and the water column are accounted for in the points of data collection;

(3) Include a taxonomic identification to the lowest taxon possible of all organisms to be collected;

(4) Describe the method in which naturally moribund organisms are identified and taken into account;

(5) Describe the method in which mortality due to holding times is taken into account; and

(6) If the facility entraps fish or shellfish, a count of the entrapment, as defined at 40 CFR 125.92(j), as impingement mortality.

(C) Flow reduction. If the demonstration relies in part on flow reduction to reduce impingement, the applicant must include two years of intake flows, measured daily, as part of the demonstration, and describe the extent to which flow reductions are seasonal or intermittent. The applicant must document how the flow reduction results in reduced impingement. In addition, the applicant must describe how the reduction in impingement has reduced impingement mortality.

(D) Total system performance. The applicant must document the percent impingement mortality reflecting optimized operation of the total system of technologies, operational measures, and best management practices and all supporting calculations. The total system performance is the combination of the impingement mortality performance reflected in paragraphs (r)(6)(ii)(A), (B), and (C) of this section.

(7) Entrainment Performance Studies. The owner or operator of an existing facility must submit any previously conducted studies or studies obtained from other facilities addressing technology efficacy, through-facility entrainment survival, and other entrainment studies. Any such submittals must include a description of each study, together with underlying data, and a summary of any conclusions or results. Any studies conducted at other locations must include an explanation as to why the data from other locations are relevant and representative of conditions at your facility. In the case of studies more than 10 years old, the applicant must explain why the data are still relevant and representative of conditions at the facility and explain how the data should be interpreted using the definition of entrainment at 40 CFR 125.92(h).

(8) Operational Status. The owner or operator of an existing facility must submit a description of the operational status of each generating, production, or process unit that uses cooling water, including but not limited to:

(i) For power production or steam generation, descriptions of individual unit operating status including age of each unit, capacity utilization rate (or equivalent) for the previous 5 years, including any extended or unusual outages that significantly affect current data for flow, impingement, entrainment, or other factors, including identification of any operating unit with a capacity utilization rate of less than 8 percent averaged over a 24-month block contiguous period, and any major upgrades completed within the last 15 years, including but not limited to boiler replacement, condenser replacement, turbine replacement, or changes to fuel type;

(ii) Descriptions of completed, approved, or scheduled uprates and Nuclear Regulatory Commission relicensing status of each unit at nuclear facilities;

(iii) For process units at your facility that use cooling water other than for power production or steam generation, if you intend to use reductions in flow or changes in operations to meet the requirements of 40 CFR 125.94(c), descriptions of individual production processes and product lines, operating status including age of each line, seasonal operation, including any extended or unusual outages that significantly affect current data for flow, impingement, entrainment, or other factors, any major upgrades completed within the last 15 years, and plans or schedules for decommissioning or replacement of process units or production processes and product lines;

(iv) For all manufacturing facilities, descriptions of current and future production schedules; and

(v) Descriptions of plans or schedules for any new units planned within the next 5 years.

(9) Entrainment Characterization Study. The owner or operator of an existing facility that withdraws greater than 125 mgd AIF, where the withdrawal of cooling water is measured at a location within the cooling water intake structure that the Director deems appropriate, must develop for submission to the Director an Entrainment Characterization Study that includes a minimum of two years of entrainment data collection. The Entrainment Characterization Study must include the following components:

(i) Entrainment Data Collection Method. The study should identify and document the data collection period and frequency. The study should identify and document organisms collected to the lowest taxon possible of all life stages of fish and shellfish that are in the vicinity of the cooling water intake structure(s) and are susceptible to entrainment, including any organisms identified by the Director, and any species protected under Federal, State, or Tribal law, including threatened or endangered species with a habitat range that includes waters in the vicinity of the cooling water intake structure. Biological data collection must be representative of the entrainment at the intakes subject to this provision. The owner or operator of the facility must identify and document how the location of the cooling water intake structure in the waterbody and the water column are accounted for by the data collection locations;

(ii) Biological Entrainment Characterization. Characterization of all life stages of fish, shellfish, and any species protected under Federal, State, or Tribal law (including threatened or endangered species), including a description of their abundance and their temporal and spatial characteristics in the vicinity of the cooling water intake structure(s), based on sufficient data to characterize annual, seasonal, and diel variations in entrainment, including but not limited to variations related to climate and weather differences, spawning, feeding, and water column migration. This characterization may include historical data that are representative of the current operation of the facility and of biological conditions at the site.

Identification of all life stages of fish and shellfish must include identification of any surrogate species used, and identification of data representing both motile and non-motile life-stages of organisms;

(iii) Analysis and Supporting Documentation. Documentation of the current entrainment of all life stages of fish, shellfish, and any species protected under Federal, State, or Tribal law (including threatened or endangered species). The documentation may include historical data that are representative of the current operation of the facility and of biological conditions at the site. Entrainment data to support the facility's calculations must be collected during periods of representative operational flows for the cooling water intake structure, and the flows associated with the data collection must be documented. The method used to determine latent mortality along with data for specific organism mortality or survival that is applied to other life-stages or species must be identified. The owner or operator of the facility must identify and document all assumptions and calculations used to determine the total entrainment for that facility together with all methods and quality assurance/quality control procedures for data collection and data analysis. The proposed data collection and data analysis methods must be appropriate for a quantitative survey.

(10) Comprehensive Technical Feasibility and Cost Evaluation Study. The owner or operator of an existing facility that withdraws greater than 125 mgd AIF must develop for submission to the Director an engineering study of the technical feasibility and incremental costs of candidate entrainment control technologies. In addition, the study must include the following:

(i) Technical feasibility. An evaluation of the technical feasibility of closed-cycle recirculating systems as defined at 40 CFR 125.92(c), fine mesh screens with a mesh size of 2 millimeters or smaller, and water reuse or alternate sources of cooling water. In addition, this study must include:

(A)A description of all technologies and operational measures considered (including alternative designs of closed-cycle recirculating systems such as natural draft cooling towers, mechanical draft cooling towers, hybrid designs, and compact or multi-cell arrangements);

(B)A discussion of land availability, including an evaluation of adjacent land and acres potentially available due to generating unit retirements, production unit retirements, other buildings and equipment retirements, and potential for repurposing of areas devoted to ponds, coal piles, rail yards, transmission yards, and parking lots;

(C)A discussion of available sources of process water, grey water, waste water, reclaimed water, or other waters of appropriate quantity and quality for use as some or all of the cooling water needs of the facility; and

(D) Documentation of factors other than cost that may make a candidate technology impractical or infeasible for further evaluation.

(ii) Other entrainment control technologies. An evaluation of additional technologies for reducing entrainment may be required by the Director.

(iii) Cost evaluations. The study must include engineering cost estimates of all technologies considered in paragraphs (r)(10)(i) and (ii) of this section. Facility costs must also be adjusted to estimate social costs. All costs must be presented as the net present value (NPV) and the corresponding annual value. Costs must be clearly labeled as compliance costs or social costs. The applicant must separately discuss facility level compliance costs and social costs, and provide documentation as follows:

(A) Compliance costs are calculated as after-tax, while social costs are calculated as pre-tax. Compliance costs include the facility's administrative costs, including costs of permit application, while the social cost adjustment includes the Director's administrative costs. Any outages, downtime, or other impacts to facility net revenue, are included in compliance costs, while only that portion of lost net revenue that does not accrue to other producers can be included in social costs. Social costs must also be discounted using social discount rates of 3 percent and 7 percent. Assumptions regarding depreciation schedules, tax rates, interest rates, discount rates and related assumptions must be identified;

(B) Costs and explanation of any additional facility modifications necessary to support construction and operation of technologies considered in paragraphs (r)(10)(i) and (ii) of this section, including but not limited to relocation of existing buildings or equipment, reinforcement or upgrading of existing equipment, and additional construction and operating permits. Assumptions regarding depreciation schedules, interest rates, discount rates, useful life of the technology considered, and any related assumptions must be identified; and

(C) Costs and explanation for addressing any non-water quality environmental and other impacts identified in paragraph (r)(12) of this section. The cost evaluation must include a discussion of all reasonable attempts to mitigate each of these impacts.

(11) Benefits Valuation Study. The owner or operator of an existing facility that withdraws greater than 125 mgd AIF must develop for submission to the Director an evaluation of the benefits of the candidate entrainment reduction technologies and operational measures evaluated in paragraph (r)(10) of this section including using the Entrainment Characterization Study completed in paragraph (r)(9) of this section. Each category of benefits must be described narratively, and when possible, benefits should be quantified in physical or biological units and monetized using appropriate economic valuation methods. The benefits valuation study must include, but is not limited to, the following elements:

(i) Incremental changes in the numbers of individual fish and shellfish lost due to impingement mortality and entrainment as defined in 40 CFR 125.92, for all life stages of each exposed species;

(ii) Description of basis for any estimates of changes in the stock sizes or harvest levels of commercial and recreational fish or shellfish species or forage fish species;

(iii) Description of basis for any monetized values assigned to changes in the stock size or harvest levels of commercial and recreational fish or shellfish species, forage fish, and to any other ecosystem or non use benefits;

(iv)A discussion of mitigation efforts completed prior to October 14, 2014 including how long they have been in effect and how effective they have been;

(v) Discussion, with quantification and monetization, where possible, of any other benefits expected to accrue to the environment and local communities, including but not limited to improvements for mammals, birds, and other organisms and aquatic habitats;

(vi) Discussion, with quantification and monetization, where possible, of any benefits expected to result from any reductions in thermal discharges from entrainment technologies.

(12) Non-water Quality Environmental and Other Impacts Study. The owner or operator of an existing facility that withdraws greater than 125 mgd AIF must develop for submission to the Director a detailed facility-specific discussion of the changes in non-water quality environmental and other impacts attributed to each technology and operational measure considered in paragraph (r)(10) of this section, including both impacts increased and impacts decreased. The study must include the following:

(i) Estimates of changes to energy consumption, including but not limited to auxiliary power consumption and turbine backpressure energy penalty;

(ii) Estimates of air pollutant emissions and of the human health and environmental impacts associated with such emissions;

(iii) Estimates of changes in noise;

(iv)A discussion of impacts to safety, including documentation of the potential for plumes, icing, and availability of emergency cooling water;

(v)A discussion of facility reliability, including but not limited to facility availability, production of steam, impacts to production based on process unit heating or cooling, and reliability due to cooling water availability;

(vi) Significant changes in consumption of water, including a facility-specific comparison of the evaporative losses of both once-through cooling and closed-cycle recirculating systems, and documentation of impacts attributable to changes in water consumption; and

(vii)A discussion of all reasonable attempts to mitigate each of these factors.

(13) Peer Review. If the applicant is required to submit studies under paragraphs (r)(10) through (12) of this section, the applicant must conduct an external peer review of each report to be submitted with the permit application. The applicant must select peer reviewers and notify the Director in advance of the peer review. The Director may

disapprove of a peer reviewer or require additional peer reviewers. The Director may confer with EPA, Federal, State and Tribal fish and wildlife management agencies with responsibility for fish and wildlife potentially affected by the cooling water intake structure, independent system operators, and state public utility regulatory agencies, to determine which peer review comments must be addressed. The applicant must provide an explanation for any significant reviewer comments not accepted. Peer reviewers must have appropriate qualifications and their names and credentials must be included in the peer review report.

(14) New Units. The applicant must identify the chosen compliance method for the new unit. In addition, the owner or operator that selects the BTA standards for new units at 40 CFR 125.94 (e)(2) as its route to compliance must submit information to demonstrate entrainment reductions equivalent to 90 percent or greater of the reduction that could be achieved through compliance with 40 CFR 125.94(e)(1). The demonstration must include the Entrainment Characterization Study at paragraph (r)(9) of this section. In addition, if data specific to your facility indicates that compliance with the requirements of § 125.94 of this chapter for each new unit would result in compliance costs wholly out of proportion to the costs EPA considered in establishing the requirements at issue, or would result in significant adverse impacts on local air quality, significant adverse impacts on local water resources other than impingement or entrainment, or significant adverse impacts on local energy markets, you must submit all supporting data as part of paragraph (r)(14) of this section. The Director may determine that additional data and information, including but not limited to monitoring, must be included as part of paragraph (r)(14) of this section.

Case Notes Applicable to Entire Part

Part Note

Administrative Law : Informal Agency Actions

This document is current through the December 11, 2017 issue of the Federal Register. Pursuant to 82 FR 8346 ("Regulatory Freeze Pending Review"), certain regulations will be delayed pending further review. See Publisher's Note under affected rules. Title 3 is current through December 4, 2017.

§ 122.42 Additional conditions applicable to specified categories of NPDES permits (applicable to State NPDES programs, see § 123.25).

The following conditions, in addition to those set forth in § 122.41, apply to all NPDES permits within the categories specified below:

(a) Existing manufacturing, commercial, mining, and silvicultural dischargers. In addition to the reporting requirements under § 122.41(1), all existing manufacturing, commercial, mining, and silvicultural dischargers must notify the Director as soon as they know or have reason to believe:

(1) That any activity has occurred or will occur which would result in the discharge, on a routine or frequent basis, of any toxic pollutant which is not limited in the permit, if that discharge will exceed the highest of the following "notification levels":

(i) One hundred micrograms per liter (100 X mg/l);

(ii) Two hundred micrograms per liter (200 X mg/l) for acrolein and acrylonitrile; five hundred micrograms per liter (500 X mg/l) for 2,4-dinitrophenol and for 2-methyl-4,6-dinitrophenol; and one milligram per liter (1 mg/l) for antimony;

(iii) Five (5) times the maximum concentration value reported for that pollutant in the permit application in accordance with § 122.21(g)(7); or

(iv) The level established by the Director in accordance with § 122.44(f).

(2) That any activity has occurred or will occur which would result in any discharge, on a non-routine or infrequent basis, of a toxic pollutant which is not limited in the permit, if that discharge will exceed the highest of the following "notification levels":

(i) Five hundred micrograms per liter (500 X mg/l);

(ii) One milligram per liter (1 mg/l) for antimony;

(iii) Ten (10) times the maximum concentration value reported for that pollutant in the permit application in accordance with § 122.21(g)(7).

(iv) The level established by the Director in accordance with § 122.44(f).

(b) Publicly owned treatment works. All POTWs must provide adequate notice to the Director of the following:

(1) Any new introduction of pollutants into the POTW from an indirect discharger which would be subject to section 301 or 306 of CWA if it were directly discharging those pollutants; and

(2) Any substantial change in the volume or character of pollutants being introduced into that POTW by a source introducing pollutants into the POTW at the time of issuance of the permit.

(3) For purposes of this paragraph, adequate notice shall include information on (i) the quality and quantity of effluent introduced into the POTW, and (ii) any anticipated impact of the change on the quantity or quality of effluent to be discharged from the POTW.

(c) Municipal separate storm sewer systems. The operator of a large or medium municipal separate storm sewer system or a municipal separate storm sewer that has been designated by the Director under § 122.26(a)(1)(v) must submit an annual report by the anniversary of the date of the issuance of the permit for such system. As of December 21, 2020 all reports submitted in compliance with this section must be submitted electronically by the owner, operator, or the duly authorized representative of the MS4 to the Director or initial recipient, as defined in 40 CFR 127.2(b), in compliance with this section and 40 CFR part 3 (including, in all cases, subpart D to part 3), § 122.22, and 40 CFR part 127. Part 127 is not intended to undo existing requirements for electronic reporting. Prior to this date, and independent of part 127, the owner, operator, or the duly authorized representative of the MS4 may be required to report electronically if specified by a particular permit or if required to do so by state law. The report shall include:

(1) The status of implementing the components of the storm water management program that are established as permit conditions;

(2) Proposed changes to the storm water management programs that are established as permit condition. Such proposed changes shall be consistent with § 122.26(d)(2)(iii) of this part; and

(3) Revisions, if necessary, to the assessment of controls and the fiscal analysis reported in the permit application under § 122.26(d)(2)(iv) and (d)(2)(v) of this part;

(4)A summary of data, including monitoring data, that is accumulated throughout the reporting year;

(5) Annual expenditures and budget for year following each annual report;

(6)A summary describing the number and nature of enforcement actions, inspections, and public education programs;

(7) Identification of water quality improvements or degradation;

(d) Storm water discharges. The initial permits for discharges composed entirely of storm water issued pursuant to § 122.26(e)(7) of this part shall require compliance with the conditions of the permit as expeditiously as practicable, but in no event later than three years after the date of issuance of the permit.

(e) Concentrated animal feeding operations (CAFOs). Any permit issued to a CAFO must include the requirements in paragraphs (e)(1) through (e)(6) of this section.

(1) Requirement to implement a nutrient management plan. Any permit issued to a CAFO must include a requirement to implement a nutrient management plan that, at a minimum, contains best management practices necessary to meet the requirements of this paragraph and applicable effluent limitations and standards, including those specified in 40 CFR part 412. The nutrient management plan must, to the extent applicable:

(i) Ensure adequate storage of manure, litter, and process wastewater, including procedures to ensure proper operation and maintenance of the storage facilities;

(ii) Ensure proper management of mortalities (i.e., dead animals) to ensure that they are not disposed of in a liquid manure, storm water, or process wastewater storage or treatment system that is not specifically designed to treat animal mortalities;

(iii) Ensure that clean water is diverted, as appropriate, from the production area;

(iv) Prevent direct contact of confined animals with waters of the United States;

(v) Ensure that chemicals and other contaminants handled on-site are not disposed of in any manure, litter, process wastewater, or storm water storage or treatment system unless specifically designed to treat such chemicals and other contaminants;

(vi) Identify appropriate site specific conservation practices to be implemented, including as appropriate buffers or equivalent practices, to control runoff of pollutants to waters of the United States;

(vii) Identify protocols for appropriate testing of manure, litter, process wastewater, and soil;

(viii) Establish protocols to land apply manure, litter or process wastewater in accordance with site specific nutrient management practices that ensure appropriate agricultural utilization of the nutrients in the manure, litter or process wastewater; and

(ix) Identify specific records that will be maintained to document the implementation and management of the minimum elements described in paragraphs (e)(1)(i) through (e)(1)(viii) of this section.

(2) Recordkeeping requirements.

(i) The permittee must create, maintain for five years, and make available to the Director, upon request, the following records:

(A) All applicable records identified pursuant paragraph (e)(1)(ix) of this section;

(B) In addition, all CAFOs subject to 40 CFR part 412 must comply with record keeping requirements as specified in § 412.37(b) and (c) and § 412.47(b) and (c).

(ii)A copy of the CAFO's site-specific nutrient management plan must be maintained on site and made available to the Director upon request.

(3) Requirements relating to transfer of manure or process wastewater to other persons. Prior to transferring manure, litter or process wastewater to other persons, Large CAFOs must provide the recipient of the manure, litter or process wastewater with the most current

nutrient analysis. The analysis provided must be consistent with the requirements of 40 CFR part 412. Large CAFOs must retain for five years records of the date, recipient name and address, and approximate amount of manure, litter or process wastewater transferred to another person.

(4) Annual reporting requirements for CAFOs. The permittee must submit an annual report to the Director. As of December 21, 2020 all annual reports submitted in compliance with this section must be submitted electronically by the permittee to the Director or initial recipient, as defined in 40 CFR 127.2(b), in compliance with this section and 40 CFR part 3 (including, in all cases, subpart D to part 3), § 122.22, and 40 CFR part 127. Part 127 is not intended to undo existing requirements for electronic reporting. Prior to this date, and independent of part 127, the permittee may be required to report electronically if specified by a particular permit or if required to do so by state law. The annual report must include:

(i) The number and type of animals, whether in open confinement or housed under roof (beef cattle, broilers, layers, swine weighing 55 pounds or more, swine weighing less than 55 pounds, mature dairy cows, dairy heifers, veal calves, sheep and lambs, horses, ducks, turkeys, other);

(ii) Estimated amount of total manure, litter and process wastewater generated by the CAFO in the previous 12 months (tons/gallons);

(iii) Estimated amount of total manure, litter and process wastewater transferred to other person by the CAFO in the previous 12 months (tons/gallons);

(vi) Summary of all manure, litter and process wastewater discharges from the production area that have occurred in the previous 12 months, including, for each discharge, the date of discovery, duration of discharge, and approximate volume; and

(v) Total number of acres under control of the CAFO that were used for land application of manure, litter and process wastewater in the previous 12 months;

(vi) Summary of all manure, litter and process wastewater discharges from the production area that have occurred in the previous 12 months, including date, time, and approximate volume; and

(vii)A statement indicating whether the current version of the CAFO's nutrient management plan was developed or approved by a certified nutrient management planner; and

(viii) The actual crop(s) planted and actual yield(s) for each field, the actual nitrogen and phosphorus content of the manure, litter, and process wastewater, the results of calculations conducted in accordance with paragraphs (e)(5)(i)(B) and (e)(5)(ii)(D) of this section, and the amount of manure, litter, and process wastewater applied to each field during the previous 12 months; and, for any CAFO that implements a nutrient management plan that addresses rates of application in accordance with paragraph (e)(5)(ii) of this section, the results of any soil testing for nitrogen and phosphorus taken during the preceding 12 months, the data used in calculations conducted in accordance with paragraph (e)(5)(ii)(D) of this section, and the amount of any supplemental fertilizer applied during the previous 12 months.

(5) Terms of the nutrient management plan. Any permit issued to a CAFO must require compliance with the terms of the CAFO's site-specific nutrient management plan. The terms of the nutrient management plan are the information, protocols, best management practices, and other conditions in the nutrient management plan determined by the Director to be necessary to meet the requirements of paragraph (e)(1) of this section. The terms of the nutrient management plan, with respect to protocols for land application of manure, litter, or process wastewater required by paragraph (e)(1)(viii) of this section and, as applicable, 40 CFR 412.4(c), must include the fields available for land application; field-specific rates of application properly developed, as specified in paragraphs (e)(5)(i) through (ii) of this section, to ensure appropriate agricultural utilization of the nutrients in the manure, litter, or process wastewater; and any timing limitations identified in the nutrient management plan concerning land application on the fields available for land application. The terms must address rates of application using one of the following two approaches, unless the Director specifies that only one of these approaches may be used:

(i) Linear approach. An approach that expresses rates of application as pounds of nitrogen and phosphorus, according to the following specifications:

(A) The terms include maximum application rates from manure, litter, and process wastewater for each year of permit coverage, for each crop identified in the nutrient management plan, in chemical forms determined to be acceptable to the Director, in pounds per acre, per year, for each field to be used for land application, and certain factors necessary to determine such rates. At a minimum, the factors that are terms must include: The outcome of the field-specific assessment of the potential for nitrogen and phosphorus transport from each field; the crops to be planted in each field or any other uses of a field such as pasture or fallow fields; the realistic yield goal for each crop or use identified for each field; the nitrogen and phosphorus recommendations from sources specified by the Director for each crop or use identified for each field; credits for all nitrogen in the field that will be plant available; consideration of multi-year phosphorus application; and accounting for all other additions of plant available nitrogen and phosphorus to the field. In addition, the terms include the form and source of manure, litter, and process wastewater to be land-applied; the timing and method of land application; and the methodology by which the nutrient management plan accounts for the amount of nitrogen and phosphorus in the manure, litter, and process wastewater to be applied.

(B) Large CAFOs that use this approach must calculate the maximum amount of manure, litter, and process wastewater to be land applied at least once each year using the results of the most recent representative manure, litter, and process wastewater tests for nitrogen and phosphorus taken within 12 months of the date of land application; or

(ii) Narrative rate approach. An approach that expresses rates of application as a narrative rate of application that results in the amount, in tons or gallons, of manure, litter, and process wastewater to be land applied, according to the following specifications:

(A) The terms include maximum amounts of nitrogen and phosphorus derived from all sources of nutrients, for each crop identified in the nutrient management plan, in

chemical forms determined to be acceptable to the Director, in pounds per acre, for each field, and certain factors necessary to determine such amounts. At a minimum, the factors that are terms must include: the outcome of the field-specific assessment of the potential for nitrogen and phosphorus transport from each field; the crops to be planted in each field or any other uses such as pasture or fallow fields (including alternative crops identified in accordance with paragraph (e)(5)(ii)(B) of this section); the realistic yield goal for each crop or use identified for each field; and the nitrogen and phosphorus recommendations from sources specified by the Director for each crop or use identified for each field. In addition, the terms include the methodology by which the nutrient management plan accounts for the following factors when calculating the amounts of manure, litter, and process wastewater to be land applied: Results of soil tests conducted in accordance with protocols identified in the nutrient management plan, as required by paragraph (e)(1)(vii) of this section; credits for all nitrogen in the field that will be plant available; the amount of nitrogen and phosphorus in the manure, litter, and process wastewater to be applied; consideration of multi-year phosphorus application; accounting for all other additions of plant available nitrogen and phosphorus to the field; the form and source of manure, litter, and process wastewater; the timing and method of land application; and volatilization of nitrogen and mineralization of organic nitrogen.

(B) The terms of the nutrient management plan include alternative crops identified in the CAFO's nutrient management plan that are not in the planned crop rotation. Where a CAFO includes alternative crops in its nutrient management plan, the crops must be listed by field, in addition to the crops identified in the planned crop rotation for that field, and the nutrient management plan must include realistic crop yield goals and the nitrogen and phosphorus recommendations from sources specified by the Director for each crop. Maximum amounts of nitrogen and phosphorus from all sources of nutrients and the amounts of manure, litter, and process wastewater to be applied must be determined in accordance with the methodology described in paragraph (e)(5)(ii)(A) of this section.

(C) For CAFOs using this approach, the following projections must be included in the nutrient management plan submitted to the Director, but are not terms of the nutrient management plan: The CAFO's planned crop rotations for each field for the period of permit coverage; the projected amount of manure, litter, or process wastewater to be applied; projected credits for all nitrogen in the field that will be plant available; consideration of multi-year phosphorus application; accounting for all other additions of plant available nitrogen and phosphorus to the field; and the predicted form, source, and method of application of manure, litter, and process wastewater for each crop. Timing of application for each field, insofar as it concerns the calculation of rates of application, is not a term of the nutrient management plan.

(D)CAFOs that use this approach must calculate maximum amounts of manure, litter, and process wastewater to be land applied at least once each year using the methodology required in paragraph (e)(5)(ii)(A) of this section before land applying manure, litter, and process wastewater and must rely on the following data:

(1)A field-specific determination of soil levels of nitrogen and phosphorus, including, for nitrogen, a concurrent determination of nitrogen that will be plant available consistent with the methodology required by paragraph (e)(5)(ii)(A) of this section, and for phosphorus, the results of the most recent soil test conducted in accordance with soil testing requirements approved by the Director; and

(2) The results of most recent representative manure, litter, and process wastewater tests for nitrogen and phosphorus taken within 12 months of the date of land application, in order to determine the amount of nitrogen and phosphorus in the manure, litter, and process wastewater to be applied.

(6) Changes to a nutrient management plan. Any permit issued to a CAFO must require the following procedures to apply when a CAFO owner or operator makes changes to the CAFO's nutrient management plan previously submitted to the Director:

(i) The CAFO owner or operator must provide the Director with the most current version of the CAFO's nutrient management plan and identify changes from the previous version, except that the results of calculations made in accordance with the requirements of paragraphs (e)(5)(i)(B) and (e)(5)(ii)(D) of this section are not subject to the requirements of paragraph (e)(6) of this section.

(ii) The Director must review the revised nutrient management plan to ensure that it meets the requirements of this section and applicable effluent limitations and standards, including those specified in 40 CFR part 412, and must determine whether the changes to the nutrient management plan necessitate revision to the terms of the nutrient management plan incorporated into the permit issued to the CAFO. If revision to the terms of the nutrient management plan is not necessary, the Director must notify the CAFO owner or operator and upon such notification the CAFO may implement the revised nutrient management plan. If revision to the terms of the nutrient management plan is necessary, the Director must determine whether such changes are substantial changes as described in paragraph (e)(6)(iii) of this section.

(A) If the Director determines that the changes to the terms of the nutrient management plan are not substantial, the Director must make the revised nutrient management plan publicly available and include it in the permit record, revise the terms of the nutrient management plan incorporated into the permit, and notify the owner or operator and inform the public of any changes to the terms of the nutrient management plan that are incorporated into the permit.

(B) If the Director determines that the changes to the terms of the nutrient management plan are substantial, the Director must notify the public and make the proposed changes and the information submitted by the CAFO owner or operator available for public review and comment. The process for public comments, hearing requests, and the hearing process if a hearing is held must follow the procedures applicable to draft permits set forth in 40 CFR 124.11 through 124.13. The Director may establish, either by regulation or in the CAFO's permit, an appropriate period of time for the public to comment and request a hearing on the proposed changes that differs from the time period specified in 40 CFR 124.10. The

Director must respond to all significant comments received during the comment period as provided in 40 CFR 124.17, and require the CAFO owner or operator to further revise the nutrient management plan if necessary, in order to approve the revision to the terms of the nutrient management plan incorporated into the CAFO's permit. Once the Director incorporates the revised terms of the nutrient management plan into the permit, the Director must notify the owner or operator and inform the public of the final decision concerning revisions to the terms and conditions of the permit.

(iii) Substantial changes to the terms of a nutrient management plan incorporated as terms and conditions of a permit include, but are not limited to:

(A) Addition of new land application areas not previously included in the CAFO's nutrient management plan. Except that if the land application area that is being added to the nutrient management plan is covered by terms of a nutrient management plan incorporated into an existing NPDES permit in accordance with the requirements of paragraph (e)(5) of this section, and the CAFO owner or operator applies manure, litter, or process wastewater on the newly added land application area in accordance with the existing field-specific permit terms applicable to the newly added land application area, such addition of new land would be a change to the new CAFO owner or operator's nutrient management plan but not a substantial change for purposes of this section;

(B) Any changes to the field-specific maximum annual rates for land application, as set forth in paragraphs (e)(5)(i) of this section, and to the maximum amounts of nitrogen and phosphorus derived from all sources for each crop, as set forth in paragraph (e)(5)(ii) of this section;

(C) Addition of any crop or other uses not included in the terms of the CAFO's nutrient management plan and corresponding field-specific rates of application expressed in accordance with paragraph (e)(5) of this section; and

(D) Changes to site-specific components of the CAFO's nutrient management plan, where such changes are likely to increase the risk of nitrogen and phosphorus transport to waters of the U.S.

(iv) For EPA-issued permits only. Upon incorporation of the revised terms of the nutrient management plan into the permit, 40 CFR 124.19 specifies procedures for appeal of the permit decision. In addition to the procedures specified at 40 CFR 124.19, a person must have submitted comments or participated in the public hearing in order to appeal the permit decision.

Mcclellan Ecological Seepage Situation (mess) v. Weinberger, 707 F. Supp. 1182, 1988 U.S. Dist. LEXIS 16103 (ED Cal June 20, 1988).

This document is current through the December 11, 2017 issue of the Federal Register. Pursuant to 82 FR 8346 ("Regulatory Freeze Pending Review"), certain regulations will be delayed pending further review. See Publisher's Note under affected rules. Title 3 is current through December 4, 2017.

§ 123.25 Requirements for permitting.

(a) All State Programs under this part must have legal authority to implement each of the following provisions and must be administered in conformance with each, except that States are not precluded from omitting or modifying any provisions to impose more stringent requirements:

(1)§ 122.4 -- (Prohibitions):

(2)§ 122.5(a) and (b) -- (Effect of permit);

(3)§ 122.7(b) and (c) -- (Confidential information);

(4)§ 122.21 (a)-(b), (c)(2), (e)-(k), (m)-(p), (q), and (r) -- (Application for a permit);

(5)§ 122.22 -- (Signatories);

(6)§ 122.23 -- (Concentrated animal feeding operations);

(7)§ 122.24 -- (Concentrated aquatic animal production facilities);

(8)§ 122.25 -- (Aquaculture projects);

(9)§ 122.26 -- (Storm water discharges);

(10)§ 122.27 -- (Silviculture);

(11)§ 122.28 -- (General permits), Provided that States which do not seek to implement the general permit program under § 122.28 need not do so.

(12) Section 122.41 (a)(1) and (b) through (n) -- (Applicable permit conditions) (Indian Tribes can satisfy enforcement authority requirements under § 123.34);

(13)§ 122.42 -- (Conditions applicable to specified categories of permits);

(14)§ 122.43 -- (Establishing permit conditions);

(15)§ 122.44 -- (Establishing NPDES permit conditions);

(16)§ 122.45 -- (Calculating permit conditions);

(17)§ 122.46 -- (Duration);

(18)§ 122.47(a) -- (Schedules of compliance);

(19)§ 122.48 -- (Monitoring requirements);

(20)§ 122.50 -- (Disposal into wells);

(21)§ 122.61 -- (Permit transfer);

(22)§ 122.62 -- (Permit modification);

(23)§ 122.64 -- (Permit termination);

(24)§ 124.3(a) -- (Application for a permit);

(25)§ 124.5 (a), (c), (d), and (f) -- (Modification of permits);

(26)§ 124.6 (a), (c), (d), and (e) -- (Draft permit);

(27)§ 124.8 -- (Fact sheets);

(28)§ 124.10 (a)(1)(ii), (a)(1)(iii), (a)(1)(v), (b), (c), (d), and (e) -- (Public notice);

(29)§ 124.11 -- (Public comments and requests for hearings);

(30)§ 124.12(a) -- (Public hearings); and

(31)§ 124.17 (a) and (c) -- (Response to comments);

(32)§ 124.56 -- (Fact sheets);

(33)§ 124.57(a) -- (Public notice);

(34)§ 124.59 -- (Comments from government agencies);

(35)§ 124.62 -- (Decision on variances);

(36) Subparts A, B, D, H, I, J, and N of part 125 of this chapter;

(37)40 CFR parts 129, 133, and subchapter N;

(38) For a Great Lakes State or Tribe (as defined in 40 CFR 132.2), 40 CFR part 132 (NPDES permitting implementation procedures only);

(39)§ 122.30 (What are the objectives of the storm water regulations for small MS4s?);

(40)§ 122.31 (For Indian Tribes only) (As a Tribe, what is my role under the NPDES storm water program?);

(41)§ 122.32 (As an operator of a small MS4, am I regulated under the NPDES storm water program?);

(42)§ 122.33 (If I am an operator of a regulated small MS4, how do I apply for an NPDES permit? When do I have to apply?);

(43)§ 122.34 (As an operator of a regulated small MS4, what will my NPDES MS4 storm water permit require?);

(44)§ 122.35 (As an operator of a regulated small MS4, may I share the responsibility to implement the minimum control measures with other entities?);

(45)§ 122.36 (As an operator of a regulated small MS4, what happens if I don't comply with the application or permit requirements in §§ 122.33 through 122.35?); and

(46)40 CFR part 3 (Cross-Media Electronic Reporting Regulation) and 40 CFR part 127 (NPDES Electronic Reporting Requirements).

Note to paragraph (a): Except for paragraph (a)(46) of this section, states need not implement provisions identical to the above listed provisions. Implemented provisions must, however, establish requirements at least as stringent as the corresponding listed provisions. While States may impose more stringent requirements, they may not make one requirement more lenient as a tradeoff for making another requirement more stringent; for example, by requiring that public hearings be held prior to issuing any permit while reducing the amount of advance notice of such a hearing.

State programs may, if they have adequate legal authority, implement any of the provisions of parts 122 and 124. See, for example, §§ 122.5(d) (continuation of permits) and 124.4 (consolidation of permit processing) of this chapter.

For example, a State may impose more stringent requirements in an NPDES program by omitting the upset provision of § 122.41 of this chapter or by requiring more prompt notice of an upset.

(b) State NPDES programs shall have an approved continuing planning process under 40 CFR 130.5 and shall assure that the approved planning process is at all times consistent with the CWA.

(c) State NPDES programs shall ensure that any board or body which approves all or portions of permits shall not include as a member any person who receives, or has during the previous 2 years received, a significant portion of income directly or indirectly from permit holders or applicants for a permit.

(1) For the purposes of this paragraph:

(i) Board or body includes any individual, including the Director, who has or shares authority to approve all or portions of permits either in the first instance, as modified or reissued, or on appeal.

(ii) Significant portion of income means 10 percent or more of gross personal income for a calendar year, except that it means 50 percent or more of gross personal income for a calendar year if the recipient is over 60 years of age and is receiving that portion under retirement, pension, or similar arrangement.

(iii) Permit holders or applicants for a permit does not include any department or agency of a State government, such as a Department of Parks or a Department of Fish and Wildlife.

(iv) Income includes retirement benefits, consultant fees, and stock dividends.

(2) For the purposes of paragraph (c) of this section, income is not received "directly or indirectly from permit holders or applicants for a permit" when it is derived from mutual fund payments, or from other diversified investments for which the recipient does not know the identity of the primary sources of income.

This document is current through the December 11, 2017 issue of the Federal Register. Pursuant to 82 FR 8346 ("Regulatory Freeze Pending Review"), certain regulations will be delayed pending further review. See Publisher's Note under affected rules. Title 3 is current through December 4, 2017.

§ 124.8 Fact sheet.

(Applicable to State programs, see §§ 123.25 (NPDES), 145.11 (UIC), 233.26 (404), and 271.14 (RCRA).)

(a)A fact sheet shall be prepared for every draft permit for a major HWM, UIC, 404, or NPDES facility or activity, for every Class I sludge management facility, for every 404 and NPDES general permit (§§ 237.37 and 122.28), for every NPDES draft permit that incorporates a variance or requires an explanation under § 124.56(b), for every draft permit that includes a sewage sludge land application plan under 40 CFR 501.15(a)(2)(ix), and for every draft permit which the Director finds is the subject of wide-spread public interest or raises major issues. The fact sheet shall briefly set forth the principal facts and the significant factual, legal, methodological and policy questions considered in preparing the draft permit. The Director shall send this fact sheet to the applicant and, on request, to any other person.

(b) The fact sheet shall include, when applicable:

(1)A brief description of the type of facility or activity which is the subject of the draft permit;

(2) The type and quantity of wastes, fluids, or pollutants which are proposed to be or are being treated, stored, disposed of, injected, emitted, or discharged.

(3) For a PSD permit, the degree of increment consumption expected to result from operation of the facility or activity.

(4)A brief summary of the basis for the draft permit conditions including references to applicable statutory or regulatory provisions and appropriate supporting references to the administrative record required by § 124.9 (for EPA-issued permits);

(5) Reasons why any requested variances or alternatives to required standards do or do not appear justified;

(6)A description of the procedures for reaching a final decision on the draft permit including:

(i) The beginning and ending dates of the comment period under § 124.10 and the address where comments will be received;

(ii) Procedures for requesting a hearing and the nature of that hearing; and

(iii) Any other procedures by which the public may participate in the final decision.

(7) Name and telephone number of a person to contact for additional information.

(8) For NPDES permits, provisions satisfying the requirements of § 124.56.

(9) Justification for waiver of any application requirements under § 122.21(j) or (q) of this chapter.

Title: ENVIRONMENTAL PROTECTION AGENCY
National Pollutant Discharge Elimination System Permit Application Regulations for Storm Water Discharges

Action: Proposed rule.

Identifier: [FRL 3376-8]

Administrative Code Citation

40 CFR Parts 122, 123, 124 and 504

Synopsis

SUMMARY: Section 405 of the Water Quality Act of 1987 (WQA) added Section 402(p) of the Clean Water Act (CWA) to require the Environmental Protection Agency (EPA) to establish regulations setting forth National Pollutant Discharge Elimination System (NPDES) permit application requirements for: storm water discharges associated with industrial activity; discharges from a municipal separate storm sewer system serving a population of 250,000 or more; and discharges from a municipal separate storm sewer system serving a population of 100,000 or more, but less than 250,000. Today's notice requests comments on proposed permit application requirements for these discharges and for storm water discharges which are designated on a case-by-case basis for a permit for which the Administrator, or State, as the case may be, determines contributes to a violation of a water quality standard or is a significant contributor of pollutants to waters of the United States.

Section 401 of the WQA amended Section 402(1)(2) to provide that NPDES permits shall not be required for discharges of storm water runoff from mining operations or oil and gas exploration, production, processing, or treatment operations or transmission facilities, which are not contaminated by contact with, or do not come into contact with, any overburden, raw material, intermediate product, finished product, byproduct, or waste product located on the site of such operations. Today's notice requests comments on regulations proposed to clarify and implement this provision.

Text

remain in place after the construction activity is completed, as continued maintenance, after the permit has expired, is more feasible.

EPA requests comments on the use of no limit or other limits such as 2, 10 or 20 acres. In addition, limitations could be based on or modified by other factors. Time limitations which consider the length of the construction activity or the season during which the activity occurs may provide a more workable administrative system while still addressing the major water quality impacts associated with construction activities. Other factors, such as steep slopes at the site, which affect the nature of the runoff, may be appropriate for defining special cases which would be addressed in this rulemaking. EPA also requests comments on other factors, such as the intensity of the development within the watershed, which affect the water quality impacts in receiving waters. Such site specific factors may be difficult to define in federal regulations. For example, a definition based on relatively easily interpreted criteria such as Census designated urban areas may not provide adequate protection for rapidly developing areas which are located outside the urban area. EPA requests comments on other factors which can be used to develop a limit on storm water discharges from construction sites which are classified as storm water discharges associated with industrial activity.

Proposed 122.26(a) would specify that storm water discharges, including construction site runoff, that discharge to municipal storm sewers are not required to obtain individual or group permits unless specifically designated by the Director. Under today's proposal, municipal permittees will be responsible for developing a proposed management plan to control pollutants in runoff from construction sites which discharge to large and medium municipal separate storm sewer systems (see § VII.G.8.d of the preamble). The Agency believes that the majority of construction sites do not discharge storm water directly to waters of the United States, but rather discharge to a municipal storm sewer or manage storm water on-site. For example, construction site runoff from a new subdivision which discharges to the drainage system of an existing road or a road that is being built by a developer for a municipality is, under this proposal, discharging to a municipal storm sewer.

9. Application Requirements for New Sources and New Discharges

Today's proposed permit application requirements provide that new sources and new discharges which discharge storm water include estimates of pollutants or parameters for which other storm water discharges are required to submit data. Under the proposal, operators of such discharges are required to provide the quantitative data which is required for other similar existing storm water discharges within two years after the commencement of the discharge, unless the data has already been reported under the monitoring requirements of the NPDES permit for the discharge.

F. Municipal Separate Storm Sewer Systems

1. Municipal Separate Storm Sewers

Today's notice proposes to define "municipal separate storm sewer" at § 122.26(b)(8) as any conveyance or system of conveyances that is owned or operated by a State or local government entity and is used for collecting and conveying storm water which is not part of a Publicly Owned Treatment Works (POTW) as defined at 40 CFR 122.2.

It is important to note that the proposed permit application requirements for discharges from municipal separate storm sewers do not apply to discharges from combined sewers that are designed as both a

sanitary sewer and a storm sewer. Discharges from combined sewer systems are not regulated under this proposed rule.

The Agency also wants to clarify that streams, wetlands and other water bodies that are waters of the United States are not storm sewers for the purpose of this rule. This use of the term "storm sewer" differs from the way that the term has often been used in the context of flood control, where natural streams and other water bodies are sometimes considered storm sewers. Activities such as stream channelization, and stream bed stabilization, which occur in waters of the United States would generally not be subject to permits issued under § 402 of the CWA. However, such activities occurring within waters of the United States may be subject to dredge and fill permits required under section 404 of the CWA by the Corps of Engineers. Applicants should consult the regulatory definition of "waters of the United States" at 40 CFR 122.2 to distinguish between storm sewers and waters of the United States.

Some municipalities have maintained in previous comments that difficulties may arise with determining owners or operators of municipal storm sewers as clear title to the storm sewer may not exist. Often, where the ownership of such conveyances is in question, the storm sewer is not maintained and hence an "operator" criteria is not particularly useful. EPA requests comments on different wording for the definition of municipal separate storm sewer to clarify responsibility under the NPDES permit system. Do legal classifications such as storm sewers that are not private (e.g., public, district or joint district sewers) provide a clearer definition than an owner or operator criteria? Does the definition need to be clarified by explicitly stating that municipal streets and roads with drainage systems (curb and gutter, ditches, etc.) are part of the municipal storm sewer system, and the owners or operators of such roads are responsible for such discharges? To what extent should the owner or operator concept apply to municipal governments with land-use authority over lands which contribute storm water runoff to the municipal storm sewer system, and how should this responsibility be clarified?

2. Effective Prohibition on Non-Storm Water Discharges

Section 402(p)(3)(B)(ii) of the amended CWA requires that permits for discharges from municipal storm sewers shall include a requirement to effectively prohibit non-storm water discharges into the storm sewers.

EPA does not interpret the effective prohibition on non-storm water discharges to municipal separate storm sewers to apply to discharges that are not composed entirely of storm water, as long as such discharge has been issued a separate NPDES permit. Rather, an "effective prohibition" would require separate NPDES permits for non-storm water discharges to municipal storm sewers. In many cases in the past, applicants for NPDES permits for process wastewaters and other non-storm water discharges have been granted approval to discharge into municipal separate storm sewers, provided that the permit conditions for the discharge are met at the point where the discharge enters into the separate storm sewer. Permits for such discharges must meet applicable technology-based and water-quality based requirements of Sections 402 and 301 of the CWA. If the permit for a non-storm water discharge to a municipal separate storm sewer contains water-quality based limitations, then such limitations should generally be based on meeting applicable water quality standards at the boundary of a State mixing zone (for States with mixing zones) located in a water of the United States. Water-quality based limitations would also generally be established during dry weather conditions, when the discharge would not be mixed with storm water in the municipal separate storm sewer (unless receiving water conditions during wet weather dictate more stringent water-quality based limitations).

TAB 3

Deering's California Codes are current with all legislation of the 2017 Regular Session (Chapters 1-859).

§ 452. Matters which may be judicially noticed

Judicial notice may be taken of the following matters to the extent that they are not embraced within Section 451:

(a) The decisional, constitutional, and statutory law of any state of the United States and the resolutions and private acts of the Congress of the United States and of the Legislature of this state.

(b) Regulations and legislative enactments issued by or under the authority of the United States or any public entity in the United States.

(c) Official acts of the legislative, executive, and judicial departments of the United States and of any state of the United States.

(d) Records of (1) any court of this state or (2) any court of record of the United States or of any state of the United States.

(e) Rules of court of (1) any court of this state or (2) any court of record of the United States or of any state of the United States.

(f) The law of an organization of nations and of foreign nations and public entities in foreign nations.

(g) Facts and propositions that are of such common knowledge within the territorial jurisdiction of the court that they cannot reasonably be the subject of dispute.

(h) Facts and propositions that are not reasonably subject to dispute and are capable of immediate and accurate determination by resort to sources of reasonably indisputable accuracy.

End of Document

Deering's California Codes are current with all legislation of the 2017 Regular Session (Chapters 1-859).

§ 11515. Official notice

In reaching a decision official notice may be taken, either before or after submission of the case for decision, of any generally accepted technical or scientific matter within the agency's special field, and of any fact which may be judicially noticed by the courts of this State. Parties present at the hearing shall be informed of the matters to be noticed, and those matters shall be noted in the record, referred to therein, or appended thereto. Any such party shall be given a reasonable opportunity on request to refute the officially noticed matters by evidence or by written or oral presentation of authority, the manner of such refutation to be determined by the agency.

§ 13000. Legislative findings and declarations

The Legislature finds and declares that the people of the state have a primary interest in the conservation, control, and utilization of the water resources of the state, and that the quality of all the waters of the state shall be protected for use and enjoyment by the people of the state.

The Legislature further finds and declares that activities and factors which may affect the quality of the waters of the state shall be regulated to attain the highest water quality which is reasonable, considering all demands being made and to be made on those waters and the total values involved, beneficial and detrimental, economic and social, tangible and intangible.

The Legislature further finds and declares that the health, safety and welfare of the people of the state requires that there be a statewide program for the control of the quality of all the waters of the state; that the state must be prepared to exercise its full power and jurisdiction to protect the quality of waters in the state from degradation originating inside or outside the boundaries of the state; that the waters of the state are increasingly influenced by interbasin water development projects and other statewide considerations; that factors of precipitation, topography, population, recreation, agriculture, industry and economic development vary from region to region within the state; and that the statewide program for water quality control can be most effectively administered regionally, within a framework of statewide coordination and policy.

End of Document

Deering's California Codes are current with all legislation of the 2017 Regular Session (Chapters 1-859).

§ 13050. Terms used in this division

As used in this division:

(a) "State board" means the State Water Resources Control Board.

(b) "Regional board" means any California regional water quality control board for a region as specified in Section 13200.

(c) "Person" includes any city, county, district, the state, and the United States, to the extent authorized by federal law.

(d) "Waste" includes sewage and any and all other waste substances, liquid, solid, gaseous, or radioactive, associated with human habitation, or of human or animal origin, or from any producing, manufacturing, or processing operation, including waste placed within containers of whatever nature prior to, and for purposes of, disposal.

(e) "Waters of the state" means any surface water or groundwater, including saline waters, within the boundaries of the state.

(f) "Beneficial uses" of the waters of the state that may be protected against quality degradation include, but are not limited to, domestic, municipal, agricultural and industrial supply; power generation; recreation; aesthetic enjoyment; navigation; and preservation and enhancement of fish, wildlife, and other aquatic resources or preserves.

(g) "Quality of the water" refers to chemical, physical, biological, bacteriological, radiological, and other properties and characteristics of water which affect its use.

(h) "Water quality objectives" means the limits or levels of water quality constituents or characteristics which are established for the reasonable protection of beneficial uses of water or the prevention of nuisance within a specific area.

(i) "Water quality control" means the regulation of any activity or factor which may affect the quality of the waters of the state and includes the prevention and correction of water pollution and nuisance.

(j) "Water quality control plan" consists of a designation or establishment for the waters within a specified area of all of the following:

(1) Beneficial uses to be protected.

(2) Water quality objectives.

(3) A program of implementation needed for achieving water quality objectives.

(k) "Contamination" means an impairment of the quality of the waters of the state by waste to a degree which creates a hazard to the public health through poisoning or through the spread of disease. "Contamination" includes any equivalent effect resulting from the disposal of waste, whether or not waters of the state are affected.

(l)

(1) "Pollution" means an alteration of the quality of the waters of the state by waste to a degree which unreasonably affects either of the following:

(A) The waters for beneficial uses.

(B) Facilities which serve these beneficial uses.

(2) "Pollution" may include "contamination."

(m) "Nuisance" means anything which meets all of the following requirements:

(1) Is injurious to health, or is indecent or offensive to the senses, or an obstruction to the free use of property, so as to interfere with the comfortable enjoyment of life or property.

(2) Affects at the same time an entire community or neighborhood, or any considerable number of persons, although the extent of the annoyance or damage inflicted upon individuals may be unequal.

(3) Occurs during, or as a result of, the treatment or disposal of wastes.

(n) "Recycled water" means water which, as a result of treatment of waste, is suitable for a direct beneficial use or a controlled use that would not otherwise occur and is therefor considered a valuable resource.

(o) "Citizen or domiciliary" of the state includes a foreign corporation having substantial business contacts in the state or which is subject to service of process in this state.

(p)

(1) "Hazardous substance" means either of the following:

(A) For discharge to surface waters, any substance determined to be a hazardous substance pursuant to Section 311(b)(2) of the Federal Water Pollution Control Act (33 U.S.C. Sec. 1251 et seq.).

(B) For discharge to groundwater, any substance listed as a hazardous waste or hazardous material pursuant to Section 25140 of the Health and Safety Code, without regard to whether the substance is intended to be used, reused, or discarded, except that "hazardous substance" does not include any substance excluded from Section 311(b)(2) of the Federal Water Pollution Control Act because it is within the scope of Section 311(a)(1) of that act.

(2) "Hazardous substance" does not include any of the following:

(A) Nontoxic, nonflammable, and noncorrosive stormwater runoff drained from underground vaults, chambers, or manholes into gutters or storm sewers.

(B) Any pesticide which is applied for agricultural purposes or is applied in accordance with a cooperative agreement authorized by Section 116180 of the Health and Safety

Code, and is not discharged accidentally or for purposes of disposal, the application of which is in compliance with all applicable state and federal laws and regulations.

(C) Any discharge to surface water of a quantity less than a reportable quantity as determined by regulations issued pursuant to Section 311(b)(4) of the Federal Water Pollution Control Act.

(D) Any discharge to land which results, or probably will result, in a discharge to groundwater if the amount of the discharge to land is less than a reportable quantity, as determined by regulations adopted pursuant to Section 13271, for substances listed as hazardous pursuant to Section 25140 of the Health and Safety Code. No discharge shall be deemed a discharge of a reportable quantity until regulations set a reportable quantity for the substance discharged.

(q)

(1) "Mining waste" means all solid, semisolid, and liquid waste materials from the extraction, beneficiation, and processing of ores and minerals. Mining waste includes, but is not limited to, soil, waste rock, and overburden, as defined in Section 2732 of the Public Resources Code, and tailings, slag, and other processed waste materials, including cementitious materials that are managed at the cement manufacturing facility where the materials were generated.

(2) For the purposes of this subdivision, "cementitious material" means cement, cement kiln dust, clinker, and clinker dust.

(r) "Master recycling permit" means a permit issued to a supplier or a distributor, or both, of recycled water, that includes waste discharge requirements prescribed pursuant to Section 13263 and water recycling requirements prescribed pursuant to Section 13523.1.

Deering's California Codes Annotated > WATER CODE > Division 7 Water Quality > Chapter 3 State Water Quality Control > Article 4 Other Powers and Duties of the State Board

§ 13170.2. California Ocean Plan

(a) The state board shall formulate and adopt a water quality control plan for ocean waters of the state which shall be known as the California Ocean Plan.

(b) The plan shall be reviewed at least every three years to guarantee that the current standards are adequate and are not allowing degradation to indigenous marine species or posing a threat to human health.

(c) In formulating the plan, the state board shall develop bioassay protocols to evaluate the effect of municipal and industrial waste discharges on the marine environment.

(d) The state board shall adopt the bioassay protocols and complementary chemical testing methods and shall require their use in the monitoring of complex effluent ocean discharges. For purposes of this section, "complex effluent" means an effluent in which all chemical constituents are not known or monitored. The state board shall adopt bioassay protocols and complementary chemical testing methods for complex effluent ocean monitoring by January 1, 1990, and shall require their use in monitoring complex effluent ocean discharges by entities discharging 100 million gallons per day or more by January 1, 1991. The state board shall also adopt a schedule for requiring the use of these protocols for complex effluent ocean discharges of under 100 million gallons per day by January 1, 1992.

§ 13240. Formulation, adoption, and revision of plans

Each regional board shall formulate and adopt water quality control plans for all areas within the region. Such plans shall conform to the policies set forth in Chapter 1 (commencing with Section 13000) of this division and any state policy for water quality control. During the process of formulating such plans the regional boards shall consult with and consider the recommendations of affected state and local agencies. Such plans shall be periodically reviewed and may be revised.

Cal Wat Code § 13376

Deering's California Codes are current with all legislation of the 2017 Regular Session (Chapters 1-859).

Deering's California Codes Annotated > WATER CODE > Division 7 Water Quality > Chapter 5.5 Compliance With the Provisions of the Federal Water Pollution Control Act as Amended in 1972

§ 13376. Reports as to discharge of pollutants to navigable waters

A person who discharges pollutants or proposes to discharge pollutants to the navigable waters of the United States within the jurisdiction of this state or a person who discharges dredged or fill material or proposes to discharge dredged or fill material into the navigable waters of the United States within the jurisdiction of this state shall file a report of the discharge in compliance with the procedures set forth in Section 13260. Unless required by the state board or a regional board, a report need not be filed under this section for discharges that are not subject to the permit application requirements of the Federal Water Pollution Control Act, as amended. A person who proposes to discharge pollutants or dredged or fill material or to operate a publicly owned treatment works or other treatment works treating domestic sewage shall file a report at least 180 days in advance of the date on which it is desired to commence the discharge of pollutants or dredged or fill material or the operation of the treatment works. A person who owns or operates a publicly owned treatment works or other treatment works treating domestic sewage, which treatment works commenced operation before January 1, 1988, and does not discharge to navigable waters of the United States, shall file a report within 45 days of a written request by a regional board or the state board, or within 45 days after the state has an approved permit program for the use and disposal of sewage sludge, whichever occurs earlier. The discharge of pollutants or dredged or fill material or the operation of a publicly owned treatment works or other treatment works treating domestic sewage by any person, except as authorized by waste discharge requirements or dredged or fill material permits, is prohibited. This prohibition does not apply to discharges or operations if a state or federal permit is not required under the Federal Water Pollution Control Act, as amended.

Digest

Water conservation.

(1) Existing law, the Davis-Sterling Common Interest Development Act, defines and regulates common interest developments, which include community apartment projects, condominium projects, planned developments, and stock cooperatives.

This bill would provide that the architectural guidelines of a common interest development shall not prohibit or include conditions that have the effect of prohibiting the use of low water-using plants as a group.

(2) The Water Conservation in Landscaping Act requires the Department of Water Resources to appoint an advisory task force to work with the department to draft a model local water efficient landscape ordinance that local agencies may adopt, requires the task force to submit the ordinance to the department on or before May 1, 1991, and requires the task force to cease to exist on the date the department adopts the model ordinance or January 1, 1992, whichever occurs first. The act requires the department, not later than January 1, 1992, to adopt a model local water efficient landscape ordinance which each local agency may adopt. The act makes the model local water efficient landscape ordinance adopted by the department applicable within the jurisdiction of a local agency if that local agency, by January 1, 1993, has not adopted a water efficient landscape ordinance or has not adopted certain findings that the adoption of the ordinance is unnecessary.

This bill would specify that the provision making the model ordinance applicable to a local agency on and after January 1, 1993, does not apply to chartered cities. The bill would require the department, to the extent funds are appropriated, not later than January 1, 2009, by regulation, to update the model ordinance in accordance with specified requirements. The bill would require the department to prepare and submit to

the Legislature a prescribed report before the adoption of the updated model ordinance. The bill would require a local agency, not later than January 1, 2010, to adopt the updated model ordinance or other water efficient landscape ordinance that is at least as effective in conserving water as the updated model ordinance. The bill would make the updated model ordinance applicable within the jurisdiction of a local agency, including a chartered city, if, by January 1, 2010, the local agency has not adopted its own water efficient landscape ordinance or the updated model ordinance. The bill would require each local agency, not later than January 31, 2010, to notify the department as to whether the local agency is subject to the department's updated model ordinance and, if not, to submit to the department a copy of the water efficient landscape ordinance adopted by the local agency, among other documents. The bill would require the department, to the extent funds are appropriated, not later than January 31, 2011, to prepare and submit a report to the Legislature relating to the status of water efficient landscape ordinances adopted by local agencies.

By imposing requirements on local agencies in connection with the adoption of water efficient landscape ordinances, the bill would impose a state-mandated local program.

(3) Existing law requires the State Energy Resources Conservation and Development Commission (Energy Commission), after one or more public hearings, to take specified action to reduce the wasteful, uneconomic, inefficient, or unnecessary consumption of energy. Existing law requires the Energy Commission, by January 1, 2004, to amend specified regulations to require that residential clothes washers manufactured on or after January 1, 2007, be at least as water efficient as commercial clothes washers, and to take certain other related action.

This bill would require the Energy Commission, in consultation with the department, to adopt, to the extent funds are available, by regulation performance standards and labeling requirements for landscape irrigation equipment, including irrigation controllers, moisture sensors, emission devices, and valves to reduce the wasteful, uneconomic, inefficient, or unnecessary consumption of energy or water. The bill would require the Energy Commission to adopt those requirements for landscape irrigation controllers and moisture sensors by January 1, 2010, and, on and after January 1, 2012, would prohibit the sale or installation of an irrigation controller or moisture sensor for landscape use unless the controller or sensor meets those adopted requirements. The bill would require the Energy Commission, on or before January 1, 2010, to prepare and submit to the Legislature a report that sets forth a proposed schedule for adopting performance standards and labeling requirements for emission devices and valves.

(4) Existing law generally requires an urban water supplier to install water meters on all municipal and industrial service connections located within its service area on or before January 1, 2025.

This bill would require a water purveyor as defined, to require as a condition of new retail water service on and after January 1, 2008, the installation of separate water meters to measure the volume of water used exclusively for landscape purposes. The bill would make this requirement applicable to specified service connections.

(5) The California Constitution requires the state to reimburse local agencies and school districts for certain costs mandated by the state. Statutory provisions establish procedures for making that reimbursement.

This bill would provide that, if the Commission on State Mandates determines that the bill contains costs mandated by the state, reimbursement for those costs shall be made pursuant to these statutory provisions.

Synopsis

An act to add Section 1353.8 to the Civil Code, to repeal and add Article 10.8 (commencing with Section 65591) of Chapter 3 of Division 1 of Title 7 of the Government Code, to add Section 25401.9 to the Public Resources Code, and to add Article 4.5 (commencing with Section 535) to Chapter 8 of Division 1 of the Water Code, relating to water conservation.

Text

The people of the State of California do enact as follows:

SECTION 1.
Section 1353.8 is added to the Civil Code, to read:

§ 1353.8.

The architectural guidelines of a common interest development shall not prohibit or include conditions that have the effect of prohibiting the use of low water-using plants as a group.

SEC. 2.
Article 10.8 (commencing with Section 65591) of Chapter 3 of Division 1 of Title 7 of the Government Code is repealed.
Article 10.8

SEC. 3.
Article 10.8 (commencing with Section 65591) is added to Chapter 3 of Division 1 of Title 7 of the Government Code, to read:
Article 10.8 Water Conservation in Landscaping

§ 65591.

This article shall be known and may be cited as the Water Conservation in Landscaping Act.

§ 65592.

Unless the context requires otherwise, the following definitions govern the construction of this article:

(a) "Department" means the Department of Water Resources.

(b) "Local agency" means any city, county, or city and county, including a charter city or charter county.

(c) "Water efficient landscape ordinance" means an ordinance or resolution adopted by a local agency, or prepared by the department, to address the efficient use of water in landscaping.

§ 65593.

The Legislature finds and declares all of the following:

(a) The waters of the state are of limited supply and are subject to ever increasing demands.

(b) The continuation of California's economic prosperity is dependent on adequate supplies of water being available for future uses.

(c) It is the policy of the state to promote the conservation and efficient use of water and to prevent the waste of this valuable resource.

(d) Landscapes are essential to the quality of life in California by providing areas for active and passive recreation and as an enhancement to the environment by cleaning air and water, preventing erosion, offering fire protection, and replacing ecosystems lost to development.

(e) Landscape design, installation, maintenance, and management can and should be water efficient.

(f) Section 2 of Article X of the California Constitution specifies that the right to use water is limited to the amount reasonably required for the beneficial use to be served and the right does not and shall not extend to waste or unreasonable use or unreasonable method of use.

(g) (1) The Legislature, pursuant to Chapter 682 of the Statutes of 2004, requested the California Urban Water Conservation Council to convene a stakeholders work group to develop recommendations for improving the efficiency of water use in urban irrigated landscapes.

(2) The work group report includes a recommendation to update the model water efficient landscape ordinance adopted by the department pursuant to Chapter 1145 of the Statutes of 1990.

(3) It is the intent of the Legislature that the department promote the use of this updated model ordinance.

(h) Notwithstanding Article 13 (commencing with Section 65700), this article addresses a matter that is of statewide concern and is not a municipal affair as that term is used in Section 5 of Article XI of the California Constitution. Accordingly, it is the intent of the Legislature that this article, except as provided in Section 65594, apply to all cities and counties, including charter cities and charter counties.

§ 65594.

(a) Except as provided in Section 65595, if by January 1, 1993, a local agency did not adopt a water efficient landscape ordinance and did not adopt findings based on climatic, geological, or topographical conditions, or water availability that state that a water efficient landscape ordinance is unnecessary, the model water efficient landscape ordinance adopted by the department pursuant to Chapter 1145 of the Statutes of 1990 shall apply within the jurisdiction of the local agency as of that date, shall be enforced by the local agency, and shall have the same force and effect as if adopted by the local agency.

(b) Notwithstanding subdivision (b) of Section 65592, subdivision (a) does not apply to chartered cities.

(c) This section shall apply only until the department updates the model ordinance.

§ 65595.

(a) (1) To the extent funds are appropriated, not later than January 1, 2009, by regulation, the department shall update the model water efficient landscape ordinance adopted pursuant to Chapter 1145 of the Statutes of 1990, after holding one or more public hearings. The updated model ordinance shall be based on the recommendations set forth in the report prepared pursuant to Chapter 682 of the Statutes of 2004 and shall meet the requirements of Section 65596.

(2) Before the adoption of the updated model ordinance pursuant to paragraph (1), the department shall prepare and submit to the Legislature a report relating to both of the following:

(A) The extent to which local agencies have complied with the model water efficient landscape ordinance adopted pursuant to Chapter 1145 of the Statutes of 1990.

(B) The department's recommendations regarding the landscape water budget component of the updated model ordinance described in subdivision (b) of Section 65596.

(b) Not later than January 31, 2009, the department shall distribute the updated model ordinance adopted pursuant to subdivision (a) to all local agencies and other interested parties.

(c) On or before January 1, 2010, a local agency shall adopt one of the following:

(1) A water efficient landscape ordinance that is, based on evidence in the record, at least as effective in conserving water as the updated model ordinance adopted by the department pursuant to subdivision (a).

(2) The updated model ordinance described in paragraph (1).

(d) If the local agency has not adopted, on or before January 1, 2010, a water efficient landscape ordinance pursuant to subdivision (c), the updated model ordinance adopted by the department pursuant to subdivision (a) shall apply within the jurisdiction of the local agency as of that date, shall be enforced by the local agency, and shall have the same force and effect as if adopted by the local agency.

(e) Nothing in this article shall be construed to require the local agency's water efficient landscape ordinance to duplicate, or to conflict with, a water efficiency program or measure implemented by a public water system, as defined in Section 116275 of the Health and Safety Code, within the jurisdictional boundaries of the local agency.

§ 65596.

The updated model ordinance adopted pursuant to Section 65595 shall do all the following in order to reduce water use:

(a) Include provisions for water conservation and the appropriate use and groupings of plants that are well-adapted to particular sites and to particular climatic, soil, or topographic conditions. The model ordinance shall not prohibit or require specific plant species, but it may include conditions for the use of plant species or encourage water conserving plants. However, the model ordinance shall not include conditions that have the effect of prohibiting or requiring specific plant species.

(b) Include a landscape water budget component that establishes the maximum amount of water to be applied through the irrigation system, based on climate, landscape size, irrigation efficiency, and plant needs.

(c) Promote the benefits of consistent local ordinances in neighboring areas.

(d) Encourage the capture and retention of stormwater onsite to improve water use efficiency or water quality.

(e) Include provisions for the use of automatic irrigation systems and irrigation schedules based on climatic conditions, specific terrains and soil types, and other environmental conditions. The model ordinance shall include references to local, state, and federal laws and regulations regarding standards for water-conserving irrigation equipment. The model ordinance may include climate information for irrigation scheduling based on the California Irrigation Management Information System.

(f) Include provisions for onsite soil assessment and soil management plans that include grading and drainage to promote healthy plant growth and to prevent excessive erosion and runoff, and the use of mulches in shrub areas, garden beds, and landscaped areas where appropriate.

(g) Promote the use of recycled water consistent with Article 4 (commencing with Section 13520) of Chapter 7 of Division 7 of the Water Code.

(h) Seek to educate water users on the efficient use of water and the benefits of doing so.

(i) Address regional differences, including fire prevention needs.

(j) Exempt landscaping that is part of a registered historical site.

(k) Encourage the use of economic incentives to promote the efficient use of water.

(l) Include provisions for landscape maintenance practices that foster long-term landscape water conservation. Landscape maintenance practices may include, but are not limited to, performing routine irrigation system repair and adjustments, conducting water audits, and prescribing the amount of water applied per landscaped acre.

(m) Include provisions to minimize landscape irrigation overspray and runoff.

§ 65597.

Not later than January 31, 2010, each local agency shall notify the department as to whether the local agency is subject to the department's updated model ordinance adopted pursuant to Section 65595, and if not, shall submit to the department a copy of the water efficient landscape ordinance adopted by the local agency, and a copy of the local agency's findings and evidence in the record that its water efficient landscape ordinance is at least as effective in conserving water as the department's updated model ordinance. Not later than January 31, 2011, the department shall, to the extent funds are appropriated, prepare and submit a report to the Legislature summarizing the status of water efficient landscape ordinances adopted by local agencies.

§ 65598.

Any model ordinance adopted pursuant to this article shall exempt cemeteries from all provisions of the ordinance except those set forth in subdivisions (h), (k), and (*l*) of Section 65596. In adopting language specific to cemeteries, the department shall recognize the special landscape management needs of cemeteries.

§ 65599.

Any actions or proceedings to attach, review, set aside, void, or annul the act, decision, or findings of a local agency on the ground of noncompliance with this article shall be brought pursuant to Section 1085 of the Code of Civil Procedure.

SEC. 4.
Section 25401.9 is added to the Public Resources Code, to read:

§ 25401.9.

(a) To the extent that funds are available, the commission, in consultation with the Department of Water Resources, shall adopt by regulation, after holding one or more public hearings, performance standards and labeling requirements for landscape irrigation equipment, including, but not limited to, irrigation controllers, moisture sensors, emission devices, and valves, for the purpose of reducing the wasteful, uneconomic, inefficient, or unnecessary consumption of energy or water.

(b) For the purposes of complying with subdivision (a), the commission shall do all of the following:

(1) Adopt performance standards and labeling requirements for landscape irrigation controllers and moisture sensors on or before January 1, 2010.

(2) Consider the Irrigation Association's Smart Water Application Technology Program testing protocols when adopting performance standards for landscape irrigation equipment, including, but not limited to, irrigation controllers, moisture sensors, emission devices, and valves.

(3) Prepare and submit a report to the Legislature, on or before January 1, 2010, that sets forth on a proposed schedule for adopting performance standards and labeling requirements for emission devices and valves.

(c) On and after January 1, 2012, an irrigation controller or moisture sensor for landscape irrigation uses may not be sold or installed in the state unless the controller or sensor meets the performance standards and labeling requirements established pursuant to this section.

SEC. 5.
Article 4.5 (commencing with Section 535) is added to Chapter 8 of Division 1 of the Water Code, to read:
Article 4.5 Irrigated Landscape

§ 535.

(a) A water purveyor shall require as a condition of new retail water service on and after January 1, 2008, the installation of separate water meters to measure the volume of water used exclusively for landscape purposes.

(b) Subdivision (a) does not apply to either of the following:

(1) Single-family residential connections.

(2) Connections used to supply water for the commercial production of agricultural crops or livestock.

(c) Subdivision (a) applies only to a service connection for which both of the following apply:

(1) The connection serves property with more than 5,000 square feet of irrigated landscape.

(2) The connection is supplied by a water purveyor that serves 15 or more service connections.

(d) For the purposes of this section, "new retail water service" means the installation of a new water meter where water service has not been previously provided, and does not include applications for new water service submitted before January 1, 2007.

SEC. 6.

If the Commission on State Mandates determines that this act contains costs mandated by the state, reimbursement to local agencies and school districts for those costs shall be made pursuant to Part 7 (commencing with Section 17500) of Division 4 of Title 2 of the Government Code.

BEFORE THE

COMMISSION ON STATE MANDATES

STATE OF CALIFORNIA

IN RE TEST CLAIM ON: 10-TC-12 Water Code Division 6, Part 2.55 [Sections 10608 through 10608.64] and Part 2.8 [Sections 10800 through 10853] as added by Statutes 2009-2010, 7th Extraordinary Session, Chapter 4; Filed on June 30, 2011; By, South Feather Water and Power Agency, Paradise Irrigation District, Richvale Irrigation District, Biggs-West Gridley Water District, Claimants; *Consolidated with* 12-TC-01 Filed on February 28, 2013; California Code of Regulations, title 23, sections 597, 597.1 597.2, 597.3, and 597.4, Register 2012, No. 28; By, Richvale Irrigation District, Biggs-West Gridley Water District, Oakdale Irrigation District, Glenn-Colusa Irrigation District, Claimants.	Case Nos.: 10-TC-12 and 12-TC-01 *Water Conservation* DECISION PURSUANT TO GOVERNMENT CODE SECTION 17500 ET SEQ.; CALIFORNIA CODE OF REGULATIONS, TITLE 2, DIVISION 2, CHAPTER 2.5, ARTICLE 7. (*Adopted December 5, 2014*) (*Served December 12, 2014*)

DECISION

The Commission on State Mandates (Commission) heard and decided this test claim during a regularly scheduled hearing on December 5, 2014. Dustin Cooper, Peter Harman, and Alexis Stevens appeared on behalf of the claimants. Donna Ferebee and Lee Scott appeared on behalf of the Department of Finance. Spencer Kenner appeared on behalf of the Department of Water Resources. Dorothy Holzem of the California Special Districts Association and Geoffrey Neill of the California State Association of Counties also appeared on behalf of interested persons and parties.

The law applicable to the Commission's determination of a reimbursable state-mandated program is article XIII B, section 6 of the California Constitution, Government Code sections 17500 et seq., and related case law.

The Commission adopted the proposed decision to deny the test claim by a vote of six to zero.

Summary of the Findings

The Commission finds that the two original agricultural water supplier claimants named in each test claim, Richvale Irrigation District and Biggs-West Gridley Water District, are not eligible to claim reimbursement under article XIII B, section 6, because they do not collect or expend tax revenue, and are therefore not subject to the limitations of articles XIII A and XIII B. However, two substitute agricultural water supplier claimants, Oakdale Irrigation District and Glenn-Colusa Irrigation District, are subject to articles XIII A and XIII B and are therefore claimants eligible to seek reimbursement under article XIII B, section 6. As a result, the Commission has jurisdiction to hear and determine test claims 10-TC-12 and 12-TC-01.

The Commission finds that the Water Conservation Act of 2009 (Act), and the Agricultural Water Measurement regulations promulgated by the Department of Water Resources (DWR) to implement the Act, impose some new required activities on urban water suppliers and agricultural water suppliers, including measurement requirements, conservation and efficient water management requirements, notice and hearing requirements, and documentation requirements, with specified exceptions and limitations.

However, the Commission finds that several agricultural water suppliers are either exempted from the requirements of the test claim statutes and regulations or are subject to alternative and less expensive compliance alternatives because the activities were already required by a regime of federal statutes and regulations, which apply to most agricultural water suppliers within the state.[1]

Additionally, to the extent that the test claim statute and regulations impose any new state-mandated activities, they do not impose costs mandated by the state because the Commission finds that urban water suppliers and agricultural water suppliers possess fee authority, sufficient as a matter of law to cover the costs of any new required activities. Therefore, the test claim statute and regulations do not impose costs mandated by the state pursuant to Government Code section 17556(d), and are not reimbursable under article XIII B, section 6 of the California Constitution.

COMMISSION FINDINGS

I. Chronology

06/30/2011	Co-claimants, South Feather Water and Power Agency (South Feather), Paradise Irrigation District (Paradise), Biggs-West Gridley Water District (Biggs), and Richvale Irrigation District (Richvale) filed test claim 10-TC-12 with the Commission.[2]
10/07/2011	Department of Finance (Finance) requested an extension of time to file comments, which was approved.

[1] See Public Law 102-565 and the Reclamation Reform Act of 1982 and the specific exceptions and alternate compliance provisions in the test claim statutes for those subject to these federal requirements, as discussed in greater detail in the analysis below.

[2] Exhibit A, *Water Conservation Act* Test Claim, 10-TC-12.

12/06/2011	Department of Water Resources (DWR) requested an extension of time to file comments, which was approved.
02/01/2012	DWR requested an extension of time to file comments, which was approved.
03/30/2012	DWR requested an extension of time to file comments, which was approved.
05/30/2012	DWR requested an extension of time to file comments, which was approved.

Staff inadvertently omitted the word "tentative" in this notice.

[18] Exhibit Q, Draft Proposed Decision.

08/14/2014	Glenn Colusa Irrigation District filed a request for an extension of time to comment and postponement of hearing to December 5, 2014, which was granted for good cause shown.
10/16/2014	Claimant filed comments on the draft proposed decision.[19]
10/17/2014	California Special Districts Association (CSDA) filed comments on the draft proposed decision.[20]
10/17/2014	Environmental Law Foundation (ELF)filed comments on the draft proposed decision.[21]
10/17/2014	DWR filed comments on the draft proposed decision.[22]
10/22/2014	Northern California Water Association (NCWA) filed late comments on the draft proposed decision.[23]
11/07/2014	Claimants filed late comments.[24]

II. Background

These consolidated test claims allege that Water Code Part 2.55 [Sections 10608 through 10608.64] and Part 2.8 [Sections 10800 through 10853] enacted by Statutes 2009-2010, 7th Extraordinary Session, chapter 4 (SBX7 7) (10-TC-12) impose reimbursable state-mandated increased costs resulting from activities required of urban water suppliers and agricultural water suppliers. The claimants also allege that the Agricultural Water Measurement regulations issued by DWR (12-TC-01), codified at California Code of Regulations, title 23, sections 597-597.4, impose additional reimbursable state-mandated increased costs on agricultural water suppliers only.

The Water Conservation Act of 2009, pled in test claim 10-TC-12, calls for a 20 percent reduction in urban per capita water use on or before December 31, 2020, and an interim reduction of at least 10 percent on or before December 31, 2015.[25] In order to achieve these reductions, the Act requires urban retail water suppliers, both publicly and privately owned, to develop urban water use targets and interim targets that cumulatively result in the desired 20 percent reduction by December 31, 2020.[26] Prior to adopting its urban water use targets, each supplier is required to conduct at least one public hearing to allow community input regarding the supplier's implementation plan to meet the desired reductions, and to consider the economic

impacts of the implementation plan.[27] This hearing may be combined with the hearing required under prior law (Water Code 10631) for adoption of the urban water management plan (UWMP).[28] An urban retail water supplier is also required to include in its UWMP, which is required to be updated every five years in accordance with pre-existing Water Code section 10621, information describing the baseline per capita water use; interim and final urban water use targets;[29] and a report on the supplier's progress in meeting urban water use targets.[30]

With respect to agricultural water suppliers, the Act requires implementation of specified critical efficient water management practices, including measuring the volume of water delivered to customers and adopting a volume-based pricing structure; and additional efficient water management practices that are locally cost effective and technically feasible.[31] In addition, the Act requires agricultural water suppliers (with specified exceptions)[32] to prepare and adopt, and every five years update, an agricultural water management plan (AWMP),[33] describing the service area, water sources and supplies, water uses within the service area, previous water management activities; and including a report on which efficient water management practices have been implemented or are planned to be implemented, and information documenting any determination that a specified efficient water management practice was not locally cost effective or technically feasible.[34]

Prior to preparing and adopting or updating an AWMP, the Act requires an agricultural water supplier to notify the city or county within which the supplier provides water that it will be preparing or considering changes to the AWMP;[35] and to make the proposed plan available for

public inspection and hold a noticed public hearing.[36] An agricultural water supplier is then required to implement the AWMP in accordance with the schedule set forth in the AWMP;[37] and to submit a copy of the AWMP to DWR and a number of specified local entities, and make the plan available on the internet, within 30 days of adoption.[38]

Finally, to aid agricultural water suppliers in complying with their measurement requirements and developing a volume-based pricing structure as required by section 10608.48, DWR adopted in 2012 the Agricultural Water Measurement Regulations,[39] which are the subject of test claim 12-TC-01. These regulations provide a range of options for agricultural water suppliers to implement accurate measurement of the volume of water delivered to customers. The regulations provide for measurement at the delivery point or farm gate of an individual customer, or at a point upstream of the delivery point where necessary, and provide for specified accuracy standards for measurement devices employed by the supplier, whether existing or new, as well as field testing protocols and recordkeeping requirements, to ensure ongoing accuracy of volume measurements.

To provide some context for how the the test claim statute and implementing regulations fit into the state's water conservation planning efforts, a brief discussion of the history of water conservation law in California follows.

A. Prior California Conservation and Water Supply Planning Requirements.

1. Constitutional and Statutory Framework of Water Conservation.

Article X, section 2 of the California Constitution prohibits the waste, unreasonable use, unreasonable method of use, or unreasonable method of diversion of water. It also declares that the conditions in the state require "that the waste or unreasonable use or unreasonable method of use of water be prevented, and that the conservation of such waters is to be exercised with a view to the reasonable and beneficial use thereof in the interest of the people and for the public welfare." Moreover, article X, section 2 provides that "[t]he right to water or to the use or flow of water in or from any natural stream or water course in this State is and shall be limited to such water as shall be reasonably required for the beneficial use to be served, and *such right does not and shall not extend to the waste or unreasonable use or unreasonable method of use or unreasonable method of diversion of water.*"[40] Although article X, section 2 provides that it is self-executing; it also provides that the Legislature may enact statutes to advance its policy.

The Legislature has implemented these constitutional provisions in a number of enactments over the course of many years, which authorize water conservation programs by water suppliers, including metered pricing. For example:

---

[36] Water Code section 10841 (Stats. 2009-2010, 7th Ex. Sess., ch. 4 (SBX7 7)).

[37] Water Code section 10842 (Stats. 2009-2010, 7th Ex. Sess., ch. 4 (SBX7 7)).

[38] Water Code sections 10843; 10844 (Stats. 2009-2010, 7th Ex. Sess., ch. 4 (SBX7 7)).

[39] Code of Regulations, title 23, sections 597-597.4 (Register 2012, No. 28).

[40] Adopted June 8, 1976. Derivation, former article 14, section 3, added November 6, 1928 and amended November 5, 1974 [emphasis added].

- Water Code section 1009 provides that water conservation programs are an authorized water supply function for all municipal water providers in the state.[41]
- Water Code section 1011 furthers the water conservation policies of the state by providing that a water appropriator does not lose an appropriative water right because of water conservation programs. [42]
- Water Code sections 520 -529.7 require water meters and recognize that metered water rates are an important conservation tool.[43]
- Water Code section 375(b) provides that public water suppliers may encourage conservation through "rate structure design." The bill amending the Water Code to add this authority was adopted during the height of a statewide drought. In an uncodified portion of the bill, the Legislature specifically acknowledged that conservation is an important part of the state's water policy and that water conservation pricing is a best management practice.[44]
- Water Code sections 370-374 provide additional, alternate authority (in addition to a water supplier's general authority to set rates) for public entities to encourage conservation rate structure design consistent with the proportionality requirements of Proposition 218.[45]
- Water Code section 10631(f)(1)(K) establishes water conservation pricing as a recognized water demand management measure for purposes of UWMPs, and other conservation measures including metering, leak detection and retrofits for pipes and plumbing fixtures.[46]

In addition, the Legislature has long vested water districts with broad authority to manage water to furnish a sustained, reliable supply. For example:

---

[41] Statutes 1976, chapter 709, p. 1725, section 1.

[42] Added by statutes 1979, chapter 1112, p. 4047, section 2, amended by Statutes, 1982, chapter 876, p. 3223, section 4, Statutes 1996, chapter 408, section 1, and Statutes 1999, chapter 938, section 2.

[43] Added by Statutes 1991, chapter 407 and amended by Statutes 2004, chapter 884, section 3 and Statutes 2005, chapter 22. See especially, Water Code section 521 (b) and (c)).

[44] Statutes 1993, chapter 313, section 1.

[45] Statutes 2008, chapter 610 (AB 2882). See Exhibit X, Senate Floor Analysis AB 2882; Assembly Floor Analysis AB 2882.

[46] Water Code section 10631(f)(1)(K) (Stats. 1995, ch. 854 (SB 1011); Stats. 2000, ch. 712 (SB 553); Stats. 2001, ch. 643 (SB 610); Stats. 2001, ch. 644 (AB 901); Stats. 2002, ch. 664 (AB 3034); Stats. 2002, ch. 969 (SB 1384); Stats. 2004, ch. 688 (SB 318); Stats. 2006, ch. 538 (SB 1852)).

- Irrigation Districts have the power to take any act necessary to furnish sufficient water for beneficial uses and to control water.[47] They have general authority to fix and collect charges for any service of the district.[48]
- County Water Districts have similar power to take any act necessary to furnish sufficient water and express authority to conserve.[49]
- Municipal Water Districts also have broad power to control water for beneficial uses and express power to conserve.[50]

2. Existing Requirements to Prepare, Adopt, and Update Urban Water Management Plans.

The Urban Water Management Act of 1983 required urban water suppliers to prepare and update an UWMP every five years.[51] This Act has been amended numerous times between its original enactment in 1983 and the enactment of the test claim statute in 2009.[52] The law pertaining to UWMPs in effect immediately prior to the enactment of the test claim statute consisted of sections 10610 through 10657 of the California Water Code, which detail the information that must be included in UWMPs, as well as who must file them.

According to the Act, as amended prior to the test claim statute, "[t]he conservation and efficient use of urban water supplies are of statewide concern; however, the planning for that use and the implementation of those plans can best be accomplished at the local level."[53] The Legislature declared as state policy that:

> (a) The management of urban water demands and efficient use of water shall be actively pursued to protect both the people of the state and their water resources.
>
> (b) The management of urban water demands and efficient use of urban water supplies shall be a guiding criterion in public decisions.

---

[47] Water Code section 22075 added by Statutes 1943, chapter 372 and section 22078 added by Statutes 1953, chapter 719, p. 187, section 1.

[48] Water Code section 22280, as amended by statutes 2007, chapter 27, section 19.

[49] Water Code sections 31020 and 31021 added by Statutes 1949, chapter 274, p. 509, section 1.

[50] Water Code sections 71610 as amended by Statutes 1995, chapter 28 and 71610.5 as added by Statutes 1975, chapter 893, p. 1976, section 1.

[51] Statutes 1983, chapter 1009 added Part 2.6 to Division 6 of the Water Code, commencing at section 10610.

[52] Enacted, Statutes 1983, chapter 1009; Amended, Statutes 1990, chapter 355 (AB 2661); Statutes 1991-92, 1st Extraordinary Session, chapter 13 (AB 11); Statutes 1991, chapter 938 (AB 1869) Statutes 1993, chapter 589 (AB 2211); Statutes 1993, chapter 720 (AB 892); Statutes 1994, chapter 366 (AB 2853); Statutes 1995, chapter 28 (AB 1247); Statutes 1995, chapter 854 (SB 1011); Statutes 2000, chapter 712 (SB 553); Statutes 2001, chapter 643 (SB 610); Statutes 2001, chapter 644 (AB 901); Statutes 2002, chapter 664 (AB 3034); Statutes 2002, chapter 969 (SB 1384); Statutes 2004, chapter 688 (SB 318); Statutes 2006, chapter 538 (SB 1852); Statutes 2009, chapter 534 (AB 1465).

[53] Water Code section 10610.2 (Stats. 2002, ch. 664 (AB 3034)).

(c) Urban water suppliers shall be required to develop water management plans to actively pursue the efficient use of available supplies.[54]

The Act specified that each urban water supplier that provides water for municipal purposes either directly or indirectly to more than 3,000 customers or supplies more than 3,000 acre feet of water annually shall prepare, update, and adopt its urban water management plan at least once every five years on or before December 31, in years ending in five and zero.[55]

a. Contents of Plans

The required contents of an UWMP are provided in sections 10631 through 10635. These statutes are prior law and have not been pled in this test claim. As last amended by Statutes 2009, chapter 534 (AB 1465), section 10631 requires that an adopted UWMP contain information describing the service area of the supplier, reliability of supply, water uses over five year increments, water demand management measures currently being implemented or being considered or scheduled for implementation, and opportunities for development of desalinated water.[56] Section 10631 further provides that urban water suppliers that are members of the California Urban Water Conservation Council and submit annual reports in accordance with the "Memorandum of Understanding Regarding Urban Water Conservation in California," may submit those annual reports to satisfy the requirements of section 10631(f) and (g), pertaining to current, proposed, and future demand management measures.[57]

Section 10632 requires that an UWMP provide an urban water shortage contingency analysis, which includes actions to be taken in response to a supply shortage; an estimate of minimum supply available during the next three years; actions to be taken in the event of a "catastrophic interruption of water supplies," such as a natural disaster; additional prohibitions employed during water shortages; penalties or charges for excessive use; an analysis of impacts on revenues and expenditures; a draft water shortage contingency resolution or ordinance; and a mechanism for determining actual reductions in water use.[58]

Section 10633, as amended by Statutes 2002, chapter 261, specifies that the plan shall provide, to the extent available, information on recycled water and its potential for use as a water source in the service area of the urban water supplier. The preparation of the plan shall be coordinated with local water, wastewater, groundwater, and planning agencies that operate within the supplier's service area, and shall include: a description of wastewater collection and treatment systems; a description of the quantity of treated wastewater that meets recycled water standards; a description of recycled water currently used in the supplier's service area; a description and quantification of the potential uses of recycled water; projected use of recycled water over five year increments for the next 20 years; a description of actions that may be taken to encourage the

---

[54] Water Code section 10610.4 (Stats. 1983, ch. 1009; Stats. 1995, ch. 854 (SB 1011)).

[55] Water Code sections 10617 (Stats. 1996, ch. 1023(SB 1497)); 10621(a) (Stats. 2007, ch. 64 (AB 1376)).

[56] Water Code section 10631 (Statutes 2009, chapter 534 (AB 1465)).

[57] Water Code section 10631(i) (Statutes 2009, chapter 534 (AB 1465)).

[58] Water Code section 10632 (Stats. 1995, ch. 854 (SB 1011)).

use of recycled water; and a plan for optimizing the use of recycled water in the supplier's service area.[59]

As added by Statutes 2001, chapter 644, and continuously in law up to the adoption of the test claim statute, section 10634 requires the UWMP to include, to the extent practicable, information relating to the quality of existing sources of water available to the supplier over the same five-year increments as described in Section 10631(a); and to describe the manner in which water quality affects water management strategies and supply reliability.[60]

And finally, section 10635, added by Statutes 1995, chapter 330, requires an urban water supplier to include in its UWMP an assessment of the reliability of its water service to customers during normal and dry years, projected over the next 20 years, in five year increments.[61]

b. Adoption and Implementation of Plans

Sections 10640 through 10645, as added by Statutes 1983, chapter 1009 and Statutes 1990, chapter 355, provide the requirements for adoption and implementation of UWMPs, including public notice and recordkeeping requirements associated with the adoption of each update of the UWMP.

Section 10640 provides that every urban water supplier required to prepare an UWMP pursuant to this part shall prepare its UWMP pursuant to Article 2 (commencing with Section 10630), and shall "periodically review the plan ... and any amendments or changes required as a result of that review shall be adopted pursuant to this article."[62] Section 10641 provides that an urban water supplier required to prepare an UWMP may consult with, and obtain comments from, any public agency or state agency or any person who has special expertise with respect to water demand management methods and techniques.[63]

Section 10642 provides that each urban water supplier shall encourage the active involvement of diverse social, cultural, and economic elements of the population within the service area prior to and during the preparation of its UWMP. Prior to adopting an UWMP, the urban water supplier shall make the plan available for public inspection and shall hold a public hearing thereon. Prior to the hearing, notice of the time and place of hearing shall be published within the jurisdiction of the publicly owned water supplier pursuant to section 6066 of the Government Code. A privately owned water supplier is required to provide a similar degree of notice, and the plan shall be adopted after the hearing either "as prepared or as modified..."[64]

Section 10643 provides that an UWMP shall be implemented "in accordance with the schedule set forth in [the] plan."[65] As amended by Statutes 2007, chapter 628, section 10644 requires an

---

[60] Water Code section 10634 (Stats. 2001, ch. 644 (AB 901)).

[61] Water Code section 10635 (Stats. 1995, ch. 330 (AB 1845)).

[62] Water Code section 10640 (Stats. 1983, ch. 1009).

[63] Water Code section 10640 (Stats. 1983, ch. 1009; Stats. 1995, ch. 854 (SB 1011)).

[64] Water Code section 10642 (Stats. 1983, ch. 1009; Stats. 1995, ch. 854 (SB 1011); Stats. 2000, ch. 297 (AB 2552)).

[65] Water Code section 10643 (Stats. 1983, ch. 1009).

urban water supplier to submit to DWR, the State Library, and any city or county within which the supplier provides water supplies, a copy of its plan and copies of any changes or amendments to the plans no later than 30 days after adoption. Section 10644 also requires DWR to prepare and submit to the Legislature, on or before December 31, in the years ending in six and one, a report summarizing the status of the UWMPs adopted pursuant to this part. The report is required to identify the outstanding elements of the individual UWMPs. DWR is also required to provide a copy of the report to each urban water supplier that has submitted its UWMP to DWR.[66] And lastly, in accordance with section 10645, not later than 30 days after filing a copy of its UWMP with DWR, the urban water supplier and DWR shall make the plan available for public review during normal business hours.[67]

c. Miscellaneous Provisions Pertaining to the UWMP Requirement

While sections 10631 through 10635 provide for the lengthy and technical content requirements of UWMPs, and sections 10640 through 10645 provide the requirements of a valid adoption of a UWMP, several remaining provisions of the Urban Water Management Planning Act provide for the satisfaction of the UWMP requirements by other means, and provide for the easing of certain other regulatory requirements and the recovery of costs.

- Section 10631, as amended by Statutes 2009, chapter 534 (AB 1465), provides that urban water suppliers that are members of the California Urban Water Conservation Council shall be deemed in compliance with the demand management provisions of the UWMP "by complying with all the provisions of the 'Memorandum of Understanding Regarding Urban Water Conservation in California'...and by submitting the annual reports required by Section 6.2 of that memorandum."[68] These suppliers, then, are not separately required to comply with sections 10631(f) and (g), which require a description and evaluation of the supplier's "demand management measures" that are currently or could be implemented.[69]
- Section 10652 streamlines the adoption of UWMPs by exempting plans from the California Environmental Quality Act (CEQA). However, section 10652 does not exempt any project (that might be contained in the plan) that would significantly affect water supplies for fish and wildlife.[70]
- Section 10653 provides that the adoption of a plan shall satisfy any requirements of state law, regulation, or order, including those of the State Water Resources Control Board and the Public Utilities Commission, for the preparation of water

[66] Water Code section 10644 (Stats. 1983, ch. 1009; Stats. 1990, ch. 355 (AB 2661); Stats. 1992, ch. 711 (AB 2874); Stats. 1995, ch. 854 (SB 1011); Stats. 2000, ch. 297 (AB 2552); Stats. 2004, ch. 497 (AB 105); Stats. 2007, ch. 628 (AB 1420)).

[67] Water Code section 10645 (Stats. 1990, ch. 355 (AB 2661)).

[68] Water Code section 10631 (as amended, Stats. 2009, ch. 534 (AB 1465)).

[69] Water Code section 10631(f-g) (as amended, Stats. 2009, ch. 534 (AB 1465)).

[70] Water Code section 10652 (Stats. 1983, ch. 1009; Stats. 1991-1992, 1st Ex. Sess., ch. 13 (AB 11); Stats. 1995, ch. 854 (SB 1011)).

management plans or conservation plans; provided, that if the State Water Resources Control Board or the Public Utilities Commission requires additional information concerning water conservation to implement its existing authority, nothing in this part shall be deemed to limit the board or the commission in obtaining that information. In addition, section 10653 provides that "[t]he requirements of this part *shall be satisfied by any urban water demand management plan prepared to meet federal laws or regulations after the effective date of this part*, and which substantially meets the requirements of this part, or by any existing urban water management plan which includes the contents of a plan required under this part."[71] The plain language of section 10653 therefore exempts an urban retail water supplier that is already required to prepare a water demand management plan from any requirements of an UWMP added by the test claim statutes.

- Section 10654 provides expressly that an urban water supplier "may recover in its rates the costs incurred in preparing its plan and implementing the reasonable water conservation measures included in the plan." Any best water management practice that is included in the plan that is identified in the "Memorandum of Understanding Regarding Urban Water Conservation in California" (discussed below) is deemed to be reasonable for the purposes of this section.[72] Therefore, suppliers are expressly authorized to recover the costs of implementing "reasonable water conservation measures" or any "best water management practice...identified in [the MOU for Urban Water Conservation]."

3. Prior Requirements to Prepare, Adopt, and Update Agricultural Water Management Plans, Which Became Inoperative by their own Terms in 1993.

The Agricultural Water Management Planning Act was enacted in 1986 and became inoperative, by its own terms, in 1993.[73] The 1986 Act stated in its legislative findings and declarations that "[t]he Constitution requires that water in the state be used in a reasonable and beneficial way..." and that "[t]he conservation of agricultural water supplies are of great concern." The findings and declarations further stated that "[a]gricultural water suppliers that receive water from the federal Central Valley Water Project are required by federal law to develop and implement water conservation plans," as are "[a]gricultural water suppliers applying for a permit to appropriate water from the State Water Resources Control Board..." Therefore, the act stated that "it is the policy of the state as follows:"

(a) The conservation of water shall be pursued actively to protect both the people of the state and their water resources.

(b) The conservation of agricultural water supplies shall be an important criterion in public decisions on water.

---

[71] Water Code section 10653 (Stats. 1983, ch. 1009; Stats. 1995, ch. 854 (SB 1011)) [emphasis added].

[72] Water Code section 10654 (Stats. 1983, ch. 1009; Stats. 1994, ch. 609 (SB 1017)).

[73] Statutes 1986, chapter 954 (AB1658). See Former Water Code section 10855 (Stats. 1986, ch. 954 (AB 1658)).

(c) Agricultural water suppliers, who determine that a significant opportunity exists to conserve water or reduce the quantity of highly saline or toxic drainage water, shall be required to develop water management plans to achieve conservation of water.[74]

Specifically, the 1986 Act provided that every agricultural water supplier serving water directly to customers "shall prepare an informational report based on information from the last three irrigation seasons on its water management and conservation practices..." That report "shall include a determination of whether the supplier has a significant opportunity to conserve water or reduce the quantity of highly saline or toxic drainage water through improved irrigation water management..." If a "significant opportunity exists" to conserve water or improve the quality of drainage water, the supplier "shall prepare and adopt an agricultural water management plan..." (AWMP).[75] The Act provided, however, that an agricultural water supplier "may satisfy the requirements of this part by participation in areawide, regional, watershed, or basinwide agricultural water management planning where those plans will reduce preparation costs and contribute to the achievement of conservation and efficient water use and where those plans satisfy the requirements of this part." The requirements of an AWMP or an informational report, where required, included quantity and sources of water delivered to and by the supplier; other sources of water used within the service area, including groundwater; a general description of the delivery system and service area; total irrigated acreage within the service area; acreage of trees and vines within the service area; an identification of current water conservation practices being used, plans for implementation of water conservation practices, and conservation educational practices being used; and a determination of whether the supplier has a significant opportunity to save water by means of reduced evapotranspiration, evaporation, or reduction of flows to unusable water bodies, or to reduce the quantity of highly saline or toxic drainage water.[76] In addition, an AWMP "shall address all of the following:" quantity and source of surface and groundwater delivered to and by the supplier; a description of the water delivery system, the beneficial uses of the water supplied, conjunctive use programs, incidental and planned groundwater recharge, and the amounts of delivered water that are lost to evapotranspiration, evaporation, or surface flow or percolation; an identification of cost-effective and economically feasible measures for water conservation; an evaluation of other significant impacts; and a schedule to implement those water management practices that the supplier determines to be cost-effective and economically feasible.[77]

The Act further provided that an agricultural water supplier required to prepare an AWMP "may consult with, and obtain comments from, any public agency or state agency or any person who has special expertise with respect to water conservation and management methods and techniques."[78] And, "[p]rior to adopting a plan, the agricultural water supplier shall make the plan available for public inspection and shall hold a public hearing thereon." This requirement

[74] Former Water Code section 10802 (Stats. 1986, ch. 954 (AB 1658)).

[75] Former Water Code section 10821 (as added, Stats. 1986, ch. 954 (AB 1658)).

[76] Former Water Code section 10825 (as added, Stats. 1986, ch. 954 (AB 1658)).

[77] Former Water Code section 10826 (as added, Stats. 1986, ch. 954 (AB 1658)).

[78] Former Water Code section 10841(as added, Stats. 1986, ch. 954 (AB 1658)).

applies also to privately owned water suppliers.[79] In addition, the Act states that an agricultural water supplier shall implement its AWMP in accordance with the schedule set forth in the plan, and "shall file with [DWR] a copy of its plan no later than 30 days after adoption."[80] Finally, the 1986 Act provided for funds to be appropriated to prepare the informational reports and agricultural water management plans, as required, and provided that "[t]his part shall remain operative only until January 1, 1993, except that, if an agricultural water supplier fails to submit its information report or agricultural water management plan prior to January 1, 1993, this part shall remain operative with respect to that supplier until it has submitted its report or plan, or both."[81]

As noted above, the AWMP requirements provided by the Agricultural Water Management Planning Act became inoperative as of January 1, 1993,[82] and therefore do not constitute the law in effect immediately prior to the test claim statute, even though, as shown below, the test claim statute reenacted substantially similar plan requirements. However, the federal requirement to submit water conservation plans to the United States Bureau of Reclamation pursuant to either the federal Central Valley Project Improvement Act (Public Law 102-565) or the federal Reclamation Reform Act of 1982, remained the law throughout and does constitute the law in effect immediately prior to the test claim statute, with respect to those suppliers subject to one or both federal requirements.[83]

4. The Water Measurement Law, Statutes 1991, chapter 407, applicable to Urban and Agricultural Water Suppliers.

The Water Measurement Law (Water Code sections 510-535) requires standardized water management practices and water measurement, and is applicable to Urban and Agricultural Water Suppliers, as follows:[84]

- Every water purveyor that provides potable water to 15 or more service connections or 25 or more yearlong residents must require meters as a condition of *new* water service.[85]
- Urban water suppliers, except those that receive water from the federal Central Valley Project, must install meters on all municipal (i.e., residential and governmental) and industrial (i.e., commercial) service connections on or before January 1, 2025 and shall charge each customer that has a service connection for which a meter has been installed based on the actual volume of deliveries beginning on or before January 1, 2010 service. A water purveyor, including an

[80] Former Water Code sections 10843 and 10844 (as added, Stats. 1986, ch. 954 (AB 1658)).

[81] Former Water Code sections 10853; 10854; 10855 (as added, Stats. 1986, ch. 954 (AB 1658)).

[82] Former Water Code section 10855 (Stats. 1986, ch. 954 (AB 1658)).

[83] See Water Code section 10828 (added, Stats. 2009-2010, 7th Ex. Sess., ch. 4 (SBX7 7)).

[84] The Water Measurement Law was added by Statutes 1991, chapter 407.

[85] Section 525 as amended by statutes 2005, chapter 22.

urban water supplier, may recover the cost of the purchase, installation, and operation of a water meter from rates, fees, or charges.[86]

- Urban water suppliers receiving water from the federal Central Valley Project (CVP) shall install water meters on all residential and non-agricultural commercial service connections constructed prior to 1992 on or before January 1, 2013 and charge customers for water based on the actual volume of deliveries, as measured by a water meter, beginning March 1, 2013, or according to the CVP water contract. Urban water suppliers that receive water from the CVP are also specifically authorized to "recover the cost of providing services related to the purchase, installation, and operation and maintenance of water meters from rates, fees or charges.[87]
- Agricultural water providers shall report annually to DWR summarizing aggregated farm-gate delivery data, on a monthly or bi-monthly basis. However, the Water Measurement Law does not require implementation of water measurement programs or practices that are not locally cost effective.[88]

The test claim statute, as noted above, requires agricultural water suppliers to measure the volume of water delivered to customers and to adopt a volume-based pricing structure. However, the test claim statute also contemplates a water supplier that is both an agricultural and an urban water supplier, by definition: section 10829 provides that an agricultural water supplier may satisfy the AWMP requirements by adopting an UWMP pursuant to Part 2.6 of Division 6 of the Water Code; and the definitions of "agricultural" and "urban retail" water suppliers in section 10608.12 are not, based on their plain language, mutually exclusive. The record on this test claim is not sufficient to determine how many, if any, agricultural water suppliers are also urban retail water suppliers,[89] and consequently would be required to install water meters on new and existing service connections in accordance with Water Code sections 525-527, and to charge customers based on the volume of water delivered. In addition, the record is not sufficient to determine whether and to what extent some agricultural water suppliers may already have implemented water measurement programs which were locally cost effective, in accordance with section 531.10. However, to the extent that an agricultural water supplier is also an urban water supplier, sections 525-527 may constitute a prior law requirement to accurately measure water delivered and charge customers based on volume, and the test claim statute may not impose new requirements or costs on some entities. And, to the extent that water measurement programs or practices were previously implemented pursuant to section 531.10, some of the activities required by the test claim statute and regulations may not be newly required, with respect to certain agricultural suppliers. These caveats and limitations are noted where relevant in the analysis below.

[87] Section 526 as amended by Statutes 2004, chapter 884.

[88] Section 531.10 as added by Statutes 2007, chapter 675.

[89] See Water Code section 10608.12, as added by Statutes 2009-2010, 7th Extraordinary Session, chapter 4 (SBX7 7) for definitions of "agricultural water supplier" and "urban retail water supplier."

III. Positions of the Parties

A. Claimants' Positions:

The four original claimants together alleged a total of $72,194.48 in mandated costs for fiscal year 2009-2010 (although Paradise maintains a different fiscal year than the remaining claimants). In addition, claimants project that program costs for fiscal year 2010-2011, and for 2011-2012, will be "higher," but claimants allege that they are unable to reasonably estimate the amount.

South Feather Water and Power Agency and Paradise Irrigation District

South Feather and Paradise allege that they are urban retail water suppliers, as defined in Water Code section 10608.12. As such, they allege that they are required to establish urban water use targets "by July 1, 2011 by selecting one of four methods to achieve the mandated water conservation." South Feather and Paradise further allege that they are "mandated to adopt expanded and more detailed urban water management plans in 2010 that include the baseline daily per capita water use, urban water use target, interim urban water use target, compliance daily per capita water use, along with the bases for determining estimates, including supporting data."[90] South Feather and Paradise allege that thereafter, UWMPs are to be updated "in every year ending in 5 and 0," and the 2015 plan "must describe the urban retail water supplier's progress towards [*sic*] achieving the 20% reduction by 2020."[91] Finally, South Feather and Paradise allege that they are required to conduct at least one noticed public hearing to allow community input, consider economic impacts, and adopt a method for determining a water use baseline "from which to measure the 20% reduction."[92]

Prior to the Act, South Feather and Paradise allege that there was no requirement to achieve a 20 percent per capita reduction in water use by 2020. They allege that they were required to adopt UWMPs prior to the Act, but not to include 'the baseline per capita water use, urban water use target, interim urban water use target, and compliance daily per capita water use, along with bases for determining those estimates, including supporting data."[93] And they allege that "[f]inally, prior to the Act, there was no requirement to conduct at least one public hearing to allow for community input regarding conservation, consider economic impacts…or to adopt a method for determining an urban water use target."[94]

Biggs-West Gridley Water District and Richvale Irrigation District

Richvale and Biggs allege that they are required to "measure the volume of water delivered to their customers using best professional practices to achieve a minimum level of measurement accuracy at the farm-gate," in accordance with regulations adopted by DWR pursuant to the Act.[95] They further allege that they are required to adopt a pricing structure for water customers

[95] Exhibit A, 10-TC-12, page 4.

based on the quantity of water delivered, and that "[b]ecause Richvale and Biggs are local public agencies, the change in pricing structure would have to be authorized and approved by its [*sic*] customers through the Proposition 218 process."[96]

In addition, Richvale and Biggs allege that "[i]f 'locally cost effective' and technically feasible, agricultural water suppliers are required to implement fourteen additional efficient management practices," as specified. They additionally allege that on or before December 31, 2012, they are required to prepare AWMPs that include a report on the implementation and planned implementation of efficient water management practices, and documentation supporting any determination made that certain conservation measures were held to be not locally cost effective or technically feasible.[97] Finally, Richvale and Biggs allege that prior to adoption of an AWMP, they are required to notice and hold a public hearing; and that after adoption the plan must be distributed to "various entities" and posted on the internet for public review.[98]

Prior to the Act, Richvale and Biggs assert, agricultural water suppliers "were not required to have a pricing structure based, at least in part, on the quantity of water delivered." In addition, prior to the Act, "there was no requirement to implement up to 14 additional conservation measures if locally cost effective and technically feasible." And, Richvale and Biggs allege that prior to the Act the number of agricultural water suppliers subject to the requirement to develop an AWMP was significantly fewer, and now the "contents of the plans" are "more encompassing than plans required under the former law."[99] Richvale and Biggs allege that "[f]inally, prior to the Act, there was no requirement to conduct at least one public hearing prior to adopting the plan, make copies of it available for public inspection, or to publish the time and place of the hearing once per week for two successive weeks in a newspaper of general circulation."[100]

As discussed below, in the early stages of Commission staff's review and analysis of these consolidated test claims, it became apparent that Richvale and Biggs, the two claimants representing agricultural water suppliers, are not subject to the revenue limits of article XIII B, and do not collect or expend "proceeds of taxes," within the meaning of articles XIII A and XIII B.[101] After additional briefing and further review, it was concluded that Richvale and Biggs are indeed not eligible for reimbursement under article XIII B, section 6. The Commission's executive director therefore issued a notice of pending dismissal and offered an opportunity for another eligible local claimant, subject to the tax and spend limitations of articles XIII A and XIII B, to take over the test claim.[102] Richvale and Biggs filed an appeal of that decision, and maintain that they are eligible local government claimants pursuant to Government Code section 17518, and that the fees or assessments that the districts would be required to establish or increase to comply with the requirements of the test claim statute and regulations would be

[102] Exhibit K, Notice of Pending Dismissal.

characterized as taxes under article XIII B, section 8, because such fees or assessments would exceed the reasonable costs of providing water services.[103] This decision addresses these issues.

Glenn-Colusa Irrigation District and Oakdale Irrigation District

Glenn-Colusa and Oakdale requested to be substituted in as parties to these consolidated test claims, in place of Richvale and Biggs.[104] Both Glenn-Colusa and Oakdale submitted declarations asserting that they receive an annual share of property tax revenue, and therefore are subject to articles XIII A and XIII B of the California Constitution. Both additionally allege that they incur at least $1000 in increased costs as a result of the test claim statute and regulations, and that they are subject to the requirements of the test claim statutes and regulations as described in the test claim narrative.[105]

Claimants' Collective Response to the Draft Proposed Decision

In comments on the draft proposed decision, the claimants focus primarily on the findings regarding the ineligibility of Richvale and Biggs to claim reimbursement based on the evidence in the record indicating that neither agency collects or expends tax revenues subject to the limitations of articles XIII A and XIII B. The claimants also address the related findings that all claimants have sufficient fee authority under law to cover the costs of the mandate, and thus the Commission cannot find costs mandated by the state, pursuant to section 17556(d).

Specifically, the claimants argue that "[f]ees and charges for sewer, water, or refuse collection services are excused from the formal election process, but not from the majority protest process."[106] Therefore, claimants conclude that "[a]gencies that provide water, sewer, or refuse collection services, including Claimants, lack sufficient authority to unilaterally impose new or increased fees or charges in light of Proposition 218's majority protest procedure."[107]

In addition, claimants note the Commission's analysis in 07-TC-09, *Discharge of Stormwater Runoff*, and argue that the Commission should not "ignore a prior Commission decision that is directly on point..." The claimants assert that "as this Commission has already recognized..." Proposition 218 "created a legal barrier to establishing or increasing fees or charges..." and as a result claimants "can do no more than merely propose new or increased fees for customer approval and the customers have the authority to then accept or reject..." a fee increase.[108]

The claimants assert that the reasoning of the draft proposed decision "would prohibit state subvention for every enterprise district in the state that is subject to Proposition 218..."[109] and "would create a class of local agencies that are per se ineligible for reimbursement under this test

claim, all potential future test claims, and all previous test claims dating back to Proposition 218's passage in 1996."[110] The claimant calls this a "sea change in Constitutional interpretation…"[111]

The claimants argue, based on this interpretation of the effect of Proposition 218, that the draft proposed decision inappropriately excluded Richvale and Biggs from subvention, "because they do not currently collect or expend tax revenues."[112] The claimants argue that "this additional 'requirement' [is] based on an outdated case that predates Proposition 218 and on an inapplicable line of cases that apply only to redevelopment agencies, while ignoring the strong policy underlying the voters' approval of the subvention requirement."[113] The claimants argue that after articles XIII C and XIII D, "assessments and property-related fees and charges have joined tax revenues as among local entities' 'increasingly limited revenue sources…'"[114]

The claimants further argue that: "Agencies like Richvale and Biggs that need additional revenue to pay for new mandates but are subject to the limitations of Proposition 218 are faced with three problematic options: (a) do not implement the mandates in light of revenue limitations; (b) implement the mandates with existing revenue; or (c) propose a new or increased fee or charge, assessment, or special tax to implement the mandates."[115] The claimants argue for the Commission to take action to expand the scope of reimbursement: "the subvention provision should be read in harmony with later Constitutional enactments and protect not just tax revenue, but assessment and fee revenue as well."[116]

Finally, in late comments, the claimants challenge DWR's reasoning, including the figures cited by the department, that due to the existence of a substantial number of private water suppliers, the test claim statutes do not impose a "program" within the meaning of article XIII B, section 6.[117]

B. State Agency Positions:

Department of Finance

Finance maintains that "the Act and Regulations do not impose a reimbursable mandate on local agencies within the meaning of Article XIII B, section 6."[118] Finance asserts that each of the claimants is a special district authorized to charge a fee for delivery of water to its users, and therefore has the ability to cover the costs of any new required activities.[119] Finance further

[119] Exhibit C, Finance Comments, page 1.

asserts that the conservation efforts required by the test claim statute and regulations will result in surplus water accruing to the claimant districts, which are authorized to sell water. Finance concludes that "each district will likely have the opportunity to cover all or a portion of costs related to implementation of the Act or Regulations with revenue from surplus water sales."[120] Moreover, Finance argues that "special districts are only entitled to reimbursement if they are subject to the tax and spend limitations under articles XIII A and XIII B...*and only when the mandated costs in question can be recovered solely from the proceeds of taxes*."[121] Finance argues that the claimants "should be directed to provide information that will enable the Commission on State Mandates to determine if they are subject to tax and spending limitations."[122] Finance did not submit comments on the draft proposed decision.

State Controller's Office

In response to Commission staff's request for additional information regarding the uncertain eligibility of the test claimants, the SCO submitted written comments confirming that the "Butte County Auditor-Controller has confirmed for fiscal years 2010-2011, 2011-2012, and 2012-2013," that South Feather and Paradise both received proceeds of taxes, but Richvale and Biggs did not.[123] However, the SCO also noted that none of the four claimants reported an appropriations limit for fiscal years 2010-2011, 2011-2012, and 2012-2013. The SCO stated that "Government Code section 7910 requires each local government entity to annually establish its appropriations limit by resolution of its governing board," and that "Government Code section 12463 requires the annual appropriations limit to be reported in the financial transactions report submitted to the SCO." However, the SCO noted that it "has the responsibility to review each report for reasonableness, yet we are not required to audit any of the data reported." The SCO concluded, therefore, that "we are unable to determine which special district is subject to report an annual appropriations limit." The SCO did not comment on the draft proposed decision.

Department of Water Resources

DWR argues, in comments on the consolidated test claims, first, that the Water Conservation Act of 2009 applies to public and private entities alike, and is therefore not a "program" within the meaning of article XIII B, section 6. In addition, DWR argues that the Act is not a "new program," because it is "a refinement of urban and agricultural water conservation requirements that have been part of the law for years." DWR further asserts that even if the Act "were an unfunded state mandate, it would not be reimbursable since the water suppliers have sufficient non-tax sources to offset any implementation costs." And, DWR asserts that the test claim regulations on agricultural water measurement do not impose any requirements on water suppliers because "they are free to choose alternative measurement methods." And finally, DWR argues that the Act does not impose any new programs or higher levels of service "because what is required is compliance with general and evolving water conservation standards based on

---

[120] Exhibit C, Finance Comments, page 2.

[121] Exhibit C, Finance Comments, page 2 [emphasis in original].

[123] Exhibit J, SCO Comments, pages 1-2.

the foundational reasonable and beneficial water use principle dating from before the 1928 amendment – Article X, section 2 – to California's Constitution revising water use standards."[124]

In comments on the draft proposed decision, DWR "concurs with and fully supports the ultimate conclusion reached…", but reiterates and expands upon its earlier comments with respect to whether the alleged test claim requirements constitute a new program or higher level of service that is uniquely imposed upon local government.[125] DWR argues that "a law that governs private and public entities alike is not a 'program' for purposes of article XIII B…"[126] DWR continues:

> Claimants, in their Rebuttal Comments, ignore DWR's reference to the language of the Water Conservation Act, which by its plain terms is made applicable to both public and private entities. Instead, Claimants seek to shift attention away from the nature of the activity and focus instead on the number of entities engaged in that activity. Claimants concede that the law and regulations adopted pursuant to that law do in fact apply to both private and public entities, but argue that because (according to their calculation) "only 7.67%" of urban retail water suppliers are private, the requirements of the Water Conservation Act ought to be treated as reimbursable "programs" because those requirements "fall overwhelmingly on local governmental agencies."[127]

DWR maintains that "there are, in fact, 72 private wholesale and retail suppliers out of a total of 369…so the proportion of private water suppliers is actually 16.3 percent." And, "based on data submitted in the 2010 urban water management plans, it turns out that private retail water suppliers serve 19.7 percent of the population and account for 17.3 percent of water delivered."[128]

DWR acknowledges that there are more public than private water suppliers, but asserts that "[u]nder the Supreme Court's test in *County of Los Angeles v. State of California* the question is not whether an activity is more likely to be undertaken by a governmental entity, but whether the activity implements a state policy and imposes unique requirements on local governments, but is one that does not apply generally to all residents and entities in the state."[129] DWR explains that "generally," in this context, is not synonymous with "commonly," and therefore the prevalence of public water suppliers as to private is not relevant to the issue; rather, "generally" refers to

laws of general application, meaning "those that apply to all persons or entities of a particular class."[130] The Water Conservation Act, DWR maintains, "does just that."[131]

In addition, DWR disputes that the provision of water services is a "classic governmental function," as asserted by the claimants.[132] The California Supreme Court has held that reimbursement should be limited to new "programs" that carry out the governmental function of providing services to the public.[133] DWR maintains that there is an important distinction between public purposes, and private or corporate purposes, and that that distinction should control in the analysis of a new program or higher level of service. In particular, DWR identifies the provision of utilities to municipal customers as a corporate activity, rather than a governmental purpose:

> Of the myriad services provided by government, although some may be difficult to categorize, at either end of the spectrum the categories are fairly clear. At one end, such things as police and fire protection have long been recognized as true governmental functions, those that implicate the notion of the "government as sovereign." At the other end, however, are public utilities such as power generation, and, of particular significance to this claim, municipal water districts.[134]

DWR argues that "California law thus draws a distinction between the many utilitarian services that could as easily be (and often are) undertaken by the private sector, and those that implicate the unique authority vested in the state and its political subdivisions." DWR continues: "Maintaining a police force, for instance, is easily understood as something fundamental to the government *as government.*" "On the other hand," DWR reasons, "there is nothing intrinsically governmental about a government entity operating a utility and providing services such as electricity, natural gas, sewer, garbage collection, or water delivery."[135]

DWR thus "urges the Commission to give full consideration to the fact that the Water Conservation Act is a law of general application that applies to private as well as public water

suppliers alike." And, DWR reiterates: "contrary to Claimants' suggestion, water delivery, while clearly an important service, is not a classic "governmental function" in the constitutional sense."[136]

C. Interested Person Positions:[137]

California Special Districts Association

CSDA asserts that "the Proposed Decision fails to appropriately analyze the provisions of Article XIII B Section 6...as amended by Proposition 1A in 2004..."[138] CSDA argues that the draft proposed decision "rather analyzes the original language of Article XIII B Section 6 adopted as Proposition 4 in 1978, before the adoption of Proposition 218 adding articles XIII C and XIII D to the Constitution and before the adoption of Proposition 1A amending Article XIII B Section 6."[139]

CSDA argues that the plain language of article XIII B, section 6, as amended by Proposition 1A, "indicates that the mandate provisions are applicable to all cities, counties, cities and counties, and special districts without restriction."[140] CSDA further asserts that "[t]he plain language also mandates the state to appropriate the 'full payment amount' of costs incurred by local government in complying with state mandated programs, without any qualification as to the types of revenues utilized by local governments in paying the costs of such compliance."[141] CSDA reasons that "there are no words of limitation indicating that suspension of mandates is only applicable to those local government agencies which receive proceeds of taxes and expend those proceeds of taxes in complying with state mandated programs." Therefore, absent "such limiting language, the holding of the Proposed Decision which limits eligibility for claiming reimbursement...to those local agencies receiving proceeds of taxes is contradicted by the mandate provisions of Proposition 1A, and is therefore incorrect as a matter of law."[142]

CSDA also argues that the voters' intent and understanding in adopting Proposition 1A is controlling, and can be determined by examining the LAO analysis in the ballot pamphlet.[143] CSDA argues that "[t]he LAO analysis of Proposition 1A in the ballot pamphlet fails to mention any restriction or limitation on state mandates to be reimbursed or suspended, and such analysis is totally silent as to any requirement that reimbursable mandates be limited to those mandates imposed on local governments which receive and expend proceeds of taxes..." In fact, CSDA argues, the LAO analysis indicates that Proposition 1A "expand(s) the circumstances under

which the state is responsible for reimbursing cities, counties and special districts for complying with state mandated programs by including all programs for which the state even had partial financial responsibility before such transfer."[144] CSDA maintains that "[t]herefore the voters who approved Proposition 1A by 82% of the popular vote had no understanding of this limitation on reimbursement of state mandates to local governments which is the basic holding of the Proposed Decision."[145] CSDA relies on the language of the ballot pamphlet, which states: "if the state does not fund a mandate within any year, the state must eliminate local government's duty to implement it for that same time period."[146] CSDA concludes that "[t]he plain words of Proposition 1A support this voter intent to require the state to fully reimburse the costs incurred by all cities, counties, cities and counties and special districts in implementing any state program in which the complete or partial financial responsibility for that program has been transferred from the state to local government, not just those cities, counties, cities and counties, and special districts which receive proceeds of taxes."[147]

In addition, CSDA argues that the Commission's analysis must read together and harmonize articles XIII A, XIII B, XIII C, and XIII D.[148] Specifically, CSDA argues that pursuant to article XIII C, added by Proposition 218, property-related fees are subject to "majority protest procedures" and "may not be expended for general governmental services…which are available to the public at large in substantially the same manner as they are to property owners..." [149] And, revenues from property-related fees "may not be used for any purpose other than that for which the fee was imposed;" and "may not exceed the costs required to provide the property related service."[150] In addition, CSDA asserts that the amount of a property-related fee must not exceed the proportional cost of providing the service to each individual parcel subject to the fee.[151] CSDA also notes that "Article XIII D includes similar provisions restricting the ability of local governments to raise and expend assessment revenue."[152] CSDA argues that "[a]nalyzed together, all of these restrictions on the raising and expenditure of property related fees and charges by local government agencies specified in Articles XIII C and D of the Constitution severely limit the ability of local government agencies to utilize revenue for property related fees and charges to fund the costs of state mandated programs."[153] CSDA goes on to argue that "[t]hose restrictions are more onerous and stringent than the restrictions imposed on local government agencies in expending proceeds of taxes by virtue of the appropriations limit in

Article XIII B."[154] CSDA concludes that "[t]he Proposed Decision should be modified to recognize these restrictions imposed by Articles XIII C and D."[155]

Environmental Law Foundation Position

ELF states, in its comments, that it agrees with the draft proposed decision, however, "[t]o aid the Commission in developing its final decision, we would like to present an additional ground upon which the Commission could rely in denying the test claim..."[156] ELF asserts that "the Commission should find that charges for irrigation water are not 'property-related fees' for the purposes of Article XIII D of the California Constitution."[157] Specifically, ELF agrees that the test claim statutes are exempt from the voter-approval requirements of article XIII D, section 6(c);[158] however, ELF also argues that "charges for irrigation water are not 'property-related fees' at all." ELF reasons: "As a result, raising them does not trigger the substantive or procedural requirements contained in Article XIII D, and the claimant districts may increase them free of any constitutional obstacle."[159]

ELF continues: "Article XIII D, § 3 restricts local governments' ability to levy a new "assessment, fee, or charge" without complying with the substantive and procedural requirements of section 4 (assessments) and section 6 (property-related fees)." However, ELF asserts that "Section 2 of Article XIII D makes Proposition 218's relatively limited reach abundantly clear."[160] ELF notes that section 2 defines a fee or charge as "any levy other than an ad valorem tax, a special tax, or an assessment, imposed by an agency upon a parcel or upon a person as an incident of property ownership, including a user fee or charge for a property related service."[161] ELF therefore reasons that "[f]ees that are not 'imposed upon a parcel' or that are not imposed upon a 'person as an incident of property ownership' or that are not a 'user fee or charge for a property related service' are not subject to Article XIII D."[162] ELF notes that in *Apartment Association of Los Angeles County v. City of Los Angeles*[163] the court held that an inspection fee imposed upon landlords was not imposed upon them as property owners, but as business owners and, therefore the fee was not subject to article XIII D.[164] The court, ELF

explains, found that this type of fee was "not 'property related' because it was dependent on the property's use – it was not imposed on the property simply as an incident of ownership."[165]

ELF goes on to note that "no case has squarely addressed the issue…" but the courts have recognized that not all water service charges are necessarily subject to article XIII D. In *Pajaro Valley Water Management Agency v. Amrheim*,[166] the court held that a groundwater augmentation charge was a property-related fee, but "it rested that conclusion on the fact that the majority of users were residential users, not large-scale irrigators."[167] And, ELF notes, other cases have found that domestic water use is "necessary for 'normal ownership and use of property.'"[168] ELF concludes that these cases, and others, "present no obstacle to the conclusion that irrigation water is not a property-related service."[169] ELF concludes that fees for irrigation water are not "property-related" but a business-related fee, and that therefore the Commission should deny this test claim.[170]

Northern California Water Association Position

In late comments on the draft proposed decision, NCWA seeks to "highlight and emphasize how onerous and expensive these new state mandates are in the Sacramento Valley."[171] NCWA argues that "[t]hese statewide benefits, achieved through implementation of incredibly expensive mandates, ought to be funded by the state and not borne exclusively by the impacted local agencies' landowners."[172] NCWA continues: "The draft proposed decision, in an effort to circumvent the clear requirements to reimburse for these types of state mandates, has attempted to avoid reimbursement by exerting exclusions that are not appropriate for the facts before the Commission."[173] NCWA denies that any "exemptions" apply to the test claim statutes, and "urge[s] the Commission to modify the draft proposed decision to reimburse these and other similarly affected water suppliers."[174]

IV. Discussion

Article XIII B, section 6 of the California Constitution provides in relevant part the following:

---

[173] Exhibit V, NCWA Comments on Draft Proposed Decision, page 2.

[174] Exhibit V, NCWA Comments on Draft Proposed Decision, page 2.

Whenever the Legislature or any state agency mandates a new program or higher level of service on any local government, the state shall provide a subvention of funds to reimburse such local government for the costs of such programs or increased level of service, except that the Legislature *may, but need not*, provide a subvention of funds for the following mandates:

(1) Legislative mandates requested by the local agency affected.

(2) Legislation defining a new crime or changing an existing definition of a crime.

(3) Legislative mandates enacted prior to January 1, 1975, or executive orders or regulations initially implementing legislation enacted prior to January 1, 1975.

The purpose of article XIII B, section 6 is to "preclude the state from shifting financial responsibility for carrying out governmental functions to local agencies, which are 'ill equipped' to assume increased financial responsibilities because of the taxing and spending limitations that articles XIII A and XIII B impose."[175] Thus, the subvention requirement of section 6 is "directed to state-mandated increases in the services provided by [local government] ..."[176]

Reimbursement under article XIII B, section 6 is required when the following elements are met:

1. A state statute or executive order requires or "mandates" local agencies or school districts to perform an activity.[177]
2. The mandated activity either:
    a. Carries out the governmental function of providing a service to the public; or
    b. Imposes unique requirements on local agencies or school districts and does not apply generally to all residents and entities in the state.[178]
3. The mandated activity is new when compared with the legal requirements in effect immediately before the enactment of the test claim statute or executive order and it increases the level of service provided to the public.[179]
4. The mandated activity results in the local agency or school district incurring increased costs, within the meaning of section 17514. Increased costs, however, are not

[177] *San Diego Unified School Dist. v. Commission on State Mandates* (*San Diego Unified School Dist.*) (2004) 33 Cal.4th 859, 874.

[178] *Id.* at 874-875 (reaffirming the test set out in *County of Los Angeles*, *supra*, 43 Cal.3d 46, 56).

[179] *San Diego Unified School Dist.*, *supra*, 33 Cal.4th 859, 874-875, 878; *Lucia Mar Unified School District v. Honig* (1988) 44 Cal.3d 830, 835.

reimbursable if an exception identified in Government Code section 17556 applies to the activity.[180]

The determination whether a statute or executive order imposes a reimbursable state-mandated program is a question of law.[181] The Commission is vested with exclusive authority to adjudicate disputes over the existence of state-mandated programs within the meaning of article XIII B, section 6.[182] In making its decisions, the Commission must strictly construe article XIII B, section 6, and not apply it as an "equitable remedy to cure the perceived unfairness resulting from political decisions on funding priorities."[183]

The parties raise the following issues in their comments:

- The test claim statute and executive order do not impose a new program or higher level of service that is subject to article XIII B, section 6 because the Water Conservation Law and implementing regulations apply to both public and private water suppliers alike, and do not impose requirements uniquely upon local government.
- The test claim statute and executive order do not impose a new program or higher level of service because the provision of water and other utilities is an activity that could be, and often is, undertaken by private enterprise, and is therefore not a quintessentially governmental service in the manner that police and fire protection are generally accepted to be.
- The test claim does not result in costs mandated by the state for agricultural water suppliers because fees or charges for the provision of irrigation water are not "property-related" fees or charges subject to the limitations of articles XIII C and XIII D.

As described below, the Commission denies this claim on the grounds that most of the code sections and regulations pled do not impose new mandated activities, and all affected claimants have sufficient fee authority as a matter of law to cover the costs of any new requirements. Therefore, this decision does not make findings on the additional potential grounds for denial raised in comments on the draft proposed decision summarized above.

A. South Feather Water and Power Agency, Paradise Irrigation District, Oakdale Irrigation District, and Glenn-Colusa Irrigation District are Subject to the Revenue Limitations of Article XIII B, and are Therefore Eligible for Reimbursement Pursuant to Article XIII B, Section 6.

1. To be eligible for reimbursement, a local agency must be subject to the taxing and spending limitations of articles XIII A and XIII B.

[183] *County of Sonoma, supra*, 84 Cal.App.4th 1265, 1280 [citing *City of San Jose, supra*].

An interpretation of article XIII B, section 6 requires an understanding of articles XIII A and XIII B. "Articles XIII A and XIII B work in tandem, together restricting California governments' power both to levy and to spend taxes for public purposes."[184]

In 1978, the voters adopted Proposition 13, which added article XIII A to the California Constitution. Article XIII A drastically reduced property tax revenue previously enjoyed by local governments by providing that "the maximum amount of any ad valorem tax on real property shall not exceed one percent (1%) of the full cash value of such property," and that the one percent (1%) tax was to be collected by counties and "apportioned according to law to the districts within the counties..."[185] In addition to limiting the property tax, section 4 also restricts a local government's ability to impose special taxes by requiring a two-thirds approval by voters.[186]

Article XIII B was adopted by the voters as Proposition 4 less than 18 months after the addition of article XIII A to the state Constitution, and was billed as "the next logical step to Proposition 13."[187] While article XIII A is aimed at controlling ad valorem property taxes and the imposition of new special taxes, "the thrust of article XIII B is toward placing certain limitations on the growth of appropriations at both the state and local government level; in particular, Article XIII B places limits on the authorization to expend the 'proceeds of taxes.'"[188]

Article XIII B established an "appropriations limit," or spending limit for each "entity of local government" beginning in fiscal year 1980-1981.[189] Specifically, the appropriations limit provides as follows:

> The total annual appropriations subject to limitation of the State and of each local government shall not exceed the appropriations limit of the entity of government for the prior year adjusted for the change in the cost of living and the change in population, except as otherwise provided in this article.[190]

No "appropriations subject to limitation" may be made in excess of the appropriations limit, and revenues received in excess of authorized appropriations must be returned to the taxpayers within the following two fiscal years.[191] Article XIII B does not limit the ability to expend government funds collected from *all sources*; the appropriations limit is based on "appropriations subject to limitation," which means, pursuant to article XIII B, section 8, "any authorization to

expend during a fiscal year the *proceeds of taxes* levied by or for that entity."[192] Appropriations subject to limitation do not include "local agency loan funds or indebtedness funds"; "investment (or authorizations to invest) funds...of an entity of local government in accounts at banks...or in liquid securities";[193] "[a]ppropriations for debt service"; "[a]ppropriations required to comply with mandates of the courts or the federal government"; and "[a]ppropriations of any special district which existed on January 1, 1978 and which did not as of the 1977-78 fiscal year levy an ad valorem tax on property in excess of 12 [and one half] cents per $100 of assessed value; or the appropriations of any special district then existing or thereafter created by a vote of the people, which is totally funded by other than the proceeds of taxes."[194]

Proposition 4 also added article XIII B, section 6 to require the state to reimburse local governments for any additional expenditures that might be mandated by the state, and which would rely solely on revenues subject to the appropriations limit. The California Supreme Court, in *County of Fresno v. State of California*,[195] explained:

> Section 6 was included in article XIII B in recognition that article XIII A of the Constitution severely restricted the taxing powers of local governments. (See *County of Los Angeles I, supra,* 43 Cal.3d at p. 61.) The provision was intended to preclude the state from shifting financial responsibility for carrying out governmental functions onto local entities that were ill equipped to handle the task. (*Ibid.*; see *Lucia Mar Unified School Dist. v. Honig* (1988) 44 Cal.3d 830, 836, fn. 6.) Specifically, it was designed to protect the tax revenues of local governments from state mandates that would require expenditure of such revenues. Thus, although its language broadly declares that the "state shall provide a subvention of funds to reimburse ... local government for the costs [of a state-mandated new] program or higher level of service," read in its textual and historical context section 6 of article XIII B requires subvention only when the costs in question can be recovered *solely from tax revenues*.[196]

Not every local agency is subject to the restrictions of article XIII B, and therefore not every local agency is entitled to reimbursement. Redevelopment agencies, for example, have been identified by the courts as being exempt from the restrictions of article XIII B. In *Bell Community Redevelopment Agency v. Woolsey*, the Second District Court of Appeal concluded that a redevelopment agency's power to issue bonds, and to repay those bonds with its tax increment, was not subject to the spending limit of article XIII B. The court reasoned that to construe tax increment payments as appropriations subject to limitation "would be directly contrary to the mandate of section 7," which provides that "[n]othing in this Article shall be construed to impair the ability of the state or of any local government to meet its obligations with

[193] California Constitution, article XIII B, section 8.

[194] California Constitution, article XIII B, section 9 (added, Nov. 7, 1979; amended by Proposition 111, June 5, 1990).

[195] *County of Fresno*, *supra*, (1991) 53 Cal.3d 482.

[196] *Id*, at p. 487. Emphasis in original.

respect to existing or future bonded indebtedness."[197] In addition, the court found that article XVI, section 16, addressing the funding of redevelopment agencies, was inconsistent with the limitations of article XIII B:

> Article XVI, section 16, provides that tax increment revenues "may be irrevocably pledged" to the payment of tax allocation bonds. If bonds must annually compete for payment within an annual appropriations limit, and their payment depend upon complying with the such limit [*sic*], it is clear that tax allocation proceeds cannot be irrevocably pledged to the payment of the bonds. Annual bond payments would be contingent upon factors extraneous to the pledge. That is, bond payments would be revocable every year of their life to the extent that they conflicted with an annual appropriation limit. The untoward effect would be that bonds would become unsaleable because a purchaser could not depend upon the agency having a sure source of payment for such bonds.[198]

The court therefore concluded that redevelopment agencies could not reasonably be subject to article XIII B, and therefore upheld Health and Safety Code section 33678, and ordered that the writ issue to compel Woolsey to publish the notice.

Accordingly, in *Redevelopment Agency of San Marcos v. Commission on State Mandates*,[199] the court held that redevelopment agencies were not eligible to claim reimbursement because Health and Safety Code section 33678 exempted tax increment financing, their primary source of revenue, from the limitations of article XIII B.

> Because of the nature of the financing they receive, tax increment financing, redevelopment agencies are not subject to this type of appropriations limitations or spending caps; they do not expend any "proceeds of taxes." Nor do they raise, through tax increment financing, "general revenues for the local entity." The purpose for which state subvention of funds was created, to protect local agencies from having the state transfer its cost of government from itself to the local level, is therefore not brought into play when redevelopment agencies are required to allocate their tax increment financing in a particular manner...
>
> For all these reasons, we conclude the same policies which support exempting tax increment revenues from article XIII B appropriations limits also support denying reimbursement under section 6... [The] costs of depositing tax increment revenues in the Housing Fund are attributable not directly to tax revenues, but to the benefit received by the Agency from the tax increment financing scheme, which is one step removed from other local agencies' collection of tax revenues.[200]

---

[197] (1985) 169 Cal.App.3d 24, at p. 31 [quoting article XIII B, section 7].

[198] *Id*, at p. 31.

[199] (1997) 55 Cal.App.4th 976.

[200] *Redevelopment Agency of San Marcos*, *supra*, 55 Cal.App.4th at pp. 986-987 [internal citations omitted].

In 2000, the Third District Court of Appeal, in *City of El Monte v. Commission on State Mandates,* affirmed the reasoning of the *San Marcos* decision, holding that a redevelopment agency cannot accept the benefits of an exemption from article XIII B's spending limit while asserting an entitlement to reimbursement under article XIII B, section 6.[201]

Therefore, pursuant to the plain language of article XIII B, section 9 and the decisions in *County of Fresno*, *supra*, *Redevelopment Agency of San Marcos*, *supra*, and *City of El Monte*, *supra*, a local agency that does not collect and expend "proceeds of taxes" is not subject to the tax and spend limitations of articles XIII A and B, and therefore is not entitled to claim reimbursement pursuant to article XIII B, section 6.

Nevertheless, claimants argue that *County of Fresno* and the redevelopment agency cases do not apply in this case. Specifically, claimants argue that *County of Fresno*, *supra*, predates Proposition 218, which added articles XIII C and XIII D to the California Constitution, and is factually distinguishable from this test claim because the test claim statute at issue in *County of Fresno* specifically authorized user fees to pay for the mandated activities. With respect to the redevelopment cases (*Bell Community Redevelopment Agency*, *Redevelopment Agency of San Marcos*, and *City of El Monte*), the claimants argue that the courts' findings rely on Health and Safety Code section 33678, which specifically excepts the revenues of redevelopment agencies from the scope of revenue-limited appropriations under article XIII B.[202] In addition, the claimants argue that the above reasoning "would prohibit state subvention for every enterprise district in the state that is subject to Proposition 218…" and "would create a class of local agencies that are per se ineligible for reimbursement under this test claim, all potential future test claims, and all previous test claims dating back to Proposition 218's passage in 1996."[203] In addition, both the claimants and CSDA suggest that the Commission broaden the scope of reimbursement eligibility under article XIII B, section 6, beyond that articulated by the courts, and beyond the plain language of articles XIII A and XIII B.[204] The claimants and CSDA urge the Commission to consider the restrictions placed on special districts' authority to impose assessments, fees, or charges by articles XIII C and XIII D to be part of the "increasingly limited revenues sources" that subvention under section 6 was intended to protect. The claimants and CSDA would have the Commission broadly interpret and extend the subvention requirement and treat fee authority subject to proposition 218 as proceeds of taxes, "to advance the goal of 'preclud[ing] the state from shifting financial responsibility for carrying out governmental functions onto local entities that [are] ill equipped to handle the task."[205]

[203] Exhibit R, Claimant Comments on Draft Proposed Decision, pages 14-15.

[204] See Exhibit R, Claimant Comments on Draft Proposed Decision, page 21; Exhibit S, CSDA Comments on Draft Proposed Decision, pages 10-12 [Arguing that the restrictions of articles XIII C and XIII D are more onerous than the revenue limits of article XIII B, and the Commission should "recognize these restrictions…" and "Articles XIII A, B, C, and D should be read together and harmonized…"].

[205] Exhibit R, Claimant Comments on Draft Proposed Decision, page 21 [quoting *County of Fresno*, *supra* 53 Cal.3d, at p. 487.].

The claimant's comments do not alter the above analysis. The factual distinction that claimants allege between this test claim and *County of Fresno* is not dispositive.[206] Specific fee authority provided by the test claim statute is not necessary: so long as a local government's statutory fee authority can be legally applied to alleged activities mandated by the test claim statute, there are no *costs mandated by the state* within the meaning of Government Code section 17514 and article XIII B, section 6, to the extent of that fee authority.[207] If the local entity is not compelled to rely on *appropriations subject to limitation* to comply with the alleged mandate, no reimbursement is required.[208]

The claimant's comments addressing the redevelopment cases are similarly unpersuasive. Those cases are discussed above not as analogues for the types of special districts represented in this test claim, but only to demonstrate that *not all local government entities* are subject to articles XIII A and XIII B, and that an agency that is not bound by article XIII B cannot assert an entitlement to reimbursement under section 6.[209]

Moreover, enterprise districts, and indeed any local government entity funded exclusively through user fees, charges, or assessments, *are* per se ineligible for mandate reimbursement. This is so because only a mandate to expend revenues that are subject to the appropriations limit, as defined and expounded upon by the courts,[210] can entitle a local government entity to mandate reimbursement. In other words, a local agency that is funded solely by user fees or charges, (or tax increment revenues, as discussed above), or appropriations for debt service, or any combination of revenues "other than the proceeds of taxes" is an agency that is not subject to the appropriations limit, and therefore not entitled to subvention.[211]

This interpretation is supported by decades of mandates precedent and is consistent with the purpose of article XIII B. As discussed above, "Section 6 was included in article XIII B in recognition that article XIII A...severely restricted the *taxing* powers of local governments."[212] Article XIII B "was not intended to reach beyond taxation..." and "would not restrict the growth in appropriations financed from other [i.e., nontax] sources of revenue..."[213] The issue, then, is

[211] California Constitution, article XIII B, section 9 (Adopted Nov. 6, 1979; Amended June 5, 1990).

[212] See *County of Fresno*, *supra*, 53 Cal.3d at p. 487 [emphasis added].

[213] *Ibid.*

not *how many* different sources of revenue a local entity has at its disposal, as suggested by claimants;[214] it is whether and to what extent those sources of revenue (and the appropriations to be made) are *limited* by articles XIII A and XIII B. Based on the foregoing, nothing in claimants' comments alters the above analysis.

The Commission also disagrees with the interpretation offered by CSDA. CSDA argues in its comments that Proposition 1A, adopted in 2004, made changes to article XIII B, section 6, which must be considered by the Commission, and that the voters' intent and understanding when adopting Proposition 1A should weigh heavily on the Commission's interpretation of the amended text.[215] However, the amendments made by Proposition 1A require the Legislature to either pay or suspend a mandate for local agencies, and expand the definition of a new program or higher level of service. The plain language of Proposition 1A does not address which entities are eligible to claim reimbursement, and does not require reimbursement for all special districts, including those that do not receive property tax revenue and are not subject to the appropriations limitation of article XIII B.[216] CSDA's comments do not alter the above analysis.

Based on the foregoing, a local agency that does not collect and expend "proceeds of taxes" is not subject to the tax and spend limitations of articles XIII A and B, and therefore is not entitled to claim reimbursement pursuant to article XIII B, section 6.

2. Biggs-West Gridley Water District and Richvale Irrigation District are not subject to the taxing and spending limitations of articles XIII A and XIII B, and are therefore not eligible for reimbursement under article XIII B, section 6 of the California Constitution. However, Oakdale Irrigation District and Glenn-Colusa Irrigation District are subject to the taxing and spending limitations, have been substituted in as claimants for both of the consolidated test claims, and are eligible for reimbursement under article XIII B, section 6 of the California Constitution.

10-TC-12 was originally filed by four co-claimants: South Feather, Paradise, Biggs, and Richvale.[217] 12-TC-01 was filed by Richvale and Biggs only,[218] and the two test claims were consolidated for analysis and hearing and renamed *Water Conservation*. Based on the analysis herein, the Commission finds that Richvale and Biggs are ineligible to claim reimbursement under article XIII B, section 6, and test claim 12-TC-01 would have to be dismissed for want of an eligible claimant.[219] However, Oakdale and Glenn-Colusa have requested to be substituted in on both test claims in the place of the ineligible claimants.[220] The analysis below will therefore address the eligibility of each of the six co-claimants, and will show that South Feather, Paradise,

[217] Exhibit A, Test Claim 10-TC-12.

[218] Exhibit B, Test Claim 12-TC-01.

[219] See Exhibit K, Notice of Pending Dismissal.

[220] Exhibit N, Request for Substitution of Parties by Oakdale Irrigation District; Exhibit O, Request for Substitution of Parties by Glenn-Colusa Irrigation District.

Oakdale, and Glenn-Colusa are all eligible to claim reimbursement under article XIII B, section 6, and therefore the Commission maintains jurisdiction over both of the consolidated test claims.

a. Biggs-West Gridley Water District and Richvale Irrigation District are not eligible to claim reimbursement under article XIII B, section 6.

The Districts have acknowledged that "Richvale and Biggs do not receive property tax revenue."[221] With respect to Richvale, that statement is consistent with the original test claim filing, in which Richvale stated that it "does not receive an annual share of property tax revenue."[222] However, Biggs had earlier stated in a declaration by Karen Peters, the District's Executive Administrator, that "Biggs receives an annual share of property tax revenue," and for "Fiscal Year 2011 the amount of property tax revenue is expected to be approximately $64,000."[223] Biggs has since determined that the Peters declaration was in error, and a more recent declaration from Eugene Massa, the District's General Manager, states that "[t]hat revenue estimate actually reflects Biggs' *assessment*, equating to $2 per acre within Biggs' boundaries." Mr. Massa goes on to state that "Biggs does not currently receive any share of ad valorem *property tax* revenue."[224,225]

Even though Richvale and Biggs acknowledge that they receive no property tax revenue, they argue that they and "other similarly situated public agencies should not be deemed ineligible for subvention due to a historical quirk that resulted in those agencies not receiving a share of ad valorem property taxes."[226] The "historical quirk" to which Richvale and Biggs refer, it is assumed, is the fact that Richvale and Biggs either did not exist or did not share in ad valorem property tax revenue as of the 1977-78 fiscal year, which would render at least some portion of

[223] Exhibit A, 10-TC-12, page 30.

[224] Exhibit I, Claimant Response to Request for Additional Information, page 393 [emphasis added].

[225] See also Exhibit X, Special Districts Annual Report 2010-2011, pages 184; 389; 1051 [The Special Districts Annual Report for 2010-2011 is consistent with Richvale's statement that it does not receive property tax revenue. Table 8 indicates no property tax receipts, and Table 1 does not indicate an appropriations limit. Biggs did not submit the necessary information to the SCO, and therefore does not appear in Tables 1 or 8 of the 2010-2011 Special Districts Annual Report. Based on that report, and the admissions of the Districts, a notice of dismissal was issued on November 12, 2013 for test claim 12-TC-01, for which Richvale and Biggs were the only named claimants. In response to the Notice of Pending Dismissal, the Districts submitted an Appeal of Dismissal, in which they argue that Proposition 218 undermines a local agency's fee authority, and that the Districts are eligible for reimbursement "for the reasons already explained in the Districts' 'Claimants' Response to Request for Additional Information 10-TC-12 and 12-TC-01.'" (Exhibit K, Notice of Pending Dismissal; Exhibit L, Appeal of Executive Director's Decision)].

[226] Exhibit R, Claimant Comments on Draft Proposed Decision, page 20.

their revenues subject to the appropriations limit, in accordance with article XIII B, section 9.[227] They argue that all public agencies are ill-equipped to cover the costs of new mandates, whether they are subject to the tax and spend limits of articles XIII A and XIII B, or the fee and assessment restrictions of articles XIII C and XIII D.[228] In addition, Richvale and Biggs assert that to the extent they do have authority to raise revenues other than taxes, any increased fees or assessments necessary to cover the costs of the required activities would, by definition, be classified as proceeds of taxes under article XIII B, section 8.[229]

The Districts' reasoning is both circular and fundamentally unsound. Article XIII B, section 8 provides that "proceeds of taxes" includes "all tax revenues and the proceeds to an entity of government from (1) regulatory licenses, user charges, and user fees *to the extent that those proceeds exceed the costs reasonably borne by that entity in providing the regulation, product, or service*, and (2) the investment of tax revenues."[230] The districts argue, therefore, that "proceeds of taxes" includes not only revenues directly derived from taxes, "but also revenues exceeding the costs to fund the services provided by the agency." The Districts argue that Richvale and Biggs are unable, under Proposition 218, to impose new fees as a matter of law, and must reallocate existing fees, which constitute "proceeds of taxes" under article XIII B, section 8. But Proposition 218 added article XIII D to expressly provide that fees or charges "*shall not be extended, imposed, or increased*" if revenues derived from the fee or charge exceed the funds needed to provide the property-related service; and "shall not be used for any purpose other than that for which the fee or charge was imposed."[231] Therefore, Proposition 218 imposes an absolute bar to raising fees beyond those necessary to provide the property-related service, or "reallocating" fees for a purpose other than that for which the fee or charge was imposed.

Moreover, Richvale and Biggs' reasoning that such fees *would automatically and by definition* constitute proceeds of taxes under article XIII B, section 8, rests on the initial presumption that such fees or charges would "exceed" those necessary to provide the service. In other words, the Districts presume that the costs of the mandate are unrelated to, or exceed, the costs of providing water service to the districts' users.[232] On the contrary, any fees or charges, whether *new or existing*, imposed by Richvale and Biggs are imposed for the purpose of providing irrigation water. The alleged mandated activities imposed upon irrigation districts by the test claim statute and regulations are required for those districts to *continue* providing irrigation water. Therefore, utilizing revenues from fees or charges to comply with the alleged new requirements is not

---

[227] Section 9 states that appropriations subject to limitation do not include: "Appropriations of any special district which existed on January 1, 1978, and which did not as of the 1977–78 fiscal year levy an ad valorem tax on property in excess of 12 1/2 cents per $100 of assessed value; or the appropriations of any special district then existing or thereafter created by a vote of the people, which is totally funded by other than the proceeds of taxes."

[228] Exhibit R, Claimant Comments on Draft Proposed Decision, page 20.

[229] Exhibit I, Claimant Response to Request for Additional Information, page 3.

[230] Exhibit I, Claimant Response to Request for Additional Information, page 3 [citing California Constitution, article XIII B, section 8 (emphasis added)].

[231] Article XIII D, section 6(b) (added November 5, 1996, by Proposition 218).

[232] Exhibit I, Claimant Response to Request for Additional Information, pages 4-5.

"divert[ing] existing revenues from their authorized purposes..."[233] Rather, the increased or reallocated fees are merely being used to ensure that claimants can continue to provide water service consistently with all applicable legal requirements. Claimants' assertion that an increase or reallocation of fees alters the legal significance of such fees pursuant to article XIII B, section 8 is not supported by the law or the record.

Simply put, Richvale and Biggs do not impose or collect taxes[234] and the Commission cannot say, as a matter of law, that fees increased or imposed to comply with the alleged mandate would constitute proceeds of taxes, within the meaning of article XIII B, section 8. Unless or until a court determines that article XIII B, section 8 can be applied in this manner, the Commission must presume that only those local government entities that collect and expend proceeds of taxes, within the meaning of article XIII A, are subject to the spending limits of article XIII B, including section 6.

Based on the foregoing, the Commission finds that Richvale Irrigation District and Biggs-West Gridley Water District are not subject to the taxing and spending limitations of articles XIII A and XIII B, and are therefore not eligible to claim reimbursement under article XIII B, section 6.

b. South Feather Water and Power Agency and Paradise Irrigation District are eligible to claim reimbursement under article XIII B, section 6.

Claimants state that "South Feather and Paradise receive property tax revenue," and "are in the process of establishing their appropriations limits for their current fiscal years."[235]

Declarations attached to claimants' response state that both South Feather and Paradise are in the process of determining and adopting an appropriations limit. Kevin Phillips, Finance Manager of Paradise, stated that during his tenure, "I have not calculated or otherwise established Paradise's appropriation limit as set forth in Proposition 4." Mr. Phillips further states that "[a]t the request of Paradise's legal counsel, I have begun working to establish Paradise's appropriation limit and intend...to ask Paradise's Board of Directors to adopt a resolution...for its current fiscal year."[236] Similarly, Steve Wong, Finance Division Manager of South Feather, states that he has not "calculated or otherwise established South Feather's appropriation limit" during his employment with South Feather. Mr. Wong further states that "[a]t the request of South Feather's legal counsel, I have begun working to establish South Feather's appropriation limit and intend, after the requisite public review period, to ask South Feather's Board of Directors to adopt a resolution establishing South Feather's appropriation limit for its current fiscal year."[237]

---

[233] See Exhibit I, Claimant Response to Request for Additional Information, pages 4-5.

[234] Note that special districts generally have statutory authorization to impose special taxes, but only with two-thirds voter approval (See article XIII A, section 4). However, there is no evidence in the record indicating that Richvale or Biggs currently collects or expends special taxes.

[235] Exhibit I, Claimant Response to Request for Additional Information, pages 1-2.

[236] See Exhibit I, Claimant Response to Request for Additional Information, page 394.

[237] See Exhibit I, Claimant Response to Request for Additional Information, page 427.

Based on the foregoing, the Commission finds that both South Feather and Paradise are subject to the tax and spend limitations of articles XIII A and XIII B, and are therefore eligible to claim reimbursement under article XIII B, section 6.

3. Oakdale Irrigation District and Glenn-Colusa Irrigation District are eligible to claim reimbursement under article XIII B, section 6 and are thus substituted in as claimants in the consolidated test claims in place of Biggs-West Gridley Water District and Richvale Irrigation District.

Pursuant to the Notice of Pending Dismissal, Oakdale submitted a request to be substituted in as a party on 10-TC-12 and 12-TC-01 on January 13, 2014. Oakdale states that it is subject to the tax and spend limitations of articles XIII A and XIII B, and that it is an agricultural water supplier "subject to the mandates imposed by the Agricultural Water Measurement Regulations...and the Water Conservation Act of 2009."[238] The declaration of Steve Knell, Oakdale's General Manager, attached to the Request for Substitution, states that Oakdale "receives an annual share of ad valorem property tax revenue from Stanislaus and San Joaquin counties." The declaration further states that the District "received $5,701,730 in property taxes for 2011-2013 and expects to receive approximately $1.9 million in 2014."

The Special Districts Annual Reports for 2010-2011 and 2011-2012 do not indicate an appropriations limit for Oakdale in Table 1,[239] but they do indicate that Oakdale received property tax revenue in Table 8 for 2010-2011 and 2011-2012.[240]

Similarly, Glenn-Colusa submitted a request to be substituted in as a party on both test claims. Glenn-Colusa asserted in its request that it "is subject to the tax and spend limitations of Articles XIII A and XIII B of the California Constitution," and is an agricultural water supplier, subject to "the mandates imposed by the Water Conservation Act of 2009...and the Agricultural Water Measurement Regulations."[241] In declarations attached to the Request for Substitution, Thaddeus Bettner, General Manager of Glenn-Colusa, asserts that the District "received $520,420 in property taxes in 2013 and expects to receive $528,300 in 2014."[242]

Table 8 of the Special Districts Annual Report indicates that Glenn-Colusa collected property taxes in 2010-2011 and 2011-2012,[243] but Table 1 does not indicate an appropriations limit for the district.[244]

---

[238] Exhibit N, Request for Substitution of Parties by Oakdale Irrigation District, page 2.

[239] Exhibit X, Special Districts Annual Reports for 2010-2011 and 2011-2012, pages 159 and 157, respectively.

[240] Exhibit X, Special Districts Annual Reports for 2010-2011 and 2011-2012, pages 381 and 379, respectively.

[241] Exhibit O, Request for Substitution of Parties by Glenn-Colusa Irrigation District, pages 1-2.

[242] Exhibit O, Request for Substitution of Parties by Glenn-Colusa Irrigation District, page 7.

[243] Exhibit X, Special Districts Annual Report, 2010-2011 and 2011-2012, pages 357 and 355, respectively.

[244] Exhibit X, Special Districts Annual Report, 2010-2011 and 2011-2012, pages 104 and 101, respectively.

Based on the evidence in the record, including the declarations of the General Managers of Oakdale and Glenn-Colusa, as well as the information reported to the SCO in the Special Districts Annual Reports for fiscal years 2010-2011 and 2011-2012, both the substitute claimants collect some amount of property tax revenue. In turn, because property tax revenue is subject to the appropriations limit, both claimants also expend revenues subject to the appropriations limit, in accordance with article XIII B. A local government entity that is subject to both articles XIII A and XIII B is eligible for subvention under article XIII B, section 6, and is an eligible claimant before the Commission.

The Commission concludes that both Oakdale and Glenn-Colusa are subject to article XIII B as a matter of law, because they have authority to collect and expend property tax revenue.

Based on the foregoing, the Commission finds that Oakdale and Glenn-Colusa are subject to the tax and spend limitations of articles XIII A and XIII B, and are therefore eligible to claim reimbursement under article XIII B, section 6.

B. Some of the Test Claim Statutes and Regulations Impose New Requirements on Urban Retail Water Suppliers.

Test claim 10-TC-12 alleged all of Part 2.55 of Division 6 of the Water Code, which consists of sections 10608 through 10608.64. The following analysis addresses only those sections of Part 2.55 containing mandatory language, and those sections specifically alleged in the test claim narrative. Sections 10608.22, 10608.28, 10608.36, 10608.43, 10608.44, 10608.50, 10608.56, 10608.60, and 10608.64 are not analyzed below, because those sections were not specifically alleged to impose increased costs mandated by the state, and because they do not impose new requirements on local government.

1. Water Code sections 10608, 10608.4(d), 10608.12(a; p), and 10608.16(a), as added by Statutes 2009-2010, 7th Extraordinary Session, chapter 4 (SBX7 7), do not impose any new requirements on local government.

Water Code section 10608 states the Legislature's findings and declarations, including: "Water is a public resource that the California Constitution protects against waste and unreasonable use..." and "Reduced water use through conservation provides significant energy and environmental benefits, and can help protect water quality, improve streamflows, and reduce greenhouse gas emissions." Subdivision (g), specifically invoked by the claimants,[245] states that "[t]he Governor has called for a 20 percent per capita reduction in urban water use statewide by 2020."[246] The plain language of this section establishes a goal, but does not, itself, impose any new requirements on local government.

Water Code section 10608.4 as added, states the "intent of the legislature," including, as highlighted by the claimants,[247] to "[e]stablish a method or methods for urban retail water suppliers to determine targets for achieving increased water use efficiency by the year 2020, in

[245] Exhibit A, Test Claim 10-TC-12, page 3.

[246] Water Code section 10608(a; d; g) (Stats. 2009-2010, 7th Ex. Sess. ch. 4 (SBX7 7)).

[247] Exhibit A, Test Claim 10-TC-12, page 3.

accordance with the Governor's goal of a 20 percent reduction."[248] The plain language of this section expresses legislative intent, and does not impose any new activities on local government

Water Code section 10608.16(a), as added, states that "[t]he state shall achieve a 20 percent reduction in urban per capita water use in California on or before December 31, 2020." In addition, section 10608.16(b) provides that the state "shall make incremental progress towards the state target specified in subdivision (a) by reducing urban per capita water use by at least 10 percent on or before December 31, 2015."[249] The plain language of this section is directed to the State generally, and does not impose any new mandated activities on local government.

Water Code section 10608.12 provides that "the following definitions govern the construction of this part:" An "urban retail water supplier " is defined as "a water supplier, either publicly or privately owned, that directly provides potable municipal water to more than 3,000 end users or that supplies more than 3,000 acre-feet of potable water annually at retail for municipal purposes."[250] The claimants allege that the Water Conservation Act imposes unfunded state mandates on urban retail water suppliers, and that South Feather and Paradise "are 'urban retail water suppliers,' as defined."[251] Likewise, under section 10608.12, an "agricultural water supplier" is defined as "a water supplier, either publicly or privately owned, providing water to 10,000 or more irrigated acres, excluding recycled water."[252] The claimants allege that this definition "expanded the definition of what constitutes an agricultural water supplier," and thus required a greater number of entities to adopt AWMPs and perform other activities under the Water Code.[253] However, whatever new activities may be required by the test claim statutes, the plain language of amended section 10608.12 does not impose any new requirements on urban retail water suppliers or agricultural water suppliers; section 10608.12 merely prescribes the applicability and scope of the other requirements of the test claim statutes.

Based on the foregoing, the Commission finds that sections 10608, 10608.4 10608.12, and 10608.16, pled as added, do not impose any new requirements on local government, and are therefore denied.

2. Water Code sections 10608.20(a; b; e; and j), 10608.24, and 10608.40, as added by Statutes 2009-2010, 7th Extraordinary Session, chapter 4 (SBX7 7) impose new required activities on urban water suppliers.

Prior law required the preparation of an urban water management plan, and required urban water suppliers to update the plan every five years. The test claim statutes add additional information related to conservation goals to that required to be included in a supplier's UWMP, and authorize an extension of time from December 31, 2010 to July 1, 2011 for the adoption of the next UWMP. As added by the test claim statute, section 10608.20 provides, in pertinent part:

[253] Exhibit A, 10-TC-12, page 8.

(a)(1) Each urban retail water supplier shall develop urban water use targets and an interim urban water use target by July 1, 2011. Urban retail water suppliers may elect to determine and report progress toward achieving these targets on an individual or regional basis, as provided in subdivision (a) of Section 10608.28, and may determine the targets on a fiscal year or calendar year basis.

(2) It is the intent of the Legislature that the urban water use targets described in subdivision (a) cumulatively result in a 20-percent reduction from the baseline daily per capita water use by December 31, 2020.

(b) An urban retail water supplier shall adopt one of the following methods for determining its urban water use target pursuant to subdivision (a):

(1) Eighty percent of the urban retail water supplier's baseline per capita daily water use.

(2) The per capita daily water use that is estimated using the sum of the following performance standards:

(A) For indoor residential water use, 55 gallons per capita daily water use as a provisional standard. Upon completion of the department's 2016 report to the Legislature pursuant to Section 10608.42, this standard may be adjusted by the Legislature by statute.

(B) For landscape irrigated through dedicated or residential meters or connections, water efficiency equivalent to the standards of the Model Water Efficient Landscape Ordinance set forth in Chapter 2.7 (commencing with Section 490) of Division 2 of Title 23 of the California Code of Regulations, as in effect the later of the year of the landscape's installation or 1992. An urban retail water supplier using the approach specified in this subparagraph shall use satellite imagery, site visits, or other best available technology to develop an accurate estimate of landscaped areas.

(C) For commercial, industrial, and institutional uses, a 10-percent reduction in water use from the baseline commercial, industrial, and institutional water use by 2020.

(3) Ninety-five percent of the applicable state hydrologic region target, as set forth in the state's draft 20x2020 Water Conservation Plan (dated April 30, 2009). If the service area of an urban water supplier includes more than one hydrologic region, the supplier shall apportion its service area to each region based on population or area.

(4) A method that shall be identified and developed by the department, through a public process, and reported to the Legislature no later than December 31, 2010...[254]

In addition, section 10608.20(e) provides that an urban retail water supplier "shall include in its urban water management plan due in 2010...the baseline daily per capita water use, urban water

[254] Water Code section 10608.20 (Stats. 2009-2010, 7th Ex. Sess. ch. 4 (SBX7 7)).

use target, interim urban water use target, and compliance daily per capita water use, along with the bases for determining estimates, including references to supporting data."[255]

And, section 10608.20(j) provides that an urban retail water supplier "shall be granted an extension to July 1, 2011..." to adopt a complying water management plan, and that an urban retail water supplier that adopts an urban water management plan due in 2010 "that does not use the methodologies developed by the department pursuant to subdivision (h) shall amend the plan by July 1, 2011 to comply with this part."[256]

Section 10608.40 provides that an urban retail water supplier shall also "report to [DWR] on their progress in meeting their urban water use targets as part of their [UWMPs] submitted pursuant to Section 10631."[257]

Section 10608.24 provides that each urban retail water supplier "shall meet its interim urban water use target by December 31, 2015," and "shall meet its [final] urban water use target by December 31, 2020."[258]

As discussed above, prior law required the adoption of an UWMP, which, pursuant to section 10631, included a detailed description and analysis of water supplies within the service area, including reliability of supply in normal, dry, and multiple dry years, and a description and evaluation of water demand management measures currently being implemented and scheduled for implementation.[259] Pursuant to existing section 10621, that plan was required to be updated "once every five years...in years ending in five and zero."[260] And, existing section 10631(e) also required identification and quantification of past, current and projected water use over a five-year period including, but not necessarily limited to, all of the following uses:

> (A) Single-family residential.
>
> (B) Multifamily.
>
> (C) Commercial.
>
> (D) Industrial.
>
> (E) Institutional and governmental.
>
> (F) Landscape.
>
> (G) Sales to other agencies.
>
> (H) Saline water intrusion barriers, groundwater recharge, or conjunctive use, or any combination thereof.

---

[255] Water Code section 10608.20(e) (Stats. 2009-2010, 7th Ex. Sess. ch. 4 (SBX7 7)).

[256] Water Code section 10608.20(j) (Stats. 2009-2010, 7th Ex. Sess. ch. 4 (SBX7 7)).

[257] Water Code section 10608.40 (Stats. 2009-2010, 7th Ex. Sess. ch. 4 (SBX7 7)).

[258] Water Code section 10608.24(a; b) (Stats. 2009-2010, 7th Ex. Sess. ch. 4 (SBX7 7)).

[259] Water Code section 10631 (Stats. 2009, ch. 534 (AB 1465)).

[260] Water Code section 10621 (Stats. 2007, ch. 64 (AB 1376)).

(I) Agricultural.[261]

However, nothing in prior law required the adoption of urban water use targets, baseline information on a per capita basis (as opposed to on a type of use basis), interim and final water use targets, assessment of present and proposed measures to achieve the targeted reductions, or a report on the supplier's progress toward meeting the reductions.

Based on the foregoing, the Commission finds that Water Code sections 10608.20, 10608.24, and 10608.40, as added by the test claim statute, impose new requirements on urban retail water suppliers, as follows:

- Develop urban water use targets and an interim urban water use targets by July 1, 2011.[262]
- Adopt one of the methods specified in section 10608.20(b) for determining an urban water use target.[263]
- Include in its urban water management plan due in 2010 the baseline daily per capita water use, urban water use target, interim urban water use target, and compliance daily per capita water use, along with the bases for determining those estimates, including references to supporting data.[264]
- Report to DWR on their progress in meeting urban water use targets as part of their UWMPs.[265]
- Amend its urban water management plan, by July 1, 2011, to allow use of technical methodologies developed by the department pursuant to subdivisions (b) and (h) of section 10608.20.[266]
- Meet interim urban water use target by December 31, 2015.[267]
- Meet final urban water use target by December 31, 2020.[268]

The activities required to meet the interim and final urban water use targets are intended to vary significantly among local governments based upon differences in climate, population density, levels of per capita water use according to plant water needs, levels of commercial, industrial, and institutional water use, and the amount of hardening that has occurred as a result of prior conservation measures implemented in different regions

---

[261] Water Code section 10631 (Stats. 2009, ch. 534 (AB 1465)).

[262] Water Code section 10608.20(a) (Stats. 2009-2010, 7th Ex. Sess. ch. 4 (SBX7 7)).

[263] Water Code section 10608.20(b) (Stats. 2009-2010, 7th Ex. Sess. ch. 4 (SBX7 7)).

[264] Water Code section 10608.20(e) (Stats. 2009-2010, 7th Ex. Sess. ch. 4 (SBX7 7)).

[265] Water Code section 10608.40 (Stats. 2009-2010, 7th Ex. Sess. ch. 4 (SBX7 7)).

[266] Water Code section 10608.20(i) (Stats. 2009-2010, 7th Ex. Sess. ch. 4 (SBX7 7)).

[267] Water Code section 10608.24(a) (Stats. 2009-2010, 7th Ex. Sess. ch. 4 (SBX7 7)).

[268] Water Code section 10608.24(b) (Stats. 2009-2010, 7th Ex. Sess. ch. 4 (SBX7 7)).

throughout the state. Local variations, therefore, are not expressly stated in the test claim statutes.

3. Water Code section 10608.26, as added by Statutes 2009-2010, 7th Extraordinary Session, chapter 4 (SBX7 7), requires urban water suppliers to conduct at least one public hearing to allow community input regarding an urban retail water supplier's implementation plan.

Section 10608.26 provides that "[i]n complying with this part," an urban retail water supplier shall conduct at least one public hearing "to accomplish all of the following:" (1) allow community input regarding the urban retail water supplier's implementation plan; (2) consider the economic impacts of the urban retail water supplier's implementation plan; and (3) adopt one of the four methods provided in section 10608.20(b) for determining its urban water use target.[269]

The claimants assert that "prior to the Act, there was no requirement to conduct at least one public hearing to allow for community input regarding conservation, consider economic impacts of the implementing the 20% reduction [*sic*], or to adopt a method for determining an urban water use target."[270]

Section 10642, added by Statutes 1983, chapter 1009, required a public hearing prior to *adopting an UWMP*, as follows:

> Prior to adopting a plan, the urban water supplier shall make the plan available for public inspection and shall hold a public hearing thereon. Prior to the hearing, notice of the time and place of hearing shall be published within the jurisdiction of the publicly owned water supplier pursuant to Section 6066 of the Government Code...[271]

However, section 10608.26 requires a public hearing for purposes of allowing public input regarding an implementation plan, considering the economic impacts of an implementation plan, or adopting a method for determining the urban water supplier's water use targets, as required by section 10608.20(b). DWR, the agency with responsibility for implementing the Water Conservation Act, has interpreted these two requirements as only requiring one hearing.[272] As the implementing agency, DWRs interpretation of the Act is entitled to great weight.[273]

Based on the foregoing, the Commission finds that section 10608.26 imposes a new and additional requirement on urban retail water suppliers, as follows:

---

[269] Water Code section 10608.26(a) (Stats. 2009-2010, 7th Ex. Sess. ch. 4 (SBX7 7)).

[270] Exhibit A, 10-TC-12, page 8 [citing Water Code section 10608.26(a)(1-3)].

[271] Water Code section 10642 (Stats. 1983, ch. 1009) [citing Government Code section 6066 (Stats. 1959, ch. 954), which provides for publication once per week for two successive weeks in a newspaper of general circulation].

[272] Exhibit X, Department of Water Resources, *Guidebook to Assist Urban Water Suppliers to Prepare a 2010 Urban Water Management Plan*, pp. A-2 and 3-4.

[273] *Yamaha Corporation of America v. State Board of Equalization* (1998) 19 Cal.4th 1, 10-11.

Include in the public hearing on the adoption of the UWMP an opportunity for community input regarding the urban retail water supplier's implementation plan; consideration of the economic impacts of the implementation plan; and the adoption of a method, pursuant to section 10608.20(b), for determining urban water use targets.[274]

4. Water Code section 10608.42, as added by Statutes 2009-2010, 7th Extraordinary Session, chapter 4 (SBX7 7), does not impose any new requirements on local government.

Section 10608.42 provides:

> The department shall review the 2015 urban water management plans and report to the Legislature by December 31, 2016, on progress towards achieving a 20-percent reduction in urban water use by December 31, 2020. The report shall include recommendations on changes to water efficiency standards or urban water use targets in order to achieve the 20-percent reduction and to reflect updated efficiency information and technology changes.[275]

The claimants allege that section 10608.42 requires an UWMP, adopted by an urban retail water supplier, to "describe the urban retail water supplier's progress toward achieving the 20% reduction by 2020."[276] However, the plain language of this section is directed to DWR, and does not, itself, impose any new activities or requirements on local government.

Based on the foregoing, the Commission finds that section 10608.42 does not impose any new requirements on local government, and is therefore denied.

5. Water Code sections 10608.56 and 10608.8, as added by Statutes 2009-2010, 7th Extraordinary Session, chapter 4 (SBX7 7), do not impose any new requirements on local government.

Section 10806.56 provides that "[o]n and after July 1, 2016, an urban retail water supplier is not eligible for a water grant or loan awarded or administered by the state unless the supplier complies with this part."[277] The plain language of this section does not impose any new requirements on local government; the section only states the consequence of failing to comply with all other requirements of the Act.

Section 10608.8 provides that "[b]ecause an urban agency is not required to meet its urban water use target until 2020 pursuant to subdivision (b) of Section 10608.24, an urban retail water supplier's failure to meet those targets shall not establish a violation of law for purposes of any state administrative or judicial proceeding prior to January 1, 2021."[278] The plain language of

---

[274] Water Code section 10608.26 ((Stats. 2009-2010, 7th Ex. Sess. ch. 4 (SBX7 7)). See also Exhibit X, Department of Water Resources, *Guidebook to Assist Urban Water Suppliers to Prepare a 2010 Urban Water Management Plan*, pp. A-2 and 3-4.

[275] Water Code section 10608.42 (Stats. 2009-2010, 7th Ex. Sess. ch. 4 (SBX7 7)).

[276] Exhibit A, 10-TC-12, page 3.

[277] Water Code section 10608.56 (Stats. 2009-2010, 7th Ex. Sess. ch. 4 (SBX7 7)).

[278] Water Code section 10608.8 (Stats. 2009-2010, 7th Ex. Sess. ch. 4 (SBX7 7)).

this section does not impose any new requirements on local government; rather, the section states that no violation of law shall occur until after the date that urban water use targets are supposed to be met.

The claimants allege that Water Code section 10608.56 imposes reimbursable state-mandated costs, alleging that "[f]ailure to comply with the aforementioned mandates by South Feather and Paradise will result, on and after July 1, 2016, in ineligibility for water grants or loans awarded or administered by the State of California." In addition, the claimants allege that "a failure to meet the 20% target shall be a violation of law on and after January 1, 2021," citing Water Code section 10608.8.[279] The plain language of sections 10608.8 and 10608.56, as described above, do not impose any new activities or tasks on local government; the provisions that the claimants allege only state the consequences of failing to comply with all other requirements of the Act.

Based on the foregoing, the Commission finds that sections 10806.56 and 10806.8 do not impose any new requirements on local government, and are therefore denied.

C. Some of the Test Claim Statutes and Regulations Impose New Requirements on Non-exempt Agricultural Water Suppliers.

Chapter 4 of Part 2.55 of Division 6 of the Water Code consists of a single code section that addresses water conservation requirements for agricultural water suppliers: section 10608.48. The remaining provisions of the test claim statute addressing agricultural water suppliers were added in Part 2.8 of Division 6 of the Water Code, consisting of sections 10800-10853, and address agricultural water management planning requirements. Sections 10608.8 and 10828 provide for exemptions from the requirements of Part 2.55 and Part 2.8, respectively, under certain circumstances, which are addressed where relevant below.

1. Water Code section 10608.48(a-c), as amended by Statutes 2009-2010, 7th Extraordinary Session, chapter 4 (SBX7 7), imposes new requirements on some agricultural water suppliers to implement efficient water management practices, including measurement and a pricing structure based in part on quantity of water delivered; and to implement up to fourteen other efficient water management practices, if locally cost effective and technically feasible.

Section 10608.48 provides for the implementation by agricultural water suppliers of specified critical efficient water management practices, including measurement and volume-based pricing; and *additional* efficient water management practices, where locally cost effective and technically feasible, as follows:

> (a) On or before July 31, 2012, an agricultural water supplier shall implement efficient water management practices pursuant to subdivisions (b) and (c).
>
> (b) Agricultural water suppliers shall implement *all of the following critical efficient management practices*:
>
> (1) Measure the volume of water delivered to customers with sufficient accuracy to comply with subdivision (a) of Section 531.10 and to implement paragraph (2).

[279] Exhibit A, 10-TC-12, page 4.

(2) Adopt a pricing structure for water customers based at least in part on quantity delivered.

(c) Agricultural water suppliers shall implement *additional efficient management practices*, including, but not limited to, practices to accomplish all of the following, *if the measures are locally cost effective and technically feasible*:

(1) Facilitate alternative land use for lands with exceptionally high water duties or whose irrigation contributes to significant problems, including drainage.

(2) Facilitate use of available recycled water that otherwise would not be used beneficially, meets all health and safety criteria, and does not harm crops or soils.

(3) Facilitate the financing of capital improvements for on-farm irrigation systems.

(4) Implement an incentive pricing structure that promotes one or more of the following goals:

(A) More efficient water use at the farm level.

(B) Conjunctive use of groundwater.

(C) Appropriate increase of groundwater recharge.

(D) Reduction in problem drainage.

(E) Improved management of environmental resources.

(F) Effective management of all water sources throughout the year by adjusting seasonal pricing structures based on current conditions.

(5) Expand line or pipe distribution systems, and construct regulatory reservoirs to increase distribution system flexibility and capacity, decrease maintenance, and reduce seepage.

(6) Increase flexibility in water ordering by, and delivery to, water customers within operational limits.

(7) Construct and operate supplier spill and tailwater recovery systems.

(8) Increase planned conjunctive use of surface water and groundwater within the supplier service area.

(9) Automate canal control structures.

(10) Facilitate or promote customer pump testing and evaluation.

(11) Designate a water conservation coordinator who will develop and implement the water management plan and prepare progress reports.

(12) Provide for the availability of water management services to water users. These services may include, but are not limited to, all of the following:

(A) On-farm irrigation and drainage system evaluations.

(B) Normal year and real-time irrigation scheduling and crop evapotranspiration information.

(C) Surface water, groundwater, and drainage water quantity and quality data.

(D) Agricultural water management educational programs and materials for farmers, staff, and the public.

(13) Evaluate the policies of agencies that provide the supplier with water to identify the potential for institutional changes to allow more flexible water deliveries and storage.

(14) Evaluate and improve the efficiencies of the supplier's pumps.[280]

The claimants allege that section 10608.48 requires agricultural water suppliers (Oakdale and Glenn-Colusa) to "measure the volume of water delivered to their customers using best professional practices to achieve a minimum level of measurement accuracy at the farm-gate." In addition, they allege, agricultural water suppliers are required to "adopt a pricing structure for water customers based on the quantity of water delivered." The claimants further allege that "[i]f 'locally cost effective' and technically feasible, agricultural water suppliers are required to implement fourteen additional efficient management practices" specified in section 10608.48(c).[281]

The claimants argue that prior to the test claim statute, agricultural water suppliers "were not required to have a pricing structure based, at least in part, on the quantity of water delivered," and were not required to measure the volume of water delivered if it was not locally cost effective to do so. The claimants assert that "[w]hile subdivision (a) of Water Code section 531.10 was a preexisting obligation, subdivision (b) of that same section gave an exception to the farm-gate measurement requirement if the measurement devices were not locally cost effective." The claimants conclude that now "[t]he Act requires compliance with subdivision (a) regardless of whether it is locally cost effective."[282] In addition, the claimants assert that prior to the Act, "there was no requirement to implement up to 14 additional conservation measures if locally cost effective and technically feasible."[283]

Section 531.10 of the Water Measurement Law, as added by Statutes 2007, chapter 675 provides, in its entirety:

(a) An agricultural water supplier shall submit an annual report to the department that summarizes aggregated farm-gate delivery data, on a monthly or bimonthly basis, using best professional practices.

(b) Nothing in this article shall be construed to require the implementation of water measurement programs or practices that are not locally cost effective.

---

[280] Water Code section 10608.48(a-c) (Stats. 2009-2010, 7th Ex. Sess. ch. 4 (SBX7 7)) [emphasis added].

[281] Exhibit A, Test Claim 10-TC-12, page 4.

[282] Exhibit A, 10-TC-12, page 8.

[283] Exhibit A, 10-TC-12, page 8.

(c) It is the intent of the Legislature that the requirements of this section shall complement and not affect the scope of authority granted to the department or the board by provisions of law other than this article.

The plain language of section 531.10 required agricultural water suppliers to submit an annual report to DWR summarizing aggregated data on water delivered to individual agricultural customers using best professional practices, but only if water measurement programs or practices were locally cost effective.[284] Therefore, to the extent that water measurement programs or practices *were* locally cost effective, such activities were required to comply with prior law. Section 10608.48(b), in turn, does not impose a *new* requirement to "[m]easure the volume of water delivered to customers with sufficient accuracy to comply with [section 531.10(a),]" if such water measurement activities were already performed. However, section 10608.48(b) also requires an agricultural water supplier, *regardless of local cost-effectiveness*, to "[m]easure the volume of water delivered to customers with sufficient accuracy to comply with subdivision (a) of Section 531.10 *and to implement paragraph (2)*," which requires suppliers to implement a pricing structure based at least in part on volume of water delivered. Therefore, section 10608.48(b) imposes a new requirement to the extent that prior law activities were not sufficient to also implement a pricing structure based at least in part on quantity of water delivered.

Moreover, Water Code section 10608.8 provides that "[t]he requirements of this part do not apply to an agricultural water supplier that is a party to the Quantification Settlement Agreement" (QSA), as defined in Statutes 2002, chapter 617, section 1, for as long as the QSA remains in effect.[285] The local agency parties to the QSA include the San Diego County Water Authority, Coachella Valley Water District, Imperial Irrigation District, and Metropolitan Water District of Southern California.[286] As a result, by the plain language of Water Code section 10608.8 those entities are exempt and are not mandated by the state to comply with the requirements of Part 2.55 of Division 6 of the Water Code, including section 10608.48.

Based on the foregoing, the Commission finds that section 10608.48 imposes new requirements on agricultural water suppliers, except those that are parties to the Quantification Settlement Agreement, as defined in Statutes 2002, chapter 617, section 1, for as long as QSA remains in effect, as follows:

- Measure the volume of water delivered to customers with sufficient accuracy to (1) comply with subdivision (a) of Water Code section 531.10, which previously imposed the requirement, with specified exceptions, for agricultural water suppliers to submit an annual report summarizing aggregated farm-gate delivery data, on a monthly or bi-monthly basis, using best professional practices; and (2) implement a pricing structure for water customers based at least in part on quantity of water delivered.[287]

---

[284] Water Code section 531.10 (Stats. 2007, Ch. 675 (AB 1404)).

[285] Water Code section 10608.8 (Stats. 2009-2010, 7th Ex. Sess., ch. 4 (SBX7 7)).

[286] Exhibit X, Quantification Settlement Agreement, dated October 10, 2003.

[287] Water Code section 10608.48(b)(1) (Stats. 2009-2010, 7th Ex. Sess. ch. 4 (SBX7 7)).

This activity is only newly required if measurement of farm-gate delivery data was not previously performed by the agricultural water supplier pursuant to a determination under section 531.10(b) that such measurement programs or practices were not locally cost effective, or if measurement data was not sufficient to implement a pricing structure based at least in part on quantity of water delivered.[288]

- Implement a pricing structure for water customers based at least in part on quantity of water delivered.[289]
- *If the measures are locally cost effective and technically feasible,* implement additional efficient management practices, including, but not limited to, practices to accomplish all of the following:

  (1) Facilitate alternative land use for lands with exceptionally high water duties or whose irrigation contributes to significant problems, including drainage.

  (2) Facilitate use of available recycled water that otherwise would not be used beneficially, meets all health and safety criteria, and does not harm crops or soils.

  (3) Facilitate the financing of capital improvements for on-farm irrigation systems.

  (4) Implement an incentive pricing structure that promotes one or more of the following goals:

  (A) More efficient water use at the farm level.

  (B) Conjunctive use of groundwater.

  (C) Appropriate increase of groundwater recharge.

  (D) Reduction in problem drainage.

  (E) Improved management of environmental resources.

  (F) Effective management of all water sources throughout the year by adjusting seasonal pricing structures based on current conditions.

  (5) Expand line or pipe distribution systems, and construct regulatory reservoirs to increase distribution system flexibility and capacity, decrease maintenance, and reduce seepage.

  (6) Increase flexibility in water ordering by, and delivery to, water customers within operational limits.

---

[288] Water Code section 531.10(a-b) previously required reporting annually to the Department of Water Resources aggregated farm-gate delivery data, summarized on a monthly or bi-monthly basis, unless such measurement programs or practices were not locally cost effective. If an agricultural water supplier had not determined that such practices were not locally cost effective, then the prior law, Section 531.10(a) would have required measurement, and the activity is not therefore new.

[289] Water Code section 10608.48(b)(2) (Stats. 2009-2010, 7th Ex. Sess. ch. 4 (SBX7 7)).

(7) Construct and operate supplier spill and tailwater recovery systems.

(8) Increase planned conjunctive use of surface water and groundwater within the supplier service area.

(9) Automate canal control structures.

(10) Facilitate or promote customer pump testing and evaluation.

(11) Designate a water conservation coordinator who will develop and implement the water management plan and prepare progress reports.

(12) Provide for the availability of water management services to water users. These services may include, but are not limited to, all of the following:

(A) On-farm irrigation and drainage system evaluations.

(B) Normal year and real-time irrigation scheduling and crop evapotranspiration information.

(C) Surface water, groundwater, and drainage water quantity and quality data.

(D) Agricultural water management educational programs and materials for farmers, staff, and the public.

(13) Evaluate the policies of agencies that provide the supplier with water to identify the potential for institutional changes to allow more flexible water deliveries and storage.

(14) Evaluate and improve the efficiencies of the supplier's pumps.[290]

2. Water Code sections 10608.48(d-f) and 10820-10829, as added by Statutes 2009-2010, 7th Extraordinary Session, chapter 4 (SBX7 7), impose new requirements on agricultural water suppliers, as defined pursuant to section 10608.12, to prepare and adopt on or before December 31, 2012, and to update on or before December 31, 2015, and every five years thereafter, an agricultural water management plan, as specified. However, many agricultural water suppliers, including all participants in the Central Valley Project and United States Bureau of Reclamation water contracts, are exempt from the requirement to *prepare and adopt* an agricultural water management plan pursuant to 10826, because they were already required by existing federal law to prepare a water conservation plan, which they may submit to satisfy this requirement.

As noted above, the test claim statute repealed and added Part 2.8 of Division 6 of the Water Code, commencing with section 10800. While a number of the activities alleged in these consolidated test claims were required by the prior provisions of the Water Code that were repealed and replaced by the test claim statute, those provisions were by their own terms no longer operative immediately prior to the effective date of the test claim statute. Former Water Code section 10855, as added by Statutes 1986, chapter 954, provided that "[t]his part shall

[290] Water Code section 10608.48(c) (Stats. 2009-2010, 7th Ex. Sess. ch. 4 (SBX7 7)).

remain operative only until January 1, 1993..." Therefore, the provisions added by the test claim statute, which became effective on February 3, 2010, impose new requirements or activities.[291]

Section 10820, as added, provides that all agricultural water suppliers *shall prepare and adopt* an AWMP on or before December 31, 2012, and shall update that plan on December 31, 2015, and on or before December 31 every five years thereafter.[292]

Section 10826, as added, provides that the plan "shall do all of the following:"

> (a) Describe the agricultural water supplier and the service area, including all of the following:
>
> (1) Size of the service area.
>
> (2) Location of the service area and its water management facilities.
>
> (3) Terrain and soils.
>
> (4) Climate.
>
> (5) Operating rules and regulations.
>
> (6) Water delivery measurements or calculations.
>
> (7) Water rate schedules and billing.
>
> (8) Water shortage allocation policies.
>
> (b) Describe the quantity and quality of water resources of the agricultural water supplier, including all of the following:
>
> (1) Surface water supply.
>
> (2) Groundwater supply.
>
> (3) Other water supplies.
>
> (4) Source water quality monitoring practices.
>
> (5) Water uses within the agricultural water supplier's service area, including all of the following:
>
> (A) Agricultural.
>
> (B) Environmental.
>
> (C) Recreational.
>
> (D) Municipal and industrial.
>
> (E) Groundwater recharge.
>
> (F) Transfers and exchanges.

---

[291] Bills introduced in an extraordinary session take effect 91 days after the final adjournment of that extraordinary session. (Cal. Const. Art. IV, Sec. 8(c)(1).) The 7th Extraordinary Session concluded on November 4, 2009. Thus, the effective date of SB X7 7 is February 3, 2010.

[292] Water Code section 10820 (Stats. 2009-2010, 7th Ex. Sess. ch. 4 (SBX7 7)).

(G) Other water uses.

(6) Drainage from the water supplier's service area.

(7) Water accounting, including all of the following:

(A) Quantifying the water supplier's water supplies.

(B) Tabulating water uses.

(C) Overall water budget.

(8) Water supply reliability.

(c) Include an analysis, based on available information, of the effect of climate change on future water supplies.

(d) Describe previous water management activities.

(e) Include in the plan the water use efficiency information required pursuant to Section 10608.48.[293]

Meanwhile, section 10608.48(d) provides that agricultural water suppliers "shall include in the agricultural water management plans required pursuant to [section 10820] a report on which efficient water management practices have been implemented and are planned to be implemented, an estimate of the water use efficiency improvements that have occurred since the last report, and an estimate of the water use efficiency improvements estimated to occur five and 10 years in the future."[294]

Furthermore, section 10608.48 provides that if a supplier "determines that an efficient water management practice is not locally cost effective or technically feasible, the supplier shall submit information documenting that determination."[295] And, the section further provides that "[t]he data shall be reported using a standardized form developed pursuant to Section 10608.52."[296]

In addition, section 10828 provides that:

> (a) Agricultural water suppliers that are required to submit water conservation plans to the United States Bureau of Reclamation pursuant to either the Central Valley Project Improvement Act (Public Law 102-575) or the Reclamation Reform Act of 1982, or both, *may submit those water conservation plans to satisfy the requirements of Section 10826, if both of the following apply*:
>
> (1) The agricultural water supplier has adopted and submitted the water conservation plan to the United States Bureau of Reclamation within the previous four years.
>
> (2) The United States Bureau of Reclamation has accepted the water conservation plan as adequate.

---

[293] Water Code section 10826 (Stats. 2009-2010, 7th Ex. Sess. ch. 4 (SBX7 7)).

[294] Water Code section 10608.48(d) (Stats. 2009-2010, 7th Ex. Sess. ch. 4 (SBX7 7)).

[295] Water Code section 10608.48(d) (Stats. 2009-2010, 7th Ex. Sess. ch. 4 (SBX7 7)).

[296] *Ibid.*

> (b) This part does not require agricultural water suppliers that are required to submit water conservation plans to the United States Bureau of Reclamation pursuant to either the Central Valley Project Improvement Act (Public Law 102-575) or the Reclamation Reform Act of 1982, or both, to prepare and adopt water conservation plans according to a schedule that is different from that required by the United States Bureau of Reclamation.[297]

And, section 10829 provides that an agricultural water supplier may satisfy the requirements "of this part" by adopting an UWMP pursuant to Part 2.6 or by participating in areawide, regional, watershed, or basinwide water management planning, so long as those plans meet or exceed the requirements of this part.[298]

Based on the plain language of section 10828, those local agencies who are CVP or USBR contractors may submit a copy of their water conservation plan already submitted to USBR in satisfaction of the requirements of section 10826 (which provides for the contents of an AWMP). In addition, section 10828(b) provides that CVP or USBR contractors are not required to adhere to the "schedule" for preparing and adopting AWMPs, as provided in section 10820, above. Therefore, the requirements of section 10820, to prepare and adopt an AWMP on or before December 31, 2012, and to update the AWMP on or before December 31, 2015 and every five years thereafter, do not apply to CVP or USBR contractors, who may instead rely on the schedule for updating and readopting their water conservation plans.

Both Glenn-Colusa and Oakdale are contractors with the United States Bureau of Reclamation (USBR) and as a result are required by federal law to prepare water conservation plans. Glenn-Colusa and Oakdale are also CVP contractors, as are dozens of other local agencies.[299]

As noted above, Water Code section 10608.8 provides that "[t]he requirements of this part do not apply to an agricultural water supplier that is a party to the Quantification Settlement Agreement" (QSA), as defined in Statutes 2002, chapter 617, section 1 for as long as QSA remains in effect.[300] Therefore, a supplier that is a party to the QSA is not mandated by the state to include the water use efficiency reporting requirements in the plan pursuant to section 10680.48.

Additionally, section 10608.48(f) provides that an agricultural water supplier "may meet the requirements of subdivisions (d) and (e) by submitting to [DWR] a water conservation plan submitted to the United States Bureau of Reclamation that meets the requirements described in Section 10828."[301] Therefore, the requirements to include in a supplier's AWMP a report on efficient water management practices and documentation on those practices determined not to be cost effective or technically feasible, pursuant to section 10608.48(d-e), do not apply to CVP or

---

[297] Water Code section 10828 (Stats. 2009-2010, 7th Ex. Sess. ch. 4 (SBX7 7)).

[298] Water Code section 10829 (Stats. 2009-2010, 7th Ex. Sess. ch. 4 (SBX7 7)).

[299] Exhibit X, Bureau of Reclamation, Mid-Pacific Region, Central Valley Project (CVP) Water Contractors, dated March 4, 2014.

[300] Water Code section 10608.8 (Stats. 2009-2010, 7th Ex. Sess., ch. 4 (SBX7 7)).

[301] Water Code section 10608.48(e; f) (Stats. 2009-2010, 7th Ex. Sess. ch. 4 (SBX7 7)).

USBR contractors that prepare and submit water conservation plans to USBR.[302] The *Guidebook to Assist Agricultural Water Suppliers to Prepare a 2012 Agricultural Water Management Plan*, issued by DWR, "encourages" suppliers to file certain "documentation as an attachment with the USBR-accepted water management/conservation plan."[303] However, the plain language of section 10608.48(f) states that a supplier may satisfy the requirements of section 10608.48(d) and (e) by submitting to DWR its water conservation plan prepared for USBR. And, section 10828, as shown above, exempts CVP and USBR contractors from the requirement to prepare an AWMP in the first instance. Finally, pursuant to section 10829, the requirement to adopt an AWMP in the first instance does not apply if the supplier adopts a UWMP, or participates in regional water management planning.

Based on the foregoing, the Commission finds that newly added sections 10820 and 10826, and 10608.48(d-f), impose the following new requirements on agricultural water suppliers, except for suppliers that adopt a UWMP or participate in areawide, regional, watershed, or basinwide water management planning, and CVP and USBR contractors:

- On or before December 31, 2012, prepare and adopt an agricultural water management plan in accordance with section 10826.[304]
- On or before December 31, 2015, and every five years thereafter, update the agricultural water management plan, in accordance with section 10820 et seq.[305]
- If a supplier becomes an agricultural water supplier, as defined, after December 31, 2012, that agricultural water supplier shall prepare and adopt an agricultural water management plan within one year after the date that it has become an agricultural water supplier.[306]
- Include in the agricultural water management plans required pursuant to Water Code section 10800 et seq. a report on which efficient water management practices have been implemented and are planned to be implemented, an estimate of the water use efficiency improvements that have occurred since the last report,

[302] Water Code section 10608.48(f) (Stats. 2009-2010, 7th Ex. Sess. ch. 4 (SBX7 7)).

[303] Exhibit X, *Guidebook to Assist Agricultural Water Suppliers to Prepare a 2012 Agricultural Water Management Plan*, page 11, "The agricultural water suppliers that submit a plan to USBR may meet the requirements of section 10608.48 (d) and (e) [report of EWMPs implemented, planned for implementation, and estimate of efficiency improvements, as well as documentation for not locally cost effective EWMPs] by submitting the USBR-accepted plan to DWR. "DWR *encourages* CVPIA/RRA water suppliers to also provide a report on water use efficiency information (required by section 10608.48(d);see Section 3.7 of this Guidebook)." Emphasis added.

[304] Water Code sections 10820; 10826 (Stats. 2009-2010, 7th Ex. Sess. ch. 4 (SBX7 7)).

[305] Water Code sections 10820; 10826 (Stats. 2009-2010, 7th Ex. Sess. ch. 4 (SBX7 7)).

[306] Water Code section 10820 (Stats. 2009-2010, 7th Ex. Sess. ch. 4 (SBX7 7)).

and an estimate of the water use efficiency improvements estimated to occur five and 10 years in the future.[307]

In addition, an agricultural water supplier that is a party to the Quantification Settlement Agreement (QSA), as defined in Statutes 2002, chapter 617, section 1 is not subject to this requirement for as long as the QSA remains in effect.[308]

- If an agricultural water supplier determines that an efficient water management practice is not locally cost effective or technically feasible, the supplier shall submit information documenting that determination.[309]

  In addition, an agricultural water supplier that is a party to the Quantification Settlement Agreement (QSA), as defined in Statutes 2002, chapter 617, section 1 is not subject to this requirement for as long as the QSA remains in effect.[310]

- Report the data using a standardized form developed pursuant to Water Code section 10608.52.[311]

  An agricultural water supplier that is a party to the Quantification Settlement Agreement (QSA), as defined in Statutes 2002, chapter 617, section 1 is not subject to this requirement for as long as the QSA remains in effect.[312]

3. Section 10608.48(g-i), as added by Statutes 2009-2010, 7th Extraordinary Session, chapter 4 (SBX7 7), does not impose any new activities on local government.

Section 10608.48(g) provides that on or before December 31, 2013, DWR shall submit to the Legislature a report on agricultural efficient water management practices that have been implemented or are planned to be implemented, and an assessment of those practices and their effects on agricultural operations. Section 10608.48(h) states that DWR "may update the efficient water management practices required pursuant to [section 10608.48(c)]," but only after conducting public hearings. Section 10608.48(i) provides that DWR "shall adopt regulations that provide for a range of options that agricultural water suppliers may use or implement to comply with the measurement requirement" of section 10608.48(b).

The plain language of these sections section 10608.48(g-i) is directed to DWR, and does not impose any activities or requirements on local government.

4. Sections 10821, 10841, 10842, 10843, and 10844, as added by Statutes 2009-2010, 7th Extraordinary Session, chapter 4 (SBX7 7), impose new requirements on agricultural water suppliers.

---

[307] Water Code section 10608.48(d) (Stats. 2009-2010, 7th Ex. Sess. ch. 4 (SBX7 7)).

[308] Water Code section 10608.8 (Stats. 2009-2010, 7th Ex. Sess., ch. 4 (SBX7 7)).

[309] Water Code section 10608.48(d) (Stats. 2009-2010, 7th Ex. Sess. ch. 4 (SBX7 7)).

[310] Water Code section 10608.8 (Stats. 2009-2010, 7th Ex. Sess., ch. 4 (SBX7 7)).

[311] Water Code section 10608.48(e) (Stats. 2009-2010, 7th Ex. Sess. ch. 4 (SBX7 7)).

[312] Water Code section 10608.8 (Stats. 2009-2010, 7th Ex. Sess., ch. 4 (SBX7 7)).

Water Code section 10821, as added, provides that an agricultural water supplier required to prepare an AWMP pursuant to this part, "shall notify each city or county within which the supplier provides water supplies that the agricultural water supplier will be preparing the plan or reviewing the plan and considering amendments or changes to the plan."[313]

In addition, newly added section 10841 requires that the plan be made available for public inspection and that a public hearing shall be held as follows:

> Prior to adopting a plan, the agricultural water supplier shall make the proposed plan available for public inspection, and shall hold a public hearing on the plan. Prior to the hearing, notice of the time and place of hearing shall be published within the jurisdiction of the publicly owned agricultural water supplier pursuant to Section 6066 of the Government Code. A privately owned agricultural water supplier shall provide an equivalent notice within its service area and shall provide a reasonably equivalent opportunity that would otherwise be afforded through a public hearing process for interested parties to provide input on the plan...[314]

Section 10842 provides that an agricultural water supplier shall implement its AWMP "in accordance with the schedule set forth in its plan."[315]

Following adoption of an AWMP, section 10843 requires an agricultural water supplier to submit a copy of its AWMP, no later than 30 days after adoption, to DWR and to the following affected or interested entities:

> (2) Any city, county, or city and county within which the agricultural water supplier provides water supplies.
>
> (3) Any groundwater management entity within which jurisdiction the agricultural water supplier extracts or provides water supplies.
>
> (4) Any urban water supplier within which jurisdiction the agricultural water supplier provides water supplies.
>
> (5) Any city or county library within which jurisdiction the agricultural water supplier provides water supplies.
>
> (6) The California State Library.
>
> (7) Any local agency formation commission serving a county within which the agricultural water supplier provides water supplies.[316]

Finally, newly added section 10844 requires an agricultural water supplier to make its water management plan available for public review via the internet, as follows:

---

[313] Water Code section 10821 (Stats. 2009-2010, 7th Ex. Sess. ch. 4 (SBX7 7)).

[314] Water Code section 10841 (Stats. 2009-2010, 7th Ex. Sess. ch. 4 (SBX7 7)).

[315] Water Code section 10842 (Stats. 2009-2010, 7th Ex. Sess. ch. 4 (SBX7 7)).

[316] Water Code section 10843 (Stats. 2009-2010, 7th Ex. Sess. ch. 4 (SBX7 7)).

(a) Not later than 30 days after the date of adopting its plan, the agricultural water supplier shall make the plan available for public review on the agricultural water supplier's Internet Web site.

(b) An agricultural water supplier that does not have an Internet Web site shall submit to [DWR], not later than 30 days after the date of adopting its plan, a copy of the adopted plan in an electronic format. [DWR] shall make the plan available for public review on [its] Internet Web site.[317]

The prior provisions of the Water Code pertaining to the adoption and implementation of AWMPs, as explained above, were inoperative by their own terms as of January 1, 1993.[318] Therefore, the requirements to hold a public hearing, to implement the plan in accordance with the schedule, to submit copies to DWR and other specified local entities, and to make the plan available by either posting the plan on the supplier's web site, or by sending an electronic copy to DWR for posting on its web site, are new activities with respect to prior law.

However, section 10828, as discussed above, provides that USBR or CVP contractors may satisfy the requirements of section 10826 by submitting their water conservation plans adopted within the previous four years pursuant to the Central Valley Improvement Act or the Reclamation Reform Act of 1982.[319] This section does not expressly exempt CVP or USBR contractors from all requirements of Part 2.8, but only from the content requirements of the plan itself, and the requirement to adopt according to the "schedule" set forth in section 10820, as discussed above. Accordingly, DWR's *Guidebook to Assist Agricultural Water Suppliers to Prepare a 2012 [AWMP]* provides:

> All agricultural water suppliers required to prepare new agricultural water management/conservation plans must prepare and complete their plan in accordance with Water Code Part 2.8, Article 1 and Article 3 requirements for notification, public participation, adoption, and submittal (refer to Section 3.1 for details). *The federal review process may incorporate many requirements specified in Part 2.8, Articles 1 and 3; as such the federal process may meet the requirements of Part 2.8, otherwise, the agricultural water supplier would have to complete those requirements in Part 2.8, Articles 1 and 3 that are not already a part of the federal review process.*[320]

Article 1 of Part 2.8 includes section 10821, which requires an agricultural water supplier to notify the city or county that it will be preparing an AWMP. Therefore, to the extent that the "federal process" of adopting a water conservation plan for USBR or CVP also requires notice to the city or county, this activity is not newly required. Article 3 of Part 2.8 includes sections 10840-10845, pertaining to the adoption and implementation of AWMPs. Those requirements include, as discussed above, noticing and holding a public hearing; implementing the plan in

---

[317] Water Code section 10844 (Stats. 2009-2010, 7th Ex. Sess. ch. 4 (SBX7 7)).

[318] See former Water Code sections 10840-10845; 10855 (Stats. 1986, ch. 954).

[319] Water Code section 10828 (Stats. 2009-2010, 7th Ex. Sess. ch. 4 (SBX7 7)).

[320] Exhibit X, *Guidebook to Assist Agricultural Water Suppliers to Prepare a 2012 Agricultural Water Management Plan*, page 94 [emphasis added].

accordance with the schedule set forth in the plan; submitting a copy of the AWMP to specified state and local entities within 30 days after adoption; and making the AWMP available on the supplier's website, or submitting the AWMP for posting on DWR's website. To the extent that the "federal process" satisfies those requirements, they are not newly required by the test claim statutes.

In addition, as noted above, section 10829 provides that an agricultural water supplier may satisfy the requirements "of this part" by adopting an UWMP pursuant to Part 2.6 or by participating in areawide, regional, watershed, or basinwide water management planning, so long as those plans meet or exceed the requirements of this part.[321] That exception would include all of the notice and hearing requirements identified below.

Based on the foregoing, the Commission finds that Water Code sections 10821, 10841, 10842, 10843, and 10844 impose new requirements on agricultural water suppliers, except those that adopt an UWMP or participate in areawide, regional, watershed, or basinwide water management planning, and except to the extent that suppliers that are USBR or CVP contractors have water conservation plans that satisfy the AWMP adoption requirements, as follows:

- Notify the city or county within which the agricultural supplier provides water supplies that it will be preparing the AWMP or reviewing the AWMP and considering amendments or changes.[322]
- Prior to adopting a plan, the agricultural water supplier shall make the proposed plan available for public inspection, and shall hold a public hearing on the plan.[323]
- Prior to the hearing, notice of the time and place of hearing shall be published in a newspaper within the jurisdiction of the publicly owned agricultural water supplier once a week for two successive weeks, as specified in Government Code 6066.[324]
- Implement the AWMP in accordance with the schedule set forth in the AWMP.[325]
- An agricultural water supplier shall submit to the following entities a copy of its plan no later than 30 days after the adoption of the plan. Copies of amendments or changes to the plans shall be submitted to the entities identified within 30 days after the adoption of the amendments or changes.
    - DWR.
    - Any city, county, or city and county within which the agricultural water supplier provides water supplies.
    - Any groundwater management entity within which jurisdiction the agricultural water supplier extracts or provides water supplies.

---

[321] Water Code section 10829 (Stats. 2009-2010, 7th Ex. Sess. ch. 4 (SBX7 7)).

[322] Water Code section 10821(Stats. 2009-2010, 7th Ex. Sess. ch. 4 (SBX7 7)).

[323] Water Code section 10841 (Stats. 2009-2010, 7th Ex. Sess. ch. 4 (SBX7 7)).

[324] Water Code section 10841 (Stats. 2009-2010, 7th Ex. Sess. ch. 4 (SBX7 7)).

[325] Water Code section 10842 (Stats. 2009-2010, 7th Ex. Sess. ch. 4 (SBX7 7)).

- Any urban water supplier within which jurisdiction the agricultural water supplier provides water supplies.
- Any city or county library within which jurisdiction the agricultural water supplier provides water supplies.
- The California State Library.
- Any local agency formation commission serving a county within which the agricultural water supplier provides water supplies.[326]

- An agricultural water supplier shall make its agricultural water management plan available for public review on its web site not later than 30 days after adopting the plan, or for an agricultural water supplier that does not have a web site, submit an electronic copy to the Department of Water Resources not later than 30 days after adoption, and the Department shall make the plan available for public review on its web site.[327]

5. Agricultural Water Measurement Regulations, California Code of Regulations, Title 23, Division 6, sections 597 through 597.4, Register 2012, Number 28.

California Code of Regulations, title 23, section 597 provides that under authority included in Water Code section 10608.48(i), DWR is required to adopt regulations that provide for a range of options that agricultural water suppliers may use or implement to comply with the measurement requirements of section 10609.48(b).[328] The plain language of this section does not impose any new activities or requirements on local government.

Section 597.1 provides that an agricultural water supplier providing water to less than 10,000 irrigated acres, excluding acres that receive only recycled water, is not subject to this article, and a supplier providing water to 10,000 or more irrigated acres but less than 25,000 irrigated acres, excluding acres that receive only recycled water, is not subject to this article unless sufficient funding is provided pursuant to Water Code section 10853. A supplier providing water to 25,000 irrigated acres or more, excluding acres that receive only recycled water, is subject to this article. A supplier providing water to wildlife refuges or habitat lands, as specified, is subject to this article. A *wholesale* agricultural water supplier is subject to this article at the location at which control of the water is transferred to the receiving water supplier, but the wholesale supplier is not required to measure the ultimate deliveries to customers. A canal authority or other entity that conveys water through facilities owned by a federal agency is not subject to this article. An agricultural water supplier that is a party to the QSA, as defined in Statutes 2002, chapter 617, section 1, is not subject to this article. And finally, DWR is not subject to this article.[329] None of the above-described provisions of section 597.1 impose any new requirements or activities on local government.

---

[326] Water Code section 10843 (Stats. 2009-2010, 7th Ex. Sess. ch. 4 (SBX7 7)).

[327] Water Code section 10844 (Stats. 2009-2010, 7th Ex. Sess. ch. 4 (SBX7 7)).

[328] Code of Regulations, title 23, section 597 (Register 2012, No. 28).

[329] Code of Regulations, title 23, section 597.1 (Register 2012, No. 28).

Section 597.2 provides definitions of "accuracy," "agricultural water supplier," "approved by an engineer," "best professional practices," "customer," "delivery point," "existing measurement device," "farm-gate," "irrigated acres," "manufactured device," "measurement device," "new or replacement measurement device," "recycled water," and "type of device."[330] Based on the plain language of 597.2, the definitions provided in section 597.2 do not impose any new requirements or activities on local government.

Section 597.3 requires an agricultural water supplier to measure surface water and groundwater that it delivers to its customers and provides a range of options to comply with section 10608.48(i), as follows:

> An agricultural water supplier subject to this article shall measure surface water and groundwater that it delivers to its customers pursuant to the accuracy standards in this section. The supplier may choose any applicable single measurement option or combination of options listed in paragraphs (a) or (b) of this section. Measurement device accuracy and operation shall be certified, tested, inspected and/or analyzed as described in §597.4 of this article.
>
> **(a) Measurement Options at the Delivery Point or Farm-gate of a Single Customer**
>
> An agricultural water supplier shall measure water delivered at the delivery point or farm-gate of a single customer using one of the following measurement options. The stated numerical accuracy for each measurement option is for the volume delivered. If a device measures a value other than volume, for example, flow rate, velocity or water elevation, the accuracy certification must incorporate the measurements or calculations required to convert the measured value to volume as described in §597.4(e).
>
> (1) An existing measurement device shall be certified to be accurate to within +12% by volume,
>
> and,
>
> (2) A new or replacement measurement device shall be certified to be accurate to within:
>
> (A) ±5% by volume in the laboratory if using a laboratory certification;
>
> (B) ±10% by volume in the field if using a non-laboratory certification.
>
> **(b) Measurement Options at a Location Upstream of the Delivery Points or Farm-gates of Multiple Customers**
>
> (1) An agricultural water supplier may measure water delivered at a location upstream of the delivery points or farm-gates of multiple customers using one of the measurement options described in §597.3(a) if the downstream individual customer's delivery points meet either of the following conditions:

[330] Code of Regulations, title 23, section 597.2 (Register 2012, No. 28).

(A) The agricultural water supplier does not have legal access to the delivery points of individual customers or group of customers needed to install, measure, maintain, operate, and monitor a measurement device.

(B) An engineer determines that, due to small differentials in water level or large fluctuations in flow rate or velocity that occur during the delivery season at a single farm-gate, accuracy standards of measurement options in §597.3(a) cannot be met by installing a measurement device or devices (manufactured or on-site built or in-house built devices with or without additional components such as gauging rod, water level control structure at the farm-gate, etc.). If conditions change such that the accuracy standards of measurement options in §597.3(a) at the farm-gate can be met, an agricultural water supplier shall include in its Agricultural Water Management Plan, a schedule, budget and finance plan to demonstrate progress to measure water at the farm-gate in compliance with §597.3(a) of this article.

(2) An agricultural water supplier choosing an option under paragraph (b)(l) of this section shall provide the following current documentation in its Agricultural Water Management Plan(s) submitted pursuant to Water Code §10826:

(A) When applicable, to demonstrate lack of legal access at delivery points of individual customers or group of customers downstream of the point of measurement, the agricultural water supplier's legal counsel shall certify to the Department that it does not have legal access to measure water at customers delivery points and that it has sought and been denied access from its customers to measure water at those points.

(B) When applicable, the agricultural water supplier shall document the water measurement device unavailability and that the water level or flow conditions described in §597.3(b)(l)(B) exist at individual customer's delivery points downstream of the point of measurement as approved by an engineer.

(C) The agricultural water supplier shall document all of the following criteria about the methodology it uses to apportion the volume of water delivered to the individual downstream customers:

(i) How it accounts for differences in water use among the individual customers based on but not limited to the duration of water delivery to the individual customers, annual customer water use patterns, irrigated acreage, crops planted, and on-farm irrigation system, and;

(ii) That it is sufficient for establishing a pricing structure based at least in part on the volume delivered, and;

(iii) That it was approved by the agricultural water supplier's governing board or body.[331]

Thus, one option under these regulations, in order to measure the volume of water delivered, as required by section 10608.48, is measurement "at the delivery point or farm-gate of a single customer" using an existing measurement device certified to be accurate to within 12 percent by volume, or a new measurement device certified to be accurate within 5 percent if certified in a laboratory or within 10 percent if certified in the field. Another option is to measure upstream of a delivery point or farm gate if the supplier does not have legal access to the delivery point for an individual customer, or if the standards of measurement cannot be met due to large fluctuations in flow rate or velocity during the delivery season. If this option is chosen, appropriate documentation explaining the option must be provided, as described above.

The claimants allege that section 597.3 requires agricultural water suppliers to measure at a delivery point or farm gate "by either (1) using an existing measurement device, certified to be accurate within ±12% by volume or (2) a new or replacement measurement device, certified to be accurate within ±5% by volume in the laboratory if using a laboratory certification or ±10% by volume in the field if using a non-laboratory certification." In addition, the claimants allege that the regulations provide for "limited exceptions" if the supplier is unable to measure at the farm-gate, which allow, in certain circumstances, for upstream measurement.[332] The claimants assert that prior to these regulations, "there was no requirement to measure water delivered to the farm-gate of *each* single customer, with limited exception."[333]

DWR argues that these regulations merely provide options, and are not therefore a mandate. Specifically, DWR asserts that "[n]o local government is required to comply with those regulations." DWR asserts that "the regulations exist as a resource for agricultural water suppliers who wish to comply with certain requirements…described in the 2009 Water Law." DWR concludes that "[the regulations] are optional, and the suppliers are free to comply with the law in other ways."[334]

Section 10608.48(i) provides that DWR "shall adopt regulations that provide for a range of options that agricultural water suppliers may use or implement" to comply with the measurement requirements of subdivision (b).[335] The phrase "may use or implement" suggests that the regulations provide a choice for agricultural water suppliers, rather than a mandate.

However, Section 10608.48(b) states that agricultural water suppliers "shall implement all of the following critical efficient management practices…(1) Measure the volume of water delivered to customers with sufficient accuracy to comply with subdivision (a) of Section 531.10 and to [adopt a pricing structure based in part on quantity of water delivered]."[336] Moreover, the plain language of section 597.3 of the regulations, as cited above, states that an agricultural water

---

[331] Code of Regulations, title 23, section 597.3 (Register 2012, No. 28).

[332] Exhibit B, 12-TC-01, page 4.

[333] Exhibit B, 12-TC-01, page 6.

[334] Exhibit D, DWR Comments, page 11.

[335] Water Code section 10608.48 (Stats. 2009-2010, 7th Ex. Sess., ch. 4 (SBX7 7)).

[336] *Ibid.*

supplier "shall measure surface water and groundwater that it delivers to customers pursuant to the accuracy standards in this section." The language states that the supplier "may choose any applicable single measurement option or combination of options listed in paragraphs (a) or (b) of this section."[337] There is no express provision for choosing a measurement option or combination of options not listed in section 597.3. Although an agricultural water supplier may pick which one of the regulatory options to comply with, it "shall" pick one of them based on the plain language of section 597.3. As a result, most agricultural water suppliers are required to implement one of the measurement options provided by 597.3. As discussed above though, there are several water suppliers exempt from this requirement, including parties to the QSA, suppliers providing water to less than 10,000 irrigated acres, excluding acres that receive only recycled water, and suppliers providing water to more than 10,000 irrigated acres but less than 25,000 irrigated acres, excluding acres that receive only recycled water, unless sufficient funding is provided pursuant to Water Code section 10853. Thus, section 597.3 requires the following for those agencies which are not exempt:

- Measure water delivered at the delivery point or farm-gate of a single customer using one of the following options.
    - An existing measurement device certified to be accurate to within ±12% by volume.
    - A new or replacement measurement device certified to be accurate to within:
        - ±5% by volume in the laboratory if using a laboratory certification;
        - ±10% by volume in the field if using a non-laboratory certification.

    If a device measures a value other than volume (e.g., flow rate, velocity or water elevation) the accuracy certification must incorporate the measurements or calculations required to convert the measured value to volume.[338]
- Measure water delivered at a location upstream of the delivery points or farm-gates of multiple customers if:
    - The supplier does not have legal access to the delivery points of individual customers or group of customers needed to install, measure, maintain, operate, and monitor a measurement device; or
    - An engineer determines that, due to small differentials in water level or large fluctuations in flow rate or velocity that occur during the delivery season, accuracy standards of measurement cannot be met by installing a measurement device or devices.[339]
- And, when a supplier chooses to measure water delivered at an upstream location:

---

[337] Code of Regulations, title 23, section 597.3 (Register 2012, No. 28).

[338] Code of Regulations, title 23, section 597.3(a) (Register 2012, No. 28).

[339] Code of Regulations, title 23, section 597.3(b) (Register 2012, No. 28).

- Provide, where applicable, documentation to demonstrate the lack of legal access at delivery points of individual or groups of customers downstream of the point of measurement; or documentation of the water measurement device unavailability and that water level or flow conditions exist that prohibit meeting accuracy standards, as approved by an engineer.
- Document the following about its apportionment of water delivered to individual customers:
  - How the supplier accounts for differences in water use among individual customers based on the duration of water delivery to the individual customers, annual customer water use patterns, irrigated acreage, crops planted, and on-farm irrigation system;
  - That it is sufficient for establishing a pricing structure based at least in part on the volume of water delivered; and
  - That it was approved by the agricultural water supplier's governing board or body.[340]

Section 597.4, also alleged in this consolidated test claim, requires that measurement devices be certified and documented as follows:

(a) Initial Certification of Device Accuracy

The accuracy of an existing, new or replacement measurement device or type of device, as required in §597.3, shall be initially certified and documented as follows:

(1) For existing measurement devices, the device accuracy required in section 597.3(a) shall be initially certified and documented by either:

(A) Field-testing that is completed on a random and statistically representative sample of the existing measurement devices as described in §597.4(b)(1) and §597.4(b)(2). Field-testing shall be performed by individuals trained in the use of field-testing equipment, and documented in a report approved by an engineer.

Or,

(B) Field-inspections and analysis completed for every existing measurement device as described in §597.4(b)(3). Field-inspections and analysis shall be performed by trained individuals in the use of field inspection and analysis, and documented in a report approved by an engineer.

(2) For new or replacement measurement devices, the device accuracy required in sections 597.3 (a)(2) shall be initially certified and documented by either:

[340] Code of Regulations, title 23, section 597.3(b) (Register 2012, No. 28).

(A) Laboratory Certification prior to installation of a measurement device as documented by the manufacturer or an entity, institution or individual that tested the device following industry-established protocols such as the National Institute for Standards and Testing (NIST) traceability standards. Documentation shall include the manufacturer's literature or the results of laboratory testing of an individual device or type of device.

Or,

(B) Non-Laboratory Certification after the installation of a measurement device in the field, as documented by either:

(i) An affidavit approved by an engineer submitted to the agricultural water supplier of either (1) the design and installation of an individual device at a specified location, or (2) the standardized design and installation for a group of measurement devices for each type of device installed at specified locations.

Or,

(ii) A report submitted to the agricultural water supplier and approved by an engineer documenting the field-testing performed on the installed measurement device or type of device, by individuals trained in the use of field testing equipment.

(b) Protocols for Field-Testing and Field-Inspection and Analysis of Existing Devices

(1) Field-testing shall be performed for a sample of existing measurement devices according to manufacturer's recommendations or design specifications and following best professional practices. It is recommended that the sample size be no less than 10% of existing devices, with a minimum of 5, and not to exceed 100 individual devices for any particular device type. Alternatively, the supplier may develop its own sampling plan using an accepted statistical methodology.

(2) If during the field-testing of existing measurement devices, more than one quarter of the samples for any particular device type do not meet the criteria pursuant to §597.3(a), the agricultural water supplier shall provide in its Agricultural Water Management Plan, a plan to test an additional 10% of its existing devices, with a minimum of 5, but not to exceed an additional 100 individual devices for the particular device type. This second round of field-testing and corrective actions shall be completed within three years of the initial field-testing.

(3) Field-inspections and analysis protocols shall be performed and the results shall be approved by an engineer for every existing measurement device to demonstrate that the design and installation standards used for the installation of existing measurement devices meet the accuracy standards

of §597.3(a) and operation and maintenance protocols meet best professional practices.

(c) Records Retention

Records documenting compliance with the requirements in §597.3 and §597.4 shall be maintained by the agricultural water supplier for ten years or two Agricultural Water Management Plan cycles.

(d) Performance Requirements

(1) All measurement devices shall be correctly installed, maintained, operated, inspected, and monitored as described by the manufacturer, the laboratory or the registered Professional Engineer that has signed and stamped certification of the device, and pursuant to best professional practices.

(2) If an installed measurement device no longer meets the accuracy requirements of §597.3(a) based on either field-testing or field-inspections and analysis as defined in sections 597.4 (a) and (b) for either the initial accuracy certification or during operations and maintenance, then the agricultural water supplier shall take appropriate corrective action, including but not limited to, repair or replacement to achieve the requirements of this article.

(e) Reporting in Agricultural Water Management Plans

Agricultural water suppliers shall report the following information in their Agricultural Water Management Plan(s):

(1) Documentation as required to demonstrate compliance with §597.3 (b), as outlined in section §597.3(b)(2), and §597.4(b)(2).

(2) A description of best professional practices about, but not limited to, the (1) collection of water measurement data, (2) frequency of measurements, (3) method for determining irrigated acres, and (4) quality control and quality assurance procedures.

(3) If a water measurement device measures flow rate, velocity or water elevation, and does not report the total volume of water delivered, the agricultural water supplier must document in its Agricultural Water Management Plan how it converted the measured value to volume. The protocols must follow best professional practices and include the following methods for determining volumetric deliveries:

(A) For devices that measure flow-rate, documentation shall describe protocols used to measure the duration of water delivery where volume is derived by the following formula: Volume = flow rate x duration of delivery.

(B) For devices that measure velocity only, the documentation shall describe protocols associated with the measurement of the cross-sectional area of flow and duration of water delivery, where volume is

derived by the following formula: Volume = velocity x cross-section flow area x duration of delivery.

(C) For devices that measure water elevation at the device (e.g. flow over a weir or differential elevation on either side of a device), the documentation shall describe protocols associated with the measurement of elevation that was used to derive flow rate at the device. The documentation will also describe the method or formula used to derive volume from the measured elevation value(s).

(4) If an existing water measurement device is determined to be out of compliance with §597.3, and the agricultural water supplier is unable to bring it into compliance before submitting its Agricultural Water Management Plan in December 2012, the agricultural water supplier shall provide in its 2012 plan, a schedule, budget and finance plan for taking corrective action in three years or less.

Thus, the plain language of section 597.4 requires agricultural water suppliers to certify and document the initial accuracy of "existing, new or replacement measurement device[s]," as specified.[341] In addition, section 597.4 provides that field-testing "shall be performed" following "best professional practices," and either sampling "no less than 10% of existing devices," as recommended by the department, or developing a "sampling plan using an accepted statistical methodology." Then, if field testing results in more than a quarter of any particular devices failing the accuracy criteria described in section 597.3(a), above, the supplier "shall provide in its Agricultural Water Management Plan, a plan to test an additional 10% of its existing devices..."[342] In addition, section 597.4 provides that records documenting compliance "shall be maintained...for ten years or two Agricultural Water Management Plan cycles."[343] Section 597.4 further provides that "all measurement devices shall be correctly installed, maintained, operated, inspected, and monitored," and if a device no longer meets the accuracy requirements of section 597.3, the supplier "shall take appropriate corrective action," including repair or replacement, if necessary.[344] And finally, section 597.4 requires agricultural water suppliers to report additional information regarding their compliance and "best professional practices" for water measurement in their agricultural water measurement plan.[345]

As noted above, some agricultural water suppliers may have been required pursuant to section 531.10 to measure farm-gate water deliveries.[346] To the extent that those measurement programs or practices satisfy the requirements of these regulations, the regulations do not impose new activities.[347] In addition, for any agricultural water supplier that is also an urban water supplier,

[342] Code of Regulations, title 23, section 597.4(b) (Register 2012, No. 28).

[343] Code of Regulations, title 23, section 597.4(c) (Register 2012, No. 28).

[344] Code of Regulations, title 23, section 597.4(d) (Register 2012, No. 28).

[345] Code of Regulations, title 23, section 597.4(e) (Register 2012, No. 28).

[346] Water Code section 531.10 (Stats. 2007, ch. 675 (AB 1404)).

[347] See discussion above addressing section 10608.48(a-c).

existing sections 525 through 527 required those entities to install water meters on new and existing service connections, as specified.[348] To the extent that any such water meter on an agricultural service connection satisfies the measurement requirements of these regulations, the regulations do not impose any new activities or requirements.

Based on the foregoing, the Commission finds that section 597.4 imposes new requirements on agricultural water suppliers not exempt from the water measurement requirements, and not already required by existing law to take part in the programs or practices of water measurement, discussed above, that would satisfy the accuracy standards of these regulations, as follows:

- Certify the initial accuracy of existing measurement devices by either:
    - Field-testing that is completed on a random and statistically representative sample of the existing measurement devices, performed by individuals trained in the use of field-testing equipment, and documented in a report approved by an engineer; or
    - Field inspections and analysis for every existing measurement device, performed by individuals trained in the use of field inspection and analysis, and documented in a report approved by an engineer.[349]
- Certify the initial accuracy of new or replacement measurement devices by either:
    - Laboratory certification prior to installation of the device as documented by the manufacturer or an entity, institution, or individual that tested the device following industry-established protocols such as the National Institute of Standards and Testing traceability standards. Documentation shall include the manufacturer's literature or the results of laboratory testing of an individual device or type of device; or
    - Non-laboratory certification after installation of a measurement device in the field, documented by either:
        - An affidavit approved by an engineer submitted to the agricultural water supplier of either (1) the design and installation of an individual device at a specified location, or (2) the standardized design and installation for a group of measurement devises for each type of device installed at specified locations; or
        - A report submitted to the agricultural water supplier and approved by an engineer documenting the field-testing performed on the installed measurement device or type of device, by individuals trained in the use of field testing equipment.[350]
- Ensure that field-testing is performed as follows:

---

[348] Section 525 as amended by statutes 2005, chapter 22; Section 527 as amended by statutes 2005, chapter 22; Section 526 as amended by Statutes 2004, chapter 884.

[349] Code of Regulations, title 23, section 597.4(a)(1) (Register 2012, No. 28).

[350] Code of Regulations, title 23, section 597.4(a)(2) (Register 2012, No. 28).

- Field-testing shall be performed for a sample of existing measurement devices according to the manufacturer's recommendations or design specifications and following best professional practices.
- If more than one quarter of the samples for any particular device type do not meet the accuracy criteria specified in section 597.3(a), the supplier shall provide in its Agricultural Water Management Plan a plan to test an additional 10% of its existing devices, with a minimum of 5, but not to exceed 100 additional devices for the particular device type, and shall complete the second round of field-testing and corrective actions within three years of the initial field-testing.
- Field inspections and analysis protocols shall be performed and the results shall be approved by an engineer for every existing measurement device to demonstrate that the design and installation standards used for the installation of existing measurement devices meet the accuracy standards specified in section 597.3(a) and that operation and maintenance protocols meet best professional practices.[351]

- Maintain records documenting compliance with the requirements of sections 597.3 and 597.4 for ten years or two Agricultural Water Management Plan cycles.[352]
- Ensure that all measurement devices are correctly installed, maintained, operated, inspected, and monitored as described by the manufacturer, the laboratory or the registered Professional Engineer that has signed and stamped certification of the device, and pursuant to best professional practices.[353]
- If an installed measurement device no longer meets the accuracy requirements of section 597.3(a) based on either field-testing or field-inspections and analysis for either the initial accuracy certification or during operations and maintenance, take appropriate corrective action, including but not limited to, repair or replacement of the device.[354]
- Report the information listed below in its Agricultural Water Management Plan(s). :
  - Documentation, as required, to demonstrate that an agricultural water supplier that chooses to measure upstream of a delivery point or farm-gate for a customer or group of customers has complied justified the reason to do so, and has taken appropriate steps to ensure that measurements can be allocated to the customer or group of customers sufficiently to support a pricing structure based at least in part on quantity of water delivered.

---

[351] Code of Regulations, title 23, section 597.4(b) (Register 2012, No. 28).

[352] Code of Regulations, title 23, section 597.4(c) (Register 2012, No. 28).

[353] Code of Regulations, title 23, section 597.4(d)(1) (Register 2012, No. 28).

[354] Code of Regulations, title 23, section 597.4(d)(2) (Register 2012, No. 28).

- A description of best professional practices about, but not limited to, the (1) collection of water measurement data, (2) frequency of measurements, (3) method for determining irrigated acres, and (4) quality control and quality assurance procedures.
- If a water measurement device measures flow rate, velocity or water elevation, and does not report the total volume of water delivered, the agricultural water supplier must document in its Agricultural Water Management Plan how it converted the measured value to volume. The protocols must follow best professional practices and include the following methods for determining volumetric deliveries:
    - For devices that measure flow-rate, documentation shall describe protocols used to measure the duration of water delivery where volume is derived by the following formula: Volume = flow rate x duration of delivery.
    - For devices that measure velocity only, the documentation shall describe protocols associated with the measurement of the cross-sectional area of flow and duration of water delivery, where volume is derived by the following formula: Volume = velocity x cross-section flow area x duration of delivery.
    - For devices that measure water elevation at the device (e.g. flow over a weir or differential elevation on either side of a device), the documentation shall describe protocols associated with the measurement of elevation that was used to derive flow rate at the device. The documentation will also describe the method or formula used to derive volume from the measured elevation value(s).
- If an existing water measurement device is determined to be out of compliance with §597.3, and the agricultural water supplier is unable to bring it into compliance before submitting its Agricultural Water Management Plan in December 2012, the agricultural water supplier shall provide in its 2012 plan, a schedule, budget and finance plan for taking corrective action in three years or less.[355]

D. The Test Claim Statutes and Regulations do not Result in Increased Costs Mandated by the State, Because the Claimants Possess Fee Authority Sufficient as a Matter of Law to Cover the Costs of any New Mandated Activities.

As the preceding analysis indicates, many of the requirements of the test claim statutes are not new, at least with respect to *some* urban or agricultural water suppliers, because suppliers were previously required to perform substantially the same activities under prior law. Additionally, many of the alleged test claim statutes do not impose any requirements at all, based on the plain language. However, even if the new requirements identified above could be argued to mandate a new program or higher level of service, the Commission finds that the costs incurred to comply

[355] Code of Regulations, title 23, section 597.4(e) (Register 2012, No. 28).

with those requirements are not costs mandated by the state, within the meaning of article XIII B, section 6 and Government Code section 17514, because all affected entities have fee authority, sufficient as a matter of law to cover the costs of any mandated activities.

Government Code section 17556(d) provides that the Commission shall not find costs mandated by the state, as defined in section 17514, if the local government claimant "has the authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service." The California Supreme Court upheld the constitutionality of Government Code section 17556, subdivision (d), in *County of Fresno v. State of California.*[356] The Court, in holding that the term "costs" in article XIII B, section 6 excludes expenses recoverable from sources other than taxes, stated:

> Section 6 was included in article XIII B in recognition that article XIII A of the Constitution severely restricted the taxing powers of local governments. (See *County of Los Angeles I, supra,* 43 Cal.3d at p. 61.) The provision was intended to preclude the state from shifting financial responsibility for carrying out governmental functions onto local entities that were ill equipped to handle the task. (*Ibid.*; see *Lucia Mar Unified School Dist. v. Honig* (1988) 44 Cal.3d 830, 836, fn. 6 [244 Cal.Rptr. 677, 750 P.2d 318].) Specifically, it was designed to protect the tax revenues of local governments from state mandates that would require expenditure of such revenues. Thus, although its language broadly declares that the "state shall provide a subvention of funds to reimburse ... local government for the costs [of a state-mandated new] program or higher level of service," read in its textual and historical context section 6 of article XIII B requires subvention only when the costs in question can be recovered *solely from tax revenues.*[357]

Accordingly, in *Connell v. Superior Court of Sacramento County*,[358] the Santa Margarita Water District, among others, was denied reimbursement based on its authority to impose fees on water users. The water districts submitted evidence that funding the mandated costs with fees was not practical: "rates necessary to cover the increased costs [of pollution control regulations] would render the reclaimed water unmarketable and would encourage users to switch to potable water."[359] The court concluded that "[t]he question is whether the Districts have authority, i.e., the right or power, to levy fees sufficient to cover the costs." Water Code section 35470 authorized the levy of fees to "correspond to the cost and value of the service," and "to defray the ordinary operation or maintenance expenses of the district and for any other lawful district purpose."[360] The court held that the Districts had not demonstrated "that anything in Water Code section 35470 limits the authority of the Districts to levy fees 'sufficient' to cover their costs,"

---

[356] *County of Fresno v. State of California, supra,* 53 Cal.3d 482.

[357] *Id*, at p. 487 [emphasis added].

[358] (Cal. Ct. App. 3d Dist. 1997) 59 Cal.App.4th 382.

[359] *Id*, at p. 399.

[360] *Ibid.*

and that therefore "the economic evidence presented by SMWD to the Board [of Control] was irrelevant and injected improper factual questions into the inquiry."[361]

Likewise, in *Clovis Unified School District v. Chiang*, the court found that the SCO was not acting in excess of its authority in reducing reimbursement claims to the full extent of the districts' authority to impose fees, even if there existed practical impediments to collecting the fees. In making its decision the court noted that the concept underlying Government Code sections 17514 and 17556(d) is that "[t]o the extent a local agency or school district 'has the authority' to charge for the mandated program or increased level of service, that charge cannot be recovered as a state-mandated cost."[362] The court further noted that, "this basic principle flows from common sense as well." The court reasoned: "As the Controller succinctly puts it, 'Claimants can choose not to require these fees, but not at the state's expense.'"[363]

1. The claimants have statutory authority to levy fees or charges for the provision of water.

Both Finance and DWR asserted, in comments on the test claim, that the test claim statutes are not reimbursable pursuant to section 17556(d). Finance argued that the claimants are "statutorily authorized to charge a fee for the delivery of water," and thus "each of these water agencies has the ability to cover any potential initial and ongoing costs related to the Act and Regulations with fee revenue."[364] DWR asserted that "Senate Bill 1017, which amended the [Urban Water Management Act] in 1994," provides authority for an urban water supplier "to recover the costs of preparing its [urban water management plan] and implementing the reasonable water conservation measures included in the plan in its water rates."[365]

For the following reasons, the Commission finds that the claimants have statutory authority to establish and increase fees or assessments for the provision of water services.

Water Code section 35470 provides generally that "[a]ny [water] district formed on or after July 30, 1917, may, in lieu in whole or in part of raising money for district purposes by assessment, make water available to the holders of title to land or the occupants thereon, and may fix and collect charges therefor." Section 35470 further provides that "[t]he charges may vary in different months and in different localities of the district to correspond to the cost and value of the service, and the district *may use so much of the proceeds of the charges as may be necessary to defray the ordinary operation or maintenance expenses of the district and for any other lawful purpose*."[366] In addition, section 50911 provides that an irrigation district may "[a]dopt a schedule of rates to be charged by the district for furnishing water for the irrigation of district lands."[367]

---

[361] *Connell, supra*, (1997) 59 Cal.App.4th at p. 401.

[362] *Clovis Unified School Dist. v. Chiang* (2010) 188 Cal.App.4th 794, at p. 812.

[363] *Ibid.*

[364] Exhibit C, Finance Comments on Test Claim, page 1.

[365] Exhibit D, DWR Comments on Test Claim, pages 8-9 [citing Water Code section 10654].

[366] Water Code section 35470 (Stats. 2007, ch. 27 (SB 444)) [emphasis added].

[367] Water Code section 50911 (Stats. 2007, ch. 27 (SB 444)).

More specifically, and pertaining to the requirements of the test claim statutes, Water Code section 10654 permits an urban water supplier to "recover in its rates" for the costs incurred in preparing and implementing water conservation measures.[368] And, section 10608.48 expressly requires agricultural water suppliers to "[a]dopt a pricing structure for water customers based at least in part on quantity delivered."[369] This provision indicates that the Legislature intended user fees to be an essential component of the water conservation practices called for by the Act. And finally, Water Code section 10608.32, as added *within the test claim statute*, provides that all costs incurred pursuant to this part may be recoverable in rates subject to review and approval by the Public Utilities Commission.[370]

Based on the foregoing, the Commission finds that both agricultural and urban water suppliers have statutory authority to impose or increase fees to cover the costs of new state-mandated activities.

2. Nothing in Proposition 218, case law, or any prior Commission Decision, alters the analysis of the claimants' statutory fee authority.

The claimants argue that both Finance and DWR cite *Connell v. Superior Court* and "ignore the most recent rulings on the subject of Proposition 218 where their exact arguments were considered and overruled by the Commission in *Discharge of Stormwater Runoff*, 07-TC-09." The claimants argue that "under Proposition 218, Claimants' customers could reject the Board's action to establish or increase fees or assessments, yet Claimants would still be obligated to implement the mandates."[371] In comments on the draft proposed decision, the claimants reiterate, more urgently:

> The Commission should not accept its staff's invitation to ignore a prior Commission decision that is directly on point, and which was based on a plain reading of the California Constitution, all in order to reject the test claim here. To do so would undermine the Commission' s credibility, eviscerate the Commission's Constitutional duty to reimburse agencies for new state mandates, and have far-reaching negative effects.[372]

For the following reasons, the claimant's argument is unsound. In *Connell v. Superior Court, supra* the court held that "[t]he question is whether the Districts have authority, i.e., the right or power, to levy fees sufficient to cover the costs," and that the economic viability of the necessary rate increases "was irrelevant and injected improper factual questions into the inquiry."[373] *Connell* did not address the possible impact of Proposition 218 on the districts' fee authority, because the districts did not "contend that the services at issue...are among the 'many services'

[373] *Connell, supra*, (1997) 59 Cal.App.4th at p. 401.

impacted by Proposition 218."[374] The claimants here argue that *Connell* is no longer good authority, because Proposition 218 has changed the landscape of special districts' legal authority to impose fees or charges.

Proposition 218, adopted by the voters in 1996, also known as the "Right to Vote on Taxes Act," declared its purpose to protect taxpayers "by limiting the methods by which local governments exact revenue from taxpayers without their consent." Proposition 218 added articles XIII C and XIII D to the Constitution;[375] article XIII C addresses assessments, while article XIII D addresses user fees and charges. The claimants allege that article XIII D, section 6, specifically, imposes a legal or constitutional hurdle to imposing or increasing fees, which undermines any analysis of statutory fee authority under Government Code section 17556(d).

The requirements of article XIII D, section 6 to which claimants refer provide as follows:

> Property Related Fees and Charges. (a) Procedures for New or Increased Fees and Charges. An agency shall follow the procedures pursuant to this section in imposing or increasing any fee or charge as defined pursuant to this article, including, but not limited to, the following:
>
> (1) The parcels upon which a fee or charge is proposed for imposition shall be identified. The amount of the fee or charge proposed to be imposed upon each parcel shall be calculated. The agency shall provide written notice by mail of the proposed fee or charge to the record owner of each identified parcel upon which the fee or charge is proposed for imposition, the amount of the fee or charge proposed to be imposed upon each, the basis upon which the amount of the proposed fee or charge was calculated, the reason for the fee or charge, together with the date, time, and location of a public hearing on the proposed fee or charge.
>
> (2) The agency shall conduct a public hearing upon the proposed fee or charge not less than 45 days after mailing the notice of the proposed fee or charge to the record owners of each identified parcel upon which the fee or charge is proposed for imposition. At the public hearing, the agency shall consider all protests against the proposed fee or charge. *If written protests against the proposed fee or charge are presented by a majority of owners of the identified parcels, the agency shall not impose the fee or charge.*
>
> [¶…¶]
>
> (c) Voter Approval for New or Increased Fees and Charges. *Except for fees or charges for sewer, water, and refuse collection services*, no property related fee or charge shall be imposed or increased unless and until that fee or charge is submitted and approved by a majority vote of the property owners of the property subject to the fee or charge or, at the option of the agency, by a two-thirds vote of the electorate residing in the affected area. The election shall be conducted not less than 45 days after the public hearing. An agency may adopt procedures

[374] 59 Cal.App.4th at p. 403.

[375] Exhibit X, Text of Proposition 218.

similar to those for increases in assessments in the conduct of elections under this subdivision.[376]

The claimants have acknowledged that they have fee authority, absent the restrictions of articles XIII C and XIII D: "Claimants do not deny that, before the passage Proposition 218, the Water Code would have provided Claimants sufficient authority, pursuant to their governing bodies' discretion, to unilaterally establish or increase fees or charges for the provision of water services."[377] After Proposition 218, the claimants argue they are now "authorized to do no more than *propose* a fee increase that can be rejected" by majority protest.[378] Furthermore, the claimants maintain that the Commission's decision in *Discharge of Stormwater Runoff* recognized the limitations imposed by article XIII D, section 6, and the effect on local governments' fee authority: "[f]inding *Connell* inapposite, the Commission observed that 'The voting requirement of Proposition 218 does not impose a mere practical or economic hurdle, as in *Connell*, but a legal and constitutional one.'"[379]

However, claimants' reliance on the Commission's prior action is misplaced, and claimants' assertions about the effect of Proposition 218 on the law of *Connell* are overstated. Commission decisions are not precedential, and in any event the current test claim is distinguishable from the analysis in *Discharge of Stormwater Runoff*. The Commission, in *Discharge of Stormwater Runoff*, deviated from the rule of *Connell*, and found that Proposition 218, as *applied to the claimants* and *the mandated activities in that test claim*, constituted a legal and constitutional barrier to increasing fees. The test claim was brought by the County of San Diego and a number of cities, and alleged various mandated activities and costs related to reducing stormwater pollution.[380] The Commission found that although the County and the Cities had a generalized fee authority based on regulatory and police powers,[381] "[w]ith some exceptions, local government fees or assessments that are incident to property ownership are subject to voter approval under article XIII D of the California Constitution, as added by Proposition 218 in 1996."[382] The Commission reasoned that "it is possible that the local agency's voters or property owners may never adopt the proposed fee or assessment, but the local agency would still be required to comply with the state mandate,"[383] and that "[a]bsent compliance with the Proposition 218 election and other procedures, there is no legal authority to impose or raise fees within the meaning of Government Code section 17556, subdivision (d)."[384] Thus, the

Commission concluded that "[t]he voting requirement of Proposition 218 does not impose a mere practical or economic hurdle, as in *Connell*, but a legal and constitutional one."[385]

Here, Proposition 218 does not impose a legal and constitutional hurdle, because fees for the provision of water services are expressly exempt from the voter approval requirements of Proposition 218.[386] The Proposition 218 Omnibus Implementation Act, enacted specifically to construe Proposition 218, defines "water" as "any system of public improvements intended to provide for the production, storage, supply, treatment, or distribution of water."[387] Thus, an urban or agricultural water supplier that undertakes measures to ensure the conservation of water, to produce more water, and enhance the quality and reliability of its supply, is providing water service, within the meaning of the Omnibus Act. The statutory and regulatory metering and other conservation practices required of the claimants therefore describe "water service." Unlike the test claimants in *Discharge of Stormwater Runoff* (cities and counties), the services for which fees or charges would be increased are expressly exempt from the voter approval requirements in article XIII D, section 6(c), and the decision and reasoning of the Commission in *Discharge of Stormwater Runoff* is not relevant. Therefore, the Commission's earlier decision is distinguishable on the very same ground that renders *Connell* significantly poignant. The claimants cannot rely on the unwillingness of voters to raise fees, because the fees in question fall, based on the plain language of the Constitution, outside voter-approval requirement of article XIII D, section 6(c).

Claimants acknowledge that fees for water service "are excused from the formal election requirement under article XIII D section 6(c), [but] the majority protest provision in subdivision (a)(2) still applies and constitutes a legal barrier to Claimants' fee authority."[388] Claimants therefore argue that they "find themselves required to implement and pay for the newly mandated activities, yet are authorized to do no more than *propose* a fee increase that can be rejected by a simple majority of affected customers."[389]

However, the so-called "majority protest provision," which claimants allege constitutes a legal barrier to claimants' fee authority, presents either a mixed question of fact and law, which has not been demonstrated based on the evidence in the record, or a legal issue that is incumbent on the courts first to resolve. In order for the Commission to make findings that the claimants' fee authority has been diminished, or negated, pursuant to article XIII D, section 6(a), the claimants would have to provide evidence that they tried and failed to impose or increase the necessary fees,[390] or provide evidence that a court determined that Proposition 218 represents a

---

[385] Exhibit X, Statement of Decision, *Discharge of Stormwater Runoff*, 07-TC-09, page 107 [citing *Connell v. Superior Court*, *supra*, 59 Cal.App.4th 382, at p. 401].

[387] Government Code section 53750(m) (Stats. 2002, ch. 395).

[388] Exhibit R, Claimant Comments on Draft Proposed Decision, page 14.

[389] Exhibit R, Claimant Comments on Draft Proposed Decision, page 15.

[390] If a claimant were to provide evidence that it had tried and failed to impose or increase fees, that evidence could constitute costs "first incurred," within the meaning of Government Code section 17551, and a claimant otherwise barred from reimbursement under section 17556(d) could thus potentially demonstrate that it had incurred costs mandated by the state, as defined in

constitutional hurdle to fee authority as a matter of law. The Commission cannot now say, as a matter of law, that the claimants' fee authority is insufficient based on the speculative and uncertain threat of a "written protests against the proposed fee or charge [being] presented by a majority of owners of the identified parcels..."[391]

Based on the foregoing analysis, the Commission cannot find costs mandated by the state, within the meaning of Government Code section 17514, because the claimants have sufficient fee authority, as a matter of law, to establish or increase fees or charges to cover the costs of any new required activities.

V. Conclusion

Based on the foregoing analysis, the Commission finds that the Water Conservation Act of 2009, enacted as Statutes 2009-2010, 7th Extraordinary Session, chapter 4 (SBX7 7), and the Agricultural Water Measurement Regulations issued by the Department of Water Resources, found at Code of Regulations, title 23, section 597 et seq., do not impose a reimbursable state-mandated program on urban retail water suppliers or agricultural water suppliers within the meaning of article XIII B, section 6 of the California Constitution and Government Code section 17514. The Commission therefore denies this test claim.

---

section 17514. The Commission does not make findings on this issue, but merely observes the potentiality.

COMMISSION ON STATE MANDATES

STATE OF CALIFORNIA

IN RE TEST CLAIM ON: San Diego Regional Water Quality Control Board Order No. R9-2007-0001 Permit CAS0108758 Parts D.1.d.(7)-(8), D.1.g., D.3.a.(3), D.3.a.(5), D.5, E.2.f, E.2.g, F.1, F.2, F.3, I.1, I.2, I.5, J.3.a.(3)(c)iv-viii & x-xv, and L. Filed June 20, 2008, by the County of San Diego, Cites of Carlsbad, Del Mar, Imperial Beach, Lemon Grove, Poway, San Marcos, Santee, Solana Beach, Chula Vista, Coronado, Del Mar, El Cajon, Encinitas, Escondido, Imperial Beach, La Mesa, Lemon Grove, National City, Oceanside, San Diego, and Vista, Claimants.	Case No.: 07-TC-09 *Discharge of Stormwater Runoff - Order No. R9-2007-0001* STATEMENT OF DECISION PURSUANT TO GOVERNMENT CODE SECTION 17500 ET SEQ.; TITLE 2, CALIFORNIA CODE OF REGULATIONS, DIVISION 2, CHAPTER 2.5, ARTICLE 7. *(Adopted on March 26, 2010)*

STATEMENT OF DECISION

The Commission on State Mandates ("Commission") heard and decided this test claim during a regularly scheduled hearing on March 26, 2010. Tim Barry, John VanRhyn, Helen Peak, Shawn Hagerty and James Lough appeared on behalf of the claimants. Elizabeth Jennings appeared on behalf of the State Water Resources Control Board. Carla Shelton and Susan Geanacou appeared on behalf of the Department of Finance.

The law applicable to the Commission's determination of a reimbursable state-mandated program is article XIII B, section 6 of the California Constitution, Government Code section 17500 et seq., and related case law.

The Commission adopted the staff analysis to partially approve the test claim at the hearing by a vote of 6-1.

Summary of Findings

The test claim, filed by the County of San Diego and several cities, alleges various activities related to reducing stormwater pollution in compliance with a permit issued by the San Diego Regional Water Quality Control Board, a state agency.

The Commission finds that the following activities in the permit (as further specified on pp. 122-132 below) are a reimbursable state-mandated new program or higher level of service within the meaning of article XIII B, section 6 of the California Constitution:

- street sweeping (permit part D.3.a(5));
- street sweeping reporting (part J.3.a.(3)(c) x-xv);
- conveyance system cleaning (part D.3.a.(3));
- conveyance system cleaning reporting (J.3.a.(3)(c)(iv)-(viii));
- educational component (part D.5.a.(1)-(2) & D.5.b.(1)(c)-(d) & D.5.(b)(3));
- watershed activities and collaboration in the Watershed Urban Runoff Management Program (part E.2.f & E.2.g);
- Regional Urban Runoff Management Program (parts F.1., F.2. & F.3);
- program effectiveness assessment (parts I.1 & I.2);
- long-term effectiveness assessment (part I.5) and
- all permittee collaboration (part L.1.a.(3)-(6)).

The Commission also finds that the following test claim activities are not reimbursable because the claimants[1] have fee authority sufficient (within the meaning of Gov. Code § 17556, subd. (d)) to pay for them: hydromodification management plan (part D.1.g) and low-impact development (parts D.1.d.(7) & D.1.d.(8)), as specified below.

Further, the Commission finds the following would be identified as offsetting revenue in the parameters and guidelines:

- Any fees or assessments approved by the voters or property owners for any activities in the permit, including those authorized by Public Resources Code section 40059 for street sweeping or reporting on street sweeping, and those authorize by Health and Safety Code section 5471, for conveyance-system cleaning, or reporting on conveyance-system cleaning; and
- Any proposed fees that are not subject to a written protest by a majority of parcel owners and that are imposed for street sweeping.
- Effective January 1, 2010, fees imposed pursuant to Water Code section 16103 only to the extent that a local agency voluntarily complies with Water Code section 16101 by developing a watershed improvement plan pursuant to Statutes 2009, chapter 577, and the Regional Board approves the plan and incorporates it into the test claim permit to satisfy the requirements of the permit.

BACKGROUND

The claimants allege various activities for reducing stormwater pollution in compliance with a permit issued by the California Regional Water Quality Control Board, San Diego Region, (Regional Board), a state agency. Before discussing the specifics of the permit, an overview of the permit's purpose, and municipal stormwater pollution in general, puts the permit in context.

---

[1] In this analysis, claimants and the permit term "copermittees" are used interchangeably, even though two of the copermittees (the San Diego Unified Port District and San Diego County Regional Airport Authority) are not claimants. The following are the claimants and copermittees that are subject to the permit requirements: Carlsbad, Chula Vista, Coronado, Del Mar, El Cajon, Encinitas, Escondido, Imperial Beach, La Mesa, Lemon Grove, National City, Oceanside, Poway, San Diego, San Marcos, Santee, Solana Beach, Vista, County of San Diego.

Municipal Stormwater

The purpose of the permit is to specify "requirements necessary for the copermittees[2] to reduce the discharge of pollutants in urban runoff to the maximum extent practicable (MEP)." Each of the copermittees or dischargers "owns or operates a municipal separate storm sewer system (MS4),[3] through which it discharges urban runoff into waters of the United States within the San Diego region."

Stormwater[4] runoff flowing untreated from urban streets directly into creeks, streams, rivers, lakes and the ocean, creates pollution, as the Ninth Circuit Court of Appeal has stated:

> Storm water runoff is one of the most significant sources of water pollution in the nation, at times "comparable to, if not greater than, contamination from industrial and sewage sources." [Citation omitted.] Storm sewer waters carry suspended metals, sediments, algae-promoting nutrients (nitrogen and phosphorus), floatable trash, used motor oil, raw sewage, pesticides, and other toxic contaminants into streams, rivers, lakes, and estuaries across the United States. [Citation omitted.] In 1985, three-quarters of the States cited urban storm water runoff as a major cause of waterbody impairment, and forty percent reported construction site runoff as a major cause of impairment. Urban runoff has been named as the foremost cause of impairment of surveyed ocean waters. Among the sources of storm water contamination are urban development, industrial facilities, construction sites, and illicit discharges and connections to storm sewer systems.[5]

Because of these stormwater pollution problems described by the Ninth Circuit, both California and the federal government regulate stormwater runoff.

California Law

The California Supreme Court summarized the state statutory scheme and regulatory agencies applicable to this test claim as follows:

---

[2] "Copermittees" are entities responsible for National Pollutant Discharge Elimination System (NPDES) permit conditions pertaining to their own discharges. (40 C.F.R. § 122.26 (b)(1).)

[3] Municipal separate storm sewer system means a conveyance or system of conveyances (including roads with drainage systems, municipal streets, catch basins, curbs, gutters, ditches, man-made channels, or storm drains): (i) Owned or operated by a State, city, town, borough, county, parish, district, association, or other public body (created by or pursuant to State law) having jurisdiction over disposal of sewage, industrial wastes, storm water, or other wastes, including special districts under State law such as a sewer district, flood control district or drainage district, or similar entity, or an Indian tribe or an authorized Indian tribal organization, or a designated and approved management agency under section 208 of the CWA that discharges to waters of the United States; (ii) Designed or used for collecting or conveying storm water; (iii) Which is not a combined sewer; and (iv) Which is not part of a Publicly Owned Treatment Works (POTW) as defined at 40 CFR 122.2. (40 C.F.R. § 122.26 (b)(8).)

[4] Storm water means "storm water runoff, snow melt runoff, and surface runoff and drainage." (40 C.F.R. § 122.26 (b)(13).)

[5] *Environmental Defense Center, Inc. v. U.S. E.P.A.* (2003) 344 F.3d 832, 840-841.

> In California, the controlling law is the Porter-Cologne Water Quality Control Act (Porter-Cologne Act), which was enacted in 1969. (Wat. Code, § 13000 et seq., added by Stats.1969, ch. 482, § 18, p. 1051.) Its goal is "to attain the highest water quality which is reasonable, considering all demands being made and to be made on those waters and the total values involved, beneficial and detrimental, economic and social, tangible and intangible." (§ 13000.) The task of accomplishing this belongs to the State Water Resources Control Board (State Board) and the nine Regional Water Quality Control Boards; together the State Board and the regional boards comprise "the principal state agencies with primary responsibility for the coordination and control of water quality." (§ 13001.)
>
> Whereas the State Board establishes statewide policy for water quality control (§ 13140), the regional boards "formulate and adopt water quality control plans for all areas within [a] region" (§ 13240).[6]
>
> In California, wastewater discharge requirements established by the regional boards are the equivalent of the NPDES permits [national pollutant discharge elimination system] required by federal law. (§ 13374.)[7]

As to waste discharge requirements, section 13377 of the California Water Code states:

> Notwithstanding any other provision of this division, the state board or the regional boards shall, as required or authorized by the Federal Water Pollution Control Act, as amended, issue waste discharge requirements and dredged or fill material permits which apply and ensure compliance with all applicable provisions of the act and acts amendatory thereof or supplementary, thereto, together with any more stringent effluent standards or limitations necessary to implement water quality control plans, or for the protection of beneficial uses, or to prevent nuisance.

Much of what the Regional Board does, especially that pertains to permits like the one in this claim, is based in the federal Clean Water Act.

Federal Law

The Federal Clean Water Act (CWA) was amended in 1972 to implement a permitting system for all discharges of pollutants[8] from point sources[9] to waters of the United States, since

---

[6] *City of Burbank v. State Water Resources Control Bd.* (2005) 35 Cal.4th 613, 619.

[7] *Id.* at page 621. State and regional board permits allowing discharges into state waters are called "waste discharge requirements." (Wat. Code, § 13263).

[8] According to the federal regulations, "Discharge of a pollutant" means: (a) Any addition of any "pollutant" or combination of pollutants to "waters of the United States" from any "point source," or (b) Any addition of any pollutant or combination of pollutants to the waters of the "contiguous zone" or the ocean from any point source other than a vessel or other floating craft which is being used as a means of transportation. This definition includes additions of pollutants into waters of the United States from: surface runoff which is collected or channeled by man; discharges through pipes, sewers, or other conveyances owned by a State, municipality, or other person which do not lead to a treatment works; and discharges through pipes, sewers, or other

discharges of pollutants are illegal except under a permit.[10] The permits, issued under the national pollutant discharge elimination system, are called NPDES permits. Under the CWA, each state is free to enforce its own water quality laws so long as its effluent limitations[11] are not "less stringent" than those set out in the CWA (33 USCA 1370). The California Supreme Court described NPDES permits as follows:

> Part of the federal Clean Water Act is the National Pollutant Discharge Elimination System (NPDES), "[t]he primary means" for enforcing effluent limitations and standards under the Clean Water Act. (*Arkansas v. Oklahoma, supra,* 503 U.S. at p. 101, 112 S.Ct. 1046.) The NPDES sets out the conditions under which the federal EPA or a state with an approved water quality control program can issue permits for the discharge of pollutants in wastewater. (33 U.S.C. § 1342(a) & (b).) In California, wastewater discharge requirements established by the regional boards are the equivalent of the NPDES permits required by federal law. (§ 13374.)[12]

In the Porter-Cologne Water Quality Control Act (Wat. Code, §§ 13370 et seq.), the Legislature found that the state should implement the federal law in order to avoid direct regulation by the federal government. The Legislature requires the permit program to be consistent with federal law, and charges the State and Regional Water Boards with implementing the federal program (Wat. Code, §§ 13372 & 13370). The State Water Resources Control Board (State Board) incorporates the regulations from the U.S. EPA for implementing the federal permit program, so both the Clean Water Act and U.S. EPA regulations apply to California's permit program (Cal.Code Regs., tit. 23, § 2235.2).

When a Regional Board adopts an NPDES permit, it must adopt as stringent a permit as U.S. EPA would have (federal Clean Water Act, § 402 (b)). As the California Supreme Court stated:

> The federal Clean Water Act reserves to the states significant aspects of water quality policy (33 U.S.C. § 1251(b)), and it specifically grants the states authority

---

conveyances, leading into privately owned treatment works. This term does not include an addition of pollutants by any "indirect discharger." (40 C.F.R. § 122.2.)

[9] A point source is "any discernible, confined and discrete conveyance, including but not limited to any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, or vessel or other floating craft, from which pollutants are or may be discharged." 33 U.S.C. § 1362(14).

[10] 40 Code of Federal Regulations, section 122.21 (a). The section applies to U.S. EPA-issued permits, but is incorporated into section 123.25 (the state program provision) by reference.

[11] *Effluent limitation* means any restriction imposed by the Director on quantities, discharge rates, and concentrations of "pollutants" which are "discharged" from "point sources" into "waters of the United States," the waters of the "contiguous zone," or the ocean. (40 C.F.R. § 122.2.)

[12] *City of Burbank v. State Water Resources Control Bd., supra,* 35 Cal.4th 613, 621. State and regional board permits allowing discharges into state waters are called "waste discharge requirements" (Wat. Code, § 13263).

> to "enforce any effluent limitation" that is not "*less stringent*" than the federal standard (*id.* § 1370, italics added). It does not prescribe or restrict the factors that a state may consider when exercising this reserved authority, and thus it does not prohibit a state-when imposing effluent limitations that are *more stringent* than required by federal law-from taking into account the economic effects of doing so.[13]

Actions that dischargers must implement as prescribed in permits are commonly called "best management practices" or BMPs.[14]

Stormwater was not regulated by U.S. EPA in 1973 because of the difficulty of doing so. This exemption from regulation was overturned in *Natural Resources Defense Council v. Costle* (1977) 568 F.2d 1369, which ordered U.S. EPA to require NPDES permits for stormwater runoff. By 1987, U.S. EPA still had not adopted regulations to implement a permitting system for stormwater runoff. The Ninth Circuit Court of Appeals explained the next step as follows:

> In 1987, to better regulate pollution conveyed by stormwater runoff, Congress enacted Clean Water Act § 402(p), 33 U.S.C. § 1342(p), "Municipal and Industrial Stormwater Discharges." Sections 402(p)(2) and 402(p)(3) mandate NPDES permits for stormwater discharges "associated with industrial activity," discharges from large and medium-sized municipal storm sewer systems, and certain other discharges. Section 402(p)(4) sets out a timetable for promulgation of the first of a two-phase overall program of stormwater regulation.[15]

NPDES permits are required for "A discharge from a municipal separate storm sewer system serving a population of 250,000 or more."[16] The federal Clean Water Act specifies the following criteria for municipal storm sewer system permits:

> (i) may be issued on a system- or jurisdiction-wide basis;
>
> (ii) shall include a requirement to effectively prohibit non-stormwater discharges into the storm sewers; and
>
> (iii) shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants.[17]

---

[13] *City of Burbank v. State Water Resources Control Bd., supra,* 35 Cal.4th 613, 627-628.

[14] Best management practices are "schedules of activities, prohibitions of practices, maintenance procedures, and other management practices to prevent or reduce the pollution of "waters of the United States." BMPs also include treatment requirements, operating procedures, and practices to control plant site runoff, spillage or leaks, sludge or waste disposal, or drainage from raw material storage." (40 CFR § 122.2.)

[15] *Environmental Defense Center, Inc. v. U.S. E.P.A., supra,* 344 F.3d 832, 841-842.

[16] 33 USCA section 1342 (p)(2)(C).

[17] 33 USCA section 1342 (p)(3)(B).

In 1990, U.S. EPA adopted regulations to implement Clean Water Act section 402(p), defining which entities need to apply for permits and the information to include in the permit application. The permit application must propose management programs that the permitting authority will consider in adopting the permit. The management programs must include the following:

> [A] comprehensive planning process which involves public participation and where necessary intergovernmental coordination, to reduce the discharge of pollutants to the maximum extent practicable using management practices, control techniques and system, design and engineering methods, and such other provisions which are appropriate.[18]

General State-Wide Permits

In addition to the regional stormwater permit at issue in this claim, the State Board has issued two general statewide permits,[19] as described in the permit as follows:

> In accordance with federal NPDES regulations and to ensure the most effective oversight of industrial and construction site discharges, discharges of runoff from industrial and construction sites are subject to dual (state and local) storm water regulation. Under this dual system, the Regional Board is responsible for enforcing the General Construction Activities Storm Water Permit, SWRCB Order 99-08 DWQ, NPDES No. CAS000002 (General Construction Permit) and the General Industrial Activities Storm Water Permit, SWRCB Order 97-03 DWQ, NPDES No. CAS000001 (General Industrial Permit), and each municipal Copermittee is responsible for enforcing its local permits, plans, and ordinances, which may require the implementation of additional BMPs than required under the statewide general permits.

The State and Regional Boards have statutory fee authority to conduct inspections to enforce the general statewide permits.[20]

The Regional Board Permit (Order No. R9-2007-001, Permit CAS0108758)

Under Part A, "Basis for the Order," the permit states:

> This Order Renews National Pollutant Discharge Elimination System (NPDES) Permit No. CAS0108758, which was first issued on July 16, 1990 (Order No. 90-42), and then renewed on February 21, 2001 (Order No. 2001-01). On August 25, 2005, in accordance with Order NO. 2001-01, the County of San Diego, as the Principal Permittee, submitted a Report of Waste Discharge (ROWD) for renewal of their MS4 Permit.

Attachment B of the permit (part 7(q)) states that "This Order expires five years after adoption." Attachment B also says (part 7 (r)) that the terms and conditions of the permit "are automatically

---

[18] 40 Code of Federal Regulations section 122.26 (d)(2)(iv).

[19] A general permit means "an NPDES 'permit' issued under [40 CFR] §122.28 authorizing a category of discharges under the CWA within a geographical area." (40 CFR § 122.2.)

[20] Water Code section 13260, subdivision (d)(2)(B)(i) - (iii).

continued pending issuance of a new permit if all requirements of the federal NPDES regulations on the continuation of the expired permits (40 CFR 122.6) are complied with."[21]

Part J.2.d. of the permit requires the Principal Permittee (County of San Diego) to "submit to the Regional Board, no later than 210 days in advance of the expiration of this order, a report of Waste Discharge (ROWD) as an application for issuance of new waste discharge requirements." The permit specifies the contents of the ROWD.

The permit is divided into 16 sections. It prohibits discharges from MS4s that contain pollutants that "have not been reduced to the maximum extent practicable" as well as discharges "that cause or contribute to the violation of water quality standards." The permit also prohibits non-storm water discharges unless they are authorized by a separate NPDES permit, or fall within specified exemptions. The copermittees are required to "establish, maintain, and enforce adequate legal authority to control pollutant discharges into and from its MS4 through ordinance, statute, permit, contract or similar means." The copermittees are also required to develop and implement an updated Jurisdictional Urban Runoff Management Program (JURMP) for their jurisdictions that meets the requirements specified in the permit as well as a Watershed Urban Runoff Management Program (watersheds are defined in the permit) and a Regional Urban Runoff Management Program, each of which are to be assessed annually and reported on. Annual fiscal analyses are also required of the copermittees. The principal permittee has additional responsibilities, as specified.

The Regional Board prepared a 115-page Fact Sheet/Technical Report for this permit in which are listed, among other things, Regional Board findings, the federal law, and the reasons for the various permit requirements.

The 2001 version of the Regional Board's permit (treated as prior law in this analysis) was challenged by the Building Industry Association of San Diego County, among others. They alleged that the permit provisions violate federal law because they prohibit the municipalities from discharging runoff from storm sewers if the discharge would cause a water body to exceed the applicable water quality standard established under state law.[22] The court held that the Clean Water Act's "maximum extent practicable" standard did not prevent the water boards from including provisions in the permit that required municipalities to comply with state water quality standards.[23]

Attached to the claimants' February 2009 comments is a document entitled "Comparison Between the Requirement of Tentative Order 2001-01, the Federal NPDES Storm Water Regulations, the Existing San Diego Municipal Storm Water Permit (Order 90-42), and Previous Drafts of the San Diego Municipal Stormwater Permit" that compares the 2001 permit with the 1990 and earlier permits. One of the document's conclusions regarding the 2001 permit is: "40% of the requirements in Tentative Order 2001-01 which 'exceed the federal regulations' are based

almost exclusively on (1) guidance documents developed by USEPA and (2) SWRCB's [State Board's] orders describing statewide precedent setting decision on MS4 permits."

Claimants' Position

Claimants assert that various parts of the Regional Board's 2007 permit constitute a reimbursable state mandate within the meaning of article XIII B, section 6, and Government Code section 17514. The parts of the permit pled by claimants are quoted below:

I. Regional Requirements for Urban Runoff Management Programs

A. Copermittee collaboration

Parts F.2. and F.3. (F. Regional Urban Runoff Management Program) of the permit provide:

> Each Copermittee shall collaborate with the other Copermittees to develop, implement, and update as necessary a Regional Urban Runoff Management Program. The Regional Urban Runoff Management Program shall meet the requirements of section F of this Order, reduce the discharge of pollutants[24] from the MS4 to the MEP, and prevent urban runoff[25] discharges from the MS4 from causing or contributing to a violation of water quality standards.[26] The Regional Urban Runoff Management Program shall, at a minimum: [¶]...[¶]
>
> 2. Develop the standardized fiscal analysis method required in section G of this Order.[27]
>
> 3. Facilitate the assessment of the effectiveness of jurisdictional, watershed,[28] and regional programs.

---

[24] Pollutant is defined in Attachment C of the permit as "Any agent that may cause or contribute to the degradation of water quality such that a condition of pollution or contamination is created or aggravated."

[25] Urban Runoff is defined in Attachment C of the permit as "All flows in a storm water conveyance system and consists of the following components: (1) storm water (wet weather flows) and (2) non-storm water illicit discharges (dry weather flows).

[26] Water Quality Standards is defined in Attachment C of the permit as "The beneficial uses (e.g., swimming, fishing, municipal drinking water supply, etc.) of water and the water quality objectives necessary to protect those uses.

[27] Section G requires the permittees to "collectively develop a standardized method and format for annually conducting and reporting fiscal analyses of their urban runoff management programs in their entirety (including jurisdictional, watershed, and regional activities)." Specific components of the method and time tables are specified in the permit (Permit parts G.2 & G.3).

[28] Watershed is defined in Attachment C of the permit as "That geographical area which drains to a specified point on a water course, usually a confluence of streams or rivers (also known as a drainage area, catchment, or river basin)."

Part L (All Copermittee Collaboration) of the Permit states:

> 1. Each Copermittee collaborate [sic] with all other Copermittees regulated under this Order to address common issues, promote consistency among Jurisdictional Urban Runoff Management Programs and Watershed Urban Runoff Management Programs, and to plan and coordinate activities required under this Order.
>
> a. Management structure – All Copermittees shall jointly execute and submit to the Regional Board no later than 180 days after adoption of this Order, a Memorandum of Understanding, Joint Powers Authority, or other instrument of formal agreement which at a minimum:
>
> (1) Identifies and defines the responsibilities of the Principal Permittee[29] and Lead Watershed Permittees;[30]
> (2) Identifies Copermittees and defines their individual and joint responsibilities, including watershed responsibilities;
> (3) Establishes a management structure to promote consistency and develop and implement regional activities;
> (4) Establishes standards for conducting meetings, decision-making, and cost-sharing.
> (5) Provides guidelines for committee and workgroup structure and responsibilities;
> (6) Lays out a process for addressing Copermittee non-compliance with the formal agreement;
> (7) Includes any and all other collaborative arrangements for compliance with this order.

Claimants stated that the Copermittees' costs to comply with this activity for fiscal year 2007-2008 was $260,031.29.

B. Copermittee collaboration – Regional Residential Education Program Development and Implementation

Part F.1 of the Permit provides:

The Regional Urban Runoff Management Program shall, at a minimum:

> 1. Develop and implement a Regional Residential Education Program. The program shall include:
>
> a. Pollutant specific education which focuses educational efforts on bacteria, nutrients, sediment, pesticides, and trash. If a different pollutant is determined to be more critical for the education program, the pollutant can be substituted for one of these pollutants.
>
> b. Education efforts focused on the specific residential sources of the pollutants listed in section F.1.a.

---

[29] The Principal Permittee is the County of San Diego.

[30] According to the permit: "Watershed Copermittees shall identify the Lead Watershed Permittee for their WMA [Watershed Management Area]."

Claimants stated that the Copermittees' costs to comply with this activity was $131,250 in fiscal year 2007-2008.

C. Hydromodification[31]

Part D.1.g. of the Permit (D. Jurisdictional Urban Runoff Management Program, 1. Development Planning Component, g. Hydromodification – Limits on Increases of Runoff Discharge Rates and Durations) states:

> g. HYDROMODIFICATION – LIMITATIONS ON INCREASES OF RUNOFF DISCHARGE RATES AND DURATIONS
>
> Each Copermittee shall collaborate with the other Copermittees to develop and implement a hydromodification management plan (HMP) to manage increases in runoff discharge rates and durations from all priority development projects,[32]

---

[31] Hydromodification is defined in Attachment C of the permit as "The change in the natural watershed hydrologic processes and runoff characteristics (i.e., interception, infiltration, overland flow, interflow and groundwater flow) caused by urbanization or other land use changes that result in increased stream flows and sediment transport. In addition, alteration of stream and river channels, installation of dams and water impoundments, and excessive streambank and shoreline erosion are also considered hydromodification, due to their disruption of natural watershed hydrologic processes."

Hydromodification is also defined as changes in the magnitude and frequency of stream flows as a result of urbanization, and the resulting impacts on the receiving channels in terms of erosion, sedimentation and degradation of in-stream habitat." *Draft Hydromodification Management Plan for San Diego County*, page 4. <http://www.projectcleanwater.org/pdf/susmp/sd_hmp_2009.pdf> as of May 28, 2009 .

[32] According to the permit, "Priority Development Projects" are: a) all new Development Projects that fall under the project categories or locations listed in section D.1.d.(2), and b) those redevelopment projects that create, add or replace at least 5,000 square feet of impervious surfaces on an already developed site that falls under the project categories or locations listed in section D.1.d.(2).

[¶]...[¶] [Part D.1.d.(2):] (2) Priority Development Project Categories (a) Housing subdivisions of 10 or more dwelling units. This category includes single-family homes, multi-family homes, condominiums, and apartments. (b) Commercial developments greater than one acre. This category is defined as any development on private land that is not for heavy industrial or residential uses where the land area for development is greater than one acre. The category includes, but is not limited to: hospitals; laboratories and other medical facilities; educational institutions; recreational facilities; municipal facilities; commercial nurseries; multi-apartment buildings; car wash facilities; mini-malls and other business complexes; shopping malls; hotels; office buildings; public warehouses; automotive dealerships; airfields; and other light industrial facilities. (c) Developments of heavy industry greater than one acre. This category includes, but is not limited to, manufacturing plants, food processing plants, metal working facilities, printing plants, and fleet storage areas (bus, truck, etc.). (d) Automotive repair shops. This category is defined as a facility that is categorized in any one of the following Standard Industrial Classification (SIC) codes: 5013, 5014, 5541, 7532-7534, or 7536-7539. (e) Restaurants. This

where such increased rates and durations are likely to cause increased erosion[33] of channel beds and banks, sediment pollutant generation, or other impacts to beneficial uses[34] and stream habitat due to increased erosive force. The HMP, once approved by the Regional Board, shall be incorporated into the local SUSMP [Standard Urban Storm Water Mitigation Plan][35] and implemented by each Copermittee so that post-project runoff discharge rates and durations shall not exceed estimated pre-project discharge rates and durations where the increased discharge rates and durations will result in increased potential for

---

category is defined as a facility that sells prepared foods and drinks for consumption, including stationary lunch counters and refreshment stands selling prepared foods and drinks for immediate consumption (SIC code 5812), where the land area for development is greater than 5,000 square feet. Restaurants where land development is less than 5,000 square feet shall meet all SUSMP requirements except for structural treatment BMP and numeric sizing criteria requirement D.1.d.(6)(c) and hydromodification requirement D.1.g. (f) All hillside development greater than 5,000 square feet. This category is defined as any development which creates 5,000 square feet of impervious surface which is located in an area with known erosive soil conditions, where the development will grade on any natural slope that is twenty-five percent or greater. (g) Environmentally Sensitive Areas (ESAs). All development located within or directly adjacent to or discharging directly to an ESA (where discharges from the development or redevelopment will enter receiving waters within the ESA), which either creates 2,500 square feet of impervious surface on a proposed project site or increases the area of imperviousness of a proposed project site to 10% or more of its naturally occurring condition. "Directly adjacent" means situated within 200 feet of the ESA. "Discharging directly to" means outflow from a drainage conveyance system that is composed entirely of flows from the subject development or redevelopment site, and not commingled with flows from adjacent lands. (h) Parking lots 5,000 square feet or more or with 15 or more parking spaces and potentially exposed to urban runoff. Parking lot is defined as a land area or facility for the temporary parking or storage of motor vehicles used personally, for business, or for commerce. (i) Street, roads, highways, and freeways. This category includes any paved surface that is 5,000 square feet or greater used for the transportation of automobiles, trucks, motorcycles, and other vehicles. (j) Retail Gasoline Outlets (RGOs). This category includes RGOs that meet the following criteria: (a) 5,000 square feet or more or (b) a projected Average Daily Traffic (ADT) of 100 or more vehicles per day.

[33] Erosion is defined in Attachment C of the permit as "When land is diminished or worn away due to wind, water, or glacial ice. Often the eroded debris (silt or sediment) becomes a pollutant via storm water runoff. Erosion occurs naturally but can be intensified by land clearing activities such as farming, development, road building and timber harvesting."

[34] Beneficial Uses is defined in Attachment C of the permit as "the uses of water necessary for the survival or well being of man, plants, and wildlife. These uses of water serve to promote tangible and intangible economic, social, and environmental goals. ... "Beneficial Uses" are equivalent to "Designated Uses" under federal law." (Wat. Code, § 13050, subd. (f).)

[35] The Standard Urban Storm Water Mitigation Plan is defined in Attachment C of the permit as "A plan developed to mitigate the impacts of urban runoff from Priority Development Projects."

erosion or other significant adverse impacts to beneficial uses, attributable to changes in the discharge rates and durations.

(1) The HMP shall:

(a) Identify a standard for channel segments which receive urban runoff discharges from Priority Development Projects. The channel standard shall maintain the pre-project erosion and deposition characteristics of channel segments receiving urban runoff discharges from Priority Development Projects as necessary to maintain or improve the channel segments' stability conditions.

(b) Utilize continuous simulation of the entire rainfall record to identify a range of runoff flows for which Priority Development Project post-project runoff flow rates and durations[36] shall not exceed pre-project runoff flow rates and durations,[37] where the increased flow rates and durations will result in increased potential for erosion or other significant adverse impacts to beneficial uses, attributable to changes in the flow rates and durations. The lower boundary of the range of runoff flows identified shall correspond with the critical channel flow[38] that produces the critical shear stress that initiates channel bed movement or that erodes the toe of channel banks. The identified range of runoff flows may be different for specific watersheds, channels, or channel reaches.

(c) Require Priority Development Projects to implement hydrologic control measures so that Priority Development Projects' post-project runoff flow rates and durations (1) do not exceed pre-project runoff flow rates and durations for the range of runoff flows identified under section D.1.g.(1)(b), where the increased flow rates and durations will result in increased potential for erosion or other significant adverse impacts to beneficial uses, attributable to changes in the flow rates and durations, and (2) do not result in channel conditions which do not meet the channel standard developed under section D.1.g.(1)(a) for channel segments downstream of Priority Development Project discharge points.

---

[36] Flow duration is defined in Attachment C of the permit as "The long-term period of time that flows occur above a threshold that causes significant sediment transport and may cause excessive erosion damage to creeks and streams (not a single storm event duration). ... Flow duration within the range of geomorphologically significant flows is important for managing erosion.

[37] Attachment C of the permit defines "Pre-project or pre-development runoff conditions (discharge rates, durations, etc.) as "Runoff conditions that exist onsite immediately before the planned development activities occur. This definition is not intended to be interpreted as that period before any human-induced land activities occurred. This definition pertains to redevelopment as well as initial development."

[38] Critical channel flow, according to Attachment C of the permit, is "the channel flow that produces the critical shear stress that initiates bed movement or that erodes the toe of channel banks. When measuring Qc [critical channel flow], it should be based on the weakest boundary material – either bed or bank."

(d) Include other performance criteria (numeric or otherwise) for Priority Development Projects as necessary to prevent urban runoff from the projects from increasing erosion of channel beds and banks, silt pollutant generation, or other impacts to beneficial uses and stream habitat due to increased erosive force.

(e) Include a review of pertinent literature.

(f) Include a protocol to evaluate potential hydrograph change impacts to downstream watercourses from Priority Development Projects.

(g) Include a description of how the Copermittees will incorporate the HMP requirements into their local approval processes.

(h) Include criteria on selection and design of management practices and measures (such as detention, retention, and infiltration) to control flow rates and durations and address potential hydromodification impacts.

(i) Include technical information supporting any standards and criteria proposed.

(j) Include a description of inspections and maintenance to be conducted for management practices and measures to control flow rates and durations and address potential hydromodification impacts.

(k) Include a description of pre- and post-project monitoring and other program evaluations to be conducted to assess the effectiveness of implementation of the HMP.

(l) Include mechanisms for addressing cumulative impacts within a watershed on channel morphology.

(m) Include information on evaluation of channel form and condition, including slope, discharge, vegetation, underlying geology, and other information, as appropriate.

(2) The HMP may include implementation of planning measures (e.g., buffers and restoration activities, including revegetation, use of less-impacting facilities at the point(s) of discharge, etc.) to allow expected changes in stream channel cross sections, vegetation, and discharge rates, velocities, and/or durations without adverse impacts to channel beneficial uses. Such measures shall not include utilization of non-naturally occurring hardscape materials such as concrete, riprap, gabions, etc.

(3) Section D.1.g.(1)(c) does not apply to Development Projects[39] where the project discharges stormwater runoff into channels or storm drains where the preexisting channel or storm drain conditions result in minimal potential for erosion or other impacts to beneficial uses. Such situations may include discharges into channels that are concrete-lined or significantly hardened (e.g.,

[39] Development projects, according to Attachment C of the permit, are "New development or redevelopment with land disturbing activities; structural development, including construction or installation of a building or structure, the creation of impervious surfaces, public agency projects, and land subdivision."

with rip-rap, sackrete, etc.) downstream to their outfall in bays or the ocean; underground storm drains discharging to bays or the ocean; and construction of projects where the sub-watersheds below the projects' discharge points are highly impervious (e.g., >70%) and the potential for single-project and/or cumulative impacts is minimal. Specific criteria for identification of such situations shall be included as a part of the HMP. However, plans to restore a channel reach may reintroduce the applicability of HMP controls, and would need to be addressed in the HMP.

(4) HMP Reporting

The Copermittees shall collaborate to report on HMP development as required in section J.2.a of this Order.[40]

(5) HMP Implementation

180 days after approval of the HMP by the Regional Board, each Copermittee shall incorporate into its local SUSMP and implement the HMP for all applicable Priority Development Projects. Prior to approval of the HMP by the Regional Board, the early implementation of measures likely to be included in the HMP shall be encouraged by the Copermittees.

(6) Interim Hydromodification Criteria for Projects Disturbing 50 Acres or More

Within 365 days of adoption of this Order, the Copermittees shall collectively identify an interim range of runoff flow rates for which Priority Development Project post-project runoff flow rates and durations shall not exceed pre-project runoff flow rates and durations (Interim Hydromodification Criteria), where the increased discharge flow rates and durations will result in increased potential for erosion or other significant adverse impacts to beneficial uses, attributable to changes in flow rates and durations. Development of the Interim Hydromodification Criteria shall include identification of methods to be used by Priority Development Projects to exhibit compliance with the criteria, including continuous simulation of the entire rainfall record. Starting 365 days after adoption of this Order and until the final Hydromodification Management Plan standard and criteria are implemented, each Copermittee shall require Priority Development Projects disturbing 50 acres or more to implement hydrologic controls to manage post-project runoff flow rates and durations as required by the Interim Hydromodification Criteria. Development Projects disturbing 50 acres or more are exempt from this requirement when:

(a) the project would discharge into channels that are concrete-lined or significantly hardened (e.g., with rip-rap, sackcrete, etc.) downstream to their outfall in bays or the ocean;

[40] Section J.2.a of the permit requires collaborating with other copermittees to develop the HMP, and submitting it for approval by the Regional Board. Part J.2.a also includes timelines for HMP completion and approval.

(b) the project would discharge into underground storm drains discharging directly to bays or the ocean; or

(c) the project would discharge to a channel where the watershed areas below the project's discharge points are highly impervious (e.g. >70%).

Claimants stated that the total cost of this activity is $1.05 million, of which $630,000 was spent in fiscal year 2007-2008, and the remaining $420,000 will be spent in fiscal year 2008-2009.

D. Low-Impact Development[41] ("LID") and Standard Urban Storm Water Mitigation Plan ("SMUSP")

Part D.1.d. of the Permit (D. Jurisdictional Urban Runoff Management Program, 1. Development Planning Component, d. Standard Urban Storm Water Mitigation Plans – Approval Process Criteria and Requirements for Priority Development Projects), paragraphs (7) and (8) state as follows:

(7) Update of SUSMP BMP Requirements

The Copermittees shall collectively review and update the BMP requirements that are listed in their local SUSMPs. At a minimum, the update shall include removal of obsolete or ineffective BMPs, addition of LID and source control BMP[42] requirements that meet or exceed the requirements of sections D.1.d.(4)[43] and D.1.d.(5),[44] and addition of LID BMPs that can be used for treatment, such as bioretention cells, bioretention swales, etc. The update shall also add appropriate LID BMPs to any tables or discussions in the local SUSMPs addressing pollutant removal efficiencies of treatment control BMPs.[45] In addition, the update shall

---

[41] Low Impact Development (LID) is defined in Attachment C of the permit as "A storm water management and land development strategy that emphasizes conservation and the use of on-site natural features integrated with engineered, small-scale hydrologic controls to more closely reflect pre-development hydrologic functions."

[42] Source Control BMPs are defined in Attachment C of the permit as "Land use or site planning practices, or structural or nonstructural measures that aim to prevent urban runoff pollution by reducing the potential for contamination at the source of pollution. Source control BMPs minimize the contact between pollutants and urban runoff."

[43] Part D.1.d.(4) of the permit includes LID BMP requirements: "Each Copermittee shall require each Priority Development Project to implement LID BMPs which will collectively minimize directly connected impervious areas and promote infiltration at Priority Development Projects:" The Permit lists various LID site design BMPs that must be implemented at all Priority Development Projects, and other LID BMPs that must be implemented at all Priority Development Projects "where applicable and feasible."

[44] Part D.1.d.(5), regarding "Source control BMP Requirements" requires permittees to require each Priority Development Project to implement source control BMPs that must "Minimize storm water pollutants of concern in urban runoff" and include five other specific criteria.

[45] A treatment control BMP, according to Attachment C of the permit, is "Any engineered system designed to remove pollutants by simple gravity settling of particulate pollutants,

include review, and revision where necessary, of treatment control BMP pollutant removal efficiencies.

(8) Update of SUSMPs to Incorporate LID and Other BMP Requirements

(a) In addition to the implementation of the BMP requirements of sections D.1.d.(4-7) within one year of adoption of this Order, the Copermittees shall also develop and submit an updated Model SUSMP that defines minimum LID and other BMP requirements to be incorporated into the Copermittees' local SUSMPs for application to Priority Development Projects. The purpose of the updated Model SUSMP shall be to establish minimum standards to maximize the use of LID practices and principles in local Copermittee programs as a means of reducing stormwater runoff. It shall meet the following minimum requirements:

i. Establishment of LID BMP requirements that meet or exceed the minimum requirements listed in section D.1.d.(4) above.
ii. Establishment of source control BMP requirements that meet or exceed the minimum requirements listed in section D.1.d.(5) above.
iii. Establishment of treatment control BMP requirements that meet or exceed the minimum requirements listed in section D.1.d.(6) above.
iv. Establishment of siting, design, and maintenance criteria for each LID and treatment control BMP listed in the Model SUSMP, so that implemented LID and treatment control BMPs are constructed correctly and are effective at pollutant removal and/or runoff control. LID techniques, such as soil amendments, shall be incorporated into the criteria for appropriate treatment control BMPs.
v. Establishment of criteria to aid in determining Priority Development Project conditions where implementation of each LID BMP listed in section D.1.d.(4)(b) is applicable and feasible.
vi. Establishment of a requirement for Priority Development Projects with low traffic areas and appropriate or amendable soil conditions to construct a portion of walkways, trails, overflow parking lots, alleys, or other low-traffic areas with permeable surfaces, such a pervious concrete, porous asphalt, unit pavers, and granular materials.
vii. Establishment of restrictions on infiltration of runoff from Priority Development Project categories or Priority Development Project areas that generate high levels of pollutants, if necessary.

(b) The updated Model SUSMP shall be submitted within 18 months of adoption of this Order. If, within 60 days of submittal of the updated Model SUSMP, the Copermittees have not received in writing from the Regional Board either

(1) a finding of adequacy of the updated Model SUSMP or (2) a modified schedule for its review and revision, the updated Model SUSMP shall be deemed adequate, and the Copermittees shall implement its provisions in accordance with section D.1.d.(8)(c) below.

---

filtration, biological uptake, media absorption or any other physical, biological, or chemical process."

(c) Within 365 days of Regional Board acceptance of the updated Model SUSMP, each Copermittee shall update its local SUSMP to implement the requirements established pursuant to section D.1.d.(8)(a). In addition to the requirements of section D.1.d.(8)(a), each Copermittee's updated local SUSMP shall include the following:

i. A requirement that each Priority Development Project use the criteria established pursuant to section D.1.d.(8)(a)v to demonstrate applicability and feasibility, or lack thereof, of implementation of the LID BMPs listed in section D.1.d.(4)(b).
ii. A review process which verifies that all BMPs to be implemented will meet the designated siting, design, and maintenance criteria, and that each Priority Development Project is in compliance with all applicable SUSMP requirements.

Claimants stated that the total cost of this activity is $52,200 to be spent in fiscal year 2007-2008.

E. Long Term Effectiveness Assessment

Part I.5 (I. Program Effectiveness Assessment) of the permit states:

5. Long-term Effectiveness Assessment

a. Each Copermittee shall collaborate with the other Copermittees to develop a Longterm Effectiveness Assessment (LTEA), which shall build on the results of the Copermittees' August 2005 Baseline LTEA. The LTEA shall be submitted by the Principal Permittee to the Regional Board no later than 210 days in advance of the expiration of this Order.

b. The LTEA shall be designed to address each of the objectives listed in section I.3.a.(6) of this Order, and to serve as a basis for the Copermittees' Report of Waste Discharge for the next permit cycle.

c. The LTEA shall address outcome levels 1-6, and shall specifically include an evaluation of program implementation to changes in water quality (outcome levels 5 and 6).[46]

d. The LTEA shall assess the effectiveness of the Receiving Waters Monitoring Program in meeting its objectives and its ability to answer the five core management questions. This shall include assessment of the frequency of monitoring conducted through the use of power analysis and other pertinent statistical methods. The power analysis shall identify the frequency and intensity of sampling needed to identify a 10% reduction in the concentration of constituents causing the high priority water quality problems within each watershed over the next permit term with 80% confidence.

e. The LTEA shall address the jurisdictional, watershed, and regional programs, with an emphasis on watershed assessment.

The claimants state that this activity is budgeted to cost $210,000.

---

[46] See footnote 50, page 21.

II. Jurisdictional Urban Runoff Management Program

A. Street Sweeping

Part D.3.a.(5) of the Permit (D.3 Existing Development Component, a. Municipal) provides:

> (5) Sweeping of Municipal Areas
>
> Each Copermittee shall implement a program to sweep improved (possessing a curb and gutter) municipal roads, streets, highways, and parking facilities. The program shall include the following measures:
>
> (a) Roads, streets, highways, and parking facilities identified as consistently generating the highest volumes of trash and/or debris shall be swept at least two times per month.
>
> (b) Roads, streets, highways, and parking facilities identified as consistently generating moderate volumes of trash and/or debris shall be swept at least monthly.
>
> (c) Roads, streets, highways, and parking facilities identified as generating low volumes of trash and/or debris shall be swept as necessary, but no less than once per year.

Part J.3.a.(3)(c)x-xv (J. Reporting, 3. Annual Reports, a. jurisdictional urban runoff management program annual reports (3) Minimum contents (c) Municipal) requires annual reports to include the following:

> x. Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating the highest volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.
> xi. Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating moderate volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.
> xii. Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating low volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.
> xiii. Identification of the total distance of curb-miles swept.
> xiv. Identification of the number of municipal parking lots, the number of municipal parking lots swept, and the frequency of sweeping.
> xv. Amount of material (tons) collected from street and parking lot sweeping.

Claimants state the following costs for this activity: in fiscal year 2007-2008: Equipment: $2,080,245, Staffing: $1,014,321, Contract costs: $382,624; for 2008-2009: Equipment: $3,566,139 (for 2008-2012), Staffing $1,054,893 (4% increase), Contract costs: $382,624.

B. Conveyance System Cleaning

Part D.3.a.(3) of the Permit (D.3. Existing Development Component, a. Municipal) provides:

> (3) Operation and Maintenance of Municipal Separate Storm Sewer System and Structural Controls
>
> (a) Each Copermittee shall implement a schedule of inspection and maintenance activities to verify proper operation of all municipal structural treatment controls designed to reduce pollutant discharges to or from its MS4s and related drainage structures.
>
> (b) Each Copermittee shall implement a schedule of maintenance activities for the MS4 and MS4 facilities (catch basins, storm drain inlets, open channels, etc). The maintenance activities shall, at a minimum, include:
>
> i. Inspection at least once a year between May 1 and September 30 of each year[47] for all MS4 facilities that receive or collect high volumes of trash and debris. All other MS4 facilities shall be inspected at least annually throughout the year.
> ii. Following two years of inspections, any MS4 facility that requires inspection and cleaning less than annually may be inspected as needed, but not less than every other year.
> iii. Any catch basin or storm drain inlet that has accumulated trash and debris greater than 33% of design capacity shall be cleaned in a timely manner. Any MS4 facility that is designed to be self cleaning shall be cleaned of any accumulated trash and debris immediately. Open channels shall be cleaned of observed anthropogenic litter[48] in a timely manner.
> iv. Record keeping of the maintenance and cleaning activities including the overall quantity of waste removed.
> v. Proper disposal of waste removed pursuant to applicable laws.
> vi. Measures to eliminate waste discharges during MS4 maintenance and cleaning activities.

Part J.3.a.(3)(c) iv-viii (J. Reporting, 3. Annual Reports, a. jurisdictional urban runoff management program annual reports (3) Minimum contents (c) Municipal) requires annual reports to include the following:

> iv. Identification of the total number of catch basins and inlets, the number of catch basins and inlets inspected, the number of catch basins and inlets found with accumulated waste exceeding cleaning criteria, and the number of catch basins and inlets cleaned.
> v. Identification of the total distance (miles) of the MS4, the distance of the MS4 inspected, the distance of the MS4 found with accumulated waste exceeding cleaning criteria, and the distance of the MS4 cleaned.

---

[47] According to Attachment C of the permit, May 1 through September 30 is the dry season.

[48] Attachment C of the permit defines "anthropogenic litter" as "trash generated from human activities, not including sediment."

vi. Identification of the total distance (miles) of open channels, the distance of the open channels inspected, the distance of the open channels found with anthropogenic litter, and the distance of open channels cleaned.
vii. Amount of waste and litter (tons) removed from catch basins, inlets, the MS4, and open channels, by category.
viii. Identification of any MS4 facility found to require inspection less than annually following two years of inspection, including justification for the finding.

The claimants state that this activity costs $3,456,087 in fiscal year 2007-2008, and increases 4% in subsequent years.

C. Program Effectiveness Assessment

Part I.1 and I.2 of the permit states:

1. Jurisdictional

a. As part of its Jurisdictional Urban Runoff Management Program, each Copermittee shall annually assess the effectiveness of its Jurisdictional Urban Runoff Management Program implementation. At a minimum, the annual effectiveness assessment shall:

(1) Specifically assess the effectiveness of each of the following:

(a) Each significant jurisdictional activity/BMP or type of jurisdictional activity/BMP implemented;

(b) Implementation of each major component of the Jurisdictional Urban Runoff Management Program (Development Planning, Construction, Municipal, Industrial/Commercial, Residential, Illicit Discharge[49] Detection and Elimination, and Education); and

(c) Implementation of the Jurisdictional Urban Runoff Management Program as a whole.

(2) Identify and utilize measurable targeted outcomes, assessment measures, and assessment methods for each of the items listed in section I.1.a.(1) above.

(3) Utilize outcome levels 1-6[50] to assess the effectiveness of each of the items listed in section I.1.a.(1) above, where applicable and feasible.

---

[49] Illicit discharge, as defined in Attachment C of the permit, is "any discharge to the MS4 that is not composed entirely of storm water except discharges pursuant to a NPDES permit and discharges resulting from firefighting activities [40 C.F.R. 122.26 (b)(2)]."

[50] Effectiveness assessment outcome levels are defined in Attachment C of the permit as follows: Effectiveness assessment outcome level 1 – Compliance with Activity-based Permit Requirements – Level 1 outcomes are those directly related to the implementation of specific activities prescribed by this Order or established pursuant to it. Effectiveness assessment outcome level 2 – Changes in Attitudes, Knowledge, and Awareness – Level 2 outcomes are measured as increases in knowledge and awareness among target audiences such as residents, business, and municipal employees. Effectiveness assessment outcome level 3 – Behavioral

(4) Utilize monitoring data and analysis from the Receiving Waters Monitoring Program to assess the effectiveness each of the items listed in section I.1.a.(1) above, where applicable and feasible.

(5) Utilize Implementation Assessment,[51] Water Quality Assessment,[52] and Integrated Assessment,[53] where applicable and feasible.

b. Based on the results of the effectiveness assessment, each Copermittee shall annually review its jurisdictional activities or BMPs to identify modifications and improvements needed to maximize Jurisdictional Urban Runoff Management Program effectiveness, as necessary to achieve compliance with section A of this Order. The Copermittees shall develop and implement a plan and schedule to address the identified modifications and improvements. Jurisdictional activities/BMPs that are ineffective or less effective than other comparable jurisdictional activities/BMPs shall be replaced or improved upon by implementation of more effective jurisdictional activities/BMPs. Where monitoring data exhibits persistent water quality problems that are caused or contributed to by MS4 discharges, jurisdictional activities or BMPs applicable to the water quality problems shall be modified and improved to correct the water quality problems.

c. As part of its Jurisdictional Urban Runoff Management Program Annual Reports, each Copermittee shall report on its Jurisdictional Urban Runoff

---

Changes and BMP Implementation – Level 3 outcomes measure the effectiveness of activities in affecting behavioral change and BMP implementation. Effectiveness assessment outcome level 4 – Load Reductions – Level 4 outcomes measure load reductions which quantify changes in the amounts of pollutants associated with specific sources before and after a BMP or other control measure is employed. Effectiveness assessment outcome level 5 – Changes in Urban Runoff and Discharge Quality – Level 5 outcomes are measured as changes in one or more specific constituents or stressors in discharges into or from MS4s. Effectiveness assessment outcome level 6 – Changes in Receiving Water Quality – Level 6 outcomes measure changes to receiving water quality resulting from discharges into and from MS4s, and may be expressed through a variety of means such as compliance with water quality objectives or other regulatory benchmarks, protection of biological integrity [i.e., ecosystem health], or beneficial use attainment.

[51] Implementation Assessment is defined in Attachment C of the permit as an "Assessment conducted to determine the effectiveness of copermittee programs and activities in achieving measureable targeted outcomes, and in determining whether priority sources of water quality problems are being effectively addressed."

[52] Water Quality Assessment is defined in Attachment C of the permit as an "Assessment conducted to evaluate the condition of non-storm water discharges, and the water bodies which receive these discharges."

[53] Integrated Assessment is defined in Attachment C of the permit as an "Assessment to be conducted to evaluate whether program implementation is properly targeted to and resulting in the protection and improvement of water quality."

Management Program effectiveness assessment as implemented under each of the requirements of sections I.1.a and I.1.b above.

2. Watershed

a. As part of its Watershed Urban Runoff Management Program, each watershed group of Copermittees (as identified in Table 4)[54] shall annually assess the effectiveness of its Watershed Urban Runoff Management Program implementation. At a minimum, the annual effectiveness assessment shall:

(1) Specifically assess the effectiveness of each of the following:

(a) Each Watershed Water Quality Activity implemented;
(b) Each Watershed Education Activity implemented; and
(c) Implementation of the Watershed Urban Runoff Management Program as a whole.

(2) Identify and utilize measurable targeted outcomes, assessment measures, and assessment methods for each of the items listed in section I.2.a.(1) above.

(3) Utilize outcome levels 1-6 to assess the effectiveness of each of the items listed in sections I.2.a.(1)(a) and I.2.a.(1)(b) above, where applicable and feasible.

(4) Utilize outcome levels 1-4 to assess the effectiveness of implementation of the Watershed Urban Runoff Management Program as a whole, where applicable and feasible.

(5) Utilize outcome levels 5 and 6 to qualitatively assess the effectiveness of implementation of the Watershed Urban Runoff Management Program as a whole, focusing on the high priority water quality problem(s) of the watershed. These assessments shall attempt to exhibit the impact of Watershed Urban Runoff Management Program implementation on the high priority water quality problem(s) within the watershed.

(6) Utilize monitoring data and analysis from the Receiving Waters Monitoring Program to assess the effectiveness each of the items listed in section I.2.a.(1) above, where applicable and feasible.

(7) Utilize Implementation Assessment, Water Quality Assessment, and Integrated Assessment, where applicable and feasible.

b. Based on the results of the effectiveness assessment, the watershed Copermittees shall annually review their Watershed Water Quality Activities, Watershed Education Activities, and other aspects of the Watershed Urban Runoff Management Program to identify modifications and improvements needed to maximize Watershed Urban Runoff Management Program effectiveness, as

[54] Table 4 of the permit divides the copermittees into nine watershed management areas. For example, the San Luis Rey River watershed management area lists the city of Oceanside, Vista and the County of San Diego as the responsible watershed copermittees. Table 4 also lists the hydrologic units and major receiving water bodies.

necessary to achieve compliance with section A of this Order.[55] The Copermittees shall develop and implement a plan and schedule to address the identified modifications and improvements. Watershed Water Quality Activities/Watershed Education Activities that are ineffective or less effective than other comparable Watershed Water Quality Activities/Watershed Education Activities shall be replaced or improved upon by implementation of more effective Watershed Water Quality Activities/Watershed Education Activities. Where monitoring data exhibits persistent water quality problems that are caused or contributed to by MS4 discharges, Watershed Water Quality Activities and Watershed Education Activities applicable to the water quality problems shall be modified and improved to correct the water quality problems.

c. As part of its Watershed Urban Runoff Management Program Annual Reports, each watershed group of Copermittees (as identified in Table 4) shall report on its Watershed Urban Runoff Management Program effectiveness assessment as implemented under each of the requirements of section I.2.a and I.2.b above.

Claimants state that this activity in I.1. and I.2 costs $392,363 in fiscal year 2007-2008, is expected to increase to $862,293 in fiscal year 2008-2009, and is expected to increase 4% annually thereafter.

D. Educational Surveys and Tests

Part D.5 of the permit (under D. Jurisdictional Urban Runoff Management Program) states:

5. Education Component

Each Copermittee shall implement an education program using all media as appropriate to (1) measurably increase the knowledge of the target communities regarding MS4s, impacts of urban runoff on receiving waters, and potential BMP solutions for the target audience; and (2) to measurably change the behavior of target communities and thereby reduce pollutant releases to MS4s and the environment. At a minimum, the education program shall meet the requirements of this section and address the following target communities:

· Municipal Departments and Personnel
· Construction Site Owners and Developers
· Industrial Owners and Operators
· Commercial Owners and Operators
· Residential Community, General Public, and School Children

a. GENERAL REQUIREMENTS

(1) Each Copermittee shall educate each target community on the following topics where appropriate:

[55] Section A is "Prohibitions and Receiving Water Limitations."

Table 3. Education

Laws, Regulations, Permits, & Requirements	Best Management Practices
• Federal, state, and local water quality laws and regulations • Statewide General NPDES Permit for Storm Water Discharges Associated with Industrial Activities (Except Construction). • Statewide General NPDES Permit for Storm Water Discharges Associated with Construction Activities • Regional Board's General NPDES Permit for Ground Water Dewatering • Regional Board's 401 Water Quality Certification Program • Statewide General NPDES Utility Vault Permit • Requirements of local municipal permits and ordinances (e.g., storm water and grading ordinances and permits)	• Pollution prevention and safe alternatives • Good housekeeping (e.g., sweeping impervious surfaces instead of hosing) • Proper waste disposal (e.g., garbage, pet/animal waste, green waste, household hazardous materials, appliances, tires, furniture, vehicles, boat/recreational vehicle waste, catch basin/ MS4 cleanout waste) • Non-storm water disposal alternatives (e.g., all wash waters) • Methods to minimized the impact of land development and construction • Erosion prevention • Methods to reduce the impact of residential and charity car-washing • Preventive Maintenance • Equipment/vehicle maintenance and repair • Spill response, containment, and recovery • Recycling • BMP maintenance
General Urban Runoff Concepts	**Other Topics**
• Impacts of urban runoff on receiving waters • Distinction between MS4s and sanitary sewers • BMP types: facility or activity specific, LID, source control, and treatment control • Short-and long-term water quality impacts associated with urbanization (e.g., land-use decisions, development, construction) • Non-storm water discharge prohibitions • How to conduct a storm water inspections	• Public reporting mechanisms • Water quality awareness for Emergency/ First Responders • Illicit Discharge Detection and Elimination observations and follow-up during daily work activities • Potable water discharges to the MS4 • Dechlorination techniques • Hydrostatic testing • Integrated pest management • Benefits of native vegetation • Water conservation •Alternative materials and designs to maintain peak runoff values •Traffic reduction, alternative fuel use

(2) Copermittee educational programs shall emphasize underserved target audiences, high-risk behaviors, and "allowable" behaviors and discharges, including various ethnic and socioeconomic groups and mobile sources.

b. SPECIFIC REQUIREMENTS

(1) Municipal Departments and Personnel Education

(a) Municipal Development Planning – Each Copermittee shall implement an education program so that its planning and development review staffs (and Planning Boards and Elected Officials, if applicable) have an understanding of:

i. Federal, state, and local water quality laws and regulations applicable to Development Projects;
ii. The connection between land use decisions and short and long-term water quality impacts (i.e., impacts from land development and urbanization);
iii. How to integrate LID BMP requirements into the local regulatory program(s) and requirements; and
iv. Methods of minimizing impacts to receiving water quality resulting from development, including:

[1] Storm water management plan development and review;
[2] Methods to control downstream erosion impacts;
[3] Identification of pollutants of concern;
[4] LID BMP techniques;
[5] Source control BMPs; and
[6] Selection of the most effective treatment control BMPs for the pollutants of concern.

(b) Municipal Construction Activities – Each Copermittee shall implement an education program that includes annual training prior to the rainy season so that its construction, building, code enforcement, and grading review staffs, inspectors, and other responsible construction staff have, at a minimum, an understanding of the following topics, as appropriate for the target audience:

i. Federal, state, and local water quality laws and regulations applicable to construction and grading[56] activities.
ii. The connection between construction activities and water quality impacts (i.e., impacts from land development and urbanization and impacts from construction material such as sediment).
iii. Proper implementation of erosion and sediment control and other BMPs to minimize the impacts to receiving water quality resulting from construction activities.
iv. The Copermittee's inspection, plan review, and enforcement policies and procedures to verify consistent application.
v. Current advancements in BMP technologies.
vi. SUSMP Requirements including treatment options, LID BMPs, source control, and applicable tracking mechanisms.

[56] Attachment C of the permit defines grading as "the cutting and/or filling of the land surface to a desired slope or elevation."

(c) Municipal Industrial/Commercial Activities - Each Copermittee shall train staff responsible for conducting storm water compliance inspections and enforcement of industrial and commercial facilities at least once a year. Training shall cover inspection and enforcement procedures, BMP implementation, and reviewing monitoring data.

(d) Municipal Other Activities – Each Copermittee shall implement an education program so that municipal personnel and contractors performing activities which generate pollutants have an understanding of the activity specific BMPs for each activity to be performed.

(2) New Development and Construction Education

As early in the planning and development process as possible and all through the permitting and construction process, each Copermittee shall implement a program to educate project applicants, developers, contractors, property owners, community planning groups, and other responsible parties. The education program shall provide an understanding of the topics listed in Sections D.5.b.(1)(a) and D.5.b.(1)(b) above, as appropriate for the audience being educated. The education program shall also educate project applicants, developers, contractors, property owners, and other responsible parties on the importance of educating all construction workers in the field about stormwater issues and BMPs through formal or informal training.

(3) Residential, General Public, and School Children Education

Each Copermittee shall collaboratively conduct or participate in development and implementation of a plan to educate residential, general public, and school children target communities. The plan shall evaluate use of mass media, mailers, door hangers, booths at public events, classroom education, field trips, hands-on experiences, or other educational methods.

Claimants state that this activity in D.5 will cost $62,617 in fiscal year 2007-2008, and is expected to increase to $171,319 in fiscal year 2008-2009, and rise 4% annually thereafter.

III. Watershed Urban Runoff Management Program

A. Copermittee Collaboration

Parts E.2.f and E.2.g of the permit state:

2. Each Copermittee shall collaborate with other Copermittees within its WMA(s) [Watershed Management Area] as in Table 4 below to develop and implement an updated Watershed Urban Runoff Management Program for each watershed. Each updated Watershed Urban Runoff Management Program shall meet the requirements of section E of this Order, reduce the discharge of pollutants from the MS4 to the MEP, and prevent urban runoff discharges from the MS4 from causing or contributing to a violation of water quality standards. At a minimum, each Watershed Urban Runoff Management Program shall include the elements described below: [¶]...[¶]

f. Watershed Activities[57]

(1) The Watershed Copermittees shall identify and implement Watershed Activities that address the high priority water quality problems in the WMA. Watershed Activities shall include both Watershed Water Quality Activities and Watershed Education Activities. These activities may be implemented individually or collectively, and may be implemented at the regional, watershed, or jurisdictional level.

(a) Watershed Water Quality Activities are activities other than education that address the high priority water quality problems in the WMA. A Watershed Water Quality Activity implemented on a jurisdictional basis must be organized and implemented to target a watershed's high priority water quality problems or must exceed the baseline jurisdictional requirements of section D of this Order.

(b) Watershed Education Activities are outreach and training activities that address high priority water quality problems in the WMA.

(2) A Watershed Activities List shall be submitted with each updated Watershed Urban Runoff Management Plan (WURMP) and updated annually thereafter. The Watershed Activities List shall include both Watershed Water Quality Activities and Watershed Education Activities, along with a description of how each activity was selected, and how all of the activities on the list will collectively abate sources and reduce pollutant discharges causing the identified high priority water quality problems in the WMA.

(3) Each activity on the Watershed Activities List shall include the following information:

(a) A description of the activity;
(b) A time schedule for implementation of the activity, including key milestones;
(c) An identification of the specific responsibilities of Watershed Copermittees in completing the activity;
(d) A description of how the activity will address the identified high priority water quality problem(s) of the watershed;
(e) A description of how the activity is consistent with the collective watershed strategy;
(f) A description of the expected benefits of implementing the activity; and
(g) A description of how implementation effectiveness will be measured.

(4) Each Watershed Copermittee shall implement identified Watershed Activities pursuant to established schedules. For each Permit year, no less than two Watershed Water Quality Activities and two Watershed Education Activities shall be in an active implementation phase. A Watershed Water Quality Activity is in an active implementation phase when significant pollutant load reductions, source

[57] In their rebuttal comments submitted in February 2009, claimants mention part E.(3) of the permit that requires a detailed description of each activity on the Watershed Activities List. Part E.(3), however, was not in the test claim so staff makes no findings on it.

abatement, or other quantifiable benefits to discharge or receiving water quality can reasonably be established in relation to the watershed's high priority water quality problem(s). Watershed Water Quality Activities that are capital projects are in active implementation for the first year of implementation only. A Watershed Education Activity is in an active implementation phase when changes in attitudes, knowledge, awareness, or behavior can reasonably be established in target audiences.

g. Copermittee Collaboration

Watershed Copermittees shall collaborate to develop and implement the Watershed Urban Runoff Management Programs. Watershed Copermittee collaboration shall include frequent regularly scheduled meetings.

Claimants state that the copermittees' staffing costs for watershed program implementation in fiscal year 2007-2008 is $1,033,219 and is expected to increase to $1,401,765 in fiscal year 2008-2009, and are expected to increase four percent annually. For consultant services, the costs are $599,674 in fiscal year 2007-2008 and are expected to be $657,101 in 2008-2009, and are expected to rise five percent annually. For Watershed Urban Runoff Management Program implementation, claimants allege that the cost in fiscal year 2008-2009 is $1,053,880.

Claimants filed a 60-page rebuttal to Finance's and the State Board's comments on February 9, 2009, which is addressed in the analysis below.

Claimant County of San Diego filed comments on the draft staff analysis in January 2010 that disagrees with the findings regarding fee authority for certain permit activities involving development. These arguments are discussed further below.

State Agency Positions

Department of Finance: In comments filed November 16, 2008, Finance alleges that the permit does not impose a reimbursable mandate within the meaning of section 6 of article XIII B of the California Constitution because the permit conditions are required by federal laws so they are not reimbursable pursuant to Government Code section 17556, subdivision (c). Finance asserts that the State and Regional Water Boards "act on behalf of the federal government to develop, administer, and enforce the NPDES program in compliance with Section 402 of the CWA." Finance also states that more activities were included in the 2007 permit than the prior permit because "it appears ... they were necessary to comply with federal law."

Finance also argues that the claimants had discretion over the activities and conditions to include in the permit application. The copermittees elected to use "best management practices" to identify alternative practices to reduce water pollution. Since the local agencies proposed the activities to be included in the permit, the requirements are a downstream result of the local agencies' decision to include the particular activities in the permit. Finance cites the *Kern* case,[58] which held that if participation in the underlying program is voluntary, the resulting new consequential requirements are not reimbursable mandates.

[58] *Department of Finance v. Commission on State Mandates (Kern High School Dist.)* (2003) 30 Cal.4th 727.

As to the claimants' identifying NPDES permits approved by other states to show the permit exceeds federal law, Finance states that this "demonstrates the variation envisioned by the federal authority in granting the administering agencies flexibility to address specific regional needs in the most practical manner."

Finally, Finance states that some local agencies are using fees for funding the claimed permit activities, so should the Commission find that the permit constitutes a reimbursable mandate, the fees should be considered as offsetting revenues.

Finance commented on the draft staff analysis in February 2010, echoing the comments of the State Board, which are summarized and addressed below.

State Water Resources Control Board: The State Board and Regional Board filed joint comments on the test claim on October 27, 2008, alleging that the permit is mandated on the local agencies by federal law, and that it is not unique to government because NPDES permits apply to private dischargers also. The State Board also states that the requirements are consistent with the minimum requirements of federal law, but even if the permit is interpreted as going beyond federal law, any additional state requirements are de minimis. In addition, the State Board alleges that the costs are not subject to reimbursement because most of the programs were proposed by the cities and County themselves, and because the claimants may comply with the permit requirements by charging fees and are not required to raise taxes.

The State Board further comments that the 2007 permit mirrors or is identical to the requirements in the 2001 permit, only providing more detail to the requirements already in existence and to implement the MEP performance standard. Like earlier permits, the 2007 permit implements the federal standard of reducing pollutants from the MS4 to the MEP (maximum extent practicable), but according to the State Board, "what *has* changed in successive permits is the level of specificity included in the permit to define what constitutes MEP." [Emphasis in original.] The State Board asserts that this level of specificity does not make the permit a state mandate, but that even if it is, the additional requirements are de minimis. The State Board also states that the local agencies have fee authority to pay for the permit requirements.

The State Board also addresses specific allegations in the test claim, as discussed below.

The State Board submitted comments on the draft staff analysis in January 2010, arguing that the test claim should not be reimbursable because (1) federal law requires local agencies to obtain NPDES permits from California Water Boards; (2) federal law mandates the permit that was issued, which is less stringent than permits for private industry; (3) the draft staff analysis incorrectly applies the *Hayes* case because the state did not shift the cost of the federal mandate to the local agencies; rather the federal mandate was imposed directly on local agencies and not on the state; (4) the permit provisions are not in addition to, but are required by federal law; (5) even though municipalities are singled out in the federal storm water law, the law is one of general application; and (6) potential limitations on the exercise of fee authority due to Proposition 218 do not invalidate claimants' fee authority because Government Code section 17556, subdivision (d), does not require unlimited or unilateral fee authority. These arguments are addressed below.

Interested Party Comments

Bay Area Stormwater Management Agencies Association (BASMAA): In comments submitted February 4, 2009, BASMAA speaks generally about California's municipal stormwater permitting program, stating that "increased requirements entail both new programs and higher levels of service." BASMAA also states:

> [T]he State essentially asserts that the federal minimum for stormwater permitting is anything one of its Water Boards says it is. Likewise, the State's assertion that its 'discretion to exceed MEP [the maximum extent practicable standard] originates in federal law' and 'requires [it], as a matter of law, to include other such permit provisions as it deems appropriate' is nothing more than an oxymoron that begs the question of what the federal Clean Water Act actually mandates rather than allows a delegated state permit writer to require as a matter of discretion. [Emphasis in original.]

BASMAA emphasizes that the water boards have wide discretion in determining the content of a municipal stormwater permit beyond the federal minimum requirements, and says that the boards need to work "proactively and collaboratively" with local governments in "prioritizing and phasing in actions that realistically can be implemented given existing and projected local revenues."

League of California Cities (League) and California State Association of Counties (CSAC): The League and CSAC filed joint comments on the draft staff analysis on January 26, 2010, expressing support for it "and its recognition of the constraints placed on cities and counties with respect to adopting new or increased property-related fees."

The League and CSAC disagree, however, with the finding that the hydromodification management plan (HMP, part D.1.g.), the requirement to include low impact development (LID) in the Standard Urban Stormwater Mitigation Plans (SUSMPs) (part D.1.d.(7)-(8)), and parts of the education component (part D.5) are not reimbursable because the claimants have fee authority (under Gov. Code, § 66000 et seq., The Mitigation Fee Act) sufficient to pay for them. The League and CSAC point out examples where a city or county constructs a priority development project for which no third party is available upon whom to assess a fee. They also assert that for these city or county projects, a nexus requirement cannot be demonstrated "because no private development impact have generated the need for the projects."

COMMISSION FINDINGS

The courts have found that article XIII B, section 6 of the California Constitution[59] recognizes the state constitutional restrictions on the powers of local government to tax and spend.[60] "Its

---

[59] Article XIII B, section 6, subdivision (a), provides:

> (a) Whenever the Legislature or any state agency mandates a new program or higher level of service on any local government, the State shall provide a subvention of funds to reimburse that local government for the costs of the program or increased level of service, except that the Legislature may, but need not, provide a subvention of funds for the following mandates: (1) Legislative mandates requested by the local agency affected. (2) Legislation defining a new

purpose is to preclude the state from shifting financial responsibility for carrying out governmental functions to local agencies, which are 'ill equipped' to assume increased financial responsibilities because of the taxing and spending limitations that articles XIII A and XIII B impose."[61] A test claim statute or executive order may impose a reimbursable state-mandated program if it orders or commands a local agency or school district to engage in an activity or task.[62]

In addition, the required activity or task must be new, constituting a "new program," or it must create a "higher level of service" over the previously required level of service.[63]

The courts have defined a "program" subject to article XIII B, section 6, of the California Constitution, as one that carries out the governmental function of providing public services, or a law that imposes unique requirements on local agencies or school districts to implement a state policy, but does not apply generally to all residents and entities in the state.[64] To determine if the program is new or imposes a higher level of service, the test claim legislation must be compared with the legal requirements in effect immediately before the enactment of the test claim legislation.[65] A "higher level of service" occurs when the new "requirements were intended to provide an enhanced service to the public."[66]

Finally, the newly required activity or increased level of service must impose costs mandated by the state.[67]

The Commission is vested with exclusive authority to adjudicate disputes over the existence of state-mandated programs within the meaning of article XIII B, section 6.[68] In making its

---

crime or changing an existing definition of a crime. (3) Legislative mandates enacted prior to January 1, 1975, or executive orders or regulations initially implementing legislation enacted prior to January 1, 1975.

decisions, the Commission must strictly construe article XIII B, section 6, and not apply it as an "equitable remedy to cure the perceived unfairness resulting from political decisions on funding priorities."[69]

The permit provisions in the test claim are discussed separately to determine whether they are reimbursable state-mandates.

Issue 1: Is the permit subject to article XIII B, section 6, of the California Constitution?

The issues discussed here are whether the permit provisions are an executive order within the meaning of Government Code section 17516, whether they are discretionary, whether they constitute a program, and whether they are a federal mandate or a state-mandated new program or higher level of service.

A. Is the permit an executive order within the meaning of Government Code section 17516?

The Commission has jurisdiction over test claims involving statutes and executive orders as defined by Government Code section 17516, which describes "executive order" for purposes of state mandates, as "any order, plan, requirement, rule, or regulation issued by any of the following: (a) The Governor. (b) Any officer or official serving at the pleasure of the Governor. (c) Any agency, department, board, or commission of state government."[70]

The California Regional Water Board, San Diego Region, is a state agency.[71] The permit it issued is a plan for reducing water pollution, and contains requirements for local agencies toward that end. Therefore, the Commission finds that the permit is an executive order within the meaning of article XIII B, section 6 and Government Code section 17516.

B. Is the permit the result of claimants' discretion?

The permit requires claimants to undertake various activities to reduce stormwater pollution in compliance with a permit issued by the Regional Board.

The Department of Finance, in comments submitted November 6, 2008, asserts that the claimants "had the option to use best management practices that would identify alternative practices to reduce pollution in water to the maximum extent practicable" Finance asserts that the claimants proposed permit requirements when they submitted the application for the permit,

---

[69] *County of Sonoma, supra,* 84 Cal.App.4th 1265, 1280, citing *City of San Jose v. State of California* (1996) 45 Cal.App.4th 1802, 1817.

[70] Section 17516 also states: ""Executive order" does not include any order, plan, requirement, rule, or regulation issued by the State Water Resources Control Board or by any regional water quality control board pursuant to Division 7 (commencing with Section 13000) of the Water Code." The Second District Court of Appeal has held that this statutory language is unconstitutional. *County of Los Angeles v. Commission on State Mandates, supra,* 150 Cal.App.4th 898, 904.

[71] Water Code section 13200 et seq.

and that increased costs due to downstream activities of an underlying discretionary activity are not reimbursable.

Similarly, the State Board, in its October 27, 2008 comments, states that the copermittees proposed the concepts that were incorporated into and form the basis of the permit provisions for which they now seek reimbursement.

In rebuttal comments submitted February 9, 2009, claimants dispute that the Report of Waste Discharge (ROWD, or permit application) "represents a copermittee proposal for 2007 Permit content or that the adopted 2007 Permit is 'based on the ROWD." According to claimants, the 2007 permit provisions "were not taken directly from, nor are they generally consistent with the intent of, most of the specific ROWD content upon which the state contends they are based."

In determining whether the permit provisions at issue are a downstream activity resulting from the discretionary decision by the local agencies, the following rule stated by the Supreme Court in the *Kern High School Dist.* case applies:

> [A]ctivities undertaken at the option or discretion of a local government entity … do not trigger a state mandate and hence do not require reimbursement of funds—even if the local entity is obliged to incur costs as a result of its discretionary decision to participate in a particular program or practice.[72]

The Commission finds that the permit activities at issue were not undertaken at the option or discretion of the claimants. The claimants are required by law to submit the NPDES permit application in the form of a Report of Waste Discharge.[73] Submitting it is not discretionary, as shown in the following federal regulation:

> a) *Duty to apply.* (1) Any person[74] who discharges or proposes to discharge pollutants … and who does not have an effective permit … must submit a complete application to the Director in accordance with this section and part 124 of this chapter.[75]

Moreover, the ROWD (tantamount to an NPDES permit application) is required by California law, as follows: "Any person discharging pollutants or proposing to discharge pollutants to the navigable water of the United States within the jurisdiction of this state … shall file a report of the discharge in compliance with the procedures set forth in Section 13260 …"[76] Thus, submitting the ROWD is not discretionary because the claimants are required to do so by both federal and California law.

---

[72] *Kern High School Dist., supra,* 30 Cal.4th 727, 742.

[73] The Report of Waste Discharge is attachment 36 of the State Water Resources Control Board comments submitted October 2008.

[74] *Person* means an individual, association, partnership, corporation, municipality, State or Federal agency, or an agent or employee thereof (40 CFR § 122.2).

[75] 40 Code of Federal Regulations, section 122.21 (a). The section applies to U.S. EPA-issued permits, but is incorporated into section 123.25 (the state program provision) by reference.

[76] Water Code section 13376.

In addition to federal and state law, the 2001 permit required submission of the ROWD. The 2007 permit, under Part A "Basis for the Order," states: "On August 25, 2005, in accordance with Order No. 2001-01 [the 2001 Permit], the County of San Diego, as the Principal Permittee, submitted a Report of Waste Discharge (ROWD) for renewal of their MS4 Permit."[77]

And although the ROWD provides a basis for some (but not all) of the 2007 permit provisions at issue in this test claim, there is a substantial difference between what was included in the claimants' ROWD and the specific requirements the Regional Board adopted (e.g., copermittee collaboration, parts F.2., F.3 & L, Regional Residential Education Program Development, part F.1., Low Impact Development, part D.1.d(7)-(8), long-term effectiveness assessment, part I.5, program effectiveness assessment, parts I.1 & I.2, educational surveys and tests, part D.5, and the Watershed Urban Runoff Management Program, parts E.2.f & E.2.g). Other permit activities were not proposed in the ROWD (e.g., hydromodification, part D.1.g., street sweeping, parts D.2.a(5) & J.3.a(3)(c)x-xv, conveyance system cleaning, part D.3.a(3) & J.3.a(3)(c)iv-viii).

Because the claimants do not voluntarily participate in the NPDES program, the Commission finds that the *Kern High School Dist.* case does not apply to the permit, the contents of which are not the result of the claimants' discretion.

C. Does the permit constitute a program within the meaning of article XIII B, section 6 of the California Constitution?

As to whether the permit provisions in the test claim constitute a "program," courts have defined a "program" for purposes of article XIII B, section 6, of the California Constitution, as one that carries out the governmental function of providing public services, or a law that imposes unique requirements on local agencies or school districts to implement a state policy, but does not apply generally to all residents and entities in the state.[78]

The State Board, in its October 2008 comments, argues that the NPDES program is not a program because the NPDES permit program, and the stormwater requirements specifically, are not peculiar to local government in that industrial and construction facilities must also obtain NPDES stormwater permits.

The State Board reiterates this argument in its January 2010 comments, asserting that the draft analysis "fails to consider that private entities, as well as certain state ... and ... federal agencies also receive NPDES permits for storm water discharges." The State Board and Finance also cite *City of Richmond v. Commission on State Mandates* (1998) 64 Cal.App.4th 1190, for the proposition that "where municipalities have separate but not more stringent requirements than private entities, there is no program subject to reimbursement." Finance, in its February 2010 comments, asserts that "the requirements within the test claim permit apply generally to state and private dischargers."

---

[77] The 2001 Permit is attached to the State Water Resources Control Board, comments submitted October 2008, Attachment 25.

[78] *San Diego Unified School Dist., supra,* 33 Cal.4th 859, 874, (reaffirming the test set out in *County of Los Angeles v. State of California, supra,* 43 Cal.3d 46, 56; *Lucia Mar, supra,* 44 Cal.3d 830, 835.)

Claimants, in their February 2009 rebuttal comments, disagree with the State Board and assert that an MS4 permit is unique to government and subject to unique regulations. Claimants cite the definition of an MS4 in 40 C.F.R. § 122.26(b)(8) as "a conveyance or system of conveyances ... owned or operated by a State, city, town, borough, county, parish, district, association, or other public body ...." Claimants argue that prohibiting "non-stormwater discharges into the storm sewers"[79] is a uniquely government function that provides for the health, safety, and welfare of the citizens in a community. Claimants also point out that the federal regulations for MS4 permits are in 40 C.F.R. §122.26(d), while the regulations pertaining to private industrial dischargers are in 40 C.F.R. § 122.26(c), different regulations that apply the Best Available Technology standard rather than the Maximum Extent Practicable standard imposed on MS4s.

The Commission finds that the permit activities constitute a program within the meaning of article XIII B, section 6. In *County of Los Angeles v. Commission on State Mandates*, the State Board argued that an NPDES permit[80] issued by the Los Angeles Regional Water Quality Control Board does not constitute a "program." The court dismissed this argument, stating: "[T]he applicability of permits to public and private dischargers does not inform us about whether a particular permit or an obligation thereunder imposed on local governments constitutes a state mandate necessitating subvention under article XIII B, section 6."[81] In other words, whether the law regarding NPDES permits generally constitute a "program" within the meaning of article XIII B, section 6 is not relevant. The only issue before the Commission is whether the permit in this test claim constitutes a program.

The permit activities in this claim (order no. R9-2007-001, NPDES no. CAS0108758) are limited to the local governmental entities specified in the permit. The permit defines the "permittees" as the County of San Diego and 18 incorporated cities, along with the San Diego Unified Port District and San Diego County Regional Airport Authority. [82] No private entities are regulated under this permit, so it is not a law (or executive order) of general application. That fact distinguishes this claim from the *City of Richmond* case cited by Finance and the State Board, in which the workers' compensation law was found to be one of general application. The same cannot be said of the permit in this claim (order no. R9-2007-001, NPDES no. CAS0108758) because no private entities are regulated by it.

Moreover, the permit provides a service to the public by preventing or abating pollution in waterways and beaches in San Diego County. As stated in the permit: "This order specifies requirements necessary for the Copermittees to reduce the discharge of pollutants in urban runoff to the maximum extent practicable."

---

[79] 33 U.S.C. § 1342(p)(3).

[80] Los Angeles Regional Quality Control Board Order No. 01-182, Permit CAS004001. The Commission issued a decision on parts 4C2a, 4C2b, 4E and 4Fc3 of this permit (test claims 03-TC-09, 03-TC-19, 03-TC-20, 03-TC-21) at its July 31, 2009 hearing.

[81] *County of Los Angeles v. Commission on State Mandates* (2007) 150 Cal.App.4th 898, 919.

[82] The cities are Carlsbad, Chula Vista, Coronado, Del Mar, El Cajon, Encinitas, Escondido, Imperial Beach, La Mesa, Lemon Grove, National City, Oceanside, Poway, San Diego, San Marcos, Santee, Solana Beach, and Vista.

Thus, the permit carries out the governmental function of providing public services, and also imposes unique requirements on local agencies in San Diego County to implement a state policy that does not apply generally to all residents and entities in the state. Therefore, the Commission finds that the permit is a program within the meaning of article XIII B, section 6.

D. Are the permit provisions in the test claim a federal mandate or a state-mandated new program or higher level of service?

The next issue is whether the parts of the permit alleged in the test claim are a state mandate, or federally mandated, as asserted by the State Board and the Department of Finance. If so, the permit would not constitute a state mandate. The California Supreme Court has stated that "article XIII B, section 6, and the implementing statutes ... by their terms, provide for reimbursement only of *state*-mandated costs, not *federally* mandated costs."[83]

Also discussed is whether the permit is a new program or higher level of service. To determine whether the permit is a new program or higher level of service, the permit is compared to the legal requirements in effect immediately before its adoption, in this case, the 2001 permit.[84]

When analyzing federal law in the context of a test claim under article XIII B, section 6, the court in *Hayes v. Commission on State Mandates* held that "[w]hen the federal government imposes costs on local agencies those costs are not mandated by the state and thus would not require a state subvention. Instead, such costs are exempt from local agencies' taxing and spending limitations" under article XIII B.[85] When federal law imposes a mandate on the state, however, and the state "freely [chooses] to impose the costs upon the local agency as a means of implementing a federal program, then the costs are the result of a reimbursable state mandate regardless whether the costs were imposed upon the state by the federal government."[86]

Similarly, Government Code section 17556, subdivision (c), states that the Commission shall not find "costs mandated by the state" if "[t]he statute or executive order imposes a requirement that is mandated by a federal law or regulation and results in costs mandated by the federal government, unless the statute or executive order mandates costs that exceed the mandate in that federal law or regulation."

In *Long Beach Unified School Dist. v. State of California*,[87] the court considered whether a state executive order involving school desegregation constituted a state mandate. The regulations required, for example, conducting mandatory biennial racial and ethnic surveys, developing a reasonably feasible plan every four years to alleviate and prevent segregation to include specifics

---

elements, and taking mandatory steps to involve the community including public hearings. The state argued that its Executive Order did not mandate a new program because school districts in California have a constitutional duty to make an effort to eliminate racial segregation in the public schools. The court held that the executive order did require school districts to provide a higher level of service than required by federal constitutional or case law because the state requirements went beyond federal requirements imposed on school districts.[88] The court stated:

> A review of the Executive Order and guidelines shows that a higher level of service is mandated because their requirements go beyond constitutional and case law requirements. ...[T]he executive Order and guidelines require specific actions ... [that were] required acts. These requirements constitute a higher level of service."[89]

In analyzing the permit under the federal Clean Water Act, we keep the following in mind. First, each state is free to enforce its own water quality laws so long as its effluent limitations are not "less stringent" than those set out in the Clean Water Act.[90] The federal Clean Water Act allows for more stringent state-imposed measures, as follows:

> Permits for discharges from municipal storm sewers [¶]...[¶] (iii) shall require controls to reduce the discharges of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the ... State determines appropriate for the control of such pollutants. (33 U.S.C.A. 1342 (p)(3)(B)(iii).)

Second, the California Supreme Court has acknowledged that an NPDES permit may contain terms that are federally mandated and terms that exceed federal law.[91]

California in the NPDES program: Under the federal statutory scheme, a stormwater permit may be administered by the Administrator of U.S. EPA or by a state-designated agency, but states are not required to have an NPDES program. Subdivision (b) of section 1324 of the federal Clean Water Act, which describes the NPDES program (and subdivision (p), which describes the requirements for the municipal stormwater system permits) states in part:

> At any time after the promulgation of the guidelines required by subsection (i)(2) of section 1314 of this title, the Governor of each State desiring to administer its own permit program for discharges into navigable waters within its jurisdiction may submit to the Administrator [of U.S. EPA] a full and complete description of the program it proposes to establish and administer under State law or under an interstate compact. [Emphasis added.]

And the federal stormwater statute states that the permits:

> [S]hall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and

---

[88] *Id.* at 173.

[89] *Ibid.*

[90] 33 U.S.C. section 1370.

[91] *City of Burbank v. State Water Resources Control Board, supra,* 35 Cal.4th 613, 618, 628.

> system, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants. (33 USCA § 1342 (p)(3)(B)(iii). [Emphasis added].)

The federal statutory scheme indicates that California is not required to have its own NPDES program nor to issue stormwater permits. According to section 1342 (p) quoted above, the Administrator of U.S. EPA would do so if California had no program. The California Legislature, when adopting the NPDES program[92] to comply with the Federal Water Pollution Control Act of 1972, stated the following findings and declaration in Water Code section 13370:

(a) The Federal Water Pollution Control Act [citation omitted] as amended, provides for permit systems to regulate the discharge of pollutants ... to the navigable waters of the United States and to regulate the use and disposal of sewage sludge.

(b) The Federal Water Pollution Control Act, as amended, provides that permits may be issued by states which are authorized to implement the provisions of that act.

(c) It is in the interest of the people of the state, in order to avoid direct regulation by the federal government, of persons already subject to regulation under state law pursuant to this division, to enact this chapter in order to authorize the state to implement the provisions of the Federal Water Pollution Control Act and acts amendatory thereof or supplementary thereto, and federal regulations and guidelines issued pursuant thereto, provided, that the state board shall request federal funding under the Federal Water Pollution Act for the purpose of carrying out its responsibilities under this program.

Based on this statute, in which California voluntarily adopts the permitting program, and on the federal statutes quoted above that authorize but do not expressly require states to have this program, the state has freely chosen[93] to effect the stormwater permit program. Further discussion in this analysis of federal "requirements" should be construed in the context of California's choice to participate in the federal regulatory NPDES program.

Finance, in its February 2010 comments on the draft staff analysis, states:

> The state's role as a permitting authority acting on behalf of the federal government negates the existence of a state mandate because the test claim permit is issued in compliance with federal law. ...[N]o state mandate exists if the state requirements, in the absence of state statute, would still be imposed upon local agencies by federal law.

Similarly, the State Board's January 2010 comments argue that the *Hayes* case is distinguishable from this test claim because NPDES permits do not impose a federal mandate on the state. Rather, federal law requires municipalities to comply with the permit. The State Board also states:

---

[92] Water Code section 13374 states: "The term 'waste discharge requirements' as referred to in this division is the equivalent of the term 'permits' as used in the Federal water Pollution Control Act, as amended."

[93] *Hayes v. Commission on State Mandates, supra,* 11 Cal. App. 4th 1564, 1593-1594.

> This [draft staff analysis'] approach fails to recognize that NPDES storm water permits, whether issued by U.S. EPA or California's Water Boards, are designed to translate the general federal mandate into specific programs and enforceable requirements. Whether issued by U.S. EPA or the California's Water Boards, the federal NPDES permit will identify specific requirements for municipalities to reduce pollutants in their storm water to the maximum extent practicable. The federally required pollutant reduction is a federal mandate. ... The fact that state agencies have responsibility for specifying the federal permit requirements for municipalities does not indicate that requirements extend beyond federal law, as in *Long Beach,* or convert the federal mandate into a state mandate.[94]

The Commission disagrees. As discussed above, the federal Clean Water Act[95] authorizes states to impose more stringent measures than required by federal law. The California Supreme Court has also recognized that permits may include state-imposed, in additional to federally required measures.[96] Those state measures that may constitute a state mandate if they "exceed the mandate in ... federal law."[97] Thus, although California opted into the NPDES program, further analysis is needed to determine whether the state requirements exceed the federal requirements imposed on local agencies.

The permit provisions are discussed below in context of the following federal law governing stormwater permits: Clean Water Act section 402 (p) (33 USCA 1342 (p)(3)(B)) and Code of Federal Regulations, title 40, section 122.26. The federal stormwater statute states:

> Permits for discharges from municipal storm sewers--
>
> (i) may be issued on a system- or jurisdiction-wide basis;
>
> (ii) shall include a requirement to effectively prohibit non-stormwater discharges into the storm sewers; and
>
> (iii) shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator[98] or the State determines appropriate for the control of such pollutants. (33 USCA § 1342 (p)(3)(B)).

The issues are whether the parts of the permit in the test claim are federal mandates or state mandates, and whether they are a new program or higher level of service.

---

[94] State Board comments submitted January 2010.

[98] Administrator means the Administrator of the United States Environmental Protection Agency, or an authorized representative. (40 CFR § 122.2.)

I. Jurisdictional Urban Runoff Management Program and Reporting (Parts D & J)

Part D of the permit describes the Jurisdictional Urban Runoff Management Program (JURMP) of which each copermittee "shall develop and implement" an updated version (p.15). Part J of the permit ("Reporting") requires the JURMP to be updated and revised to include specified information. The test claim includes parts D.1.g (hydromodification management plan), D.1.d.(7)-(8) (low-impact development or LID), D3a(5) (street sweeping) and J.3.a(3)x-xv (reporting on street sweeping), D.3.a.(3) (conveyance system cleaning) and J.3.a.(3)(c)(iv)-(viii) (reporting on conveyance system cleaning), and D.5 (educational surveys and tests).

Hydromodification (part D.1.g.): Part D.1 of the permit is entitled "Development Planning." Part D.1.g. requires developing and implementing, in collaboration with other copermittees, a hydromodification management plan (HMP) "to manage increases in runoff discharge rates and durations from all Priority Development Projects."[99] Priority development projects can include both private projects, and municipal (city or county) projects. The purpose of the HMP is:

---

[99] According to the permit, Priority Development Projects are: a) all new Development Projects that fall under the project categories or locations listed in section D.1.d.(2), and b) those redevelopment projects that create, add or replace at least 5,000 square feet of impervious surfaces on an already developed site that falls under the project categories or locations listed in section D.1.d.(2)..

[¶]...[¶] [Section D.1.d.(2):] (2) Priority Development Project Categories (a) Housing subdivisions of 10 or more dwelling units. This category includes single-family homes, multi-family homes, condominiums, and apartments. (b) Commercial developments greater than one acre. This category is defined as any development on private land that is not for heavy industrial or residential uses where the land area for development is greater than one acre. The category includes, but is not limited to: hospitals; laboratories and other medical facilities; educational institutions; recreational facilities; municipal facilities; commercial nurseries; multi-apartment buildings; car wash facilities; mini-malls and other business complexes; shopping malls; hotels; office buildings; public warehouses; automotive dealerships; airfields; and other light industrial facilities. (c) Developments of heavy industry greater than one acre. This category includes, but is not limited to, manufacturing plants, food processing plants, metal working facilities, printing plants, and fleet storage areas (bus, truck, etc.). (d) Automotive repair shops. This category is defined as a facility that is categorized in any one of the following Standard Industrial Classification (SIC) codes: 5013, 5014, 5541, 7532-7534, or 7536-7539. (e) Restaurants. This category is defined as a facility that sells prepared foods and drinks for consumption, including stationary lunch counters and refreshment stands selling prepared foods and drinks for immediate consumption (SIC code 5812), where the land area for development is greater than 5,000 square feet. Restaurants where land development is less than 5,000 square feet shall meet all SUSMP requirements except for structural treatment BMP and numeric sizing criteria requirement D.1.d.(6)(c) and hydromodification requirement D.1.g. (f) All hillside development greater than 5,000 square feet. This category is defined as any development which creates 5,000 square feet of impervious surface which is located in an area with known erosive soil conditions, where the development will grade on any natural slope that is twenty-five percent or greater. (g) Environmentally Sensitive Areas (ESAs). All development located within or directly adjacent to or discharging directly to an ESA (where discharges from the development or redevelopment

> [T]o manage increases in runoff discharge rates and durations from all Priority Development Projects, where such rates and durations are likely to cause increased erosion of channel beds and banks, sediment pollutant generation, or other impacts to beneficial uses and stream habitat due to increased erosive force.

Hydromodification is defined in Attachment C of the permit as "The change in the natural watershed hydrologic processes and runoff characteristics (i.e., interception, infiltration, overland flow, interflow and groundwater flow) caused by urbanization or other land use changes that result in increased stream flows and sediment transport. In addition, alteration of stream and river channels, installation of dams and water impoundments, and excessive streambank and shoreline erosion are also considered hydromodification, due to their disruption of natural watershed hydrologic processes."[100]

As detailed in the permit and on pages 12-17 above, the HMP must have specified content, including "a description of how the copermittees will incorporate the HMP requirements into their local approval processes." Also required is collaborative reporting on the HMP and implementation 180 days after the HMP is approved by the Regional Water Board, with earlier implementation encouraged.

According to the State Board's comments submitted in October 2008 the requirement to develop and implement a HMP is necessary to meet the minimum federal MEP standard. The Board states that "broad federal legal authority is contained in CWA sections 402(p)(3)(B)(ii)-(iii), CWA section 402(a), and in 40 C.F.R. sections 122.26 (d)(2)(i)(B)-(C), (E), and (F), 131.12, and 122.26(d)(2)(iv)(A)(2), which states:

---

will enter receiving waters within the ESA), which either creates 2,500 square feet of impervious surface on a proposed project site or increases the area of imperviousness of a proposed project site to 10% or more of its naturally occurring condition. "Directly adjacent" means situated within 200 feet of the ESA. "Discharging directly to" means outflow from a drainage conveyance system that is composed entirely of flows from the subject development or redevelopment site, and not commingled with flows from adjacent lands. (h) Parking lots 5,000 square feet or more or with 15 or more parking spaces and potentially exposed to urban runoff. Parking lot is defined as a land area or facility for the temporary parking or storage of motor vehicles used personally, for business, or for commerce. (i) Street, roads, highways, and freeways. This category includes any paved surface that is 5,000 square feet or greater used for the transportation of automobiles, trucks, motorcycles, and other vehicles. (j) Retail Gasoline Outlets (RGOs). This category includes RGOs that meet the following criteria: (a) 5,000 square feet or more or (b) a projected Average Daily Traffic (ADT) of 100 or more vehicles per day.

[100] It is also defined as "changes in the magnitude and frequency of stream flows as a result of urbanization, and the resulting impacts on the receiving channels in terms of erosion, sedimentation and degradation of in-stream habitat." Draft Hydromodification Management Plan for San Diego County, page 4. <http://www.projectcleanwater.org/pdf/susmp/sd_hmp_2009.pdf> as of May 28, 2009.

(d) Application requirements for large and medium municipal separate storm sewer discharges. The operator[101] of a discharge[102] from a large or medium municipal separate storm sewer or a municipal separate storm sewer that is designated by the Director under paragraph (a)(1)(v) of this section, may submit a jurisdiction-wide or system-wide permit application. ... Permit applications for discharges from large and medium municipal storm sewers or municipal storm sewers designated under paragraph (a)(1)(v) of this section shall include; [¶]...[¶]

(2) *Part 2.* Part 2 of the application shall consist of: [¶]...[¶]

(iv) *Proposed management program.* A proposed management program covers the duration of the permit. It shall include a comprehensive planning process which involves public participation and where necessary intergovernmental coordination, to reduce the discharge of pollutants to the maximum extent practicable using management practices, control techniques and system, design and engineering methods, and such other provisions which are appropriate. The program shall also include a description of staff and equipment available to implement the program. Separate proposed programs may be submitted by each coapplicant. Proposed programs may impose controls on a systemwide basis, a watershed basis, a jurisdiction basis, or on individual outfalls. Proposed programs will be considered by the Director when developing permit conditions to reduce pollutants in discharges to the maximum extent practicable. Proposed management programs shall describe priorities for implementing controls. Such programs shall be based on:

(A) A description of structural and source control measures to reduce pollutants from runoff from commercial and residential areas that are discharged from the municipal storm sewer system that are to be implemented during the life of the permit, accompanied with an estimate of the expected reduction of pollutant loads and a proposed schedule for implementing such controls. At a minimum, the description shall include: [¶]...[¶]

---

[101] "*Owner or operator* means the owner or operator of any "facility or activity" subject to regulation under the NPDES program." (40 CFR § 122.2)

[102] "*Discharge* when used without qualification means the "discharge of a pollutant. *Discharge of a pollutant* means: (a) Any addition of any "pollutant" or combination of pollutants to "waters of the United States" from any "point source," or (b) Any addition of any pollutant or combination of pollutants to the waters of the "contiguous zone" or the ocean from any point source other than a vessel or other floating craft which is being used as a means of transportation.

This definition includes additions of pollutants into waters of the United States from: surface runoff which is collected or channeled by man; discharges through pipes, sewers, or other conveyances owned by a State, municipality, or other person which do not lead to a treatment works; and discharges through pipes, sewers, or other conveyances, leading into privately owned treatment works. This term does not include an addition of pollutants by any "indirect discharger." (40 CFR § 122.2.)

> (*2*) A description of planning procedures including a comprehensive master plan to develop, implement and enforce controls to reduce the discharge of pollutants from municipal separate storm sewers which receive discharges from areas of new development and significant redevelopment. Such plan shall address controls to reduce pollutants in discharges from municipal separate storm sewers after construction is completed. ...

The State Board also cited the U.S. Supreme Court decision, *P.U.D. No. 1 v. Washington Department of Ecology* (1994) 511 U.S. 700, for the state's authority to regulate flow under the federal Clean Water Act in order to protect water quality standards.

In response, the claimants' February 2009 comments state that the permit's Fact Sheet did not cite any federal authorities to justify the HMP portion of the permit, and that none exists. Claimants also assert that no other jurisdiction in the United States that was surveyed for the claim has a permit that requires a HMP. Claimants call the HMP requirement a flood control measure that is not a requirement in any other permit outside of California, and that the HMP exceeds the federal requirements and constitutes a state mandate. Claimants also point to the language in section 122.26(d)(2)(iv)(A)(2) that they say is:

> [A]imed directly at controlling pollutant discharges from an MS4 that originate in areas of new development. [The regulation] does not mention the need to include controls to reduce the *volume* of storm water discharged from these areas. ... controls designed only to limit volume are not expressly required.

As to the *P.U.D. No. 1 v. Washington Department of Ecology* decision cited by the State Board, the claimants distinguish it as being decided under section 401 of the Clean Water Act, wherein the permit was issued under section 402. Claimants state that the *P.U.D.* case recognized state authority under the Clean Water Act rather than a federal mandate.

The Commission agrees with claimants about the applicability of the *P.U.D.* case, which determined whether the state of Washington's environmental agency properly conditioned a permit for a federal hydroelectric project on the maintenance of specific minimum stream flows to protect salmon and steelhead runs. The U.S. Supreme Court determined that Washington could do so, but the decision was based on section 401 of the Clean Water Act, which involves certifications and wetlands. Even if the decision could be applied to section 402 NPDES permits, it merely recognized state authority to regulate flows. The issue here is not whether the state has authority to regulate flows, but whether a federal mandate requires it. This was not addressed in the *P.U.D.* decision.

Overall, there is nothing in the federal regulations that requires a municipality to adopt or implement a hydromodification plan. Thus, the HMP requirement in the permit "exceed[s] the mandate in that federal law or regulation."[103] As in *Long Beach Unified School Dist. v. State of California*,[104] the permit requires specific actions, i.e., required acts that go beyond the requirements of federal law. In adopting these permit provisions, the state has freely chosen[105] to

---

[103] Government Code section 17556, subdivision (c).

[104] *Long Beach Unified School Dist. v. State of California, supra,* 225 Cal.App.3d 155.

[105] *Hayes v. Commission on State Mandates, supra,* 11 Cal. App. 4th 1564, 1593-1594.

impose these requirements. Thus, the Commission finds that part D.1.g. of the permit is not a federal mandate.

All of part D.1.g. of the permit requires the HMP to have specified contents except part D.1.g.(2), which states that the HMP "*may* include implementation of planning measures ..." as specified. As the plain language of this part does not require the implementation of planning measures, the Commission finds that part D.1.g.(2) of the permit is not a state mandate.

The Commission also finds that HMP is not a state mandate for municipal (city or county) projects that are priority development projects, such as a hospital, laboratory or other medical facility, recreational facility, airfield, parking lot, street, road, highway, and freeway, a project over an acre, and a project located in an environmentally sensitive area.[106] Although these projects would be subject to the compliance with HMP requirements, there is no legal requirement to build municipal projects.[107] Thus, municipal projects are built by cities or counties voluntarily, and their decision triggers the requirements to comply with the HMP. In *Kern High School Dist.*,[108] the California Supreme Court decided whether the state must reimburse the costs of school site councils and advisory committees complying with the Brown (Open Meetings) Act for schools who participate in various school-related education programs. The court determined that participation in the underlying school site council program was not legally compelled and so mandate reimbursement was not required for the downstream compliance with the Brown Act. The court said:

> Activities undertaken at the option or discretion of a local government entity (that is, actions undertaken without any legal compulsion or threat of penalty for nonparticipation) do not trigger a state mandate and hence do not require reimbursement of funds-even if the local entity is obliged to incur costs as a result of its discretionary decision to participate in a particular program or practice.[109]

As with the voluntary programs in *Kern,* there is no requirement for municipalities to undertake any of the priority development projects described in the permit. Thus, the Commission finds that the costs of complying with the HMP in part D.1.g., is not a state mandate for priority development projects undertaken by a city or county.

Based on the mandatory language of the remainder of part D.1.g. of the permit (except part D.1.g.(2) and except for municipal projects), the Commission finds that it is a state mandate on the claimants to do the following:

---

[106] The County of San Diego, in its January 2010 comments on the draft staff analysis, raises the issue of its fee authority for municipal projects. The League of California Cities, in its January 2010 comments on the draft staff analysis, also discusses municipal projects, citing examples "where a city or county constructs a Priority Development Project for which no third party is available to assess a fee against."

[107] California Constitution, article XI, section 7. "A county or city may make and enforce within its limits all local, police, sanitary, and other ordinances and regulations not in conflict with general laws."

[108] *Kern High School Dist., supra,* 30 Cal.4th 727.

[109] *Kern High School Dist., supra,* 30 Cal.4th 727, 742.

Each Copermittee shall collaborate with the other Copermittees to develop and implement a Hydromodification Management Plan (HMP) to manage increases in runoff discharge rates and durations from all Priority Development Projects, where such increased rates and durations are likely to cause increased erosion of channel beds and banks, sediment pollutant generation, or other impacts to beneficial uses and stream habitat due to increased erosive force. The HMP, once approved by the Regional Board, shall be incorporated into the local SUSMP [Standard Urban Storm Water Mitigation Plan] and implemented by each Copermittee so that post-project runoff discharge rates and durations shall not exceed estimated pre-project discharge rates and durations where the increased discharge rates and durations will result in increased potential for erosion or other significant adverse impacts to beneficial uses, attributable to changes in the discharge rates and durations.

(1) The HMP shall:

(a) Identify a standard for channel segments which receive urban runoff discharges from Priority Development Projects. The channel standard shall maintain the pre-project erosion and deposition characteristics of channel segments receiving urban runoff discharges from Priority Development Projects as necessary to maintain or improve the channel segments' stability conditions.

(b) Utilize continuous simulation of the entire rainfall record to identify a range of runoff flows for which Priority Development Project post-project runoff flow rates and durations shall not exceed pre-project runoff flow rates and durations, where the increased flow rates and durations will result in increased potential for erosion or other significant adverse impacts to beneficial uses, attributable to changes in the flow rates and durations. The lower boundary of the range of runoff flows identified shall correspond with the critical channel flow that produces the critical shear stress that initiates channel bed movement or that erodes the toe of channel banks. The identified range of runoff flows may be different for specific watersheds, channels, or channel reaches.

(c) Require Priority Development Projects to implement hydrologic control measures so that Priority Development Projects' post-project runoff flow rates and durations (1) do not exceed pre-project runoff flow rates and durations for the range of runoff flows identified under section D.1.g.(1)(b), where the increased flow rates and durations will result in increased potential for erosion or other significant adverse impacts to beneficial uses, attributable to changes in the flow rates and durations, and (2) do not result in channel conditions which do not meet the channel standard developed under section D.1.g.(1)(a) for channel segments downstream of Priority Development Project discharge points.

(d) Include other performance criteria (numeric or otherwise) for Priority Development Projects as necessary to prevent urban runoff from the projects from increasing erosion of channel beds and banks, silt pollutant generation, or other impacts to beneficial uses and stream habitat due to increased erosive force.

(e) Include a review of pertinent literature.

(f) Include a protocol to evaluate potential hydrograph change impacts to downstream watercourses from Priority Development Projects.

(g) Include a description of how the Copermittees will incorporate the HMP requirements into their local approval processes.

(h) Include criteria on selection and design of management practices and measures (such as detention, retention, and infiltration) to control flow rates and durations and address potential hydromodification impacts.

(i) Include technical information supporting any standards and criteria proposed.

(j) Include a description of inspections and maintenance to be conducted for management practices and measures to control flow rates and durations and address potential hydromodification impacts.

(k) Include a description of pre- and post-project monitoring and other program evaluations to be conducted to assess the effectiveness of implementation of the HMP.

(l) Include mechanisms for addressing cumulative impacts within a watershed on channel morphology.

(m) Include information on evaluation of channel form and condition, including slope, discharge, vegetation, underlying geology, and other information, as appropriate.

[¶]...[¶]

(3) Section D.1.g.(1)(c) does not apply to Development Projects where the project discharges stormwater runoff into channels or storm drains where the preexisting channel or storm drain conditions result in minimal potential for erosion or other impacts to beneficial uses. Such situations may include discharges into channels that are concrete-lined or significantly hardened (e.g., with rip-rap, sackrete, etc.) downstream to their outfall in bays or the ocean; underground storm drains discharging to bays or the ocean; and construction of projects where the sub-watersheds below the projects' discharge points are highly impervious (e.g., >70%) and the potential for single-project and/or cumulative impacts is minimal. Specific criteria for identification of such situations shall be included as a part of the HMP. However, plans to restore a channel reach may reintroduce the applicability of HMP controls, and would need to be addressed in the HMP.

(4) HMP Reporting

The Copermittees shall collaborate to report on HMP development as required in section J.2.a of this Order.[110]

---

[110] Section J.2.a of the permit requires collaborating with other copermittees to develop the HMP, and submitting it for approval by the Regional Board. Part J.2.a also includes timelines for HMP completion and approval.

(5) HMP Implementation

180 days after approval of the HMP by the Regional Board, each Copermittee shall incorporate into its local SUSMP and implement the HMP for all applicable Priority Development Projects. Prior to approval of the HMP by the Regional Board, the early implementation of measures likely to be included in the HMP shall be encouraged by the Copermittees.

(6) Interim Hydromodification Criteria for Projects Disturbing 50 Acres or More

Within 365 days of adoption of this Order, the Copermittees shall collectively identify an interim range of runoff flow rates for which Priority Development Project post-project runoff flow rates and durations shall not exceed pre-project runoff flow rates and durations (Interim Hydromodification Criteria), where the increased discharge flow rates and durations will result in increased potential for erosion or other significant adverse impacts to beneficial uses, attributable to changes in flow rates and durations. Development of the Interim Hydromodification Criteria shall include identification of methods to be used by Priority Development Projects to exhibit compliance with the criteria, including continuous simulation of the entire rainfall record. Starting 365 days after adoption of this Order and until the final Hydromodification Management Plan standard and criteria are implemented, each Copermittee shall require Priority Development Projects disturbing 50 acres or more to implement hydrologic controls to manage post-project runoff flow rates and durations as required by the Interim Hydromodification Criteria. Development Projects disturbing 50 acres or more are exempt from this requirement when:

(a) The project would discharge into channels that are concrete-lined or significantly hardened (e.g., with rip-rap, sackcrete, etc.) downstream to their outfall in bays or the ocean;

(b) The project would discharge into underground storm drains discharging directly to bays or the ocean; or

(c) The project would discharge to a channel where the watershed areas below the project's discharge points are highly impervious (e.g. >70%).

As to whether part D.1.g. of the permit (except for D.1.g.(2)) is a new program or higher level of service, the claimants, in their February 2009 comments, assert that it is.

> The 2001 Permit only included general statements regarding the need to control downstream erosion with post construction BMPs. The 2007 Permit increased these requirements by requiring the copermittees to, among other things, draft and implement interim and long-term hydromodification plans, and impose specific, strict post construction BMPs on new development projects within their jurisdiction.

The State Board, in its October 2008 comments, argues that part D.1 "expands upon and makes more specific the hydromodification requirements in the 2001 Permit."

Finance argues, in its February 2010 comments on the draft staff analysis, that the entire permit is not a new program or higher level of service because additional activities, beyond those

required by the 2001 permit, are necessary for the claimants to continue to comply with the federal Clean Water Act and reduce pollutants to the Maximum Extent Practicable.

The Commission disagrees with Finance. This analysis measures the 2007 permit against the 2001 permit to determine which provisions are a new program or higher level of service. Under the standard urged by Finance, anything the state imposes under the permit would not be a new program or higher level of service. The Commission does not read the federal Clean Water Act so broadly. In *Building Industry Assoc. of San Diego County v. State Water Resources Control Board* (2004) 124 Cal.App.4th 866, the court held that the Clean Water Act's "maximum extent practicable" standard did not prevent the water boards from including provisions in the permit that required municipalities to comply with state water quality standards.[111]

The Regional Board prepared a Fact Sheet/Technical Report[112] for the permit that lists the federal authority and reasons the permit provisions were adopted. Regarding part D.1.g. of the permit, the Fact Sheet/Technical Report does not expressly mention the 2001 permit, but states:

> This section of the Order expands the requirements for control of hydromodification caused by changes in runoff resulting from development and urbanization. Expansion of these requirements is needed due to the current lack of a clear standard for controlling hydromodification resulting from modification. While the Model SUSMP[113] [adopted in 2002] developed by the Copermittees requires project proponents to control hydromodification, it provides no standard or performance criteria for how this is to be achieved.

The Commission finds that part D.1.g. of the permit (except for D.1.g.(2)) with respect to private priority development projects is a new program or higher level of service. The Fact Sheet/Technical Report describes the section as an "expansion" of hydromodification control requirements. The 2001 permit (in part F.1.b.(2)(j)) included only the following on hydromodification:

> Downstream Erosion – As part of the model SUSMP [Standard Urban Storm Water Mitigation Plan] and the local SUSMPs, the Copermittees shall develop criteria to ensure that discharges from new development and significant redevelopment maintain or reduce pre-development downstream erosion and protect stream habitat. At a minimum, criteria shall be developed to control peak storm water discharge rates and velocities in order to maintain or reduce pre-development downstream erosion and protect stream habitat. Storm water discharge volumes and durations should also be considered.

The requirements in the 2007 permit, however, are much more expansive and detailed, requiring development and implementation of a hydromodification management plan (HMP) to be approved by the Regional Board. And while the 2001 permit contained a broad description of

---

[111] *Building Industry Assoc. of San Diego County v. State Water Resources Control Board, supra,* 124 Cal.App.4th 866, 870.

[112] The Fact Sheet/Technical Report was attached to the test claim.

[113] According to the Fact Sheet/Technical Report, the Model SUSMP was completed and adopted in 2002.

the criteria required, part D.1.g. of the 2007 permit contains a detailed description of the contents of the HMP, including identifying standards for channel segments, using continuous simulation of the entire rainfall record to identify runoff flows, requiring priority development projects to implement hydrologic control measures, including other performance criteria for priority development projects to prevent urban runoff from the projects, and 9 other components to include in the HMP. Therefore, the Commission finds that part D.1.g. of the permit (except for D.1.g.(2)) is a new program or higher level of service over the 2001 permit.

In sum, the Commission finds that part D.1.(g) of the permit (except for D.1.g.(2)) is a state-mandated new program or higher level of service for private priority development projects. Reimbursement is not required for complying with the HMP for municipal priority development projects.

B. Low Impact Development (LID) and Standard Urban Storm Water Mitigation Plan (part D.1.d.): Also under part D.1 "Development Planning" is part D.1.d, which requires the copermittees to review and update their SUSMPs (Standard Urban Storm Water Mitigation Plans)[114]and (in paragraphs 7 and 8) add low impact development (LID) and source control BMP requirements for each priority development project, and to implement the updated SUSMP, as specified on pages 17-19 above. The purpose of LID is to "collectively minimize directly connected impervious areas and promote infiltration at Priority Development Projects." LID best management practices include draining a portion of impervious areas into pervious areas prior to discharge into the storm drain, and constructing portions of priority development projects with permeable surfaces (*Id.*)

According to the State Board's comments submitted in October 2008, the requirement in part D.1.d. is necessary to meet the minimum federal MEP standard, and is supported by 40 C.F.R. section 122.26 (d)(2)(iv)(A)-(D), part of which is quoted in the discussion of hydromodification above. Part (d)(2)(iv)(A)(2) of the regulation requires part of the permit application to include:

> (2) A description of planning procedures including a comprehensive master plan to develop, implement and enforce controls to reduce the discharge of pollutants from municipal separate storm sewers which receive discharges from areas of new development and significant redevelopment. Such plan shall address controls to reduce pollutants in discharges from municipal separate storm sewers after construction is completed.

The State Board asserts that these regulations "require municipalities to implement controls to reduce pollutants in urban runoff from new development and significant redevelopment, construction, and commercial, residential, industrial and municipal land uses or activities." The Board cites a decision of the Washington Pollution Control Hearings Board that found that permit provisions to promote but not require low impact development "failed to satisfy the federal MEP standard and Washington state law because it ... did not require LID at the parcel and subdivision level."

In their February 2009 rebuttal comments, the claimants assert: "while federal regulations require the large MS4 permits to include programs to reduce the discharge of pollutants from the

---

[114] The Permit defines the Standard Urban Storm Water Mitigation Plan as "A plan developed to mitigate the impacts of urban runoff from Priority Development Projects."

MS4 that originate in areas of new development, federal regulations do not require or even mention LID or LID principles." And "while requiring post-construction controls that limit pollutant discharges originating in areas of new development is clearly within the requirements of Section 122.26(d)(2)(iv)(A), the 2007 Permit's specific LID requirements are not." Claimants also address the Washington State Pollution Control Board decision by noting that the Board's decision "explicitly recognized that LID requirements are not federally mandated." The claimants also point out EPA-issued NPDES permits in Washington, D.C. and Albuquerque, New Mexico that make no reference to LID.

The Commission finds nothing in the federal regulation (40 C.F.R. § 122.26) that requires local agencies to collectively review and update the BMP requirements listed in their SUSMPs, or to develop, submit and implement "an updated Model SUSMP" that defines minimum LID and other BMP requirements for incorporation into the SUSMPs. Thus, the LID requirements in the permit "exceed the mandate in that federal law or regulation."[115] As in *Long Beach Unified School Dist. v. State of California,*[116] the permit requires specific actions, i.e., required acts that go beyond the requirements of federal law. In adopting these permit provisions, the state has freely chosen[117] to impose these requirements. Thus, the Commission finds that part D.1.d. of the permit is not a federal mandate.

The Commission further finds that the LID requirements are not a state-mandated program for municipal projects for the same reason as discussed in the HMP discussion above: there is no requirement for cities or counties to build priority development projects, which would trigger the downstream requirement to comply with parts D.1.d.(7) and D.1.d.(8) of the permit, the LID portions of the permit.

As to non-municipal projects, however, because of the mandatory language on the face of the permit, the Commission finds that part D.1.d. of the permit is a state mandate for the claimants to do all of the following:

> (7) Update of SUSMP BMP Requirements
>
> The Copermittees shall collectively review and update the BMP requirements that are listed in their local SUSMPs. At a minimum, the update shall include removal of obsolete or ineffective BMPs, addition of LID and source control BMP requirements that meet or exceed the requirements of sections D.1.d.(4) and D.1.d.(5), and addition of LID BMPs that can be used for treatment, such as bioretention cells, bioretention swales, etc. The update shall also add appropriate LID BMPs to any tables or discussions in the local SUSMPs addressing pollutant removal efficiencies of treatment control BMPs. In addition, the update shall include review, and revision where necessary, of treatment control BMP pollutant removal efficiencies.

---

[115] Government Code section 17556, subdivision (c).

[116] *Long Beach Unified School Dist. v. State of California, supra,* 225 Cal.App.3d 155.

[117] *Hayes v. Commission on State Mandates, supra,* 11 Cal. App. 4th 1564, 1593-1594.

(8) Update of SUSMPs to Incorporate LID and Other BMP Requirements

(a) In addition to the implementation of the BMP requirements of sections D.1.d.(4-7) within one year of adoption of this Order, the Copermittees shall also develop and submit an updated Model SUSMP that defines minimum LID and other BMP requirements to be incorporated into the Copermittees' local SUSMPs for application to Priority Development Projects. The purpose of the updated Model SUSMP shall be to establish minimum standards to maximize the use of LID practices and principles in local Copermittee programs as a means of reducing stormwater runoff. It shall meet the following minimum requirements:

i. Establishment of LID BMP requirements that meet or exceed the minimum requirements listed in section D.1.d.(4) above.[118]

ii. Establishment of source control BMP requirements that meet or exceed the minimum requirements listed in section D.1.d.(5) above.[119]

iii. Establishment of treatment control BMP requirements that meet or exceed the minimum requirements listed in section D.1.d.(6) above.[120]

iv. Establishment of siting, design, and maintenance criteria for each LID and treatment control BMP listed in the Model SUSMP, so that implemented LID and treatment control BMPs are constructed correctly and are effective at pollutant removal and/or runoff control. LID techniques, such as soil amendments, shall be incorporated into the criteria for appropriate treatment control BMPs.

v. Establishment of criteria to aid in determining Priority Development Project conditions where implementation of each LID BMP listed in section D.1.d.(4)(b) is applicable and feasible.

vi. Establishment of a requirement for Priority Development Projects with low traffic areas and appropriate or amendable soil conditions to construct a portion of walkways, trails, overflow parking lots, alleys, or other low-traffic areas with permeable surfaces, such a pervious concrete, porous asphalt, unit pavers, and granular materials.

vii. Establishment of restrictions on infiltration of runoff from Priority Development Project categories or Priority Development Project areas that generate high levels of pollutants, if necessary.

---

[118] Part D.1.d.(4) of the permit includes LID BMP requirements: "Each Copermittee shall require each Priority Development Project to implement LID BMPs which will collectively minimize directly connected impervious areas and promote infiltration at Priority Development Projects:" The Permit lists various LID site design BMPs that must be implemented at all Priority Development Projects, and other LID BMPs that must be implemented at all Priority Development Projects "where applicable and feasible."

[119] Part D.1.d.(5) of the permit lists source control BMP requirements.

[120] Part D.1.d.(6) of the permit lists treatment control BMP requirements.

(b) The updated Model SUSMP shall be submitted within 18 months of adoption of this Order. If, within 60 days of submittal of the updated Model SUSMP, the Copermittees have not received in writing from the Regional Board either (1) a finding of adequacy of the updated Model SUSMP or (2) a modified schedule for its review and revision, the updated Model SUSMP shall be deemed adequate, and the Copermittees shall implement its provisions in accordance with section D.1.d.(8)(c) below.

(c) Within 365 days of Regional Board acceptance of the updated Model SUSMP, each Copermittee shall update its local SUSMP to implement the requirements established pursuant to section D.1.d.(8)(a). In addition to the requirements of section D.1.d.(8)(a), each Copermittee's updated local SUSMP shall include the following:

i. A requirement that each Priority Development Project use the criteria established pursuant to section D.1.d.(8)(a)v to demonstrate applicability and feasibility, or lack thereof, of implementation of the LID BMPs listed in section D.1.d.(4)(b).

ii. A review process which verifies that all BMPs to be implemented will meet the designated siting, design, and maintenance criteria, and that each Priority Development Project is in compliance with all applicable SUSMP requirements.

The State Board, in its October 2008 comments on the test claim, argues that the requirements in part D.1.d.(7) of the permit are not a new program or higher level of service because they "merely add definition to the scope of the local SUSMP already required in the 2001 Permit (see Section F.1.b.(2))." As to part D.1.d.(8), the State Board asserts that it:

> [P]rovides a framework for the Copermittees to develop criteria to be used in the application of LID requirements to Priority Development Projects. The Copermittees must develop their LID programs through an update to the Model SUSMP, the document that guides (and guided the 2001 Permit cycle) post-construction BMP implementation at Priority Development Projects.

According to the State Board, these parts of the permit are not a new program or higher level of service because they merely add additional detail in implementing the same minimum federal MEP standard and add specificity to already existing BMPs.

The claimants, in their February 2009 comments, assert that by adding requirements and increasing the specificity of existing requirements, the 2007 LID permit requirements are a new program or higher level of service.

The Commission finds that part D.1.d.(7) is a new program or higher level of service because it calls for a collective review and update of BMP requirements listed in the claimants' SUSMPs (presumably those drafted under the 2001 permit) that was not required under the 2001 permit.

The Commission also finds that part D.1.d.(8) is a new program or higher level of service because it requires developing, submitting, and implementing "an updated Model SUSMP" that defines minimum LID and other BMP requirements for incorporation into the copermittees SUSMPs. Although the 2001 permit required adopting a Model SUSMP and local SUSMP, it

did not require developing and submitting an updated Model SUSMP with the specified LID BMP requirements.

In sum, the Commission finds that parts D.1.d.(7) and D.1.d.(8) of the 2007 permit constitute a state-mandated new program or higher level of service for private priority development projects. Reimbursement is not required for complying with the LID requirements for municipal priority development projects.

C. Street sweeping and reporting (parts D.3.a.(5) & J.3.a(3)x-xv): Part D.3 is entitled "Existing Development." Part D.3.a.(5) requires regular street sweeping based on the amount of trash generated on the road, street, highway, or parking facility. Those identified as generating the highest volumes of trash are to be swept at least two times per month, those generating moderate volumes of trash are to be swept at least monthly, and those generating low volumes of trash are to be swept as necessary, but not less than once per year. The copermittees determine what constitutes high, moderate, and low trash generation.

In addition, section J.3.a.(3)(c) x-xv requires the copermittees, as part of their annual reporting, to identify the total distance of curb-miles of improved roads in each priority category, the total distance of curb-miles swept, the number of municipal parking lots and the number swept, the frequency of sweeping, and the tons of material collected from street and parking lot sweeping.

The State Board, in its comments submitted in October 2008, states that requiring minimum sweeping frequencies for streets determined by the copermittees to have high volumes of trash or debris is necessary to meet the minimum federal MEP standard. The State Board cites C.F.R. section 122.26(d)(2)(i)(B)-(C), (E) and (F) and 40 C.F.R. section 122.26(d)(2)(iv), and more specifically, section 122.26(d)(2)(iv)(A)(1), which states that the proposed management program include "[a] description of maintenance activities and a maintenance schedule for structural controls to reduce pollutants (including floatables) in discharges from municipal separate storm sewers." Also, section 122.26(d)(2)(iv)(A)(6) provides that the proposed management program include:

> [a] description of a program to reduce to the maximum extent practicable, pollutants in discharges from municipal separate storm sewers associated with the application of pesticides, herbicides, and fertilizer which will include, as appropriate, controls such as educational activities, permits, certifications, and other measures for commercial applicators and distributors, and controls for application in public right-of-ways and at municipal facilities.

The State Board also cites section 122.44(d)(1)(i), which states as follows regarding NPDES permits: "limitations must control all pollutants or pollutant parameters (either conventional, nonconventional, or toxic pollutants) which the Director determines are or may be discharged at a level which will cause, have reasonable potential to cause, or contribute to an excursion above any State Water quality standard, including narrative criteria for water quality." And section 122.26(d)(2)(iv)(A)(3) states that the proposed management program include "A description for operating and maintaining public streets, roads and highways and procedures for reducing the impact on receiving waters of discharges from municipal storm sewer systems, including pollutants discharged as a result of deicing activities."

In their February 2009 rebuttal comments, the claimants point out that street sweeping as a BMP to control "floatables" is not required by federal law in that none of the federal regulations

specifically require street sweeping. The claimants quote the following from *Hayes v. Commission on State Mandates*:[121] "if the state freely chose to impose the costs upon the local agency as a means of implementing a federal program then the costs are the result of a reimbursable state mandate."

The Commission agrees with claimants. The permit requires activities that fall within the federal regulations to include: "[a] description of maintenance activities and a maintenance schedule for structural controls to reduce pollutants (including floatables) in discharges from municipal separate storm sewers."[122] And they also require: "A description for operating and maintaining public streets, roads and highways and procedures for reducing the impact on receiving waters of discharges from municipal storm sewer systems…"[123]

Yet the more specific requirements in the permit include variable street sweeping schedules for areas impacted by different amounts of trash. They also require reporting on the amount of trash collected, which is not required by the federal regulations. These activities "exceed the mandate in that federal law or regulation."[124] As in *Long Beach Unified School Dist. v. State of California*,[125] the permit requires specific actions, i.e., required acts that go beyond the requirements of federal law. In adopting these permit provisions, the state has freely chosen[126] to impose these requirements. Therefore, the Commission finds that parts D.3.a.(5) and J.3.a.(3)(c)x-xv of the permit are not a federal mandate.

Because of the mandatory language on the face of the permit, the Commission also finds part D.3.a(5) of the permit is a state mandate for the claimants to do all of the following:

> (5) Sweeping of Municipal Areas
>
> Each Copermittee shall implement a program to sweep improved (possessing a curb and gutter) municipal roads, streets, highways, and parking facilities. The program shall include the following measures:
>
> (a) Roads, streets, highways, and parking facilities identified as consistently generating the highest volumes of trash and/or debris shall be swept at least two times per month.
>
> (b) Roads, streets, highways, and parking facilities identified as consistently generating moderate volumes of trash and/or debris shall be swept at least monthly.
>
> (c) Roads, streets, highways, and parking facilities identified as generating low volumes of trash and/or debris shall be swept as necessary, but no less than once per year.

---

[121] *Hayes v. Commission on State Mandates, supra,* 11 Cal.App.4th 1564.

[122] 40 Code of Federal Regulations, section 122.26(d)(2)(iv)(A)(1).

[123] 40 Code of Federal Regulations, section 122.26(d)(2)(iv)(A)(3).

[124] Government Code section 17556, subdivision (c).

[125] *Long Beach Unified School Dist. v. State of California, supra,* 225 Cal.App.3d 155.

[126] *Hayes v. Commission on State Mandates, supra,* 11 Cal. App. 4th 1564, 1593-1594.

And as stated in part J.3.a(3)(c)x-xv (on p. 68) of the permit, the claimants report annually on:

> x. Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating the highest volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.
>
> xi. Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating moderate volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.
>
> xii. Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating low volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.
>
> xiii. Identification of the total distance of curb-miles swept.
>
> xiv. Identification of the number of municipal parking lots, the number of municipal parking lots swept, and the frequency of sweeping.
>
> xv. Amount of material (tons) collected from street and parking lot sweeping.

The State Board, in its October 2008 comments, argues that requiring minimum street sweeping frequencies does not result in a new program or higher level of service. According to the State Board:

> The 2001 Permit required Copermittees to perform street sweeping, but did not specify minimum frequencies. While the minimum frequencies may exceed some Copermittees' existing programs, the Claimants acknowledge than many Copermittees meet or exceed the mandatory requirements on a voluntary basis. To the extent the frequencies are already being met and the Permit imposes the same MEP standard as its predecessor ... the 2007 Permit does not impose a higher level of service.

In their February 2009 rebuttal comments, the claimants cite Government Code section 17565 to argue that whether or not they were sweeping streets at frequencies equal or more than the permit requires is not relevant. Government Code section 17565 states: "If a local agency ... at its option, has been incurring costs which are subsequently mandated by the state, the state shall reimburse the local agency ... for those costs incurred after the operative date of the mandate." The claimants also state that the 2001 permit did not in fact require street sweeping, "[a]t best it only included general statements regarding the need to control pollutants in streets and other impervious areas and, in any event, minimum frequencies were not required."

The Regional Board's Fact Sheet/Technical Report on part D.3.a.(5) of the 2007 permit states that street sweeping "has been added to ensure that the Copermittees are implementing this effective BMP at all appropriate areas."

The Commission finds that the street sweeping provision (part D.3.a.(5)) in the permit is a new program or higher level of service. The Commission agrees that Government Code section 17565 makes it irrelevant (for purposes of mandate reimbursement) whether or not claimants

were performing the activity prior to the permit, since voluntary activities do not affect reimbursement of an activity that is subsequently mandated by the state.

The 2001 permit, in part F.3.a.(3) and (4) stated:

> (a) To establish priorities for oversight of municipal areas and activities required under this Order, each Copermittee shall prioritize each watershed inventory in F.3.a.2. above by threat to water quality and update annually. Each municipal area and activity shall be classified as high, medium, or low threat to water quality. In evaluating threat to water quality, each Copermittee shall consider (1) type of municipal area or activity; (2) materials used (3) wastes generated; (4) pollutant discharge potential; (5) non-storm water discharges; (6) size of facility or area; (7) proximity to receiving water bodies; (8) sensitivity of receiving water bodies; and (9) any other relevant factors.
>
> (b) At a minimum, the high priority municipal areas and activities shall include the following:
>
> (i) Roads, Streets, Highways, and Parking Facilities. [¶]...[¶]
>
> F.3.a.(4) BMP Implementation (Municipal)
>
> (a) Each Copermittee shall designate a set of minimum BMPs for high, medium, and low threat to water quality municipal areas and activities (as determined under section F.3.a.(3)).The designated minimum BMPs for high threat to water quality municipal areas and activities shall be area or activity specific as appropriate.

Street sweeping is not expressly required in this 2001 permit provision, nor does it specify any frequencies or required reporting. Thus, the Commission finds that part D.3.a.(5) of the 2007 permit that requires street sweeping, as specified, is a new program or higher level of service, as well as part J.3.a(3)x-xv that requires reporting on street-sweeping activities.

D. Conveyance system cleaning and reporting (parts D.3.a.(3) & J.3.a.(3)(c)(iv)-(viii)): Also under part D.3 "Existing Development," part D.3.a.(3) requires conveyance system cleaning, including the following:

- Verifying proper operation of all municipal structural treatment controls designed to reduce pollutant discharges to or from the MS4s and related drainage structures.
- Cleaning any catch basin or storm drain inlet that has accumulated trash and debris greater than 33% of the design capacity in a timely manner.
- Cleaning any MS4 facility that is designed to be self cleaning of any accumulated trash and debris immediately.
- Cleaning open channels of observed anthropogenic litter in a timely manner.

In J.3.a.(3)(c)(iv)-(viii), as part of the annual reporting requirements, copermittees shall provide a detailed accounting of the numbers of MS4 facilities in inventory, and the numbers of facilities inspected, exceeding cleaning criteria, and cleaned. In addition, copermittees must report by category tons of waste and litter removed from the facilities.

The State Board, in its comments submitted in October 2008, disagrees that the requirements exceed federal law, saying that "the same broad authorities applicable to the street sweeping requirement also apply to the conveyance system cleaning requirements." According to the State Board, specificity in inspection and cleaning requirements is consistent with and supported by U.S. EPA guidance. Also, to the extent that permit requirements are more specific than the federal regulations, the State Board asserts that the requirements are an appropriate exercise of the San Diego Water Board's discretion to define the MEP standard.

The claimants, in their February 2009 comments, state that "the requirements to inspect and perform maintenance to insure compliance with these standards is not limited by the 'regular schedule of maintenance' obligation but rather must be done as frequently as is necessary to comply with these specific standards." Also, claimants note that the content and detail in the reporting is more than required by the 2001 permit. As to the MEP standard required by the federal regulations, claimants assert that the U.S. EPA documents cited by the State Board provide guidance, not mandates, and the permit Fact Sheet does not specifically set forth mandatory annual inspection and maintenance requirements. According to the claimants, the only mandatory requirement is that a maintenance program exist, and that the applicant provide an inspection schedule if maintenance depends on the results of inspections or occurs infrequently. Yet the 2007 permit includes "very specific requirements that go beyond the U.S. EPA guidance and are not included within the federal regulations." Finally, claimants note that the State Board has acknowledged that the 2007 permit requirements are more specific than federal regulations, and cites the *Long Beach Unified School District* case to conclude that the specificity makes the requirements state mandates.

The Commission agrees with claimants. Like street sweeping, the permit requires conveyance system cleaning activities that fall within the federal regulations to include: "[a] description of maintenance activities and a maintenance schedule for structural controls to reduce pollutants (including floatables) in discharges from municipal separate storm sewers."[127] And they also require: "A description for operating and maintaining public streets, roads and highways and procedures for reducing the impact on receiving waters of discharges from municipal storm sewer systems…"[128]

Yet the permit requirements are more specific. Part D.3.a.(3) requires verifying proper operation of all municipal structural treatment controls, cleaning any catch basin or storm drain inlet that has accumulated trash and debris greater than 33% of the design capacity in a timely manner, cleaning any MS4 facility that is designed to be self cleaning of any accumulated trash and debris immediately, and cleaning open channels of observed anthropogenic litter in a timely manner. In addition, the reporting in part J requires a detailed accounting of the numbers of MS4 facilities in inventory, and the numbers of facilities inspected, exceeding cleaning criteria, and cleaned, and reporting by category tons of waste and litter removed from the facilities. These activities, "exceed[s] the mandate in that federal law or regulation."[129] As in *Long Beach*

---

[127] 40 Code of Federal Regulations, section 122.26(d)(2)(iv)(A)(1).

[128] 40 Code of Federal Regulations, section 122.26(d)(2)(iv)(A)(3).

[129] Government Code section 17556, subdivision (c).

Unified School Dist. v. State of California,[130] the permit requires specific actions, i.e., required acts that go beyond the requirements of federal law. In adopting these permit provisions, the state has freely chosen[131] to impose these requirements. Therefore, the Commission finds that parts D.3.a.(3) and J.3.a.(3)(c)iv-viii of the permit are not a federal mandate.

Rather, the Commission finds that part D.3.a.(3) of the 2007 permit is a state mandate on the claimants to do the following:

> (a) Implement a schedule of inspection and maintenance activities to verify proper operation of all municipal structural treatment controls designed to reduce pollutant discharges to or from its MS4s and related drainage structures.
>
> (b) Implement a schedule of maintenance activities for the MS4 and MS4 facilities (catch basins, storm drain inlets, open channels, etc). The maintenance activities shall, at a minimum, include:
>
> i. Inspection at least once a year between May 1 and September 30 of each year for all MS4 facilities that receive or collect high volumes of trash and debris. All other MS4 facilities shall be inspected at least annually throughout the year.
>
> ii. Following two years of inspections, any MS4 facility that requires inspection and cleaning less than annually may be inspected as needed, but not less than every other year.
>
> iii. Any catch basin or storm drain inlet that has accumulated trash and debris greater than 33% of design capacity shall be cleaned in a timely manner. Any MS4 facility that is designed to be self cleaning shall be cleaned of any accumulated trash and debris immediately. Open channels shall be cleaned of observed anthropogenic litter in a timely manner.
>
> iv. Record keeping of the maintenance and cleaning activities including the overall quantity of waste removed.
>
> v. Proper disposal of waste removed pursuant to applicable laws.
>
> vi. Measures to eliminate waste discharges during MS4 maintenance and cleaning activities.

The Commission also finds that part J.3.a.(3)(c) iv-viii is a state mandate to report the following information in the JURMP annual report:

> iv. Identification of the total number of catch basins and inlets, the number of catch basins and inlets inspected, the number of catch basins and inlets found with accumulated waste exceeding cleaning criteria, and the number of catch basins and inlets cleaned.
>
> v. Identification of the total distance (miles) of the MS4, the distance of the MS4 inspected, the distance of the MS4 found with accumulated waste exceeding cleaning criteria, and the distance of the MS4 cleaned.

---

[130] *Long Beach Unified School Dist. v. State of California, supra,* 225 Cal.App.3d 155.

[131] *Hayes v. Commission on State Mandates, supra,* 11 Cal. App. 4th 1564, 1593-1594.

vi. Identification of the total distance (miles) of open channels, the distance of the open channels inspected, the distance of the open channels found with anthropogenic litter, and the distance of open channels cleaned.

vii. Amount of waste and litter (tons) removed from catch basins, inlets, the MS4, and open channels, by category.

viii. Identification of any MS4 facility found to require inspection less than annually following two years of inspection, including justification for the finding.

As to whether these provisions are a new program or higher level of service, the State Board, in its October 2008 comments, states that the 2001 permit contained "*more* frequent inspection and removal requirements than required in the 2007 Permit. It also contained record keeping requirements to document the facilities cleaned and the quantities of waste removed." [Emphasis in original.]

Claimants, in their February 2009 comments, argue that the 2001 permit, in part F.3.a.(5) required each copermittee to 'implement a schedule of maintenance activities at all structural controls designed to reduce pollutant discharges. By contrast, the 2007 permit requires each copermittee to 'implement a schedule of **inspection and** maintenance' and to '**verify proper operation of all municipal** structural controls...." [Emphasis in original.] Claimants also point out that the 2007 permit requires copermittees to:

- Clean any catch basin or storm drain inlet that has accumulated trash and debris greater than 33% of the design capacity in a timely manner.
- Clean any MS4 facility that is designed to be self cleaning of any accumulated trash and debris immediately.
- Clean open channels of observed anthropogenic litter in a timely manner.

According to claimants, these requirements were not included in the 2001 permit. Claimants also state that the requirement to inspect and perform maintenance "is not limited by the 'regular schedule of maintenance' obligation but rather must be done as frequently as is necessary to comply with these specific standards."

As to reporting, claimants state that the language in part D.3.a.(3)(b)(iv),(v) and (vi) of the 2007 permit and part F.3.a.(5)(c)(iii), (iv) and (v) of the 2001 permit track each other, but part J.3.a.(3)(c) iv through viii detail the information that the reports must now contain that was not in the 2001 permit, such as identifying the number of catch basins and inlets, the number inspected, the number found with accumulated waste exceeding the cleaning criteria, the distance of the MS4 cleaned, and other detail.

In analyzing whether parts D.3.a.(3) and J.3.a.(3)(c)(iv) – (viii) are a new program or higher level of service, we compare those provisions to the prior permit and look at the Regional Board's Fact Sheet/Technical Report, which states why Part D.3.a.(3) was added:

> **Section D.3.a.(3)** ... requires the Copermittees to inspect and remove waste from their MS4s prior to the rainy season. Additional wording has been added to clarify the intent of the requirements. The Copermittees will be required to inspect all storm drain inlets and catch basins. This change will assist the Copermittees in determining which basins/inlets need to be cleaned and at what

priority. Removal of trash has been identified by the copermittees as a priority issue in their long-term effectiveness assessment. To address this issue, wording has been added to require the Copermittees, at a minimum, inspect [sic] and remove trash from all their open channels at least once a year.

The 2001 permit contained the following in part F.3.a.(5)(b) and (c):

> (b) Each Copermittee shall implement a schedule of maintenance activities for the municipal separate storm sewer system.
> (c) The maintenance activities must, at a minimum, include:
> i. Inspection and removal of accumulated waste (e.g., sediment, trash, debris and other pollutants) between May 1 and September 30 of each year;
> ii. Additional cleaning as necessary between October 1 and April 30 of each year;
> iii. Record keeping of cleaning and the overall quantity of waste removed;
> iv. Proper disposal of waste removed pursuant to applicable laws;
> v. Measures to eliminate waste discharges during MS4 maintenance and cleaning activities.

The Commission finds that some provisions in the 2007 permit are the same as in the 2001 permit. Specifically, part D.3.a(3)(a) is not a new program or higher level of service because the 2001 permit also required maintenance and inspection in part F.3.a.(5)(b) and (c). The Commission also finds that part D.3.a.(3)(b)(i),(iv)- (vi) of the 2007 permit is the same as part F.3.a.(5)(c)(i)(iii) - (v) in the 2001 permit, both of which require:

- Annual inspection of MS4 facilities (D.3.a(3)(b)(i));
- Record keeping of the maintenance and cleaning activities including the overall quantity of waste removed (D.3.a(3)(b)(iv));
- Proper disposal of waste removed pursuant to applicable laws (D.3.a(3)(b)(v)); and
- Measures to eliminate waste discharges during MS4 maintenance and cleaning activities (D.3.a(3)(b)(vi)).

Therefore, the Commission finds that these provisions are not a new program or higher level of service.

The Commission also finds that part D.3.a.(3)(b)(ii) is not a new program or higher level of service. It gives the claimants the flexibility, after two years of inspections, to inspect MS4 facilities that require inspection and cleaning less than annually, but not less than every other year. Part F.3.a.(5)(c)(i) of the 2001 permit stated: "The maintenance activities must, at a minimum, include: i. inspection and removal of accumulated waste (e.g., sediment, trash, debris and other pollutants) between May 1 and September 30 of each year." Potentially less frequent inspections under the 2007 permit is not a new program or higher level of service.

The Commission finds that part D.3.a.(3)(b)(iii) of the 2007 permit is a new program or higher level of service on claimants to clean in a timely manner "Any catch basin or storm drain inlet that has accumulated trash and debris greater than 33% of design capacity.... Any MS4 facility that is designed to be self cleaning shall be cleaned of any accumulated trash and debris immediately. Open channels shall be cleaned of observed anthropogenic litter in a timely

manner." This part contains specificity, e.g., a standard of accumulation greater than 33% of design capacity, which was not in the 2001 permit.

Further, the Commission finds that the reporting in part J.3.a.(3)(c) (iv) – (viii) is a new program or higher level of service. The 2001 permit did not require this information in the content of the annual reports.

E. Educational component (part D.5): Part D.5 requires the copermittees to perform the activities on pages 25-28 above, which can be summarized as:

- Implement an educational program so that copermittees' planning and development review staffs (and planning board/elected officials, if applicable) understand certain laws and regulations related to water quality.
- Implement an educational program that includes annual training before the rainy season so that the copermittees' construction, building, code enforcement, and grading review staffs, inspectors, and others will understand certain specified topics.
- At least annually, train staff responsible for conducting stormwater compliance inspections and enforcement of industrial and commercial facilities on specified topics.
- Implement an education program so that municipal personnel and contractors performing activities that generate pollutants understand the activity specific BMPs for each activity to be performed.
- Implement a program to educate project applicants, developers, contractors, property owners, community planning groups, and others relating to specified topics.

The State Board, in its October 2008 comments on the test claim, states that federal regulations authorize the inclusion of an education component, in that the proposed management program must "include a description of appropriate educational and training measures for construction site operations" (40 C.F.R. § 122.26(d)(2)(iv)(D)(4)) and a "description of a program to reduce to the maximum extent practicable, pollutants in discharges from municipal separate storm sewers associated with the application of pesticides, herbicides, and fertilizer which will include, as appropriate, controls such as educational activities, permits, certifications, and other measures for commercial applicators and distributors…(40 C.F.R. § 122.26(d)(2)(iv)(A)(6)). The federal regulations also require a "description of a program to promote, publicize, and facilitate public reporting of the presence of illicit discharges or water quality impacts associated with discharges from municipal separate storm sewers" (40 C.F.R. § 122.26(d)(2)(iv)(B)(5)) and a "description of educational activities, public information activities, and other appropriate activities to facilitate the proper management and disposal of used oil and toxic materials." (40 C.F.R. § 122.26(d)(2)(iv)(B)(6)). The State Board also says that according to the U.S. EPA's Phase II stormwater regulations, the MEP standard requires the copermittees to implement public education programs. According to the State Board, the regulations apply to copermittees with less developed storm water programs, and require the programs to include a public education and outreach program (40 C.F.R. § 122.34(b)(1)) and a public involvement/participation program (40 C.F.R. § 122.26(b)(2)). To the extent the permit requirements are more specific than federal law, the State Board calls them an appropriate use of the Regional Board's discretion "to require more specificity in establishing the MEP standard."

Claimants, in their February 2009 comments, characterize the federal regulations as only requiring them "to describe educational, public information, and other appropriate activities associated with their jurisdictional, watershed or stormwater management programs." By contrast, under the permit claimants argue that they are required to "implement specific educational and training programs that achieve measurable increases in specific target community knowledge and to ensure a measurable change in the behavior of such target communities rather than simply report on the ... educational programs on an annual basis." Claimants state that they are required to perform testing and surveys and "new program elements to secure the measureable changes in knowledge and behavior."

The Commission agrees with claimants. As quoted in the State Board's comments, the federal regulations require nonspecific descriptions of educational programs, for example, requiring the permit application to "include appropriate educational and training measures for construction site operations" and "controls such as educational activities." The permit, on the other hand, requires implementation of an educational program with target communities and specified topics. These requirements "exceed the mandate in that federal law or regulation."[132] As in *Long Beach Unified School Dist. v. State of California,*[133] the permit requires specific actions, i.e., required acts that go beyond the requirements of federal law. In adopting these permit provisions, the state has freely chosen[134] to impose these requirements. Thus, the Commission finds that part D.5 of the permit is not federally mandated.

Based on the mandatory language on the face of the permit, the Commission finds that part D.5 of the permit constitutes a state mandate on the copermittees to do all of the following:

> Each Copermittee shall implement an education program using all media as appropriate to (1) measurably increase the knowledge of the target communities regarding MS4s, impacts of urban runoff on receiving waters, and potential BMP solutions for the target audience; and (2) to measurably change the behavior of target communities and thereby reduce pollutant releases to MS4s and the environment. At a minimum, the education program shall meet the requirements of this section and address the following target communities:
>
> · Municipal Departments and Personnel
> · Construction Site Owners and Developers
> · Industrial Owners and Operators
> · Commercial Owners and Operators
> · Residential Community, General Public, and School Children
>
> a. GENERAL REQUIREMENTS
>
> (1) Each Copermittee shall educate each target community on the following topics where appropriate:

---

[132] Government Code section 17556, subdivision (c).

[133] *Long Beach Unified School Dist. v. State of California, supra,* 225 Cal.App.3d 155.

[134] *Hayes v. Commission on State Mandates, supra,* 11 Cal. App. 4th 1564, 1593-1594.

Table 3. Education

Laws, Regulations, Permits, & Requirements	Best Management Practices
• Federal, state, and local water quality laws and regulations • Statewide General NPDES Permit for Storm Water Discharges Associated with Industrial Activities (Except Construction). • Statewide General NPDES Permit for Storm Water Discharges Associated with Construction Activities • Regional Board's General NPDES Permit for Ground Water Dewatering • Regional Board's 401 Water Quality Certification Program • Statewide General NPDES Utility Vault Permit • Requirements of local municipal permits and ordinances (e.g., storm water and grading ordinances and permits)	• Pollution prevention and safe alternatives • Good housekeeping (e.g., sweeping impervious surfaces instead of hosing) • Proper waste disposal (e.g., garbage, pet/animal waste, green waste, household hazardous materials, appliances, tires, furniture, vehicles, boat/recreational vehicle waste, catch basin/ MS4 cleanout waste) • Non-storm water disposal alternatives (e.g., all wash waters) • Methods to minimized the impact of land development and construction • Erosion prevention • Methods to reduce the impact of residential and charity car-washing • Preventive Maintenance • Equipment/vehicle maintenance and repair • Spill response, containment, and recovery • Recycling • BMP maintenance
General Urban Runoff Concepts	**Other Topics**
• Impacts of urban runoff on receiving waters • Distinction between MS4s and sanitary sewers • BMP types: facility or activity specific, LID, source control, and treatment control • Short-and long-term water quality impacts associated with urbanization (e.g., land-use decisions, development, construction) • Non-storm water discharge prohibitions • How to conduct a storm water inspections	• Public reporting mechanisms • Water quality awareness for Emergency/ First Responders • Illicit Discharge Detection and Elimination observations and follow-up during daily work activities • Potable water discharges to the MS4 • Dechlorination techniques • Hydrostatic testing • Integrated pest management • Benefits of native vegetation • Water conservation •Alternative materials and designs to maintain peak runoff values •Traffic reduction, alternative fuel use

(2) Copermittee educational programs shall emphasize underserved target audiences, high-risk behaviors, and "allowable" behaviors and discharges, including various ethnic and socioeconomic groups and mobile sources.

b. SPECIFIC REQUIREMENTS

(1) Municipal Departments and Personnel Education

(a) Municipal Development Planning – Each Copermittee shall implement an education program so that its planning and development review staffs (and Planning Boards and Elected Officials, if applicable) have an understanding of:

i. Federal, state, and local water quality laws and regulations applicable to Development Projects;
ii. The connection between land use decisions and short and long-term water quality impacts (i.e., impacts from land development and urbanization);
iii. How to integrate LID BMP requirements into the local regulatory program(s) and requirements; and
iv. Methods of minimizing impacts to receiving water quality resulting from development, including:
[1] Storm water management plan development and review;
[2] Methods to control downstream erosion impacts;
[3] Identification of pollutants of concern;
[4] LID BMP techniques;
[5] Source control BMPs; and
[6] Selection of the most effective treatment control BMPs for the pollutants of concern.

(b) Municipal Construction Activities – Each Copermittee shall implement an education program that includes annual training prior to the rainy season so that its construction, building, code enforcement, and grading review staffs, inspectors, and other responsible construction staff have, at a minimum, an understanding of the following topics, as appropriate for the target audience:

i. Federal, state, and local water quality laws and regulations applicable to construction and grading[135] activities.
ii. The connection between construction activities and water quality impacts (i.e., impacts from land development and urbanization and impacts from construction material such as sediment).
iii. Proper implementation of erosion and sediment control and other BMPs to minimize the impacts to receiving water quality resulting from construction activities.
iv. The Copermittee's inspection, plan review, and enforcement policies and procedures to verify consistent application.
v. Current advancements in BMP technologies.
vi. SUSMP Requirements including treatment options, LID BMPs, source control, and applicable tracking mechanisms.

[135] Attachment C of the permit defines grading as "the cutting and/or filling of the land surface to a desired slope or elevation."

(c) Municipal Industrial/Commercial Activities - Each Copermittee shall train staff responsible for conducting storm water compliance inspections and enforcement of industrial and commercial facilities at least once a year. Training shall cover inspection and enforcement procedures, BMP implementation, and reviewing monitoring data.

(d) Municipal Other Activities – Each Copermittee shall implement an education program so that municipal personnel and contractors performing activities which generate pollutants have an understanding of the activity specific BMPs for each activity to be performed.

(2) New Development and Construction Education

As early in the planning and development process as possible and all through the permitting and construction process, each Copermittee shall implement a program to educate project applicants, developers, contractors, property owners, community planning groups, and other responsible parties. The education program shall provide an understanding of the topics listed in Sections D.5.b.(1)(a) and D.5.b.(1)(b) above, as appropriate for the audience being educated. The education program shall also educate project applicants, developers, contractors, property owners, and other responsible parties on the importance of educating all construction workers in the field about stormwater issues and BMPs through formal or informal training.

(3) Residential, General Public, and School Children Education

Each Copermittee shall collaboratively conduct or participate in development and implementation of a plan to educate residential, general public, and school children target communities. The plan shall evaluate use of mass media, mailers, door hangers, booths at public events, classroom education, field trips, hands-on experiences, or other educational methods.

The State Board, in its October 2008 comments, states that the education requirement in part D.5. does not amount to a new program or higher level of service because the 2007 permit "includes education topics from the 2001 permit with minor wording and formatting changes. Additionally, the requirements were adopted to implement the same federal MEP standard as established in the CWA and in the 2001 Permit."

In their February 2009 comments, the claimants state that the 2001 permit did not require:

- Implementation of an education program so that the copermittee's planning and development review staff (and Planning Boards and Elected Officials, if applicable) understand certain specified laws and regulations related to water quality. (D.5.b.(1)(a).)
- Implementation of an education program that includes annual training prior to the rainy season so that the copermittee's construction, building, code enforcement, and grading review staffs, inspectors, and other responsible construction staff have, at a minimum, an understanding of certain specified topics. (D.5.b.(1)(b).)
- Training of staff responsible for conducting storm water compliance inspections and enforcement of industrial and commercial facilities at least once a year relating to certain specified topics (D.5.b.(1)(c).)

- Implementation of an education program so that municipal personnel and contractors performing activities which generate pollutants have an understanding of the activity specific BMPs for each activity to be performed. (D.5.b.(1)(d).)
- Implementation of a program to educate project applicants, developers, contractors, property owners, community planning groups, and other responsible parties relating to certain specified topics. (D.5.b.(2).)

This analysis of whether the permit is a new program or higher level of service is in the order presented in the permit. The Commission finds that nearly all of the educational topics in part D.5.a. are the same as those in the 2001 permit (part F.4). Both the 2001 and 2007 permits require the claimants to "educate" each specified target community on the following topics (Table 3 in the 2007 permit):

> **Laws, Regulations, Permits, & Requirements:** Federal, state, and local water quality laws and regulations; Statewide General NPDES Permit for Storm Water Discharges Associated with Industrial Activities (Except Construction); Statewide General NPDES Permit for Storm Water Discharges Associated with Construction Activities; Regional Board's General NPDES Permit for Ground Water Dewatering; Regional Board's 401 Water Quality Certification Program; Statewide General NPDES Utility Vault Permit; Requirements of local municipal permits and ordinances (e.g., storm water and grading ordinances and permits).
>
> **Best Management Practices:** Pollution prevention and safe alternatives; Good housekeeping (e.g., sweeping impervious surfaces instead of hosing); Proper waste disposal (e.g., garbage, pet/animal waste, green waste, household hazardous materials, appliances, tires, furniture, vehicles, boat/recreational vehicle waste, catch basin/ MS4 cleanout waste); Non-storm water disposal alternatives (e.g., all wash waters); Methods to minimized the impact of land development and construction; Methods to reduce the impact of residential and charity car-washing; Preventive Maintenance; Equipment/vehicle maintenance and repair; Spill response, containment, and recovery; Recycling; BMP maintenance.
>
> **General Urban Runoff Concepts:** Impacts of urban runoff on receiving waters; Distinction between MS4s and sanitary sewers; Short-and long-term water , quality impacts associated with urbanization (e.g., land-use decisions, development, construction); How to conduct a storm water inspection.
>
> **Other Topics:** Public reporting mechanisms; Water quality awareness for Emergency/ First Responders; Illicit Discharge Detection and Elimination observations and follow-up during daily work activities; Potable water discharges to the MS4; Dechlorination techniques; Hydrostatic testing; Integrated pest management; Benefits of native vegetation; Water conservation; Alternative materials and designs to maintain peak runoff values; Traffic reduction, alternative fuel use.

Because the requirement to educate the target communities on these topics was in the 2001 permit, as well as the 2007 permit, the Commission finds that doing so, as required by part D.5.a(1), table 3, is not a new program or higher level of service.

Under the 2007 permit, the copermittees are required to "educate each target community" on the following educational topics that were not in the 2001 permit: (1) Erosion prevention, (2) Non storm water discharge prohibitions, and (3) BMP types: facility or activity specific, LID [low-impact development], source control, and treatment control. Thus, the Commission finds that the part D.5.a.(1) is a new program or higher level of service to educate each target community on only the following topics: (1) Erosion prevention, (2) Non storm water discharge prohibitions, and (3) BMP types: facility or activity specific, LID, source control, and treatment control.

Part D.5.a.(2) states: "(2) Copermittee educational programs shall emphasize underserved target audiences, high-risk behaviors, and 'allowable' behaviors and discharges, including various ethnic and socioeconomic groups and mobile sources." This provision was not in the 2001 permit, so the Commission finds that part D.5.a.(2) is a new program or higher level of service.

In part D.5.b.(1)(a) (Municipal Development Planning) the permit requires implementing an education program for "municipal planning and development review staffs (and Planning Board and Elected Officials, if applicable)" on specified topics. The 2001 permit required implementing an educational program for "Municipal Departments and Personnel" that would include planning and development review staffs, but not planning boards and elected officials. So the Commission finds that part D.5.b.(1)(a)(i) and (ii) is a new program or higher level of service for planning boards and elected officials.

Certain topics in part D.5.b.(1)(a) are a new program or higher level of service for both planning and development review staffs as well as planning boards and elected officials. Under both part F.4.a. of the 2001 permit, and D.5.b.(1)(a) of the 2007 permit, the copermittees are required to implement an educational program on the following topics:

> i. Federal, state, and local water quality laws and regulations applicable to Development Projects; [The 2001 permit, in F.4.a. (p. 35) says: "Federal, state and local water quality regulations that affect development projects."]
>
> ii. The connection between land use decisions and short and long-term water quality impacts (i.e., impacts from land development and urbanization); [The 2001 permit, in F.4.a (p. 35) calls this "Waters Quality Impacts associated with land development."]

Thus the Commission finds that implementing an educational program on these topics is not a new program or higher level of service for municipal departments, but is for planning boards and elected officials.

The following topics were not listed in the 2001 permit, so the Commission finds that part D.5.b.(1)(a) is a new program or higher level of service to implement these in an educational program for all target communities:

> (iii) How to integrate LID BMP requirements into the local regulatory program(s) and requirements;
>
> (iv) Methods of minimizing impacts to receiving water quality resulting from development, including: [1] Storm water management plan development and review; [2] Methods to control downstream erosion impacts; [3] Identification of pollutants of concern; [4] LID BMP techniques; [5] Source control BMPs; and

[6] Selection of the most effective treatment control BMPs for the pollutants of concern.

Part D.5.b.(1)(b) (Municipal Construction Activities) of the permit requires implementing an educational program for municipal "construction, building, code enforcement, and grading review staffs." Again, this is not a new program or higher level of service for those topics in which the 2001 permit also required an education program for "Municipal Departments and Personnel," such as:

> i. Federal, state, and local water quality laws and regulations applicable to construction and grading activities. [The 2001 permit, in F.4.a. (p. 35) says: "Federal, state and local water quality regulations that affect development projects."]
>
> ii. The connection between construction activities and water quality impacts (i.e., impacts from land development and urbanization and impacts from construction material such as sediment. [The 2001 permit, in F.4.a (p. 35) calls this "Water Quality Impacts associated with land development."]

The timing of the educational program specified in D.5.b.(1)(b) requires it to be implemented "prior to the rainy season." There is no evidence in the record, however, that this timing requirement is a new program or higher level of service compared with the 2001 permit. Thus the Commission finds that part D.5.b.(1)(b)(i) and (ii) are not a new program or higher level of service.

Municipal construction activity education topics were added to the 2007 permit, however, that were not in the 2001 permit, in paragraphs (iii) to (vi) as follows:

> (b) Municipal Construction Activities – Each Copermittee shall implement an education program that includes annual training prior to the rainy season so that its construction, building, code enforcement, and grading review staffs, inspectors, and other responsible construction staff have, at a minimum, an understanding of the following topics, as appropriate for the target audience: [¶]...[¶] iii. Proper implementation of erosion and sediment control and other BMPs to minimize the impacts to receiving water quality resulting from construction activities.
> iv. The Copermittee's inspection, plan review, and enforcement policies and procedures to verify consistent application.
> v. Current advancements in BMP technologies.
> vi. SUSMP Requirements including treatment options, LID BMPs, source control, and applicable tracking mechanisms.

Thus, the Commission finds that part D.5.b.(1)(b)(iii) - (vi) of the 2007 permit is a new program or higher level of service.

Part D.5.b.(1)(c) of the 2007 permit (Municipal Industrial/Commercial Activities) requires the following:

> (c) Each Copermittee shall train staff responsible for conducting storm water compliance inspections and enforcement of industrial and commercial facilities at

least once a year. Training shall cover inspection and enforcement procedures, BMP implementation, and reviewing monitoring data.

The 2001 permit included (in F.4.b.) the topic "How to conduct a stormwater inspection" but did not specify that the training was to be annual, and did not require the training to cover inspection and enforcement procedures, BMP Implementation, or reviewing monitoring data. Thus, the Commission finds that part D.5.(b)(1)(c) is a new program or higher level of service.

Part D.5.b.(1)(d) of the 2007 permit requires the following:

> (d) Municipal Other Activities – Each Copermittee shall implement an education program so that municipal personnel and contractors performing activities which generate pollutants have an understanding of the activity specific BMPs for each activity to be performed.

Regarding part D.5.b.(1)(d), the 2007 Fact Sheet/Technical Report states:

> A new requirement has also been added for education of activity specific BMPs for municipal personnel and contractors performing activities that generate pollutants. Education is required at all levels of municipal staff and contractors. Education is especially important for the staff in the field performing activities which might result in discharges of pollutants if proper BMPs are not used.

Because part D.5.b.(1)(d) was not in the 2001 permit, and because the Regional Board called it a "new requirement" the Commission finds that part D.5.(b)(1)(d) of the 2007 permit is a new program or higher level of service.

Part D.5.(b)(2) of the 2007 permit requires an education program for "project applicants, developers, contractors, property owners, community planning groups, and other responsible parties." Parts F.4.a and F4.b. of the 2001 permit required a similar education program for "construction site owners and developers." The Fact Sheet/Technical Report for the 2007 permit states:

> Different levels of training will be needed for planning groups, owners, developers, contractors, and construction workers, but everyone should get a general education of stormwater requirements. Education of all construction workers can prevent unintentional discharges, such as discharges by workers who are not aware that they are not allowed to wash things down the storm drains. Training for BMP installation workers is imperative because the BMPs will not fail if not properly installed and maintained. Training for field level workers can be formal or informal tail-gate format.

Thus, the Commission finds that part D.5.(b)(2) of the 2007 permit is a new program or higher level of service for project applicants, contractors, or community planning groups who are not developers or construction site owners.

The final part of the education programs in the 2007 permit is D.5.(b)(3) regarding "Residential, General Public, and School Children."

> Each Copermittee shall collaboratively conduct or participate in development and implementation of a plan to educate residential, general public, and school children target communities. The plan shall evaluate use of mass media, mailers,

door hangers, booths at public events, classroom education, field trips, hands-on experiences, or other educational methods.

The 2001 permit (part F.4.c.) stated the following:

> In addition to the topics listed in F.4.a. above, the Residential, General Public, and School Children communities shall be educated on the following topics where applicable:
>
> - Public reporting information resources
> - Residential and charity car-washing
> - Community activities (e.g., "Adopt a Storm Drain, Watershed, or Highway" Programs, citizen monitoring, creek/beach cleanups, environmental protection organization activities, etc..

The 2001 permit did not require claimants to "collaboratively conduct or participate in development ... of a plan to educate residential, general public, and school children target communities." The 2001 permit also did not require the plan to "evaluate use of mass media, mailers, door hangers, booths at public events, classroom education, field trips, hands-on experiences, or other educational methods." Thus, the Commission finds that part D.5.(b)(3) of the 2007 permit is a new program or higher level of service.

In sum, as to part D.5 of the 2007 permit that requires implementing educational programs, the Commission finds that the following subparts are new programs or higher levels of service:

- D.5.a.(1): Each copermittee shall educate each target community, as specified, on the following topics: erosion prevention, nonstorm waters discharge prohibitions, and BMP types: facility or activity specific, LID, source control, and treatment control.
- D.5.a.(2): Copermittee educational programs shall emphasize underserved target audiences, high-risk behaviors, and "allowable" behaviors and discharges, including various ethnic and socioeconomic groups and mobile sources.
- D.5.b.(1)(a): Implement an education program so that planning boards and elected officials, if applicable, have an understanding of: (i) Federal, state, and local water quality laws and regulations applicable to Development Projects; (ii) The connection between land use decisions and short and long-term water quality impacts (i.e., impacts from land developments and urbanization).
- D.5.b.(1)(a): Implement an education program so that planning and development review staffs as well as planning boards and elected officials have an understanding of: (iii) How to integrate LID BMP requirements into the local regulatory program(s) and requirements; (iv) Methods of minimizing impacts to receiving water quality resulting from development, including: [1] Storm water management plan development and review; [2] Methods to control downstream erosion impacts; [3] Identification of pollutants of concern; [4] LID BMP techniques; [5] Source control BMPs; and [6] Selection of the most effective treatment control BMPs for the pollutants of concern."
- D.5.b.(1)(b)(iii) - (vi): Implement an education program that includes annual training prior to the rainy season for its construction, building, code enforcement, and grading review staffs, inspectors, and other responsible construction staff have, at a minimum, an

understanding of the topics in parts D.5.b.(1)(b)(iii), (iv), (v), and (vi) of the permit, as follows:

> iii. Proper implementation of erosion and sediment control and other BMPs to minimize the impacts to receiving water quality resulting from construction activities.
>
> iv. The Copermittee's inspection, plan review, and enforcement policies and procedures to verify consistent application.
>
> v. Current advancements in BMP technologies.
>
> vi. SUSMP Requirements including treatment options, LID BMPs, source control, and applicable tracking mechanisms.

- D.5.(b)(1)(c) and (d) as follows:

  > Each Copermittee shall train staff responsible for conducting storm water compliance inspections and enforcement of industrial and commercial facilities at least once a year. Training shall cover inspection and enforcement procedures, BMP implementation, and reviewing monitoring data.

- Municipal Other Activities – Each Copermittee shall implement an education program so that municipal personnel and contractors performing activities which generate pollutants have an understanding of the activity specific BMPs for each activity to be performed.
- D.5.(b)(2), As early in the planning and development process as possible and all through the permitting and construction process, to implement a program to educate project applicants, contractors, property owners, community planning groups, and other responsible parties. The education program shall provide an understanding of the topics listed in Sections D.5.b.(1)(a) [Municipal Development Planning] and D.5.b.(1)(b) [Municipal construction Activities] above, as appropriate for the audience being educated. The education program shall also educate project applicants, contractors, property owners, and other responsible parties on the importance of educating all construction workers in the field about stormwater issues and BMPs through formal or informal training.
- D.5.(b)(3), Each Copermittee shall collaboratively conduct or participate in development and implementation of a plan to educate residential, general public, and school children target communities. The plan shall evaluate use of mass media, mailers, door hangers, booths at public events, classroom education, field trips, hands-on experiences, or other educational methods.

II. Watershed Urban Runoff Management Program (Part E)

Part E of the permit is the Watershed Urban Runoff Management Program (WURMP). The permit (Table 4) divides the copermittees into nine watershed management areas (WMAs) by "major receiving water bodies." The 2001 permit also had a WURMP component (in part J).

A. Watershed Urban Runoff Management Program copermittee collaboration (parts E.2.f & E.2.g): These provisions require the copermittees to do the activities on pages 28-29 above, including the following:

- Collaborating with other copermittees within their watershed management areas (WMAs) to develop and implement an updated Watershed Urban Runoff Management Program for each watershed that prevents urban runoff discharges from the MS4 from causing or contributing to a violation of water quality standards which at a minimum includes:
    - Identifying and implementing watershed activities that address the high priority water quality problems in the watershed management areas that include both watershed water quality activities[136] and watershed education activities.[137]
    - Creating a watershed activities list that includes certain specified information to be submitted with each updated Watershed Urban Runoff Management Plan (WURMP) and updated annually thereafter.
    - Implementing identified watershed activities within established schedules.
    - Collaborating to develop and implement the Watershed Urban Runoff Management Program, including frequent regularly scheduled meetings.[138]

In its October 2008 comments, the State Board asserts that the Watershed Urban Runoff Management Program activities are necessary to meet the minimum federal MEP standard. The State Board quotes the following federal regulations: "The Director may … issue distinct permits for appropriate categories of discharges … including, but not limited to … all discharges within a system that discharge to the same watershed…" (40 C.F.R. 122.26(a)(3)(ii).) The State Board also quotes more specific federal regulations:

> Permits for all or a portion of all discharges from large or medium municipal separate storm sewer systems that are issued on a system-wide, jurisdiction-wide, watershed, or other basis may specify different conditions relating to different discharges covered by the permit, including different management programs for different drainage areas [watersheds] which contribute storm water to the system. (40 C.F.R. § 122.26 (a)(3)(v).)
>
> The Director may issue permits for municipal separate storm sewers that are designated under paragraph (a)(1)(v) of this section on a system-wide basis, a

---

[136] Watershed Water Quality Activities are activities other than education that address the high priority water quality problems in the WMA. A Watershed Water Quality Activity implemented on a jurisdictional basis must be organized and implemented to target a watershed's high priority water quality problems or must exceed the baseline jurisdictional requirements of section D of the permit (Part E.2.f).

[137] Watershed Education Activities are outreach and training activities that address high priority water quality problems in the WMA (Part E.2.f).

[138] In their February 2009 comments, the claimants also list the following activities: (1) Annual review of WURMPs to identify needed modifications and improvements (part E.2.i); (2) Develop and periodically update watershed maps (part E.2.b); (3) Develop and implement a program for encouraging collaborative watershed-based land-use planning (part E.2.d); (4) Develop and implement a collective watershed strategy (part E.2.e). These parts of the permit, however, were not pled in the test claim so the Commission makes no findings on them.

> jurisdiction-wide basis, watershed basis, or other appropriate basis;" (40 C.F.R. § 122.26 (a)(5).)
>
> Proposed programs may impose controls on a systemwide basis, a watershed basis, a jurisdiction basis, or on individual outfalls. (40 C.F.R. § 122.26 (d)(2)(iv).)

The State Board argues that the regional board "determined that the inclusion of the requirement to formalize the Watershed Water Qualities Activities List was appropriate to further the goal of the WURMPS in achieving compliance with federal law." Based on some reports it received, the Regional Board determined that "many of the watershed water quality activities had no clear connection to the high priority water quality problems in the area of implementation." The Board determined it was therefore necessary and appropriate to require development of an implementation strategy to maximize WURMP effectiveness.

Claimants, in their February 2009 comments, point out that while cooperative agreements may be required by 40 C.F.R. § 122.26(d)(2)(i)(D), "each copermittee is only responsible for their own systems." Claimants quote another federal regulation: "Copermittees need only comply with permit conditions relating to discharges from the municipal separate storm sewers for which they operate." (40 C.F.R. § 122.26(a)(3)(vi).) Claimants argue that the 2007 permit:

> [R]equires the copermittees to engage in specific programmatic activities that are duplicative of the activities that were not required under the 2001 Permit and that are already required of them on a jurisdictional basis within the boundaries of the same watershed. These new requirements include no less than two watershed water quality activities and two watershed education activities per year.

Claimants also state that the permit "mandates that watershed quality activities implemented on a jurisdictional basis must exceed the baseline jurisdictional requirements under Section D of the Order." (part E.2.f.(1)(a).) According to what the claimants call these "dual baseline standards, jurisdictional and watershed, the copermittees are required to perform more and duplicative work."

The Commission finds that the permit requirements in sections E.2.f and E.2.g. are not federal mandates. As with the other requirements in the permit, the federal regulations authorize but do not require the specificity regarding whether collaboration occurs on a jurisdictional, watershed or other basis. These requirements "exceed the mandate in that federal law or regulation."[139] As in *Long Beach Unified School Dist. v. State of California*,[140] the permit requires specific actions, i.e., required acts that go beyond the requirements of federal law. In adopting these permit provisions, the state has freely chosen[141] to impose these requirements.

Based on the mandatory language in the permit, the Commission finds that the following in part E are a state mandate on the copermittees:

---

[139] Government Code section 17556, subdivision (c).

[140] *Long Beach Unified School Dist. v. State of California, supra,* 225 Cal.App.3d 155.

[141] *Hayes v. Commission on State Mandates, supra,* 11 Cal. App. 4th 1564, 1593-1594.

2. Each Copermittee shall collaborate with other Copermittees within its WMA(s) as in Table 4 [of the permit] to develop and implement an updated Watershed Urban Runoff Management Program for each watershed. Each updated Watershed Urban Runoff Management Program shall meet the requirements of section E of this Order, reduce the discharge of pollutants from the MS4 to the MEP, and prevent urban runoff discharges from the MS4 from causing or contributing to a violation of water quality standards. At a minimum, each Watershed Urban Runoff Management Program shall include the elements described below:
[¶]...[¶]

f. Watershed Activities[142]

(1) The Watershed Copermittees shall identify and implement Watershed Activities that address the high priority water quality problems in the WMA. Watershed Activities shall include both Watershed Water Quality Activities and Watershed Education Activities. These activities may be implemented individually or collectively, and may be implemented at the regional, watershed, or jurisdictional level.

(a) Watershed Water Quality Activities are activities other than education that address the high priority water quality problems in the WMA. A Watershed Water Quality Activity implemented on a jurisdictional basis must be organized and implemented to target a watershed's high priority water quality problems or must exceed the baseline jurisdictional requirements of section D of this Order.

(b) Watershed Education Activities are outreach and training activities that address high priority water quality problems in the WMA.

(2) A Watershed Activities List shall be submitted with each updated Watershed Urban Runoff Management Plan (WURMP) and updated annually thereafter. The Watershed Activities List shall include both Watershed Water Quality Activities and Watershed Education Activities, along with a description of how each activity was selected, and how all of the activities on the list will collectively abate sources and reduce pollutant discharges causing the identified high priority water quality problems in the WMA.

(3) Each activity on the Watershed Activities List shall include the following information:

(a) A description of the activity;
(b) A time schedule for implementation of the activity, including key milestones;
(c) An identification of the specific responsibilities of Watershed Copermittees in completing the activity;
(d) A description of how the activity will address the identified high priority water quality problem(s) of the watershed;

---

[142] In their rebuttal comments submitted in February 2009, claimants mention part E.(3) of the permit that requires a detailed description of each activity on the Watershed Activities List. Part E.(3), however, was not in the test claim so staff makes no findings on it.

(e) A description of how the activity is consistent with the collective watershed strategy;
(f) A description of the expected benefits of implementing the activity; and
(g) A description of how implementation effectiveness will be measured.

(4) Each Watershed Copermittee shall implement identified Watershed Activities pursuant to established schedules. For each Permit year, no less than two Watershed Water Quality Activities and two Watershed Education Activities shall be in an active implementation phase. A Watershed Water Quality Activity is in an active implementation phase when significant pollutant load reductions, source abatement, or other quantifiable benefits to discharge or receiving water quality can reasonably be established in relation to the watershed's high priority water quality problem(s). Watershed Water Quality Activities that are capital projects are in active implementation for the first year of implementation only. A Watershed Education Activity is in an active implementation phase when changes in attitudes, knowledge, awareness, or behavior can reasonably be established in target audiences.

g. Copermittee Collaboration

Watershed Copermittees shall collaborate to develop and implement the Watershed Urban Runoff Management Programs. Watershed Copermittee collaboration shall include frequent regularly scheduled meetings.

As to the issue of new program or higher level of service, the State Board, in its October 2008 comments, states:

> Although Section E.2.f. requires development and implementation of a list of Watershed Water Qualities Activities for potential implementation that was not specifically required in the 2001 Permit, the Copermittees were previously required to identify priority water quality issues and identify recommended activities to address the priority water quality problems (See 2001 Permit, section J.1 and J.2.d.)

The State Board asserts that Copermittees were already required to collaborate with other Copermittees, and that "Section E.2.g. merely adds effectiveness strategies to the collaboration requirements." ... Other requirements challenged by the Claimants exist in the 2001 Permit, but with minor wording changes (e.g., the requirement to update watershed maps, which exists in both permits).

Claimants, in their February 2009 comments, assert that parts E.2.f. and E.2.g do impose a new program or higher level of service. According to the claimants:

> Under the 2001 Permit the watershed requirements were essentially limited to mapping, assessment and identification of short and long term issues. Collaboration included mapping (J.2.a.), assessment of receiving waters (J.2.b); identification and prioritization of water quality problems (J.2.c); implementation of time schedules (J.2.d) and identification of copermittee responsibilities for each recommended activity including a time schedule.
>
> [¶]...[¶]

> The 2007 Permit imposes standards far beyond those listed in ... the 2001 Permit .... The 2007 Permit now requires the copermittees to engage in specific programmatic activities that are duplicative of the activities that were not required under the 2001 Permit and that are already required of them on a jurisdictional basis within the boundaries of the same watershed. These new requirements include no less than two watershed water quality activities and two watershed education activities per year. The two-activity watershed requirement is a condition of all copermittees regardless of whether the activity is within their jurisdictional authority or not.
>
> In addition, while the 2007 Permit states that activities can be implemented at a regional, watershed or jurisdictional level, it mandates that watershed quality activities implemented on a jurisdictional basis must exceed the baseline jurisdictional requirements under Section D of the Order. By reason of the dual baseline standards, jurisdictional and watershed, the copermittees are required to perform more and duplicative work.

The Commission finds that E.2.f. and E.2.g of the permit are a new program or higher level of service.

As to watershed education in part E.2.f, the 2001 permit (in part J.2.g.) stated that the WURMP shall contain "A watershed based education program." The 2007 permit states that the WURMP shall include "watershed education activities" defined as "outreach and training activities that address high priority water quality problems in the WMA [Watershed Management Area(s)]." Moreover, in part E.f.(4), the 2007 permit states: "A Watershed Education Activity is in an active implementation phase when changes in attitudes, knowledge, awareness, or behavior can reasonably be established in target audiences." Because of this increased requirement for implementation of watershed education, the Commission finds that watershed education activities, as defined in part E.2.f, is a new program or higher level of service.

Additionally, the Commission finds that the rest of part E.2.f. is a new program or higher level of service because it includes elements not in the 2001 permit, such as:

- A definition of watershed water quality activities (part E.2.f.(1)(a)).
- Submission of a watershed activities list, with specified contents (part E.2.f.(2)).
- A detailed description of each activity on the watershed activities list, with seven specific components (part E.2.f.(3)).
- Implementation of watershed activities pursuant to established schedules, including definitions of when activities are in an active implementation phase (part E.2.f.(4)).

As to part E.2.g., although the 2001 (in parts J.1. & J.2.) and 2007 permits both require copermittee collaboration in developing and implementing the Watershed Urban Runoff Management Plan, copermittee collaboration is a new program or higher level of service because the WURMP is greatly expanded over the 2001 permit in part E.2.f as discussed above. This means that new collaboration is required to develop and implement the watershed activities in part E.2.f.

The 2007 permit (in part E.2.g) also states that "Watershed Copermittee collaboration shall include frequent regularly scheduled meetings." This requirement for meetings was not in the 2001 permit. The Fact Sheet/Technical Report states:

> The requirement for regularly scheduled meetings has been added based on Regional Board findings that watershed groups which hold regularly scheduled meetings (such as for San Diego Bay) typically produced better programs and work products than watershed groups that went for extended periods of time without scheduled meetings.[143]

Therefore, the Commission finds that part E.2.g. of the 2007 permit is a new program or higher level of service.

Regarding watershed water quality activities in part E.2.f, the Fact Sheet/Technical Report the Regional Board stated:

> This requirement developed over time while working with the Copermittees on their WURMP implementation under Order No. 2001-01. In October 2004 letters, the Regional Board recommended the Copermittees develop a list of Watershed Water Quality Activities for potential implementation. Following receipt of the Regional Board letters, the Copermittees created the Watershed Water Quality Activity lists. Although the Copermittees' lists needed improvement, the Regional Board found the lists to be useful planning tools that can be evaluated to identify effective and efficient Watershed Water Quality Activities. Because the lists are useful and have become a part of the WURMP implementation process, a requirement for their development has been written into the Order.

Thus, the Commission finds that part E.2.f. of the permit is a new program or higher level of service, in that it requires the following not required in the 2001 permit:

- Identification and implementation of watershed activities that address the high priority water quality problems in the WMA (Watershed Management Area), as specified (part E.2.f.(1)).
- Submission of a watershed activities list with each updated WURMP and updated annually thereafter, as specified (part E.2.f.(2)-(3)).
- Implementation of watershed activities pursuant to established schedules: no less than two watershed water quality activities and two watershed education activities in active implementation phase, as defined, per permit year (part E.2.f.(4)).

III. Regional Urban Runoff Management Program (Part F)

Part F of the permit describes the Regional Urban Runoff Management Program (RURMP). It was included because "some aspects of urban runoff management can be effectively addressed at a regional level. … However, significant flexibility has been provided to the Copermittees for new regional requirements."[144]

---

[143] For an inexplicable reason, the Fact Sheet/Technical Report lists this collaboration activity under Section E.2.m of the permit rather than E.2.g.. The permit at issue has no section E.2.m.

[144] San Diego Regional Water Quality Control Board, "Fact Sheet/Technical Report for Order No. R9-2007-0001."

A. Copermittee collaboration – Regional Residential Education Program Development and Implementation (part F.1): Part F.1 requires the copermittees to develop and implement a Regional Residential Education Program, with specified contents (see p. 12 above). In the test claim the claimants discuss hiring a consultant to develop the educational program that "will generally educate residents on: 1) the difference between stormwater conveyance systems and sanitary sewer systems; 2) the connection of storm drains to local waterways; and 3) common residential sources of urban run-off." Claimants allege activities to comply with section F.1 of the permit that include, but are not limited to: "development of materials/branding, a regional website, regional outreach events, regional advertising and mass media, partnership development, and the development of marketing and research tools, including regional surveys to be conducted in FY 2008-09 and again in FY 2011-12."

In comments submitted in October 2008, the State Board asserts that the permit condition in section F.1. is necessary to meet the minimum federal MEP standard and that the requirement is supported by the Clean Water Act statutes and regulations. The State Board cites the following federal regulations:

> (v) Permits for all or a portion of all discharges from large or medium municipal separate storm sewer systems that are issued on a system-wide, jurisdiction-wide, watershed or other basis may specify different conditions relating to different discharges covered by the permit, including different management programs for different drainage areas which contribute storm water to the system.[145] [¶]...[¶]
>
> (5) The Director may issue permits for municipal separate storm sewers that are designated under paragraph (a)(1)(v) of this section on a system-wide basis, jurisdiction-wide basis, watershed basis or other appropriate basis, or may issue permits for individual discharges.[146] [¶]...[¶]
>
> (2) *Part 2.* Part 2 of the application shall consist of:
>
> (i) *Adequate legal authority.* A demonstration that the applicant can operate pursuant to legal authority established by statute, ordinance or series of contracts which authorizes or enables the applicant at a minimum to: [¶]...[¶]
>
> (D) Control through interagency agreements among coapplicants the contribution of pollutants from one portion of the municipal system to another portion of the municipal system;[147]
>
> (iv) Proposed programs may impose controls on a systemwide basis, a watershed basis, a jurisdiction basis, or on individual outfalls. ...[148]

In response, the claimants' February 2009 comments state that the Regional Residential Education Program is not necessary to meet the minimum federal MEP standard. The regional nature of the education program, according to the claimants, is duplicative because it imposes the

---

[145] 40 Code of Federal Regulations section 122.26 (a)(3(v).

[146] 40 Code of Federal Regulations section 122.26 (a)(5).

[147] 40 Code of Federal Regulations section 122.26 (d)(2)(i)(D).

[148] 40 Code of Federal Regulations section 122.26 (d)(iv).

education requirements at the regional and jurisdictional levels concurrently, and it exceeds federal law.

The Commission finds that the requirements in part F.1 of the permit do not constitute a federal mandate. There is no federal requirement to provide a regional educational program, so the education program, "exceed[s] the mandate in that federal law or regulation."[149] As in *Long Beach Unified School Dist. v. State of California*, the permit "requires specific actions ... [that are] required acts."[150] In adopting part F.1, the state has freely chosen[151] to impose these requirements. Thus, the Commission finds that part F.1. of the permit does not constitute a federal mandate.

Based on the mandatory language on the face of the permit, the Commission finds that the permit constitutes a state mandate on the claimants to do all the following in part F.1 of the permit:

> The Regional Urban Runoff Management Program shall, at a minimum:
>
> 1. Develop and implement a Regional Residential Education Program. The program shall include:
>
> a. Pollutant specific education which focuses educational efforts on bacteria, nutrients, sediment, pesticides, and trash. If a different pollutant is determined to be more critical for the education program, the pollutant can be substituted for one of these pollutants.
> b. Education efforts focused on the specific residential sources of the pollutants listed in section F.1.a (p. 50.)

As to whether this is a new program or higher level of service, the State Board, in its October 2008 comments, states that it is not because the claimants were already implementing a residential education program at a regional level before the permit was adopted.

In claimants' February 2009 rebuttal comments, they assert that it is irrelevant whether or not the copermittees voluntarily met or exceeded the now mandatory requirements imposed by the 2007 permit because Government Code section 17565 states: "If a local agency ... at its option, has been incurring costs which are subsequently mandated by the state, the state shall reimburse the local agency ... for those costs incurred after the operative date of the mandate."

The Commission finds that part F.1 of the permit is a new program or higher level of service. The 2001 permit required an educational component as part of the Jurisdictional Urban Runoff Management Program (part F.4) that contained a residential component, but not a Regional Residential Education Program, so the activities in this program are new. Also, the Commission agrees that whether or not claimants were engaged in an educational program is not relevant due to Government Code section 17565. The Regional Board, in requiring the regional educational program, leaves the local agencies with no choice but to comply.

---

[149] Government Code section 17556, subdivision (c).

[150] *Long Beach Unified School Dist. v. State of California, supra,* 225 Cal.App.3d 155, 173.

[151] *Hayes v. Commission on State Mandates, supra,* 11 Cal. App. 4th 1564, 1593-1594.

B. Copermittee collaboration (parts F.2 & F.3): Parts F.2 and F.3 (quoted on p. 11 above) require the copermittees to collaborate to develop, implement, and update as necessary a Regional Urban Runoff Management Program, to include developing the standardized fiscal analysis method required in permit part G (part F.2) and facilitating the assessment of the effectiveness of jurisdictional, watershed, and regional programs (part F.3).

In comments submitted in October 2008, the State Board asserts that the permit conditions in sections F.2 and F.3 are necessary to meet the minimum MEP standard, quoting the following federal regulation regarding municipal stormwater permits:

> (2) *Part 2.* Part 2 of the application shall consist of:
>
> (i) *Adequate legal authority.* A demonstration that the applicant can operate pursuant to legal authority established by statute, ordinance or series of contracts which authorizes or enables the applicant at a minimum to: [¶]...[¶]
>
> (D) Control through interagency agreements among coapplicants the contribution of pollutants from one portion of the municipal system to another portion of the municipal system;[152]

The State Board also quotes section 122.26 (a)(3)(v) of the federal regulations as follows:

> (v) Permits for all or a portion of all discharges from large[153] or medium[154] municipal separate storm sewer systems that are issued on a system-wide, jurisdiction-wide, watershed or other basis may specify different conditions relating to different discharges covered by the permit, including different

---

[152] 40 Code of Federal Regulations section 122.26 (d)(2)(i)(D).

[153] "(4) Large municipal separate storm sewer system means all municipal separate storm sewers that are either: (i) Located in an incorporated place with a population of 250,000 or more as determined by the 1990 Decennial Census by the Bureau of the Census (Appendix F of this part); or (ii) Located in the counties listed in appendix H, except municipal separate storm sewers that are located in the incorporated places, townships or towns within such counties; or (iii) Owned or operated by a municipality other than those described in paragraph (b)(4)(i) or (ii) of this section and that are designated by the Director as part of the large or medium municipal separate storm sewer system due to the interrelationship between the discharges of the designated storm sewer and the discharges from municipal separate storm sewers described under paragraph (b)(4)(i) or (ii) of this section. ..." [40 CFR § 122.26 (b)(4).]

[154] "(7) Medium municipal separate storm sewer system means all municipal separate storm sewers that are either: (i) Located in an incorporated place with a population of 100,000 or more but less than 250,000, as determined by the 1990 Decennial Census by the Bureau of the Census (Appendix G of this part); or (ii) Located in the counties listed in appendix I, except municipal separate storm sewers that are located in the incorporated places, townships or towns within such counties; or (iii) Owned or operated by a municipality other than those described in paragraph (b)(7)(i) or (ii) of this section and that are designated by the Director as part of the large or medium municipal separate storm sewer system due to the interrelationship between the discharges of the designated storm sewer and the discharges from municipal separate storm sewers described under paragraph (b)(7)(i) or (ii) of this section. ..." [40 CFR § 122.26 (b)(7).]

management programs for different drainage areas which contribute storm water to the system.

The State Board also asserts:

> To the extent the Clean Water Act and federal regulations do not identify all of the specificity required in Sections F.2, F.3 ..., the San Diego Water Board properly exercised its discretion under federal law to include specificity so that the federal MEP standard can be achieved. The San Diego Water Board exercised this duty under federal law and therefore the provisions of the 2007 Permit were adopted as federal requirements.

In the claimants' rebuttal comments submitted in February 2009, they state that "all of the authorities cited by the State merely acknowledge the State's authority to go beyond the federal regulations."

The Commission finds that the requirements in parts F.2 and F.3. of the permit do not constitute a federal mandate. There is no federal requirement to collaborate on, develop, or implement a Regional Urban Runoff Management Program (RURMP). The Commission finds that these RURMP activities "exceed the mandate in that federal law or regulation."[155] As in *Long Beach Unified School Dist. v. State of California*,[156] the permit requires specific actions, i.e., required acts that go beyond the requirements of federal law. In adopting these permit provisions, the state has freely chosen[157] to impose these requirements. Thus, the Commission finds that parts F.2 and F.3 of the permit do not constitute federal mandates.

Based on the mandatory language on the face of the permit, the Commission finds that parts F.2 and F.3 of the permit constitutes a state mandate on the claimants to do all the following:

> Collaborate with the other Copermittees to develop, implement, and update as necessary a Regional Urban Runoff Management Program that meets the requirements of section F of the permit, reduces the discharge of pollutants from the MS4 to the MEP, and prevents urban runoff discharges from the MS4 from causing or contributing to a violation of water quality standards. The Regional Urban Runoff Management Program shall, at a minimum: [¶]...[¶]
>
> (2) Develop the standardized fiscal analysis method required in section G of the permit, and,
>
> (3) Facilitate the assessment of the effectiveness of jurisdictional, watershed, and regional programs.

As to whether these activities are a new program or higher level of service, the claimants state in the test claim:

> "[W]hile the 2001 Permit required the copermittees to collaborate to address common issues and promote consistency among JURMPs and WURMPs and to

---

[155] Government Code section 17556, subdivision (c).

[156] *Long Beach Unified School Dist. v. State of California, supra,* 225 Cal.App.3d 155.

[157] *Hayes v. Commission on State Mandates, supra,* 11 Cal. App. 4th 1564, 1593-1594.

establish a management structure for this purpose, it lacked the detail, specificity and level of effort now mandated by the 2007 Permit."

In their February 2009 rebuttal comments, claimants assert that the 2001 and 2007 permits contain major substantive differences in their requirements for fiscal analyses of their jurisdictional programs.

The State Board, in its October 2008 comments, states that the 2001 permit required that "the Copermittees enter into a formal agreement to provide, at a minimum, a management structure for designating joint responsibilities, decision making, watershed management, information management of data and reports" and other collaborative arrangements to comply with the permit.

According to the State Board, parts F.2 and F.3 are not a new program or higher level of service because the copermittees "were already conducting multiple efforts on a regional level under the 2001 permit. The inclusion of the RURMP is designed to organize these efforts into one framework to improve Copermittee and Regional Board tracking of regional efforts." The State Board also asserts that the requirements were intended to reduce redundant reporting and improve efficiency and streamline regional program implementation. The State Board describes the 2007 permit as merely elaborating on and refining the 2001 requirements.

The permit itself states: "This Order contains new or modified requirements that are necessary to improve Copermittees' efforts to reduce the discharge of pollutants in urban runoff to the MEP and achieve water quality standards." [Emphasis added.] The permit also describes the Regional Urban Runoff Management Plan as new.

While the 2001 permit contained requirements for a fiscal analysis (part F.8) and an assessment of effectiveness (part F.7), it did so only as components of a Jurisdictional Urban Runoff Management Program. The Regional Urban Runoff Management Program, required in part F.2 of the 2007 permit, is new. The fiscal analysis in part G is incorporated by reference into part F.2, and the effectiveness assessment is incorporated into part F.3. Thus, the Commission finds that the requirements in parts F.2 and F.3 are a new program or higher level of service.

IV. Program Effectiveness Assessment (Part I)

Part I of the permit is called "Program Effectiveness Assessment" and includes subparts for Jurisdictional (I.1), Watershed (I.2) and Regional (I.3) assessment, in addition to a Long Term Effectiveness Assessment (I.5). Of these, claimants pled subparts I.1, I.2 and I.5.

A. Jurisdictional and Watershed Program effectiveness assessment (parts I.1 & I.2): As more specifically stated on pages 22-24 above, the permit requires the copermittees to do the following:

- Annually assess the effectiveness of the Jurisdictional Urban Runoff Management Program (JURMP) that includes specifically assessing the effectiveness of specified components of the JURMP and the effectiveness of the JURMP as a whole.
- Identify measureable targeted outcomes, assessment measures, and assessment methods for each jurisdictional activity/BMP implemented, each major JURMP component, and the JURMP as a whole.

- Development and implement a plan and schedule to address the identified modifications and improvements.
- Annually report on the effectiveness assessment as implemented under each of the specified requirements.
- As a watershed group of copermittees, annually assess the effectiveness of the Watershed Urban Runoff Management Program (WURMP) implementation, including each water quality activity and watershed education activity, and the program as a whole.
- Determine source load reductions resulting from WURMP implementation and utilize water quality monitoring results and data to determine whether implementation is resulting in changes to water quality.
- As with the JURMP, annually review WURMP jurisdictional activities or BMPs to identify modifications and improvements needed to maximize the program's effectiveness, develop and implement a plan and schedule to address the identified modifications and improvements to the programs, and annually report on the program's effectiveness assessment as implemented under each of the requirements.

Regarding parts I.1.a. and I.2.a. of the permit, the Fact Sheet/Technical Report states: "The section requires both specific activities and broader programs to be assessed since the effectiveness of jurisdictional [or watershed] efforts may be evident only when considered at different scales."[158]

The State Board, in its comments submitted in October 2008, cites section 402(p)(3(B)(ii)-(iii) of the Clean Water Act, as well as 40 C.F.R. sections 122.26(d)(2)(i)(B)-(C), (E) and (F) and subdivision (d)(2)(iv) of the same section to show the "broad federal authorities relied upon by the San Diego Water Board to support Section I ... [that] ... support inclusion of the JURMP and WURMP effectiveness assessments under federal law." The State Board also quotes section 122.26(d)(2)(v) that the copermittees must include in part 2 of their application for a permit:

> *Assessment of controls.* Estimated reductions in loadings of pollutants from discharges of municipal storm sewer constituents from municipal storm sewer systems expected as the result of the municipal storm water quality management program. The assessment shall also identify known impacts of storm water controls on ground water.

The State Board also says that "under 40 C.F.R. section 122.42(c), applicants must provide annual reports on the progress of their storm water management programs. The federal law behind the JURMP and WURMP effectiveness assessment requirements were discussed at great length in the 2001 Permit Fact Sheet."[159] The State Board quotes a lengthy portion of the 2001

---

[158] Fact Sheet/Technical Report for Order No. R9-2007-0001, Parts I.1.a. and I.2.a.. Two identical paragraphs describe the JURMP on page 319 and the WURMP on page 320.

[159] 40 C.F.R. section 122.42(c) states:

> *Municipal separate storm sewer systems.* The operator of a large or medium municipal separate storm sewer system or a municipal separate storm sewer that has been designated by the Director under §122.26(a)(1)(v) of this part must

Fact Sheet, which states that the U.S. EPA requires applicants to submit estimated reductions in pollutant loads expected to result from implemented controls and describe known impacts of storm water controls on groundwater. The 2001 Fact Sheet also includes "Throughout the permit term, the municipality must submit refinements to its assessment or additional direct measurements of program effectiveness in its annual report." It also lists a number of U.S. EPA suggestions, recommendations, and encouraged actions.

The State Board also quotes at length from the 2007 Permit Fact Sheet/Technical Report regarding why the effectiveness assessments are required under the permit, including the need for them and the benefits of including them. According to the State Board, the federal authorities support including the effectiveness assessments, and the Regional Board appropriately exercised discretion under federal law to include them, finding them necessary to implement the MEP standard. Thus, the State Board asserts that sections I.1 and I.2 do not exceed federal law.

The claimants, in their February 2009 comments, state that neither the broad nor the specific legal authority cited in the permit Fact Sheet "contains the above-referenced mandates required under the 2007 Permit." Claimants characterize the federal regulations as only requiring "program descriptions, estimated reductions, known impacts, and an annual report on progress. Federal law does not mandate the specific activities mandated by the 2007 Permit." Claimants also argue that the permit requirements are not necessary to meet the federal MEP standard, and point out that the 2001 Permit Fact Sheet cited by the State Board describes actions recommended or encouraged by the U.S. EPA, but not required. As claimant says: "they simply authorize applicants to go beyond minimum federal requirements." Claimants also quote the State Board's comment on "the need for and benefits of assessment requirements," noting that needs and benefits "constitute an insufficient basis for the imposition of a mandated requirement without subvention."

Although the federal regulations require assessment of controls and annual reports, they do not require the detailed assessment in the 2007 permit. The regulations do not require, for example, assessments of the effectiveness of each significant jurisdictional activity/BMP or watershed

---

submit an annual report by the anniversary of the date of the issuance of the permit for such system. The report shall include:

(1) The status of implementing the components of the storm water management program that are established as permit conditions;
(2) Proposed changes to the storm water management programs that are established as permit condition. Such proposed changes shall be consistent with §122.26(d)(2)(iii) of this part; and
(3) Revisions, if necessary, to the assessment of controls and the fiscal analysis reported in the permit application under §122.26(d)(2)(iv) and (d)(2)(v) of this part;
(4) A summary of data, including monitoring data, that is accumulated throughout the reporting year;
(5) Annual expenditures and budget for year following each annual report;
(6) A summary describing the number and nature of enforcement actions, inspections, and public education programs;
(7) Identification of water quality improvements or degradation.

quality activity, or of the implementation of each major component of the JURMP or WURMP, or identification of modifications and improvements to maximize the JURMP or WURMP effectiveness. These requirements, "exceed the mandate in that federal law or regulation."[160] As in *Long Beach Unified School Dist. v. State of California,*[161] the permit requires specific actions, i.e., required acts that go beyond the requirements of federal law. In adopting these permit provisions, the state has freely chosen[162] to impose these requirements. Thus, the Commission finds that parts I.1 and I.2 of the permit are not federal mandates.

Based on the mandatory language on the face of the permit, the Commission finds that parts I.1 and I.2 of the permit are a state mandate on the copermittees to do all of the following:

> 1. Jurisdictional
>
> a. As part of its Jurisdictional Urban Runoff Management Program, each Copermittee shall annually assess the effectiveness of its Jurisdictional Urban Runoff Management Program implementation. At a minimum, the annual effectiveness assessment shall:
>
> (1) Specifically assess the effectiveness of each of the following:
>
> (a) Each significant jurisdictional activity/BMP or type of jurisdictional activity/BMP implemented;
> (b) Implementation of each major component of the Jurisdictional Urban Runoff Management Program (Development Planning, Construction, Municipal, Industrial/Commercial, Residential, Illicit Discharge[163] Detection and Elimination, and Education); and
> (c) Implementation of the Jurisdictional Urban Runoff Management Program as a whole.
>
> (2) Identify and utilize measurable targeted outcomes, assessment measures, and assessment methods for each of the items listed in section I.1.a.(1) above.
>
> (3) Utilize outcome levels 1-6[164] to assess the effectiveness of each of the items listed in section I.1.a.(1) above, where applicable and feasible.
>
> (4) Utilize monitoring data and analysis from the Receiving Waters Monitoring Program to assess the effectiveness each of the items listed in section I.1.a.(1) above, where applicable and feasible.
>
> (5) Utilize Implementation Assessment,[165] Water Quality Assessment,[166] and Integrated Assessment,[167] where applicable and feasible.

---

[160] Government Code section 17556, subdivision (c).

[161] *Long Beach Unified School Dist. v. State of California, supra,* 225 Cal.App.3d 155.

[162] *Hayes v. Commission on State Mandates, supra,* 11 Cal. App. 4th 1564, 1593-1594.

[163] Illicit discharge, as defined in Attachment C of the permit, is "any discharge to the MS4 that is not composed entirely of storm water except discharges pursuant to a NPDES permit and discharges resulting from firefighting activities [40 C.F.R. 122.26 (b)(2)]."

[164] See footnote 50, page 21.

b. Based on the results of the effectiveness assessment, each Copermittee shall annually review its jurisdictional activities or BMPs to identify modifications and improvements needed to maximize Jurisdictional Urban Runoff Management Program effectiveness, as necessary to achieve compliance with section A of this Order. The Copermittees shall develop and implement a plan and schedule to address the identified modifications and improvements. Jurisdictional activities/BMPs that are ineffective or less effective than other comparable jurisdictional activities/BMPs shall be replaced or improved upon by implementation of more effective jurisdictional activities/BMPs. Where monitoring data exhibits persistent water quality problems that are caused or contributed to by MS4 discharges, jurisdictional activities or BMPs applicable to the water quality problems shall be modified and improved to correct the water quality problems.

c. As part of its Jurisdictional Urban Runoff Management Program Annual Reports, each Copermittee shall report on its Jurisdictional Urban Runoff Management Program effectiveness assessment as implemented under each of the requirements of sections I.1.a and I.1.b above.

2. Watershed

a. As part of its Watershed Urban Runoff Management Program, each watershed group of Copermittees (as identified in Table 4)[168] shall annually assess the effectiveness of its Watershed Urban Runoff Management Program implementation. At a minimum, the annual effectiveness assessment shall:

(1) Specifically assess the effectiveness of each of the following:

(a) Each Watershed Water Quality Activity implemented;
(b) Each Watershed Education Activity implemented; and
(c) Implementation of the Watershed Urban Runoff Management Program as a whole.

---

[165] Implementation Assessment is defined in Attachment C of the permit as an "Assessment conducted to determine the effectiveness of copermittee programs and activities in achieving measureable targeted outcomes, and in determining whether priority sources of water quality problems are being effectively addressed."

[166] Water Quality Assessment is defined in Attachment C of the permit as an "Assessment conducted to evaluate the condition of non-storm water discharges, and the water bodies which receive these discharges."

[167] Integrated Assessment is defined in Attachment C of the permit as an "Assessment to be conducted to evaluate whether program implementation is properly targeted to and resulting in the protection and improvement of water quality."

[168] Table 4 of the permit divides the copermittees into nine watershed management areas. For example, the San Luis Rey River watershed management area lists the city of Oceanside, Vista and the County of San Diego as the responsible watershed copermittees. Table 4 also lists where the hydrologic units are and major receiving water bodies.

(2) Identify and utilize measurable targeted outcomes, assessment measures, and assessment methods for each of the items listed in section I.2.a.(1) above.

(3) Utilize outcome levels 1-6 to assess the effectiveness of each of the items listed in sections I.2.a.(1)(a) and I.2.a.(1)(b) above, where applicable and feasible.

(4) Utilize outcome levels 1-4 to assess the effectiveness of implementation of the Watershed Urban Runoff Management Program as a whole, where applicable and feasible.

(5) Utilize outcome levels 5 and 6 to qualitatively assess the effectiveness of implementation of the Watershed Urban Runoff Management Program as a whole, focusing on the high priority water quality problem(s) of the watershed. These assessments shall attempt to exhibit the impact of Watershed Urban Runoff Management Program implementation on the high priority water quality problem(s) within the watershed.

(6) Utilize monitoring data and analysis from the Receiving Waters Monitoring Program to assess the effectiveness each of the items listed in section I.2.a.(1) above, where applicable and feasible.

(7) Utilize Implementation Assessment, Water Quality Assessment, and Integrated Assessment, where applicable and feasible.

b. Based on the results of the effectiveness assessment, the watershed Copermittees shall annually review their Watershed Water Quality Activities, Watershed Education Activities, and other aspects of the Watershed Urban Runoff Management Program to identify modifications and improvements needed to maximize Watershed Urban Runoff Management Program effectiveness, as necessary to achieve compliance with section A of this Order.[169] The Copermittees shall develop and implement a plan and schedule to address the identified modifications and improvements. Watershed Water Quality Activities/Watershed Education Activities that are ineffective or less effective than other comparable Watershed Water Quality Activities/Watershed Education Activities shall be replaced or improved upon by implementation of more effective Watershed Water Quality Activities/Watershed Education Activities. Where monitoring data exhibits persistent water quality problems that are caused or contributed to by MS4 discharges, Watershed Water Quality Activities and Watershed Education Activities applicable to the water quality problems shall be modified and improved to correct the water quality problems.

c. As part of its Watershed Urban Runoff Management Program Annual Reports, each watershed group of Copermittees (as identified in Table 4) shall report on its Watershed Urban Runoff Management Program effectiveness assessment as implemented under each of the requirements of section I.2.a and I.2.b above.

[169] Section A is "Prohibitions and Receiving Water Limitations."

The State Board, in its October 2008 comments, states that the program effectiveness assessment is not a new program or higher level of service because the 2001 permit included a JURMP (in part F.7) and WURMP (in part J) effectiveness assessment requirements.

The claimants, in their February 2009 comments, state as follows:

> The 2001 Permit only required the copermittees to develop a long term strategy for assessing the effectiveness of their individual JURMP using specific and indirect measurements to track the long term progress of their individual JURMPs towards achieving water quality. [part F.7.a. of the 2001 permit.] The 2001 Permit also only mandated that the long term strategy developed by the copermittees include an assessment of the effectiveness of their JURMP in an annual report using the direct and indirect assessment measurements and methods developed in the long-term strategy. [part F.7. of the 2001 permit.]

Part F.7 of the 2001 permit required developing the following on the topic of "Assessment of Jurisdictional URMP Effectiveness Component."

> a. As part of its individual Jurisdictional URMP, each Copermittee shall develop a long-term strategy for assessing the effectiveness of its individual Jurisdictional URMP. The long-term assessment strategy shall identify specific direct and indirect measurements that each Copermittee will use to track the long-term progress of its individual Jurisdictional URMP towards achieving improvements in receiving water quality. Methods used for assessing effectiveness shall include the following or their equivalent: surveys, pollutant loading estimations, and receiving water quality monitoring. The long-term strategy shall also discuss the role of monitoring data in substantiating or refining the assessment.
>
> b. As part of its individual Jurisdictional URMP Annual Report, each Copermittee shall include an assessment of the effectiveness of its Jurisdictional URMP using the direct and indirect assessment measurements and methods developed in its long-term assessment strategy.

The 2007 permit requires more detail in its assessments than the 2001 permit. The 2007 permit requires annual assessments and using outcome levels, among other things, to assess the effectiveness of (a) each significant jurisdictional activity/BMP, (b) implementation of each major component of the JURMP, and (c) implementation of the JURMP as a whole. The 2001 permit did not require assessments at these three levels. And for example, outcome level 4 in the 2007 permit is required for measuring load reductions.[170] This is a higher level of service than "pollutant loading estimations" to be used as an effectiveness strategy in the 2001 permit.[171] Therefore, the Commission finds that section I.1 of the permit (Jurisdictional URMP effectiveness assessment) is a new program or higher level of service.

---

[170] There are six Effectiveness Assessments incorporated into part I.1.a.(3) of the permit and are defined in Attachment C. One of them is "Effectiveness Assessment Level 4 – Load Reductions – Level 4 outcomes measure load reductions which quantify changes in the amounts of pollutants associated with specific sources before and after a BMP or other control measure is employed."

[171] See Fact Sheet/Technical Report for Order No. R9-2007-0001.

The assessment provisions of the Watershed Urban Runoff Management Program are in part J.2 of the 2001 permit, which requires each copermittee to develop and implement a Watershed URMP that contains, among other things:

> b. An assessment of the water quality of all receiving waters in the watershed based upon (1) existing water quality data; and (2) annual watershed water quality monitoring that satisfies the watershed monitoring requirements of Attachment B.
>
> [¶]...[¶]
>
> i. Long-term strategy for assessing the effectiveness of the Watershed URMP. The long-term assessment strategy shall identify specific direct and indirect measurements that will track the long-term progress of the Watershed URMP towards achieving improvements in receiving water quality. Methods used for assessing effectiveness shall include the following or their equivalent: surveys, pollutant loading estimations, and receiving water quality monitoring. The long-term strategy shall also discuss the role of monitoring data in substantiating or refining the assessment.

As with the JURMP, the 2001 permit required a "long-term strategy for assessing the effectiveness of the Watershed URMP" whereas the 2007 permit requires the annual assessment of more specific criteria: (a) each Watershed Water Quality Activity implemented; (b) Each Watershed Education Activity implemented; and (c) Implementation of the Watershed Urban Runoff Management program as a whole. And the 2007 permit requires assessing these activities using the same six effectiveness outcome levels as for the JURMP (defined in Attachment C), that were not in the 2001 permit.[172]

---

[172] Effectiveness assessment outcome levels are defined in Attachment C of the permit as follows: Effectiveness assessment outcome level 1 – Compliance with Activity-based Permit Requirements – Level 1 outcomes are those directly related to the implementation of specific activities prescribed by this Order or established pursuant to it. Effectiveness assessment outcome level 2 – Changes in Attitudes, Knowledge, and Awareness – Level 2 outcomes are measured as increases in knowledge and awareness among target audiences such as residents, business, and municipal employees. Effectiveness assessment outcome level 3 – Behavioral Changes and BMP Implementation – Level 3 outcomes measure the effectiveness of activities in affecting behavioral change and BMP implementation. Effectiveness assessment outcome level 4 – Load Reductions – Level 4 outcomes measure load reductions which quantify changes in the amounts of pollutants associated with specific sources before and after a BMP or other control measure is employed. Effectiveness assessment outcome level 5 – Changes in Urban Runoff and Discharge Quality – Level 5 outcomes are measured as changes in one or more specific constituents or stressors in discharges into or from MS4s. Effectiveness assessment outcome level 6 – Changes in Receiving Water Quality – Level 6 outcomes measure changes to receiving water quality resulting from discharges into and from MS4s, and may be expressed through a variety of means such as compliance with water quality objectives or other regulatory benchmarks, protection of biological integrity [i.e., ecosystem health], or beneficial use attainment.

Therefore, the Commission finds that section I.2. of the permit (the Watershed URMP effectiveness assessment) is a new program or higher level of service.

B. Long Term Effectiveness Assessment (part I.5): As stated on pages 19-20 above, part I.5 requires the copermittees to collaborate to develop a Long Term Effectiveness Assessment (LTEA) that evaluates the copermittee programs on a jurisdictional, watershed, and regional level, and that emphasizes watershed assessment. The LTEA must build on the results of the August 2005 Baseline LTEA, and must be submitted to the Regional Board no later than 210 days before the permit expires. The LTEA must address the Regional objectives listed in part I.3 of the permit, as well as assess the effectiveness of the Receiving Waters Monitoring Program, and address outcome levels 1-6 as specified in attachment C of the permit.

In its October 2008 comments on the test claim, the State Board says that the LTEA requirement was imposed "so that the San Diego Water Board could properly evaluate the Copermittees' storm water program during the reapplication process." The State Board asserts that the LTEA provision is a federal mandate, citing 40 C.F.R. section 122.26, subdivisions (d)(2)(iv) and (v), in which (v) states that a permit application must include:

> *Assessment of controls.* Estimated reductions in loadings of pollutants from discharges of municipal storm sewer constituents from municipal storm sewer systems expected as the result of the municipal storm water quality management program. The assessment shall also identify known impacts of storm water controls on ground water.

According to the State Board, "Even if the requirements to develop an LTEA are not specifically required by the federal regulations, the general discussion of the federal MEP standard is applicable here and supports the San Diego Water Board's determination that the region-wide LTEAs are necessary to meet the federal MEP standard."

In their February 2009 rebuttal comments, the claimants state:

> The program effectiveness component of the 2007 Permit mandates Jurisdictional (I.1), Watershed (I.2), Regional (I.3), Total Maximum Daily Loads ("TMDL") and BMP Implementation (I.4) and Long-term Effectiveness Assessment (I.5) requirements. This Section mandates multiple layers of program assessment, review and reporting. Such duplicative and collaborative efforts were not required under the 2001 Permit and are not required by federal law.

Claimants assert that there is no federal authority that states that the regional, jurisdictional and watershed program effectiveness training requirements are required to meet the minimum federal MEP standards. Claimants also state that permits in other jurisdictions do not have LTEA requirements. According to the claimants, "while portions of the federal regulations cited by the State permit region-wide or watershed-wide cooperation, there is no mandatory requirement for multiple layers of program effectiveness assessment."

Although the federal regulations require assessment of controls, they do not require the detailed assessment in the 2007 permit. They do not require, for example, collaboration with other copermittees, addressing specified objectives or outcome levels, or addressing jurisdictional, watershed, and regional programs. These requirements "exceed the mandate in that federal law

or regulation."[173] As in *Long Beach Unified School Dist. v. State of California*,[174] the permit requires specific actions, i.e., required acts that go beyond the requirements of federal law. In adopting these permit provisions, the state has freely chosen[175] to impose these requirements. Thus, the Commission finds that part I.5 of the permit is not a federal mandate.

Because of the mandatory language on the face of the permit, the Commission finds that part I.5 of the permit is a state mandate for the claimants to do all of the following:

5. Long-term Effectiveness Assessment

a. Each Copermittee shall collaborate with the other Copermittees to develop a Longterm Effectiveness Assessment (LTEA), which shall build on the results of the Copermittees' August 2005 Baseline LTEA. The LTEA shall be submitted by the Principal Permittee to the Regional Board no later than 210 days in advance of the expiration of this Order.

b. The LTEA shall be designed to address each of the objectives listed in section I.3.a.(6)[176] of this Order, and to serve as a basis for the Copermittees' Report of Waste Discharge for the next permit cycle.

c. The LTEA shall address outcome levels 1-6, and shall specifically include an evaluation of program implementation to changes in water quality (outcome levels 5 and 6).

d. The LTEA shall assess the effectiveness of the Receiving Waters Monitoring Program in meeting its objectives and its ability to answer the five core management questions. This shall include assessment of the frequency of monitoring conducted through the use of power analysis and other pertinent statistical methods. The power analysis shall identify the frequency and intensity of sampling needed to identify a 10% reduction in the concentration of

---

[173] Government Code section 17556, subdivision (c).

[174] *Long Beach Unified School Dist. v. State of California, supra,* 225 Cal.App.3d 155.

[175] *Hayes v. Commission on State Mandates, supra,* 11 Cal. App. 4th 1564, 1593-1594.

[176] Part I.3.a.(6) of the permit states: At a minimum, the annual effectiveness assessment shall: (6) Include evaluation of whether the Copermittees' jurisdictional, watershed, and regional effectiveness assessments are meeting the following objectives: (a) Assessment of watershed health and identification of water quality issues and concerns. (b) Evaluation of the degree to which existing source management priorities are properly targeted to, and effective in addressing, water quality issues and concerns. (c) Evaluation of the need to address additional pollutant sources not already included in Copermittee programs. (d) Assessment of progress in implementing Copermittee programs and activities. (e) Assessment of the effectiveness of Copermittee activities in addressing priority constituents and sources. (f) Assessment of changes in discharge and receiving water quality. (g) Assessment of the relationship of program implementation to changes in pollutant loading, discharge quality, and receiving water quality. (h) Identification of changes necessary to improve Copermittee programs, activities, and effectiveness assessment methods and strategies.

constituents causing the high priority water quality problems within each watershed over the next permit term with 80% confidence.

e. The LTEA shall address the jurisdictional, watershed, and regional programs, with an emphasis on watershed assessment.

The next issue is whether the LTEA (part I.5) is a new program or higher level of service. The State Board, in its October 2008 comments, state as follows:

> The LTEA does not impose a new program or higher level of service. Rather, it requires the Copermittees to conduct a long term effectiveness assessment prior to submitting an application for reissuance of the Order in the next permit term and is necessary to support proposed changes to the Copermittees' programs."

The claimants, in their February 2009 comments, argue that the LTEA requirement in part I.5 does impose a new program or higher level of service. According to the claimants:

> Section F.7 of the 2001 Permit only required individual copermittees to develop long term effectiveness assessments for their Jurisdictional Urban Runoff Management Plan ("JURMP"). ... The 2001 Permit did not require the copermittees to collaborate to develop an overarching LTEA for regional, jurisdictional and watershed programs, and did not require the submission of a LTEA by a date certain in advance of the Permit expiration.

The Commission finds that the LTEA is a new program or higher level of service. The 2001 permit required JURMP assessment (in part F.7) and WURMP (in part J.2) as quoted above in the discussion on parts I.1 and I.2., but not an LTEA. The Fact Sheet/Technical Report for the 2007 permit states:

> Section I.5 (Long-Term Effectiveness Assessment) requires the Copermittees to conduct a Long-Term Effectiveness Assessment prior to their submittal of an application for reissuance of the Order. The Long-Term Effectiveness Assessment is necessary to provide support for the Copermittees' proposed changes to their programs in their ROWD. It can also serve as the basis for changes to the Order's requirements.

The Commission finds that the LTEA (part I.5) is a new program or higher level of service for three reasons. First, the scope of the assessment in the 2001 permit addresses only the JURMP and WURMP rather than "jurisdictional, watershed, and regional programs, with an emphasis on watershed assessment" as in the 2007 permit (see the analysis of I.1 and I.2 above). Second, the 2001 permit did not require collaborating with all other copermittees on assessment. Third, the 2001 permit contains much less detail on what to include in the assessment, such as, for example, the eight regional objectives listed in I.3.a.(6), incorporated by reference in part I.5. Also, the LTEA must assess the "effectiveness of the Receiving Waters Monitoring Program ... [and] shall include assessment of the frequency of monitoring conducted through the use of power analysis and other pertinent statistical methods." These methods were not required under the 2001 permit.

V. All Copermittee Collaboration (Part L)

Part L, labeled "All Permittee Collaboration," requires the copermittees to collaborate to address common issues and plan and coordinate activities, including developing a Memorandum of

Understanding (MOU), as specified. The Copermittees entered into an MOU effective in January 2008, which is attached to the test claim. The Copermittees allege activities involved with working body support and working body participation.

In comments submitted in October 2008, the State Board asserts that the permit condition in part L is necessary to meet the minimum MEP standard, quoting the following federal regulation regarding municipal stormwater permits:

> (2) *Part 2.* Part 2 of the application shall consist of:
>
> (i) *Adequate legal authority.* A demonstration that the applicant can operate pursuant to legal authority established by statute, ordinance or series of contracts which authorizes or enables the applicant at a minimum to: [¶]...[¶]
>
> (D) Control through interagency agreements among coapplicants the contribution of pollutants from one portion of the municipal system to another portion of the municipal system;[177]

The Commission finds that there is no federal mandate to develop a management structure (memorandum of understanding, or MOU) as required in part L of the 2007 permit. The federal regulation most on point requires an applicant (claimant) to demonstrate adequate legal authority "which authorizes or enables the applicant at a minimum to: [¶]...[¶] (D) Control through interagency agreements among coapplicants the contribution of pollutants from one portion of the municipal system to another portion of the municipal system;"[178] All the federal regulations address is authority to establish an interagency agreement or memorandum of understanding, but do not require it to be implemented or specify its contents beyond "controlling ... the contribution of pollutants from one portion of the municipal system to another portion of the municipal system."

By contrast, part L of the permit requires the copermittees to collaborate, promote consistency among JURMP and WURMP and plan and coordinate activities required under the permit. It also requires joint execution and submission to the Regional Board an MOU with a minimum of seven specified requirements.

Thus, this permit activity "exceed[s] the mandate in that federal law or regulation."[179] As in *Long Beach Unified School Dist. v. State of California,*[180] the permit requires specific actions, i.e., required acts that go beyond the requirements of federal law. In adopting these permit provisions, the state has freely chosen[181] to impose these requirements. Thus, the Commission finds that part L of the permit does not impose a federal mandate.

Based on the mandatory language in the permit, the Commission finds that part L of the permit is a state mandate on the claimants to do the following:

---

[177] 40 Code of Federal Regulations section 122.26 (d)(2)(i)(D).

[178] 40 Code of Federal Regulations section 122.26 (d)(2)(i)(D).

[179] Government Code section 17556, subdivision (c).

[180] *Long Beach Unified School Dist. v. State of California, supra,* 225 Cal.App.3d 155.

[181] *Hayes v. Commission on State Mandates, supra,* 11 Cal. App. 4th 1564, 1593-1594.

1. Collaborate with all other Copermittees regulated under this Order to address common issues, promote consistency among Jurisdictional Urban Runoff Management Programs and Watershed Urban Runoff Management Programs, and to plan and coordinate activities required under this Order.

(a) Jointly execute and submit to the Regional Board no later than 180 days after adoption of the permit, a Memorandum of Understanding, Joint Powers Authority, or other instrument of formal agreement that at a minimum:

(1) Identifies and defines the responsibilities of the Principal Permittee[182] and Lead Watershed Permittees;[183]

(2) Identifies Copermittees and defines their individual and joint responsibilities, including watershed responsibilities;

(3) Establishes a management structure to promote consistency and develop and implement regional activities;

(4) Establishes standards for conducting meetings, decisions-making, and cost-sharing;

(5) Provides guidelines for committee and workgroup structure and responsibilities;

(6) Lays out a process for addressing Copermittee non-compliance with the formal agreement;

(7) Includes any and all other collaborative arrangements for compliance with this order.

The State Board, in its October 2008 comments, asserts that the management structure framework in part L of the 2007 permit is not a new program or higher level of service because:

> The 2001 permit required significant collaboration to address common issues and promote consistency across management programs [and] development of a management structure through execution of a formal agreement, meeting minimum specifications. It also required standardized reporting, including fiscal analysis.

The State Board also argues there is "minimal substantive difference" between the 2001 and 2007 permits in their requirements to establish "a formal cooperative arrangement and to implement regional urban runoff management activities. The 2007 Permit merely elaborates on and refines the 2001 requirements."

In its February 2009 rebuttal comments, the claimants assert that the 2001 and 2007 permits contain major substantive differences in their requirements for fiscal analyses of their jurisdictional programs.

---

[182] The Principal Permittee is the County of San Diego.

[183] According to the permit: "Watershed Copermittees shall identify the Lead Watershed Permittee for their WMA [Watershed Management Area]."

Part L.1 of the 2007 permit, the first paragraph in L requiring collaboration, is identical to part N of the 2001 permit. The Commission finds, however, that the collaboration is a new program or higher level of service because it now applies to all the activities that are found to be a new program or higher level of service in the analysis above (i.e, not in the 2001 permit) including the Regional Urban Runoff Management Program.

Part L.1.a, regarding the MOU or formal agreement, is similar but not identical to part N of the 2001 permit. Both permits require adoption of a "Memorandum of Understanding [MOU], Joint Powers Authority, or other instrument of formal agreement." The 2001 permit, in part N.1.a, required the MOU to provide a management structure with the following contents: "designation of joint responsibilities, decision making, watershed activities, information management of data and reports, including the requirements under this Order; and any and all other collaborative arrangements for compliance with this Order."

By contrast, the 2007 permit, requires the MOU to be submitted to the Regional Board within 180 days after adoption of the permit and requires that the MOU, at a minimum:

(1) Identifies and defines the responsibilities of the principal Permittee and Lead Watershed Permittees;

(2) Identifies Copermittees and defines their individual and joint responsibilities;

(3) Establishes a management structure to promote consistency and develop and implement regional activities;

(4) Establishes standards for conducting meetings, decision-making, and cost-sharing;

(5) Provides guidelines for committee and workgroup structure and responsibilities;

(6) Lays out a process for addressing Copermittee non-compliance with the formal agreement; and

(7) Includes any and all other collaborative arrangements for compliance with this order.

The contents of the MOU specified in the 2001 permit, although stated with less specificity, are the same as those in the 2007 permit for numbers (1)-(2) and (7) above. Both permits require the MOU to contain "designation of joint responsibilities" and "collaborative arrangements for compliance with this order." Thus, the Commission finds that jointly executing and submitting those parts of the MOU to the Regional Board is not a new program or higher level of service.

The Commission finds that part L.1.a of the permit is a new program or higher level of service for all copermittees to do the following:

- Collaborate with all other Copermittees to address common issues, promote consistency among Jurisdictional Urban Runoff Management Programs and Watershed Urban Runoff Management Programs, and to plan and coordinate activities required under the permit.
- Jointly execute and submit to the Regional Board, no later than 180 days after adoption of the permit, a Memorandum of Understanding, Joint Powers Authority, or other instrument of formal agreement which at a minimum: (3) Establishes a management structure to promote consistency and develop and implement regional activities; (4) Establishes standards for conducting meetings, decision-making, and cost-sharing; (5) Provides guidelines for

committee and workgroup structure and responsibilities; and (6) Lays out a process for addressing copermittee non-compliance with the formal agreement.

Summary of Issue 1: The Commission finds that the following parts of the 2007 permit are a state-mandated, new program or higher level of service.

I. Jurisdictional Urban Runoff Management Program and Reporting (Parts D & J)

- Collaborate with other copermittees to develop and implement a hydromodification management plan, as specified (D.1.g.), for private priority development projects. Reimbursement is not required for this activity for municipal priority development projects.
- Develop and submit an updated Model SUSMP that defines minimum Low-impact Development and other BMPs as specified (D.1.d.(7)-(8)), for private priority development projects. Reimbursement is not required for this activity for municipal priority development projects.
- Street sweeping (D.3.a.(5)) and reporting on street sweeping (J.3.a(3)x-xv);
- Conveyance system cleaning (D.3.a.(3)(b)(iii)) and reporting on conveyance system cleaning (J.3.a.(3)(c)(iv)-(viii));
- Educational component (D.5).
    - Educate each specified target community on the following topics: (1) Erosion prevention, (2) Non storm water discharge prohibitions, and (3) BMP types: facility or activity specific, LID, source control, and treatment control (D.5.a.(1));
    - Educational programs shall emphasize underserved target audiences, high-risk behaviors, and 'allowable' behaviors and discharges, including various ethnic and socioeconomic groups and mobile sources (D.5.a.(2));
    - Implement an education program that includes annual training only for planning boards and elected officials, if applicable, to have an understanding of the topics in (i) and (ii) (D.5.b.(1)(a)(i) & (ii));
    - Implement an education program so that its planning and development review staffs (and Planning Boards and Election Officials, if applicable) have an understanding of the topics in (iii) and (iv) as specified (D.5.b.(1)(a)(iii) & (iv));
    - Implement an education program that includes annual training prior to the rainy season so that [the Copermittee's] construction, building, code enforcement, and grading review staffs, inspectors, and other responsible construction staff have, at a minimum, an understanding of the following topics, as appropriate for the target audience: the topics in (iii) to (vi), as specified (D.5.b.(1)(b)(iii) & (iv));
        - Municipal Industrial/Commercial Activities (D.5.b.(1)(c));
        - Municipal Other Activities (D.5.b.(1)(d));
        - New Development and Construction Education (D.5.(b)(2));
        - Residential, General Public, and School Children Education (D.5.(b)(3)).

II. Watershed Urban Runoff Management Program (Parts E.2.f & E.2.g.)

- Identify and implement the Watershed activities as specified (E.2.f.).
- Collaborate to develop and implement the Watershed Urban Runoff Management Programs. Watershed Copermittee collaboration shall include frequent regularly scheduled meetings. (E.2.g.)

III. Regional Urban Runoff Management Program (Parts F.1, F.2 & F.3)

- Include developing and implementing a Regional Residential Education Program development and implementation in the RURMP, as specified (F.1.).
- Include developing the standardized fiscal analysis method required in permit part G in the RURMP (F.2.).
- Facilitate the assessment of the effectiveness of jurisdictional, watershed, and regional programs in the RURMP (F.3.).

IV. Program Effectiveness Assessment (Parts I.1, I.2 & I.5)

- Annually assess the effectiveness of each copermittee's JURMP, as specified (I.1.).
- Annually assess the effectiveness of each watershed group's WURMP (I.2.).
- Collaborate with the other copermittees to develop a Long-term Effectiveness Assessment, as specified, and submit it to the Regional Board as specified (I.5.).

V. All Permittee Collaboration (Part L)

- Collaborate with all other copermittees to address common issues, promote consistency among the JURMP and WURMP, and to plan and coordinate activities required under the permit.
- Jointly execute and submit to the Regional Board, no later than 180 days after adoption of the permit, a Memorandum of Understanding, Joint Powers Authority, or other instrument of formal agreement as specified (L.1.a. (3)-(5)).

Any further reference to the test claim activities is limited to these parts of the permit found to be a new program or higher level of service.

Issue 2: Do the test claim activities impose costs mandated by the state within the meaning of Government Code sections 17514 and 17556?

The final issue is whether the permit provisions impose costs mandated by the state,[184] and whether any statutory exceptions listed in Government Code section 17556 apply to the test claim. Government Code section 17514 defines "cost mandated by the state" as follows:

> [A]ny increased costs which a local agency or school district is required to incur after July 1, 1980, as a result of any statute enacted on or after January 1, 1975, or any executive order implementing any statute enacted on or after January 1, 1975, which mandates a new program or higher level of service of an existing program within the meaning of Section 6 of Article XIII B of the California Constitution.

[184] *Lucia Mar, supra*, 44 Cal.3d 830, 835; Government Code section 17514.

Government Code section 17564 requires reimbursement claims to exceed $1000 to be eligible for reimbursement. In the test claim, the County of San Diego itemized the costs of complying with the permit conditions as follows:

Activity	Cost FY 2007-08
Regional Urban Runoff Management Program -Copermittee collaboration (F.2, F.3, L)	$260,031.09
Copermittee collaboration, Regional Residential Education, Program Development and Implementation (F.1)	$131,250.00
Jurisdictional Urban Runoff Management Program (JURMP) -hydromodification (D.1.g)	$630,000.00
JURMP Standard Urban Storm Water Mitigation Plans -low impact development (D.1.d)	$52,200.00
Long Term Effectiveness Assessment (I.5)	$210,000.00
Street Sweeping (D.3.a.(5) Equipment, Staffing, Contract	$3,477,190.00
Conveyance System Cleaning (D.3.a.(3)) and Reporting (J.2.a.(3)(c) iv – vii.	$3,456,087.00
Program Effectiveness Assessment (I.1 & I.2)	$392,363.00
Educational Surveys and Tests (D.5)	$62,617.00
Watershed Urban Runoff Management Program -Copermittee collaboration (E.2.f., E.2.g)	$1,632,893.00
Total	$10,304,631.09

Claimants submitted documentation in February 2010 that show the 2008-2009 cost for the permit activities is $18,014,213. These figures, along with those in the test-claim narrative and declarations submitted by the San Diego County and 18 cities,[185] illustrate that the costs to comply with the permit activities exceed $1,000. The Commission, however, cannot find "costs mandated by the state" within the meaning of Government Code section 17514 if any exceptions in Government Code section 17556 apply, which is discussed below.

A. Claimants did not request the test claim activities within the meaning of Government Code section 17556, subdivision (a).

The first issue is whether the claimants requested or proposed the activities in the permit. The Department of Finance and the State Board both assert that claimants did so in their Report of

[185] The County and city declarations are attached to the test claim.

Waste Discharge. As discussed above, the claimants were required to submit a ROWD and Stormwater Quality Management Plan before the permit was issued.[186]

Government Code section 17556, subdivision (a), provides that the Commission shall not find costs mandated by the state if:

> (a) The claim is submitted by a local agency ... that requested legislative authority for that local agency ... to implement the program specified in the statute, and that statute imposes costs upon that local agency or school district requesting the legislative authority. A resolution from the governing body or a letter from a delegated representative of the governing body of a local agency ... that requests authorization for that local agency ... to implement a given program shall constitute a request within the meaning of this subdivision.

Based on the language of the statute, section 17556, subdivision (a), does not apply because the permit is not a statute, the claimants did not request "legislative authority" to implement the permit, and the record lacks any resolutions adopted by the claimants. Therefore, the Commission finds that the claimants did not request the activities in the permit within the meaning of Government Code section 17556, subdivision (a).

B. Claimants have fee authority under Government Code section 17556, subdivision (d), for the test claim activities that do not require voter approval under Proposition 218

Government Code section 17556, subdivision (d), states:

> The commission shall not find costs mandated by the state, as defined in Section 17514, in any claim submitted by a local agency ... if, after a hearing, the commission finds any one of the following: [¶]...[¶] (d) The local agency ... has the authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service.

The California Supreme Court upheld the constitutionality of Government Code section 17556, subdivision (d), in *County of Fresno v. State of California.*[187] The court, in holding that the term "costs" in article XIII B, section 6, excludes expenses recoverable from sources other than taxes, stated:

> Section 6 was included in article XIII B in recognition that article XIII A of the Constitution severely restricted the taxing powers of local governments. (See *County of Los Angeles, supra,* 43 Cal.3d at p. 61.) The provision was intended to preclude the state from shifting financial responsibility for carrying out governmental functions onto local entities that were ill equipped to handle the task. (*Ibid.*; see *Lucia Mar Unified School Dist. v. Honig* (1988) 44 Cal.3d 830, 836, fn. 6 [244 Cal.Rptr. 677, 750 P.2d 318].) Specifically, it was designed to protect the tax revenues of local governments from state mandates that would require expenditure of such revenues. Thus, although its language broadly

---

[186] Water Code section 13376; 40 Code of Federal Regulations, section 122.21 (a). The Federal regulation applies to U.S. EPA-issued permits, but is incorporated into section 123.25 (the state-program provision) by reference. Also see the 2007 permit, page 2, part A.

[187] *County of Fresno v. State of California, supra,* 53 Cal.3d 482.

> declares that the "state shall provide a subvention of funds to reimburse ... local government for the costs [of a state-mandated new] program or higher level of service," read in its textual and historical context section 6 of article XIII B requires subvention only when the costs in question can be recovered *solely from tax revenues.*
>
> In view of the foregoing analysis, the question of the facial constitutionality of section 17556(d) under article XIII B, section 6, can be readily resolved. As noted, the statute provides that "The commission shall not find costs mandated by the state ... if, after a hearing, the commission finds that" the local government "has the authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service." Considered within its context, the section effectively construes the term "costs" in the constitutional provision as excluding expenses that are recoverable from sources other than taxes. Such a construction is altogether sound. As the discussion makes clear, the Constitution requires reimbursement only for those expenses that are recoverable solely from taxes. It follows that section 17556(d) is facially constitutional under article XIII B, section 6.[188]

In another case about subdivision (d) of section 17556, *Connell v. Superior Court,*[189] the dispute was whether local agencies had sufficient fee authority for a mandate involving increased purity of reclaimed wastewater used for certain types of irrigation. The court cited statutory fee authority for the reclaimed wastewater, and noted that the water districts did not dispute their fee authority. Rather, the water districts argued that they lacked "sufficient" fee authority in that it was not economically feasible to levy fees sufficient to pay the mandated costs. In finding the fee authority issue is a question of law, the court stated that Government Code section 17556, subdivision (d), is clear and unambiguous, in that its plain language precludes reimbursement where the local agency has the authority, i.e., the right or the power, to levy fees sufficient to cover the costs of the state-mandated program." The court rejected the districts' argument that "authority" as used in the statute should be construed as a "practical ability in light of surrounding economic circumstances" because that construction cannot be reconciled with the plain language of section 17556, and would create a vague standard not capable of reasonable adjudication. The court also said that nothing in the fee authority statute (Wat. Code, § 35470) limited the authority of the districts to levy fees "sufficient" to cover their costs. Thus, the court concluded that the plain language of section 17556 made the fee authority issue solely a question of law, and that the water districts could not be reimbursed due to that fee authority.[190]

[189] *Connell v. Superior Court* (1997) 59 Cal.App.4th 382.

[190] *Connell v. Superior Court, supra,* 59 Cal.App.4th 382, 398-402.

1. **Claimants' have regulatory fee authority (within the meaning of Gov. Code, § 17556, subd. (d)) under the police power sufficient to pay for the mandated activities that do not require voter approval under Proposition 218: the hydromodification plan and low-impact development.**

In its October 2008 comments, the State Board asserted that the claimants have fee authority to pay for the permit activities. Although the Board recognizes "limitations on assessing fees and surcharges under California law ... [concerning] the percentage of voters who must approve the assessment" the Board points to examples of local agencies (Cities of Los Angeles, San Clemente, and Palo Alto) that have successfully adopted an assessment. The State Board also argues that the cities' trash collection responsibilities may also include street sweeping and conveyance system cleaning for which the city could charge fees, and that developer fees could be charged for hydromodification and low impact development.

Claimants, in comments submitted in February 2009, state that they cannot unilaterally impose a fee to recover the cost to comply with the 2007 permit on water or sewer bills sent to residents because of *Howard Jarvis Taxpayer Assoc. v. City of Salinas,*[191] in which the court invalidated a stormwater management utility fee imposed by the city on all owners of developed parcels in the city. The court held that article XIII D (Proposition 218) of the California Constitution "required the city to subject the proposed storm drainage fee to a vote of the property owners or the voting residents of the affected area."[192] As to the argument that claimants can put the fee to a vote in their jurisdictions, claimants state as follows:

> Articles XIII C and XIII D, which were added to the Constitution by Proposition 218, regulate the imposition of general and special taxes as well as the imposition of special assessments and property related fees. In each of these cases the question of whether to impose a tax, special assessment or a property related fee must be submitted to and approved by the voters. And, in the case of a special tax, and in certain instances the imposition of a fee or charge, the tax or fee must be approved by a two-thirds vote of the resident voters. The State fails to cite any authority that requires the copermittees to first submit the question of whether to impose a tax or fee to the voters and have them reject the proposition. Such a requirement would render all mandate claims moot, without first submitting the question of whether to impose a tax or assessment to a vote of the electorate.

The issue of local fee authority for municipal stormwater permit activities in this permit cannot be answered without discussing regulatory fee authority under the police power and the limitations on that authority via the voter-approval requirement in article XIII D of the California Constitution (Proposition 218).

Case law has recognized three general categories of local agency fees or assessments: (1) special assessments, based on the value of benefits conferred on property; (2) development fees, exacted in return for permits or other government privileges; and (3) regulatory fees, imposed under the police power.[193] The regulatory and development fees are discussed below in the context of

[192] *Id.* at page 1358-1359.

[193] *Sinclair Paint v. State Board of Equalization* (1997) 15 Cal.4th 866, 874.

XIII D (Proposition 218) that would allow the claimants to impose fees for the activities in the test claim related to development.

Regulatory fee authority under the police power: The law on local government fee authority begins with article XI, section 7, of the California Constitution, which states: "A county or city may make and enforce within its limits all local, police, sanitary, and other ordinances and regulations not in conflict with general laws." Article XI, section 7, includes the authority to impose fees, and courts have held that "the power to impose valid regulatory fees does not depend on legislatively authorized taxing power but exists pursuant to the direct grant of police power under article XI, section 7, of the California Constitution."[194]

Water pollution prevention is also a valid exercise of government police power.[195]

In *Sinclair Paint v. State Board of Equalization,*[196] the California Supreme Court upheld a fee on manufacturers of paint that funded a child lead-poisoning program that provided evaluation, screening, and medically necessary follow-up services for children who were deemed potential victims of lead poisoning. The program was entirely supported by fees assessed on manufacturers or other persons contributing to environmental lead contamination. In upholding the fee, the court ruled that it was a regulatory fee imposed under the police power and not a special tax requiring a two-thirds vote under article XIII A, section 4, of the California Constitution. The court stated:

> From the viewpoint of general police power authority, we see no reason why statutes or ordinances calling on polluters or producers of contaminating products to help in mitigation or cleanup efforts should be deemed less "regulatory" in nature than the initial permit or licensing programs that allowed them to operate.
>
> Viewed as a mitigating effects measure, [the fee] is comparable in character to several police power measures imposing fees to defray the actual or anticipated adverse effects of various business operations.[197] [Emphasis added.]

Regulatory fees also help to prevent or mitigate pollution, as the Court said: "imposition of 'mitigating effects' fees in a substantial amount ... also 'regulates' future conduct by deterring further manufacture, distribution, or sale of dangerous products, and by stimulating research and development efforts to produce safer or alternative products."[198] The court also recognized that regulatory fees do not depend on government-conferred benefits or privileges.[199]

---

[194] *Mills v. County of Trinity* (1980) 108 Cal.App.3d 656, 662, in which a taxpayer challenged a county ordinance that imposed new and increased fees for county services in processing subdivision, zoning, and other land-use applications that had been adopted without a two-thirds affirmative vote of the county electors.

[195] *Freeman v. Contra Costa County Water Dist.* (1971) 18 Cal.App.3d 404, 408.

[196] *Sinclair Paint v. State Board of Equalization* (1997) 15 Cal.4th 866.

[197] *Sinclair Paint v. State Board of Equalization, supra,* 15 Cal.4th 866, 877.

[198] *Sinclair Paint v. State Board of Equalization, supra,* 15 Cal.4th 866, 875-877.

[199] *Id.* at page 875.

Although the holding in *Sinclair Paint* applied to a state-wide fee, the court's language (treating "ordinances" the same as "statutes") recognizes that local agencies also have police power to impose regulatory fees, and it relied on local government police power cases in its analysis.[200]

Other cases have defined a regulatory fee as an imposition that funds a regulatory program[201] or that distributes the collective cost of a regulation"[202] and is "enacted for purposes broader than the privilege to use a service or to obtain a permit. ...the regulatory program is for the protection of the health and safety of the public."[203] Courts will uphold regulatory fees if they do not exceed the reasonable cost of providing services necessary to the activity on which the fee is based and are not levied for an unrelated revenue purpose.

In upholding regulatory fees for environmental review by the California Department of Fish and Game, the court of appeal summarized the following rules on regulatory fees:

> A regulatory fee may be imposed under the police power when the fee constitutes an amount necessary to carry out the purposes and provisions of the regulation. [Citations omitted.] Such costs ... include all those incident to the issuance of the license or permit, investigation, inspection, administration, maintenance of a system of supervision and enforcement. [Citations omitted.] Regulatory fees are valid despite the absence of any perceived "benefit" accruing to the fee payers. [Citations omitted.] Legislators "need only apply sound judgment and consider 'probabilities according to the best honest viewpoint of informed officials' in determining the amount of the regulatory fee.[204] [Emphasis added.]

In *Tahoe Keys Property Owner's Assoc. v. State Water Resources Control Board*,[205] the court refused to issue a preliminary injunction against collecting a pollution mitigation fee of $4000 for each lot developed in the Tahoe Keys subdivision of Lake Tahoe. The fees were to be used for mitigation projects designed to achieve a net reduction in nutrients generated by the Tahoe Keys development. The court said: "on the face of the regulation, there appears to be a sufficient

[203] *Ibid.*

[204] *California Assn. of Prof. Scientists v. Dept. of Fish and Game, supra,* 79 Cal.App.4th 935, 945.

[205] *Tahoe Keys Property Owner's Assn. v. State Water Resources Control Board* (1993) 23 Cal.App.4th 1459.

nexus between the effect of the regulation and the objectives it was supposed to advance to support the regulatory scheme [mitigation of pollution in Lake Tahoe]."[206]

A variety of local agency regulatory fees have been upheld for various programs, including: processing subdivision, zoning, and other land-use applications,[207] art in public places,[208] remedying substandard housing,[209] recycling,[210] administrative hearings under a rent-control ordinance,[211] signage,[212] air pollution mitigation,[213] and replacing converted residential hotel units.[214] Fees on developers for environmental mitigation under the California Environmental Quality Act have also been upheld.[215]

Given the variety of examples where regulatory fees have been upheld, and the broad range of costs to which they may be applied (including those for 'administration'), the claimants have fee authority under the police power to impose fees for the permit activities that are a state-mandated new program or higher level of service. But a determination as to whether the claimants' fee authority is sufficient, within the meaning of Government Code section 17556, subdivision (d), to pay for the mandated activities and deny the test claim, cannot be made without analysis of the limitations on the fee authority imposed by Proposition 218.

Regulatory fee authority is limited by voter approval under Proposition 218: With some exceptions, local government fees or assessments that are incident to property ownership are subject to voter approval under article XIII D of the California Constitution, as added by Proposition 218 in 1996. Article XIII D defines a fee as "any levy other than an ad valorem tax, a special tax, or an assessment, imposed by an agency on a parcel or a person as an incident of property ownership, including a user fee or charge for a property-related service." It defines an assessment as "any levy or charge upon real property by an agency for a special benefit conferred upon the real property [and] includes, but is not limited to, "special assessment,' 'benefit assessment,' 'maintenance assessment,' and 'special assessment tax.'"

Among other procedures, new or increased property-related fees require a majority-vote of the affected property owners, or two-thirds registered voter approval, or weighted ballot approval by the affected property owners (art. XIII D, § 6, subd. (c)). Assessments must also be approved by owners of the affected parcels (art. XIII D, § 4, subd.(d)). Expressly exempt from voter

approval, however, are property-related fees for sewer, water, or refuse collection services (art. XIII D, § 6, subd. (c)).

In 2002, an appellate court in *Howard Jarvis Taxpayers Association v. City of Salinas, supra,* 98 Cal.App.4th 1351, found that a city's charges on developed parcels to fund stormwater management were property-related fees, and were not covered by Proposition 218's exemption for "sewer" or "water" services. This means that an election would be required to charge stormwater fees if they are imposed "as an incident of property ownership."

The issue of whether a local agency has sufficient fee authority for the mandated activities under Government Code section 17556, subdivision (d), in light of the voter approval requirement for fees under article XIII D (Proposition 218) is one of first impression for the Commission.

The Commission finds that a local agency does not have sufficient fee authority within the meaning of Government Code section 17556 if the fee or assessment is contingent on the outcome of an election by voters or property owners. The plain language of subdivision (d) of this section prohibits the Commission from finding that the permit imposes "costs mandated by the state" if "The local agency ... has the authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service." [Emphasis added.] Under Proposition 218, the local agency has no authority to impose the fee without the consent of the voters or property owners.

Additionally, it is possible that the local agency's voters or property owners may never adopt the proposed fee or assessment, but the local agency would still be required to comply with the state mandate. Denying reimbursement under these circumstances would violate the purpose of article XIII B, section 6, which is to "to preclude the state from shifting financial responsibility for carrying out governmental functions to local agencies, which are 'ill equipped' to assume increased financial responsibilities because of the taxing and spending limitations that articles XIII A and XIII B impose."[216]

In its January 2010 comments on the draft staff analysis, the State Board disagrees that "the requirement to subject new or increased fees to these voting or protest requirements strips the claimants of 'fee authority' within the meaning of Government Code section 17556, subdivision (d)." The State Board cites *Connell v. Superior Court,*[217] in which the water districts argued that they lacked "sufficient" fee authority because it was not economically feasible for them to levy fees that were sufficient to pay the mandated costs. The *Connell* court determined that "the plain language of the statute [Gov. Code, § 17556, subd. (d)] precludes reimbursement where the local agency has the authority, i.e., the right or the power, to levy fees sufficient to cover the costs of the state-mandated program."[218] The State Board equates the Proposition 218 voting requirement with the economic impracticability faced by the water districts in *Connell.*

The claimants disagree, citing a lack of authority that requires them to first submit the question of whether to impose a tax or fee to the voters and have them reject the proposition. According

---

[216] *County of San Diego, supra,* 15 Cal.4th 68, 81.

[217] *Connell v. Superior Court, supra,* 59 Cal.App.4th 382.

[218] *Id.* at page 401.

to the claimants, such a requirement would render all mandate claims moot, without first submitting the question of whether to impose a tax or assessment to a vote of the electorate.

The Commission disagrees with the State Board. The Proposition 218 election requirement is not like the economic hurdle to fees in *Connell*. Absent compliance with the Proposition 218 election and other procedures, there is no legal authority to impose or raise fees within the meaning of Government Code section 17556, subdivision (d). The voting requirement of Proposition 218 does not impose a mere practical or economic hurdle, as in *Connell*, but a legal and constitutional one. Without voter or property owner approval, the local agency lacks the "authority, i.e., the right or power, to levy fees sufficient to cover the costs of the state-mandated program."[219]

In fact, the fee at issue in the *Connell* case (Wat. Code, § 35470) was amended by the Legislature in 2007 to conform to Proposition 218. Specifically, the Water Code statute now requires compliance with "the "notice, protest, and hearing procedures in Section 53753 of the Government Code."[220] This Government Code statute implements Proposition 218.

For these reasons, the Commission finds that local agencies do not have fee authority that is sufficient within the meaning of Government Code section 17556, subdivision (d) to deny the test claim for those activities that would condition the fee or assessment on voter or property-owner approval under Proposition 218 (article XIII D). The Commission finds that Proposition 218 applies to all the activities in this test claim (except for the hydromodification and LID activities that are related to priority development projects discussed below) so that they impose "costs mandated by the state" (within the meaning of Gov. Code, § 17556, subd. (d)). To the extent that property-owner or voter-approved fees or assessments are imposed to pay for any of the permit activities found above to be a state-mandated new program or higher level of service, the fee or assessment would be identified as offsetting revenue in the parameters and guidelines to offset the claimant's costs in performing those activities.

Fees imposed for two of the test-claim activities, however, i.e., for the hydromodification management plan and low-impact development, would not be subject to voter approval under Proposition 218, as discussed below.

Fees as a condition of property development are not subject to Proposition 218: Proposition 218 does not apply to development fees, including those imposed on activities in part D of the permit. Article XIII D expressly states that it shall not be construed to "affect existing laws relating to the imposition of fees or charges as a condition of property development."[221]

Moreover, the California Supreme Court has ruled that fees imposed "as an incident to property ownership" are subject to Proposition 218, but fees that result from the owner's voluntary

---

[219] *Connell v. Superior Court, supra,* 59 Cal.App.4th 382, 401.

[220] Water Code section 35470, as amended by Statutes 2007, chapter 27. Section 53753 of the Government Code requires compliance with "the procedures and approval process set forth in Section 4 of Article XIII D of the California Constitution" for assessments.

[221] California Constitution, article XIII D, section 1, subdivision (b).

decision to seek a government benefit are not.[222] Thus, fees imposed as a result of the owner's voluntary decision to undertake a development project are not subject to Proposition 218, because they are not merely incident to property ownership.[223]

The final issue, therefore, is whether claimants may impose fees that are sufficient within the meaning of Government Code section 17556, subdivision (d), to pay for the activities in the permit related to development: the hydromodification management plan (part D.1.g), and low-impact development (part D.1.d.(7)&(8)). The Commission finds claimants have fee authority that is sufficient within the meaning of Government Code section 17556, subdivision (d), and that these activities do not impose costs mandated by the state and are not reimbursable.

Hydromodification management plan: Part D.1 of the permit describes the development planning component of the JURMP. Part D.1.g. requires each copermittee to collaborate with other copermittees to develop and implement and report on developing a hydromodification management plan (HMP) to manage increases in runoff discharge rates and durations from all priority development projects, as specified. As discussed above, the HMP is a state-mandated new program or higher level of service for only private priority development projects. The purpose of the HMP is:

> [T]o manage increases in runoff discharge rates and durations from all Priority Development Projects, where such rates and durations are likely to cause increased erosion of channel beds and banks, sediment pollutant generation, or other impacts to beneficial uses and stream habitat due to increased erosive force.

According to the permit, priority development projects are:

> a) all new Development Projects that fall under the project categories or locations listed in section D.1.d.(2), and b) those redevelopment projects that create, add or replace at least 5,000 square feet of impervious surfaces on an already developed site that falls under the project categories or locations listed in section D.1.d.(2).

---

[222] In *Richmond v. Shasta Community Services Dist.* (2004) 32 Cal.4th 409, the court held that water service fees were subject to Proposition 218, but that water connection fees were not. In *Apartment Assoc. of Los Angeles County v. City of Los Angeles, supra,* 24 Cal.4th 830, 839-840, the court held that apartment inspection fees were not subject to Proposition 218 because they were not imposed on property owners as such, but in their capacity as landlords.

[223] A recent report by the Office of the Legislative Analyst concurs with this conclusion: "Local governments finance stormwater clean–up services from revenues raised from a variety of fees and, less frequently, through taxes. Property owner fees for stormwater services typically require approval by two–thirds of the voters, or a majority of property owners. Developer fees and fees imposed on businesses that contribute to urban runoff, in contrast, are not restricted by Proposition 218 and may be approved by a vote of the governing body. Taxes for stormwater services require approval by two–thirds of the electorate." Office of the Legislative Analyst. *California's Water: An LAO Primer* (October 22, 2008) page 56. [Emphasis added.] See: <http://www.lao.ca.gov/2008/rsrc/water_primer/ water_primer_102208.pdf> as of October 22, 2008.

The priority development project categories listed in part D.1.d.(2) are:

(a) Housing subdivisions of 10 or more dwelling units. This category includes single-family homes, multi-family homes, condominiums, and apartments.

(b) Commercial developments greater than one acre. [as specified]

(c) Developments of heavy industry greater than one acre. This category includes, but is not limited to, manufacturing plants, food processing plants, metal working facilities, printing plants, and fleet storage areas (bus, truck, etc.).

(d) Automotive repair shops. This category is defined as a facility that is categorized in any one of the following Standard Industrial Classification (SIC) codes: 5013, 5014, 5541, 7532-7534, or 7536-7539.

(e) Restaurants. This category is defined as a facility that sells prepared foods and drinks for consumption, including stationary lunch counters and refreshment stands selling prepared foods and drinks for immediate consumption (SIC code 5812), where the land area for development is greater than 5,000 square feet. Restaurants where land development is less than 5,000 square feet shall meet all SUSMP requirements except ... hydromodification requirement D.1.g.

(f) All hillside development greater than 5,000 square feet. This category is defined as any development which creates 5,000 square feet of impervious surface which is located in an area with known erosive soil conditions, where the development will grade on any natural slope that is twenty-five percent or greater.

(g) Environmentally Sensitive Areas (ESAs). All development located within or directly adjacent to or discharging directly to an ESA (where discharges from the development or redevelopment will enter receiving waters within the ESA), which either creates 2,500 square feet of impervious surface on a proposed project site or increases the area of imperviousness of a proposed project site to 10% or more of its naturally occurring condition. "Directly adjacent" means situated within 200 feet of the ESA. "Discharging directly to" means outflow from a drainage conveyance system that is composed entirely of flows from the subject development or redevelopment site, and not commingled with flows from adjacent lands.

(h) Parking lots 5,000 square feet or more or with 15 or more parking spaces and potentially exposed to urban runoff. Parking lot is defined as a land area or facility for the temporary parking or storage of motor vehicles used personally, for business, or for commerce.

(i) Street, roads, highways, and freeways. This category includes any paved surface that is 5,000 square feet or greater used for the transportation of automobiles, trucks, motorcycles, and other vehicles.

(j) Retail Gasoline Outlets (RGOs). This category includes RGOs that meet the following criteria: (a) 5,000 square feet or more or (b) a projected Average Daily Traffic (ADT) of 100 or more vehicles per day.

The Commission finds that claimants have authority to impose fees for complying with the HMP activities in permit part D.1.g. for priority development projects, and their authority is sufficient within the meaning of Government Code section 17556, subdivision (d), in that the fee would not be subject to Proposition 218 voter approval. These activities involve collaborating with other copermittees to develop and implement a hydromodification management plan, and reporting on it. Because regulatory fees, pursuant to article XI, section 7 of the California Constitution, could be imposed on these priority development projects to pay for the costs of HMP, the Commission finds that permit part D.1.g. does not impose costs mandated by the state.

Low impact development: Low impact development is defined in Attachment C of the permit as a "storm water management and land development strategy that emphasizes conservation and the use of on-site natural features integrated with engineered, small-scale hydrologic controls to more closely reflect pre-development hydrologic functions." The purpose of LID is to "collectively minimize directly connected impervious areas and promote infiltration at Priority Development Projects." LID best management practices include draining a portion of impervious areas into pervious areas prior to discharge into the storm drain, and constructing portions of priority development projects with permeable surfaces.

Part D.1.d.(7) requires updating the Standard Urban Storm Water Mitigation Plans (SUSMP) to include low impact development requirements, as specified, including BMP requirements that meet or exceed the requirements of sections D.1.d.(4)[224] and D.1.d.(5).[225] Both D.1.d.(4) and D.1.d.(5) are the LID requirement implemented at priority development projects.

Part D.1.d.(8) requires permittees to develop and submit an updated model SUSMP that defines minimum low impact development and other BMP requirements to incorporate into the permittees local SUSMPs for application to priority development projects.

The Commission finds that claimants have authority to impose fees for complying with the LID activities in parts D.1.d.(7) and D.1.d.(8) of the permit, and their authority is sufficient within the meaning of Government Code section 17556, subdivision (d), in that they are not subject to Proposition 218 voter approval. Because regulatory fees, pursuant to article XI, section 7 of the California Constitution, could be imposed on the priority development projects to pay for the costs associated with LID, the Commission finds that permit parts D.1.d.(7) and D.1.d.(8) do not impose costs mandated by the state.

---

[224] Part D.1.d.(4) of the permit includes LID BMP requirements: "Each Copermittee shall require each Priority Development Project to implement LID BMPs which will collectively minimize directly connected impervious areas and promote infiltration at Priority Development Projects:" The Permit lists various LID site design BMPs that must be implemented at all Priority Development Projects, and other LID BMPs that must be implemented at all Priority Development Projects "where applicable and feasible."

[225] Part D.1.d.(5), regarding "Source control BMP Requirements" requires permittees to require each Priority Development Project to implement source control BMPs that must "Minimize storm water pollutants of concern in urban runoff" and include five other specific criteria.

2. Claimants also have fee authority regulated by the Mitigation Fee Act that is sufficient (within the meaning of Gov. Code, § 17556, subd. (d)) to pay for the hydromodification and low-impact development permit activities.

Development fees are also an exercise of the local police power under article XI, section 7 of the California Constitution.[226] A fee is considered a development fee if it is exacted in return for building permits or other governmental privileges so long as the amount of the fee bears a reasonable relation to the development's probable costs to the community and benefits to the developer.[227] Development fees are not restricted by Proposition 218 as discussed above.

Fees on developers as conditions of permit approval are governed by the Mitigation Fee Act (Gov. Code, §§ 66000-66025) which defines a "fee" as:

> [A] monetary exaction other than a tax or special assessment, whether established for a broad class of projects by legislation of general applicability or imposed on a specific project on an ad hoc basis, that is charged by a local agency to the applicant in connection with approval of a development project for the purpose of defraying all or a portion of the cost of public facilities related to the development project, but does not include ... fees for processing applications for governmental regulatory actions or approvals ...."[228] [Emphasis added.]

Public facilities are defined in the Act as "public improvements, public services, and community amenities."[229]

When a local agency imposes or increases a fee as a condition of development approval, it must do all of the following: (1) Identify the purpose of the fee; (2) Identify the use to which the fee is to be put. If the use is financing public facilities, the facilities shall be identified. (3) Determine how there is a reasonable relationship between the fee's use and the type of development project on which the fee is imposed; and, (4) Determine how there is a reasonable relationship between the need for the public facility and the type of development project upon which the fee is imposed. (Gov. Code, § 66001, subd. (a),)

The city or county must also determine whether there is a reasonable relationship between the specific amount of the fee and the costs of building, expanding, or upgrading public facilities. These determinations, known as nexus studies, are in writing and must be updated whenever new fees are imposed or existing fees are increased.[230] A fee imposed "as a condition of approval of

[227] *Sinclair Paint, supra,* 15 Cal.4th at page 875.

[228] Government Code section 66000, subdivision (b).

[229] Government Code section 66000, subdivision (d).

[230] Government Code section 66001, subdivision (b). The Act also requires cities to segregate fee revenues from other municipal funds and to refund them if they are not spent within five years. Any person may request an audit to determine whether any fee or charge levied by the city or county exceeds the amount reasonably necessary to cover the cost of the service provided (Gov. Code, §66006, subd. (d)). Under Government Code section 66014, fees charged for zoning changes, use permits, building permits, and similar processing fees are subject to the same nexus requirements as development fees. Lastly, under California Government Code

a proposed development or development project" is limited to the estimated reasonable cost of providing the service or facility.[231] This is in contrast to regulatory fees, which do not depend on government-conferred benefits or privileges.[232]

The Mitigation Fee Act defines a "development project" as "any project undertaken for the purpose of development ... includ[ing] a project involving the issuance of a permit for construction or reconstruction, but not a permit to operate." (Gov. Code, § 66000, subd. (a).)

A fee does not become a development fee simply because it is made in connection with a development project. Approval of the development must be conditioned on the payment of the fee. The Mitigation Fee Act is limited to situations where the fee or exaction is imposed as a condition of approval of a development project.[233]

Because local agencies may make development of priority development projects conditional on the payment of a fee, the Commission finds that the claimants have fee authority, governed by the Mitigation Fee Act, that is sufficient within the meaning of Government Code section 17556, subdivision (d), to pay for the hydromodification management plan and low-impact development activities. As discussed below, HMP and LID are "public facilities," which the Mitigation Fee Act defines as "public improvements, public services, and community amenities."[234]

The County of San Diego, in its January 2010 comments on the draft staff analysis, disagrees that it can impose a fee for the hydromodification plan (HMP) activities in the permit, stating that development and implementation of the HMP does not constitute a "public facility."

The Commission disagrees. The purpose of the permit is to prevent or abate pollution in waterways and beaches in San Diego County. More specifically, the purpose of the HMP is:

> [T]o manage increases in runoff discharge rates and durations from all Priority Development Projects, where such increased rates and durations are likely to cause increased erosion of channel beds and banks, sediment pollutant generation, or other impacts to beneficial uses and stream habitat due to increased erosive force.

All these stated purposes of the HMP provide public services or improvements, or community amenities within the meaning of the Act.[235] Moreover, the California Supreme Court stated that the Act "concerns itself with development fees; that is, fees imposed on development projects in

---

section 66020, agencies collecting fees must provide project applicants with a statement of the amounts and purposes of all fees at the time of fee imposition or project approval.

[231] Government Code section 66005, subdivision (a).

[232] *Sinclair Paint, supra,* 15 Cal.4th at page 875.

[233] *California Building Industry Ass'n v. San Joaquin Valley Air Pollution Control Dist.* (2009) 178 Cal.App.4th, 130, 131.

[234] Government Code section 66000, subdivision (d).

[235] Government Code section 66000, subdivision (d).

order to finance public improvements or programs that bear a 'reasonable relationship' to the development at issue."[236] The HMP is such a program.

Similarly, the purposes of LID are to "collectively minimize directly connected impervious areas and promote infiltration at Priority Development Projects" and to reduce stormwater runoff from priority development projects. These activities are public services or improvements that fall within the Act's definition of public facility.

The County also argues that under the Mitigation Fee Act, the local agency must determine that there is "a reasonable relationship between the fee's use and the type of development project on which the fee is imposed." The County argues that there is no reasonable relationship between the costs incurred by claimants to develop and implement the HMP and a particular development project on which the fee might be imposed.

Again, the Commission disagrees. Every time a developer proposes a project that falls within one of the "priority development project" categories listed above, and the developer has "not yet begun grading or construction activities at the time any updated SUSMP or hydromodification requirement commences," the local agency may impose a fee subject to the Mitigation Fee Act. The fee would be for the costs of developing and implementing the HMP to "manage increases in runoff discharge rates and durations from all Priority Development Projects [that] cause ... impacts to beneficial uses and stream habitat due to increased erosive force." The local agency may also impose a fee on priority development projects to comply with LID, the purpose of which is to "collectively minimize directly connected impervious areas and promote infiltration at Priority Development Projects" and to reduce stormwater runoff.

Finally, the County argues that assessing fees on a private developer who submits a project for approval to recover the costs of reviewing and approving a particular project is "specifically excluded from the definition of 'fee' under the Act." The definition of fee in the Act states that it "does not include ... fees for processing applications for governmental regulatory actions or approvals ...." (Gov. Code, § 66000, subd. (b).)

The Commission disagrees that an HMP fee would be for "processing applications for governmental regulatory actions or approvals." Rather, it would be for permit approval of priority development projects, and used to implement the HMP and LID requirements. In *Barratt American Inc. v. City of Rancho Cucamonga* (2005) 37 Cal.4th 685, 698, the California Supreme Court distinguished between regulatory fees that implement state and local building safety standards under the Health and Safety Code and developer fees subject to the Mitigation Fee Act by stating: "These regulatory fees fund a program that supervises how, not whether, a developer may build." Thus, the Commission finds that the developer fees may be imposed for permit approval for priority development projects if the permit is conditional on payment of the fee, and the fee is used for HMP and LID compliance.

In sum, the Commission finds that the claimants have fee authority governed by the Mitigation Fee Act that is sufficient (within the meaning of Gov. Code, § 17556, subd. (d), to pay for the following parts of the permit that are related to development: the hydromodification management plan (part D.1.g) and updating the Standard Urban Storm Water Mitigation Plans to include Low Impact Development requirements (part D.1.d.(7)&(8)).

---

[236] *Utility Cost Management v. Indian Wells Valley Water Dist.* (2001) 26 Cal.4th 1185, 1191.

3. Claimants' fee authority under Public Resources Code section 40059, or via benefit assessments, is not sufficient to pay for street sweeping, and Government Code section 17556, subdivision (d), does not apply to reporting on street sweeping.

Street sweeping is one test claim activity that is typically funded by local agency fees or assessments. Fees and assessments are both governed by Proposition 218.

The permit (in part D.3.a.5) requires a program to sweep "improved (possessing a curb and gutter) municipal roads, streets, highways, and paring facilities" at intervals depending on whether they are identified as consistently generating the highest volumes, moderate volumes, or low volumes of trash and/or debris. Reporting on street sweeping, such as curb-miles swept and tons of material collected, is also required (part J.3.a.(3)(c)x-xv).

Some local agencies collect fees for street sweeping for their refuse fund, such as the City of Pasadena.[237] Other local agencies, e.g., the County of Fresno[238] and the City of La Quinta,[239] collect an assessment for street sweeping as a street maintenance activity. Both approaches are discussed below in light of the procedural requirements under Proposition 218.

Fees for street sweeping as refuse collection/solid waste handling: Article XI, section 7 of the California Constitution states: "A county or city may make and enforce within its limits all local, police, sanitary or other ordinances and regulations not in conflict with general laws." Local agency fees for refuse collection are authorized by Public Resources Code section 40059, which states:

> (a) Notwithstanding any other provision of law, each county, city, district, or other local governmental agency may determine all of the following:
>
> (1) Aspects of solid waste handling which are of local concern, including, but not limited to, frequency of collection, means of collection and transportation, level of services, charges and fees, and nature, location, and extent of providing solid waste handling services. [Emphasis added.]

"Solid waste" is defined in Public Resources Code section 40191 as:

> [A]ll putrescible and nonputrescible solid, semisolid, and liquid wastes, including garbage, trash, refuse, paper, rubbish, ashes, industrial wastes, demolition and construction wastes, abandoned vehicles and parts thereof, discarded home and industrial appliances, dewatered, treated, or chemically fixed sewage sludge

---

[237] City of Pasadena, Agenda Report, Resolution Nos. 8942 and 8943, April 27, 2009, "Public Hearing: Amendment to the General Fee Schedule to Increase the Residential Refuse Collection Fees and Solid Waste Franchise Fees." One of the findings in the resolution is: "Whereas, street sweeping is a refuse collection service involving solely the collection, removal and disposal of solid waste from public rights of way, and is, therefore, properly allocated to the Refuse Fund."

[238] County of Fresno, Resolution Nos. 8942 and 8943, adopted January 15, 2008.

[239] City of La Quinta, Resolution No. 2009-035, adopted May 5, 2009.

which is not hazardous waste, manure, vegetable or animal solid and semisolid wastes and other discarded solid and semisolid wastes.[240]

"Solid waste handling" is defined in Public Resources Code section 40195 as "the collection, transportation, storage, transfer, or processing of solid wastes." Given the nature of material swept from city streets, street sweeping falls under the rubric of 'solid waste handling.'

Under Proposition 218, "refuse collection" is expressly exempted from the voter-approval requirement (article XIII D, § 6, subd. (c).). Although "refuse collection" has no definition in article XIII D, the plain meaning of refuse[241] collection is the same as solid waste handling, as the dictionary definition of "refuse" and the statutory definition of "solid waste" both refer to rubbish and trash as synonyms. Refuse is collected via solid waste handling.

To impose or increase refuse collection fees, the local agency must provide mailed written notice to each parcel owner on which the fee will be imposed, and conduct a public hearing not less than 45 days after mailing the notice. If written protests against the proposed fee are presented by a majority of the parcel owners, the local agency may not impose or increase the fee (article XIII D, § 6, subd. (a)(2)). In addition, revenues are: (1) not to exceed the funds required to provide the service, (2) shall not be used for any other purpose than to provide the property-related service, and the amount of the fee on a parcel shall not exceed the proportional cost of the service attributable to the parcel. And the service must be actually used by or immediately available to the property owner (article XIII D, § 6, subd. (b)).

Government Code, section 17556, subdivision (d), does not apply to street sweeping because the fee is contingent on the outcome of a written protest by a majority of the parcel owners. The plain language of subdivision (d) of this section prohibits the Commission from finding that the permit imposes "costs mandated by the state" if "The local agency ... has the authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service." [Emphasis added.] Under Proposition 218, the local agency has no authority to impose the fee if it is protested by a majority of parcel owners.

Additionally, it is possible that a majority of land owners in the local agency may never allow the proposed fee, but the local agency would still be required to comply with the state mandate. This would violate the purpose of article XIII B, section 6, which is to "to preclude the state from shifting financial responsibility for carrying out governmental functions to local agencies, which are 'ill equipped' to assume increased financial responsibilities because of the taxing and spending limitations that articles XIII A and XIII B impose."[242]

Thus, the Commission finds that fee authority under Public Resources Code section 40059 is not sufficient to pay for the mandated program or increased level of service in permit parts D.3.a.5 (street sweeping). Therefore, the Commission finds that street sweeping imposes costs mandated by the state and is reimbursable.

---

[240] This definition also excludes hazardous waste, radioactive waste and medical waste, as defined.

[241] "Refuse" is defined as " Items or material discarded or rejected as useless or worthless; trash or rubbish." <http://dictionary.reference.com/browse/refuse> as of November 23, 2009.

[242] *County of San Diego, supra,* 15 Cal.4th 68, 81.

Any proposed fees that are not blocked by a majority of parcel owners for street sweeping must be identified as offsetting revenue in the parameters and guidelines.

Fees for street sweeping reports: Proposition 218 does not contain an express exemption on voter approval for reporting on street sweeping, only for "refuse collection." Moreover, Proposition 218 (art. XIII D, § 6, subd. (b)(4)) states: "No fee or charge may be imposed for a service unless that service is actually used by, or immediately available to, the owner of the property in question." The permit does not require the street sweeping reports be available to property owners, only that the reports be submitted to the Regional Board. For these reasons, the Commission finds that Government Code section 17556, subdivision (d), does not apply to reporting on street sweeping, so that part J.3.a.(3)(c)x-xv of the permit imposes costs mandated by the state and is reimbursable.

Assessments for street operation and maintenance: As mentioned above, some local agencies collect an assessment for street sweeping, e.g., the County of Fresno[243] and the City of La Quinta.[244] Assessments are defined as "any levy or charge upon real property by an agency for a special benefit conferred upon the real property. 'Assessment' includes, but is not limited to, 'special assessment,' 'benefit assessment,' 'maintenance assessment' and 'special assessment tax.'" (article XIII D, § 2, subd. (b).) The terms "maintenance and operation" of "streets" and "drainage systems," although used in article XIII D, are not defined in it. The plain meaning of maintenance of streets and drainage systems, however, would include street sweeping because "maintenance" means "the work of keeping something in proper condition; upkeep."[245] Clean streets are used not only for transportation, but for conveying storm water to storm drains.

The Supreme Court defined special assessments as follows:

> A special assessment is a "'compulsory charge placed by the state upon real property within a pre-determined district, made under express legislative authority for defraying in whole or in part the expense of a permanent public improvement therein....' " [Citation.]' [Citation.] In this regard, a special assessment is 'levied against real property particularly and directly benefited by a local improvement in order to pay the cost of that improvement.' [Citation.] 'The rationale of special assessment[s] is that the assessed property has received a special benefit over and above that received by the general public. The general public should not be required to pay for special benefits for the few, and the few specially benefited should not be subsidized by the general public.[246]

The Supreme Court summarized the constitutional procedures for creating an assessment district.

> Under Proposition 218's procedures, local agencies must give the record owners of all assessed parcels written notice of the proposed assessment, a voting ballot, and a statement disclosing that a majority protest will prevent the assessment's

---

[243] County of Fresno, Resolution Nos. 8942 and 8943, adopted January 15, 2008.

[244] City of La Quinta, Resolution No. 2009-035, adopted May 5, 2009.

[245] <http://dictionary.reference.com/browse/maintenance> as of December 7, 2009.

[246] *Silicon Valley Taxpayers Ass'n. v. Santa Clara Open Space Authority* (2008) 44 Cal.4th 431, 442.

> passage. (Art. XIII D, § 4, subds. (c), (d).) The proposed assessment must be "supported by a detailed engineer's report." (Art. XIII D, § 4, subd. (b).) At a noticed public hearing, the agencies must consider all protests, and they "shall not impose an assessment if there is a majority protest." (Art. XIII D, § 4, subd. (e).) Voting must be weighted "according to the proportional financial obligation of the affected property." (*Ibid.*)[247]

Proposition 218 dictated that as of July 1, 1997, existing assessments were to comply with its procedural requirements, but an exception was created for "any assessment imposed exclusively to finance the capital costs or maintenance and operation expenses for sidewalks, streets, sewers, water, flood control, drainage systems or vector control." (art. XIII D, § 5, subd. (a), emphasis added.) This means that the procedural requirements of Proposition 218 apply only to increases in assessments for street sweeping that were imposed after Proposition 218 was enacted.[248]

Absent any evidence in the record that assessments imposed before July 1, 1997 for street sweeping are sufficient to pay for the street sweeping specified in part D.3.a. of the permit, the Commission cannot find that assessments imposed before that date would pay for the costs mandated by the state for street sweeping within the meaning of Government Code section 17556, subdivision (d).

Should a local agency determine that its existing assessments are not sufficient to pay for the mandated street sweeping, it can raise assessments by following the article XIII D (Proposition 218) procedures detailed above. Those procedures, however, include an election and a protest, both of which were found above to extinguish local fee authority sufficient to pay for the mandate and to block the application of Government Code section 17556, subdivision (d).

Thus, to the extent that the claimants impose or increase assessments to pay for the street sweeping, they would be identified as offsetting revenue in the parameters and guidelines.

4. Claimants' fee or assessment authority under Health and Safety Code section 5471 is not sufficient to pay for conveyance-system cleaning, and Government Code section 17556, subdivision (d), does not apply to reporting on conveyance-system cleaning

Conveyance-system cleaning for operation and maintenance of the MS4 and MS4 facilities (catch basins, storm drain inlets, open channels, etc.) is required in the permit (part D.3.a.(3)). Specifically, claimants are required to clean in a timely manner "Any catch basin or storm drain inlet that has accumulated trash and debris greater than 33% of design capacity.... Any MS4 facility that is designed to be self cleaning shall be cleaned of any accumulated trash and debris immediately. Open channels shall be cleaned of observed anthropogenic litter in a timely manner." Claimants are also required to report on the number of catch basins and inlets inspected and cleaned (J.3.a.(3)(c)iv-viii).

---

[247] *Silicon Valley Taxpayers Ass'n v. Santa Clara Open Space Authority, supra,* 44 Cal.4th 431, 438.

[248] See also *Howard Jarvis Taxpayers Ass'n. v. City of Riverside* (1999) 73 Cal.App.4th, 679, holding that a preexisting streetlighting assessment is 'exempt under Proposition 218.'

Local agencies have fee authority under Health and Safety Code section 5471 to charge fees for storm drainage maintenance and operation as follows:

> [A]ny entity[249] shall have power, by an ordinance approved by a two-thirds vote of the members of the legislative body thereof, to prescribe, revise and collect, fees, tolls, rates, rentals, or other charges for services and facilities furnished by it, either within or without its territorial limits, in connection with its water, sanitation, storm drainage, or sewerage system. ... Revenues derived under the provisions in this section, shall be used only for the acquisition, construction, reconstruction, maintenance, and operation of water systems and sanitation, storm drainage, or sewerage facilities .... [Emphasis added.]

This plain meaning of this statutory fee for storm drain operation and maintenance would include conveyance-system cleaning as required in the permit (part D.3.a.(3)(iii)), which the permit specifies as cleaning "catch basins or storm drain inlets." This cleaning is within the operation and maintenance of the storm drains.

The statutory fee, adopted in 1953, is now subject to the procedural requirements of Proposition 218. As it states in subdivision (d) of Health and Safety Code section 5471:

> If the procedures set forth in this section as it read at the time a standby charge was established were followed, the entity may, by ordinance adopted by a two-thirds vote of the members of the legislative body thereof, continue the charge pursuant to this section in successive years at the same rate. If new, increased, or extended assessments are proposed, the entity shall comply with the notice, protest, and hearing procedures in Section 53753 of the Government Code [the codification of the Proposition 218 procedural requirements].

Proposition 218 does not exempt from voting requirements fees for storm drain maintenance like it does for "water, sewer, and refuse collection" in section 6 (c) of article XIII D. In fact, in *Howard Jarvis Taxpayers Ass'n. v. City of Salinas* (2002) 98 Cal.App.4th 1351, the court invalidated a local storm drain fee and held that the exemption from an election for sewer fees does not include storm drainage fees. As to new or increased assessments imposed for storm drainage operation and maintenance, they would be subject to the same election requirement of Proposition 218 (art. XIII D, § 4, subd. (e)) as for other assessments.

Therefore, the Commission finds that local agencies do not have sufficient authority under section 5471 of the Health and Safety Code to impose fees or assessments (under Gov. Code § 17556, subd. (d)) for conveyance system cleaning as required by part D.3.a.(3)(iii) of the permit or reporting as required by part J.3.a.(3)(c)iv-viii of the permit.

Fees or assessments for conveyance-system reports: The Commission also finds that local agencies do not have fee or assessment authority for reporting on conveyance-system (in part J.3.a.(3)(c)iv-viii) on the number of catch basins and inlets inspected and cleaned. Fees or

---

[249] Entity is defined to include "counties, cities and counties, cities, sanitary districts, county sanitation districts, sewer maintenance districts, and other public corporations and districts authorized to acquire, construct, maintain and operate sanitary sewers and sewerage systems." Health and Safety Code section 5470, subdivision (e).

assessments imposed for this reporting would be subject to a vote of parcel owners. Moreover, Proposition 218 (art. XIII D, § 6, subd. (b)(4)) states: "No fee or charge may be imposed for a service unless that service is actually used by, or immediately available to, the owner of the property in question." The permit does not require the reports on conveyance- system cleaning be available to property owners, only that the reports be submitted to the Regional Board. For these reasons, the Commission finds that Government Code section 17556, subdivision (d), does not apply to reporting on conveyance-system cleaning, and that part J.3.a.(3)(c)iv-viii of the permit imposes costs mandated by the state within the meaning of Government Code section 17556, subdivision (d), and is reimbursable.

Any revenue from existing assessments, or assessments obtained after voter approval, for conveyance system cleaning would be included in the parameters and guidelines as offsets to reimbursement.

C. Claimants have potential fee authority and offsetting revenue if they comply with the requirements of Senate Bill 310 (Stats. 2009, ch. 577)

Effective January 2010, Senate Bill 310 (Stats. 2009, ch. 577) was enacted to add Water Code provisions authorizing local agencies to adopt watershed improvement plans.

SB 310 is intended to establish multiple watershed-based pilot programs.[250] The bill creates the California Watershed Improvement Act of 2009 (commencing with Wat. Code, § 16000). Pursuant to Water Code section 16101, each county, city, or special district that is a copermittee under a NPDES permit ***may*** develop either individually or jointly a watershed improvement plan. The process for developing a watershed improvement plan is to be conducted consistent with all applicable open meeting laws. Each county, city, or special district, or combination thereof, is to notify the appropriate Regional Board of its intention to develop a watershed improvement plan.

The watershed improvement plan is voluntary – it is not necessarily the same watershed activities required by the permit in the test claim.

SB 310 includes the following local agency fee authority:

> 16103. (a) In addition to making use of other financing mechanisms that are available to local agencies to fund watershed improvement plans and plan measures and facilities, a county, city, special district, or combination thereof may impose fees on activities that generate or contribute to runoff, stormwater, or surface runoff pollution, to pay the costs of the preparation of a watershed improvement plan, and the implementation of a watershed improvement plan if all of the following requirements are met:
>
> (1) The Regional Board has approved the watershed improvement plan.
>
> (2) The entity or entities that develop the watershed improvement plan make a finding, supported by substantial evidence, that the fee is reasonably related to the cost of mitigating the actual or anticipated past, present, or future adverse effects of the activities of the feepayer. "Activities," for the purposes of this paragraph,

[250] Senate Rules Committee, Office of Senate Floor Analyses, Analysis of Senate Bill 310 (2009-2010 Reg. Sess.) as amended August 31, 2009, page 4.

means the operations and existing structures and improvements subject to regulation under an NPDES permit for municipal separate storm sewer systems.

(3) The fee is not imposed solely as an incident of property ownership.

(b) A county, city, special district, or combination thereof may plan, design, implement, construct, operate, and maintain controls and facilities to improve water quality, including controls and facilities related to the infiltration, retention and reuse, diversion, interception, filtration, or collection of surface runoff, including urban runoff, stormwater, and other forms of runoff, the treatment of pollutants in runoff or other waters subject to water quality regulatory requirements, the return of diverted and treated waters to receiving water bodies, the enhance-ment of beneficial uses of waters of the state, or the beneficial use or reuse of diverted waters.

(c) The fees authorized under subdivision (a) may be imposed as user-based or regulatory fees consistent with this chapter.

However, Water Code section 16102, subdivision (d), states: "A regional board may, if it deems appropriate, utilize provisions of the approved watershed improvement plan (approved under this new act) to promote compliance with one of more of the regional board's regulatory plans or programs." Subdivision (e) states "Unless a regional board incorporates the provisions of the watershed improvement plan into waste discharge requirements issued to a permittee, the implementation of a watershed improvement plan by a permittee shall not be deemed to be in compliance with those waste discharge requirements."

Therefore, the Commission finds that Water Code section 16103 may only provide offsetting revenue for this test claim to the extent that a local agency voluntarily complies with Water Code section 16101, the Regional Board approves the plan and incorporates it into the test claim permit to satisfy the requirements of the permit.

D. The holding in *San Diego Unified School Dist. v. Commission on State Mandates* does not apply to the test claim activities.

The State Board's January 2010 comments on the draft staff analysis cite *San Diego Unified v. Commission on States Mandates,*[251] arguing that the permit in this test claim, like the pupil expulsion hearings, are intended to implement a federal law, and has costs that are, in context, de minimis. In *San Diego Unified School District,* the California Supreme Court held costs for hearing procedures and notice are not reimbursable for pupil expulsions that are discretionary under state law. The court found that these hearing procedures are incidental to federal due process requirements and the costs are de minimis, and thus not reimbursable.

The Commission disagrees. The permit in this case does not meet the criteria in the *San Diego Unified School District* case. Unlike the discretionary expulsions in *San Diego Unified School District,* the permit imposes state-mandated activities. And although the permit is intended to implement the federal Clean Water Act, there is no evidence or indication that its costs are de minimis. Claimants submitted declarations of costs totaling over $10 million for fiscal year

[251] *San Diego Unified School Dist., supra,* 33 Cal.4th 859.

2007-2008 alone.[252] Claimants further submitted documentation of 2008-2009 costs of over $18 million. The State Board offers no evidence or argument to refute these cost declarations, so the Commission finds that permit activities (except for LID and HMP discussed above) impose costs mandated by the state that are not de minimis.

Summary: To recap fee authority under issue 2, the Commission finds that, due to the fee authority under the police power generally, and as governed by the Mitigation Fee Act, there are no "costs mandated by the state" within the meaning of Government Code sections 17514 and 17556 for the following parts of the permit that have a reasonable relationship to property development:

- Hydromodification Management Plan (part D.1.g);
- Updating the Standard Urban Storm Water Mitigation Plans to include Low Impact Development requirements (parts D.1.d.(7) & D.1.d.(8));

The Commission also finds that the claimants' fee or assessment authority is not sufficient within the meaning of Government Code section 17556, subdivision (d), and that there are costs mandated by the state within the meaning of Government Code section 17514 for all the activities in the permit, including:

- The fee authority in Public Resources Code section 40059 for the permit activities in parts D.3.a.5 (street sweeping) and J.3.a.(3)(c)x-xv (reporting on street sweeping);
- The fee authority in Health and Safety Code section 5471, for the permit activities in part D.3.a.(3)(iii) (conveyance system cleaning) or part J.3.a.(3)(c)iv-viii (reporting on conveyance system cleaning) of the permit.

Further, the Commission finds the following would be identified as offsetting revenue in the parameters and guidelines for this test claim:

- Any fees or assessments approved by the voters or property owners for any activities in the permit, including those authorized by Public Resources Code section 40059 for street sweeping or reporting on street sweeping, and those authorize by Health and Safety Code section 5471, for conveyance-system cleaning, or reporting on conveyance-system cleaning;
- Any proposed fees that are not subject to a written protest by a majority of parcel owners and that are imposed for street sweeping.
- Effective January 1, 2010, fees imposed pursuant to Water Code section 16103 only to the extent that a local agency voluntarily complies with Water Code section 16101 by developing a watershed improvement plan pursuant to Statutes 2009, chapter 577, and the Regional Board approves the plan and incorporates it into the test claim permit to satisfy the requirements of the permit.

[252] The County and city declarations are attached to the test claim.

CONCLUSION

For the reasons discussed above, the Commission finds that parts of 2007 permit issued by the California Regional Quality Control Board, San Diego Region (Order No. R9-2007-001, NPDES No. CAS0108758), are a reimbursable state-mandated program within the meaning of article XIII B, section 6 of the California Constitution for the claimants to perform the following activities.

The term of the permit is from January 24, 2007 – January 23, 2012.[253] The permit terms and conditions are automatically continued, however, pending issuance of a new permit if all requirements of the federal NPDES regulations on the continuation of expired permits are complied with.[254]

I. Jurisdictional Urban Runoff Management Program and Reporting (parts D & J)

Street sweeping (part D.3.a.(5)): Sweeping of Municipal Areas

> Each Copermittee shall implement a program to sweep improved (possessing a curb and gutter) municipal roads, streets, highways, and parking facilities. The program shall include the following measures:
>
> (a) Roads, streets, highways, and parking facilities identified as consistently generating the highest volumes of trash and/or debris shall be swept at least two times per month.
>
> (b) Roads, streets, highways, and parking facilities identified as consistently generating moderate volumes of trash and/or debris shall be swept at least monthly.
>
> (c) Roads, streets, highways, and parking facilities identified as generating low volumes of trash and/or debris shall be swept as necessary, but no less than once per year.

Street sweeping reporting (J.3.a.(3)(c)x-xv): Report annually on the following:

---

[253] According to attachment B of the permit: "*Effective Date.* This Order shall become effective on the date of its adoption provided the USEPA has no objection...." "(q) *Expiration.* This Order expires five years after adoption."

[254] According to attachment B of the permit: "(r) *Continuation of Expired Order* [23 CCR 2235.4]. After this Order expires, the terms and conditions of this Order are automatically continued pending issuance of a new permit if all requirements of the federal NPDES regulations on the continuation of expired permits (40 CFR 122.6) are complied with."

x. Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating the highest volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.
xi. Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating moderate volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.
xii. Identification of the total distance of curb-miles of improved roads, streets, and highways identified as consistently generating low volumes of trash and/or debris, as well as the frequency of sweeping conducted for such roads, streets, and highways.
xiii. Identification of the total distance of curb-miles swept.
xiv. Identification of the number of municipal parking lots, the number of municipal parking lots swept, and the frequency of sweeping.
xv. Amount of material (tons) collected from street and parking lot sweeping.

Conveyance system cleaning (D.3.a.(3)):

(a) Implement a schedule of inspection and maintenance activities to verify proper operation of all municipal structural treatment controls designed to reduce pollutant discharges to or from its MS4s and related drainage structures.

(b) Implement a schedule of maintenance activities for the MS4 and MS4 facilities (catch basins, storm drain inlets, open channels, etc). The maintenance activities shall, at a minimum, include: [¶]...[¶]

iii. Any catch basin or storm drain inlet that has accumulated trash and debris greater than 33% of design capacity shall be cleaned in a timely manner. Any MS4 facility that is designed to be self cleaning shall be cleaned of any accumulated trash and debris immediately. Open channels shall be cleaned of observed anthropogenic litter in a timely manner.

Conveyance system cleaning reporting (J.3.a.(3)(c)(iv)-(viii)): Update and revise the copermittees' JURMPs to contain:

iv. Identification of the total number of catch basins and inlets, the number of catch basins and inlets inspected, the number of catch basins and inlets found with accumulated waste exceeding cleaning criteria, and the number of catch basins and inlets cleaned.

v. Identification of the total distance (miles) of the MS4, the distance of the MS4 inspected, the distance of the MS4 found with accumulated waste exceeding cleaning criteria, and the distance of the MS4 cleaned.

vi. Identification of the total distance (miles) of open channels, the distance of the open channels inspected, the distance of the open channels found with anthropogenic litter, and the distance of open channels cleaned.

vii. Amount of waste and litter (tons) removed from catch basins, inlets, the MS4, and open channels, by category.

viii. Identification of any MS4 facility found to require inspection less than annually following two years of inspection, including justification for the finding.

Educational component (part D.5): To implement an education program using all media as appropriate to (1) measurably increase the knowledge of the target communities regarding MS4s, impacts of urban runoff on receiving waters, and potential BMP solutions for the target audience; and (2) to measurably change the behavior of target communities and thereby reduce pollutant releases to MS4s and the environment. At a minimum, the education program shall meet the requirements of this section and address the following target communities:

- Municipal Departments and Personnel
- Construction Site Owners and Developers
- Industrial Owners and Operators
- Commercial Owners and Operators
- Residential Community, General Public, and School Children

a.(1) Each Copermittee shall educate each target community on the following topics where appropriate: (i) Erosion prevention, (ii) Non storm water discharge prohibitions, and (iii) BMP types: facility or activity specific, LID,-source control, and treatment control.

a.(2) Copermittee educational programs shall emphasize underserved target audiences, high-risk behaviors, and "allowable" behaviors and discharges, including various ethnic and socioeconomic groups and mobile sources.

b. SPECIFIC REQUIREMENTS

(1) Municipal Departments and Personnel Education

(a) Municipal Development Planning – Each Copermittee shall implement an education program so that its Planning Boards and Elected Officials, if applicable, have an understanding of:

i. Federal, state, and local water quality laws and regulations applicable to Development Projects;
ii. The connection between land use decisions and short and long-term water quality impacts (i.e., impacts from land development and urbanization);
iii. How to integrate LID BMP requirements into the local regulatory program(s) and requirements; and
iv. Methods of minimizing impacts to receiving water quality resulting from development, including:

[1] Storm water management plan development and review;
[2] Methods to control downstream erosion impacts;
[3] Identification of pollutants of concern;
[4] LID BMP techniques;
[5] Source control BMPs; and
[6] Selection of the most effective treatment control BMPs for the pollutants of concern.

(b) Municipal Construction Activities – Each Copermittee shall implement an education program that includes annual training prior to the rainy season so that its construction, building, code enforcement, and grading review staffs, inspectors, and other responsible construction staff have, at a minimum, an understanding of the following topics, as appropriate for the target audience:

iii. Proper implementation of erosion and sediment control and other BMPs to minimize the impacts to receiving water quality resulting from construction activities.
iv. The Copermittee's inspection, plan review, and enforcement policies and procedures to verify consistent application.
v. Current advancements in BMP technologies.
vi. SUSMP Requirements including treatment options, LID BMPs, source control, and applicable tracking mechanisms.

(c) Municipal Industrial/Commercial Activities - Each Copermittee shall train staff responsible for conducting storm water compliance inspections and enforcement of industrial and commercial facilities at least once a year [except for staff who solely inspect new development]. Training shall cover inspection and enforcement procedures, BMP implementation, and reviewing monitoring data.

(d) Municipal Other Activities – Each Copermittee shall implement an education program so that municipal personnel and contractors performing activities which generate pollutants have an understanding of the activity specific BMPs for each activity to be performed.

(2) New Development and Construction Education

As early in the planning and development process as possible and all through the permitting and construction process, each Copermittee shall implement a program to educate project applicants, developers, contractors, property owners, community planning groups, and other responsible parties. The education program shall provide an understanding of the topics listed in Sections D.5.b.(1)(a) and D.5.b.(1)(b) above, as appropriate for the audience being educated. The education program shall also educate project applicants, developers, contractors, property owners, and other responsible parties on the importance of educating all construction workers in the field about stormwater issues and BMPs through formal or informal training.

(3) Residential, General Public, and School Children Education

Each Copermittee shall collaboratively conduct or participate in development and implementation of a plan to educate residential, general public, and school children target communities. The plan shall evaluate use of mass media, mailers, door hangers, booths at public events, classroom education, field trips, hands-on experiences, or other educational methods.

II. Watershed Urban Runoff Management Program (parts E.2.f & E.2.g.)

Each Copermittee shall collaborate with other Copermittees within its WMA(s) [Watershed Management Area] as in Table 4 [of the permit] to develop and

implement an updated Watershed Urban Runoff Management Program for each watershed. Each updated Watershed Urban Runoff Management Program shall meet the requirements of section E of this Order, reduce the discharge of pollutants from the MS4 to the MEP, and prevent urban runoff discharges from the MS4 from causing or contributing to a violation of water quality standards. At a minimum, each Watershed Urban Runoff Management Program shall include the elements described below: [¶]...[¶]

[Paragraphs (a) through (e) were not part of the test claim.]

f. Watershed Activities

(1) The Watershed Copermittees shall identify and implement Watershed Activities that address the high priority water quality problems in the WMA. Watershed Activities shall include both Watershed Water Quality Activities and Watershed Education Activities. These activities may be implemented individually or collectively, and may be implemented at the regional, watershed, or jurisdictional level.

(a) Watershed Water Quality Activities are activities other than education that address the high priority water quality problems in the WMA. A Watershed Water Quality Activity implemented on a jurisdictional basis must be organized and implemented to target a watershed's high priority water quality problems or must exceed the baseline jurisdictional requirements of section D of this Order.

(b) Watershed Education Activities are outreach and training activities that address high priority water quality problems in the WMA.

(2) A Watershed Activities List shall be submitted with each updated Watershed Urban Runoff Management Plan (WURMP) and updated annually thereafter. The Watershed Activities List shall include both Watershed Water Quality Activities and Watershed Education Activities, along with a description of how each activity was selected, and how all of the activities on the list will collectively abate sources and reduce pollutant discharges causing the identified high priority water quality problems in the WMA.

(3) Each activity on the Watershed Activities List shall include the following information:

(a) A description of the activity;

(b) A time schedule for implementation of the activity, including key milestones;

(c) An identification of the specific responsibilities of Watershed Copermittees in completing the activity;

(d) A description of how the activity will address the identified high priority water quality problem(s) of the watershed;

(e) A description of how the activity is consistent with the collective watershed strategy;

(f) A description of the expected benefits of implementing the activity; and

(g) A description of how implementation effectiveness will be measured.

(4) Each Watershed Copermittee shall implement identified Watershed Activities pursuant to established schedules. For each Permit year, no less than two Watershed Water Quality Activities and two Watershed Education Activities shall be in an active implementation phase. A Watershed Water Quality Activity is in an active implementation phase when significant pollutant load reductions, source abatement, or other quantifiable benefits to discharge or receiving water quality can reasonably be established in relation to the watershed's high priority water quality problem(s). Watershed Water Quality Activities that are capital projects are in active implementation for the first year of implementation only. A Watershed Education Activity is in an active implementation phase when changes in attitudes, knowledge, awareness, or behavior can reasonably be established in target audiences.

g. Watershed Copermittees shall collaborate to develop and implement the Watershed Urban Runoff Management Programs. Watershed Copermittee collaboration shall include frequent regularly scheduled meetings.

III. Regional Urban Runoff Management Program (parts F.1, F.2 & F.3)

The Regional Urban Runoff Management Program shall, at a minimum:

Each copermittee shall collaborate with the other Copermittees to develop, implement, and update as necessary a Regional Urban Runoff Management Program that meets the requirements of section F of the permit, reduces the discharge of pollutants from the MS4 to the MEP, and prevents urban runoff discharges from the MS4 from causing or contributing to a violation of water quality standards. The Regional Urban Runoff Management Program shall, at a minimum: [¶]...[¶]

1. Develop and implement a Regional Residential Education Program. The program shall include:

a. Pollutant specific education which focuses educational efforts on bacteria, nutrients, sediment, pesticides, and trash. If a different pollutant is determined to be more critical for the education program, the pollutant can be substituted for one of these pollutants.

b. Education efforts focused on the specific residential sources of the pollutants listed in section F.1.a.

2. Develop the standardized fiscal analysis method required in section G of the permit, and,

3. Facilitate the assessment of the effectiveness of jurisdictional, watershed, and regional programs.

IV. Program Effectiveness Assessment (parts I.1 & I.2)

1. Jurisdictional

a. As part of its Jurisdictional Urban Runoff Management Program, each Copermittee shall annually assess the effectiveness of its Jurisdictional Urban Runoff Management Program implementation. At a minimum, the annual effectiveness assessment shall:

(1) Specifically assess the effectiveness of each of the following:

(a) Each significant jurisdictional activity/BMP or type of jurisdictional activity/BMP implemented;

(b) Implementation of each major component of the Jurisdictional Urban Runoff Management Program (Development Planning, Construction, Municipal, Industrial/Commercial, Residential, Illicit Discharge[255] Detection and Elimination, and Education); and

(c) Implementation of the Jurisdictional Urban Runoff Management Program as a whole.

(2) Identify and utilize measurable targeted outcomes, assessment measures, and assessment methods for each of the items listed in section I.1.a.(1) above.

(3) Utilize outcome levels 1-6[256] to assess the effectiveness of each of the items listed in section I.1.a.(1) above, where applicable and feasible.

---

[255] Illicit discharge, as defined in Attachment C of the permit, is "any discharge to the MS4 that is not composed entirely of storm water except discharges pursuant to a NPDES permit and discharges resulting from firefighting activities [40 C.F.R. 122.26 (b)(2)]."

[256] Effectiveness assessment outcome levels are defined in Attachment C of the permit as follows: Effectiveness assessment outcome level 1 – Compliance with Activity-based Permit Requirements – Level 1 outcomes are those directly related to the implementation of specific activities prescribed by this Order or established pursuant to it. Effectiveness assessment outcome level 2 – Changes in Attitudes, Knowledge, and Awareness – Level 2 outcomes are measured as increases in knowledge and awareness among target audiences such as residents, business, and municipal employees. Effectiveness assessment outcome level 3 – Behavioral Changes and BMP Implementation – Level 3 outcomes measure the effectiveness of activities in affecting behavioral change and BMP implementation. Effectiveness assessment outcome level 4 – Load Reductions – Level 4 outcomes measure load reductions which quantify changes in the amounts of pollutants associated with specific sources before and after a BMP or other control measure is employed. Effectiveness assessment outcome level 5 – Changes in Urban Runoff and Discharge Quality – Level 5 outcomes are measured as changes in one or more specific constituents or stressors in discharges into or from MS4s. Effectiveness assessment outcome level 6 – Changes in Receiving Water Quality – Level 6 outcomes measure changes to receiving water quality resulting from discharges into and from MS4s, and may be expressed through a variety of means such as compliance with water quality objectives or other regulatory benchmarks, protection of biological integrity [i.e., ecosystem health], or beneficial use attainment.

(4) Utilize monitoring data and analysis from the Receiving Waters Monitoring Program to assess the effectiveness each of the items listed in section I.1.a.(1) above, where applicable and feasible.

(5) Utilize Implementation Assessment,[257] Water Quality Assessment,[258] and Integrated Assessment,[259] where applicable and feasible.

b. Based on the results of the effectiveness assessment, each Copermittee shall annually review its jurisdictional activities or BMPs to identify modifications and improvements needed to maximize Jurisdictional Urban Runoff Management Program effectiveness, as necessary to achieve compliance with section A of this Order. The Copermittees shall develop and implement a plan and schedule to address the identified modifications and improvements. Jurisdictional activities/BMPs that are ineffective or less effective than other comparable jurisdictional activities/BMPs shall be replaced or improved upon by implementation of more effective jurisdictional activities/BMPs. Where monitoring data exhibits persistent water quality problems that are caused or contributed to by MS4 discharges, jurisdictional activities or BMPs applicable to the water quality problems shall be modified and improved to correct the water quality problems.

c. As part of its Jurisdictional Urban Runoff Management Program Annual Reports, each Copermittee shall report on its Jurisdictional Urban Runoff Management Program effectiveness assessment as implemented under each of the requirements of sections I.1.a and I.1.b above.

2. Watershed

a. As part of its Watershed Urban Runoff Management Program, each watershed group of Copermittees (as identified in Table 4)[260] shall annually assess the effectiveness of its Watershed Urban Runoff Management Program implementation. At a minimum, the annual effectiveness assessment shall:

---

[257] Implementation Assessment is defined in Attachment C of the permit as an "Assessment conducted to determine the effectiveness of copermittee programs and activities in achieving measureable targeted outcomes, and in determining whether priority sources of water quality problems are being effectively addressed."

[258] Water Quality Assessment is defined in Attachment C of the permit as an "Assessment conducted to evaluate the condition of non-storm water discharges, and the water bodies which receive these discharges."

[259] Integrated Assessment is defined in Attachment C of the permit as an "Assessment to be conducted to evaluate whether program implementation is properly targeted to and resulting in the protection and improvement of water quality."

[260] Table 4 of the permit divides the copermittees into nine watershed management areas. For example, the San Luis Rey River watershed management area lists the city of Oceanside, Vista and the County of San Diego as the responsible watershed copermittees. Table 4 also lists where the hydrologic units are and major receiving water bodies.

(1) Specifically assess the effectiveness of each of the following:

(a) Each Watershed Water Quality Activity implemented;

(b) Each Watershed Education Activity implemented; and

(c) Implementation of the Watershed Urban Runoff Management Program as a whole.

2) Identify and utilize measurable targeted outcomes, assessment measures, and assessment methods for each of the items listed in section I.2.a.(1) above.

3) Utilize outcome levels 1-6 to assess the effectiveness of each of the items listed in sections I.2.a.(1)(a) and I.2.a.(1)(b) above, where applicable and feasible.

4) Utilize outcome levels 1-4 to assess the effectiveness of implementation of the Watershed Urban Runoff Management Program as a whole, where applicable and feasible.

5) Utilize outcome levels 5 and 6 to qualitatively assess the effectiveness of implementation of the Watershed Urban Runoff Management Program as a whole, focusing on the high priority water quality problem(s) of the watershed. These assessments shall attempt to exhibit the impact of Watershed Urban

Runoff Management Program implementation on the high priority water quality problem(s) within the watershed.

6) Utilize monitoring data and analysis from the Receiving Waters Monitoring Program to assess the effectiveness each of the items listed in section I.2.a.(1) above, where applicable and feasible.

7) Utilize Implementation Assessment, Water Quality Assessment, and Integrated Assessment, where applicable and feasible.

b. Based on the results of the effectiveness assessment, the watershed Copermittees shall annually review their Watershed Water Quality Activities, Watershed Education Activities, and other aspects of the Watershed Urban Runoff Management Program to identify modifications and improvements needed to maximize Watershed Urban Runoff Management Program effectiveness, as necessary to achieve compliance with section A of this Order.[261] The Copermittees shall develop and implement a plan and schedule to address the identified modifications and improvements. Watershed Water Quality Activities/Watershed Education Activities that are ineffective or less effective than other comparable Watershed Water Quality Activities/Watershed Education Activities shall be replaced or improved upon by implementation of more effective Watershed Water Quality Activities/Watershed Education Activities. Where monitoring data exhibits persistent water quality problems that are caused or contributed to by MS4 discharges, Watershed Water Quality Activities and Watershed Education Activities applicable to the water quality problems shall be modified and improved to correct the water quality problems.

---

[261] Section A is "Prohibitions and Receiving Water Limitations."

c. As part of its Watershed Urban Runoff Management Program Annual Reports, each watershed group of Copermittees (as identified in Table 4) shall report on its Watershed Urban Runoff Management Program effectiveness assessment as implemented under each of the requirements of section I.2.a and I.2.b above.

Long Term Effectiveness Assessment (I.5):

a. Collaborate with the other Copermittees to develop a Longterm Effectiveness Assessment (LTEA), which shall build on the results of the Copermittees' August 2005 Baseline LTEA. The LTEA shall be submitted by the Principal Permittee to the Regional Board no later than 210 days in advance of the expiration of this Order.

b. The LTEA shall be designed to address each of the objectives listed in section I.3.a.(6)[262] of this Order, and to serve as a basis for the Copermittees' Report of Waste Discharge for the next permit cycle.

c. The LTEA shall address outcome levels 1-6, and shall specifically include an evaluation of program implementation to changes in water quality (outcome levels 5 and 6).

d. The LTEA shall assess the effectiveness of the Receiving Waters Monitoring Program in meeting its objectives and its ability to answer the five core management questions. This shall include assessment of the frequency of monitoring conducted through the use of power analysis and other pertinent statistical methods. The power analysis shall identify the frequency and intensity of sampling needed to identify a 10% reduction in the concentration of constituents causing the high priority water quality problems within each watershed over the next permit term with 80% confidence.

e. The LTEA shall address the jurisdictional, watershed, and regional programs, with an emphasis on watershed assessment.

1. Collaborate with all other Copermittees regulated under the permit to address common issues, promote consistency among Jurisdictional Urban Runoff

---

[262] Part I.3.a.(6) of the permit states: At a minimum, the annual effectiveness assessment shall: (6) Include evaluation of whether the Copermittees' jurisdictional, watershed, and regional effectiveness assessments are meeting the following objectives: (a) Assessment of watershed health and identification of water quality issues and concerns. (b) Evaluation of the degree to which existing source management priorities are properly targeted to, and effective in addressing, water quality issues and concerns. (c) Evaluation of the need to address additional pollutant sources not already included in Copermittee programs. (d) Assessment of progress in implementing Copermittee programs and activities. (e) Assessment of the effectiveness of Copermittee activities in addressing priority constituents and sources. (f) Assessment of changes in discharge and receiving water quality. (g) Assessment of the relationship of program implementation to changes in pollutant loading, discharge quality, and receiving water quality. (h) Identification of changes necessary to improve Copermittee programs, activities, and effectiveness assessment methods and strategies.

Management Programs and Watershed Urban Runoff Management Programs, and to plan and coordinate activities required under this Order.

V. All Copermittee Collaboration (part L)

(a) Collaborate with all other Copermittees to address common issues, promote consistency among Jurisdictional Urban Runoff Management Programs and Watershed Urban Runoff Management Programs, and to plan and coordinate activities required under the permit.

Jointly execute and submit to the Regional Board no later than 180 days after adoption of the permit, a Memorandum of Understanding, Joint Powers Authority, or other instrument of formal agreement that at a minimum: [¶]...[¶]

3. Establishes a management structure to promote consistency and develop and implement regional activities;
4. Establishes standards for conducting meetings, decisions-making, and cost-sharing.
5. Provides guidelines for committee and workgroup structure and responsibilities;
6. Lays out a process for addressing Copermittee non-compliance with the formal agreement.

The Commission finds that due to the fee authority under the police power (Cal. Const. art. XI, § 7) and as governed by the Mitigation Fee Act, there are no "costs mandated by the state" within the meaning of Government Code sections 17514 and 17556 for the following parts of the permit that have a reasonable relationship to property development:

- Hydromodification Management Plan (part D.1.g);
- Updating the Standard Urban Storm Water Mitigation Plans to include Low Impact Development requirements (parts D.1.d.(7) & D.1.d.(8));

The Commission also finds that the claimants' fee or assessment authority is not sufficient within the meaning of Government Code section 17556, subdivision (d), and that there are costs mandated by the state within the meaning of Government Code section 17514 for all the activities in the permit, including:

- The fee authority in Public Resources Code section 40059 for the permit activities in parts D.3.a.5 (street sweeping) and J.3.a.(3)(c)x-xv (reporting on street sweeping);
- The fee authority in Health and Safety Code section 5471, for the permit activities in part D.3.a.(3)(iii) (conveyance system cleaning) or part J.3.a.(3)(c)iv-viii (reporting on conveyance system cleaning) of the permit.

Further, the Commission finds the following would be identified as offsetting revenue in the parameters and guidelines for this test claim:

- Any fees or assessments approved by the voters or property owners for any activities in the permit, including those authorized by Public Resources Code section 40059 for street sweeping or reporting on street sweeping, and those authorize by Health and Safety Code

section 5471, for conveyance-system cleaning, or reporting on conveyance-system cleaning;

- Any proposed fees that are not subject to a written protest by a majority of parcel owners and that are imposed for street sweeping.
- Fees imposed pursuant to Water Code section 16103 only to the extent that a local agency voluntarily complies with Water Code section 16101, the Regional Board approves the plan and incorporates it into the test claim permit to satisfy the requirements of the permit.

BEFORE THE

COMMISSION ON STATE MANDATES

STATE OF CALIFORNIA

IN RE TEST CLAIM ON:

Los Angeles Regional Quality Control Board
Order No. 01-182
Permit CAS004001
Parts 4C2a., 4C2b, 4E & 4F5c3

Filed September 2, 2003, (03-TC-04)
September 26, 2003 (03-TC-19)
by the County of Los Angeles, Claimant

Filed September 30, 2003 (03-TC-20 & 03-TC-21) by the Cities of Artesia, Beverly Hills, Carson, Norwalk, Rancho Palos Verdes, Westlake Village, Azusa, Commerce, Vernon, Bellflower, Covina, Downey, Monterey Park, Signal Hill, Claimants

Case Nos.: 03-TC-04, 03-TC-19, 03-TC-20, 03-TC-21

Municipal Stormwater and Urban Runoff Discharges

STATEMENT OF DECISION PURSUANT TO GOVERNMENT CODE SECTION 17500 ET SEQ.; TITLE 2, CALIFORNIA CODE OF REGULATIONS, DIVISION 2, CHAPTER 2.5, ARTICLE 7.

(Adopted July 31, 2009)

STATEMENT OF DECISION

The Commission on State Mandates ("Commission") heard and decided this test claim during a regularly scheduled hearing on July 31, 2009. Leonard Kaye and Judith Fries appeared on behalf of the County of Los Angeles. Howard Gest appeared on behalf of the cities. Michael Lauffer appeared on behalf of the State Water Resources Control Board and the Regional Water Quality Control Board. Carla Castaneda and Susan Geanacou appeared on behalf of the Department of Finance. Geoffrey Brosseau appeared on behalf of the Bay Area Stormwater Management Agencies Association.

The law applicable to the Commission's determination of a reimbursable state-mandated program is article XIII B, section 6 of the California Constitution, Government Code section 17500 et seq., and related case law.

The Commission adopted the staff analysis to partially approve the test claim at the hearing by a vote of 4-2.

Summary of Findings

The consolidated test claim, filed by the County of Los Angeles and several cities, allege various activities related to placement and maintenance of trash receptacles at transit stops and inspections of various facilities to reduce stormwater pollution in compliance with a permit issued by the Los Angeles Regional Water Quality Control Board.

The Commission finds that the following activity in part 4F5c3 of the permit is a reimbursable state mandate on local agencies subject to the permit that are not subject to a trash total

maximum daily load:[1] "Place trash receptacles at all transit stops within its jurisdiction that have shelters no later than August 1, 2002, and at all transit stops within its jurisdiction no later than February 3, 2003. All trash receptacles shall be maintained as necessary."

The Commission also finds that the remainder of the permit (parts 4C2a, 4C2b & 4E) does not impose costs mandated by the state within the meaning of article XIII B, section 6 of the California Constitution because the claimants have fee authority (under Cal. Const. article XI, § 7) within the meaning of Government Code section 17556, subdivision (d), sufficient to pay for the activities in those parts of the permit.

BACKGROUND

The claimants allege various activities related to placement and maintenance of trash receptacles at transit stops and inspections of restaurants, automotive service facilities, retail gasoline outlets, automotive dealerships, phase I industrial facilities (as defined) and construction sites to reduce stormwater pollution in compliance with a permit issued by the Los Angeles Regional Water Quality Control Board (LA Regional Board), a state agency.

History of the test claims

The test claims were filed in September 2003,[2] by the County of Los Angeles and several cities within it (the permit covers the Los Angeles County Flood Control District and 84 cities in Los Angeles County, all except Long Beach). The Commission originally refused jurisdiction over the permits based on Government Code section 17516's definition of "executive order" that excludes permits issued by the State Water Resources Control Board (State Water Board) or Regional Water Quality Control Boards (regional boards). After litigation, the Second District Court of Appeal held that the exclusion of permits and orders of the State and Regional Water Boards from the definition of "executive order" is unconstitutional. The court issued a writ commanding the Commission to set aside the decision "affirming your Executive Director's rejection of Test Claim Nos. 03-TC-04, 03-TC-19, 03-TC-20 and 03-TC-21" and to fully consider those claims.[3]

The County of Los Angeles and the cities re-filed their claims in October and November 2007. The claims were consolidated by the Executive Director in December 2008. Thus, the

---

[1] A Total Maximum Daily Load, or TMDL, is a calculation of the maximum amount of a pollutant that a waterbody can receive and still safely meet water quality standards.

[2] Originally, test claims 03-TC-04 (*Transit Trash Receptacles*) and 03-TC-19 (*Inspection of Industrial/Commercial Facilities)* were filed by the County of Los Angeles on September 5, 2003. Test claim 03-TC-21 (*Stormwater Pollution Requirements*) was filed by the Cities of Baldwin Park, Bellflower, Cerritos, Covina, Downey, Monterey Park, Pico Rivera, Signal Hill, South Pasadena, and West Covina on September 30, 2003. Test claim 03-TC-20 (*Waste Discharge Requirements*) was filed by Cities of Artesia, Beverly Hills, Carson, La Mirada, Monrovia, Norwalk, Rancho Palos Verdes, San Marino, and Westlake Village on September 30, 2003.

[3] *County of Los Angeles v. Commission on State Mandates* (2007) 150 Cal.App.4th 898.

reimbursement period is as though the claims were filed in September 2003, i.e., beginning July 1, 2002.[4]

Before discussing the specifics of the permit, an overview of municipal stormwater pollution puts the permit in context.

Municipal stormwater

One of the main objectives of the permit is "to assure that stormwater discharges from the MS4 [Municipal Separate Storm Sewer Systems][5] shall neither cause nor contribute to the exceedance of water quality standards and objectives nor create conditions of nuisance in the receiving waters, and that the discharge of non-stormwater to the MS4 has been effectively prohibited." (Permit, p. 13.)

Stormwater runoff flows untreated from urban streets directly into streams, lakes and the ocean. To illustrate the effect of stormwater[6] on water pollution, the Ninth Circuit Court of Appeal has stated the following:

> Storm water runoff is one of the most significant sources of water pollution in the nation, at times "comparable to, if not greater than, contamination from industrial and sewage sources." [Citation omitted.] Storm sewer waters carry suspended metals, sediments, algae-promoting nutrients (nitrogen and phosphorus), floatable trash, used motor oil, raw sewage, pesticides, and other toxic contaminants into streams, rivers, lakes, and estuaries across the United States. [Citation omitted.] In 1985, three-quarters of the States cited urban storm water runoff as a major cause of waterbody impairment, and forty percent reported construction site runoff as a major cause of impairment. Urban runoff has been named as the foremost cause of impairment of surveyed ocean waters. Among the sources of storm water contamination are urban development, industrial facilities, construction sites, and illicit discharges and connections to storm sewer systems.[7]

---

[4] Government Code section 17557, subdivision (e).

[5] Municipal separate storm sewer means a conveyance or system of conveyances (including roads with drainage systems, municipal streets, catch basins, curbs, gutters, ditches, man-made channels, or storm drains): (i) Owned or operated by a State, city, town, borough, county, parish, district, association, or other public body (created by or pursuant to State law) having jurisdiction over disposal of sewage, industrial wastes, storm water, or other wastes, including special districts under State law such as a sewer district, flood control district or drainage district, or similar entity, or an Indian tribe or an authorized Indian tribal organization, or a designated and approved management agency under section 208 of the CWA that discharges to waters of the United States; (ii) Designed or used for collecting or conveying storm water; (iii) Which is not a combined sewer; and (iv) Which is not part of a Publicly Owned Treatment Works (POTW) as defined at 40 CFR 122.2. (40 C.F.R. § 122.26 (b)(8).)

[6] Storm water means "storm water runoff, snow melt runoff, and surface runoff and drainage." (40 C.F.R. § 122.26 (b)(13).)

[7] *Environmental Defense Center, Inc. v. U.S. E.P.A.* (2003) 344 F.3d 832, 840-841.

Because of the stormwater pollution problems described by the Ninth Circuit above, California and the federal government regulate stormwater runoff as described below.

California law

The California Supreme Court summarized the state statutory scheme and regulatory agencies applicable to this test claim as follows:

> In California, the controlling law is the Porter-Cologne Water Quality Control Act (Porter-Cologne Act), which was enacted in 1969. (Wat. Code, § 13000 et seq., added by Stats.1969, ch. 482, § 18, p. 1051.) Its goal is "to attain the highest water quality which is reasonable, considering all demands being made and to be made on those waters and the total values involved, beneficial and detrimental, economic and social, tangible and intangible." (§ 13000.) The task of accomplishing this belongs to the State Water Resources Control Board (State Board) and the nine Regional Water Quality Control Boards; together the State Board and the regional boards comprise "the principal state agencies with primary responsibility for the coordination and control of water quality." (§ 13001.) As relevant here, one of those regional boards oversees the Los Angeles region (the Los Angeles Regional Board).
>
> Whereas the State Board establishes statewide policy for water quality control (§ 13140), the regional boards "formulate and adopt water quality control plans for all areas within [a] region" (§ 13240).[8]

Much of what the regional board does, especially as pertaining to permits like the one in this claim, is based in federal law as described below.

Federal law

The Federal Clean Water Act (CWA) was amended in 1972 to implement a permitting system for all discharges of pollutants[9] from point sources[10] to waters of the United States, since

---

[8] *City of Burbank v. State Water Resources Control Bd.* (2005) 35 Cal.4th 613, 619.

[9] According to the federal regulations, "Discharge of a pollutant" means: (a) Any addition of any "pollutant" or combination of pollutants to "waters of the United States" from any "point source," or (b) Any addition of any pollutant or combination of pollutants to the waters of the "contiguous zone" or the ocean from any point source other than a vessel or other floating craft which is being used as a means of transportation. This definition includes additions of pollutants into waters of the United States from: surface runoff which is collected or channeled by man; discharges through pipes, sewers, or other conveyances owned by a State, municipality, or other person which do not lead to a treatment works; and discharges through pipes, sewers, or other conveyances, leading into privately owned treatment works. This term does not include an addition of pollutants by any "indirect discharger." (40 C.F.R. § 122.2.)

[10] A point source is "any discernible, confined and discrete conveyance, including but not limited to any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, or vessel or other floating craft, from which pollutants are or may be discharged." 33 U.S.C. § 1362(14).

discharges of pollutants are illegal except under a permit.[11] The permits, issued under the national pollutant discharge elimination system, are called NPDES permits. Under the CWA, each state is free to enforce its own water quality laws so long as its effluent limitations[12] are not "less stringent" than those set out in the CWA (33 USCA 1370). The California Supreme Court described NPDES permits as follows:

> Part of the federal Clean Water Act is the National Pollutant Discharge Elimination System (NPDES), "[t]he primary means" for enforcing effluent limitations and standards under the Clean Water Act. (*Arkansas v. Oklahoma, supra,* 503 U.S. at p. 101, 112 S.Ct. 1046.) The NPDES sets out the conditions under which the federal EPA or a state with an approved water quality control program can issue permits for the discharge of pollutants in wastewater. (33 U.S.C. § 1342(a) & (b).) In California, wastewater discharge requirements established by the regional boards are the equivalent of the NPDES permits required by federal law. (§ 13374.)[13]

In the Porter-Cologne Water Quality Control Act (Wat. Code, §§ 13370 et seq.), the Legislature found that the state should implement the federal law in order to avoid direct regulation by the federal government. The Legislature requires the permit program to be consistent with federal law, and charges the State and Regional Water Boards with implementing the federal program (Wat. Code, §§ 13372 & 13370). The State Water Resources Control Board (State Board) incorporates the regulations from the U.S. EPA for implementing the federal permit program, so both the Clean Water Act and U.S. EPA regulations apply to California's permit program (Cal.Code Regs., tit. 23, § 2235.2).

When a regional board adopts an NPDES permit, it must adopt as stringent a permit as U.S. EPA would have (federal Clean Water Act, § 402 (b)). As the California Supreme Court stated:

> The federal Clean Water Act reserves to the states significant aspects of water quality policy (33 U.S.C. § 1251(b)), and it specifically grants the states authority to "enforce any effluent limitation" that is not " *less stringent* " than the federal standard (*id.* § 1370, italics added). It does not prescribe or restrict the factors that a state may consider when exercising this reserved authority, and thus it does not prohibit a state-when imposing effluent limitations that are *more stringent*

---

[11] 40 Code of Federal Regulations, section 122.21 (a). The section applies to U.S. EPA-issued permits, but is incorporated into section 123.25 (the state program provision) by reference.

[12] *Effluent limitation* means any restriction imposed by the Director on quantities, discharge rates, and concentrations of "pollutants" which are "discharged" from "point sources" into "waters of the United States," the waters of the "contiguous zone," or the ocean. (40 C.F.R. § 122.2.)

[13] *City of Burbank v. State Water Resources Control Bd., supra,* 35 Cal.4th 613, 621. Actually, State and regional board permits allowing discharges into state waters are called "waste discharge requirements" (Wat. Code, § 13263).

than required by federal law-from taking into account the economic effects of doing so.[14]

Actions that dischargers must implement as prescribed in permits are commonly called "best management practices" or BMPs.[15]

Stormwater was not regulated by U.S. EPA in 1973 because of the difficulty of doing so. This exemption from regulation was overturned in *Natural Resources Defense Council v. Costle* (1977) 568 F.2d 1369, which ordered U.S. EPA to require NPDES permits for stormwater runoff. By 1987, U.S. EPA still had not adopted regulations to implement a permitting system for stormwater runoff. The Ninth Circuit Court of Appeals explained the next step as follows:

> In 1987, to better regulate pollution conveyed by stormwater runoff, Congress enacted Clean Water Act § 402(p), 33 U.S.C. § 1342(p), "Municipal and Industrial Stormwater Discharges." Sections 402(p)(2) and 402(p)(3) mandate NPDES permits for stormwater discharges "associated with industrial activity," discharges from large and medium-sized municipal storm sewer systems, and certain other discharges. Section 402(p)(4) sets out a timetable for promulgation of the first of a two-phase overall program of stormwater regulation.[16]

NPDES permits are required for "A discharge from a municipal separate storm sewer system serving a population of 250,000 or more."[17] The federal Clean Water Act specifies the following criteria for municipal storm sewer system permits:

> (i) may be issued on a system- or jurisdiction-wide basis;
>
> (ii) shall include a requirement to effectively prohibit non-stormwater discharges into the storm sewers; and
>
> (iii) shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants.[18]

In 1990, U.S. EPA adopted regulations to implement Clean Water Act section 402(p), defining which entities need to apply for permits and the information to include in the permit application.

---

[14] *City of Burbank v. State Water Resources Control Bd., supra,* 35 Cal.4th 613, 627-628.

[15] Best management practices, or BMPs, means "schedules of activities, prohibitions of practices, maintenance procedures, and other management practices to prevent or reduce the pollution of "waters of the United States." BMPs also include treatment requirements, operating procedures, and practices to control plant site runoff, spillage or leaks, sludge or waste disposal, or drainage from raw material storage." (40 CFR § 122.2.)

[16] *Environmental Defense Center, Inc. v. U.S. E.P.A., supra,* 344 F.3d 832, 841-842.

[17] 33 USCA 1342 (p)(2)(C).

[18] 33 USCA 1342 (p)(3)(B).

The permit application must propose management programs that the permitting authority will consider in adopting the permit. The management programs must include the following:

> [A] comprehensive planning process which involves public participation and where necessary intergovernmental coordination, to reduce the discharge of pollutants to the maximum extent practicable using management practices, control techniques and system, design and engineering methods, and such other provisions which are appropriate.[19]

General state-wide permits

In addition to the regional stormwater permit at issue in this claim, the State Board has issued two general statewide permits,[20] as described in the permit as follows:

> To facilitate compliance with federal regulations, the State Board has issued two statewide general NPDES permits for stormwater discharges: one for stormwater from industrial sites [NPDES No. CAS000001, General Industrial Activity Storm Water Permit (GIASP)] and the other for stormwater from construction sites [NPDES No. CAS000002, General Construction Activity Storm Water Permit (GCASP)]. ... Facilities discharging stormwater associated with industrial activities and construction projects with a disturbed area of five acres or more are required to obtain individual NPDES permits for stormwater discharges, or to be covered by a statewide general permit by completing and filing a Notice of Intent (NOI) with the State Board. The U.S. EPA guidance anticipates coordination of the state-administered programs for industrial and construction activities with the local agency program to reduce pollutants in stormwater discharges to the MS4. The Regional Board is the enforcement authority in the Los Angeles Region for the two statewide general permits regulating discharges from industrial facilities and construction sites, and all NPDES stormwater and non-stormwater permits issued by the Regional Board. These industrial and construction sites and discharges are also regulated under local laws and regulations. (Permit, p. 11.)

The State Board has statutory fee authority to conduct inspections to enforce the general state-wide permits.[21] The statewide permits are discussed in further detail in the analysis.

The Los Angeles Regional Board permit (Order No. 01-182, Permit CAS004001)

To obtain the permit, the County of Los Angeles, on behalf of all permittees, submitted on January 31, 2001 a Report of Waste Discharge, which constitutes a permit application, and a Stormwater Quality Management Program, which constituted the permittees' proposal for best management practices that would be required in the permit.[22]

---

[19] 40 Code of Federal Regulations section 122.26 (d)(2)(iv).

[20] A general permit means "an NPDES 'permit' issued under [40 CFR] §122.28 authorizing a category of discharges under the CWA within a geographical area." (40 CFR § 122.2.)

[21] Water Code section 13260, subdivision (d)(2)(B)(i) - (iii).

[22] State Water Resources Control Board, comments submitted April 18, 2008, page 8 and attachment 36.

The permit states that its objective is: "to protect the beneficial uses of receiving waters in Los Angeles County."[23] The permit was upheld by the Second District Court of Appeal in 2006, which described it as follows:

> The 72-page permit is divided into 6 parts. There is an overview and findings followed by a statement of discharge prohibitions; a listing of receiving water limitations; the Storm Water Quality Management Program; an explanation of special provisions; a set of definitions; and a list of what are characterized as standard provisions. The county, the flood control district, and the 84 cities are designated in the permit as the permittees.[24]

After finding that "the county, the flood control district, and the 84 cities discharge and contribute to the release of pollutants from "municipal separate storm sewer systems" (storm drain systems)" and that the discharges were the subject of regional board permits in 1990 and 1996, the regional board found that the storm drain systems in the county discharged a host of specified pollutants into local waters. The permit summed up by stating: "Various reports prepared by the regional board, the Los Angeles County Grand Jury, and academic institutions indicated pollutants are threatening to or actually impairing the beneficial uses of water bodies in the Los Angeles region."[25]

The permit also specifies prohibited and allowable discharges, receiving water limitations, the implementation of the Storm Water Quality Management Program "requiring the use of best management practices to reduce pollutant discharge into the storm drain systems to the maximum extent possible."[26] As the court described the permit:

> In the prohibited discharges portion of the permit, the county and the cities were required to "effectively prohibit non-stormwater discharges" into their storm sewer systems. This prohibition contains the following exceptions: where the discharge is covered by a National Pollutant Discharge Elimination permit for non-stormwater emission; natural springs and rising ground water; flows from riparian habitats or wetlands; stream diversions pursuant to a permit issued by the

---

[23] Permit page 13. The permit also says: "This permit is intended to develop, achieve, and implement a timely comprehensive, cost-effective storm water pollution control program to reduce the discharge of pollutants in storm water to the Maximum Extent Practicable (MEP) from the permitted areas in the County of Los Angeles to the waters of the US subject to the Permittees' jurisdiction."

[24] *County of Los Angeles v. California State Water Resources Control Board* (2006) 143 Cal.App.4th 985, 990.

[25] *County of Los Angeles v. California State Water Resources Control Board , supra,* 143 Cal.App.4th 985, 990

[26] *County of Los Angeles v. California State Water Resources Control Board,, supra,* 143 Cal.App.4th 985, 994.

regional board; "uncontaminated ground water infiltrations" ... and waters from emergency fire-fighting flows.[27]

There is also a list of permissible discharges that are incidental to urban activity, as specified (e.g., landscape irrigation runoff, etc.). In the part on receiving water limitations, the permit prohibits discharges from storm sewer systems that "cause or contribute" to violations of "Water Quality Standards" objectives in receiving waters as specified in state and federal water quality plans. Storm or non-stormwater discharges from storm sewer systems which constitute a nuisance are also prohibited.[28]

To comply with the receiving water limitations, the permittees must implement control measures in accordance with the permit.[29]

The permittees are also to implement the Storm Water Quality Management Program (SQMP) that meets the standards of 40 Code of Federal Regulations, part 122.26(d)(2) (2000) and reduces the pollutants in stormwaters to the maximum extent possible with the use of best management practices. And the permittees must revise the SQMP to comply with specified total maximum daily load (TMDL) allocations.[30] If a permittee modified the countywide SQMP, it must implement a local management program. Each permittee is required by November 1, 2002, to adopt a stormwater and urban runoff ordinance. By December 2, 2002, each permittee must certify that it had the legal authority to comply with the permit through adoption of ordinances or municipal code modifications.[31]

---

[27] *County of Los Angeles v. California State Water Resources Control Board, supra,* 143 Cal.App.4th 985, 991-992.

[28] "'Nuisance' means anything that meets all of the following requirements: (1) is injurious to health, or is indecent or offensive to the senses, or an obstruction to the free use of property, so as to interfere with the comfortable enjoyment of life or property; (2) affects at the same time an entire community or neighborhood, or any considerable number of persons, although the extent of the annoyance or damage inflicted upon individuals may be unequal; (3) occurs during, or as a result of, the treatment or disposal of wastes." *Id.* at 992.

[29] If the Storm Water Quality Management Program did not assure compliance with the receiving water requirements, the permittee must immediately notify the regional board; submit a Receiving Water Limitations Compliance Report that describes the best management practices currently being used and proposed changes to them; submit an implementation schedule as part of the Receiving Water Limitations Compliance Report; and, after approval by the regional board, promptly implement the new best management practices. If the permittee makes these changes, even if there were further receiving water discharges beyond those addressed in the Water Limitations Compliance Report, additional changes to the best management practices need not be made unless directed to do so by the regional board. *Id.* at 993.

[30] A Total Maximum Daily Load, or TMDL, is a calculation of the maximum amount of a pollutant that a waterbody can receive and still safely meet water quality standards. See <http://www.epa.gov/OWOW/tmdl> as of October 3, 2008.

[31] *County of Los Angeles v. California State Water Resources Control Board, supra,* 143 Cal.App.4th 985.

The permit gives the County of Los Angeles additional responsibilities as principal permittee, such as coordination of the SQMP and convening watershed management committees. In addition, the permit contains a development construction program under which permittees are to implement programs to control runoff from construction sites, with additional requirements imposed on sites one acre or larger, and more on those five acres or larger. Permittees are to eliminate all illicit connections and discharges to the storm drain system, and must document, track and report all cases.

In this claim, however, claimants only allege activities in parts 4C2a, 4C2b, 4E and 4F5c3 of the permit. These parts concern placement and maintenance of trash receptacles at transit stops, and inspections of restaurants, automotive service facilities, retail gasoline outlets, automotive dealerships, phase I industrial facilities (as defined) and construction sites, as quoted below.

Co-Claimants' Position

Co-claimants assert that parts 4C2a, 4C2b, 4E and 4F5c3 of the LA Regional Board's permit constitute a reimbursable state-mandate within the meaning of article XIII B, section 6, and Government Code section 17514.

Transit Trash Receptacles: Los Angeles County ("County") filed test claims 03-TC-04 and 03-TC-19. In 03-TC-04, *Transit Trash Receptacles*, filed by the County, and 03-TC-20, *Waste Discharge Requirements,* filed by the cities, the claimants allege the following activities as stated in the permit part 4F5c3 (Part 4, Special Provisions, F. Public Agency Activities Program, 5. Storm Drain Operation and Management):

> c. Permittees not subject to a trash TMDL[32] shall: [¶]...[¶]
>
> (3) Place trash receptacles at all transit stops within its jurisdiction that have shelters no later than August 1, 2002, and at all transit stops within its jurisdiction no later than February 3, 2003. All trash receptacles shall be maintained as necessary.

Claimant County asserts that this permit condition requires the following:

1. Identifying all transit stops within its jurisdiction except for the Los Angeles River and Ballona Creek Watershed Management areas.
2. Selecting proper trash receptacle design and evaluating proper placement of trash receptacles.
3. Designing receptacle pad improvement, if needed.
4. Constructing and installing trash receptacle units.
5. Collecting trash and maintaining receptacles.

Inspection of Industrial and Commercial Facilities: In claim 03-TC-19, *Inspection of Industrial/ Commercial Facilities*, filed by the County, and 03-TC-20, *Waste Discharge Requirements,* filed by the cities, claimants allege the following activities as stated in the permit parts 4C2a and 4C2b (Part 4, Special Provisions, C. Industrial/Commercial Facilities Control Program):

---

[32] A Total Maximum Daily Load, or TMDL, is a calculation of the maximum amount of a pollutant that a waterbody can receive and still safely meet water quality standards. See <http://www.epa.gov/OWOW/tmdl> as of October 3, 2008.

2. Inspect Critical Sources – Each Permittee shall inspect all facilities in the categories and at a level and frequency as specified in the following subsections:

a) Commercial Facilities

(1) Restaurants

Frequency of Inspections: Twice during the 5-year term of the Order, provided that the first inspection occurs no later than August 1, 2004, and that there is a minimum interval of one year in between the first compliance inspection and the second compliance inspection.

Level of Inspections-: Each Permittee, in cooperation with its appropriate department (such as health or public works), shall inspect all restaurants within its jurisdiction to confirm that stormwater BMPs are being effectively implemented in compliance with State law, County and municipal ordinances, Regional Board Resolution 98-08, and the SQMP [Storm Water Quality Management Program]. At each restaurant, inspectors shall verify that the restaurant operator:

- has received educational materials on stormwater pollution prevention practices;
- does not pour oil and grease or oil and grease residue onto a parking lot, street or adjacent catch basin;
- keeps the trash bin area clean and trash bin lids closed, and does not fill trash bins with washout water or any other liquid;
- does not allow illicit discharges, such as discharge of washwater from floormats, floors, porches, parking lots, alleys, sidewalks and street areas (in the immediate vicinity of the establishment), filters or garbage/trash containers;
- removes food waste, rubbish or other materials from parking lot areas in a sanitary manner that does not create a nuisance or discharge to the storm drain.

(2) Automotive Service Facilities

Frequency of Inspections: Twice during the 5-year term of the Order, provided that the first inspection occurs no later than August 1, 2004, and that there is a minimum interval of one year in between the first compliance inspection and the second compliance inspection.

Level of Inspections: Each permittee shall inspect all automotive service facilities within its jurisdiction to confirm that stormwater BMPs are effectively implemented in compliance with County and municipal ordinances, Regional Board Resolution 98-08, and the SQMP. At each automotive service facility, inspectors shall verify that each operator:

- maintains the facility area so that it is clean and dry without evidence of excessive staining;
- implements housekeeping BMPs to prevent spills and leaks;
- properly discharges wastewaters to a sanitary sewer and/or contains wastewaters for transfer to a legal point of disposal;

- is aware of the prohibition on discharge of non-stormwater to the storm drain;
- properly manages raw and waste materials including proper disposal of hazardous waste;
- protects outdoor work and storage areas to prevent contact of pollutants with rainfall and runoff;
- labels, inspects, and routinely cleans storm drain inlets that are located on the facility's property; and
- trains employees to implement stormwater pollution prevention practices.

(3) Retail Gasoline Outlets and Automotive Dealerships

Frequency of Inspection: Twice during the 5-year term of the Order, provided that the first inspection occurs no later than August 1, 2004, and that there is a minimum interval of one year in between the first compliance inspection and the second compliance inspection.

Level of Inspection: Each Permittee shall confirm that BMPs are being effectively implemented at each RGO [Retail Gasoline Outlet] and automotive dealership within its jurisdiction, in compliance with the SQMP, Regional Board Resolution 98-08, and the Stormwater Quality Task Force Best Management Practice Guide for RGOs. At each RGO and automotive dealership, inspectors shall verify that each operator:

- routinely sweeps fuel-dispensing areas for removal of litter and debris, and keeps rags and absorbents ready for use in case of leaks and spills;
- is aware that washdown of facility area to the storm drain is prohibited;
- is aware of design flaws (such as grading that doesn't prevent run-on, or inadequate roof covers and berms), and that equivalent BMPs are implemented;
- inspects and cleans storm drain inlets and catch basins within each facility's boundaries no later than October 1st of each year;
- posts signs close to fuel dispensers, which warn vehicle owners/operators against "topping off" of vehicle fuel tanks and installation of automatic shutoff fuel dispensing nozzles;
- routinely checks outdoor waste receptacle and air/water supply areas, cleans leaks and drips, and ensures that only watertight waste receptacles are used and that lids are closed; and
- trains employees to properly manage hazardous materials and wastes as well as to implement other stormwater pollution prevention practices.

b) Phase I Facilities[33]

Permittees need not inspect facilities that have been inspected by the Regional Board within the past 24 months. For the remaining Phase I facilities that the Regional Board has not inspected, each Permittee shall conduct compliance inspections as specified below.

Frequency of Inspection

Facilities in Tier 1 Categories:[34] Twice during the 5-year term of the Order, provided that the first inspection occurs no later than August 1, 2004, and that there is a minimum interval of one year in between the first compliance inspection and the second compliance inspection.

Facilities in Tier 2 Categories:[35] Twice during the 5-year term of the permit, provided that the first inspection occurs no later than August 1, 2004, Permittees need not perform additional inspections at those facilities determined to have no risk of exposure of industrial activity[36] to stormwater. For those facilities that do

---

[33] On page 62 of the permit, U.S. EPA Phase I Facilities are defined as "facilities in specified industrial categories that are required to obtain an NPDES permit for storm water discharges, as required by 40 CFR 122.26(c). These categories include: (i) facilities subject to storm water effluent limitation guidelines, new source performance standards, or toxic pollutant effluent standards (40 CFR N); (ii) manufacturing facilities; (iii) oil and gas/mining facilities; (iv) hazardous waste treatment, storage, or disposal facilities; (v) landfills, land application sites, and open dumps; (vi) recycling facilities; (vii) steam electric power generating facilities; (viii) transportation facilities; (ix) sewage or wastewater treatment works; (x) light manufacturing facilities.

[34] Attachment B of the Permit (pp. B-1 to B-2) lists the Tier 1 categories as follows (with Phase I facilities listed in italics): "*Municipal landfills ...; Hazardous Waste Treatment, Disposal and Recovery Facilities; Facilities Subject to SARA Title III ...;* Restaurants; *Wholesale trade (scrap, auto dismantling)...;* Automotive service facilities; *Fabricated metal products ...; Motor freight ...; Chemical/allied products ...;* Automotive Dealers/Gas Stations ...; *Primary Metals.*"

[35] Attachment B of the Permit (pp. B-1 to B-2) lists the Tier 2 categories as follows (with Phase I facilities listed in italics): "*Electric/Gas/Sanitary...; Air Transportation ...; Rubbers/Miscellaneous Plastics ...; Local/Suburban Transit ...; Railroad Transportation ...; Oil & Gas Extraction ...; Lumber/Wood Products...; Machinery Manufacturing ...; Transportation Equipment ...; Stone, Clay, Glass, Concrete ...; Leather/Leather Products...; Miscellaneous Manufacturing ...; Food and kindred Products...; Mining of Nonmetallic Minerals ...; Printing and Publishing ...; Electric/Electronics ...; Paper and Allied Products ...; Furniture and Fixtures ...;* Laundries ...; *Instruments...; Textile Mills Products ...; Apparel ...*"

[36] "Storm water discharge associated with industrial activity means the discharge from any conveyance that is used for collecting and conveying storm water and that is directly related to manufacturing, processing or raw materials storage areas at an industrial plant. ... The following categories of facilities are considered to be engaging in "industrial activity" for purposes of paragraph (b)(14): [¶]...[¶] (x) Construction activity including clearing, grading and excavation,

have exposure of industrial activities to stormwater, a Permittee may reduce that frequency of additional compliance inspections to once every 5 years, provided that the Permittee inspects at least 20% of the facilities in Tier 2 each year.

Level of Inspection: Each Permittee shall confirm that each operator:

- has a current Waste Discharge Identification (WDID) number for facilities discharging stormwater associated with industrial activity, and that a Storm Water Pollution Prevention Plan is available on-site, and
- is effectively implementing BMPs in compliance with County and municipal ordinances, Regional Board Resolution 98-08, and the SQMP.

Inspection of Construction Sites: In claims 03-TC-20 and 03-TC-21, *Waste Discharge Requirements*, the cities allege the activities in permit parts 4C2a, 4C2b, and 4F5c3, as listed in the test claims cited above, in addition to the following activities as stated in part 4E of the permit (Part 4, Special Provisions, E. Development Construction Program):

- For construction sites one acre or greater, each Permittee shall comply with all conditions in section E1 above and shall: ...

  (b) Inspect all construction sites for stormwater quality requirements during routine inspections a minimum of once during the wet seasons. The Local SWPPP [Storm Water Pollution Prevention Plan] shall be reviewed for compliance with local codes, ordinances, and permits. For inspected sites that have not adequately implemented their Local SWPPP, a follow-up inspection to ensure compliance will take place within 2 weeks. If compliance has not been attained, the Permittee will take additional actions to achieve compliance (as specified in municipal codes). If compliance has not been achieved, and the site is also covered under a statewide general construction stormwater permit, each Permittee shall enforce their local ordinance requirements, and if non-compliance continues the Regional Board shall be notified for further joint enforcement actions.

  Part 4E3 of the Order provides, in relevant part, as follows:

  3. For sites five acres and greater, each Permittee shall comply with all conditions in Sections E1 and E2 and shall:

  a) require, prior to issuing a grading permit for all projects requiring coverage under the state general permit,[37] proof of a Waste Discharger Identification (WDID) number for filing a Notice of Intent (NOI) for coverage under the GCASP [General Construction

---

except operations that result in the disturbance of less than five acres of total land area. Construction activity also includes the disturbance of less than five acres of total land area that is a part of a larger common plan of development or sale if the larger common plan will ultimately disturb five acres or more;" [40 CFR §122.26 (b)(14), Emphasis added.]

[37] A general permit means "an NPDES 'permit' issued under [40 CFR] §122.28 authorizing a category of discharges under the CWA [Clean Water Act] within a geographical area." (40 CFR § 122.2.) California has issued one general permit for construction activity and one for industrial activity.

Activity Storm Water Permit][38] and a certification that a SWPPP has been prepared by the project developer. A Local SWPPP may substitute for the State SWPPP if the Local SWPPP is at least as inclusive in controls and BMPs as the State SWPPP.

b) Require proof of an NOI and a copy of the SWPPP at any time a transfer of ownership takes place for the entire development or portions of the common plan of development where construction activities are still on-going.
c) Use an effective system to track grading permits issued by each Permittee. To satisfy this requirement, the use of a database or GIS system is encouraged, but not required.

Both county and city claimants allege more than $1000 in costs in each test claim to comply with the permit activities.

In comments submitted June 4, 2009 on the draft staff analysis, the County of Los Angeles asserts that local agencies do not have fee authority to collect trash from trash receptacles that must be placed at transit stops, and that voter approval under Proposition 218 would be required to do so. The County also argues that voter approval under Proposition 218 would be required for stormwater inspection costs, and cites as evidence the City of Santa Clarita's stormwater pollution prevention fee, as well as legislative proposals now in the legislature that would, if enacted, provide fee authority.

In comments submitted June 8, 2009 on the draft staff analysis, the cities disagree with the conclusion that they have fee authority to recoup the costs of the transit-stop trash receptacles, and disagree that they have fee authority to inspect facilities covered by the state-issued general stormwater permits, as discussed in more detail below.

State Agency Positions

Department of Finance: Finance, in comments filed March 27, 2008 on all four test claims, alleges that the permit does not impose a reimbursable mandate within the meaning of section 6 of article XIII B of the California Constitution because "The permit conditions imposed on the local agencies are required by federal laws" so they are not reimbursable pursuant to Government Code section 17556, subdivision (c). Finance asserts that "requirements of the permit are federally required to comply with the NPDES [National Pollutant Discharge Elimination System] program ... [and] is enforceable under the federal CWA [Clean Water Act]."

Finance also argues that the claimants had discretion over the activities and conditions to include in the permit application. The permittees submitted a Storm Water Quality Management Program prevention report with their applications, in which they had the option to use "best management practices" to identify alternative practices to reduce water pollution. Since the local agencies prescribed the activities to be included in the permit, the requirements are a downstream result of the local agencies' decision to include the particular activities in the permit. Finance cites the *Kern* case,[39] which held that if participation in the underlying program is voluntary, the resulting new consequential requirements are not reimbursable mandates.

---

[38] See page 11, paragraph 22 of the permit for a description of the statewide permits.

[39] *Department of Finance v. Commission on State Mandates (Kern High School Dist.)* (2003) 30 Cal.4th 727

Finally, Finance states that some local agencies are using fees for funding the claimed permit activities, so should the Commission find that the permit constitutes a reimbursable mandate, the fees should be considered as offsetting revenues.

Finance submitted comments on the draft staff analysis on June 19, 2009, agreeing that the local agencies have fee authority sufficient to pay for the mandated activities. Finance disagrees, however, with the portion of the analysis that finds that the activities are not federal mandates.

State Water Resources Control Board: The State Board filed comments on the four test claims on April 18, 2008, noting that the federal CWA mandates that municipalities apply for and receive permits regulating discharges of pollutants from their municipal separate storm sewer system (MS4) to waters of the United States. "Pursuant to federal regulations, the Permit contains numerous requirements for the cities and County to take actions to reduce the flow of pollutants into the rivers and the Bay, known as Best Management practices (BMPs)."

The State Board asserts that the permit is mandated on the local governments by federal law, and applies to many dischargers of stormwater, both public and private, so it is not unique to local governments. The federal mandate requires that the permit be issued to the local governments, and the specific requirements challenged are consistent with the minimum requirements of federal law. According to the State Board, even if the permit were interpreted as going beyond federal law, any additional state requirements are de minimis. And the costs are not subject to reimbursement because the programs were proposed by the cities and County themselves, and because they have the ability to fund these requirements through charges and fees and are not required to raise taxes.

In comments filed with the State Board on April 10, 2008 (attached to the State Board comments on the test claim), the United States Environmental Protection Agency (U.S. EPA) asserts that the permit conditions reduce pollutants to the "maximum extent practicable." The transit trash receptacle and inspection programs, according to U.S. EPA, are founded in section 402 (p) of the Clean Water Act, and are well within the scope of the federal regulations (40 CFR § 122.26 (d)(2)(iv)(A)(3)).

In its comments on the draft staff analysis submitted June 5, 2009, the State Board agrees with the conclusion and staff recommendation to deny the test claim, but disagrees with parts of the analysis. The State Board asserts that federal law: (1) requires local agencies to obtain NPDES permits from California Water Boards, and (2) mandates the permit, which is less stringent than permits for private industry. The State Board also states that the permit does not exceed the minimum federal mandate, as found by a court of appeal. Finally, the State Board argues that the federal stormwater law is one of general application, and therefore does not impose a state mandate.

Interested Party Positions

Bay Area Stormwater Management Agencies Association: In comments on the draft staff analysis received June 3, 2009 (although the letter is dated April 29, 2009) the Bay Area Stormwater Management Agencies Association (BASMAA) states that this matter is of statewide importance with broad implications, and fundamentally a matter of public finance. BASMAA also urges keeping the voters' objectives paramount. BASMAA agrees that the permit requirements are a new program or higher level of service and that the requirements go beyond the federal Clean Water Act's mandates. As for the portion of the draft staff analysis that

discusses local agency fee authority, BASMAA calls it "myopic" saying it "falls short in its consideration of all potentially relevant issues and appellate court precedents that need to be presented to the Commission to serve the interest of the public." (Comments p. 3.) BASMAA contends that many permit requirements relate to local communities and their residents rather than specific business activities, and require public services that are essentially incident to real property ownership, and/or may only be financed via fees that remain subject to the Proposition 218 voting requirement or increased property taxes. BASMAA also states that many permit activities would fall on joint power authorities or special districts that have no fee authority, or for which exemptions from Proposition 218 would not be applicable. BASMAA requests that the analysis be revised to revisit the conclusions regarding "funded vs. unfunded" requirements, and to recognize and distinguish the many types of stormwater activities for which regulatory fees would not apply.

League of California Cities and California State Association of Counties (CSAC): In joint comments on the draft staff analysis received June 4, 2009, the League of Cities and CSAC agree with the draft staff analysis that the permit is a mandate, but question whether the *Connell* and *County of Fresno* decisions are still valid as applied to Government Code section 17556, subdivision (d), which prohibit the Commission from finding costs mandated by the state if the local agency has fee authority. This is because of the voters' approval of Proposition 218 in 1996. The League and CSAC urge the Commission not to find that fee authority exists for local agencies (1) to the extent there may be doubt about whether a local agency has it, and (2) to the extent that there is no person upon which the local agency can impose the fee.

COMMISSION FINDINGS

The courts have found that article XIII B, section 6 of the California Constitution[40] recognizes the state constitutional restrictions on the powers of local government to tax and spend.[41] "Its purpose is to preclude the state from shifting financial responsibility for carrying out governmental functions to local agencies, which are 'ill equipped' to assume increased financial responsibilities because of the taxing and spending limitations that articles XIII A and XIII B impose."[42] A test claim statute or executive order may impose a reimbursable state-mandated program if it orders or commands a local agency or school district to engage in an activity or

---

[40] Article XIII B, section 6, subdivision (a), provides:

> (a) Whenever the Legislature or any state agency mandates a new program or higher level of service on any local government, the State shall provide a subvention of funds to reimburse that local government for the costs of the program or increased level of service, except that the Legislature may, but need not, provide a subvention of funds for the following mandates: (1) Legislative mandates requested by the local agency affected. (2) Legislation defining a new crime or changing an existing definition of a crime. (3) Legislative mandates enacted prior to January 1, 1975, or executive orders or regulations initially implementing legislation enacted prior to January 1, 1975.

[41] *Kern High School Dist., supra,* 30 Cal.4th 727, 735.

[42] *County of San Diego v. State of California (County of San Diego)*(1997) 15 Cal.4th 68, 81.

task.[43] In addition, the required activity or task must be new, constituting a "new program," or it must create a "higher level of service" over the previously required level of service.[44]

The courts have defined a "program" subject to article XIII B, section 6, of the California Constitution, as one that carries out the governmental function of providing public services, or a law that imposes unique requirements on local agencies or school districts to implement a state policy, but does not apply generally to all residents and entities in the state.[45] To determine if the program is new or imposes a higher level of service, the test claim legislation must be compared with the legal requirements in effect immediately before the enactment of the test claim legislation.[46] A "higher level of service" occurs when the new "requirements were intended to provide an enhanced service to the public."[47]

Finally, the newly required activity or increased level of service must impose costs mandated by the state.[48]

The Commission is vested with exclusive authority to adjudicate disputes over the existence of state-mandated programs within the meaning of article XIII B, section 6.[49] In making its decisions, the Commission must strictly construe article XIII B, section 6, and not apply it as an "equitable remedy to cure the perceived unfairness resulting from political decisions on funding priorities."[50]

The permit provisions in the consolidated test claim are discussed separately to determine whether they are reimbursable state-mandates.

Issue 1: Are the permit provisions (Parts 4C2a, 4C2b, 4E, and 4F5c3) subject to article XIII B, section 6, of the California Constitution?

The issues discussed here are whether the permit provisions are an executive order within the meaning of Government Code section 17516, whether they are discretionary, and whether they constitute a federal mandate.

A. Are the permit provisions (Parts 4C2a, 4C2b, 4E, and 4F5c3) an executive order within the meaning of Government Code section 17516?

The Commission has jurisdiction over test claims involving statutes and executive orders as defined by Government Code section 17516, which defines an "executive order" for purposes of state mandates, as "any order, plan, requirement, rule, or regulation issued by any of the following:

(a) The Governor.
(b) Any officer or official serving at the pleasure of the Governor.
(c) Any agency, department, board, or commission of state government."[51]

The LA Regional Water Board is a state agency.[52] The permit it issued is both a plan for reducing water pollution, and contains requirements for local agencies toward that end. Therefore, the Commission finds that the permit is an executive order within the meaning of article XIII B, section 6 and Government Code section 17516.

B. Are the permit provisions (Parts 4C2a, 4C2b, 4E, and 4F5c3) the result of claimants' discretion?

The permit provisions require placing and maintaining trash receptacles at transit stops and inspecting specified facilities and construction sites.

The Department of Finance, in comments submitted March 27, 2008, asserts that the claimants had discretion over what activities and conditions to include in the permit application, so that any resulting costs are downstream of the claimant's decision to include those provisions in the permit. Thus, Finance argues that the costs are not mandated by the state.

Similarly, the State Board, in its April 18, 2008 comments, cites the Stormwater Quality Management Program (SQMP) submitted by the county that constituted the claimants' proposal for the BMPs required under the permit. The State Water Board refers to (on p. 28 of the SQMP) the county's proposal to "collect trash along open channels and encourage voluntary trash collection in natural stream channels." The State Water Board further states that the SQMP (pp. 22-23) contains the municipalities' proposal for (1) site visits to industrial and commercial facilities, including automotive service businesses and restaurants to verify evidence of BMP

---

[51] Section 17516 also states: ""Executive order" does not include any order, plan, requirement, rule, or regulation issued by the State Water Resources Control Board or by any regional water quality control board pursuant to Division 7 (commencing with Section 13000) of the Water Code." The Second District Court of Appeal has held that this statutory language is unconstitutional. *County of Los Angeles v. Commission on State Mandates, supra,* 150 Cal.App.4th 898, 904.

[52] Water Code section 13200 et seq.

implementation, and (2) maintaining a database of automotive and food service facilities including whether they have NPDES stormwater permit coverage.

Claimant County of Los Angeles, in its June 23, 2008 rebuttal comments (pp.3-4), stated whether or not most jurisdictions place transit receptacles at transit stops is not relevant to the existence of a state mandate because Government Code section 17565 provides that if a local agency has been incurring costs for activities that are subsequently mandated by the state, the activities are still subject to reimbursement. The County also states that the permit application only proposed an industrial/commercial *educational* site visit program, not an inspection program. The claimants allege that the inspection program was previously the state's duty, but that the permit shifted it to the local agencies.

Claimant cities in their June 28, 2008 comments also construe the SQMP proposal as involving only educational site visits, which they characterize as very different from compliance inspections. And cities assert that "nowhere in the Report of Waste Discharge do the applicants propose compliance inspections of facilities that hold general industrial and general construction stormwater permits for compliance with those permits." According to the cities, the city and county objected orally and in writing to the inspection permit provision.

In determining whether the permit provisions at issue are a downstream activity resulting from the discretionary decision by the local agencies, the following rule stated by the Supreme Court in the *Kern High School Dist.* case applies:

> [A]ctivities undertaken at the option or discretion of a local government entity ... do not trigger a state mandate and hence do not require reimbursement of funds—even if the local entity is obliged to incur costs as a result of its discretionary decision to participate in a particular program or practice.[53]

The Commission finds that the permit activities at issue were not undertaken at the option or discretion of the claimants. The claimants were required by state and federal law to submit the NPDES permit application in the form of a Report of Waste Discharge and SQMP. Submitting them was not discretionary. According to the record,[54] the county on behalf of all claimants, submitted on January 31, 2001 a Report of Waste Discharge (ROWD), which constitutes a permit application, and a SQMP, which constitutes the claimants' proposal for best management practices that would be required in the permit.

The duty to apply for an NPDES permit is not within the claimants' discretion. According to the federal regulation:

> a) *Duty to apply.* (1) Any person[55] who discharges or proposes to discharge pollutants ... and who does not have an effective permit ... must submit a

---

[53] *Kern High School Dist., supra,* 30 Cal.4th 727, 742.

[54] State Water Resources Control Board, comments submitted April 18, 2008, page 8 & attachment 36.

[55] *Person* means an individual, association, partnership, corporation, municipality, State or Federal agency, or an agent or employee thereof (40 CFR § 122.2).

complete application to the Director in accordance with this section and part 124 of this chapter.[56]

Moreover, the ROWD (tantamount to an NPDES permit application) is required by California law, as follows: "Any person discharging pollutants or proposing to discharge pollutants to the navigable water of the United States within the jurisdiction of this state ... shall file a report of the discharge in compliance with the procedures set forth in Section 13260 ..."[57] Thus, submitting the ROWD is not discretionary.

Federal regulations also anticipate the filing of an application for a stormwater permit, which contains the information in the SQMP. The regulation states in part:

> (d) *Application requirements for large and medium municipal separate storm sewer discharges.* The operator of a discharge from a large or medium municipal separate storm sewer or a municipal separate storm sewer that is designated by the Director under paragraph (a)(1)(v) of this section, may submit a jurisdiction-wide or system-wide permit application. Where more than one public entity owns or operates a municipal separate storm sewer within a geographic area (including adjacent or interconnected municipal separate storm sewer systems), such operators may be a coapplicant to the same application.[58]

According to the permit, section 122.26, subdivision (d), of the federal regulations contains the essential components of the SQMP (p. 32), which is an enforceable element of the permit (p. 45). Section 122.26, subdivision (d)(2)(iv)(C), in the federal regulations is interpreted in the permit to "require that MS4 permittees implement a program to monitor and control pollutants in discharges to the municipal system from industrial and commercial facilities that contribute a substantial pollutant load to the MS4." (p. 35.) In short, the claimants were required by law to submit the ROWD and SQMP, with specified contents.

Because the claimants do not voluntarily participate in the NPDES program, the Commission finds that the *Kern High School Dist.* case does not apply to the permit, the contents of which were not the result of the claimants' discretion.

C. Are the permit provisions (Parts 4C2a, 4C2b, 4E, and 4F5c3) a federal mandate within the meaning of article XIII B, sections 6 and 9, subdivision (b)?

The next issue is whether the parts of the permit at issue are federally mandated, as asserted by the State Board and the Department of Finance (whose comments are detailed below). If so, the parts of the permit would not constitute a state mandate.

In *County of Los Angeles v. Commission on State Mandates,* the court stated as follows regarding this permit: "We are not convinced that the obligations imposed by a permit issued by a Regional Water Board necessarily constitute federal mandates under all circumstances."[59] But after

---

[56] 40 Code of Federal Regulations, section 122.21 (a). The section applies to U.S. EPA-issued permits, but is incorporated into section 123.25 (the state program provision) by reference.

[57] Water Code section 13376.

[58] 40 Code of Federal Regulations, section 122.26 (d).

[59] *County of Los Angeles v. Commission on State Mandates, supra,* 150 Cal.App.4th 898, 914.

summarizing the arguments on both sides, the court declined to decide the issue, stating: "Resolution of the federal or state nature of these [permit] obligations therefore is premature and, thus, not properly before this court."[60] The court agreed with the Commission (calling it an "inescapable conclusion") that the federal versus state issues in the test claims must be addressed in the first instance by the Commission.[61]

The California Supreme Court has stated that "article XIII B, section 6, and the implementing statutes ... by their terms, provide for reimbursement only of *state*- mandated costs, not *federally* mandated costs."[62]

When analyzing federal law in the context of a test claim under article XII B, section 6, the court in *Hayes v. Commission on State Mandates* held that "[w]hen the federal government imposes costs on local agencies those costs are not mandated by the state and thus would not require a state subvention. Instead, such costs are exempt from local agencies' taxing and spending limitations" under article XIII B.[63] When federal law imposes a mandate on the state, however, and the state "freely [chooses] to impose the costs upon the local agency as a means of implementing a federal program, then the costs are the result of a reimbursable state mandate regardless whether the costs were imposed upon the state by the federal government."[64]

Similarly, Government Code section 17556, subdivision (c), states that the Commission shall not find "costs mandated by the state" if "[t]he statute or executive order imposes a requirement that is mandated by a federal law or regulation and results in costs mandated by the federal government, unless the statute or executive order mandates costs that exceed the mandate in that federal law or regulation."

In *Long Beach Unified School Dist. v. State of California*,[65] the court considered whether a state executive order involving school desegregation constituted a state mandate. The court held that the executive order required school districts to provide a higher level of service than required by federal constitutional or case law because the state requirements went beyond federal requirements.[66] The *Long Beach* court stated that unlike the federal law at issue, "the executive

[66] *Id.* at page 173.

Order and guidelines require specific actions ... [that were] required acts. These requirements constitute a higher level of service."[67]

In analyzing the permit under the federal Clean Water Act, we keep the following in mind. First, each state is free to enforce its own water quality laws so long as its effluent limitations are not "less stringent" than those set out in the Clean Water Act.[68] Second, the California Supreme Court has acknowledged that an NPDES permit may contain terms that are federally mandated and terms that exceed federal law.[69] The federal Clean Water Act also allows for more stringent measures, as follows:[70]

> Permits for discharges from municipal storm sewers [¶]...[¶] (iii) shall require controls to reduce the discharges of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the ... State determines appropriate for the control of such pollutants. (33 U.S.C.A. 1342 (p)(3)(B)(iii).)

As discussed further below, the Commission finds that the permit activities are not federally mandated because federal law does not require the permittees to install and maintain trash receptacles at transit stops, or require inspections of restaurants, automotive service facilities, retail gasoline outlets or automotive dealerships. As to inspecting phase I facilities or construction sites, the federal regulatory scheme authorizes states to perform the inspections under a general statewide permit, making it possible to avoid imposing a mandate on the local agencies to do so.

In its June 2009 comments on the draft staff analysis, the State Board disagrees that specific mandates in the permit exceed the federal requirements, the State Board argues:

> This approach fails to recognize that NPDES storm water permits, whether issued by U.S. EPA or California's Water Boards, are designed to translate the general federal mandate into specific programs and enforceable requirements. Whether issued by U.S. EPA or the California's Water Boards, the federal NPDES permit will identify specific requirements for municipalities to reduce pollutants in their storm water to the maximum extent practicable. The federally required pollutant reduction is a federal mandate. ... The fact that state agencies have responsibility for specifying the federal permit requirements for municipalities does not convert the federal mandate into a state mandate.[71]

The Commission disagrees. Based on the *Long Beach Unified School Dist.* case discussed above and applied in the analysis below, the specific requirements in the permit may constitute a state mandate even though they are imposed in order to comply with the federal Clean Water Act.

[70] 33 USCA section 1370.

[71] State Board comments submitted June 2009, page 6.

Finance, in its June 2009 comments on the draft staff analysis, distinguishes this permit from the issue in the *Long Beach Unified School Dist.* case. According to Finance, in *Long Beach,* the courts had suggested certain steps and approaches that might help alleviate racial discrimination, although the state's executive order and guidelines required specific actions. But in this claim, federal law requires NPDES permits to include specific requirements.

The Commission agrees that NPDES permits are required to include specific measures. But as discussed in more detail below, those measures are not the same as the specific requirements at issue in this permit (in Parts 4C2a, 4C2b, 4E, and 4F5c3).

The State Board's June 2009 comments also discuss *County of Los Angeles v. State Water Resources Control Board,*[72] which involved the same permit as in this test claim. The State Board asserts that this case holds, in an unpublished part, that "the permit did not exceed the federal minimum requirements for the MS4 program."[73] (Comments, p. 5.) The State Board asserts that the Commission is bound by this decision.

The Commission reads the *County of Los Angeles* case differently than the State Board. The plaintiffs (permittees and others) in that case challenged the permit on a variety of issues, including that the regional board did not have jurisdiction to issue it, and that it violated the California Environmental Quality Act. The court did not, however, discuss the permit conditions at issue in this test claim. In the portion cited by the State Board, the court was addressing the consideration of the permit's economic effects. One of the plaintiffs' challenges to the permit was that the regional board was required to consider the economic effects in issuing the permit. By alleging the regional board had not done so, the plaintiffs argued that the permit imposed conditions more stringent than required by the federal Clean Water Act. The court held that the plaintiff's contentions were waived for failure to set forth all the documents received by the regional board, and that the regional board had considered the costs and benefits of implementation of the permit. In other parts of the opinion, however, the court acknowledged the regional board's authority to impose permit restrictions beyond the "maximum extent feasible"[74]

The *County of Los Angeles* case is silent on the permit provisions at issue in this claim[75] (Parts 4C2a, 4C2b, 4E, and 4F5c3) except when it said: "we need no [sic] address the parties'

---

[72] *County of Los Angeles v. State Water Resources Control Board, supra,* 143 Cal.App.4th 985.

[73] The court's opinion, including the unpublished parts, are in attachment 26 of the State Board's comments submitted April 18, 2008.

[74] See page 18 of attachment 26 of the State Board's comments submitted April 18, 2008.

[75] In *County of Los Angeles,* the plaintiffs also challenged the following parts of the permit: (1) part 2.1 that deals with receiving water restrictions and that prohibits all water discharges that violate water quality standards or objectives regardless of whether the best management practices are reasonable; (2) part 3.C, which requires the permittees to revise their storm water quality management programs in order to implement the total maximum daily loads for impaired water bodies, and (3) parts 3.G and 4., which authorize the regional board to require strict requirements with numeric limits on pollutants which are incorporated into the total maximum daily load restrictions. The court held that these contentions were waived for failure to set forth all the

remaining contentions concerning trash receptacles."[76] The court also said inspections under the permit were not unlawful. Nonetheless, the case is not binding on the Commission in deciding the issues in this claim.

California in the NPDES program: By way of background, under the federal statutory scheme, a stormwater permit may be administered by the Administrator of U.S. EPA or by a state-designated agency, but states are not required to have an NPDES program. Subdivision (b) of section 1324 of the federal Clean Water Act, the section that describes the NPDES program (and which, in subdivision (p), describes the requirements for the municipal stormwater system permits) states in part:

> At any time after the promulgation of the guidelines required by subsection (i)(2) of section 1314 of this title, the Governor of each State desiring to administer its own permit program for discharges into navigable waters within its jurisdiction may submit to the Administrator [of U.S. EPA] a full and complete description of the program it proposes to establish and administer under State law or under an interstate compact. [Emphasis added.]

And the federal stormwater statute states that the permits:

> [S]hall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants. (33 USCA § 1342 (p)(3)(B)(iii). [Emphasis added].)

The federal statutory scheme indicates that California is neither required to have an NPDES program nor to issue stormwater permits. According to section 1342 (p) quoted above, the Administrator of U.S. EPA would do so if California had no program. The California Legislature, when adopting the NPDES program[77] to comply with the Federal Water Pollution Control Act of 1972 stated the following findings and declaration in Water Code section 13370:

(a) The Federal Water Pollution Control Act [citation omitted] as amended, provides for permit systems to regulate the discharge of pollutants ... to the navigable waters of the United States and to regulate the use and disposal of sewage sludge.

(b) The Federal Water Pollution Control Act, as amended, provides that permits may be issued by states which are authorized to implement the provisions of that act.

(c) It is in the interest of the people of the state, in order to avoid direct regulation by the federal government, of persons already subject to regulation under state law pursuant to this division, to enact this chapter in order to authorize the state to implement the

---

applicable evidence, and that the regional board has authority to impose restrictions beyond the maximum extent feasible.

[76] See page 22, attachment 26 of the State Board's comments submitted April 18, 2008.

[77] Water Code section 13374 states: "The term 'waste discharge requirements' as referred to in this division is the equivalent of the term 'permits' as used in the Federal water Pollution Control Act, as amended."

provisions of the Federal Water Pollution Control Act and acts amendatory thereof or supplementary thereto, and federal regulations and guidelines issued pursuant thereto, provided, that the state board shall request federal funding under the Federal Water Pollution Act for the purpose of carrying out its responsibilities under this program.

Based on this Water Code section 13370, in which California voluntarily adopts the permitting program, and on the federal statutes quoted above that authorize but do not expressly require states to have this program, the state has freely chosen[78] to effect the stormwater permit program.

Any further discussion in this analysis of federal "requirements" should be construed in the context of California's choice to participate in the federal regulatory NPDES program.

In its June 2009 comments on the draft staff analysis, the State Board argues as follows:

> [T]he ... analysis treats the state's decision to *administer* the NPDES permit program in 1972 as the 'choice' referred to in *Hayes*. ...The state's 'choice' to administer the program in lieu of the federal government does not alter the federal requirement on municipalities to reduce pollutants in these discharges to the maximum extent practicable.[79]

Finance, in its June 2009 comments, also disagrees with this part of the draft staff analysis, asserting that the duty to apply for a NPDES permit is required by federal law on public and private dischargers, which in this case are local agencies.

Even though California opted into the NPDES program, further analysis is needed to determine whether the federal regulations impose a mandate on the local agencies. To the extent that state requirements go beyond the federal requirements, there would be a state mandate.[80] Thus, the permit provisions (Parts 4C2a, 4C2b, 4E, and 4F5c3) are discussed below in context of the following federal law governing stormwater permits: Clean Water Act section 402(p) (33 USCA 1342 (p)(3)(B)) and Code of Federal Regulations, title 40, section 122.26.

Placing and maintaining trash receptacles at transit stops (part 4F5c3): This part of the permit states:

> c. Permittees not subject to a trash TMDL[81] shall: [¶]...[¶]
> (3) Place trash receptacles at all transit stops within its jurisdiction that have shelters no later than August 1, 2002, and at all transit stops within its jurisdiction no later than February 3, 2003. All trash receptacles shall be maintained as necessary.

The comments of the State Water Board and U.S. EPA assert that the permit conditions merely implement a federal mandate under the federal Clean Water Act and its regulations. The U.S.

[79] State Board comments submitted June 2009, page 4.

[80] *Long Beach Unified School Dist. v. State of California, supra,* 225 Cal.App.3d 155, 173. Government Code section 17556, subdivision (b).

[81] A Total Maximum Daily Load, or TMDL, is a calculation of the maximum amount of a pollutant that a waterbody can receive and still safely meet water quality standards.

EPA submitted a letter to the State Water Board regarding the permit conditions in April 2008, which the State Water Board attached to its comments. Regarding the trash receptacles, the letter states:

> [M]aintaining trash receptacles at all public transit stops is well within the scope of these [Federal] regulations. Among the minimum controls required to reduce pollutants from runoff from commercial and residential areas are practices for "operating and maintaining public streets, roads, and highways ... [40 CFR] § 122.26(d)(2)(iv)(A)(3).[82]

U.S. EPA also cites EPA's national menu of BMPs for stormwater management programs, "which recommends a number of BMPs to reduce trash discharges." Among the recommendations is 'improved infrastructure' for trash management when necessary, which includes the placement of trash receptacles at appropriate locations based on expected need."[83]

The State Water Board, in comments filed April 18, 2008, states that part 4F of the permit (regarding trash receptacles) concerns "the municipalities' own activities, as opposed to its regulation of discharges into its system by others." The State Water Board cites the same section 122.26 regulation as U.S. EPA, and states that the requirements "reflect the federal requirement to reduce pollutants from the MS4 to the maximum extent practicable. It is federal law that animates the requirement and federal law that mandates specificity in describing the BMPs." The State Water Board alleges that two appellate courts[84] have determined that the permit provisions constitute the "maximum extent practicable" standard, which is the minimum requirement under federal law.

The Department of Finance also asserts that the permit requirements are a federal mandate.

The County of Los Angeles, in comments filed June 23, 2008, states that "Nothing in the federal Clean Water Act requires the County to install trash receptacles at transit stops. Nothing in the federal regulations or the Clean Water Act itself imposes this obligation." The county states that the U.S.EPA's citation to BMPs for stormwater management programs "may be permitted under federal law ... and even encouraged as 'reasonable expectations.' But such requirements are not mandated on the County by federal law." The County admits the existence of "an abundance of federal guidance and encouragement to have the County install and maintain trash receptacles at all public transit stops. But these are merely federal suggestions, not mandates."

The city claimants, in comments filed June 25, 2008, also argue that the requirement for transit trash receptacles is not a federal mandate, stating that nothing in the Clean Water Act or the federal regulations requires cities to install trash receptacles at transit stops. City claimants also submit a survey of other municipal stormwater permits, finding that none of those issued by U.S. EPA required installation of trash receptacles at transit stops.

---

[82] Letter from Alexis Strauss, Director, Water Division, U.S. EPA, to Tam M. Doduc, Chair, and Dorothy Rice, Executive Director, State Water Resources Control Board, April 10, 2008, page 3.

[83] *Id.* at page 3.

[84] The State Water Board cites: *City of Rancho Cucamonga v. Regional Water Quality Control Board- Santa Ana Region* (2006) 135 Cal.App.4th 1377; *County of Los Angeles v. California State Water Resources Control Board* (2006) 148 Cal.App.4th 985.

The federal law applicable to this issue is section 402 of the Clean Water Act, which states:

> Permits for discharges from municipal storm sewers--
>
> (i) may be issued on a system- or jurisdiction-wide basis;
>
> (ii) shall include a requirement to effectively prohibit non-stormwater discharges into the storm sewers; and
>
> (iii) shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator[85] or the State determines appropriate for the control of such pollutants. (33 USCA § 1342 (p)(3)(B).)

The applicable federal regulations state as follows:

> (d) Application requirements for large and medium municipal separate storm sewer discharges. The operator[86] of a discharge[87] from a large or medium municipal separate storm sewer or a municipal separate storm sewer that is designated by the Director under paragraph (a)(1)(v) of this section, may submit a jurisdiction-wide or system-wide permit application. ... Permit applications for discharges from large and medium municipal storm sewers or municipal storm sewers designated under paragraph (a)(1)(v) of this section shall include; [¶]...[¶]
>
> (2) Part 2 of the application shall consist of: [¶]...[¶]
>
> (iv) Proposed management program. A proposed management program covers the duration of the permit. It shall include a comprehensive planning process which involves public participation and where necessary intergovernmental coordination, to reduce the discharge of pollutants to the maximum extent practicable using management practices, control techniques and system, design

---

[85] Administrator means the Administrator of the United States Environmental Protection Agency, or an authorized representative. (40 CFR § 122.2.)

[86] "*Owner or operator* means the owner or operator of any "facility or activity" subject to regulation under the NPDES program." (40 CFR § 122.2.)

[87] "*Discharge* when used without qualification means the "discharge of a pollutant. *Discharge of a pollutant* means: (a) Any addition of any "pollutant" or combination of pollutants to "waters of the United States" from any "point source," or (b) Any addition of any pollutant or combination of pollutants to the waters of the "contiguous zone" or the ocean from any point source other than a vessel or other floating craft which is being used as a means of transportation.

This definition includes additions of pollutants into waters of the United States from: surface runoff which is collected or channeled by man; discharges through pipes, sewers, or other conveyances owned by a State, municipality, or other person which do not lead to a treatment works; and discharges through pipes, sewers, or other conveyances, leading into privately owned treatment works. This term does not include an addition of pollutants by any "indirect discharger." (40 CFR § 122.2.)

and engineering methods, and such other provisions which are appropriate. The program shall also include a description of staff and equipment available to implement the program. Separate proposed programs may be submitted by each coapplicant. Proposed programs may impose controls on a systemwide basis, a watershed basis, a jurisdiction basis, or on individual outfalls. Proposed programs will be considered by the Director when developing permit conditions to reduce pollutants in discharges to the maximum extent practicable. Proposed management programs shall describe priorities for implementing controls. Such programs shall be based on:

(A) A description of structural and source control measures[88] to reduce pollutants from runoff from commercial and residential areas that are discharged from the municipal storm sewer system that are to be implemented during the life of the permit, accompanied with an estimate of the expected reduction of pollutant loads and a proposed schedule for implementing such controls. At a minimum, the description shall include: [¶]...[¶]

(3) A description of practices for operating and maintaining public streets, roads and highways and procedures for reducing the impact on receiving waters of discharges from municipal storm sewer systems, including pollutants discharged as a result of deicing activities. (40 CFR § 122.26(d)(2)(iv)(A)(3).) [Emphasis added.]

The Commission finds that the plain language of the federal statute (33 USCA § 1342 (p)(3)(B)) and regulation (40 CFR § 122.26 (d)(2)(iv)(A)(3)) does not require the permitees to install and maintain trash receptacles at transit stops.

Specifically, the state freely chose[89] to impose the transit trash receptacle requirement on the permittees because neither the federal statute nor the regulations require it. Nor do they require the permittees to implement "practices for operating and maintaining public streets, roads and highways and procedures for reducing the impact on receiving waters of discharges from municipal storm sewer systems"[90] although the regulation requires a description of practices for doing so. Because installing and maintaining trash receptacles at transit stops is not expressly required of cities or counties or municipal separate storm sewer dischargers in the federal statutes or regulations, these are activities that "mandate costs that exceed the mandate in the federal law or regulation."[91]

---

[88] Minimum control measures are defined in 40 CFR § 122.34 to include: 1) Public education and outreach on storm water impacts; (2) Public involvement/participation; (3) Illicit discharge detection and elimination. (4) Construction site storm water runoff control; (5) Post-construction storm water management in new development and redevelopment.; (6) Pollution prevention/good housekeeping for municipal operations.

[89] *Hayes v. Commission on State Mandates, supra,* 11 Cal. App. 4th 1564, 1593-1594.

[90] 40 CFR § 122.26(d)(2)(iv)(A)(3).

[91] Government Code section 17556, subdivision (c).

In *Long Beach Unified School Dist. v. State of California*,[92] the court considered whether a state executive order involving school desegregation constituted a state mandate. The court held that the executive order required school districts to provide a higher level of service than required by federal constitutional or case law because the state requirements went beyond federal requirements.[93] The *Long Beach Unified School District* court stated:

> Where courts have suggested that certain steps and approaches may be helpful [in meeting constitutional and case law requirements] the executive Order and guidelines require *specific actions.* ...[T]he point is that these steps are no longer merely being suggested as options which the local school district may wish to consider but are required acts. These requirements constitute a higher level of service.[94] [Emphasis added.]

The reasoning of *Long Beach Unified School Dist.* is applicable to this claim. Although "operating and maintaining public streets, roads and highways and procedures for reducing the impact on receiving waters of discharges from municipal storm sewer systems..."[95] is a federal requirement on municipalities, the permit requirement to place trash receptacles at all transit stops and maintain them is an activity, like in *Long Beach Unified School Dist.,* that is a *specified action* going beyond federal law.[96]

Neither of the cases cited by the State Water Board demonstrate that placing trash receptacles at transit stops is required by federal law. In *City of Rancho Cucamonga v. Regional Water Quality Control Board –Santa Ana Region*[97] the court upheld a stormwater permit similar to the one at issue in this claim. The City of Rancho Cucamonga challenged the permit on a variety of grounds, including that it exceeded the federal requirements for stormwater dischargers to "reduce the discharge of pollutants to the maximum extent practicable"[98] and that it was overly prescriptive. The court concluded that the permit did not exceed the maximum extent practicable standard and upheld the permit in all respects. There is no indication in that case, however, that the permit at issue required trash receptacles at transit stops. Similarly, in a suit regarding the same permit at issue in this case, the *Los Angeles County*[99] court dismissed various challenges to the permit, but made no mention of the permit's transit trash receptacle provision.

[96] *Ibid.*

[97] *City of Rancho Cucamonga v. Regional Water Quality Control Board- Santa Ana Region, supra,* 135 Cal.App.4th 1377.

[98] 33 USCA section 1342 (p)(3(B)(iii).

[99] *County of Los Angeles v. California State Water Resources Control Board, supra,* 143 Cal.App.4th 985.

Therefore, the Commission finds that placing and maintaining trash receptacles at all transit stops within the jurisdiction of each permittee, as specified, is not a federal mandate within the meaning of article XIII B, sections 6 and 9, subdivision (b).

Part 4F5c3 of the permit states as follows:

> c. Permittees not subject to a trash TMDL shall: (3) Place trash receptacles at all transit stops within its jurisdiction that have shelters no later than August 1, 2002, and at all transit stops within its jurisdiction no later than February 3, 2003. All trash receptacles shall be maintained as necessary.

Based on the mandatory language (i.e., "shall") in part 4F5c3 of the permit, the Commission finds it is a state mandate for the claimants that are not subject to a trash TMDL to place trash receptacles at all transit stops within its jurisdiction that have shelters no later than August 1, 2002, and at all transit stops within its jurisdiction no later than February 3, 2003, and to maintain all trash receptacles as necessary.

Inspecting commercial facilities (part 4C2a): Section 4C2a of the permit requires inspections of restaurants, automotive service facilities, retail gasoline outlets and automotive dealerships as follows:

> 2. Inspect Critical Sources – Each Permittee shall inspect all facilities in the categories and at a level and frequency as specified in the following subsections:
>
> (a) Commercial Facilities
>
> (1) Restaurants
>
> Frequency of Inspections: Twice during the 5-year term of the Order, provided that the first inspection occurs no later than August 1, 2004, and that there is a minimum interval of one year in between the first compliance inspection and the second compliance inspection.
>
> Level of Inspections: Each Permittee, in cooperation with its appropriate department (such as health or public works), shall inspect all restaurants within its jurisdiction to confirm that stormwater BMPs are being effectively implemented in compliance with Statw law, County and municipal ordinances, Regional Board Resolution 98-08, and the SQMP. At each restaurant, inspectors shall verify that the restaurant operator:
>
> - has received educational materials on stormwater pollution prevention practices;
> - does not pour oil and grease or oil and grease residue onto a parking lot, street or adjacent catch basin;
> - keeps the trash bin area clean and trash bin lids closed, and does not fill trash bins with washout water or any other liquid;
> - does not allow illicit discharges, such as discharge of washwater from floormats, floors, porches, parking lots, alleys, sidewalks and street areas (in the immediate vicinity of the establishment), filters or garbage/trash containers;

- removes food waste, rubbish or other materials from parking lot areas in a sanitary manner that does not create a nuisance or discharge to the storm drain.

(2) Automotive Service Facilities

Frequency of Inspections: Twice during the 5-year term of the Order, provided that the first inspection occurs no later than August 1, 2004, and that there is a minimum interval of one year in between the first compliance inspection and the second compliance inspection.

Level of Inspections: Each permittee shall inspect all automotive service facilities within its jurisdiction to confirm that stormwater BMPs are effectively implemented in compliance with County and municipal ordinances, Regional Board Resolution 98-08, and the SQMP. At each automotive service facility, inspectors shall verify that each operator:

- maintains the facility area so that it is clean and dry without evidence of excessive staining;
- implements housekeeping BMPs to prevent spills and leaks;
- properly discharges wastewaters to a sanitary sewer and/or contains wastewaters for transfer to a legal point of disposal;
- is aware of the prohibition on discharge of non-stormwater to the storm drain;
- properly manages raw and waste materials including proper disposal of hazardous waste;
- protects outdoor work and storage areas to prevent contact of pollutants with rainfall and runoff;
- labels, inspects, and routinely cleans storm drain inlets that are located on the facility's property; and
- trains employees to implement stormwater pollution prevention practices.

(3) Retail Gasoline Outlets and Automotive Dealerships

Frequency of Inspection: Twice during the 5-year term of the Order, provided that the first inspection occurs no later than August 1, 2004, and that there is a minimum interval of one year in between the first compliance inspection and the second compliance inspection.

Level of Inspection: Each Permittee shall confirm that BMPs are being effectively implemented at each RGO and automotive dealership within its jurisdiction, in compliance with the SQMP, Regional Board Resolution 98-08, and the Stormwater Quality Task Force Best Management Practice Guide for RGOs. At each RGO and automotive dealership, inspectors shall verify that each operator:

- routinely sweeps fuel-dispensing areas for removal of litter and debris, and keeps rags and absorbents ready for use in case of leaks and spills;
- is aware that washdown of facility area to the storm drain is prohibited;
- is aware of design flaws (such as grading that doesn't prevent run-on, or inadequate roof covers and berms), and that equivalent BMPs are implemented;

- inspects and cleans storm drain inlets and catch basins within each facility's boundaries no later than October 1st of each year;
- posts signs close to fuel dispensers, which warn vehicle owners/operators against "topping off" of vehicle fuel tanks and installation of automatic shutoff fuel dispensing nozzles;
- routinely checks outdoor waste receptacle and air/water supply areas, cleans leaks and drips, and ensures that only watertight waste receptacles are used and that lids are closed; and
- trains employees to properly manage hazardous materials and wastes as well as to implement other stormwater pollution prevention practices. [¶]...[¶]

Level of Inspection: Each Permittee shall confirm that each operator:

- has a current Waste Discharge Identification (WDID) number for facilities discharging stormwater associated with industrial activity, and that a Storm Water Pollution Prevention Plan is available on-site, and
- is effectively implementing BMPs in compliance with County and municipal ordinances, Regional Board Resolution 98-08, and the SQMP.

The state asserts that these inspection requirements in permit part 4C2a are a federal mandate.

In comments filed April 18, 2008, the State Water Board quotes from the MS4 Program Evaluation Guide issued by U.S. EPA, asserting that it requires inspections of businesses. The State Water Board also states:

> The federal regulations also specifically require local stormwater agencies, as part of their responsibilities under NPDES permits, to conduct inspections. [citing 40 CFR § 122.26(d)(2)(iv)(C).] Throughout the federal law, there are numerous requirements for entities that discharge pollutants to waters of the United States to monitor and inspect their facilities and their effluent. [citing Clean Water Act §402(b)(2)(B); 40 CFR § 122.44(i)).] The claimants are the dischargers of pollutants into surface waters; as part of their permit allowing these dischargers they must conduct inspections.

Similarly, the April 10, 2008 letter from U.S. EPA to the State Water Board and attached to the Board's comments submitted April 18, 2008, states:

> A program for commercial and industrial facility inspection and enforcement that includes restaurants and automobile facilities, would appear to be both practicable and effective. Such an inspection program ensures that stormwater discharges from such facilities are reducing their contribution of pollutants and that there are no non-stormwater discharges or illicit connections. Thus these programs are founded in both 402 (p)(3)(B)(ii) and (iii) and are well within the scope of 40 CFR § 122.26(d)(2)(iv)(A) and (B).

The County of Los Angeles, in its June 23, 2008 rebuttal comments, asserts that federal law requires prohibiting non-stormwater discharges into the storm sewers, and reducing the discharge of pollutants in stormwater to the maximum extent practicable (33 USC 1342(p)) but not inspecting restaurants, automotive service facilities, retail gas outlets, or automotive dealerships.

Only municipal landfills, hazardous waste treatment, disposal and recovery facilities and related facilities are required to be inspected (40 CFR § 122.26(d)(2)(iv)(C)).

In comments received June 25, 2008, the city claimants argue that the LA Regional Board freely chose to impose the permit requirements on the permittees, and make the following arguments: (1) The inspection obligations were not contained in two prior permits issued to the cities and the County—thus, the requirements are not federal mandates; (2) No federal statute or regulation requires the cities or the County to inspect restaurants, automotive service facilities, retail gas outlets, automotive dealerships or facilities that hold general industrial permits; (3) Stormwater NPDES permits issued by the U.S. EPA do not contain the requirement to inspect restaurants, auto service facilities, retail gas outlets and automotive dealerships, or require the extensive inspection of facilities that hold general industrial stormwater permits as contained in the Order [i.e. permit]; (4) The Administrator of U.S. EPA, as well as the head of the water division for U.S. EPA Region IX, have specifically stated that a municipality has an obligation under a stormwater permit only to assure compliance with local ordinances; the state retains responsibility to inspect for compliance with state law, including state-issued permits.

The city claimants dispute the State Board's contention that the court in *City of Rancho Cucamonga v. Regional Water Quality Control Board* (2006) 135 Cal.App.4th 1377 held that federal law required inspections like those at issue in the permit. The cities quote part of the *City of Rancho Cucamonga* case with the following emphasis:

> Rancho Cucamonga and the other permittees are responsible for inspecting construction and industrial sites and commercial facilities within their jurisdiction for compliance with and enforcement of local municipal ordinances and permits. *But the Regional Board continues to be responsible under the 2002 NPDES permit for inspections under the general permits.* The Regional Board may conduct its own inspections but permittees must still enforce their own laws at these sites. (40 C.F.R. § 122.26, subd. (d)(2) (2005).)

In discussing the federal mandate issue, the applicable federal law is section 402 of the Clean Water Act, which states that municipal storm sewer system permits:

> (i) may be issued on a system- or jurisdiction-wide basis; (ii) shall include a requirement to effectively prohibit non-stormwater discharges into the storm sewers; and (iii) shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants. (33 USCA § 1342 (p)(3)(B).)

The applicable federal regulations (40 CFR § 122.26 (d)(2)(iv)(B)&(C)) state as follows:

> (d) Application requirements for large and medium municipal separate storm sewer discharges. The operator of a discharge from a large or medium municipal separate storm sewer or a municipal separate storm sewer that is designated by the Director under paragraph (a)(1)(v) of this section, may submit a jurisdiction-wide or system-wide permit application. Where more than one public entity owns or operates a municipal separate storm sewer within a geographic area (including adjacent or interconnected municipal separate storm sewer systems), such

operators may be a coapplicant to the same application. Permit applications for discharges from large and medium municipal storm sewers or municipal storm sewers designated under paragraph (a)(1)(v) of this section shall include; [¶]...[¶]

(2) Part 2 of the application shall consist of: [¶]...[¶]

(iv) Proposed management program. A proposed management program covers the duration of the permit. It shall include a comprehensive planning process which involves public participation and where necessary intergovernmental coordination, to reduce the discharge of pollutants to the maximum extent practicable using management practices, control techniques and system, design and engineering methods, and such other provisions which are appropriate. The program shall also include a description of staff and equipment available to implement the program. Separate proposed programs may be submitted by each coapplicant. Proposed programs may impose controls on a systemwide basis, a watershed basis, a jurisdiction basis, or on individual outfalls. Proposed programs will be considered by the Director when developing permit conditions to reduce pollutants in discharges to the maximum extent practicable. Proposed management programs shall describe priorities for implementing controls. Such programs shall be based on: [¶]...[¶]

(B) A description of a program, including a schedule, to detect and remove (or require the discharger to the municipal separate storm sewer to obtain a separate NPDES permit for) illicit discharges and improper disposal into the storm sewer. The proposed program shall include:

(1) A description of a program, <u>including inspections</u>, to implement and enforce an ordinance, orders or similar means <u>to prevent illicit discharges to the municipal separate storm sewer system</u>; this program description shall address all types of illicit discharges, however the following category of non-stormwater discharges or flows shall be addressed where such discharges are identified by the municipality as sources of pollutants to waters of the United States [¶]...[¶]

(C) A description of a program to monitor and control pollutants in stormwater discharges to municipal systems from municipal landfills, hazardous waste treatment, disposal and recovery facilities, industrial facilities that are subject to section 313 of title III of the Superfund Amendments and Reauthorization Act of 1986 (SARA), and industrial facilities that the municipal permit applicant determines are contributing a substantial pollutant loading to the municipal storm sewer system. The program shall:

(1) Identify priorities and procedures <u>for inspections</u> and establishing and implementing control measures for such discharges. (40 C.F.R. § 122.26, subd. (d)(2)(iv)(B)(1) & (C)(1).) [Emphasis added.]

There is a requirement in subdivision (d)(2)(iv)(B)(1) for implementing and enforcing "an ordinance, orders, or similar means to prevent illicit discharges to the municipal separate storm system." There is no express requirement in federal law, however, to inspect restaurants, automotive service facilities, retail gasoline outlets, or automotive dealerships. Nor does the

portion of the MS4 Program Evaluation Guide quoted by the State Water Board contain mandatory language to conduct inspections for these facilities.

In its April 2008 comments, the State Water Board argues that this reading of the regulations is not reasonable, and that U.S. EPA acknowledged that the initial selection by MS4s was only a starting point. In its comments (p.15), the State Water Board also states:

> Because the federal mandate requires Water Boards to choose specific BMPs [Best Management Practices] that are included in MS4 permits as requirements, the 'discretion' exercised in selecting those BMPs is necessarily a part of the federal mandate. It is not comparable to the discretion that the courts in *Hayes* or *San Diego* spoke of, where the state truly had a 'free choice.' The Los Angeles Water Board was mandated by federal law to select BMPs that would result in compliance with the federal MEP [Maximum Extent Practicable] standard. ... Therefore, it is clear that the mere exercise of discretion in selecting BMPs does not create a reimbursable mandate.

The State Water Board would have the Commission read requirements into the federal law that are not there. The Commission, however, cannot read a requirement into a statute or regulation that is not on its face or its legislative history.[100]

Based on the plain language of the federal regulations that are silent on the types of facilities at issue in the permit, the Commission finds that performing inspections at restaurants, automotive service facilities, retail gasoline outlets, or automotive dealerships, as specified in the permit, is not a federal mandate.

Moreover, the requirement to inspect the facilities listed in the permit is an activity, as in the *Long Beach Unified School Dist.* case discussed above, [101] that is a specified action going beyond the federal requirement for inspections "to prevent illicit discharges to the municipal separate storm sewer system." (40 C.F.R. § 122.26, subd. (d)(2)(iv)(B)(1).) As such, the inspections are not federally mandated.

The permit states in part: "Each Permittee shall inspect all facilities in the categories and at a level and frequency as specified ..." Based on the mandatory language in part 4C2a of the permit, the Commission finds that this part is a state mandate on the claimants to perform the inspections at restaurants, automotive service facilities, retail gasoline outlets, and automotive dealerships at the frequency and levels specified in the permit.

Inspecting phase I industrial facilities (part 4C2b): Part 4C2b of the permit regarding phase I industrial facilities requires the following:

---

[100] *Gillett-Harris-Duranceau & Associates, Inc. v. Kemple* (1978) 83 Cal.App.3d 214, 219-220. "Rules governing the interpretation of statutes also apply to interpretation of regulations." *Diablo Valley College Faculty Senate v. Contra Costa Community College Dist.* (2007) 148 Cal.App.4th 1023, 1037.

[101] *Long Beach Unified School Dist. v. State of California, supra,* 225 Cal.App.3d 155.

b) Phase I Facilities[102]

Permittees need not inspect facilities that have been inspected by the Regional Board within the past 24 months. For the remaining Phase I facilities that the Regional Board has not inspected, each Permittee shall conduct compliance inspections as specified below.

Frequency of Inspection

Facilities in Tier 1 Categories:[103] Twice during the 5-year term of the Order, provided that the first inspection occurs no later than August 1, 2004, and that there is a minimum interval of one year in between the first compliance inspection and the second compliance inspection.

Facilities in Tier 2 Categories:[104] Twice during the 5-year term of the permit, provided that the first inspection occurs no later than August 1, 2004, Permittees need not perform additional inspections at those facilities determined to have no risk of exposure of industrial activity to stormwater. For those facilities that do have exposure of industrial activities to stormwater, a Permittee may reduce that frequency of additional compliance inspections to once every 5 years, provided that the Permittee inspects at least 20% of the facilities in Tier 2 each year.

Level of Inspection: Each Permittee shall confirm that each operator:

---

[102] On page 62 of the permit, U.S. EPA Phase I Facilities are defined as "facilities in specified industrial categories that are required to obtain an NPDES permit for storm water discharges, as required by 40 CFR 122.26(c). These categories include: (i) facilities subject to storm water effluent limitation guidelines, new source performance standards, or toxic pollutant effluent standards (40 CFR N); (ii) manufacturing facilities; (iii) oil and gas/mining facilities; (iv) hazardous waste treatment, storage, or disposal facilities; (v) landfills, land application sites, and open dumps; (vi) recycling facilities; (vii) steam electric power generating facilities; (viii) transportation facilities; (ix) sewage or wastewater treatment works; (x) light manufacturing facilities.

[103] Attachment B of the permit (pp. B-1 to B-2) lists the Tier 1 categories as follows (with Phase I facilities listed in italics): "*Municipal landfills ...; Hazardous Waste Treatment, Disposal and Recovery Facilities; Facilities Subject to SARA Title III ...;* Restaurants; *Wholesale trade (scrap, auto dismantling)...;* Automotive service facilities; *Fabricated metal products ...; Motor freight ...; Chemical/allied products ...;* Automotive Dealers/Gas Stations ...; *Primary Metals.*"

[104] Attachment B of the permit (pp. B-1 to B-2) lists the Tier 2 categories as follows (with Phase I facilities listed in italics): "*Electric/Gas/Sanitary...; Air Transportation ...; Rubbers/Miscellaneous Plastics ...; Local/Suburban Transit ...; Railroad Transportation ...; Oil & Gas Extraction ...; Lumber/Wood Products...; Machinery Manufacturing ...; Transportation Equipment ...; Stone, Clay, Glass, Concrete ...; Leather/Leather Products...; Miscellaneous Manufacturing ...; Food and kindred Products...; Mining of Nonmetallic Minerals ...; Printing and Publishing ...; Electric/Electronics ...; Paper and Allied Products ...; Furniture and Fixtures ...;* Laundries ...; *Instruments...; Textile Mills Products ...; Apparel ...*"

- has a current Waste Discharge Identification (WDID) number for facilities discharging stormwater associated with industrial activity, and that a Storm Water Pollution Prevention Plan is available on-site, and is effectively implementing BMPs in compliance with County and municipal ordinances, Regional Board Resolution 98-08, and the SQMP.

The issue is whether these inspection requirements for phase I industrial facilities is a federal mandate. The governing federal regulation is 40 CFR section 122.26 (d)(2)(iv)(B)&(C), which is cited above. Specifically on point is subpart (C), which states that the proposed management program must include the following:

> (C) A description of a program to monitor and control pollutants in stormwater discharges to municipal systems from municipal landfills, hazardous waste treatment, disposal and recovery facilities, industrial facilities that are subject to section 313 of title III of the Superfund Amendments and Reauthorization Act of 1986 (SARA), and industrial facilities that the municipal permit applicant determines are contributing a substantial pollutant loading to the municipal storm sewer system. The program shall:
>
> (1) Identify priorities and procedures for inspections and establishing and implementing control measures for such discharges; (40 C.F.R. § 122.26, subd. (d)(2)(iv)(B)(1) & (C)(1).) [Emphasis added.]

The phase I facilities in the permit are defined to include.

> (i) facilities subject to storm water effluent limitation guidelines, new source performance standards, or toxic pollutant effluent standards (40 CFR N); (ii) manufacturing facilities; (iii) oil and gas/mining facilities; (iv) hazardous waste treatment, storage, or disposal facilities; (v) landfills, land application sites, and open dumps; (vi) recycling facilities; (vii) steam electric power generating facilities; (viii) transportation facilities; (ix) sewage or wastewater treatment works; (x) light manufacturing facilities. (Permit, p. 62)

And the Tier 1 facilities in the permit include municipal landfills, hazardous waste treatment, disposal and recovery facilities and facilities subject to SARA Title III (see permit attachment B, pp. B-1 to B-2). Thus, there is a federal requirement to inspect these phase I and tier 1 facilities in the permit. The issue is whether this requirement constitutes a federal mandate on local agencies. The Commission finds that it does not.

It is the state that mandates the phase I inspection and related activities in that the state freely chooses to impose the inspection and enforcement requirements on the local agency permittees.[105] This is because the federal regulatory scheme provides an alternative means of regulating and inspecting these industrial facilities under the state-enforced, statewide permit, as follows:

---

[105] *Hayes v. Commission on State Mandates, supra,* 11 Cal. App. 4th 1564, 1593-1594.

(c) Application requirements for stormwater discharges associated with industrial activity[106] and stormwater discharges associated with small construction activity -

(1) Individual application. Dischargers of stormwater associated with industrial activity and with small construction activity are required to apply for an individual permit or seek coverage under a promulgated stormwater general permit. Facilities that are required to obtain an individual permit, or any discharge of stormwater which the Director is evaluating for designation (see 124.52(c) of this chapter) under paragraph (a)(1)(v) of this section and is not a municipal storm sewer, shall submit an NPDES application in accordance with the requirements of § 122.21 as modified and supplemented by the provisions of this paragraph. [Emphasis added.]

The state has issued a statewide general activity industrial permit (GIASP) that is enforced through the regional boards.[107] This, along with the statewide construction permit, is described in the permit itself:

> To facilitate compliance with federal regulations, the State Board has issued two statewide general NPDES permits for stormwater discharges: one for stormwater from industrial sites [NPDES No. CAS000001, General Industrial Activity Storm Water Permit (GIASP)] and the other for stormwater from construction sites [NPDES No. CAS000002, General Construction Activity Storm Water Permit (GCASP)]. The GCASP was reissued on August 19, 1999. The GIASP was reissued on April 17, 1997. Facilities discharging stormwater associated with industrial activities and construction projects with a disturbed area of five acres or more are required to obtain individual NPDES permits for stormwater discharges, or to be covered by a statewide general permit by completing and filing a Notice of Intent (NOI) with the State Board. The USEPA guidance anticipates coordination of the state-administered programs for industrial and construction activities with the local agency program to reduce pollutants in stormwater discharges to the MS4. The Regional Board is the enforcement authority in the Los Angeles Region for the two statewide general permits regulating discharges from industrial facilities and construction sites, and all NPDES stormwater and

---

[106] According to 40 CFR § 122.26, (b)(14): "Storm water discharge associated with industrial activity means the discharge from any conveyance that is used for collecting and conveying storm water and that is directly related to manufacturing, processing or raw materials storage areas at an industrial plant. ... The following categories of facilities are considered to be engaging in "industrial activity" for purposes of paragraph (b)(14): [¶]...[¶](x) Construction activity including clearing, grading and excavation, except operations that result in the disturbance of less than five acres of total land area. Construction activity also includes the disturbance of less than five acres of total land area that is a part of a larger common plan of development or sale if the larger common plan will ultimately disturb five acres or more."

[107] For example, page 2 of the Fact Sheet for the General Construction Activity Storm Water Permit states: "This General Permit shall be implemented and enforced by the nine California Regional Water Quality Control Boards (RWQCBs)."

> non-stormwater permits issued by the Regional Board. These industrial and construction sites and discharges are also regulated under local laws and regulations.[108]

There is nothing in the federal statutes or regulations that would prevent the state (rather than local agencies) from performing the inspections of industrial facilities (specified in part 4C2b of the permit) under the state-enforced general permit. Nor does federal law require the owner or operator of the discharge to perform these activities in part 4C2b of the permit. In fact, the State Board collects fees for the regional boards for performing inspections under the GIASP (see Wat. Code, § 13260, subd. (d)(2)(B)(ii)).

In its April 18, 2008 comments, the State Water Board asserts:

> Because the federal mandate requires Water Boards to choose specific BMPs [Best Management Practices] that are included in MS4 permits as requirements, the 'discretion' exercised in selecting those BMPs is necessarily a part of the federal mandate. It is not comparable to the discretion that the courts in *Hayes* or *San Diego* spoke of, where the state truly had a 'free choice.' The Los Angeles Water Board was mandated by federal law to select BMPs that would result in compliance with the federal MEP [Maximum Extent Practicable] standard. ... Therefore, it is clear that the mere exercise of discretion in selecting BMPs does not create a reimbursable mandate.[109]

The Commission disagrees. Inasmuch as the federal regulation (40 CFR § 122.26 (c)) authorizes coverage under a statewide general permit for the inspections of industrial activities, and the federal regulation (40 CFR § 122.26 (d)(2)(iv)(D)) does not expressly require those inspections to be performed by the county or cities (or the "owner or operator of the discharge") the Commission finds that the state has freely chosen[110] to impose these activities on the permittees. Therefore, the Commission finds that there is no federal mandate on the claimants to perform inspections of phase I facilities as specified in part 4C2b of the permit.

As to whether the permit is a state mandate, part 4C2b contains the following mandatory language:

---

[108] Permit, page 11, paragraph 22.

[109] State Water Board comments, submitted April 18, 2008, page 15.

[110] *Hayes v. Commission on State Mandates, supra,* 11 Cal. App. 4th 1564, 1593-1594.

b) Phase I Facilities[111]

Permittees need not inspect facilities that have been inspected by the Regional Board within the past 24 months. For the remaining Phase I facilities that the Regional Board has not inspected, each Permittee shall conduct compliance inspections as specified below. [Emphasis added.]

Frequency of Inspection

Facilities in Tier 1 Categories:[112] Twice during the 5-year term of the Order, provided that the first inspection occurs no later than August 1, 2004, and that there is a minimum interval of one year in between the first compliance inspection and the second compliance inspection.

Facilities in Tier 2 Categories:[113] Twice during the 5-year term of the permit, provided that the first inspection occurs no later than August 1, 2004, Permittees need not perform additional inspections at those facilities determined to have no risk of exposure of industrial activity[114] to stormwater. For those facilities that do

---

[111] On page 62 of the permit, U.S. EPA Phase I Facilities are defined as "facilities in specified industrial categories that are required to obtain an NPDES permit for storm water discharges, as required by 40 CFR 122.26(c). These categories include: (i) facilities subject to storm water effluent limitation guidelines, new source performance standards, or toxic pollutant effluent standards (40 CFR N); (ii) manufacturing facilities; (iii) oil and gas/mining facilities; (iv) hazardous waste treatment, storage, or disposal facilities; (v) landfills, land application sites, and open dumps; (vi) recycling facilities; (vii) steam electric power generating facilities; (viii) transportation facilities; (ix) sewage or wastewater treatment works; (x) light manufacturing facilities.

[112] Attachment B of the permit (pp. B-1 to B-2) lists the Tier 1 categories as follows (with Phase I facilities listed in italics): "*Municipal landfills ...; Hazardous Waste Treatment, Disposal and Recovery Facilities; Facilities Subject to SARA Title III ...;* Restaurants; *Wholesale trade (scrap, auto dismantling)...;* Automotive service facilities; *Fabricated metal products ...; Motor freight ...; Chemical/allied products ...;* Automotive Dealers/Gas Stations ...; *Primary Metals.*"

[113] Attachment B of the permit (pp. B-1 to B-2) lists the Tier 2 categories as follows (with Phase I facilities listed in italics): "*Electric/Gas/Sanitary...; Air Transportation ...; Rubbers/Miscellaneous Plastics ...; Local/Suburban Transit ...; Railroad Transportation ...; Oil & Gas Extraction ...; Lumber/Wood Products...; Machinery Manufacturing ...; Transportation Equipment ...; Stone, Clay, Glass, Concrete ...; Leather/Leather Products...; Miscellaneous Manufacturing ...; Food and kindred Products...; Mining of Nonmetallic Minerals ...; Printing and Publishing ...; Electric/Electronics ...; Paper and Allied Products ...; Furniture and Fixtures ...;* Laundries ...; *Instruments...; Textile Mills Products ...; Apparel ...*"

[114] "Storm water discharge associated with industrial activity means the discharge from any conveyance that is used for collecting and conveying storm water and that is directly related to manufacturing, processing or raw materials storage areas at an industrial plant. ... The following categories of facilities are considered to be engaging in "industrial activity" for purposes of paragraph (b)(14): [¶]...[¶] (x) Construction activity including clearing, grading and excavation,

have exposure of industrial activities to stormwater, a Permittee may reduce that frequency of additional compliance inspections to once every 5 years, provided that the Permittee inspects at least 20% of the facilities in Tier 2 each year.

Level of Inspection: Each Permittee shall confirm that each operator:

- has a current Waste Discharge Identification (WDID) number for facilities discharging stormwater associated with industrial activity, and that a Storm Water Pollution Prevention Plan is available on-site, and is effectively implementing BMPs in compliance with County and municipal ordinances, Regional Board Resolution 98-08, and the SQMP.

Based on this mandatory language to perform the inspections of phase I facilities as specified, the Commission finds that part 4C2b of the permit is a state-mandate.

Inspecting construction sites (part 4E): Part 4E of the permit contains the following requirements:

- Implement a program to control runoff from construction activity at all construction sites within each permittees jurisdiction, and ensure the specified minimum requirements are effectively implemented at all construction sites. (Permit, 4E1.)

  For construction sites one acre or greater, each permittee shall:

- Require the preparation and submittal of a Local SWPPP [Storm Water Pollution Prevention Plan], with specified contents, for approval prior to issuing a grading permit for construction projects. (Permit, 4E2a.)
- Inspect all construction sites for stormwater quality requirements during routine inspections a minimum of once during the wet seasons. (Permit, 4E2b.)
- Review the Local SWPPP for compliance with local codes, ordinances, and permits. (Permit, 4E2b.)
- For inspected sites that have not adequately implemented their Local SWPPP, conduct a follow-up inspection to ensure compliance will take place within 2 weeks.
  - If compliance has not been attained, take additional actions to achieve compliance (as specified in municipal codes).
  - If compliance has not been achieved, and the site is also covered under a statewide general construction stormwater permit, enforce the local ordinance requirements, and
  - If non-compliance continues the Regional Board shall be notified for further joint enforcement actions. (Permit, 4E2b.)

---

except operations that result in the disturbance of less than five acres of total land area. Construction activity also includes the disturbance of less than five acres of total land area that is a part of a larger common plan of development or sale if the larger common plan will ultimately disturb five acres or more." [40 CFR §122.26 (b)(14), Emphasis added.]

- Require by March 10, 2003, before issuing a grading permit for all projects less than five acres requiring coverage under a statewide general construction stormwater permit, proof of a Waste Discharger Identification Number for filing a Notice of Intent for permit coverage and a certification that a SWPPP has been prepared by the project developer. A Local SWPPP may substitute for the State SWPPP if the Local SWPPP is at least as inclusive in controls and BMPs [Best Management Practices] as the State SWPPP (Permit, 4E2c.)
- For sites five acres and greater:
    - Require, prior to issuing a grading permit for all projects requiring coverage under the state general permit, proof of a Waste Discharger Identification (WDID) number for filing a Notice of Intent (NOI) for coverage under the GCASP [General Construction Activity Storm Water Permit] and a certification that a SWPPP has been prepared by the project developer. A Local SWPPP may substitute for the State SWPPP if the Local SWPPP is at least as inclusive in controls and BMPs as the State SWPPP.
    - Require proof of an Notice of Intent (NOI) and a copy of the SWPPP at any time a transfer of ownership takes place for the entire development or portions of the common plan of development where construction activities are still on-going.
    - Use an effective system to track grading permits issued by each permittee. (Permit, 4E3.)
- For projects subject to the GCASP [General Construction Activity Storm Water Permit], permittees shall refer non-filers (i.e., those projects which cannot demonstrate that they have a WDID number) to the Regional Board, within 15 days of making a determination. In making such referrals, permittees shall include, at a minimum, the following documentation: Project location; Developer; Estimated project size; and Records of communication with the developer regarding filing requirements. (Permit, 4E4b.)
- Train employees in targeted positions (whose jobs or activities are engaged in construction activities including construction inspection staff) regarding the requirements of the stormwater management program no later than August 1, 2002, and annually thereafter. For permittees with a population of 250,000 or more (2000 US Census), initial training shall be completed no later than February 3, 2003. Each permittee shall maintain a list of trained employees. (Permit, 4E5.)

The applicable federal regulation (40 CFR § 122.26 (d)(2)(iv)(D)) on the issue of whether the inspection of construction sites is a federal mandate is as follows:

> (d) Application requirements for large[115] and medium[116] municipal separate storm sewer discharges. The operator[117] of a discharge from a large or medium

---

[115] "(4) Large municipal separate storm sewer system means all municipal separate storm sewers that are either: (i) Located in an incorporated place with a population of 250,000 or more as

municipal separate storm sewer or a municipal separate storm sewer that is designated by the Director under paragraph (a)(1)(v) of this section, may submit a jurisdiction-wide or system-wide permit application. ... Permit applications for discharges from large and medium municipal storm sewers or municipal storm sewers designated under paragraph (a)(1)(v) of this section shall include; [¶]...[¶]

(2) Part 2 of the application shall consist of: [¶]...[¶]

(iv) Proposed management program. A proposed management program covers the duration of the permit. It shall include a comprehensive planning process which involves public participation and where necessary intergovernmental coordination, to reduce the discharge of pollutants to the maximum extent practicable using management practices, control techniques and system, design and engineering methods, and such other provisions which are appropriate. The program shall also include a description of staff and equipment available to implement the program. Separate proposed programs may be submitted by each coapplicant. Proposed programs may impose controls on a systemwide basis, a watershed basis, a jurisdiction basis, or on individual outfalls. Proposed programs will be considered by the Director when developing permit conditions to reduce pollutants in discharges to the maximum extent practicable. Proposed management programs shall describe priorities for implementing controls. Such programs shall be based on: [¶]...[¶]

(D) A description of a program to implement and maintain structural and non-structural best management practices to reduce pollutants in stormwater runoff

---

determined by the 1990 Decennial Census by the Bureau of the Census (Appendix F of this part); or (ii) Located in the counties listed in appendix H, except municipal separate storm sewers that are located in the incorporated places, townships or towns within such counties; or (iii) Owned or operated by a municipality other than those described in paragraph (b)(4)(i) or (ii) of this section and that are designated by the Director as part of the large or medium municipal separate storm sewer system due to the interrelationship between the discharges of the designated storm sewer and the discharges from municipal separate storm sewers described under paragraph (b)(4)(i) or (ii) of this section. ..." (40 CFR § 122.26 (b)(4).)

[116] "(7) Medium municipal separate storm sewer system means all municipal separate storm sewers that are either: (i) Located in an incorporated place with a population of 100,000 or more but less than 250,000, as determined by the 1990 Decennial Census by the Bureau of the Census (Appendix G of this part); or (ii) Located in the counties listed in appendix I, except municipal separate storm sewers that are located in the incorporated places, townships or towns within such counties; or (iii) Owned or operated by a municipality other than those described in paragraph (b)(7)(i) or (ii) of this section and that are designated by the Director as part of the large or medium municipal separate storm sewer system due to the interrelationship between the discharges of the designated storm sewer and the discharges from municipal separate storm sewers described under paragraph (b)(7)(i) or (ii) of this section. ..." (40 CFR § 122.26 (b)(7).)

[117] "*Owner or operator* means the owner or operator of any 'facility or activity' subject to regulation under the NPDES program." (40 CFR § 122.2.)

> from construction sites to the municipal storm sewer system, which shall include: [¶]...[¶]
>
> (3) A description of procedures for identifying priorities for inspecting sites and enforcing control measures which consider the nature of the construction activity, topography, and the characteristics of soils and receiving water quality; and ... [Emphasis added.]

The language of the federal regulation indicates a duty to inspect construction sites and enforce control measures as specified in part 4E of the permit. The *Rancho Cucamonga* case cited by the State Board also states that federal law requires NPDES permittees to inspect construction sites.[118]

The issue, however, is whether the federal requirements to inspect construction sites and enforce control measures amounts to a federal mandate on the local agencies. The Commission finds that it does not. First, the federal regulations quoted above do not specify the frequency or other specifics of the inspection program as the permit does. These are activities, as in the *Long Beach Unified School Dist.* case discussed above,[119] that are specified actions going beyond the federal requirement for inspections "to prevent illicit discharges to the municipal separate storm sewer system." (40 C.F.R. § 122.26, subd. (d)(2)(iv)(B)(1).) As such, it is not a federal mandate for the local agency permittees to inspect construction sites.

Moreover, it is the state that mandates the inspections of construction sites and related activities in that the state freely chooses to impose the inspection and enforcement requirements on the local agency permittees.[120] The federal regulations do not require: (1) a municipality to have a separate permit for construction activity or enforcement; or (2) that the inspections and related activities in part 4E of the permit be conducted by the owner or operator of the discharge. Rather, these activities may be conducted by the state under a state-wide, state-enforced, general permit, as stated in the federal stormwater regulation (40 CFR § 122.26 (c)), which states in part:

> (c) Application requirements for stormwater discharges associated with industrial activity [includes construction activity of five or more acres] and stormwater discharges associated with small construction activity[121] [construction activity from one to less than five acres]--

---

[118] *City of Rancho Cucamonga v. Regional Water Quality Control Bd.-Santa Ana Region, supra,* 135 Cal.App.4th 1377, 1390.

[119] *Long Beach Unified School Dist. v. State of California, supra,* 225 Cal.App.3d 155.

[120] *Hayes v. Commission on State Mandates, supra,* 11 Cal. App. 4th 1564, 1593-1594.

[121] According to 40 CFR § 122.26, (b)(15): "Storm water discharge associated with small construction activity means the discharge of storm water from: (i) Construction activities including clearing, grading, and excavating that result in land disturbance of equal to or greater than one acre and less than five acres. Small construction activity also includes the disturbance of less than one acre of total land area that is part of a larger common plan of development or sale if the larger common plan will ultimately disturb equal to or greater than one and less than five acres. Small construction activity does not include routine maintenance that is performed to maintain the original line and grade, hydraulic capacity, or original purpose of the facility. The

(1) Individual application. Dischargers of stormwater associated with industrial activity and with small construction activity are required to apply for an individual permit or seek coverage under a promulgated stormwater general permit. [Emphasis added.]

The state has issued a statewide general construction permit, as described on page 11 of the permit as quoted above, which is enforced through the regional boards.[122] In fact, the State Board collects fees for the regional board for performing inspections under the GCASP (see Wat. Code, § 13260, subd. (d)(2)(B)(ii)).

There is nothing in the federal statutes or regulations that would prevent the state (rather than local agencies) from performing the inspection of construction sites and related activities (in part 4E of the permit) under the state-enforced general permit. Nor does federal law require the owner or operator of the discharge to perform these activities in part 4E of the permit. Therefore, the Commission finds that the requirement for local-agency permittees to inspect construction sites in section 4E of the permit is not a federal mandate.

The Commission finds that, based on the permit's mandatory language, the following activities in part 4E are state mandates on the permittees within the meaning of article XIII B, section 6:

- Implement a program to control runoff from construction activity at all construction sites within each permittee's jurisdiction, and ensure the specified minimum requirements are effectively implemented at all construction sites. (Permit, 4E1.)

  For construction sites one acre or greater:

- Require the preparation of a Local SWPPP [Storm Water Pollution Prevention Plan], with specified contents, for approval prior to issuing a grading permit for construction projects. (Permit, 4E2a.)
- Inspect all construction sites for stormwater quality requirements during routine inspections a minimum of once during the wet seasons. (Permit, 4E2b.)
- Review the Local SWPPP for compliance with local codes, ordinances, and permits. (Permit, 4E2b.)
- For inspected sites that have not adequately implemented their Local SWPPP, conduct a follow-up inspection to ensure compliance will take place within 2 weeks.
  - If compliance has not been attained, take additional actions to achieve compliance (as specified in municipal codes).

Director may waive the otherwise applicable requirements in a general permit for a storm water discharge from construction activities that disturb less than five acres where: ..."

[122] For example, page 2 of the Fact Sheet for the General Construction Activity Storm Water Permit states: "This General Permit shall be implemented and enforced by the nine California Regional Water Quality Control Boards (RWQCBs)."

- If compliance has not been achieved, and the site is also covered under a statewide general construction stormwater permit, enforce the local ordinance requirements, and
- If non-compliance continues, notify the Regional Board for further joint enforcement actions. (Permit, 4E2b.)

- Require by March 10, 2003, before issuing a grading permit for all projects less than five acres requiring coverage under a statewide general construction stormwater permit, proof of a Waste Discharger Identification Number for filing a Notice of Intent for permit coverage and a certification that a SWPPP has been prepared by the project developer. A Local SWPPP may substitute for the State SWPPP if the Local SWPPP is at least as inclusive in controls and BMPs [Best Management Practices] as the State SWPPP. (Permit, 4E2c.)
- For sites five acres and greater:
  - Require, prior to issuing a grading permit for all projects requiring coverage under the state general permit, proof of a Waste Discharger Identification (WDID) number for filing a Notice of Intent (NOI) for coverage under the GCASP [General Construction Activity Storm Water Permit] and a certification that a SWPPP has been prepared by the project developer. A Local SWPPP may substitute for the State SWPPP if the Local SWPPP is at least as inclusive in controls and BMPs as the State SWPPP.
  - Require proof of an Notice of Intent (NOI) and a copy of the SWPPP at any time a transfer of ownership takes place for the entire development or portions of the common plan of development where construction activities are still on-going.
  - Use an effective system to track grading permits issued by each permittee. (Permit, 4E3.)
- For projects subject to the GCASP [General Construction Activity Storm Water Permit], permittees shall refer non-filers (i.e., those projects which cannot demonstrate that they have a WDID number) to the Regional Board, within 15 days of making a determination. In making such referrals, permittees shall include, at a minimum, the following documentation: Project location; Developer; Estimated project size; and Records of communication with the developer regarding filing requirements. (Permit, 4E4b.)
- Train employees in targeted positions (whose jobs or activities are engaged in construction activities including construction inspection staff) regarding the requirements of the stormwater management program no later than August 1, 2002, and annually thereafter. For permittees with a population of 250,000 or more (2000 US Census), initial training shall be completed no later than February 3, 2003. Each permittee shall maintain a list of trained employees. (Permit, 4E5.)

One of the requirements in part 4E3c of the permit is to: "Use an effective system to track grading permits issued by each permittee. To satisfy this requirement, the use of a database or

GIS system is encouraged, but not required." The Commission finds that, based on the plain language of this provision, using an effective system to track grading permits is a state mandate, although use of a database or GIS system is not.

Overall, the Commission finds that the permit provisions (parts 4C2a, 4C2b, 4E & 4F5c3) are subject to article XIII B, section 6, of the California Constitution.

Issue 2: Do the transit trash receptacle and inspection permit provisions (Parts 4C2a, 4C2b, 4E, and 4F5c3) impose a new program or higher level of service?

The next issue is whether the permit provisions at issue, i.e., found above to be state-mandated, are a program, and whether they are a new program or higher level of service.

First, courts have defined a "program" for purposes of article XIII B, section 6, of the California Constitution, as one that carries out the governmental function of providing public services, or a law that imposes unique requirements on local agencies or school districts to implement a state policy, but does not apply generally to all residents and entities in the state.[123]

The State Water Board, in its April 2008 comments, argues that the NPDES program is not a program because "the NPDES permit program, and the stormwater requirements specifically, are not peculiar to local government. Industrial and construction facilities must also obtain NPDES stormwater permits."

In comments submitted June 25, 2008, the cities call the State Board's argument inapposite, and cite the *Carmel Valley Fire Protection District* case[124] regarding whether the permit constitutes a "program." According to claimant, "[t]he test is not whether the general program applies to both governmental and non-governmental entities. The test is whether the specific executive orders at issue apply to both government and non-governmental entities."

The Commission finds that the permit activities constitute a program within the meaning of article XIII B, section 6. The permit activities are limited to local governmental entities. The permit defines the "permittees" as the County of Los Angeles and 84 incorporated cities within the Los Angeles County Flood Control District (Permit, p. 1 & attachment A). The permit lists no private entities as "permittees." Moreover, the permit provides a service to the public by preventing or abating pollution in waterways and beaches in Los Angeles County. (Or as stated on page 13 of the permit: "The objective of this Order is to protect the beneficial uses of receiving waters in Los Angeles County.") Therefore, the Commission finds that the permit is a program within the meaning of article XIII B, section 6.

In its comments on the draft staff analysis submitted June 5, 2009, the State Board disagrees with this conclusion because NPDES permits may also apply to private entities.

The State Board made this same argument in *County of Los Angeles v. Commission on State Mandates*, which the court addressed by stating: "[T]he applicability of permits to public and private dischargers does not inform us about whether a particular permit or an obligation

---

[123] *San Diego Unified School Dist., supra,* 33 Cal.4th 859, 874, (reaffirming the test set out in *County of Los Angeles v. State of California, supra,* 43 Cal.3d 46, 56; *Lucia Mar, supra,* 44 Cal.3d 830, 835.)

[124] *Carmel Valley Fire Protection District v. State of California* (1987) 190 Cal.App.3d 521, 537.

thereunder imposed on local governments constitutes a state mandate necessitating subvention under article XIII B, section 6."[125]

In other words, the issue is not whether NPDES permits generally constitute a "program" within the meaning of article XIII B, section 6. The only issue before the Commission is whether the permit in this test claim (Los Angeles Regional Quality Control Board Order No. 01-182, Permit CAS004001) constitutes a program because this permit is the only one over which the Commission has jurisdiction. Because they apply exclusively to local agencies, the Commission finds that the activities (parts 4C2a, 4C2b, 4E & 4F5c3) in this permit (Los Angeles Regional Quality Control Board Order No. 01-182, Permit CAS004001) constitute a program within the meaning of article XIII B, section 6.

The next step to determine whether the permit is a new program or higher level of service, the permit is compared to the legal requirements in effect immediately before its adoption.[126]

The Commission finds that local agencies were not required by state or federal law to place and maintain trash receptacles at transit stops before the permit was adopted. Whether or not most cities or counties do so, as argued by the State Water Board in its April 2008 comments, is not relevant to finding a state-mandated new program or higher level of service because even if they do, Government Code section 17565 states: "If a local agency ... at its option, has been incurring costs which are subsequently mandated by the state, the state shall reimburse the local agency ... for those costs incurred after the operative date of the mandate."

Because the transit trash receptacle requirement is newly mandated by the permit, and based on the plain language of part 4F5c3 of the permit, the Commission finds that it is a new program or higher level of service to place trash receptacles at transit stops and maintain them as specified in the permit.

For the same reason, the Commission finds that the inspections and enforcement activities at industrial and commercial facilities, including restaurants, automotive service facilities, retail gasoline outlets, automotive dealerships, and phase I facilities (in parts 4C2a & 4C2b of the permit) as well as inspection and enforcement at construction sites (in part 4E of the permit) are a new program or higher level of service. These were not required activities of the permittees prior to the permit's adoption.

In sum, the Commission finds that all the permit provisions at issue in this test claim impose a new program or higher level of service within the meaning of article XIII B, section 6 of the California Constitution.

Issue 3: Do the transit trash receptacle and inspection permit provisions (Parts 4C2a, 4C2b, 4E & 4F5c3) impose costs mandated by the state within the meaning of Government Code sections 17514 and 17556?

---

[125] *County of Los Angeles v. Commission on State Mandates* (2007) 150 Cal.App.4th 898, 919.

[126] *San Diego Unified School Dist., supra,* 33 Cal.4th 859, 878; *Lucia Mar, supra,* 44 Cal.3d 830, 835.

The final issue is whether the permit provisions impose costs mandated by the state,[127] and whether any statutory exceptions listed in Government Code section 17556 apply to the test claims. Government Code section 17514 defines "cost mandated by the state" as follows:

> [A]ny increased costs which a local agency or school district is required to incur after July 1, 1980, as a result of any statute enacted on or after January 1, 1975, or any executive order implementing any statute enacted on or after January 1, 1975, which mandates a new program or higher level of service of an existing program within the meaning of Section 6 of Article XIII B of the California Constitution.

Government Code section 17564 requires reimbursement claims to exceed $1000 to be eligible for reimbursement.

In test claims 03-TC-20 and 03-TC-21, the cities' claimant representative declares (p. 24) that the cities will incur costs estimated to exceed $1000 to implement the permit conditions.

In test claim 03-TC-04, the County of Los Angeles states (p. 18) that the costs in providing the services claimed "far exceed the minimum reimbursement amount of $1000 per annum." In the attached declaration for *Transit Trash Receptacles*, the County declares (pp. 22-23) the following itemization of costs from December 13, 2001 to October 31, 2002:

> (1) Identify all transit stops in the jurisdiction: $19,989.17;
>
> (2) Select proper trash receptacle design, evaluate proper placement, specification and drawing preparation: $38,461.87;
>
> (3) Preliminary engineering works (construction contract preparation, specification reviewing process, bid advertising and awarding): $19,662.02;
>
> (4) Construct and install trash receptacle units: $230,755.58, construction management $34,628.31;
>
> (5) Trash collection and receptacle maintenance in FY 2002-03, $3,513.94, maintenance contractor costs for maintaining and collecting trash in FY 2002-03, $93,982.50;
>
> (6) Projected costs for on-going maintenance in FY 2003-04, $375,570.00.

Similarly, attached to claim 03-TC-19 (pp. 20-21) are declarations that itemize the County of Los Angeles' costs for *Inspection of Industrial/Commercial Facilities* program, from December 13, 2001 to September 15, 2003, as follows:

> (1) inspect 1744 restaurants: $234,931.83;
>
> (2) inspect 1110 automotive service facilities: $149,526.36;
>
> (3) inspect 249 retail gasoline outlets and automotive dealerships: $33,542.45;
>
> (4) Identify and inspect all Phase I (387 Tier 1 and 543 Tier 2) facilities within the jurisdiction: $125,155.31;
>
> (5) Total $543,155.95.

---

[127] *Lucia Mar, supra*, 44 Cal.3d 830, 835; Government Code section 17514.

These declarations illustrate that the costs associated with the permit activities exceed $1,000. The Commission, however, cannot find "costs mandated by the state" within the meaning of Government Code section 17514 if any exceptions in Government Code section 17556 apply, which is discussed below.

A. Did the claimants request the activities in the permit within the meaning of Government Code section 17556, subdivision (a)?

The first issue is whether the claimants requested the activities in the permit. The Department of Finance and the State Water Board both asserted that they did. As discussed above, the claimants were required to submit a Report of Waste Discharge and Stormwater Quality Management Plan before the permit was issued.

Government Code section 17556, subdivision (a), provides that the Commission shall not find costs mandated by the state if:

> (a) The claim is submitted by a local agency ... that requested legislative authority for that local agency ... to implement the program specified in the statute, and that statute imposes costs upon that local agency or school district requesting the legislative authority. A resolution from the governing body or a letter from a delegated representative of the governing body of a local agency ... that requests authorization for that local agency ... to implement a given program shall constitute a request within the meaning of this subdivision.

Based on the language of the statute, section 17556, subdivision (a), does not apply because the permit is not a statute, the claimants did not request "legislative authority" to implement the permit, and the record lacks any resolutions adopted by the claimants. Therefore, the Commission finds that the claimants did not request the activities in the permit within the meaning of Government Code section 17556, subdivision (a).

B. Do the claimants have fee authority for the permit activities within the meaning of Government Code section 17556, subdivision (d)?

Government Code section 17556, subdivision (d), states:

> The commission shall not find costs mandated by the state, as defined in Section 17514, in any claim submitted by a local agency ... if, after a hearing, the commission finds any one of the following: [¶]...[¶] (d) The local agency ... has the authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service.

The constitutionality of Government Code section 17556, subdivision (d), was upheld by the California Supreme Court in *County of Fresno v. State of California*,[128] in which the court held that the term "costs" in article XIII B, section 6, excludes expenses recoverable from sources other than taxes. The court stated:

> Section 6 was included in article XIII B in recognition that article XIII A of the Constitution severely restricted the taxing powers of local governments. (See *County of Los Angeles, supra,* 43 Cal.3d at p. 61.) The provision was intended to

---

[128] *County of Fresno v. State of California , supra,* 53 Cal.3d 482.

> preclude the state from shifting financial responsibility for carrying out governmental functions onto local entities that were ill equipped to handle the task. (*Ibid.*; see *Lucia Mar Unified School Dist. v. Honig* (1988) 44 Cal.3d 830, 836, fn. 6 [244 Cal.Rptr. 677, 750 P.2d 318].) Specifically, it was designed to protect the tax revenues of local governments from state mandates that would require expenditure of such revenues. Thus, although its language broadly declares that the "state shall provide a subvention of funds to reimburse ... local government for the costs [of a state-mandated new] program or higher level of service," read in its textual and historical context section 6 of article XIII B requires subvention only when the costs in question can be recovered *solely from tax revenues.*
>
> In view of the foregoing analysis, the question of the facial constitutionality of section 17556(d) under article XIII B, section 6, can be readily resolved. As noted, the statute provides that "The commission shall not find costs mandated by the state ... if, after a hearing, the commission finds that" the local government "has the authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service." Considered within its context, the section effectively construes the term "costs" in the constitutional provision as excluding expenses that are recoverable from sources other than taxes. Such a construction is altogether sound. As the discussion makes clear, the Constitution requires reimbursement only for those expenses that are recoverable solely from taxes. It follows that section 17556(d) is facially constitutional under article XIII B, section 6.[129]

In *Connell v. Superior Court,*[130] the dispute was whether local agencies had sufficient fee authority for a mandate involving increased purity of reclaimed wastewater used for certain types of irrigation. The court cited statutory fee authority for the reclaimed wastewater, and noted that the water districts did not dispute their fee authority. Rather, the water districts argued that they lacked "sufficient" fee authority in that it was not economically feasible to levy fees sufficient to pay the mandated costs. In finding the fee authority issue is a question of law, the court stated that Government Code section 17556, subdivision (d), is clear and unambiguous, in that its plain language precludes reimbursement where the local agency has the authority, i.e., the right or the power, to levy fees sufficient to cover the costs of the state-mandated program." The court rejected the districts' argument that "authority" as used in the statute should be construed as a "practical ability in light of surrounding economic circumstances" because that construction cannot be reconciled with the plain language of section 17556, and would create a vague standard not capable of reasonable adjudication. The court also said that nothing in the fee authority statute (Wat. Code, § 35470) limited the authority of the Districts to levy fees "sufficient" to cover their costs. Thus, the court concluded that the plain language of section

---

[129] *County of Fresno v. State of California, supra,* 53 Cal.3d 482, 487.

[130] *Connell v. Superior Court* (1997) 59 Cal.App.4th 382.

17556 made the fee authority issue solely a question of law, and that the water districts could not be reimbursed due to that fee authority.[131]

In its April 18, 2008 comments (p. 19), the State Board asserted that the claimants have fee authority to pay for the trash receptacle and inspection programs in the permit. Likewise, the Department of Finance, in its March 2008 comments, states that "some local agencies have set fees to be used toward funding the claimed permit activities" that should be considered offsetting revenues.

Los Angeles County, in its comments submitted in June 2008, states (p. 2) that it is "without sufficient fee authority to recover its costs." The County points out that the state or regional board has fee authority in Water Code section 13260, subdivision (d)(2)(B)(iii) for inspections of industrial and commercial facilities, but those fees are not shared with the County or the cities.[132] The County also states that the inspections are to determine compliance with the general industrial permit that is enforced by the regional boards.[133]

In their comments received June 25, 2008, the city claimants assert that they do not have fee authority. The cities first note that, for facilities that hold state-issued general industrial or general construction stormwater permits, the state already imposes an annual fee and therefore has occupied the field (Wat. Code, § 13260, subd. (d)(2)(B)(iii)). The cities also relate the difficulty of imposing a fee for inspecting restaurants, automotive service facilities, retail gasoline outlets and automotive dealerships because, although the cities could enact a general businesses license on all businesses, "the cities could not charge other businesses for the cost of inspecting this subgroup without again running the risk of charging fees on the other businesses for services not related to regulation of them." The cities also dispute the State Water Board's assertion that transit users could be charged a fee for the transit trash receptacles because the County and cities do not operate the transit system.

---

[131] *Connell v. Superior Court, supra,* 59 Cal.App.4th 382, 398-402.

[132] Water Code section 13260, subdivision (d)(2)(B)(i) - (iii) states:

> (i) Notwithstanding subparagraph (A), the fees collected pursuant to this section from stormwater dischargers that are subject to a general industrial or construction stormwater permit under the national pollutant discharge elimination system (NPDES) shall be separately accounted for in the Waste Discharge Permit Fund. (ii) Not less than 50 percent of the money in the Waste Discharge Permit Fund that is separately accounted for pursuant to clause (i) is available, upon appropriation by the Legislature, for expenditure by the regional board with jurisdiction over the permitted industry or construction site that generated the fee to carry out stormwater programs in the region. (iii) Each regional board that receives money pursuant to clause (ii) shall spend not less than 50 percent of that money solely on stormwater inspection and regulatory compliance issues associated with industrial and construction stormwater programs.

[133] Page 3 of the General Industrial Permit states in part: "Following adoption of this General Permit, the Regional Water Boards shall enforce its provisions."

In comments on the draft staff analysis submitted in June 2009, the League of California Cities and California State Association of Counties (CSAC) question whether the decisions in *Connell* (1997), and *County of Fresno* (1991), can any longer be cited as good authority for the constitutionality of Government Code section 17556, subdivision (d), given the voter-approval requirement of Proposition 218 (discussed below) added to the state Constitution in 1996. Proposition 218 requires, among other things, that new or increased property-related fees be approved by a majority of the affected property owners, or two-thirds registered voter approval, or weighted ballot approval by the affected property owners, except for property-related fees for sewer, water, or refuse collection services (Cal. Const., art. XIII D, § 6, subd. (c)).

The League and CSAC also urge the Commission, to the extent there may be legal doubt whether a local agency has the authority to impose a fee, to not find that the fee authority exception to reimbursement in Government Code section 17556, subdivision (d), applies.

The Commission disagrees with the League and CSAC. The Commission cannot ignore the precedents of *Connell* or *County of Fresno*, or find that they conflict with article XIII D of the California Constitution (Proposition 218), until the issue is decided by a court of law. With regards to Government Code section 17556, subdivision (d), article III, section 3.5 of the California Constitution forbids the Commission or any state agency from declaring a statute unenforceable or refusing to enforce it on the basis of its unconstitutionality unless an appellate court declares that it is unconstitutional. Since no appellate court has so declared, the Commission is bound to uphold and analyze the application of Government Code section 17556, subdivision (d), to this test claim.

The issue of local fee authority for the municipal stormwater permit activities, however, is one of first impression for the Commission. Although there are no authorities directly on point, some legal principles emerge that guide the analysis, as discussed below.

1. Local fee authority to inspect commercial and industrial and construction sites (parts 4C2a, 4C2b & 4E)

Fee authority to inspect under the police power: The law on local government fee authority begins with article XI, section 7, of the California Constitution, which states: "A county or city may make and enforce within its limits all local, police, sanitary, and other ordinances and regulations not in conflict with general laws."

The Third District Court of Appeal has stated that article XI, section 7, includes the authority to impose fees. In *Mills v. Trinity County*,[134] a taxpayer challenged a county ordinance that imposed new and increased fees for county services in processing subdivision, zoning, and other land-use applications that had been adopted without the two-thirds affirmative vote of the county electors. In upholding the fees, the court stated:

> [S]o long as the local enactments are not in conflict with general laws, the power to impose valid regulatory fees does not depend on legislatively authorized taxing power but exists pursuant to the direct grant of police power under article XI, section 7, of the California Constitution.[135]

---

[134] *Mills v. County of Trinity* (1980) 108 Cal.App.3d 656.

[135] *Mills v. County of Trinity, supra,* 108 Cal.App.3d 656, 662.

In addition to the *Mills* case, courts have held that water pollution prevention is a valid exercise of government police power.[136] And municipal inspections in furtherance of sanitary regulations have been upheld as "an exercise of that branch of the police power which pertains to the public health."[137]

In *Sinclair Paint v. State Board of Equalization,* [138] the California Supreme Court upheld a fee imposed on manufacturers of paint that funded a child lead-poisoning program, ruling it was a regulatory fee and not a special tax requiring a two-thirds vote under article XIII A, section 4, of the California Constitution (Proposition 13). The court recognized that determining under Proposition 13 whether impositions were fees or taxes is a question of law. In holding that the fee on paint manufacturers was "regulatory" and not a special tax, the court stated:

> From the viewpoint of general police power authority, we see no reason why statutes or ordinances calling on polluters or producers of contaminating products to help in mitigation or cleanup efforts should be deemed less "regulatory" in nature than the initial permit or licensing programs that allowed them to operate.
>
> Viewed as a mitigating effects measure, [the fee] is comparable in character to several police power measures imposing fees to defray the actual or anticipated adverse effects of various business operations.[139] [Emphasis added.]

The *Sinclair Paint* court also recognized that regulatory fees help to prevent pollution when it stated: "imposition of 'mitigating effects' fees in a substantial amount ... also 'regulates' future conduct by deterring further manufacture, distribution, or sale of dangerous products, and by stimulating research and development efforts to produce safer or alternative products."[140]

Although the court's holding in *Sinclair Paint* applied to a state-wide fee, the language it used (putting "ordinances" in the same category as "statutes") recognizes that local agencies also have the police power to impose regulatory fees. Moreover, the court relied on local government police power cases in its analysis.[141]

---

[136] *Freeman v. Contra Costa County Water Dist.* (1971) 18 Cal.App.3d 404, 408.

[137] *Sullivan v. City of Los Angeles Dept. of Bldg. & Safety* (1953) 116 Cal.App.2d 807, 811.

[138] *Sinclair Paint v. State Board of Equalization* (1997) 15 Cal.4th 866.

[139] *Sinclair Paint v. State Board of Equalization, supra,* 15 Cal.4th 866, 877.

[140] *Sinclair Paint v. State Board of Equalization, supra,* 15 Cal.4th 866, 877.

[141] *Sinclair Paint v. State Board of Equalization, supra,* 15 Cal.4th 866, 873. The Court stated: "Because of the close, 'interlocking' relationship between the various sections of article XIII A (Citation omitted) we believe these "special tax" cases [under article XIII A, § 3, state taxes] may be helpful, though not conclusive, in deciding the case before us. The reasons why particular fees are, or are not, "special taxes" under article XIII A, section 4, [local government taxes] may apply equally to section 3 cases."

A regulatory fee is an imposition that funds a regulatory program[142] and is "enacted for purposes broader than the privilege to use a service or to obtain a permit. ...the regulatory program is for the protection of the health and safety of the public."[143] Courts will uphold regulatory fees if they comply with the following principles:

> Fees charged for the associated costs of regulatory activities are not special taxes under an article XIII A section 4 analysis if the "fees do not exceed the reasonable cost of providing services necessary to the activity for which the fee is charged and [they] are not levied for unrelated revenue purposes." [Citations omitted] "A regulatory fee may be imposed under the police power when the fee constitutes an amount necessary to carry out the purposes and provisions of the regulation." [Citations omitted] "Such costs ... include all those incident to the issuance of the license or permit, investigation, inspection, administration, maintenance of a system of supervision and enforcement." [Citations omitted] Regulatory fees are valid despite the absence of any perceived "benefit" accruing to the fee payers. [Citations omitted] Legislators "need only apply sound judgment and consider 'probabilities according to the best honest viewpoint of informed officials' in determining the amount of the regulatory fee."[144] [Emphasis added.]

Local fees for inspections of commercial and industrial facilities, and construction sites, would be preventative and could be imposed to comply with the criteria the courts have used to uphold regulatory fees, articulated above. And the regulatory fees fall within the local police power to prevent, clean up, or mitigate pollution.

Therefore, pursuant to article XI, section 7, the Commission finds that the claimants have fee authority within the meaning of Government Code section 17556, subdivision (d), sufficient to carry out the mandated activities in parts 4C2a, 4C2b and 4E of the permit. Therefore, the Commission finds that there are no "costs mandated by the state" within the meaning of Government Code section 17514 and 17556 to perform the activities in those parts of the permit (commercial, phase I, and construction site inspections and related activities).

In fact, in June 2005, claimant Covina adopted stormwater inspection fees on restaurants, retail gasoline outlets, automotive service facilities, etc., as part of its business license fee, expressly for the purpose of complying with the permit at issue in this test claim.[145]

Statutory fee authority to operate and maintain storm drains: Health and Safety Code section 5471 expressly authorizes cities and counties to charge fees for storm drainage maintenance and operation services:

---

[142] *California Assn. of Prof. Scientists v. Dept. of Fish and Game* (2000) 79 Cal.App.4th 935, 950.

[143] *Ibid.*

[144] *California Assn. of Prof. Scientists v. Dept. of Fish and Game, supra,* 79 Cal.App.4th 935, 945.

[145] City of Covina, Resolution No. 05-6455.

> [A]any entity[146] shall have power, by an ordinance approved by a two-thirds vote of the members of the legislative body thereof, to prescribe, revise and collect, fees, tolls, rates, rentals, or other charges for services and facilities furnished by it, either within or without its territorial limits, in connection with its water, sanitation, storm drainage, or sewerage system. ... Revenues derived under the provisions in this section, shall be used only for the acquisition, construction, reconstruction, maintenance, and operation of water systems and sanitation, storm drainage, or sewerage facilities ....

The statute makes no mention of "inspecting" commercial or industrial facilities or construction sites. Rather, the fee revenues are used for "maintenance and operation" of storm drainage facilities. Thus, for the types of businesses regulated by the permit (restaurants, automotive service facilities, retail gasoline outlets, automotive dealerships, phase I facilities, as defined, and construction sites) the Commission cannot find that pursuant to Health and Safety Code section 5471, the claimants have fee authority "sufficient" to pay for the mandated inspection program within the meaning of Government Code section 17556. The statute's "operation and maintenance" of storm drainage facilities does not encompass the state-mandated inspections of the facilities or construction sites specified in the permit.

2. Local fee authority under the police power and the Public Resources Code to place and maintain trash receptacles at transit stops (Permit, 4F5c3)

As discussed above, part 4F5c3 of the permit requires the County and cities to place and maintain trash receptacles at transit stops in their jurisdictions. Public Resources Code section 40059, subdivision (a), suggests that the County and cities have fee authority to perform this activity as follows:

> (a) Notwithstanding any other provision of law, each county, city, district, or other local governmental agency may determine all of the following: (1) Aspects of solid waste handling which are of local concern, including, but not limited to, frequency of collection, means of collection and transportation, level of services, charges and fees, and nature, location, and extent of providing solid waste handling services.

The statute gives local governments the authority over the "nature, location and extent of providing solid waste handling services" and is broad enough to encompass "placing and maintaining" receptacles at transit stops. The statute also provides local governments with broad authority over the "level of services, charges and fees."

The draft staff analysis determined that the claimants had fee authority under Public Resources Code section 40059 and the police power (Cal. Const. art. XI, § 7) to install and maintain trash receptacles at transit stops and recommended that the Commission deny the test claim with respect to part 4F5c3 of the permit.

---

[146] Entity is defined to include "counties, cities and counties, cities, sanitary districts, county sanitation districts, sewer maintenance districts, and other public corporations and districts authorized to acquire, construct, maintain and operate sanitary sewers and sewerage systems." Health and Safety Code section 5470, subdivision (e).

The city claimants, in June 2009 comments on the draft staff analysis, argue that section 40059, subdivision (a), does not apply here because it was adopted as a "savings provision" in legislation establishing the Integrated Waste Management Board (IWMB) in order to ensure that local trash collection agreements would not be affected by the IWMB legislation. The cities also cite *Waste Resources Technologies v. Department of Public Health* (1994) 23 Cal.app.4th 299, which held that the statute reflected the Legislature's intent to allow for local regulation of waste collection. According to the cities, the statute "was not intended as an *imprimatur* for local agencies to assess fees on their residents or on businesses to pay for the costs of trash generated by transit users when that requirement was established not as a matter of local choice but rather state mandate." (Comments, p. 7.)

The cities also argue that a valid fee must have a causal connection or nexus between the person or entity paying the fee, and the benefit or burden being addressed. Claimants assert that there is no group on which the claimants can assess a fee that has a relationship with the trash receptacles because the burden is created by the transit riders but benefits the public at large. City claimants also argue that they cannot assess fees on transit agencies or increase transit fares to recoup the cost of installing and maintaining trash receptacles because they have no authority to do so. As an example, the claimants cite the Metropolitan Transit Authority's (the largest public transit operator in Los Angeles County) authority to set fares (Pub. Util. Code, § 30638) that rests exclusively with the MTA's board.

As to the police power, City claimants argue that they cannot use it to assess fees on property owners or businesses for the cost of transit trash receptacles because doing so would collect more than the actual cost of the collection and thereby create a special tax that would require a two-thirds vote (Cal. Const. art. XIII A, § 4). And according to the claimants, they do not have statutory fee authority to assess property owners for the cost of installing and maintaining trash receptacles. Finally, claimants assert that a fee on property owners for transit stop trash receptacles, even if it were not a special tax, would require a vote under Proposition 218 (Cal. Const., art. XIII D).

The County of Los Angeles, in its June 2009 comments on the draft staff analysis, argues that local agencies do not have fee authority over bus operators, and for support cites *Biber Electric Co. v. City of San Carlos* (1960) 181 Cal.App.2d 342, which held that a local fee would conflict with a general state Vehicle Code provision. The County also asserts that no fee could be imposed on bus riders because the pollution prevention would benefit all county residents, not only those riding buses, and that such a fee would require a vote under Proposition 218 because the fee's purpose would be excluding trash from storm drains rather than routine collection.

The League of California Cities and CSAC, in their June 2009 comments on the draft staff analysis, criticize the conclusion that fee authority exists for transit trash receptacles because the analysis does not discuss upon whom the fee would be imposed. They also dispute the application of the *Connell* case because the issue is not whether the fee is economically feasible, but whether it is legally feasible. The League and CSAC point out that local agencies have no authority to impose the fee on transit agencies or their ridership, and that Proposition 218 imposes procedural and substantive requirements on adjacent business owners and residences, so that the local agency could not impose the fee or assessment on them without their consent. Thus, the League and CSAC argue that the local agencies do not have fee authority pursuant to

Government Code section 17556, subdivision (d): "sufficient to pay for the mandated program or increased level of service."

After considering these arguments, the Commission agrees that Government Code section 17556, subdivision (d), does not apply to the placement and maintenance of transit trash receptacles as specified in the permit because the claimants do not have the authority to impose fees.

Michael Lauffer was asked at the Commission hearing on July 31, 2009, why the transit trash requirement in the permit was not imposed on transit agencies. Mr. Lauffer testified that transit agencies were not named historically on the permits, and that the Board, at the time it established the requirements, thought it was appropriate to place them on municipalities. He also testified that nothing would prevent the municipalities under the permit from working with Metropolitan Transit Authority (MTA) to cooperatively implement the transit trash requirement, or to have the MTA carry out the primary obligation for meeting it. He added that the transit stops were public facilities, the language used in the federal regulations, which is why the permit included the requirement to place the trash receptacles there.[147]

Because the trash receptacles are required to be placed at transit stops that would typically be on city property (sidewalks)[148] or transit district property (for bus or metro or subway stations), there are no entities on which the claimants would have authority to impose the fees. The plain language of Public Resources Code section 40059 provides no fee authority over transit districts or transit riders, and the Metropolitan Transit Authority's fee statutes grant fee authority exclusively to its board (Pub. Util. Code, §§ 30638 & 130051.12).

Additionally, the claimants do not have fee authority under the police power because they do not provide the "services necessary to the activity for which the fee is charged."[149]

Thus, the Commission finds that part 4F5c3 of the permit imposes costs mandated by the state within the meaning of Government Code section 17514 and 17556.

The remainder of this analysis addresses the arguments raised by the claimants that their local fee authority for inspections would be preempted by a statute granting the state fee authority, and that a local fee would be a special tax. The application of Proposition 218 on the fee authority for inspection is also discussed.

---

[147] Commission on State Mandates, Public Hearing, Reporter's Transcript of Proceedings, July 31, 2009, pages 52-53.

[148] "The general rule views the sidewalk as part of the street; it … holds the city liable for pedestrian injuries caused by the dangerous condition of the sidewalk." *Low v. City of Sacramento* (1970) 7 Cal.App.3d 826, 832.

[149] *California Assn. of Prof. Scientists v. Dept of Fish and Game, supra,* 79 Cal.App.4th, 935, 945.

3. Local fee authority to inspect industrial or construction sites (parts 4C2a, 4C2b & 4E) performed under the statewide general permits would not be preempted by state fee authority in Water Code section 13260, subdivision (b)(2)(B)

In their comments submitted in June 2008 (p. 14), the city claimants argue that the permittees cannot impose fees for inspections of industrial or commercial or construction sites as follows:

> [W]ith respect to facilities that hold state-issued general industrial or general construction stormwater permits, the state had occupied the field. ...[T]he state already imposes an annual fee on general industrial and general construction stormwater permittees. That fee is explicitly designated, in part, to cover inspections of these facilities and regulatory compliance. Water Code § 13260(d)(2)(B).
>
> This state fee thus preempts any fee that the Cities or County could charge for inspection of these facilities.

The cities also assert that in 2001, the regional board initiated negotiation of a contract with the County whereby the regional board would pay the County to perform inspections of facilities that held general industrial stormwater permits (the 'Phase I facilities') on the regional board's behalf. Immediately after the permit was issued, the regional board terminated those negotiations.

In comments submitted in June 2009 on the draft staff analysis, city claimants clarify that their comments "are not directed towards the claimants' ability to assess fees for inspections of the other commercial establishments, i.e., restaurants and automotive service facilities, retail gasoline outlets and automobile dealerships, or Phase I facilities or construction sites that are not required to hold a state-issued general industrial or general construction stormwater permit."

According to the city claimants, fees for inspecting the phase I industrial facilities and construction sites under the statewide permits (the GIASP and GCASP) would be preempted by state fee authority in Water Code section 13260, under which the State Board collects fees for inspecting those sites. The city claimants state the fact that the specific destination of the funds from the fees in Water Code section 13260, subdivision (d)(2)(iii) is spelled out is evidence of intent that the Legislature fully occupied the field for inspections of GIASP and GCASP permit holders.

Because the fee authority to inspect commercial facilities (identified in the permit as restaurants, automotive service facilities, retail gasoline outlets and automotive dealerships) is not contested by the city claimants, the discussion below is limited to industrial and construction site inspections performed under the statewide permits concurrently with the permit at issue in this claim.

The California Supreme Court has outlined the following rules as to when a statute preempts a local ordinance by fully occupying the field:

> A local ordinance *enters a field fully occupied* by state law in either of two situations-when the Legislature "expressly manifest[s]" its intent to occupy the legal area or when the Legislature "impliedly" occupies the field. (*Sherwin-Williams, supra,* 4 Cal.4th at p. 898, 16 Cal.Rptr.2d 215, 844 P.2d 534; see also 8 Witkin, Summary of Cal. Law (10th ed. 2005) Constitutional Law, § 986, p.

551["[W]here the Legislature has manifested an intention, expressly or by implication, wholly to occupy the field ... municipal power [to regulate in that area] is lost."].)

When the Legislature has not expressly stated its intent to occupy an area of law, we look to whether it has *impliedly* done so. This occurs in three situations: when " '(1) the subject matter has been so fully and completely covered by general law as to clearly indicate that it has become exclusively a matter of state concern; (2) the subject matter has been partially covered by general law couched in such terms as to indicate clearly that a paramount state concern will not tolerate further or additional local action; or (3) the subject matter has been partially covered by general law, and the subject is of such a nature that the adverse effect of a local ordinance on the transient citizens of the state outweighs the possible benefit to the' locality." (*Sherwin-Williams, supra,* 4 Cal.4th at p. 898, 16 Cal.Rptr.2d 215, 844 P.2d 534.)[150]

The state statute at issue, the stormwater fee statute, in subdivision (d) of section 13260 of the Water Code, reads in pertinent part:

(d)(1)(A) Each person who is subject to subdivision (a) [who discharges waste that affects the quality of waters of the state] or (c) shall submit an annual fee according to a fee schedule established by the state board.

(B) The total amount of annual fees collected pursuant to this section shall equal that amount necessary to recover costs incurred in connection with the issuance, administration, reviewing, monitoring, and enforcement of waste discharge requirements and waivers of waste discharge requirements.

(C) Recoverable costs include, but are not limited to, costs incurred in reviewing waste discharge reports, prescribing terms of waste discharge requirements and monitoring requirements, enforcing and evaluating compliance with waste discharge requirements and waiver requirements, conducting surface water and groundwater monitoring and modeling, analyzing laboratory samples, and reviewing documents prepared for the purpose of regulating the discharge of waste, and administrative costs incurred in connection with carrying out those actions. [¶]...[¶]

(2) Subject to subparagraph (B), any fees collected pursuant to this section shall be deposited in the Waste Discharge Permit Fund which is hereby created. The money in the fund is available for expenditure by the state board, upon appropriation by the Legislature, for the purposes of carrying out this division.

(B) (i) Notwithstanding subparagraph (A), the fees collected pursuant to this section from stormwater dischargers that are subject to a general industrial or construction stormwater permit under the national pollutant discharge elimination system (NPDES) shall be separately accounted for in the Waste Discharge Permit Fund.

---

[150] *O'Connell v. City of Stockton* (2007) 41 Cal.4th 1061, 1068. Emphasis in original.

> (ii) Not less than 50 percent of the money in the Waste Discharge Permit Fund that is separately accounted for pursuant to clause (i) is available, upon appropriation by the Legislature, for expenditure by the regional board with jurisdiction over the permitted industry or construction site that generated the fee to carry out stormwater programs in that region. (iii) Each regional board that receives money pursuant to clause (ii) shall spend not less than 50 percent of that money solely on stormwater inspection and regulatory compliance issues associated with industrial and construction stormwater programs. (Wat. Code, § 13260, subds. (d)(1) & (d)(2).) [Emphasis added.]

The State Water Board has adopted regulations to implement the stormwater fee that include fee schedules based on the threat to water quality and a complexity rating.[151] At the hearing on July 31, 2009, Michael Lauffer of the State Water Board testified that the fee is established annually by the State Board, based on the legislative appropriation for the boards to carry out their responsibilities. Mr. Lauffer testified that the annual fee for industrial facilities under this Water Code statute is $833, and the fee for construction facilities is variable, starting at $238, plus $24 per acre, with a cap of $2,600. [152]

The issue is whether Water Code section 13260, subdivision (d)(1) and (d)(2), preempts local fee authority. In resolving this, we look for express or implied preemption or intent to occupy the field.[153]

First, there is no express intent on the face of the Water Code statute to preempt any local fee ordinance because the statute is silent on local fees. As to implied intent to occupy the field of law, the Supreme Court has stated that it may be found if:

> (1) the subject matter has been so fully and completely covered by general law as to clearly indicate that it has become exclusively a matter of state concern; (2) the subject matter has been partially covered by general law couched in such terms as to indicate clearly that a paramount state concern will not tolerate further or additional local action; or (3) the subject matter has been partially covered by general law, and the subject is of such a nature that the adverse effect of a local ordinance on the transient citizens of the state outweighs the possible benefit to the locality.[154]

The city claimants, in their comments on the draft staff analysis submitted in June 2009, argue as follows with regard to Water Code section 13260:

> Here, the Legislature adopted a statute that specifically established a mechanism for fees to be assessed on GIASP and GCASP holders, for those funds to be

---

[151] Fees for NPDES permits for municipal separate stormwater sewer systems are in subdivision (b) of section 2200 of title 23 of the California Code of Regulations.

[152] Commission on State Mandates, Public Hearing, Reporter's Transcript of Proceedings, July 31, 2009, page 111.

[153] *O'Connell v. City of Stockton, supra,* 41 Cal.4th 1061, 1068.

[154] *O'Connell v. City of Stockton, supra,* 41 Cal.4th 1061, 1068.

> segregated and sent to the regional boards, and for a specified amount of those funds ("not less than 50 percent of the money") to be used by the regional boards "solely" on stormwater inspection and regulatory compliance issues associated with industrial and construction stormwater programs. Water Code section 13260(d)(2)(iii). Such a specific determination as to the destination of the funds for the purposes of inspection and compliance evidences the intent of the Legislature that the issue of funding for GIASP and GCASP inspections be "fully occupied."

The Commission disagrees. Specific determination of funds is not a factor the courts use to determine whether a state statute fully occupies the field. Applying the Supreme Court's factors from the *O'Connell v. City of Stockton* case, the subject matter of stormwater fees has not been "so fully and completely covered by general law as to clearly indicate that it has become exclusively a matter of state concern."[155] The Water Code's single fee statute for state permit holders does not rise to that level. Second, the Commission cannot find that "the subject matter has been partially covered by general law couched in such terms as to indicate clearly that a paramount state concern will not tolerate further or additional local action."[156] No clear indication of a paramount state concern can be found on the face of the Water Code fee statute. And the third instance does not apply because the subject is not "of such a nature that the adverse effect of a local ordinance on the transient citizens of the state outweighs the possible benefit to the locality."

The legislative history of the Water Code provision does not indicate any intent to occupy the field. The legislative history of the amendment to require 50 percent of the fees to be used for stormwater inspection and regulatory compliance issues indicated as follows:

> ...California's 1994 Water Quality Inventory Report states that storm waters and urban run-off are the leading sources of pollution in California estuaries and ocean waters. Proponents argue that non-compliance is rampant, with approximately 10,000 industries in the Los Angeles area alone who are required but have failed to obtain storm water permits. Further, proponents point out that the Los Angeles Regional Water Quality Control Board has only two staff to contact, educate, and control each site and question whether adequate revenues are returned to the regional boards for this program.[157]

The Legislature acknowledged that the state inspections at the time the statute was enacted were inadequate to prevent the pollution that the statewide permits were intended to prevent.

And the regional board, via the permit, acknowledges the role of both local regulation and state regulation under the general permits. Page 11 of the permit states:

---

[155] *O'Connell v. City of Stockton, supra,* 41 Cal.4th 1061, 1068.

[156] *Ibid.*

[157] Senate Rules Committee, Office of Senate Floor Analyses, third reading analysis of Assem. Bill No. 1186 (1997-1998 Reg. Sess.) as amended August 6, 1997.

> The U.S. EPA guidance anticipates coordination of the state-administered programs for industrial and construction activities with the local agency program to reduce pollutants in stormwater discharges to the MS4. The Regional Board is the enforcement authority in the Los Angeles Region for the two statewide general permits regulating discharges from industrial facilities and construction sites, and all NPDES stormwater and non-stormwater permits issued by the Regional Board. These industrial and construction sites and discharges are also regulated under local laws and regulations.

As to inspection of construction sites, section 4E of the permit states:

> If compliance has not been achieved, and the site is also covered under a statewide general construction stormwater permit, each Permittee shall enforce their local ordinance requirements, and if non-compliance continues the Regional Board shall be notified for further joint enforcement actions.

Moreover, the Water Code statute provides broader fee authority than a local inspection fee. The statute requires the regional board to "spend not less than 50 percent of that money solely on stormwater inspection and regulatory compliance issues associated with industrial and construction stormwater programs." (Wat. Code, § 13260, subd. (d)(2)(iii). Emphasis added.) Because the fees for GIASP and GCASP permit holders may also be spent on "regulatory compliance issues" in addition to the inspections, the Commission cannot find that a local fee ordinance would duplicate or be "coextensive" with state fee authority, and therefore cannot find that the state fee statute occupies the field. A local fee would merely partially overlap with the state fee.

As for the phase I facilities[158] subject to inspection, the inspections do not occupy the field because the permit specifies that these need not be inspected if the regional board has inspected them within the past 24 months.

According to the State Board's April 2008 comments, the overlapping fees were envisioned by U.S./EPA.

> In addition to the requirements for permits issued to municipalities, the Water Boards are also mandated to issue permits to entities that discharge stormwater "associated with industrial activity." (fn. CWA § 402(p)(2)(B)). As part of its responsibilities for its in lieu program, the State Boards must administer and enforce all of its permits. (fn. CWA § 402(p).) The State Water Board has issued

---

[158] On page 62 of the permit, U.S. EPA Phase I Facilities are defined as "facilities in specified industrial categories that are required to obtain an NPDES permit for storm water discharges, as required by 40 CFR 122.26(c). These categories include: (i) facilities subject to storm water effluent limitation guidelines, new source performance standards, or toxic pollutant effluent standards (40 CFR N); (ii) manufacturing facilities; (iii) oil and gas/mining facilities; (iv) hazardous waste treatment, storage, or disposal facilities; (v) landfills, land application sites, and open dumps; (vi) recycling facilities; (vii) steam electric power generating facilities; (viii) transportation facilities; (ix) sewage or wastewater treatment works; (x) light manufacturing facilities.

> permits for industrial and construction discharges of stormwater, and the Los Angeles Water Board administers those permits within its jurisdiction. Therefore, the Los Angeles Water Board does conduct inspections at businesses in Los Angeles County to ensure compliance with the state permits. In addition, the MS4 Permit requires the permittees also to conduct inspections. This approach, which may result in two different entities inspecting the same businesses to review stormwater practices, was specifically envisioned and required by U.S. EPA in adopting its stormwater regulations.

U.S./EPA, in its "MS4 Program Evaluation Guidance" document, acknowledged regulation at both the local and state levels as follows:[159]

> In addition to regulation of construction site stormwater at the local level, EPA regulations also require construction sites disturbing greater than one acre to obtain an NPDES permit. This permit can be issued by the state permitting authority or EPA, depending on whether the state has been delegated the NPDES authority. This dual regulation of construction sites at both the local and state or federal level can be confusing to permittees and construction operators.[160]

In fact, as to inspection duties and costs under two permit systems, one court has stated regarding a permit similar to the one in this claim:

> Rancho Cucamonga and the other permittees are responsible for inspection construction and industrial sites and commercial facilities within their jurisdiction for compliance with the enforcement of local municipal ordinance and permits. But the Regional Board continues to be responsible under the 2002 NPDES permit for inspections under the general permits.[161]

The reasoning of the *City of Rancho Cucamonga* case is instructive because a local regulatory fee could be used for local-government inspections, and the state fee is for state or regional inspections under the general statewide permits.

The state permit program and local inspection program under the regional board's permit can be viewed as two programs with similar, overlapping goals. Viewed in this way, the fees for two sets of inspections for construction sites (or for phase I facilities not inspected by the regional board within the past two years) would not necessarily exceed the costs of both sets of inspections.

In short, a local regulatory fee ordinance that provided for inspections of the industrial facilities and construction sites specified in the permit (parts 4C2a, 4C2b & 4E) would not be preempted

---

[159] State Water Resources Control Board, comments submitted April 18, 2008, attachment 33.

[160] *Ibid.*

[161] *City of Rancho Cucamonga v. Regional Water Quality Control Board, supra,* 135 Cal.App.4th 1377. The test claim record is silent as to the number of facilities within the permit area that are subject to the General Industrial Activity Storm Water Permit, or how many construction sites within the permit area are subject to the General Construction Activity Storm Water Permit.

by the state fee authority in Water Code section 13260 or in title 23 of the California Code of Regulations.

4. Local fee authority to inspect industrial or construction sites covered under the state permits would not be a "special tax" under article XIII A, section 4, of the California Constitution

In their June 2008 rebuttal comments, the city claimants assert that they do not have sufficient fee authority under Government Code section 17556, subdivision (d). They focus on facilities that hold state-issued general industrial or construction stormwater permits and pay the state-imposed fees pursuant to Water Code section 13260, arguing that an additional local fee for inspecting these facilities would be considered a special tax. According to the city claimants:

> In order for a fee to be considered a "fee" as opposed to a "special tax," the fee cannot exceed the reasonable cost of providing the services necessary for which the fee is charged. See *Mills v. County of Trinity* (1980) 108 Cal.App.3d 656, 659-660. Any fee assessed by the Cities or the County for inspection of these facilities would be a double assessment, and thus run afoul of this rule.

The city claimants, in their June 2009 comments on the draft staff analysis, again assert that forcing claimants to recover their costs for inspecting the state-permitted GIASP and GCASP facilities and sites, the regional board is creating a special tax on holders of those state permits.

Special taxes are governed by article XIII A, section 4, of the California Constitution:

> Cities, Counties and special districts, by a two-thirds vote of the qualified electors of such district, may impose special taxes on such district, except ad valorem taxes on real property or a transaction tax or sales tax on the sale of real property within such City, County or special district.

Government Code section 50076 states that a fee is not a special tax under article XIII A, section 4, if the fees are: (1) "charged in connection with regulatory activities which fees do not exceed the reasonable cost of providing services necessary to the activity for which the fee is charged," and (2) "are not levied for unrelated revenue purposes." The California Supreme Court has reaffirmed this rule.[162]

The Commission finds that a local regulatory stormwater fee, if appropriately calculated and charged, would not be a special tax within the meaning of article XIII A, section 4. There is no evidence in the record that a local regulatory fee charged for the stormwater inspections would exceed the reasonable cost of providing the inspections and related services or would otherwise violate the criteria in section 50076.

As the court stated in the *Connell v. Superior Court* case discussed above:

---

[162] *Sinclair Paint v. State Board of Equalization, supra,* 15 Cal.4th at p. 876: "[T]he term "special taxes" in article XIII A, section 4, does not embrace fees charged in connection with regulatory activities which fees do not exceed the reasonable cost of providing services necessary to the activity for which the fee is charged and which are not levied for unrelated revenue purposes."

> The [Water] Districts argue any fees levied by the districts "cannot exceed the cost to the local agency to provide such service," because such excessive fees would constitute a special tax. However, the districts fail to explain how this is an issue. No one is suggesting the districts levy fees that exceed their costs.[163]

Similarly, in this claim no one is suggesting that the local agencies levy regulatory fees that exceed their costs. Therefore, the Commission finds that a local regulatory fee for stormwater would not be a "special tax" under article XIII A, section 4, of the California Constitution for the activities at issue in the permit.

5. The local fee to inspect industrial and construction sites would not be subject to voter approval under article XIII D (Proposition 218) of the California Constitution

Some local government fees are subject to voter approval under article XIII D of the California Constitution, as added by Proposition 218 (1996). Article XIII D defines a property-related fee or charge as any levy other than an ad valorem tax, a special tax, or an assessment, imposed by an agency on a parcel or a person as an incident of property ownership, including a user fee or charge for a property-related service. Among other things, new or increased property-related fees require a majority-vote of the affected property owners, or two-thirds registered voter approval, or weighted ballot approval by the affected property owners (article XIII D, § 6, subd. (c)). Exempt from voter approval, however, are property-related fees for sewer, water, or refuse collection services (*Ibid*).

In 2002, an appellate court decision in *Howard Jarvis Taxpayers Association v. City of Salinas* (2002) 98 Cal.App.4th 1351, found that a city's charges on developed parcels to fund stormwater management were property-related fees, and were not covered by Proposition 218's exemption for "sewer" or "water" services. This means that an election would be required to impose storm water fees if they are imposed "as an incident of property ownership."

The Commission finds that local fees for inspections of phase I facilities, restaurants, retail gasoline outlets, automotive dealerships, etc., would not be subject to the vote requirement of Proposition 218. In a case involving inspections of apartments in the City of Los Angeles in which a fee was charged to landlords, the California Supreme Court ruled that the regulatory fee for inspecting apartments was not a "levy ... upon a parcel or upon a person as an incident of property ownership, including a user fee or charge for a property-related service" [164] within the meaning of Proposition 218. The court interpreted the phrase "incident of property ownership" as follows:

> The foregoing language means that a levy may not be imposed on a property owner as such-i.e., in its capacity as property owner-unless it meets constitutional prerequisites. In this case, however, the fee is imposed on landlords not in their capacity as landowners, but in their capacity as business owners. The exaction at issue here is more in the nature of a fee for a business license than a charge

---

[163] *Connell v. Superior Court, supra,* 59 Cal.App.4th 382, 402.

[164] That is the definition of "fee" or "charge" in article XIII D, section 2, subdivision (e).

against property. It is imposed only on those landowners who choose to engage in the residential rental business, and only while they are operating the business.[165]

[¶]...[¶] In other words, taxes, assessments, fees, and charges are subject to the constitutional strictures when they burden landowners *as landowners.* The [City of Los Angeles'] ordinance does not do so: it imposes a fee on its subjects by virtue of their ownership of a business-i.e., because they are landlords.[166]

Following the reasoning of the *Apartment Assoc.* case, the inspection fees on restaurants, retail gasoline outlets, automotive dealerships, phase I facilities, etc., like the fee in *Apartment Assoc.*, would not be imposed on landowners as landowners, nor as an incident of property ownership, but by virtue of business ownership. Thus, the inspection fee would fall outside the voter requirement of Proposition 218.

As to the fees for inspecting construction sites, the Commission finds that they too would not be subject to Proposition 218's voter requirement. Article XIII D of the California Constitution states that it shall not be construed to "affect existing laws relating to the imposition of fees or charges as a condition of property development."[167]

Moreover, the California Supreme Court, in determining whether water connection fees are within the purview of Proposition 218, reasoned that "water service" fees were within the meaning of "property-related services" but "water connection" fees were not.

> Rather, we conclude that a water service fee is a fee or charge under article XIII D if, but only if, it is imposed "upon a person as an incident of property ownership." (Art. XIII D, § 2, subd. (e).) A fee for ongoing water service through an existing connection is imposed "as an incident of property ownership" because it requires nothing other than normal ownership and use of property. But a fee for making a new connection to the system is not imposed "as an incident of property ownership" because it results from the owner's voluntary decision to apply for the connection.[168]

The Supreme Court's reasoning applies to local stormwater fees for inspecting construction sites. That is, the fee would not be an incident of property ownership because it results from the owner's voluntary decision to build on or develop the property. Therefore, the Commission finds that local inspection fees for stormwater compliance at construction sites would not be within the purview of the election requirement of Proposition 218. A recent report by the Office of the Legislative Analyst concurs with this conclusion.[169]

---

[165] *Apartment Assoc. of Los Angeles County v. City of Los Angeles* (2001) 24 Cal.4th 830, 839-840.

[166] *Id.* at 842 [Emphasis in original.]

[167] Article XIII D, section 1, subdivision (b).

[168] *Richmond v. Shasta Community Services Dist.* (2004) 32 Cal.4th 409, 427.

[169] "Local governments finance stormwater clean–up services from revenues raised from a variety of fees and, less frequently, through taxes. Property owner fees for stormwater services typically require approval by two–thirds of the voters, or a majority of property owners.

In its June 2009 comments, the County disagrees that stormwater pollution fees would not be subject to the voter requirement in Proposition 218, or that fee authority exists. In support, the County points to unadopted legislation pending in the current or in past legislative sessions that would provide fee authority or expressly exempt stormwater fees from the Proposition 218 voting requirement. For example SCA 18 (2009) would add "stormwater and urban runoff management" fees to those expressly exempted from the vote requirement in article XIII D, putting them in the same category as trash and sewer fees. SB 2058 (2002) would have required the regional water boards to share their fees with counties and cities. And SB 210 (2009) would provide cities and counties with stormwater regulatory or user-based fee authority.

The Commission finds that the unadopted legislative proposals cited by the County are unconvincing to show a lack of regulatory fee authority for business inspections as discussed above. First, courts have said that "As evidence of legislative intent, unadopted proposals have been held to have little value."[170] Second, if they were enacted, the legislative proposals would grant broader fee authority than is found in this analysis. For example, SCA 18, by adding a stormwater exception from the vote requirement in Proposition 218, would authorize *user* fees on residential property for stormwater and urban runoff programs, whereas this analysis addresses the much narrower issue of *regulatory* fees on businesses for inspections. Likewise, SB 2058 would have required the State Board's permit fees to be shared with "counties and cities" for the broad purpose of carrying out stormwater programs rather than for the narrower purpose of inspecting businesses. And SB 210 would likewise provide fee authority that is broader than regulatory fees; as the May 28, 2009 version expressly states in proposed section 16103, subdivision (c), of the Water Code: "The fees authorized under subdivision (a) may be imposed as user-based or regulatory fees consistent with this chapter." In short, the legislative proposals cited by the County do not indicate that fee authority does not exist. Rather, the proposals would, if enacted, provide broader fee authority than now exists.

In comments received June 3, 2009, the Bay Area Stormwater Management Agencies Association (BASMAA) contends that many permit requirements relate to local communities and their residents rather than specific business activities, and require public services that are essentially incident to real property ownership, and/or may only be financed via fees that remain subject to the voting requirements of Proposition 218 or increased property taxes. BASMAA also states that many permit activities would fall on joint power authorities or special districts that have no fee authority, or for which exemptions from Proposition 218 would not be applicable. BASMAA requests that the analysis be revised to revisit the conclusions regarding "funded vs. unfunded" requirements, and to recognize and distinguish the many types of stormwater activities for which regulatory fees would not apply.

Developer fees and fees imposed on businesses that contribute to urban runoff, in contrast, are not restricted by Proposition 218 and may be approved by a vote of the governing body. Taxes for stormwater services require approval by two–thirds of the electorate." Office of the Legislative Analyst. *California's Water: An LAO Primer* (October 22, 2008) page 56.

[170] *County of Sacramento v. State Water Resources Control Board* (2007) 153 Cal.App.4th 1579, 1590.

The Commission disagrees. BASMAA raises issues that are outside the scope of the portions of the Los Angeles stormwater permit (parts 4C2a, 4C2b, 4E & 4Fc3) that were pled by the test claimants. Because the Commission's jurisdiction is limited by those parts of the permit pled in the test claim, it cannot opine on other issues outside the pleadings, even if it would raise issues closely related to other NPDES permits (or even other parts of this NPDES permit).

In sum, the Commission finds that the inspections and related activities at issue in the Los Angeles stormwater permit are not subject to voter approval in article XIII D of the California Constitution (Proposition 218), so a regulatory fee ordinance for stormwater inspections would not be subject to voter approval.

Given the existence of local regulatory fee authority under the police power (Cal. Const, art. XI, § 7), and lacking any evidence or information to the contrary, the Commission finds that the claimants' authority to adopt a regulatory fee is sufficient (pursuant to Gov. Code, § 17556, subd. (d)) to pay for the inspections of restaurants, automotive service facilities, retail gasoline outlets, automotive dealerships, phase I facilities, as defined, and construction sites, and related activities specified in the permit. Therefore, for the inspections and related activities at issue, the Commission finds that there are no "costs mandated by the state" within the meaning of Government Code sections 17514 and 17556.

CONCLUSION

For the reasons discussed above, the Commission finds that the following activity in part 4F5c3 of the permit is a reimbursable state mandate within the meaning of Government Code sections 17514 and 17556: For local agencies subject to the permit that are not subject to a trash TMDL[171] to: "Place trash receptacles at all transit stops within its jurisdiction that have shelters no later than August 1, 2002, and at all transit stops within its jurisdiction no later than February 3, 2003. All trash receptacles shall be maintained as necessary."

The Commission also finds that the remainder of the permit (parts 4C2a, 4C2b & 4E) does not impose costs mandated by the state within the meaning of article XIII B, section 6 of the California Constitution because the claimants have fee authority (under Cal. Const. article XI, § 7) within the meaning of Government Code section 17556, subdivision (d), sufficient to pay for the activities in those parts of the permit.

---

[171] A Total Maximum Daily Load, or TMDL, is a calculation of the maximum amount of a pollutant that a waterbody can receive and still safely meet water quality standards.

WDID - Waste Discharger Identification

STATE WATER RESOURCES CONTROL BOARD (STATE WATER BOARD)
WATER QUALITY ORDER NO. 97-03-DWQ
NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM (NPDES)
GENERAL PERMIT NO. CAS000001 (GENERAL PERMIT)

WASTE DISCHARGE REQUIREMENTS (WDRS)
FOR
DISCHARGES OF STORM WATER ASSOCIATED WITH INDUSTRIAL ACTIVITIES
EXCLUDING CONSTRUCTION ACTIVITIES

The State Water Board finds that:

1. Federal regulations for storm water discharges were issued by the U.S. Environmental Protection Agency (U.S. EPA) on November 16, 1990 (40 Code of Federal Regulations [CFR] Parts 122, 123, and 124). The regulations require operators of specific categories of facilities where discharges of storm water associated with industrial activity (storm water) occur to obtain an NPDES permit and to implement Best Available Technology Economically Achievable (BAT) and Best Conventional Pollutant Control Technology (BCT) to reduce or prevent pollutants associated with industrial activity in storm water discharges and authorized non-storm discharges.

2. This General Permit shall regulate storm water discharges and authorized non-storm water discharges from specific categories of industrial facilities identified in Attachment 1, storm water discharges and authorized non-storm water discharges from facilities as designated by the Regional Water Quality Control Boards (Regional Water Boards), and storm water discharges and authorized non-storm water discharges from other facilities seeking General Permit coverage. This General Permit may also regulate storm water discharges and authorized non-storm water discharges from facilities as required by U.S. EPA regulations. This General Permit shall regulate storm water discharges and authorized non-storm water discharges previously regulated by San Francisco Bay Regional Water Board Order, No.92-11 (as amended by Order No. 92-116). This General Permit excludes storm water discharges and non-storm water discharges that are regulated by other individual or general NPDES permits, storm water discharges and non-storm water discharges from construction activities, and storm water discharges and non-storm water discharges excluded by the Regional Water Boards for coverage by this General Permit. Attachment 2 contains the addresses and telephone numbers of each Regional Water Board office.

3. To obtain coverage for storm water discharges and authorized non-storm water discharges pursuant to this General Permit, operators of facilities (facility operators) must submit a Notice of Intent (NOI), in accordance with the Attachment 3

10. Facility operators who have filed an NOI, pursuant to State Water Board Order No. 91-013-DWQ (as amended by Order No. 92-12) or San Francisco Bay Regional Water Board Order No. 92-11 (as amended by Order No. 92-116) shall:

    a. Complete the 1996-97 activities required by those general permits. These include, but are not limited to, conducting any remaining visual observations, sample collection, annual site inspection, annual report submittal, and (for group monitoring leaders) Group Evaluation Reports; and

    b. Comply with the requirements of this General Permit no later than August 1, 1997.

11. If the Regional Water Board determines that a discharge may be causing or contributing to an exceedance of any applicable water quality standards contained in a Statewide Water Quality Control Plan or the applicable Regional Water Board's Basin Plan, the Regional Water Board may order the facility operator to comply with the requirements described in Receiving Water Limitation C.3. The facility operator shall comply with the requirements within the time schedule established by the Regional Water Board.

12. If the facility operator determines that its storm water discharges or authorized non-storm water discharges are causing or contributing to an exceedance of any applicable water quality standards, the facility operator shall comply with the requirements described in Receiving Water Limitation C.3.

13. State Water Board Order No. 91-013-DWQ (as amended by Order No. 92-12-DWQ) and San Francisco Bay Regional Water Board Order No. 91-011 (as amended by Order No. 92-116) are hereby rescinded.

F. REGIONAL WATER BOARD AUTHORITIES

1. Following adoption of this General Permit, Regional Water Boards shall:

    a. Implement the provisions of this General Permit, including, but not limited to, reviewing SWPPPs, reviewing annual reports, conducting compliance inspections, and taking enforcement actions.

    b. Issue other NPDES general permits or individual NPDES storm water permits as they deem appropriate to individual facility operators, facility operators of specific categories of industrial activities, or facility operators in a watershed or geographic area. Upon issuance of such NPDES permits by a Regional Water Board, the affected facility operator shall no longer

be regulated by this General Permit. Any new NPDES permit issued by the Regional Water Board may contain different requirements than the requirements of this General Permit.

2. Regional Water Boards may provide guidance to facility operators on the SWPPP and the Monitoring Program and reporting implementation.

3. Regional Water Boards may require facility operators to conduct additional SWPPP and Monitoring Program and reporting activities necessary to achieve compliance with this General Permit.

4. Regional Water Boards may approve requests from facility operators whose facilities include co-located industrial activities that are not contiguous within the facilities (e.g., some military bases) to comply with this General Permit under a single NOI. Storm water discharges and authorized non-storm water discharges from the co-located industrial activities and from other sources within the facility that may generate significant quantities of pollutants are authorized provided the SWPPP and Monitoring Program addresses each co-located industrial activity and other sources that may generate significant quantities of pollutants.

CERTIFICATION

The undersigned, Administrative Assistant to the State Water Board, does hereby certify that the foregoing is a full, true, and correct copy of an order duly and regularly adopted at a meeting of the State Water Resources Control Board held on April 17, 1997.

AYE: John P. Caffrey
John W. Brown
James M. Stubchaer

SECTION B. MONITORING PROGRAM AND REPORTING REQUIREMENTS

1. *Implementation Schedule*

Each facility operator shall develop a written monitoring program for each facility covered by this General Permit in accordance with the following schedule:

a. Facility operators beginning industrial activities before October 1, 1992 shall develop and implement a monitoring program no later than October 1, 1992. Facility operators beginning operations after October 1, 1992 shall develop and implement a monitoring program when the industrial activities begin.

b. Facility operators that submitted a Notice Of Intent (NOI) pursuant to State Water Resources Control Board (State Water Board) Order No. 91-013-DWQ (as amended by Order No. 92-12) or San Francisco Bay Regional Water Quality Control Board (Regional Water Board) Order No. 92-11 (as amended by Order No. 92-116), shall continue to implement their existing monitoring program and implement any necessary revisions to their monitoring program in a timely manner, but in no case later than August 1, 1997. These facility operators may use the monitoring results conducted in accordance with those expired general permits to satisfy the pollutant/parameter reduction requirements in Section B.5.c., Sampling and Analysis Exemptions and Reduction certifications in Section B.12., and Group Monitoring Sampling credits in B.15.k. For facilities beginning industrial activities after the adoption of this General Permit, the monitoring program shall be developed and implemented when the facility begins the industrial activities.

2. *Objectives*

The objectives of the monitoring program are to:

a. Ensure that storm water discharges are in compliance with the Discharge Prohibitions, Effluent Limitations, and Receiving Water Limitations specified in this General Permit.

b. Ensure practices at the facility to reduce or prevent pollutants in storm water discharges and authorized non-storm water discharges are evaluated and revised to meet changing conditions.

c. Aid in the implementation and revision of the SWPPP required by Section A of this General Permit.

d. Measure the effectiveness of best management practices (BMPs) to prevent or reduce pollutants in storm water

discharges and authorized non-storm water discharges. Much of the information necessary to develop the monitoring program, such as discharge locations, drainage areas, pollutant sources, etc., should be found in the Storm Water Pollution Prevention Plan (SWPPP). The facility's monitoring program shall be a written, site-specific document that shall be revised whenever appropriate and be readily available for review by employees or Regional Water Board inspectors.

3. *Non-storm Water Discharge Visual Observations*

a. Facility operators shall visually observe all drainage areas within their facilities for the presence of unauthorized non-storm water discharges;

b. Facility operators shall visually observe the facility's authorized non-storm water discharges and their sources;

c. The visual observations required above shall occur quarterly, during daylight hours, on days with no storm water discharges, and during scheduled facility operating hours[1]. Quarterly visual observations shall be conducted in each of the following periods: January-March, April-June, July-September, and October-December. Facility operators shall conduct quarterly visual observations within 6-18 weeks of each other.

d. Visual observations shall document the presence of any discolorations, stains, odors, floating materials, etc., as well as the source of any discharge. Records shall be maintained of the visual observation dates, locations observed, observations, and response taken to eliminate unauthorized non-storm water discharges and to reduce or prevent pollutants from contacting non-storm water discharges. The SWPPP shall be revised, as necessary, and implemented in accordance with Section A of this General Permit.

4. *Storm Water Discharge Visual Observations*

a. With the exception of those facilities described in Section B.4.d. below, facility operators shall visually

[1] "Scheduled facility operating hours" are the time periods when the facility is staffed to conduct any function related to industrial activity, but excluding time periods where only routine maintenance, emergency response, security, and/or janitorial services are performed.

observe storm water discharges from one storm event per month during the wet season (October 1-May 30). These visual observations shall occur during the first hour of discharge and at all discharge locations. Visual observations of stored or contained storm water shall occur at the time of release.

b. Visual observations are only required of storm water discharges that occur during daylight hours that are preceded by at least three (3) working days[2] without storm water discharges and that occur during scheduled facility operating hours.

c. Visual observations shall document the presence of any floating and suspended material, oil and grease, discolorations, turbidity, odor, and source of any pollutants. Records shall be maintained of observation dates, locations observed, observations, and response taken to reduce or prevent pollutants in storm water discharges. The SWPPP shall be revised, as necessary, and implemented in accordance with Section A of this General Permit.

d. Feedlots (subject to Federal effluent limitations guidelines in 40 Code of Federal Regulations [CFR] Part 412) that are in compliance with Sections 2560 to 2565, Article 6, Chapter 15, Title 23, California Code of Regulations, and facility operators with storm water containment facilities shall conduct monthly inspections of their containment areas to detect leaks and ensure maintenance of adequate freeboard. Records shall be maintained of the inspection dates, observations, and any response taken to eliminate leaks and to maintain adequate freeboard.

5. *Sampling and Analysis*

a. Facility operators shall collect storm water samples during the first hour of discharge from (1) the first storm event of the wet season, and (2) at least one other storm event in the wet season. All storm water discharge locations shall be sampled. Sampling of stored or contained storm water shall occur at the time the stored or contained storm water is released. Facility operators that do not collect samples from the first storm event of the wet season are still required to collect samples from two other storm events of the wet season and shall explain in the Annual Report why the first storm event was not sampled.

---

[2] Three (3) working days may be separated by non-working days such as weekends and holidays provided that no storm water discharges occur during the three (3) working days and the non-working days.

b. Sample collection is only required of storm water discharges that occur during scheduled facility operating hours and that are preceded by at least (3) three working days without storm water discharge.

c. The samples shall be analyzed for:

i. Total suspended solids (TSS) pH, specific conductance, and total organic carbon (TOC). Oil and grease (O&G) may be substituted for TOC; and

ii. Toxic chemicals and other pollutants that are likely to be present in storm water discharges in significant quantities. If these pollutants are not detected in significant quantities after two consecutive sampling events, the facility operator may eliminate the pollutant from future sample analysis until the pollutant is likely to be present again; and

iii. Other analytical parameters as listed in Table D (located at the end of this Section). These parameters are dependent on the facility's standard industrial classification (SIC) code. Facility operators are not required to analyze a parameter listed in Table D when the parameter is not already required to be analyzed pursuant to Section B.5.c.i. and ii. or B.6 of this General Permit, and either of the two following conditions are met: (1) the parameter has not been detected in significant quantities from the last two consecutive sampling events, or (2) the parameter is not likely to be present in storm water discharges and authorized non-storm water discharges in significant quantities based upon the facility operator's evaluation of the facilities industrial activities, potential pollutant sources, and SWPPP. Facility operators that do not analyze for the applicable Table D parameters shall certify in the Annual Report that the above conditions have been satisfied.

iv. Other parameters as required by the Regional Water Board.

6. *Facilities Subject to Federal Storm Water Effluent Limitation Guidelines*

Facility operators with facilities subject to Federal storm water effluent limitation guidelines, in addition to the requirements in Section B.5. above, must complete the following:

a. Collect and analyze two samples for any pollutant specified in the appropriate category of 40 CFR Subchapter N. The sampling and analysis exemptions and reductions described in Section B.12. of this General Permit do not apply to these pollutants.

b. Estimate or calculate the volume of storm water discharges from each drainage area;

c. Estimate or calculate the mass of each regulated pollutant as defined in the appropriate category of 40 CFR Subchapter N; and

d. Identify the individual(s) performing the estimates or calculations in accordance with Subsections b. and c. above.

7. *Sample Storm Water Discharge Locations*

a. Facility operators shall visually observe and collect samples of storm water discharges from all drainage areas that represent the quality and quantity of the facility's storm water discharges from the storm event.

b. If the facility's storm water discharges are commingled with run-on from surrounding areas, the facility operator should identify other visual observation and sample collection locations that have not been commingled by run-on and that represent the quality and quantity of the facility's storm water discharges from the storm event.

c. If visual observation and sample collection locations are difficult to observe or sample (e.g., sheet flow, submerged outfalls), facility operators shall identify and collect samples from other locations that represent the quality and quantity of the facility's storm water discharges from the storm event.

d. Facility operators that determine that the industrial activities and BMPs within two or more drainage areas are substantially identical may either (i) collect samples from a reduced number of substantially identical

drainage areas, or (ii) collect samples from each substantially identical drainage area and analyze a combined sample from each substantially identical drainage area. Facility operators must document such a determination in the annual report.

8. *Visual Observation and Sample Collection Exceptions*

Facility operators are required to be prepared to collect samples and conduct visual observations at the beginning of the wet season (October 1) and throughout the wet season

until the minimum requirements of Sections B.4. and B.5. are completed with the following exceptions:

a. A facility operator is not required to collect a sample and conduct visual observations in accordance with Section B.4 and Section B.5 due to dangerous weather conditions, such as flooding, electrical storm, etc., when storm water discharges begin after scheduled facility operating hours or when storm water discharges are not preceded by three working days without discharge. Visual observations are only required during daylight hours. Facility operators that do not collect the required samples or visual observations during a wet season due to these exceptions shall include an explanation in the Annual Report why the sampling or visual observations could not be conducted.

b. A facility operator may conduct visual observations and sample collection more than one hour after discharge begins if the facility operator determines that the objectives of this Section will be better satisfied. The facility operator shall include an explanation in the Annual Report why the visual observations and sample collection should be conducted after the first hour of discharge.

9. *Alternative Monitoring Procedures*

Facility operators may propose an alternative monitoring program that meets Section B.2 monitoring program objectives for approval by the Regional Water Board. Facility operators shall continue to comply with the monitoring requirements of this Section and may not implement an alternative monitoring plan until the alternative monitoring plan is approved by the Regional Water Board. Alternative monitoring plans are subject to modification by the Regional Water Boards.

10. *Monitoring Methods*

a. Facility operators shall explain how the facility's monitoring program will satisfy the monitoring program objectives of Section B.2. This shall include:

i. Rationale and description of the visual observation methods, location, and frequency.

ii. Rationale and description of the sampling methods, location, and frequency; and

iii. Identification of the analytical methods and corresponding method detection limits used to detect pollutants in storm water discharges. This shall include justification that the method detection limits are adequate to satisfy the objectives of the monitoring program.

b. All sampling and sample preservation shall be in accordance with the current edition of "Standard Methods for the Examination of Water and Wastewater" (American Public Health Association). All monitoring instruments and equipment (including a facility operator's own field instruments for measuring pH and Electro Conductivity) shall be calibrated and maintained in accordance with manufacturers' specifications to ensure accurate measurements. All laboratory analyses must be conducted according to test procedures under 40 CFR Part 136, unless other test procedures have been specified in this General Permit or by the Regional Water Board. All metals shall be reported as total metals. With the exception of analysis conducted by facility operators, all laboratory analyses shall be conducted at a laboratory certified for such analyses by the State Department of Health Services. Facility operators may conduct their own sample analyses if the facility operator has sufficient capability (qualified employees, laboratory equipment, etc.) to adequately perform the test procedures.

DECLARATION OF SERVICE BY EMAIL

I, the undersigned, declare as follows:

I am a resident of the County of Sacramento and I am over the age of 18 years, and not a party to the within action. My place of employment is 980 Ninth Street, Suite 300, Sacramento, California 95814.

On December 15, 2017, I served the:

Re: Draft Proposed Decision, Schedule for Comments, and Notice of Hearing
California Regional Water Quality Control Board, San Diego Region, Order No. R9-2010-0016, 11-TC-03
California Regional Water Quality Control Board, San Diego Region, Order No. R9-2010-0016, Sections B.2., C., D., F.1.d.1., 2., 4., 7., F.1.f., F.1.h., F.1.i., F.2.d.3., F.2.e.6.e., F.3.a.10., F.3.b.4.a.ii., F.3.d.1.-5., F.4.d., F.4.e., G.1.-5., K.3.a.-c., Attachment E., Sections II.C. and II.E.2.-5., and Sections F., F.1., F.1.d., F.2., F.3.a.-d., and F.6., Adopted November 10, 2010
County of Riverside, Riverside County Flood Control and Water Conservation District, and Cities of Murrieta, Temecula, and Wildomar, Claimants

Dear Mr. Burhenn and Mr. Cook

The Draft Proposed Decision for the above-captioned matter is enclosed for your review and comment.

Written Comments

Written comments may be filed on the Draft Proposed Decision no later than **5:00 pm on April 3, 2023**. Please note that all representations of fact submitted to the Commission must be signed under penalty of perjury by persons who are authorized and competent to do so and must be based upon the declarant's personal knowledge, information, or belief. (Cal. Code Regs., tit. 2, § 1187.5.) Hearsay evidence may be used for the purpose of supplementing or explaining other evidence but shall not be sufficient in itself to support a finding unless it would be admissible over an objection in civil actions. (Cal. Code Regs., tit. 2, § 1187.5.) The Commission's ultimate findings of fact must be supported by substantial evidence in the record.[1]

You are advised that comments filed with the Commission are required to be electronically filed (e-filed) in an unlocked legible and searchable PDF file, using the Commission's Dropbox. (Cal. Code Regs., tit. 2, § 1181.3(c)(1).) Refer to http://www.csm.ca.gov/dropbox_procedures.php on the Commission's website for electronic filing instructions. If e-filing would cause the filer undue hardship or significant prejudice, filing may occur by first class mail, overnight delivery or personal service only upon approval of a written request to the executive director. (Cal. Code Regs., tit. 2, § 1181.3(c)(2).)

[1] Government Code section 17559(b), which provides that a claimant or the state may commence a proceeding in accordance with the provisions of section 1094.5 of the Code of Civil Procedure to set aside a decision of the Commission on the ground that the Commission's decision is not supported by substantial evidence in the record.

If you would like to request an extension of time to file comments, please refer to section 1187.9(a) of the Commission's regulations.

Hearing

This matter is set for hearing on **Friday, May 26, 2023**, at 10:00 a.m. via Zoom. The Proposed Decision will be issued on or about May 12, 2023.

Please notify Commission staff not later than the Wednesday prior to the hearing that you or a witness you are bringing plan to testify and please specify the names and email addresses of the people who will be speaking for inclusion on the witness list and so that detailed instructions regarding how to participate as a witness in this meeting on Zoom can be provided to them. When calling or emailing, please identify the item you want to testify on and the entity you represent. The Commission Chairperson reserves the right to impose time limits on presentations as may be necessary to complete the agenda.

If you would like to request postponement of the hearing, please refer to section 1187.9(b) of the Commission's regulations.

Sincerely,

Heather Halsey
Executive Director

DRAFT PROPOSED DECISION

California Regional Water Quality Control Board, San Diego Region, Order No. R9-2010-0016, Sections B.2., C., D., F.1.d.1., 2., 4., 7., F.1.f., F.1.h., F.1.i., F.2.d.3., F.2.e.6.e., F.3.a.10., F.3.b.4.a.ii., F.3.d.1.-5., F.4.d., F.4.e., G.1.-5., K.3.a.-c., Attachment E., Sections II.C. and II.E.2.-5., and Sections F., F.1., F.1.d., F.2., F.3.a.-d., and F.6.

Adopted November 10, 2010

California Regional Water Quality Control Board, San Diego Region, Order No. R9-2010-0016

11-TC-03

County of Riverside, Riverside County Flood Control and Water Conservation District, and Cities of Murrieta, Temecula, and Wildomar, Claimants

---

EXECUTIVE SUMMARY

Overview

This Test Claim alleges reimbursable costs mandated by the state for the County of Riverside, the Riverside County Flood Control and Water Conservation District, and the cities of Murrieta, Temecula, and Wildomar (claimants), to comply with conditions of National Pollutant Discharge Elimination System Program (NPDES) permit, Order No. R9-2010-0016 (test claim permit) issued by the California Regional Water Quality Control Board, San Diego Region (Regional Board). This Test Claim pleads the following sections of the test claim permit:

A. The requirement to address three categories of urban irrigation runoff that formerly were considered exempt non-stormwater discharges, contained in Section B.2.;[1]

B. The requirement to monitor for, report and address exceedances of non-stormwater action levels, contained in Sections C. and F.4.d., F.4.e., and Attachment E., Section II.C.;[2]

[1] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 21, 35-36 (Test Claim narrative).

[2] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 21, 39-42 (Test Claim narrative).

C. The requirement to monitor for, report and address exceedances of stormwater action levels, contained in Section D.;[3]

D. Requirements relating to the Priority Development Projects, local impact development (LID) and hydromodification, contained in Section F.1.d.1., 2., 4., 7., and F.1.h.;[4]

E. Requirements to track the construction and operation of post-construction best management practices ("BMPs"), contained in Section F.1.f.;[5]

F. Requirements relating to the control of pollutants from construction sites, contained in Section F.2.d.3. and F.2.e.6.e.;[6]

G. Requirements relating to the development and implementation of BMPs for unpaved roads, contained in Sections F.1.i. and F.3.a.10.;[7]

H. Requirements relating the inspection of monitoring of commercial/industrial sources, contained in Section F.3.b.4.a.ii.;[8]

I. Requirements relating to the retrofitting of existing development, contained in Section F.3.d.1.-5.[9];

J. Requirements relating to the development and implementation of the Watershed Water Quality Workplan, contained in Section G.1.-5.;[10]

K. Requirements relating to the JRMP Annual Report, contained in Section K.3.a.-c.;[11]

---

[3] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 21, 44-45 (Test Claim narrative).

[4] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 21, 46-52 (Test Claim narrative).

[5] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 21, 57-58 (Test Claim narrative).

[6] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 21, 59-60 (Test Claim narrative).

[7] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 21, 61-62 (Test Claim narrative).

[8] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 22, 63-64 (Test Claim narrative).

[9] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 22, 65-66 (Test Claim narrative).

[10] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 22, 68-70 (Test Claim narrative).

[11] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 22, 72-73 (Test Claim narrative).

L. Requirements to perform special studies, contained in the Monitoring and Reporting Program, Attachment E., Section II.E.2.-5.;[12] and

M. Requirements to ensure that stormwater runoff not cause or contribute to a violation of water quality standards and "prevent" illicit discharges into the MS4, Sections F., F.1., F.1.d., F.2., F.3.a.-d., and F.6 addressing development, construction, municipal facilities, industrial/commercial facilities, residential areas, retrofitting and education.[13]

Staff recommends that the Commission deny the Test Claim with respect to the Riverside County Flood Control and Water Conservation District, and partially approve the Test Claim for the County and cities as specified below.

Procedural History

On November 10, 2011, the claimants filed the joint Test Claim.[14] Between January 13, 2012 and January 17, 2013, the State Water Resources Control Board (State Board) and the San Diego Regional Water Quality Control Board (Regional Board) (collectively the Water Boards) requested five extensions of time to file comments on the Test Claim.

The claimants requested the Test Claim be put on inactive status on March 20, 2013. On August 29, 2016, the California Supreme Court issued its decision in *Department of Finance v. Commission on State Mandates* addressing the state mandate issue for a stormwater permit issued by the Los Angeles Regional Water Quality Control Board (Case No. S214855).[15] On March 8, 2017, Commission staff issued the Notice of Incomplete Joint Test Claim Filing. After one extension of time to file, the claimants filed their response to the Notice of Incomplete Joint Test Claim Filing on April 28, 2017.

On May 8, 2017, Commission staff issued Notice of Complete Joint Test Claim Filing, Removal From Inactive Status, Schedule for Comments, Renaming of Matter, Request for Administrative Record, and Notice of Tentative Hearing Date. Between May 22, 2017 and August 16, 2017, the Water Boards requested three extensions of time to file comments on the Test Claim. The Department of Finance (Finance) filed comments on the Test Claim on September 20, 2017.[16] The Water Boards filed comments on the Test Claim and the Administrative Record on September 22, 2017.[17] The claimants requested extensions of time to file rebuttal comments on

[12] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 22, 75-77 (Test Claim narrative).

[13] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 22, 81-83 (Test Claim narrative).

[14] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017.

[15] *Department of Finance v. Commission on State Mandates* (2016) 1 Cal.5th 749.

[16] Exhibit B, Finance's Comments on the Test Claim, filed September 20, 2017.

[17] Exhibit C, Water Boards' Comments on the Test Claim, filed September 22, 2017.

October 3, 2017 and November 20, 2017. The claimants filed rebuttal comments on December 14, 2017.[18] On March 13, 2023, Commission staff issued the Draft Proposed Decision.[19]

Commission Responsibilities

Under article XIII B, section 6 of the California Constitution, local agencies and school districts are entitled to reimbursement for the costs of state-mandated new programs or higher levels of service. In order for local government to be eligible for reimbursement, one or more similarly situated local agencies or school districts must file a test claim with the Commission. "Test claim" means the first claim filed with the Commission alleging that a particular statue or executive order imposes costs mandated by the state. Test claims function similarly to class actions and all members of the class have the opportunity to participate in the test claim process and all are bound by the final decision of the Commission for purposes of that test claim.

The Commission is the quasi-judicial body vested with exclusive authority to adjudicate disputes over the existence of state-mandated programs within the meaning of article XIII B, section 6 of the California Constitution and not apply it as an "equitable remedy to cure the perceived unfairness resulting from political decisions on funding priorities."[20]

Claims

The following chart provides a brief summary of the claims and issues raised and staff's recommendation.

Issue	Description	Staff Recommendation
Is the Test Claim Timely Filed?	At the time the Test Claim was filed, Government Code section 17551 provided that local government test claims shall be filed "not later than 12 months following the effective date of a statute or executive order or within 12 months of incurring increased costs as a result of a statute or executive order, whichever is later."[21] The effective date of the test claim permit is November 10, 2010.[22] The	*Timely Filed* – This Test Claim was filed on November 10, 2011, which is 12 months following the effective date of the test claim permit. Therefore it was timely filed. Because the Test Claim was filed on November 10, 2011, the potential period of reimbursement under Government Code section 17557 begins on July 1, 2010. However, since the test claim

[18] Exhibit D, Claimants' Rebuttal Comments, filed December 14, 2017.

[19] Exhibit E, Draft Proposed Decision, issued March 13, 2023.

[20] *County of Sonoma v. Commission on State Mandates* (2000) 84 Cal.App.4th 1264, 1281, citing *City of San Jose v. State of California* (1996) 45 Cal.App.4th 1802, 1817.

[21] Government Code section 17551(c) (Stats. 2007, ch. 329).

[22] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 269 (test claim permit).

Issue	Description	Staff Recommendation
	Test Claim was filed on November 10, 2011, which is exactly 12 months following the effective date. Government Code section 17557(e) requires a test claim to be "submitted on or before June 30 following a fiscal year in order to establish eligibility for reimbursement for that fiscal year."	permit has a later effective date, the period of reimbursement for this Test Claim begins on the permit's effective date, November 10, 2010.
Does Section B.2. impose a reimbursable state mandated program?	Section B.2. of the test claim permit removes landscape irrigation, irrigation water, and lawn watering from the exempt, non-prohibited discharge list requiring the claimants to effectively prohibit them from entering the MS4 by implementing a program to detect and remove these illicit discharges.	*Deny* – Section B.2. of the test claim permit does not mandate a new program or higher level of service. This provision is required by federal law when the discharge is identified as a source of pollution[23] and was required under the prior permit.[24] Thus, the provision is not new. Both the claimants and the Regional Board identified landscape irrigation, irrigation water, and lawn watering as a source of non-stormwater pollution[25] leaving the Regional Board with no discretion, but to remove the exemption and require the claimants to effectively prohibit these non-stormwater discharges from entering the MS4 in compliance with federal law.

[23] Code of Federal Regulations, title 40, section 122.26(d)(2)(IV)(B)(1).

[24] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 572 (Order R9-2004-0001, Section B.2.); see also, Exhibit X (33), National Pollutant Discharge Elimination System Permit Application Regulations for Storm Water Discharges; Final Rule, 55 Federal Register 47990 (November 16, 1990), page 48, which states: "However, the Director may include permit conditions that either require municipalities to prohibit or otherwise control any of these types of discharges where appropriate."

[25] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 473-476 (Fact Sheet/Technical Report).

Issue	Description	Staff Recommendation
		Moreover, this provision does not change or increase the level or quality of service to the public; it simply makes the claimants comply with existing federal law to prohibit non-stormwater discharges.[26]
Do Sections C. and F.4.d. and e., and Section II.C. of Attachment E of the test claim permit impose a reimbursable state mandated program?	Sections C. and F.4.d. and e., and Section II.C. of Attachment E of the test claim permit establish dry weather non-stormwater action levels (NALs) for 18 pollutants that, if shown to be in excess of the NAL during monitoring, the claimant is required to investigate, identify, and remove the source of the illicit, non-stormwater discharge.	*Deny* – Sections C. and F.4.d. and e., and Section II.C. of Attachment E of the test claim permit do not mandate a new program or higher level of service. These sections simply identify action levels for each pollutant consistent with existing water quality standards that, if detected in dry weather monitoring and field screening to be in excess of the action level, triggers the investigation, identification of the discharge, removal, and reporting activities required by existing federal law.[27] The claimants do not violate the permit by exceeding the action level, as implied by the claimants; rather a violation occurs only if a permittee fails to timely implement the required actions following an exceedance of an action level.[28] In this sense, the action levels established in the test claim permit function the same as the prior permit, which required the claimants to identify criteria to determine if significant sources of

[27] Code of Federal Regulations, title 40, sections 122.26(d)(2)(iv)(B), 122.41, 122.48, and Part 27 (reporting).

[28] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 203 (Directive C.3.).

Issue	Description	Staff Recommendation
		pollutants were present in dry weather non-stormwater discharges consistent with water quality objectives.[29] Under both permits, the action levels or criteria are intended to determine the presence of an illicit discharge, which then triggers the federal requirements to investigate, identify, and remove the illicit discharge, and report the findings to the Regional Board.
Does Section D. impose a reimbursable state mandated program?	Section D. of the test claim permit establishes Stormwater Action Levels (SALs) for seven pollutants that, if shown to be in excess of the SAL during monitoring, the claimant is required to implement stormwater controls and reduce the discharge to the maximum extent practicable (MEP) to meet water quality standards, and annually evaluate and report that information to the Regional Board.	*Deny* – Section D. of the test claim permit does not mandate a new program or higher level of service. The SALs imposed by the test claim permit are simply numbers that reflect the existing water quality standards applicable to the waterbodies in the Basin Plan, the California Toxics Rule (CTR), and the US EPA Water Quality Criteria for the pollutants at issue, and if there is an exceedance of a SAL detected with monitoring, then the claimants have to address those exceedances by implementing or modifying BMPs to the MEP as required by federal law.[30] Thus, the Regional Board has imposed an iterative, BMP-based compliance regime, using the SALs as a target, or trigger, but leaving substantial flexibility to the permittees to determine how to comply with long-standing

[29] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 594 (Order R9-2004-0001, Section J.4.).

[30] United States Code, title 33, section 1342(a)(2) (Public Law 100-4); Code of Federal Regulations, title 40, sections 122.22, 122.44(d),(i)(1), 122.48.

Issue	Description	Staff Recommendation
		federal requirements to monitor, implement BMPs, and report exceedances to the Regional Board. The SALs themselves do not impose any new mandated activities. Moreover, the requirements to monitor and implement BMPs to ensure that stormwater discharges meet water quality standards for these constituents are not new, but have long been required and thus, these activities do not constitute a new program or higher level of service.[31]
Do Sections F.1.d.1., 2., 4., 7., and h. and F.3.d.1.-5., of the test claim permit impose a reimbursable state-mandated program?	Sections F.1.d.1., 2., 4., 7., and h. and F.3.d.1.-5., of the test claim permit requires, in the continuing effort to reduce the discharges of stormwater pollution from the MS4 to the MEP and to prevent those discharges from causing or contributing to a violation of water quality standards, an updated Standard Stormwater Mitigation Plan (SSMP) for review of priority development projects proposed by residential, commercial, industrial, mixed-use, and public project proponents and the implementation of LID site design BMPs at new development and redevelopment projects; the development of a hydromodification plan to manage increases in runoff discharge rates and durations from priority development projects; and the development and implementation of	*Deny* – Some activities required by sections F.1.d.1., 2., 4., 7., and h. and F.3.d.1.-5. do not constitute a state-mandated new program or higher level of service, and those that do, do not result in costs mandated by the state. All LID, hydromodification, and retrofitting costs required by Sections F.1.d.1., 2., 4., 7., and h. and F.3.d.1.-5. of the test claim permit and incurred and triggered by a project proponent of a *municipal* priority development project are not mandated by the state and do not impose a new program or higher level of service because such costs are incurred at the discretion of the local agency, are not unique to government, and

[31] United States Code, title 33, section 1342(p)(3)(B)(iii) (Public Law 100-4); Code of Federal Regulations, title 40, section 122.26(d)(2)(iv); Code of Federal Regulations, title 40, section 122.44(i)(1); Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 573 (Order R9-2004-0001, Section C.2.).

Issue	Description	Staff Recommendation
	a retrofitting program to reduce the impacts from hydromodification and promote LID BMPs.	do not provide a governmental service to the public.[32] The remaining new activities required by sections F.1.d., F.1.h., and F.3.d. that relate to the claimants' regulatory activities for the LID, hydromodification, and retrofit provisions of other development are mandated by the state and impose a new program or higher level of service. However, there are no costs mandated by the state. The claimants have regulatory fee authority sufficient as a matter of law to pay for the new state-mandated activities.[33]
Does Section F.1.f. impose a reimbursable state-mandated program?	Section F.1.f. of the test claim permit requires each copermittee, as part of their Jurisdictional Runoff Management Program (JRMP), to develop and maintain a watershed-based database.[34] The database shall track and inventory all approved structural post-construction BMPs and BMP maintenance for existing municipal, industrial, commercial, and	*Deny* – Section F.1.f. does not impose costs mandated by the state. Except as applicable to a claimant's own municipal development (which is not mandated by the state)[36], Section F.1.f., of the test claim permit imposes some new requirements

Issue	Description	Staff Recommendation
	residential projects within its jurisdiction since July 2005; conduct inspections of the projects as specified; and verify that approved post-construction BMPs are operating effectively and have been adequately maintained as specified in the permit.[35]	that mandate a new program or higher levels of service. However, there are no costs mandated by the state. The claimants have regulatory fee authority sufficient as a matter of law to pay for the new state-mandated activities.[37]
Do Sections F.2.d.3. and F.2.e.6.e. of the test claim permit impose a reimbursable state-mandated program?	Sections F.2.d.3. and F.2.e.6.e. of the test claim permit require the claimants to require the implementation of Active/Passive Sediment Treatment (AST)[38] at construction sites that are determined by the copermittee to be an exceptional threat to water quality, and to review site monitoring data, if the site monitors its runoff, as part of construction site inspections.[39]	*Deny* – Sections F.2.d.3. and F.2.e.6.e. either do not mandate a new program or higher level of service, or do not impose costs mandated by the state. Section F.2.e.6.e., which requires that inspections of construction sites must include a review of facility monitoring data results if the site monitors its runoff, is not new, and does not impose a new program or higher level of service. Section F.2.d.3. imposes a state-mandated new program or higher level of service only when the claimant is acting in its regulatory capacity to require implementation of AST for construction sites other than its

[35] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 221-222 (test claim permit, Section F.1.f.).

[37] *Department of Finance v. Commission on State Mandates* (2021) 59 Cal.App.5th 546, *Department of Finance v. Commission on State Mandates* (2022) 85 Cal.App.5th 535, 590.

[38] Active/Passive Sediment Treatment is defined as "[u]sing mechanical, electrical or chemical means to flocculate or coagulate suspended sediment for removal from runoff from construction sites prior to discharge. Exhibit A, Test Claim filed November 10, 2011 and Revised April 28, 2017, page 283 (test claim permit, Attachment C).

[39] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 22, 59-60. The claimants have not alleged any other activities in section F.2.d., and, thus, only Sections F.2.d.3. and F.2.e.6.e. of the test claim permit are analyzed in this Decision.

Issue	Description	Staff Recommendation
		own that are determined to be an exceptional threat to water quality. However, there are no costs mandated by the state for the requirement imposed by section F.2.d.3. The claimants have regulatory fee authority sufficient as a matter of law to pay for the new state-mandated activities.[40]
Do Sections F.1.i. and F.3.a.10. impose a reimbursable state mandated program?	Sections F.1.i. and F.3.a.10. of the test claim permit require erosion and sediment control BMPs after construction of new unpaved roads and during maintenance activities on unpaved roads.	*Deny* – Sections F.1.i. and F.3.a.10. of the test claim permit do not mandate a new program or higher level of service. Federal law requires permittees to reduce the discharge of pollutants to the MEP[41] and to submit a proposed management program including operating and maintaining public streets, roads, and highways to reduce the impact on receiving waters.[42] The prior permit required the prevention or reduction of pollutants in runoff to the MEP during all phases of construction[43] and from all existing development including roads.[44] Thus, these requirements are not new and, if anything, they simply clarify the existing legal requirement to assess a site's

		compliance with local ordinances and water quality standards.[45]
Does Section F.3.b.4.a.ii. impose a reimbursable state mandated program?	Section F.3.b.4.a.ii. of the test claim permit requires that the inspection of industrial and commercial sites include a review of site monitoring data if the site monitors its runoff.	*Deny* – Section F.3.b.4.a.ii. does not mandate a new program or higher level of service. Federal regulations require that large and medium MS4 dischargers demonstrate adequate legal authority, through ordinance, permit, or other means, to prohibit illicit discharges;[46] control pollutants to the MS4 from stormwater discharges associated with industrial activity; carry out inspections, surveillance, and monitoring to ensure compliance with the permit conditions;[47] reduce pollutants from runoff from commercial areas; and perform inspections to implement and enforce ordinances.[48] The prior permit required the permittees to have adequate legal authority to control pollutant discharges into and from the MS4 through ordinance, statute, permit, contract, or other similar means;[49] and inspections of all industrial and commercial facilities that could contribute a significant pollutant load to the MS4.[50]

[50] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 589-590 (Order R9-2004-0001, Section H.2.a., b.).

Issue	Description	Staff Recommendation
		Although the prior permit did not expressly state that reviewing facility monitoring data results, if the site monitors its runoff, was required as part of the inspection, it did expressly require that the inspections of industrial and commercial facilities include "but not be limited to" an assessment of the site's compliance with local ordinances and permits related to stormwater runoff, including the implementation and maintenance of designated minimum BMPs, and visual observations for non-stormwater discharges, potential illicit connections, and potential discharge of pollutants in stormwater runoff.[51] The prior permit also required the permittee to carry out all inspections and monitoring, and to enforce local stormwater ordinances on industrial and commercial facilities "as necessary to maintain compliance with this Order," including the permit's receiving water limitations and prohibitions banning any discharge of pollutant and non-stormwater discharges into the MS4 that would cause or contribute to the violation of water quality standards.[52] Thus, these requirements are not new.

[51] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 589-591 (Order R9-2004-0001, Section H.2.a., b., d.).

[52] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 574-575, 592 (Order R9-2004-0001, Prohibitions and Receiving Water Limitations; Industrial/Commercial Inspections, Section H.2.e.).

Issue	Description	Staff Recommendation
Does Section G.1.-5. impose a reimbursable state-mandated program?	Section G.1.-5. of the test claim permit requires the copermittees in a watershed management area to develop a workplan to assess and prioritize the water quality problems within the watershed's receiving waters, identify sources of the highest priority water quality problems, develop a watershed-wide BMP implementation strategy to abate the highest priority water quality problems, and a monitoring strategy to evaluate BMP effectiveness and changing water quality prioritization in the watershed management area[53]	*Partially approve* - Sections G.1.d., G.3., G.4., and G.5. of the test claim permit impose new requirements that mandate a new program or higher level of service. These requirements impose costs mandated by the state for the County and cities only, from November 10, 2010 through December 31, 2017. Beginning January 1, 2018, however, there are no costs mandated by the state because the County and cities have fee authority sufficient as a matter of law within the meaning of Government Code section 17556(d).[54] There are no costs mandated by the state for the Riverside County Flood and Water Conservation District because there is no evidence in the record that the District was forced to spend its "proceeds of taxes," but instead used assessment revenue and contract funds from the County and cities.[55]

Issue	Description	Staff Recommendation
Do Sections K.3.a.-c. impose a reimbursable state-mandated program?	Section K.3.a.-c. of the test claim permit requires that each claimant prepare an individual JRMP annual report that covers implementation of its jurisdictional activities during the past annual reporting period, and specifies the contents of the annual report, which claimants contend includes a new reporting requirements that constitute a reimbursable state-mandated program.[56]	*Partially approve* - Sections K.3.a. and b. do not impose any new activities. Sections K.3.c.1., 2., 3., and 4. impose new requirements to include new information in the annual report, an annual reporting checklist, and new information identified in Table 5, and except for reporting on the claimant's own municipal projects (which is not mandated by the state)[57], the new requirements are mandated by the state and impose a new program or higher level of service. However, there are no costs mandated by the state for the requirements imposed by Sections K.3.c.1., 2., 3., and 4. that require the annual reporting of information relating to development that the claimants regulate. The claimants have regulatory fee authority sufficient as a matter of law to pay for these new state-mandated activities.[58]

Issue	Description	Staff Recommendation
		contract funds from the County and cities.[63]
Do Sections F., F.1., F.1.d., F.2., F.3.a.-d., and F.6. of the test claim permit impose a reimbursable state-mandated program?	Sections F., F.1., F.1.d., F.2., F.3.a.-d., and F.6. address development, construction, municipal facilities, industrial/commercial facilities, residential areas, retrofitting and education, and contain language that provides that each updated JRMP and the components of the program "must . . . effectively prohibit non-storm water discharges, and prevent runoff discharges from the MS4 from causing or contributing to a violation of water quality standards."[64] The claimants contend that the language imposes new requirements to develop and implement the components in Section F. "in a manner that guarantees that those programs will	*Deny* – The language in Sections F., F.1., F.1.d., F.2., F.3.a.-d., and F.6. is not new and does not mandate a new program or higher level of service. Federal law has long required the claimants "to implement and enforce an ordinance, orders or similar means *to prevent illicit discharges to the municipal separate storm sewer system*"[67] and to "effectively *prohibit non-stormwater discharges into the storm sewers*."[68] Both of these limitations address discharges coming *into* the MS4. The claimants assert that the verb "prevent" is more stringent that "prohibit." However, this is not

[63] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 102-103 (Declaration of Stuart McKibbin, Chief of the Watershed Protection Division of the Riverside County Flood Control and Water Conservation District, dated April 27, 2017) and pages 104-105, paragraph 5 (Declaration of David Garcia, Project Manager within the Watershed Protection Division of the Riverside County Flood Control and Water Conservation District dated April 27, 2017); Exhibit X (37), Santa Margarita River Region, Report of Waste Discharge (ROWD), January 15, 2009, pages 1, 16; Exhibit X (36), Riverside County Flood Control and Water Conservation District's Jurisdictional Runoff Management Program (JRMP), June 30, 2012, page 13; Exhibit X (24), Excerpt from Riverside County Flood Control and Water Conservation District's Annual Budget, Fiscal Year 2011-2012, pages 5, 6; Exhibit X (25), Excerpt from Riverside County Flood Control and Water Conservation District's Comprehensive Annual Financial Report for Year Ending June 30, 2015, pages 7, 9, 18.

	prevent the discharge of pollutants at a level that could cause or contribute to a violation of any water quality standard as well as to prevent illicit discharges to the MS4," and that such requirements go beyond the MEP standard of federal law and constitute a new or higher level of service.[65] The claimants further allege that the requirements now subject them to sanctions, including civil penalties and injunctive relief, for the failure to achieve water quality standards.[66]	the case. Black's Law Dictionary defines prohibit as: "To prevent, preclude, or severely hinder."[69] Merriam-Webster Dictionary defines prohibit as, "to prevent from doing something."[70] Thus, prevention is part of, and not more stringent than, prohibition. Moreover, the requirement to prohibit non-storm water discharges *through and from* their MS4 systems, implement a program to prevent illicit discharges, and monitor to identify illicit discharges and exempted discharges that are a source of pollution, has been in the claimants' permits for the last 20 years.[71] Federal law requires that NPDES permits include conditions to achieve water quality standards and objectives.[72] And receiving water limitations and discharge prohibitions prohibiting discharges into and from MS4s in a manner causing a condition of pollution, causing

Issue	Description	Staff Recommendation
		exceedances of water quality objectives, or causing a violation of water quality standards, have been in all permits since 1999 when the State Water Resources Control Board issued precedential order 99-05.[73]

Staff Analysis

A. The Test Claim Was Timely Filed With a Period of Reimbursement Beginning November 10, 2010.

The Test Claim was filed on November 10, 2011. The effective date of the test claim permit is November 10, 2010.[74] At the time of filing, the Government Code provided that "test claims shall be filed not later than 12 months following the effective date of a statute or executive order…."[75] As the Test Claim was filed within 12 months following the effective date of the test claim permit, the Test Claim was timely filed.

Government Code section 17557(e) requires a test claim to be "submitted on or before June 30 following a fiscal year in order to establish eligibility for reimbursement for that fiscal year." Because the Test Claim was filed on November 10, 2011, the potential period of reimbursement under Government Code section 17557 begins on July 1, 2010. However, since the test claim permit has a later effective date, the period of reimbursement for this Test Claim begins on the permit's effective date, November 10, 2010.

B. Some of the Sections Pled by the Claimants Impose a State-Mandated New Program or Higher Level of Service.

Section B.2., of the test claim permit removes landscape irrigation, irrigation water, and lawn watering from the exempt, non-prohibited list of non-stormwater discharges requiring the claimants to effectively prohibit them from entering the MS4 by implementing a program to detect and remove these illicit discharges. This provision is required by federal law when the discharge is identified as a source of pollution[76] and was required under the prior permit.[77] Thus,

[73] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 572-573, (Order R9-2004-0001, Section A.1.-3.); Exhibit C, Water Boards' Comments on the Test Claim, filed September 22, 2017, State Water Board Order WQ 2015-0075, pages 221-222.

[74] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 269 (test claim permit).

[75] Government Code section 17551(c) (Stats. 2007, ch. 329).

[76] Code of Federal Regulations, title 40, section 122.26(d)(2)(IV)(B)(1).

[77] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 572 (Order R9-2004-0001, Section B.2.); see also, Exhibit X (33), National Pollutant Discharge Elimination System Permit Application Regulations for Storm Water Discharges; Final Rule, 55 Federal

the provision is not new. Both the claimants and the Regional Board identified landscape irrigation, irrigation water, and lawn watering as a source of non-stormwater pollution[78] leaving the Regional Board with no discretion, but to remove the exemption and require the claimants to effectively prohibit these non-stormwater discharges from entering the MS4 in compliance with federal law. Reimbursement under article XIII B, section 6 of the California Constitution is not required if the statute or executive order imposes a requirement that is expressly mandated by federal law.[79] Moreover, this provision it is not new but simply makes the claimants comply with longstanding federal law which prohibits non-stormwater discharges.[80]

Sections C., and F.4.d., and e., and Section II.C. of Attachment E., of the test claim permit require dry weather monitoring and field screening for 18 pollutants specified in the permit, and if a pollutant is shown to exceed the non-stormwater action level (NAL), which is based on existing water quality standards, then the claimants are required to investigate, identify and remove the source of the illicit, non-stormwater discharge. Staff finds that these sections of the permit do not mandate a new program or higher level of service. Instead, the test claim permit simply identifies action levels for each pollutant consistent with existing water quality standards that, if detected in dry weather monitoring and field screening to be in excess of the action level, triggers the investigation, identification of the discharge, removal, and reporting activities required by existing federal law.[81] The claimants do not violate the permit by exceeding the action level, as implied by the claimants; rather a violation occurs only if a permittee fails to timely implement the required actions following an exceedance of an action level.[82] In this sense, the action levels established in the test claim permit function the same as the prior permit, which required the claimants to identify criteria to determine if significant sources of pollutants were present in dry weather non-stormwater discharges consistent with water quality objectives.[83] Under both permits, the action levels or criteria are intended to determine the

---

Register 47990 (November 16, 1990), page 48, which states: "However, the Director may include permit conditions that either require municipalities to prohibit or otherwise control any of these types of discharges where appropriate."

presence of an illicit discharge, which then triggers the federal requirements to investigate, identify, and remove the illicit discharge, and report the findings to the Regional Board.

Section D. of the test claim permit establishes Stormwater Action Levels (SALs) for seven pollutants that, if shown to be in excess of the SAL during monitoring, the claimant is required to implement stormwater controls and reduce the discharge to the maximum extent practicable (MEP) to meet water quality standards, and annually evaluate and report that information to the Regional Board. Staff finds that Section D. of the test claim permit does not mandate a new program or higher level of service. The SALs imposed by the test claim permit are simply numbers that reflect the existing water quality standards applicable to the waterbodies in the Basin Plan, the California Toxics Rule (CTR), and the US EPA Water Quality Criteria for the pollutants at issue, and if there is an exceedance of a SAL detected with monitoring, then the claimants have to address those exceedances by implementing or modifying BMPs to the MEP as required by existing federal law.[84] Thus, the Regional Board has imposed an iterative, BMP-based compliance regime, using the SALs as a target, or trigger, but leaving substantial flexibility to the permittees to determine how to comply with long-standing federal requirements to monitor, implement BMPs, and report exceedances to the Regional Board. The SALs themselves do not impose any new mandated activities. Moreover, monitoring and implementing BMPs to ensure that stormwater discharges meet water quality standards for these constituents are not new, but have long been required and thus, these activities do not constitute a new program or higher level of service.[85]

Sections F.1.d.1., 2., 4., 7., and h. and F.3.d.1.-5., of the test claim permit requires, in the continuing effort to reduce the discharges of stormwater pollution from the MS4 to the MEP and to prevent those discharges from causing or contributing to a violation of water quality standards, an updated Standard Stormwater Mitigation Plan (SSMP) for review of priority development projects proposed by residential, commercial, industrial, mixed-use, and public project proponents and the implementation of LID site design BMPs at new development and redevelopment projects; the development of a hydromodification plan to manage increases in runoff discharge rates and durations from priority development projects; and the development and implementation of a retrofitting program to reduce the impacts from hydromodification and promote LID BMPs. Staff finds that:

- All LID, hydromodification, and retrofitting costs required by Sections F.1.d.1., 2., 4., 7., and h. and F.3.d.1.-5. of the test claim permit and incurred and triggered by a project proponent of a *municipal* priority development project are not mandated by the state and do not impose a new program or higher level of service because such costs are incurred at

[84] United States Code, title 33, section 1342(a)(2) (Public Law 100-4); Code of Federal Regulations, title 40, sections 122.22, 122.44(d),(i)(1), 122.48.

[85] United States Code, title 33, section 1342(p)(3)(B)(iii) (Public Law 100-4); Code of Federal Regulations, title 40, section 122.26(d)(2)(iv); Code of Federal Regulations, title 40, section 122.44(i)(1); Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 573 (Order R9-2004-0001, Section C.2.).

the discretion of the local agency, are not unique to government, and do not provide a governmental service to the public.[86]

- The remaining new LID, hydromodification, and retrofitting administrative, planning, and regulatory activities required by Sections F.1.d.1., 2., 4., 7., and h., and F.3.d.1.-5. are mandated by the state and impose a new program or higher level of service.

Section F.1.f. of the test claim permit requires each copermittee, as part of their Jurisdictional Runoff Management Program (JRMP), to develop and maintain a watershed-based database.[87] The database shall track and inventory all approved structural post-construction BMPs and BMP maintenance for existing municipal, industrial, commercial, and residential projects within its jurisdiction since July 2005; conduct inspections of the projects as specified; and verify that approved post-construction BMPs are operating effectively and have been adequately maintained as specified in the permit.[88] Staff finds that, *except* as applicable to a claimant's own municipal development (which is not mandated by the state),[89] the following activities are newly required by Section F.1.f., of the test claim permit and constitute state-mandated new programs or higher levels of service:

- Develop and maintain a watershed-based database to track and inventory all projects, within its jurisdiction, that have a final approved SSMP with structural post-construction BMPs implemented since July 2005. The database must include information on BMP type; location; watershed; date of construction; the party responsible for maintenance, maintenance verifications, and corrective actions; and whether the site was referred to the local vector control agency.[90]
- Verify that the required structural post-construction BMPs on inventoried *residential* projects have been implemented, are maintained, and are operating effectively every five

[88] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 221-222 (test claim permit, Section F.1.f.).

[89] *Department of Finance v. Commission on State Mandates* (*Kern*) (2003) 30 Cal.4th 727, 754 [citing *City of Sacramento v. State* (1990) 50 Cal.3d 51, 74]; *Department of Finance v. Commission on State Mandates* (2009) 170 Cal.App.4th 1355, 1368 (*POBRA*); *Coast Community College Dist. v. Commission on State Mandates* (2022) (2022) 13 Cal.5th 800, 815-817.

[90] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 221 (test claim permit, Section F.1.f.1.).

years. Verification can be made through inspections, self-certifications, surveys, or other equally effective approaches.[91]

- Annually inspect the required structural post-construction BMPs at high priority *residential* projects.[92]
- For all inventoried projects, verifications performed through a means other than direct copermittee inspection, adequate documentation must be submitted to the copermittee to provide assurance that the required maintenance has been completed.[93]
- Inspections of the required structural post-construction BMPs at all inventoried projects must note observations of vector conditions and, where conditions are contributing to mosquito production, the copermittee is required to notify the local vector control agency.[94]

All other activities required by Section F.1.f. are not new and, thus, do not impose a new program or higher level of service.

Sections F.2.d.3. and F.2.e.6.e. of the test claim permit require the claimants to require the implementation of Active/Passive Sediment Treatment (AST)[95] at construction sites that are determined by the copermittee to be an exceptional threat to water quality, and to review site monitoring data, if the site monitors its runoff, as part of construction site inspections.[96] Staff finds that Section F.2.d.3. imposes a state-mandated new program or higher level of service only when the claimant is acting in its regulatory capacity and is performing the following activity for construction sites other than its own:

[91] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 222 (test claim permit, Section F.1.f.2.b.i.).

[92] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 222 (test claim permit, Section F.1.f.2.b.ii.).

[93] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 222 (test claim permit, Section F.1.f.2.b.v.).

[94] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 222 (test claim permit, Section F.1.f.2.b.vii.).

[95] Active/Passive Sediment Treatment is defined as "[u]sing mechanical, electrical or chemical means to flocculate or coagulate suspended sediment for removal from runoff from construction sites prior to discharge. Exhibit A, Test Claim filed November 10, 2011 and Revised April 28, 2017, page 283 (test claim permit, Attachment C).

[96] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 22, 59-60. The claimants have not alleged any other activities in section F.2.d., and, thus, only Sections F.2.d.3. and F.2.e.6.e. of the test claim permit are analyzed in this Decision.

- Require implementation of AST for sediment at construction sites other than its own (or portions thereof) that are determined to be an exceptional threat to water quality.[97]

However, with respect to a local agency's own *municipal* construction sites, the requirement to implement AST is not mandated by the state, but is triggered by a local discretionary decision to construct new municipal projects.[98] Moreover, implementing AST at a local agency's own municipal construction site does not impose a new program or higher level of service because such costs are not unique to government and do not provide a governmental service to the public. Staff also finds that Section F.2.e.6.e. of the test claim permit, which requires that inspections of construction sites must include a review of facility monitoring data results if the site monitors its runoff, is not new, and does not impose a new program or higher level of service.

Sections F.1.i., and F.3.a.10. of the test claim permit require erosion and sediment control BMPs after construction of new unpaved roads and during maintenance activities on unpaved roads. Federal law requires permittees to reduce the discharge of pollutants to the MEP[99] and to submit a proposed management program including operating and maintaining public streets, roads, and highways to reduce the impact on receiving waters.[100] The prior permit required the prevention or reduction of pollutants in runoff to the MEP during all phases of construction[101] and from all existing development including roads.[102] Thus, these requirements are not new and, if anything, they simply clarify the existing legal requirement to assess a site's compliance with local ordinances and water quality standards.[103] Accordingly, the Staff that Sections F.1.i., and F.3.a.10. are not new requirements imposed or shifted by the state, and do not constitute a new program or higher level of service.

Section F.3.b.4.a.ii. of the test claim permit requires that the inspection of industrial and commercial sites include a review of site monitoring data if the site monitors its runoff. Staff finds that the requirement imposed by Section F.3.b.4.a.ii. clarifies the existing legal requirement to assess a site's compliance with local ordinances and water quality standards, but is not a new requirement and does not impose a new program or higher level of service. Federal regulations require that large and medium MS4 dischargers demonstrate adequate legal authority, through

ordinance, permit, or other means, to prohibit illicit discharges;[104] control pollutants to the MS4 from stormwater discharges associated with industrial activity; carry out inspections, surveillance, and monitoring to ensure compliance with the permit conditions;[105] reduce pollutants from runoff from commercial areas; and perform inspections to implement and enforce ordinances.[106] The prior permit required the permittees to have adequate legal authority to control pollutant discharges into and from the MS4 through ordinance, statute, permit, contract, or other similar means;[107] and inspections of all industrial and commercial facilities that could contribute a significant pollutant load to the MS4.[108] Although the prior permit did not expressly state that reviewing facility monitoring data results, if the site monitors its runoff, was required as part of the inspection, it did expressly require that the inspections of industrial and commercial facilities include "but not be limited to" an assessment of the site's compliance with local ordinances and permits related to stormwater runoff, including the implementation and maintenance of designated minimum BMPs, and visual observations for non-stormwater discharges, potential illicit connections, and potential discharge of pollutants in stormwater runoff.[109] The prior permit also required the permittee to carry out all inspections and monitoring, and to enforce local stormwater ordinances on industrial and commercial facilities "as necessary to maintain compliance with this Order," including the permit's receiving water limitations and prohibitions banning any discharge of pollutant and non-stormwater discharges into the MS4 that would cause or contribute to the violation of water quality standards.[110] Thus, these requirements are not new and, if anything, the requirement to review monitoring data results, if the site monitors its runoff, simply clarifies the existing legal requirement to assess a site's compliance with local ordinances and water quality standards. Moreover, there has been no shift of costs from the State to the claimants. The claimants enforce their local permits, plans, and ordinances, and the Water Boards enforce the General Industrial Permit.[111] In addition, the test claim permit states that if the Regional Board has conducted an inspection of an industrial

[111] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 441 (Fact Sheet/Technical Report, Finding D.3.a.).

site during a particular year, the requirement for the responsible claimant to inspect this facility during the same year is deemed satisfied.[112]

Section G.1.-5. of the test claim permit requires the copermittees in a watershed management area to develop a workplan to assess and prioritize the water quality problems within the watershed's receiving waters, identify sources of the highest priority water quality problems, develop a watershed-wide BMP implementation strategy to abate the highest priority water quality problems, and a monitoring strategy to evaluate BMP effectiveness and changing water quality prioritization in the watershed management area.[113] A watershed workplan is not new. Under the prior permit, the claimants were required to collaborate with other watershed permittees to develop and implement a watershed stormwater management plan (watershed SWMP).[114] However, staff finds that Sections G.1.d., G.3., G.4., and G.5. of the test claim permit mandate a new program or higher level of service for the following new activities:

- The watershed BMP implementation strategy shall include a map of any implemented and proposed BMPs.[115]
- The copermittees shall pursue efforts to obtain any interagency agreements, or other coordination efforts, with non-copermittee owners of the MS4 (such as Caltrans, Native American tribes, and school districts) to control the contribution of pollutants from one portion of the shared MS4 to another portion of the shared MS4.[116]
- The watershed workplan must include the identification of the persons or entities anticipated to be involved during the development and implementation of the Watershed Workplan.[117]
- The annual watershed review meetings shall be open to the public and adequately noticed.[118]

[112] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 244 (test claim permit, Section F.3.b.4.(e)).

[113] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 255-257 (test claim permit, Sections G.1.-G.5.).

[114] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 595 (Order R9-2004-0001, Sections K.1., 2.).

[115] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 255 (test claim permit, Section G.1.d.).

[116] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 256 (test claim permit, Section G.3.).

[117] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 256 (test claim permit, Section G.4.).

[118] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 257 (test claim permit, Section G.5.).

- Each permittee shall review and modify jurisdictional programs and JRMP annual reports, as necessary, so they are consistent with the updated watershed workplan.[119]

Section K.3.a.-c. of the test claim permit requires that each claimant prepare an individual JRMP annual report that covers implementation of its jurisdictional activities during the past annual reporting period, and specifies the contents of the annual report, which claimants contend includes new reporting requirements that constitute a reimbursable state-mandated program.[120] Staff finds that sections K.3.a. and b. do not impose any new activities. Sections K.3.c.1., 2., 3., and 4. impose new requirements to include new information in the annual report, specifically, an annual reporting checklist and new information identified in Table 5. Except for reporting on the claimant's own municipal projects (which is not mandated by the state),[121] staff finds the new requirements are mandated by the state and impose a new program or higher level of service.

Section II.E.2.-5. of Attachment E, which is part of the Monitoring and Reporting Program (MRP), requires the claimants to perform the following special studies: Sediment Toxicity Study; Trash and Litter Investigation; Agricultural, Federal and Tribal Input Study; and MS4 Receiving Water and Maintenance Study.[122] Staff finds that that Attachment E, Sections II.E.2.-5. mandate a new program or higher level of service within the meaning of article XIII B, section 6 of the California Constitution.

Finally, the claimants plead language in Sections F., F.1., F.1.d., F.2., F.3.a.-d., and F.6. of the test claim permit, which addresses development, construction, municipal facilities, industrial/commercial facilities, residential areas, retrofitting and education, that provides that each updated JRMP and the components of the program "must . . . effectively prohibit non-storm water discharges, and prevent runoff discharges from the MS4 from causing or contributing to a violation of water quality standards."[123] The claimants contend that the language imposes new requirements to develop and implement the components in Section F. "in a manner that guarantees that those programs will prevent the discharge of pollutants at a level that could cause or contribute to a violation of any water quality standard as well as to prevent illicit discharges to the MS4," and that such requirements go beyond the MEP standard of federal law and constitute

---

[119] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 257 (test claim permit, Section G.5.).

[120] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 262-267 (test claim permit, section K.3.).

[121] *Department of Finance v. Commission on State Mandates* (*Kern*) (2003) 30 Cal.4th 727, 754 [citing *City of Sacramento v. State* (1990) 50 Cal.3d 51, 74]; *Department of Finance v. [122] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 22, 75-81, 297-324 (Test Claim narrative; Attachment E.) The claimants did not plead the other special studies addressed in Attachment E, sections II.E.7. and 8. and, thus, this Decision does not address those studies.

[123] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 208 (test claim permit, Section F.).

a new and/or higher level of service.[124] The claimants further allege that the requirements now subject them to sanctions, including civil penalties and injunctive relief, for the failure to achieve water quality standards.[125] Staff finds that the language at issue in Sections F., F.1., F.1.d., F.2., F.3.a.-d., and F.6. of the test claim permit does not impose any new requirements and, therefore, does not mandate a new program or higher level of service. Federal law has long required the claimants "to implement and enforce an ordinance, orders or similar means *to prevent illicit discharges to the municipal separate storm sewer system*"[126] and to "effectively *prohibit non-stormwater discharges into the storm sewers*."[127] Both of these limitations address discharges coming *into* the MS4. The claimants assert that the verb "prevent" is more stringent that "prohibit." However, this is not the case. Black's Law Dictionary defines prohibit as: "To prevent, preclude, or severely hinder."[128] Merriam-Webster Dictionary defines prohibit as, "to prevent from doing something."[129] Thus, prevention is part of, and not more stringent than, prohibition. Moreover, the requirement to prohibit non-storm water discharges *through and from* their MS4 systems, implement a program to prevent illicit discharges, and monitor to identify illicit discharges and exempted discharges that are a source of pollution, has been in the claimants' permits for the last 20 years.[130] Federal law requires that NPDES permits include conditions to achieve water quality standards and objectives.[131] And receiving water limitations and discharge prohibitions into and from MS4s in a manner causing a condition of pollution, causing exceedances of water quality objectives, or causing a violation of water quality standards, have been in all permits since 1999 when the State Board issued precedential order

[124] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 83 (Test Claim narrative).

[128] Exhibit X (1), Black's Law Dictionary (11th ed. 2019), prohibit.

[129] Exhibit X (32), Merriam-Webster Dictionary, prohibit, https://www.merriam-webster.com/dictionary/prohibit?utm_campaign=sd&utm_medium=serp&utm_source=jsonld (accessed on April 4, 2022).

[130] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 413 (Fact Sheet/Technical Report).

[131] United States Code, title 33, section 1311(b)(1)(C); United States Code, title 33, section 1342(o)(3) (Public Law 100-4); Code of Federal Regulations, title 40, sections 122.41(d), 122.44(d)(1).

99-05.[132] Thus, the requirement to prevent runoff discharges from the MS4 from causing or contributing to a violation of water quality standards is not new.

C. Pursuant to Government Code Section 17556(d), There Are No Costs Mandated by the State When the Claimants Have Regulatory Authority to Impose Fees (e.g., for LID, Hydromodification, Retrofitting, BMP Maintenance Tracking, Active/Passive Sediment Treatment, and Annual Reporting Requirements Addressing Development). Although the Remaining New State-Mandated Activities Result in Costs Mandated by the State for the County and Cities From November 10, 2010, to December 31, 2017, There Are No Costs Mandated by the State for Riverside County Flood and Water Conservation District Because There Is No Evidence in the Record that the District Was Forced to Spend Their Local "Proceeds of Taxes."

In order to be reimbursable, the mandated activities in these sections must result in increased costs mandated by the state, forcing local government to incur "increased actual expenditures of limited tax proceeds that are counted against the local government's spending limit."[133] In addition, a finding of costs mandated by the state means that none of the exceptions in Government Code section 17556 apply to deny the claim. Government Code section 17556(d) states that the Commission shall not find costs mandated by the state when:

> The local agency or school district has the authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service. This subdivision applies regardless of whether the authority to levy charges, fees, or assessments was enacted or adopted prior to or after the date on which the statute or executive order was enacted or issued.

Staff finds that:

a. The new state-mandated activities do not result in costs mandated by the state for the Riverside County Flood and Water Conservation District because there is no evidence in the record that the District was forced to spend its "proceeds of taxes," but instead used assessment revenue and contract funds from the County and cities.[134]

b. The County and cities have regulatory fee authority sufficient as a matter of law to fund the new state-mandated activities required related to LID (Section F.1.d.1., 2., 4., 7.), Hydromodification (Section F.1.h.), Retrofitting (Section F.3.d.1-5.), BMP Maintenance Tracking (Section F.1.f.), Active/Passive Sediment Treatment (Section F.2.d.3.), Annual JRMP Reporting Checklist on Construction, New Development, Post Construction Development, Municipal (other than their own)/Commercial/Industrial (Section K.3.c.3.), and the Annual JRMP Reporting Requirements listed in Table 5 on New Development, Construction, Municipal (other than their own), Commercial/Industrial, Residential, and Retrofitting Existing Development (Section K.3.c.4.), pursuant to Government Code section 17556(d) and, thus, there are no costs mandated by the state for these activities.

c. The County and cities have constitutional and statutory authority to charge property-related fees for the new state-mandated requirements related to the Watershed Workplan (Sections G.1.-5.); the Annual JRMP Reporting requirements to include in the annual fiscal analysis a narrative description of circumstances resulting in a 25 percent or greater annual change for any budget line items (Section K.3.c.1.), and provide in the annual report an updated timeframe for attainment of a desired outcome level when an assessment indicates that the desired outcome level has not been achieved at the end of the projected timeframe (Section K.3.c.2.); the Annual JRMP Reporting Checklist on Illicit Discharges and Connections and MS4 Maintenance (Section K.3.c.3.); the Annual JRMP Reporting Requirements listed in Table 5 on Illicit Discharge Detection and Elimination and Updated Workplans (Section K.3.c.4.); and Special Studies (Section II.E.2.-5. of Attachment E.). Based on *Howard Jarvis Taxpayers Association v. City of Salinas* (2002) 98 Cal.App.4th 1351, and consistent with the prior Decision of the Commission in *Discharge of Stormwater Runoff- Order No. R9-2007-0001*, 07-TC-09, which was recently upheld by the Third District Court of Appeal in *Department of Finance v. Commission on State Mandates*,[135] these fees are subject to the voter approval requirement in article XIII D, section 6(c) from November 10, 2010, the beginning date of the potential period of reimbursement, to December 31, 2017, and, thus, the fee authority is not sufficient as a matter of law during this time period to fund the costs of the mandated activities. Under these limited circumstances, Government Code section 17556(d) does not apply, and there are costs mandated by the state. Any fee revenues received must be identified as offsetting revenue. In addition, reimbursement for this mandate from any source, including but not limited to, service fees collected, federal funds, other state funds, and other funds that are not the claimant's proceeds of taxes shall be identified and deducted from this claim.

Water Conservation District's Jurisdictional Runoff Management Program (JRMP), June 30, 2012, page 13; Exhibit X (24), Excerpt from Riverside County Flood Control and Water Conservation District's Annual Budget, Fiscal Year 2011-2012, pages 5, 6; Exhibit X (25), Excerpt from Riverside County Flood Control and Water Conservation District's Comprehensive Annual Financial Report for Year Ending June 30, 2015, pages 7, 9, 18.

[135] *Department of Finance v. Commission on State Mandates* (2022) 85 Cal.App.5th 535, 579-581 (review denied March 1, 2023).

Based on *Paradise Irrigation District* case and the Legislature's enactment of Government Code sections 57350 and 57351 (which overturned *Howard Jarvis Taxpayers Association v. City of Salinas* (2002) 98 Cal.App.4th 1351), there are no costs mandated by the state on or after January 1, 2018, to comply with these activities, because claimants have constitutional and statutory authority to charge property-related fees for these costs subject only to the voter protest provisions of article XIII D, which is sufficient as a matter of law to cover the costs of the mandated activities within the meaning of Government Code section 17556(d).

Conclusion

Accordingly, staff recommends that the Commission deny this Test Claim with respect to the Riverside County Flood and Water Conservation District.

Staff further recommends that the Commission partially approve this Test Claim for the county and city copermittees, and find that the following activities impose a reimbursable state-mandated program from November 10, 2010, the beginning date of the potential period of reimbursement, to December 31, 2017:

A. Watershed Workplan

1. The watershed BMP implementation strategy shall include a map of any implemented and proposed BMPs. (Section G.1.d.)
2. The copermittees shall pursue efforts to obtain any interagency agreements, or other coordination efforts, with non-copermittee owners of the MS4 (such as Caltrans, Native American tribes, and school districts) to control the contribution of pollutants from one portion of the shared MS4 to another portion of the shared MS4. (Section G.3.)
3. The watershed workplan must include the identification of the persons or entities anticipated to be involved during the development and implementation of the Watershed Workplan. (Section G.4.)
4. The annual watershed review meetings shall be open to the public and adequately noticed. (Section G.5.)
5. Each permittee shall review and modify jurisdictional programs and JRMP annual reports, as necessary, so they are consistent with the updated watershed workplan. (Section G.5.)

B. Annual JRMP Report

1. Include in the annual fiscal analysis a narrative description of circumstances resulting in a 25 percent or greater annual change for any budget line items. (Section K.3.c.1.)
2. Provide in the annual report an updated timeframe for attainment of a desired outcome level in the annual report when an assessment indicates that the desired outcome level has not been achieved at the end of the projected timeframe, but the review of the existing activities and BMPs are adequate, or that the projected timeframe should be extended. (Section K.3.c.2.)

3. Providing the following information in the Reporting Checklist: Illicit Discharges and Connections (Number of IC/ID Eliminations and Violations), and MS4 Maintenance (Total Miles of MS4 Inspected). (Section K.3.c.3.)
4. Providing the following information the Annual JRMP Reporting Requirements listed in Table 5: Illicit Discharge Detection and Elimination (A description of instances when field screening and analytical data exceeded action levels, including those instances for which no investigation was conducted), and Updated Workplans including priorities, strategy, implementation schedule, and effectiveness evaluation. (Section K.3.c.4.)

C. Special Studies

1. Conduct the four Special Studies required by Section II.E.2.-5. of Attachment E.

All other activities and sections of the test claim permit pled by the claimants and costs claimed are recommended for denial.

Staff Recommendation

Staff recommends that the Commission adopt the Proposed Decision to partially approve the Test Claim and authorize staff to make any technical, non-substantive changes to the Proposed Decision following the hearing.

COMMISSION ON STATE MANDATES

STATE OF CALIFORNIA

IN RE TEST CLAIM California Regional Water Quality Control Board, San Diego Region, Order No. R9-2010-0016, Sections B.2., C., D., F.1.d.1., 2., 4., 7., F.1.f., F.1.h., F.1.i., F.2.d.3., F.2.e.6.e., F.3.a.10., F.3.b.4.a.ii., F.3.d.1.-5., F.4.d., F.4.e., G.1.-5., K.3.a.-c., Attachment E., Sections II.C. and II.E.2.-5., and Sections F., F.1., F.1.d., F.2., F.3.a.-d., and F.6., Adopted November 10, 2010 Filed on November 10, 2011 and Revised April 28, 2017 County of Riverside, Riverside County Flood Control and Water Conservation District, Cities of Murrieta, Temecula, and Wildomar, Claimants	Case No.: 11-TC-03 *California Regional Water Quality Control Board, San Diego Region, Order No. R9-2010-0016* DECISION PURSUANT TO GOVERNMENT CODE SECTION 17500 ET SEQ.; CALIFORNIA CODE OF REGULATIONS, TITLE 2, DIVISION 2, CHAPTER 2.5, ARTICLE 7. (*Adopted May 26, 2023*)

DECISION

The Commission on State Mandates (Commission) heard and decided this Test Claim during a regularly scheduled hearing on May 26, 2023. [Witness list will be included in the adopted Decision.]

The law applicable to the Commission's determination of a reimbursable state-mandated program is article XIII B, section 6 of the California Constitution, Government Code sections 17500 et seq., and related case law.

The Commission [adopted/modified] the Proposed Decision to [approve/partially approve/deny] the Test Claim by a vote of [vote will be included in the adopted Decision], as follows:

Member	**Vote**
Lee Adams, County Supervisor	
Gayle Miller, Representative of the Director of the Department of Finance, Chairperson	
Scott Morgan, Representative of the Director of the Office of Planning and Research	
Renee Nash, School District Board Member	
Sarah Olsen, Public Member	
Lynn Paquin, Representative of the State Controller, Vice Chairperson	
Spencer Walker, Representative of the State Treasurer	

Summary of the Findings

This Test Claim, which was timely filed, alleges reimbursable costs mandated by the state for the County of Riverside, Riverside County Flood Control and Water Conservation District (District), Cities of Murrieta, Temecula, and Wildomar (claimants), to comply with conditions of the National Pollutant Discharge Elimination System Program (NPDES) permit, Order No. R9-2010-0016 (test claim permit) issued by the California Regional Water Quality Control Board, San Diego Region (Regional Board). The claimants have properly pled the following sections of the test claim permit pursuant to Government Code section 17553, alleging these sections impose a reimbursable state-mandated program within the meaning of article XIII B, section 6 of the California Constitution: B.2., C., D., F.1.d.1., 2., 4., 7., F.1.f., F.1.h., F.1.i., F.2.d.3., F.2.e.6.e., F.3.a.10., F.3.b.4.a.ii., F.3.d.1.-5., F.4.d., F.4.e., G.1.-5., K.3.a.-c., Attachment E., Sections II.C. and II.E.2.-5., and Sections F., F.1., F.1.d., F.2., F.3.a.-d., and F.6.

The Commission finds that some of the sections of the test claim permit pled by the claimants impose a state-mandated new program or higher level of service, and others do not.

Section B.2., of the test claim permit removes landscape irrigation, irrigation water, and lawn watering from the exempt, non-prohibited list of non-stormwater discharges requiring the claimants to effectively prohibit them from entering the MS4 by implementing a program to detect and remove these illicit discharges. This provision is required by federal law when the discharge is identified as a source of pollution[136] and was required under the prior permit. [137] Thus, the provision is not new. Both the claimants and the Regional Board identified landscape irrigation, irrigation water, and lawn watering as a source of non-stormwater pollution[138] leaving the Regional Board with no discretion, but to remove the exemption and require the claimants to effectively prohibit these non-stormwater discharges from entering the MS4 in compliance with federal law. Reimbursement under article XIII B, section 6 of the California Constitution is not required if the statute or executive order imposes a requirement that is expressly mandated by

[136] Code of Federal Regulations, title 40, section 122.26(d)(2)(IV)(B)(1).

[137] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 572 (Order R9-2004-0001, Section B.2.); see also, Exhibit X (33), National Pollutant Discharge Elimination System Permit Application Regulations for Storm Water Discharges; Final Rule, 55 Federal Register 47990 (November 16, 1990), page 48, which states: "However, the Director may include permit conditions that either require municipalities to prohibit or otherwise control any of these types of discharges where appropriate."

[138] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 473-476 (Fact Sheet/Technical Report).

federal law.[139] Moreover, this provision it is not new but simply makes the claimants comply with longstanding federal law which prohibits non-stormwater discharges.[140]

Sections C., and F.4.d., and e., and Section II.C. of Attachment E., of the test claim permit require dry weather monitoring and field screening for 18 pollutants specified in the permit, and if a pollutant is shown to exceed the non-stormwater action level (NAL), which is based on existing water quality standards, then the claimants are required to investigate, identify and remove the source of the illicit, non-stormwater discharge. The Commission finds that these sections of the permit do not mandate a new program or higher level of service. Instead, the test claim permit simply identifies action levels for each pollutant consistent with existing water quality standards that, if detected in dry weather monitoring and field screening to be in excess of the action level, triggers the investigation, identification of the discharge, removal, and reporting activities required by existing federal law.[141] The claimants do not violate the permit by exceeding the action level, as implied by the claimants; rather a violation occurs only if a permittee fails to timely implement the required actions following an exceedance of an action level.[142] In this sense, the action levels established in the test claim permit function the same as the prior permit, which required the claimants to identify criteria to determine if significant sources of pollutants were present in dry weather non-stormwater discharges consistent with water quality objectives.[143] Under both permits, the action levels or criteria are intended to determine the presence of an illicit discharge, which then triggers the federal requirements to investigate, identify, and remove the illicit discharge, and report the findings to the Regional Board.

Section D. of the test claim permit establishes Stormwater Action Levels (SALs) for seven pollutants that, if shown to be in excess of the SAL during monitoring, the claimant is required to implement stormwater controls and reduce the discharge to the maximum extent practicable (MEP) to meet water quality standards, and annually evaluate and report that information to the Regional Board. The Commission finds that section D. of the test claim permit does not mandate a new program or higher level of service. The SALs imposed by the test claim permit are simply numbers that reflect the existing water quality standards applicable to the waterbodies in the Basin Plan, the California Toxics Rule (CTR), and the US EPA Water Quality Criteria for the

Commission on State Mandates* (2016) 1 Cal.5th 749, 763; Government Code section 17556(c).

[140] *San Diego Unified School Dist. v. Commission on State Mandates* (2004) 33 Cal.4th 859, 877.

[141] Code of Federal Regulations, title 40, sections 122.26(d)(2)(iv)(B), 122.41, 122.48, and Part 27 (reporting).

[142] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 203 (Directive C.3.).

[143] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 594 (Order R9-2004-0001, Section J.4.).

pollutants at issue, and if there is an exceedance of a SAL detected with monitoring, then the claimants have to address those exceedances by implementing or modifying BMPs to the MEP as required by existing federal law.[144] Thus, the Regional Board has imposed an iterative, BMP-based compliance regime, using the SALs as a target, or trigger, but leaving substantial flexibility to the permittees to determine how to comply with long-standing federal requirements to monitor, implement BMPs, and report exceedances to the Regional Board. The SALs themselves do not impose any new mandated activities. Moreover, monitoring and implementing BMPs to ensure that stormwater discharges meet water quality standards for these constituents are not new, but have long been required and thus, these activities do not constitute a new program or higher level of service.[145]

Sections F.1.d.1., 2., 4., 7., and h. and F.3.d.1.-5., of the test claim permit requires, in the continuing effort to reduce the discharges of stormwater pollution from the MS4 to the MEP and to prevent those discharges from causing or contributing to a violation of water quality standards, an updated Standard Stormwater Mitigation Plan (SSMP) for review of priority development projects proposed by residential, commercial, industrial, mixed-use, and public project proponents and the implementation of LID site design BMPs at new development and redevelopment projects; the development of a hydromodification plan to manage increases in runoff discharge rates and durations from priority development projects; and the development and implementation of a retrofitting program to reduce the impacts from hydromodification and promote LID BMPs. The Commission finds that:

- All LID, hydromodification, and retrofitting costs required by Sections F.1.d.1., 2., 4., 7., and h. and F.3.d.1.-5. of the test claim permit and incurred and triggered by a project proponent of a *municipal* priority development project are not mandated by the state and do not impose a new program or higher level of service because such costs are incurred at the discretion of the local agency, are not unique to government, and do not provide a governmental service to the public.[146]
- The remaining new LID, hydromodification, and retrofitting administrative, planning, and regulatory activities required by Sections F.1.d.1., 2., 4., 7., and h., and F.3.d.1.5. are mandated by the state and impose a new program or higher level of service.

Section F.1.f. of the test claim permit requires each copermittee, as part of their Jurisdictional Runoff Management Program (JRMP), to develop and maintain a watershed-based database.[147] The database shall track and inventory all approved structural post-construction BMPs and BMP maintenance for existing municipal, industrial, commercial, and residential projects within its jurisdiction since July 2005; conduct inspections of the projects as specified; and verify that approved post-construction BMPs are operating effectively and have been adequately maintained as specified in the permit.[148] The Commission finds that, *except* as applicable to a claimant's own municipal development (which is not mandated by the state)[149], the following activities are newly required by Section F.1.f., of the test claim permit and constitute state-mandated new programs or higher levels of service:

- Develop and maintain a watershed-based database to track and inventory all projects, within its jurisdiction, that have a final approved SSMP with structural post-construction BMPs implemented since July 2005. The database must include information on BMP type; location; watershed; date of construction; the party responsible for maintenance, maintenance verifications, and corrective actions; and whether the site was referred to the local vector control agency.[150]
- Verify that the required structural post-construction BMPs on inventoried *residential* projects have been implemented, are maintained, and are operating effectively every five years. Verification can be made through inspections, self-certifications, surveys, or other equally effective approaches.[151]
- Annually inspect the required structural post-construction BMPs at high priority *residential* projects.[152]

[147] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 21, 57-58 (Test Claim narrative).

[148] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 221-222 (test claim permit, Section F.1.f.).

Commission on State Mandates* (2009) 170 Cal.App.4th 1355, 1368 (*POBRA*); *Coast Community College Dist. v. Commission on State Mandates* (2022) (2022) 13 Cal.5th 800, 815-817.

[150] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 221 (test claim permit, Section F.1.f.1.).

[151] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 222 (test claim permit, Section F.1.f.2.b.i.).

[152] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 222 (test claim permit, Section F.1.f.2.b.ii.).

- For all inventoried projects, verifications performed through a means other than direct copermittee inspection, adequate documentation must be submitted to the copermittee to provide assurance that the required maintenance has been completed.[153]
- Inspections of the required structural post-construction BMPs at all inventoried projects must note observations of vector conditions and, where conditions are contributing to mosquito production, the copermittee is required to notify the local vector control agency.[154]

All other activities required by Section F.1.f. are not new and, thus, do not impose a new program or higher level of service.

Sections F.2.d.3. and F.2.e.6.e. of the test claim permit require the claimants to require the implementation of Active/Passive Sediment Treatment (AST)[155] at construction sites that are determined by the copermittee to be an exceptional threat to water quality, and to review site monitoring data, if the site monitors its runoff, as part of construction site inspections.[156] The Commission finds that Section F.2.d.3. imposes a state-mandated new program or higher level of service only when the claimant is acting in its regulatory capacity and is performing the following activity for construction sites other than its own:

- Require implementation of AST for sediment at construction sites other than its own (or portions thereof) that are determined to be an exceptional threat to water quality.[157]

However, with respect to a local agency's own *municipal* construction sites, the requirement to implement AST is not mandated by the state, but is triggered by a local discretionary decision to construct new municipal projects.[158] Moreover, implementing AST at a local agency's own municipal construction site does not impose a new program or higher level of service because such costs are not unique to government and do not provide a governmental service to the public.

---

[153] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 222 (test claim permit, Section F.1.f.2.b.v.).

[154] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 222 (test claim permit, Section F.1.f.2.b.vii.).

[155] Active/Passive Sediment Treatment is defined as "[u]sing mechanical, electrical or chemical means to flocculate or coagulate suspended sediment for removal from runoff from construction sites prior to discharge. Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 283 (test claim permit, Attachment C).

[156] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 22, 59-60. The claimants have not alleged any other activities in section F.2.d., and, thus, only Sections F.2.d.3. and F.2.e.6.e. of the test claim permit are analyzed in this Decision.

[157] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 231 (test claim permit, Section F.2.d.3.).

[158] *Department of Finance v. Commission on State Mandates* (*Kern*) (2003) 30 Cal.4th 727, 754 [citing *City of Sacramento v. State* (1990) 50 Cal.3d 51, 74]; *Department of Finance v. Commission on State Mandates* (2009) 170 Cal.App.4th 1355, 1368 (*POBRA*); *Coast Community College Dist. v. Commission on State Mandates* (2022) (2022) 13 Cal.5th 800, 815-817.

The Commission also finds that Section F.2.e.6.e. of the test claim permit, which requires that inspections of construction sites must include a review of facility monitoring data results if the site monitors its runoff, is not new, and does not impose a new program or higher level of service.

Sections F.1.i., and F.3.a.10. of the test claim permit require erosion and sediment control BMPs after construction of new unpaved roads and during maintenance activities on unpaved roads. Federal law requires permittees to reduce the discharge of pollutants to the MEP[159] and to submit a proposed management program including operating and maintaining public streets, roads, and highways to reduce the impact on receiving waters.[160] The prior permit required the prevention or reduction of pollutants in runoff to the MEP during all phases of construction[161] and from all existing development including roads.[162] Thus, these requirements are not new and, if anything, they simply clarify the existing legal requirement to assess a site's compliance with local ordinances and water quality standards.[163] Accordingly, the Commission finds that Sections F.1.i., and F.3.a.10. are not new requirements imposed or shifted by the state, and do not constitute a new program or higher level of service.

Section F.3.b.4.a.ii. of the test claim permit requires that the inspection of industrial and commercial sites include a review of site monitoring data if the site monitors its runoff. The Commission finds that the requirement imposed by Section F.3.b.4.a.ii. clarifies the existing legal requirement to assess a site's compliance with local ordinances and water quality standards, but is not a new requirement and does not impose a new program or higher level of service. Federal regulations require that large and medium MS4 dischargers demonstrate adequate legal authority, through ordinance, permit, or other means, to prohibit illicit discharges;[164] control pollutants to the MS4 from stormwater discharges associated with industrial activity; carry out inspections, surveillance, and monitoring to ensure compliance with the permit conditions;[165] reduce pollutants from runoff from commercial areas; and perform inspections to implement and enforce ordinances.[166] The prior permit required the permittees to have adequate legal authority to control pollutant discharges into and from the MS4 through ordinance, statute, permit, contract, or other similar means;[167] and inspections of all industrial and commercial facilities that

[161] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 585 (Order R9-2004-0001, Section G.5.a.(8)).

[162] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 587 (Order R9-2004-0001, Section H.1.b.).

[163] *Western Security Bank v. Superior Court* (1997) 15 Cal.4th 232, 243.

[164] Code of Federal Regulations, title 40, section 122.26(d)(2)(i)(B).

[165] Code of Federal Regulations, title 40, section 122.26(d)(2)(i)(A), (F).

[166] Code of Federal Regulations, title 40, section 122.26(d)(2)(iv)(A), (B).

[167] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 575-576 (Order R9-2004-0001, Section D.1.).

could contribute a significant pollutant load to the MS4.[168] Although the prior permit did not expressly state that reviewing facility monitoring data results, if the site monitors its runoff, was required as part of the inspection, it did expressly require that the inspections of industrial and commercial facilities include "but not be limited to" an assessment of the site's compliance with local ordinances and permits related to stormwater runoff, including the implementation and maintenance of designated minimum BMPs, and visual observations for non-stormwater discharges, potential illicit connections, and potential discharge of pollutants in stormwater runoff.[169] The prior permit also required the permittee to carry out all inspections and monitoring, and to enforce local stormwater ordinances on industrial and commercial facilities "as necessary to maintain compliance with this Order," including the permit's receiving water limitations and prohibitions banning any discharge of pollutant and non-stormwater discharges into the MS4 that would cause or contribute to the violation of water quality standards.[170] Thus, these requirements are not new and, if anything, the requirement to review monitoring data results, if the site monitors its runoff, simply clarifies the existing legal requirement to assess a site's compliance with local ordinances and water quality standards. Moreover, there has been no shift of costs from the State to the claimants. The claimants enforce their local permits, plans, and ordinances, and the Water Boards enforce the General Industrial Permit.[171] In addition, the test claim permit states that if the Regional Board has conducted an inspection of an industrial site during a particular year, the requirement for the responsible claimant to inspect this facility during the same year is deemed satisfied.[172]

Section G.1.-5. of the test claim permit requires the copermittees in a watershed management area to develop a workplan to assess and prioritize the water quality problems within the watershed's receiving waters, identify sources of the highest priority water quality problems, develop a watershed-wide BMP implementation strategy to abate the highest priority water quality problems, and a monitoring strategy to evaluate BMP effectiveness and changing water quality prioritization in the watershed management area.[173] The requirement for a watershed workplan is not new. Under the prior permit, the claimants were required to collaborate with other watershed permittees to develop and implement a watershed stormwater management plan

[168] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 589-590 (Order R9-2004-0001, Section H.2.a.b.).

[169] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 589-591 (Order R9-2004-0001, Section H.2.a., b., d.).

[170] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 574-575, 592 (Order R9-2004-0001, Prohibitions and Receiving Water Limitations; Industrial/Commercial Inspections, Section H.2.e.).

[171] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 441 (Fact Sheet/Technical Report, Finding D.3.a.).

[172] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 244 (test claim permit, Section F.3.b.4.(e)).

[173] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 255-257 (test claim permit, Sections G.1.-G.5.).

(watershed SWMP).[174] However, Sections G.1.d, G.3., G.4., and G.5. of the test claim permit mandate a new program or higher level of service for the following new activities:

- The watershed BMP implementation strategy shall include a map of any implemented and proposed BMPs.[175]
- The copermittees shall pursue efforts to obtain any interagency agreements, or other coordination efforts, with non-copermittee owners of the MS4 (such as Caltrans, Native American tribes, and school districts) to control the contribution of pollutants from one portion of the shared MS4 to another portion of the shared MS4.[176]
- The watershed workplan must include the identification of the persons or entities anticipated to be involved during the development and implementation of the Watershed Workplan.[177]
- The annual watershed review meetings shall be open to the public and adequately noticed.[178]
- Each permittee shall review and modify jurisdictional programs and JRMP annual reports, as necessary, so they are consistent with the updated watershed workplan.[179]

Section K.3.a.-c. of the test claim permit requires that each claimant prepare an individual JRMP annual report that covers implementation of its jurisdictional activities during the past annual reporting period, and specifies the contents of the annual report, which claimants contend includes a new reporting requirements that constitute a reimbursable state-mandated program.[180] The Commission finds that sections K.3.a. and b. do not impose any new activities. Sections K.3.c.1., 2., 3., and 4. impose some new requirements to include new information in the annual report, an annual reporting checklist, and new information identified in Table 5, and except for reporting on the claimant's own municipal projects (which is not mandated by the state)[181], the

[181] *Department of Finance v. Commission on State Mandates* (*Kern*) (2003) 30 Cal.4th 727, 754 [citing *City of Sacramento v. State* (1990) 50 Cal.3d 51, 74]; *Department of Finance v.*

new requirements are mandated by the state and impose a new program or higher level of service.

Section II.E.2.-5. of Attachment E, which is part of the Monitoring and Reporting Program (MRP), requires the claimants to perform the following special studies: Sediment Toxicity Study; Trash and Litter Investigation; Agricultural, Federal and Tribal Input Study; and MS4 Receiving Water and Maintenance Study.[182] The Commission finds that that Attachment E, Sections II.E.2.-5. mandate a new program or higher level of service within the meaning of article XIII B, section 6 of the California Constitution.

Finally, the claimants plead particular language that appears in Sections F., F.1., F.1.d., F.2., F.3.a.-d., and F.6. of the test claim permit, which address development, construction, municipal facilities, industrial/commercial facilities, residential areas, retrofitting and education, and contain language that provides that each updated JRMP and the components of the program "must . . . effectively prohibit non-storm water discharges, and prevent runoff discharges from the MS4 from causing or contributing to a violation of water quality standards."[183] The claimants contend that the language imposes new requirements to develop and implement the components in Section F. "in a manner that guarantees that those programs will prevent the discharge of pollutants at a level that could cause or contribute to a violation of any water quality standard as well as to prevent illicit discharges to the MS4," and that such requirements go beyond the MEP standard of federal law and constitute a new or higher level of service.[184] The claimants further allege that the requirements now subject them to sanctions, including civil penalties and injunctive relief, for the failure to achieve water quality standards.[185] The Commission finds that the language at issue in Sections F., F.1., F.1.d., F.2., F.3.a.-d., and F.6. of the test claim permit does not impose any new requirements and, therefore, does not mandate a new program or higher level of service. Federal law has long required the claimants "to implement and enforce an ordinance, orders or similar means *to prevent illicit discharges to the municipal separate storm sewer system*"[186] and to "effectively *prohibit non-stormwater*

Commission on State Mandates (2009) 170 Cal.App.4th 1355, 1368 (*POBRA*); *Coast Community College Dist. v. Commission on State Mandates* (2022) (2022) 13 Cal.5th 800, 815-817.

[182] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 22, 75-81, 297-324 (Test Claim narrative; Attachment E.) The claimants did not plead the other special studies addressed in Attachment E, sections II.E.7. and 8. and, thus, this Decision does not address those studies.

[183] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 208 (test claim permit, Section F.).

[184] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 83 (Test Claim narrative).

[185] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 81 (Test Claim narrative).

[186] United States Code, title 33, section 1342(p)(3)(B)(ii), emphasis added.

discharges into the storm sewers."[187] Both of these limitations address discharges coming *into* the MS4. The claimants assert that the verb "prevent" is more stringent that "prohibit." However, this is not the case. Black's Law Dictionary defines prohibit as: "To prevent, preclude, or severely hinder."[188] Merriam-Webster Dictionary defines prohibit as, "to prevent from doing something."[189] Thus, prevention is part of, and not more stringent than, prohibition. Moreover, the requirement to prohibit non-storm water discharges *through and from* their MS4 systems, implement a program to prevent illicit discharges, and monitor to identify illicit discharges and exempted discharges that are a source of pollution, has been in the claimants' permits for the last 20 years.[190] Federal law requires that NPDES permits include conditions to achieve water quality standards and objectives.[191] And receiving water limitations and prohibition of discharges into and from MS4s in a manner causing a condition of pollution, causing exceedances of water quality objectives, or causing a violation of water quality standards, have been in all permits since 1999 when the State Board issued precedential order 99-05.[192] Thus, the requirement to prevent runoff discharges from the MS4 from causing or contributing to a violation of water quality standards is not new.

In order to be reimbursable, the new mandated activities must result in increased costs mandated by the state, forcing local government to incur "increased actual expenditures of limited tax proceeds that are counted against the local government's spending limit."[193] In addition, a finding of costs mandated by the state means that none of the exceptions in Government Code section 17556 apply to deny the claim. Government Code section 17556(d) states that the Commission shall not find costs mandated by the state when "[t]he local agency or school district has the authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service."

[192] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 572-573, (Order R9-2004-0001, Section A.1.-3.); Exhibit C, Water Boards' Comments on the Test Claim, filed September 22, 2017, State Water Board Order WQ 2015-0075, pages 221-222.

[193] California Constitution, article XIII B, section 6; Government Code sections 17514, 17561(a); *County of Sonoma v. Commission on State Mandates* (2000) 84 Cal.App.4th 1264, 1283; *County of Los Angeles v. Commission on State Mandates* (2003) 110 Cal.App.4th 1176, 1185, emphasis added.

The Commission finds that:

a. The new state-mandated activities do not result in costs mandated by the state for Riverside County Flood and Water Conservation District because there is no evidence in the record that the District was forced to spend its "proceeds of taxes," but instead used assessment revenue and contract funds from the County and cities.[194]

b. The County and cities have regulatory fee authority sufficient as a matter of law to fund the new state-mandated activities required related to LID (Section F.1.d.1., 2., 4., 7.), Hydromodification (Section F.1.h.), Retrofitting (Section F.3.d.1-5.), BMP Maintenance Tracking (Section F.1.f.), Active/Passive Sediment Treatment (Section F.2.d.3.), Annual JRMP Reporting Checklist on Construction, New Development, Post Construction Development, Municipal (other than their own)/Commercial/Industrial (Section K.3.c.3.), and the Annual JRMP Reporting Requirements listed in Table 5 on New Development, Construction, Municipal (other than their own), Commercial/Industrial, Residential, and Retrofitting Existing Development (Section K.3.c.4.), pursuant to Government Code section 17556(d) and, thus, there are no costs mandated by the state for these activities.

c. The County and cities have constitutional and statutory authority to charge property-related fees for the new state-mandated requirements related to the Watershed Workplan (Sections G.1.-5.); the Annual JRMP Reporting requirements to include in the annual fiscal analysis a narrative description of circumstances resulting in a 25 percent or greater annual change for any budget line items (Section K.3.c.1.), and provide in the annual report an updated timeframe for attainment of a desired outcome level when an assessment indicates that the desired outcome level has not been achieved at the end of the projected timeframe (Section K.3.c.2.); the Annual JRMP Reporting Checklist on Illicit Discharges and Connections and MS4 Maintenance (Section K.3.c.3.); the Annual JRMP Reporting Requirements listed in Table 5 on Illicit Discharge Detection and Elimination and Updated Workplans (Section K.3.c.4.); and Special Studies (Section II.E.2.-5. of Attachment E.). Based on *Howard Jarvis Taxpayers Association v. City of Salinas* (2002) 98 Cal.App.4th 1351, and consistent with the prior Decision of the Commission in *Discharge of Stormwater Runoff- Order No. R9-2007-0001*, 07-TC-09, which was recently upheld by the Third District Court of Appeal in *Department of*

[194] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 102-103 (Declaration of Stuart McKibbin, Chief of the Watershed Protection Division of the Riverside County Flood Control and Water Conservation District, dated April 27, 2017) and pages 104-105, paragraph 5 (Declaration of David Garcia, Project Manager within the Watershed Protection Division of the Riverside County Flood Control and Water Conservation District dated April 27, 2017); Exhibit X (37), Santa Margarita River Region, Report of Waste Discharge (ROWD), January 15, 2009, pages 1, 16; Exhibit X (36), Riverside County Flood Control and Water Conservation District's Jurisdictional Runoff Management Program (JRMP), June 30, 2012, page 13; Exhibit X (24), Excerpt from Riverside County Flood Control and Water Conservation District's Annual Budget, Fiscal Year 2011-2012, pages 5, 6; Exhibit X (25), Excerpt from Riverside County Flood Control and Water Conservation District's Comprehensive Annual Financial Report for Year Ending June 30, 2015, pages 7, 9, 18.

Finance v. Commission on State Mandates,[195] these fees are subject to the voter approval requirement in article XIII D, section 6(c) from November 10, 2010, the beginning date of the potential period of reimbursement, to December 31, 2017, and, thus, the fee authority is not sufficient as a matter of law during this time period to fund the costs of the mandated activities. Under these limited circumstances, Government Code section 17556(d) does not apply, and there are costs mandated by the state. Any fee revenues received must be identified as offsetting revenue. In addition, reimbursement for this mandate from any source, including but not limited to, service fees collected, federal funds, other state funds, and other funds that are not the claimant's proceeds of taxes shall be identified and deducted from this claim.

Based on *Paradise Irrigation District* case and the Legislature's enactment of Government Code sections 57350 and 57351 (which overturned *Howard Jarvis Taxpayers Association v. City of Salinas* (2002) 98 Cal.App.4th 1351), there are no costs mandated by the state on or after January 1, 2018, to comply with these activities, because claimants have constitutional and statutory authority to charge property-related fees for these costs subject only to the voter protest provisions of article XIII D, which is sufficient as a matter of law to cover the costs of the mandated activities within the meaning of Government Code section 17556(d).

Accordingly, the Commission denies this Test Claim with respect to the Riverside County Flood and Water Conservation District.

The Commission partially approves this Test Claim for the County of city copermitees only, and finds that the following activities impose a reimbursable state-mandated program from November 10, 2010, the beginning date of the potential period of reimbursement, to December 31, 2017:

A. Watershed Workplan

1. The watershed BMP implementation strategy shall include a map of any implemented and proposed BMPs. (Section G.1.d.)
2. The copermittees shall pursue efforts to obtain any interagency agreements, or other coordination efforts, with non-copermittee owners of the MS4 (such as Caltrans, Native American tribes, and school districts) to control the contribution of pollutants from one portion of the shared MS4 to another portion of the shared MS4. (Section G.3.)
3. The watershed workplan must include the identification of the persons or entities anticipated to be involved during the development and implementation of the Watershed Workplan. (Section G.4.)
4. The annual watershed review meetings shall be open to the public and adequately noticed. (Section G.5.)

[195] *Department of Finance v. Commission on State Mandates* (2022) 85 Cal.App.5th 535, 579-581 (review denied March 1, 2023).

5. Each permittee shall review and modify jurisdictional programs and JRMP annual reports, as necessary, so they are consistent with the updated watershed workplan. (Section G.5.)

B. Annual JRMP Report

1. Include in the annual fiscal analysis a narrative description of circumstances resulting in a 25 percent or greater annual change for any budget line items. (Section K.3.c.1.)
2. Provide in the annual report an updated timeframe for attainment of a desired outcome level in the annual report when an assessment indicates that the desired outcome level has not been achieved at the end of the projected timeframe, but the review of the existing activities and BMPs are adequate, or that the projected timeframe should be extended. (Section K.3.c.2.)
3. Providing the following information in the Reporting Checklist: Illicit Discharges and Connections (Number of IC/ID Eliminations and Violations), and MS4 Maintenance (Total Miles of MS4 Inspected). (Section K.3.c.3.)
4. Providing the following information the Annual JRMP Reporting Requirements listed in Table 5: Illicit Discharge Detection and Elimination (A description of instances when field screening and analytical data exceeded action levels, including those instances for which no investigation was conducted), and Updated Workplans including priorities, strategy, implementation schedule, and effectiveness evaluation. (Section K.3.c.4.)

C. Special Studies

1. Conduct the four Special Studies required by Section II.E.2.-5. of Attachment E.

All other activities and sections of the test claim permit pled by the claimants and costs claimed are denied.

Table of Contents

A. The Test Claim Was Timely Filed With a Period of Reimbursement Beginning November 10, 2010. 20

B. Some of the Sections Pled by the Claimants Impose a State-Mandated New Program or Higher Level of Service. 20

C. Pursuant to Government Code Section 17556(d), There Are No Costs Mandated by the State When the Claimants Have Regulatory Authority to Impose Fees (e.g., for LID, Hydromodification, Retrofitting, BMP Maintenance Tracking, Active/Passive Sediment Treatment, and Annual Reporting Requirements Addressing Development). Although the Remaining New State-Mandated Activities Result in Costs Mandated by the State for the County and Cities From November 10, 2010, to December 31, 2017, There Are No Costs Mandated by the State for Riverside County Flood and Water Conservation District Because There Is No Evidence in the Record that the District Was Forced to Spend Their Local "Proceeds of Taxes." 30

IV. Discussion 77
A. The Test Claim Was Timely Filed Pursuant to Government Code Section 17551(c) Because the Test Claim Was Filed Within Twelve Months of the Effective Date of the Test Claim Permit, with a Period of Reimbursement Beginning November 10, 2010 78
B. Some of the Sections Pled by the Claimants Impose a State-Mandated New Program or Higher Level of Service. 79
1. The Requirements of Section B.2. of the Test Claim Permit, Addressing Formerly Exempted Non-Stormwater Discharges That Have Been Identified as a Source of Pollutants,

Do Not Mandate a New Program or Higher Level of Service Because Existing Federal Law Requires the Claimants to Prohibit Non-Stormwater Discharges..... 79

2. Sections C., F.4.d. and e., and Section II.C. of Attachment E of the Test Claim Permit, Which Address Dry Weather Non-Stormwater Action Levels (NALs), Do Not Mandate a New Program or Higher Level of Service Because the Requirements Are Not New, But Simply Implement Federal Law. 89

3. Section D. of the Test Claim Permit, Which Addresses Stormwater Action Levels (SALs), Does Not Mandate a New Program or Higher Level of Service Because the Activities to Monitor Discharges of Stormwater, Determine if the Discharges Are Meeting Existing Water Quality Standards Identified in the SALs and If Not, Implement or Modify BMPs to Meet Water Quality Standards and Report that Information to the Regional Board Were Required by the Prior Permit and Are Mandated by Existing Federal Law.. 114

4. Sections F.1.d.1., 2., 4., 7., and h. and F.3.d.1.-5. of the Test Claim Permit, Addressing Low Impact Development (LID), Hydromodification Plans, Best Management Practices (BMPs) for Priority Development Projects, and a Retrofitting Program to Reduce Impacts from Hydromodification and Promote Low Impact Development Best Management Practices (LID BMPs), Impose Some State-Mandated New Programs or Higher Levels of Service When Local Agencies Regulate Land Use and Development. 137

5. Except as Applicable to a Claimant's Own Municipal Development, Section F.1.f, Addressing BMP Maintenance Tracking, Imposes Some State-Mandated New Programs or Higher Levels of Service. 185

6. Section F.2.d.3. Imposes a State-Mandated New Program or Higher Level of Service to Require Implementation of Active/Passive Sediment Treatment at Construction Sites (Other Than the Claimants' Own Municipal Construction Site), But the Requirements in Section F.2.e.(6)(e) Are Not New and Do Not Impose a New Program or Higher Level of Service..... 204

7. Sections F.1.i. and F.3.a.10. of the Test Claim Permit, Addressing Erosion and Sediment Control Best Management Practices (BMPs) After Construction and During Maintenance of Unpaved Roads, Do Not Mandate a New Program or Higher Level of Service Because the Activities Are Not New and Any Downstream Costs Incurred for Municipal Unpaved Roads Are at the Discretion of the Local Agency. 223

8. Section F.3.b.4.a.ii. of the Test Claim Permit, Which Addresses Industrial and Commercial Site Inspections, Does Not Require the Claimants to Perform Any New Activities and, Thus, Does Not Impose a New Program or Higher Level of Service. 233

9. Sections G.1.-5. of the Test Claim Permit, Addressing the Watershed Workplan, Impose Some State-Mandated New Programs or Higher Level of Service..... 243

10. Section K.3.a.-c. of the Test Claim Permit Imposes Some New Annual Reporting Requirements That Are Mandated by the State and Impose a New Program or Higher Level of Service. 261

11. Attachment E of the Test Claim Permit, Which Addresses Special Studies in Section II.E.2.-5., Mandates a New Program or Higher Level of Service..... 300

12. Sections F., F.1., F.1.d., F.2., F.3.a.-d., and F.6. of the Test Claim Permit, Which Address Prevention of Discharges, Does Not Impose Any New Requirements and Therefore, Does Not Mandate a New Program or Higher Level of Service..... 311

C. Pursuant to Government Code Section 17556(d), There Are No Costs Mandated by the State When the Claimants Have Regulatory Authority to Impose Fees (i.e. for LID, Hydromodification, Retrofitting, BMP Maintenance Tracking, Active/Passive Sediment Treatment, and Annual Reporting Requirements Addressing Development). Although the Remaining New State-Mandated Activities Result in Costs Mandated by the State for the County and Cities From November 10, 2010, to December 31, 2017, There are No Costs Mandated by the State for Riverside County Flood and Water Conservation District Because There Is No Evidence in the Record that the District Was Forced to Spend Their Local "Proceeds of Taxes."..... 330

1. The New State-Mandated Activities Do Not Result in Costs Mandated by the State for the Riverside County Flood and Water Conservation District Because There Is No Evidence in the Record That the District Was Forced to Spend Their Local "Proceeds Of Taxes." 344

2. The New State Mandated Activities Result in Costs Mandated by the State Except For Those Activities for Which the County and Cities Have Fee Authority Sufficient to Fund the Cost of the Program. 352

V. Conclusion 379

COMMISSION FINDINGS

I. Chronology

11/10/2010	The California Regional Water Quality Control Board, San Diego Region (Regional Board) issued the test claim permit, Order No. R9-2010-0016.
11/10/2011	The claimants filed the joint Test Claim.[196]
12/02/2011	The claimants filed supplemental declarations to the Test Claim.
01/13/2012-01/17/2013	The Water Boards requested five extensions of time to file comments, which were granted for good cause.
03/20/2013	The claimants requested the Test Claim be put on inactive status due to pending litigation, which was approved on March 22, 2013.
03/08/2017	Commission staff issued Notice of Incomplete Joint Test Claim Filing.
03/16/2017	The claimants requested an extension to respond to the Notice of Incomplete Joint Test Claim Filing, which was approved for good cause.
04/28/2017	The claimants filed their response to the Notice of Incomplete Joint Test Claim Filing.

[196] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017.

05/08/2017	Commission staff issued Notice of Complete Joint Test Claim Filing, Removal From Inactive Status, Schedule for Comments, Renaming of Matter, Request for Administrative Record, and Notice of Tentative Hearing Date.
05/22/2017-08/16/2017	The Water Boards requested three extensions of time to file comments on the Test Claim, which were approved for good cause.
09/20/2017	The Department of Finance (Finance) filed comments on the Test Claim.[197]
09/22/2017	The Water Boards filed comments on the Test Claim and filed the Administrative Record on Order R9-2010-0016.[198]
10/03/2017-11/20/2017	The claimants requested two extensions of time to file rebuttal comments, which were approved for good cause.
12/14/2017	The claimants filed rebuttal comments.[199]
03/13/2023	Commission staff issued the Draft Proposed Decision.[200]

II. Background

A. History of the Federal Regulation of Municipal Stormwater

The law commonly known today as the Clean Water Act (CWA) is the result of major amendments to the Federal Water Pollution Control Act enacted in 1977. The history that follows details the evolution of the federal law and implementing regulations which are applicable to the case at hand. The bottom line is that CWA's stated goal is to *eliminate* the discharge of pollutants into the nation's waters by 1985.[201] "*This goal is to be achieved through the enforcement of the strict timetables and technology-based effluent limitations established by the Act.*"[202] The CWA utilizes a permit program that was established in 1972, the National Pollutant Discharge Elimination System (NPDES), as the primary means of enforcing the Act's effluent limitations. As will be made apparent by the following history, the goal of eliminating the discharge of pollutants into the nation's waters was still far from being achieved as of 2010, when the test claim permit was issued, and the enforcement, rather than being strict, has taken an iterative approach, at least with respect to municipal stormwater dischargers.

Regulation of water pollution in the United States finds its beginnings in the Rivers and Harbors Appropriation Act of 1899, which made it unlawful to throw or discharge "any refuse matter of any kind or description…into any navigable water of the United States, or into any tributary of

any navigable water."[203] This prohibition survives in the current United States Code today, qualified by more recent provisions of law that authorize the issuance of discharge permits with specified restrictions to ensure that such discharges will not degrade water quality or cause or contribute to the violation of any water quality standards set for the water body by the United States Environmental Protection Agency (US EPA) or by states on behalf of US EPA.[204]

In 1948, the federal Water Pollution Control Act "adopted principles of State-Federal cooperative program development, limited federal enforcement authority, and limited federal financial assistance."[205] Pursuant to further amendments to the Act made in 1965, "States were directed to develop water quality standards establishing water quality goals for interstate waters." However, the purely water quality-based approach "lacked enforceable Federal mandates and standards, and a strong impetus to implement plans for water quality improvement. The result was an incomplete program that in Congress' view needed strengthening."[206]

Up until 1972, many states had "water quality standards" that attempted to limit pollutant concentrations in their lakes, rivers, streams, wetlands, and coastal waters. Yet the lack of efficient and effective monitoring and assessment tools and the sheer difficulty in identifying pollutant sources resulted in a cumbersome, slow, ineffective system that was unable to reverse growing pollution levels in the nation's waters. In 1972, after earlier state and federal laws failed to sufficiently improve water quality, and rivers that were literally on fire provoked public outcry, the Congress passed the Federal Water Pollution Control Act Amendments, restructuring the authority for water pollution control to regulate individual point source dischargers and generally prohibit the discharge of any pollutant to navigable waters from a point source unless the discharge was authorized by a NPDES permit. The 1972 amendments also consolidated authority in the Administrator of US EPA.

In 1973, US EPA adopted regulations to implement the Act which provided exclusions for several types of discharges including "uncontrolled discharges composed entirely of storm runoff when these discharges are uncontaminated by any industrial or commercial activity" and have not been identified "as a significant contributor of pollution."[207] This particular exclusion applied only to municipal separate storm sewer systems (MS4s). As a result, as point source pollutant loads were addressed effectively by hundreds of new treatment plants, the problem with polluted runoff (i.e., both nonpoint source pollution and stormwater discharges) became more evident.

[207] Code of Federal Regulations, title 40, sections 124.5 and 124.11 (30 FR 18003, July 5, 1973).

However, in 1977 the Court in *Natural Resources Defense Council v. Costle* held that the US EPA had no authority to exempt point source discharges, including stormwater discharges from MS4s, from the requirements of the Act and that to do so contravened the Legislature's intent.[208] The Act prohibits "the discharge of any pollutant by any person" without an NPDES permit.[209] The term "discharge of a pollutant" means "any addition of any pollutant to navigable waters from *any* point source."[210] A "point source" is any discernible, confined and discrete conveyance, including but not limited to any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, or vessel or other floating craft, from which pollutants are or may be discharged.[211] Thus, when an MS4 discharges stormwater contaminated with pollutants from a pipe, ditch, channel, gutter or other conveyance, it is a point source discharger subject to the requirements of the CWA to obtain and comply with an NPDES permit or else be found in violation of the CWA.

Stormwater runoff "…is generated from rain and snowmelt events that flow over land or impervious surfaces, such as paved streets, parking lots, and building rooftops, and does not soak into the ground."[212] Polluted stormwater runoff is commonly transported through MS4s, and then often discharged, untreated, into local water bodies.[213] As the Ninth Circuit Court of Appeal has stated:

> Storm water runoff is one of the most significant sources of water pollution in the nation, at times "comparable to, if not greater than, contamination from industrial and sewage sources." [Citation omitted.] Storm sewer waters carry suspended metals, sediments, algae-promoting nutrients (nitrogen and phosphorus), floatable trash, used motor oil, raw sewage, pesticides, and other toxic contaminants into streams, rivers, lakes, and estuaries across the United States. [Citation omitted.] In 1985, three-quarters of the States cited urban storm water runoff as a major cause of waterbody impairment, and forty percent reported construction site runoff as a major cause of impairment. Urban runoff has been named as the foremost cause of impairment of surveyed ocean waters. Among the sources of storm water

contamination are urban development, industrial facilities, construction sites, and illicit discharges and connections to storm sewer systems.[214]

Major amendments to the Federal Water Pollution Control Act were enacted in the federal Clean Water Act of 1977, and the federal act is now commonly referred to as the Clean Water Act (CWA). CWA's stated goal is to eliminate the discharge of pollutants into the nation's waters by 1985.[215] "This goal is to be achieved through the enforcement of the strict timetables and technology-based effluent limitations established by the Act."[216]

MS4s are thus established point sources subject to the CWA's NPDES permitting requirements.[217]

In 1987, to better regulate pollution conveyed by stormwater runoff, Congress enacted CWA section 402(p), codified at United States Code, title 33, section 1342(p), "Municipal and Industrial Stormwater Discharges." Sections 1342(p)(2) and (3) require NPDES permits for stormwater discharges "associated with industrial activity," discharges from large and medium-sized municipal storm sewer systems, and certain other discharges. Section 402(p)(4) sets out a timetable for promulgation of the first of a two-phase overall program of stormwater regulation with the first permits to issue by not later than 1991 or 1993, depending on the size of the population served by the MS4.[218]

Generally, NPDES permits issued under the CWA must "contain limits on what you can discharge, monitoring and reporting requirements, and other provisions to ensure that the discharge does not hurt water quality or people's health."[219] A NPDES permit specifies "an acceptable level of a pollutant or pollutant parameter in a discharge." [220]

With regard to MS4s specifically, the 1987 amendments require control technologies that reduce pollutant discharges to the maximum extent practicable (MEP), including best management

practices (BMPs), control techniques and system design and engineering methods, and such other provisions as the Administrator[221] deems appropriate for the control of such pollutants.[222] A statutory anti-backsliding requirement was also added to preserve present pollution control levels achieved by dischargers by prohibiting the adoption of less stringent effluent limitations[223] than those already contained in their discharge permits, except in certain narrowly defined circumstances.[224]

The United States Supreme Court has observed the cooperative nature of water quality regulation under the CWA as follows:

> The Clean Water Act anticipates a partnership between the States and the Federal Government, animated by a shared objective: "to restore and maintain the chemical, physical, and biological integrity of the Nation's waters." (33 U.S.C. § 1251(a).) Toward this end, the Act provides for two sets of water quality measures. "Effluent limitations" are promulgated by the EPA and restrict the quantities, rates, and concentrations of specified substances which are discharged from point sources. (See §§ 1311, 1314.) "[W]ater quality standards" are, in general, promulgated by the States and establish the desired condition of a waterway. (See § 1313.) These standards supplement effluent limitations "so that numerous point sources, despite individual compliance with effluent limitations, may be further regulated to prevent water quality from falling below acceptable levels." (*EPA v. California ex rel. State Water Resources Control Bd.,* 426 U.S. 200, 205, n. 12, 96 S.Ct. 2022, 2025, n. 12, 48 L.Ed.2d 578 (1976).)[225]

The CWA thus employs two primary mechanisms for controlling water pollution: identification and standard-setting for bodies of water (i.e. 303(d) listings of impaired water bodies and the setting of water quality standards), and identification and regulation of dischargers (i.e. the inclusion of effluent limitations consistent with water quality standards in NPDES permits).

In 1990, pursuant to CWA section 1342, US EPA issued the "Phase I Rule" regulating large and medium MS4s. The Phase I Rule and later amendments thereto, in addition to generally applicable provisions of the CWA and its implementing regulations and other state and federal

environmental laws, apply to the permit at issue in this Test Claim.

B. Key Definitions

1. Water Quality Standards

A "water quality standard" defines the water quality goals of a water body, or portion thereof, by designating the use or uses to be made of the water and by setting criteria that protect the designated uses.[226] The term "water quality standard applicable to such waters" and "applicable water quality standards" refer to those water quality standards established under section 303 of the CWA, including numeric criteria, narrative criteria, waterbody uses, and antidegradation requirements which may be adopted by the federal or state government and may be found in a variety of places including but not limited to Code of Federal Regulations, title 40, sections 131.36, 131.38, and California state adopted water quality control plans and basin plans.[227] A TMDL is a regulatory term in the CWA, describing a plan for restoring impaired waters that identifies the maximum amount of a pollutant that a body of water can receive while still meeting water quality standards. Federal law requires the states to adopt an anti-degradation policy which at minimum protects existing uses and requires that existing high quality waters be maintained to the maximum extent possible unless certain findings are made.[228]

The water quality criteria can be expressed in narrative form, which are broad statements of desirable water quality goals, or in a numeric form, which identifies specific pollutant concentrations.[229] When water quality criteria are met, water quality will generally protect the designated use.[230] Federal regulations state the purpose of a water quality standard as follows:

> A water quality standard defines the water quality goals of a water body, or portion thereof, by designating the use or uses to be made of the water and by setting criteria that protect the designated uses. States adopt water quality standards to protect public health or welfare, enhance the quality of water and serve the purposes of the Clean Water Act (the Act). "Serve the purposes of the Act" (as defined in sections 101(a)(2) and 303(c) of the Act) means that water quality standards should, wherever attainable, provide water quality for the protection and propagation of fish, shellfish and wildlife and for recreation in and on the water and take into consideration their use and value of public water supplies, propagation of fish, shellfish, and wildlife, recreation in and on the water, and agricultural, industrial, and other purposes including navigation.[231]

With respect to standard-setting for bodies of water, section 1313(a) of the United States Code provides that existing water quality standards may remain in effect unless the standards are not

---

[226] Code of Federal Regulations, title 40, part 131.2.

[231] Code of Federal Regulations, title 40, section 131.2.

consistent with the CWA, and that the Administrator "shall promptly prepare and publish" water quality standards for any waters for which a state fails to submit water quality standards, or for which the standards are not consistent with the CWA.[232] In addition, states are required to hold public hearings from time to time but "at least once each three year period" for the purpose of reviewing applicable water quality standards and, as appropriate, modifying and adopting standards:

> Whenever the State revises or adopts a new standard, such revised or new standard shall be submitted to the [US EPA] Administrator. Such revised or new water quality standard shall consist of the designated uses of the navigable waters involved and the water quality criteria for such waters based upon such uses. Such standards shall protect the public health or welfare, enhance the quality of water and serve the purposes of this chapter. Such standards shall be established taking into consideration their use and value for public water supplies, propagation of fish and wildlife, recreational purposes, and agricultural, industrial, and other purposes, and also taking into consideration their use and value for navigation.[233]

In general, if a body of water is identified as impaired under section 303(d) of the CWA, it is necessarily exceeding one or more of the relevant water quality standards.[234]

2. Total Maximum Daily Loads (TMDLs).

Section 303(d) of the CWA, codified at United States Code, title 33, section 1313(d), requires that each state "identify those waters within its boundaries for which the effluent limitations…are not stringent enough to implement any water quality standard applicable to such waters." The identification of waters not meeting water quality standards is called an "impairment" finding, and the priority ranking is known as the "303(d) list."[235] The state is required by the Act to "establish a priority ranking for such waters, taking into account the severity of the pollution and the uses to be made of such waters."[236]

After the waters are ranked, federal law requires that "TMDLs shall be established at levels necessary to attain and maintain the applicable narrative and numerical WQS [water quality standards] with seasonal variations and a margin of safety which takes into account any lack of

---

[232] United States Code, title 33, section 1313(a). Note that section 1313 was last amended by 114 Stat. 870, effective Oct. 10, 2000.

[233] United States Code, title 33, section 1313(c)(2)(A), effective October 10, 2000.

[234] See United States Code, title 33, section 1313(d)(1)(A) (codifying CWA § 303(d) and stating: "Each State shall identify [as impaired] those waters within its boundaries for which the effluent limitations … are not stringent enough to implement any water quality standard applicable to such waters. The State shall establish a priority ranking for such waters, taking into account the severity of the pollution and the uses to be made of such waters.").

[235] Code of Federal Regulations, title 40, part 130.7(d)(1); see also *San Francisco Baykeeper, Inc. v. Browner* (N.D. Cal 2001) 147 F.Supp.2d 991, 995.

[236] United States Code, title 33, section 1313(d)(1)(A).

knowledge concerning the relationship between effluent limitations and water quality. Determinations of TMDLs shall take into account critical conditions for stream flow, loading, and water quality parameters."[237] A TMDL is defined as the sum of the amount of a pollutant allocated to *all point sources* (*i.e.*, the sum of all waste load allocations, or WLAs), plus the amount of a pollutant allocated for nonpoint sources and natural background. A TMDL is essentially a plan setting forth the amount of a pollutant allowable that will attain the water quality standard necessary for beneficial uses.[238]

303(d) lists and TMDLs are required to be submitted to the Administrator "not later than one hundred and eighty days after the date of publication of the first identification of pollutants under section 1314(a)(2)(D) [of the CWA]" and thereafter "from time to time," and the Administrator "shall either approve or disapprove such identification and load not later than thirty days after the date of submission."[239] A complete failure by a state to submit a TMDL for a pollutant received by waters designated as "water quality limited segments" pursuant to the CWA, will be construed as a constructive submission of no TMDL, triggering a nondiscretionary duty of the federal EPA to establish a TMDL for the state.[240] If the Administrator disapproves the 303(d) list or a TMDL, the Administrator "shall not later than thirty days after the date of such disapproval identify such waters in such State and establish such loads for such waters as he determines necessary to implement [water quality standards]."[241] Finally, the identification of waters and setting of standards and TMDLs is required as a part of a state's "continuing planning process approved [by the Administrator] which is consistent with this chapter."[242]

If a TMDL has been established for a body of water identified as impaired under section 303(d), an NPDES permit must contain limitations that "must control all pollutants or pollutant parameters (either conventional, nonconventional, or toxic pollutants) which the Director determines are or may be discharged at a level that will cause, have the reasonable potential to cause, or contribute to an excursion above any [s]tate water quality standard, including [s]tate narrative criteria for water quality."[243] And, for new sources or discharges, the limitations must ensure that the source or discharge will not cause or contribute to the violation of water quality standards and will not violate the TMDL.[244]

3. Municipal Separate Storm Sewer System (MS4)

A "Municipal Separate Storm Sewer System" (or MS4) refers to a collection of structures designed to gather stormwater and discharge it into local streams and rivers. A storm sewer contains untreated water, so the water that enters a storm drain and then into a storm sewer enters rivers, creeks, or the ocean at the other end is the same water that entered the system.

4. Best Management Practices (BMPs)

The acronym "BMP" is short for Best Management Practice. In the context of water quality, BMPs are methods, or practices designed and selected to reduce or eliminate the discharge of pollutants to surface waters from point and non-point source discharges including stormwater. BMPs include but are not limited to structural and nonstructural controls and operation and maintenance procedures. BMPs can be applied before, during, and after pollution-producing activities.

C. Specific Federal Legal Provisions Relating to Stormwater Pollution Prevention

1. Federal Anti-degradation Policy

When a TMDL has not been established, however, a permit may be issued provided that the new source does not degrade water quality in violation of the applicable anti-degradation policy. Any increase in loading of a pollutant to a waterbody that is impaired because of that pollutant would degrade water quality in violation of the applicable anti-degradation policy. Federal law, Code of Federal Regulations, title 40, section 131.12(a)(1), requires the state to adopt and implement an anti-degradation policy that will "maintain the level of water quality necessary to protect existing (in stream water) uses."

NPDES permits must include conditions to achieve water quality standards and objectives and generally may not allow dischargers to backslide.[245]

2. Requirement to Effectively Prohibit Non-Stormwater Discharges

CWA section 402(p)(3)(B)(ii) requires that permits for MS4s "shall include a requirement to effectively prohibit non-storm water discharges into the storm sewers."

TMDL specifies the maximum amount of a particular pollutant that can be discharged or loaded into the waters from all combined sources, so as to comply with the water quality standards.").

[245] United States Code, title 33, section 1311(b)(1)(C), which states, "in order to carry out the objective of this chapter there shall be achieved . . . any more stringent limitation, including those necessary to meet water quality standards"; section 1342(o)(3), which states, "In no event may such a permit to discharge into waters be renewed, reissued, or modified to contain a less stringent effluent limitation if the implementation of such limitation would result in a violation of a water quality standard under section 1313 of this title applicable to such waters"; and Code of Federal Regulations, title 40, section 122.44(d)(1), which states that NPDES permits must include "any requirements in addition to or more stringent than promulgated effluent limitations guidelines . . . necessary to . . . [a]chieve water quality standards established under section 303 of the CWA."

3. Standard Setting for Dischargers of Pollutants: NPDES Permits

Section 1342 of the CWA provides for the NPDES program, the final piece of the regulatory framework under which discharges of pollutants are regulated and permitted, and applies whether or not a TMDL has been established. Section 1342 states that "the Administrator may, after opportunity for public hearing, issue a permit for the discharge of any pollutant, or combination of pollutants, notwithstanding section 1311(a) of this title."[246] Section 1342 further provides that states may submit a plan to administer the NPDES permit program, and that upon review of the state's submitted program "[t]he Administrator shall authorize a State, which he determines has the capability of administering a permit program which will carry out the objective of this chapter to issue permits for discharges into the navigable waters within the jurisdiction of such State."[247]

Whether issued by the Administrator or by a state permitting program, all NPDES permits must ensure compliance with the requirements of sections 1311, 1312, 1316, 1317, and 1343 of the Act; must be for fixed terms not exceeding five years; can be terminated or modified for cause, including violation of any condition of the permit; and must control the disposal of pollutants into wells.[248] In addition, NPDES permits are generally prohibited, with some exceptions, from containing effluent limitations that are "less stringent than the comparable effluent limitations in the previous permit."[249] An NPDES permit for a point source discharging into an impaired water body must be consistent with the WLAs made in a TMDL, if a TMDL is approved and is applicable to the water body.[250]

4. The Federal Toxics Rules (40 CFR 131.36 and 131.38)

In 1987, Congress amended CWA section 303(c)(2) by adding subparagraph (B) which requires that a state, whenever reviewing, revising, or adopting new water quality standards, must adopt numeric criteria for all toxic pollutants listed pursuant to section 307(a)(1) for which criteria have been published under section 304(a). Section 303(c)(4) of the CWA authorizes the U.S. EPA Administrator to promulgate standards where necessary to meet the requirements of the Act. The federal criteria below are legally applicable in the State of California for inland surface waters, enclosed bays, and estuaries for all purposes and programs under the CWA.

5. National Toxics Rule (NTR)

For the 14 states that did not timely adopt numeric criteria as required, U.S. EPA promulgated the National Toxics Rule (NTR) on December 22, 1992 (57 FR 60848). About 40 criteria in the NTR apply in California.

---

[246] United States Code, title 33, section 1342(a)(1).

[247] United States Code, title 33, section 1342(a)(5); (b).

[248] United States Code, title 33, section 1342(b)(1).

[249] United States Code, title 33, section 1342(o).

[250] Code of Federal Regulations, title 40, section 122.44(d).

6. The California Toxics Rule (CTR)

The "California Toxics Rule" is also a federal regulation, notwithstanding its somewhat confusing name. On May 18, 2000, U.S. EPA adopted the CTR. The CTR promulgated new toxics criteria for California to supplement the previously adopted NTR criteria that applied in the State. U.S. EPA amended the CTR on February 13, 2001. U.S. EPA promulgated this rule to fill a gap in California water quality standards that was created in 1994 when a state court overturned the state's water quality control plans which contained water quality criteria for priority toxic pollutants, leaving the state without numeric water quality criteria for many priority toxic pollutants as required by the CWA.

California had not adopted numeric water quality criteria for toxic pollutants as required by CWA section 303(c)(2)(B), which was added to the CWA by Congress in 1987 and was the only state in the nation for which CWA section 303(c)(2)(B) had remained substantially unimplemented after the US EPA's promulgation of the NTR in December of 1992.[251] The Administrator determined that this rule was a necessary and important component for the implementation of CWA section 303(c)(2)(B) in California.

In adopting the CTR, U.S. EPA states:

> EPA is promulgating this rule based on the Administrator's determination that numeric criteria are necessary in the State of California to protect human health and the environment. The Clean Water Act requires States to adopt numeric water quality criteria for priority toxic pollutants for which EPA has issued criteria guidance, the presence or discharge of which could reasonably be expected to interfere with maintaining designated uses.

And:

> Numeric criteria for toxic pollutants allow the State and EPA to evaluate the adequacy of existing and potential control measures to protect aquatic ecosystems and human health. Numeric criteria also provide a more precise basis for deriving water quality-based effluent limitations (WQBELs) in National Pollutant Discharge Elimination System (NPDES) permits and wasteload allocations for total maximum daily loads (TMDLs) to control toxic pollutant discharges. Congress recognized these issues when it enacted section 303(c)(2)(B) to the CWA.

D. The California Water Pollution Control Program

1. Porter-Cologne

California's water pollution control laws were substantially overhauled in 1969 with the Porter-Cologne Water Quality Control Act (Porter-Cologne).[252] Beginning with section 13000, Porter-Cologne provides:

[251] Federal Register, Volume 64, Number 97, page 7.

[252] Water Code section 13020 (Stats. 1969, ch. 482).

> The Legislature finds and declares that the people of the state have a primary interest in the conservation, control, and utilization of the water resources of the state, and that the quality of all the waters of the state shall be protected for use and enjoyment by all the people of the state.
>
> The Legislature further finds and declares that activities and factors which may affect the quality of the waters of the state shall be regulated to attain the highest water quality which is reasonable, considering all demands being made and to be made on those waters and the total values involved, beneficial and detrimental, economic and social, tangible and intangible.
>
> The Legislature further finds and declares that the health, safety, and welfare of the people of the state requires that there be a statewide program for the control of the quality of all the waters of the state…and that the statewide program for water quality control can be most effectively administered regionally, within a framework of statewide coordination and policy.[253]

The state water pollution control program was again modified, beginning in 1972, so that the code would substantially comply with the federal CWA, and "on May 14, 1973, California became the first state to be approved by the EPA to administer the NPDES permit program."[254]

Section 13160 provides that the State Water Resources Control Board (State Board) "is designated as the state water pollution control agency for all purposes stated in the Federal Water Pollution Control Act…[and is] authorized to exercise any powers delegated to the state by the Federal Water Pollution Control Act (33 U.S.C. § 1251 et seq.) and acts amendatory thereto."[255] Section 13001 describes the state and regional boards as being "the principal state agencies with primary responsibility for the coordination and control of water quality."

To achieve the objectives of conserving and protecting the water resources of the state, and in exercise of the powers delegated, Porter-Cologne, like the CWA, employs a combination of water quality standards and point source pollution controls.[256]

Under Porter Cologne, the nine regional boards' primary regulatory tools are the water quality control plans, also known as basin plans.[257] These plans fulfill the planning function for the water boards, are regulations adopted under the Administrative Procedure Act with a specialized process,[258] and provide the underlying basis for most of the regional board's actions (e.g., NPDES permit conditions, cleanup levels). Basin plans consist of three elements:

---

[253] Water Code section 13000 (Stats. 1969, ch. 482).

[254] *County Sanitation Dist. No. 2 of Los Angeles County v. County of Kern* (2005) 127 Cal.App.4th 1544, 1565-1566; see also Water Code section 13370 *et seq*.

[255] Water Code section 13160 (Stats. 1969, ch. 482; Stats. 1971, ch. 1288; Stats. 1976, ch. 596).

[256] Water Code section 13142 (Stats. 1969, ch. 482; Stats. 1971, ch. 1288; Stats. 1979, ch. 947; Stats. 1995, ch. 28).

[257] Water Code sections 13240-13247.

[258] Water Code sections 11352-11354.

- Determination of beneficial uses;
- Water quality objectives to reasonably protect beneficial uses; and
- An implementation program to achieve water quality objectives.[259]

Porter Cologne sections 13240-13247 address the development and implementation of regional water quality control plans (i.e., basin plans), including "water quality objectives," defined in section 13050 as "the limits or levels of water quality constituents or characteristics which are established for the reasonable protection of beneficial uses of water or the prevention of nuisance within a specific area."[260] Section 13241 provides that each regional board "shall establish such water quality objectives in water quality control plans as in its judgment will ensure the reasonable protection of beneficial uses and the prevention of nuisance." The section directs the regional boards to consider, when developing water quality objectives:

(a) Past, present, and probable future beneficial uses of water.

(b) Environmental characteristics of the hydrographic unit under consideration, including the quality of water available thereto.

(c) Water quality conditions that could reasonably by achieved through the coordinated control of all factors which affect water quality in the area.

(d) Economic considerations.

(e) The need for developing housing within the region.

(f) The need to develop and use recycled water.[261]

Beneficial uses, in turn, are defined in section 13050 as including, but not limited to, "domestic, municipal, agricultural and industrial supply; power generation; recreation; aesthetic enjoyment; navigation; and preservation and enhancement of fish, wildlife, and other aquatic resources or preserves."[262] In addition, section 13243 permits a regional board to define "certain conditions or areas where the discharge of waste, or certain types of waste, will not be permitted."[263]

Sections 13260-13274 address the development of "waste discharge requirements," which section 13374 states "is the equivalent of the term 'permits' as used in the Federal Water

[263] Water Code section 13243 (Stats. 1969, ch. 482).

Pollution Control Act, as amended."[264] Section 13263 permits the regional boards, after a public hearing, to prescribe waste discharge requirements "as to the nature of any proposed discharge, existing discharge, or material change in an existing discharge, except discharges into a community sewer system." Section 13263 also provides that the regional boards "need not authorize the utilization of the full waste assimilation capacities of the receiving waters," and that the board may prescribe requirements although no discharge report has been filed, and may review and revise requirements on its own motion. The section further provides that "[a]ll discharges of waste into waters of the state are privileges, not rights."[265] Section 13377 permits a regional board to issue waste discharge requirements "which apply and ensure compliance with all applicable provisions of the [Federal Water Pollution Control Act]."[266] In effect, sections 13263 and 13377 permit the issuance of waste discharge requirements concurrently with an NPDES permit if a discharge is to waters of both California and the United States.

The California Supreme Court explained the interplay between state and federal law in *Department of Finance v. Commission on State Mandates* as follows:

> California was the first state authorized to issue its own pollutant discharge permits. (Citations omitted.) Shortly after the CWA's enactment, the Legislature amended the Porter–Cologne Act, adding chapter 5.5 (Wat. Code, § 13370 et seq.) to authorize state issuance of permits (Wat. Code, § 13370, subd. (c)). The Legislature explained the amendment was "in the interest of the people of the state, in order to avoid direct regulation by the federal government of persons already subject to regulation under state law pursuant to [the Porter–Cologne Act]." (*Ibid*.) The Legislature provided that Chapter 5.5 be "construed to ensure consistency" with the CWA. (Wat. Code, § 13372, subd. (a).) It directed that state and regional boards issue waste discharge requirements "ensur[ing] compliance with all applicable provisions of the [CWA] ... *together with any more stringent effluent standards or limitations* necessary to implement water quality control plans, or for the protection of beneficial uses, or to prevent nuisance." (Wat. Code, § 13377, italics added.) To align the state and federal permitting systems, the legislation provided that the term " 'waste discharge requirements' " under the Act was equivalent to the term " 'permits' " under the CWA. (Wat. Code, § 13374.) Accordingly, California's permitting system now regulates discharges under both state and federal law. (Citations omitted.)
>
> In 1987, Congress amended the CWA to clarify that a permit is required for any discharge from a municipal storm sewer system serving a population of 100,000 or more. (33 U.S.C. § 1342(p)(2)(C), (D).) Under those amendments, a permit may be issued either on a system- or jurisdiction-wide basis, must effectively prohibit nonstorm water discharges into the storm sewers, and must "require controls to reduce the discharge of pollutants *to the maximum extent practicable*."

---

[264] Water code section 13374 (Stats. 1972, ch. 1256).

[265] Water Code section 13263(a), (b), (g) (Stats. 1969, ch. 482; Stats. 1992, ch. 211 (AB 3012); Stats. 1995, ch. 28 (AB 1247); Stats. 1995, ch. 421 (SB 572)).

[266] Water Code section 13377 (Stats. 1972, ch. 1256; Stats. 1978, ch. 746).

(33 U.S.C. § 1342(p)(3)(B), italics added.) The phrase "maximum extent practicable" is not further defined. How that phrase is applied, and by whom, are important aspects of this case.

EPA regulations specify the information to be included in a permit application. (See 40 C.F.R. § 122.26(d)(1)(i)-(vi), (d)(2)(i)-(viii).) Among other things, an applicant must set out a proposed management program that includes management practices; control techniques; and system, design, and engineering methods to reduce the discharge of pollutants to the maximum extent practicable. (40 C.F.R. § 122.26(d)(2)(iv).) The permit-issuing agency has discretion to determine which practices, whether or not proposed by the applicant, will be imposed as conditions. (*Ibid*.)[267]

2. California's Anti-degradation Policy (State Water Resources Control Board Resolution No. 68-16 adopted October 24, 1968)

In 1968, the State Board adopted Resolution 68-16, formally entitled "Statement of Policy With Respect to Maintaining High Quality of Waters In California," to prevent the degradation of surface waters where background water quality is higher than the established level necessary to protect beneficial uses. That executive order states the following:

WHEREAS the California Legislature has declared that it is the policy of the State that the granting of permits and licenses for unappropriated water and the disposal of wastes into the waters of the State shall be so regulated as to achieve highest water quality consistent with maximum benefit to the people of the State and shall be controlled so as to promote the peace, health, safety and welfare of the people of the State; and

WHEREAS water quality control policies have been and are being adopted for waters of the State; and

WHEREAS the quality of some waters of the State is higher than that established by the adopted policies and it is the intent and purpose of this Board that such higher quality shall be maintained to the maximum extent possible consistent with the declaration of the Legislature;

NOW, THEREFORE, BE IT RESOLVED:

Whenever the existing quality of water is better than the quality established in policies as of the date on which such policies become effective, such existing high quality will be maintained until it has been demonstrated to the State that any change will be consistent with maximum benefit to the people of the State, will not unreasonably affect present and anticipated beneficial use of such water and will not result in water quality less than that prescribed in the policies.

Any activity which produces or may produce a waste or increased volume or concentration of waste and which discharges or proposes to discharge to existing high quality waters will be required to meet waste discharge requirements which

[267] *Department of Finance v. Commission on State Mandates* (2016) 1 Cal.5th 749, 757.

> will result in the best practicable treatment or control of the discharge necessary to assure that (a) a pollution or nuisance will not occur and (b) the highest water quality consistent with maximum benefit to the people of the State will be maintained.
>
> In implementing this policy, the Secretary of the Interior will be kept advised and will be provided with such information as he will need to discharge his responsibilities under the Federal Water Pollution Control Act.

State Board Resolution 68-16, Statement of Policy With Respect to Maintaining High Quality of Waters in California, is the policy that the State asserts incorporates the federal antidegradation policy. The Water Quality Control Plans in turn (i.e., Basin Plans) require conformity with State Board Resolution 68-16. Therefore, any provisions in a permit that are inconsistent with the State's anti-degradation policy are also inconsistent with the Basin Plan.

3. Administrative Procedures Update, Antidegradation Policy Implementation for NPDES Permitting, 90-004

The May 1990 Administrative Procedures Update, entitled Antidegradation Policy Implementation for NPDES Permitting, APU 90-004, provides guidance for the State's regional boards in implementing the State Board's Resolution No. 68-16, Statement of Policy With Respect to Maintaining High Quality of Waters in California, and the Federal Antidegradation Policy, as set forth in Code of Federal Regulations, title 40, part 131.12. It states that "If baseline water quality is equal to or less than the quality as defined by the water quality objective, water quality shall be maintained or improved to a level that achieves the objectives."[268]

4. Statewide Plans: The Ocean Plan, the California Inland Surface Waters Plan (ISWP), and, the Enclosed Bays and Estuaries Plan (EBEP)

California has adopted an Ocean Plan, applicable to interstate waters, and two other state-wide plans which establish water quality criteria or objectives for all fresh waters, bays and estuaries in the State.

a. California Ocean Plan

Section 303(c)(3)(A) of the CWA provides that "[a]ny State which prior to October 18, 1972, has not adopted pursuant to its own laws water quality standards applicable to intrastate waters shall, not later than one hundred and eighty days after October 18, 1972, adopt and submit such standards to the [U.S. EPA] Administrator." Section 303(c)(3)(C) further provides that "[i]f the [U.S. EPA] Administrator determines that any such standards are not consistent with the applicable requirements of this Act as in effect immediately prior to October 18, 1972, he shall, not later than the ninetieth day after the date of submission of such standards, notify the State and specify the changes to meet such requirements. If such changes are not adopted by the State within ninety days after the date of notification, the Administrator shall promulgate such standards pursuant to subsection (b) of this section." Thus, beginning October 18, 1972, states

[268] Exhibit X (40), State Water Resources Control Board, Administrative Procedures Update, 90-004, page 4.

were required to adopt water quality laws applicable to intrastate waters or else allow the U.S. EPA to adopt such standards for them.

California's first adopted its Ocean Plan in July 6, 1972, and as applicable to this test claim, has amended it in 1978, 1983, 1988, 1990, 1997, 2001, 2005, and 2009.[269] The Ocean Plan was also amended five times after the adoption of the test claim permit.

b. The California Inland Surface Waters Plan (ISWP) and the Enclosed Bays and Estuaries Plan (EBEP)

On April 11, 1991, the State Board adopted two statewide water quality control plans, the California Inland Surface Waters Plan (ISWP) and the Enclosed Bays and Estuaries Plan (EBEP). These statewide plans contained narrative and numeric water quality criteria for toxic pollutants, in part to satisfy CWA section 303(c)(2)(B). The water quality criteria contained in these statewide plans, together with the designated uses in each of the Basin Plans, created a set of water quality standards for waters within the State of California.

Specifically, the two plans established water quality criteria or objectives for all fresh waters, bays and estuaries in the State.

Section 303(c)(2)(B) of the federal CWA requires that states adopt numeric criteria for priority pollutants for which EPA has issued criteria guidance, as part of the states' water quality standards. As discussed above, U.S. EPA promulgated these criteria in the CTR in 2000 because the State court overturned two of California's water quality control plans (the ISWP and the EBEP) in 1994 and the State failed to promulgate new plans, so the State was left without enforceable standards. The federal toxics criteria apply to the State of California for inland surface waters, enclosed bays, and estuaries for "all purposes and programs under the CWA" and are commonly known as "the California Toxics Rule" (CTR).[270] There are 126 chemicals on the federal CTR[271] and the State Implementation Policy (SIP) for Implementation of the Toxics Standards for Inland Surface Waters, Enclosed Bays, and Estuaries adds another 6 isomers of

---

[269] California first adopted its Ocean Plan on July 6, 1972, and has amended it in 1978 (Order 78-002, adopted 1/19/1978), 1983 (Order 83-087, adopted 11/17/1983), 1988 (Order 88-111, adopted 9/22/1988), 1990 (Order 90-027, amendment regarding new water quality objectives in Table B, adopted 3/22/1990), 1997 (Order 97-026, amendment regarding revisions to the list of critical life stage protocols used in testing the toxicity of waste discharges, adopted 3/20/1997), 2001 (Order 2000-108, amendment regarding Table A, chemical water quality objectives, provisions of compliance, special protection for water quality and designated uses, and administrative changes, adopted 11/16/2000), 2005 (Order 2005-0013, amendment regarding Water Contact Bacterial Standards, adopted 1/20/2005; Order 2005-0035, amendments regarding (1) Reasonable Potential, Determining When California Ocean Plan Water Quality-Based Effluent Limitations are Required, and (2) Minor Changes to the Areas of Special Biological Significance, and Exception Provisions, 4/21/2005) and 2009 (Order 2009-0072, amendments regarding total recoverable metals, compliance schedules, toxicity definitions, and the list of exceptions, adopted 9/15/2009).

[270] Code of Federal Regulations, title 40, Part 131, May 18, 2000.

[271] See Code of Federal Regulations, title 40, Part 131, May 18, 2000.

chlorinated dioxins and 10 isomers of chlorinated furans for optional use in California (however, these are required to be used in the California Ocean Plan).

The EBEP was later adopted with respect to sediment quality objectives for toxic pollutants by the State Board on September 16, 2008 (Resolution No. 2008-0070), effective on January 5, 2009, and has been amended twice after the adoption of the test claim permit on April 6, 2011 (Resolution No. 2011-0017), effective on June 8, 2011 and June 5, 2018 (Resolution No. 2018-0028), effective March 11, 2019.

Likewise, the following adopted amendments, all of which were adopted after the test claim permit at issue in this case, were incorporated into the ISWP:

- Part 1: Trash Provisions, adopted on April 7, 2015 (Resolution No. 2015-0019), effective on December 2, 2015
- Part 2: Tribal Subsistence Beneficial Uses and Mercury Provisions, adopted on May 2, 2017 (Resolution No. 2017-0027), effective on June 28, 2017
- Part 3: Bacteria Provisions and Variance Policy, adopted on August 7, 2018 (Resolution No. 2018-0038), effective on February 4, 2019
- State Wetland Definition and Procedures for Discharges of Dredged or Fill Material to Waters of the State (for waters of the United States only), adopted April 2, 2019 (Resolution No. 2019-0015), effective May 28, 2020.

5. Basin Plans (also known as Water Quality Control Plans)

The Basin Plan is a regional board's master water quality control planning document for a particular water basin. It designates beneficial uses and water quality objectives for waters of the State, including surface waters and groundwater. It also must include any TMDL programs of implementation to achieve water quality objectives.[272] Basin Plans must be adopted by the regional board and approved by the State Board, the California Office of Administrative Law (OAL), and U.S. EPA, in the case of action on surface waters standards.[273]

E. The History of the Test Claim Permit

The claimants are the owners of an interconnected MS4 which lies within the Santa Margarita Hydrologic Unit, one of the eleven hydrologic units of the San Diego Region.[274] The Upper Santa Margarita Watershed is approximately 548 square miles and includes the County of Riverside, the Cities of Murrieta, Temecula, and Wildomar, as well as portions of the Cleveland and San Bernardino National Forests, and the Cahuilla, Ramona, Pauma, and Pechanga Indian Reservations.[275] The claimants' MS4 discharges its runoff into lakes, drinking water reservoirs,

[272] Water Code section 13241.

[273] Water Code section 13245; United States Code, title 33, section 1313(c)(1).

[274] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 184-185 (test claim permit, Finding C.7.).

[275] Exhibit X (34), Order R9-2004-0001, Fact Sheet/Technical Report, section V.C., page 8.

rivers, streams, creeks, bays, estuaries, coastal lagoons, and, ultimately, the Pacific Ocean.[276] "Over 40 percent of the water used in the watershed is locally produced. In addition, surface and ground water from the Upper Santa Margarita Watershed flow to Fallbrook in San Diego County and the U.S. Marine Corps Base Camp Pendleton where it is used as part of the municipal and domestic water supply."[277]

The test claim permit, Order No. R9-2010-0016,[278] is the fourth iteration of the NPDES permit for the claimants' MS4 (fourth term permit). In 1990, the Riverside County Flood Control and Water Conservation District, the County of Riverside, and the City of Temecula (copermittees)[279] obtained a first-term permit. Following its incorporation in 1992, the City of Murrieta was added as a copermittee to that permit. In 1998, the Regional Board adopted the second-term permit. The US EPA objected to the 1998 permit due to the receiving water limitations language, which the US EPA determined did not comply with the federal CWA and its implementing regulations. US EPA reissued the second-term permit and the Regional Board issued an addendum to incorporate US EPA's permit.[280]

In 2004, the Regional Board adopted the third-term permit, Order No. R9-2004-0001 (prior permit).[281] At the time that the prior permit was adopted, the Upper Santa Margarita Watershed had significant pollutant issues: Murrieta Creek and a portion of the Santa Margarita River were CWA section 303(d) listed for phosphorus and the Santa Margarita Lagoon was listed for eutrophication. Pollutants of concern included sedimentation, iron, manganese, and total dissolved solids. Other existing or potential sources of the following pollutants that may cause, or contribute to an excursion above a State water quality standard were identified: nitrogen, diazinon and other pesticides, herbicides, heavy metals and other toxics, oil and grease, total suspended solids, nutrients, pathogens, and trash.[282]

The prior permit represented a shift in the Regional Board's approach to permitting, using for the first time detailed, specific requirements to achieve the minimum level of implementation. The prior permit, however, did not address all of the water quality challenges faced by the

---

[276] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 184-185 (test claim permit, Finding C.7.).

[277] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 395 (Fact Sheet/Technical Report, Discussion of Finding C.5.), footnote omitted.

[278] R9-2010-0016 is both an "order" of the Regional Board and an NPDES "permit." This analysis will refer to it as the "test claim permit."

[279] The claimants are interchangeably referred to as permittees, as used in the prior permit and copermittees, as used in the test claim permit.

[280] Exhibit X (34), Order R9-2004-0001, Fact Sheet/Technical Report, section V.A., page 8.

[281] R9-2004-0001 is both an "order" of the Regional Board and an NPDES "permit." This analysis will refer to it as the "prior permit."

[282] Exhibit X (34), Order R9-2004-0001, Fact Sheet/Technical Report, section VI.B., Table 1, pages 16-18.

copermittees.[283] Discharges from the MS4 continued to be the leading cause of water quality impairment with increases in toxicity and the number of CWA section 303(d) listed water bodies continued to increase.[284]

On November 10, 2010, the Regional Board adopted the test claim permit.[285] The City of Wildomar was added as a copermittee for the first time because it was just incorporated in 2008 and was covered under the unincorporated part of the county in the prior permits.[286] The test claim permit increases the emphasis on watershed-focused discharge management. As explained by the Fact Sheet: "There are several reasons for this shift in emphasis. An emphasis on watersheds is necessary to shift the focus of the Copermittees from program development and implementation to water quality results. After over 20 years of Copermittee program implementation, it is critical that the Copermittees link their efforts with positive impacts on water quality."[287]

This Test Claim pleads the following provisions of the test claim permit:

A. The requirement to address three categories of urban irrigation runoff that formerly were considered exempt non-stormwater discharges, contained in Section B.2.;[288]

B. The requirement to monitor for, report and address exceedances of non-stormwater action levels, contained in Sections C. and F.4.d., F.4.e., and Attachment E., Section II.C.;[289]

C. The requirement to monitor for, report and address exceedances of stormwater action levels, contained in Section D.;[290]

stormwater runoff not cause or contribute to a violation of a water quality standard and "prevent" illicit discharges into the MS4, contained in Sections F., F.1., F.1.d., F.2., F.3.a.-d., and F.6.[300]

III. Positions of the Parties and Interested Parties

A. County of Riverside, Riverside County Flood Control and Water Conservation District, and the Cities of Murrieta, Temecula, and Wildomar, Claimants

As will be covered within the analysis of the specific sections pled below, the claimants contend that the test claim permit includes numerous new requirements that exceed what is required under federal law.[301] The claimants note that the Commission has twice found the imposition of reimbursable state-mandated programs in MS4 permits issued by the Los Angeles and the San Diego regional boards.[302]

The claimants contend that under definitive guidance provided by the court in *Department of Finance* regarding how to determine what constitutes a federal versus state mandate, the test claim permit's requirements are state, not federal, mandates.[303] The claimants also contend that the decision in *Department of Finance* has three relevant holdings. First, the claimants assert that the decision sets forth the test to determine if a permit requirement is a federal or state mandate, that is, if the state has discretion to impose the requirement and does so by virtue of a true choice, then the requirement is state-mandated.[304] Second, the claimants assert that the decision addresses whether the Commission must defer to the Water Boards as to what constitutes a federal mandate. The claimants further assert that the court concludes that the Commission must make that determination by applying California's constitutional, statutory, and common law to the issue of reimbursement. The claimants concede that the Commission must defer to the Water Boards' expertise if the regional board found that the permit conditions were the only means to implement the MEP standard, however, the regulatory language must be

[300] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 22, 81-83 (Test Claim narrative).

[301] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 21 (Test Claim narrative).

[303] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 30-35 (Test Claim narrative), citing *Department of Finance v. Commission on State Mandates* (2016) 1 Cal.5th 749, 765.

[304] Exhibit D, Claimants' Rebuttal Comments, filed December 14, 2017, page 35, citing *Department of Finance v. Commission on State Mandates* (2016) 1 Cal.5th 749, 765.

examined to establish the scope and detail required by the federal law.[305] Third, the claimants assert that the court concludes that the state bears the burden to establish an exception under Government Code section 17556.[306] The claimants contend that the test claim permit does not contain the necessary findings to establish that the requirements are only federal mandates and the Water Boards cite general regulatory authority to support their specific requirements.[307]

The claimants further contend that the test claim permit is not based on the federal MEP standard, but rather on the water quality standards established in the state's Basin Plan requiring compliance under state, not federal, authority.[308]

The claimants further assert that the requirements in the test claim permit are new programs and higher levels of service.[309] The claimants contend that the test claim permit imposed requirements uniquely on local government, and are not based on the claimants' voluntary act.[310]

The claimants then assert that Water Boards have not demonstrated that the requirements are the only method to meet the MEP standard or are required by federal law, contending that the Water Boards' findings regarding federal law are not entitled to deference and the Water Boards have too narrow of a reading of the application of *Department of Finance* to the test claim permit.[311] Specifically, the claimants argue that the test claim permit, itself, states it is based on both federal and state law.[312] Claimants state that Finding E.6., which addresses whether the test claim permit is a state mandate, is not entitled to deference under *Department of Finance* as the Commission has exclusive jurisdiction to make that determination.[313] The claimants state that the court in *Department of Finance* considered the Water Boards' argument, that the test claim permit requirements are derived from federal law and that the US EPA would have included the same requirements, and rejected it.[314]

The claimants argue that the test claim permit imposes costs mandated by the state and the claimants lack fee authority to cover the costs of complying with the test claim permit, so Government Code section 17556(d) does not apply. The claimants allege that the costs are not recoverable through fees due to the application of Proposition 26, which amended article XIII C

of the California Constitution to define most fees as taxes unless the fee falls within certain exceptions. The claimants argue that they can only charge fees in the amount necessary to recover program costs and the payor can only be charged for the portion of costs attributable to the burdens on or direct benefits to that payor. If the charge does not fall within that definition of a fee, the charge is a tax and must be approved by the voters. The claimants conclude that charges for a specific purpose, such as the costs to comply with the test claim permit, would be a special tax and require the approval of two-thirds of the voters.[315]

B. Department of Finance

Finance defers to the Water Boards on the issues of whether the test claim permit imposes a new program or higher level of service and the impact of the decision in *Department of Finance v. Commission on State Mandates* (2016) 1 Cal.5th 749.[316] Regarding the issue of fee authority, Finance states that the claimants have fee authority "undiminished by Propositions 2018 or 26."[317] Finance contends that Proposition 26 specifically excludes assessments and property-related fees imposed under Proposition 218.[318] Finance further contends that the claimants can impose property-related fees under their police powers. Finance relies on the holding in *Clovis Unified School Dist. v. Chiang* (2010) 188 Cal.App.4th 794, that to the extent that a local government has authority to charge for program costs, those charges cannot be recovered as a state-mandated cost. Finance argues that holding applies to this Test Claim: "Local governments can choose to not submit a fee to the voters and voters can indeed reject a proposed fee, but not with the effect of turning permit costs into state reimbursable mandates."[319] Finance concludes that the claimants have sufficient authority to charge fees regardless of political feasibility. Finance also contends that Government Code section 17556(d) applies in that there can be no finding of a reimbursable state-mandated program when the claimants have the authority to impose fees sufficient to pay for the permit activities.[320] However, if the Commission should find a reimbursable state-mandated program, Finance points to the offsetting revenue identified by the claimants and notes the Commission should identify those revenues as well.[321]

C. The Water Boards

As will be covered in more detail in the analysis below, the Water Boards contend that, when adopting the test claim permit, "the San Diego Water Board found that provisions and requirements were necessary to meet the maximum extent practicable standard (MEP) and are

[317] Exhibit B, Finance's Comments on the Test Claim, filed September 20, 2017, page 1.

[318] Exhibit B, Finance's Comments on the Test Claim, filed September 20, 2017, page 1, citing California Constitution, article XIIIC, section 1(e)(7).

[319] Exhibit B, Finance's Comments on the Test Claim, filed September 20, 2017, page 1.

[320] Exhibit B, Finance's Comments on the Test Claim, filed September 20, 2017, pages 1-2.

[321] Exhibit B, Finance's Comments on the Test Claim, filed September 20, 2017, page 2.

based exclusively on federal law."[322] The Water Boards contend that the claimants are not entitled to subvention for complying with the test claim permit because they have not shown that the requirements are new programs or higher level of services, are unique to local agencies, or that exceptions to the subvention requirement do not apply.[323]

The Water Boards further contend that the decision in *Department of Finance v. Commission on State Mandates* (2016) 1 Cal.5th 749 (*Department of Finance*), when applied to the test claim permit, will yield a finding that there is no state mandate due to the following differences between the facts of the case and the facts of this Test Claim. Specifically, the Water Boards assert, this test claim raises the following issues which were not addressed in *Department of Finance*:

1. Here, the Regional Board specifically found the permit requirements at issue in this test claim are federal mandates, unlike the regional board in the *Department of Finance case*;

2. The parties in *Department of Finance* did not dispute that the requirements were new and were not included in the prior permit, which is not true here since the Water Boards contend that the requirements of test claim permit *were* contained in prior permits and are not new;

3. There was no evaluation in *Department of Finance* of whether the requirements were required under a TMDL or other federal law, such as the requirement to effectively prohibit non-stormwater discharges into their MS4s;

4. None of the requirements evaluated by the court in *Department of Finance* were included in any US EPA issued permits, which is not the case here;

5. The issue of whether the local government had the authority to levy fees or assessments pursuant to Government Code section 17556(d) was not determined by the court in *Department of Finance*;

6. The Supreme Court in *Department of Finance* did not consider that the requirements are generally applicable and not unique to government;

7. The Supreme Court in *Department of Finance* did not evaluate the permittees' voluntary participation in the NPDES program.[324]

With regard to the test claim permit, the Water Boards contend that the requirements were in prior permits and are not new. Any changes to those requirements are not a higher level of service because the changes are mere refinements of existing requirements and are consistent with the US EPA's guidance that the iterative process making each permit more refined and detailed than the last. Also, mere direction from the San Diego Water Board to reallocate resources is not sufficient to show a shifting of costs from the state to the local government.[325]

---

[322] Exhibit C, Water Boards' Comments on the Test Claim, filed September 22, 2017, page 2.

[323] Exhibit C, Water Boards' Comments on the Test Claim, filed September 22, 2017, page 2.

[324] Exhibit C, Water Boards' Comments on the Test Claim, filed September 22, 2017, pages 3-4.

[325] Exhibit C, Water Boards' Comments on the Test Claim, filed September 22, 2017, pages 10-12, 15-16.

The Water Boards contend that the Regional Board's findings regarding federal law are entitled to deference. In contrast to the Regional Board in *Department of Finance*, the Regional Board here, when issuing the test claim permit, specifically found "[I]t is entirely the federal authority that forms the legal basis to establish the permit provisions."[326] And "this Order implements the federally mandated requirements under the CWA" including "federal requirements to effectively prohibit non-stormwater discharges, to reduce the discharge of pollutants in storm water to the MEP."[327] The Water Boards reason that if they were not authorized to issue permits, the US EPA would have issued a similar permit. "Therefore, in issuing the permit provisions necessary to comply with federal law, the San Diego Water Board exercised its duty under federal law."[328] Relying on *Rancho Cucamonga v. Regional Water Quality Control Bd., Santa Ana Region* (2006) 135 Cal.App.4th 1377, the Water Boards argue that in exercising its duty, the San Diego Water Board required compliance with federal mandates and, in exercising its discretion as required by federal law, the Regional Board imposed requirements necessary to implement federal law. This supports a conclusion that the requirements in the test claim permit are federal mandates. The holding in *Department of Finance* does not conflict with this conclusion as the permit at issue in that case had its roots in both state and federal law, whereas the test claim permit is rooted only in federal law. The Water Boards conclude that the Regional Board's findings that the requirements were necessary to implement the MEP standard are entitled to deference under *Department of Finance.*[329]

The Water Boards also contend that the requirements in the test claim permit are not unique to government as the US EPA requires control of municipal and non-municipal stormwater discharges. Numerous provisions of the permit are laws of general applicability. While the requirements in the test claim permit apply only to the public entity copermittees, the substantive actions required are not unique to that class of permittee and other permits impose similar requirements on non-local agencies.[330]

Finally, the Water Boards contend that the claimants have voluntarily undertaken to participate in the MS4 program as there is no requirement for them to do so and the claimants have not demonstrated that they cannot cover any costs by imposing fees as has been done by the cities of Alameda, San Clemente, San Jose, and Santa Cruz.[331]

IV. Discussion

Article XIII B, section 6 of the California Constitution provides in relevant part the following:

> Whenever the Legislature or any state agency mandates a new program or higher level of service on any local government, the state shall provide a subvention of funds to reimburse such local government for the costs of such programs or increased level of service…

The purpose of article XIII B, section 6 is to "preclude the state from shifting financial responsibility for carrying out governmental functions to local agencies, which are 'ill equipped' to assume increased financial responsibilities because of the taxing and spending limitations that articles XIII A and XIII B impose."[332] Thus, the subvention requirement of section 6 is "directed to state-mandated increases in the services provided by [local government] …"[333]

Reimbursement under article XIII B, section 6 is required when the following elements are met:

1. A state statute or executive order requires or "mandates" local agencies or school districts to perform an activity.[334]
2. The mandated activity constitutes a "program" that either:
   a. Carries out the governmental function of providing a service to the public; or
   b. Imposes unique requirements on local agencies or school districts and does not apply generally to all residents and entities in the state.[335]
3. The mandated activity is new when compared with the legal requirements in effect immediately before the enactment of the test claim statute or executive order and it increases the level of service provided to the public.[336]
4. The mandated activity results in the local agency or school district incurring increased costs, within the meaning of section 17514. Increased costs, however, are not reimbursable if an exception identified in Government Code section 17556 applies to the activity.[337]

The Commission is vested with the exclusive authority to adjudicate disputes over the existence of state-mandated programs within the meaning of article XIII B, section 6 of the California

[335] *San Diego Unified School Dist. v. Commission on State Mandates* (2004) 33 Cal.4th 859, 874-875 (reaffirming the test set out in *County of Los Angeles* (1987) 43 Cal.3d 46, 56).

[336] *San Diego Unified School Dist.* (2004) 33 Cal.4th 859, 874-875, 878; *Lucia Mar Unified School District v. Honig* (1988) 44 Cal.3d 830, 835.

[337] *County of Fresno v. State of California* (1991) 53 Cal.3d 482, 487; *County of Sonoma v. Commission on State Mandates* (2000) 84 Cal.App.4th 1265, 1284; Government Code sections 17514 and 17556.

Constitution.[338] The determination whether a statute or executive order imposes a reimbursable state-mandated program is a question of law.[339] In making its decisions, the Commission must strictly construe article XIII B, section 6 of the California Constitution, and not apply it as an "equitable remedy to cure the perceived unfairness resulting from political decisions on funding priorities."[340]

A. The Test Claim Was Timely Filed Pursuant to Government Code Section 17551(c) Because the Test Claim Was Filed Within Twelve Months of the Effective Date of the Test Claim Permit, with a Period of Reimbursement Beginning November 10, 2010.

The Test Claim was filed on November 10, 2011. The effective date of the test claim permit is November 10, 2010.[341] At the time of filing, the Government Code section 17551 provided that "test claims shall be filed not later than 12 months following the effective date of a statute or executive order…."[342] As the Test Claim was filed within 12 months following the effective date of the test claim permit, the Test Claim was timely filed.

Government Code section 17557(e) requires a test claim to be "submitted on or before June 30 following a fiscal year in order to establish eligibility for reimbursement for that fiscal year." Because the Test Claim was filed on November 10, 2011, the potential period of reimbursement under Government Code section 17557 begins on July 1, 2010. However, since the test claim permit has a later effective date, the potential period of reimbursement for this Test Claim begins on the permit's effective date, November 10, 2010.

[341] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 269 (test claim permit).

[342] Government Code section 17551(c) (Stats. 2007, ch. 329).

B. Some of the Sections Pled by the Claimants Impose a State-Mandated New Program or Higher Level of Service.

1. The Requirements of Section B.2. of the Test Claim Permit, Addressing Formerly Exempted Non-Stormwater Discharges That Have Been Identified as a Source of Pollutants, Do Not Mandate a New Program or Higher Level of Service Because Existing Federal Law Requires the Claimants to Prohibit Non-Stormwater Discharges.

The claimants have pled Section B.2. of the test claim permit,[343] which removes landscape irrigation, irrigation water, and lawn watering from the exempt, non-prohibited discharge list.[344] Thus, the claimants are now required to effectively prohibit landscape irrigation, irrigation water, and lawn watering from entering the MS4 by implementing a program to detect and remove these illicit discharges, just like other prohibited non-stormwater discharges.

The Commission finds that Section B.2. does not mandate a new program or higher level of service.

a. Background

i Federal law requires that if an exempt discharge is identified as a pollutant, the permittee is required to effectively prohibit the illicit discharge from entering the municipal separate storm sewer system.

Federal law distinguishes between stormwater discharges and non-stormwater discharges. Stormwater is defined as "storm water runoff, snow melt runoff, and surface runoff and drainage; events related to precipitation."[345] A discharge to a MS4 that "is *not* composed entirely of stormwater" is considered an illicit non-stormwater, or dry weather discharge.[346]

---

[343] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 21, 35-36 (Test Claim narrative).

[344] Section B.2. of the test claim permit exempts the following non-stormwater discharges: diverted stream flows, rising ground water, uncontaminated ground water infiltration (as defined at Code of Federal Regulations, title 40, section 35.2005(20)) to MS4s, uncontaminated pumped ground water, foundation drains, springs, water from crawl space pumps, footing drains, air conditioning condensation, flows from riparian habitats and wetlands, water line flushing, discharges from potable water sources not subject to NPDES Permit No. CAG679001 other than water main breaks, individual residential car washing, and dechlorinated swimming pool discharges. Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 200-201 (test claim permit, Section B.2.).

[345] Code of Federal Regulations, title 40, section 122.26(b)(13).

[346] Code of Federal Regulations, title 40, section 122.26(b)(2) defines "Illicit discharge" as "any discharge to a municipal separate storm sewer that is *not* composed entirely of storm water except discharges pursuant to a NPDES permit (*other than the NPDES permit for discharges from the municipal separate storm sewer*) and discharges resulting from firefighting activities." Emphasis added.

Federal law requires that, in order to achieve water quality standards and objectives, permits for discharges from MS4s "shall include a requirement to effectively prohibit non-stormwater discharges into the storm sewers," unless those discharges are conditionally exempted from this prohibition.[347] Those discharge categories that are not prohibited from entering into the MS4 continue to be exempt unless the discharge is identified by a municipality as a source of pollutants to waters of the United States. If a discharge is identified as a pollutant, the municipality is required by federal law to effectively prohibit the illicit discharge from entering the MS4 by implementing a program to detect and remove the discharge.[348]

ii. The prior permit conditionally exempted landscape irrigation, irrigation water, and lawn watering from the list of non-stormwater discharges that permittees were prohibited from discharging.

Section B.2. of the prior permit provided a list of exempt non-stormwater discharges that included landscape irrigation, irrigation water, and lawn watering, which were not prohibited from being discharged into the MS4.[349] Section B.2. further stated that the listed categories of non-stormwater discharges are not prohibited "unless a Permittee or the SDRWQCB identifies the discharge category as a source of pollutants to waters of the U.S."[350] The prior permit also required each permittee to "examine its Illicit Discharge Monitoring results collected in accordance with Requirement J.3 of this Order and Section II.B of the MRP [Monitoring and Reporting Program] to identify water quality problems which may be the result of any non-prohibited discharge category(ies) listed above in Requirement B.2. Follow-up investigations shall be conducted as necessary to identify and control any non-prohibited discharge category(ies) listed above."[351] In addition, permittees were required to "investigate and inspect any portion of the MS4 that, based on visual observations, monitoring results or other appropriate information, indicates a reasonable potential for illicit discharges, illicit connections, or other sources of non-storm water (including non-prohibited discharge(s) identified in Section B. of this Order)."[352] If a non-prohibited discharge category was identified by a permittee as a source of pollutant to the waters of the United States during the term of the permit, the permittee was required by the prior permit to prohibit the discharge or to implement Best Management

Practices (BMPs) to reduce the discharge of the pollutant to the MEP and submit a report to the Regional Board.[353]

b. Section B.2. of the test claim permit removes landscape irrigation, irrigation water, and lawn watering from the exemption, but does not mandate a new program or higher level of service.

Section B.2. of the test claim permit removes landscape irrigation, irrigation water, and lawn watering from the exempt, non-prohibited discharge list.[354] Thus, the claimants are now required to effectively prohibit landscape irrigation, irrigation water, and lawn watering from entering the MS4 by implementing a program to detect and remove these illicit discharges, just like other prohibited non-stormwater discharges.

The Fact Sheet for the test claim permit explains that removal of landscape irrigation, irrigation water, and lawn watering discharges from the exemption was based on the claimants' and the Regional Board's identification of these discharges as sources of pollutants to the waters of the United States:

> Discharges from landscape irrigation have been identified by the San Diego Water Board and the Copermittees as a source of pollutants and conveyance of pollutants to waters of the United States in the following:
>
> - In educational materials developed by The Cities and County of Riverside "Only Rain in the Storm Drain" Pollution Prevention Program, the Landscape and Garden brochure states: "Soil, yard wastes, *over-watering* [] and garden chemicals become part of the urban runoff mix that winds it [sic] way through streets, gutters and storm drains before entering lakes, rivers, streams, etc."
> - In an educational survey developed by The Cities and County of Riverside "Only Rain in the Storm Drain" Pollution Prevention Program distributed at Public Outreach events, the answer to the question about where lawn irrigation water goes states: *"Water that leaves your lawn from irrigation ... can pick up motor oil and grease from vehicles,* excess *fertilizer from your lawn, bacteria from pet waste, and* excess *pesticides from your yard. These*

[353] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 572 (Order R9-2004-0001, Section B.2.).

[354] Section B.2. of the test claim permit exempts the following non-stormwater discharges: diverted stream flows, rising ground water, uncontaminated ground water infiltration (as defined at Code of Federal Regulations, title 40, section 35.2005(20)) to MS4s, uncontaminated pumped ground water, foundation drains, springs, water from crawl space pumps, footing drains, air conditioning condensation, flows from riparian habitats and wetlands, water line flushing, discharges from potable water sources not subject to NPDES Permit No. CAG679001 other than water main breaks, individual residential car washing, and dechlorinated swimming pool discharges. Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 200-201 (test claim permit, Section B.2.).

pollutants can be carried down streets and storm drains directly to our streams, *lakes and rivers without treatment!"*

- In 2006, the State Water Board allocated Grant funding to the Smarttimer/Edgescape Evaluation Program (SEEP). The project targets irrigation runoff by retrofitting existing development and documenting the conservation and runoff improvements. The Grant Application states that "Irrigation runoff contributes flow & pollutant loads to creeks and beaches that are 303(d) listed for bacteria indicators". Furthermore, the grant application states that "Regional program managers agree that the reduction and/or elimination of irrigation-related urban flows and associated pollutant loads may be key to successful attainment of water quality and beneficial use goals as outlined in the Basin Plan and Bacteria TMDL over the long term". This is reinforced in the project descriptions and objectives: "Elevated dry-weather storm drain flows, composed primarily ... of landscape irrigation water wasted as runoff, carry pollutants that impair recreational use and aquatic habitats all along Southern California's urbanized coastline. Storm drain systems carry the wasted water, along with landscape derived pollutants such as bacteria, nutrients and pesticides, to local creeks and the ocean. Given the local Mediterranean climate, excessive perennial dry season stream flows are an unnatural hydrologic pattern, causing species shifts in local riparian communities and warm, unseasonal contaminated freshwater plumes in the nearshore marine environment". The basis of this grant project is that over-irrigation (landscape irrigation, irrigation water and lawn watering) into the MS4 is a source and conveyance of pollutants. In addition, they indicate that the alteration of natural flows is impacting the Beneficial Uses of waters of the State. The results of this study can be applied broadly to any area where over-irrigation takes place, including Riverside County. Preliminary results from the study indicate that that over-irrigation (landscape irrigation, irrigation water and lawn watering) into the MS4 is a source and conveyance of pollutants.
- In the Watershed Action Plan Annual Report(s) for the 2006-2007 reporting period, submitted by the County of Orange, Orange County Flood Control District and Copermittees within the San Juan Creek, Laguna Coastal Streams, Aliso Creek, and Dana Point Coastal Streams Watersheds, the Orange County Copermittees, within their Watershed Action Strategy Table for Fecal Indicator Bacteria state that *"Support programs to reduce or eliminate the discharge of anthropogenic dry weather nuisance flow throughout the [. . .] watershed. Dry weather flow* is *the transport medium for bacteria and other 303(d) constituents of concern".* Additionally, they state that *"conditions in the MS4 contribute to high* seasonal *bacteria propagation in-pipe during warm weather. Landscape irrigation* is a *major contributor to dry weather flow, both* as *surface runoff due to over-irrigation and overspray onto pavements; and* as *subsurface seepage that finds its way into the MS4."*

- In the Carlsbad Watershed Urban Runoff Management Program (WURMP) Fiscal Year 2008 Annual Report, submitted by the Carlsbad Watershed Copermittees (Cities of Carlsbad, Encinitas, Escondido, Oceanside, San Marcos, Solana Beach, and Vista, and the County of San Diego), the Carlsbad Watershed Copermittees state *"The Carlsbad Watershed Management Area (WMA) collective watershed strategy identifies bacteria, sediment, and nutrients* as *high priority water quality pollutants in the Agua Hedionda (904.3 - bacteria and sediment), Buena Vista (904.2 - bacteria), and San Marcos Creek (904.5 - nutrients) Hydrologic Areas. Bacteria, sediment, and nutrients have been identified* as *potential discharges from over-irrigation."*
- In Appendix D of the San Diego Bay WURMP 2007-2008 Annual Report, submitted by the San Diego Bay Watershed Copermittees (Cities of Chula Vista, Coronado, Imperial Beach, La Mesa, Lemon Grove, National City, and San Diego, the County of San Diego, the Port of San Diego, and the San Diego County Airport Authority), the San Diego Bay Watershed Copermittees identified *over-irrigation of lawns* from business and/or residential land uses as a likely pollutant source for bacteria, pesticides, and sediment.
- On September 28, 2006 Governor Arnold Schwarzenegger approved Assembly Bill 1881, The Water Conservation in Landscaping Act (AB 1881, Laird) [Civil Code section 65591 et seq. (Stats. 2006, ch. 559)]. The act requires cities, counties, and charter cities and charter counties, to adopt landscape water conservation ordinances by January 1, 2010. Additionally, the law required the Department of Water Resources (DWR) to prepare a Model Water Efficient Landscape Ordinance for use by local agencies. The Water Efficient Landscape Ordinance was approved by the Office of Administrative Law on September 10, 2009. All local agencies were required to adopt a water efficient landscape ordinance by January 1, 2010. Local agencies could adopt the Water Efficient Landscape Ordinance developed by DWR, or an ordinance considered at least as effective as the Model Ordinance. The Water Efficient Landscape Ordinance includes a requirement that local agencies prohibit runoff from irrigation (§ 493.2): *"Local agencies shall prevent water waste resulting from inefficient landscape irrigation by* prohibiting runoff from leaving the target landscape *[emphasis added] due to low head drainage, overspray, or other similar conditions where water flows onto adjacent property, non-irrigated* areas, *walks, roadways, parking lots, or structures. Penalties for violation of these prohibitions shall be established locally."*
- On October 08, 2009, the State of California Department of Water Resources issued a letter to all cities and counties within the State of California giving reminder of required adoption of the Water Efficient Landscape Ordinance. The letter states that: *"Other benefits include reduced irrigation runoff,* reduced pollution of waterways *[emphasis added], drought resistance, and less green waste."*

- On December 18, 2009, the San Diego Water Board adopted Order. No. R9-2009-0002, the fourth-term Orange County permit, which found that over-irrigation (landscape irrigation, irrigation water and lawn watering) into the MS4 is a source and conveyance of pollutants. Landscape irrigation, irrigation water, and lawn watering were categories removed from the list of non-storm water discharges not prohibited to be discharged into the MS4.
- The San Diego Water Board has responded to complaints about and observed runoff from over-irrigation entering the MS4s in the Riverside County portion of the San Diego Region.[355]

The claimants contend that federal law does not support the prohibition of landscape irrigation, irrigation water, and lawn watering, noting that federal regulations require the claimants to address — not prohibit — non-stormwater discharges or flows when the discharges are identified by the municipality — not the Regional Board — as sources of pollutants.[356] The claimants further contend that they did not identify landscape irrigation, irrigation water, and lawn watering as sources of pollution, but only prepared the educational outreach materials to educate and prevent these discharges from becoming problematic:

> While the 2010 Permit Fact Sheet states that educational outreach materials utilized by the Copermittees identified these categories of runoff as a source and conveyance of pollutants to the MS4 (Fact Sheet, pp. 108-09), those materials were prepared as a preventative measure, to educate the public and prevent these discharges from becoming problematic, and did not represent a determination by Claimants that those discharges were a demonstrated problem within the watershed. In comments to the RWQCB during the development of the 2010 Permit, Claimants in fact stated that none of the municipalities had identified irrigation runoff as a source of pollutants requiring prohibition. [Footnote 6: The Fact Sheet also cites other support for the elimination of the exemption for irrigation water runoff, but this "evidence" relates to findings for other municipalities, or generally for the state, and not for the Copermittees. *See* Fact Sheet, pp. 109-10.] (*See* District Comment Letter dated September 7, 2010 and Attachment 6 (included in Section 7)). Thus, in adding this provision, the RWQCB relied on no actual determination of impairment within the jurisdiction of the Claimants.[357]

The claimants also contend that there is a distinction between identifying a particular discharger and identifying an entire category of discharges pointing to the preamble to the federal regulations, which "makes clear that the permittees' illicit discharge program need not prevent

[355] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 473-476 (Fact Sheet/Technical Report), emphasis in original.

[356] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 36 (Test Claim narrative), citing Code of Federal Regulations, title 40, section 122.26(d)(2)(iv)(B)(1).

[357] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 37 (Test Claim narrative).

discharges of the 'exempt' categories into the MS4 'unless such discharges are specifically identified on a case-by-case basis as needing to be addressed.'"[358] Thus, the claimants agree that "individual discharges within exempt categories must be addressed when the particular discharge is a source of pollutants to waters of the U.S.," but assert that "federal regulations do not allow for removing entire categories of exempt non-storm water discharges."[359] Moreover, the prohibition of all irrigation runoff is impracticable and "may not be significant enough to ever be discharged from the MS4 into receiving waters or contain pollutants in violation of any water quality standard."[360] Finally, the claimants conclude that the requirements are not a federal mandate.[361]

The Water Boards contend that the claimants identified landscape irrigation, irrigation water, and lawn watering as significant dry weather, non-stormwater contributors of pollutants to MS4s during the permit development process as stated in the test claim permit. "Where, as here, a municipality has identified previously exempt categories of non-storm water discharges as sources of pollutants, the categories represent illicit discharges and must be prohibited in compliance with the CWA."[362] Moreover, the permit record "reflects statewide recognition of the pollution caused by overirrigation" and "that pollution in irrigation waters is ubiquitous and would be extremely difficult to isolate and address on a site-by-site basis."[363] Requiring the claimants "to address only individual sites, rather than the categories of irrigation waters, as they suggest, would not satisfy the federal requirements."[364]

The Water Boards further contend that the requirements in the test claim permit are not new as the prior permit include prohibitions on non-stormwater discharges in the MS4 unless authorized by a separate permit or authorized as a category of exempted non-stormwater discharges. The prior permit also addressed removing the exemptions when categories are identified as sources of pollutants.[365]

[362] Exhibit C, Water Boards' Comments on the Test Claim, filed September 22, 2017, page 20 citing to United States Code, title 33, section 1342(p)(3)(B)(ii), requiring permits for municipal stormwater discharges "shall include a requirement to effectively prohibit non-stormwater discharges into the storm sewers."

[363] Exhibit C, Water Boards' Comments on the Test Claim, filed September 22, 2017, page 20.

[364] Exhibit C, Water Boards' Comments on the Test Claim, filed September 22, 2017, page 20.

[365] Exhibit C, Water Boards' Comments on the Test Claim, filed September 22, 2017, page 20.

> When the municipality has provided information showing that a category of discharge is a source of pollutants, federal law requires it to address the category in a manner similar to other recognized illicit discharges under the federal nonstorm water provisions in place for decades. Implementation of this decades-old standard does not amount to imposition of a new program or any higher level of service than was previously in place.[366]

The Water Boards conclude that the Commission should give significant weight to the conclusion of the Regional Board in its decision to prohibit landscape irrigation, irrigation water, and lawn watering.[367]

The Commission finds that Section B.2. of the test claim permit does not mandate a new program or higher level of service.

The CWA requires that permits adopted by the Water Boards for discharges from municipal storm sewers "shall include a requirement to effectively prohibit non-stormwater discharges into the storm sewers."[368] Federal regulations expressly state that the program to detect and remove illicit discharges into the MS4 shall address "all types of illicit discharges," including the following "categories" of non-stormwater discharges "where such discharges are identified by the municipality as sources of pollutants to waters of the United States: . . ., "landscape irrigation," . . ., "irrigation water," . . . [and] "lawn watering."[369] The preamble to the Federal regulations refers to "components of discharges" that are not prohibited from entering the MS4 unless "such discharges are specifically identified on a case-by-case basis as needing to be addressed":

> … in general, municipalities will not be held responsible for prohibiting some specific components of discharges or flows listed below through their municipal separate storm sewer system, even though their such components may be considered non-storm water discharges, unless such discharges are specifically identified on a case-by-case basis as needing to be addressed.[370]

The preamble also refers to the "classes" of non-stormwater discharges that are not prohibited in all cases:

> Several commenters suggested that either the definition of "storm water" should include some additional classes of nonprecipitation sources, or that municipalities should not be held responsible for "effectively prohibiting" some classes of nonstorm water discharges into their municipal storm sewers. The various types of discharges addressed by these comments include . . . landscape irrigation, . . .

[370] Exhibit X (33), National Pollutant Discharge Elimination System Permit Application Regulations for Storm Water Discharges; Final Rule, 55 Federal Register 47990 (November 16, 1990), page 6.

> irrigation waters, . . . lawn watering . . . . Most of these comments were made with regard to the concern that these were commonly occurring discharges which did not pose significant environmental problems.
>
> EPA disagrees that the above described flows will not pose, in every case, significant environmental problems. At the same time, it is unlikely Congress intended to require municipalities to effectively prohibit . . . seemingly innocent flows that are characteristic of human existence in urban environments and which discharge to municipal separate storm sewers. It should be noted that the legislative history is essentially silent on this point. Accordingly, EPA is clarifying that section 402(p)(3)(B) of the CWA (which requires permits for municipal separate storm sewers to "effectively" prohibit non-storm water discharges) does not require permits for municipalities to prohibit certain discharges or flows of nonstorm water to waters of the United States through municipal separate storm sewers in all cases.[371]

Accordingly, federal law does not support the claimants' assertion that each individual discharge be treated on a case-by-case basis; it's the type of discharge that is treated on a case-by-case basis. Thus, when approving a jurisdiction-wide NPDES permit, the Regional Board is required by federal law to address and effectively prohibit a previously exempted category of a non-stormwater discharge when the discharge is identified as a source of pollution.

Moreover, the prior permit required that if either a claimant or the Regional Board identifies a discharge category as a source of pollutants to the waters of the United States, then the discharge category represents an illicit discharge and must be prohibited in compliance with the CWA and, thus, that provision is not new.[372]

In this case, the record shows that the claimants identified to their residents that landscape irrigation, irrigation water, and lawn watering can be a source of non-stormwater pollution in their education materials and survey as part of the "Only Rain in the Storm Drain" Pollution Prevention Program.[373] In addition, the Regional Board found ample evidence in the surrounding areas of the state, and through complaints in Riverside County, that landscape irrigation, irrigation water, and lawn watering discharges into the MS4 were sources and conveyances of pollutants to waters of the United States. The State Board, in its grant funding

[371] Exhibit X (33), National Pollutant Discharge Elimination System Permit Application Regulations for Storm Water Discharges; Final Rule, 55 Federal Register 47990 (November 16, 1990), page 48.

[372] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 572 (Order R9-2004-0001, Section B.2.); see also, Exhibit X (33), National Pollutant Discharge Elimination System Permit Application Regulations for Storm Water Discharges; Final Rule, 55 Federal Register 47990 (November 16, 1990), page 48, which states: "However, the Director may include permit conditions that either require municipalities to prohibit or otherwise control any of these types of discharges where appropriate."

[373] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 473-474 (Fact Sheet/Technical Report).

materials for the SEEP program, stated that irrigation runoff contributes flow and pollutant loads to creeks and beaches that are 303(d) listed for bacteria indicators, and that the reduction or elimination of irrigation-related urban flows and associated pollutant loads may be key to successful attainment of water quality and beneficial use goals as outlined in the Basin Plan and Bacteria TMDLs over the long term.[374] Moreover, state law previously required local government to adopt a Water Efficient Landscape Ordinance to prohibit irrigation runoff from leaving the target landscape, and required local agencies to either adopt the following model ordinance or its equivalent:[375]

> (a) Local agencies shall prevent water waste resulting from inefficient landscape irrigation by prohibiting runoff from leaving the target landscape due to low head drainage, overspray, or other similar conditions where water flows onto adjacent property, non-irrigated areas, walks, roadways, parking lots, or structures. Penalties for violation of these prohibitions shall be established locally.
>
> (b) Restrictions regarding overspray and runoff may be modified if:
>
> (1) the landscape area is adjacent to permeable surfacing and no runoff occurs; or
>
> (2) the adjacent non-permeable surfaces are designed and constructed to drain entirely to landscaping.[376]

Federal law requires the Regional Board to establish conditions to ensure compliance with all applicable requirements of the CWA and regulations, including the prohibition of illicit non-stormwater discharges.[377] Accordingly, since landscape irrigation, irrigation water, and lawn watering were identified as sources and conveyances of pollutants, the Regional Board had no discretion, but was required by federal law to remove the exemption and require the claimants to effectively prohibit these non-stormwater discharges from entering the MS4. Reimbursement under article XIII B, section 6 of the California Constitution is not required if the statute or executive order imposes a requirement that is expressly mandated by federal law.[378]

Moreover, the requirement to prohibit landscape irrigation, irrigation water, and lawn watering does not constitute a new program or higher level of service. The Supreme Court has clarified

that "simply because a state law or order may *increase the costs* borne by local government *in providing services*, this does not necessarily establish that the law or order constitutes an *increased or higher level* of the resulting 'service to the public' under article XIII B, section 6, and Government Code section 17514."[379] Rather, the new program or higher level of service must "increase the actual level or quality of governmental services provided," or be unique to local government.[380] In this case, federal law has long required that all dischargers, including private industrial dischargers and local governments, effectively prohibit "all types" of non-stormwater discharges identified as sources of pollutants to waters of the United States.[381] The requirements associated with effectively prohibiting landscape irrigation, irrigation water, and lawn watering, which are known sources of non-stormwater pollutants, do not change or increase that level or quality of service to the public; they simply make the claimants comply with existing federal law to prohibit non-stormwater discharges.

Accordingly, the Commission finds that Section B.2. of the test claim permit does not mandate a new program or higher level of service.

2. Sections C., F.4.d. and e., and Section II.C. of Attachment E of the Test Claim Permit, Which Address Dry Weather Non-Stormwater Action Levels (NALs), Do Not Mandate a New Program or Higher Level of Service Because the Requirements Are Not New, But Simply Implement Federal Law.

The claimants have pled Sections C. (Non-Stormwater Dry Weather Action Levels) and F.4.d. and e. (Illicit Discharge Detection and Elimination) and Section II.C., of Attachment E of the test claim permit,[382] which address dry weather non-stormwater action levels (NALs) for fecal coliform, enterococci, turbidity, pH, dissolved oxygen, total nitrogen, total phosphorus, methyl blue active substances (MBAS), iron, manganese; and the priority pollutants: cadmium, copper, chromium III, chromium IV (hexavalent), lead, nickel, silver, and zinc.[383] The claimant states more specifically that:

> Sections C and portions of F.4 of the 2010 Permit (as well as the provisions of Section II.C of the Permit's Monitoring and Reporting Program ("MRP"), Attachment E) required Claimants to comply with new requirements relating to "Non-Stormwater Dry Weather Action Levels" or "NALs." These requirements

[379] *San Diego Unified School Dist. v. Commission on State Mandates* (2004) 33 Cal.4th 859, 876-877, emphasis in original.

[381] United States Code, title 33, section 1342(p)(3)(B)(ii) (Public Law 100-4); Code of Federal Regulations, title 40, section 122.26(d)(2)(iv)(B)(1). In addition, MS4 dischargers must demonstrate adequate legal authority, through ordinance, permit, or other means, to prohibit illicit discharges from others to the MS4. Code of Federal Regulations, title 40, section 122.26(d)(2)(i)(B).

[382] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 21, 39-42 (Test Claim narrative).

[383] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 204-205 (test claim permit, Section C.5.)

included programmatic investigation, monitoring and reporting requirements, as well as action items stemming from a NAL exceedance.[384]

These sections generally require monitoring and field screening for pollutants as specified in the permit, and if a pollutant is shown to be in excess of the NAL, then the claimant is required to investigate and identify and remove the source of the illicit, non-stormwater discharge.

As explained below, the Commission finds that that sections C and F.4.d. and e. do not mandate a new program or higher level of service. Instead, the test claim permit simply identifies action levels for each pollutant consistent with existing water quality standards that, if detected in dry weather monitoring and field screening to be in excess of the action level, triggers the investigation, identification of the discharge, removal, and reporting activities required by existing federal law. The claimants do not violate the permit by exceeding the action level, as implied by the claimants; rather a violation occurs only if a permittee fails to timely implement the required actions following an exceedance of an action level.[385] In this sense, the action levels established in the test claim permit function the same as the prior permit, which required the claimants to identify criteria to determine if significant sources of pollutants were present in dry weather non-stormwater discharges consistent with water quality objectives.[386] Under both permits, the action levels or criteria are intended to determine the presence of an illicit discharge, which then triggers the federal requirements to investigate, identify, and remove the illicit discharge, and report the findings to the Regional Board.

a. Background

i. Federal law requires permittees to effectively prohibit non-stormwater discharges into the storm sewers by implementing a program to detect and remove illicit discharges.

In order to achieve water quality standards, federal law requires that permits for discharges from MS4s "shall include a requirement to effectively prohibit non-stormwater discharges into the storm sewers," unless those discharges are conditionally exempted from this prohibition.[387] According to a fact sheet issued by EPA, illicit non-stormwater discharges may contribute to high levels of pollutants, including heavy metals, toxics, oil and grease, solvents, nutrients, viruses, and bacteria to receiving waterbodies:

> Illicit discharges enter the MS4 system through either direct connections (e.g., wastewater piping either mistakenly or deliberately connected to the storm drains) or indirect connections (e.g., infiltration into the MS4 from cracked sanitary systems, spills collected by drain outlets, or paint or used oil dumped directly into

[384] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 39.

[385] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 203 (Directive C.3.).

[386] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 594 (Order R9-2004-0001, Section J.4.).

[387] United States Code, title 33, section 1342(p)(3)(B)(ii) (Public Law 100-4); Code of Federal Regulations, title 40, section 122.26(d)(2)(iv)(B)(1).

> the drain). The result is untreated discharges that contribute high levels of pollutants, including heavy metals, toxics, oil and grease, solvents, nutrients, viruses, and bacteria to receiving waterbodies. Pollutant levels from these illicit discharges have been shown in EPA studies to be high enough to significantly degrade receiving water quality and threaten aquatic, wildlife, and human health.[388]

Examples of illicit non-stormwater discharges include sanitary wastewater, effluent from septic tanks, car wash wastewater, improper oil disposal, radiator flushing disposal, laundry wastewaters, spills from roadway accidents, and improper disposal of automobile and household toxics.[389]

To "effectively prohibit" non-stormwater discharges requires the implementation of a program to detect and remove illicit discharges, which under federal law shall contain the following:

- A description of a program, including inspections, to implement and enforce an ordinance to prevent illicit non-stormwater discharges to the MS4.[390]
- A description of procedures to conduct on-going field screening activities during the life of the permit, including areas or locations to be evaluated.[391]
- A description of procedures to investigate portions of the MS4 that, based on field screening or other information, indicate a reasonable potential for containing illicit discharges or other sources of non-storm water pollution.[392]
- A description of procedures to prevent, contain, and respond to spills that may discharge into the MS4;
- A description of a program to promote, publicize, and facilitate public reporting of the presence of illicit discharges or water quality impacts associated with discharges from MS4s;
- A description of educational activities, public information activities, and other activities to facilitate the proper management and disposal of oil and toxic materials; and

[388] Exhibit X (20), EPA, Stormwater Phase II Final Rule, Illicit Discharge Detection and Elimination Minimum Control Measure, Fact Sheet 2.5 (EPA 833-F-00-007), January 2000, revised December 2005.

[389] Exhibit X (20), EPA, Stormwater Phase II Final Rule, Illicit Discharge Detection and Elimination Minimum Control Measure, Fact Sheet 2.5 (EPA 833-F-00-007), January 2000, revised December 2005.

[390] Code of Federal Regulations, title 40, section 122.26(d)(2)(iv)(B)(1).

[391] Code of Federal Regulations, title 40, section 122.26(d)(2)(iv)(B)(2).

[392] Code of Federal Regulations, title 40, section 122.26(d)(2)(iv)(B)(3).

- A description of controls to limit infiltration of seepage from municipal sanitary sewers to MS4s where necessary.[393]

Federal law also requires that NPDES permits include specific requirements for the proper collection, management, and electronic reporting of data about the NPDES program to ensure that there is timely, complete, accurate, and nationally-consistent set of data about the NPDES program.[394] All NPDES permits must also specify requirements for recording and reporting monitoring results.[395]

> *ii. The prior permit required the permittees to develop a dry weather monitoring program to include numeric criteria for pollutants to determine when an exceedance occurred. Investigation, inspection, follow-up and reporting requirements were required if an exceedance of the numeric criteria was detected and the permittee had to immediately eliminate all detected illicit discharges, discharge sources, and connections.*

The prior permit contained the following receiving water limitations and discharge prohibitions:

- Discharges into and from MS4s causing, or threatening to cause, a condition of pollution, contamination, or nuisance (as defined in CWC section 13050), in waters of the State are prohibited.
- Discharges from MS4s that cause or contribute to exceedances of water quality objectives for surface water or groundwater are prohibited.
- Discharges from MS4s that cause or contribute the violation of water quality standards (designated beneficial uses and water quality objectives developed to protect the beneficial uses of receiving waters) are prohibited.
- Discharges are also subject to the prohibitions in the Basin Plan, which includes but is not limited to, illicit discharges that are not composed entirely of stormwater, which are prohibited.[396]

Section B.1.-3. of the prior permit required each permittee to "effectively prohibit all types of non-stormwater discharges into its MS4 unless such discharges are either authorized by a separate NPDES permit" or the discharge falls within a non-prohibited category of discharges.[397]

Section J. required each permittee to develop and implement an illicit discharge detection and elimination program to actively seek and eliminate illicit discharges and connections to the MS4, including the requirement to develop a dry weather monitoring program and numeric criteria for

[396] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 572, 573, 598-599 (Order R9-2004-0001, Sections A., C.1., and Attachment A.).

[397] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 572-573 (Order R9-2004-0001, Sections B.1.-B.3.).

pollutants that will trigger follow-up investigations to identify and remove the source causing the exceedance. The program must include the following, at minimum:

- Implement a program to actively seek and eliminate illicit discharges and connections into its MS4. The program shall address all types of illicit discharges and connections excluding those non-storm water discharges that are exempt.[398]
- Develop or obtain an up-to-date labeled map of its entire MS4 and the corresponding drainage areas, the accuracy of which shall be confirmed and updated at least annually.[399]
- Implement the illicit discharge monitoring program in accordance with section II.B. of the MRP to detect illicit discharges and connections.[400]
- Investigate and inspect any portion of its MS4 that, based on visual observations, monitoring results or other appropriate information, indicates a reasonable potential for illicit discharges, illicit connections, or other sources of non-storm water.[401]
- Develop numeric criteria to determine when follow-up actions will be necessary and include the criteria and follow-up procedures in each permittees' Individual Storm Water Management Plan (SWMP).[402]
- Eliminate all illicit discharges, illicit discharge sources, and illicit connections as soon as possible after detection. Illicit discharges that are a serious threat to public health or the environment must be eliminated immediately.[403]
- Implement and enforce ordinances, orders, or other legal authority to prevent and eliminate illicit discharges and connections to its MS4.[404]

- Take appropriate actions to prevent, respond to, contain and cleanup sewage spills into the MS4 and to prevent the contamination of surface water, ground water and soil to the MEP.[405]
- Promote, publicize and facilitate public reporting of illicit discharges or water quality impacts associated with discharges into or from MS4s including the development and operation of a public hotline capable of receiving reports in both English and Spanish, 24 hours per day/seven days per week.[406]
- Respond to and resolve each reported incident and summarize all reported incidents and resolution in the annual report.[407]
- Facilitate the proper management and disposal of used oil, toxic materials, and other household hazardous wastes including educational activities, public information activities, and establishment of collection sites.[408]

The requirements of the illicit discharge monitoring program are in Section II.B., of the MRP and require each permittee to develop and implement a program that meets or exceeds the listed requirements within 365 days of the adoption of prior permit. The program had to be designed to emphasize frequent, geographically widespread inspections, monitoring, and follow-up investigations to detect illicit discharges and connections. The program was required to be included in the each permittee's individual SWMP.[409] The program requirements under the prior permit were as follows:

- Use the MS4 map and select illicit discharge monitoring stations at accessible points (i.e., outfalls, manholes or open channels), located downstream of potential sources of illicit discharges (i.e., commercial, industrial, and residential areas), and in a quantity sufficient to represent the MS4 and detect illicit discharges that may occur throughout the system.[410]

[405] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 594-595 (Order R9-2004-0001, Section J.7.).

[410] Exhibit X (35), Order R9-2004-0001, Monitoring and Reporting Program, Section II.B.1.a., page 9.

- Inspect each station at least twice between May 1st and September 30th of each year, *and more frequently if necessary to comply with Section J. of the prior permit* [the Illicit Discharge Detection and Elimination Program].[411]
- Inspect all other dry weather flows that are observed or reported in addition to the station inspections.[412]
- Record the following information at each inspected site: time since last rain, quantity of last rain, site descriptions, flow estimation, and visual observations.[413]
- If flow or ponded water is observed at a station and there has been at least 72 hours of dry weather, a field screening analysis using suitable methods to estimate the following constituents shall be conducted: specific conductance or calculate total dissolved solids,[414] turbidity, pH, temperature, and dissolved oxygen.[415]
- If field screening analysis or visual observations at a site indicate a potential illicit discharge, a sample shall be collected and analyzed for: total hardness, oil and grease, ammonia nitrogen, total phosphorus, copper (total and dissolved), surfactants (MBAS), diazinon, chlorpyrifos, lead (dissolved), nitrate nitrogen, E.coli, total coliform, and fecal coliform.[416]
- Develop numeric criteria for field screening and analytical monitoring results that will trigger follow-up investigations to identify the source causing the exceedance of the criteria.[417]

[417] Exhibit X (35), Order R9-2004-0001, Monitoring and Reporting Program, Section II.B.3., page 10.

- Implement the follow-up investigation procedures in the event of an exceedance of the criteria.[418]

In addition to the illicit discharge monitoring program, the MRP under the prior permit included receiving waters monitoring, which along with wet weather monitoring, required the permittees to "analyze a minimum of two dry weather samples from each triad station per monitoring year," which could be done using grab samples.[419] The dry weather samples had to be analyzed for the following constituents:

> Trace metals: total cadmium, total chromium, total copper, total nickel, total lead, total zinc;
>
> Nutrients: ammonia, total Kjeldahl nitrogen, nitrate, total phosphorus;
>
> Bacteria: total coliform, fecal coliform, E. coli;
>
> Pesticides: diazinon, chlorpyrifos, other organophosphate pesticides;
>
> Conventionals: temperature, pH, hardness, specific conductance, dissolved oxygen, MBAS;
>
> Polycyclic aromatic hydrocarbons;
>
> Volatiles; and
>
> Total suspended solids.[420]

The permittees were required to use the data results from the receiving water monitoring to evaluate the extent and cause of the pollutants in receiving waters. Specifically, the permittees were required to use Toxicity Identification Evaluations (TIEs) to determine the causes and Toxicity Reduction Evaluations (TREs) to identify sources.

In addition, the receiving water monitoring program included tributary monitoring where the permittees were required to:

- Collect a grab sample from two dry weather events during each monitoring year at the following four tributary stations: (1) Warm Springs Creek, near the confluence with Murrieta Creek; (2) Santa Gertudis Creek, near the confluence with Murrieta Creek; (3) Long Canyon Creek near the confluence with Murrieta Creek; and (4) Redhawk Channel, near the confluence with Temecula Creek.[421]

---

[418] Exhibit X (35), Order R9-2004-0001, Monitoring and Reporting Program, Section II.B.3., page 10.

[419] Exhibit X (35), Order R9-2004-0001, Monitoring and Reporting Program, Section II.A., page 3.

[420] Exhibit X (35), Order R9-2004-0001, Monitoring and Reporting Program, Table 1, pages 3-4.

[421] Exhibit X (35), Order R9-2004-0001, Monitoring and Reporting Program, Section II.A.5.a., page 7.

- If flow is insufficient to collect a sample, this shall be documented in the subsequent annual report.[422]
- Tributary samples shall be analyzed for constituents of concern. Constituents of concern shall be determined based on exceedances of water quality objectives at respective triad and dry weather monitoring stations, as well as land uses in the area.[423]

The MRP also required that the priority toxic pollutants identified in the CTR be monitored under all monitoring programs and analyzed.[424]

b. The requirements imposed by Sections C. and F.4.d. and e., and Section II.C. of Attachment E of the test claim permit do not mandate a new program or higher level of service.

i. Sections C. and F.4.d. and e., and Section II.C. of Attachment E of the test claim permit establish NALs for specified pollutants and when an exceedance of a NAL is detected during monitoring, the permit requires investigation, inspection, follow-up and reporting and requires the claimant to immediately eliminate all detected illicit discharges, discharge sources, and connections.

The test claim permit contains the same receiving water limitations and discharge prohibitions as the prior permit, including the requirement to effectively prohibit non-stormwater discharges into the MS4 unless authorized by another permit or not prohibited and the prohibition of discharges from the MS4 that cause or contribute to a violation of water quality standards.[425]

While the prior permit directed the copermittees to develop numeric criteria for pollutants to determine when an exceedance of a pollutant occurred requiring follow-up actions and elimination of the illicit discharge, the test claim permit establishes numeric action levels "to help provide an assessment of the effectiveness of the prohibition of non-storm water discharges" specifically for fecal coliform, enterococci, turbidity, pH, dissolved oxygen, total nitrogen, total phosphorus, methyl blue active substances (MBAS), iron, manganese in inland surface waters, and for priority pollutants (cadmium, copper, chromium III, chromium IV (hexavalent), lead, nickel, silver, and zinc), and requires the permittees to monitor for these action levels.[426] The action levels are based on existing narrative or numeric water quality objectives and criteria defined in the Basin Plan, the Water Quality Control Plan for Ocean Waters of California (Ocean Plan), and the State Policy for Implementation of Toxics Standards

[422] Exhibit X (35), Order R9-2004-0001, Monitoring and Reporting Program, Section II.A.5.b., page 8.

[425] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 199-200, 270-271 (test claim permit, Sections A. and B., and Attachment A.).

[426] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 204-205 (test claim permit, Section C.5.).

for Inland Surface Waters, Enclosed Bays, and Estuaries of California (State Implementation Policy or SIP).[427] Specifically, action levels for fecal coliform, enterococci, turbidity, pH, dissolved oxygen, total nitrogen, total phosphorus, MBAS, iron, and manganese in inland surface waters were established as follows:

> For discharges to inland surface waters, action levels are based on the USEPA water quality criteria for the protection of aquatic species, the USEPA water quality criteria for the protection of human health, water quality criteria and objectives in the applicable State plans, effluent concentration available using best available technology, and 40 CFR 131.38. Since the assumed initial dilution factor for the discharge is zero and a mixing zone is not allowed, a non-storm water discharge from the MS4 could not cause an excursion from numeric receiving water quality objectives if the discharge is in compliance with the action levels contained in the Order.[428]

And action levels for the priority pollutants were established as follows:

> Priority pollutants analyzed included Cadmium, Copper, Chromium, Lead, Nickel, Silver and Zinc. These priority pollutants are likely to be present in non-storm water MS4 discharges (see Finding C.3) though dissolved metal effluent monitoring was not conducted under the previous Order. The most stringent applicable water quality criteria have been identified for these seven metals and, excluding Chromium (VI), and all are dependent on receiving water hardness. The conversion factors for Cadmium and Lead are also water hardness dependent (40 CFR [section] 131.38(b)(2)). These levels are established as the action levels for these constituents.
>
> While effluent monitoring is not available from the previous Order, the monitoring that was done for metal concentrations in receiving waters often lacked a measurement of receiving water hardness. Due to the multiple point source discharges of non-storm water from the MS4, a discharge may enter a receiving water whose hardness will vary temporally. In addition, hardness may vary spatially within and among receiving waters.
>
> However, other information is available to determine the appropriateness of an action level. Existing monitoring concentrations absent of receiving water data, no dilution credit or mixing zone allowance, current 303(d) listings of receiving waters for other pollutants, receiving water monitoring data, and the classification of waters as critical habitat for endangered and species of concern, provide evidence that NALs are appropriate for these priority pollutants at this time in

[427] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 480 (Fact Sheet/Technical Report).

[428] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 481 (Fact Sheet/Technical Report).

> order to ensure that the Copermittees comply with the requirement to effectively prohibit all types of unauthorized non-storm water discharges into the MS4s.[429]

NALs were established because the Regional Board found that dry weather monitoring in receiving waters that was conducted under the prior permit identified the presence of bacteria, pH, dissolved oxygen, nitrate, turbidity, MBAS, and metals, all in concentrations that exceed water quality criteria.[430] The Regional Board also found that the exceedances relating to non-stormwater discharges now require it to establish TMDLs for the pollutants to eliminate the impairment in the waters and until that is done, early control actions are warranted and required:

> . . . there is a reasonable potential that municipal storm water and non-storm water discharges from MS4s cause or may cause or contribute to an excursion above water quality standards for the following pollutants: Indicator Bacteria (including Fecal Coliform and E. Coli), Copper, Manganese, Iron, Chlorpyrifos, Diazinon, Sulfates, Phosphorous, Nitrogen, Total Dissolved Solids (TDS), and Toxicity. In accordance with CWA section 303(d), the San Diego Water Board is required to establish TMDLs for these pollutants to these waters to eliminate impairment and attain water quality standards. Therefore, certain early pollutant control actions and further pollutant impact assessments by the Copermittees are warranted and required pursuant to this Order.[431]

The activities required by the test claim permit are cross-referenced in Sections C., F.4.d. and e., and Section II.C. of Attachment E., and are listed below with citations to each activity.

1. Each copermittee, beginning no later than July 1, 2012, must implement the NAL monitoring as described in Attachment E of this Order.[432]

   Attachment E is the Monitoring and Reporting Program for the test claim permit, and Section II.C. of Attachment E requires each copermittee to collaborate with the other copermittees to develop, conduct, and report on a year-round watershed based dry weather non-storm water MS4 discharge monitoring program. The monitoring program

[429] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 481-482 (Fact Sheet/Technical Report, Directive C).

[430] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 481 (Fact Sheet/Technical Report, Discussion of Directive C).

[431] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 463 (Fact Sheet/Technical Report, Discussion of Finding E.9.).

[432] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 202, 250 (test claim permit, Sections C.1., F.4.d.). Section C.1. states that "Each copermittee, beginning no later than July 1, 2012, must implement the NAL monitoring as described in Attachment E of this Order." Section F.4.d. requires that each copermittee to conduct dry weather field screening and analytical monitoring of MS4 outfalls and other portions of its MS4 within its jurisdiction to detect illicit discharges and connections in accordance with Attachment E.

must also be designed to assess the contribution of dry weather flows to Clean Water Act section 303(d) listed impairments.[433]

In the interim period until the dry weather non-storm water effluent analytical monitoring program is implemented, each copermittee is required to continue to implement dry weather field screening and analytical monitoring as it was most recently implemented pursuant to the prior permit.[434]

2. The monitoring program must include the following components:

   a. MS4 Outfall monitoring. Sampling stations must be located at major outfalls to allow monitoring of effluent at the end of pipe prior to discharge into the receiving waters and other outfall sampling points (or any other point of access such as manholes) identified by the copermittees as potential high risk sources of polluted effluent. The copermittees must develop their monitoring plans to sample a representative percentage of major outfalls and identified stations within each hydrologic subarea.[435]

   b. Clearly identify each dry weather effluent analytical monitoring station on the MS4 map as either a separate geographic information system (GIS) layer or a map overlay.[436]

   c. Develop or update written procedures and implement effluent analytical monitoring including field observations, monitoring, and analyses to be conducted. These procedures must be consistent with 40 CFR part 136, Guidelines Establishing Test Procedures for the Analysis of Pollutants. At a minimum, the procedures must meet the following criteria:

      - Sampling Frequency. Sample a representative percentage of major outfalls and identified stations within each hydrologic subarea. All monitoring conducted must be preceded by a minimum of 72 hours of dry weather.
      - If a ponded MS4 discharge is observed at a monitoring station, record the observation and collect at least one grab sample. Estimate the discharge flow by measuring the width of water surface, approximate depth of water, and approximate flow velocity.

---

[433] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 309 (test claim permit, Attachment E, Section II.C.)

[434] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 309 (test claim permit, Attachment E, Section II.C.3.)

[435] "A representative percentage determination must consider hydrologic conditions, total drainage area of the site, population density of the site, traffic density, age of the structures or buildings in the area, and land use types (commercial, residential and industrial)." Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 309-310 (test claim permit, Section C.4.; Attachment E., Sections II.C.1.a.(1) and II.C.1.b.(1), footnote 12).

[436] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 309 (test claim permit, Attachment E, Section II.C.2.a.(2)).

- Effluent samples must undergo analytical laboratory analysis for (a) all constituents described in Table 1. Analytical Testing for Mass Loading and Stream Assessment of this Order,[437] (b) constituents with assigned NALs, and (c) Total Residual Chlorine.
- If the station is dry (i.e. no flowing or ponded MS4 discharge is observed), make and record all applicable observations on the MS4 outfall and receiving waters, including any evidence of past non-stormwater flows and the presence of trash.[438]

3. Investigate Source of Exceedance:
   a. Develop or update response criteria for dry weather non-stormwater effluent analytical monitoring results that include the NALS as described in Section C., an evaluation of LC_{50} levels for toxicity to appropriate test organisms,[439] and a consideration of 303(d) listed waterbodies and environmentally sensitive areas, to determine when follow-up investigations will be performed in response to monitoring.[440]
   b. In response to an exceedance of a NAL, the copermittees having jurisdiction must investigate and seek to identify the source of the exceedance in a timely manner, as follows:
      - Obvious illicit discharges (i.e. color, odor, or significant exceedances of action levels) must be investigated immediately.
      - Field screen data. Within two business days of receiving dry weather field screening results that exceed action levels, the copermittee(s) having jurisdiction

[437] Table 1 Analytical Testing for Mass Loading (II.A.1.) and Stream Assessment (II.A.2.): Conventionals, Nutrients, Hydrocarbons: Total Dissolved Solids, Total Suspended Solids, Turbidity, Total Hardness, pH, Specific Conductance, Temperature, Dissolved Oxygen, Total Phosphorus, Dissolved Phosphorus, Nitrite, Nitrate, Total Kjeldahl Nitrogen, Ammonia, Biological Oxygen Demand, 5-day, Chemical Oxygen Demand, Total Organic Carbon, Dissolved Organic Carbon, Methylene Blue Active Substances, Oil and Grease, Sulfate. Pesticides: Diazinon, Chlorpyrifos, Malathion, Carbamates, Pyrethroids. Metals (Total and Dissolved): Arsenic, Cadmium, Total Chromium, Hexavalent Chromium, Copper, Lead, Iron, Manganese, Nickel, Selenium, Zinc, Mercury, Silver, Thallium. Bacteriological (mass loading): E. coli, Fecal Coliform, Enterococcus. (Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 301 (test claim permit, Attachment E, Table 1).

[438] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 250, 310 (test claim permit, Section F.4.d.; Attachment E, Section II.C.1.b.).

[439] Median lethal concentration, or LC50, is the average concentration of a chemical capable of killing one-half of a population of test animals exposed to the chemical under test conditions. Exhibit X (30), Medical Dictionary, LC50, https://medical-dictionary.thefreedictionary.com/LC50 (accessed on April 6, 2022).

[440] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 251, 311 (test claim permit, Section F.4.e.1.; Attachment E, Section II.C.2.a.).

must either initiate an investigation to identify the source of the discharge or document the rationale for why the discharge does not pose a threat to water quality and does not need further investigation. This documentation must be included in the annual report.

- Analytical data. Within five business days of receiving analytical laboratory results that exceed action levels, the copermittee(s) having jurisdiction must either initiate an investigation to identify the source of the discharge or document the rationale for why the discharge does not pose a threat to water quality and does not need further investigation. This documentation must be included in the annual report.[441]

c. Depending on the source of the exceedance, the following action must be taken:[442]

- If the source is natural in origin and in conveyance into the MS4, then the copermittee must report its findings and documentation of its source investigation in its annual report.[443]
- If the source is an illicit discharge or connection, then the copermittee must eliminate the discharge to its MS4 and report the findings, including any enforcement actions taken, and documentation of the source investigation in its annual report. If the copermittee is unable to eliminate the source of discharge prior to the annual report submittal, then the copermittee must submit, as part of its annual report, its plan and timeframe to eliminate the source.[444]
- If the source is an exempted category of non-stormwater discharge, then the copermittee must determine if this is an isolated circumstance or if the category of discharges must be addressed through the prevention or prohibition. The copermittee must submit its findings including a description of the steps taken to address the discharge and the category of discharge in its annual report. The steps taken must include relevant updates to or new ordinances, orders, or other legal means of addressing the category of discharge and the anticipated schedule for doing so. The copermittee must submit a summary of its findings with the Report of Waste Discharge.[445]

[442] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, pages 202, 311 (test claim permit, Section C.2.; Attachment E, Section II.C.2.b.).

[443] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 202 (test claim permit, Section C.2.a.).

[444] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 202 (test claim permit, Section C.2.b.).

[445] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 202 (test claim permit, Section C.2.c.).

- If the source is a non-storm water discharge in violation or potential violation of an existing separate NPDES permit, then the copermittee must report, within three business days, the findings including all pertinent information regarding the discharger and discharge characteristics to the Regional Board.[446]
- If the source is unidentifiable after taking and documenting reasonable steps to do so, then the copermittee must perform additional focused sampling. If the results of the additional sampling indicate a recurring exceedance of NALs with an unidentified source, then the copermittee must update its programs (including, where applicable, updates to the watershed workplan, retrofitting considerations, and program effectiveness work plans) within a year to address the common contributing sources and include the updates in its annual report.[447]

d Respond to notifications: Each copermittee must respond to and resolve each reported incident (e.g., public hotline, staff notification, etc.) made to the copermittee in a timely manner. Criteria may be developed to assess the validity of, and prioritize the response to, each report.[448]

e. Report, during any annual reporting period in which one or more exceedances of NALs have been documented, a description of whether and how the observed exceedances did or did not result in a discharge from the MS4 that caused, or threatened to cause or contribute to a condition of pollution, contamination, or nuisance in the receiving waters.[449]

The test claim permit further explains that an exceedance of a NAL does not alone constitute a violation of the permit, but could indicate non-compliance with the requirement to effectively prohibit non-stormwater discharges. A failure to timely undertake required source investigation and elimination actions following an exceedance of a NAL, however, is a violation of the permit.

> An exceedance of an NAL does not alone constitute a violation of the provisions of this Order. An exceedance of an NAL may indicate a lack of compliance with the requirement that Copermittees effectively prohibit all types of unauthorized non-storm water discharges into the MS4 or other prohibitions set forth in Sections A and B of this Order. Failure to timely implement required actions specified in this Order following an exceedance of an NAL constitutes a violation of this Order. Neither the absence of exceedances of NALs nor compliance with required actions following observed exceedances, excuses any non-compliance

with the requirement to effectively prohibit all types of unauthorized non-storm water discharges into the MS4s or any non-compliance with the prohibitions in Sections A and B of this Order.[450]

ii. The requirements imposed by Sections C. and F.4.d. and e., and Section II.C. of Attachment E of the test claim permit do not mandate a new program or higher level of service.

The claimants contend that Sections C., F.4.d. and e., and Section II.C. of Attachment E. impose reimbursable state-mandated activities and that federal law does not require the imposition of numeric action levels for pollutants for MS4 NPDES permit holders.

> The language of the CWA, as well as the relevant authority discussing federal requirements for an MS4 NPDES Permit under the Act, confirm that no numeric limits, whether or not styled as "action levels," are *required* to be included within an MS4 permit. (*See, e.g., Defenders of Wildlife, supra*, 191 F.3d at 1163 and 1165 ["Industrial discharges must comply strictly with State water-quality standards," while "Congress chose not to include a similar provision for municipal storm-sewer discharges;" "the *statute unambiguously demonstrates* that Congress did not require municipal storm-sewer dischargers to strictly comply with 33 U.S.C. § 1311(b)(1)(C)."]; *Building Industry Association of San Diego County v. State Water Resources Control Board* (2004) 124 Cal.App.4th 866, 874 ("*BIA*") ("With respect to municipal stormwater discharges, Congress clarified that the EPA has the authority to fashion NPDES Permit requirements to meet water quality standards without specific numeric effluent limits and to instead impose 'controls to reduce the discharge of pollutants to the maximum extent practicable.'"); *Divers' Environmental Conservation Organization v. State Water Resources Control Board* (2006) 145 Cal.App.4th 246, 256 ("In regulating stormwater permits the EPA has repeatedly expressed a preference for doing so by the way of BMPs, rather than by way of imposing either technology-based or water quality based numerical limitations."); State Board Order No. 2000-11, p. 3 ("In prior orders this Board has explained the need for the municipal stormwater programs *and the emphasis on BMPs in lieu of numeric effluent limitations*.")(emphasis supplied); State Board Order No. 2006-12, p. 17 ["Federal regulations do not require numeric effluent limitations for discharges of stormwater."]; and State Board Order No. 91-03, pgs. 30-31 ("*We . . . conclude that numeric effluent limitations are not legally required*. Further we have determined that the program of prohibitions, source control measures and 'best management practices' set forth in the Permit constitutes effluent limitations as required by law.'") (emphasis supplied).[451]

[450] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 203 (Directive C.3.).

[451] Exhibit A, Test Claim, filed November 10, 2011 and revised April 28, 2017, page 42 (Test Claim narrative).

The claimants further contend that NALs are similar to strict numeric effluent limits in that they impose new mandated requirements on the claimants to address exceedances of NALs. Upon an exceedance, the claimants are required to implement various measures to comply with NALs, regardless of the feasibility of complying. Failure to address NAL exceedances is a violation of the test claim permit. "In light of these facts, the NAL mandates went beyond what is required to be imposed in an MS4 permit, and was therefore not a federal mandate. Having only general authority in the CWA regulations, the RWQCB made a 'true choice' in deciding to impose these specific mandates."[452] Finally, the claimants contend that there were no NAL-related requirements in the prior permit.[453]

The Water Boards contend that the imposition of NALs do not constitute a reimbursable state-mandated program, but are necessary to meet the federal requirement that each permittee effectively prohibit all types of unauthorized non-storm water discharges into its MS4. This requirement has been in place for decades. The NALs provisions are designed to help achieve compliance with the federal standard — not to impose a new program or a higher level of service. The level of service is the same as has been required and expected of copermittees in prior permits. Like the test claim permit, the prior permit contained specific non-stormwater or dry-weather monitoring and follow-up requirements, for example:[454]

> Directive B.1., ["Each permittee shall effectively prohibit all types of non-storm water discharges into its MS4 unless such discharges are either authorized by a separate NPDES permit or authorized in accordance with Requirements B.2. and B.3 below."], Directive B.4, "Each Permittee shall examine its Illicit Discharge Monitoring results ... to identify water quality problems which may be the result of any non-prohibited discharge category(ies) listed above in Requirement B.2. Follow-up investigations shall be conducted as necessary to identify and control ... [,]" and Directive J.4., "Each Permittee shall develop numeric criteria in accordance with section I1.B.3 of the MRP to determine when follow-up actions will be necessary."[455]

The Water Boards further contend that the action levels are based on applicable water quality objectives from the Basin Plan and other water quality control plans. The determination to include action levels resulted from evaluation of available information leading to the conclusion

that claimants' reliance on existing BMPs for almost 20 years had yet to result in compliance with applicable water quality standards.[456]

The Commission finds that the requirements imposed by Sections C. and F.4.d. and e., and Section II.C. of Attachment E. of the test claim permit do not mandate a new program or higher level of service.

First, the claimants mistakenly rely on provisions of the CWA that require NPDES permits authorizing *stormwater* discharges from MS4s, to reduce the discharge of pollutants to the maximum extent practicable (MEP) under 33 U.S. Code section 1342(p)(3)(B)(iii), to argue that the requirements in Sections C. and F.4.(d) and (e) of the test claim permit are mandated by the state. Federal law includes a separate, more stringent requirement for *non-stormwater* discharges into the MS4. As indicated in the background for this section, 33 U.S. Code section 1342(p)(3)(B)(ii) requires that permits for discharges from MS4s "shall include a requirement to effectively prohibit non-stormwater discharges into the storm sewers."[457] The distinction between the requirements for stormwater and non-stormwater discharges is explained in Finding 14 of the test claim permit as follows:

> Non-storm water (dry weather) discharge from the MS4 is not considered storm water (wet weather) discharge and therefore is not subject to regulation under the Maximum Extent Practicable(MEP) standard from CWA 402(p)(3)(B)(iii), which is explicitly for "Municipal . . . *Stormwater Discharges* (emphasis added)" from the MS4. Rather, non-storm water discharges, per CWA 402(p)(3)(B)(ii), are to be effectively prohibited.[458]

US EPA adopted regulations to implement the effective prohibition of non-stormwater discharges into the MS4 on November 16, 1990, by requiring operators of MS4s to submit, as part of their application for a NPDES permit, a description of their existing management program to control pollutants from the MS4 and the existing program to identify illicit connections to the MS4.[459] The application must also include the results of a field screening analysis for illicit connections and illegal dumping.[460] The federal regulations require that field screening points or major outfalls shall be randomly located throughout the storm sewer system and selected by placing a grid over a drainage system map that identifies those cells of the grid that contain a segment of the storm sewer system or major outfall. The field screening analysis shall include a narrative description of visual observations made during dry weather periods. If any flow is observed, grab samples must be collected and analyzed for color, odor, turbidity, the presence of an oil sheen or surface scum, and any other relevant observations regarding the potential presence of non-stormwater discharges or illegal dumping. In addition, a narrative

description of the results of a field analysis using suitable methods to estimate pH, total chlorine, total copper, total phenol, and detergents (surfactants) shall be provided, along with a flow rate.[461]

Federal regulations also require a proposed management program to detect and remove illicit discharges.[462] The program must include a description of procedures for ongoing field screening activities, including areas or locations to be evaluated;[463] and procedures to investigate portions of the MS4 that, based on field screening or other information, indicate a reasonable potential for containing illicit discharges or other sources of non-storm water pollution.[464] Federal regulations also contain reporting requirements.[465] When adopting these regulations, the US EPA stated the following:

> Today's rule defines the term "illicit discharge" to describe any discharge through a municipal separate storm sewer that is not composed entirely of storm water and that is not covered by an NPDES permit. Such illicit discharges are not authorized under the CWA. Section 402(p)(3)(B) of the CWA requires that permits for discharges from municipal separate storm sewers require the municipality to "effectively prohibit" non-storm water discharges from the municipal separate storm sewer. As discussed in more detail below, today's rule begins to implement the "effective prohibition" by requiring municipal operators of municipal separate storm sewer systems serving a population of 100,000 or more to submit a description of a program to detect and control certain non-storm water discharges to their municipal system. Ultimately, such non-storm water discharges through a municipal separate storm sewer must be either removed from the system or become subject to an NPDES permit . . . .[466]

If a municipality does not implement a program to detect and remove illicit discharges, or fails to obtain an NPDES permit to specifically allow for the discharge, then the municipality violates the CWA and such noncompliance constitutes "grounds for enforcement action; for permit termination, revocation and reissuance, or modification; or denial of a permit renewal application" under federal law.[467]

Accordingly, federal law has long required the claimants to effectively prohibit non-stormwater discharges by implementing a program to detect and remove illicit discharges, which includes field screening and monitoring; preparing a map overlay of the monitoring stations and field screening points; procedures to investigate portions of the MS4 that, based on field screening or
